(iv)Addressing the concerns of societal as well as mathematical equity

Engagement with the Field

An understanding of the relationship between the discipline and a selection of school curriculum will be enhanced through observations and projects to address the following issues: What knowledge is valued? How is mathematics experienced in school settings and how are learner identities constructed? How do communities shape knowledge production and, there, what counts as useful mathematical knowledge? Credits: 04 MM: 100 (External: 70 Internal: 30) Contact Week 15

Introduction of the Course

The assessment and identification of needs for children with intellectual disabilities are crucial for several reasons. These reasons include understanding the unique challenges faced by these children, tailoring support and interventions, promoting inclusion and acceptance, and ultimately improving their quality of life. Firstly, understanding the specific needs of children with intellectual disabilities is essential for providing appropriate support. This support can include educational, therapeutic, and social services that are tailored to their individual requirements. By identifying their strengths and needs, educators and caregivers can design personalized interventions that address these needs, leading to better outcomes and overall development. Secondly, promoting inclusion and acceptance in society is vital for children with intellectual disabilities. By recognizing their unique needs and challenges, schools, communities, and families can work together to create an inclusive environment that values and supports diversity. This fosters a sense of belonging and helps to break down barriers that may hinder their full participation in society. Thirdly, early identification and intervention are critical for children with intellectual disabilities. By identifying their needs at an early age, professionals can provide timely support and services that can significantly impact their development and future opportunities.

Learning Outcome

After completing the course student-teachers will be able to

- Comprehend historical perspective, nature and needs and characteristics of persons with Intellectual Disability.
- Understand various procedures, areas and approaches of assessment and their relevance.
- Gain insight into importance of assessment at Pre School and school level and become familiar with development and adaptive behavioural assessment and assessment tools at pre-school level.
- Get familiarized assessment tools for independent living, provisions and schemes for vocational skills development and implication of assessment.
- Develop understanding about significance of different types of family needs their assessment and implications for extending support to their families, demonstration.

Semester-ML) Course Code: D 18 Credits: 02

Maximum Marks: 50 (External -35 & Internal 15)

Introduction of the Course

India has an excellent historical backdrop as well as contemporary talents in the field of art. However, it is debatable whether the same has been translated into our school system effectively. Do most of our students get exposure to a variety of activities involving knowing, exploring and appreciating art? Most probably they do not. It is time that we take a fresh look at what art education is and what role it plays in school education. More than anything, art education is also expected to enhance learning. And do teachers know how to go about it to achieve it? Here is an opportunity to facilitate the art within you which in turn will reflect art in within students.

For a student-teacher with disability appropriate learning alternatives are to be given by the college. For example, a candidate with blindness must get alternative learning opportunities and evaluative tasks for visual art or a candidate with deafness for music art - if and when needed.

After completing the course student-teachers will be able to

- 1. Exhibit Basic understanding in art appreciation, art expression and art education.
