1. Amendment to Appendix -II-A to the Ordinance V (2-A) of the Ordinances of the University vide EC Resolution 18-1-20 dated 18.08.2022 regarding Value Addition Courses (VAC)

Following addition be made to Appendix-II-A to the Ordinance V (2-A) of the Ordinances of the University;

Add the following:

**VALUE ADDITION COURSES (VACs)
UNDER
UGCF-2022
LISTED UNDER APPENDIX-II-A TO THE ORDINANCE V (2-A) OF THE
ORDINANCES OF THE UNIVERSITY
(With effect from Academic Year 2022-23)**

In pursuance of the objectives outlined in the National Education Policy 2020, the Value Addition Courses (VACs) seek to fulfil the mandate of providing holistic education to the students. As the NEP elucidates, “the purpose of the education system is to develop good human beings capable of rational thought and action, possessing compassion and empathy, courage and resilience, scientific temper and creative imagination, with sound ethical moorings and values.” The Value Addition Courses will introduce students to the rich heritage of the nation as well as to important social concerns of the current times, helping them to make connections between what they learn and how they live.

The courses have a sound theoretical base as well as appropriate hands-on components. At the same time, they clearly set out measurable and attainable Learning Outcomes. Knowledge, in essence, being integrated, these courses are essentially multidisciplinary in nature.

Designed to ignite the intellectual curiosity of the learners, the Value Addition courses will inspire and guide them in their journey of personal and professional development making them thoughtful, well-rounded, and creative individuals, with a sense of service and responsibility towards the Nation.

A student who pursues any undergraduate programme in the University and its Colleges is offered a pool of Value Addition Courses, from which he has to choose one to study in the first Semester. A list of such courses as passed by the Executive Council in its meeting dated 18.08.2022 is as below:

| SL.NO. | COURSE TITLE | TOTAL CREDITS: 2 |
|--------|---|------------------|
| 1 | Ayurveda and Nutrition | |
| 2 | Constitutional Values and Fundamental Duties | |

Examination scheme and mode: Subject to directions from the Examination Branch/University of Delhi from time to time

VAC: Culture and Communication

| Course Title & Code | Credits | Credit Distribution of the Course | | | Eligibility Criteria | Prerequisite of the Course |
|------------------------------|---------|--------------------------------------|----------|------------------------|-----------------------------------|----------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Culture and Communication | 02 | 1 | 0 | 1 | Pass in Class 12 th | NIL |

Learning Objectives:

- To focus on traditional values disseminated from Indian cultural heritage.
- To understand the interconnections between the legacy of our past and needs of our contemporary society.
- To learn to adapt, interact and celebrate our diversity and pluralistic culture.
- To develop communication skills in speaking, listening, reading and writing and apply them in our quotidian life as young citizens of contemporary India.
- To integrate ethical values and life skills.

Course Outcomes

- Students will be able to appreciate the relevance of ancient Indian wisdom and core ethical values in our contemporary life.
- Students will be able to engage in a dialogue between the past and the present and inculcate the best principles towards a meaningful life.
- Students will be encouraged to involve themselves in team work and group activities to address challenges faced in metropolitan cities.
- Students will be able to develop communication skills, that is, analytical reading, empathetic listening, considerate speaking as well as informed writing.

- Extension activities will equip the students, drawn from diverse backgrounds, with life skills and confidence to integrate with a multicultural environment and work towards an inclusive community.
- Students will be encouraged to envisage and work towards an ethically robust society and thereby strengthen the nation.

| | |
|---|------------------|
| UNIT - I Ethical Values from Indian Cultural Heritage <ul style="list-style-type: none"> • <i>Vasudhaiva Kutumbakam</i> • United We Stand, Divided We Fall • <i>Ek Bharat, Shresht Bharat</i> | 3 Classes |
| UNIT - II Developing Life Skills <ul style="list-style-type: none"> • Empathy • Adaptability • Conserving our natural resources • Sharing knowledge resources | 4 Classes |
| UNIT - III Effective Communication in Everyday Life <ul style="list-style-type: none"> • Empathetic listening • Considerate speaking • Analytical reading • Informed writing | 8 Classes |

Practical/ Practice Component

(15 Sessions of 2 hours each= 30 hours)

As hands-on experience is an essential component of the course, this section will focus on the practical aspects to correlate with the fundamental principles and learnings of the theory portion. Students will be encouraged to use the communication tools learnt through Unit 3 and corroborate the continuities of core principles studied in Unit 1 and 2.

- Students will be asked to conduct surveys/interviews in their neighbourhood or commuting routes to assess the nature and quality of negotiating our cultural diversity and pluralist traditions.

- Students would be assigned visits to old-age homes, hospitals, cancer wards, etc. to interact and write about their experiences with old people, caregivers, patients, nursing staff, helpers, etc.
- They will also be assigned visits to historically important places and monuments within the city and also converse with the tourists in order to trace a comprehensive view of the rich cultural history of India. They may create video documentaries, take and record tourists' interviews and/or write a journal entry of the visit using the communication skills learnt.
- Students shall make group presentations or individual reports on the activities undertaken. Discussions with classmates and the teacher shall be undertaken to evolve clarity of vision on the ethical values and effective communication skills learned through this course.
- Any other related activity.

(5 Weeks)

- Needs and challenges
- Vision of Digital India: DigiLocker, E-Hospitals, e-Pathshala, BHIM, e-Kranti (Electronic Delivery of Services), e-Health Campaigns
- Public utility portals of Govt. of India such as RTI, Health, Finance, Income Tax filing, Education

UNIT – II Communication and Collaboration in the Cyberspace (4 Weeks)

- Electronic Communication: electronic mail, blogs, social media
- Collaborative Digital platforms
- Tools/platforms for online learning
- Collaboration using file sharing, messaging, video conferencing

UNIT – III Towards Safe and Secure Cyberspace (4 Weeks)

- Online security and privacy
- Threats in the digital world: Data breach and Cyber Attacks
- Blockchain Technology
- Security Initiatives by the Govt of India

UNIT – IV Ethical Issues in Digital World (2 Weeks)

- Netiquettes
- Ethics in digital communication
- Ethics in Cyberspace

Practical component (if any) (15 Weeks)

- The course should be conducted in an interactive mode through demonstration, using appropriate tools.
- Conduct workshops on e-services initiated under Digital India.
- Spread digital literacy/awareness amongst the vulnerable groups and marginalised sections of the society like street vendors, domestic help, security guards, senior citizens.
- Students will take up team activities/ projects exploring digital services in the areas such as education, health, planning, farming, security, cyber security, financial inclusion, and justice, e-Kranti.
- Any other Practical/Practice as decided from time to time.

VAC 1: EMOTIONAL INTELLIGENCE

Credit distribution, Eligibility and Pre-requisites of the Course

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course |
|------------------------|---------|-----------------------------------|----------|---------------------|--------------------------------|-----------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Emotional Intelligence | 02 | 1 | 0 | 1 | Pass in Class 12 th | NIL |

Learning Objectives

The Learning Objectives of the course are:

- Introduce the concept of emotional intelligence, its models and components.
- Understand the significance of emotional intelligence in self-growth and building effective relationships.
- Identify the measures of emotional intelligence.

Learning outcomes

The Learning Outcomes of the course are

- Self-Awareness, Self-Management, Social Awareness & Relationship Management.
- Discover personal competence and techniques of building emotional intelligence.
- Gain insights into establishing positive relationships.

SYLLABUS OF EMOTIONAL INTELLIGENCE

UNIT – I Fundamentals of Emotional Intelligence

(4 Weeks)

- Nature and Significance
- Models of emotional intelligence: Ability, Trait and Mixed
- Building blocks of emotional intelligence: self-awareness, self-management, social awareness, and relationship management

UNIT – II Personal Competence

(5 Weeks)

- Self Awareness: Observing and recognizing one's own feelings, Knowing one's strengths and areas of development.
- Self Management: Managing emotions, anxiety, fear, and anger.

UNIT – III Social Competence

(3 Weeks)

- Social Awareness: Others' Perspectives, Empathy and Compassion
- Relationship Management: Effective communication, Collaboration, Teamwork, and Conflict management

UNIT – IV Emotional Intelligence: Measurement and Development (3 Weeks)

- Measures of emotional intelligence
- Strategies to develop and enhance emotional intelligence

Practical component (if any)

(15 Weeks)

Students will practice self-management techniques to regulate emotions such as

- Mindfulness
- Conditioned relaxation response
- Boundary setting
- Any other

Students will practice various techniques of relationship management such as engaging with:

- Display of empathy
- Effective communication
- Teamwork
- Conflict resolution
- Any other
- If required, students can share their experiences in the form of a Project Report.
- Any other Practical/Practice as decided from time to time

Suggested Readings

- HBR's 10 Must Reads on Emotional Intelligence (2015)

- HBR's 10 Must Reads on Managing Yourself (2011)
- Self Discipline: Life Management, Kindle Edition, Daniel Johnson.

Examination scheme and mode: Subject to directions from the Examination Branch/University of Delhi from time to time

VAC 1: ETHICS AND CULTURE

Credit distribution, Eligibility and Pre-requisites of the Course

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course |
|---------------------|---------|-----------------------------------|----------|---------------------|--------------------------------|-----------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Ethics and Culture | 02 | 1 | 0 | 2 | Pass in Class 12 th | NIL |

Learning Objectives

The Learning Objectives of this course are as follows:

- To help students explore ethical and cultural dimensions of their lives.
- To provides a forum for students to pause, revisit their assumptions and beliefs, and become mindful of their thoughts, emotions and actions.
- To give the students an opportunity to express themselves and inquire into their decision making processes.
- To cultivate ethical values and participate in the creation of a society based on acceptance, compassion, and justice.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Explore perspectives on ethics in thoughts, words and actions
- Evolve ethical decision making practises
- Understand the need for an ethical society and culture
- Introspect, become conscious of and assess one's stance in life
- Cultivate empathy, tolerance and compassion
- Apply the values learnt in the course to everyday life

SYLLABUS OF ETHICS AND CULTURE

UNIT – I Introduction - The Basis of Ethics

(3 Weeks)

- Getting to Know Each Other
- What to Expect from the Course?
- Recognition of Our Common Humanity
- Empathy, Compassion and Justice

UNIT – II The Role of Intelligence, Reason and Emotions

(4 Weeks)

- Discernment: What Is The Right Thing To Do?
- The Art of Conflict Resolution
- Destructive and Constructive Emotions
- The Need for Emotional Balance

UNIT – III Cultivating Inner Values- Ethics in the World of Work and Play

(4 Weeks)

- Training the Mind: Mindfulness and Kindness
- Meditation
- Discovering your Vocation and Interests
- Self-discipline, Integrity, Commitment, Creativity
- Work-Life Balance

UNIT – IV Striving for a Better World | Outreach Activities

(4 Weeks)

- Means and Ends
- Debate and Dialogue
- Culture as Shared Values
- Creating and Sustaining Ethical Cultures: The Role of Philosophy, Religion, Literature, Theatre, Cinema, Music, Media
- Outreach Activities

Practical component (if any) –

(15 Weeks)

Unit 1

1. The teacher may ask students to introduce themselves, sharing their regional and cultural roots. They may be asked to reflect on those aspects of their identities that reflect their cultural roots.
2. After a round of initial introduction, the teacher may ask students to list down a set of values that they think they have developed through their parents and grandparents. Are these values unique to their families, regional and/or ethnic backgrounds? Of these, which are the values they would like to sustain and which are the ones they would wish to modify?
3. The teacher may draw upon the values discussed by students in the previous lesson. Using these as the base, the teacher may ask students to think of ethical values that form the basis of their decisions.

4. The teacher may ask students to think of people who they think have lived an 'ethical life'. These may be people who they know from their personal lives or people known for upholding ethical values in the face of adversity.
5. Students are encouraged to identify what common human values are necessary are Realise shared common humanity– the feeling of interconnectedness/interdependence.
6. Class to be divided in small groups to discuss how each would make an effort to cultivate new morals/ethical values for betterment of their local environment.
7. Celebrating 'Sharing and Caring' based on regional diversity can be encouraged.
8. Engage students to do activities of 'being in the shoes of others' (peers, parents, siblings, house help/support or in any local community grappling with problems) to understand the problems empathetically.
9. The students can be asked to make bookmarks/cards to remind them about virtues pertaining to empathy versus sympathy, need versus greed, just versus unjust or compassion versus insensitivity.
10. Compassion is about cultivation of it as a daily value so students can in small groups undertake compassion based activities of looking after animals, birds, needy, elderly, differently abled, non-privileged etc. and share their thoughts in the class.

Unit 2

1. Make the student think of a hard decision they have made. What made it hard? How did you make the decision? How do you assess it retrospectively?
2. Encourage students to think of judgements and decisions based on the dilemmas and challenges they faced? How do they go about making these decisions?
3. The teacher may introduce any well known story and ask the students to discuss the story from the point of view of the different characters.
4. Ask students how willing they are to deal with a conflict when it occurs. What strategies do they adopt to resolve the conflict?
5. The teacher may ask students to prepare posters with captions like "avoidance", "competition", "cooperation" and "adaptation" and then may ask students to identify with one of these styles which according to them best represents their style of dealing with conflict.
6. The students may be asked to discuss different such similar situations that they may have encountered and a discussion may be initiated on how they resolve those conflicts.
7. The students can be asked to write down certain destructive emotions that they are experiencing presently. How would they work to make them constructive? A classroom discussion could follow around this.

8. Ask the students to note down a list of constructive emotions experienced by them recently. Were the constructive emotions less powerful as compared to the destructive ones experienced by them? Discussion in class can follow.
9. How do you (i) express, (ii) handle anger/ disgust/ distress/ fear (any destructive emotion can be taken up). A healthy discussion in the class can take place around this.
10. Students may be asked to practice a simple breathing exercise. They can sit straight with eyes opened or closed in a comfortable position to just observe their breathing. They can repeat this exercise six to eight times and share (if they like) their experience of silence.
11. To identify your interests and develop a meaningful hobby.
12. Have an open conversation in the class about happiness.

Unit 3

1. The students could observe various emotions that bottle-up in their minds and be asked to watch the flow of emotions non-judgmentally.
2. Students may be asked to recall their journey to the college that morning. Do they remember road signs, faces of people they crossed, the roads that they took, the people they interacted with, the sights and smells around them, or anything else?
3. Students could be asked to cultivate the habit of simple greeting as practice of gratitude and celebrate a day of joyful giving.
4. The students can close their eyes for 2-3 minutes and be asked to observe their thoughts, list them and categorise them into 'to be kept' or 'to let go'.
5. The teacher may ask students to close their eyes and imagine a situation in which they are truly happy. Students could wish for the well-being of two students in the same classroom in their meditative state.
6. Students could meditate on who has been their inspiration and the qualities of the person who has inspired them and then express gratitude to the person concerned.
7. The teacher may ask the students to think retrospectively about what they thought they would take up as a vocation when they were younger. How and why their choices were influenced and changed, if at all.
8. The teacher may ask the students to imagine and chart a journey and destination for themselves. They may also talk about the challenges they foresee.
9. The teacher may encourage the students to maintain a daily diary of their scheduling of time or a worklog and see how much time they effectively give to their work. The teacher may help the students identify the distractors and where one may be 'wasting' time and energy. The activity is designed to help students understand the value of effective time utilisation.

10. In this lesson, the teacher may ask the students to draw up a list of team ethics. They may build this based on their experiences of working with each other in groups.
11. The teacher may ask the students to share an incident each where they felt pressurised/ bored to complete some work. How did they deal with their stress and monotony of work?

Unit 4

1. Students will be asked to work in pairs and develop situations that pose ethical dilemmas and how to resolve them.
2. Students may be asked to look at a film or at an advertisement and discuss what they think about the question/s posed in them. The teacher may ask them if they can think of an alternative ethical approach to the problem posed.
3. Students will be asked to think of situations in which they lost their temper. Have they ever felt that in a fit of emotion they said something that they regretted later? If they had paused to listen and then respond, what would the other person have said? How would the outcome of the situation have been different?
4. A debate on any relevant topic may be conducted in the class. After the first round the students may be asked to adopt and argue their opponents point of view. At the end of this exercise the students can have an open discussion on which position finally appealed to them.
5. The teacher may give a short story to the students and ask them to change the ending. They may be asked to observe how characters and their views may have undergone change in the process.
6. There can be a discussion around a topic such as, the idea of corporal punishment, euthanasia etc. Students can be given a sheet of paper and can be asked to write for or against the theme. The idea is to enable them to understand that the positions they have taken vis-a-vis the theme are a result of different value orientations.
7. Popular foods from many parts of India can be discussed. Their origins can be traced to chart a kind of food history.
8. The teacher on the basis of discussions with students can draw from Philosophy, Religion, Literature, Theatre, Cinema, and Media to highlight that the choices people/characters make are grounded in their culture.
9. The students can discuss classical/folk dances that are performed in their respective groups. Details can be drawn based on the number of dancers, music (live or recorded) and costumes. 3. The role of oral traditions and literature in indicating the importance of ethics in our everyday lives can be discussed.

Suggested Activities for Outreach: Social/ Community Engagement and Service

In the weeks that follow, students will be expected to engage in outreach activities that shall enable them to put into practice some of the ethical considerations deliberated upon and imbibed in the previous modules. A list of suggested outreach activities is as follows:

- Adopt a village with the aim of cultural and ethical learning
- Discussing health and hygiene issues in a community
- Tutoring students
- Gender sensitisation
- Working on environmental issues
- Working with Child Care Centres such as Anganwadis and Balwadis
- Working with differently abled students
- Preserving cultural and heritage sites
- Spending time with senior citizens including in a Senior Citizens Home
- Extending care to animals in animal welfare shelters
- Addressing issues relating to Reproductive Health
- Spreading awareness about adolescent health
- Addressing issues relating to mental health
- Health and nutrition awareness
- Swacchata Abhiyaan
- Sensitisation towards disease awareness
- Vriksharopan
- If required, students can share their experiences in the form of a Project Report.
- Any other Practical/Practice as decided from time to time

Suggested Readings:

- Aristotle. Nichomachean Ethics. London: Penguin Classics, 2004
- Swami Vivekananda. The Complete Works of Swami Vivekananda. Advaita Ashrama, 2016.

- Panch Parmeshwar in English translation as The Holy Panchayat by Munshi Premchand
- The Silas Marner by George Eliot
- We are Seven by Wordsworth
- The Chimney Sweeper by William Blake

Examination scheme and mode: Subject to directions from the Examination Branch/University of Delhi from time to time

VAC 1: ETHICS AND VALUES IN ANCIENT INDIAN TRADITIONS

Credit distribution, Eligibility and Pre-requisites of the Course

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course |
|--|---------|-----------------------------------|----------|---------------------|--------------------------------|-----------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Ethics and Values in Ancient Indian Traditions | 02 | 1 | 0 | 1 | Pass in Class 12 th | NIL |

Learning Objectives

The Learning Objectives of this course are as follows:

- To understand the rich cultural traditions relating to discourses on life and its purpose, instilling of values relating to ethical and moral propriety.
- To make students more engaged with the past traditions of the country.
- To introduce students to early epics: Puranic, Buddhist and other traditions.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Students will develop an overview of indigenous philosophies.
- Understanding the richness of Indian heritage leading to greater sensitivity.
- Inspiration from history to deal with contemporary issues.
- Appreciate the traditions of diversity, discussions, debates and knowledge transmission.

SYLLABUS OF ETHICS AND VALUES IN ANCIENT INDIAN TRADITIONS

UNIT – I The idea of India and Bharat

(5 Weeks)

- 'Jambudvipa'; 'Aryavrata'; 'Bharat' ; India
- Early discourse on moral order- ṛta in Vedic traditions
- Debates in the Upanishads and the Shramanic traditions

UNIT – II State, Society and Dharma

(5 Weeks)

- Kingship and Society: Dharma, Neeti and Daṇḍa
- Rashtra, Sanskar and making of socio-cultural milieu

UNIT – III The ‘Purpose of Life’ in Texts

(5 Weeks)

- Right Conduct’: Buddhist, Jaina and Shramanic Traditions
- Puruṣārtha Chatushtaya: Dharma, Artha, Kāma and Mokṣa
- Assimilation and Assertion: Ethical issues in Epics and Puranic traditions

Practical component (if any) –

(15 Weeks)

- Discuss in your locality, in 10-15 households with regard to Ethics and Values in Indian traditions:
 - i. Vedic traditions
 - ii. Puruṣārtha Chatushtaya
 - iii. Buddhist, Jaina and Shramanic Traditions
 - iv. Jambudvīpa; Aryavrata; Bharat; India
- Students are required to explore e-resources available with University of Delhi and academic institutions.
- Students are required to watch documentaries and films on the subject-related topics.
- If required, students can share their experiences in the form of a Project Report.
- Students may share their experiences in the form of audio-visual presentations of 15-30 minutes.
- Any other Practical/Practice as decided from time to time

VAC 1: FINANCIAL LITERACY

Credit distribution, Eligibility and Pre-requisites of the Course

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course |
|---------------------|---------|-----------------------------------|----------|---------------------|--------------------------------|-----------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Financial Literacy | 02 | 1 | 0 | 1 | Pass in Class 12 th | NIL |

Learning Objectives

The Learning Objectives of this course are as follows:

- Familiarity with different aspects of financial literacy such as savings, investment, taxation, and insurance
- Understand the relevance and process of financial planning
- Promote financial well-being

Learning outcomes

The Learning Outcomes of this course are as follows:

- Develop proficiency for personal and family financial planning
- Apply the concept of investment planning
- Ability to analyse banking and insurance products
- Personal tax planning

SYLLABUS OF FINANCIAL LITERACY

UNIT – I Financial Planning and Financial Products

(3 Weeks)

- Introduction to Saving
- Time value of money
- Management of spending and financial discipline

UNIT – II Banking and Digital Payment

(4 Weeks)

- Banking products and services

- Digitisation of financial transactions: Debit Cards (ATM Cards) and Credit Cards., Net banking and UPI, digital wallets
- Security and precautions against Ponzi schemes and online frauds

UNIT – III Investment Planning and Management (4 Weeks)

- Investment opportunity and financial products
- Insurance Planning: Life and non-life including medical insurance schemes

UNIT – IV Personal Tax (4 Weeks)

- Introduction to basic Tax Structure in India for personal taxation
- Aspects of Personal tax planning
- Exemptions and deductions for individuals
- e-filing

Note: Some of the theoretical concepts would be dealt with during practice hours.

Practical component (if any) – (15 Weeks)

- Regular class activities to enhance students' understanding of topics and the application of concepts. The case study method may be followed as a teaching pedagogy.
- Numerical questions pertaining to each unit wherever applicable should be practiced.
- For the second unit, students may be assigned a project wherein they can log on to the website of various banks and conduct an in-depth analysis and comparison of various financial products offered.
- For Unit III, a Project related to building a dummy portfolio of stocks and tracking their returns may be given.
- An investment budget may be given to the students to select investment options that maximize the return and minimize the tax implications.
- For the last unit, students may also file a dummy IT return to get hands-on experience with e-filing.
- Students may conduct a financial literacy survey among at least 25 respondents to measure the level of financial literacy and share the findings in the awareness in the form of a report.
- Any other Practical/Practice as decided from time to time

Essential/recommended readings

- Introduction to Financial Planning (4th Edition 2017) – Indian Institute of Banking

& Finance.

- Sinha, Madhu. Financial Planning: A Ready Reckoner July 2017, McGraw Hill.

Suggested readings

- Halan, Monika, Lets Talk Money: You've Worked Hard for It, Now Make It Work for You, July 2018 Harper Business.

| | | Lecture | Tutorial | Practical/ Practice | | |
| Fit India | 02 | 0 | 0 | 2 | Pass in Class 12 th | NIL |

Learning Objectives

The Learning Objectives of this course are as follows:

- Encourage physical activity through engaging the students in sports and yoga.
- Understand the importance of a balanced diet .
- Build skills for self-discipline, self-confidence, cooperation and teamwork.
- Promote fitness as a joyful activity

Learning outcomes

The Learning Outcomes of this course are as follows:

- Adopting a healthy lifestyle.
- Knowledge of nutrition, diet and psycho-physiological aspects of fitness.
- Develop Self-esteem, Self-confidence, Self-discipline and team spirit as indicators of fitness.

SYLLABUS OF FIT INDIA**ONLY PRACTICAL**

Note: Concepts are to be taken up during the practical/practice hours.

Practical component (if any) –

(15 Weeks)

UNIT – I Participation in Physical Activity

(4 Weeks)

- Fit India Protocol

- Physical Activity, Health and Fitness
- Indicators of Fitness

Practical/Practice

- Aerobic Work Out / Physical Activity (Walking)
- Yoga – Asanas (Lying, Sitting and Standing positions) and Pranayama
- Cardiovascular Testing by 12min/9 min Cooper Run/Walk test

UNIT – II Health Related Fitness and their Components (4 Weeks)

- Muscular Strength and Endurance
- Body Composition and Flexibility

Practical/Practice

- Flexibility Training: Back Saver Sit and Reach test
- Muscular Strength Training: Curl Ups / Standing Broad Jump/ Vertical Jump/ Plyometric
- Endurance Training: 1 Mile RockPort Test or 12 /9 minute Cooper run/walk test.
- Ideal Body Weight, Body Mass Index (BMI), Waist-Hip Ratio, Waist-Height Ratio (Data of at least 10 persons to be collected)

UNIT – III Nutrition and Fitness (4 Weeks)

- Healthy Eating Plate
- Balanced Diet
- Caloric Content of Food

Practical/Practice

- Preparing Daily Diet and Calorie Chart
- Aerobic Work Out / Physical Activity (Walking)
- Assessment of Physical Activity with the Calorie intake.
- Asanas for digestive system excretory system

UNIT – IV Sports Physiology and Psychology (3 Weeks)

- Depression, Anxiety and Stress Scale (DASS)
- Rosenberg Self Esteem Scale

Practical/Practice

- Skills learning and Participation in sports
- Group Games / Relays/ Minor Games
- Meditative Asanas and Pranayama
- Fitness component testing (as per Fit India Protocol and Norms) and Analysis of Results
- Data of at least 10 persons to be collected on DASS and self-esteem scale

VAC 1: GANDHI AND EDUCATION

Credit distribution, Eligibility and Pre-requisites of the Course

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course |
|----------------------|---------|-----------------------------------|----------|---------------------|--------------------------------|-----------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Gandhi and Education | 02 | 1 | 0 | 1 | Pass in Class 12 th | NIL |
| | | | | | | |

Learning Objectives:

The Learning Objectives of the course are:

- Seek inspiration from Gandhi's thoughts on education.
- Analyse Gandhian education philosophy for moral and character development.
- Understand Gandhi's Idea on Self-reliant education (Swavalambi Shiksha)
- Relate Gandhi's educational thoughts to NEP 2020

Learning Outcomes

The Learning Outcomes of the course are:

- Value Gandhian perspective on education
- Appreciate the significance of education in Indian languages
- Evaluate the application of Gandhian thoughts in NEP 2020
- Realise the principles of NEP 2020 in vocational and skill oriented education.

SYLLABUS OF GANDHI AND EDUCATION

UNIT – I : Gandhi's Philosophy and education

(Weeks: 5)

- Gandhi's Philosophy on education
- Education for character building and moral development
- Education relating to health, hygiene, heritage, and handicraft

UNIT – II Gandhi's Experiment in Education

(Weeks: 5)

- Gandhi's educational ideas on use of Indian Language as a medium of Instruction, TextBook and Teacher.
- Gandhi's educational thought on Elementary and Adult Education.
- Gandhi's vision on Higher Education

UNIT – III : Gandhi's Educational Thought on Skill and Vocational Education

(Weeks: 5)

- Rural development through Skill and Local Need Based education
- Skill education in NEP 2020 and Gandhi
- Gandhi's Idea on Self-reliance (Swavalambi Shiksha) and its reflection in contemporary educational policy.

Practical component (if any) -

(15 Weeks)

- Regular visits to Gandhi Museum and library to gain insight on Gandhi
- Excursion to Gandhi Ashrams located in different places like Sewagram, Wardha, Sabarmati, Ahmedabad etc.
- Workshops/projects in collaboration with Gandhi Bhawan, Gandhi Smriti and Darshan, Gandhi Peace Center. Ashrams based on innovation in village & cottage industry, Khadi, handicrafts, organic farming etc.
- Adoption of one place for Swachhta Mission or Skill Education
- If required, students can share their experiences in the form of a Project Report.
- Any other Practical/Practice as decided from time to time

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course |
|------------------------|---------|-----------------------------------|----------|---------------------|--------------------------------|-----------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Ecology and Literature | 02 | 1 | 0 | 1 | Pass in Class 12 th | NIL |

Learning Objectives

The Learning Objectives of this course are as follows:

- To raise awareness among students towards the urgent predicament of Environmental and Ecological crisis and the need for reducing our carbon footprint upon fast depleting, ravaged ecological reserves.
- To develop a heightened ecological consciousness among students, leading to more responsible ecological behavior.
- To view environmental concerns as raised through plays, stories and poems.

Learning outcomes

The Learning Outcomes of this course are as follows:

- The course will highlight the urgency of environmental crisis, making Students conscious and aware of the role each one of us plays.
- Students will be trained into environmental sensitivity and responsible Ecological behavior.
- Students will be encouraged to respond to incidents of habitat destruction deforestation, etc. and realize the need for our urgent intervention

SYLLABUS OF ECOLOGY AND LITERATURE

UNIT – I Negotiating environmental issues creatively

(5 Weeks)

- William Wordsworth: 'In April beneath the scented thorn'
- Rabindranath Tagore: 'The Waterfall'
- Gieve Patel: 'On Killing a Tree'

UNIT – II Ecocritical literary representations

(5 Weeks)

- Mary Oliver: 'Sleeping in the Forest'
- 2.AK Ramanujan: 'A Flowering Tree'
- 3.Mamang Dai: 'Small Towns and the River'

UNIT – III Empathetic exploration and imaginative re-enactments (5 Weeks)

- Amitav Ghosh's 'Part I: Stories' from The Great Derangement: Climate Change and the Unthinkable.
- Thangjamlbopishak: 'Volcano, You cannot erupt' from Dancing Earth: An Anthology of Poetry from North-East India
- Thangjamlbopishak: 'Dali, Hussain, or Odour of Dream, Colour of Wind' from Dancing Earth: An Anthology of Poetry from North-East India

Practical component (if any) –

(15 Weeks)

- Students would undertake field visits to a school or a slum in the neighborhood or the play area of residential complexes to share, narrate stories, poems and articulate the ideas engaged with in the classroom lectures.
- They shall apply imaginative and creative ways of presenting socially responsible ecological behavior through re-tellings of the texts they have studied in the class.
- Creative re-enactment of key ideas studied by students in the form of a play, to be done individually and/or in a group to create awareness regarding environmental consciousness.
- They can also collectively organize a tree plantation drive in and around the college campus and adopt a sapling each in the college premises and in their neighborhood to take care of.
- Any other Practical/Practice as decided from time to time

Essential/recommended readings

- Akhter, Tawhida, and Ahmad Bhat, Tariq. Literature and Nature. United Kingdom, Cambridge Scholars Publishing, 2022.
- Shiva, Vandana. 'Development, Ecology and Women', Staying Alive: Women Ecology and Development. India: Zed Books, 1988. pp 1-14
- Carl, Safina. Prologue & Chapter 1, Beyond Words: What animals think and feel. Souvenir Press, 2015.
- Garrard, Greg. Ecocriticism. United Kingdom: Taylor & Francis, 2011.
- Wohlleben, Peter. The Hidden Life of Trees: What They Feel, How They Communicate—Discoveries from a Secret World. India: Penguin Books Limited, 2016.

Examination scheme and mode: Subject to directions from the Examination Branch/University of Delhi from time to time

VAC 1: NATIONAL CADET CORPS- I

Credit distribution, Eligibility and Pre-requisites of the Course

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course |
|-------------------------|---------|-----------------------------------|----------|---------------------|--------------------------------|-----------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| National Cadet Corps -I | 02 | 1 | 0 | 1 | Pass in Class 12 th | Enrolled as NCC Cadet |
| | | | | | | |

Learning Objectives

The Learning Objectives of this course are as follows:

- Provide knowledge about the history of NCC, its organization, and incentives of NCC for their career prospects.
- Inculcate spirit of duty and conduct in NCC cadets.
- Provide understanding about different NCC camps and their conducts.
- Provide understanding about the concept of national integration and its importance.
- Provide understanding about the concept of self-awareness and emotional intelligence.
- Provide understanding about the concept of critical & creative thinking.
- Provide understanding about the process of decision making & problem solving.
- Provide understanding about the concept of team and its functioning.
- Provide understanding about the concept and importance of Social service.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Critically think and analyse.
- Understand the basic concept of NCC.
- Respect the diversity of different Indian culture.
- Practice togetherness, teamwork and empathy in all walks of their life.
- Do their own self-analysis and will work out to overcome their weakness for Better performance in all aspects of life.

SYLLABUS OF NATIONAL CADET CORPS-I

UNIT – I NCC General (4 Weeks)

- Aims, Objectives and Organization of NCC
- Incentives for NCC Cadets
- Duties of NCC Cadets
- NCC Camps: Types and Conduct

UNIT – II National Integration (4 Weeks)

- National Integration: Importance and Necessity
- Factors affecting National Integration
- Unity in Diversity
- Threats to National Security

UNIT – III Personality Development (5 Weeks)

- Factors
- Self-Awareness
- Empathy
- Critical and Creative Thinking
- Decision Making and Problem Solving

UNIT – IV Social Service and Community Development (2 Weeks)

- Basics of Social Service
- Rural Development Programmes
- NGO's
- Contribution of Youth

Practical component (if any) - (15 Weeks)

- Drill
- Field Craft & Battle Craft
- Map Reading
- Weapon Training
- Social Service & Community Development
- Any other Practical/Practice as decided from time to time

Suggested readings

- DGNCC Cadet's Hand Book - Common Subjects -All Wings (in English)
- DGNCC Cadet's Hand Book - Common Subjects -All Wings (in Hindi)
- DGNCC Cadet's Hand Book – Specialised Subjects –Army, Navy and Air Wing

Examination scheme and mode: Subject to directions from the Examination Branch/University of Delhi from time to time.

VAC 1: PANCHKOSHA: HOLISTIC DEVELOPMENT OF PERSONALITY

Credit distribution, Eligibility and Pre-requisites of the Course

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course |
|---|---------|-----------------------------------|----------|---------------------|--------------------------------|-----------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Panchkosha: Holistic Development of Personality | 02 | 1 | 0 | 1 | Pass in Class 12 th | NIL |

Learning Objectives

The Learning Objectives of this course are as follows:

- To introduce Five Koshas – five levels of mind-body complex – Annamaya, Pranayama, Manomaya, Vigyanamaya and Anandamaya Kosha; for a holistic development of personality.
- To generate awareness about physical and mental wellbeing through the Indian concept of Panchkosha.
- To develop a positive attitude towards self, family and society amongst students.
- To guide students build personalities based on the understanding of Panchkosha.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Enhanced physical and mental health.
- Coping with peer pressures and stress.
- Improved concentration leading to better overall performance.
- Manage life situations through a balanced and mature approach.

SYLLABUS OF HOLISTIC DEVELOPMENT OF PERSONALITY

UNIT – I Elements of Personality

(4 Weeks)

- PanchaKosha: Introduction
- Five aspects of Human Personality: Annamaya Kosha (Physical

body), Pranamaya Kosha (Vital life force energy), Manomaya Kosha (Psychological wellness), Vijnanamaya Kosha (Intellect), Anandamaya Kosha (Happiness and Blissfulness)

- Health: Mental and Physical

UNIT – II *Annamaya Kosha and Pranamaya Kosha*

(4 Weeks)

- Human Body and Pancha Karmendriyas
- Annamaya Kosha: Balanced diet and exercise for healthy body
- Pranamaya Kosha: Development of life force, Pranayam
- Charucharya: Social Etiquettes

UNIT – III *Manomaya Kosha and Vijnanamaya Kosha*

(4 Weeks)

- Antahkarana and its functions
- Pancha Gyanendriyas
- Manomaya Kosha : Controlling the Mana (mind)
- Vijnanamaya Kosha: Ability of discretion and decision making

UNIT – IV *Anandamaya Kosha and Beyond*

(3 Weeks)

- Anandamaya Kosha: Experience of happiness and bliss
- Self-realisation, Nature of Consciousness: Sat-Chit-Ananda

Practical component (if any) –

(15 Weeks)

- Recitation of select verses from Taitiriyopansid
- Asana
- Pranayama
- Meditation
- Visit to a Yog shivir or meditation centres
- Students are required to watch documentaries and films on the subject-related topics.
- If required, students can share their experiences in the form of a Project Report.
- Any other Practical/Practice as decided from time to time

Essential Readings

- पंचकोश वि वेक, स्वामी परमहंस योगनन्द, <https://ndl.iitkgp.ac.in/> पर उपलब्ध
- वि वेक चूड़ामणि , आदि शंकराचार्य द्वारा लि खि त, अरवि न्द आनंद द्वारा अनुदि त,

चौखम्भा प्रकाशन, वाराणसी, 2015

- Vivek Chudamani, Adi Shankaracharya, Swami Turiyananda (Sanskrit and English), Sri Ramakrishna Math, Mylapore, 2019
- सभी के लिए योग, बी.के.एस. आयंगर, प्रभात प्रकाशन, 2018
- Yoga The Path to Holistic Health: The Definitive Step-by-step Guide, B.K.S. Iyengar, Dorling Kingsley, London, 2021
- The Sacred Science of Yoga & The Five Koshas, Christopher Sartain, CreateSpace Independent Pub, 2015

Suggested Readings

- PanchaKosha: The five sheaths of the human being, Swami Nishchalanand, Kindle edition.
- Upanisadvakya Mahakosa. (An Upanishadic Concordance, taken from 239 Upanishads, G. S. Sadhale (Compiled by). Chowkhamba Vidyabhanan, Varanasi, 2014
- The Pentagon of Creation: As Expounded in the Upani

Examination scheme and mode: Subject to directions from the Examination Branch/University of Delhi from time to time

VAC 1: READING INDIAN FICTION IN ENGLISH

Credit distribution, Eligibility and Pre-requisites of the Course

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course |
|-----------------------------------|---------|-----------------------------------|----------|---------------------|--------------------------------|-----------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Reading Indian Fiction in English | 02 | 1 | 0 | 1 | Pass in Class 12 th | NIL |

Learning Objectives

The Learning Objectives of this course are as follows:

- Acquaint students with Indian Fiction in English.
- Familiarise students with Indian ethos and values through Indian fiction.
- Analyze novels critically and in the context of their own lived situations.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Understanding of Indian ethos and values through Indian fiction.
- Develop creative thinking through reading of fiction..
- Realise the potential of fiction in bringing out social and cultural change

SYLLABUS OF READING INDIAN FICTION IN ENGLISH

UNIT – I

(2 Weeks)

- How to Read a Novel
- Novel as Reflection of Society

UNIT – II

(7 Weeks)

- Bankim Chandra Chatterjee: Anandamath (English translation by Sri Aurobindo and Barindra K Ghosh)

Points of Discussion:

- Patriotism and Nationalism
- The song Bande Mataram
- Elements of History and Romance
- Issues of Gender
- Natural calamity
- Genre of Text and Feature Film

UNIT – III

(6 Weeks)

- Chaman Nahal: Azadi. Houghton Mifflin publication, 1975.

Points of Discussion:

- The Story of Partition
- Violence and Trauma
- Autobiographical voices in the novel
- Elements of history, politics and art
- Personal and Political

Practical component (if any) –

(15 Weeks)

- Students may be asked to do a dramatic recitation of selected parts of a novel.
- Students may be asked to organize the major events of the plot of a novel through different methods: graphically, making a plot outline or sketching a storyboard.
- Students may be asked to classify each instance of figurative language (simile, metaphor, etc.) and explain its effect on that section of the text.
- Students may share their understanding of any particular aspect of the novels through a brief write up.
- Discuss the portrayal of any major characters of the novel with reference to the central theme of the text.
- Think about and discuss Indian fiction in relation to cultural and critical contexts.
- Any other Practical/Practice as decided from time to time

Essential/recommended readings

- Bankim Chandra Chatterjee: Anandamath (English translation by Sri Aurobindo and Barindra K. Ghosh)

- Chaman Nahal: Azadi. Houghton Mifflin publication, 1975
- E. M. Forster: Aspects of the Novel

Suggested Reading:

- Srinivasa Iyengar, K. R. Indian Writing in English. India, Sterling Publishers, 1987.
- 2. Naik, M. K. A History of Indian English Literature. India, SahityaAkademi, 1982.
- 3. Nayar, Pramod K. The Indian Graphic Novel: Nation, History and Critique. India, Taylor & Francis, 2016.
- 4. Gopal, Priyamvada. The Indian English Novel: Nation, History, and Narration. United Kingdom, Oxford University Press, 2009.

Examination scheme and mode: Subject to directions from the Examination Branch/University of Delhi from time to time

VAC 1: SCIENCE AND SOCIETY

Credit distribution, Eligibility and Pre-requisites of the Course

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course |
|---------------------|---------|-----------------------------------|----------|---------------------|--------------------------------|-----------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Science and Society | 02 | 1 | 0 | 1 | Pass in Class 12 th | NIL |

Learning Objectives

The Learning Objectives of this course are:

- The primary objective of this course is to instil in students an appreciation for science and a scientific outlook and temper.
- The course further aims to increase awareness about fundamental scientific concepts that play an important role in our daily life using various examples and case studies.
- Pedagogy in this course should largely rely on learning by enquiry, observations, experimentation and group discussions using case studies/examples.
- Efforts should be made to instil an interest in students for science. Students should be encouraged to understand and appreciate scientific concepts and their applications rather than solely memorizing factual information.

Learning outcomes

The Learning Outcomes of this course are:

- This paper is interdisciplinary in nature and would provide students with basic exposure to scientific methods, technologies and developments that have played a significant role in the evolution of human society from ancient to modern times.
- 2. Students would also be made aware of the scientific rationale of technological developments that would enable them to make informed decisions about their potential impact on society.

SYLLABUS OF SCIENCE AND SOCIETY

UNIT – I Science and Technology – from Ancient to Modern Times (10 Weeks)

In this section, students should also be made aware about the contributions of Indian scientists since ancient times and the contributions of women in science.

Subtopics

- Philosophy of science, the scientific method, importance of observation, questions and experimental design, rational thinking, myths vs. Facts
- Science, Technology and Traditional Practices: Suggestive areas include: Water harvesting structures and Practices; Construction, architecture and design – use of natural environment-friendly designs and materials; Agriculture including domestication of plants and animals.
In this section, students should also be made aware about the contributions of Indian scientists since ancient times and the contributions of women in science.
- Science and Technology in Modern Times: Suggestive areas include: Public Health: Nutrition, Hygiene, Physical and Mental Health, Vaccines and Antibiotics, Anti-microbial resistance; Food Security: Green Revolution, White Revolution; IT Revolution, E-Governance; Clean Energy, Renewable Energy; Space Science and Exploration; Evolution, Ecology and Environment

UNIT II: Scientific Principles, and Concepts in Daily Life (5 Weeks)

Unit Description:

This section aims to encourage appreciation of the scientific method through observation, experimentation, analysis and discussions. Students are required to participate in activities and experiments. A suggestive list is given below:

Subtopics:

Suggested Activities:

- Observing and documenting flora and fauna of College campus/city.
- Visits to science laboratories in the College or neighbouring College/Institute.
- Visits to science museums, planetarium.
- Visits to biodiversity parks and nature walks.
- Participation in a citizen science project/initiative.

Suggested Experiments (minimum any four):

- Measuring the height of the college building using a stick.
- Measuring the curvature of earth, using distance and shadow length.
- Isolation of DNA (DNA Spooling)
- Observing transpiration and photosynthesis in plants
- The blood typing game (online)
- Are fruit juices, soap, carbonated drinks acidic or alkaline? (using pH strips or developing your own Litmus Test)
- Do plants learn and remember?
- Experiments on how migratory birds find their way. (Online)
- How can a mosquito sit on a water surface or a blade float on water?
- How does a submarine dip or rise in the ocean?
- How and why does the path of the sun in the sky change with the seasons?
- Identification of celestial objects with the naked eye
- Types of clouds
- Science of musical sounds
- Science of splitting of colours from white light: rainbow, CD-rom, prism, oil films.
- Lenses, mirrors and the human eye

Practical/ Practice Component : **Please Refer to Unit II.**

Essential/recommended readings

- Basu and Khan (2001). Marching Ahead with Science. National Book Trust
- Gopalakrishnan (2006). Inventors who Revolutionised our Lives. National Book Trust
- Yash Pal and Rahul Pal (2013) Random Curiosity. National Book Trust
- Hakob Barseghyan, Nicholas Overgaard, and Gregory Rupik (****) Introduction to History and Philosophy of Science
- John Avery (2005). Science and Society, 2nd Edition, H.C. Ørsted Institute, Copenhagen.

VAC 1: SOCIAL AND EMOTIONAL LEARNING

Credit distribution, Eligibility and Pre-requisites of the Course

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course |
|-------------------------------|---------|-----------------------------------|----------|---------------------|--------------------------------|-----------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Social and Emotional Learning | 02 | 1 | 0 | 1 | Pass in Class 12 th | NIL |

Learning Objectives

The Learning Objectives of this course are as follows:

- This course aims to develop social and emotional awareness in students and initiate them towards better personal and social well-being.
- To create an awareness towards self, others, the environment and their harmonious coexistence.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Students will be able to become aware of oneself and the society.
- Make informed lifestyle choices and extend the self in the joy of giving.
- Develop empathy, compassion, connect with nature and evolve emotionally to create a more harmonious society.
- Cultivate sensitivity towards discriminatory practices and explore possible solutions.

SYLLABUS OF SOCIAL AND EMOTIONAL LEARNING

UNIT – I Introduction - Self-Awareness and Happiness (3 Weeks)

- Getting to Know Each Other
- What to Expect from this Course?
- Getting to Know Oneself
- What Makes One Happy/ Unhappy? Outer vs Inner Sources of Happiness, Joy of Giving

UNIT – II Social Relationships | Mindfulness (4 Weeks)

- Sharing vs Power: Peers, Family and Society
- Going Beyond Power Relationships Through Open Conversation
- The Value of Silence and Reflection
- Practice of Mindfulness

UNIT – III Identity, Self-Image, Status, Self-Worth- Digital Identity (4 Weeks)

- Identity Construction and Expression: Individual and Collective
- Accepting and Valuing Oneself
- Understanding the Gendered World
- Identifying and transcending stereotypes
- Identity Formation and Validation in the Digital World
- Discrimination and its Forms

UNIT – IV Lifestyle Choices | Stress and Its Management (4 Weeks)

- What Choices Does One Get To Make?
- Is Choice influenced? Relationships, Career Choices
- Career Pressures, Examinations
- Dealing with Disappointment, Coping Skills, Health and Fitness
- Connect With Nature: Sensitivity Towards Other Sentient Beings

Practical component (if any) – (15 Weeks)

Unit 1

Getting to Know Each Other

In this lecture, the teacher will facilitate social engagement and personal reflection through a round of introductions. This also provides an opportunity for the teacher and students to recognise the deeper meanings that lie underneath routine exercises of introduction. For example, the adjectives that people use to describe themselves are indicative of the image that they wish others to hold of them. But do they hold the same image about themselves?

Teachers may begin the class by introducing themselves. Any introductory exercise that serves as an ice breaker and creates the classroom space as one of vibrant and open discussions, may be used. Teachers should try and ensure participation of all students in this exercise.

Activities

1. Who is in your circle?

Students may be asked to draw three concentric circles on their notebooks. The central circle is for the topic, the second for 'Love', and third for 'Like'. The space outside the circles is for 'Don't like'. The class decides on one topic, such as food, movies, web series, books, music, interests, etc. Each topic is taken up in turn and students are asked to write what they love, like, and don't like in the circles and share it with others. The exercise helps students to identify with their peers in commonalities and differences. The teacher may use prompts such as 'Why do you like this show?', 'Why do you dislike this food?' etc.

2. I am...

Students are asked to complete the sentences. The teacher may take turns and ask random students to answer it or the teacher may write these on the board and ask every student to write the answer in their notebooks. Some suggested prompt sentences are:

I am excited about.....

I wish I could.....

I am wondering.....

I am feeling anxious about....

Students can choose to share some of the answers with the class. The purpose of the exercise is to bring most students to speak in class and share their honest feelings and thoughts.

3. Introduce Yourself. Know Yourself

In this exercise, the teacher asks all students to take turns to introduce themselves. It is likely that most students will talk about their names, previous qualifications and hobbies. At the end of the introductions, the teacher can identify

commonalities such as previous courses undertaken, regional identities, age, or similar common factors. The teacher may then use the following prompts to facilitate discussion:

Do these define you? Are you something more? Would you like to change any of these qualifiers?

Is there something about you that you would like to share with us? Do you ever wonder about your identity/ identities?

What to Expect from this Course?

In this class, the focus is on understanding the relevance of the course and providing a course overview. Students will be able to explore the various dimensions of their lives and develop insights about themselves and their relationships. By discussing the outline of the course and the suggested activities, the teacher shall bring to the fore the exploratory journey that the students will embark upon. The students' questions relating to the course contents will also be addressed in this lecture.

Activities

In this class, the teacher may undertake an overview of the course, discussing each week's themes briefly. The nature of assignments and evaluation can also be detailed out. The teacher may hold a discussion with students on the following:

1. Why is social and emotional learning important?
2. What can the teacher do to make the classroom a more welcoming and open space for you?
3. What would be some of the activities that you would like to undertake during the course? Such as watching movies, reading books, maintaining a reflective journal, engagement in the field, mindfulness exercises, etc.

Self Awareness and Happiness

The aim of this module is to help students develop awareness about themselves – who they are, what their strengths and limitations are, and how they can develop themselves. This will help them to learn interlinkages and distinctions between thoughts, emotions and behaviours. This module will make them aware of the differences between happiness and pleasure and help them ponder on sources of happiness.

Self Awareness

Self-awareness is the experience and understanding of one's own personality – how an individual understands his own feelings, motives, desires, and behaviour, and the triggers for the same. Hence, self-awareness can be considered to be vital for personal development. Students would thereby become more grounded and confident. This lesson will focus on the student's intrapersonal and interpersonal awareness through discussions and activities.

Activities

1. Students are asked to make a timeline of important events in their life and how each one affected them at that time. Do they see it differently today?
2. SWOT Analysis can be done by each student – Strengths, Weaknesses, Opportunities and Threats.
3. How do they envision their ideal person – What does your ideal person look like? What characteristics do they possess? Identify the gap. How do they plan to fill/reduce the gap?

Happiness

The term 'happiness' includes pleasant and positive emotions which can range from deep satisfaction and contentment to pleasure and excitement. The focus of this session would be to discuss techniques to develop the long-lasting feelings of contentment rather than momentary and short-lived emotions of excitement and pleasure. This will encourage and foster feelings of wellbeing and life satisfaction. The teacher will use activities in order to inculcate the ways of developing and sustaining happiness.

Activities

Writing a gratitude Journal – include in it what you are grateful for. Mindfulness exercises and developing a mindful way of doing things.

"As one door closes, another door opens". A discussion based on the three opportunities that they think they lost and consider what it was they gained in the process.

Unit 2

Social Relationships

In this module, students will be asked to turn their gaze towards the society in which they are located and where they form social relations. They will be asked to introspect and understand the ways in which they connect with their immediate and extended social surroundings. In this context, peers and family exercise a significant influence on the identities of adolescents and young adults. The students will be asked to assess the nature of their relationship with friends and family and explore these negotiations in the context of sharing versus power.

The teacher will help students broaden their understanding by extending the discussion to include other social relationships, beyond peers and family. They will be encouraged to think about how they are influenced and how they in turn influence the people around them. The class shall explore the importance of open conversation as a means to resolve conflicts and contradictions.

Sharing vs Power: Peers

Identity formation and development is significantly dependent on the peer group with which the individual interacts. During this class, the students may pose the following question to themselves and to each other- What is the nature of the relationships that they share with their peers? Adolescents and young adults like to conform to peer expectations. Students may explore whether relationships between peers are equal. What forces mediate these relationships? By posing examples from real life, the teacher will encourage the students to closely examine their relationships with their friends and family.

Activities

Ask the students to describe their close friends with fictitious names. They should then be asked why they are close to them and what is the one quality about their friends that they appreciate.

Divide students into groups of 5 each. This can vary depending on the class size. Each group can discuss how they were influenced by their friends in decision making processes.

The class/ group can share a story from their life about how they made a decision based on peer pressure. They should also share the result. Were they happy or unhappy about it? The findings can be discussed in the class.

Sharing vs Power: Family

The family is often considered to be a given and stable construct in which one is born or placed. As the relationships of adolescents with people outside the home grow, their interactions with their families evolve and take on a new and sometimes difficult character. Discussions and activities in the class should help the students objectively analyse their family space and the way in which they negotiate with it at different points of time. Through examples from day to day life, the teacher will help the students understand such spaces and the role they play.

Activities

Describe the ideal family. The students can think about the nature of the ideal created by them. What is the role played by siblings in your personal development?

Role play can be used to perform the different roles in a family so as to understand the different points of view within it.

Sharing vs Power: Society

The individuals generally extend the nature of their relationships with the family to the larger social world. In their pursuit to seek autonomy and independence, they may form new kinds of relationships in the larger social context. These relationships may be characterised by imbalances in power. This lecture will try to help the students strike a balance between self and society and stress the role of dialogue, sharing and cooperation.

Activities

The teacher can ask the students to describe any one constructive social role performed by them. (Any way in which they helped people around them). They can draw, speak, share a photograph or write a creative piece about it.

In the years to come what kind of role do you see yourself performing in society?

Share any one story about a person that has really influenced you? It can be about a public figure or anyone around you.

Going Beyond Power Through Open Conversation

In the previous lectures, the discussion has been around family, peer groups and society. In this session, the focus will be on the ways to build a more egalitarian society—one that is more collaborative, inclusive and takes into account different points of view. Open Conversation is suggested as a way by which acceptance, active listening and empathy can be encouraged.

Activities

The students can be asked to present a brief performance showing the way in which open conversation can help in conflict resolution.

Movies in line with classroom discussions held in the past few weeks can be shown to the students. Movie screening should be followed by a discussion.

A short story, poem or a play can be used to build on classroom discussions.

Mindfulness

This module focuses on the significance of silence, introspection and non-judgmental awareness of the present moment. These mental practices are for understanding and building humane connection with self and others. The students are sometimes unable to spare time for their inner growth. Mindfulness practices aim at self-awareness and self-acceptance for overall well being. Valuing and practicing silence helps in the process of deeper reflection and builds inner strength to face conflicts with calmness. It hones the ability to develop mental equanimity and equipoise.

The Value of Silence and Reflection

The students will learn to understand the value of silence in the noise around. The practice of silence helps in self-reflection and connecting the inner and outer worlds. It enables one to experience joy, contentment and peace. Silence is a way of understanding how to enjoy one's own company and not to confuse being alone with loneliness. The students will appreciate that silence and solitude are positive and constructive.

Activities

The students can be asked to maintain silence and watch the flow of thoughts and emotions. In the process of silence the students can identify what gives them happiness and what they can do to create happiness for others.

The students can visit natural spaces to understand how silence runs in the sounds of nature which can help them realise peace.

Practice of Mindfulness

Through this lesson, the students will understand the significance of mindfulness as a daily practice for understanding that happiness depends on the self-training of mind. The joy of living in the moment with full awareness and steadiness of mind are important for accepting and cherishing all experiences positively and non-judgmentally.

Suggested Activities

Mindful walk/trek in the garden/forest/mountains or at a monument. Mindful eating while enjoying all elements of tastes in different types of food can also be done.

The students can be engaged in groups for non-judgmental listening

The class can be divided to discuss what activities of the day they engage with full awareness and where the moments go unnoticed

Unit 3

Identity, Self-image, Status, Self-worth

The module is designed to help the learners revisit the constructs of identity, self and personhood. It builds on questions such as 'who am I', 'how do others and I see myself', 'does status and self-image affect my sense of self-worth'. Specifically, it deals with how one's identity takes shape and thereon begins to be an integral part of oneself. It encourages the students to think about what factors influence their self-worth, such as achievements and accumulations, wealth, career or popularity. The students learn to accept and appreciate self and others.

Identity Construction and Expression: Individual and Collective

This lesson is aimed to help the learners deconstruct their sense of identity and rechart the signifiers/ markers and processes which have played a pivotal role in constructing their sense of identity and self. It unfolds processes of socialisation within family, school, community and society at large have played a role in making students who they are. How do

these processes shape our notions of self-concept, self-evaluation, and self-esteem? The students will be able to become aware of their individual and collective sense of identity and self.

Activities

The teacher may ask the students to imagine one's identity in different contexts that are significant for identity construction. For instance, what does identity of being someone's 'child' entail; likewise what kind of an identity does one expect of oneself as a sibling, student and as a friend.

The teacher may ask the students to read from biographies/autobiographies of people from other cultures and discuss excerpts from the books. The teacher may elaborate the qualities of these people.

The teacher may organise a field visit with the students to different places. Ask the students to survey people from those locales about their experiences.

Accepting and Valuing Oneself

This lesson builds on the previous lesson by unpacking how concerns revolving around self- image and status may affect one's sense of self. It aims to make one aware why a challenge to

one's identity may lead to discomfort and conflict. Students will be encouraged to accept their physical appearance and identity and to value self-worth. This lesson invites them to undertake an inward journey.

Activities

The teacher may ask students to respond to different characters in a movie where challenges to their identity lead to different kinds of responses.

What will change after 10 years in terms of your identity and what according to you will not change?

The teacher may ask the students to identify an 'open space' and 'sit alone' and write a reflective essay on the theme, 'remember what makes you, you'.

Gender Roles

The objective of this module is to enable the students to differentiate between biological and psychological context of gender in order to understand how

their gendered identities are socially constructed. Gender refers to the characteristics of men and women and includes norms, behaviour and roles associated with being man or woman, girl or boy. Further, this will enable the students to become aware that their destiny need not be determined by biology.

Understanding a Gendered World

The objective of this lecture is to enable the students to understand that gender roles are taught by the process of socialization, beginning with the family. Everyday things that we do like eating, speaking, walking, our gestures and even the professions that we think we choose are all often influenced by societal norms.

Activities

The teacher may ask the students to list things associated under the heading; men and women. Once listed, the headings can be interchanged and a discussion may follow.

Ask students to bring an artefact from home, it can be a childhood picture. On the basis of the picture students can share childhood experiences. Through the narrative of their oral history students can share experiences of how they acquired gender.

Identifying and Transcending Stereotypes

In the previous lecture, students have been made aware that gender stereotypes are socially constructed, that the ways in which we interact with others and with ourselves are shaped by gender. The objective of this lecture is to explain the importance of thinking beyond the stereotypes and to reinforce that biological differences between genders should not lead to social discrimination.

Activities

Movie viewing: Students and teachers can choose any movie for discussion.

Quiz cards: On the cards the following can be written and the student can be asked to identify which is socially constructed and which refers to biology.

Men are Breadwinners, Women are homemakers.

Males have XY chromosomes, Females have XX chromosomes. Women give birth to babies, men don't.

Boys don't cry

Digital Identity

It may be constricting to identify exclusively with ideas like region, ethnicity, language, gender, nationality. For, in this increasingly interconnected world, students find themselves at the intersection of many ideas - evolving and fixed, dominant and marginalised. This rainbow of ideas provides an opportunity to appreciate the diversity in the constitution of an individual's identity. But what happens when one is given a chance to construct a digital identity for oneself? Digital platforms and social networking sites arguably provide an individual the choice to portray oneself the way one likes. Do we choose to present our authentic selves or do we prefer to present highly curated versions of ourselves? Do social media posts reflect self-respect and self-love?

Identity Formation and Validation in the Digital World

Through this session, students are expected to realise the ways in which they construct themselves digitally and how that construction is a manifestation of conformity, resistance and/or subversion, of the dominant ideologies. Students should be encouraged to reflect on what exactly they are seeking from engaging with social media. They need to think how the joy of sharing ideas may be different from the egoic need for compulsive validation.

Activities

Think of the digital filters that you use before sharing your photographs with others. Why do you think you need to do that?

We often feel happy about being validated in the form of 'likes' and positive comments on our social media posts. However, do you feel sad when that does not happen? What could be the possible reason for your mind to have this line of thought?

Digital Identities: Impact on the Self

The students will carry forward the learnings from the previous session and continue their inquiry in the realm of motivations for curating a digital self and its relation to self-esteem. They would be encouraged to engage in a non-judgemental conversation which would motivate them to inquire whether

their digital activities are a result of anxiety which may be emanating from their self-image.

Activities

Do you think the use of digital filters is disrespectful to your self? Is not using them a source of anxiety for you? Can this have anything to do with your self-esteem?

Think of situations that make you feel sad on social media. Note them down. Do you think not exposing yourself to such a situation is a solution or do you think you also need to locate the issue within yourself?

Try spending a day without doing any activity on social media like posting anything or surfing other people's accounts for their activities. At the end of the day observe how you feel.

Unit IV

Lifestyle Choices

How we choose to live and behave influences our social and emotional wellbeing. In this module we analyse our lifestyle choices relating to material and cultural consumption, relationships and career. Students will be encouraged to inquire whether our everyday choices are based on a culture of passive consumption and conformism. We will seek to explore possibilities of alternative forms of living premised on ethical consumption, altruism, simple and sustainable living.

What Choices Does One Get to Make?

In this session, the attempt will be to explore the extent to which consumerism impacts our lifestyle choices and the repercussions of these on our natural and social environment. Today we live in an era of mass consumption and consumer culture fostered by advanced technologies and global production systems. Overt materialism, wasteful and conspicuous consumption unmindful of the larger implications are key aspects of this phenomenon. In this lecture, we explore our lifestyle choices such as our physical image, attire, dietary choices, desire for dream homes and destination weddings. This would be the starting point for a re-imagination of a world based upon choices that would lead to simple and sustainable living.

Suggested Activities

Students may be asked to work through their consumption history right from their childhood. A discussion may then be initiated by asking the students to reflect on their consumption choices and their motives behind the same.

The teacher may identify a few products like tea, coffee, coca-cola, jeans etc and ask the students to trace product histories and geographies.

The students may be asked to discuss a strong desire to possess an object and then deconstruct that desire. Discussion may emphasise upon why they wanted it?

Is Choice Influenced? Relationships, Career Choices

In this lecture, we examine the extent to which lifestyle choices, regarding relationships and career, get influenced and by what factors. Do we really have a choice as regards the career that we intend to pursue? Often factors like family, gender, the need for security and stability influence our choices. Recognizing and mapping the space of freedom and unfreedom with respect to our choices is a necessary life skill that would enable a more self-aware and harmonious living.

Activities

Reflect on an instance where you may have inflicted pain on someone and also think of a moment when you felt someone was insensitive in their conduct of a relationship.

The teacher may divide the class into small groups and hold a discussion on what constitutes a successful career.

Reflect on the various career options available in your society and discuss what you would prefer to pursue and why?

Discrimination

The module is designed to help the learners understand the origin and nature of discrimination and the effects thereof. Discrimination can be on various grounds such as ethnicity, religion, caste, race, gender, disability, or place of birth. One's discriminatory actions can lead to social fragmentation. The module encourages the learners to introspect their actions and seeks to celebrate diversity.

Why and How? Forms of Discrimination

The objective of this lesson is to make learners aware of different forms of discrimination. On the one hand, an individual can be a victim of discrimination, and on the other, the same person

may harbour prejudice or discriminate against others. It is pertinent to understand our own biases and introspect our actions.

Activities

The teacher can ask students to count their friends who belong to different backgrounds. They can reflect on what they have learned by interacting with these friends.

Ask students to learn about their neighbourhood and document what groups live there, what has been the nature of their relationships.

An exercise on privilege using nothing but wadded up papers and a trash can.
Students Learn A Powerful Lesson About Privilege.
<https://youtu.be/2KlmvmuxzYE>

Stress and Its Management

This module is designed to give students an opportunity to articulate the pressures and

challenges that one experiences in life. It gives students a chance to spell out how pressure to perform well can become a source of stress. The module is aimed to equip the learners with ways of dealing with disappointments with regard to the choice of career path and with performance related stress. It brings to fore skills of coping with stress and disappointments. It also highlights the role of physical well-being in keeping oneself mentally healthy.

