

## UNIVERSITY OF DELHI

DEPARTMENT: Statistics

COURSE NAME: B.Sc. (Hons)

(SEMESTER – 1)

based on  
Undergraduate Curriculum Framework 2022 (UGCF)  
(Effective from Academic Year 2022-23)

University of DelhiList of DSC Papers

Course Title	Nature of the Course	Total Credits	Components			Contents of the course and reference is in
			Lecture	Tutorial	Practical	
Descriptive Statistics	DSC-101	4	3	0	1	Annexure-I
Introduction to Probability	DSC-102	4	3	0	1	Annexure-II
Calculus	DSC-103	4	3	0	1	Annexure-III

List of GE Papers

Course Title	Nature of the Course	Total Credits	Components			Contents of the course and reference is in

Introduction to Statistics	GE-01	4	3	0	1	Annexure-IV
Time Series Analysis & Index Numbers	GE-02	4	3	0	1	Annexure-V

## **STAT-DSC-101-Descriptive Statistics**

Objective of the Course:

- To tabulate statistical information given in descriptive form and to use graphical techniques to interpret
- To understand various measures of central tendency, dispersion, skewness and kurtosis. Moments and its properties.
- Familiarize with quantitative and qualitative data and available statistical tools to analyse them.
- Finding linear correlation between two variates using different measures and studying their properties. Least square method of fitting of curves, regression lines and their elementary properties.

Learning Outcomes:

After taking this course, the student should be able to:

- Understand concepts of sample vs. population and get acquainted with different types of data /scales. Distinguish between primary and secondary data. Tabulate and plot frequency distribution. Deals with numerical and graphical ways to describe and display data using histograms, stem and leaf plot and box plots.
- Calculate measures of central locations like mean, geometric mean, harmonic mean, median and mode and explain their properties
- Calculate measures of the spread: variance, standard deviation, range and inter-quartile range and explain their properties.
- 
- Understand the meaning of probability and probabilistic experiment. Familiarize with the four approaches to probability theory and particularly, the axiomatic approach and use and manipulate the four axioms of probability comfortably to derive the results of other set operations
- Understand and exploit Addition and Multiplicative laws of probability understand the meaning of conditional probability, conditioning, and reduced sample space, compute joint and conditional probabilities. independence, total probability, Bayes' rule and applications.
- Understand the concept of a random variable, differentiate between independent and uncorrelated random variables, distinguish between discrete, continuous, random variables

and be able to represent them using probability mass, probability density, and cumulative distribution functions, Univariate transformation and its application.

- Understand expectation and its properties, Compute variance and covariance in terms of expectation. Solve problems based on expectation and its properties.

Lecture: 3-hour      Credit:3

Practical: 2-hour      Credit :1

Note: Practical in Batches as per Strength

# Proposed Syllabus for B.Sc. (H) Statistics under UGCF – 2022

## ❖ DSC and DSE papers for B.Sc (H) Statistics under UGCF - 2022

### Semester I

#### STAT-DSC-101: Descriptive Statistics

##### UNIT I

Statistical Methods: Definition and scope of Statistics, concepts of statistical population and sample. Types of Data: Concepts of population and sample, quantitative and qualitative data, cross-sectional and time-series data, discrete and continuous data. Different types of scales: Nominal, ordinal, interval and ratio. Collection and Scrutiny of Data: Primary data. Secondary data – its major sources. Complete enumeration. Construction of tables with one or more factors of classification, frequency distributions and cumulative frequency distributions and their graphical representations (Histograms, frequency polygon), stem and leaf displays.

##### UNIT II

Measures of Central Tendency: Mathematical and positional, partition values, Measures of Dispersion: range, quartile deviation, mean deviation, standard deviation, coefficient of variation, graphical representation of various measures of location and dispersion (Ogives, Histograms, Box Plot) Moments: Raw moments, Central moments, Absolute moments, Factorial moments, Sheppard's corrections, skewness and kurtosis, Types of frequency distributions.

