Choice Based Credit System (CBCS)

UNIVERSITY OF DELHI

DEPARTMENT OF MATHEMATICS

UNDERGRADUATE PROGRAMME
(Courses effective from Academic Year 2015-16)

SYLLABUS OF COURSES TO BE OFFERED
Core Courses, Elective Courses & Ability Enhancement Courses

Disclaimer: The CBCS syllabus is uploaded as given by the Faculty concerned to the Academic Council. The same has been approved as it is by the Academic Council on 13.7.2015 and Executive Council on 14.7.2015. Any query may kindly be addressed to the concerned Faculty.

Undergraduate Programme Secretariat
Preamble

The University Grants Commission (UGC) has initiated several measures to bring equity, efficiency and excellence in the Higher Education System of country. The important measures taken to enhance academic standards and quality in higher education include innovation and improvements in curriculum, teaching-learning process, examination and evaluation systems, besides governance and other matters.

The UGC has formulated various regulations and guidelines from time to time to improve the higher education system and maintain minimum standards and quality across the Higher Educational Institutions (HEIs) in India. The academic reforms recommended by the UGC in the recent past have led to overall improvement in the higher education system. However, due to lot of diversity in the system of higher education, there are multiple approaches followed by universities towards examination, evaluation and grading system. While the HEIs must have the flexibility and freedom in designing the examination and evaluation methods that best fits the curriculum, syllabi and teaching–learning methods, there is a need to devise a sensible system for awarding the grades based on the performance of students. Presently the performance of the students is reported using the conventional system of marks secured in the examinations or grades or both. The conversion from marks to letter grades and the letter grades used vary widely across the HEIs in the country. This creates difficulty for the academia and the employers to understand and infer the performance of the students graduating from different universities and colleges based on grades.

The grading system is considered to be better than the conventional marks system and hence it has been followed in the top institutions in India and abroad. So it is desirable to introduce uniform grading system. This will facilitate student mobility across institutions within and across countries and also enable potential employers to assess the performance of students. To bring in the desired uniformity, in grading system and method for computing the cumulative grade point average (CGPA) based on the performance of students in the examinations, the UGC has formulated these guidelines.
CHOICE BASED CREDIT SYSTEM (CBCS):

The CBCS provides an opportunity for the students to choose courses from the prescribed courses comprising core, elective/minor or skill based courses. The courses can be evaluated following the grading system, which is considered to be better than the conventional marks system. Therefore, it is necessary to introduce uniform grading system in the entire higher education in India. This will benefit the students to move across institutions within India to begin with and across countries. The uniform grading system will also enable potential employers in assessing the performance of the candidates. In order to bring uniformity in evaluation system and computation of the Cumulative Grade Point Average (CGPA) based on student’s performance in examinations, the UGC has formulated the guidelines to be followed.

Outline of Choice Based Credit System:

1. **Core Course:** A course, which should compulsorily be studied by a candidate as a core requirement is termed as a Core course.

2. **Elective Course:** Generally a course which can be chosen from a pool of courses and which may be very specific or specialized or advanced or supportive to the discipline/subject of study or which provides an extended scope or which enables an exposure to some other discipline/subject/domain or nurtures the candidate’s proficiency/skill is called an Elective Course.
   2.1 **Discipline Specific Elective (DSE) Course:** Elective courses may be offered by the main discipline/subject of study is referred to as Discipline Specific Elective. The University/Institute may also offer discipline related Elective courses of interdisciplinary nature (to be offered by main discipline/subject of study).
   2.2 **Dissertation/Project:** An elective course designed to acquire special/advanced knowledge, such as supplement study/support study to a project work, and a candidate studies such a course on his own with an advisory support by a teacher/faculty member is called dissertation/project.
   2.3 **Generic Elective (GE) Course:** An elective course chosen generally from an unrelated discipline/subject, with an intention to seek exposure is called a Generic Elective.
      P.S.: A core course offered in a discipline/subject may be treated as an elective by other discipline/subject and vice versa and such electives may also be referred to as Generic Elective.