Career Pressures, Examinations

This lesson is designed to help students have a relook at the challenges and pressures they have recently faced or are facing on account of career choices and examinations. It gives them a space to articulate what they might have faced while making these choices. This lesson also gives them an opportunity to highlight the uncertainties and challenges they foresee in their future lives.

Activities

The teacher may ask the students to organise themselves in groups of 4-6. Each of the groups have to do a role-play around the themes on career pressures.

Show images of different people and ask the students to quickly jot down impressions. The collective answers serve as a springboard for discussions. Students may learn about their own biases through this activity.

The teacher may ask the students to identify movies where struggles related to career and performance pressure stand out.

The teacher may ask the students to share their experiences about the following:

- First few months into an academic programmes
- 2 months before examinations
- On the day of examination
- 15 days after examinations get over

Dealing with Disappointments, Coping Skills, Health and Fitness

This session aims to equip the learners with coping skills to manage stress and deal with disappointments. Furthermore, it makes them aware of the importance of health and fitness for maintaining mental health.

Activities

The teacher can ask the students to write how they come to know they are stressed and what they do when they are stressed? The teacher may engage them in a discussion on coping skills and channelize students' energies into positive ways of resolutions of conflict and stress.

The teacher may ask the students to discuss the lives of high achievers and low achievers and

how performance pressures drive their lives. Can they draw similarities and differences in the sources of stresses and how they deal with these stresses?

Ask each of the students to share their daily regime to keep themselves physically fit. The students may also share how each one mentally 'feels/experiences' when one is engaged in physical exercises.

Connect with Nature

This module is designed to strengthen bonds with nature while understanding its intrinsic value as opposed to its instrumental value. Issues of global warming

and environmental degradation are the consequences of a disconnect between humans and nature. The aim is to cultivate environmental awareness through virtues of altruistic responsibility, empathy, cohesiveness, and mutual sustainability between nature, flora-fauna, animals and humans. The students may be engaged in activities to build bridges between the inner environment (one's self) and external environment (nature). In this way, they can celebrate oneness with nature and perceive nature not as a means but an end in itself.

Sensitivity Towards Other Sentient Beings

The students, in this session, would participate in group based environmental activities as a way of building social responsibility towards all sentient beings. Any action against even a part of nature impacts the whole. Thus, it is the responsibility of all, to create a safe environment for all sentient beings to live in harmony.

Activities

Students can be encouraged for Nature walks, nature drives, treks and hikes, nature photography, adopting natural spaces in local areas, plantation drives, visiting biodiversity parks, adopting spaces for greening etc.

Visits to animal shelters can be organised to sensitise the students.

Films can be screened on environmental sustainability, environmental consciousness etc

- Any other Practical/Practice as decided from time to time

VAC 1: SPORTS FOR LIFE - I

Credit distribution, Eligibility and Pre-requisites of the Course

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course |
|---------------------|---------|-----------------------------------|----------|---------------------|--------------------------------|-----------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Sports for Life - I | 02 | 0 | 0 | 2 | Pass in Class 12 th | NIL |

Learning Objectives

The Learning Objectives of this course are

- To imbibe the significance of sports to promote health, fitness and wellness in life.
- To understand the values of teamwork, tolerance, goal-setting and decision making.
- To learn the strategies and tactical moves while playing a sport.
- To understand the importance of physical activity in reference to 3S: strength, speed and suppleness.

Learning outcomes

The learning Outcomes of this course are

- Acquire values of cooperation, team spirit, determination, and endurance.
- Acquire good health and psychological well-being through sports participation.
- Apply the decision making-ability and goal-setting skills acquired through sports participation in everyday life.
- Acquire skills for engaging in moderate or vigorous physical activity and sports participation.
- Reduce exposure to screen time on electronic gadgets and channelising energy through sports participation.

SYLLABUS OF SPORTS LIFE 1
ONLY PRACTICAL

UNIT – I: Rules and Techniques

(4 Weeks)

Concept

- Rules of the Sport
- Techniques / skills in the sport/ Aerobic Skills

Practical

- Marking of the court / field
- Outdoor Adventure Activity
- Skills learning in sports
- Group Games / Relays
- Participation in Intramural competitions

UNIT – II: Components of Fitness

(4 Weeks)

Concepts

- Meaning and Development of Strength, Speed,
- Endurance, Flexibility and Coordinative Abilities.

Practical

- Skills learning and Participation in sports
- Group Games / Relays / Minor games
- Participation in Intramural competitions

UNIT – III: Benefits of sports and physical activity

(4 Weeks)

Concepts

- Effect of exercise on the body
- Organizing of a sports competition
- Balanced Diet

Practical

- Skills learning and participation in sports
- Group Games, / Relays /Step Aerobics
- Participation in Intramural competitions

UNIT – IV Sports in Contemporary Times

(3 Weeks)

Concepts

- Honours and Awards associated with sports and sportspersons

Practical

- Skills learning and Participation in sports
- Participation in Intramural competitions

Practical component : 30x2 (15 weeks)

The concepts are to be dealt with during the practical/practice classes: Aerobics and Physical Activity, Athletics, Archery, Badminton, Basketball, Boxing, Chess, Carrom, Cricket, Football, Handball, Hockey, Kabaddi, Kho-Kho, Swimming, Shooting, Squash, Table-Tennis, Tennis, Taekwando, Volleyball, Wushu, Wrestling etc.

Examination scheme and mode: Subject to directions from the Examination Branch/University of Delhi from time to time

VAC 1: SWACHH BHARAT

Credit distribution, Eligibility and Pre-requisites of the Course

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course |
|---------------------|---------|-----------------------------------|----------|---------------------|--------------------------------|-----------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Swachh Bharat | 02 | 1 | 0 | 1 | Pass in Class 12 th | NIL |

Learning Objectives

The Learning Objectives of the Course are:

- To understand the developmental challenges with reference to sanitation infrastructure and practices.
- To build values of cleanliness, hygiene and waste management in diverse socio-economic contexts.
- To understand planning of social policy and programmes.
- To use waste management techniques at community level.
- To instil a sense of service towards society and the Nation.

Learning Outcomes

The Learning Outcomes of the course are:

- Understanding the significance of the Swachh Bharat Abhiyan.
- Ability to analyse and predict the sanitation challenges of India
- Determine the link between sanitation and development.
- Contribute to the Swachh Bharat Abhiyan through real time projects/fieldwork.

SYLLABUS OF SWACHH BHARAT

UNIT – I Introduction to Swachh Bharat Abhiyan

(4 Weeks)

- Gandhian philosophy of Cleanliness
- Swachh Bharat Abhiyan (SBA)
- Hygiene, Sanitation & Sustainable Waste Management
- Agencies and nodal Ministries for SBA

- Different phases of the SBA and its evaluation
- Citizens' Responsibilities: Role of Swacchagrahi

UNIT – II Swachh Bharat: Rural and Urban Facets

(8 Weeks)

- Indicators for Swachh Bharat
- Rural
 - i. Sanitation coverage across households (2014 vs. 2022)
 - ii. Open Defecation Free (ODF) Villages: Parameters
 - iii. ODF plus model: Key indicators
- Urban
 - i. Sustainable sanitation
 - ii. Waste/water and solid waste management
 - iii. Garbage Free Cities

UNIT – III Prospects and Challenges

(3 Weeks)

- Attitudes and Perceptions
- Operational and Financial issues
- Monitoring & Supervision
- Community Mobilization

Practical component (if any) –

(15 Weeks)

Suggested Activities: List of activities to be undertaken:

- Identify plastic and e-waste in and around the institution and suggest innovative technologies to minimize wastage.
- Identify events/fests that generate maximum waste and ways to minimize it.
- Visit canteen/shops and track the lifecycle of wet/dry waste in and around the institution and document the findings in the form of a Project Report.
- Conduct interviews of stakeholders to understand the level of awareness.
- Conduct a Clean Audit of the Institution and identify areas for action.
- Conduct cleanliness drives.
- Organise Swachhata Pakhwada meetings, rallies, and mobilization camps within the identified communities.
- Students may participate in the Swachh Bharat Internship programme.
- If required students can share their experiences in the form of a Project Report.
- Any other Practical/Practice as decided from time to time

VAC 1: THE ART OF BEING HAPPY

Credit distribution, Eligibility and Pre-requisites of the Course

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course |
|------------------------|---------|-----------------------------------|----------|---------------------|--------------------------------|-----------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| The Art of Being Happy | 02 | 1 | 0 | 1 | Pass in Class 12 th | NIL |
| | | | | | | |
| | | | | | | |

Learning Objectives

- To synthesize the insights developed by Human Development experts, Psychologists, Anthropologists on one hand, and the intellectual traditions of Vedantic Philosophy and Indology on the other towards the experience of happiness.
- To illustrate various factors that determine the subjective experience of happiness in a cross cultural context.

Learning outcomes

- The students shall be able to evaluate the factors contributing to the phenomenon of happiness in the personal, familial and community life of an individual in different cultures in the Indian context.
- They will be able to develop healthy interpersonal relationships and wellbeing cherishing the values of Indian culture and philosophy.
- They will be able to relate to the global phenomenon of sustainable development and become sensitive to the needs of the planet.
- They will be able to apply the experience of *Aananda* at a personal level.

SYLLABUS OF THE ART OF BEING HAPPY

UNIT – I Human Ecology and Happiness Lectures

(3 Weeks)

- Definitions/Factors of Happiness: Environmental and Social

- Physical, emotional and psychological well-being for happiness
- Physiological and hormonal basis of happiness
- Coping with Stress: A life saving skill

UNIT – II Indological Theories of Happiness

(4 Weeks)

- *Panch Kosh* Theory & Idea of Well-Being
- Idea of Self and other
- Hierarchy and stages of happiness

UNIT – III Happiness: Cross-cultural Contexts

(4 Weeks)

- Culture and Happiness
- Interpersonal Relationship: Comparative Perspective
- Towards Self-Actualization

UNIT – IV Local and Global Perspective of Happiness

(4 Weeks)

- Measuring happiness: Key indicators
- Happiness Index
- India in Global Happiness Indices

Practical component (if any) –

(15 Weeks)

The course will be based on students' identification and operationalization of the concept of happiness and well-being. Students will explore the indicators and actualization of these concepts in everyday life.

- Community surveys on the facilities promoting positive mental health practices such as Yoga and Meditation Centres, Recreation clubs, and Parks for youth and senior citizens shall be carried out by the students.
- Extending help and social service by visiting old age homes/ hospitals/slum areas or any other disadvantaged groups.
- Students can undertake a field work / project independently or work as an Intern with NGOs working in the area of happiness and well-being.
- Critical appreciation of a documentary/ film based on Happiness and Well-being can be undertaken by the students.
- Workshops/ Sessions for the actualization of innate creative potential- (Music, Drawing, Calligraphy, Dramatics)

- Hands-on Happiness: Gardening, Cleaning, Washing, Cooking, etc.
- If required, students can share their experiences in the form of a Project Report.
- Students may share their experiences in the form of Audio-video presentations of 15-20 minutes.
- Any other Practical/Practice as decided from time to time

VAC 1: VEDIC MATHEMATICS - I

Credit distribution, Eligibility and Pre-requisites of the Course

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course |
|-----------------------|---------|-----------------------------------|----------|---------------------|-----------------------|-----------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Vedic Mathematics - I | 02 | 1 | 0 | 1 | 12 TH Pass | NIL |

Learning Objectives

The Learning Objectives of the course are:

- Foster love for maths and remove its fear through Vedic Mathematics
- Enhance computation skills in students through Vedic Mathematics
- Develop logical and analytical thinking
- Promote joyful learning of mathematics
- Discuss the rich heritage of mathematical temper of Ancient India

Learning outcomes

The Learning Outcomes of the course are

- Overcome the fear of maths
- Improved critical thinking
- Familiarity with the mathematical underpinnings and techniques
- Ability to do basic maths faster and with ease.
- Appreciate the Mathematical advancements of Ancient India.

SYLLABUS OF VEDIC MATHEMATICS - I

UNIT – I Vedic Maths- High Speed Addition and Subtraction Sessions/Lectures (5 Weeks)

- Vedic Maths: History of Vedic Maths and its Features
- Vedic Maths formulae: Sutras and Upsutras
- Addition in Vedic Maths: Without carrying, Dot Method

- Subtraction in Vedic Maths: Nikhilam Navatashcaramam Dashatah (All from 9 last from 10)
- Fraction –Addition and Subtraction

UNIT – II Vedic Maths- Miracle Multiplication and Excellent Division (4 Weeks)

- Multiplication in Vedic Maths: Base Method (any two numbers upto three digits)
- Multiplication by Urdhva Tiryak Sutra
- Miracle multiplication: Any three-digit number by series of 1's and 9's
- Division by Urdhva Tiryak Sutra (Vinculum method)

UNIT – III Vedic Maths-Lightening Squares and Rapid Cubes (3 Weeks)

- Squares of any two-digit numbers: Base method
- Square of numbers ending in 5: Ekadhikena Purvena Sutra
- Easy square roots: Dwandwa Yoga (duplex) Sutra
- Square root of 2: Baudhayana Shulbasutra
- Cubing: Yavadunam Sutra

UNIT – IV Vedic Maths-Enlighten Algebra and Geometry (3 Weeks)

- Factoring Quadratic equation: Anurupyena, Adyamadyenantyamanty Sutra
- Concept of Baudhayana (Pythagoras) Theorem
- Circling a square: Baudhayana Shulbasutra
- Concept of pi: Baudhayana Shulbasutra
- Concept angle (θ) 0o, 30o, 45o, 60o and 90o: Baudhayana number

Practical component : (If any) (15 Weeks)

The students are expected to demonstrate the application of Vedic Maths: Sutra and Upsutra

- Conduct workshops under the supervision of the course teacher to spread awareness on the utility of Vedic Mathematics.
- Students are required to visit nearby retail shops/local vendors to purchase stationery/vegetables/bread and butter and use tricks of Vedic maths of addition and subtraction to calculate the amount to pay and receive the difference.
- Students may share their experience with the class teacher in the form of audio-video presentations of 15 minutes.
- If required, students can share their experiences in the form of a Project Report.
- Any other Practical/Practice as decided from time to time

Essential Readings

- The Essential of Vedic Mathematics, Rajesh Kumar Thakur, Rupa Publications, New Delhi 2019.
- Vedic Mathematics Made Easy, Dahaval Bathia, Jaico Publishing, New Delhi 2011
- Vedic Mathematics: Sixteen Simple Mathematical formulae from the Vedas, Jagadguru Swami Sri Bharati Krishna Trithaji, Motilal Banarasidas, New Delhi 2015.
- Learn Vedic Speed Mathematics Systematically, Chaitnaya A. Patil 2018.

Suggested Readings

- A Modern Introduction to Ancient Indian Mathematics, T S Bhanumurthy, Wiley Eastern Limited, New Delhi.
- Enjoy Vedic Mathematics, S M Chauthaiwale, R Kollaru, The Art of Living, Bangalore.
- Magical World of Mathematics, VG Unkalkar, Vandana publishers, Bangalore.

Examination scheme and mode: Subject to directions from the Examination Branch/University of Delhi from time to time

VAC 1: Yoga: PHILOSOPHY AND PRACTICE

Credit distribution, Eligibility and Pre-requisites of the Course

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course |
|-------------------------------|---------|-----------------------------------|----------|---------------------|-----------------------|-----------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Yoga: Philosophy and Practice | 02 | 1 | 0 | 1 | 12 th Pass | NIL |

Learning Objectives

The Learning Objectives of the course are:

- To learn the fundamentals of Yoga for harmonising the body, mind and emotions.
- To demonstrate the value and the practice of holistic living.
- To value the heritage of Yoga for self and society.

Learning outcomes

The Learning Outcomes of the course are:

- Understanding ways to harmonise the body and mind through Yoga.
- Disciplining the mind through practicing Yoga.
- Understanding of consciousness through practical training.

SYLLABUS OF YOGA: PHILOSOPHY AND PRACTICE

UNIT – I Yoga: *Asana*, *Prāṇāyāma* and *Dhyana*

(5 Weeks)

- History of Yoga
- Significance of Asana
- Effect of Prāṇāyama
- Importance of Dhyana

UNIT – II Patanjali's *Yogasūtra* and *Chakra*

(6 Weeks)

- Patanjali's *Yogasūtra*: a summary
- First sutra
- Second sutra
- Chakras (psychic centres)

UNIT – III Understanding *Asana* and *Pranayama*

(4 Weeks)

- Asana: the basics
- Surya Namaskara
- Nadishodhana Pranayama

Practical component (if any)

(15 Weeks)

- Surya Namaskar
- Selected Asana
- Pranayama
- Relaxation exercises for the eyes (7 steps) neck (4 steps)
- Concentration on Bhramadhy
- Project Work (effect of everyday concentration on breath for 15 minutes: reflections to be compiled in the form of a Project report.
- Any other Practical/Practice as decided from time to time

Essential Readings

- Āsanas, Prāṇāyāma and Mudra Bandh , Swami Satyananda Saraswati, Yoga Publications Trust, Munger, Bihar, India, 2004.
- Patanjali Yogasutras, Commentary by Swami Vivekanand, Rajyoga

Suggested Reading

- Patanjali Yog Pradeep- Swami Omanand Saraswati, Gita Press, Gorakhpur, 2013.
- Science of Pranayama-Swami Sivananda, Edition by David De Angellis, 2019, All Rights Reserved.
- Udayveer Shastri Granthavali, 4, Patanjali- Yoga Darshanam, Udayavir Shastri, Govindram Hasanand, Delhi 6.

Examination scheme and mode: Subject to directions from the Examination Branch/University of Delhi from time to time.

VAC 1: भारतीय भक्ति परंपरा और मानव मूल्य**Credit distribution, Eligibility and Pre-requisites of the Course**

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course |
|-----------------------------------|---------|-----------------------------------|----------|---------------------|--------------------------------|-----------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| भारतीय भक्ति परंपरा और मानव मूल्य | 02 | 1 | 0 | 1 | Pass in Class 12 th | NIL |

Learning Objectives

The Learning Objectives of this course are as follows:

- भारतीय भक्ति की महान परंपरा, प्राचीनता और इसके अखिल भारतीय स्वरूप से छात्रों का परिचय कराना
- भारतीय भक्ति परंपरा के माध्यम से छात्रों में मानव मूल्यों और गुणों को जगाकर उनका चारित्रिक विकास करना और एक अच्छे मनुष्य का निर्माण करना।
- छात्रों को भारतीय नैतिक, सांस्कृतिक और सामाजिक मूल्यों के प्रति जागरूक करना।
- भारतीय भक्ति परंपरा के माध्यम से राष्ट्रीयता और अखिल भारतीयता की भावना जागृत करना।

Learning outcomes

The Learning Outcomes of this course are as follows:

- भारतीय भक्ति परंपरा के माध्यम से छात्रों में मानव मूल्यों और गुणों को विकास होगा और वे एक अच्छे और चरित्रवान मनुष्य बन सकेंगे।
- भारतीय भक्ति परंपरा के सांस्कृतिक और सामाजिक पक्षों की जानकारी हो सकेगी।
- भक्ति की प्राचीनता और अखिल भारतीय स्वरूप की जानकारी से राष्ट्रीयता और अखिल

भारतीयता की भावना जागृत और मजबूत होगी।

- प्रमुख भक्त कवियों का परिचय और उनके विचारों की जानकारी हो सकेगी।

SYLLABUS OF परंपरा और मानव मूल्य

UNIT – I भारतीय भक्ति परंपरा

(5 Weeks)

- भक्ति : अर्थ और अवधारणा
- भक्ति के विभिन्न संप्रदाय और सिद्धांत
- भारत की सांस्कृतिक एकता और भक्ति
- भक्ति का अखिल भारतीय स्वरूप

UNIT – II भारत के कुछ प्रमुख भक्त और उनके विचार

(5 Weeks)

संतति रुक्मिण, आण्डाल, अक्कमहादेवी, ललदयद, मीराबाई, तुलसीदास, कबीरदास, रैदास, गुरु नानक, सूरदास, जायसी, तकुाराम, नामदेव, नरसिंह मेहता, वेमना, कंचन, नम्बियार, चतैन्य महाप्रभु, चंडीदास, सारला दास, शंकरदेव

UNIT – III मानव मूल्य और भक्ति

(5 Weeks)

मानव मूल्य का अर्थ

चयनित भक्त कवियों की जीवन मूल्यपरक कविताएँ

Practical component (if any) –

(15 Weeks)

- पाठ्यक्रम में उल्लिखित कवियों में से किसी एक कवि की रचनाओं में विभिन्न मानव मूल्यों के आधार पर प्रोजेक्ट
- वर्तमान समय में भक्ति की प्रासंगिकता को समझना; सर्वे और साक्षात्कार पद्धति के आधार पर.
- जीवन में मानव मूल्यों के प्रति पालन पर सर्वे और साक्षात्कार के आधार पर एक रिपोर्ट बनाना.

- उल्लिखित कवियों में से किसी एक कवि से संबंधित किसी मठ, आश्रम या मंदिर आदि, अथवा कोई फिल्म/ डॉक्यूमेंट्री के आधार पर रिपोर्ट बनाना.
- आवश्यक हो, तो छात्र प्रोजेक्ट रिपोर्ट के रूप में अपने अनुभव साझा करें
- Any other Practical/Practice as decided from time to time

Essential/recommended readings

- 'भक्ति का उद्भव और विकास तथा वैष्णव भक्ति के विविधरूप, भारतीय साहित्य का समेकित इतिहास, संपादक- डॉ नगेंद्र, हिंदी माध्यम कार्यान्वयन निदेशालय, दिल्ली विश्वविद्यालय, दिल्ली, पृष्ठ संख्या 215-250
- कुछ प्रमुख कवियों के चयनित पद
- 'भक्ति आंदोलन और भक्ति काव्य', शिव कुमार मिश्र, अभिव्यक्ति प्रकाशन, इलाहाबाद, 1994
- 'मानव मूल्य और साहित्य, डॉ धर्मवीर भारती, भारतीय ज्ञानपीठ, नई दिल्ली, 1999

Suggested readings

- 'भक्ति के आयाम', डॉ. पी. जयरामन, वाणी प्रकाशन, नई दिल्ली
- 'हिंदी साहित्य का इतिहास, आचार्य रामचंद्र शुक्ल, लोक भारती प्रकाशन, इलाहाबाद
- 'मध्यकालीन हिंदी काव्य का स्त्री पक्ष', डॉ. पूनम कुमारी, अनामिका पब्लिशर्स एंड डिस्ट्रीब्यूटर्स, नई दिल्ली
- 'मध्यकालीन हिंदी भक्ति काव्य: पुनर्मूल्यांकन के आयाम', डॉ. पूनम कुमारी, अनामिका पब्लिशर्स एंड डिस्ट्रीब्यूटर्स, नई दिल्ली

Examination scheme and mode: Subject to directions from the Examination Branch/University of Delhi from time to time

VAC 1: साहित्य संस्कृति और सिनेमा**Credit distribution, Eligibility and Pre-requisites of the Course**

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course |
|----------------------------|---------|-----------------------------------|----------|---------------------|--------------------------------|-----------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| साहित्य संस्कृति और सिनेमा | 02 | 1 | 0 | 1 | Pass in Class 12 th | NIL |

Learning Objectives

The Learning Objectives of this course are as follows:

- साहित्य, संस्कृति और सिनेमा के माध्यम से छात्रों का सर्वांगीण विकास करना
- छात्रों को नैतिक, सांस्कृतिक और संवैधानिक मूल्यों के प्रति जागरूक करना
- भारतीय ज्ञान परंपरा, वैज्ञानिक दृष्टिकोण और तार्किक क्षमता को प्रोत्साहित करना
- साहित्य, संस्कृति और सिनेमा के माध्यम से राष्ट्र प्रेम की भावना जागृत करना
- सामूहिक कार्यों के माध्यम से सम्प्रेषण, प्रस्तुतीकरण एवं कौशल दक्षता विकसित करना

Learning outcomes

The Learning Outcomes of this course are as follows:

- साहित्य, संस्कृति और सिनेमा के माध्यम से नैतिक, सांस्कृतिक और संवैधानिक मूल्यों की समझ विकसित होगी
- भारतीय ज्ञान परंपरा और नैतिक मूल्यों के प्रति सकारात्मक दृष्टिकोण बनेगा
- वैचारिक समझ एवं तार्किक क्षमता का विकास होगा
- परियोजना के माध्यम से सम्प्रेषण एवं प्रस्तुतीकरण दक्षता का विकास होगा
- छात्रों के व्यक्तित्व का सर्वांगीण विकास होगा

SYLLABUS OF साहित्य संस्कृति और सिनेमा

UNIT – I साहित्य, संस्कृति और सिनेमा का सामान्य परिचय (2 Weeks)

- साहित्य, संस्कृति और सिनेमा : परिभाषा और स्वरूप
- साहित्य , संस्कृति और सिनेमा का अंतःसंबंध

UNIT – II साहित्यिक कृतियों पर आधारित सिनेमा (6 Weeks)

- साहित्यिक कृतियों पर आधारित सिनेमा में परिकल्पना
- साहित्यिक कृतियों पर आधारित सिनेमा की प्रासंगिकता
- साहित्यिक कृतियों पर आधारित सिनेमा- आनंदमठ 1952, तीसरी कसम 1966, रजनीगंधा 1974, पद्मावत 2016

UNIT – III हिन्दी सिनेमा में सामाजिक –सांस्कृतिक मूल्यों की अभिव्यक्ति (7 Weeks)

- सामाजिक - सांस्कृतिक मूल्य
- सामाजिक - सांस्कृतिक मूल्य के शक्तिशाली उपकरण के रूप में सिनेमा
- हिन्दी सिनेमा में अंतर्निहित सामाजिक- सांस्कृतिक मूल्य – मदर इंडिया 1957, बंदिनी 1963, पूरब और पश्चिम 1970, हम आपके हैं कौन 1994, टॉयलेट: एक प्रेमकथा 2017

Practical component (if any) – (15 Weeks)

- भारतीय सांस्कृतिक मूल्यों पर आधारित लघु फिल्म हेतु पटकथा लेखन (8-10 मि नट)
- साहित्यिक रचनाओं का फिल्मांतरण (8-10 मि नट); यह सामूहिक क्रियाकलाप होगा
- राष्ट्रप्रेम, कुटुंब, शांति , पर्यावरण, जल-संरक्षण, स्वच्छता, मित्रता, सत्यनिष्ठा, कर्मनिष्ठा, समरसता में से किसी एक विषय पर मूक फिल्म निर्माण (8-10 मि नट)
- आवश्यक हो, तो छात्र प्रोजेक्ट रिपोर्ट के रूप में अपने अनुभव साझा करें
- Any other Practical/Practice as decided from time to time

Essential/Recommended readings

- 'संस्कृति क्या है (निबंध) संस्कृति ,भाषा और राष्ट्र, रामधारी सिंह दिनकर, लोक भारती प्रकाशन,2008,पृष्ठ संख्या 60-64.
- साहित्य का उद्देश्य(निबंध) ,प्रेमचंद ,एस. के.पब्लिशर्स,नई दि ल्ली,1988,पृष्ठसंख्या 7-18.
- भारतीय संस्कृति के स्वर,महादेवी वर्मा , राजपाल एंड संस प्रकाशन 2017 .
- हि ंदी सिनेमा ; भाषा ,समाज और संस्कृति (लेख), पृष्ठ संख्या 11-18 भाषा ,साहित्य ,समाज और संस्कृति खंड 6,प्रो. लालचंद राम, अक्षर पब्लिशर्स एंड डिस्ट्रीब्यूटर्स,2020
- सिनेमा और साहित्य का अंतःसंबंध (लेख) पृष्ठ संख्या 30-34,साहित्य और सिनेमा, परुषोत्तम कंु दे (संपा.) साहित्य संस्थान,2014
- साहित्यिक रचनाओं का फिल्मांतरण (लेख) पृष्ठ संख्या 206-212,लोकप्रिय सिनेमा और सामाजिक यथार्थ ,जवरीमल पारख, अनामि का पब्लिशर्स एंड डिस्ट्रीब्यूटर्स प्रा.लि., 2019

Suggested readings

- सिनेमा और संस्कृति ,राही मासूम रजा, वाणी प्रकाशन, प्रकाशन वर्ष, 2018.
- जीवन को गढ़ती फिल्में, प्रयाग शुक्ल
- सिनेमा और संसार, उदयन वाजपेयी
- साहित्य,संस्कृति और समाज परिवर्तन की प्रक्रि या(नि बंध)अज्ञेय, संपा०कृष्णदत्तपालीवाल, सस्ता साहित्य मंडल,नई दि ल्ली, 2010, पृष्ठसंख्या 25-41
- सिनेमा समकालीन सिनेमा ,अजय ब्रह्मात्मज,वाणी प्रकाशन,2006
- कल्चर इन्डस्ट्री रिकन्सि डर्डः पृष्ठसंख्या- 98-106 कल्चरइन्डस्ट्रीःथ्योडोरएडोर्नो , राउटलेज (भारतीयसंस्करण)
- दि सिग्निफिकेन्स ऑफ कल्चर इन अन्डस्टैंडिंग ऑफ सोशल चेंज इन कन्टेम्पररि इंडियाः पृष्ठसंख्या- 25-39.
- कल्चर चेंज इन इंडियाःआइडन्टिटी एंड ग्लोबलाइजेशनः योगेन्द्र सिंह .रावत पब्लिकेशन, जयपुर,भारत.

Examination scheme and mode: Subject to directions from the Examination Branch/University of Delhi from time to time

VAC 1: सृजनात्मक लेखन के आयाम

Credit distribution, Eligibility and Pre-requisites of the Course

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course |
|------------------------|---------|-----------------------------------|----------|---------------------|--------------------------------|-----------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| सृजनात्मक लेखन के आयाम | 02 | 1 | 0 | 1 | Pass in Class 12 th | NIL |

Learning Objectives

The Learning Objectives of this course are as follows:

- सृजनात्मकता और भाषायी कौशल का संक्षिप्त परिचय कराना
- विचारों का प्रभावी प्रस्तुति करण करना
- सृजनात्मक चिंतन और लेखन क्षमता को विकसित करना
- मीडिया लेखन की समझ विकसित करना

Learning outcomes

The Learning Outcomes of this course are as follows:

- सृजनात्मक चिंतन और लेखन क्षमता का विकास हो सकेगा
- लेखन और मौखिक अभिव्यक्ति की प्रभावी क्षमता विकसित हो सकेगी
- मीडिया लेखन की समझ विकसित होगी
- विद्यार्थी में अपने परिवेश, समाज तथा राष्ट्र के प्रति संवेदनशीलता का विकास होगा

SYLLABUS OF सृजनात्मक लेखन के आयाम

UNIT – I सृजनात्मक लेखन

(5 Weeks)

- सृजनात्मक लेखन : अर्थ, स्वरूप और बोध

- सृजनात्मक लेखन और परिवेश
- सृजनात्मक लेखन और व्यक्तित्व निर्माण

UNIT – II सृजनात्मक लेखन : भाषिक संदर्भ

(5 Weeks)

- भाव और विचार का भाषा में रूपान्तरण
- साहित्यिक भाषा की विभिन्न छवि याँ
- प्रिंट तथा इलेक्ट्रॉनिक माध्यमों की भाषा का अंतर

UNIT – III सृजनात्मकता लेखन – विविध आयाम

(5 Weeks)

- कविता, गीत, लघु कथा
- हास्य - व्यंग्य लेखन,
- पल्लवन, संक्षेपण , अनुच्छेद

Practical component (if any) –

(15 Weeks)

- कक्षा में प्रत्येक विद्यार्थी द्वारा 'मेरी पहली रचना' शीर्षक से किसी भी विधा में लेखन
- किसी भी साहित्यिक रचना का भाषा की दृष्टि से विश्लेषण
- इकाई- 3 में उल्लिखित विधाओं में विद्यार्थी यों द्वारा लेखन एवं सामूहिक चर्चा
- प्रत्येक इकाई से संबन्धित परि योजना कार्य:
 - i. समसामयिक विषयों पर किसी भी विधा में लेखन – बदलते जीवन मूल्य, महामारी, राष्ट्र निर्माण में छात्र की भूमि का, युवाओं के कर्तव्य, पर्यावरण संरक्षण, लोकतन्त्र में मीडिया की भूमि का, ऑनलाइन शॉपिंग अथवा अन्य समसामयिक विषय
 - ii. किसी उत्सव, मेला, प्रदर्शनी, संग्रहालय और किसी दर्शनीय स्थल का भ्रमण तथा उस पर परियोजना कार्य
- प्रिंट माध्यम के खेल, राजनीति , आर्थिक और फिल्म जगत आदि से जुड़ी सामग्री का भाषा की दृष्टि से विवेचन
- इलेक्ट्रॉनिक माध्यम के समाचार, धारावाहिक, विज्ञापन आदि का भाषा की दृष्टि से विवेचन
- आवश्यक हो, तो छात्र प्रोजेक्ट रिपोर्ट के रूप में अपने अनुभव साझा करें

- Any other Practical/Practice as decided from time to time

Essential/recommended readings

- लेखन एक प्रयास, हरीश चन्द्र काण्डपाल
- रचनात्मक लेखन, सं. रमेश गौतम
- साहित्य – चिंतन: रचनात्मक आयाम, रघुश

Suggested readings

- अग्नि की उड़ान, अबुल कलाम आज़ाद
- टेलीविजन की भाषा - हरीश चन्द्र बर्णवाल, राधाकृष्ण प्रकाशन, नई दिल्ली
- छोटे पर्दे का लेखन, हरीश नवल
- काव्यभाषा : रचनात्मक सरोकार, प्रो. राजमणि शर्मा
- कविता रचना प्रक्रिया, कुमार विमल

Examination scheme and mode: Subject to directions from the Examination Branch/University of Delhi from time to time

2. Amendment to Appendix -II-A to the Ordinance V (2-A) of the Ordinances of the University vide EC Resolution 18-1-21 dated 18.08.2022 regarding Skill Enhancement Courses (SECS)

Following addition be made to Appendix-II-A to the Ordinance V (2-A) of the Ordinances of the University;

Add the following:

**SKILL ENHANCEMENT COURSES (SECS)
UNDER
UGCF-2022
LISTED UNDER APPENDIX-II-A TO THE ORDINANCE V (2-A) OF THE
ORDINANCES OF THE UNIVERSITY
(With effect from Academic Year 2022-23)**

The NEP 2020 envisages imparting life skills as well as technical and professional skills as part of holistic education. University of Delhi has prepared various Skill Enhancement Courses in different domains to provide kinds of skills to the students, such as Communication Skills, Computer related skills, Coding skills, financial management skills, etc. with higher degree of hands on learning so as to equip them with the skills of their choice suitable to the academic path they choose.

A student who pursues any undergraduate programme in the University and its Colleges is offered a pool of Skill Enhancement Courses, from which he has to choose one to study in the first Semester. A list of such courses as passed by the Executive Council in its meeting dated 18.08.2022 is as below:

| SL.NO. | COURSE TITLE | TOTAL CREDITS: 2 |
|--------|----------------------------------|------------------|
| 1 | Advanced Spreadsheets Tools | |
| 2 | Analytics/ Computing With Python | |
| 3 | APP Development using Flutter | |
| 4 | Back-End Web Development | |
| 5 | Basic IT Tools | |

| | |
|----|--|
| 6 | Big Data Analytics |
| 7 | Beginners Course to Calligraphy |
| 8 | Business Communication |
| 9 | Business Intelligence and Data Visualisation |
| 10 | CAD for Fashion |
| 11 | Communication in Everyday Life |
| 12 | Communication in Professional Life |
| 13 | Creative Writing |
| 14 | Cyber Sphere and Security : Global Concern |
| 15 | Developing sustainability plans for a business |
| 16 | Digital Film Production |
| 17 | Digital Marketing |
| 18 | Essentials of Python |
| 19 | E-Tourism |
| 20 | Finance for Everyone |
| 21 | Financial Database and Analysis Software |
| 22 | Front End Web Design and Development |
| 23 | Graphics Design & Animation |
| 24 | Harmonium |
| 25 | Introduction to Arabic Calligraphy |
| 26 | Introduction to Blockchain |
| 27 | Introduction to Cloud Computing (AWS) |
| 28 | Negotiations and Leadership |
| 29 | Personal Financial Planning |
| 30 | Personality Development and Communication |
| 31 | Political Leadership and Communication |
| 32 | Programing with Python |
| 33 | Prospecting E-Waste for Sustainability |
| 34 | Public Speaking in English Language and Leadership |
| 35 | Statistical Software Package |
| 36 | Statistics with 'R' |
| 37 | Sustainable Ecotourism and Entrepreneurship |
| 38 | Visual Communication and Photography |
| 39 | पटकथा लेखन |
| 40 | रंगमंच |
| 41 | रचनात्मक लेखन |

ADVANCED SPREADSHEETS TOOLS

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|-----------------------------|---------|-----------------------------------|----------|------------------------|-----------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Advanced Spreadsheets Tools | 2 | 0 | 0 | 2 | 12 th Pass | NIL |

Learning Objectives

The Learning Objectives of this course are as follows:

- To enable the students to use Excel for advanced data analysis
- To equip the students to with automation skills on excel
- To enable the students to use excel for informed decision making.

Learning outcomes

The Learning Outcomes of this course are as follows:

- By studying this course, students will be able to make meaningful representations of data in the form of charts and pivot tables.
- By studying this course, students will be able to draw analysis on data using spreadsheets and use interpretation to make decisions.
- By studying this course, students will be able to generate word documents with appropriate formatting, layout, proofing.
- By studying this course, students will be able to manage data for generating queries, forms and reports in a database.

SYLLABUS

Unit 1: Excel Advanced Techniques

(3 Weeks)

Templates, Efficiency, and Risk (Standard Deviation, Variance, and Coefficient of Variation), Data Validation; *Functions and Power functions, Array Formulae (Frequency Distribution, mode.mult, mode.sngl), Tables, Advanced Range Names, What-if-analysis: Goal-seek, Data tables, and Scenario Manager; Data analysis ToolPak: Descriptive Statistics, Moving averages, Histogram, Covariance, correlation, and Regression analysis (only for projection); solver add-

in. Problem Solving using Solver (optimal product mix, workforce scheduling, transportation, capital budgeting, financial planning), Integrating excel with other tools: MS word, outlook, PowerPoint, Access, Power BI.

Unit 2: Excel Interactivity and Automation

(4 Weeks)

Index and Match, Offset, Dynamic Charting, Database functions, Text functions, and Error functions: IfError, IsError, Aggregate, Circular Reference, Formula Auditing, Floating-Point Errors, Form Controls (Button, Combo, Check box, Spinner, List, Option), Visual Basic (only basic). Recording Macros, Absolute and relative macros, editing macros, Use of spinner buttons and command buttons; Sub Procedure, Function Procedure (creating New Functions); Working with Loops: Do_while loop, For_Next loop; Creating User Forms: Message Box, Input Box; If_Then_Else.

Unit 3: Introduction to VBA

(4 Weeks)

Conditional Formatting, Charts that Inspire (Waterfall, Column, Line, Combo, Thermometer, Scatter, Histogram) Slicers, Sparklines, Graphics Tricks and Techniques, Worksheet Automation using Macros: Absolute and relative macros, editing macros, Creating new functions using macros, Use of spinner buttons and command buttons.

Unit 4: Data Analysis and Decision-Making

(4 Weeks)

Working with External Data, Advanced Uses of PivotTables, PowerPivot, Reporting with PowerPivot, Power query, Dashboard, Creating a spreadsheet in the area of: Loan and Lease statement; Ratio Analysis; Payroll Accounting; Capital Budgeting (NPV & IRR), Portfolio Management, Breakeven analysis, and Sensitivity analysis; Operations Management: Constraint, Forecasting & Trend Analysis optimization, Assignment Problems; Depreciation Accounting (Single Method); Graphical representation of data; Frequency distribution and its statistical parameters; Correlation and Regression Analysis

Essential/recommended readings

- Excel 2016 Power Programming with VBA, Michael Alexander, Dick Kusleika, Wiley.
- Financial Analysis and Modelling Using Excel and VBA, Chandan Sengupta, Second Edition, Wiley Student Edition.
- MS Excel 2016, Data Analysis & Business Modelling, Wayne Winston, PHI.

Suggestive readings

- Microsoft Excel 2016 - Data Analysis and Business Modelling Paperback – 1 May 2017 Wayne L. Winston, Microsoft Press.
- Microsoft Excel Practical Formulae: From Basic Data Analysis to Advanced Formulae
- Manipulation Diane Griffiths.

Examination scheme and mode:

Total Marks: 100

Internal Assessment: 25 Marks

Practical Exam (Internal): 25 Marks

End Semester University Exam: 50 Marks

The Internal Assessment for the course may include Class participation, Assignments, Class tests, Projects, Field Work, Presentations, amongst others as decided by the faculty.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

ANALYTICS / COMPUTING WITH PYTHON

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|--|----------|-----------------------------------|----------|---------------------|-----------------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Analytics/computing with Python | 2 | 0 | 0 | 2 | 12th Pass | NIL |

Learning Objectives

The Learning Objectives of this course are as follows:

- To introduce machine learning techniques to students using Python programming
- To enable students to use various tools and packages for advanced data analysis

Learning outcomes

The Learning Outcomes of this course are as follows:

- After studying this course, students will be able to learn about Python's main features and how they make Python a great tool for financial analysts.
- After studying this course, students will be able to get familiarized with Anaconda and Jupyter Notebook.
- After studying this course, students will be able to learn basics of Machine learning.
- After studying this course, students will be able to apply these techniques on data.

SYLLABUS

Unit I

(5 weeks)

Python: General overview, Python vs. Excel , Anaconda and Jupyter notebook: Interface overview, Data types in Python, Python basic syntax: Assignment statements, creating variables, indentation, conditionals, and loops, writing user defined functions. Working with libraries: Pandas, NumPy, Matplotlib, and Seaborn. Python SQL Database Access: Introduction, Installation, DB Connection, Creating DB Table.

Unit II

(5 weeks)

Pandas: Working with Data Frame, Importing from Excel or .csv files, Powerful filters and indexes. Numpy: Selecting data with loc and iloc, Using NumPy for speed, Trade-offs between arrays and lists, Array functions. Data cleansing and normalization: Libraries for data visualization, Types of charts/graphs and how to build them.

Unit III

(5 weeks)

Machine learning: Introduction, Definitions, Supervised, unsupervised, python libraries for machine learning: Sci-kit learn, Regression: Linear regression, logistic regression, over-fitting and regularization.

Essential/recommended readings

- Pilgrim, M. (2004). Dive Into Python. Apress. Ch. 1,2,4
- S Raschka, Python Machine Learning, V Mirjalili (2020), Ch 3
- Mitchell, T. M. (1997). Machine Learning. New York: McGraw-Hill.

Suggested Readings

- Liu, Y. (2019). Python machine learning by example: Implement machine learning algorithms and techniques to build intelligent systems (Second edition.). Packt Publishing.
- Boschetti, A. (2016). Regression Analysis with Python (1st ed.). Packt Publishing. Retrieved from <https://www.perlego.com/book/4457/regression-analysis-with-python-pdf> (Original work published 2016)
- Sivanandam, S.N., & Deepa, S.N. (2011). Principles of soft computing.

Examination scheme and mode:

Total Marks: 100

Internal Assessment: 25 marks

Practical Exam (Internal): 25 marks

End Semester University Exam: 50 marks

The Internal Assessment for the course may include Class participation, Assignments, Class tests, Projects, Field Work, Presentations, amongst others as decided by the faculty.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

APP Development using Flutter

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|-------------------------------|---------|-----------------------------------|----------|------------------------|-----------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| APP development using Flutter | 2 | 0 | 0 | 2 | 12 th Pass | NIL |

Learning Objectives

The Learning Objectives of this course are as follows:

- To enable the students for developing simple mobile applications that can run on Android, IOS and Web.
- To learn the fundamentals of Flutter platform.
- To enable the students to write cross-platform applications.

Learning outcomes

The Learning Outcomes of this course are as follows:

- After studying this course, students will be able to Install and use flutter
- After studying this course, students will be able to use DART language
- After studying this course, students will be able to build a cross-platform APP
- After studying this course, students will be able to deploy application with single codebase.

SYLLABUS

Unit 1

(3 weeks)

Introduction to Flutter, Flutter – installation, Widgets, Gestures (Title, Body, Layouts, Columns, Row, Run app)

Unit 2

(4 weeks)

State Management, Flutter – Introduction To Package, Build method, Dart packages, app bar, text widgets, Scaffold, Containers, Structuring flutter apps, Using GitHub repos of flutter.

Unit 3

(4 weeks)

Flutter – Accessing Rest API, Database Concepts, Testing (Widget Testing).

Unit 4

(4 weeks)

Deployment (Android Application On Play Store, IOS Application On APP Store)

Practical Exercises

(15 weeks)

- Build a simple quiz app in flutter for android, ios, and web.
- Build a cross-platform app based on your own idea. Use as many features of flutter as you can.

Essential/recommended readings

- <https://docs.flutter.dev/>
- <https://github.com/flutter>

Examination scheme and mode:

Total Marks: 100

Internal Assessment: 25 marks

Practical Exam (Internal): 25 marks

End Semester University Exam: 50 marks

The Internal Assessment for the course may include Class participation, Assignments, Class tests, Projects, Field Work, Presentations, amongst others as decided by the faculty.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Back-End Web Development

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|--------------------------|---------|-----------------------------------|----------|---------------------|-----------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Back-End Web Development | 2 | 0 | 0 | 2 | 12 th Pass | NIL |

Learning Objectives

The Learning Objective of this course is as follows:

- To introduce the basic concepts and techniques of server side web programming.
- To enable the students to apply the basic concepts and techniques of server side web programming.

Learning outcomes

The Learning Outcomes of this course are as follows:

- After studying this course, students will be able to build interactive and dynamic websites.
- After studying this course, students will be able to write the server side programming techniques with Django for accessing the contents to/from the server
- After studying this course, students will be able to learn to validate server-side/backend data
- After studying this course, students will be able to use GET and POST methods for sending data within client and server.

SYLLABUS

Unit 1

(7 weeks)

Installation of Django ,Introduction to Django;;Model–view–controller(MVC) model; Django structure; HTML templates; URL dispatcher ,Django Template System, Interacting with a Database

Unit 2**(8 weeks)**

The Django Administration Site , Wrapper Functions, Custom Views GET and POST methods ;Deployment of Django; Automating tasks with Django; Building Web APIs using Django REST

Project work**(15 weeks)**

Build a website for student admission in a college/university.

Essential/recommended readings

- <https://docs.djangoproject.com/>

Examination scheme and mode:

Total Marks: 100

Internal Assessment: 25 marks

Practical Exam (Internal): 25 marks

End Semester University Exam: 50 marks

The Internal Assessment for the course may include Class participation, Assignments, Class tests, Projects, Field Work, Presentations, amongst others as decided by the faculty.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Basic IT Tools

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|---------------------------|---------|-----------------------------------|----------|------------------------|-----------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Basic IT Tools | 2 | 0 | 0 | 2 | 12 th Pass | NIL |

Learning Objectives

The Learning Objectives of this course are as follows:

- To enable students develop IT skills that are a pre-requisite in today's work environment.
- To equip them with basic computing skills that will enhance their employability in general.
- To enable the student to analyse and present information in a meaningful manner.

Learning outcomes

The Learning Outcomes of this course are as follows:

- By studying this course, students will be able to use word-processor to generate documents with appropriate formatting, layout, review and referencing.
- By studying this course, students will be able to manage data in worksheets and workbooks and analyze it using spreadsheet functions and inbuilt formulas.
- By studying this course, students will be able to draw analysis on data using spreadsheets to make decisions.
- By studying this course, students will be able to make meaningful representations of data in the form of charts and pivot tables.
- By studying this course, students will be able to manage data in database tables and use the same for generating queries, forms and reports.

SYLLABUS

Course Contents:

Unit 1: Introduction to Spreadsheets

(4 Weeks)

Spreadsheets: Concept of worksheets and workbooks, creating, opening, closing and saving workbooks, moving, copying, inserting, deleting and renaming worksheets, working with multiple worksheets and multiple workbooks, controlling worksheet views, naming cells using name box, name create and name define; Exchanging data using clipboard, object linking and

embedding; Printing and Protecting worksheets: Adjusting margins, creating headers and footers, setting page breaks, changing orientation, creating portable documents and printing data and formulae; Implementing file level security and protecting data within the worksheet; Understanding absolute, relative and mixed referencing in formulas, referencing cells in other worksheets and workbooks, correcting common formula errors, working with inbuilt function categories like mathematical, statistical, text, lookup, information, logical, database, date and time and basic financial functions.

Unit 2: Data Analysis in Spreadsheets

(4 Weeks)

Consolidating worksheets and workbooks using formulae and data consolidate command; Choosing a chart type, understanding data points and data series, editing and formatting chart elements, and creating sparkline graphics, Analysing data using pivot tables: Creating, formatting and modifying a pivot table, sorting, filtering and grouping items, creating calculated field and calculated item, creating pivot table charts, producing a report with pivot tables. Introduction to recording and execution of macros.

Unit 3: Word Processing

(3 Weeks)

Introduction: Creating and saving your document, displaying different views, working with styles and character formatting, working with paragraph formatting techniques using indents, tabs, alignment, spacing, bullets and numbering and creating borders; Page setup and sections: Setting page margins, orientation, headers and footers, end notes and foot notes, creating section breaks and page borders; Working with tables: Creating tables, modifying table layout and design, sorting, inserting graphics in a table, table math, converting text to table and vice versa; Create newspaper columns, indexes and table of contents, Spell check your document using inbuilt and custom dictionaries, checking grammar and style, using thesaurus and finding and replacing text; Create bookmarks, captions and cross referencing, adding hyperlinks, adding sources and compiling and bibliography; Mail merge: Creating and editing your main document and data source, sorting and filtering merged documents and using merge instructions like ask, fill-in and if-then-else; Linking and embedding to keep things together.

Unit 4: Databases**(4 Weeks)**

Introduction to Database Development: Database Terminology, Objects, Creating Tables, working with fields, understanding Data types, Changing table design, Assigning Field Properties, Setting Primary Keys, using field validation and record validation rules, Indexing, working with multiple tables, Relationships & Integrity Rules, Join Properties, Record manipulation, Sorting & Filtering; Select data with queries: Creating Query by design & by wizard (Select, Make Table, Append, Delete, Cross Tab, Update, Parameterized Query, Find Duplicate and Find Unmatched), Creating multi table queries, creating & working with table joins. Using operators & expressions: Creating simple & advance criteria; Working with forms: Creating Basic forms, working with bound, unbound and calculated controls, understanding property sheet, Working with Data on Forms: Changing Layout, creating Sub Forms, creating list box, combo box and option groups; Working with Reports: Creating Basic Reports, Creating Header & Footer, Placing Controls on reports, sorting & grouping, Creating Sub reports.

Essential/recommended readings

- Swinford, E., Dodge, M., Couch, A., Melton, B. A. (2013). Microsoft Office Professional 2013. United States: O'Reilly Media.
- Wang, W. (2018). Office 2019 For Dummies. United States: Wiley. Microsoft Lambert, J. (2019). Microsoft Word 2019 Step by Step. United States: Pearson Education.

Suggestive readings

- Jelen, B. (2013). Excel 2013 Charts and Graphs. United Kingdom: Que.
- Alexander, M., Jelen, B. (2013). Excel 2013 Pivot Table Data Crunching. United Kingdom: Pearson Education.
- Alexander, M., Kusleika, R. (2018). Access 2019 Bible. United Kingdom: Wiley.

Examination scheme and mode:

Total Marks: 100

Internal Assessment: 25 Marks Practical

Exam (Internal): 25 Marks

End Semester University Exam: 50 Marks

The Internal Assessment for the course may include Class participation, Assignments, Classtests, Projects, Field Work, Presentations, amongst others as decided by the faculty.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Big Data Analytics

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|---------------------------|---------|-----------------------------------|----------|---------------------|-----------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Big Data Analytics | 2 | 0 | 0 | 2 | 12 th Pass | NIL |

Learning Objectives

The Learning Objectives of this course are as follows:

- To Understand the Big Data Platform and its Uses
- Provide an overview of Apache Hadoop
- Provide HDFS Concepts and Interfacing with HDFS.
- Provide hands on Hadoop Eco System
- To understand spark framework

Learning outcomes

The Learning Outcomes of this course are as follows:

- After studying this course, students will be able to identify Big Data and its Business Implications.
- After studying this course, students will be able to list the components of Hadoop and Hadoop Eco-System.
- After studying this course, students will be able to access and process data on distributed file system,
- After studying this course, students will be able to manage job execution in Hadoop environment.
- After studying this course, students will be able to develop Big Data Solutions using Hadoop Eco System.

SYLLABUS

Unit 1: Fundamentals of Big Data Analysis (3 weeks)

Data Storage and Analysis, Characteristics of Big Data, Big Data Analytics, Typical Analytical Architecture, Requirement for new analytical architecture, Challenges in Big Data Analytics – Need of big data frameworks

Unit 2: Hadoop Framework (4 weeks)

Hadoop, Requirement of Hadoop Framework, Design principle of Hadoop –Comparison with other system, Hadoop Components – Hadoop 1 vs Hadoop 2, Hadoop Daemon's – HDFS Commands, Map Reduce Programming: I/O formats, Map side join, Reduce Side Join, Secondary sorting, Pipelining Map Reduce jobs

Unit 3: HDFS (Hadoop Distributed File System) (4weeks)

The Design of HDFS, HDFS Concepts, Command Line Interface, Hadoop file system interfaces, Data flow, Data Ingest with Flume and Scoop and Hadoop archives, Hadoop I/O: Compression, Serialization, Avro and File-Based Data structures.

Unit 4: Spark Framework and Data Analysis with Spark Shell (4 weeks)

Introduction to GPU Computing, CUDA Programming Model, CUDA API, Simple Matrix, Multiplication in CUDA, CUDA Memory Model, Shared Memory Matrix Multiplication, Additional CUDA API Features. Writing Spark Application - Spark Programming in Scala, Python, R, Java - Application Execution.

Practical Exercises (15 weeks)

- Downloading and installing Hadoop.
- Understanding different Hadoop modes. Startup scripts, Configuration files.
- Hadoop Implementation of file management tasks, such as Adding files and directories, retrieving files and Deleting files.
- Run a basic word count Map reduce program to understand map reduce paradigm: To count words in a given file, to view the output file, and to calculate the execution time.
- Map Reduce Program to analyse time-temperature statistics and generate report with max/min temperature.
- Implement of Matrix Multiplication with Hadoop Map Reduce.
- Implementation of K-means clustering using Map Reduce.
- To study and implement basic functions and commands in R programming.
- To build Word cloud, a text mining method using R for easy to understand and visualization than a table data.
- To implement clustering program using R programming

Essential/recommended readings

- Seema Acharya, Subhasini Chellappan, "Big Data Analytics" Wiley 2015.
- Mike Frampton, "Mastering Apache Spark", Packt Publishing, 2015.
- Tom White, "Hadoop: The Definitive Guide", O'Reilly, 4th Edition, 2015.
- Nick Pentreath, Machine Learning with Spark, Packt Publishing, 2015.
- Mohammed Guller, Big Data Analytics with Spark, Apress, 2015.
- Donald Miner, Adam Shook, "Map Reduce Design Pattern", O'Reilly, 2012

Examination scheme and mode:

Total Marks: 100

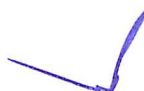

Internal Assessment: 25 marks

Practical Exam (Internal): 25 marks

End Semester University Exam: 50 marks

The Internal Assessment for the course may include Class participation, Assignments, Class tests, Projects, Field Work, Presentations, amongst others as decided by the faculty.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Beginners Course to Calligraphy

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|--|----------|-----------------------------------|----------|------------------------|-----------------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Beginners course to Calligraphy | 2 | 0 | 0 | 2 | 12th Pass | NIL |

Learning Objectives

The Learning Objectives of this course are as follows:

- To teach students the art of Calligraphy.
- To make students better at handwriting and embellish the scripts.
- To help the students communicate with creativity.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Students will be skilled in calligraphy scripts.
- Learning flourishing will help to develop good writing.
- Practice sessions will further a project at the end of semester.
- Will induce skills to set up a business, too.

SYLLABUS

Unit 1: Introduction to Calligraphy

(3 Weeks)

- Definition, History of calligraphy, Calligraphy at the Global level, Types of Calligraphy: Classical Calligraphy & Modern Calligraphy
- Practice Sessions: Introducing students to Calligraphy and its types through images, videos and animations.

Unit 2: Introduction to the Writing tools

(5 Weeks)

- Tool Kit, Different Types of Pens, Different Types of Nibs, Different Types of Brushes, Different Types of Inks
- Practice Sessions: Display of Writing items, Discussion on the usage of different types of pens, nibs and brushes through hands-on activities

Unit 3: Foundation to Calligraphy**(7 Weeks)**

- How to write letters?, Majuscules, Miniscules, Numbers, Learning Strokes, Sans Serif B-point, Celtic, Italian Script, Roman Script, Gothic Script
- Practice Sessions: Learning and practicing strokes- Upstroke, Downstroke, Overturn, Underturn, Compound curve, Oval, Ascending loop
- Hands-on activities and Assessment on Sans Serif B-point, Celtic, Italian Script, Roman Script, Gothic Script, Flourishing

Essential/recommended readings

- Suepsuan, P. A. (2021). Start Calligraphy The Right way to write: Learn Calligraphy The Complete Book - Modern Calligraphy Pen For Beginners, Learning Resources Step By Step Number Line, Mastering Modern Calligraphy. Independently published.
- C., & Co., T. P. (2020). Modern Calligraphy Set for Beginners: A Creative Craft Kit for Adults featuring Hand Lettering 101 Book, Brush Pens, Calligraphy Pens, and More. Paige Tate & Co.

Examination scheme and mode:

Total Marks: 100

Internal Assessment: 25 marks

Practical Exam (Internal): 25 marks

End Semester University Exam: 50 marks

The Internal Assessment for the course may include Class participation, Assignments, Class tests, Projects, Field Work, Presentations, amongst others as decided by the faculty.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Business Communication

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|------------------------|---------|-----------------------------------|----------|---------------------|-----------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Business Communication | 2 | 1 | 0 | 1 | 12 th Pass | NIL |

Learning Objectives

The Learning Objectives of this course are as follows:

- To train students to enhance written as well as oral communication in the corporate world.
- To help students in understanding the principles and techniques of business communication.
- To understand the use of electronic media for communication.

Learning outcomes

The Learning Outcomes of this course are as follows:

- After studying this course, students will be able to explain the need for communication in management.
- After studying this course, students will be able to appreciate the need of effective writing for communication.
- After studying this course, students will be able to demonstrate the skill of effective report writing and summarizing annual reports.
- After studying this course, students will be able to analyse business correspondence and e-correspondence.
- After studying this course, students will be able to appreciate oral presentations.

SYLLABUS

Unit 1: Introduction to the essentials of Business Communication (3 weeks)

Meaning, process and functions. Need and importance. Medium: verbal & non-verbal communication. Channels: formal & informal. Levels of communication. Direction of communication: downward, upward, lateral, & diagonal. Effective communication: difficulties/barriers and solutions. Interactive and non-interactive techniques of communication. Listening as a tool of communication, Guidelines for effective listening.

Unit 2: Effective Writing (3 weeks)

Guidelines for clear writing. References, bibliographical research tools. Citing methods, footnotes, discussion footnotes. Use of library and internet for collection, classification and interpretation of data and information.

Unit 3: Report Writing**(3 weeks)**

Types of reports. Formal report: components and purpose. Organising information: outlining & numbering sections, section headings, sub-headings, & presentation. Writing reports on field work/visits to industries, business concerns. Summarising annual reports of companies: purpose, structure and principles. Drafting minutes.

Unit 4: Business Correspondence and E-Correspondence**(3 weeks)**

Need and importance of business letters. Office memorandum, office circulars, notices and orders. Technology for communication. Effective IT communication tools. Electronic mail: advantages, safety and smartness in email. E-mail etiquettes.

Unit 5: Spoken English and Oral Presentation**(3 weeks)**

Effective negotiation: elements, process and general guidelines. Telephonic conversation. Conducting & facing interviews. Conducting & participating in group decisions. Making presentations: content and organising. Features of a good presentation. Delivering a presentation.

Practical Exercises:**(15 weeks)**

The learners are required to:

- learn how to summarise annual reports of companies.
- prepare presentations using power-point.
- participate in Group discussions and mock interviews.
- smartly draft business emails.

Essential/recommended readings

- C.B.Gupta (2019). Essentials of Business Communication, Sultan Chand & Sons.
- Kaul, A. Effective Business Communication, 2nd ed. PHI learning
- Lesikar, R.V. & Flatley, M.E. (2001). Basic Business Communication Skills for Empowering the Internet Generation, Tata McGraw Hill Publishing Company Ltd. New Delhi.
- Ludlow, R. & Panton, F.(1992). The Essence of Effective Communications, Prentice Hall of India Pvt. Ltd., New Delhi.
- Meyer C,Dev(2021). Communicating for Results,Oxford University Press
- Quintanilla, Kelly M, (2021), Business and Professional Communication, 4e, Sage Textbook
- R. C. Bhatia (2008), Business Communication, Ane Books Pvt Ltd, New Delhi.
- Raman and Singh(2012). Business Communication. Oxford University Press
- Scot, O., Contemporary Business Communication. Biztantra, New Delhi.

Note: Learners are advised to use the latest edition of readings.

Examination scheme and mode:

Total Marks: 100

Internal Assessment: 25 marks

Practical Exam (Internal): 25 marks

End Semester University Exam: 50 marks

The Internal Assessment for the course may include Class participation, Assignments, Class tests, Projects, Field Work, Presentations, amongst others as decided by the faculty.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Business Intelligence and Data Visualisation

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|---|----------|-----------------------------------|----------|---------------------|-----------------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Business Intelligence and Data Visualisation | 2 | 0 | 0 | 2 | 12th Pass | NIL |

Learning Objectives

The Learning Objectives of this course are as follows:

- ☐ To understand data and generate insights from it is by visualising it using a range of data visualization tools available.
- ☐ To understand large volume of data, discover trends, communicate effectively with all stakeholders and influence decisions.
- ☐ To develop Business Analytics skillset about how to create effective charts and interactive dashboards is extremely useful.

Learning outcomes

The Learning Outcomes of this course are as follows:

- ☐ After studying this course, students will be able to understand and describe the main concepts of data visualization.
- ☐ After studying this course, students will be able to determine the right type of graph for different types of data available or provided through hands on experience with handling real data sets.
- ☐ After studying this course, students will be able to read reports, charts, graphs, figures, maps and derive meaning from them.
- ☐ After studying this course, students will be able to create reports, data visualizations, and dashboards using Power BI and Tableau.
- ☐ After studying this course, students will be able to understand how to automate tasks, perform ETL, create data models, perform computations, and present insights using data visualization and dashboards.

SYLLABUS

Unit-1 (POWER BI)

(5 weeks)

DATA PREPARATION- Connecting to different data sets, Basic data prep and model on Power Query, Drill down and Tooltip, AI visuals (Q&A, Analyze, Decomposition)

DATA VISUALIZATION AND DASHBOARDS- Inbuilt visuals, Custom visuals, Learn from existing reports, Visualization as a Tooltip, Final dashboard – putting it together Filter, slicer, bookmarks, buttons

Unit-2 (POWER BI)**(6 weeks)**

PERFORMING COMPUTATIONS - Combine multiple files and folders, Merge and append, Custom calculations Conditional columns, Column from examples, Advanced Editor.