##### UNIT III

Theory of attributes: consistency and independence of data with special reference to attributes, Association of attributes: concept, Yule's coefficient of Colligation and Coefficient of Colligation.

##### UNIT IV

Bivariate data: Definition, scatter diagram, Karl Pearson's coefficient of correlation. Spearman's rank correlation coefficient (Introductory with interpretation). Principle of least squares and fitting of polynomials and exponential curves, lines of regression, properties of regression coefficients, angle between two regression lines, and residual variance.

#### **SUGGESTED READINGS:**

1. Goon, A.M., Gupta, M.K. and Dasgupta, B. (2016). *Fundamentals of Statistics*, Vol. I, 8th Ed. The World Press, Kolkata.
2. Gupta, S. C. and Kapoor, V. K. (2020). *Fundamentals of Mathematical Statistics*, 12<sup>th</sup> Edn., S. Chand and Sons. Delhi.
3. Tukey, J.W. (1977). *Exploratory Data Analysis*, Addison-Wesley Pub. Co. N.Y.
4. Bernstein, S. and Bernstein, R. (2020). *Schaums: Outline of Elements of Statistics I Descriptive Statistics and Probability*. McGraw Hill.
5. Myatt, G, J. and Johnson, W.P. (2014). *Making sense of data: A practical guide to exploratory data analysis and data mining*. 2<sup>nd</sup> Edn, John Wiley & Sons, Inc. N. J.

6. Agresti, A., Christine Franklin, C. and Klingenberg, B. (2017). *Statistics: the art and science of learning from data*. Pearson. Boston.
7. Heumann, C., Schomaker, M. and Shalabh (2016). *Introduction to Statistics and Data Analysis with Exercises, Solutions and Applications in R*. Springer.

## **PRACTICAL / LAB WORK**

### **List of Practicals:**

1. Graphical representation of data- frequency polygon, histogram and ogive.
2. Practical based on arithmetic mean and to find missing frequencies given arithmetic mean.
3. Practical based on median and partition values using formulae and to find them graphically also.
4. Practical based on mode by using formula, graphically, method of grouping.
5. Practical based on combined mean and combined variance.
6. Practical based on quartile deviation using formula and graphically.
7. Practical based on mean deviation and standard deviation.
8. Practical based on coefficient of variation.
9. Practical based on moments about origin and moments about any arbitrary point.
10. Practical on skewness based on mean, median, mode and standard deviation.
11. Practical based on central moments, skewness and kurtosis.
12. Practical based on fitting of polynomials.
13. Practical based on fitting of exponential curves, power curves.
14. Practical based on association and independence of attributes.
15. Practical based on fundamental set of class frequencies in attributes (find missing frequencies given fundamental set of class frequencies).
16. Practical based on Karl Pearson correlation coefficient.
17. Practical based on correlation coefficient for a bivariate frequency distribution.
18. Practical based on lines of regression, angle between lines and estimated values of variables.
19. Practical based on rank correlation with ties.
20. Practical based on rank correlation without ties.

## **STAT- DSC2-INTRODUCTION TO PROBABILITY**

### **Objective of the Course:**

- Familiarize students with the mathematical basis of probability theory.
- Prepare students with important tools for statistical analyses at the undergraduate level.
- Promote understanding through real-world statistical applications.

### **Learning Outcomes:**

After taking this paper, the student should be able to:

- Understand the meaning of probability and probabilistic experiment. Familiarize with the four approaches to probability theory and particularly, the axiomatic approach, use and manipulate the four axioms of probability comfortably to derive the results of other set operations.
- Understand and use addition and multiplicative laws of probability, understand the meaning of conditional probability, conditioning, and reduced sample space, compute joint and conditional probabilities. independence, total probability, Bayes' rule and applications.
- Understand the concept of a random variable, differentiate between independent and uncorrelated random variables, distinguish between discrete and continuous, random variables and be able to represent them using probability mass, probability density, and cumulative distribution functions. Acquaint with Univariate transformation and its application.
- Understand expectation and its properties, Compute variance and covariance in terms of expectation. Solve problems based on expectation and its properties.