3. **Ability Enhancement Courses (AEC)/Competency Improvement Courses/Skill Development Courses/Foundation Course:** The Ability Enhancement (AE) Courses may be of two kinds: AE Compulsory Course (AECC) and AE Elective Course (AEEC). “AECC” courses are the courses based upon the content that leads to Knowledge enhancement. They ((i) Environmental Science, (ii) English/MIL Communication) are mandatory for all disciplines. AEEC courses are value-based and/or skill-based and are aimed at providing hands-on-training, competencies, skills, etc.
   3.1 **AE Compulsory Course (AECC):** Environmental Science, English Communication/MIL Communication.
   3.2 **AE Elective Course (AEEC):** These courses may be chosen from a pool of courses designed to provide value-based and/or skill-based instruction.

**Project work/Dissertation** is considered as a special course involving application of knowledge in solving / analyzing /exploring a real life situation / difficult problem. A Project/Dissertation work would be of 6 credits. A Project/Dissertation work may be given in lieu of a discipline specific elective paper.

Semester-I

Paper I Calculus
Five Lectures per week + Tutorial as per University rules
Max. Marks 100 (including internal assessment)
Examination 3 hrs.

SECTION – I
Limit and Continuity, Types of discontinuities. Differentiability of functions. Successive differentiation, Leibnitz’s theorem, Partial differentiation, Euler’s theorem on homogeneous functions.

SECTION - II
Tangents and normals, Curvature, Asymptotes, Singular points, Tracing of curves.

SECTION – III
Rolle’s theorem, Mean Value Theorems, Taylor’s Theorem with Lagrange’s & Cauchy’s forms of remainder. Taylor’s series, Maclaurin’s series of sin x, cos x, e^x, log(1+x), (l+x)^m, Applications of Mean Value theorems to Monotonic functions and inequalities. Maxima & Minima. Indeterminate forms.

Books Recommended:

Semester-II

Paper II  **Algebra**
Five Lectures per week + Tutorial as per University rules
Max. Marks 100 (including internal assessment)
Examination 3 hrs.

**SECTION - I**
Definition and examples of a vector space, Subspace and its properties, Linear independence and dependence of vectors, basis and dimension of a vector space. Types of matrices. Rank of a matrix. Invariance of rank under elementary transformations. Reduction to normal form, Solutions of linear homogeneous and non-homogeneous equations with number of equations and unknowns upto four. Cayley-Hamilton theorem, Characteristic roots and vectors.

**SECTION - II**
De Moivre's theorem (both integral and rational index). Solutions of equations using trigonometry, Expansion for Cos nx. Sin nx in terms of powers of Sin x, Cosx, and Cos^n x, Sin^n x in terms of Cosine and Sine of multiples of x, Summation of series, Relation between roots and coefficients of n^{th} degree equation. Solutions of cubic and biquadratic equations, when some conditions on roots of the equation are given, Symmetric functions of the roots for cubic and biquadratic equations.

**SECTION - III**
Integers modulo n, Permutations, Groups, subgroups, Lagrange's Theorem, Euler's Theorem, Symmetry Groups of a segment of a line, and regular n-gons for n=3, 4, 5 and 6. Rings and subrings in the context of C[0,1] and Z_n.

**Recommended Books:**
Semester-III

Paper III: Analytic Geometry and Applied Algebra
Five Lectures per week + Tutorial as per University rules
Max. Marks 100 (including internal assessment)
Examination 3 hrs.

SECTION-I: Geometry
Techniques for sketching parabola, ellipse and hyperbola. Reflection properties of parabola, ellipse and hyperbola and their applications to signals, classification of quadratic equation representing lines, parabola, ellipse and hyperbola.

SECTION-II: 3-Dimensional Geometry and Vectors
Rectangular coordinates in 3-space; spheres, cylindrical surfaces cones. Vectors viewed geometrically, vectors in coordinate system, vectors determine by length and angle, dot product, cross product and their geometrical properties. Parametric equations of lines in plane, planes in 3-space.

SECTION - III: Applied Algebra
Latin Squares, Table for a finite group as a Latin Square, Latin squares as in Design of experiments, Mathematical models for Matching jobs, Spelling Checker, Network Reliability, Street surveillance, Scheduling Meetings, Interval Graph Modelling and Influence Model, Picher Pouring Puzzle.