DAX - Introduction to Measures, Calculated Columns vs Quick Measures, Creating a Date Table, Time Intelligence Functions

POWER BI SERVICE - Publishing to Power BI Service, Power BI dataflows, Dashboards and Cross-Reporting

Unit- 3 (TABLEAU)**(4 weeks)**

VISUALIZATIONS- Introduction to Dimensions and Measures, Bar Chart, Line Chart, Table, Heat Map, Treemap, Packed Bubble, Tooltip

CALCULATIONS- Calculated Fields, Parameters, Introduction to Level of Detail (LOD)

FINAL DASHBOARD- Animations, Tooltips, Dashboard and Stories

Essential/recommended readings

- ☐ The Definitive Guide to DAX – 2nd Edition
Marco Russo Alberto Ferrari
- ☐ M Is for (Data) Monkey: A Guide to the M Language in Excel Power Query
Ken Puls & Miguel Escobar
- ☐ Tableau Your Data! Fast and Easy Visual Analysis with Tableau Software by Daniel G. Murray. 1st Edition, WILEY.
- ☐ Steve Wexler, Jeffrey Shaffer, Andy Cotgreave: The Big Book of Dashboards – visualizing your data using real world business scenarios; Wiley
- ☐ Ryan Sleeper: Practical Tableau
- ☐ Cole Nussabaumer Knaflitz : Storytelling with data- a data visualization guide for business professionals ; Wiley
- ☐ Visualize This: The Flowing Data Guide to Design, Visualization, and Statistics by Nathan Yau. 1st Edition

Examination scheme and mode:

Total Marks: 100

Internal Assessment: 25 marks

Practical Exam (Internal): 25 marks

End Semester University Exam: 50 marks

The Internal Assessment for the course may include Class participation, Assignments, Class tests, Projects, Field Work, Presentations, amongst others as decided by the faculty.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

CAD FOR FASHION

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|---------------------------|----------|-----------------------------------|----------|------------------------|-----------------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| CAD for Fashion | 2 | 0 | 0 | 2 | 12th Pass | NIL |

Learning Objectives

The Learning Objectives of this course are as follows:

- To understand the concept of fashion sketching and fabric rendering
- To learn different softwares for fashion designing and rendering

Learning outcomes

The Learning Outcomes of this course are as follows:

- After studying this course, students will be able to understand the basics of garmentsketching and fabric rendering manually.
- After studying this course, students will be able to gain the knowledge about variouscomputer design softwares – Adobe Photoshop, CorelDraw, Adobe Illustrator and Open source
- After studying this course, students will be able to learn the application of selectedcomputer design softwares for fashion sketching.
- After studying this course, students will be able to develop proficiency in CAD forthe creation of fabric textures and colour schemes.
- After studying this course, students will be able to Design a theme-based fashion collection using computer design software.

SYLLABUS

Unit I: Fashion sketching

(7 weeks)

Unit Description: Fashion sketching plays an important role in designing to preview and visualize designs before sewing actual clothing. Thus, this unit aims to help students develop the skills in designing apparel through flat sketching of garment components both manually and digitally.

Topics: Flat sketching of garment components by hand – necklines, collars, sleeves, skirts, tops, and trousers, Introduction to vector-based drawing softwares – CorelDraw, Adobe Illustrator and open-source software like Inkscape, Introduction to features and tools of CorelDraw/Illustrator/Inkscape, Project - Application of software tools for drawing technicalflats on any vector-based computer design software

Unit II: Fabric rendering

(8 weeks)

Unit Description: This unit will help students to develop skills to render the fabrics and silhouettes used in the garment. Students will be taught to imitate fabric textures in their drawing both manually and through computer aided design softwares. In addition, they will also learn to develop their own textile prints and their colour ways.

Topics: Learning to simulate textures of various fabrics manually - cotton, silk, fur, net, leather, velvet, denim, corduroy, georgette, chiffon, knit, crochet, lace, embroidery and prints. Understanding the basics of design repeat and how to create seamless prints manually.

Introduction to raster -based editing softwares –Adobe Photoshop and open-source software like GIMP, Photopea etc.

Introduction to features and tools of Photoshop/Photopea/GIMP Application of software tools for creating seamless patterns.

Project - Application of software tools for designing various textile products with different fabric textures in three different colour schemes

All the above work will be collated as a digital portfolio.

Essential Readings

- Abing, B., (2019). Fashion Sketchbook, Bloomsbury Publication, UK
- Aldrich, W., (1994). CAD in Clothing and Textiles, 2nd Edition, Wiley-Blackwell Publishing, USA
- Jain, S. & Geetha M. (2018). CorelDraw Training Guide, BPB Publications, India
- Lazear, M. Susan, (2007). Adobe Photoshop for Fashion Design, Pearson Publishing
- Callender, J. (2011). 2000 Pattern Collection, Anova Books Company Limited, London.

Suggested Readings

- CorelDraw tutorial: <https://www.youtube.com/watch?v=89VZfov7p8Q>
- Photoshop tutorial: <https://helpx.adobe.com/in/photoshop/tutorials.html>
- Shuffle Botham, R., 2014, Photoshop cc, In Easy Steps Limited, UK

Examination scheme and mode:

Total Marks: 100

Internal Assessment: 25 marks

Practical Exam (Internal): 25 marks

End Semester University Exam: 50 marks

The Internal Assessment for the course may include Class participation, Assignments, Class tests, Projects, Field Work, Presentations, amongst

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Communication in Everyday Life

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|--------------------------------|---------|-----------------------------------|----------|---------------------|-----------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Communication in Everyday Life | 2 | 0 | 0 | 2 | 12 th Pass | Nil. |

Learning Objectives

The Learning Objectives of this course are as follows:

- To lay down a basic foundation for basic communication that is a part of a student's everyday life.
- To inculcate the fundamentals of communication with the aim to enhance listening, speaking and writing skills.
- To hone practical skills that can be used in day-to-day affairs.

Learning outcomes

The Learning Outcomes of this course are as follows:

- After studying this course, students will be able to improve mediation skills.
- After studying this course, students will be able to building human relationships.
- After studying this course, students will be able to foster societal understanding & develop an independent perspective.
- After studying this course, students will be able to enhance social communications skills of students.

SYLLABUS

UNIT 1

(2 Weeks)

Theory of Communication

- Meaning, Features, Uses, Cycle, Feedback, Advantages
- Barriers
- 7 C's of Communication

UNIT 2

(3 Weeks)

Listening Skills

- Netiquettes
- Audio-book Listening & Discussions
- Note-taking

UNIT 3

(4 Weeks)

Speaking Skills

- Oral Presentation- Audio-Visual aids, Audience & Feedback, Delivery of Presentation, Handling Questions
- Group Discussion- Culture & History, Current Affairs, Society-related
- Public Speaking- Public Speech, Extempore
- Interview- Personal, Conversational, Public

UNIT 4

(2 Weeks)

Reading Skills

- Close Reading
- Skimming
- Scanning

UNIT 5

(4 Weeks)

Writing Skills

- Summarising
- Paraphrasing
- Note-making
- Essays- Expository Essay, Descriptive Essay, Narrative Essay
- Letter Writing- Formal Letter, Informal Letter
- Reports- Incidence, Newspaper, Organisational Report
- Analysis & Interpretation- Textual
- Intra & Inter-personal Skills - Monologue, Dialogue

Suggested Readings

- Chaudhary, Shoma. "Understanding Interviews, Billy Elliot is my Story, Only LessHappy". Tehelka: The People's Paper, 18 February 2006.
- Kumar, Dinesh. "Understanding Values, Our Muddled Generation". The Hindu, 26March 2006.
- Learning to Write I, "Free Writing". In Fluency in English II, ed. Varma, Pramodiniand Mukti Sanyal, pp. 1-5, Oxford, New Delhi, 2015.

Examination scheme and mode:

Total Marks: 100

Internal Assessment: 25 marks

Practical Exam (Internal): 25 marks

End Semester University Exam: 50 marks

The Internal Assessment for the course may include Class participation, Assignments, Class tests, Projects, Field Work, Presentations, amongst others as decided by the faculty.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Communication in Professional Life

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|---|----------|-----------------------------------|----------|---------------------|----------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Communication in Professional Life | 2 | 0 | 0 | 2 | 12th Pass | NIL |

Learning Objectives

The Learning Objectives of this course are as follows:

- To prepare the students for their upcoming professional fields.
- To inculcate the fundamentals of professional and business communication.
- To learn aspects of global communication.
- To enhance employability skills of the learners by enabling them to write effective resumes and face interviews with confidence

Learning outcomes

The Learning Outcomes of this course are as follows:

- After studying this course, students will be able to improve presentation skills to be learnt by effective use of verbal and non-verbal communication for the professional field.
- After studying this course, students will be able to acquire practical employability skills to be disseminated through focused sessions on practical employable knowledge.
- After studying this course, students will be able to enhance professional communication.
- After studying this course, students will be able to improve persuasion and negotiation skills which will be useful for the professional field.

SYLLABUS

UNIT 1

(2 Weeks)

- Theory of Business Communication
- Introduction
- What is Business Communication?
- Language of Business Communication
- Cultural Components – Cross-Cultural Communication, Cultural Shock, Stereotyping, Ethnocentrism
- Miscommunication & Effective Communication

UNIT 2

(3 Weeks)

Listening Skills

- Netiquettes
- Audio-book Listening & Discussions
- Note-taking

UNIT 3

(5 Weeks)

Speaking Skills

- Presentation Skills- Oral Presentation, Ppt. Preparation, Ppt. Presentation
- Group Discussion
- Talks- Domain-specific, Ted-Talks, Business Meets, Motivational Talks
- Telephonic Skills
- Persuasion Skills
- Meeting & Negotiation
- Interview- Promotion Interview, Job Interview, Business Interview
- Functions and activities of PR

UNIT 4

(5 Weeks)

Writing Skills

- Summarising & Paraphrasing
- Job-Oriented Skills- CV, Resume & Bio- Data, Job Application Letter
- Documentation
- Advertisements & Invitation
- Letter Writing- Applications, Business Letters
- Report- Analytical Report, Project Report
- Digital Communication in Social Space- Social Media Posts (Twitter, Facebook), Blog Writing, Review Writing
- Advertisement/Invitation/Poster Designing- Canva/MS Word/Coral
- Memo, Office Order, Minutes
- Making Online Academic/Work Profile- LinkedIn

Suggested Readings

- Kaushik, J.C. and K.K. Sinha eds., English for Students of Commerce, Oxford University Press, New Delhi.
- Sethi, Anjana & Bhavana Adhikari, Business Communication, Tata McGraw Hill.
- Anjana Neira Dev, et.al, eds. Business English, Department of English, University of Delhi, 2011, Pearson Publications, New Delhi.

Examination scheme and mode:

Total Marks: 100

Internal Assessment: 25 marks

Practical Exam (Internal): 25
marks

End Semester University Exam: 50 marks

The Internal Assessment for the course may include Class participation, Assignments, Class tests, Projects, Field Work, Presentations, amongst others as decided by the faculty.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Creative Writing

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|-------------------------|----------|-----------------------------------|----------|---------------------|-----------------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Creative Writing | 2 | 0 | 0 | 2 | 12th Pass | NIL |

Learning Objectives

The Learning Objectives of this course are as follows:

- To build creative writing skills of students in the main modes of creative writing viz poetry, fiction (novel, short stories), non-fiction (life narratives, autobiographies and biographies) and drama.
- To inculcate practical skills in students by mapping their creative talent which be beneficial for employability too.
- To perform hands-on-activities to students to develop their creative skills through practical sessions.

Learning outcomes

The Learning Outcomes of this course are as follows:

- After studying this course, students will be able to be sensitive to the texture of literary language.
- After studying this course, students will be able to develop craft in creative writing.
- After studying this course, students will be able to develop sense of expressing themselves through poetry/short story/biography.
- After studying this course, students will be able to induce an understanding of the relationship between an individual and society.
- After studying this course, students will be able to get into different fields and pursue versatile career opportunities.
- After studying this course, students will be able to develop an understanding of theatre and performance through drama will also help them to develop observational and behavioural skills.
- After studying this course, students will be able to develop a critical thought process and a knack in putting it in words. Students may also utilise the learnings of proofreading and editing for their academic and professional growth.
- After studying this course, students will be able to go for publishing their own work.
- After studying this course, students will be able to write a book and submit to professional bodies & academic organisations.

SYLLABUS

UNIT 1

(5 Weeks)

- Introduction to Creative Writing- Meaning, Importance
- Imagination & Writing- Peer-interaction, Activities on Imagination
- Tropes, Motifs and Figures- Learning tropes, motifs and figures through videos, Discussion on the findings
- Craft of Writing- Figure of Speech, Word Play, Character Creation
- Character Creation- Dialogue Enaction, Learning Characters through discussion on famous writings, Character Analysis, Writing activities on creating different types of characters (gender/social background/ethnicity etc.)

UNIT 2

(5 Weeks)

- Close Reading
- Analysis and Interpretation- Reading different works in Literature, Discussion in small groups, Practice Writing Session
- Proofreading & Editing- Practice sessions on Proofreading & Editing of different types of writing

UNIT 3

(5 Weeks)

- Steps of Creative Writing- Pre-Writing, Writing, Post-Writing/Final Draft
- Types of Creative Writing- Poetry, Fiction, Non-Fiction (Life Narratives), Drama
- Creative Writing & Media- Film Review, Book Review, Other Writings in Media, Submission, Publication
- Learning to write Poetry- Reading & understanding Poetry; Practising tone, rhyme, metre, verses; Writing sessions
- Learning to write Fiction- Reading & understanding Fiction; Practicing different elements of fiction (Short story, Novella, Novel); Writing sessions
- Learning to write Non-Fiction- Reading & understanding Non-Fiction (Biographies & Autobiographies); Practicing different elements of non-fiction; Writing sessions
- Learning to write Drama- Reading & understanding Drama; Practicing different elements (plot, character, climax, verbal & non-verbal cues) of Drama; Writing sessions
- Submission & Publication (in Print & Digital) - Discussions over how & where to submit and publish (online/offline), Hands-on activities

Suggested Readings

- *Creative Writing: A Beginners' Manual* by Anjana Neira Dev et al. for The Department of English, University of Delhi (New Delhi: Pearson, 2008).

Examination scheme and mode:

Total Marks: 100

Internal Assessment: 25 marks

Practical Exam (Internal): 25 marks

End Semester University Exam: 50 marks

The Internal Assessment for the course may include Class participation, Assignments, Class tests, Projects, Field Work, Presentations, amongst others as decided by the faculty.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Cyber Sphere and Security: Global Concerns

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|---|----------|-----------------------------------|----------|------------------------|-----------------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Cyber Sphere and Security: Global Concerns | 2 | 1 | 0 | 1 | 12th Pass | NIL |

Learning Objectives

The Learning Objective of this course is as follows:

- To spread awareness and enlightening visions of the indiscriminate and diversified students to ensure their immediate and basic cyber safety and prevent loss due to sheer ignorance.

Learning outcomes

The Learning Outcomes of this course are as follows:

- After studying this course, students will be able to apprehend key terms of cyber domain and identify cyber threats.
- After studying this course, students will be able to understand cyber law concepts, intellectual property and Digital Rights Management.
- After studying this course, students will be able to diagnose and examine basic security loopholes, anomalous behavior in internet.
- After studying this course, students will be able to understand principles of web security.
- After studying this course, students will be able to secure and protect personal data with safe Internet usage.
- After studying this course, students will be able to assimilate approaches for incident analysis and response, risk management and best cyber security practices.

SYLLABUS

Unit I: Introducing Cyber 'Sphere' and 'Security' (3 Weeks)

- Cyber Terminologies: Cyber Sphere, Cyber Security, Cyber Crime, Cyber Attack, Cyber Espionage, Cyber Warfare, Cybernetics
- Cyber Security and Paradigms
- Cyber Security: Objectives and Roles

Unit II: Cyber Crime: Insight, Mitigation and Control (3 Weeks)

- Cyber Crime and Cyber Activism: An Overview
- Typologies of Cyber Crimes: Generic Cyber Crimes, Advanced Persistent Threats (APTs), Cyber Threat in Mobile Technology, Cloud Computing and BYOD
- Cyber Crime Identification, Risk Assessment, Management and Control

Unit III: Cyber Policies and Cyber Law (3 Weeks)

- Cyber Policies and Cyber Law: Dimensions, Determinants, Dilemmas
- Existing Cyber Policies and Must Follow Up Actions
- Grey Areas in Cyber Laws

Unit IV: Security Tools and Usage (3 Weeks)

- Knowledge and Identification of Security Tools
- Cyber Security Aspects
- Cyber Security Toolkits

Unit V: Cyber Security: Case Studies (3 Weeks)

- Government Institutions
- Banks and Financial Institutions, Commercial Websites, Point of Sale issues and Online Payment
- Real Time Cases

Essential Readings:

- Bertrand Venard (2019). 'Cyber Security: The New Art of War', Lecture delivered at Developing Countries Research Centre [drcr], University of Delhi, 1 April 2019.
- Bertrand Venard (2019). 'The Determinants of Cybersecurity Behaviours: Qualitative Research Among French Students' in C. Onwubiko, X. Bellekens, A. Erola, M. Jaatun and C. Nogueira (eds.), Proceedings of the Cyber Science 2019: Cyber Situational Awareness for Predictive Insight and Deep Learning. UK: University of Oxford.
- Bertrand Venard (2019). Cybersecurity Among students. UK: Wolfson College, University of Oxford.
- Bertrand Venard (2019). Cyber Aggressions in the XXIst Century: Equation of a Crisis. UK: University of Oxford.

- Yogesh Atal and Sunil K Choudhary (2013). Combating Corruption: The Indian Case. Hyderabad and New Delhi: Orient Blackswan.

Examination scheme and mode:

Total Marks: 100

Internal Assessment: 25 marks

Practical Exam (Internal): 25 marks

End Semester University Exam: 50 marks

The Internal Assessment for the course may include Class participation, Assignments, Class tests, Projects, Field Work, Presentations, amongst others as decided by the faculty.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DEVELOPING SUSTAINABILITY PLANS FOR A BUSINESS

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|---|----------|-----------------------------------|----------|---------------------|-----------------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Developing sustainability plans for a business | 2 | 0 | 0 | 2 | 12th Pass | NIL |

Learning Objectives

The Learning Objectives of this course are as follows:

- To assess the status of integration of social and ecological values into business practices
- To determine strengths and weaknesses in linkages between people, planet, and profit during business practices
- To correlate the changes in ecological footprint with growth in corporate responsibility
- To recommend strategies to improve current CSR practices for environmental conservation and enhance the return on investment of the organization

Learning outcomes

The Learning Outcomes of this course are as follows:

- After studying this course, students will be able to develop CSR plans to balance ecological security with economic success.
- After studying this course, students will be able to evolve methods for the financial stability of different organizations/companies
- After studying this course, students will be able to develop a framework to reduce energy consumption, adopt renewable resources and integrate waste management strategies among employees
- After studying this course, students will be able to design sustainable business plans having major positive impacts on plant and next-generation business setting

SYLLABUS

Practical/Hands-on Exercises

(15 weeks)

- Determine strategies to reduce carbon footprint and improve supply chain efficiency of an organization
- Assess the current status of renewable energy use and investment and develop strategies to become carbon negative in the next decade
- Identify opportunities for sustainable alternatives for an environmental cause that aligns well with the organizational goal and areas of philanthropic investments
- Analyze material use at different stages of organizational process based on a set of sustainable principles and suggest environment-friendly alternatives to reduce waste
- Calculate the water footprint of the organization and develop methods for mindful water consumption to improve human health and reduce the economic cost
- Examine the current status of infrastructure with respect to the energy-efficient lighting system and evolve strategies for shifting to 100% renewable energy
- Determine the ecological impact of current infrastructure using guiding principles of LEED (Leadership in Energy and Environmental Design) Certification and identify areas for biophilic design, green spaces, and work conditions
- Optimize to reduce waste by improved methods of handling and disposing of waste
- Develop guidelines for eco-friendly transportation to reduce fuel usage and maximize route efficiency
- Eco-innovation in developing energy alternatives and providing solutions to complex environmental challenges
- Document the biological wealth (especially plants, insects, and birds) of an organization and develop the green design to maintain and enrich the biological wealth

Teaching and learning interface for practical skills:

To impart training on technical and analytical skills related to the course objectives, a wide range of learning methods will be used, including (a) laboratory practicals; (b) field-work exercises; (c) customized exercises based on available data; (d) survey analyses; and (e) developing case studies; (f) demonstration and critical analyses; and (h) experiential learning individually and collectively.

Prospective sector(s):

(a) Environmental Consultancies, (b) Sustainability Advisors, (c) All Multi-National Large-Scale Industries, and (d) Environmental NGOs

Suggested readings

- Daniels, T., 2017. The Environmental Planning Handbook: For Sustainable Communities and Regions. Routledge.
- Davoudi, S., Cowell, R., White, I. and Blanco, H. eds., 2019. The Routledge Companion to Environmental Planning. Routledge.
- Quaddus, M.A. and Siddique, M.A.B. eds., 2013. Handbook of Sustainable Development Planning: Studies in Modelling and Decision Support. Edward Elgar Publishing.
- USEPA, 2012. Planning for Sustainability: A Handbook for Water and Wastewater Utilities.

Examination scheme and mode:

Total Marks: 100

Internal Assessment: 25 marks

Practical Exam (Internal): 25 marks

End Semester University Exam: 50 marks

The Internal Assessment for the course may include Class participation, Assignments, Class tests, Projects, Field Work, Presentations, amongst others as decided by the faculty.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Digital Film Production

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|-------------------------|---------|-----------------------------------|----------|---------------------|-----------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Digital Film Production | 2 | 0 | 0 | 2 | 12 th Pass | NIL |

Learning Objectives

The Learning Objectives of this course are as follows:

- To introduce the students to the art of digital video making and editing
- To learn about the tools required for video making and editing
- To learn about the various aspects in pre and post production of videos.

Learning outcomes

The Learning Outcomes of this course are as follows:

- After studying this course, students will be able to understand the importance of various aspects of audio-video production
- After studying this course, students will be able to prepare an effective layout for making an effective video.
- After studying this course, students will be able to apply the tools required for video production and editing.

SYLLABUS

Unit 1: Introduction, Financial Planning and Budgeting (3 weeks)

Audio Production: Concept of Sound, Types of sound, Audio range, Know your equipment's (Acoustic, Microphone, Recorder, Audio Mixer, Cables & connectors), Process of recording, Mixing, Sound processing, Recording level, Audio Editing, Dubbing & voiceover (Process, steps)

Unit 2: (4 weeks)
Video Production (Pre-Production): Concept, What is pre-production, Concept/visualization, R & D, Screen play writing, Storyboard making, Shooting script writing, Peoples involved in pre-production, Set making, Copyright , Music making, Budgeting, Production Design, Location hunting, Hiring of equipment & crew members

Unit 3: (4 weeks)
Video Production (Production): Know your equipment, Camera & accessories, Lights & Camera support, Clapboard, Sound equipment, Field Monitor, Blocking, Rehearsal, Lighting, Shooting

Unit 4: (4 weeks)
Video Production (Post Production): Compiling the concept and Shooting material to final stage, Peoples involved in Post-production, Know your equipment, Editing, Color grading, Publicity, Transmission, Distribution and Rating

Practical Exercises and Projects (15 weeks)

- Recording & Mixing of multi-track audio
- Budget Making & Script writing 05 minutes program
- Shooting for 05 minutes program (News / Music Video / Documentary / Feature / Chat show / Discussion etc.)
- Editing of 05 minutes video program

Audio Production (Project)

- Knowing the audio equipment's & software
- Recording process
- Mixing & Editing of various sound
- Exporting sound in various audio formats & project

Video Production (Project)

- Story writing, Storyboard making, Shooting script writing
- Location hunting, Breakdown making, Budget making
- Set making, Lighting, Shooting
- Editing, BGM posting, Color grading, Publicity, Exhibition & Transmission

Suggested Readings:

- Digital Filmmaking for Beginners A Practical Guide to Video Production (ELECTRONICS) by Michael K. Hughes, McGraw Hill TAB.
- Digital Filmmaking for Beginners A Practical Guide to Video Production, McGraw Hill TAB
- The Digital Filmmaking Handbook, Mark Brindle
- Video Production, Vasuvi Belavdi, Oxford Higher Education

- Editing Digital Video: The Complete Creative and Technical guide, Robert Goodman and Patrick McGrath, McGraw Hill Education TAB
- Digital Video Camerawork, Peter Ward, Routledge.
- Digital Video Hacks: Tips & Tools for Shooting, Editing, and Sharing, Joshua Paul, O'Reilly Media.

Note: Learners are advised to use the latest edition of readings.

Examination scheme and mode:

Total Marks: 100

Internal Assessment: 25 marks

Practical Exam (Internal): 25 marks

End Semester University Exam: 50 marks

The Internal Assessment for the course may include Class participation, Assignments, Class tests, Projects, Field Work, Presentations, amongst others as decided by the faculty.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Digital Marketing

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|---------------------------|----------|-----------------------------------|----------|------------------------|-----------------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Digital Marketing | 2 | 0 | 0 | 2 | 12th Pass | NIL |

Learning Objectives

The Learning Objectives of this course are as follows:

- ☐ To acquaint the students with the knowledge of growing integration between the traditional and digital marketing concepts and practices in the digital era.
- ☐ To familiarize the students with the tools and techniques used by the digital marketers for driving the marketing decisions to attain marketing objectives.

Learning outcomes

The Learning Outcomes of this course are as follows:

- After studying this course, students will be able to understand the concept of digital marketing and its integration with traditional marketing.
- After studying this course, students will be able to understand customer value journey in digital context and behaviour of online consumers.
- After studying this course, students will be able to understand email, content and social media marketing and apply the learnings to create digital media campaigns.
- After studying this course, students will be able to examine various tactics for enhancing a website's position and ranking with search engines.
- After studying this course, students will be able to leverage the digital strategies to gain competitive advantage for business and career.

SYLLABUS

Unit 1: Marketing in the Digital World

(3 weeks)

Digital marketing: Concept, Features, Difference between traditional and digital marketing, Moving from traditional to digital Marketing; c

Digital Marketing Channels: Intent Based- SEO, Search Advertising; Brand Based- Display Advertising; Community Based-Social Media Marketing; Others- Affiliate, Email, Content, Mobile.

Customer Value Journey: 5As Framework; The Ozone O3 Concept Key; Traits of online consumer

Unit 2: Content and Email Marketing

(2 weeks)

Content Marketing: Step-by-step Content Marketing Developing a content marketing strategy Email Marketing: Types of Emails in email marketing, Email Marketing best practices

Unit 3: Social Media Marketing and Display Marketing

(5 weeks)

Social Media Marketing: Building Successful Social Media strategy; Social Media Marketing Channels; Facebook, LinkedIn, YouTube (Concepts and strategies)

Display Advertising: Working of Display Advertising; Benefits and challenges; Overview of Display ad Process.; Define- Customer, Publisher, Objectives; Format- Budget, Media, Ad Formats, Ad Copy.

Unit 4 Search Engine Marketing

(5 weeks)

Introduction of SEM: Working of Search Engine; SERP Positioning; online search behaviour, DMI's 5P Customer Search Insights Model.

Search Engine Optimization: Overview of SEO Process; Goal Setting-Types.

On-Page Optimization: Keyword Research, SEO Process -Site Structure, Content, Technical Mechanics, Headings, Image & Alt text, Social Sharing, Sitemaps, Technical Aspects- Compatibility, Structured Data Markup.

Off Page Optimisation: Link Formats, Link Building, Content Marketing, Social Sharing; Black and White Hat Techniques

Search Advertising: Overview of PPC Process; Benefits of Paid Search; Basis of Ranking; Goal Setting-Objectives; Account Setting-Creation of Google Ads, Campaign architecture, Campaign setup, Targeting, Bid Strategy, Delivery, Ad Scheduling, Ad Rotation, Keyword Selection; Ad Copy composition, Ad Extension

- Ryan, Damien: Understanding Digital Marketing - Marketing Strategies for Engaging the Digital Generation. Kogan Page Limited.

Suggested Readings

- ☐ Moutusy Maity: Internet Marketing: A practical approach in the Indian Context: Oxford Publishing
- ☐ Seema Gupta: Digital Marketing: McGraw Hill
- ☐ Ultimate guide to digital Marketing by Digital Marketer

Examination scheme and mode:

Total Marks: 100

Internal Assessment: 25 marks

Practical Exam (Internal): 25 marks

End Semester University Exam: 50 marks

The Internal Assessment for the course may include Class participation, Assignments, Class tests, Projects, Field Work, Presentations, amongst others as decided by the faculty.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Essentials of Python

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|---------------------------|---------|-----------------------------------|----------|---------------------|-----------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Essentials of Python | 2 | 0 | 0 | 2 | 12 th Pass | NIL |

Learning Objectives

The Learning Objectives of this course are as follows:

- To introduce programming concepts using python
- To use python programming to solve problems of different domains

Learning outcomes

The Learning Outcomes of this course are as follows:

- After studying this course, students will be able to understand the basics of programming language
- After studying this course, students will be able to develop, document and debug modular python programs
- After studying this course, students will be able to apply suitable programming constructs and built in data structures to solve a problem

SYLLABUS

Unit I

(3 weeks)

Introduction

What can Python do? Why Python? Python Syntax compared to other programming languages, Python Installation.

The print statement, Comments, Python Data Structures & Data Types, String Operations in Python, Simple Input & Output, Simple Output Formatting, Operators in python

Python Program Flow

Indentation, The If statement and its' related statement, An example with if and it's related statement, The while loop, The for loop, The range statement, Break &Continue, Assert, Examples for looping

Functions& Modules

Create your own functions, Functions Parameters, Variable Arguments, Scope of a Function, Function Documentations, Lambda Functions& map, n Exercise with functions, Create a Module, Standard Modules

Unit 2

(4 weeks)

Exceptions Handling

Errors, Exception handling with try, handling Multiple Exceptions, Writing your own Exception

File Handling

File handling Modes, Reading Files, Writing& Appending to Files, Handling File Exceptions, The with statement

Classes In Python

New Style Classes, Creating Classes, Instance Methods, Inheritance, Polymorphism, Exception Classes & Custom Exceptions

Generators and iterators

Iterators, Generators, The Functions any and all, With Statement, Data Compression

Unit 3

(4 weeks)

Data Structures

List Comprehensions, Nested List Comprehensions, Dictionary Comprehensions. Functions, Default Parameters, Variable Arguments, Specialized Sorts

Collections

namedtuple(), deque, ChainMap, Counter, OrderedDict, defaultdict, UserDict, UserList, UserString

Writing GUIs in Python (Tkinter)

Introduction, Components and Events, An Example GUI, The root Component, Adding a Button, Entry Widgets, Text Widgets, Check buttons

Python SQL Database Access

Introduction, Installation, DB Connection, Creating DB Table, INSERT, READ, UPDATE, DELETE operations, COMMIT & ROLLBACK operation, handling Errors

Network Programming

Introduction, A Daytime Server, Clients and Servers, The Client Program, The Server Program

Date and Time

Sleep, Program execution time, more methods on date/time

Unit 4

(4 weeks)

Filter, Map, Reduce, Decorators, Frozen set, Collections

Regular Expression

Split, Working with special characters, date, emails, Quantifiers, Match and find all, character sequence and substitute, Search method

Threads ESSENTIAL

Class and threads, Multi-threading, Synchronization, Treads Life cycle, use cases

Accessing API ESSENTIAL

Introduction, Facebook Messenger, Openweather

DJANGO

Django Overview, Django Installation, Creating a Project, Usage of Project in depth Discussion, Creating an Application, Understanding Folder Structure, Creating a Hello WorldPage, Database and Views, Static Files and Forms, API and Security

Essential/recommended readings

Examination scheme and mode:

Total Marks: 100

Internal Assessment: 25 marks

Practical Exam (Internal): 25 marks

End Semester University Exam: 50 marks

The Internal Assessment for the course may include Class participation, Assignments, Class tests, Projects, Field Work, Presentations, amongst others as decided by the faculty.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time

E-Tourism

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course(if any) |
|------------------------|---------|-----------------------------------|----------|---------------------|-----------------------|-------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| E-Tourism | 2 | 0 | 0 | 2 | 12 th Pass | NIL |

Learning Objectives

The Learning Objectives of this course are as follows:

- To learn about the application of e-business in tourism sector with understanding of contemporary issues of the use of electronic technology in the tourism business.
- To learn about e-business strategies and how to apply it to help them comprehend a variety of basic e-business ideas and theories.
- To teach fundamental concept of what e-business is and how to conduct e-business successfully in the tourism sector.

Learning outcomes

The Learning Outcomes of this course are as follows:

- After studying this course, students will be able to gain insight into concept of e-tourism, travel intermediaries and travel websites.
- After studying this course, students will be able to learn and explain the emerging ICT tools and its impact in the industry.
- After studying this course, students will be able to understand and implement the use of social media platforms/artificial intelligence in e-tourism.

SYLLABUS

Unit-I

(5 Weeks)

Introduction to E-tourism, stages of ICT revolution, ICTS and new business tools, Strategic and Operational use of IT in Tourism, The Internet and tourism – a powerful combination. Networks for intermediaries: Travel trade intermediaries-Features of a travel trade web site, implementing a travel trade website, online travel intermediaries.

Unit– II**(5 Weeks)**

E-business for Destination Management Organizations: Principles and concepts – Positioning DMOs in value net, destination e-business system model, e-Business Partnerships for DMOs, Case Studies of Red Apple DMC, OYO Rooms, OLX, Zoom Car, Ofo Cycles etc.

Unit– III**(5 Weeks)**

Social Media Marketing in Tourism - Facebook, Twitter, YouTube, WhatsApp - Travel Blogs –Usage of Artificial Intelligence- Virtual Reality - Challenges for conventional business models and Competitive strategies.

Examination scheme and mode:

Total Marks: 100

Internal Assessment: 25 marks

Practical Exam (Internal): 25 marks

End Semester University Exam: 50 marks

The Internal Assessment for the course may include Class participation, Assignments, Class tests, Projects, Field Work, Presentations, amongst others as decided by the faculty.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Finance for Everyone

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|-----------------------------|----------|-----------------------------------|----------|---------------------|-----------------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Finance for Everyone | 2 | 1 | 0 | 1 | 12th Pass | NIL |

Learning Objectives

The Learning Objectives of this course are as follows:

- To offer an integrated approach to the understanding of concepts and applications of financial planning.
- To help the students in their financial planning.

Learning outcomes

The Learning Outcomes of this course are as follows:

- After studying this course, students will be able to understand the importance of financial literacy and the institutions providing financial services.
- After studying this course, students will be able to prepare a financial plan, budget and manage personal finances.
- After studying this course, students will be able to open, avail and manage services offered by banks.
- After studying this course, students will be able to open, avail and manage services offered by post offices.
- After studying this course, students will be able to plan for life insurance and property insurance.
- After studying this course, students will be able to choose instruments for investment in shares.

SYLLABUS

Unit 1: Introduction, Financial Planning and Budgeting (3 weeks)

Meaning, importance and scope of financial literacy; Prerequisites of financial literacy – level of education, numerical and communication ability; Various financial institutions – banks, insurance companies, post offices, mobile app based services. Need of availing of financial services from banks, insurance companies and postal services. Concept of economic wants and means for satisfying these needs; Balancing between economic wants and resources; Meaning, importance and need for financial planning; Personal budget, family budget, business budget and national budget; Procedure for financial planning and preparing a budget; Budget surplus and budget deficit, Avenues for savings from surplus, Sources for meeting the deficit.

Unit 2: Banking Services (3 weeks)

Types of banks; Banking products and services – Various services offered by banks; Types of bank deposit accounts – savings bank account, term deposit, current account, recurring deposit; pan card, address proof, KYC norm; Various types of loans – education loan, consumer durable loan, vehicle loan, housing loan, short term, medium term, long term, microfinance, bank overdraft, cash credit, mortgage, reverse mortgage, hypothecation, pledge, Agricultural and related interest rates offered by various nationalized banks; Cashless banking, e-banking, check counterfeit currency; CIBIL, ATM, net banking, RTGS, NEFT, IMPS, electronic clearance services (ECS), debit and credit card, app based payment system, bank draft and pay order; banking complaints and ombudsman.

Unit 3: Financial Services from India Post Office (3 weeks)

Post office savings schemes: savings bank, recurring deposit, term deposit, monthly income scheme, kisan vikas patra, NSC, PPF, senior citizen savings scheme, sukanya samriddhi yojana; india post payments bank. money transfer: money order, e-money order. instant money order, collaboration with the western union financial services; mo videsh, international money transfer service, money gram international money transfer, indian postal order.

Unit 4: Insurance Services (3 weeks)

Life insurance policies: life insurance, term life insurance, endowment policies, pension policies, ULIP, health insurance plans, comparison of policies offered by various life insurance companies, comparison of policies offered by various health insurance companies. Property insurance policies. Post office life insurance schemes: postal life insurance and rural postal life insurance.

Unit 5: Stock Markets – Some Basic Concepts (3 weeks)

Terms used in stock markets: SENSEX, NIFTY, primary markets, secondary markets, initial public offering(IPO), follow-on public offering (FPO), offer for sale (OFS), block deal, equity shares, preference shares, debentures, bonus shares, stock split, dividend, buyback, DEMAT

account, trading account, delivery instruction slip (DI Slips), blue chips, defensive stocks, face value, market value, market capitalisation, pre-opening session, trading session, opening price, closing price, business days, bull, bear, bull market, bear market, risk, stop loss, derivatives, call option, put option, hedge, holding period; Tax on short term capital gains and long-term capital gains, Mutual Fund and its various schemes.

Practical Exercises:

(15 weeks)

The learners are required to:

- Visit banks, post offices, and insurance companies to collect information and required documents related to the services offered by these institutions and to know the procedure for availing of these services.
- Carry out the comparative analysis of different types of life insurance policies.
- Carry out the comparative analysis of different types of health insurance policies.
- Prepare a personal and family budget for one/six/ twelve months on imaginary figures.

Suggested Readings:

- Avadhani, V. A. "Investment Management" Himalaya Publishing House Pvt. Ltd., Mumbai.
- Batra, J.K., Accounting and Finance for Non-finance Managers, Sage Textbook
- Chandra, P. "Investment Game: How to Win" Tata McGraw Hill Education, New Delhi.
- Kothari, R. "Financial Services in India-Concept and Application" Sage Publications India Pvt. Ltd., New Delhi.
- Milling, B. E. "The Basics of Finance: Financial Tools for Non-Financial Managers" Universe Company, Indiana,
- Mittra, S., Rai, S. K., Sahu, A. P., & Starn, H. J. "Financial Planning" Sage Publications India Pvt. Ltd., New Delhi.
- Zokaityte, A. "Financial Literacy Education" Palgrave Macmillan, London.

Note: Learners are advised to use the latest edition of readings.

Examination scheme and mode:

Total Marks: 100

Internal Assessment: 25 marks

Practical Exam (Internal): 25 marks

End Semester University Exam: 50 marks

The Internal Assessment for the course may include Class participation, Assignments, Class tests, Projects, Field Work, Presentations, amongst others as decided by the faculty.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

FINANCIAL DATABASE AND ANALYSIS SOFTWARE

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|--|---------|-----------------------------------|----------|---------------------|-----------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Financial Database and analysis software | 2 | 0 | 0 | 2 | 12 th Pass | NIL |

Learning Objectives

The Learning Objectives of this course are as follows:

- To enable students to obtain data from financial database.
- To enable to use R language for statistical & econometric data analysis.
- To develop skills that can help in solving your research problems.

Learning outcomes

The Learning Outcomes of this course are as follows:

- After studying this course, students will be able to understand the utility of a financial database
- After studying this course, students will be extract data from financial database (Prowess IQ)
- After studying this course, students will be perform data analysis using R
- After studying this course, students will be apply 'R' and Prowess IQ in financial analysis and research.

SYLLABUS

Unit I (Financial Database)

(3 weeks)

An Introduction to financial database Prowess IQ from CMIE: Creating company set-, creating spreadsheets, use of elements in Ribbons – Company address and identity indicators, business segments and products, Ownership structure and governance indicators, Financial Statements, Stock prices and capital changes, Capex and M&A, indices and index number. Formulating queries and advance queries Student is expected to be able to extract different types of data for an index, an industry and company data Selection of company/s, period to be studied. Data extraction from balance sheet, profit & loss statement and cash flow statements

Stock market data- price and volume, BSE/NSE, adjusted prices Saving and exporting data to a spreadsheet for further analysis.

Unit II (Fundamentals of R)

(4 weeks)

Overview of the R language, Input and output of data in R, Help command and Directory in R, In-built functions in R, Operators in R; Assignment, Arithmetic, logical, and Relational operators, Using R studio, Scripts, Text editors for R, Graphical User Interfaces (GUIs) for R, installing packages and libraries, Variable classes (numeric, character, logical, complex, missing), Data Types in R; Vectors, Matrices, Arrays, Lists, Factors, and Data Frames, Important operations of these Data Types, Using data from external files- reading & writing data to external files, Creating and storing R workspaces.

Unit III (Descriptive Analysis and Data Visualizations)

(4 weeks)

Data preparation; Data cleaning and Missing value treatment, Data Exploration and Manipulation, Data Visualization; Bar chart, pie chart, Histogram, Frequency curve, Scatter plot, Box & Whisker plot etc., Important R functions for Describing a data; Mean, Median, Range, Standard deviation, Variance, Five number summary, Correlation coefficients for a bivariate data.

Unit III (Predictive Analysis)

(4 weeks)

Simple and Multiple Regression using R, Estimating Regression Equation by Ordinary Least Squares in R, Violations of Classical Assumptions: multicollinearity, heteroscedasticity, autocorrelation and model specification errors, their identification, their impact on parameters; tests related to parameters and impact on the reliability and the validity of inferences in case of violations of Assumptions; methods to take care of violations of assumptions, goodness of fit. Time Series Analysis using R (Basic idea only).

Essential/recommended readings

- Gardener, M., *Beginning R: The Statistical Programming Language*, Wiley & Sons. 2018
- Wickham, H., et al. *R for Data Science: Import, Tidy, Transform, Visualize, and ModelData*, O'Reilly', 2017
- Motwani, B., *Data Analytics with R*, Wiley & Sons, Indian edition 2021
- Chang, R *Graphics Cookbook- Practical Recipes for Visualizing Data*; O' Reilly Media
- Gujarati, D.N. et al. *Basic Econometrics*, McGraw Hill India, 5e, 2018

Examination scheme and mode:

Total Marks: 100

Internal Assessment: 25 marks Practical

Exam (Internal): 25 marks

End Semester University Exam: 50 marks

The Internal Assessment for the course may include Class participation, Assignments, Class tests, Projects, Field Work, Presentations, amongst others as decided by the faculty.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Front End Web Design and Development

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|--------------------------------------|---------|-----------------------------------|----------|---------------------|-----------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Front End Web Design and Development | 2 | 0 | 0 | 2 | 12 th Pass | NIL |

Learning Objectives

The Learning Objectives of this course are as follows:

- To introduce the basic concepts and techniques of client-side web programming.
- To enable the students to develop simple, interactive, and stylish websites using HTML, CSS and JavaScript.

Learning outcomes

The Learning Outcomes of this course are as follows:

- After studying this course, students will be able to build websites using the elements of HTML.
- After studying this course, students will be able to build interactive and stylish websites using the client side programming techniques with CSS and Javascript.
- After studying this course, students will be able to learn to validate client-side data.
- After studying this course, students will be able to define the structure and content of the website using different features of CSS.

SYLLABUS

Unit 1 **(3 weeks)**
Introduction: Introduction to internet and web design. Basic concepts of web architecture.

Unit 2 **(4 weeks)**
HTML: Introduction to hypertext mark-up language (html), creating web pages, lists, hyperlinks, tables, web forms, inserting images, frames.

Unit 3

(4 weeks)

Cascading style sheet (CSS): Concept of CSS, creating style sheet, Importing style sheets, CSS properties, CSS styling (background, text format, controlling fonts), CSS rules, Style Types, CSS Selectors, CSS cascade, working with block elements and objects, working with lists and tables, CSS id and class, box model (introduction, border properties, padding properties, margin properties).

Unit 4

(4 weeks)

Basics of Javascript: Document object model, data types and variables, functions, methods and events, controlling program flow, built-in objects and operators, validations.

Practical Exercises

(15 weeks)

HTML

- ☐ Create an HTML document with following formatting – Bold, Italics, Underline, Colors, Headings, Title, Font and Font Width, Background, Paragraph, Line Brakes, Horizontal Line, Blinking text as well as marquee text.
- ☐ Create an HTML document with Ordered and Unordered lists, Inserting Images, Internal and External linking
- ☐ Create an HTML document for displaying the current semester's timetable.
- ☐ Create a website with horizontal and vertical frames. Top horizontal frame needs to show your college's name and logo. Bottom horizontal frame is to be split into two vertical frames. The left frame has hyperlinks to pages related to faculty, courses, student activities, etc. The right frame shows the corresponding webpage based on the link clicked on the left frame.
- ☐ Create a student registration form using HTML which has the following controls and make an interactive content presentation using CSS.:
 - I. Text Box II. Dropdown box III. Option/radio buttons
 - IV. Check boxes V. Reset and Submit button
- ☐ Create a webpage for your department with a drop-down navigation menu for faculty, courses, activities, etc.. Implement the webpage using styles, rules, selectors etc. learned in CSS
- ☐ Write event-driven programs in JavaScript for the following:
 - Enter a number and on click of a button print its multiplication table.
 - Print the largest of three numbers entered by the user.
 - Find the factorial of a number entered by the user.
 - Enter a list of positive numbers using the prompt terminated by a zero. Find the sum and average of these numbers.
- ☐ Create a student registration form using text, radio button, check box, drop down box, text field and all other required HTML elements. Customize the CSS and javascript to input and validate all data. Create functions to perform validation of each element, example:
 - a. Roll number is a 7-digit numeric value
 - b. Name should be an alphabetical value (String)
 - c. Non-empty and valid fields like DOB

Essential/recommended readings

- Nixon, R., Learning PHP, MySQL & JavaScript with jQuery, CSS and HTML5, O'Reilly, 2018.
- Powell, T.A. HTML & CSS: The Complete Reference, 5th edition, TataMcGrawHill, 2017.
- Duckett, J., JavaScript and JQuery: Interactive Front-End Web Development, Wiley, 2014.

Suggested Readings

- Boehm, A., & Ruvalcaba, Z., Murach's HTML5 and CCS, 4th edition, Mike Murach & Associates, 2018.
- Ivan Bayross, Web Enabled Commercial Application Development Using Html, Dhtml, Javascript, Perl CGI, BPB Publications, 2010.

Examination scheme and mode:

Total Marks: 100

Internal Assessment: 25 marks

Practical Exam (Internal): 25 marks

End Semester University Exam: 50 marks

The Internal Assessment for the course may include Class participation, Assignments, Class tests, Projects, Field Work, Presentations, amongst others as decided by the faculty.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Graphics Design & Animation

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|-----------------------------|---------|-----------------------------------|----------|------------------------|-----------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Graphics Design & Animation | 2 | 0 | 0 | 2 | 12 th Pass | NIL |

Learning Objectives

The Learning Objectives of this course are as follows:

- To introduce the students to the skill of animation.
- To learn about the application of 2D and 3D animation.

Learning outcomes

The Learning Outcomes of this course are as follows:

- After studying this course, students will be able to understand the importance of animation and graphics design
- After studying this course, students will be able to learn graphics design in 2D and 3D animation.
- After studying this course, students will be able to learn the application of graphics design in 2D and 3D animation in advertising and other areas.

SYLLABUS

Unit 1:2D Animation

(7 weeks)

Introduction to 2D Animation: Introduction to 2D Animation, Drawing concept, Colour theory & basics, Incorporating sound into 2D animation

Layout & Designing: Basic of sketching, still life and assignment of basic drawing, Composition of basic elements, Work in different media, such as drawing, collage, and painting, Explore the relationship between elements and principal, Pixel and resolution: Vector and Bitmap Graphics

Graphics and advertising (Practical)

- Creating Digital Layout
- Professional image editing (PHOTOSHOP)
- Advertising and relevant case , Graphics and illustration (Corel Draw, Paint)
- Vector Composition , 2D animation (Macromedia Flash)

Broadcast Design (Practical)

- Working with visual images
- Story Boarding
- Titles and Credit Making
- Stop motion animation

Production / Post-Production (Practical)

- Paint & animate (scanning, tracing, ink & Paint)
- Understanding Background composition
- Basic Understanding of 2D animation and technique
- Animation with flash, Portfolio Making

Unit 2: 3D Animation**(8 weeks)**

3D Modeling: Introduction to 3D space in Blender, Introduction to Modeling Techniques, In-organic Modeling, Organic Modeling

3D Shading: Use of Materials & Shader, Shader and Texture Editing, Shading Organic Model, Shading In-Organic Models

3D Animation and Rigging (Practical)

- Introduction to 3D Animation
- Create, Edit and working with Animation Graph, Rigging using Blender
- Setting up controllers for joints
- Simple Skeleton structure with proper joint orientation

3D Lighting and Rendering (Practical)

- Understanding Lighting in Cycles
- Direct and Indirect Lighting
- Light Linking, Final Composition
- Creating composition and Light with the Shaded Models

3D Dynamics (Practical)

- Introduction to Dynamics, Active and Passive Bodies
- Creating basic Simulation and collusion using Rigid body
- Cloth Simulation, Simulation of Brick wall collusion
- Introduction to Fluid Effects, Creating fluid simulation

Project

(Digital Imaging)

- Design Print advertisement for Service
- Design Print advertisement for Product
- Design Print advertisement an Event
- Design Print advertisement on Social Awareness
- Design a collage with a social message

2D Animation

- Drawing fundamentals using lines
- Sketching of cartoon characters
- 2D Logo designing
- Storyboarding of a 30 seconds film
- Portfolio making of an organization

3D Animation

- Exploring the Interface of 3D application & Basic Modeling
- Create different types of Materials and create a Shading
- Create a simple walk cycle using the character rigs
- Create a composition and Light set up
- Create a Fluid simulation & rendering

Suggested Readings:

- The Illusion of Life: Disney Animation, Ollie Johnston and Frank Thomas, Disney Editions.
- Blender Production Creating Short Animations from Start to Finish, Roland Hess, Routledge.
- Animating with Blender: Creating Short Animations from Start to Finish, Roland Hess, Focal Press
- Simplified Drawing for Planning Animation, Wayne Gilbert, Anamie Entertainment Ltd.
- Getting Started in 3D with Maya, Adam Watkins, Routledge.
- Creating Characters with Personality: For Film, TV, Animation, Video Games, and Graphic Novels, Tom Bancroft, Watson-Guption
- Force: Dynamic Life Drawing for Animators, Mike Mattesi, Focal Press

Note: Learners are advised to use the latest edition of readings.

Examination scheme and mode:

Total Marks: 100

Internal Assessment: 25 marks

Practical Exam (Internal): 25 marks

End Semester University Exam: 50 marks

The Internal Assessment for the course may include Class participation, Assignments, Class tests, Projects, Field Work, Presentations, amongst others as decided by the faculty.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Harmonium

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|---------------------------|---------|-----------------------------------|----------|---------------------|-----------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Harmonium | 2 | 0 | 0 | 2 | 12 th Pass | NIL |

Learning Objectives

The Learning Objectives of this course are as follows:

- To initiate the students to a very popular instrument of Indian music through a general discussion on the role of Harmonium in accompanying various singing forms
- To throw light on the various types of musical instruments that are played in Hindustani music
- To discuss the features of various types of wind instruments
- To teach the student the fundamentals of playing the Harmonium, such as the correct placement of the fingers on the instrument, the right posture for sitting etc.
- To demonstrate tonal exercises, such as palta-s and alankar-s, vital for playing.
- To initiate his training in the realm of playing the instrument with the basic ragas, like Alhaiya, Bilawal and Yaman

Learning outcomes

The Learning Outcomes of this course are as follows:

- After studying this course, students will be able to learn the origin, development and classification of musical instruments.
- After studying this course, students will be able to learn the importance of wind instruments.
- After studying this course, students will be able to learn gat and dhun in prescribed ragas.
- After studying this course, students will be able to demonstrate the various talas and their layakaries.
- After studying this course, students will become well-versed with the techniques of Playing Harmonium
- After studying this course, students will be able to achieve dexterity of the hand, through regular practice of the playing exercises at home.
- After studying this course, students will be able to read and learn new compositions in the prescribed ragas.
- After studying this course, students will be able to grasp the various grammatical aspects of the prescribed ragas, like how they arise, what are the respective rules that govern these ragas, how do the notes move in the ragas, what are the performing times of the ragas etc.
- After studying this course, students will be able to learn the art of playing a raga, especially with regard to having the Tabla as an accompanying instrument.

SYLLABUS

Unit I (2 weeks)
Origin and Development of Musical Instruments

Unit II (2 weeks)
Classification of instruments

Unit III (2 weeks)
Study of Wind Instruments

Unit IV (3 weeks)
Writing notation of compositions in prescribed ragas

Unit V (3 weeks)
Writing notation of Talas with Thah, Dugun, Tigun and Chaugun in Kaharva

Unit VI (3 weeks)
Theoretical knowledge of the prescribed ragas

Recommended Books:

- Sangeet Bodh – Sharadchandra Shridhar. Paranjape:-Madhye Pradesh Hindi Granth Academy, Bhopal, 1st Edition: 1972
- Samvadini – Jayant Bhalodkar :- Kanishka Publication, New Delhi, 1st Edition: 2006
- Dhvani Aur Sangeet - Lalit Kishore Singh:- Bhartiye Gyanpeeth, Lodi Road, New Delhi, 1st Edition: 1954
- Kramik Pustak Malika – Part- II :- V.N. Bhatkhande, Sangeet Karyalaya, Hathras, Editor: Laxminarayan Garg, January: 2008
- Sangeet Shastra Vigyan - Dr.Pannalal Madan:- Rajasthan Hindi Granth Academy, Jaipur, 2nd Edition: 1991, Abhishek Publication
- Tal Parichay Part III ,Girishchandra Srivastava, Rubi Prakashan , Allahabad, 2nd

Edition: June: 2002

(Practical - 1): Stage Performance & Viva-Voce:

(15 weeks)

Prescribed Ragas:

Alhaiya Bilawal

Yaman

Khamaj

Unit I

Ability to play five alankars in the prescribed ragas.

Unit II

One Sargam Geet to be played each in the prescribed ragas

Unit III

One Lakshan Geet each to be played in the prescribed ragas

Unit IV

Two Drut Khyals with elaborations in any of the prescribed ragas

Unit V

Ability to play a Dhun in raga Khamaj

Unit VI

In-depth knowledge of the prescribed ragas

Unit VII

Knowledge and demonstration of the following tala with dugun, tigon and chaugun -Kaharva

Unit VIII

Basic knowledge of Harmonium and its various parts

Examination scheme and mode:

Total Marks: 100

Internal Assessment: 25 marks Practical Exam

(Internal): 25 marks

End Semester University Exam: 50 marks

The Internal Assessment for the course may include Class participation, Assignments, Class tests, Projects, Field Work, Presentations, amongst others as decided by the faculty.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Introduction to Arabic Calligraphy

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|------------------------------------|---------|-----------------------------------|----------|---------------------|-----------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Introduction to Arabic Calligraphy | 2 | 0 | 0 | 2 | 12 th Pass | Nil. |

Learning Objectives

The Learning Objectives of this course are as follows:

- To make the learners familiar with Arabic Calligraphy.
- To make them aware of different Arabic scripts.

Learning outcomes

After completion of the course the student will be able to:

- Know about the history of Arabic Calligraphy.
- Read and write Arabic letters and text.
- Recognize different Arabic scripts/fonts.
- Write in two Arabic scripts: Naskh and Ruq'ah.

SYLLABUS

UNIT 1

(5 Weeks)

- Calligraphy
- Arabic Calligraphy
- Origin and Development of Arabic Calligraphy
- Lesson on Arabic Alphabet
- Introduction to Arabic script Ruq'ah
- Introduction to Arabic script Naskh

UNIT 2

(5 Weeks)

- Importance and Characteristics of the Arabic Script Ruq'ah in modern time.
- Importance and Characteristics of the Arabic Script Naskh in modern time.
- Familiarity with different Arabic scripts.
- Al-Aqlaam Al-Sittah
- Pioneers of the Arabic scripts/calligraphy.
 - ✓ Ibn Muqlah
 - ✓ Ibn Al-Bawwab

UNIT 3

(5 Weeks)

- Benefits of Good handwriting
- Famous Arabic fonts of computer
- Practice of the Arabic scripts: Naskh and Ruq'ah

Essential Readings

1. M. Ziauddin: Muslim Calligraphy, Kitab Bhawan, Delhi

2. مولانا نور عالم خلیل دہلوی: خط رقعی کتبوں اور کتب سبکوں؟، دیوبند

3. د. عادل دہلوی: الخط العربی نشأته وتطوره، القاهرة.

4. د. إبراهيم سليمان شيخ العبد، الخط العربی حضارة وممارسة، مكتبة سم، منصور، غزة، فلسطين.

Suggested Resources:

1. Muhammad Sohail: Administrative and Cultural History of Islam, New Delhi.

2. مركز الملك فيصل للبحوث والدراسات الإسلامية: الخط العربی من خلال المخطوطات، المملكة العربية السعودية.

Examination scheme and mode:

Total Marks: 100

Internal Assessment: 25 marks

Practical Exam (Internal): 25 marks

End Semester University Exam: 50 marks

The Internal Assessment for the course may include Class participation, Assignments, Class tests, Projects, Field Work, Presentations, amongst others as decided by the faculty.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Introduction to Blockchain

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|----------------------------|---------|-----------------------------------|----------|------------------------|-----------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Introduction to Blockchain | 2 | 0 | 0 | 2 | 12 th Pass | NIL |

Learning Objectives

The Learning Objectives of this course are as follows:

- To introduce the students to the basic concept of blockchain.
- To make the students learn and implement blockchain technology.
- To learn about the distributed organizations and distributed ledger.

Learning outcomes

The Learning Outcomes of this course are as follows:

- After studying this course, students will be able to understand how Ethereum transactions are validated by miners.
 - After studying this course, students will be able to understand Ethereum Blockchain.
 - After studying this course, students will be able to learn Solidity programming language to develop Smart Contracts.
 - After studying this course, students will be able to understand the key concepts like cryptography and public , private blockchain.
 - After studying this course, students will be able to gain a deep insight into Ethereum, Hyperledger and its network.
- 

SYLLABUS

Unit 1 (7 weeks)

Blockchain: Basics And Applications: Node Fundamentals,Blockchain Basics, Blockchain Features, Ethereum Fundamentals, Smart Contract Development In Ethereum, Dapp Development In Ethereum.

Unit 2 (8 weeks)

Building A Distributed Application On Hyperledger Fabric:

HyperledgerFundamentals, Fabric Network Setup, Chaincode Development ,DAPP Development.

CAPSTONE PROJECT (15 weeks)

- **Assignment/Project**

Suggested Web links

- <https://ethereum.org>
- <https://www.hyperledger.org/>

Examination scheme and mode:

Total Marks: 100

Internal Assessment: 25 marks

Practical Exam (Internal): 25 marks

End Semester University Exam: 50 marks

The Internal Assessment for the course may include Class participation, Assignments, Class tests, Projects, Field Work, Presentations, amongst others as decided by the faculty.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Introduction to Cloud Computing (AWS)

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|---------------------------------------|---------|-----------------------------------|----------|------------------------|-----------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Introduction to Cloud Computing (AWS) | 2 | 0 | 0 | 2 | 12 th Pass | NIL |

Learning Objectives

The Learning Objectives of this course are as follows:

- To learn about cloud computing through Amazon Web Services (AWS) platform.
- To learn about AWS cloud concepts, services, security and architecture to build an application.

Learning outcomes

The Learning Outcomes of this course are as follows:

- After studying this course, students will be able to Understanding cloud computing platform
- After studying this course, students will be able to differentiate between on-premises, hybrid-cloud, and all-in cloud
- After studying this course, students will be able to describe the basic global infrastructure of the AWS Cloud
- After studying this course, students will be able to understanding the core AWS services, including compute, network, databases, and storage

SYLLABUS

Unit 1 (5 weeks)

Introduction to cloud computing, Creating AWS account, AWS Management Console, AWS Documentation overview, Availability Zones, AWS Global Infrastructure.

Unit 2 (5 weeks)

Compute in the Cloud :- Amazon EC2, instance types.

Unit 3 (5 weeks)

Storage and Databases: - Amazon Simple Storage Service (Amazon S3), Amazon Relational Database Service (Amazon RDS), Amazon DynamoDB.

Project (15 weeks)

Create an AWS account and implement AWS cloud for deploying any application.

Suggested Sources

- Any free platform can be used, for example Amazon, Google, Azure etc.

Examination scheme and mode:

Total Marks: 100

Internal Assessment: 25 marks

Practical Exam (Internal): 25 marks

End Semester University Exam: 50 marks

The Internal Assessment for the course may include Class participation, Assignments, Class tests, Projects, Field Work, Presentations, amongst others as decided by the faculty.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Negotiation and Leadership

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|----------------------------|---------|-----------------------------------|----------|------------------------|-----------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Negotiation and Leadership | 2 | 0 | 0 | 2 | 12 th Pass | NIL |

Learning Objectives

The Learning Objectives of this course are as follows:

- To introduce the students to the importance of negotiation skills
- To expose the students to diverse contexts and situations that require negotiation skills
- To learn about the management of critical and crisis situations
- To evolve relationship building skills

Learning outcomes

The Learning Outcomes of this course are as follows:

- After studying this course, students will be able to apply negotiation skills to obtain desired results
- After studying this course, students will be able to understand the various aspects of a crisis situation for appropriate management.
- After studying this course, students will be able to learn how to manage complex negotiation situations.
- After studying this course, students will be able to understand the process of relationship building.
- After studying this course, students will be able to test and judge the legitimacy of the terms of negotiation

SYLLABUS

Unit 1

(3 weeks)

Negotiation Fundamentals Key concepts and core vocabulary of negotiation process, deal-making and dispute resolution, Assumptions and biases that are barriers to effective negotiation, Collaborative approaches, risk & opportunities to achieve win-win outcomes

Negotiation Canvas Introduction of a framework for negotiation preparation and how to use it, Elements of negotiation canvas i.e. relationship, alternatives, legitimacy, options, interests among others, Difference between position and interests

Unit 2

(4 weeks)

Managing critical moments

Types of negotiation approaches used by negotiators Critical moments that can make or break the deal How to identify these critical moments, Strategies to manage critical moments in the negotiation

Effective Communication and Relationship Building

Role of communication and relationship in negotiation, Understanding the other party's psychology to understand their interests, build trust and improve the scope of the negotiation, Unconditionally constructive behaviours, Methods of building trust, and empathy, Overcoming communication barriers, difficult behaviours and information asymmetry

Unit 3

(4 weeks)

Discovering, creating and claiming value

Methods of value discovery during negotiation, How is value divided and claimed between the negotiating parties?, What are the tradeoffs, mutual gains and contingencies?, Concept of distributive bargaining, equitable solutions, and ZOPA (zone of possible agreement), Biases and enemies of value creation

Complex Negotiations

Strategies for negotiations are not straightforward, involve several issues, include multiple stakeholders, and /or involve powerful parties, Hofstede's Culture dimensions, Dealing with people with difficult behaviours

Unit 4

(4 weeks)

Managing Alternatives

Concept of BATNA (Best Alternative to Negotiated Agreement), Methods to evaluate alternative options/offers, Management of one's alternatives and other party's alternatives during negotiation.

Legitimacy and Building Commitment

When to say yes to agreed terms, and when to walk away, Criteria for decision-making on negotiated terms, Assessment of the legitimacy of negotiated terms, Leading all parties to commit to the negotiated agreement, Steps from plan to execution

Essential/Recommended Readings

- Getting to Yes: Negotiating Agreement Without Giving in by Roger Fisher, William L. Ury, and Bruce Patton. Penguin Books
- Difficult Conversations: How to Discuss What Matters Most by Douglas Stone, Bruce Patton, Sheila Heen. Penguin Books
- Value Negotiation: How to Finally Get the Win-Win Right by Horacio Falcão. Pearson Education

Articles

- The Seven Myths of Win-Win Negotiations, by Horacio Falcão
- Control the Negotiation before it begins by Deepak Malhotra

Examination scheme and mode:

Total Marks: 100

Internal Assessment: 25 marks

Practical Exam (Internal): 25 marks

End Semester University Exam: 50 marks

The Internal Assessment for the course may include Class participation, Assignments, Class tests, Projects, Field Work, Presentations, amongst others as decided by the faculty.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Personal Financial Planning

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|------------------------------------|----------|-----------------------------------|----------|------------------------|-----------------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Personal Financial Planning | 2 | 1 | 0 | 1 | 12th Pass | NIL |

Learning Objectives

The Learning Objectives of this course are as follows:

- To familiarize students with different aspects of personal financial planning like savings, investment, taxation, insurance, and retirement planning
- To develop the necessary knowledge and skills for effective financial planning.