Lecture: 3-hour      Credit:3

Practical: 2-hour      Credit :1

Note: Practical in Batches as per Strength

## **STAT-DSC-102: Introduction to Probability**

### **UNIT I**

Probability: Introduction, random experiments, sample space, events and algebra of events.

Definitions of Probability – classical, statistical, Limitations of Classical definition. Probability of union and intersection of events, Probability of occurrence of exactly  $m$  and at least  $m$  events out of  $n$  events, Examples based on classical approach and repeated trials, Kolmogorov's Axiomatic definition and problems based on it, Matching problems.

### **UNIT II**

Unit 2 Conditional Probability, laws of addition and multiplication, theorem of total probability, Examples based on conditional probability and laws of addition and multiplication, independent events – Pairwise mutual independence, Bayes' theorem and its applications, Geometric probability.

### **UNIT III**

Random variables, distribution function and properties, Discrete random variables - p.m.f., discrete distribution function, Continuous random variables - p.d.f, illustrations and properties of random variables. Measures of central tendency, dispersion, skewness and kurtosis for continuous probability distributions, Examples based on random variables, Continuous distribution functions and their properties, Univariate transformation of random variables, Examples based on univariate transformations.

### **UNIT IV**

Mathematical Expectation: Expectation of random variables and its properties (addition and multiplication theorem of expectation) Variance and Covariance in terms of expectation and their properties, Examples based on Expectation and its properties.

### **SUGGESTED READINGS:**

1. Goon, A.M., Gupta, M.K. and Dasgupta, B. (2016). *Fundamentals of Statistics*, Vol. I, 8th Ed. The World Press, Kolkata.
2. Goon, A.M., Gupta, M.K. and Dasgupta, B. (2017). *An Outline of statistical theory*, Vol. I, The World Press, Kolkata.
3. Gupta, S. C. and Kapoor, V. K. (2020). *Fundamentals of Mathematical Statistics*, 12<sup>th</sup> Edn., S. Chand and Sons. Delhi.
4. Chung, K.L. (2000). *A Course in Probability Theory*, 3<sup>rd</sup> Edn. Academic Press.
5. Parzen, E. (1960). *Modern probability theory and its applications*. John Wiley.
6. Feller, W. (1968) *An introduction to probability theory and its applications*. Vol. I, 3<sup>rd</sup> Edn. John Wiley & Sons Inc., New York.
7. Ross, S.M. (2002). *A first course in Probability*, 6th Ed., Pearson.

### **PRACTICAL / LAB WORK**

#### **List of Practicals:**

1. Problem based long run relative frequency to establish statistical definition of probability
2. Problem based on geometric probability.
3. Problem based on permutations and combinations when all objects are distinguishable.
4. Problem based on permutations and combinations when not all objects are different.
5. Computation of probability related to occurrence of exactly  $m$  and at least  $m$  events out of  $n$  events.
6. Computation of probabilities related to matching problems

7. Computation of conditional probabilities using addition and multiplication laws.
8. Problem related to application of Bayes Theorem.
9. Computation of distribution function of discrete and continuous random variables and calculations of probabilities of events thereof.
10. Graphical representation of probability function and distribution function of discrete/continuous arbitrary random variables.
11. Finding expectation, variance and covariances of discrete as well as continuous random variables
12. Finding expectation, variance and covariances of linear function of discrete as well as continuous random variables.
13. Constructing sample space for two-dimensional random variable.

**Syllabus**  
**B.Sc. (Hons) Statistics, Semester I**  
**Paper DSC 3: Calculus**

**Credits: 04**

**Max. Marks: 100**  
**Theory Marks: 75**  
**IA: 25**

**Course Objectives:**

The objective of this course is

- To familiarize students with the basic mathematical tools.
- It helps students to understand the other statistical concepts.

