

**UNIVERSITY OF DELHI**  
**DEPARTMENT OF MATHEMATICS**  
**GENERIC ELECTIVE (GE) Courses For**  
**B.A. / B.Com. Programme**  
(Effective from Academic Year 20-- - --)

**PROPOSED SYLLABUS**

XXXXX Revised Syllabus as approved by Academic Council on XXXX, 2018 and  
Executive Council on YYYY, 2018

GENERIC ELECTIVE (GE) COURSES  
OFFERED TO  
B.A./B.Com. Programme  
(Students who are not having Mathematics as a  
Discipline Subject can opt for such courses)

Semester	Core Course (12)	Ability Enhancement Compulsory Course (AECC)(2)	Skill Enhancement Course (SEC) (4)	Discipline Specific Elective (DSE)(4)	Generic Elective (GE) (2) Credits: 6 each
I					
II					
III					
IV					
V					<b>GE-1</b> <b>General Mathematics- 1</b>
VI					<b>GE-2</b> <b>General Mathematics- 2</b>

## Semester-V

### GE-1: General Mathematics - I

**Total Marks: 100** (Theory: 75, Internal Assessment: 25)

**Workload:** 5 Lectures, 1 Tutorial (per week) **Credits:** 6 (5+1)

**Duration:** 14 Weeks (70 Hrs.) **Examination:** 3 Hrs.

**Course Objectives:** The course aims at introducing number system, fundamental arithmetic operations, prime numbers and Pythagorean triplets to the students. The concept of matrices and determinants with their properties are also introduced.

**Course Learning Outcomes:** The course will enable the students to understand:

- i) The contributions of the Ancient Indian Mathematicians in the field of Algebra, Geometry, Trigonometry, Calculus and Astronomy.
- ii) The number systems and their properties, also Latin and Magic squares.
- iii) Matrices and determinants, inverse of a matrix, Cramer's rule to solve a systems of linear equations.

### Course Contents:

#### Unit 1: Biographies of Ancient Indian Mathematicians (Lectures: 15)

A brief introduction to the lives and information on the works of the following Mathematicians: Aryabhata, Varahamihira, Brahmagupta, Bhaskara I & II, Mahavira, Madhava, and Paramesvara.

#### Unit 2: Number Systems (Lectures: 40)

An overview of number systems, Algebraic and transcendental numbers with some historical background, Fundamental arithmetic operations, Rules of divisibility, Hierarchy of operations and Modular arithmetic, Euclidean algorithm, Prime numbers, The sieve of Eratosthenes, Fundamental theorem of arithmetic, Euclid's lemma, Fermat numbers, Mersenne numbers and Mersenne primes, prime testing method of Fermat, Statement and significance of the prime number theorem, Goldbach conjectures, Twin primes, Uses of prime numbers, Perfect and amicable numbers, Pythagoreans triplets and its properties, Statement and historic background of Fermat's Last Theorem, Multiplication principle, Permutation and combinations, Latin squares and magic squares.

#### Unit 3: Matrices and Determinants (Lectures: 15)

Matrices, Basic concepts and algebraic operations, Types of matrices, Transpose of a matrix, Symmetric and skew-symmetric matrices, Matrix multiplication and its properties, Powers of square matrices, Inverse square matrix and its properties, Determinant and its properties, Expansion by rows and columns, Cofactors, Matrix singularity, Adjoint matrix and calculation of inverse, Cramer's rule.

**Teaching Plan (GE-1: General Mathematics-I):**

**Weeks 1 to 3:** A brief introduction to the lives and information on the works of the following Mathematicians: Aryabhata, Varahamihira, Brahmagupta, Bhaskara I & II, Mahavira, Madhava, and Paramesvara.

[3] Chapters 5, 6, 7, 9, 11 and 13 for brief statements and examples on the works of the above Mathematicians.

[4] Sections 30, 31, 35, 41 to 44, 54 to 56, 59 to 61, 67 and 68 for brief introduction of the Mathematicians.

**Weeks 4 and 5:** An overview of number systems, Algebraic and transcendental numbers with some historical background, Fundamental arithmetic operations, Rules of divisibility, Hierarchy of operations and Modular arithmetic, Euclidean algorithm.

[2] Chapter 3 (Sections 3.0, 3.1, and 3.4), and Chapter 4 (Section 4.2 up to page 128)

**Weeks 6 and 7:** Prime numbers, The sieve of Eratosthenes, Fundamental theorem of arithmetic, Euclid's lemma, Fermat numbers, Mersenne numbers and Mersenne primes, Prime testing method of Fermat, Statement and significance of the prime number theorem, Goldbach conjectures, Twin primes, Uses of prime numbers.

[2] Chapter 3 (Section 3.2)

**Weeks 8 and 9:** Perfect and amicable numbers, Pythagoreans triplets and its properties, Statement and historic background of Fermat's Last Theorem.

[2] Chapter 3 (Section 3.3), and Chapter 9 (Section 9.9, pages 332 to 334).

**Weeks 10 and 11:** Multiplication principle, Permutation and combinations, Latin squares and magic squares.

[2] Chapter 5 (Sections 5.1 to 5.4, and 5.6 up to page 212)

**Weeks 12:** Matrices, Basic concepts and algebraic operations, Types of matrices, Transpose of a matrix, symmetric and skew-symmetric matrices, Matrix multiplication and its properties, Powers of square matrices.

[1] Chapter 1 (Sections 1.4, and 1.5)

**Week 13 and 14:** Inverse of a square matrix and its properties, Determinant and its properties, Expansion by rows and columns, Cofactors, Matrix singularity, Adjoint matrix and calculation of inverse, Cramer's rule.