Learning outcomes

The Learning Outcomes of this course are as follows:

- After studying this course, students will be able to understand the meaning and appreciate the relevance of financial planning.
- After studying this course, students will be able to understand the concept of investment planning and its methods.
- After studying this course, students will be able to examine the scope and ways of personal tax planning.
- After studying this course, students will be able to analyse insurance planning and its relevance.
- After studying this course, students will be able to develop insight into retirement planning and its relevance.

SYLLABUS

Unit 1: Introduction to Financial Planning: (3 weeks)

Financial goals, steps in financial planning, budgeting incomes and payments, time value of money. Introduction to savings, benefits of savings, management of spending & financial discipline, Setting alerts and maintaining sufficient funds for fixed commitments.

Unit 2: Investment Planning: (3 weeks)

Process and objectives of investment, concept and measurement of return & risk for various asset classes, measurement of portfolio risk and return, diversification & portfolio formation. Gold bond; Real estate; Investment in greenfield and brownfield Projects; Investment in fixed income instruments, financial derivatives & commodity market in India. Mutual fund schemes; International investment avenues. Currency derivatives and digital currency.

Unit 3: Personal Tax Planning: (3 weeks)

Tax structure in India for personal taxation, Scope of personal tax planning, exemptions and deductions available to individuals under different heads of income and gross total income. Comparison of benefits - Special provision u/s 115 BAC vis-à-vis General provisions of the Income-tax Act, 1961, tax avoidance versus tax evasion.

Unit 4: Insurance Planning: (3 weeks)

Need for insurance. Life insurance, health insurance, property insurance, credit life insurance and professional liability insurance.

Unit 5: Retirement Benefits Planning: (3 weeks)

Retirement planning goals, process of retirement planning, Pension plans available in India, Reverse mortgage, Estate planning.

Practical Exercises: (15 Weeks)

The learners are required to:

- Perform electronic fund transfers through net banking and UPI.
- Identify certain recent Ponzi schemes in the market.
- Prepare tax planning for a hypothetical individual.

Suggested Readings:

- Halan, M. "Let's Talk Money: You've Worked Hard for It, Now Make It Work for You" Harper Collins Publishers, New York.
- Indian Institute of Banking & Finance. "Introduction to Financial Planning" Taxmann Publication, New Delhi.
- Keown A.J. "Personal Finance" Pearson, New York.
- Madura, J. "Personal Finance", Pearson
- Pandit, A. "The Only Financial Planning Book that You Will Ever Need" Network 18 Publications Ltd., Mumbai.
- Sinha, M. "Financial Planning: A Ready Reckoner" McGraw Hill Education, New York.
- Tripathi, V. "Fundamentals of Investment" Taxmann Publication, New Delhi.

Note: Learners are advised to use the latest edition of readings.

Examination scheme and mode:

Total Marks: 100

Internal Assessment: 25 marks

Practical Exam (Internal): 25 marks

End Semester University Exam: 50 marks

The Internal Assessment for the course may include Class participation, Assignments, Class tests, Projects, Field Work, Presentations, amongst others as decided by the faculty

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

PERSONALITY DEVELOPMENT AND COMMUNICATION

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|---------------------------|---------|-----------------------------------|----------|---------------------|-----------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Personality Development | 2 | 1 | 0 | 1 | 12 th Pass | NIL |

Learning Objectives

The Learning Objectives of this course are as follows:

- To develop inter personal and effective communication skills.
- To develop problem solving skills and understand its influence on behaviour and attitudes of individuals.

Learning outcomes

The Learning Outcomes of this course are as follows:

- After studying this course, students will be able to understand the importance of oral and written communication in day-to-day working of the organisation.
- After studying this course, students will be able to develop inter personal skills and problem-solving skills.
- After studying this course, students will be able to understand the role of body language in effective communication.

SYLLABUS

Unit 1

(4 Weeks)

Introduction, need for Communication, Process of Communication, Written and Verbal Communication, Visual communication, Signs, Signals and Symbols, Silence as a Mode of Communication, Inter-cultural, Intra-cultural, Cross-cultural and International communication, Communication through Questionnaires, Business Letter Writing, Electronic Communication.

Unit 2

(4 Weeks)

Business Cases and Presentations, Letters within the Organizations, Letters from Top Management, Circulars and Memos, Business Presentations to Customers and other stakeholders, presenting a Positive Image through Verbal and Non-verbal Cues, Preparing and Delivering the Presentations, Use of Audio-visual Aids, Report Writing.

Unit 3**(4 Weeks)**

Barriers to Communication, Improving Communication Skills, Preparation of Promotional Material, Non-verbal communication, Body language, Postures and gestures, Value of time, Organizational body language, Importance of Listening, Emotional Intelligence. Working individually and in a team, Leadership skills, Leadership Lessons, Team work and Team building, Feedback, Feed forward Interpersonal skills – Delegation, Humour, Trust, Expectations, Values, Status, Compatibility and their role in building team – work Conflict Management – Types of conflicts, how to cope with conflict.

Unit 4**(3 Weeks)**

Negotiation Skills, Types of Negotiation, Negotiation Strategies, Selling skills – Selling to customers, Selling to Superiors Selling to peer groups, team mates and subordinates, Conceptual selling, Strategic selling, Selling skills – Body language.

Essential/recommended readings

- Kushal Jin – Business Communication, VK India.
- Krishnamacharyulu, C. S. G, Ramakrishnan Lalitha – Personality Development, Interpersonal Skills and Career Management, Himalaya Publishing.
- Corvete Budjac – Conflict Management: A Practical Guide to Developing Negotiation Strategies, Pearson.

Suggestive Readings

- Mitra, B. K., Personality Development and Soft Skills, Oxford University Press.
- Kumar Sanjay and Pushplata, Communication Skills, Oxford University Press.
- Mandal S. K., Effective Communication and Public Speaking, Jaico Publishing.

Note: Latest edition of the readings may be used

Examination scheme and mode:

Total Marks: 100

Internal Assessment: 25 marks

Practical Exam (Internal): 25 marks

End Semester University Exam: 50 marks

The Internal Assessment for the course may include Class participation, Assignments, Class tests, Projects, Field Work, Presentations, amongst others as decided by the faculty.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Political Leadership and Communication

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|--|---------|-----------------------------------|----------|------------------------|-------------------------|--|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Political Leadership and Communication | 2 | 1 | 0 | 1 | 12 th Pass | NIL |

Learning Objectives

The Learning Objectives of this course are as follows:

- To understand the cross-cutting multi-disciplinary linkage of the subject.
- To gain a basic understanding of specific concepts and critical review of political communication and election campaign studies.
- To be able to construct a linkage between political communication and leadership.
- To learn conceptual frameworks and qualitative research skills for the analysis of modes and techniques of political communication and leadership.

Learning outcomes

The Learning Outcome of this course is as follows:

- After studying this course, students will be able to have a professional/career-oriented insight by facilitating their journey as Media managers, policy makers, political analysts, Journalists, Public relations officers in government agencies, political parties and higher education.

SYLLABUS

Unit I: Explaining Political Communication

(3 weeks)

- Meaning, Nature and Scope
- Evolution and Transformation

Unit II: Exploring Leadership

(3 weeks)

- Themes, Theories and Typologies
- Participation and Performance

Unit III: Expanding Political Communication and Leadership: Orientation and Action

(3 weeks)

- Developing Communication and Leadership through Research
- Strengthening Techniques of Communication and Leadership

Unit IV: Extending Political Communication and Leadership: Research Issues and Challenges

(3 weeks)

- Researching Communication and Leadership through Survey: Opinion Poll, Exit Poll.
- Examining Contemporary Issues and Challenges in Communication and Leadership

Unit V: Executing Political Communication and Leadership: Empirical and Professional Implications

(3 weeks)

- 
- Psephology as an Art and Vocation
 - Exploring Career Options

Essential/recommended Readings:

- Pole (2009). Blogging the Political: Politics and Participation in a networked Society. New York: Routledge.
- D. A. Graber (2005). 'Political Communication Faces the 21st Century', Journal of Communication, September: 479-507.
- Frank Esser and Barbara Pfetsh (eds.). (2004). Comparing Political Communication-Theories, Cases and Challenges. Cambridge: Cambridge University Press.
- G. Gerbner, L. Gross, M. Morgan and N. Signorielli (1982). 'Charting the Mainstream: Television's Contribution to Political Orientations', Journal of Communication, 32(2): 100-27.
- H. A. Semetko and M. Scammell (eds.) (2012). The SAGE Handbook of Political Communication. London: Sage.
- John C Maxwell (2008). Developing the Leader Within You. New Delhi: Harper Collins.
- Kiran Prasad (ed.) (2003). Political Communication: The Indian Experience. New Delhi: B.R. Publishers.
- Max Depree (2004). Leadership is an Art. RHUS Publications.
- Yogesh Atal (2014). 'Matdataoin Ka Sansar', Pratiman, Vol.2, No.1.
- Yogesh Atal (2018). 'Chunav Shastra Aur Rajniti', Pratiman, No.11.

Examination scheme and mode:

Total Marks: 100

Internal Assessment: 25 marks

Practical Exam (Internal): 25 marks

End Semester University Exam: 50 marks

The Internal Assessment for the course may include Class participation, Assignments, Class tests, Projects, Field Work, Presentations, amongst others as decided by the faculty.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Programming using Python

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|--------------------------------|----------|-----------------------------------|----------|---------------------|-----------------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Programming with Python | 2 | 0 | 0 | 2 | 12th Pass | NIL |

Learning Objectives

The Learning Objectives of this course are as follows:

- ☐ To provide exposure to basic problem-solving techniques with computers
- ☐ To develop logical thinking abilities and to propose novel solutions for real world problems through programming language constructs.
- ☐ To deepen the empirical knowledge on applying programming on business domains.

Learning outcomes

The Learning Outcomes of this course are as follows:

- ☐ After studying this course, students will be able to interpret the basic representation of the data structures and sequential programming
- ☐ After studying this course, students will be able to gain knowledge of, and ability to use control framework terminologies.
- ☐ After studying this course, students will be able to work out using the core data structures as lists, dictionaries, tuples, and sets.
- ☐ After studying this course, students will be able to choose appropriate programming paradigms, interrupt and handle data using files to propose solutions through reusable modules.
- ☐ After studying this course, students will be able to propose possible error-handling constructs for unanticipated states/inputs .
- ☐ After studying this course, students will be able to implements exemplary applications on real-world problems.

SYLLABUS

Unit-1: Introduction

(3 weeks)

Relationship between computers and programs, Basic principles of computers, File systems, Using the Python interpreter, Introduction to binary computation, Input / Output

Unit-2: Data types and control structures

(4 weeks)

Operators (unary, arithmetic, etc.), Data types, variables, expressions, and statements, Assignment statements, Strings and string operations, Control Structures: loops and decision

Unit-3: Modularization and Classes

(4 weeks)

Standard modules, Packages, Defining Classes, Defining functions, Functions and arguments(signature)

Unit-4: Data structures and Object-oriented design

(4 weeks)

Data Structures (array, List, Dictionary), Error processing, Exception Raising and Handling Programming types, Object Oriented Programming, Object Oriented Design, Inheritance and Polymorphism

Practical Exercises

(15 weeks)

- ☐ Running instructions in Interactive interpreter and a Python Script
- ☐ Write a program to purposefully raise Indentation Error and Correct it
- ☐ Write a program to compute distance between two points taking input from the user. (Pythagorean Theorem)
- ☐ Write a program add.py that takes 2 numbers as command line arguments and prints its sum.
- ☐ Write a Program for checking whether the given number is an even number or not.
- ☐ Using a for loop, write a program that prints out the decimal equivalents of 1/2, 1/3, 1/4, 1/10
- ☐ Write a program using a for loop that loops over a sequence. What is the sequence?
- ☐ Write a program using a while loop that asks the user for a number, and prints a countdown from that number to zero.
- ☐ Find the sum of all the primes below two million. Each new term in the Fibonacci sequence is generated by adding the previous two terms. By starting with 1 and 2, the first 10 terms will be: 1, 2, 3, 5, 8, 13, 21, 34, 55, 89, ...
- ☐ By considering the terms in the Fibonacci sequence whose values do not exceed four million, find the sum of the even-valued terms.
- ☐ Write a program to count the numbers of characters in the string and store them in a dictionary data structure.
- ☐ Write a program to use split and join methods in the string and trace a birthday with a dictionary data structure.
- ☐ Write a program combining lists that combines these lists into a dictionary.
- ☐ Write a program to count the frequency of characters in a given file. Can you use

character frequency to tell whether the given file is a Python program file, C program file or a text file?

- ☐ Write a program to print each line of a file in reverse order.
- ☐ Write a program to compute the number of characters, words and lines in a file.
- ☐ Write a function ball collide that takes two balls as parameters and computes if they are colliding. Your function should return a Boolean representing whether or not the balls are colliding. Hint: Represent a ball on a plane as a tuple of (x, y, r), r being the radius. If (distance between two balls centers) \leq (sum of their radii) then (they are colliding)
- ☐ Find mean, median, mode for the given set of numbers in a list.
- ☐ Write a function nearly equal to test whether two strings are nearly equal. Two strings a and b are nearly equal when a can be generated by a single mutation on b.
- ☐ Write a function dups to find all duplicates in the list.

Essential/recommended readings

- ☐ "Starting Out with Python plus My Programming Lab with Pearson eText --Access Card Package (3rd Edition) Tony Gaddis ISBN-13: 978-0133862256".
- ☐ Python Crash Course: A Hands-On, Project-Based Introduction to Programming (2nd Edition).
- ☐ Head-First Python: A Brain-Friendly Guide (2nd Edition) by Paul Barry.
- ☐ Learn Python the Hard Way: 3rd Edition by Zed A. Shaw.
- ☐ Python Programming: An Introduction to Computer Science (3rd Edition) by John M. Zelle.
- ☐ Python Cookbook: Recipes for Mastering Python 3 (3rd Edition) by Brian Jones and David Beazley.

Examination scheme and mode:

Total Marks: 100

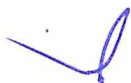

Internal Assessment: 25 marks

Practical Exam (Internal): 25 marks

End Semester University Exam: 50 marks

The Internal Assessment for the course may include Class participation, Assignments, Class tests, Projects, Field Work, Presentations, amongst others as decided by the faculty.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

PROSPECTING E-WASTE FOR SUSTAINABILITY

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|--|---------|-----------------------------------|----------|---------------------|-----------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Prospecting E-waste for Sustainability | 2 | 0 | 0 | 2 | 12 th Pass | NIL |

Learning Objectives

The Learning Objectives of this course are as follows:

- To provide in-depth knowledge on the effective mechanisms to regulate the generation, collection, and storage of e-waste
- To gain insights into the internationally/nationally acceptable methods of transport, import, and export of e-waste within and between countries
- To develop a holistic view on recycling, treatment, and disposal of e-waste and related legislative rules.

Learning outcomes

The Learning Outcomes of this course are as follows:

- After studying this course, students will be able to holistically analyze the environmental impacts of e-waste
- After studying this course, students will be able to apply the skills and various concepts for sustainable management of e-waste
- After studying this course, students will be able to decipher the role of various national and international regulations for e-waste management
- After studying this course, students will be able to provide specific recommendations for improved methods for handling e-waste at different stages such as generation, collection, storage, transport, and recycling

SYLLABUS

Practical/Hands-on Exercises

(15 weeks)

- Identification of e-waste and its types
- Composition of e-waste and segregation- from the material provided
- Dismantling of e-waste and handling process
- Visit a nearby e-waste handling facility
- Environmental protection laws and producer's responsibility for e-waste management
- Build an understanding of how regulatory mechanisms can be utilized in the management of e-waste in educational institutions.
- Discussion on plausible ways and implementation of e-waste reduction at the source
- Evaluation of the status of e-waste handling at your institution. Suggest potential solutions as per the existing norms of E-Waste (Management) Rules, 2016 and beyond.
- Estimate how recycling of e-waste in metro cities will go in sync with the circular economy
- Develop an understanding and itinerary of the process for procuring e-waste import permissions.
- Inventory of the e-waste disposal mechanisms.
- Study the evolution of e-waste management rules and its implementation- Hazardous Waste Rules, 2008, E-waste (Management and Handling) Rules, 2011; and E-Waste (Management) Rules, 2016
- Study the international laws on e-waste management- the international legislations: The Basel Convention; The Bamako Convention; The Rotterdam Convention;
- Waste Electrical and Electronic Equipment (WEEE) Directive in the European Union; Restrictions of Hazardous Substances (RoHS) Directive

Teaching and learning interface for practical skills:

To impart training on technical and analytical skills related to the course objectives, a wide range of learning methods will be used, including (a) laboratory practicals; (b) field-work exercises; (c) customized exercises based on available data; (d) survey analyses; and (e) developing case studies; (f) demonstration and critical analyses; and (h) experiential learning individually and collectively.

Prospective sector(s):

- Electric and electronic industries,
- E-waste Recycling Unites,
- Private entrepreneurs,
- Environmental consultancies,
- Pollution Boards, and
- Environmental NGOs

Suggested Readings:

- Hester, R.E. and Harrison, R.M., 2009. Electronic Waste Management: Design. Analysis and Application. Royal Society of Chemistry Publishing. Cambridge, UK.
- Fowler, B.A., 2017. Electronic Waste: Toxicology and Public Health Issues. Academic Press.

- 
- Gaidajis, G., Angelakoglou, K. and Aktsoglou, D., 2010. E-waste: environmental problems and current management. *Journal of Engineering Science and Technology Review*, 3(1), pp.193-199.
 - Janyasuthiwong, S., 2020. *Metal Removal and Recovery from Mining Wastewater and E-waste Leachate*. CRC Press.

Examination scheme and mode:

Total Marks: 100

Internal Assessment: 25 marks

Practical Exam (Internal): 25 marks

End Semester University Exam: 50 marks

The Internal Assessment for the course may include Class participation, Assignments, Class tests, Projects, Field Work, Presentations, amongst others as decided by the faculty.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Public Speaking in English Language and Leadership

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|--|---------|-----------------------------------|----------|---------------------|-----------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Public Speaking in English Language and Leadership | 2 | 0 | 0 | 2 | 12 th pass | NIL |

Learning Objectives

The Learning Objectives of this course are as follows:

- To impart leadership skills to students along with adequate communication skills to create strong leaders in the emerging social, political and corporate world.
- To create leaders with ethics and resilience in industry-based fields as well as social fields.
- To allow students to realise their leadership skills and curate them through a hand-on practical approach which will be helpful in generating employable skills for them.

Learning outcomes

The Learning Outcomes of this course are as follows:

- After studying this course, students will be able to learn effective communication through Public Speaking will instill leadership development among students.
- After studying this course, students will be able to lead in different fields at the undergraduate level, be responsible citizens and employ leadership skills in their future endeavours, too.
- After studying this course, students will be able to strengthen their critical mindset, help them being assertive and put forward constructive viewpoints employing the skills learnt in the practice sessions.

SYLLABUS

UNIT 1

(2 Weeks)

- Introduction to Effective Communication- Features, Advantages & Disadvantages
- Importance of Listening
- Oral communication- Meaning, Features & Importance
- Reading Public Speech- Reading documented speeches delivered in the past; Understanding the art of word play, vocabulary and putting thoughts into words

UNIT 2

(5 Weeks)

- Public Speaking-
 - ✓ What is Speech?, Overcoming Fear of Public Speaking, Language of Public Speech
 - ✓ Drafting a Public Speech (Reading, research, writing, Fact check, Re-writing, Delivery)
 - ✓ 3P's of Public Speaking (Preparation, Practice, Performance)
 - ✓ Rhetoric Skills, Art of Informative & Persuasive speaking, Concluding Speech with Power
- Types of Public Speaking-
 - ✓ Physical & Online
 - ✓ Political, Organisational, Educational & Motivational
 - ✓ Ted Talks, Public Speaking in Media
- Listening in groups and Discussion- Listening famous speeches (from history & everyday life); Analysis of its elements & classroom discussion
- Writing Public speech- Classroom Practice Sessions

UNIT 3

(5 Weeks)

- Leadership Skills- (2 hrs.)
 - ✓ Meaning, Features & Importance
 - ✓ Historical Overview
 - ✓ Leadership in Academic Life, Corporate Space, Public Life, Social Leadership and Political Leadership
- Leadership & Innovations- (2 hrs.)
 - ✓ Audience analysis
 - ✓ Audience Engagement & Leadership
 - ✓ Influencing through Leadership
- Execution & Delivery of Public Speech- Learning rhetorics through speeches in the form of Audio/ Video; Learning Body Language & Paralanguage through ICT
- Developing leadership competence through Public Speaking- Intra-class Speech Competitions; Extempore; Group Discussion

UNIT 4

(3 Weeks)

- Importance of Public Speaking in developing Leadership Skills
- Ethics in Public Speaking & Leadership
- Mock Parliament/MUNs
- Workshop

Suggested Readings:

- ✓ Beebe, S. A., & Beebe, S. J. (2012). Public speaking: An audience-centred approach. (8th ed.). Boston: Pearson.
- ✓ Cardon, P. (2014). Business communication: Developing leaders for a networked world. (international ed.). New York: McGraw-Hill.
- ✓ Jaffe, C. I. (2013). Public speaking: Concepts & skills for a diverse society. (7th ed.). Boston: Cengage Learning.

Examination scheme and mode:

Total Marks: 100

Internal Assessment: 25 marks

Practical Exam (Internal): 25 marks

End Semester University Exam: 50 marks

The Internal Assessment for the course may include Class participation, Assignments, Class tests, Projects, Field Work, Presentations, amongst others as decided by the faculty.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

STATISTICAL SOFTWARE PACKAGE

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|------------------------------|---------|-----------------------------------|----------|------------------------|-----------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Statistical Software Package | 2 | 0 | 0 | 2 | 12 th Pass | NIL |

Learning Objectives

The Learning Objectives of this course are as follows:

- To familiarize students with data analysis using a statistical software package like SPSS or any other equivalent.
- To provide skills for research analysis and increase employability.
- To lay a foundation for advance data analysis work and higher education.

Learning outcomes

The Learning Outcomes of this course are as follows:

- After studying this course, students will be able to understand basic functions of statistical software package for managing variables and generate descriptive statistics to describe the data and analyze data through graphs and charts.
- After studying this course, students will be able to test differences in sample means.
- After studying this course, students will be able to identify relationships between variables and develop models for predicting dependent variables on the basis of independent variables.
- After studying this course, students will be able to understand data structures and identify clusters in data.
- After studying this course, students will be able to identify principal components that are relevant from a host of variables.

SYLLABUS

Unit 1: Getting started with the Software

(4 Weeks)

Introduction: Data Entry, Storing and Retrieving Files, Generating New Variables; Managing Data – Listing cases, replacing missing values, computing new variables, recoding variables, selecting cases, sorting cases, merging files, Graphs – Creating and editing graphs and charts; Descriptive Statistics Procedures: Frequencies, Descriptive, Explore, Cross Tabulation.

Unit 2: Hypothesis Testing for Means

(3 Weeks)

T-tests: One sample test, Independent samples and paired samples t-test; ANOVA – One-way analysis of variance with post hoc analysis, Two-way analysis of variance.

Unit 3: Testing for Association between Variables

(4 Weeks)

Chi-square Test of Independence; Bivariate Correlation Analysis: Simple Scatter Plot; Correlation Coefficient: Pearson, Spearman Rho and Kendall Tau Coefficient. Factor analysis.

Unit 4: Regression Analysis

(4 Weeks)

Linear Regression: Simple Linear Regression, Multiple regression analysis with matrix scatterplot. Multiple Regression: Standard (Enter) and Stepwise Method. Binary Logistic Regression.

Essential/recommended readings

- ☐ Performing Data Analysis using IBM SPSS, Lawrence S. Meyers, Glenn C. Gamst, A. J. Guarino, Wiley Publication
- ☐ SPSS for Windows Step by Step A Simple Guide and Reference, Darren George and Paul Malley
- ☐ SPSS in Simple Steps, Kiran Pandya, Smruti Bulsari, Sanjay Sinha, Dreamtech Press

Suggestive Readings

- Using SPSS in Research, Dr. Radha Mohan, Neelkamal.

Examination scheme and mode:

Total Marks: 100

Internal Assessment: 25 marks Practical

Exam (Internal): 25 marks

End Semester University Exam: 50 marks

The Internal Assessment for the course may include Class participation, Assignments, Class tests, Projects, Field Work, Presentations, amongst others as decided by the faculty.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|---------------------------|---------|-----------------------------------|----------|---------------------|-----------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Statistics with R | 2 | 0 | 0 | 2 | 12 th Pass | NIL |

Learning Objectives

The Learning Objectives of this course are as follows:

- To enable students to handle data in the R software thereby helping them to understand meaningful statistical analysis performed on the data.
- To enable students to extract data, and perform basic statistical operations entailing
- Data analysis such as – data cleaning, data visualisation, data summarisation, and regression amongst others.

Learning outcomes

The Learning Outcomes of this course are as follows:

- After studying this course, students will be able to extract and Read data into R, manipulate, and analyse it
- After studying this course, students will be able Tto debug, organize, and commentR code
- After studying this course, students will be able to understand the R environment for downloading, installing, and using packages
- After studying this course, students will be able to do basic programming to write own functions
- After studying this course, students will be able to use loops
- After studying this course, students will be able to create standard and customizedgraphics
- After studying this course, students will be able to perform basic statisticaloperations and regression.

SYLLABUS

Unit 1: Data Extraction and Spread Sheet Exploration

(3 Weeks)

Extraction of economics and financial data from Prowessiq, RBI, IMF, World bank or an equivalent financial/economic database. The students should be able to save and export the data to 'R-environment' for further analysis.

Unit 2: Basics of R-language

(7 Weeks)

Overview of the R language: Installing R and R Studio : Using R studio, Scripts, Text editors for R, Graphical User Interfaces (GUIs) for R, Creating and storing R workspaces, installing packages and libraries, Mathematical operations.

Data Types in R – Numeric, Integer, Character, Logical, Complex and missing data. Data Structures in R

- Vectors – Creation, Arithmetic operations of Vectors, Vector Sub setting, Sorting and Sequencing functions.
- Matrix and Arrays – Creation, Arithmetic Operations of matrix, Sub setting, Use of Drop Function.
- Factors – Converting a vector into factor, assigning levels and labels, ordered Factor.
- List – Creating a list, accessing elements from a list, adding a new element and eliminating an existing element from the list, converting list to vectors.
- Data Frames – Creation of Data Frame, adding new columns, rows and removing columns, accessing column using the \$ sign, importing a data set (important file formats such as csv, txt and spreadsheet), aggregate function and subsetting of dataframes, tapply function, manipulation using dplyr package (select, filter, arrange, mutate and group by function, pipe operator).

Programming Fundamentals: Logical operators, conditional statements (if, else, else if statements in R), While loops, For loops, repeat loops. Creating functions in R.

Reading data in R (file formats such as csv, txt, and xlsx), Writing data to external files (file formats such as csv, txt, and xlsx), writing a table to a file, print function.

Unit 3: Basic Statistics and Regression

(5 Weeks)

Summarizing and exploring data: Descriptive statistics (mean, median, mode, variance, skewness, five-point summary), dealing with missing data in R, Data cleaning (dplyr package, tidyr package and pipe operator), Exploratory Data Analysis; data visualization using inbuilt functions and ggplot2 package (pie chart, bar chart, line chart, histogram, box plot, scatter plot, Normal QQ plot).

Regression analysis using R: Regression vs Correlation, Simple and multiple regression, Ordinary least square, Assumptions of classical normal linear regression model (CNLRM), corrplot package, car package, lmtest package, scatter plot (using plot function and ggplot2 package) to understand the relationship between variables, lm, abline, predict, resid function, interpreting 'summary table' of the regression model, normality of residuals (qqnorm and qqPlot functions), multicollinearity (correlation matrix, corrplot and vif function), autocorrelation (acf plot and Durbin Watson test),

heteroscedasticity (graphically, bptest, ncvtTest), impact on estimates and inferences in case of violations of assumptions of CNLRM, methods to take care of violations.

Time series data, components of a time series data, additive and multiplicative time series model, ts function, diff function, plot of a time series data, time series data with linear trend; regression analysis using 'lm' function, stationarity in time series (concept only).

Examination scheme and mode:

Total Marks: 100

Internal Assessment: 25 marks

Practical Exam (Internal): 25 marks

End Semester University Exam: 50 marks

The Internal Assessment for the course may include Class participation, Assignments, Class tests, Projects, Field Work, Presentations, amongst others as decided by the faculty.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

SUSTAINABLE ECOTOURISM AND ENTREPRENEURSHIP

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|--|----------|-----------------------------------|----------|---------------------|-----------------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Sustainable Ecotourism and Entrepreneurship | 2 | 0 | 0 | 2 | 12th Pass | NIL |

Learning Objectives

The Learning Objectives of this course are as follows:

- To train students in concepts and principles of sustainable ecotourism leading to a new generation of entrepreneurs
- To inculcate field-based practical skills in translating ecological systems into wealth generation while conserving natural resources
- To transform local biological wealth into a hub of global attraction and generate a scientific basis of Indian traditional knowledge

Learning outcomes

The Learning Outcomes of this course are as follows:

- After studying this course, students will be able to develop next-generation ecological entrepreneurs
- After studying this course, students will be able to evolve eco-literate society by integrating market-based instruments with eco-cultural knowledge of traditional societies
- After studying this course, students will be able to practice ecological knowledge for wealth generation, environmental conservation, and popularization of Indian traditional knowledge

SYLLABUS

Practical/Hands-on Exercise

(15 weeks)

- Assess the current state of ecotourism in little-known/explored areas and examine ecotourism potential
- Field surveys to identify the existing locations having ecological, wildlife, scenic, and ethnic potential for ecotourism and analyze existing prevalent eco-practices having the potential to integrate with ecotourism programme
- Identify ten plant species having ecological, economic, and cultural significance as ecotourist attraction
- Develop stories on the selected wild habitats to attract ecotourists from within and outside the country
- Identify suitable track and prepare a checklist of birds and animals with their stories for a diverse group of ecotourists
- Examine the current state of natural resources and develop suitable messages and appropriate media for educating different target groups
- Survey and identify the target group for ecotourism based on their age, education, economic and other criteria and evaluate their psychological barriers to ecotourism
- Conduct inventory of facility and analyze a preliminary competitive advantage over ecological attractions in the nearby area
- Analyze tourist spending patterns and track preferences for ecotourism attractions in nearby areas and add value to ecological, wildlife, and cultural attractions
- Survey attitude and perception of residents regarding ecotourism plan and analyze costs and benefits of the sustainable ecotourism development programme using a demand-driven marketing approach
- Develop messages, stories, and pictures to attract tourists and promote ecotourism in the target area
- Analyze basic elements of ecotourism, the special needs of ecotourists, develop trips and travel packages offering an array of experiences and predict the market trends
- Develop ecotourist activities for individuals, families, and groups and craft social media campaigns for the proposed ecotourism business
- Develop a plan for strategic alliances and partnerships with other projects/groups /organizations for public- private partnership in the proposed ecotourism programme

Teaching and learning interface for practical skills:

To impart training on technical and analytical skills related to the course objectives, a wide range of learning methods will be used, including

- (a) laboratory practicals;
 - (b) field-work exercises;
 - (c) customized exercises based on available data;
 - (d) survey analyses;
 - (e) developing case studies;
 - (f) demonstration and critical analyses;
 - (h) experiential learning individually and collectively.
- 

Prospective sector(s):

- Forest Departments
- Tourism industry
- World Bank
- UNDP
- WWF
- Environmental NGOs

Suggested Reading:

Examination scheme and mode:

Total Marks: 100

Internal Assessment: 25 marks

Practical Exam (Internal): 25 marks

End Semester University Exam: 50 marks

The Internal Assessment for the course may include Class participation, Assignments, Class tests, Projects, Field Work, Presentations, amongst others as decided by the faculty.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

VISUAL COMMUNICATION AND PHOTOGRAPHY

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|---|----------|-----------------------------------|----------|---------------------|-----------------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Visual Communication and Photography | 2 | 0 | 0 | 2 | 12th Pass | NIL |

Learning Objectives

The Learning Objectives of this course are as follows:

- To synthesize a comprehensive view of principles involved in Visual Communication.
- To appreciate and express the cultural significance of photography as visual art and understand its evolution and purposes.
- To develop an awareness of compositional and organizational strategies for the effective deployment of formal elements of visual art.
- To read visual texts with a deep knowledge of visual history and theory.
- To create an ability of situating the content and form of the visual representation of thematic context.

Learning outcomes

The Learning Outcomes of this course are as follows:

- After studying this course, students will be able to acquire knowledge of the cultural and historical importance of the visual medium.
- After studying this course, students will be able to explore the fundamentals and underlying theories of Visual Communication.
- After studying this course, students will be able to develop a thorough knowledge of concepts, and skills in creating photographs.
- After studying this course, students will be able to learn to identify and analyze semiotics in photographs.
- After studying this course, students will be able to develop a craftsmanship in creating aesthetically pleasing photographs

SYLLABUS

Unit 1: Historical Background and Basics of Visual Communication (3 Weeks)

Unit Description: The Unit I will give a brief history of the visual arts from the caveman to modern man. Skills of artistic schools of thought and Intertextuality in art in relation to culture.

Topics- Concept and History of Visual Communication, Human Eye and Visual Process, Visual culture and Information Education Communication, Theories of visual communication - Gestalt Theory of visual communication, Perceptual theory of Visual communication, Semiotics and cognitive approach in visuals

Unit II: Theories of Visual Communication (4 Weeks)

Unit Description: This unit will put emphasis on theories, semiotics and the study of signs. Through semiotic theories improve critical thinking skills, and learn to use semiotics to think logically and to analyze visual media in context of culture.

Topics: Fundamentals of Design: Definition. Approaches to Design, Centrality of Design, Elements of Design, Principles of Visual and other Sensory Perceptions. Colour psychology and theory (some aspects), Definition, Optical / Visual Illusions, etc., Various stages of design process, Learning skills to read signs and signifier in visuals for social messaging

Unit III: Photography as Visual Communication (4 Weeks)

Unit Description: This unit will provide skills to learn camera and lighting techniques.

Topics: Introduction to photography, Camera – structure and function of camera , Characteristics of light, Sources of Light – Nature, Artificial and Available, Lighting techniques – three-point lighting, Exposure – focusing, aperture, shutter speed, Depth of field. , Kinds of light indoor and outdoor – Electronic flash and artificial lights, Light meters

Unit IV: Camera Compositions and Accessories (4 Weeks)

Unit Description: This unit will provide skills about camera accessories and designing aesthetically rich compositions.

Topics: Camera lenses and accessories, Basic shots, angle, and view, Composition, Role of photographic image in visual communication, Basics of photojournalism, photo-features, photo - essays, writing captions, visual storytelling.

Essential Readings

- Barnes, Susan B. An Introduction to Visual Communication: From Cave Art to Second Life, Peter Lang Pub, 2011.
- Berger, Arthur Asa, Seeing is Believing: An Introduction to Visual Communication, McGraw-Hill Education, 2012.
- Lester, Paul Martin, Visual Communication: Images with Messages (6ed), Cengage Learning, 2013.
- Photography: A Critical Introduction - edited by Liz Wells London, Routledge, Oxon, 2015.
- Farrell, I. Complete Guide to Digital Photography, Quercus Publishing, UK, 2014.

Suggested Readings

- Mandav, Pradeep, Visual Media Communication, Authors Press, 2001.
- Williams, Rich, Visual Communication: Integrating Media, Art, and Science, Routledge, 2007

Examination scheme and mode:

Total Marks: 100

Internal Assessment: 25 marks

Practical Exam (Internal): 25 marks

End Semester University Exam: 50 marks

The Internal Assessment for the course may include Class participation, Assignments, Class tests, Projects, Field Work, Presentations, amongst others as decided by the faculty.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

पटकथा लेखन

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|---------------------|---------|-----------------------------------|----------|---------------------|-----------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| पटकथा लेखन | 2 | 0 | 0 | 2 | 12 th Pass | NIL |

Course Objective:

- पटकथा लेखन का परिचय कराना।
- विद्यार्थी की लेखन-क्षमता और भाषा-कौशल को बढ़ावा देना।
- विद्यार्थी को लेखन में रोजगार सम्बन्धी क्षेत्रों के लिए तैयार करना।

Course Learning Outcomes:

- पटकथा लेखन तथा उसके तकनीकी शब्दों से विद्यार्थी अवगत हो सकेगा।
- पटकथा लेखन की जानकारी मिलने के उपरान्त विद्यार्थी के लिए रोजगार की संभावनाएँ बनेंगी।
- विद्यार्थी भाषायी सम्प्रेषण को समझते हुए लेखन से सम्बन्धित विभिन्न पक्षों से अवगत हो सकेगा।
- विद्यार्थी में अभिव्यक्ति कौशल का विकास हो सकेगा।

SYLLABUS

यूनिट 1

(4 सप्ताह)

- पटकथा लेखन: परिचय
- पटकथा के तत्व
- पटकथा के प्रकार
- पटकथा की शब्दावली

यूनिट 2

(4 सप्ताह)

- पटकथा लेखन में शोध का महत्व
- चरित्र की निर्मिति और विकास
- एक दृश्य का लिखा जाना
- तीन अंक (थ्री एक्ट) और पाँच अंक (फाइव एक्ट) को समझना

यूनिट 3

(4 सप्ताह)

- वेबसीरीज के लिए पटकथा लेखन
- लघु फ़िल्म के लिए पटकथा लेखन
- वृत्तचित्र के लिए पटकथा लेखन
- विज्ञापन फ़िल्म के लिए पटकथा लेखन

यूनिट 4

(3 सप्ताह)

- पटकथा का पाठ और विश्लेषण
- किसी आईडिया को स्क्रीन प्ले के तौर पर विकसित करना

सन्दर्भ पुस्तकें:

- पटकथा कैसे लिखें: राजेंद्र पांडेय - वाणी प्रकाशन, दिल्ली, संस्करण 2015
- पटकथा लेखन : एक परिचय - मनोहर श्याम जोशी - राजकमल प्रकाशन, दिल्ली संस्करण 2000
- कथा-पटकथा: मन्नु भंडारी - वाणी प्रकाशन, दिल्ली, संस्करण 2014
- व्यावहारिक निर्देशिका: पटकथा लेखन: असगर वज़ाहत - राजकमल प्रकाशन, दिल्ली संस्करण 2011
- आईडिया से परदे तक: रामकुमार सिंह - राजकमल प्रकाशन, दिल्ली संस्करण 2021

Examination Scheme & Mode:

Total Marks: 100

Internal Assessment: 25 marks

Practical Exam (Internal): 25 marks

End Semester University Exam: 50 marks

The Internal Assessment for the course may include Class participation, Assignments, Class tests, Projects, Field Work, Presentations, amongst others as decided by the faculty.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

रंगमंच

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|---------------------|---------|-----------------------------------|----------|---------------------|-----------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| रंगमंच | 2 | 0 | 0 | 2 | 12 th pass | NIL |

Course Objective:

- हिन्दी रंगमंच का सामान्य परिचय कराना ।
- नाट्य-प्रस्तुति की प्रक्रिया की जानकारी देना ।
- अभिनय के विभिन्न पक्षों से अवगत कराना ।
- रंगमंच के खेलों और गतिविधियों से अवगत कराना ।

Course Learning Outcomes:

- नाट्य-प्रस्तुति की प्रक्रिया से विद्यार्थी अवगत हो सकेगा ।
- रंगमंच की सामान्य जानकारी मिलने के उपरान्त इस क्षेत्र में विद्यार्थी के लिए रोजगार की संभावनाएँ बनेंगी ।
- रंगमंचीय गतिविधियों से विद्यार्थी के व्यक्तित्व का विकास हो सकेगा ।
- विद्यार्थी में अभिव्यक्ति कौशल का विकास हो सकेगा ।

SYLLABUS

यूनिट 1

(4 सप्ताह)

- भरत मुनि कृत नाट्यशास्त्र (संक्षिप्त परिचय)
- हिन्दी का पारंपरिक रंगमंच (संक्षिप्त परिचय)

यूनिट 2

(4 सप्ताह)

प्रस्तुति-प्रक्रिया: आलेख का चयन, अभिनेताओं का चयन, दृश्य-परिकल्पना (ध्वनि-संगीत-नृत्य-प्रकाश), पूर्वाभ्यास

यूनिट 3

(4 सप्ताह)

अभिनय की तैयारी: वाचिक, आंगिक, आहार्य, सात्विक

यूनिट 4

(2 सप्ताह)

आशु अभिनय, थिएटर गेम्स, संवाद-वाचन, शारीरिक अभ्यास, सीन वर्क

यूनिट 5

(1 सप्ताह)

मंच प्रबंधन: सेट, रंग-सामग्री, प्रचार-प्रसार, ब्रोशर-निर्माण

सन्दर्भ पुस्तकें:

- संक्षिप्त नाट्यशास्त्रम् - राधावल्लभ त्रिपाठी, वाणी प्रकाशन, दिल्ली, 2009
- रंग स्थापत्य: कुछ टिप्पणियाँ - एच. वी. शर्मा राष्ट्रीय नाट्य विद्यालय प्रकाशन, दिल्ली, 2004
- पारंपरिक भारतीय: रंगमंच अनंतधाराएँ - कपिला वात्स्यायन, अनुवाद - बदी उज़्ज्वला, नेशनल बुक ट्रस्ट, दिल्ली, 1995
- हिंदी रंगमंच का लोकपक्ष, सं. प्रो. रमेश गौतम, स्वराज प्रकाशन, दिल्ली 2020
- मंच आलोकन - जी. एन. दासगुप्ता, अनुवाद - अजय मलकानी, नेशनल बुक ट्रस्ट, दिल्ली, 2006
- रंगमंच के सिद्धांत - सं. महेश आनंद, देवेन्द्र राज अंकुर, राजकमल प्रकाशन, दिल्ली 2008

Examination Scheme & Mode:

Total Marks: 100

Internal Assessment: 25 marks

Practical Exam (Internal): 25 marks

End Semester University Exam: 50 marks

The Internal Assessment for the course may include Class participation, Assignments, Class tests, Projects, Field Work, Presentations, amongst others as decided by the faculty.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

रचनात्मक लेखन

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|---------------------|---------|-----------------------------------|----------|---------------------|----------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| रचनात्मक लेखन | 2 | 0 | 0 | 2 | 12th Pass | NIL |

Learning Objectives

- विद्यार्थियों के मौखिक और लिखित अभिव्यक्ति कौशल को विकसित करना।
- उनमें कल्पनाशीलता और रचनात्मकता का विकास करना।
- साहित्य की विविध विधाओं और उनकी रचनात्मक शैली का परिचय कराते हुए लेखन की ओर प्रेरित करना।
- प्रिंट एवं इलेक्ट्रानिक माध्यमों के लिए लेखन की प्रवृत्ति को विकसित करना।

Learning outcomes

The Learning Outcomes of this course are as follows:

इस पाठ्यक्रम के अध्ययन के पश्चात् विद्यार्थियों में:

- मौखिक और लिखित अभिव्यक्ति कौशल को विकसित होने में मदद मिलेगी।
 - उसमें कल्पनाशीलता और रचनात्मकता का विकास हो सकेगा।
 - साहित्य की विविध विधाओं और उनकी रचनात्मकता शैली का परिचय होगा जिससे वे स्वयं भी इन विधाओं में लेखन की अग्रसर हो सकेंगे।
-
- प्रिंट एवं इलेक्ट्रानिक माध्यमों के लिए लेखन की ओर भी ये अग्रसर होंगे।

SYLLABUS

इकाई 1

(5 सप्ताह)

रचनात्मक लेखन: अवधारणा: स्वरूप आधार एवं विश्लेषण

- भाव एवं विचार की रचना में अभिव्यक्ति की प्रक्रिया
- अभिव्यक्ति के विविध क्षेत्र: साहित्य पत्रकारिता, विज्ञापन, भाषण
- लेखन के विविध रूप: मौखिक-लिखित, गद्य-पद्य, कथात्मक-कथेतर
- अर्थ निर्मिति के आधार: शब्द और अर्थ की मीमांसा शब्द के पुराने-नए प्रयोग, शब्द की व्याकरणिक कोटि

इकाई 2

भाषा भंगिमा और साहित्य लेखन

(5 सप्ताह)

- भाषा की भंगिमाएँ: औपचारिक-अनौपचारिक, मौखिक-लिखित, मानक भाषिक संदर्भ: क्षेत्रीय, वर्ग-सापेक्ष, समूह-सापेक्ष
- रचना-सौष्ठव: शब्दशक्ति, प्रतीक, बिम्ब, अलंकारवक्रता
- कविता: संवेदना, भाषिक सौष्ठव, छंदबद्ध-छंदमुक्त, लय, गति, तुक
- कथा-साहित्य: वस्तु, पात्र, परिवेश, कथ्य और भाषा

Unit III

(5 weeks)

विविध विधाओं एवं सूचना माध्यमों के लिए लेखन

- नाट्य-साहित्य: वस्तु, पात्र, परिवेश, कथ्य, रंगमंच और नाट्य-भाषा
- विविध गद्य विधाएँ: निबंध, संस्मरण, आत्मकथा, व्यंग्य, रिपोर्ताज, यात्रा-वृत्तांत
- प्रिंट माध्यम के लिए लेखन: फीचर, यात्रा-वृत्तांत, साक्षात्कार, विज्ञापन

- इलेक्ट्रानिक माध्यम के लिए लेखन: विज्ञापन, पटकथा, संवाद

Practical Exercises if any:

नोट: उपर्युक्त का परिचय देते हुए इनका अभ्यास भी करवाया जाए।

BA (Hons.) Political Science
Category-I

DISCIPLINE SPECIFIC CORE COURSE -1 (DSC-1) – : Understanding Political Theory

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|--------------------------------------|---------|-----------------------------------|----------|---------------------|-----------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Understanding Political Theory DSC-1 | 4 | 3 | 1 | - | 12 th Pass | NA |

Learning Objectives

This course introduces the various ways of theorizing politics. The idea is to introduce and assess the conventional as well as contemporary approaches to understanding politics. The course familiarizes students with central debates in political theory. It investigates various traditions and critical perspectives on political theory. The core aim is develop critical and analytical skills among students and the development of their understanding to some of the

key concepts in political practices.

Learning outcomes

After completion of this course, students will

- Understand the various traditions and approaches of political theory and appreciate how they get reflected in organizing social living
- Understand multiple frames by which the idea of political community is debated
- Understand the significance of theorizing and relating theory to practice
- Acquire the critical analytical vocabulary to address political questions in a reflected and theoretically informed way.
- Know how political theory provides a normative framework to resolve various social and political problems and issues.

SYLLABUS OF DSC-1

UNIT – I (12 Hours)

What is Politics: Theorizing the ‘Political’

UNIT – II (12 Hours)

Approaches to Political Theory: Normative, Historical and Empirical

UNIT – III (12 Hours)

Traditions of Political Theory: Liberal, Marxist, Anarchist and Conservative

UNIT – IV (12 Hours)

Critical Perspectives in Political Theory: Feminist and Postmodern

UNIT – V (12 Hours)

The Idea of Political Community: Political Obligation

| | | Lecture | Tutorial | Practical/ Practice | | |
| Ideas and Institutions in Indian Political Thought DSC-2 | 4 | 3 | 1 | - | 12th Pass | NA |

Learning Objectives

This paper introduces students to certain basic terms of ancient Indian thought. While drawing a historical trajectory of these concepts, students will also be familiarized with theories and philosophy of these ideas. Students will also get knowledge about the ancient institutions that were in place at that time, their functioning and their duties, broader norms, roles and responsibilities which guided the state and its important apparatuses. As it is difficult to bring in all the diverse traditions and institutions, attempts have been made to introduce those ones which have been most talked about. This paper seeks to challenge the hegemonic bias of euro-centric terms that had debunked ancient Indian thought as limiting. It thus aims to re-ignite the quest for learning for Indian political thought.

Learning outcomes

At the end of this course students would have acquired

- The knowledge of ideas of Indian political thought
- Acquaintance with institutions of Indian political thought
- Comprehensive understanding of Indian political thought
- Challenging the colonial mindset of underestimating India's rich historical past

DISCIPLINE SPECIFIC CORE COURSE– 3 (DSC-3): Colonialism and Nationalism in India

Credit distribution, Eligibility and Pre-requisites of the Course

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|---|----------|-----------------------------------|----------|---------------------|-----------------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Colonialism and Nationalism in India DSC-3 | 4 | 3 | 1 | - | 12th Pass | NA |

Learning Objectives

The purpose of this course is to help students understand historically the advent of colonialism in India and the emergence of the discourse on nationalism as a response to it. The aim is to engage with theoretical explanations of colonialism and nationalism in India at the same time study the social, political and institutional practices that unfolded in that period, gradually paving way towards independence and democracy in India.

Learning outcomes

On successful completion of the course, students would be able to:

- Show an understanding of the nature of colonial rule in India and the various developments through which it consolidated itself.

- Demonstrate awareness of the specific impacts of colonialism on Indian economy
- Show knowledge of the gradual emergence of the nationalist movement in India in response to the colonial rule
- Demonstrate an understanding of the distinct periods of the nationalist movement and the nature of resistance politics adopted in different phases
- Show awareness of the various social movements, the kind of questions they raised and their contributions in the nationalist movement

SYLLABUS OF DSC-3

UNIT – I (12 Hours)

Colonialism and Nationalism:

- Main perspectives on colonialism: Liberalism, Marxism, Postcolonialism
- Approaches to the study of nationalism in India: Nationalist, Imperialist, Marxist, and Subaltern

UNIT – II (12 Hours)

Colonial Rule in India and its impact:

- Constitutional developments and the colonial state
- Colonial ideology of civilizing mission: Utilitarians and Missionaries
- Impact on agriculture, land relations, industry and ecology

UNIT – III (12 Hours)

Reform and Resistance:

- The 1857 war of Independence
- Major social and religious movements
- Education and the rise of the new middle class

UNIT – IV (12 Hours)

Nationalist Politics and Expansion of its Social Base:

- Phases of the Nationalist Movement: Liberal constitutionalist, Swadeshi and the Radicals, Formation of the Muslim League
- Gandhi and mass mobilisation: Non-cooperation, Civil Disobedience, and Quit India Movements
- Revolutionaries, Socialists and Communists
- Communalism in Indian Politics
- The two-nation theory, negotiations over partition

UNIT – V (12 Hours)

Social Movements:

Peasants, Tribals, Workers, Women and anti-caste movements

Category-II

DISCIPLINE SPECIFIC CORE COURSE (DSC-1): Introduction to Political Theory

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|---|----------|-----------------------------------|----------|---------------------|-----------------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Introduction to Political Theory MDSC 1A | 4 | 3 | 1 | - | 12th Pass | NIL |

Learning Objectives

This course seeks to understand the unexamined explanation of what is political. It investigates various concepts like liberty, equality, justice that build the foundation of political theory. The core aim of the paper is to inculcate students to normatively and critically analyze the political arguments and debates. The course therefore develops understanding of the nature and significance of political theory through various perspectives and conceptual analysis.

Learning outcomes

After completing this course students will be able to:

- Understand the nature, scope and relevance of political theory
- Understand the different concepts of political theory such as liberty, equality justice, rights and fraternity
- Develop a broader historical, normative and empirical understanding of political theory
- Know and understand the ancient Greece and ancient Indian political theory
- Reflect upon the contemporary debates in political theory

SYLLABUS OF DSC-1

UNIT – I (16 Hours)

What is Political Theory and what is its relevance?

UNIT – II (28 Hours)

Concepts: Liberty, Equality, Justice, Rights

UNIT – III (16 Hours)

Debates in Political Theory:

- a. Protective discrimination and principles of fairness?
- b. The Public vs private debate: Feminist Perspective Censorship and its limits

DISCIPLINE SPECIFIC CORE COURSE – 2 (DSC-2): Public Administration in India

Credit distribution, Eligibility and Prerequisites of the Course

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|--|---------|-----------------------------------|----------|---------------------|-----------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Public Administration in India MDSC 1B | 4 | 3 | 1 | - | 12 th Pass | NIL |

Learning Objectives

The paper seeks to provide an introduction to the different dimensions of public administration in India. It seeks to acquaint the student with an analytical and critical understanding of the institution of Indian bureaucracy, with issues of decentralization,

financial management, public accountability, e-governance and some specific dimensions of citizens and social welfare policies.

Learning outcomes

After completion of this course, students will be able to:

- Have a clear picture of the complex institutional structure of Indian administration at present
- Understand the building blocks of local governance, in rural and urban areas
- Explain the processes by which different budgeting systems work for this structure
- Analyse the processes of implementation of different social welfare policies by the administrative institutions.

SYLLABUS OF DSC- 2

UNIT – I (10 Hours)

Indian Administration

- a. Structure of the Civil Services: Evolution
 - i. Colonial Legacy
 - ii. Civil Service in the Constitutional Framework; appointment training, promotion
 - iii. PMO, Cabinet Secretariat
 - iv. Major Initiatives in Administrative Reforms

UNIT – II (10 Hours)

Decentralization and Local Self Governance

- a. Meaning and Types: Rural and Urban
- b. PRIs and implementation of public policies

UNIT – III (10 Hours)

Budget

- a. Concept of Budget and Budget Cycle in India
- b. Types of Budget: Line Budget, Performance Planning Budget, Zero Based Budget
- c. Budget making: role of the Finance Ministry

UNIT – IV (10 Hours)

Technology and Public Administration in India

- a. E-Governance: The Journey of E-Governance in India
- b. Models of E-Governance: Case-Study of Digital India Mission

UNIT – V (10 Hours)

Social Welfare Policies

- a. Education: Right to Education
- b. Health: National Health Mission
- c. Food: Right to Food Security

- d. Employment: MGNREGA

UNIT – VI (10 Hours)

Issues and Debates in Indian Administration

- a. Ethics in Administration: Integrity vs. Corruption
- b. Accountability: RTI, Lokpal, Citizens' Charter
- c. Relationship between Political Executive and Permanent Executive
- d. Generalists and Specialists
- e. Gender sensitivity and gender participation

BA (PROG) WITH POLITICAL SCIENCE AS MINOR

Category-III

DISCIPLINE SPECIFIC CORE COURSE (DSC-1): Introduction to Political Theory

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|---|----------|-----------------------------------|----------|---------------------|-----------------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Introduction to Political Theory MDSC 1A | 4 | 3 | 1 | - | 12th Pass | NA |

Learning Objectives

This course seeks to understand the unexamined explanation of what is political. It investigates various concepts like liberty, equality, justice that build the foundation of political theory. The core aim of the paper is to inculcate students to normatively and critically analyze the political arguments and debates. The course therefore develops understanding of the nature and significance of political theory through various perspectives and conceptual analysis.

Learning outcomes

After completing this course students will be able to:

- Understand the nature, scope and relevance of political theory
- Understand the different concepts of political theory such as liberty, equality justice, rights and fraternity
- Develop a broader historical, normative and empirical understanding of political theory
- Know and understand the ancient Greece and ancient Indian political theory
- Reflect upon the contemporary debates in political theory

SYLLABUS OF DSC-1

UNIT – I (16 Hours)

What is Political Theory and what is its relevance?

UNIT – II (28 Hours)

Concepts: Liberty, Equality, Justice, Rights

UNIT – III (16 Hours)

Debates in Political Theory:

- a. Protective discrimination and principles of fairness?
- b. The Public vs private debate: Feminist Perspective Censorship and its limits

Essential/recommended readings

Unit I

Bhargava, R. (2008) 'What is Political Theory', in Bhargava, R. and Acharya, A. (eds.) *Political Theory: An Introduction*. New Delhi: Pearson Longman, pp. 2-17.

Bhargava, R. (2008) 'Why Do We Need Political Theory', in Bhargava, R. and Acharya, A. (eds.) *Political Theory: An Introduction*. New Delhi: Pearson Longman, pp. 18-37.

Unit 2

Sriranjani, V. (2008) 'Liberty', in Bhargava, R. and Acharya, A. (eds.) *Political Theory: An Introduction*. New Delhi: Pearson Longman, pp. 40-57.

Acharya, A. (2008) 'Equality', in Bhargava, R. and Acharya, A. (eds.) *Political Theory: An Introduction*. New Delhi: Pearson Longman, pp. 58-73.

Menon, K. (2008) 'Justice', in Bhargava, R. and Acharya, A. (eds.) *Political Theory: An Introduction*. New Delhi: Pearson Longman, pp. 74-82.

Talukdar, P.S. (2008) 'Rights', in Bhargava, R. and Acharya, A. (eds.) *Political Theory: An Introduction*. New Delhi: Pearson Longman, pp. 88-105.

Unit 3

Acharya, A. (2008) 'Affirmative Action', in Bhargava, R. and Acharya, A. (eds.) *Political Theory: An Introduction*. New Delhi: Pearson Longman, pp. 298-307.

Frances E O. (1985) 'The Myth of State Intervention in the Family', *University of Michigan Journal of Law Reform*. 18 (4), pp. 835-64.

Sethi, A. (2008) 'Freedom of Speech and the Question of Censorship', in Bhargava, R. and Acharya, A. (eds.) *Political Theory: An Introduction*. New Delhi: Pearson Longman, pp. 308-319.

COMMON POOL OF GENERIC ELECTIVES (GE) COURSES

Offered by Department of Political Sciences

Category-IV

GENERIC ELECTIVES (GE-1): Ideas in Indian Political Thought

Credit distribution, Eligibility and Pre-requisites of the Course

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course |
|---|---------|-----------------------------------|----------|---------------------|-----------------------|-----------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Ideas in Indian Political Thought GE-1 | 4 | 3 | 1 | - | 12 th Pass | NA |

Learning Objectives

This paper is designed for students who are from other disciplines and wish to have a basic understanding of the various themes that has shaped Indian society and politics. It revolves around key concepts based on original texts which would help the students to critically engage with the ideas.

Learning outcomes

After completion of this course, students will be able to

- answer about the nature and form of statecraft that existed in Ancient India.
- explain how the texts in ancient India interpreted Dharma and Danda
- answer what were sources and mechanisms to practice Nyay in ancient India.
- make distinction between Rastra and Rajya.
- explain the meaning and foundations of Varna and how are they different from caste.

SYLLABUS OF GE-1

UNIT – I (8 Hours)

Dharma and Danda: Kautilya

UNIT – II (8 Hours)

Gender: Tarabai Shinde

UNIT – III (8 Hours)

Culture and Nationalism: Vivekananda

UNIT – IV (12 Hours)

Swaraj: Gandhi

UNIT – V (8 Hours)

Nyaya: Ambedkar

UNIT – VI (8 Hours)

Hindutva: Savarkar

UNIT – VII (8 Hours)

Integral Humanism: Deen Dayal Upadhyaya

Essential/recommended readings**1. Dharma and Danda: Kautilya**

Mehta, V.R. (1992) 'The Pragmatic Vision: Kautilya and His Successor', in *Foundations of Indian Political Thought*, Delhi: Manohar, pp. 88- 109.

Sharma, R S (2005), *Aspects of Political Ideas and Institutions in Ancient India*, Motilal Banarsidass, New Delhi pp 143-164

2. Gender: Tarabai Shinde

O' Hanlon, Rosalind (2002) *A comparison between women and men: Tarabai Shinde and the critique of Gender Relations in Colonial India*. New Delhi: Oxford University Press.

Lele, Jayant (1998) *Gender Consciousness in Mid-Nineteenth Century Maharashtra*, in Anne Feldhaus *Images of women in Maharashtra Society*. The University of New York Press: New York

3. Culture and Nationalism: Vivekananda

Sen, Amiya P. (2011), 'Vivekanand: Cultural Nationalism', in M. P. Singh and Himanshu Roy (ed.), *Indian Political Thought: Themes and Thinkers* Delhi. Pearson

Kiggley, Dermot (1990) 'Vivekananda's western message from the East' in William Radice (ed) *Swami Vivekananda and modernization of Hinduism*, New Delhi: Oxford University Press.

4. Swaraj: Gandhi

Parel, A. (ed.) (2002), 'Introduction', in *Gandhi, freedom and Self Rule*, Delhi: Vistaar Publication.

Dalton, Denis (1982) *Indian Idea of freedom*, Gurgaon: Academic Press, pp 154-190

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

GENERIC ELECTIVES (GE-3): Nationalism in India

Credit distribution, Eligibility and Pre-requisites of the Course

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course |
|------------------------------|---------|-----------------------------------|----------|---------------------|-----------------------|-----------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Nationalism in India GE-3 | 4 | 3 | 1 | - | 12 th Pass | NA |

Learning Objectives

The course aims to help students understand the national movement in India. It looks at the movement from different theoretical perspectives that highlight its varied dimensions. The course begins by looking at the Indian responses to colonial dominance in the nineteenth century, and traces the development of the anti-colonial struggle up to the mid-20th century. It successively focuses on the events leading to the Partition and the Independence in 1947. In the process, the course also tries to focus on the various tensions and debates within nationalism in India as it engaged with the questions of communalism, class struggle, caste and gender.

Learning outcomes

On successful completion of the course, students would:

- Gain an understanding of the different theoretical views on the emergence and development of nationalism in India and the tensions that existed between them
- Demonstrate knowledge of the historical trajectory of the development of the nationalist movement in India, with specific focus on its different phases
- Understand the contribution of various social movements in the anti-colonial struggle
- Demonstrate awareness of the history of partition and independence

SYLLABUS OF GE-3

UNIT – I (12 Hours)

Approaches to the Study of Nationalism in India: Nationalist, Imperialist, Marxist, and Subaltern

UNIT – II (12 Hours)

Reformism and Anti-Reformism in the Nineteenth Century: Major Social and Religious Movements in 19th century

UNIT – III (16 Hours)

Nationalist Politics and Expansion of its Social Base

- a. Phases of Nationalist Movement: Liberal Constitutionalists, Swadeshi and the Radicals; Beginning of Constitutionalism in India
- b. Gandhi and Mass Mobilisation: Non-Cooperation Movement, Civil Disobedience Movement, and Quit India Movement
- c. Revolutionaries, Socialists, and Communists

UNIT – IV (12 Hours)

Social Movements

Peasants, Tribals, Workers, Women and anti-caste movements

UNIT – V (8 Hours)

Partition, Independence and Integration of states

Communalism in Indian Politics, The Two-Nation Theory and Partition, Independence and Integration of Indian States

Essential/recommended readings

Approaches to the Study of Nationalism in India

S. Bandopadhyay (2004) *From Plassey to Partition: A History of Modern India*, New Delhi: Orient Longman, pp. 184-191.

DEPARTMENT OF ECONOMICS

BA (Hons.) Economics

Category-I

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|--|----------|-----------------------------------|----------|---------------------|-----------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Introductory Microeconomics ECON001 | 4 | 3 | 1 | 0 | Class XII pass | NIL |

Learning Objectives

The Learning Objectives of this course are as follows:

- To expose students to the basic principles of microeconomic theory
- To emphasis on the fundamental economic trade-offs and allocation problems due to scarcity of resources
- To use graphical methods to illustrate how microeconomic concepts can be applied to analyze real-life situations

Learning outcomes

The Learning Outcomes of this course are as follows:

- By studying the course, the students will understand economic trade-offs and opportunities.
- By studying the course, the students will understand the fundamentals of market mechanisms and government interventions.