**Expected Learning Outcomes:**

On completion of this course students are expected

- To solve applied problems using differentiation and integration.
- To solve applied problems under integral sign and changes of order of integration.

**Credit of the Course: 3 Lectures + 2 Practicals\***

**Content**

**UNIT I: DIFFERENTIAL CALCULUS**

Review of limits, continuity and differentiability, partial differentiation and total differentiation. Indeterminate forms: L-Hospital's rule, Leibnitz rule for successive differentiation. Euler's theorem on homogeneous functions.

**UNIT II: INTEGRAL CALCULUS**

Review of integration and definite integral. Differentiation under integral sign, double integral, changes of order of integration. Beta and Gamma functions: Properties and relationship between them.

**UNIT III: DIFFERENTIAL EQUATIONS**

Exact differential equations. Differential equations of first order and first degree. Higher Order Differential Equations: Linear differential equations of order  $n$ , Homogeneous and non-homogeneous linear differential equations of order  $n$  with constant coefficients, Different forms of particular integrals. The Cauchy-Euler's equation of order  $n$ . Formation and solution of a partial differential equations. Equations easily integrable. Linear partial differential equations of

first order. Homogeneous linear partial differential equations with constant coefficients. Different cases for complimentary functions and particular integrals.

## PRACTICAL/LAB WORK

### List of Practicals:

- 1) Verification of Euler's Theorem.
- 2) Applications of differentiation
  - a. Calculate income and price elasticity of demand.
  - b. Determination of price and quantity for which total revenue is maximum.
  - c. Find the level of output for which the average cost is minimum.
  - d. Solve profit maximization problems.
  - e. Evaluate first and second order partial derivatives of functions of the form  $z = f(x, y)$ .
  - f. Examine a function of two variables for relative maxima and relative minima.
  - g. Find the nature of the commodities by using the concept of partial marginal demand functions.
  - h. Find four partial elasticities for a demand function of two variables.
- 3) Applications of Integration
  - a) Derive total cost function from given marginal cost function.
  - b) Derive total revenue function and demand function from a given marginal revenue function.

- c) Calculate the maximum profit if marginal revenue and marginal cost are given.
- d) Find the demand function when the price elasticity of demand is given.
- 4) Applications of Differential Equations
  - a) Application on growth and decay.
  - b) Application of the form  $\frac{d^2y}{dx^2} = f(x)$  and  $\frac{d^2y}{dx^2} = f(y)$  to physical problems.
  - c) Application on coordinate geometry.
- 5) Verify that the area under the curve is unity under the given p.d.f. and also calculate
  - a) Arithmetic Mean
  - b) Median
  - c) Mode
  - d) Standard Deviation

### Pattern of Paper

- 1) There will be an end-semester *Theory & Practical* examinations in this paper.
- 2) Theory paper will consist of **two** sections, Section A based on the Unit I and Unit II (Equal weightage should be given to both the units) consisting of **five** questions and Section B based on Unit III consisting of **three** questions. Weightage of the marks for
  - Unit I 25 Marks
  - Unit II 25 Marks
  - Unit III 25 Marks
- 3) Students will have to attempt six questions in all by selecting **four** questions from Section A and **two** questions from Section B
- 4) Evaluation for practical will be done through continuous evaluation (25 marks) and end semester practical examination (25 marks).
- 5) Continuous evaluation shall be comprised of 15 marks for practical file and 10 marks on the basis of performance of the student in the practical classes.
- 6) Practical examination will be of 02 hrs. duration.
- 7) Practical paper will consist of five questions in all covering the topics from all the Units on the basis of its practical applications, out of which four questions are to be attempted.