[1] Chapter 2 (Section 2.4 up to Example 3, page 138), and Chapter 3 (Sections 3.1 to 3.3)

## Semester-VI

### GE-2: General Mathematics – II

**Total Marks: 100** (Theory: 75, Internal Assessment: 25)

**Workload:** 5 Lectures, 1 Tutorial (per week) **Credits:** 6 (5+1)

**Duration:** 14 Weeks (70 Hrs.) **Examination:** 3 Hrs.

**Course Objectives:** The course aims at introducing graph theory, perspective geometry and its uses in art, fractals in nature, Fibonacci sequences and their uses. The solutions to the linear system of equations using row operations of matrices are also introduced.

**Course Learning Outcomes:** The course will enable the students to understand:

- i) The contributions of remarkable Mathematicians in the field of Algebra, Analysis, Number theory, Calculus, Analytic geometry, Ordinary & partial differential equations and mechanics.
- ii) Perspective geometry and its uses in art, Fractals and Fibonacci sequences with applications.
- iii) Types of symmetry and patterns by looking at monuments/buildings/ornamental art.

#### Course Contents:

##### Unit 1: Biographies of Remarkable Mathematicians (Lectures: 15)

A brief introduction to the lives and information on the works of the following Mathematicians: Euler, Lagrange, Gauss, Cauchy, Abel, Galois, Riemann, Hardy, Noether, Ramanujan, Neumann, Wiles, and Bhargava.

##### Unit 2: Functions, Perspective Geometry, Symmetry and Fractals (Lectures: 45)

Basics of Graph Theory, The Königsberg Bridge problem, The four-color map problem, The Möbius strip and the Klein bottle.

Introduction of functions, Graphs of functions, Increasing and decreasing functions, Even and odd functions, Location of points of extrema, Inflection, Periodic functions – all via graphs.

Perspective and Projection, Perspective geometry: Lines and points in 2D and 3D, Fundamental trigonometric functions, Use of perspective in drawing, Historic background, Common tools adopted by artists for such representations, Analysis of some paintings to spot use of perspective and techniques.

Types of symmetry, Concrete examples of symmetry groups, Study of symmetry and patterns by looking at monuments/buildings/ornamental art, Fibonacci sequences in nature, Golden Ratio, Golden triangle.

Shapes and solids, Basic tilings, The regular polyhedron, Importance of Platonic solids and mystical significance to the ancient Greeks; Fractals in nature, Snowflake curves, and Sierpinski triangle.

**Unit 3: Solving Systems of Linear Equations using Matrix (Lectures: 10)**

Solving systems of linear equations, Gaussian elimination method and row operations, Consistent and inconsistent system, Gauss-Jordan row reduction and reduced row echelon form, Homogenous system, Equivalent systems and row equivalence of matrices, Rank of a matrix, Relation between homogenous system and rank.

**Teaching Plan (GE-2: General Mathematics-II):**

**Weeks 1 to 3:** A brief introduction to the lives and information on the works of the following Mathematicians: Euler, Lagrange, Gauss, Cauchy, Abel, Galois, Riemann, Hardy, Noether, Ramanujan, Neumann, Wiles, and Bhargava.

[2] Pages 41, 126, 161, 207, 280, 346, and 579-580.

[4] Chapter 1 (pages 1–7), Chapter 5 (pages 182 – 189), Chapter 8 (pages 299 – 306), Chapter 9 (pages 357 – 362), and Chapter 10 (pages 412 – 416).

**Week 4:** Basics of Graph Theory, The Königsberg Bridge problem, The four-color map problem, The Möbius strip and the Klein bottle.

[3] Chapter 5 (Section 5.5), and Chapter 11 (Section 11.5)

**Weeks 5 and 6:** Introduction of functions, Graphs of functions, Increasing and decreasing functions, Even and odd functions, Location of points of extrema, Inflection, Periodic functions – all via graphs.

[3] Chapter 10 (Sections 10.0, and 10.1 up to page 344)

**Weeks 7 and 8:** Perspective and Projection, Perspective geometry: lines and points in 2D and 3D, Fundamental trigonometric functions, Use of perspective in drawing, Historic background, Common tools adopted by artists for such representations, Analysis of some paintings to spot use of perspective and techniques.

[3] Chapter 11 (Section 11.2), Chapter 13 (Section 13.1), and Chapter 15 (Section 15.1)

**Weeks 9 and 10:** Types of symmetry, Concrete examples of symmetry groups, Study of symmetry and patterns by looking at monuments/buildings/ornamental art, Fibonacci sequences in nature, Golden Ratio, Golden triangle.

[2] Chapter 1. [3] Chapter 8 (Section 8.5), and Chapter 12 (Pages 418 and 419).

**Weeks 11 and 12:** Shapes and solids, Basic tilings, The regular polyhedron, Importance of Platonic solids and mystical significance to the ancient Greeks; Fractals in nature, Snowflake curves, and Sierpinski triangle.

[3] Chapter 12 (Sections 12.0, and 12.1 up to page 399), and Chapter 17 (Sections 17.0 to 17.4)

**Weeks 13 and 14:** Solving system of linear equations, Gauss elimination method and row operations, Consistent and inconsistent system, Gauss-Jordan row reduction and reduced row echelon form, Homogenous system, Equivalent system, Row equivalence, Rank of a matrix, Relation between homogenous system and rank. [1] Chapter 2 (Sections 2.1 to 2.3).