SYLLABUS OF DSC-1

UNIT – I: Introduction to economic trade-offs (12 Hours)
Resources and opportunities, Gains from trade, Individual and society

UNIT – II: How market works (16 Hours)
Supply and demand, Price and resource allocation, Elasticity, Market, trade and welfare

UNIT – III: Role of government (16 Hours)
Taxation, Public good, Inequality and poverty

UNIT – IV: Individual decision and interaction (16 Hours)
Decision versus strategic interaction, How to think about strategic interactions, Real life examples

Practical component (if any) - NIL

Essential/recommended readings:

- Mankiw, N. G. (2018). *Principles of Microeconomics* 8th ed.
- Frank, R. H., & Cartwright, E. (2010). *Microeconomics and behavior*. New York: McGraw-Hill.
- Dixit, A. K., & Skeath, S. (2015). *Games of strategy*: Fourth international student edition. WW Norton & Company.
- Acemoglu, D., Laibson, D., & List, J. (2017). *Microeconomics*. Pearson.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE – 2 (DSC-2): INTRODUCTORY MATHEMATICAL METHODS FOR ECONOMICS

CREDIT DISTRIBUTION, ELIGIBILITY AND PREREQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|--|---------|-----------------------------------|----------|---------------------|---------------------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Introductory Mathematical Methods for Economics ECON002 | 4 | 3 | 1 | 0 | Class XII pass with Mathematics | NIL |

Learning Objectives

The Learning Objectives of this course are as follows:

- To transmit the body of basic mathematics that enables the study of economic theory at the undergraduate level, specifically the courses on microeconomic theory, macroeconomic theory, statistics and econometrics set out in this syllabus
- Particular economic models are not the ends, but the means for illustrating the method of applying mathematical techniques to economic theory in general
- The sophistication would be maintained at a standard level to grow in the profession

Learning outcomes

The Learning Outcomes of this course are as follows:

- To hone and upgrade the mathematical skills acquired in school and paves the way for the second semester course Intermediate Mathematical Methods
- To apply the analytical tools introduced in this course wherever unconstrained optimisation techniques are used in economics and business decision-making

- To make the students more logical in making or refuting arguments

SYLLABUS OF DSC- 2

UNIT –I: Preliminaries (20 Hours)

Logic and proof techniques; sets and set operations; relations; functions and their properties; number systems.

UNIT – II: Functions of one real variable: (20 Hours)

Graphs; elementary types of functions: quadratic, polynomial, power, exponential, logarithmic; sequences and series: convergence, algebraic properties and applications; continuous functions: characterisation, properties with respect to various operations and applications; differentiable functions: characterisation, properties with respect to various operations and applications; second and higher order derivatives: properties and applications.

UNIT – III: Single-variable optimization (20 Hours)

Geometric properties of functions: convex functions, their characterisation and applications; local and global optima: geometric and calculus-based characterisation, applications

Practical component (if any) - NIL

Essential/recommended readings

- Sydsaeter, K., Hammond, P. (2002). *Mathematics for economic analysis*. Pearson Education.
- Hoy, M., Livernois, J., McKenna, C., Rees, R., Stengos, T. (2001). *Mathematics for Economics*, Prentice-Hall India.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE– 3 (DSC-3): INTRODUCTORY STATISTICS FOR ECONOMICS

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|--|---------|-----------------------------------|----------|---------------------|---------------------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Introductory Statistics for Economics ECON003 | 4 | 3 | 1 | 0 | Class XII pass with Mathematics | NIL |

Learning Objectives

The Learning Objectives of this course are as follows:

- To familiarize students with methods of summarizing and describing important features of data. The course teaches students the basics of probability theory and sets a necessary foundation for Inferential Statistical Theory and the Econometrics courses. The familiarity with probability theory will also be valuable for courses in economic theory.

Learning outcomes

The Learning Outcomes of this course are as follows:

- The student would understand the concept of probability, random variables and their distributions and become familiar with some commonly used discrete and continuous distributions of random variables so that they would be able to analyse various real-life data.

SYLLABUS OF DSC-3

UNIT - 1: Introduction and overview (12 Hours)

The distinction between populations and samples and, between population parameters and sample statistics; Pictorial Methods in Descriptive Statistics; Measures of Location and Variability.

UNIT - 2: Elementary probability theory (12 Hours)

Sample spaces and events; probability axioms and properties; counting techniques; conditional probability and Bayes' rule; independence.

UNIT – 3: Random variables and probability distributions (12 Hours)

Defining random variables; discrete and continuous random variables, probability distributions; expected values and functions of random variables.

UNIT - 4: Sample Distributions (8 Hours)

Properties of commonly used discrete and continuous distributions (uniform, binomial, exponential, Poisson, hypergeometric and Normal random variables).

UNIT - 5: Random sampling and jointly distributed random variables (16 Hours)

Density and distribution functions for jointly distributed random variables; computing expected values of jointly distributed random variables; conditional distributions and expectations, covariance and correlation.

Practical component (if any) - NIL

Essential/recommended readings

- Devore, J. (2012). *Probability and Statistics for Engineers*, 8th ed. Cengage Learning.
- John A. Rice (2007). *Mathematical Statistics and Data Analysis*, 3rd ed. Thomson Brooks/Cole.
- Miller, I., Miller, M. (2017). *J. Freund's Mathematical Statistics with Applications*, 8th ed. Pearson.
- Hogg, R., Tanis, E., Zimmerman, D. (2021) *Probability and Statistical inference*, 10th Edition, Pearson

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE – 2 (DSC-2): BASIC MATHEMATICS FOR ECONOMIC ANALYSIS

CREDIT DISTRIBUTION, ELIGIBILITY AND PREREQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|--|---------|-----------------------------------|----------|---------------------|----------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Basic Mathematics for Economic Analysis ECON021 | 4 | 3 | 1 | 0 | Class XII pass | NIL |

Learning Objectives

The Learning Objectives of this course are as follows:

- The objective of the course is train basic algebras that enables the study of economic theory at the undergraduate level, specifically the courses on microeconomics, macroeconomics, statistics and econometrics set out in this syllabus. In this course, particular economic models are not the ends, but the means for illustrating the method of applying mathematical techniques to economic theory in general. It contains understanding of basic functions, relations, real number systems, set operations, linear algebras and matrix operations used in economics.

Learning outcomes

The Learning Outcomes of this course are as follows:

- The course equips the students with exposition of economic problems with formal pre- situations algebraically and offers solution techniques to find equilibrium analysis. These tools are necessary for anyone seeking employment as an analyst in the corporate and policy framing world.

SYLLABUS OF DSC- 2

UNIT – I: Economic

Models (20 Hours)

Ingredients of mathematical models - variables, constants, parameters, equations, and identities; Real number system; Sets and functions; relations and their proper- ties; types of functions; functions of more than one variables; Limit, sequences and series: convergence, algebraic properties and applications; continuous functions: characterisation, properties with respect to various operations and applications; differentiable functions: characterisation, properties with respect to various operations and applications; second and higher order derivatives: properties and applications.

UNIT – II: Equilibrium Analysis in Economics (20 Hours)

Meaning of equilibrium; partial market equilibrium - linear and non-linear models; General market equilibrium

UNIT – III: Linear Models and Matrix Algebras and their Applications in Economics (20 Hours)

Matrix operations, Determinants and Cramer's Rule and their applications

Practical component (if any) - NIL

Essential/recommended readings

- Chiang, A and Wainwright, K. (2005). Fundamental methods of mathematical economics. Boston, Mass. McGraw-Hill/Irwin.
- Sydsaeter, K., Hammond, P. (2002). *Mathematics for economic analysis*. Pearson Educational.
- Hoy, M., Livernois, J., McKenna, C., Rees, R., Stengos, T. (2001). *Mathematics for Economics*, Prentice-Hall India.

Learning Objectives

The Learning Objectives of this course are as follows:

- This course discusses the basic principles in Microeconomics and their applications. It includes consumer's problem, demand estimation, production function, cost functions and market analysis. It illustrates how the concepts of microeconomics can be applied to analyze real-life economic situations.

Learning outcomes

The Learning Outcomes of this course are as follows:

- The students learn some basic principles of microeconomics of consumer and producers, and interactions of supply and demand, characteristics of perfect competition, efficiency and welfare outcomes.

SYLLABUS OF DSC-1

UNIT – I: Introduction

(16 Hours)

Problem of scarcity and choice: scarcity, choice and opportunity cost; production possibility frontier; economic systems. Demand and supply: law of demand, determinants of demand, shifts of demand versus movements along a demand curve, market demand, law of supply, determinants of supply, shifts of supply versus movements along a supply curve, market supply, market equilibrium. Applications of demand and supply: price rationing, price floors,

consumer surplus, producer surplus. Elasticity: price elasticity of demand, calculating elasticity, determinants of price elasticity, other elasticities

UNIT – II: Consumer Theory

(12 Hours)

Budget constraint, concept of utility, diminishing marginal utility, Diamond-water paradox, income and substitution effects; consumer choice: indifference curves, derivation of demand curve from indifference curve and budget constraint

UNIT – III: Production and Costs

(16 Hours)

Production: behaviour of profit maximising firms, production process, production functions, law of variable proportions, choice of technology, isoquant and isocost lines, cost minimizing equilibrium condition

Costs: costs in the short run, costs in the long run, revenue and profit maximization, minimizing losses, short run industry supply curve, economies and diseconomies of scale, long run adjustments

UNIT – IV: Perfect Competition

(16 Hours)

Assumptions: theory of a firm under perfect competition, demand and revenue; equilibrium of the firm in the short run and long run; Long run industry supply curve: increasing, decreasing and constant cost industries.

Welfare: allocative efficiency under perfect competition.

Practical component (if any) - NIL

Essential/recommended readings

- Mankiw, N. G. (2018). *Principles of Microeconomics* 8th ed.
- Frank, R. H., & Cartwright, E. (2010). *Microeconomics and behavior*. New York: McGraw-Hill.
- Bernheim, B., Whinston, M. (2009). *Microeconomics*. Tata McGraw-Hill.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

| | | Lecture | Tutorial | Practical/ Practice | | |
| Principles of Microeconomics I ECON025 | 4 | 3 | 1 | 0 | Class XII pass | NIL |

Learning Objectives

The Learning Objectives of this course are as follows:

- This course discusses the basic principles in Microeconomics and their applications. It includes consumer's problem, demand estimation, production function, cost functions and market analysis. It illustrates how the concepts of microeconomics can be applied to analyze real-life economic situations.

Learning outcomes

The Learning Outcomes of this course are as follows:

- The students learn some basic principles of microeconomics of consumer and producers, and interactions of supply and demand, characteristics of perfect competition, efficiency and welfare outcomes.

SYLLABUS OF GE-1

UNIT – I: Introduction

(16 Hours)

Problem of scarcity and choice: scarcity, choice and opportunity cost; production possibility frontier; economic systems. Demand and supply: law of demand, determinants of demand, shifts of demand versus movements along a demand curve, market demand, law of supply, determinants of supply, shifts of supply versus movements along a supply curve, market supply, market equilibrium. Applications of demand and supply: price rationing, price floors, consumer surplus, producer surplus. Elasticity: price elasticity of demand, calculating elasticity, determinants of price elasticity, other elasticities

UNIT – II: Consumer Theory

(12 Hours)

Budget constraint, concept of utility, diminishing marginal utility, Diamond-water paradox, income and substitution effects; consumer choice: indifference curves, derivation of demand curve from indifference curve and budget constraint

UNIT – III: Production and Costs (16 Hours)

Production: behaviour of profit maximising firms, production process, production functions, law of variable proportions, choice of technology, isoquant and isocost lines, cost minimizing equilibrium condition

Costs: costs in the short run, costs in the long run, revenue and profit maximization, minimizing losses, short run industry supply curve, economies and dis- economies of scale, long run adjustments

UNIT – IV: Perfect Competition (16 Hours)

Assumptions: theory of a firm under perfect competition, demand and revenue; equilibrium of the firm in the short run and long run; Long run industry supply curve: increasing, decreasing and constant cost industries.

Welfare: allocative efficiency under perfect competition.

Practical component (if any) - NIL

GENERIC ELECTIVES (GE-2): BASIC DEVELOPMENT ECONOMICS

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course |
|--|----------|-----------------------------------|----------|---------------------|-----------------------|-----------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Basic Development Economics ECON029 | 4 | 3 | 1 | 0 | Class XII Pass | NIL |

Learning Objectives

The Learning Objectives of this course are as follows:

- This course exposes students to some of the key ideas and concepts in the areas of economic growth, human development and globalisation building on the concept of growth and further links it up with alternative conceptions of development.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Students will develop a critical understanding of the contemporary issues in economic growth and development and their paths. Students will thus be better prepared to face the professional world and can use this knowledge base in a variety of jobs, including in the corporate, civil service and NGO sectors.

SYLLABUS OF GE-2

UNIT – I: Development and underdevelopment

(16 Hours)

Growth vs Development; Classic Approaches of Development; Contemporary theories of Development and Underdevelopment

UNIT – II: Development goals and indicators, measures of underdevelopment

(16 Hours)

Various concepts and measures of poverty and inequality, poverty lines using various national and international criteria.

UNIT – III: Capabilities, human development and sustainable development

(16 Hours)

UNIT – IV: Globalisation and development

(12 Hours)

Practical component (if any) - NIL

Essential/recommended readings

- Debraj Ray, *Development Economics*, (DE), Princeton University Press, 1998.
- Robinson, J. A., & Acemoglu, D. (2012). *Why nations fail: The origins of power, prosperity and poverty* (pp. 45-47). London: Profile.
- Abhijit Banerjee, Roland Benabou and Dilip Mookerjee (eds), *Understanding Poverty* (UP), Oxford University Press, 2006.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

GENERIC ELECTIVES (GE-3): ESSENTIALS OF ECONOMICS

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course |
|------------------------------------|---------|-----------------------------------|----------|---------------------|----------------------|-----------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Essentials of Economics ECON076 | 4 | 3 | 1 | 0 | Class XII pass | NIL |

Learning Objectives

The Learning Objectives of this course are as follows:

- This course will introduce the fundamental concepts of economics, the study of how people manage resources. It contains basic principles of microeconomics (the behaviour of consumers, firms and companies), macroeconomics (national production, employment, inflation and interest rates) and international economics (balance of payment, exchange rate and trade) with graphical illustration and contemporary examples.

Learning outcomes

The Learning Outcomes of this course are as follows:

- By studying this course, the students will learn to think like an economist and understand how a modern market economy function. They will learn about the factors that determine long-run growth and short-term fluctuations and role of government and financial institutions, so they can better understand how economics applies to the everyday life.

SYLLABUS OF GE-3

UNIT – I: Microeconomic Foundations (20 Hours)

Foundations of economics, how market works, firms and market structures, markets for factor of production, role of government

UNIT – II: Macroeconomic Foundations (20 Hours)

GDP (measuring total production, income and economic growth), unemployment and inflation; aggregate demand and aggregate supply analysis; monetary and fiscal policies

UNIT – III: Foundation of International Economics (20 Hours)

Comparative advantage and the gains from trade, macroeconomics in an open economy

Practical component (if any) - NIL

Essential/recommended readings

- Hubbard, G., Garnett, A., & Lewis, P. (2019). Essentials of economics.- 5th edition, Pearson Higher Education AU.
- Sloman, J., & Garratt, D. (2016). Essentials of Economics, 7th edition, Pearson

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DEPARTMENT OF GEOGRAPHY

BA (Hons.) Geography *Category-I*

DISCIPLINE SPECIFIC CORE COURSE – 1 (DSC-1) –: PHYSICAL GEOGRAPHY

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|---------------------------|----------|-----------------------------------|----------|---------------------|-----------------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| PHYSICAL GEOGRAPHY | 4 | 3 | 1 | - | 12th Pass | NIL |

Learning Objectives

The Learning Objectives of this course are as follows:

- To explain the concept, definition and scope of earth systems.
- To recognize the structure of the Earth and describe its characteristic features.
- To understand the atmospheric composition and structure.

Learning outcomes

The Learning Outcomes of this course are as follows:

The students will be able:

- To classify earth into various domains according to its physical features.
- To differentiate between lithosphere, hydrosphere, atmosphere and biosphere, and to understand interrelationship between them.
- To explain the atmospheric composition and structure.
- To assess the impact of anthropogenic activities on earth systems.

SYLLABUS OF DSC-1

UNIT – I (4 Hours)

Physical Geography: Definition, Nature, Scope, Earth as a System and its Components

UNIT – II (16 Hours)

Atmosphere: Composition and Structure, Energy: Insolation and Temperature, Motion in the atmosphere: pressure and circulation

UNIT – III (16 Hours)

Lithosphere: Earth's Interior, Isostasy, Earth's movement: endogenic including folding and faulting and exogenic forces

UNIT – IV (12 Hours)

Hydrosphere: Hydrological Cycle, Ocean Water Movement – Currents and Tides

UNIT – V (12 Hours)

Biosphere: Soil and Vegetation – Factors and Distribution

Practical component (if any) - NIL**Essential/recommended readings**

1. Alan H. Strahler and Arthur Strahler (1992). Modern Physical Geography Fourth Edition, John Wiley & Sons, Canada.
2. Barry, R. G., and Chorley, R. J. (2009). Atmosphere, Weather and Climate (9th Edition). Routledge, New York, USA.
3. Christopherson, R. W. and Birkeland, G. H. (2012). Geosystems: An Introduction to Physical Geography (8th edition). Pearson Education, New Jersey, USA.
4. Gupta, L.S. (2000). JalvayuVigyan(Hindi). Hindi Madhyam Karyanvayan Nidishalya, Delhi.
5. Lal, D. S. (2006). JalvayuVigyan (Hindi). PrayagPustakBhavan, Allahabad, India.
6. Sharma, V.K. (2010). Introduction to Process Geomorphology. CRC Press Taylor & Francis Group.

| | | Lecture | Tutorial | Practical/ Practice | | |
| HUMAN GEOGRAPHY | 4 | 3 | 1 | - | 12th Pass | NIL |

Learning Objectives

The Learning Objectives of this course are as follows:

- To understand various dimensions of human geography and cultural landscape.
- To analyses the population growth and distribution.
- To understand the relationship between population and resource.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Detailed exposure of contemporary relevance of cultural landscape.
- In-depth knowledge of space and society of cultural regions.
- Understanding the settlement pattern and population resource relationship.

SYLLABUS OF DSC- 2

UNIT – I (8 Hours)

Human Geography: Definition, Scope and Major Themes; Contemporary Relevance, Understanding Cultural Landscape.

UNIT – II (16 Hours)

Population: World Population Growth – Trends and Patterns, Population Composition (Residence, Literacy and Age).

UNIT – III (12 Hours)

Space and Society: Cultural Regions, Tribes, Religion and Language.

UNIT – IV (12 Hours)

Settlements: Types of Rural Settlements; Classification of Urban Settlements; Trends and Patterns of World Urbanization.

UNIT – V (12 Hours)

Human Development – Measurements (HDI and IHDI), Regional Variations and Sustainable Development Goals.

Practical component (if any) - NIL

Essential/recommended readings

1. Chandna, R.C. (2017). Geography of Population. Kalyani Publishers, Ludhiana, India.
2. Hassan M.I. (2020). Population Geography-A Systematic Exposition. Routledge Taylor and Francis Group, New York.
3. Human Development Reports of United Nations Development Program.
4. Hussain Majid (2021). Human Geography. Rawat Publication.
5. Majid, Hussain (2012). Manav Bhugol. Rawat Publication.
6. Maurya, S.D. (2012). Manav Bhugol. Sharda Pustak Bhawan, Allahabad, India.
7. Patra, P. et. al.(2021). Perspectives of Human Geography. Concept Publications, New Delhi.
8. Rubenstein, J.M. (2008). An Introduction to Human Geography: The Cultural Landscape. Pearson Prentice Hall, NJ.
9. Saroha, J. (2021). Jansankhya Bhugol, Janankiki evam Jansankhya Adhayan. M.K. Books, New Delhi.
10. Singh, S and Saroha, J. (2021). Human and Economic Geography. Pearson Publication.

Suggestive readings (if any)

**DISCIPLINE SPECIFIC CORE COURSE– 3 (DSC-3): DIGITAL
CARTOGRAPHY (PRACTICAL)**

Credit distribution, Eligibility and Pre-requisites of the Course

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course(if any) |
|--|----------|-----------------------------------|----------|---------------------|-----------------------------|-------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| DIGITAL CARTOGRAPHY (PRACTICAL) | 4 | - | - | 4 | 12th Pass | NIL |

Learning Objectives

The Learning Objectives of this course are as follows:

- Create professional and aesthetically pleasing maps through thoughtful application of cartographic conventions digitally.
- Develop an understanding of the concepts regarding scale, map projections to suit map purposes digitally.
- Better understand the techniques of interpretation of topographical and weather maps through digital cartographic techniques.

Learning outcomes

The Learning Outcomes of this course are as follows:

This is a practical hands-on course, when the students have completed this course, they are able:

- To explain how maps work, conceptually and technically and also will be able to understand the science and art of cartography through digital techniques.
- To recognize the benefits and limitations of some common map projections and their use.
- To understand and perform interpretation of topographical maps and weather maps.

SYLLABUS OF DSC-3

UNIT – I (12 Hours)

- 1.1. Maps: Concepts and classification, Coordinate system, Nature and Scope-Analogue and Digital cartography)
- 1.2. History and evolution of Cartography: Western and Indian perspectives
- 1.3. Digital Cartography: Basics of Raster and Vector Data

UNIT – II (12 Hours)

Scale: Plain, Comparative and Diagonal: Construction and Applications

UNIT – III (16 Hours)

Map Projections: Concept of Datum and Spheroid, Fundamentals of Projections- Classification, Properties, Uses and limitations of Polar Zenithal-Stereographic, Conical projection with two standard parallel and Mercator's Projections. Concept and Use of UTM.

UNIT – IV (12 Hours)

Interpretation of Topographic Maps, Conventional symbols, Cross and Longitudinal Profiles, Identification and Inter-relationships between physical and cultural features in the mountain regions.

UNIT – V (8 Hours)

Concept of Map elements in Digital Cartography

Practical components – Lab Exercises (30 Hours)

- 1.1. Using online maps for place look-ups, latitude and longitudes, time zones
- 1.2. Refer to the text for the history and evolution of cartography as listed in the reference list
- 1.3. Introduction to available GIS software, raster and vector data presentation
- 2.1. Construction and applications
- 3.1. Construction of Polar Zenithal Stereographic, Conical projection with two standard parallel and Mercator's Projections (manual)
- 3.2. Digital demonstration of projections
- 5.1. Map layout preparation with the provided data

| | | Lecture | Tutorial | Practical/ Practice | | |
| SPATIAL DIMENSIONS OF DEVELOPMENT | 4 | 4 | - | - | 12th Pass | NIL |

Learning Objectives

The Learning Objectives of this course are as follows:

- Understand the meaning and concept of Development.
- Understand the different theories of development.
- Understand global pattern of development.

Learning outcomes

The Learning Outcomes of this course are as follows:

The students will be able:

- To learn changing concept of development.
- To learn the human development index.
- To analyses the different theories of development.

SYLLABUS OF GE-2**UNIT – I (12 Hours)**

Concept of Development: Definition and Meaning of Development, Changing Concept of Development (Economic Growth, Modernization, Distributive Justice), Equity-Efficiency Debate, Alternative Development Paradigms.

UNIT – II (12 Hours)

Indicators of Development: Economic, Social and Environmental.

UNIT – III (12 Hours)

Theories of Development: Myrdal, Hirschman, Rostow, Friedman, Under Development and Dependent Development.

UNIT – IV (12 Hours)

Global Patterns of Development: Economic Groupings (United Nations, World Bank, IMF) and Inter Regional Cooperation (SAARC, ASEAN, European Union).

UNIT – V (12 Hours)

Human Development: Concept, Indicators, HDI (India and World).

Practical component (if any) - NIL

ASSESSMENT

Internal Assessment: 25 Marks

The internal assessment will comprise of assignments/project works/case studies/presentation in addition to class test and class attendance as per University norms.

Semester End Examination: 75 Marks as per University academic calendar

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE– 3 (DSC-3): FIELD WORK PRACTICUM

Credit distribution, Eligibility and Pre-requisites of the Course

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|---|----------|-----------------------------------|----------|---------------------|---|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| FIELD WORK PRACTICUM-I DSC 3 SW103 | 4 | 0 | 0 | 4 | Class XII from any discipline as per University guidelines | NIL |

Learning Objectives

- To develop empathetic attitude towards the needs, problems and real life situations of individuals, families, groups and communities
- To understand fieldwork agency's philosophy, structure, functions, resources, and service delivery system
- To understand the essence of professional relationship and applications of skills to deal with human problems and concerns

Learning outcomes

At the end of the semester, students will be able to

- Understand the significance of field work in social work education
- Understand the programmes and projects of governmental and nongovernmental social welfare/developmental agencies/organizations
- Build the competencies to perform the role of professional social workers

SYLLABUS OF DSC-3

Tasks/Activities:

1. Attend orientation programme organized by the department at the commencement of the course of the semester.
2. Agency/community visits during orientation programme for learning agency/community structure, functioning, policies, programmes & activities, services, clients, networking with other organizations etc.
3. Establish contact and develop rapport with the agency personnel, volunteers and/or community people and perform the assigned tasks during concurrent field work.
4. Prepare and submit learning plan, agency/community profile in a timely and appropriate manner to both college and agency supervisor
5. Work with volunteers, para-professionals/outreach workers in the agency and/or community.

6. Regular reporting to all concerned persons (both at agency and college level) during scheduled meetings and supervisory/individual conferences in order to seek their guidance.
7. Complete and submit weekly records of concurrent field work in a prescribed manner.
8. Attend workshops on “perspectives building” and “social sensitization”, whenever organized as per the need.
9. Continuous self-assessment of field work experiences.

Field work Hours in a semester:

- A minimum of 12 hours which comprises of concurrent fieldwork (8 hrs), report writing (3 hrs) per week will be required for each student. An hour(1) of Field work mentoring per week (individual conference) may also be counted.
- Must strictly maintain the discipline as applicable for concurrent field work and related activities, such as - completing compulsory hours (Minimum 180 hours each semester) and percentage of attendance (Minimum 80% attendance in the concurrent field work), participating in regular and specific activities as instructed from time to time i.e. orientation programme, agency/community tasks, workshops/seminars/special sessions, etc.
- The field work agency of the students will remain the same for two consecutive semesters of an academic year.

Total time in fieldwork practicum in a week is 12 hours,

Thus 12 hours x 15 (approx. weeks in a semester) is 180 hours per semester.

Teaching learning process

- The teaching learning process of field work includes- observation visits, orientation programmes, task-based field visits, individual conferences/mentoring, group conference scientific or experienced based paper presentation, report writing, critical discussion of the reports, workshops, seminars and skill-oriented sessions. The field work agency of the students will remain the same for two consecutive semesters of an academic year. Every student will be assigned a supervisor for personalized learning and mentoring throughout the academic year.

Practical component (if any) – 100% Field work (15 weeks)

Essential readings

- Brown, S.C. & Gloyne, E.R. (1966).The Field Training of Social Workers: A Survey. London: George Allen and Unwin Ltd.

Suggested readings

- Verma, R.B.S. and Singh, A.P. (2011).Handbook of Field Work Practice Learning in Social Work. Lucknow, India: New Royal Book Company.

Assessment Methods

- The field work assessment is a continuous process. The students will be required to submit their weekly report to the respective supervisors. Any delay in report submission will bring disadvantage to the students. Their learning will be monitored through weekly individual conferences (IC) with the assigned supervisors. At the end of the semester, students will be required to prepare a field work self-assessment report as per the guidelines in a prescribed form and submit the same to the respective college supervisors. The field work assessment will be done by both internal supervisor and external examiner. The distribution of internal and external marking scheme will be 75 and 25 respectively. The students will be required to appear in viva-voce before the external examiner on scheduled university examination day.

ASSESSMENT

Internal Assessment: 25 Marks

The internal assessment will comprise of assignments/project works/case studies/presentation in addition to class test and class attendance as per University norms.

Semester End Examination: 75 Marks as per University academic calendar

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DEPARTMENT OF SOCIOLOGY

B.A. (Hons.) Sociology

Category I

DISCIPLINE SPECIFIC CORE COURSE -1 (DSC-01) – : Introduction to Sociology

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|---|----------|-----------------------------------|----------|---------------------|----------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| DSC 01 Introduction to Sociology | 4 | 3 | 1 | 0 | Nil | Nil |

Learning Objectives:

The mandate of the course is to introduce the discipline of Sociology to students who may come from diverse academic backgrounds, training and capabilities. The course intends to introduce the students to a sociological way of thinking and to apply sociological concepts to everyday life. Students by the end of the course learn that individual choices are impacted by the social structures of which they are a part. They develop reflexive thinking skills for both self and society. They develop a sense of how common sense is limited to those who share the same spatial-geographical, social and cultural locations.

The course also introduces the idea that the various aspects of society are interlinked with each other, thereby orienting them to the sociological relationship between individuals and groups. By understanding these relationships, the student develops a sense of how closely the lives of individuals are intertwined and impact each other. The course also introduces the students to the emergence of Sociology as a systematic and scientific field of study. The emergence of sociology as a discipline enables them to understand the changing conceptualization of what it means to be scientific.

Learning outcomes

1. Students learn to apply the sociological perspective in understanding how society shapes our individual lives.
2. This provides a foundation for the other more detailed and specialized courses in sociology.
3. Students learn how to read texts and to express thoughts and ideas effectively in writing. They also learn how to frame arguments cogently.

Syllabus of DSC-1

UNIT – I (16 hours)

Thinking Sociologically

UNIT – II (16 hours)

Emergence of Sociology and Social Anthropology

UNIT – III (28 hours)

Basic Sociological Concepts

- a. Social Groups
- b. Social Institutions
- c. Culture
- d. Social Change

Practical component (if any) - NIL Essential/Recommended Readings:

Unit 1: Thinking Sociologically

Mills, C. W. (1959). 'The Promise' in *The Sociological Imagination*. Oxford: Oxford University Press, 6th Edition (2000). Pp. 3-24.

| | | Lecture | Tutorial | Practical/ Practice | | |
| DSC 02 Sociology of India I | 4 | 3 | 1 | 0 | Nil | Nil |

Learning Objectives:

Indian society is layered, complex and ever transforming. This course seeks to familiarize the students with this entity through a sociological lens by delineating its historical formations and the kaleidoscopic configuration of its various key elements. The aim here is to render the key sociological elements identified - Caste, Village, Classes, Gender, Family, Religions, Tribes, and Cities – as concrete and tactile. They are treated as relational and interlinked features of Indian society. The course presents structures and institutions of the society as dynamic and changing over a period; at the same time, it takes cognizance of the dynamism of the interactions between them. The objective is to help students to understand Indian society as a vivid reality even as they acquire elementary sociological categories to grasp it and develop an awareness of the key processes that engender it.

Learning outcomes

1. Familiarization with Indian society seen through a sociological lens.
2. Understanding of the interlinkages between various elements of Indian society.
3. Ability to enable critical examination of a shared social reality.

|---|----------|-----------------------------------|----------|---------------------|----------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| DSC 03 Introduction to Sociological Research | 4 | 3 | 1 | 0 | Nil | Nil |

Learning Objectives

The course is designed as a foundational introduction to sociological research. It will provide the student with an understanding of how the social sciences, mainly sociology and social anthropology comprehend the world. It will begin with basic explanation of the research process and move on to the components of research and enable students to learn best practices.

Learning outcomes

1. Students are introduced to sociological research both from a theoretical and methodological perspective.
2. The course enables students to read and critically evaluate a piece of research and move towards designing a simple research project.
3. Students would be able to identify the difference between quantitative and qualitative methods.
4. Students will learn about ethical and practical issues in research.
5. Students learn that research methods are universal and not bound by cultural location and that no one research method can adequately explain the world around them.

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|-----------------------------------|----------|-----------------------------------|----------|---------------------|----------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| An Invitation to Sociology | 4 | 3 | 1 | 0 | Nil | Nil |

Learning Objectives

This course is a broad introduction to the discipline of sociology. It introduces students to understanding the 'social' in everyday life. It helps to link the social to the personal and to develop a sociological imagination. It interrogates the taken-for-granted structures in society and familiarises students with some of the fundamental concepts and concerns of the discipline.

Learning outcomes

1. After studying the paper, the students should be able to:
2. Appreciate and adopt a sociological perspective to the understanding of reality
3. Understand the basic concepts in Sociology and relate them to the micro and macro aspects of social life.
4. Develop a sociological way of thinking.

An Invitation to Sociology

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|----------------------------|---------|-----------------------------------|----------|---------------------|----------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| An Invitation to Sociology | 4 | 3 | 1 | 0 | Nil | Nil |

Learning Objectives

This course is a broad introduction to the discipline of sociology. It introduces students to understanding the 'social' in everyday life. It helps to link the social to the personal and to develop a sociological imagination. It interrogates the taken-for-granted structures in society and familiarises students with some of the fundamental concepts and concerns of the discipline.

Learning outcomes

1. After studying the paper, the students should be able to:
2. Appreciate and adopt a sociological perspective to the understanding of reality
3. Understand the basic concepts in Sociology and relate them to the micro and macro aspects of social life.
4. Develop a sociological way of thinking.

SYLLABUS OF DSC-1

UNIT – I (12 hours)

Introducing Sociology

UNIT – II (12 hours)

The emergence of Sociology

UNIT – III (36 Hours)

Basic Concepts

- a. Culture
- b. Social Interactions and Institutions
- c. Social Change
- d. Sociology and Personal Life

Practical component (if any) - NIL Essential/recommended readings:

Unit I. Introducing Sociology

|------------------------------------|----------|-----------------------------------|----------|---------------------|----------------------|------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Sociology and Everyday Life | 4 | 3 | 1 | 0 | Nil | Nil |

Learning Objectives:

This course is an invitation to a sociological vision, imagination, and practice - for students who are pursuing disciplines other than sociology. The course seeks to render sociology alive by illuminating its perspective, concepts and practice through a series of interesting sociological studies of everyday life. The course attempts to introduce sociology in an accessible and engaging way.

The course begins with an introductory section that speaks of the spirit of sociology, followed by a substantive section where students are familiarized with key concerns and ideas of sociology using empirical studies of relatable aspects of everyday life. The course concludes with a small section that allows students to reflect on what they have learned in the course, and what they could do to put that learning into practice with a primer on the craft of doing sociology.

Learning outcomes

1. Inculcating a sociological imagination
2. Familiarity with basic concepts of sociology
3. Grasp social groups, institutions and processes that engender everyday life
4. Preparation for a more enduring engagement with sociology

GENERIC ELECTIVES (GE-2: Family and Intimacy)

Credit distribution, Eligibility and Pre-requisites of the Course

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre- requisite of the course |
|----------------------------|----------|-----------------------------------|----------|---------------------|----------------------|------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Family and Intimacy | 4 | 3 | 1 | 0 | Nil | Nil |

Learning Objectives

This course seeks to introduce students to a range of contemporary concerns pertaining to family as a social institution from a sociological viewpoint and with an interdisciplinary orientation. It situates family in its historical, cultural, social and comparative contexts. The course enables students to examine the commonsensical notions of family by making them aware of the diversity of family forms and reconstitute it as a possible arena of justice. It aims to familiarize students with different aspects of family and intimate life using ethnographic accounts from India. Its objective is to enable students to examine the institution of family and analyse intimacy in a sociological way.

Learning outcomes

1. An ability to examine the institution of family and realities of intimate experiences from a sociological perspective.
2. Knowledge of diverse forms of the family within their appropriate historical contexts and comparative appreciation of their features.
3. A disposition to constitute everyday spaces of family and intimacy as an arena of democracy, gender justice and empowerment.

4. Making students aware of the symbiotic relationship between conceptual, ethnographic and critical literature in social sciences and demonstrating how they work in close tandem.
5. To alert next-generation policymakers to take the questions of the intimacy with seriousness and make them integral to public reason and conversation

GENERIC ELECTIVES (GE-3) Understanding Indian Society**Credit distribution, Eligibility and Pre-requisites of the Course**

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course |
|-------------------------------------|----------|-----------------------------------|----------|---------------------|----------------------|-----------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Understanding Indian Society | 4 | 3 | 1 | 0 | Nil | Nil |

Learning Objectives

The Course is an interdisciplinary course on Indian society. The course throws light on different dimensions of Indian social life including institutional structures, processes and contemporary issues and challenges. The students will also engage with the historical processes and ideological tensions underlying the diversity and uniqueness of various social formations. Institutions and concepts like village, town, caste structure and politics, class dynamics, religion, tribes, family, gender and political economy in the context of India are also discussed. These building blocks and core processes of Indian Society are considered relationally and as intersecting fields. It will help students enable the capacity to invoke scientific and analytical attitude toward one's own society and its ongoing workings and evolution. It provides the cultural knowledge and research skills that would be necessary for problem-solving in the Indian context.

Learning outcomes

1. Develops a reflexive and nuanced understanding of Indian Society
2. Enables an understanding and sensitivity towards India's diversity and uniqueness.
3. Helps to analyze complex social phenomena, their arrangement and processes.
4. Provides an intersectional understanding of complex social processes.

| History of India I (From the beginning to fourth century BCE) – DSC 01 | 4 | 3 | 1 | 0 | 12 th Pass | NIL |

Learning Objectives

The Learning Objectives of this course are as follows:

The course intends to provide an extensive and deep understanding of early Indian history to students who will be introduced to the manner in which diverse aspects of ancient Indian history has been recovered from a rich variety of sources, archaeological, literary, numismatic, epigraphist. Students will become familiar with the tools required for studying history and explore the diverse histories and regional variations in the Indian subcontinent and also study various facets of ancient India- social, cultural, political, environmental concerns. The course, with an interdisciplinary approach, will help students trace elements of continuity and changes in processes spanning over several millennia, from pre-historic times up to the 400 BCE. The emphasis on historiography will allow students to understand how historians have approached ancient India and how our present knowledge and perceptions have played a role in interpreting the past.

Learning outcomes

The Learning Outcomes of this course are as follows:

After completing the course, the students will be able to appreciate the diverse histories of our past and the significant technological, social and cultural changes in the Indian Subcontinent from prehistoric times. The students will understand the significance of environment and ecology and have an understanding of the historical trajectory of the relationships between communities and their subsistence strategies, regions, landscapes and resources. They will be able to understand the transitions to early state formations, social complexity and emergence of religious and philosophical traditions. The students will learn about early artifacts, texts, coins and epigraphs, and recognise the

need to study and preserve the rich cultural heritage of our past while also realizing the possibilities and future potential of the study of ancient Indian history.

SYLLABUS OF DSC-1

Unit I: Introducing early Indian history: Sources (upto 750 CE) and historiographical trends. (12 hours)

Unit II: Prehistoric hunter-gatherers and early food producing societies (16 hours)

1. Paleolithic cultures: sequence and distribution; tool typology and technology, subsistence patterns.
2. Mesolithic Cultures: regional distribution, tool typology and subsistence patterns.
3. Early food producing communities: Regional and chronological distribution of the Neolithic and Chalcolithic cultures; subsistence; patterns of interaction and exchange.

Unit III: The Harappan civilization (16 hours)

Origins; settlement patterns and town planning; agrarian base; pyrotechnology and water management; craft production and trade; social and political organization; religious beliefs and practices; art; Late/ Post Harappan evidence.

Unit IV: Social and Cultural Transitions (up to 400 BCE) (16 hours)

1. Archeological cultures: PGW, NBPW, megalithic; metallic coins; role of iron technology.
2. Literary and textual traditions: Vedic and Brahmanical; Shramanic.
3. The Aryan Question.
4. Emergence of Social and political institutions; urbanization; social stratification and state formation.

Practical component (if any) - NIL

Essential/recommended readings

Unit I: This unit aims to familiarise students with the divergent landscapes, varied sources and the different approaches to the history of ancient India. (Teaching Time: 8 hours Approx.)
Relevant chapters from General readings

- Subbarao, B. (1958). The Personality of India. (Baroda: M. S. University). Chapter II.
- Chattopadhyaya, B. D. (2017). _The Concept of Bharatavarsha and Other Essays. (Ranikhet: Permanent Black). Chapter 1.
- Thapar, Romila. (2013). The Past Before Us; Historical Traditions of Early India, Del-hi: Permanent Black, Part 1, pp. 3-84.

Unit II: This unit aims to familiarize students with the distribution, economic and technological patterns in the Palaeolithic and Mesolithic cultures of the Indian subcontinent, and the beginnings of organized food production in pre-historic times in the Indian subcontinent. It also explains the impact on other aspects of the life of the Neolithic and Chalcolithic humans, their cultural practices, their art and funerary practices. (Teaching Time: 16 hours Approx.)

Relevant chapters from General readings:

- Chattopadhyaya, U. C. (1996). "Settlement Pattern and the Spatial Organization of Subsistence and Mortuary Practices in the Mesolithic Ganges Valley, North-Central India, *World Archaeology*, vol. 27(3), pp. 461-476
- Neumayer, E. (1993). *Lines on Stone: The Prehistoric Rock Art of India*. Delhi: Manohar.

Unit III: At the end of this unit, students shall be familiar with various aspects of Harappan Civilization, their technological expertise, as well as the varied ways in which the archaeological remains of Harappa and related sites have been interpreted and studied. (Teaching Time: 16 hours Approx.)

Relevant chapters from General readings

- Kenoyer, J. Mark. (1998). *Ancient Cities of the Indus Valley Civilization*. Karachi: Oxford University Press.
- Possehl, Gregory L. (2002). *The Indus Civilization: A Contemporary Perspective*. Delhi: Vistaar Publications.
- Ratnagar, Shereen. (2001). *Understanding Harappa: Civilization in the Greater Indus Valley*. Delhi: Tulika.
- Ratnagar, Shereen. (2015). *Harappan Archaeology: Early State Perspectives*, Delhi: Primus.
- Thaplyal, K. K. and Sankata Prasad Shukla. (2003). *Sindhu Sabhyata*. Lucknow: Uttar Pradesh Hindi Sansthan. (In Hindi)

Unit IV: This unit traces the archaeological and textual evidence for processes that led to the emergence of states, social complexity, intensive agriculture and urban patterns. The unit also covers debates around the origins and coming of the Aryans, the cosmogonies, cosmology and world view of Vedic, Brahmanical texts and religio-philosophical thought in Upanishads, Bud-dhist, Jaina and Shramanic traditions. (Teaching Time: 6 weeks)

Relevant chapters in General Readings (for archaeological cultures)

DISCIPLINE SPECIFIC CORE COURSE – 2 (DSC-2): Social Formations and Cultural Patterns of the Ancient World – I

Credit distribution, Eligibility and Prerequisites of the Course

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|--|----------|-----------------------------------|----------|---------------------|-----------------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Social Formations and Cultural Patterns of the Ancient World-I – DSC 02 | 4 | 3 | 1 | 0 | 12th Pass | NIL |

Learning Objectives

The Learning Objectives of this course are as follows:

The Course aims to introduce students to significant developments in world history that have shaped the complexity of human existence. To begin with, it offers a historical survey of human evolution. It details the transition from the hunting-gathering subsistence pattern to more advanced adaptations to a sedentary farming economy. The course content is based on the premise that the pace and nature of change differed in different parts of the world. Further, changes in social formations that facilitated the emergence of socially stratified and state-ordered societies are explained through a study of some of the early Bronze Age Civilizations. The impact of specific ecological conditions on different trajectories of growth, higher population density and social complexity, the emergence of the city and newer crafts and trade and the unfolding of cultural patterns in the early civilizations are concerns that are central to this course. This therefore, provides a sound foundation in the historical discipline, and helps in engaging in a variety of subject matters of history – social relations, economics, political formations, religion, and culture from a global perspective. Understanding the dissimilar but inter-linked history of humanity is therefore the prime objective of this Course.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Trace long term changes in the relationship of humans to their landscapes, to resources and to social groups.
- Discuss that human history is the consequence of choices made in ecological and biological contexts, and that these choices are not only forced by external forces like environmental change but are also enabled by changes in technology and systems of cultural cognition.
- Delineate the significance of early food production and the beginning of social complexity.
- Analyze the process of state formation and urbanism in the early Bronze Age Civilizations.
- Correlate the ancient past and its connected histories, the ways in which it is reconstructed, and begin to understand the fundamentals of historical methods and approaches.

SYLLABUS OF DSC- 2

Unit-I: Evolution of Humans and Hunting-Gathering Cultures (12 hours)

1. Understanding Prehistory
2. Biological and Cultural Evolution of Humans: lithic and other technologies
3. Changing subsistence patterns; funerary practices and art

Unit-II: Transition to Food Production (16 hours)

1. Mesolithic Cultures: West Asia and Europe
2. Origins of Food Production: Debates
3. Features of the Neolithic based on sites from West Asia, Europe, Mesoamerica / China

Unit-III: The Bronze Age (16 hours)

Note: Rubrics b, and c are to be based on any one case study:

1. Ancient Mesopotamia (Sumerian and Akkadian period)/Egypt (Old Kingdom)/China (Shang dynasty).
2. Concepts: 'Bronze Age', 'Civilization', 'Urban Revolution' and 'State'
3. Ecological context of early civilizations
4. Kingship, religion and state; Social and economic complexity: Class, Gender

Unit IV: Nomadic Cultures in Transition (16 hours)

1. Nomadic Pastoralism in West Asia in the third and second millennium BCE
2. Iron technology and its spread

Practical component (if any) - NIL

Essential/recommended readings

Unit-I: This Unit introduces students to the basic aspects of world prehistory particularly with reference to the debate on the biological and cultural evolution of Humans (Teaching Time: 16 hours Approx.)

Unit II. This Unit will familiarise students with the transition to food production when the advanced Hunter-Gatherer communities primarily of the Mesolithic cultures responded to environmental changes with greater sedentism and newer ways of exploiting plants and animals. The debates on the origins of food production will enable students to understand the complexity of the Neolithic cultures. The discussion on the Neolithic sites in different parts of the world will help in understanding the process of beginning of food production and variations in Neo-lithic Cultures. |---|----------|-----------------------------------|----------|---------------------|-----------------------------|-------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| History of the USA: Independence to Civil War – DSC 03 | 4 | 3 | 1 | 0 | 12th Pass | NIL |

Learning Objectives

The Learning Objectives of this course are as follows:

The course initiates the process of comprehending the rise of the 'New World' that eventually came to be known as the United States of America (USA) after the American Revolution, came at the cost of marginalization of the Indigenous Tribes and enslavement of Black labourers. The focus is to study both Indigenous tribes and Black Slaves in a detailed manner to understand the limits of American democracy that pushed the country towards the Civil War. The course also concentrates on the process of the evolution of America's foreign policy in the aftermath of the War of 1812.

Learning outcomes

Upon the completion of this course the student shall be able to:

- Explain the emergence of a new independent nation in the Western Hemisphere (USA) at the cost of placing Indigenous tribes behind reserves and introduction of the institution of slavery and racism
- Examine the limits of American democracy in its formative stages along with the foundation of the U.S foreign policy
- Describe the economics of slavery in the USA along with details of slave culture and forms of resistance
- Trace the main issues related to the Civil War and its critical evaluation

SYLLABUS OF DSC-3

Unit I: A New World: (12 hours)

1. Contribution of Indigenous Tribes, Indentured Servants and Slave labour in the growth and expansion of American colonies
2. American Revolution: Sources, Historiography

Unit II: Limits of American Democracy: (16 hours)

1. Marginalization and Displacement of Indigenous tribes (Shawnee and Cherokee)
2. Policies of Thomas Jefferson and Andrew Jackson that placed the original peoples (Indigenous tribes) behind 'reserves'

Unit III: United States Quest for Dominance: Imperialism and Changing Diplomacy: (16 hours)

1. Manifest Destiny
2. War of 1812
3. Monroe Doctrine

Unit IV: Slavery and the Civil War: (16 hours)

1. The Economics of Slavery: South vs. North Debate
2. Slave Culture and Slave resistances (including the nature of female slavery and resistance)
3. Issues of the Civil War and the Interpretations

Practical component (if any) - NIL

Essential/recommended readings

Unit I: This Unit importance is given to the usage of varied types of labour force for the colonization of the New World with special emphasis on the Indigenous tribes and Slave labour. The factors that led to the rise of the American Revolution along with historiographical debates is being emphasized. (Teaching Time: 16 hours Approx.)

- Boyer, P.S., H. Sitkoff et al. The Enduring Vision: A History of the American People. Vol. 5th edition. Massachusetts: Houghton Mifflin Company, 2003.

Selected Films:

- 'Lincoln' Directed and Co-produced by Steven Spielberg, 2012.
- 'The Birth of a Nation' (based on slave Nat Turner, who led a rebellion in Southampton, Virginia in 1831) Directed and Co-produced by D.W. Griffith, 2016.
- 'The Birth of a Nation' (showcases assassination of Lincoln; originally based on 'The Clansman' and 'The Leopard's Spots' by T.F. Dixon Jr.) Directed and Co-produced by D.W. Griffith, 1915.
- 'Glory' (set during the Civil War) Directed by Edward Zwick, Produced by Freddie Fields, 1989.
- '12 Years a Slave' Directed and Co-produced by Steve McQueen, 2013.
- 'Django Unchained' (set in Old West and Ante-Bellum South) Directed by Quentin Tarantino, Produced by Stacey Sher & Others, 2012.
- 'Amistad' (based on events in 1839 aboard the slave ship Le Amistad) Directed and Produced by Steven Spielberg, 1997.
- 'Gone with the Wind' (set in the Civil War era) Directed by Victor Fleming and Produced by David Selznick, 1939.
- 'Uncle Tom's Cabin' (set in 1856) Directed by Stan Lathan and Produced by Jeffrey A. Nelson and Others, 1987.
- 'Roots' (based on Alex Haley, 'Roots: The Saga of American Family, 1976) Directed by Bruce Beresford and Produced by Ann Kindberg and others, 2016.

BA (Prog.) with History as Major
Category II

DISCIPLINE SPECIFIC CORE COURSE (DSC-1): History of India from earliest times up to c. 300 CE

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|---|----------|-----------------------------------|----------|---------------------|-----------------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| History of India from earliest times up to c. 300 CE | 4 | 3 | 1 | 0 | 12th Pass | NIL |

Learning Objectives

The Learning Objectives of this course are as follows:

This course explores various historical phases and processes of Indian history from prehistoric period to early historic centuries through the lens of archaeological and literary evidence. An overview of various transformations, cultural shifts, developments in all aspects from the earliest times up to the phase of Empire building is provided to the learner. Alongside the pan-Indian historical changes, it also focuses on regional diversities.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Explain the importance of various sources for study of prehistory and proto-history
- Distinguish between civilization and culture, particularly in the context of the Harappan civilization
- Locate the developments related to the introduction of Iron in early societies leading to urbanism and state formation
- Outline the key features of the Mauryan period.
- Locate the shift of historical focus from Gangetic belt to newer areas alongside the process of assimilation.

SYLLABUS OF DSC-1

Unit I: Sources for interpreting early Indian history (4 hours)

Unit II: Survey of Prehistoric Cultures: Palaeolithic, Mesolithic, Neolithic. (8 hours)

Unit III: Harappan Civilization: early urbanism, town planning, economy, cultural patterns and decline. (8 hours)

Unit IV: Vedic and Megalithic cultures: an overview (8 hours)

Unit V: Second urbanization, material and social changes, Buddhism and Jainism. (8 hours)

Unit VI: The Mauryan Empire: administration, economy, Ashoka's Dhamma, pillars and rock edicts (8 hours)

Unit VII: Early Tamilkam: Survey of Sangam literature, polity, economy and society (8 hours)

Unit VIII: Post Mauryan age: polity economy, society and culture with special reference to Satvahanas and Kushanas (8 hours)

Practical component (if any) - NIL

Essential/recommended readings

Unit I: In this Unit the students shall be introduced to the varied sources, their scope and limitations, for reconstructing the early history of India. (Teaching Time: 4 hours approx.)

- Chakrabarti, D.K. (1990). India: An Archaeological History. New Delhi: OUP (Chapter 7)
- Goyal, S.R. (1995). The Coinage of Ancient India. Jodhpur: Kusumanjali Prakashan.
- झा. डी. एन. एवं के. एम. श्रीमाली. (2000) प्राचीन भारत का इतिहास. दिल्ली : हिन्दी माध्यम कार्यान्वय निदेशालय, दिल्ली विश्वविद्यालय. पुनर्मुद्रन. (अध्याय 2)
- Salomon, Richard. (1998). Indian Epigraphy. Delhi: OUP.
- Sharma, R.S. (1995). Perspectives in Social and Economic History of Early India. New Delhi: Munshiram Manoharlal. (Chapter 2)
- शर्मा, आर. एस. (2000). प्रारम्भिक भारत का सामाजिक और आर्थिक इतिहास. दिल्ली : हिन्दी माध्यम कार्यान्वय निदेशालय, दिल्ली विश्वविद्यालय. (अध्याय 2)

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite the course (if any) |
|--------------------------|----------|-----------------------------------|----------|---------------------|-----------------------------|-----------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Ancient Societies | 4 | 3 | 1 | 0 | 12th Pass | NIL |

Learning Objectives

The Learning Objectives of this course are as follows:

The course aims towards enabling students to have a broad understanding of various Ancient Civilizations with special focus on complexities in State Formation, society, economy, religion and culture. An overview of the ecological impact on their emergence, craft and trade, emerging cultural patterns, art and architecture and religion will be discussed related to the Indian, Mesopotamian, Egyptian, Greek and Chinese Civilizations. Students will get to familiarize themselves with fundamental concepts like 'Bronze Age', 'Civilization', 'Culture', 'Urban Revolution', and 'State'. Various craft technology especially metal technology and debates around it will also be introduced to them. The course strives to generate interest in students to learn about metal technology and its contribution to the emergence and growth of Ancient Civilizations.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Define and explain concepts like Urban Revolution, Bronze Age and Civilization.
- Discuss the debate around metal technology.
- Describe ecological and other reasons for emergence of the various civilizations.
- Understand social complexities of different civilizations.
- Explain trends in the economy of these civilizations.
- Gain an understanding of cultural patterns and religious developments.

SYLLABUS OF DSC-1

Unit I: Defining Civilization, Sources and Historiography, Urban Revolution and Bronze Age, Debating Metal Technology (12 hours)

Unit II: Bronze Age Civilizations- India / China (Shang Dynasty) (16 hours)

Unit III: Bronze Age Civilizations- Mesopotamia (Sumerian and Akkadian Period)/Egypt (Old Kingdom) Ecological Context, Kingship and State, Social Pattern and Economy. Art, Religion and Culture (16 hours)

Unit IV: Bronze Age Civilizations- Minoan/ Mycenaean, Ecological Context, Kingship and State, Social Pattern and Economy Art, Religion and Culture (16 hours)

Practical component (if any) - NIL

Essential/recommended readings

Unit I: This Unit will help students understand the concept of Civilization. The important milestones in the growth and spread of civilizations viz. urban revolution, Bronze Age and advent of metal technology will also be dealt with. (Teaching period: 8 hours approx.)

- Childe, G. (1950). "The Urban Revolution," *The Town Planning Review*, Vol. 21, No. 1, April 1950, pp. 3-17.
- Redman, C.L. (1978). *The Rise of Civilisations. From Early Farmers to Urban Society in the Ancient Near East*. San Francisco: W.H. Freeman, Chapter 2, 6, 7, pp. 16-49; 188-213; 214-243.

Learning Objectives

The Learning Objectives of this course are as follows:

This course explores various historical phases and processes of Indian history from prehistoric period to early historic centuries through the lens of archaeological and literary evidence. An overview of various transformations, cultural shifts, developments in all aspects from the earliest times up to the phase of Empire building is provided to the learner. Alongside the pan-Indian historical changes, it also focuses on regional diversities.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Explain the importance of various sources for study of prehistory and proto-history
- Distinguish between civilization and culture, particularly in the context of the Harappan civilization
- Locate the developments related to the introduction of Iron in early societies leading to urbanism and state formation
- Outline the key features of the Mauryan period.
- Locate the shift of historical focus from Gangetic belt to newer areas alongside the process of assimilation.

SYLLABUS OF DSC-1

Unit I: Sources for interpreting early Indian history (4 hours)

Unit II: Survey of Prehistoric Cultures: Paleolithic, Mesolithic, Neolithic. (8 hours)

Unit III: Harappan Civilization: early urbanism, town planning, economy, cultural patterns and decline. (8 hours)

Unit IV: Vedic and Megalithic cultures: an overview (8 hours)

Unit V: Second urbanization, material and social changes, Buddhism and Jainism. (8 hours)

Unit VI: The Mauryan Empire: administration, economy, Ashoka's Dhamma, pillars and rock edicts (8 hours)

Unit VII: Early Tamilkam: Survey of Sangam literature, polity, economy and society (8 hours)

Unit VIII: Post Mauryan age: polity economy, society and culture with special reference to Satvahanas and Kushanas (8 hours)

Practical component (if any) - NIL

Essential/recommended readings

Unit I: In this Unit the students shall be introduced to the varied sources, their scope and limitations, for reconstructing the early history of India. (Teaching Time: 4 hours approx.)

- Chakrabarti, D.K. (1990). India: An Archaeological History. New Delhi: OUP (Chapter 7)
- Goyal, S.R. (1995). The Coinage of Ancient India. Jodhpur: Kusumanjali Prakashan.
- झा. डी. एन. एवं के. एम. श्रीमाली. (2000) प्राचीन भारत का इतिहास. दिल्ली : हिन्दी माध्यम कार्यान्वय निदेशालय, दिल्ली विश्वविद्यालय. पुनर्मुद्रन. (अध्याय 2)
- Salomon, Richard. (1998). Indian Epigraphy. Delhi: OUP.
- Sharma, R.S. (1995). Perspectives in Social and Economic History of Early India. New Delhi: Mun-shiram Manoharlal. (Chapter 2)
- शर्मा, आर. एस. (2000). प्रारम्भिक भारत का सामाजिक और आर्थिक इतिहास. दिल्ली : हिन्दी माध्यम कार्यान्वय निदेशालय, दिल्ली विश्वविद्यालय. (अध्याय 2)
- Singh, Upinder. (2013). A History of Ancient and Early Medieval India: From the Stone Age to the 12th century. New Delhi: Pearson. (Chapter 1)
- सिंह, उपिंदर. (2016). प्राचीन एवं पूर्व मध्यकालीन भारत का इतिहास: पाषाण काल से 12वीं शताब्दी तक. नई दिल्ली. पियरसन. (अध्याय 1)
- Thapar, Romila. (2002). Early India from the Origins to AD 1300. New Delhi: Penguin. (Chapter 1)

COMMON POOL OF GENERIC ELECTIVES (GE) COURSES
Offered By Department Of History
Category-IV

GENERIC ELECTIVES (GE-1): Delhi Through the Ages: The making of its early Modern History

Credit distribution, Eligibility and Pre-requisites of the Course

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course |
|---|----------|-----------------------------------|----------|---------------------|-----------------------------|-----------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Delhi Through the Ages: The making of its early Modern History | 4 | 3 | 1 | 0 | 12th Pass | NIL |

Learning Objectives

The Learning Objectives of this course are as follows:

The objective of the paper is to explore the city of Delhi from its early history to the eighteenth century. The city grew into one of the largest cities in the world and was the capital of some of the great empires. As capital Delhi profited from continuous immigration, state patronage and vibrant cultural life. The city was not merely dependent upon its rulers for cultural and political sustenance. The course also focuses on Sufis, litterateurs and merchants who also gave the city its unique character and resilience in the face of political turbulence.

Learning outcomes

Upon completion of this course the student shall be able to:

- To acquaint students with the history of Delhi till the early modern period.
- Analyse the processes of urbanization as shaped by political, economic and social changes

SYLLABUS OF GE-1

Unit I: Ancient Delhi and adjoining sites: (12 hours)

1. Indraprastha- Hastinapur, Panipat, Tilpat
2. Ashokan Edicts
3. Mehrauli Iron Pillar
4. Lalkot

Unit II: From Settlements to Cityscape - Understanding the 10th and 14th Century Cities of Delhi. Case Study Any Two: (16 hours)

1. Anangpur Fort
2. Dehli-i Kuhna's Masjid-i Jami
3. Siri
4. Ghiyaspur-Kilukhari
5. Tughulqabad
6. Firuzabad

Unit III: 16th to 17th Century Delhi: (16 hours)

1. Humayun's Garden Tomb
2. Morphology of Shahjahanabad

Unit IV: 18th Century Delhi - Understanding political and social changes (16 hours)

Essential/recommended readings

Unit 1: This unit will introduce students to the early history of Delhi, focusing on Indraprastha, ancient edicts and pillars and the Tomar and Chauhan constructions. (Teaching Time: 12 hours)

- Richard J. Cohen, "An Early Attestation of the Toponym Dhillī", *Journal of the American Oriental Society*, Vol. 109 (1989), pp. 513-519.
- Singh, Upinder. (2006). *Ancient Delhi*, Delhi: Oxford University Press
- Mani, B.R. (1997). *Delhi: Threshold of the Orient*; (Studies in Archaeological Investigations), Aryan Books International

Unit 2: This unit will study the cities of Sultanate Delhi in the 10th to 14th centuries. It will discuss the various reasons for the shift of capitals and the changing character of the city. Case studies of any two of these cities will be undertaken. Students will be encouraged to plan field trips related to the themes and readings. (Teaching Time: 16 hours)

- B.R. Mani and I.D. Dwivedi (2006). 'Anangpur Fort: The Earliest Tomar Settlements Near Delhi', in Upinder Singh, ed., *Delhi: Ancient History*, Social Science Press, New Delhi, pp 200-204.

GENERIC ELECTIVES (GE-2): Science, Technologies and Humans: Contested Histories

Credit distribution, Eligibility and Pre-requisites of the Course

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course |
|--|----------|-----------------------------------|----------|---------------------|-----------------------------|-----------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Science, Technologies and Humans: Contested Histories | 4 | 3 | 1 | 0 | 12th Pass | NIL |

Learning Objectives

The Learning Objectives of this course are as follows:

This course proposes to examine the history of science and technology with respect to social acceptance, economic viability and politics associated with it. While dealing with the history of science and technology this paper challenges the notion of 'modern origins of science in west-ern societies. Human instinct to understand the unknown and the need to predict the future which often ventures into providence has been explored through case studies of astronomy and astrology. The paper analyses the impact of hegemony of colonial science on traditional knowledge systems. It proposes a case study to highlight the highly contested heritage of science. The thin line between military and peaceful use of technology in the capitalist economy also constitutes an important component of this paper. A brief discussion on science and nation making has been introduced to highlight the role of important figures and women in sciences that shaped the nature of scientific development in India.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Critique the prevalent dominant understanding of science and technology.
- Discuss the complex relations between science, technology and society.
- Examine the role of politics associated with scientific and technological developments and its economics in the capitalist economy
- Examine the character of 'dual use' technologies.
- Define various initiatives taken by the government for promotion of science and technology.

SYLLABUS OF GE-2

Unit 1: Science, Technology and Society (12 hours)

1. Revisiting 'Scientific Revolution'
2. Colonialism and Science

Unit 2: Science: Contestation and Exchanges (16 hours)

1. Decimal and Zero
2. Hegemony of documentation

Unit 3: Economics of Technologies: Questions of Ethics (16 hours)

1. Generic Medicines
2. Industrial Disasters

Unit 4: Science and nation making (16 hours)

1. Atomic Power
2. Policies and Institutions
3. Homi Jehangir Bhabha, Meghnad Shaha, E. K. Janaki Ammal

Practical component (if any) - NIL

Essential/recommended readings

Unit-1: Science and technology have a very complex relationship with society. Populating of 'Science' and 'Technology' will be unpacked to convey the role of colonial power in establishing the hegemony of western knowledge systems. (Teaching Time: 16 hours Approx.)

- Pati, Biswamoy & Harrison, Mark. (2001). Introduction in Biswamoy Pati & Mark Harrison, eds., Health, Medicine and Empire: Perspectives on Colonial India. New Delhi: Orient Longman. pp. 1-24/36.