**\* There will be batch of 15 students per practical class.**

\*\*\*\*\*

**Generic Elective**

**B.Sc. (H) Statistics semester I under UGCF 2022  
GE I(a) : Introduction to Statistics**

**Credits: 4**

**( Theory:3 and Practical:1)**

**Course Objectives:**

The learning objectives include:

- Acquainting the students with descriptive data analysis.
- To introduce students to different measurement scales, qualitative and quantitative and discrete and continuous data.
- To help students to organise data into frequency distribution graphs, including bar graphs, histograms, polygons and ogives.
- Students should be able to understand the purpose for measuring central tendency, dispersion, skewness and kurtosis and should be able to compute them as well.
- Students should be able to understand theory of attributes, independence and association of attributes.

**Course Learning Outcomes:**

Upon successful completion of this course students will demonstrate knowledge of:

- Introduction to Statistics, definitions and data classification
- Graphical displays of data, frequency distributions, analysing graphs.
- Numerical descriptions of data, measures of center tendency, measures of dispersion, skewness and kurtosis.
- Theory of attributes.

**Contents.**

**UNIT I : Introduction to Statistics and data**

Introduction: Definition and scope of Statistics, concepts of statistical population and sample. Data: quantitative and qualitative, attributes, variables, scales of measurement -nominal, ordinal, interval and ratio. Presentation: tabular and graphic, including histogram and ogives.

## UNIT II: Descriptive Statistics

Measures of Central Tendency: Arithmetic mean, median, mode, geometric mean, harmonic mean, partition values. Measures of Dispersion: Range, quartile deviation, mean deviation, standard deviation, variance, coefficient of dispersion: coefficient of variation. Moments, Measure of skewness and kurtosis.

## UNIT III: Theory of attributes

Theory of Attributes: Consistency of data, independence of attributes, association of attributes, Yule's coefficient of association, coefficient of colligation.

## SUGGESTED READINGS:

1. Goon, A.M., Gupta, M.K. and Dasgupta, B. (2002). *Fundamentals of Statistics*, 8th Ed. Vol. I & II, The World Press, Kolkata.
2. Miller, I. and Miller, M. (2006). *John E. Freund's Mathematical Statistics with Applications*, 7th Ed., Pearson Education, Asia.
3. Mood, A.M. Graybill, F.A. and Boes, D.C. (2007). *Introduction to the Theory of Statistics*, 3rd Ed., (Reprint), Tata McGraw-Hill Pub. Co. Ltd.
4. Gupta, S.C., and Kapoor, V.K. (2014). *Fundamental of Mathematical Statistics*, 11<sup>th</sup> Ed., Sultan Chand.
5. Ross, Sheldon M. (2010): *Introductory Statistics*, 3rd Edition, Academic Press.
6. Sidney Siegel, N. John Castellan, Jr.: *Non Parametric Statistics for the behavioral sciences*, Second edition.

## PRACTICAL/ LAB WORK

### List of Practical:

1. Tabular representation of data
2. Graphical representation of data using histogram
3. Graphical representation of data using ogives
4. Problems based on arithmetic mean
5. Problems based on geometric mean
6. Problems based on harmonic mean
7. Problems based on median
8. Problems based on mode
9. Problems based on partition values
10. Verifying the relationship between arithmetic mean, geometric mean and harmonic mean
11. Problems based on range and quartile deviation.
12. Problems based on mean deviation
13. Problems based on standard deviation and variance
14. Problems based on combined mean and combined variance
15. Problems based on coefficient of variation.
16. Problems based on moments,
17. Problems based on skewness

18. Problems based on kurtosis
19. Checking consistency of data.
20. Checking the independence of attributes
21. Measuring the association between the attributes.

### **Pattern of theory examination (75 marks)**

End Semester Paper will be of 50 marks and 25 marks for internal assessment.

*Instruction for the students:*

- Do five questions in all. Question 1 is compulsory. Do remaining four questions from Section A and B, selecting two from each section.
- All question carries equal marks
- Use of simple calculator is allowed.