Recommended Books:
Semester-IV

Paper IV : **Analysis**
Five Lectures per week + Tutorial as per University rules
Max. Marks 100 (including internal assessment)
Examination 3 hrs.

**SECTION-I**
Order completeness of Real numbers, open and closed sets, limit point of sets, Bolzano Weierstrass Theorem, properties of continuous functions, Uniform continuity.

**SECTION-II**
Sequences, convergent and Cauchy sequences, sub-sequences, limit superior and limit inferior of a sequence, monotonically increasing and decreasing sequences, infinite series and their convergences, positive term series, comparison tests, Cauchy’s nth root test, D. Alembert’s ratio test, Raabe’s test, alternating series, Leibnitz’s test, absolute and conditional convergence.

**SECTION-III**
Riemann integral, integrability of continuous and monotonic functions

**Books Recommended:**
Semester-V

DSE-1

(I) Differential Equations

or

(ii) Discrete Mathematics

Paper V  **Differential Equations**
Five Lectures per week + Tutorial as per University rules
Max. Marks 100 (including internal assessment)
Examination 3 hrs.

**Ordinary differential equations**
First order exact differential equations including rules for finding integrating factors, first order higher degree equations solvable for $x, y, p$, Wronskian and its properties, Linear homogeneous equations with constant coefficients, Linear non-homogeneous equations. The method of variation of parameters. Euler’s equations. Simultaneous differential equations. Total differential equations.

**Partial differential equations**

**Recommended Books:**

or
Paper V **Discrete Mathematics**

Five Lectures per week + Tutorial as per University rules  
Max. Marks 100 (including internal assessment)  
Examination 3 hrs.

**SECTION-I**  
Definition, examples and properties of posets, maps between posets, Algebraic lattice, lattice as a poset, duality principal, sublattice, Hasse diagram. Products and homomorphisms of lattices, Distributive lattice, complemented lattice. Boolean Algebra, Boolean polynomial, CN form, DN form.

**SECTION-II**  
Simplification of Boolean polynomials, Karnaugh diagram. Switching Circuits and its applications. Finding CN form and DN form, Graphs, subgraph, complete graph, bipartite graph, degree sequence, Euler's theorem for sum of degrees of all vertices.

**SECTION-III**  

References:  
Semester-VI

DSE-2

(I) Numerical Analysis

or

(ii) Statistics

Paper VI Numerical Analysis
Five Lectures per week + Tutorial as per University rules
Max. Marks 100 (including internal assessment)
Examination 3 hrs.

Section-I
Significant digits, Error, Order of a method, Convergence and terminal conditions, Efficient computations Bisection method, Secant method, RegulaFalsi method, Newton Raphson method, Newton’s method for solving nonlinear systems

Section-II
Gauss elimination method (with row pivoting) and Gauss-Jordan method, Gauss Thomas method for tridiagonal systems Iterative methods: Jacobi and Gauss-Seidel iterative methods Interpolation: Lagrange’s form and Newton’s form Finite difference operators, Gregory Newton forward and backward differences Interpolation

Section-III

REFERENCES:
Paper VI **Statistics**  
Five Lectures per week + Tutorial as per University rules  
Max. Marks 100 (including internal assessment)  
Examination 3 hrs.

**Section-I**  
Probability Classical, relative frequency and axiomatic approaches to probability. Theorems of total and compound probability. Conditional probability, independent events, Bayes Theorem. Random Variables. Discrete and continuous random variables, Distribution function, Expectation of a random variable, Moments, moment generating functions.

**Section-II**  
Discrete and continuous distribution, Bionomial, Poisson, geometric. Normal and exponential distributions, bivariate distribution, conditional distribution and marginal distribution, Correlation and regression for two variables, weak law of large numbers, central limit theorem for independent and identically distributed random variables.

**Section-III**  
Statistical inference, definition of random sample, parameter and statistic concept of sampling distribution standard error, sampling distribution of mean variance of random sample from a normal population, Test of significance based on F and chi-square distribution t and F.