GENERIC ELECTIVES (GE-3): Culture and Everyday Life in India

Credit distribution, Eligibility and Pre-requisites of the Course

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite the course |
|---|----------|-----------------------------------|----------|---------------------|-----------------------------|--------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Culture and Everyday Life in India | 4 | 3 | 1 | 0 | 12th Pass | NIL |

Learning Objectives

The Learning Objectives of this course are as follows:

Our everyday lives are filled with activities so routine and mundane that it hardly seems worth talking about them—getting up, doing daily ablutions, drinking a cup of tea or coffee, performing daily prayers and rituals, getting dressed for workplace, boarding the metro to work, returning home, finding leisure in watching TV, shopping and even planning a holiday. All these sorts of activities are part of our everyday lives, and most people have the same sorts of everyday experiences. At the same time, however, different people across the world have different sorts of every-day lives that are defined by their society. Further, the society itself is defined by peoples' ideas, values, customs, beliefs, and ways of thinking. All these things may be explained as 'culture'. While there are several

definitions of culture, in this module we will take culture to mean the ‘whole way of life’ of a given group of people who form the urban populace in India. This course explores everyday life in India through mundane aspects like food, beverage, and masticatory habits; manner of conduct in the domestic and public sphere; responses to globalization in localized spheres; and defining leisure in cinema, recreational outings or seeking guidance for well-being. In reading these themes we hope to stimulate discussion about particularities of cultural forms that have evolved and continue to change in response to historical circumstances.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Identify some of the basic components of culture that determine our everyday existence
- The complex nature of the relationship between everyday life and society in urban India.
- Appreciate that culture is multifaceted and evolves in response to historical circumstance and that culture cannot be essentialized.
- Appreciate an interdisciplinary approach that is indispensable for reading culture in any given society.
- Analyse cultural behaviour through multiple frames of reference.

SYLLABUS OF GE-3

Unit I: Culture and everyday life (12 hours)

Unit II: Sustenance and beyond: Chai, Coffee & Paan (16 hours)

Unit III: Religion everyday - at the threshold, shrine, and online (16 hours)

Unit IV: The everyday global in g/local: Metro, malls, and pilgrimage online (16 hours)

Practical component (if any) - NIL

Essential/recommended readings

Unit I: This Unit tries to initiate discussion about the emergence of culture as a specific field of sociological analysis and draw attention to the relationship between ‘culture’ and ‘everyday life’. Further, these readings discuss if there is something peculiar about Indian culture. (Teaching time: 12 hours)

- David Inglis, “Introduction” in *Culture and Everyday Life*, London & New York: Routledge, Taylor & Francis Group, 2005, pp. 1-14.
- S. Radhakrishnan, “Culture of India” in *The Annals of the American Academy of Political and Social Science*, Vol. 233, *India Speaking* (May 1944), pp. 18-21.
- K. Ramanujan, “Is There an Indian Way of Thinking? An Informal Essay” in Vinay Dharwarkar ed., *The Collected Essays of A.K. Ramanujan*, New Delhi: OUP, 1999, pp. 34-51.
- Kathryn Hansen, “Who wants to be a cosmopolitan? Readings from the composite culture”, *The Indian Economic and Social History Review*, Vol. 47, No. 3 (2010), pp. 291–308.

Unit II: In the opinion of some scholars India, traditionally, most discourses on food have centered on social and religious rituals. The following articles discuss how historical circumstances has redefined culinary patterns in India by introducing new foods and beverages like tea and coffee. (Teaching time: 12 hours)

- Ashis Nandy, "The Changing Popular Culture of Indian Food: Preliminary Notes", *South Asia Research*, Vol. 24, No. 1 (May 2004), pp. 9–19
- Philip Lutgendorf, "Making tea in India: Chai, capitalism, culture", *Thesis Eleven*, vol. 113(1), pp. 11-31
- R. Venkatachalapathy, "'In those days there was no coffee': Coffee-drinking and middle-class culture in colonial Tamilnadu", *The Indian Economic & Social History Review*, vol. 39 (2–3), pp. 301–316.
- M. Gowda, "The Story of Pan Chewing in India", *Botanical Museum Leaflets, Harvard University*, Vol. 14, No. 8 (January 15, 1951), pp. 181-214.

Unit III. Religion is a significant aspect of everyday life. Rituals define the boundary between the private and public lives. Ritual observance in the public sphere invites community participation and defines religiosity in a wider cultural context. (Teaching time: 12 hours)

- Jyotsna S. Kilambi, "Toward an Understanding of the Muggu: Threshold Drawings in Hyderabad", *RES: Anthropology and Aesthetics*, No. 10 (Autumn, 1985), pp. 71-102.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

GENERIC ELECTIVES (GE-4): Understanding History

Credit distribution, Eligibility and Pre-requisites of the Course

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite the course |
|------------------------------|----------|-----------------------------------|----------|---------------------|-----------------------------|--------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Understanding History | 4 | 3 | 1 | 0 | 12th pass | NIL |

Learning Objectives

The Learning Objectives of this course are as follows:

This course aims to familiarize students with what it means to historicize human activities, and to think historically. It seeks to equip students with an understanding of what historians do, i.e., explore causation; contingency; explain factors that influence individuals and human society; and how historians build on generalizations to construct consistent narratives from historical facts and credible sources. It also familiarizes students with broad kinds of histories written, and the relationship shared between history and other disciplines.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Outline / illustrate the need for historical perspective.

- Explain the historical nature of all human activities and social sphere.
- Distinguish essential features of historical inquiry.
- Identify the essential skills of a historian, and explain the key aspects of the historian's work.
- Delineate sources that can be used to describe and interpret a social issue, an event, a given time period, or a wider social development.
- Differentiate between various kinds of histories.
- Situate history among other disciplines and distinguish the key aspects of their interface.

SYLLABUS OF GE-3

Unit I: What History Can Tell Us (12 hours)

Unit II: The Historian at Work (16 hours)

Unit III: Issues in History Writing (16 hours)

Unit IV: History and Other Disciplines (16 hours)

Practical component (if any) - NIL

Essential/recommended readings

Unit-1: This Unit shall explore the meaning of history and historical thinking. The students will be equipped to distinguish the historical perspective from other ways of understanding our individual and collective pasts. (Teaching time: 12 hours approx.)

- Schlabach, Gerald. A Sense of History: Some Components <http://www.geraldschlabach.net/about/relationships/benedictine/courses/handouts/sense-of-history/>
- Tosh, J. (2002). In Pursuit of History. Revised third edition. London, N.Y., New Delhi: Long-man (Ch.1 and Ch. 2).

4. Amendment to Appendix -II-A to the Ordinance V (2-A) of the Ordinances of the University vide EC Resolution 18-1-1 dated 18.08.2022 regarding Syllabi of 1st Semester of Departments under Faculty of Arts

Add the following:

Syllabi of Semester-I of the following departments under Faculty of Arts based on Under Graduate Curriculum Framework -2022 to be implemented from the Academic Year 2022-23.

FACULTY OF ARTS

DEPARTMENT OF ARABIC

B.A (H) ARABIC:
Category-I

DISCIPLINE SPECIFIC CORE COURSE – 1
ARABIC READING & WRITING FOR BEGINNERS

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|--|---------|-----------------------------------|----------|---------------------|----------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Arabic Reading & Writing For Beginners | 4 | 3 | 1 | 0 | Class XII Pass | NIL |

Learning Objectives

The Learning Objectives of this course are as follows:

1. To make the learners familiar with the Arabic language skills.
2. To make them aware with correct pronunciation of consonants and vowels.
3. To make them acquainted with basic Arabic vocabulary.

Learning outcomes

The Learning Outcomes of this course are as follows:

By studying this course the student will be able to:

1. Recognise, read and write Arabic alphabet.
2. Read short and simple sentences in Arabic.
3. Use basic interrogative sentences in Arabic.
4. Use the basic vocabulary of the things around him/her in Arabic.
5. Use the Arabic numerals from 1-10.

SYLLABUS OF DSC-1 (CATEGORY-I)

Unit 1 (20 hours)

Arabic Reading & Writing

- Arabic Alphabet with different shapes
- Moon & Sun letters
- Vowel signs (short & long)
- Joining of letters
- Words with different vowels

Basic Vocabulary

- Frequently used Urdu words of Arabic Origin (100).
- Frequently used vocabulary of the following heads (300):
House, Kitchen, Office, Classroom, College, Human Body, Vegetables, Fruits, Name of Days, Name of Months, Numbers (1-10)

Unit 2 (20 hours)

- Reading and Comprehension

Lessons: 1 to 5

Prescribed Book: “Madina Arabic Reader-1 by Dr. V. Abdur Rahim”

Unit 3 (20 hours)

- Reading and Comprehension

Lessons: 6 to 10

Prescribed Book: “Madina Arabic Reader-1 by Dr. V. Abdur Rahim”

Practical component (if any) - NIL

Essential/recommended readings

1. Prof. W. A. Nadwi: A Practical Approach to the Arabic Language Vol.-1, New Delhi.
2. Reading material prepared by the Department of Arabic, ZHDC, D.U.

Suggestive readings

1. Prof. S. A. Rahman: Teach Yourself Arabic, New Delhi.
2. Prof. R.I. Faynan: Essential Arabic, New Delhi.
3. Dr. Amir Jamal: Arabic Learn the Easy Way, New Delhi.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE – 2 ARABIC GRAMMAR FOR BEGINNERS

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|------------------------------|---------|-----------------------------------|----------|---------------------|----------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Arabic Grammar For Beginners | 4 | 3 | 1 | 0 | Class XII Pass | NIL |

Learning Objectives

The Learning Objectives of this course are as follows:

1. To make the learners well versed in Syntax and Morphology.
2. To enable them to translate the text.
3. To develop speaking, reading and writing skills in them.

Learning outcomes

The Learning Outcomes of this course are as follows:

By studying this course the student will be able to:

1. Conjugate the given verbs and use them as per their requirement.
2. Use them in their writings and conversation as per the need.
3. Learn elementary grammar of the Arabic syntax.
4. Make simple nominal sentences.

SYLLABUS OF DSC-2 (CATEGORY-I)

Unit 1 (20 hours)

- نكرة – أداة النكرة & معرفة – أداة المعرفة
- Nouns: Masculine & Feminine and Symbols of feminineness.
- Complete chart of أسماء الإشارة
- Nominal Sentence (المبتدأ والخبر)
- 14 Mood Conjugation of the following:

- فَعَلَ – يَفْعَلُ
- فَعِلَ – يُفْعَلُ
- مَا فَعَلَ – لَا يَفْعَلُ
- مَا فَعِلَ – لَا يُفْعَلُ

Unit 2 (20 hours)

- Complete chart of الضمائر المنفصلة & الضمائر المتصلة
- Formation of المركب الإضافي & المركب الإشاري
- 6 Mood Conjugation of the following:

- إِفْعَلْ
- لَا تَفْعَلْ
- فَاعِلْ
- مَفْعُولْ

Unit 3 (20 hours)

- Formation of المركب الوصفي
- Frequently used prepositions:

| | | | | | |
|----|----|-----|-----|---|---|
| من | في | إلى | على | ل | ب |
|----|----|-----|-----|---|---|

- Conjugation of the أبواب الفعل الثلاثي المجرد:

| | | | | | |
|------------|------------|------------|------------|------------|------------|
| فتح - يفتح | ضرب - يضرب | نصر - ينصر | سمع - يسمع | كرم - يكرم | حسب - يحسب |
|------------|------------|------------|------------|------------|------------|

Practical component (if any) - NIL

Essential/recommended readings

1. Dr. W. A. Nadwi: A Practical Approach to the Arabic Language Vol.1, New Delhi.
2. Dr. Amir Jamal: Arabic Learn the Easy Way, New Delhi.
3. علي جارم ومصطفى أمين: النحو الواضح، القاهرة
4. مولانا عبد الرحمن امرتسري: كتاب النحو، پانی پت

Suggestive readings

1. J. A. Haywood & H. M.: A New Arabic Grammar, New Delhi.
2. Prof. R.I. Faynan: Essential Arabic, New Delhi.
3. مولانا عبد الماجد الندوي: معلم الإنشاء، لکنؤ
4. عبد الستار خان: عربی کا معلم، دہلی

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE – 3 ARABIC TRANSLATION FOR BEGINNERS

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|----------------------------------|---------|-----------------------------------|----------|---------------------|----------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Arabic Translation For Beginners | 4 | 3 | 1 | 0 | Class XII Pass | NIL |

Learning Objectives

The Learning Objectives of this course are as follows:

To enable learners to translate simple sentences from English into Arabic.

To enable learners to translate simple sentences from Arabic into English.

Learning outcomes

The Learning Outcomes of this course are as follows:

The student will acquire skills of translating simple sentences English into Arabic.

The student will acquire skills of translating simple sentences English into Arabic.

SYLLABUS OF DSC-3 (CATEGORY-I)

Unit 1 (5 Weeks)

Translation based on two-word nominative sentences using the following as subject (المبتدأ):

| | | |
|---------------|-----------------|------------------|
| أسماء الإشارة | الضمائر المتصلة | الضمائر المنفصلة |
| المعرف باللام | العلم | |

Unit 2 (20 hours)

Translation based on الجملة الفعلية on the following pattern:

Verb + Doer

Verb + Doer + Object

Unit 3 (20 hours)

Translation based on the following phrases:

Possessive Phrase (المركب الإضافي)

Adjectival Phrase (المركب الوصفي)

Demonstrative Phrase (المركب الإشاري)

Practical component (if any) - NIL

Essential/recommended readings

Dr. W. A. Nadwi: A Practical Approach to the Arabic Language Vol.1, New Delhi.

Prof. V. Abdur Rahim: Madina Arabic, Vol. 1, New Delhi.

Dr. Amir Jamal: Arabic Learn the Easy Way, New Delhi.

النحو، پانی پت کتاب: امرتسری الرحمن عبد مولانا

Suggestive readings

J. A. Haywood & H. M. : A New Arabic Grammar, New Delhi.

Prof. R.I. Faynan: Essential Arabic, New Delhi.

الإنشاء، لکنؤ معلم: الندوی الماجد عبد مولانا

معلم، دہلی کا عربی: خان الستار عبد

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Additional material may be provided by the Department.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE– 3 (DSC-3)

Language Through Texts (1)

Credit distribution, Eligibility and Pre-requisites of the Course

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course(if any) |
|----------------------------|---------|-----------------------------------|----------|---------------------|-----------------------|-------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Language Through Texts (1) | 4 | 3 | 1 | | 12 th Pass | NIL |

Learning Objectives

- Introduction to extracts from contemporary literary texts of both French and francophone writers.
- Introduction to varied cultural themes of France and francophone countries to develop vocabulary and written expression.
- Creating awareness of present day France through short journalistic texts.
- Development of language competence (reading skills, comprehension and vocabulary)

Learning outcomes

At the end of semester 1, a student will be able to

- read and understand a short literary text adapted for students of level A1 and to answer questions on the same.
- Read and understand a short culture based text adapted for students of level A1 and to answer questions on the same.
- read and understand a short journalistic text adapted for students of level A1 and to answer questions on the same.

SYLLABUS OF DSC-3

Unit 1: Literary texts³ (20 hours)

1. Proust, Marcel : « *A la recherché du temps perdu* »
2. Camus, Albert : « *Le malentendu* »
3. Prévert, Jacques : « *Familiale* »
4. Bâ, Mariama : « Une si longue lettre »
5. Bégag, Azouz : « *Le Gone du Chaâba* »
6. Ernaux, Annie : « *Une femme* »

³ The titles cited above are examples of texts. The teacher can bring in other literary texts adapted to the level of students.

Unit 2: Texts on culture and civilisation⁴ (20 hours)

1. Une vie d'étudiant
2. Les medias
3. Les Vacances
4. Familles
5. La France Multiculturelle
6. La Francophonie.

Unit 3: Short texts from newspapers. (20 hours)

Material will be made available by the Department as journalistic texts have to refer to events in real time.

Practical component (if any) - NIL

Essential/recommended readings

To be compiled and provided by the Department.

1. Blondeau Nicole, Allouache Ferroudja, Né Marie-Françoise « *Littérature progressive du français, A1-A2 niveau débutant* » (2^e édition avec 600 activités), CLÉ, International, 2019.
2. Carlo Catherine, Causa Marielle : « *Civilisation Progressive du français, A1, niveau débutant* » (3^e édition avec 450 activités), CLÉ International, 2019.
3. “ *Le plaisir de lire en français* ” Level A1 romans illustrés, Les Éditions DIDIER
4. *Le Journal des Enfants*: A weekly newspaper for young learners.

Additional material may be provided by the Department.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

⁴ The teacher can introduce themes and material adapted to the level of the students.

BA (Prog.) French
Category-III

Courses for Undergraduate Programme of study with discipline as one of the Core Disciplines

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

DISCIPLINE SPECIFIC CORE COURSE (DSC-1): French in Context: Basic Level – 1

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|---|----------|-----------------------------------|----------|---------------------|-------------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| French in Context: Basic Level-1 | 4 | 3 | 1 | Nil | Passed Class XII | None |

Learning Objectives: (Reading, Writing, Listening and Speaking):

In Semester 1, the student will learn

- about France and French speaking countries.
- to greet in different situations, introduce themselves, ask for information about others and introduce them, learn to communicate orally in formal and informal situations.

DISCIPLINE SPECIFIC CORE COURSE -1 (DSC-1)
Language in Context: Developing Reading and Writing Skills (1)

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|--|---------|-----------------------------------|----------|---------------------|----------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Language in Context: Developing Reading and Writing Skills (1) | 4 | 3 | 1 | 0 | Passed Class XII | Nil |

Learning Objectives

The Learning Objectives of this course are as follows:

At the end of Semester 1, a student will

- be able to read simple texts and answer questions on them;
- be able to write short texts, about subjects pertaining to his/her immediate environment;
- attain Level A 1.1 of the Common European Framework (CEF).

Learning Outcomes

The Learning Outcomes of this course are as follows:

- Enable students to partially attain A1 Level of reading and writing skills in the concerned language.
- Reading simple texts and answering questions on them.
- Equip students to write about subjects pertaining to his/her immediate environment.

SYLLABUS OF DSC-1

Content:

Reading: Read and understand simple documents, texts, emails containing personal information, describing a person, a place, daily activities, means of transport, family and members of the family, invitations, messages, greeting cards etc.

Writing: Guided writing activities. A few sentences, short text or email describing oneself, others, a place, daily activities, the family, means of transport, writing and replying to invitations, messages, greeting cards for a birthday, a festival etc.

Morphosyntax and Vocabulary: Simple grammatical structures and vocabulary used to introduce oneself, introduce others, describe oneself and others, describe one's residential area, city, greetings, professions etc.

Intercultural and cocultural: Introduction to German-speaking regions/countries, celebrities from German, fashion, cinema, comic strips etc.

UNIT I

12 Hours

Recognise the alphabets and learn the spellings.

Read texts which introduce the various forms of greetings.

Give a brief written introduction.

Learn to spell names and some simple objects.

Learn to recognise country names and their languages.

- Wh-questions
- Personal pronouns (I)
- Some basic verbs

Read short biographical texts and do written exercises based on that.

- Spellings of numbers 1 to 20.
- Different definite articles

UNIT II

12 Hours

Read job advertisements and note down the relevant information.

- Vocabulary for the days of the week
- Plural forms

Interrogative questions

Learn how to fill a form for job interviews.

- Counting 20 onwards
- Personal pronouns (II)

Conjugation of 'haben' and 'sein'

Read brochures about cities and write about your favourite city.

- Learn to name places and buildings
- Vocabulary pertaining to means of transport

Indefinite article 'ein/-'

UNIT III

12 Hours

Read maps and use the given information to guide someone.

- Negative article 'kein/-'

Irregular verbs

Read texts about food habits related to German speaking countries.

- Introduce the accusative case.

Vocabulary related to meals and food items

Interpret a survey pertaining to individual food habits.

Write about one's own countries' food habits.

- Express likes and dislikes.

Modal verb in a sentence.

UNIT IV

12 Hours

Read texts related to day-to-day activities and write about one's own daily routine.

- Temporal prepositions

More modal verbs (müssen, wollen, können).

Read an email asking for planning something together and respond to it.

Possessive pronouns

Write a text about your family members / friends.

- Ordinal numbers

Introduction to separable verbs.

UNIT V

12 Hours

Read a statistic about most preferred leisure activities and express your opinion about them.

- Learn how to tell the date using the preposition 'am'.

Different uses of the preposition 'für'

Learn to write an invitation (for example birthday).

- Accusative personal pronouns
- More separable verbs

Write down a short text describing one's city in the past and at present.

- Imperfekt / Präteritum form of 'haben' and 'sein'

Suggestive readings

Learning/Teaching Material: Any of the textbooks given below may be prescribed.

1. Dengler, S., Rusch, P., Schmitz, H. (2013). *Netzwerk A1.1: Deutsch als Fremdsprache. Kurs- und Arbeitsbuch mit DVD und 2 Audio--CDs*. Klett Verlag.
2. Dengler, Stefanie; Tanja Mayr-Sieber, Paul Rusch, Helen Schmitz. *Netzwerk neu A1.1: Deutsch als Fremdsprache. Kurs- und Übungsbuch mit Audios und Videos*. Klett Verlag
3. Evans, S., Pude, A., Specht, F. (2021). *Momente A1.1. Kurs- und Arbeitsbuch*. Hueber Verlag.
4. Evans, S., Pude, A., Specht, F. (2020). *Menschen A 1. Kurs- und Arbeitsbuch*. Max Hueber Verlag

Basic rules of pronunciation.

Intercultural and Co-cultural: Knowledge and practice of structures relevant to formal and informal situations.

UNIT I

12 Hours

Practice the phonetics of alphabets.

Exchange greetings with each other.

Listen to a text related to the given topic.

Introduce oneself to others.

Learn to ask each other questions related to one's state and its languages.

Listen to a text related to the given topic.

Exchange telephone numbers with each other.

Listen to a text and note down information like phone numbers, names, places and languages.

UNIT II

12 Hours

Exchange information about one's age, languages, telephone numbers, e-mail addresses (both in formal as well as informal manner).

Listen to a text related to the given topic.

Talk about hobbies, different seasons and months.

Listen to a text related to the given topic.

Listen to interviews about different professions and their working hours.

Conduct interviews to find out about professions and working hours.

UNIT III

12 Hours

Ask questions related to basic directions and explain as to how to reach specific places.

Narrate a story with the help of pictures.

Talk about one's eating habits and preferred food items.

Listen to a text related to the given topic.

Simulate the situation of shopping.

Listen to a text related to the given topic.

UNIT IV

12 Hours

Talk about one's daily routine.

Listen to a text related to the given topic.

Talk about one's family.

Listen to a text related to the given topic.

Plan leisure activities with friends.

Listen to a text related to the given topic.

UNIT V

12 Hours

Formulate invitations and learn how to react to them.

Listen to a text related to the given topic.

Simulate the situation of eating out and how to pay for the same.

Listen to a text related to the given topic.

Talk to each other about one's likes, dislikes, hobbies, family, daily routine, working hours, habits, friends, going out etc.

Listen to texts related to the given topics.

Learning Objectives

Objective: At the end of semester 1, a student will be able to read and understand a short literary/journalistic/ad/song text adapted for students of level A1 and to answer questions on the same.

SYLLABUS OF DSC-3

UNIT I

12 Hours

Practice of recognizing and speaking of alphabets and numbers through short advertisements, telephone directories and announcements (e.g., lottery announcements).
Listening and singing of simple alphabet and number songs.
Recognizing country and city names on political maps and in tour guides.
Recognizing wh-questions, personal pronouns, definite articles and verb conjugations in simple written and audio texts.

UNIT II

12 Hours

Reading newspaper job advertisements, road-maps, brochures, short biographical texts from social media, and watching/listening to short and simple biographical videos and audios.
Students can start constructing simple texts of their own on the above-mentioned topics.

UNIT III

12 Hours

Reading restaurant menus, and supermarket brochures and pamphlets to identify and use vocabulary learnt in other courses to construct short dialogues.
Reading simple stories and using pictures to write their own stories.

UNIT IV

12 Hours

Reading and listening to short stories about family and friends. Constructing your own texts on friends, family and hobbies. Reading and writing diary entries.
Reading and writing of simple “konkrete Poesie”. Listening to simple popular German songs.

UNIT V

12 Hours

Reading and writing invitations to birthdays, weddings, anniversaries etc. Reading and writing postcards. By now students can start constructing short stories and films with the vocabulary learnt.

DEPARTMENT OF PHILOSOPHY

BA (Hons.) Philosophy

Category-I

DISCIPLINE SPECIFIC CORE COURSE -1 (DSC-1) – : Introduction to Philosophy

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|----------------------------------|---------|-----------------------------------|----------|---------------------|----------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Introduction to Philosophy DSC 1 | 4 | 3 | 1 | 0 | Passed Class XII | Nil |

Learning Objectives

The Learning Objectives of this course are as follows:

- This course introduces the basic areas of philosophy, like metaphysics, epistemology, ethics, aesthetics, social and political philosophy etc.
- Questions like What is reality?, what is good and what is bad?, what is beautiful ? What is justice? What is science and scientific temper? Etc will be raised/discussed in the course
- The course aims at comprehensive view of philosophy and its branches

Learning outcomes

The Learning Outcomes of this course are as follows:

- By studying the course, the student will be able to comprehend nature and scope of the course
- Apart from the subject matter of ethics, aesthetics, and social political philosophy, the student will also learn about the relation between philosophy and science and about the inculcation of the scientific temper for doing further research in philosophy.
- The student will be well prepared to tackle questions of philosophy after taking this course.

SYLLABUS OF DSC-1

UNIT I What is Philosophy?

(16 Hours)

1. Philosophy, *Darsana*, *Anviksiki*, *Tattva*

2. Classifications of Philosophy

“What is Philosophy” (pp. 1-5), “Divisions of Philosophy”, (pp. 13-15, in Moore, Brooke Noel and Bruder, Kenneth (2010). *Philosophy: The Power of Ideas*. McGraw-Hill
“Introduction” (pp. 1-10) by Bertrand Russell,. *History of Western Philosophy*, RKP,
“General Introduction” (1-12) in Ramakrishna Puligandla’s *Fundamentals of Indian Philosophy*, D K Printworld, 2008
Kauṭilya. (2003). *Arthaśāstra*, Book 1, section 1-3, *The Kauṭilya Arthaśāstra*-, trans. R. P. Kangle, (Bombay University : 1972), reprint, Delhi: 2003, Motilal Banarasi Das Publishers.

UNIT II Metaphysics and Epistemology

(16 Hours)

1. The Question of Existence
2. Different views of reality
3. Knowledge and Belief

Kristie Miller: What is Metaphysics? (193-209)

Duncan Pritchard: What is Knowledge? (123-133)

Prescribed Text: Duncan Pritchard : What is this thing called Philosophy? (RKP, 2015)

UNIT III Ethics and Aesthetics

(16 Hours)

1. The basis of right and wrong
2. Aesthetics: art and its objects

Michael Brady: What is Ethics? (3- 6)

Kathleen Stock: What is Art? (81-93)

Prescribed Text: Duncan Pritchard: What is this thing called Philosophy? (RKP, 2015)

UNIT IV Social and Political Philosophy and Philosophy of Science

(16 Hours)

1. Social Contract
2. Justice
3. Scientific Temper

Thom Brooks “What is Justice” (52-65)

Chattopadhyaya, D. P. (1990). Defending the Scientific Temper. *India International Centre Quarterly*, 17(3/4), 42–57. <http://www.jstor.org/stable/23002452>

Prescribed Text: Duncan Pritchard : What is this thing called Philosophy? (RKP, 2015)

Essential Readings/Recommended Readings

Strawson, Peter (1992). *Analysis and Metaphysics: An Introduction to Philosophy*. Oxford University Press.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE – 2 (DSC-2): Logic

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|---------------------|---------|-----------------------------------|----------|---------------------|----------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Logic DSC 2 | 4 | 3 | 1 | 0 | Passed Class XII | Nil |

Learning Objectives

- This course primarily helps in developing one's skill in correct reasoning or argumentation.
- It trains the student to construct good and sound arguments rejecting the vague and unsound ones at any point of time and situation.

Learning Outcomes:

- Helps in sharpening the reasoning and argumentation skills of a learner and simultaneously helps in identifying the flaws.
- Enhances the analytical skills, so that one can resolve the difficult issues and finally arrives at a reasonable solution.
- Helps in good scoring for a better rank in form of result.

Unit I **Basic Concepts in Logic**

12 Hours

1. Proposition and Sentence
2. Arguments: Deductive and Inductive
3. Truth, Validity and Soundness

1. Copi, Irving M., Carl Cohen, and Kenneth McMahon. *Introduction to Logic*. 14th ed. Delhi: Pearson, 2016. pp. 1-33.

Unit II **Traditional Logic**

24 Hours

1. Categorical Propositions: Quality, Quantity and Distribution of Terms
2. The Traditional Square of Opposition, Existential Import
3. Immediate Inferences- Conversion, Obversion and Contraposition
4. Translating Ordinary Language Sentences into Standard Logical Form

1. Copi, Irving M., Carl Cohen, and Kenneth McMahon. *Introduction to Logic*. 14th ed. Delhi: Pearson, 2016. pp. 167-250.

Unit III **Categorical Syllogisms**

24 Hours

1. Moods and Figures
2. Rules of Syllogism and Syllogistic Fallacies
3. Determining Validity/Invalidity using rules of Syllogism
4. Determining Validity/Invalidity using Venn Diagrams

1. Copi, Irving M., Carl Cohen, and Kenneth McMahon. *Introduction to Logic*. 14th ed. Delhi: Pearson, 2016. pp. 211-254.

Essential/Recommended Readings

Copi, Irving M., Carl Cohen, and Kenneth McMahon. *Introduction to Logic*. 14th ed. Delhi: Pearson, 2016.

Suggestive Readings:

Jain, Krishna. *A Textbook of Logic*. New Delhi: D.K. Printworld, 2018.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE – 3 (DSC-3): Indian Philosophy

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|-------------------------|---------|-----------------------------------|----------|---------------------|----------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Indian Philosophy DSC 3 | 4 | 3 | 1 | 0 | Passed Class XII | Nil |

Learning Objectives

- In this course the focus will be on interactive learning where students will engage themselves into rigorous and an analytical examination of key concepts in a manner that enables them for contemporary engagement and reflection . Hence there will be a focus on the dialectical and analytical method to understand Indian philosophy.
- The aim is to make students familiar with and develop a clear understanding of the major concepts such as the Śruti and Smṛiti, Karma, Jñāna and Bhakti in different systems of Indian Philosophy and Śreyas and Preyas in Kathopanishad . It will also show the problems which arise in translating the Sanskrit terms to English, for example dharma as translated as religion within Indian Philosophical studies.
- Debate amongst the schools regarding the nature of the self will enhance various perspectives and further increase students understanding of Indian Philosophical systems and their philosophy.
- Improved critical reading of the texts, their rational and logical understanding, and writing abilities.
- Finally it will give a holistic development of their personality.

Learning Outcomes

- Students will understand the richness of Indian Intellectual Traditions through basic concepts such as Śruti and Smṛiti, Karma, Jñāna and Bhakti, Śreyas and Preyas and Students will appreciate the Indian Metaphysics of various ancient Indian schools such as Cārvāka, Buddhism, Jainism, Sāṅkhya, Pūrva-Mīmāṃsā and Vedānta, which will help them to understand and appreciate different perspectives within the society at large.
- Students will learn to develop scientific, logical and rational inquiry for understanding the systems.
- Students will be able to do a comparative analysis of all systems which will further enhance their debating skills.
- Students will develop the ability to think critically and to read and analyse scientific literature.

- Students will develop strong oral and written communication skills through the effective presentation of Projects, Quiz as well as through Seminars.

UNIT I Introduction to Indian Philosophy

12 Hours

1. Historical overview
1. Rise of Systems
2. Origins of Indian Philosophy

J.N.Mohanty, *Classical Indian Philosophy*, Lanham: Rowman and Little field,1999, pp.1-10.

A.K.Warder, *A Course in Indian Philosophy*, Delhi: Motilal Banarsidass Publishers,2018, pp.4-11

UNIT II Outlines of Indian Philosophy Hours

16

1. Distinction between *Śruti* and Smṛiti.
2. Distinction between Dharma and Religion.
3. Emphasis on *Karma* (Action), *Jñāna* (Knowledge) and *Bhakti* (Devotion) : An Understanding of different Indian Philosophical Schools
4. *Śreyas* and *Preyas* with reference to *Kaṭha Upaniṣad*.

1. Dasgupta, S.N. (2004), *A History of Indian Philosophy*, Vol. 1, Motilal Banarasi Das Publications, Delhi.

2. Radhakrishnan, S. Moore, (1967) CA, *A Sourcebook in Indian Philosophy*, Princeton.

3. Raju, P.T. (1985) *Structural Depths of Indian Thought*, NY Albany: State University of New York Press.

4. *Kaṭha Upaniṣad*

UNIT III Indian Metaphysics

20 Hours

- 1 Four Noble Truths (catvariyaśatyani), Doctrine of Dependent Origination (Pratityasamutpada) and Doctrine of Momentariness (Kṣāṇabhanga-vāda) in Buddhism. Prakṛti, Puruṣa and Parināmavāda of Sāṅkhya School.
- 2 Pūrva- Mīmāṃsā theory of Karma (Apurva)
- 3 Indian school of Materialism (Cārvāka, Early Sāṅkhya, Atomism of Vaiśeṣika)

1. Hiriyanna, M: (1951), *Outlines of Indian Philosophy*, London: Allen & Unwin
2. Dasgupta, S.N. (2004), *A History of Indian Philosophy*, Vol. 1, Motilal Banarasi Das Publications, Delhi
3. Chatterjee, S.C. & D.M. Datta (1984), *An Introduction to Indian Philosophy*, reprint, University of Calcutta.

4. M.N.Roy, *Materialism in Indian Philosophy*, Delhi: Critical Quest ,2017, Pp1-22(Selections from Materialism: An Outline of the History of Scientific Thought
5. Bhattacharya, Ramkrishna. “Materialism in India: A Synoptic View.” Retrieved 27 July 2012.<http://www.carvaka4india.com/2011/08/materialism-in-india-synoptic-view.html>

UNIT IV Indian Epistemology

20 Hours

1. Syādvāda of Jainism
 2. Prama and Pramana distinction with reference to Nyāya theory of Perception.
-
1. Chatterjee, S.C. (2008), Nyāya Theory of Knowledge, Delhi, Bharatiya Kala Prakashan.
 2. Sharma, C.D. (2003) Critical Survey of Indian Philosophy, Delhi: MotilalBanarsidass
 3. Stevenson, S.1951. The Heart of Jainism. London: Oxford University Press.
 4. Shastri, Haridatta, BhartiyaDarshanKaItihas.(Hindi)
 5. Upadhaya, Baldeva. BhartiyaDarshan (Hindi), Banaras.

Essential/recommended Readings

1. Hiriyanna, M: (1951), Outlines of Indian Philosophy, London: Allen & Unwin
2. Dasgupta, S.N. (2004), A History of Indian Philosophy, Vol. 1, MotilalBanarasiDas Publications, Delhi

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

BA (Prog) with Philosophy as Major
Category II

DISCIPLINE SPECIFIC CORE COURSE (DSC-1): Philosophical Issues

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|-----------------------------------|----------|-----------------------------------|----------|---------------------|-------------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| DSC 1 Philosophical Issues | 4 | 3 | 1 | 0 | Passed Class XII | Nil |

Learning Objectives

- The primary objective of this course is to introduce the main philosophical issues to students
- It will encourage the students to think critically about some of the most important questions that philosophers ask
- It will also teach students how analytical and rigorous answers are possible to hard questions

Learning Outcomes

- By studying this course, a student should be able to demonstrate a clear understanding of the background the philosophical issues.
- They will acquire a good understanding of the key concepts of Indian schools as well as Western philosophy.
- They will have a sound understanding of epistemological, metaphysical, and ethical issues and shall be able to go for further studies in the subject.

Unit I Introduction

12 Hours

- What is Philosophy?
- What is a Philosophical Issue?
- Origins of Indian Philosophy

Moore, B. N., & Bruder, K. (2001). *Philosophy: The power of ideas* (5th ed.). New York: McGraw-Hill, pp. 1-5, 13-15

Warder, A K (2018). *A course in Indian Philosophy*, Motilal Banarsidass, Pg. 4-19

Unit II Metaphysical Issues

16 Hours

- What is metaphysics?
- Idea of Reality, Being, and Becoming

Laurence, Stephen and Cynthia Macdonald (eds.), 1998, *Contemporary Readings in the Foundations of Metaphysics*, Oxford: Blackwell.pp 1-21

Unit III. Epistemological Issues

12 Hours

- What is Knowledge?
- Prama, Prameya and Pramana

Lehrer, K. (1990). *Theory of knowledge*. Boulder, CO: Westview Press.pg 2-4

Puligandla, R. (2008). *Fundamentals of Indian Philosophy*, D K Printworld, pp. 184-191

Unit IV. Ethical Issues

20 Hours

- Morality and Ethics
- Buddhist Ethics

Rachels, J., & Rachels, S. (2012). "What is Morality?" In *The Elements of Moral Philosophy* 7e. McGraw Hill. pp 1 to 13

Keown, Damien (2018). "Buddhist Ethics", in Billimoria, Purushottama (ed.) (2018). *Routledge History of Indian Philosophy*. Routledge, pp. 496-505

Essential/recommended readings

Gupta, R.K., (1995), *Social Action and Non-violence*, ICPR, New Delhi.

Hiriyana, M. (1951), *Outlines of Indian Philosophy*, Allen & Unwin, London.

Kar, Bijayananda (1985), *Indian Philosophy*, Ajanta Publications, Delhi.

Keown, D. (1992), *The Nature of Buddhist Ethics*, Macmillan, London.

Lama, Dalai (1999), Ethics for the New Millennium, Riverhead Books, New York.
 O'Connor, D.J., (1964), Critical History of Western Philosophy, Free Press of Glencoe, London.
 Raju, P.T., (1971), The Philosophical Traditions of India, George Allen & Unwin Ltd., London.

Suggestive Readings

Rao, V. Ramakrishna (1987), Selected Doctrines from Indian Philosophy, Mittal Publications, Delhi.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE – 2 (DSC-2): Logic

Credit distribution, Eligibility and Prerequisites of the Course

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|---------------------|----------|-----------------------------------|----------|---------------------|-------------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |

Learning Objective

- This course primarily helps in developing one's skill in correct reasoning or argumentation.
- It trains the student to construct good and sound arguments rejecting the vague and unsound ones at any point of time and situation.

Learning Outcomes

- Helps in sharpening the reasoning and argumentation skills of a learner and simultaneously helps in identifying the flaws.
- Enhances analytical skills so that one can resolve difficult issues and finally arrives at a reasonable solution.

Unit I Basic Logical Concepts

8 Hours

1. Proposition and Sentence
2. Deductive argument
3. Truth, Validity, and Soundness

Copi, Irving M., Carl Cohen, and Kenneth McMahon. *Introduction to Logic*. 14th ed. Delhi: Pearson, 2016. Ch 1-2.

Unit II Traditional Logic (A)

20 Hours

1. Terms and Distribution of terms
2. Categorical Propositions
3. Traditional Square of Opposition and Existential Import
4. Translating Ordinary Language Sentences into Standard form

Traditional Logic (B)

1. Immediate Inferences- Conversion, Obversion, and Contraposition
2. Categorical Syllogism: Figure and Mood
3. Syllogistic Rules and Fallacies
4. Venn Diagram

1. Copi, Irving M., Carl Cohen, and Kenneth McMahon. *Introduction to Logic*. 14th ed. Delhi: Pearson, 2016. Ch 5-7.

Unit III Symbolization Hours

20

1. Types of Truth functions: Negation, Conjunction, Disjunction (Alternation), Conditional (Implication), and Bi-Conditional (Equivalence)
2. Statements, Statement forms, and Logical status
3. Decision procedures: Truth table Method and Reductio ad Absurdum

1. Copi, Irving M., Carl Cohen, and Kenneth McMahon. *Introduction to Logic*. 14th ed. Delhi: Pearson, 2016. Ch 8.

Unit IV Indian Logic

12 Hours

1. Debate
2. Logic
3. Steps of Inference in Indian Logic

Warder, A K (2018). *A course in Indian Philosophy*, Motilal Banarsidass, Pg. 128-137 (“Debate and Logic”)

Essential/Recommended Readings

COMMON POOL OF GENERIC ELECTIVE COURSES

Offered by Department of Philosophy

Category –IV

GENERIC ELECTIVES (GE-1): Ethics in Public Domain

Credit distribution, Eligibility and Pre-requisites of the Course

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course | Department offering the course |
|------------------------------|---------|-----------------------------------|----------|---------------------|----------------------|-----------------------------|--------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | | |
| Ethics in Public Domain GE 1 | 4 | 3 | 1 | 0 | Passed XII class | Nil | Philosophy |

Learning Objectives

- The course aims to develop an ethical perspective on socio-political and even economic issues where the public discourses and debates are often bereft of ethical/moral considerations and are often plagued with objectivism and materialism.
- Through theoretical understanding of ethics and its practical application in daily life, it generates ethical awareness/sensitivity necessary for overall wellbeing and inspires the readers to contribute voluntarily to the society as a responsible member.

Learning Outcomes

- To equip the students with tools and techniques for handling socio political issues that affect them on individual / collective basis.
- Larger awareness of public issues and empathy with marginalised issues in society.
- Inculcate a sense of ethical responsibility and a vision to challenge the existing norms in need of change.

Unit I: Introduction to Ethics

12

Hours

1.Morality

*Rachel, James. "What is Morality?" In The Elements of Moral Philosophy. 1-14. McGraw-Hill, 2012.

2.Cultural Relativism

*Rachel, James. "The Challenge of Cultural Relativism." In The Elements of Moral Philosophy. 15-34. McGraw- Hill, 2012.

Unit II Structures of Inequality

16 Hours

1.Caste

*Ambedkar, B. R. "Castes in India: Their Mechanism, Genesis and Development." Paper presented at an Anthology Seminar, Columbia University, 1916.

2. Gender

*Beauvoir, Simone de. "The Married Woman." In *Second Sex*, vol. II, part two, chapter 5. USA: Vintage, 2011.

Unit III Freedom and Morality

16 Hours

*Sen, Amartya. "Freedom, Agency and Wellbeing." In *Inequality Re-examined*, 56-72. USA: First Harvard University Press, 1992.

Archard, David. "Privacy, the public interest and a prurient public. In *Media Ethics* edited Matthew Kieran, 82-96. USA; Canada: Routledge. 2014

Unit IV Animal Ethics

16 Hours

DEPARTMENT OF PUNJABI

BA (Hons.) Punjabi

Category-I

DISCIPLINE SPECIFIC CORE COURSE -1 (DSC-1)

PUNJABI BHASHA ATE GURMUKHI LIPI

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|--|---------|-----------------------------------|----------|---------------------|--|--|
| | | Lecture | Tutorial | Practical/ Practice | | |
| PUNJABI BHASHA ATE GURMUKHI LIPI (DSC-1) | 4 | 3 | 1 | 0 | Class 12 th pass in any subject | Studied Punjabi up to 10 th Standard or Working knowledge of Punjabi language |

Credits: 4

L/T/P= 3/1/0

LEARNING OBJECTIVES:

- The purpose of this course is to enhance student's language skills.
- The study of language would help the students to enrich their linguistic and creative aptitude.
- The course seeks to develop a fundamental understanding of the basic nature, branches and history of Punjabi language, in students.
- The purpose of the course is to help the students to understand and use methods of analysing the data from various dialects of Punjabi language.
- The objective of the course is to provide students a broad interdisciplinary perspective of Punjabi language and Gurmukhi script.

LEARNING OUTCOMES:

- The students will obtain advanced knowledge of Punjabi language.
- They will develop an insight about various dialects of Punjabi language.
- They will have in-depth knowledge of selected areas of linguistics such as, language variation, language development, language learning etc.
- They will understand the concepts of phonology, morphology and syntax structure of Punjabi language.

- They will analyse the historical background of Indo-Aryan language family and its relation to Punjabi language.

Unit-I: ਭਾਸ਼ਾ ਅਤੇ ਪੰਜਾਬੀ ਭਾਸ਼ਾ

(Bhasha ate Punjabi Bhasha) (16 Hours)

- ਭਾਸ਼ਾ: ਸਰੂਪ ਅਤੇ ਲੱਛਣ
Bhasha: Saroop ate Lachhan
- ਵਿਸ਼ਵ ਭਾਸ਼ਾ ਸਮੂਹ ਅਤੇ ਇੰਡੋ-ਆਰੀਆਈ ਭਾਸ਼ਾਵਾਂ
Vishav Bhasha Samooch ate Indo-Aaryai Bhashavan
- ਪੰਜਾਬੀ ਭਾਸ਼ਾ ਦਾ ਨਿਕਾਸ ਅਤੇ ਵਿਕਾਸ
Punjabi Bhasha da Nikas ate Vikas
- ਪੰਜਾਬੀ ਭਾਸ਼ਾ ਦੀਆਂ ਵਿਸ਼ੇਸ਼ਤਾਵਾਂ
Punjabi Bhasha dian Vishestavan

Unit-II: ਪੰਜਾਬੀ ਦੀਆਂ ਉਪਭਾਸ਼ਾਵਾਂ

(Punjabi dian Upbhashavan) (16 Hours)

- ਮਾਝੀ
Majhi
- ਮਲਵਈ
Malwai
- ਦੁਆਬੀ
Doabi
- ਪੁਆਧੀ
Puadhi

Unit-III: ਪੰਜਾਬੀ ਭਾਸ਼ਾ ਸੰਰਚਨਾ

(Punjabi Bhasha Sanrachna) (16 Hours)

- ਸਵਰ ਅਤੇ ਵਿਅੰਜਨ ਧੁਨੀਆਂ
Svar ate Viyanjan Dhunian
- ਪੰਜਾਬੀ ਸ਼ਬਦ ਬਣਤਰ: ਅਗੇਤਰ, ਪਿਛੇਤਰ, ਸਮਾਸੀ ਸ਼ਬਦ
Punjabi Shabad Bantar: Agetar, Pichhetar, Samasi Shabad
- ਵਾਕ ਦੀਆਂ ਕਿਸਮਾਂ: ਸਧਾਰਨ, ਸੰਯੁਕਤ ਅਤੇ ਮਿਸ਼ਰਤ ਵਾਕ
Vak dian Kisman: Sadharan, Sanyukat, Mishrat Vak
- ਅਰਥ ਵਿਸਤਾਰ, ਅਰਥ ਸੰਕੋਚ, ਅਰਥ ਪਰਿਵਰਤਨ
Arth Vistar, Arth Sankoch, Arth Parivartan

Unit-IV: ਗੁਰਮੁਖੀ ਲਿਪੀ

(Gurmukhi Lipi) (12 Hours)

- ਲਿਪੀ ਨਾਲ ਜਾਣ-ਪਛਾਣ
Lipi naal Jaan-Pachhaan
- ਗੁਰਮੁਖੀ ਲਿਪੀ ਦਾ ਨਿਕਾਸ ਅਤੇ ਵਿਕਾਸ
Gurmukhi Lipi da Nikas ate Vikas
- ਗੁਰਮੁਖੀ ਲਿਪੀ ਵਿਚ ਲਗਾਂ-ਮਾਤਰਾਵਾਂ ਅਤੇ ਲਗਾਂ-ਅੱਖਰਾਂ ਦੀ ਵਰਤੋਂ ਅਤੇ ਮਹੱਤਵ
Gurmukhi Lipi vich Lagan-Mataran ate Lagan-Akharan di Varton ate Mahatav
- ਪੰਜਾਬੀ ਭਾਸ਼ਾ ਲਈ ਗੁਰਮੁਖੀ ਲਿਪੀ ਦੀ ਉਚਿਤਤਾ
Punjabi Bhasha lai Gurmukhi Lipi di Uchitata

DISCIPLINE SPECIFIC CORE COURSE – 2

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITE OF THE COURSE

| Course Title & Code | Total Credits | Credit distribution of the course | | | Eligibility Criteria/ Prerequisite | Pre-requisite of the course, if any |
|-----------------------------|---------------|-----------------------------------|----------|-----------|------------------------------------|-------------------------------------|
| | | Lecture | Tutorial | Practical | | |
| Cognitive Psychology | 4 | 3 | 0 | 1 | Class XII Passed | Nil |

Credit: 4 (3 Lecture + 1 Practical)

Course Learning Outcomes:

- To gain an understanding of basic theoretical, empirical, and applied knowledge that have shaped cognitive psychology.
- To understand the fundamentals of cognitive processes and cognitive psychology.

Unit 1: Introduction to Cognitive Psychology: Brief history, Nature & Research methods in Cognitive Psychology, Paradigms- Information processing, Connectionist, Evolutionary Ecological

(15 Hours)

Unit 2: Sensing and Perceiving: Sensation to representation, approaches to perception, perception of object and forms, perception of constancies and deficits of perception, Attention: nature & theories, when attention fails us, Automatic and Controlled Processes in Attention

(15 Hours)

Unit 3: Thinking, Problem Solving and Decision Making:

Components of thoughts, imagery and cognitive maps, strategies and barriers of effective problem solving; judging and making decisions: biases and methods

(15 Hours)

PRACTICAL : (30 Hours)

Any one practicum based on Unit 2 or Unit 3. Each practical group will consist of 10-12 students.

DISCIPLINE SPECIFIC CORE COURSE – 3

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITE OF THE COURSE

| Course Title & Code | Total Credits | Credit distribution of the course | | | Eligibility Criteria/ Prerequisite | Pre-requisite of the course, if any |
|---------------------|---------------|-----------------------------------|----------|-----------|------------------------------------|-------------------------------------|
| | | Lecture | Tutorial | Practical | | |
| Bio Psychology | 4 | 3 | 1 | 0 | Class XII Passed | Nil |

Course Learning Outcomes:

- To understand into the nature and scope of bio psychology and its applications in psychology
- To learning the structure and function of Neuron and the importance of action potential and synaptic activity
- To become aware of the methods to study the brain and its role in behavior
- To learn how endocrine glands mediate behavior.

Unit 1: Introduction to Biopsychology & Nerve Impulse: Nature & scope of bio psychology(briefly explain what is bio psychology, and its application in psychology).

(9 Hours)

Unit 2: Neuron: structure and function of Neurons, action potential/nerve impulse, synaptic transmission

(12 Hours)

Unit 3: Brain and Behavior: Methods (EEG, CT, fMRI), CNS and behavior(Spinal cord and Brain functions.)

(12 Hours)

Unit 4: Endocrine System: Endocrine basis of behavior, Structure, function and abnormalities(Pituitary, Adrenal, Thyroid, Gonads)

(12 Hours)

BA (Hons.) Applied Psychology
Category-I

DISCIPLINE SPECIFIC CORE COURSE – 1
CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITE OF THE COURSE

| Course Title & Code | Total Credits | Credit distribution of the course | | | Eligibility Criteria/ Prerequisite | Pre-requisite of the course, if any |
|--------------------------------------|---------------|-----------------------------------|----------|-----------|---------------------------------------|-------------------------------------|
| | | Lecture | Tutorial | Practical | | |
| Basic processes in Psychology | 4 | 3 | 0 | 1 | Class XII Passed | Nil |

Course Learning Outcomes

- To develop an understanding of the foundational concepts of the human mind and behaviour
- To identify various approaches, fields and sub-fields of Psychology
- To develop skills that enable students to apply the knowledge gained through this course in everyday life

Unit 1: Introduction to Psychology: Nature and scope of Psychology. Difference between Psychology and Applied Psychology. Historical Development and Current Status. Methods of Psychological Research (experiments, psychological tests and observation). Ethics in Psychological Research. Biological Basis of Behavior (Structure of Neurons, Brain Structure and functions, Lateralization)

(15 Hours)

Unit 2: Attention and Perception: Nature, Difference between selective and divided attention, Theories of Selective Attention (Broadbent's Filter Model, Triesman's Attenuation Model, Limited Capacity Model, Kahneman Attention Theory), Perceptual processes: laws of perceptual organizations, depth perception, constancy (Size), Top-down theory (Gregory's Theory) and Bottom-up Theory (Gibson's Ecological Theory), Illusions and factors affecting perception. Application of attention and perception in Indian Context

(15 Hours)

Unit 3: Learning and Memory: Nature (memory), Memory as Information Processing, Models of Memory (Levels of Processing Model, Parallel Distributed Processing Model), Improving Memory, Forgetting, Nature (Learning), Conditioning, Cognitive Learning, Observation learning; applications of learning. Application of learning and memory in Indian Context

(15 Hours)

PRACTICAL: (30 Hours)

Total of TWO Experiments- One each from Unit 2 and 3 based on course DSC01: Basic Processes in Psychology. Each practical group will consist of 10-12 students.

DISCIPLINE SPECIFIC CORE COURSE – 2 CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITE OF THE COURSE

| Course Title & Code | Total Credits | Credit distribution of the course | | | Eligibility Criteria/ Prerequisite | Pre-requisite of the course, if any |
|----------------------------------|---------------|-----------------------------------|----------|-----------|------------------------------------|-------------------------------------|
| | | Lecture | Tutorial | Practical | | |
| Applied Social Psychology | 4 | 3 | 0 | 1 | Class XII Passed | Nil |

Course Learning Outcomes

- Describe the key concepts and methods relevant to the study of social psychology.
- Understand and improve the relationship between self and society.
- Understand the significance of indigenous social psychology and apply social psychological processes in promoting change in Indian society.

Unit 1: Introduction: Social Psychology & Applied Social Psychology: Structure of Indian

Society (with reference to unity and diversity), Definitions, historical development of the field and current status, Levels of analysis, theoretical approaches (Symbolic Interactionism, Social Constructionism), Methodological approaches in social psychology: experimental and non-experimental; Action research.

(15 Hours)

Unit 2: Social Cognition: Nature of social cognition, social schema, heuristic, new directions of social cognition; Attribution theory (Heider, Kelley, Jones and Davis, Weiner); attribution biases; Person perception: impression formation and management (definition, process and factors).

(15 Hours)

Unit 3: Attitude & Attitude Change: Structure, functions, formation of attitudes, attitude-behavior relationship, Attitude Change: Process of persuasion, related factors, Theories of attitude change. Strategies of promoting attitude and behavior change in India-illustrative case studies in Indian context.

(15 Hours)

PRACTICAL: (30 Hours)

Any 2 lab/field practicums based on course DSC02: Applied Social Psychology. Each practical group will consist of 10-12 students.

DISCIPLINE SPECIFIC CORE COURSE – 3
CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITE OF THE COURSE

| Course Title & Code | Total Credits | Credit distribution of the course | | | Eligibility Criteria/ Prerequisite | Pre-requisite of the course, if any |
|--|---------------|-----------------------------------|----------|-----------|------------------------------------|-------------------------------------|
| | | Lecture | Tutorial | Practical | | |
| Psychology of Health and Well-Being | 4 | 3 | 0 | 1 | Class XII Passed | Nil |

Course Learning Outcomes

- To understand the concept of health and well-being from the standpoint of biological, psychological, social and cultural factors in interaction with each other.
- To learn about the role of health beliefs, attitudes and behaviours affecting individuals' decisions relating to health.
- To understand the importance of modifying the problematic health behaviours.

Unit 1: Introduction: Definition of health psychology, goals of health psychology, illness-wellness continuum, Mind-body relationship, Bio-psychosocial model of Health; Indian perspective to health (concept of health in Ayurveda and Yoga); Subjective Well-being (Diener); Emotional, Social and Psychological well-being (Ryff). **(15 Hours)**

Unit 2: Behaviour and Health: Characteristics of health behaviours (health behaviour, illness behaviour and sick-role behaviour); Barriers to health behaviour (individual, interpersonal and community). Theories of health behaviour (Protective motivation theory, theory of reasoned action, Transtheoretical model). **(15 Hours)**

Unit 3: Health enhancing behaviors and health compromising behaviours: Health enhancing behaviours: Exercise, Nutrition; Health compromising behaviours: Alcoholism and Smoking; **(15 Hours)**

PRACTICAL: - 30 Hours

Any two practicums (one in lab and one in field) on any of the two topics from the DSC03: Psychology of Health and Well-Being using scales on general health behaviours, sleep, well-being etc. Each practical group will consist of 10-12 students.

BA (Prog.) with Psychology as Major
Category-II

DISCIPLINE SPECIFIC CORE COURSE – 1
CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITE OF THE COURSE

| Course Title & Code | Total Credits | Credit distribution of the course | | | Eligibility Criteria/ Prerequisite | Pre-requisite of the course, if any |
|-----------------------------------|---------------|-----------------------------------|----------|-----------|---------------------------------------|-------------------------------------|
| | | Lecture | Tutorial | Practical | | |
| Fundamentals of Psychology | 4 | 3 | 0 | 1 | Class XII Passed | Nil |

3 classes for theory + 2 classes for Practical (10-12 students per week per group)

Objective: To introduce learners to the basic concepts of the field of psychology with an emphasis on applications of psychology in everyday life.

Learning Outcomes: After completing this course, the student will be able to:

- Understand the basic psychological processes
- Apply principles of psychology in everyday life

Unit 1: Introduction (9 Hours)

Psychology: Nature, goals and scope; Perspectives in psychology: Structuralism, Functionalism, Evolutionary, Psychodynamic, Behaviourism, Cognitive, Humanistic-Existential, Indian perspective.

Unit 2: Learning and Memory (12 Hours)

Nature of Learning and applications: Classical conditioning, operant conditioning, observational learning.

Memory: Nature and models of memory- Information processing, levels of processing, parallel distributed processing; techniques for improving memory.

Unit 3: Personality and Intelligence (12 Hours)

Personality: Nature of personality; theories of personality: Trait theory (Big Five Theory), Psychoanalytic and Humanistic

Intelligence: Nature of intelligence; theories of intelligence: Spearman's two factor, Gardener's multiple intelligence, Sternberg triarchic theory; PASS model

Unit 4: Practicum (4 weeks)

Any one experiment based on Unit-2.

DISCIPLINE SPECIFIC CORE COURSE – 2 CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITE OF THE COURSE

| Course Title & Code | Total Credits | Credit distribution of the course | | | Eligibility Criteria/ Prerequisite | Pre-requisite of the course, if any |
|--------------------------------------|---------------|-----------------------------------|----------|-----------|------------------------------------|-------------------------------------|
| | | Lecture | Tutorial | Practical | | |
| Fundamentals of Cognitive Psychology | 4 | 3 | 0 | 1 | Class XII Passed | Nil |

3 classes for theory + 2 classes for Practical (10-12 students per week per group)

Objective: Understanding the fundamental concepts of human cognition and how cognitive

functioning operates in everyday life.

Learning Outcomes: After completing this course, the student will be able to:

- Appreciate important concepts related to cognition such as attention, perception, problem-solving and creativity
- Develop an insight into the applications of cognitive psychology concepts in everyday life.
- Design studies/research on cognitive concepts.

Unit 1: Introduction (9 Hours)

Cognitive Psychology: Cognitive revolution, nature, methods and scope; fundamental ideas and key themes; culture and cognition

Unit 2: Attention and Perception (12 Hours)

Attention: Nature, determinants, theories, and applications

Perception: Nature of perception, laws of perception, perceptual illusions

Unit 3: Problem solving and Creativity (12 Hours)

Problem Solving: Nature, processes and methods (Algorithms and Heuristics), barriers of problem solving, convergent and divergent thinking, creativity in problem-solving

Unit 4: Practicum (8 Hours)

Any one laboratory or field practicum based on the above three units.

COMMON POOL OF GENERIC ELECTIVES (GE) COURSES

Offered by Department of Psychology

GENERIC ELECTIVE– 1

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITE OF THE COURSE

| Course Title & Code | Total Credits | Credit distribution of the course | | | Eligibility Criteria/ Prerequisite | Pre-requisite of the course, if any |
|---------------------------|---------------|-----------------------------------|----------|-----------|---------------------------------------|-------------------------------------|
| | | Lecture | Tutorial | Practical | | |
| Foundations of Psychology | 4 | 3 | 1 | 0 | Class XII Passed | Nil |

Course Learning Outcomes

- To introduce the core concepts of psychology with an emphasis on applications of psychology in everyday life.
- To help students develop an insight into their own and others' behavior and underlying mental processes.
- To understand and be able to interweave the fundamental psychological concepts of learning, memory, motivation, and emotion.
- To understand the theoretical perspectives and research findings that have shaped some of the most important areas of contemporary psychology.

Unit 1: What is Psychology : Psychology as a science; Major schools of Psychology; Evolution of Psychology in India; Subfields and Applications of Psychology **(12 Hours)**

Unit 2: Mind as Information Processer: Bottom-up and Top-down processing, Perceptual organizational processes, Acquiring Information: Learning by Association, Social Cognitive Learning, Encoding and Retrieval in Memory: Information Processing model; Why we forget? Mnemonics **(16 Hours)**

Unit 3: Self and Personality: Nature and Perspectives (Trait and Type, Jungian Theory of Psychoanalysis, Roger's Self Theory), Measures of Personality: Inventories and Projective techniques, Culture and Personality **(16 Hours)**

Unit 4: Intelligence and Creativity: Nature and Perspectives: Psychometric approach (Spearman's 'g' factor theory), Cognitive perspective (Fluid and Crystallized Intelligence; Triarchic Theory of Intelligence), Multiple Intelligences, Managing emotions intelligently, Nature of Creativity **(16 Hours)**

GENERIC ELECTIVE– 2

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITE OF THE COURSE

| Course Title & Code | Total Credits | Credit distribution of the course | | | Eligibility Criteria/ Prerequisite | Pre-requisite of the course, if any |
|--------------------------|---------------|-----------------------------------|----------|-----------|------------------------------------|-------------------------------------|
| | | Lecture | Tutorial | Practical | | |
| Understanding Psychology | 4 | 3 | 0 | 1 | Class XII Passed | Nil |

Course Learning Outcomes

- To develop an understanding of self and others' by using the knowledge gained through the course about the different approaches in understanding behavior
- Demonstrate comprehension of the theoretical concepts of psychology and the related empirical findings in areas such as perception, memory, motivation, emotions, learning, Intelligence, personality, cognition etc.

Unit 1: Introduction to Psychology: Nature and Scope, Historical Development (structuralism, functionalism, psychoanalytic, cognitive, behavioural, humanistic- existential, gestalt), Psychology in India (15 Hours)

Unit 2: Intelligence and Personality: Nature (Intelligence and Personality) Theories of

personality: Psychoanalytic and Socio Cognitive Theory; Theories of intelligence: Sternberg's Triarchic Theory and Gardner's theory of Multiple Intelligence; Emotional intelligence; Assessment of intelligence and personality. Intelligence and personality in Indian Context
(15 Hours)

Unit 3: Learning and Memory : Nature (Learning and Memory), Conditioning (Classical and Instrumental), Observation learning. Memory- Models (Information Processing Model, Levels of Processing Model, Improving memory. Memory in Indian Context
(15 Hours)

PRACTICAL: Total of TWO Experiments- One each from Unit 2 and 3 based on course GE02: Understanding Psychology. Each practical group will consist of 10-12 students.

30 Hours

GENERIC ELECTIVE– 3
CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITE OF THE COURSE

| Course Title & Code | Total Credits | Credit distribution of the course | | | Eligibility Criteria/ Prerequisite | Pre-requisite of the course, if any |
|-------------------------------|---------------|-----------------------------------|----------|-----------|------------------------------------|-------------------------------------|
| | | Lecture | Tutorial | Practical | | |
| Psychology for Healthy Living | 4 | 3 | 1 | 0 | Class XII Passed | Nil |

Course Learning Outcomes

- To build an in-depth understanding of topics like stress, health, well-being and positive human behaviour
- To develop skills and competencies by application of these principles for promoting health, well-being and positive functioning in self and others.

Unit 1: Stress and coping: Understanding causes of stress; Effects of stress on physical and mental health; coping strategies (emotion focused, problem focused, avoidant coping), coping techniques **(12 Hours)**

Unit 2: Understanding subjective wellbeing and health: Meaning of subjective and psychological/hedonistic and eudaimonic well-being); comparing Medical and Bio-psycho-social approaches to health. **(16 Hours)**

Unit 3: Health-enhancing behaviours: Introduction to health enhancing behaviours: Exercise, Nutrition and Sleep **(16 Hours)**

Unit 4: Promoting Positive human functioning: Introduction to Positive Psychology, Hope (definitions, Snyder model, applications), Optimism (Optimism as an explanatory style, benefits) and Self-efficacy (Bandura's concept, sources of self-efficacy, applications in different arenas) **(16 Hours)**

BA (Hons.) Bengali

Category-I

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|--|---------|-----------------------------------|----------|---------------------|--|--|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Barnanatmak Bhasabigyan: Bangla Bhasha | 4 | 3 | 1 | NIL | Class 12 th pass in any subject | Studied Bengali Up to 10 th & Above |

Learning Objectives:

Language is the basis of any existing literature. To study literature, one must know the language well beforehand and then delve into its literature. Thus, our first paper will be the descriptive linguistics of Bengali.