### **NOTE**

- Question 1 will be objective type based on all the units for 10 marks.
- Section A consisting of three questions (with subparts) each of 10 marks from Unit II
- Section B consisting of three questions (with subparts) each of 10 marks from Unit I and Unit III

### **Pattern of practical examination (25 marks)**

- End Semester practical examination will be of 15 marks and 10 marks for internal assessment.
- End semester examination will have two parts: 10 marks for practical examination and 5 marks for viva-voce.

- A student has to attempt four questions in all from the total of five (5) questions.

**Bachelor of Science (Hons.) in Statistics**  
**STAT-GE-102: Time Series Analysis and Index Number**

**Credits: 4**

**Course Objectives:**

The learning objectives include:

- Understand the concept of time series, its components, and their estimation.
- Application of time series.
- Understand the concept, formulation, and application of index numbers.

**Course Learning Outcomes:**

After completing this course, students will possess the ability to appreciate, formulate solutions, and analyze the use of time series and index numbers for real-world problems.

**Contents:**

**UNIT I**

Introduction to Time Series, Components of time series, Decomposition of time series- Additive and multiplicative model with their merits and demerits, Illustrations of time series, Measurement of trend by method of free-hand curve, method of semi-averages and method of least squares (linear, quadratic and exponential).

**UNIT II**

Fitting of modified exponential, Gompertz and logistic curve, Moving average method, Measurement of seasonal variations by method of simple averages, ratio to trend method, and ratio to moving average method.

**UNIT III**

Introduction to Index numbers, Problems in the construction of index numbers, Construction of price and quantity index numbers: simple aggregate, weighted aggregate (Laspeyres, Paasche's, Drobish-Bowley, Marshall-Edgeworth's, Walsch and Fisher's Formula), simple and weighted average of price relatives, and chain base method, Criteria for a good index number, Errors in the measurement of price and quantity index numbers, Consumer price index number, its construction and uses, Uses and limitations of index numbers.

**SUGGESTED READINGS:**

1. Croxton, Fredrick E, Cowden, Dudley J. and Klein, S. (1973): Applied General Statistics, 3<sup>rd</sup> edition, Prentice Hall of India Pvt. Ltd.
2. Allen R.G.D. (1975): Index Numbers in Theory and Practice, Macmillan
3. Gun, A.M., Gupta, M.K. and Dasgupta, B. (2008). Fundamentals of Statistics, Vol. II, 9th Ed., World Press, Kolkata.
4. Gupta, S.C. and Kapoor, V.K. (2014). Fundamentals of Mathematical Statistics, 11th Ed., Sultan Chand.
5. Mukhopadhyay, P. (1999). Applied Statistics, New Central Book Agency, Calcutta.

## **PRACTICAL/LAB WORK**

### **List of Practicals:**

1. Fitting of linear trend
2. Fitting of quadratic trend
3. Fitting of an exponential curve
4. Fitting of modified exponential curve by the method of
  - a. Three selected points
  - b. Partial sums
5. Fitting of Gompertz curve by the method of
  - a. Three selected points
  - b. Partial sums
6. Fitting of logistic curve by the method of three selected points
7. Fitting of trend by moving average method (for n even and odd)
8. Measurement of seasonal indices by
  - a. Method of simple averages
  - b. Ratio-to-trend method
  - c. Ratio-to-moving-average method
9. Construction of price and quantity index numbers by simple aggregate method.
10. Construction of price and quantity index numbers by Laspeyres, Paasche's, Drobish-Bowley, Marshall-Edgeworth, Walsch and Fisher's Formula.
11. Construction of price and quantity index numbers by simple and weighted average of price relatives.
12. Construction of index number by Chain base method.
13. Construction of consumer price index number by
  - a. Family budget method
  - b. Aggregate expenditure method
14. Time Reversal Test and Factor Reversal Test

### **PATTERN OF THE QUESTION PAPER:**

Students are required to attempt 5 questions in all. All questions are of 15 marks each.

Question 1 is compulsory and will be based on the entire syllabus.

There will be 3 questions from Units 1 and 2; and 2 questions from Unit 3. Students can attempt any 4 questions out of these.