Learning outcomes:

To study the linguistics of any particular language is not limited to knowing the language to be able to communicate but to have vivid knowledge of its construction, its fundamental properties, its Phonology, Morphology etc. Students will be taught the science of Bengali language which is a branch of the discipline, i.e. Linguistics.

SYLLABUS OF DSC-1

UNIT – I (20 Hours)

- ভাষার সংজ্ঞা ও বৈশিষ্ট্য

ধ্বনিতত্ত্ব

- ধ্বনি ও বর্ণ স্বরধ্বনি ও ব্যঞ্জনধ্বনি ; বৈশিষ্ট্য ও শ্রেণিবিভাগ উচ্চারণ বৈচিত্র্য ও স্বনিম
- ধ্বনি পরিবর্তন : কারণধারা ও সূত্র ,
- ধ্বনির আগম : স্বরাগম — অপিনিহিতি, স্বরভক্তি, ব্যঞ্জনাগম — শ্রুতিধ্বনি

- ধ্বনির নির্গমন বা ধ্বনিলোপ — স্বরলোপ সমাষ্করলোপ, ব্যঞ্জনলোপ,
- ধ্বনির রূপান্তর — অভিশ্রুতিনাসিক্যভবন, সমীভবন, স্বরসঙ্গতি,
- ধ্বনির স্থানান্তর — ধ্বনির বিপর্যাস

UNIT – II (20 Hours)

- আন্তর্জাতিক ধ্বনিমূলক বর্ণমালা সংজ্ঞা ও রূপান্তর :

UNIT – III (20 Hours)

- রূপিম— বদ্ধ রূপিম ও মুক্ত রূপিম
- শব্দ— সংজ্ঞা ও শ্রেণিবিভাগ (জাতি ও গঠন, অর্থ)

Practical component (if any) - NIL

Essential/recommended readings

|--|---------|-----------------------------------|----------|---------------------|--|--|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Bangla Sahityer Itihas : Prachin O Madhyajug - 1 | 4 | 3 | 1 | NIL | Class 12 th pass in any subject | Studied Bengali Up to 10 th & Above |

Learning Objectives:

The whole range of literary creations in Bangla cannot be searched and studied in detail by any student of Bengali Literature of UG course. A history of Literature, thus, is a holistic approach towards the development of the literature. This paper will discuss the old (ancient) and medieval period literature.

Learning outcomes:

It is impossible for a student of literature to know the vast number of written-literature intricately in a particular language. History of Literature will let the students know and study about the outline of Bengali literature and its development time to time with special reference to its background.

DISCIPLINE SPECIFIC CORE COURSE (DSC-1): History of Tamil Language -I

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|------------------------------|---------|-----------------------------------|----------|---------------------|--|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| History of Tamil Language -I | 04 | 03 | 01 | - | Students who have studied the Tamil language up to Class XII | NIL |

Learning Objectives:

This course aims at introducing the history of Tamil language beginning from the origin of the Tamil script available from the cave inscriptions and archeological excavations to the modern developments of 20th century. The earliest available literature of Tamil, the *Sangam* Anthology and *Tolkāppiyam* are taken as the source to discuss the structure of ancient Tamil. The latter texts of grammatical treatises, epics, commentaries etc., stand as the resource for the study of evolution of Tamil during the medieval period. It discusses phonological, morphological, semantic, and syntactic changes taken place in the language.

Learning Outcomes:

This course would enlighten the students the place of Tamil in Dravidian family of languages, various dialects of Tamil and the impact of Sanskrit and other languages in Tamil.

SYLLABUS OF DSC-1

Unit -I (15 Hours)

- Dravidian Languages and Tamil

Unit -II (15 Hours)

- History of Tamil Script

Unit -III (15 Hours)

- Sources of Tamil Language History

Unit -IV (15 Hours)

- Phonological, Morphological, and syntactic changes

Essential/recommended Readings:

1. Varadarajan.M. 2017. *Mozhi Varalaru*, Chennai: Pari Nilayam.
2. Suyambu, P., 2005, *Moḷi Varalārril Tamīl*, Chennai: Visalakshi Nilaiyam.
3. Meenakshisundaram, T.P., (Trans. S. Jeyaprakasam), 1982, *Tamiḷ Moḷi Varalāru*, Madurai: Sarvodaya Ilakkiyappannai.

Suggestive Readings:

1. Sastri, Suriya Narayana, 2003, *Tamiḷmoḷiyiṇ Varalāru*, Chennai: International Institute of Tamil Studies.

| | | Lecture | Tutorial | Practical/ Practice | | |
| TELUGU LITERATURE AND OTHER ARTS | 04 | 03 | 01 | | Students who have studied Telugu up to Class XII and above | NIL |

Learning Objectives

This course looks closely at the relationship between art, Architecture, Music, Dance and literature, focusing most specifically upon the complementary nature of the forms from a historical perspective, i.e., how this relationship has changed the art forms since their inception. The course discusses how different arts were depicted in medieval and modern Telugu literature

and the place of music and metre in literature. It will focus on the origin and development of Andhra traditional dance, its importance in the qualitative life of human beings, and how the different dance forms are reflected in the region's art, architecture and literature.

Learning outcomes

This course will outline the interaction between literature and other arts, and Students will be able to understand the multidisciplinary approach method in the literature.

SYLLABUS OF DSC- 2

ORIGIN AND DEVELOPMENT OF SINDHI LANGUAGE AND SCRIPTS.

Credit- 4

60 hours

The course provides a brief introduction to the history of Sindhi language and scripts. The beginning of writing system in Sindhi within the emergence of writing culture in India is addressed to start with. This followed by a discussion on the language families of the Indian sub-continent and the Indo- Aryan family of languages to which Sindhi belongs to. The subsequent three parts deal with old Sindhi, Middle Sindhi and Modern Sindhi phases of the language. The last phase deals with the regional varieties of Sindhi.

GENERIC ELECTIVES (GE-8): BASIC TELUGU

Credit distribution, Eligibility and Pre-requisites of the Course

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course | Department offering the course |
|---------------------|---------|-----------------------------------|----------|---------------------|---|-----------------------------|--------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | | |
| Basic Telugu | 4 | 3 | 1 | | Students who have not studied Telugu up to 8 th Standard | NIL | MIL&LS |

Learning Objectives:

The course aims to teach basic language skills in Telugu, and it intends to facilitate students in acquiring foundational skills of reading, writing and speaking in Telugu along with synonyms to expand vocabulary. This course is divided into three units, and it will cover the basic language structures, the activities and functions generally explored by a beginners' syllabus, i.e. learning Telugu syllables, making simple sentence construction and using the same sentences with fellow students; it goes further, covering situations such as working, studying and including materials focused on the Telugu media, i.e., cinema, television, the press and advertising. Regarding grammar structures, the exercises are at the primary level only.

Course Learning Outcome:

The course will enable the students to obtain the basic skills of reading, writing and speaking in Telugu, along with building a primary vocabulary. After completing the course, they can read and construct simple Telugu sentences, figure out words with conjunct characters, and learn functional, everyday conversation in different language situations. Students interact with classmates by using simple sentences about their daily routine matters on official and informal occasions.

Allotted classes: 30 hours

Credits: 02

Unit -I (20 Hours)

Introduction to Telugu Vowel & Consonant sounds & along with the sound-image

Script introduction

Introduction of Numerals (up to 70+30)

Unit -II (24 Hours)

Introduction to Telugu Noun & Pronoun, its Subjunctives

Telugu qualifiers/adjectives

Telugu prepositions

Conjunctions and their usage

Introduction to Verb & Time/Tense

Conjugation of different verbs

Unit –III (16 Hours)

Making simple sentences in Telugu (basic syntactical rules)

Making Negative sentences in Telugu

Making Interrogative sentences in Telugu

Teaching Learning Process: Lecture-30 Hrs. Discussions 4Hrs.

Assignments / Presentation-4 Hrs

Assessment Methods: Monthly Test., Internal Exam, Semester Examinations.

Keywords: Telugu, Alphabets, Simple Sentence, Elementary Vocabulary.

Reading list:

GENERIC ELECTIVES (GE-11: Introduction to Tamil Folk Literature)**Credit distribution, Eligibility and Pre-requisites of the Course**

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course |
|--|-----------|-----------------------------------|-----------|---------------------|--|-----------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Introduction to Tamil Folk Literature | 04 | 03 | 01 | - | Students who have not studied the Tamil language up to Class VIII | NIL |

Learning Objectives:

The aim of the course is to teach the students to read literature as the source to understand and explain the Folklore. It will train the students to write on the specialized subject of Folklore and Culture with the help of literary texts and to incorporate this knowledge in understanding of literature and other studies. This course will enhance the ability in language usage by developing the technical terminology of the specific fields of knowledge. The teaching method of this course includes the identification of texts which contains the elements of Folklore and Culture in Tamil.

Learning Outcomes:

The intense study will equip the students to understand the particular field of knowledge in Tamil and inculcate an ability to write on these disciplines. This study shall explain the role of literature to understand Folklore and Culture and the need of these disciplines in understanding and production of literary texts.

SYLLABUS OF GE -11

Unit I (15 Hours)

- Introduction to Tamil Folklore Studies

Unit II(15 Hours)

- Oral Traditions

Unit III (15 Hours)

- Folklore and Culture of Tamils

Unit IV (15 Hours)

- Analysis and Interpretations Folk Creations

Essential/recommended Readings:

1. N.Vanamamalai.1969. *Studies in Tamil Folk Literature*, Madras: NCBH.

Suggestive Readings:

1. Arunachalam.M. 1976. *Ballad Poetry*, Thiruchitrambalam: Gandhi Vidhyalayam.

3. Hundoo, Jawaharlal, (Ed.) 1977. *A Bibliography of Indian Folk Literature*, Mysore : CILL
4. Dundes, Alen, (Ed.) 1965. *The Study of Folklore*, Englwood Cliffs, N.J: Prientice Hall, Inc.
5. Blackburn, Stuart Hart, 1983.*Performance As Paradigm: The Tamil Bow Song Tradition*, Michigan: University Microfilms International.
6. N.Vanamamalai.1981. *Interpretation of Tamil Folk Creations*, Trivandrum: Dravidian Linguistics Association.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DEPARTMENT OF LINGUISTICS

BA (Prog.) with Linguistics as Major

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria/ Pre-requisite of the course |
|--------------------------|---------|-----------------------------------|----------|------------------------|--|
| | | Lecture | Tutorial | Practical/ Practice | |
| Introduction to Language | 4 | 3 | 1 | 0 | Class XII with |

Learning Objectives. This course provides an introduction to the nature of language and its structure. It discusses the nature of human language and its properties with reference to both nature and nurture perspectives on language.

Course learning outcomes. The learning outcomes include basic knowledge of the structure of human language, nature and properties of human language, and essential skills in analysing language structure.

Unit 1: Introduction to Language

Hours: 12

- Nature of language: Language evolution, properties of human language, cognitive, social, and biological perspectives on language, spoken and signed languages.
- Language as a Scientific Phenomenon: Knowledge of language and how it is revealed
- Language and other areas of knowledge

Unit 2: Phonetics: Study of speech Sounds and their properties

Hours: 16

- The relationship between words and sounds and sounds and spelling
- Sounds in languages of the world, a finite set; Speech versus non-speech sounds; why study speech sounds? Anatomy of human speech
- Sounds and symbols, Speech production and description

Unit 3: Phonology

Hours: 12

- Organization of speech sounds
- Phonemes, allophones, possible sequences of speech sounds in a specific language
- Phonological processes

Unit 4: Morphology and Syntactic structure

Hours: 20

- Structure of words: Morphemes and allomorphs, Morphological Processes
- Phrase structure: Words versus Phrases; relationship among words
- Phrase structure of Noun Phrases, Verb Phrases, Adjectival Phrases, Prepositional Phrases
- Syntactic structure: Basic typology of syntactic structures

|---------------------------------|---------|-----------------------------------|----------|-----------|--|
| | | Lecture | Tutorial | Practical | |
| Introduction to Indian Language | 4 | 3 | 1 | 0 | Class XII with |

Objectives. Simultaneous with DSC-1, this additional paper introduces students to the specifics being learnt to Indian languages as a case study, as such, it provides a clear knowledge and expertise in the concepts learnt in DSC-1. This course provides a brief survey and the characteristics of Indian languages and Indian language families.

Course learning outcomes. The learning outcomes include the classification of the Indian languages and the essential properties of Indian languages.

Unit 1: India as a ‘Linguistic Area’

Hours: 12

- A brief survey of Indian Languages.
- Description of Indian Languages.
- Classification of Indian Languages

Unit 2: Classification and features of Indo-Aryan Language family

Hours: 16

- geographical distribution of the Modern Indo-Aryan languages
- Classification of Indo-Aryan Language family
- Characteristics/features of Indo-Aryan Language family
- A note of any two Indo-Aryan Languages or dialects.

Unit 3: Classification and features of Dravidian language family and Tibeto-Burman language family

Hours : 16

- geographical distribution of the Modern Dravidian languages
- Classification and features of Dravidian Language family
- geographical distribution of Tibeto-Burman languages
- Classification and features of Tibeto-Burman language family

Unit 4: Classification and features of Austro-Asiatic language family and Languages of Andaman and Nicobar

Hours : 16

- geographical distribution of the Austro-Asiatic languages
- Classification and features of Austro-Asiatic Language family
- geographical distribution of languages of Andaman and Nicobar Islands
- Classification and features of languages of Andaman and Nicobar Islands

| | | Lecture | Tutorial | Practical/ Practice | | | |
| Language and Crime | 4 | 3 | 1 | 0 | Class XII | | Linguistics |

Learning Objectives

The Learning Objectives of this course are as follows:

- To make learners appreciate the interface between language and law

- To make learner understand the use of language in the legal process
- To teach the fundamentals of text analysis using linguistic tools
- To teach students to analyse linguistic data in a forensic context by understanding social contexts of language

Learning outcomes

By participating in this course, the student will develop:

- an appreciation of theory behind analysis of speech involved in criminal contexts;
- skills to analyse spoken and written language using linguistic tools, in the contexts of criminal courtroom statements, interactions and documents
- experience of handling of difficult and sensitive materials and an understanding of ethical issues involved in crime-related data;
- skills of auditory analysis and digital processing of forensic recordings.

SYLLABUS OF GE-1 (SEMESTER-I)

UNIT – I (12 Hours)

Language-Crime Interface

- legal language and grammar
- legal language and meaning
- Courtroom discourse

UNIT – II (16 Hours)

Forensic Speech Science

- Indian language speech sounds
- Transcription of speech data
- Acoustic data analysis

UNIT – III (16 Hours)

Sociophonetics

- phonological variation
- dialects and speech varieties
- language change

UNIT – IV (16 Hours)

Linguistic analysis and Identification

- linguistic fingerprinting
- discourse analysis
- analysis of social media texts and images

Essential/recommended readings

Jessen, M. (2008) Forensic phonetics. *Language and Linguistics Compass* 2: 671-711.

BA (Prog.) With Sanskrit as Major
Category-II

DSC 1: Sanskrit Grammar

Credit distribution, Eligibility and Pre-requisites of the Course

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course |
|-------------------------|-----------|-----------------------------------|----------|---------------------|-----------------------|-----------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Sanskrit Grammar | 04 | 3 | 1 | 0 | Class XII Pass | Nil |

Learning Objectives:

Sanskrit is much known for a long tradition of grammatical and semantic analysis of the language. Panini's grammar has always been highly respected for providing the best model for structural and semantic studies. This course intends to introduce to students the basic structure of Sanskrit language through the Laghusiddhantakaumudi, the premier text of Sanskrit grammar by Varadaraj.

Learning outcomes:

After completion of this course

- Students will understand the basic structural nuances of Panini's grammar.
- They will become familiar with fundamental sandhi and compounding patterns.
- They will also understand some most important primary and secondary suffixes of Sanskrit.
- The practice of the application of the rules learnt from the reading of the texts will further enhance their knowledge of the structural patterns of Sanskrit language.

SYLLABUS OF DSC-1

Unit I (15 Hrs)

Laghusiddhantakaumudī : Sañjñā Prakaraṇa

Mahesvar Sutra, Pratyahara, Uchcharana Sthan, Different types of Sound.

Unit II (15 Hrs)

Laghusiddhantakaumudī: Sandhi Prakaraṇa

ac sandhi: yaṇ, guṇa, dīrgha, ayādi, vṛddhi and pūrvarūpa.
hal sandhi: ścutva, ṣṭutva, anunāsikatva, chhatva and jaṣṭva
visarga sandhi: utva, lopa, satva and rutva

Unit III

(15 Hrs)

Laghusiddhāntakaumudī: Vibhaktyartha Prakaraṇa Vibhaktyartha Prakaraṇa

Unit IV

(15 Hrs)

General introduction to Samasa based on Laghusiddhāntakaumudī.

Essential/recommended readings:

1. धरानन्द शास्त्री, लघुसिद्धान्तकौमुदी, मूल एवं हिन्दी व्याख्या, दिल्ली ।
2. भीमसेन शास्त्री, लघुसिद्धान्तकौमुदी भैमी व्याख्या (भाग-1), भैमी प्रकाशन, दिल्ली ।
3. चारुदेव शास्त्री, व्याकरण चन्द्रोदय (भाग-1,2 एवं 3), मोतीलाल बनारसीदास, दिल्ली ।
4. सत्यपाल सिंह, लघुसिद्धान्तकौमुदी: प्रकाशिका नाम्नी हिन्दी व्याख्या सहिता, शिवालिक पब्लिकेशन, दिल्ली, 2014 ।
5. V.S. Apte, The Students' Guide to Sanskrit Composition, Chowkhamba Sanskrit Series, Varanasi (Hindi Translation also available).
6. M.R. Kale, Higher Sanskrit Grammar, MLBD, Delhi (Hindi Translation also available).

Suggested readings:

1. चक्रधर नौतियाल हंस, बृहद् अनुवाद चन्द्रिका, मोतीलाल बनारसीदास, दिल्ली
2. कपिलदेव द्विवेदी – रचनानुवादकौमुदी, विश्वविद्यालय प्रकाशन, वाराणसी

GE-1: Basic Sanskrit

| Course Title | Nature of the Course | Total Credits | Components | | | Eligibility Criteria/ Prerequisite |
|-----------------------|----------------------|---------------|------------|----------|-----------|---------------------------------------|
| | | | Lecture | Tutorial | Practical | |
| Basic Sanskrit | GE-01 | 4 | 3 | 1 | 0 | Class XII Pass |

Basic Sanskrit

[A] Course Objectives:

This is an elementary course in Sanskrit language designed for students who wish to learn Sanskrit from the very beginning. Essential Sanskrit grammar will be introduced (without reference to Panini's sutras) through the multiple example method with emphasis on students constructing themselves the simple Sanskrit sentences.

[B] Course Learning Outcomes:

- Students will acquire the basic and working knowledge of the Sanskrit language.
- Students will be able to communicate in simple Sanskrit.
- Students will develop an interest in Sanskrit.
- Students will be motivated to study further.

[C] Course Contents

Unit: I Grammar and Composition, Part I:

- Nominative forms of 'a' ending masculine and neuter gender nouns with paṭh, khād, likh, bhū, and other similar simple verbs in present, past and future tenses. Accusative forms of nouns in singular number with the usage of more simple verbs.
- 'ā' and 'ī' ending feminine words in nominative and accusative cases with loṭ lakāra (imperative).
- Masculine and Feminine nouns ending in 'i' and masculine nouns ending in 'u' in various cases in singular number.
- Nominative forms of pronouns- asmad, yuṣmad, tat, etat, yat, kim in masculine, feminine and neutral genders.
- Masculine nouns ending in consonants – bhavat, guṇin, ātman and Feminine nouns ending in consonants – vāk.
- Neuter nouns ending in consonants – jagat, manas.

Unit: II Grammar and Composition, Part II

Special Verb forms – in parasmaipada –past, present, future and imperative - kr, śrū

Special Verb forms – in parasmaipada –past, present, future and imperative - jñā

Special Verb forms – in parasmaipada –past, present, future and imperative – dā, dhā

Special Verb forms – in ātmanepada – past, present, future and imperative – edh, sev

Unit: III Sandhis and Pratyayas

Ac Sandhis:

yaṇ, guṇa, dirgha, ayadi, vrddhi and pūrvarūpa

Hal sandhis:

scutva, stutva, anunāsikatva, chhatva and jaštva

Visarga sandhis:

satva and rutva

Unit: IV Pratyayas–

śatṛ, śānac, ktavatu, kta

ktvā, lyap, tumun

Active – passive structures only in laṭ lakāra

[D] References:

Compulsory Readings:

1. Mishra, Dr. Yadunandan, Anuvada Chandrika, Chaukhambha Orientaliya, Delhi, 2021.
2. Apte, Vaman Shivram, Students Guide to Sanskrit Composition, The Standard Publishing Company, Girgaon, Bombay, 1925.
3. Tripathi, Dr. Brahmananda, Rupa Chandrika, Chaukhamba Surbharati Prakashan, Varanasi, 2008.
4. Kridanta Rupa Mala – Srijan Jha – App. available on Google Play Store

[E] Teaching Learning Process:

1. Teachers will introduce the prescribed components of grammar with several examples.
2. Teachers will make students produce and practise with more examples.
3. Teachers will put words in phrases and sentences and repeat them in several variations.
4. Students will construct Sanskrit sentences in the class singly and collectively and exhibit them in spoken as well as written forms.
5. Teachers will provide practice sheets to the students for each section, which they will solve either in class or at home.
6. Teachers will from the very beginning, encourage students to make short and simple Sanskrit sentences and speak in Sanskrit.

GE -2: INDIAN AESTHETICS

| Course Title | Nature of the Course | Total Credits | Components | | | Eligibility Criteria/ Prerequisite |
|--------------------------|----------------------|---------------|------------|----------|-----------|------------------------------------|
| | | | Lecture | Tutorial | Practical | |
| Indian Aesthetics | GE-02 | 4 | 3 | 1 | 0 | Class XII Pass |

Course Objectives:

Aesthetics is a potent and important field of literary criticism. It has acquired the status and recognition of an independent academic discipline today, Aesthetics deals with the historically determined essence of human values, their creation, perception, appreciation and assimilation. It is the science and philosophy of all fine art forms. Indian perception accepts poetry, drama, music, architecture, iconography and painting as independent Art forms. The principal objective of this course is to give the students an overview of the major trends of Indian Aesthetics.

Course Learning Outcomes:

This course will enable students to identify the real essence behind all ideas of Beauty as propounded by Indian rhetoricians. After the completion of the course, the learner will be able to understand the Indian deliberations on aesthetic experience in the form of Rasa and its process. The participant will be able to appreciate the various artistic modes of expressions of Beauty in general and poetry in particular. The course will help the student peep into the historical evolution of the Indian science of aesthetics.

Course Contents:

Unit: I

Aesthetics (Saundaryāśāstra), its nature and components

Beauty (Saundarya): its definition, nature, importance and components: vāya, rūpa, vacana, hāva, Discussion of synonyms of the term Beauty (Saundarya): ramaṇīyatā, lāvaṇya, cārutā, kānti, madhuratā, manohāritā, suṣmā, abhirāmtā

Unit: II

The process of Aesthetic experience (Rasa)

- Constituents of rasa: Bhāva (human feelings and emotions) Vibhāva (causes or determinants), Anubhāva (voluntary gestures), Sāttvika bhāva (Involuntary gestures), Vyabhicāri bhava (transitory states) and Sthāyibhāva(basic mental states), Sahṛdaya/Sāmājika (Connoisseur/Spectator). Anukārya, Anukartā, Sādharaṇīkaraṇa (Generalization), four mental stages of rasa realization: Vikāsa (cheerfulness), Vistāra(exaltation), Kṣobha (agitation), Vikṣepa (perturbation).
- Number of rasas according to Bharat.
- Nature of rasa (Aesthetic experience) according to Sāhityadarpaṇa, aesthetic enjoyment – eternal bliss, the ultimate reality (ānandamayātā, alaukikatā)

Unit: III

Aesthetic elements (saundarya - tattva)

- Art as the mode of expression of Saundarya –Architecture, Sculpture and Painting

and Music.

- Main aesthetic elements of literary arts (Poetry and Drama): Alaṅkāra, rīti, Dhvani, Vakrokti & Aucitya.

Unit: IV

Prominent thinkers of Indian Aesthetics and Perception of beauty in Abhijñānaśākuntalam

- Bharata, Bhāmaha, Vāmana, Ānandavardhana, Rajśekhara, Abhinavagupta, Maṃmaṭa, Viśvanātha, Rūpagoswamī and Paṇḍitarāja Jagannātha
- Perception of beauty in Drama from cultural, social and aesthetical point of view in the context of Abhijñānaśākuntalam.

Teaching Learning Process:

The teaching-learning process for this paper will be theoretical as well as practical wherein all relevant elements will be analyzed. The students will know the salient features of Aesthetic based on Sanskrit literature on the Subject.

GE -3: BASIC PRINCIPLES OF AYURVEDA

| Course Title | Nature of the Course | Total Credits | Components | | | Eligibility Criteria/ Prerequisite |
|-------------------------------------|----------------------|---------------|------------|----------|-----------|---------------------------------------|
| | | | Lecture | Tutorial | Practical | |
| Basic Principles of Ayurveda | GE-03 | 4 | 3 | 1 | 0 | Class XII Pass |

Basic Principles of Āyurveda

Course Objectives:

The primary objective of this course is to offer the students an opportunity of learning about Ancient Indian Medical practices. Students will be familiar with the basic principles of the Science of Ayurveda.

Course Learning Outcomes:

This course will enable the students to get a fair understanding of the Science of Ayurveda (Medical Science). The course will make the learner capable of analyzing the classification and elements of Indian herbs. The course is supposed to create among the students an awareness of ancient medical practices.

Course Contents:

Unit: I

Introduction to Āyurveda

Definition of Āyurveda, Aim of Āyurveda, Subject Matter of Āyurveda, Salient Features of Āyurveda, Concept of Health according to Āyurveda, Unique features of Āyurveda.

History of Āyurveda

Introduction to Major Texts (Suśrut Samhitā and Caraka Samhitā) and Authors (Suśruta and Caraka) and Aṣṭāṅga Hṛdayam, Aṣṭāṅga Saṅgraha of Vāgbhaṭa.

Unit: II

Basic Principles of Āyurveda

1. **Triguṇas:** Sattva, Rajas and Tamas.
2. **Pañcamahābhūtas:** Ākāśa (Space), Vāyu (Air), Teja or Agni (Fire), Jala (Water) and Pṛthvī (Earth).
3. **Tridoṣas:** Vāta, Pitta and Kapha.
4. **Saptadhātus:** Rasa (fluid), Rakta (blood), Māmsa, Meda (fat), Asthi, Majjā and Śukra.

5. **Trayodasāgni:** Jatharāgni (gastric fire), Saptadhātvāgni and Pācabhātāgni.
6. **Trimalas:** Purīṣā (faeces), Mūtra (urine) and Sveda (sweat).

Unit: III

Aṣṭāṅga Āyurveda:

1. Kāy cikitsā (General Medicine)
2. Kaumārabhr̥tya (Pediatrics)
3. śalyatantra (Surgery)
4. Śālākya-Tantra (Ent. and Ophthalmology)
5. Bhūta Vidyā (Psychiatry Medicine).
6. Viṣa Vijñāna (Toxicology).
7. Rasāyana (Rejuvenates).
8. Vajīkaraṇa (Aphrodisiac).

Unit: IV

Important Medicinal Plants and their bases on Āyurveda

Medicinal Plants in Suśruta Saṁhitā: Tulsī, Haridrā, Sarpagandhā, Ghṛta Kumārī, Guggulu, Brāhmī, āmalā, Aśwagandhā, Arjun, Haldi, Neema Plant, Jamun, Pudina

[E] Teaching Learning Process:

1. Teachers will explain the relevant texts in lecture method.
2. Teachers will make the students visit to and experience themselves the medicinal plants.
3. Teachers will instruct the students to prepare reports on their understanding of the plants.

GE -4: SANSKRIT NARRATOLOGY

| Course Title | Nature of the Course | Total Credits | Components | | | Eligibility Criteria/ Prerequisite |
|-----------------------------|----------------------|---------------|------------|----------|-----------|------------------------------------|
| | | | Lecture | Tutorial | Practical | |
| Sanskrit Narratology | GE-04 | 4 | 3 | 1 | 0 | Class XII Pass |

Course Objectives:

This course aims at acquainting the students with various aspects of Sanskrit Narratology. These aspects cover origin and development of Sanskrit narratives, its distinctive features, functions, forms and cross-cultural reception.

Course Learning Outcomes:

Students will acquire the basic understanding of Sanskrit Narratives. They will be able to appreciate the essence of Sanskrit Narratology. They will develop an interest in Sanskrit Narratives and will be motivated to study the subject further.

Course Contents:

Unit: I Origin and Development of Sanskrit Narratives

- A. Vedic Origin- Ṛgvedic Saṁvāda Sūktas, Gāthā Nārāsaṁsī, Upniṣadic ākhyāna
- B. Itihāsa-purāṇa tradition
- C. Bṛhatkathā and its Sanskrit recensions – Bṛhatkathā ślokaṁgrha, Kathāśartitsāgara, Bṛhatkathāmañjarī
- D. Origin and Development of Sanskrit Fables – Pañcatantra, Hitopadeśa, Vetālapañcaviṁśikā, Siṁhāsanadvātriṁśikā, Puruṣaparīkṣā, Śukasaptati

Unit: II Distinctive Features and Functions of Sanskrit Narratology

(i) Distinctive Features of Sanskrit Narratology

1. Interiorization 2. Serialisation 3. Fantasisation 4. Cyclicalisation 5. Allegorisation
6. Anonymisation 7. Elasticisation of Time 8. Spatilisation 9. Stylisation
10. Improvisation

(ii) **Institution and Function of Story-telling**

1. Ritualistic, spiritualistic, recreational and pedagogical thrust
2. Narrator as a social-class- Kuśīlava, Cāraṇa, Sūta

Unit: III Art-forms as Medium of Sanskrit Narrative

Kathāsātra (Symposium of Story-telling), Drama, Dance-forms, Cave-paintings, Miniature Paintings and Sculpture.

Unit: IV Cultural Reception of Pañcatantra

Adaptation, Re-casting and Re-telling of Pañcatantra across cultures and nations.

[E] Teaching Learning Process:

1. Teachers will introduce the elements of Sanskrit Narratology.
2. Teachers will explain and clarify the fundamental concepts and issues of Narratology in the class.
3. Teachers will suggest the students to visit the blogs, articles and other digital and non – digital sources in the subjects.
4. Teachers will make the students understand the preventive approach of Sanskrit Narratology.

Department of English

BA (Hons.) English

Category I

[UG Programme for Bachelor in English (Honours) degree in three years]

DISCIPLINE SPECIFIC CORE COURSE -1 (DSC-1) – : Introduction to Literary Studies

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|---|---------|-----------------------------------|----------|---------------------|-------------------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| DSC 1: Introduction to Literary Studies | 4 | 3 | 1 | 0 | Passed Class XII with English | NIL |

Learning Objectives

The Learning Objectives of this course are as follows:

- To offer students a foundational understanding of the domain of literature, its genres, methods of critique and its distinctive ability to influence and project social and cultural change.

Learning outcomes

The Learning Outcomes of this course are as follows:

- By studying this course, students will be able to grasp a basic sense of literature as a discipline of thought and application.

SYLLABUS OF DSC-1

UNIT – I (20 Hours)

UNIT I: Reading the Novel

- Jane Austen: *Pride and Prejudice*
- Prince, Gerald J. *Narratology: Form and Function of Narrative*. NY: Mouton Publishers, 1982. pp 7 – 16 & pp 103 – 105

3. Kaul, A.N. 'A New Province of Writing,' *The Domain of the Novel: Reflections on Some Historical Definitions*. Routledge, 2021. pp 20-36

UNIT – II (20 Hours)

UNIT II: Reading Poetry

1. John Milton: 'On His Blindness'
2. William Wordsworth: 'Composed Upon Westminster Bridge'
3. Emily Dickinson: '341 After Great Pain'
4. Rabindranath Tagore: 'Where the Mind is Without Fear'
5. Ferguson, Margaret, Mary Jo Salter and Jon Stallworthy, 'Versification and Poetic Syntax', *The Norton Anthology of Poetry, 5th edition*. NY and London: W.W. Norton & Company, 2005. pp 2021 – 2065

UNIT – III (20 Hours)

UNIT III: Reading Drama

1. Mahesh Dattani: *Tara*
2. Watson, G.J. 'The Nature of Drama', *Drama: An Introduction* (London: Macmillan, 1983)
3. Tanvir, Habib. *It Must Flow: A Life in Theatre*
<http://www.seagullindia.com/stq/pdf/STQ%20Issue%2010.pdf>
4. Day, Gary. 'Introduction', *Class*. UK: Routledge, 2001. pp 1 – 18

Practical component (if any) - NIL

Essential/recommended readings- as listed in the units

Suggestive readings:

1. Hudson, William Henry. *An Introduction to the Study of Literature*. New Delhi: Atlantic Publishers and distributors 1998, 2006.
2. Booth, Wayne C. *The Rhetoric of Fiction*. University of Chicago Press, 1983.
3. King, Bruce. 'Introduction', *Modern Indian Poetry in English*. New Delhi: OUP, 2nd edn. 2005.
4. Dharwadker, A.B. *Theatres of Independence: Drama, theory and urban performance in India since 1947*. University of Iowa Press, 2009

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE – 2 (DSC-2): European Classical Literature

Credit distribution, Eligibility and Prerequisites of the Course

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|--------------------------------------|---------|-----------------------------------|----------|---------------------|-------------------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| DSC 2- European Classical Literature | 4 | 3 | 1 | 0 | Passed Class XII with English | NIL |

Learning Objectives:

The Learning Objectives of this course are as follows:

- To offer students a basic understanding of the mode of thought and understanding in classical Europe and contextualize the western classical texts within literary studies in a scholarly manner.

Learning outcomes:

The Learning Outcomes of this course are as follows:

- By studying this course, students will be able to gain an understanding of the classical, that is valuable in itself and as a frame of reference for subsequent periods of literary studies

SYLLABUS OF DSC- 2

UNIT – I (20 Hours)

- Homer: *The Odyssey*

UNIT – II (20 Hours)

- Aristotle: *Poetics*
- Sophocles: *Antigone*

UNIT – III (20 Hours)

- Aristophanes: *Lysistrata*

Practical component (if any) - NIL

Essential/recommended readings- as listed in the units

Suggestive readings (if any):

1. Plato, 'Book X', *The Republic*. tr. Desmond Lee, London: Penguin, 2007.
2. Horace, 'Ars Poetica', *Horace: Satires, Epistles and Ars Poetica*. tr. H. Rushton Fairclough, Cambridge Mass.: Harvard University Press, 2005.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE– 3 (DSC-3): Indian Classical Literature

Credit distribution, Eligibility and Prerequisites of the Course

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|-----------------------------|---------|-----------------------------------|----------|---------------------|-------------------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Indian Classical Literature | 4 | 3 | 1 | 0 | Passed Class XII with English | NIL |

Learning Objectives

The Learning Objectives of this course are as follows:

- To offer students a foundational understanding of Indian classical literary tradition.
- To introduce students to a rich and diverse literature from two classical languages of India, Sanskrit and Tamil.

Learning outcomes

The Learning Outcomes of this course are as follows:

- By studying this course, students will be able to gain knowledge of the aesthetic and cultural values that serve as the groundwork for later developments in Indian philosophical and social change.

SYLLABUS OF DSC-3

UNIT – I (20 Hours)

1. Vyasa. Selections from *The Mahabharata*, from *The Mahabharata of Krishna-Dwaipayana Vyasa*, trans. K. M. Ganguli (Delhi: Munshiram Manoharlal Publishers, 2012).

- a) 'The Dicing' and 'Sequel to Dicing', Book 2, Sabha Parva Section XLVI-LXXII
- b) 'The Temptation of Karna', Book 5, Udyog Parva, Section CXL-CXLVI.
- c) 'Krishna's Peace Proposal', Book 5, Udyog Parva, Section LXXXIX-CXXXI

UNIT – II (20 Hours)

1. Kalidasa. *Abhijnanasakuntalam*, trans. Chandra Rajan, in *Kalidasa: The Loom of Time*. Penguin Classics, 1989, reprint 2000.

UNIT – III (20 Hours)

1. Ilango Atikal. 'The Book of Vanci', *Cilappatikaram*. trans. R. Parthasarathy (Columbia University Press, 1993; Penguin Books India, 2004).

Practical component (if any) - NIL

Essential/recommended readings- as listed in the units

Suggestive readings:

1. Bharata Muni. Selections from *Natyasastra*. (i) Chapter 6, 'The Sentiments'; (ii) Chapter 20, 'Ten Kinds of Play'; (iii) Chapter 35, 'Characteristics of the Jester', trans. Manomohan Ghosh, Calcutta: Asiatic Society of Bengal, 1951. pp105-17; 355-74; 548-50
2. Osho. Selections from *Krishna: The Man and His Philosophy*. (i) Krishna is Complete and Whole (ii) Draupadi: A Rare Woman (iii) Action, Inaction and Non-Action (iv) Rituals, Fire and Knowledge, Delhi: Jaico Publishing House, 1991.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE– 3 (DSC-3): History of the Media

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|-------------------------------|---------|-----------------------------------|----------|---------------------|-------------------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| DSC-3 History of the Media | 4 | 3 | 0 | 1 | Passed Class XII with English | NIL |

Learning Objectives

The Learning Objectives of this course are as follows:

- To help students attain familiarity with the historical evolution of the media.
- To contextualize the developments of the media and its role through political and economic changes across the world.

Learning outcomes

The Learning Outcomes of this course are as follows:

- By studying this course, students will be able to assist any organisation in writing historical aspects in an efficient manner.
- students will also get an opportunity to work as a researcher and place key developments in media technologies across history.

SYLLABUS OF DSC-3

UNIT – I (20 Hours)

UNIT I: History of Print Media

- Print revolution and telegraph
- Yellow Journalism, Evolution of Press in United States and Great Britain
- History of the Press in India: Colonial Period, National Freedom Movement
- Gandhi and Ambedkar as Journalists and Communicators
- Emergency and Post Emergency Era

UNIT – II (20 Hours)

UNIT II: Beginnings of Sound Media

- The coming of Gramophone
- Early history of Radio in India
- Evolution of AIR Programming
- Patterns of State Control; the Demand for Autonomy
- FM: Radio Privatization

UNIT – III (20 Hours)

UNIT III: Visual Media

- The early years of Photography and Cinema
- The coming of Television and the State's Development Agenda
- Commercialization of Programming (1980s)
- Invasion from the Skies: The coming of transnational television (1990s)
- Formation of Prasar Bharati

Practical component (if any) –

A comparative study of a Community Radio project and any of AIR's Local Radio stations. Projects such as case studies of radio programmes, tracing the transformation of certain traditional musical genres like devotional music, ghazals and folk songs with the advent of cassette technology, presentations on the importance of archiving and archives of films, newspapers, music and photographs as well as projects on digital archives of sound and visual media.

**Generic Electives Language Courses offered by the Department of English
(GE Language 1) English Language through Literature-I**

Credit distribution, Eligibility and Pre-requisites of the Course

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course |
|---------------------------------------|---------|-----------------------------------|----------|------------------------|----------------------|-----------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| English Language Through Literature-I | 4 | 3 | 1 | 0 | Passed Class XII | NIL |

Learning Objectives

The Learning Objectives of this course are as follows:

- To develop in students the ability and confidence to process, understand and examine different kinds of texts-verbal and written-that they encounter in everyday life.
- To enable students to identify and understand social contexts and ethical frameworks in the texts they encounter.
- To encourage suitable research—to recognize sources; to distinguish fact from opinion/editorialization; produce objective versus subjective pieces
- To learn skilled comprehension; listening/reading; skimming; summarizing; précis writing; paraphrasing; note making
- To identify key topics/arguments/ideas
- To accomplish writing goals: creating an essay; writing a thesis statement; producing topic sentences; developing organised paragraphs; evolving the skill of producing suitable transitions between paragraphs
- To enable students to write in expository argumentative and descriptive modes
- To help students identify and use the characteristic features of various writing forms: letters; programmes reports/press-releases; newspaper; feature articles; fiction and nonfiction
- To enable students to choose between expository, argumentative, descriptive and narrative writing styles to assemble their own writing

Learning outcomes

The Learning Outcomes of this course are as follows:

- By studying this course, students will be able to inculcate confident expression.
- Students will be able to articulate their own views confidently as their language skills sufficiently empower them to converse, research and collate information from various textual sources—verbal or written.

- निर्गुण काव्य में नारी – अनिल राय

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

हिंदी साहित्य का इतिहास (आदिकाल एवं मध्यकाल)
Core Course - (DSC)-2
कोर कोर्स 2

| COURSE | Nature of the Course | Total Credit | Componets | | | Eligibility Criteria / Prerequisite |
|--|----------------------|--------------|-----------|----------|-----------|--|
| | | | Lecture | Tutorial | Practical | |
| हिंदी साहित्य का इतिहास (आदिकाल एवं मध्यकाल) | कोर कोर्स (DSC) 2 | 4 | 3 | 1 | .. | दिल्ली विश्वविद्यालय के नियम के अनुसार |

Course Objective (2-3)

- हिंदी साहित्य के इतिहास की जानकारी
- प्रमुख इतिहास ग्रन्थों की जानकारी
- आदिकाल, मध्यकाल के इतिहास की जानकारी

Course learning outcomes

- हिंदी साहित्य के इतिहास का ज्ञान
- इतिहास ग्रन्थों का विप्लेषण
- इतिहास निर्माण की पद्धति

Unit 1

(15 घंटे)

हिंदी साहित्य : इतिहास—लेखन

- हिंदी साहित्य के इतिहास—लेखन की परंपरा का परिचय
- हिंदी साहित्य : काल—विभाजन एवं नामकरण

Unit 2

आदिकाल

(15 घंटे)

- आदिकाल का राजनीतिक, सामाजिक, सांस्कृतिक परिवेश और साहित्यिक पृष्ठभूमि
- सिद्ध साहित्य, नाथ साहित्य, जैन साहित्य
- रासो काव्य
- लौकिक साहित्य

Unit 3

(15 घंटे)

भक्तिकाल (पूर्वमध्यकाल)

- भक्ति – आंदोलन और उसका अखिल भारतीय स्वरूप
- भक्ति साहित्य की दार्शनिक पृष्ठभूमि
- भक्तिकाल की धाराएँ :
 1. निर्गुण धारा (ज्ञानाश्रयी शाखा, प्रेममार्गी सूफी शाखा)
 2. सगुण धारा (रामभक्ति शाखा, कृष्णभक्ति शाखा)

Unit 4

(15 घंटे)

रीतिकाल (उत्तरमध्यकाल)

- युगीन पृष्ठभूमि (राजनीतिक, सामाजिक-सांस्कृतिक-आर्थिक परिवेश, साहित्य एवं संगीत आदि कलाओं की स्थिति)
- काव्य – प्रवृत्तियाँ
 1. रीतिबद्ध और रीतिसिद्ध
 2. रीतिमुक्त काव्य
 3. वीरकाव्य, भक्तिकाव्य, नीतिकाव्य

हिंदी सिनेमा और उसका अध्ययन

Generic Elective – (GE) /Language

Core Course - (GE) Credits : 4

| COURSE | Nature of the Course | Total Credit | Componets | | | Eligibility Criteria / Prerequisite |
|-----------------------------|----------------------|--------------|-----------|----------|-----------|--|
| | | | Lecture | Tutorial | Practical | |
| हिंदी सिनेमा और उसका अध्ययन | GE/ Language | 4 | 3 | 1 | .. | दिल्ली विश्वविद्यालय के नियम के अनुसार |

Course Objective (2-3)

हिंदी सिनेमा जगत की जानकारी

सिनेमा के निर्माण, प्रसारण और उपभोग से संबंधित आलोचनात्मक चिंतन की समझ

Course learning outcomes

हिंदी सिनेमा, समाज और संस्कृति की समझ

सिनेमा निर्माण, प्रसार कैमरे की भूमिका आदि की व्यावहारिक समझ

Unit 1

(15 घंटे)

सिनेमा : सामान्य परिचय

1. जनमाध्यम के रूप में सिनेमा,
2. सिनेमा की इतिहास यात्रा
3. सिनेमा के प्रकार – व्यावसायिक सिनेमा, समानान्तर सिनेमा, क्षेत्रीय सिनेमा।

Unit 2

(15 घंटे)

सिनेमा अध्ययन

1. सिनेमा अध्ययन की दृष्टियाँ
2. हिंदी सिनेमा का राष्ट्रीय बाज़ार
3. हिंदी सिनेमा का अंतरराष्ट्रीय बाज़ार

Unit 3

(15 घंटे)

सिनेमा अंतर्वस्तु और तकनीक

1. पटकथा, अभिनय, संवाद, संगीत और नृत्य
2. कैमरा, लाइट, साउंड
3. सिनेमा और सेंसरबोर्ड

Unit 4

(15 घंटे)

सिनेमा अध्ययन की दिशाएँ

1. सिनेमा समीक्षा के विविध पहलू
2. हिंदी की महत्वपूर्ण फिल्मों की समीक्षा का व्यावहारिक ज्ञान (अछूत कन्या, मदर इंडिया, काबुलीवाला, शोले, सद्गति, अमर अकबर एंथनी, पीकू, मधुमती)
3. सिनेमा के दृश्य, तकनीक, कहानी, स्पेशल इफेक्ट, आइटम गीत, गीत, संगीत आदि की समीक्षा

References

1. फिल्म निर्देशन – कुलदीप सिन्हा
2. हिंदी सिनेमा का इतिहास – मनमोहन चड्ढा
3. नया सिनेमा – ब्रजेश्वर मदान
4. भारतीय सिने सिद्धांत – अनुपम ओझा
5. सिनेमा : कल, आज, कल – विनोद भारद्वाज
6. हिंदी सिनेमा के सौ वर्ष – प्रकाशन विभाग
7. हिंदी सिनेमा का समाजशास्त्र, जवरीमल पारख

हिंदी में व्यावहारिक अनुवाद

Generic Elective – (GE) /Language

Core Course - (GE) Credits : 4

| COURSE | Nature of the Course | Total Credit | Componets | | | Eligibility Criteria / Prerequisite |
|-----------------------------|----------------------|--------------|-----------|----------|-----------|--|
| | | | Lecture | Tutorial | Practical | |
| हिंदी में व्यावहारिक अनुवाद | GE/ Language | 4 | 3 | 1 | .. | दिल्ली विश्वविद्यालय के नियम के अनुसार |

Course Objective (2-3)

अनुवाद की समझ विकसित करना
व्यावहारिक और क्षेत्र विशेष में अनुवाद गतिविधियों का परिचय देना

Course learning outcomes

अनुवाद की रोजगारपरक क्षमता विकसित होगी
क्षेत्र विशेष की माँग से परिचित होंगे

Unit 1

(15 घंटे)

भारत का भाषायी परिदृश्य और अनुवाद का महत्व
अनुवाद का स्वरूप
अनुवाद प्रक्रिया

Unit 2

(15 घंटे)

प्रयुक्ति की आधारभूत
अनुवाद और विविध प्रयुक्ति क्षेत्र
अनुवाद की व्यावसायिक संभावनाएँ

Unit 3

(15 घंटे)

अनुवाद व्यवहार –1 (अंग्रेजी से हिंदी तथा हिंदी से अंग्रेजी)
सर्जनात्मक साहित्य
ज्ञान-विज्ञान और तकनीकी साहित्य

Unit 4

(15 घंटे)

अनुवाद व्यवहार 2 (अंग्रेजी से हिंदी तथा हिंदी से अंग्रेजी)
जनसंचार
प्रशासनिक अनुवाद और बैंकिंग अनुवाद

बी.ए. आनर्स हिन्दी पत्रकारिता एवं जनसंचार
(B.A. Honours in Hindi Journalism & Mass Communication)

Category I

DISCIPLINE SPECIFIC CORE COURSE – 1: (जनसंचार माध्यम)

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|---------------------|---------|-----------------------------------|----------|---------------------|----------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| जनसंचार माध्यम | 4 | 3 | | 1 | | |

Learning Objectives

The Learning Objectives of this course are as follows:

- जनमाध्यमों की वृहद जानकारी प्रदान करना।
- जनमाध्यमों के द्वारा भारतीय ज्ञान-परम्परा का प्रसार करना।
- समाज पर प्रिंट- इलेक्ट्रॉनिक माध्यमों के प्रभाव का अध्ययन।
- जनमाध्यमों की कार्यशैली का परिचय कराना।

Learning outcomes

The Learning Outcomes of this course are as follows:

- जनमाध्यमों की तकनीक एवं प्रक्रिया संबंधी समझ विकसित होगी।
- छात्रों के संचार कौशल में वृद्धि होगी।
- सैद्धांतिक एवं प्रायोगिक कार्यो द्वारा रोजगारपरक संभावनाएँ बढ़ेंगी।
- भारतीय ज्ञान परम्परा की समझ से छात्रों के व्यक्तित्व का सर्वांगीण विकास होगा।

SYLLABUS OF DSC-1

UNIT – I संचार और जनसंचार

(12.5 hours)

- संचार- अर्थ परिभाषा, महत्व, संचार के प्रकार

- जनसंचार - अर्थ, स्वरूप, विशेषताएँ, संचार और जनसंचार का अंतर
- संचार की प्रक्रिया एवं प्रतिपुष्टि

UNIT – II जनमाध्यम

(12.5 hours)

- जनमाध्यम- अर्थ, परिभाषा और महत्व
- जनमाध्यमों के कार्य, प्रभाव और अपेक्षाएँ
- सामाजिक परिवर्तन और जनमाध्यम

UNIT – III मुद्रित माध्यम

(12.5 hours)

- मुद्रित माध्यम - सामान्य परिचय, समाचार पत्र और पत्रिकाओं का स्वरूप
- समाचार संकलन, प्रस्तुति एवं रिपोर्ट-लेखन
- मुद्रित माध्यमों का संगठन एवं स्वामित्व

UNIT – IV इलेक्ट्रॉनिक माध्यम

(12.5 hours)

- इलेक्ट्रॉनिक माध्यमों के विविध रूप - रेडियो, टेलीविजन, सिनेमा, इन्टरनेट आधारित मीडिया
- इलेक्ट्रॉनिक माध्यमों में प्रयुक्त पारिभाषिक शब्दावली - रेडियो, टेलीविजन, सिनेमा, इन्टरनेट आधारित मीडिया
- समाज और संस्कृति के विकास में इलेक्ट्रॉनिक माध्यमों की भूमिका

Practical component (25 hours)

- किसी विषय/ क्षेत्र से जुड़ी पत्रिका की सामग्री का अध्ययन।
- रेडियो के किसी कार्यक्रम के प्रभाव का अध्ययन।
- टेलीविजन के किसी एक कार्यक्रम का समीक्षात्मक विश्लेषण।
- ई-पत्र-पत्रिका अथवा न्यूज़ पोर्टल की सामग्री का अध्ययन।
- टेलीविजन के किसी एक कार्यक्रम का सामाजिक - सांस्कृतिक प्रभाव की दृष्टि से अध्ययन।

Essential/recommended readings

1. इंटरनेट पत्रकारिता, सुरेश कुमार, तक्षशिला प्रकाशन

2. पत्रकारिता का इतिहास एवं जनसंचार माध्यम, डॉ. संजीव भानावत, यूनिवर्सिटी पब्लिकेशन जयपुर
3. संचार सिद्धांत की रूपरेखा, डॉ. प्रेमचंद पातंजलि, के. एल. पचौरी प्रकाशन
4. पत्रकारिता के विविध रूप, रामचंद्र तिवारी, आलेख प्रकाशन
5. समाचार अवधारणा और लेखन प्रक्रिया, सुभाष धूलिया, आनंद प्रधान, भारतीय जनसंचार संस्थान प्रकाशन
6. दूरसंचार और सूचना प्रौद्योगिकी, डी. डी. ओझा, ज्ञानगंगा प्रकाशन
7. संचार माध्यमों का वर्ग चरित्र, रेमंड विलियम्स, ग्रंथ शिल्पी प्रकाशन
8. टेलीविजन की कहानी, श्याम कश्यप और मुकेश कुमार, वाणी प्रकाशन

DISCIPLINE SPECIFIC CORE COURSE – 2: हिंदी पत्रकारिता का इतिहास

Credit distribution, Eligibility and Pre-requisites of the Course

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|----------------------------|---------|-----------------------------------|----------|---------------------|----------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| हिंदी पत्रकारिता का इतिहास | 4 | 3 | | 1 | | |

Learning Objectives

The Learning Objectives of this course are as follows:

- हिंदी पत्रकारिता की ऐतिहासिक भूमिका के प्रति समझ विकसित करना।
- स्वतंत्रता संग्राम में हिंदी पत्र-पत्रिकाओं के योगदान से अवगत कराना।
- हिंदी पत्रकारिता के विभिन्न कालखंडों के मूल्यों से परिचित कराना।
- भारतीय बोध के विकास में हिंदी पत्रकारिता के महत्त्व की जानकारी देना।
- भारतीय स्वतंत्रता सेनानी पत्रकारों, साहित्यकारों और संपादकों के अवदान से परिचित कराना।

Learning outcomes

The Learning Outcomes of this course are as follows:

- हिंदी पत्रकारिता के इतिहास एवं विकास के प्रति समझ विकसित होगी।
- आज़ादी की लड़ाई में हिंदी पत्रकारिता के महत्त्व से परिचित होंगे।
- स्वतंत्रता पूर्व एवं पश्चात की पत्रकारिता में आए मूल्य परिवर्तन से अवगत होंगे।
- हिंदी पत्र-पत्रिकाओं के माध्यम से भारतीय बोध का ज्ञान होगा।

SYLLABUS OF DSC- 2

UNIT – I स्वतंत्रता पूर्व हिंदी पत्रकारिता (12.5 hours)

- स्वतंत्रता पूर्व की भारतीय पत्रकारिता का सामान्य परिचय
- स्वतंत्रता संग्राम और हिंदी पत्र-पत्रिकाओं की भूमिका एवं सामाजिक प्रभाव
- स्वतंत्रता पूर्व हिंदी पत्रकारिता की चुनौतियां

UNIT – II स्वतंत्रता पश्चात हिंदी पत्रकारिता (12.5 hours)

- स्वतंत्रता पश्चात हिंदी पत्रकारिता का विकास एवं स्वामित्व
- आजादी के बाद जनतंत्र व विकास की चुनौतियां
- आपातकाल : प्रेस और अभिव्यक्ति की स्वतंत्रता के सवाल

UNIT – III आपातकाल के बाद की हिंदी पत्रकारिता। (12.5 hours)

- राजनैतिक, सामाजिक एवं सांस्कृतिक परिवर्तन और हिंदी पत्र-पत्रिकाएं
- इलेक्ट्रॉनिक माध्यमों की हिंदी पत्रकारिता
- हिंदी पत्रकारिता की समाचार सामग्री

UNIT – IV भूमंडलीकरण के बाद की हिंदी पत्रकारिता (12.5 hours)

- भूमंडलीकरण और हिंदी पत्रकारिता - हिंदी पत्रकारिता के समक्ष चुनौतियां एवं ज्वलंत मुद्दे
- हिंदी पत्रकारिता का व्यवसायीकरण - विज्ञापन और पत्रकारिता का संबंध, पेड न्यूज़, ब्रेकिंग न्यूज़, इन्फोटेनमेंट
- डिजिटलीकरण, ऑनलाइन हिंदी पत्रकारिता का स्वरूप

Practical component (25 hours)

- स्वतंत्रता आंदोलन में हिंदी पत्रकारिता की भूमिका पर रिपोर्ट, फीचर, लेख तैयार करना।

- पत्रकारों, स्वतंत्रता सेनानियों और संपादकों पर रिपोर्ट, लेख, फीचर लेखन।
- स्वतंत्रता सेनानी पत्रकार, संपादकों पर ब्लॉग लेखन, यूट्यूब वीडियो, पॉडकास्ट, वृत्तचित्र तैयार करना।
- प्रेस के संदर्भ में अभिव्यक्ति की स्वतंत्रता और आपातकाल पर परियोजना कार्य।

Essential/recommended readings

1. हिंदी पत्रकारिता : विविध आयाम, डॉक्टर वेद प्रताप वैदिक, हिंदी बुक सेंटर

| भारतीय समाज और संचार | 4 | 3 | | 1 | | |

Learning Objectives

The Learning Objectives of this course are as follows:

- भारतीय समाज एवं संस्कृति की समझ विकसित करना।
- भारत की दर्शन, धर्म की विरासत से परिचित कराना
- भारतीय साहित्य एवं कला से अवगत कराना।
- भारतीय भाषाओं और भारतीय जनमानस के अंतरसंबंधों की पड़ताल करना।

Learning outcomes

The Learning Outcomes of this course are as follows:

- भारत की सामाजिक आर्थिक सांस्कृतिक पृष्ठभूमि की समझ विकसित होगी।
- छात्रों में भारतीय समाज की संरचना और मूल्य व्यवस्था के प्रति सकारात्मक दृष्टिकोण निर्मित होगा।
- भारतीय धर्म, दर्शन और कलाओं की विरासत से परिचित होंगे।
- विद्यार्थी भारत के भाषिक वैविध्य के ज्ञान एवं सौंदर्य से अभिभूत होंगे।

SYLLABUS OF DSC-3

UNIT – I भारतीय समाज

(12.5 hours)

- भारतीय समाज का स्वरूप
- भारतीय समाज की मूल्य-व्यवस्था- पारिवारिक, सामाजिक, राष्ट्रीय और मानवीय
- भारतीय समाज की चुनौतियां और संभावनाएं

UNIT – II भारतीय धर्म, दर्शन और संस्कृति

(12.5 hours)

- भारतीय संस्कृति की प्रमुख विशेषताएं
- प्रमुख धर्म : सामान्य परिचय
- प्रमुख भारतीय दर्शन

UNIT – III भाषा, साहित्य और कलाएँ

(12.5 hours)

- प्रमुख भारतीय भाषाओं का संक्षिप्त परिचय
- महाभारत और रामचरित मानस का सामान्य परिचय
- प्रमुख कलाएँ : वास्तुकला, मूर्तिकला, चित्रकला, संगीत

UNIT – IV संचार की भारतीय परंपरा

(12.5 hours)

- लोकगीत, लोककथा

- लोकनृत्य, लोकनाट्य
- पारंपरिक भारतीय जनसंचार (पर्व, मेले, नुक्कड़ नाटक, कठपुतली आदि)

Practical component (25 hours)

भारतीय धर्म और दर्शन से सम्बंधित महत्वपूर्ण ग्रंथों पर रिपोर्ट लेखन

1. किसी सांस्कृतिक कार्यक्रम की रिपोर्टिंग
2. किसी लोकनाट्य को देखना और उसका समीक्षात्मक लेखन
3. भारतीय समाज की किसी समस्या पर समाधानपरक मौलिक लेख लिखना
4. चयनित विषयों पर समूह चर्चा और परियोजना कार्य
5. प्रमुख कालजयी रचनाओं की प्रासंगिकता पर लेखन/समूह चर्चा
6. लोकनाट्य के रूप में रामलीला और रासलीला का जनसमाज पर पड़ने वाले प्रभाव का सर्वेक्षण एवं लेखन

Essential/recommended readings

1. संस्कृति के चार अध्याय, रामधारी सिंह दिनकर, साहित्य अकादमी

6. मीडिया में सामाजिक लोकतंत्र की तलाश, श्यौराज सिंह बेचैन, अनामिका प्रकाशन
7. संस्कृति, जनसंचार और बाज़ार, नन्द भारद्वाज, सामयिक प्रकाशन

GENERIC ELECTIVES (GE-2) फोटो पत्रकारिता

Credit distribution, Eligibility and Pre-requisites of the Course

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course | Department offering the course |
|---------------------|---------|-----------------------------------|----------|---------------------|----------------------|-----------------------------|--------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | | |
| फोटो पत्रकारिता | 4 | 3 | | 1 | | | |

Learning Objectives

The Learning Objectives of this course are as follows:

- फोटो पत्रकारिता की समझ विकसित करना।
- व्यावहारिक एवं सैद्धांतिक ज्ञान देना।
- फोटोग्राफी के रचनात्मक पहलुओं का ज्ञान कराना।
- विभिन्न जनसंचार माध्यमों में फोटो के उपयोग एवं महत्व से अवगत कराना।

Learning outcomes

The Learning Outcomes of this course are as follows:

- फ़ोटो पत्रकारिता का व्यावहारिक ज्ञान विकसित होगा।
- छात्रों में रोज़गार उन्मुख कौशल विकसित होगा।
- छात्र विषय, माध्यम एवं प्रकृति के अनुरूप फ़ोटोग्राफी सम्बन्धी तकनीकी कौशल विकसित होगा।
- छात्र 'प्रिंट और इलेक्ट्रॉनिक माध्यमों में फ़ोटो शूट प्रविधि में प्रशिक्षित होंगे।

SYLLABUS OF GE-2

UNIT – I फ़ोटो पत्रकारिता: परिचय (12.5 hours)

- फ़ोटो पत्रकारिता का स्वरूप एवं फ़ोटो पत्रकार के गुण
- फ़ोटोग्राफी के मूलभूत सिद्धांत
- फ़ोटो पत्रकारिता के क्षेत्र एवं संभावनाएँ

UNIT – II फ़ोटोग्राफी का तकनीकी पक्ष (12.5 hours)

- फ़ोटो शूट प्रविधि - प्रकाश - व्यवस्था स्टूडियो के अंदर और बाहर
- फ़ोटोग्राफी : कैमरा, सम्पादन, स्पैशल इफेक्ट्स
- शॉट्स के प्रकार - रोल कैमरा, फ्रेम, शॉट, कैमरा एंगल, वाइड शॉट, लॉन्ग शॉट, मिड शॉट, क्लोज शॉट, डिजीटल कैम क्लोज अप शॉट, एक्सट्रीम क्लोजअप शॉट, टू, शॉट, ओवर द शोल्डर शॉट, मूविंग शॉट, रिवर्स शॉट, ट्रैकिंग शॉट, जूम शॉट पेन शॉट, टिल्ट शॉट, टिल्ट एंड पैन शॉट, लो एंड हाई एंगल शॉट स्टॉक शॉट प्वाइंट ऑफ व्यू फेरिंग

UNIT – III फ़ोटोग्राफी का रचनात्मक पक्ष (12.5 hours)

- फ़ोटोग्राफी का कलात्मक रूप
- फ़ोटोग्राफी रिसर्च एवं समीक्षा
- फीचर, समाचार, रिपोर्टाज और डॉक्यूमेंट्री में फ़ोटोग्राफी का महत्व

UNIT – IV फ़ोटोग्राफी का क्षेत्र और संपादन (12.5 hours)

- विभिन्न माध्यमों के लिए फ़ोटोग्राफी
- फ़ोटोग्राफी के प्रकार
- फ़ोटोग्राफी और वीडियो सम्पादन

Practical component (13- 14 Week)

- खेल या पर्यटन से सम्बंधित 10 फ़ोटो का निर्माण।

- प्रिंट मीडिया के लिए फोटोशूट और कैप्शन तैयार करना।
- आउटडोर शूटिंग और पर्यटन डॉक्यूमेंट्री तैयार करना।
- किसी एक फोटो प्रदर्शनी का भ्रमण और साक्षात्कार के आधार पर एक परियोजना कार्य तैयार करना।
- किसी एक सामाजिक विषय पर फोटो डॉक्यूमेंट्री तैयार करना।

Essential/recommended readings

1. प्रसारण और फोटो पत्रकारिता, ओम गुप्ता, कनिष्क प्रकाशन
2. संचार और फोटो पत्रकारिता, रमेश मेहरा, तक्षशिला प्रकाशन
3. फोटो पत्रकारिता, नवल जायसवाल, सामयिक प्रकाशन
4. प्रकाश लेखन और फोटो पत्रकारिता, गुलाब कोठारी, पत्रिका प्रकाशन
5. फोटो जर्नलिज्म, बी. के. देशपांडे, सोनाली पब्लिकेशन
6. फोटो जर्नलिज्म एंड कम्युनिकेशन टेक्नोलॉजी, पंकज सेठी, नवयुग पब्लिशर्स एंड डिस्ट्रीब्यूटर

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

BA (Prog.) Hindi

DSC-I

हिंदी भाषा और साहित्य का इतिहास

Course Objective (2-3)

हिंदी भाषा और साहित्य के इतिहास का परिचय प्राप्त होगा।

साहित्य इतिहास के विभिन्न कालों की प्रमुख प्रवृत्तियों की आलोचनात्मक समझ विकसित होगी।

Course Learning Outcomes

इतिहास के प्रति आलोचनात्मक-विश्लेषणात्मक ज्ञान के द्वारा हिंदी भाषा और साहित्य इतिहास को संतुलित रूप से प्रस्तुत किया जा सकेगा।

इकाई-1

(क) हिंदी भाषा का विकास : सामान्य परिचय

1. हिंदी भाषा का उद्भव
2. हिंदी भाषा की बोलियाँ
3. हिंदी भाषा का विकास : आदिकालीन हिंदी, मध्यकालीन हिंदी, आधुनिक हिंदी

(ख) हिंदी साहित्य का इतिहास : आदिकाल

1. आदिकाल : काल-विभाजन एवं नामकरण
2. आदिकाल की प्रमुख प्रवृत्तियाँ (रासो साहित्य, धार्मिक साहित्य, लौकिक साहित्य)

इकाई-2

हिंदी साहित्य का इतिहास : भक्तिकाल

1. भक्ति आंदोलन : उद्भव और विकास
2. भक्तिकाल की प्रमुख प्रवृत्तियाँ (संत काव्य, सूफी काव्य, राम काव्य, कृष्ण काव्य)

इकाई-3

हिंदी साहित्य का इतिहास : रीतिकाल

1. रीतिकाल : नामकरण विषयक विभिन्न मतों की समीक्षा
2. रीतिकाल की प्रमुख प्रवृत्तियाँ (रीतिबद्ध काव्य, रीतिसिद्ध काव्य, रीतिमुक्त काव्य)

इकाई-4

हिंदी साहित्य का इतिहास : आधुनिक काल

1. मध्यकालीन बोध तथा आधुनिक बोध (संक्रमण की परिस्थितियाँ)
2. आधुनिक हिंदी कविता की प्रमुख प्रवृत्तियाँ (भारतेंदु युग, द्विवेदी युग, छायावाद, प्रगतिवाद, प्रयोगवाद, नई कविता)
3. गद्य विधाओं का उद्भव एवं विकास : उपन्यास, कहानी, नाटक, निबंध

References

5. हिंदी साहित्य के इतिहास पर कुछ नोट्स : डॉ. रसाल सिंह
6. हिंदी साहित्य का अतीत : विष्णुनाथ प्रसाद मिश्र
7. हिंदी का गद्य साहित्य : रामचंद्र तिवारी
8. हिंदी गद्य : विन्यास और विकास : रामस्वरूप चतुर्वेदी

Teaching Learning Process

व्याख्यान और सामूहिक चर्चा

1 से 3 सप्ताह : इकाई-1

4 से 6 सप्ताह : इकाई-2

7 से 9 सप्ताह : इकाई-3

10 से 12 सप्ताह : इकाई-4

13 से 14 सप्ताह : सामूहिक चर्चा, विशेष व्याख्यान एवं आंतरिक मूल्यांकन संबंधी गतिविधियाँ

Assessment Methods

टेस्ट और असाइनमेंट

Keywords

इतिहास, भाषा और आलोचना से जुड़ी शब्दावली

Discipline Specific Core-2

हिंदी सिनेमा और उसका अध्ययन

Course Objective (2-3)

सिनेमा के निर्माण और उपभोग या आलोचना की व्यावहारिक समझ विकसित करना

हिंदी सिनेमा के विकास अध्ययन

कुछ प्रमुख फिल्मों के माध्यम से सिनेमा में आ रहे बदलाव को समझना

Course Learning Outcomes

सिनेमा की व्यावहारिक और आलोचनात्मक समझ विकसित होगी।

सिनेमा के विकास के माध्यम से भारत के मनोरंजन जगत में आ रहे बदलाव को समझ सकेंगे।

इकाई-1

कला विधा के रूप में सिनेमा और उसकी सैद्धांतिकी

इकाई—2

हिंदी सिनेमा : उद्भव और विकास

इकाई—3

सिनेमा में कैमरे की भूमिका

इकाई—4

नयी तकनीक और सिनेमा : संभावनाएं और चुनौतियां
(संदर्भ : मुगलेआजम, मदर इंडिया, पीके)

References

1. हिंदी सिनेमा का इतिहास : मनमोहन चड्ढा
2. सिनेमा, नया सिनेमा : ब्रजेष्वर मदान
3. सिनेमा : कल, आज और कल : विनोद भारद्वाज
4. हिंदी का मौखिक परिदृश्य : करुणा षंकर उपाध्याय
5. हिंदी का मौखिक परिदृश्य : कौषल कुमार गोस्वामी

Teaching Learning Process

व्याख्यान, सामूहिक चर्चा, वीडियो क्लिप का अध्ययन और उसे बनाना, कैमरे का कक्षा के बाहर अध्ययन

1 से 3 सप्ताह : इकाई—1

4 से 6 सप्ताह : इकाई—2

7 से 9 सप्ताह : इकाई—3

10 से 12 सप्ताह : इकाई—4

13 से 14 सप्ताह : सामूहिक चर्चा, विशेष व्याख्यान एवं आंतरिक मूल्यांकन संबंधी गतिविधियाँ

COMMON POOL OF GENERIC ELECTIVES (GE)
OFFERED BY DEPARTMENT OF HINDI

‘हिंदी-क’ (उन विद्यार्थियों के लिए जिन्होंने 12वीं कक्षा तक हिंदी पढ़ी है।)

हिंदी : भाषा और साहित्य

Course Objective (2-3)

हिंदी भाषा और साहित्य की सामान्य जानकारी विकसित करना।

राष्ट्रभाषा, राजभाषा और संपर्क भाषा के रूप में हिंदी की स्थिति का परिचय देना।

विशिष्ट कविताओं के अध्ययन-विश्लेषण के माध्यम से कविता-संबंधी समझ विकसित करना।

Course Learning Outcomes

हिंदी साहित्य और भाषा के विकास की स्पष्ट समझ विकसित होगी।

आधुनिक आवश्यकताओं के अनुरूप राष्ट्रभाषा, राजभाषा और संपर्क भाषा की जानकारी प्राप्त होगी।

इकाई-1

(क) हिंदी भाषा का उद्भव एवं विकास

(ख) राष्ट्रभाषा, राजभाषा और संपर्क-भाषा के रूप में हिंदी

इकाई-2

हिंदी साहित्य का इतिहास

(क) हिंदी साहित्य का इतिहास (आदिकाल, मध्यकाल) सामान्य परिचय

(ख) हिंदी साहित्य का इतिहास (आधुनिक काल) सामान्य परिचय

इकाई-3

(क) संत-काव्य (संग्रह) : परशुराम चतुर्वेदी; किताब महल, इलाहाबाद; 1952

संत रैदासजी

पद : 1, 4, और 19

(ख) भूषण – भूषण ग्रंथावली, सं. आचार्य विष्णुनाथ प्रसादमिश्र, वाणी प्रकाशन, दिल्ली, 1998;
कवित्त संख्या 409, 411, 412

(ग) बिहारी — बिहारी रत्नाकर, सं. जगन्नाथदास रत्नाकर बी.ए., प्रकाशन संस्थान, नई दिल्ली, सं. 2006, दोहा 1, 10, 13, 32

इकाई—4

- आधुनिक हिंदी कविता
- माखनलाल चतुर्वेदी : बेटी की विदाई
- जयशंकर प्रसाद : हिमाद्रि तुंग शृंग से
- नागार्जुन : बादल को घिरते देखा है

References

9. रामचंद्र शुक्ल : हिंदी साहित्य का इतिहास

हिंदी भाषा और साहित्य की सामान्य जानकारी विकसित करना।

विशिष्ट कविताओं के अध्ययन—विश्लेषण के माध्यम से कविता संबंधी समझ विकसित करना।

Course Learning Outcomes

हिंदी साहित्य और भाषा के विकास की स्पष्ट समझ विकसित होगी।
विषिष्ट कविताओं के अध्ययन से साहित्य की समझ विकसित होगी।

इकाई—1

हिंदी भाषा और साहित्य

हिंदी भाषा का उद्भव और विकास

हिंदी की प्रमुख बोलियों का परिचय

हिंदी साहित्य का इतिहास : संक्षिप्त परिचय (आदिकाल, मध्यकाल)

हिंदी साहित्य का इतिहास : संक्षिप्त परिचय (आधुनिक काल)

इकाई—2

भक्तिकालीन कविता :

(क) कबीर — कबीर ग्रंथावली, सं. श्यामसुंदर दास, नागरीप्रचारिणी सभा, वाराणसी 17वां संस्करण, सं. 2049 वि.

साखी : गुरुदेव कौ अंग — 24, 25, 26, 27, 28, 33, 34

(ख) तुलसी : 'रामचरितमानस' गीताप्रेस, गोरखपुर से 'केवटप्रसंग'

इकाई—3

— मैथिलीषरण गुप्त : नर हो न निराष करो

— सूर्यकांत त्रिपाठी 'निराला' — तोड़ती पत्थर

— केदारनाथ अग्रवाल : धूप

इकाई—4

आधुनिक कविता

— सुभद्रा कुमार चौहान : बालिका का परिचय

— निराला : तोड़ती पत्थर

4. बिहारी की वाग्विभूति : विष्णुनाथ प्रसाद मिश्र
5. हिंदी साहित्य का इतिहास : रामचंद्र शुक्ल
6. डॉ. रसाल सिंह : हिंदी साहित्य के इतिहास पर कुछ नोट्स

Teaching Learning Process

सीखने की इस प्रक्रिया में हिंदी साहित्य और हिंदी कविता को मजबूती प्रदान करना है। कालक्रम के विद्यार्थी युग बोध कोठी से जान सकेंगे। छात्र कविता के माध्यम से उसमें निहित मानवतावादी दृष्टिकोण को बेहतर तरीके से जान सकेंगे। हिंदी भाषा आज तेजी से वैश्वीकृत हो रही है। ऐसे में कविता की भूमिका और भी अधिक महत्वपूर्ण हो जाती है। साहित्य के आरंभ से ही कविता ने समय और समाज को प्रभावित किया है और मानवीय आचरण को संतुलित करने में महत्वपूर्ण भूमिका निभाई है। अतः शिक्षण में हिंदी कविता छात्रों

के दृष्टिकोण को और भी अधिक परिपक्व करेगी। प्रस्तुत पाठ्यक्रम को निम्नांकित सप्ताहों में विभाजित किया जा सकता है :

1 से 3 सप्ताह : इकाई-1

4 से 6 सप्ताह : इकाई-2

7 से 9 सप्ताह : इकाई-3

10 से 12 सप्ताह : इकाई-4

13 से 14 सप्ताह : सामूहिक चर्चा, विशेष व्याख्यान एवं आंतरिक मूल्यांकन संबंधी गतिविधियाँ

Add the following:

Syllabi of Semester-I of the following departments under Faculty of Science based on Under Graduate Curriculum Framework -2022 to be implemented from the Academic Year 2022-23.

FACULTY OF SCIENCE

DEPARTMENT OF BOTANY

BSc. (Hons.) Botany
Category-I

DISCIPLINE SPECIFIC CORE COURSE – 1: Plant Diversity and Evolution

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|--------------------------------------|--------------|-----------------------------------|----------|---------------------|--|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Plant Diversity and Evolution | DSC-1 | 2 | 0 | 2 | 10+2 from any recognized Board with Biology & Candidates must appear in CUET in the following subject combination: Physics+ Chemistry+ Biology/Biotechnology | Nil |

Learning Objectives

The Learning Objectives of this course are as follows:

- To make students aware about the diversity of plants and microbes present on the planet and how are they possibly related to each other in light of evolution.

Learning outcomes

The Learning Outcomes of this course are as follows:

By studying this course students will gain basic knowledge on

- The diversity of plants and microbes
- Their general characteristics
- Various groups of plants and their evolutionary relationships
- Basic principles and concepts of evolution that contribute to plant diversity

SYLLABUS OF DSC-1

Unit1: Origin of life

Hours: 6

Principles and concepts of evolution, Tree of Life, and classification (upto six kingdoms)

Unit2: Bacteria

Hours: 4

General characteristic features, cell structure, asexual reproduction and modes of gene transfer (conjugation, transformation and transduction), brief introduction to Archaeobacteria.

Unit3: Viruses

Hours: 4

General characteristic features, replication, RNA virus (structure of TMV), DNA virus (structure of T-phage), Lytic and Lysogenic life cycle (Lambda phage).

Unit4: Algae

Hours: 6

General characteristic features, cell structure, range of thallus, methods of reproduction and evolutionary classification (only upto groups). Brief account of *Spirogyra*, *Sargassum*.

Unit5: Fungi

Hours: 8

General characteristic features, reproduction and broad classification. Myxomycetes and their similarities with fungi, plants and animals, Brief account of *Rhizopus*, *Agaricus*. Introduction to lichens.

Unit6: Bryophytes

Hours: 8

General characteristic features and reproduction, adaptation to land habit, broad classification, evolutionary trends in Bryophytes. Brief account of *Marchantia*, *Funaria*.

Unit7: Pteridophytes**Hours: 8**

General characteristic features and reproduction, broad classification, evolutionary trends in Pteridophytes, affinities with Bryophytes. Brief account of *Adiantum*, *Selaginella*.

Unit8: Gymnosperms**Hours: 8**

General characteristic features and reproduction, broad classification, evolutionary trends in Gymnosperm, affinities with Pteridophytes. Brief account of *Gnetum*, *Ephedra*.

Unit9: Angiosperms**Hours: 8**

General characteristic features and reproduction, Concept of natural, artificial and phylogenetic system of classification. Affinities with Gymnosperms.

Practical component (60 Hours)

1. To study structure of TMV and Bacteriophage (electronmicrographs/models). (01)
2. To study morphology of *Volvox*, *Oedogonium*, *Chara*, *Fucus* and *Polysiphonia* (Temporary preparation/specimens/slides). (02)
3. To study *Rhizopus*, *Penicillium*, *Alternaria* (Temporary preparations), symptoms of rust of wheat, white rust of crucifer (specimen). (02)
4. To study *Marchantia* (morphology, WM of rhizoids and scales), *Anthoceros* (morphology), *Sphagnum* (morphology, WM of leaf), *Funaria* (morphology WM of rhizoid and leaf). (02)
5. To study *Selaginella* (morphology, WM of strobilus and spores), *Equisetum* (morphology, WM of spores), *Pteris* (morphology, tease mount of sporangia and spores). (03)
6. To study *Cycas* (morphology, leaf, leaflet anatomy, coralloid root, bulbils, megasporophyll and microsporophyll); *Pinus* (morphology of dwarf shoot, needle anatomy, male and female cones, WM pollen grains). (02)
7. To study variation in leaf venations in dicots and monocots (at least two specimens each). (01)
8. To study the types of inflorescences in angiosperms (through specimens).(01)
9. To study the types of fruits in angiosperms (through specimens). (01)

DISCIPLINE SPECIFIC CORE COURSE – 2: Cell Biology: Organelles and

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|---|---------|-----------------------------------|----------|---------------------|---|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Cell Biology: Organelles and Biomolecules | DSC-2 | 2 | 0 | 2 | 10+2 from any recognized Board with Biology & Candidates must appear in CUET in the following subject combination: Physics+Chemistry+ Biology/ Biotechnology | Nil |

Learning Objectives

The Learning Objectives of this course are as follows:

- Cell as a structural and functional unit of life.
- Types of biomolecules (proteins, carbohydrates, lipids and nucleic acids) and their roles in cell structure and function.
- Structures of different organelles and their role in fundamental metabolic processes of a cell.

Learning outcomes

The Learning Outcomes of this course are as follows:

By studying this course students will gain basic knowledge on

- The relationships between the properties of macromolecules, their cellular activities and biological functions.
- Physico-chemical composition of organelles and their functional organization.
- Basic principles and concepts of evolution that contribute to plant diversity.

SYLLABUS OF DSC-2

Unit 1: Biomolecules**Hours: 10**

Types of chemical bonds and their biological significance. Structure and biological roles of carbohydrates, lipids, proteins and nucleic acids. ATP: structure and its role as an energy currency molecule.

Unit 2: The Cell**Hours: 04**

Cell as a unit of structure and function; Characteristics of prokaryotic and eukaryotic cells; Origin of eukaryotic cell (Endosymbiotic theory).

Unit 3: Cell Wall and Plasma Membrane**Hours: 06**

Chemistry, structure and function of Plant Cell Wall. Singer and Nicolson's fluid mosaic model of cell membrane.

Unit 4: Cell Organelles: Structure and function of the following Organelles**Hours: 11**

Nucleus: Structure and function (nuclear envelope, nuclear pore complex, nuclear lamina); types of chromatins; nucleolus.

Chloroplast and Mitochondria: Structural organization; Function; Semi- autonomous nature of mitochondria and chloroplast.

Endomembrane system: Endoplasmic Reticulum – Structure and function of RER and SER, protein folding, processing in ER, export of proteins and lipids; Golgi Apparatus Organization, protein glycosylation, protein sorting and export from Golgi Apparatus. Introduction to post- translational modifications.

Peroxisome and Lysosomes: Structure and function.

Cytoskeleton: Role and structure of microtubules, microfilaments, intermediary filament and motor proteins.

Unit 5: Cell division**Hours: 08**

Eukaryotic cell cycle, mitosis and meiosis; regulation of cell cycle.

Practical component (60 Hours):

1. Study of cell and its organelles with the help of electron micrographs and other digital resources. (02)
2. Study of plant cell structure with the help of epidermal peel mount of *Allium/Rhoeo/Crinum*. (01)
3. Microchemical tests for carbohydrates (reducing, non-reducing sugars and starch), lipids and proteins. (02)
4. Separation of chloroplast pigments by paper chromatography/ Thin Layer Chromatography. (01)
5. Separation of amino acids by paper chromatography. (01)
6. Study the effect of organic solvent and temperature on membrane permeability. 02
7. Demonstration of the phenomenon of protoplasmic streaming in *Hydrilla* leaf. (01)
8. Demonstration of the phenomenon of plasmolysis and deplasmolysis. (01)
9. Demonstration of separation of biomolecules by dialysis. (01)

Essential/recommended Readings:

- Hardin, J. and Lodolce, J.P. (2022). *Becker's World of the cell*, 10th edition, Pearson
- Berg, J.M., Tymoczko, J.L., Stryer, L. (2011). *Biochemistry*. New York, NY: W. H. Freeman and Company.
- Campbell, N. A. (2020). *Biology: A Global Approach*, 12th Edition, Pearson
- Campbell, P.N., Smith, A.D. (2011). *Biochemistry Illustrated*, 4th edition. London, UK: Churchill Livingstone.

Suggested readings:

1. Cooper, G.M., Hausman, R.E. (2019). *The Cell: A Molecular Approach*, 7th edition. Sinauer/OUP.
2. Iwasa, J, Marshall, W. (2020). *Karps's Cell Biology*, 9th edition, New Jersey, U.S.A.: John Wiley & Sons.
3. Majumdar, R., Sisodia, R. (2019). *Laboratory Manual of Cell Biology*, with reference to Plant Cells. New Delhi, Delhi: Prestige Publication.
4. Nelson, D.L., Cox, M.M. (2021). *Lehninger Principles of Biochemistry*, 8th edition. New York, NY: W.H. Freeman and Company.
5. Reven, F.H., Evert, R.F., Eichhorn, S.E. (1992). *Biology of Plants*. New York, NY: W.H. Freeman and Company.
6. Tymoczko, J.L., Berg, J.M., Stryer, L. (2012). *Biochemistry: A short course*, 2nd edition. New York, NY: W.H. Freeman and Company.

Note: Examination scheme and modes shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE – 3: Basic Laboratory and Field Skills in

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|---|--------------|-----------------------------------|----------|---------------------|--|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Basic Laboratory and Field Skills in Plant Biology | DSC-3 | 2 | 0 | 2 | 10+2 from any recognized Board with Biology & Candidates must appear in CUET in the following subject combination: Physics+ Chemistry+ Biology/ Biotechnology | Nil |

Learning Objectives

The course will help students gain knowledge about:

- To learn fundamental skills important for performing laboratory and field experiments

Learning outcomes

This course will be able to demonstrate basic knowledge and understanding of:

- Good laboratory practices, management of laboratory waste, understanding hazards and risks to ensure a safe laboratory environment.
- Basics of measurements, units and common mathematical calculations, sampling and data collection.
- Operation and maintenance of instruments
- Presentation, analysis of data and interpretation of results.

SYLLABUS OF DSC-3

Unit 1: Lab safety and good lab practices

Hours: 08

General laboratory safety, good laboratory practices, biosafety measures (first-aid practices to be followed in case of burn, acid spills and injury), safety symbols, lab safety equipments (fire extinguisher, fume hood, safety glasses), classes of laboratory chemicals, maintenance and handling of chemicals (Labels, Quality - LR/ AR/ Molecular biology grade/ HPLC grade; Expiry date; Precautions for use), Disinfectants, Biocontainment, Disposal of hazardous chemicals, radioactive and biological waste, Laboratory waste management.

Unit 2: Use and maintenance of Laboratory equipment

Hours: 08

Weighing balance (Top loading and Analytical), pH meter (calibration and use), magnetic stirrer, pipettes and micropipettes, autoclave, laminar airflow, BOD incubator, incubator shaker, micrometer, haemocytometer, spectrophotometer, Agarose gel electrophoresis unit, SDS PAGE unit, centrifuge, distillation unit, conductivity meter, Lux meter.

Unit 3: Microscopy, sample and slide preparation

Hours: 05

Microscopes (Dissecting, Compound and Electron microscopes), Fixation and Preservation (for light and electron microscopy); staining, mounting; basic introduction to other types of microscopes (Confocal, Fluorescence)

Unit 4: Measurements and calculations

Hours: 04

Units of measurements and conversion from one unit to another, measurement of volumes of liquids, Weighing, calculations: scientific notations, powers, logarithm and fractions.

Unit 5: Solutions and Buffers

Hours: 04

Molarity, Molality, Normality, percent solution, stock solution, standard solution, dilution, dilution series, pH, acids and bases, buffers - phosphate, Tris- acetate, Tris- Cl and Citrate buffer.

Unit 6: Basic culturing techniques**Hours: 06**

Basic culture media (LB, YEB, MS)- liquid and solid, Culture techniques: plating (streak, spread & pour), replica plating, serial dilution.

Unit 7: Data collection, statistical analysis and interpretation**Hours: 08**

Fundamentals of data collection, data types - primary and secondary, methods of data collection, sample, sampling methods - merits and demerits, technical and biological replicates, classification - tabulation and presentation of data, Descriptive statistics - Mean, Mode, Median, Variance, Standard Deviation, Standard error, Coefficient of Variation, difference between sample mean and population mean.

Unit 8: Basic computer skills for biology**Hours: 08**

MS-Word, PowerPoint, Excel, introduction to biological databases.

Unit 9: Field Skills**Hours: 04**

Identification, collection, cataloguing and preservation of plant specimens, Herbarium and Museum.

Practical component (60 Hours):

1. Preparation of solutions- molar, molal, normal, percentage, stock, standard and serial dilution (01)
2. Determining pH of solutions (pH paper, Universal indicator, pH meter) and preparation of buffers (Phosphate, Tris-Cl, Electrophoresis buffers - TBE/TAE) (01)
3. Working of instruments -light microscope, autoclave, laminar air flow, spectrophotometer, centrifuge, gel electrophoresis unit (Agarose & Poly acrylamide). (01)
4. Temporary peel mount slide preparation and staining (safranin and acetocarmine). (01)
5. Calculate cell size using micrometer. (01)
6. Calculate number of cells (pollen/spores) using haemocytometer. (01)
7. Preparation of LB medium, growth and maintenance of bacterial cultures (liquid -serial dilution method; and semi-solid cultures - streak, spread and pour plates) (02)
8. Isolation of genomic DNA from *E. coli* and plant leaf material, Agarose gel electrophoresis (01)
9. Calculation of mean, mode, median, standard deviation using data set (collected from experiments 5,6). (01)
10. Using software to draw tables, graphs and calculating descriptive statistics (Microsoft Excel) (01)
11. Laboratory safety equipment (Fire extinguisher, Fume hood, safety glasses) (01)
12. Mounting of a properly dried and processed plant specimen with herbarium label. (01)

Essential/recommended Readings:

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

COMMON POOL OF GENERIC ELECTIVES (GE) COURSES
Offered by Department of Botany
Category-IV

GENERIC ELECTIVES (GE-1)

Credit distribution, Eligibility and Pre-requisites of the Course

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course |
|-----------------------------------|---------|-----------------------------------|----------|---------------------|-----------------------|-----------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Plant Diversity and Human Welfare | 4 | 2 | 0 | 2 | 12 th Pass | NIL |

Learning Objectives

The Learning Objectives of this course are as follows:

Build awareness about the different groups of plants and their roles in supporting human life.

Learning outcomes

After studying this course the student will gain knowledge about:

- the diversity of various groups of plants, their characteristics and identification.
- different phytogeographic zones in India.
- the basic principles of conservation of Biodiversity and Sustainable Development Goals (SDG).
- the role of plants in human welfare.

SYLLABUS OF GE-1

Unit 1: Understanding biodiversity

Hours: 06

Understanding biodiversity - definition of key terms; plant diversity in India; assigning value to plant diversity; economic and ecological importance of algae, bryophytes, pteridophytes and gymnosperms; insights into flowering plant diversity with special focus on

agrobiodiversity.

Unit 2: Crop diversity

Hours: 08

Crop diversity in various phytogeographic regions in India and their traditional importance as food (including cereals, pulses, oil crops, spices, beverages, fruits and nuts, vegetables, condiments), medicines (Ashwagandha and Sarpagandha) and adornments

Unit 3: Role of forests

Hours: 06

Forests, woodlands, and vegetation stands: diversity and their importance in ecological, aesthetic, and overall well-being; social dimensions of plant diversity; commercial value and utilization of plant wealth.

Unit 4: Cash Crops

Hours: 5

Crops of high economic value (tobacco, sugarcane, cotton, basmati rice, sandalwood, saffron); Petro crops: the future industry (*Jatropha* sp., corn and sugarcane).

Unit 5: Conservation of biodiversity

Hours: 3

Conservation of biodiversity using community driven conservation strategies, sustainable utilization keeping Sustainable Development Goals (SDGs) in mind, Innovative approaches and traditional methods of biodiversity utilization and waste minimization during product formation.

Unit 6: Policy issues in conservation of Biodiversity

Hours: 02

National and International initiatives and programmes/schemes focussing on Plant Diversity and human welfare (Tribal Rights Bill, Convention on Biological Diversity (CBD), International Union for Conservation of Nature (IUCN), Protection of Plant Varieties and Farmers' Rights Authority (PPVFRA).

Practicals: (60 Hours)

1. To study local plant diversity (common algae, bryophytes, pteridophytes, gymnosperms

- (any two of each) in and around the campus; and understand their ecological and economic importance.
2. Microchemical tests for carbohydrates, proteins and oils.
 3. To study (any three) commonly found tree species in the vicinity and understand their role in human welfare.
 4. To prepare an inventory of common medicinal plants in your campus (identify to the family level, list their uses in Indian System of Medicines)
 5. To visit the local parks and list the trees planted. Also assess some for their dust pollution mitigation capacity using standard procedures.
 6. Industrial visit to see how the drugs are extracted from plants (report to be submitted for evaluation).

Essential/recommended readings

1. Bilgrami, K. S. (1998). Phytodiversification and Human Welfare: Dedicated to Late Prof. KS Bilgrami, FNA (1933-96). MD Publications Pvt. Ltd.
2. Utting, P. (2013). Trees, People and Power. Routledge.
3. Manoharachary, C., Nagaraju, D. (2016). Medicinal plants for human health and welfare. Ann. Phytomed, 5(1), 24-34.

Suggestive reading

Myers, N. (2019). A wealth of wild species: storehouse for human welfare. Routledge

GENERIC ELECTIVES (GE-2)

Credit distribution, Eligibility and Pre-requisites of the Course

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course |
|---------------------|---------|-----------------------------------|----------|---------------------|-----------------------|-----------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Biofertilizers | 4 | 2 | | 2 | 12 th Pass | Nil |

Learning Objectives

The Learning Objectives of this course are as follows:

- To develop an understanding of biological systems used as fertilizers and build skills in handling microbial inoculants.
- To understand the optimum conditions for growth and multiplication of useful microbes such as *Rhizobium*, cyanobacteria, mycorrhizae, *Azotobacter* etc.
- To understand the role of microbes in mineral cycling and nutrition of plants.
- To gain expertise in various methods of decomposition of biodegradable waste, conversion into compost and apply this knowledge and skill in their daily life.

Learning outcomes

On successful completion of this course, a student will be able to:

- visualize and identify different types of microorganisms with a compound microscope.
- understand the classification of microorganisms according to their shape/ structure for morphological identification. Prepare and sterilize different types of culture media.
- isolate of microorganisms from the environmental samples and culture in aseptic conditions.

SYLLABUS OF GE-2

Unit 1: Introduction

Hours: 7

Introduction to microbial inoculants or biofertilizers, macro and micro nutrition of plants, chemical fertilizers versus biofertilizers; Methods and steps in mass multiplication of biofertilizers: stock culture, broth culture, growth medium, fermentation, blending with the carrier, packaging, and quality check, ISI standard specification for biofertilizers; scope of biofertilizers in India.

Unit 2: Microbial Inoculants

Hours: 08

Study of important microbial inoculants: *Rhizobium*, *Azospirillum*, *Azotobacter*, Actinorhizae; Characteristics, isolation, identification, and crop response.

Unit 3: Role of Cyanobacteria

Hours: 02

Role of Cyanobacteria (blue-green algae) in rice cultivation; *Azolla* and *Anabaena azollae* association, nitrogen fixation, and factors affecting growth.

Unit 4: Mycorrhizal association

Hours: 08

Types of mycorrhizal association, taxonomy, occurrence and distribution; Role of Arbuscular mycorrhizal fungi in phosphorus nutrition, growth and yield of crop plants; AMF – methods in isolation (wet sieving and decanting), identification (morphological and molecular methods). Methods of inoculum production (Pot culture and root culture).

Unit 5: Organic farming

Hours: 5

Introduction to organic farming, recycling of biodegradable municipal (domestic), agricultural and industrial waste; green manuring, bio-composting, vermicomposting and their field application.

Practicals: (60 Hours)

1. Study of *Rhizobium* from root nodules of leguminous plants by Gram staining method. **Hours: 01**
2. Observation of arbuscular mycorrhizal fungi from plant roots. **Hours: 02**
3. Isolation of arbuscular mycorrhizal spores from rhizosphere soil. **Hours: 01**
4. Isolation of *Anabaena* from *Azolla* leaf. **Hours: 01**
5. Study of Earthworm, *Azolla*, AMF: Arbuscules-vesicles through specimen /digital resources. **Hours: 01**
6. Study of Biocontrol methods and their application -Pheromone trap, *Trichoderma*, *Pseudomonas*, Neem etc. through digital resources. **Hours: 01**
7. Rapid test for pH, NO_3^- , SO_4^{2-} , Cl^- and organic matter of different composts. **Hours: 02**
8. Projects on any one of the following topics: *Rhizobium* technology, AMF technology, Organic farming, Bio composting, Vermicomposting, *Azolla* culture etc. (The design of the project should be such that it includes a continuous work of at least 6 Hours and a dissertation submission). **Hours:06**

Essential/recommended readings

GENERIC ELECTIVES (GE-3)

Credit distribution, Eligibility and Pre-requisites of the Course

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course |
|---|---------|-----------------------------------|----------|---------------------|-----------------------|-----------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Protected Agriculture – Hydroponics and Organic Cultivation | 4 | 2 | | 2 | 12 th Pass | Nil |

Learning Objectives

The Learning Objectives of this course are as follows:

- To provide knowledge and expertise of various aspects of hydroponics, aquaponics and organic cultivation to the students.
- To make students economically self-reliant by growing and marketing organic herbs, vegetables, microgreens and fruits.

Learning outcomes

- The Learning Outcomes of this course are as follows:
- Students will develop a thorough understanding of the concept of Hydroponics, Aquaponics and Organic farming.
- Students will be trained in establishing hydroponic facility. Students will learn the development of various organic products such as biopesticides, biofertilizers and biogrowth promoters.
- Students will understand various government policies in marketing of hydroponic and organic produce.
- Understand Good Agricultural Practices associated with protected agriculture.

SYLLABUS OF GE-3

Unit 1: Introduction to Protected Agriculture

Hours: 02

Protected Agriculture types (hydroponics, aquaponics and organic farming), definition history, terminology, importance and advantages over traditional agriculture, limitations and challenges.

Unit 2: Plant Growth Requirements and Media formulations

Hours: 5

Physical parameters - light (quality and quantity) artificial light, light balancers; pH, conductivity, salinity (Dissolved Oxygen-DO, Total Dissolved Solid - TDS) and temperature; Chemical parameters- mineral nutrient requirements, deficiencies, toxicities, growth regulators (auxins, gibberellins, cytokinins and abscisic acids); Growth media- types, properties, uses, nutrient formulae, preparation of solutions, solid Media and nutrient film.

Unit 3: Hydroponic growing systems

Hours: 7

Basic concepts and designs (closed and open systems techniques Nutrient Film Technique (NFT), Deep Water Culture (DWC), Dutch Bucket and other small-scale systems), systems layout. Strengths and weaknesses of various systems, site considerations, componentry, nutrient delivery, pumping

Unit 4: Hydroponics associated pest and diseases

Hours: 06

Hydroponics associated pest - mites, thrips, whiteflies, leaf miners; Identification and management of diseases -bacterial, fungal and viral diseases; safety practices (Good Agricultural Practices (GAP) and Integrated Pest Management (IPM).

Unit 5: Organic farming and its management

Hours: 06

Organic farming and associated management practices (nutritional requirements, pest, diseases, weeds); use of biofertilizers, biopesticides, bioherbicides, biocontrol agents (plant growth promoting rhizobacteria (PGPR), pheromone trapping, *Trichoderma*, *Pseudomonas*, neem oil, garlic etc.) in management.

Unit 6: Marketing and Policies

Hours: 04

Marketing of the produce and government institutes and policies related to protected farming (hydroponics and organic farming).

Practicals: (60 Hours)

1. Study of various instruments used in hydroponics.
2. Preparation of growth media for hydroponics.
3. Estimation of NPK, DO, TDS, pH of growing media
4. Demonstration of different irrigation techniques in hydroponics.
5. Demonstration of construction of a sustainable hydroponic unit.
6. Perform rapid tests for estimation of NPK in different soil samples (at least three).
7. Bulk density and porosity of soilless media e.g. coco-peat, perlite, vermiculite, expanded clay, rockwool (any two media).

8. Demonstration of growing a leafy vegetable/fruity vegetable/ medicinal herb/aromatic plant in Hydroponics solution.
9. Study of traditional organic inputs and formulation of biofertilizer.
10. Preparation of biopesticides, plant health promoters like *Panchgavya*, *Beejamrut* etc. Field visit to organic farm/hydroponic farm and submission of visit report.

Essential/recommended readings

GENERIC ELECTIVES (GE-4)

Credit distribution, Eligibility and Pre-requisites of the Course

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course |
|--|---------|-----------------------------------|----------|---------------------|-----------------------|-----------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Basic Laboratory and Field Skills in Plant Biology | 4 | 2 | | 2 | 12 th Pass | Nil |

Learning Objectives

The Learning Objectives of this course are as follows:

To learn fundamental skills important for performing laboratory and field experiments.

Learning outcomes

After completion of this course the student will learn:

- Good Lab Practices, management of laboratory waste, understanding hazards and risks to ensure a safe laboratory environment.
- Basics of measurements, units and common mathematical calculations, sampling and data collection.
- Handling and maintenance of instruments
- Presentation, analysis and interpretation of results.

SYLLABUS OF GE-4

Unit 1: Lab safety and good lab practices

Hours: 04

General laboratory safety, good laboratory practices, biosafety measures (first-aid practices to be followed in case of burn, acid and injury), safety symbols, lab safety equipments (Fire extinguisher, fume hood, safety glasses), classes of laboratory chemicals, maintenance and handling of chemicals (Labels, Quality - LR/ AR/ Molecular biology grade/ HPLC grade; Expiry date; Precautions for use), Disinfectants, Biocontainment, Disposal of hazardous chemicals, radioactive and biological waste, Laboratory waste management

Unit 2: Use and maintenance of Laboratory equipments

Hours: 04

Weighing balance (Top loading and Analytical), pH meter (calibration and use), magnetic stirrer, pipettes, autoclave, laminar airflow, BOD incubator, incubator shaker, micrometer, haemocytometer, spectrophotometer, Agarose gel electrophoresis unit, SDS PAGE unit, centrifuge, distillation unit, conductivity meter, Lux meter.

Unit 3: Microscopy, sample and slide preparation:

Hours: 5

Microscopes (Dissecting, compound, electron microscope), Fixation and Preservation (for light and electron microscopy); staining, mounting; basic introduction to other types of

microscopes (confocal, fluorescence)

Unit 4: Measurements and calculations

Hours: 02

Units of measurements and conversion from one unit to another, measurement of volumes of liquids, Weighing, calculations: scientific notations, powers, logarithms and fractions

Unit 5: Solutions and Buffers

Hours: 02

Molarity, Molality, Normality, percent solution, stock solution, standard solution, dilution, dilution series, pH, acid and bases, buffers- Phosphate, Tris- acetate, Tris-Cl and Citrate buffer

Unit 6: Basic culturing techniques

Hours: 03

Basic culture media (LB, YEB, MS)- Liquid and solid, Culture techniques : plating (streak, spread & pour), replica plating , serial dilution

Unit 7: Data collection, statistical analysis and interpretation

Hours: 04

Fundamentals of data collection, data types - primary and secondary, methods of data collection, sample, sampling methods - merits and demerits, technical and biological replicates, classification - tabulation and presentation of data, Descriptive statistics - Mean, mode, median, Variance, Standard Deviation, Standard error, Coefficient of Variation, difference between sample and population mean.

Unit 8: Basic computer skills for biology

Hours: 04

MS- Word, PowerPoint, Excel, introduction to biological databases

Unit 9: Field Skills

Hours: 02

Identification, collection, cataloguing and preservation of plant specimens, Herbarium and Museum

Practicals: (60 Hours)

1. Preparation of solution- molar, molal, normal, percentage, stock, standard and serial dilution
2. Determining pH of solutions (pH paper, Universal indicator, pH meter) and preparation of buffers (Phosphate, Tris-Cl, Electrophoresis buffers- TBE/TAE)
3. Working of instruments - light microscope, autoclave, laminar air flow, spectrophotometer, centrifuge, gel electrophoresis unit (Agarose & Poly acrylamide gels)
4. Temporary peel mount slide preparation and staining (safranin and acetocarmine).
5. Calculate cell size using micrometer.
6. To calculate number of cells using haemocytometer per unit volume (using pollen/spores)
7. Preparation of LB medium, growth and maintenance of bacterial cultures (liquid -serial dilution method; and semi-solid cultures - streak, spread and pour plates)
8. Isolation of genomic DNA from *E. coli* and plant leaf material, Agarose gel electrophoresis.
9. Calculation of mean, mode, median, standard deviation using data set (collected from experiments 5,6).
10. Using software to draw tables, graphs and calculating descriptive statistics (Microsoft Excel)
11. Laboratory safety equipments (Fire extinguisher, Fume hood, safety glasses)
12. Mounting of a properly dried and processed plant specimen with herbarium label

| Green Belt Development and Urban Management for Smart Cities | 4 | 2 | | 2 | 12 th Pass | Nil |

Learning Objectives

The Learning Objectives of this course are as follows:

- Green Belt Development is a major step in the development of a sustainable ecosystem, particularly under the Smart Cities Program for urban development (Government of India).
- To introduce students with one of the key green skill development programs under the Skill India mission by the Government of India.
- To acquaint students with various methods and techniques used in development of green infrastructure for smart cities

Learning outcomes

Students will gain as the:

- Course familiarizes students with green skills that contribute to preserving or restoring the environment for a sustainable future that protect ecosystems and biodiversity, reduce energy and minimize waste and pollution.
- This course will help students understand the role of green belt in capturing the

transient emissions, prevent soil erosion and degradation, containing water run-offs and recharging ground water, attenuate the noise generated and improve the aesthetics.

- Students would be well trained (knowledge & skills) to contribute to Green Sector Skill program.

SYLLABUS OF GE-5

Unit 1: Introduction

Hours: 02

Definition, History and Concept of Green Belt; Aesthetics and Importance; Recommended Guidelines for green belt development for industries; Advantages and Applications.

Unit 2: Pollution and Carbon emission

Hours: 04

Type and various source of Emissions; Methods of estimation and monitoring of pollutants; Mechanism of deposition; Regulatory standards for major pollutants.

Unit 3: Plant-Pollutant Interaction

Hours: 04

Methods of sampling and screening local flora, Native and Exotic Plants, Various indicators (Morphological, Anatomical, Physiological and Biochemical) for selection of pollution mitigating plants; Sensitive/indicator, Resistant/ Tolerant Plant Species for different pollutants (air, water, land and sound). Factors effecting plant regeneration and growth.

Unit 4: Structural and Functional Aspects of Green Belt

Hours: 06

Methods of Planting and Propagation, Various approaches for green belt development, Theoretical Models; Site specific ecological requirements, parameters involved that effect landscape design, Methods to evaluate the effectiveness of green belt. Various tools for assessment and monitoring of green belt (GIS and Remote Sensing)

Unit 5: Green Belt for Mitigating Climate change

Hours: 04

Objectives of UNFCCC for mitigating greenhouses gases in urban sectors, Green Finance

and Green Infrastructure development, Methods to Evaluate total carbon sequestered; Carbon stocks and credits.

Unit 6: Waste water treatment through constructed wetlands

Hours: 06

Introduction: Wetlands values and functions, natural and constructed wetlands for wastewater treatments; Life forms in wetlands: microbes and vegetation in wetlands, plants adapted to pollutants and flooding, Role of macrophytes in constructed wetlands; physical and chemical characteristics of freshwater wetlands, constructed wetlands: types, role and management including key parameters for assessment.

Unit 7: Economics of Green Infrastructure

Hours: 04

Understanding of key plants for green economy - NFTP (Non-Forest timber products), biodiesel plants, herbal garden; Evaluating the cost and benefits of green belt development with type studies, Environmental accounting, Ecosystem services and constituents of wellbeing. Environmental Impact Assessment

Practicals: (60 Hours)

1. Methods of Vegetation Sampling and calculation of importance value index.
2. Measuring Tree Height and Cover to estimate green cover of an area.
3. Estimation of total carbon of an area.
4. Methods for selection of plants according to pollutant load both air and water (includes field survey)
5. Open Sources Software for mapping the GPS points and generating a cover map.
6. Measurement of Dissolved Oxygen (DO) from treated waste water.
7. Measurement of BOD and TDS from intake and treated pond.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DEPARTMENT OF ZOOLOGY

BSC (Hons.) Zoology

Category-I

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|---|----------|-----------------------------------|----------|---------------------|---|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Nonchordata – Protists to Pseudocoelomates | 4 | 2 | 0 | 2 | Class X II pass with Biology as one of the papers in Class XII | - |

Learning Objectives

The course would provide an insight to the learner about the existence of different life forms on the earth and appreciate the diversity of animal life. It will help the students to understand the features of non-chordates and their systematic organization based on evolutionary relationships, structural and functional affinities. The course will also make the students aware about the characteristic morphological and anatomical features of diverse animals; the economic, ecological, and medical significance of various animals in human life; and will create interest among them to explore the animal diversity in nature.

Learning outcomes

Upon completion of the course, students should be able to:

- Learn about the importance of systematics, taxonomy, and structural organization of non-chordates.
- Appreciate the diversity of non-chordates living in varied habits and habitats
- Understand evolutionary history and relationships of different non-chordates through functional and structural affinities.
- Critically analyse the organization, complexity and characteristic features of nonchordates.
- Recognize the life functions and the ecological roles of the animals belonging to different phyla.
- Enhance collaborative learning and communication skills through practical sessions, teamwork, group discussions, assignments, and projects.

SYLLABUS OF DSC-1

Unit I: Introduction to Non-chordates (2 Hours)

General characteristics of non-chordates and basis of classification.

Unit II: Protista (07 Hours)

General characteristics and classification; Life cycle of *Plasmodium vivax*; Locomotion and reproduction in Protista.

Unit III: Porifera (05 Hours)

Introduction to Parazoa; General characteristics and classification; Canal system in sponges.

Unit IV: Cnidaria and Ctenophora (8 Hours)

Introduction to Metazoa; General characteristics and classification; Polymorphism in Cnidaria; Corals and coral reefs.

Unit V: Platyhelminthes and Nemathelminthes (8 Hours)

General characteristics and classification; Parasitic adaptations of Helminthes; Life cycle of *Taenia solium* and *Ascaris lumbricoides*.

Note: Outline classification up to classes to be followed from “Ruppert, Fox and Barnes (2004). Invertebrate Zoology: A Functional Evolutionary Approach”. VII Edition, Cengage Learning, India

Practical component

1. Study of whole mount of Euglena, Amoeba, Noctiluca, Paramecium, Binary fission in Paramecium and Conjugation in Paramecium.
2. Examination of pond water collected from different places to observe diversity in Protista.
3. Study of Sycon, Hyalonema, Euplectella, Spongilla, T.S. of Sycon, L.S. of Sycon.
4. Study of *Obelia*, *Physalia*, *Millepora*, *Aurelia*, *Tubipora*, *Corallium*, *Alcyonium*, *Gorgonia*, *Metridium/Adamsia*, *Pennatula*, *Fungia*, *Meandrina*, *Madrepora*.
5. Specimen/slide of any one Ctenophore.
6. Study of adult *Fasciola hepatica*, *Taenia solium* and their life stages (Slides/microphotographs).
7. Study of adult *Ascaris lumbricoides* and its life stages (Slides/microphotographs).
8. To submit a Project Report on the life cycle of any one parasite or pathogen/corals/coral reefs.
9. Examination of soil samples collected from different places to observe diversity in nematodes.

Essential readings

1. Ruppert, Fox and Barnes (2004). Invertebrate Zoology. VII Edition, Cengage Learning, India.
2. Pechenik, J. A. (2015). Biology of the Invertebrates. VII Edition, McGraw-Hill Education.
3. Barnes, R.S.K., Calow, P., Olive, P.J.W., Golding, D.W. and Spicer, J.I. (2002). The Invertebrates: A New Synthesis. III Edition, Blackwell Science.

DISCIPLINE SPECIFIC CORE COURSE – 2 (DSC-2) Biology of Cell: Structure

Credit distribution, Eligibility and Prerequisites of the Course

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|--|---------|-----------------------------------|----------|---------------------|---|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Biology of Cell: Structure and Function | 4 | 2 | -- | 2 | Class X II pass with Biology as one of the papers in Class XII | - |

Learning Objectives

The objective of the course is to help the students to learn and develop an understanding of a cell as a basic unit of life. This course is designed to enable them to understand the functions of cellular organelles and how a cell carries out and regulates cellular functions.

Learning outcomes

Upon completion of the course, students should be able to:

- Understand the fundamental principles of cell biology.
- Explain the structure and functions of cell organelles involved in diverse cellular processes.
- Appreciate how cells grow, divide, survive, die, and regulate these important processes.
- Comprehend the process of cell signaling and its role in cellular functions.
- Have an insight into how defects in the functioning of cell organelles and regulation of cellular processes can develop into diseases. Learn the advances made in the field of cell biology and their applications

SYLLABUS OF DSC- 2

Unit I: Overview of Cells and Plasma membrane (05 Hours)

Prokaryotic and Eukaryotic cells; Various models of plasma membrane structures, Transport across membranes: active and passive transport, facilitated transport; Cell-cell junctions, structures, and functions: Tight junctions, adherens junctions, gap junctions.

Unit II: Endomembrane System (10 Hours)

Structure and Functions: Endoplasmic Reticulum (ER), Golgi apparatus, Signal hypothesis, Vesicular transport from ER to Golgi apparatus, Protein sorting and transport from Golgi apparatus, Coated Vesicles, Lysosomes, Peroxisomes. Structure of Mitochondria, Semiautonomous nature, Endosymbiotic hypothesis; Respiratory chain, Chemiosmotic hypothesis, ATP Synthase.

Unit III: Cytoskeleton (2 Hours)

Structure and Functions: Microtubules, Microfilaments and Intermediate filaments.

Unit IV: Nucleus (4 Hours)

Structure of Nucleus, Nuclear envelope, nuclear pore complex, Transport of molecules across nuclear membrane, nucleosome, nucleolus; Chromatin: euchromatin, heterochromatin.

Unit V: Cell Division (4 Hours)

Mitosis, Meiosis, Cell cycle and its regulation.

Unit VI: Introduction to Cell Signaling (05 Hours)

Cell Signaling through G-protein coupled receptor (GPCR) and role of secondary messenger: cAMP and protein kinase A.

Practical component (60 Hours)

1. Microscopy: Compound microscope: principle, components and handling; Phase contrast microscope; Electron microscope; Differential Interference Contrast (DIC) Microscope.
2. Principle and types of cell fixation and staining; Cell fractionation.
3. To study prokaryotic cells by Gram staining and eukaryotic cell (cheek cells) by hematoxylin/methylene blue.
4. To study the effect of hypotonic, isotonic, and hypertonic solutions on cell permeability.
5. Preparation of a temporary slide of squashed and stained onion root tip to study various stages of mitosis.
6. Study the effect of colchicine on mitosis at 24 hrs and 48 hrs.
7. Study of various stages of meiosis through permanent slides.
8. Preparation of stained mount to show the presence of Barr body in human female blood cells/cheek cells.
9. Cytochemical demonstration of:
 - a. DNA by Feulgen reaction
 - b. Mucopolysaccharides by PAS reaction
 - c. Proteins by Mercuric Bromophenol Blue/Acid Fast Green

Essential readings

1. Cooper, G.M., Hausman, R.E. (2019) The Cell: A Molecular Approach. VIII Edition, ASM Press and Sinauer Associates.
2. Becker, Kleinsmith, and Hardin (2018) The World of the Cell, IX Edition, Benjamin Cummings Publishing, San Francisco.
3. Karp, G. (2015). Cell and Molecular Biology: Concepts and Experiments, VIII Edition, John Wiley & Sons Inc.
4. Renu Gupta, Seema Makhija and Ravi Toteja (2018). Cell Biology Practical Manual, Prestige Publishers, New Delhi
5. VK Sharma (1991). Techniques in Microscopy and Cell Biology, Tata McGraw-Hill Publishing Company Limited, New Delhi

DISCIPLINE SPECIFIC CORE COURSE– 3 (DSC-3) Concepts of Ecology**Credit distribution, Eligibility and Pre-requisites of the Course**

| Course | Credits | Credit distribution of the course | Eligibility | Pre-requisite |
|--------|---------|-----------------------------------|-------------|---------------|
|--------|---------|-----------------------------------|-------------|---------------|

| title & Code | | Lecture | Tutorial | Practical/ Practice | criteria | of the course(if any) |
|--------------------|---|---------|----------|---------------------|--|-----------------------|
| Concept of Ecology | 4 | 2 | 0 | 2 | Class X II pass with Biology as one of the papers in Class XII | NIL |

Learning Objectives

The primary aim of this course is to develop a scientific understanding of the diverse aspects of the field of ecology. The students will be familiarized with the interactions between the organisms and their physical environment. Additionally, various attributes of populations and communities with help of theoretical concepts and field examples will be discussed. It provides a platform to understand the varied forces that lead to variations among populations of a species.

Learning outcomes

Upon completion of the course, the students should be able to:

- Demonstrate an understanding of the basic concepts of the subject
- Explain the characteristics, dynamics, and growth of populations
- Understand the characteristics of the community, ecosystem development and climax theories
- Gain knowledge about the relationship of the evolution of various species and the environment they live in.
- Design basic field studies, collect data and interpret it
- Carry out population and community studies

SYLLABUS OF DSC-3

Unit I: Introduction to Ecology (03 Hours)

Autecology and Synecology, Laws of limiting factors, Study of physical factors: Temperature and Light.

Unit II: Population (07 Hours)

Unitary and Modular populations; Unique and group attributes of population: density, natality, mortality, life tables, fecundity tables, survivorship curves, age ratio, sex ratio, dispersal and dispersion; Exponential and logistic growth, equations and patterns, r and k strategies; Intraspecific population regulation: density-dependent and independent factors.

Unit III: Species Interactions (06 Hours)

Types of species interactions, Interspecific competition: Lotka-Volterra model of competition, Gause's Principle with laboratory and field examples, Niche concept; Predation: Lotka-Volterra equations, Functional and numerical responses, predator defence mechanisms, Resource partitioning.

Unit IV: Community (05 Hours)

Community characteristics: species richness, dominance, diversity, abundance, guilds, ecotone and edge effect; Ecological succession with examples and types.

Unit V: Ecosystem (6 Hours)

Types of Ecosystems: Terrestrial ecosystem, vertical stratification in tropical forest; Food chain: detritus and grazing food chains, linear and Y-shaped food chains, food web; Energy flow through the ecosystem; Ecological pyramids and Ecological efficiencies; Biogeochemical cycle- nitrogen cycle.

Unit VI: Applied Ecology (03 Hours)

Ecology in wildlife conservation and management, Protected areas: National Parks, Biosphere reserves and Sanctuaries; Restoration ecology, Principles of Environmental impact assessment.

Practical components (60 Hours)

1. Study of life tables and plotting of survivorship curves of different types from hypothetical/ real data
2. Determination of population density in a natural or a hypothetical community by quadrat method and calculation of Shannon-Weiner diversity index.
3. Study of an aquatic ecosystem:
 - a) Phytoplankton and zooplankton
 - b) Measurement of temperature, turbidity/penetration of light, determination of pH
 - c) Dissolved oxygen content (Winkler's method), chemical oxygen demand
 - d) Free carbon dioxide and alkalinity
4. Study of ten endemic animals of India with slides/pictures/videos.
5. Report on a visit to a National Park/Biodiversity Park/Wildlife Sanctuary.

Essential readings

1. Odum, E.P. and Barrett G. W. (2008). Fundamentals of Ecology. Indian Edition (5th). Publisher: Brooks/Cole.
2. Smith T. M. and Smith R. L. (2015). Elements of Ecology. 9th International Edition. Publisher: Benjamin Cummings.
3. Saha G.K. and Mazumdar S. (2020) Wildlife Biology, An Indian Perspective. Publisher: PHI Learning Private Limited
4. Zimmer C. and Emlen D. J., (2013) 1st Edition. Evolution: Making Sense of Life, Roberts & Co.
5. Futuyma, Douglas and Mark, Kirkpatrick (2017) 3rd Edition. Evolutionary Biology, Oxford University Press

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time

COMMON POOL OF GENERIC ELECTIVES (GE) COURSES
Offered by Department of Zoology
Category-IV

GENERIC ELECTIVES (GE-1): Human Physiology

Credit distribution, Eligibility and Pre-requisites of the Course

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course | Department offering the course |
|-------------------------|---------|-----------------------------------|----------|---------------------|-----------------------|-----------------------------|--------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | | |
| Human Physiology | 4 | 2 | - | 2 | 12 th Pass | Nil | Zoology |

Learning Objectives

This course offers an overview of the concepts of normal biological functions in the human body. The fundamentals of human physiology and histological structures will be correlated. The concept of homeostasis in response to changes in the external environment will be introduced. Further, students will be provided with knowledge that can be applied in everyday life. The students will be encouraged to pursue further studies in physiology and related fields as well as multidisciplinary subjects that require an understanding of the physiology of humans.

Learning outcomes

Upon completion of the course, students will be able to:

- Understand the principles of normal biological function in the human body.
- Outline basic human physiology and correlate it with histological structures.
- Understand the homeostasis in animals in response to changes in their external environment.

SYLLABUS OF GE-1

Unit I: Tissues (05 Hours)

Types of Tissues; Structure and Function of Epithelial, Connective, Muscular and Nervous tissues.

Unit II: Functioning of Excitable Tissue (Nerve and Muscle) (05 Hours)

Propagation of nerve impulse (myelinated and non-myelinated nerve fibre); Mechanism of muscle contraction (Sliding filament theory).

Unit III: Digestion and Absorption of Food (05 Hours)

Structure and function of digestive system; Digestion and absorption of carbohydrates, fats and proteins.

Unit IV: Respiratory Physiology (04 Hours)

Structure and function of respiratory tract and lungs; Ventilation, External and Internal respiration; Transport of oxygen and carbon dioxide in blood.

Unit V: Cardiovascular System (04 Hours)

Structure of heart, Cardiac cycle, Composition of blood

Unit VI: Renal Physiology (03 Hours)

Functional anatomy of kidney

Unit VII: Reproductive Physiology (04 Hours)

Structure of testis and ovary; Spermatogenesis and Oogenesis.

Practical component (if any) (60 Hours)

1. Preparation of temporary mount of neurons and blood cells (blood film preparation).
2. Preparation of haemin and haemochromogen crystals.
3. Haemoglobin estimation using Sahli's haemoglobinometer.
4. Determination of ABO Blood group.
5. Recording of blood pressure using a Sphygmomanometer.
6. Examination and detailed study of permanent histological sections of mammalian Stomach, Duodenum, Liver, Lung, Kidney, Pancreas, Testis and Ovary.

Essential readings

1. Tortora, G.J. and Derrickson, B.H. (2012). Principles of Anatomy and Physiology. XIIIth Edition, John Wiley and Sons, Inc.
2. Widmaier E, Raff H and Strang K. (2013). Vander's Human Physiology: The Mechanism of Body Functions. XIIIth Edition, McGraw-Hill Education.
3. Guyton, A.C. and Hall, J.E. (2011) Textbook of Medical Physiology. XII Edition, Harcourt Asia Pvt. Ltd/ W.B. Saunders Company.
4. Kesar, S. and Vashisht, N. (2007) Experimental Physiology. Heritage Publishers.
5. Prakash, G. (2012) Lab Manual on Blood Analysis and Medical Diagnostics. S. Chand and Company Ltd.

GENERIC ELECTIVES (GE-2): Nature and Wildlife Studies

Credit distribution, Eligibility and Pre-requisites of the Course

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course | Department offering the course |
|------------------------------------|---------|-----------------------------------|----------|---------------------|-----------------------|-----------------------------|--------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | | |
| Nature and Wildlife Studies | 4 | 2 | - | 2 | 12 th Pass | Nil | Zoology |

Learning Objectives

The course is designed to acquaint students with varied aspects of wildlife conservation, including its importance, major threats, and management of habitats and populations. The emphasis will be on developing interest and invoking a sense of responsibility among students towards wildlife conservation. The course also explores different techniques, perspectives, and approaches to both identify and achieve wildlife management goals. Further, students will be motivated to pursue careers in the field of wildlife conservation and management..

Learning outcomes

By studying the course the students will develop:

- Understanding about wild life
- Evaluation and Management of Wildlife
- Wild life resources and protection

SYLLABUS OF GE-2

Unit I: Conservation of Nature and Wildlife (06 Hours)

Values of wildlife - positive and negative; Conservation ethics; Importance of conservation; Causes of depletion; World conservation strategies: Wildlife Conservation Society (WCS), Convention on Biological Diversity (CBD), Agenda 21 of United Nations.

Unit II: Evaluation and Management of Wildlife (06 Hours)

Habitat analysis: a) Physical parameters: Topography, Geology, Soil and water; b) Biological Parameters: food, cover, forage; Census method

Unit III: Management of Natural Habitats (04 Hours)

Setting back succession: Grazing logging, Mechanical treatment, Advancing the successional process.

Unit IV: Management Planning of Wildlife in Protected Areas (04 Hours)

Human-wildlife conflict, Captive Breeding, Ecotourism.

Unit V: Wildlife Health and Management (04 Hours)

Care of injured and diseased animals, Quarantine; Zoonotic diseases: Ebola, Salmonellosis, Rabies, Foot and Mouth Disease, MonkeyPox, SARS, Bovine and Avian Flu.

Unit VI: Protected Areas (06 Hours)

National parks and sanctuaries, Biosphere reserves, Conservation and Community reserve, Important features of protected areas in India, Tiger conservation , management and challenges.

Practical component (if any) (60 Hours)

1. Identification of mammalian fauna, avian fauna, herpeto-fauna through direct and indirect evidences seen on a field trip to a wildlife conservation site.
2. Demonstration of basic equipment needed in wildlife studies use, care and maintenance (Compass, Binoculars, Spotting scope, Range Finders, Various types of Cameras and lenses).
3. Familiarization and study of animal evidences in the field: Identification of animals
4. through pug marks, hoof marks and scats.

5. To study the various animal tracking system: Global Positioning System, Remote Sensing and Biotelemetry.
6. Trail / transect monitoring for abundance and diversity estimation of mammals and bird (direct and indirect evidences).
7. A report based on a visit to National Park/ Wildlife Sanctuary/ Biodiversity Park or any other wildlife conservation site.

Essential readings

1. Saha, G.K. and Mazumdar, S. (2017). Wildlife Biology: An Indian Perspective. PHI learning Pvt. Ltd. ISBN: 8120353137, 978-812035313

ACBR

BSc (H) Biomedical Science *Category-I*

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|-----------------------------|----------|-----------------------------------|----------|---------------------|--|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| BIOORGANIC CHEMISTRY | 4 | 3 | - | 1 | Student should have studied science (Biological science/ physical sciences) | - |

Learning Objectives

The Learning Objectives of this course are as follows:

Bioorganic Chemistry is a discipline that integrates organic chemistry and biochemistry. It aims at understanding the relevance of biological processes using the fundamental concepts of organic chemistry. This course includes basic principles of organic chemistry like concepts of stereochemistry and their importance in understanding various bio-molecular reactions along with introduction to biomolecules.

Learning outcomes

The Learning Outcomes of this course are as follows:

The students will be able:

- Identify, assess and analyze different types of stereoisomers and their properties in organic compounds and biomolecules.
- Explain the structures and function of biomolecules (carbohydrates, amino acids, lipids and nucleotide).
- To understand the mechanism of biologically significant name reaction and their role in biological systems.

SYLLABUS OF DSC-1

UNIT – I Stereochemistry

(9

Hours)

Optical isomerism: Optical activity, specific rotation, enantiomerism, D and L designation, racemic modification, R and S sequence rules, diastereoisomers.

Conformational isomers: conformation of ethane and butane, interconversion of projection formula, cyclohexane (mono- and di-substituted), resolution, optical purity.

Geometrical isomerism: Definition, nomenclature– E and Z.

UNIT – II Introduction to Biomolecules I (12 Hours)

Carbohydrates:

Monosaccharides- cyclization of aldoses and ketoses, conformations, concept of mutarotation, anomers, epimers.

Disaccharides- structure, reducing and non-reducing sugars. Polysaccharides- Starch, glycogen and cellulose.

Lipids:

Fatty acids, triacylglycerols, phospholipids, lipid bilayer formation, steroids (cholesterol)

UNIT – III Introduction to Biomolecules II (12 Hours)

Amino Acids:

Structure and classification of amino acids, ionization, chemistry of peptide bond, non-ribosomal peptide bond formation, essential and non-essential amino acids, amino acids as precursors of other bioactive compounds, zwitterion, isoelectric point, optical properties of amino acids, Definition of a peptide, peptide unit, peptide group, bond length, cis and trans conformation, primary, secondary (alpha helix, beta sheet, beta turn, collagen helix), tertiary and quaternary structures (with examples).

Nucleotides:

Sugars and Bases, conformation of sugar phosphate backbone, hydrogen bonding and tautomerism in nucleic acid bases Effect of structure on reactivity of biomolecules.

UNIT – IV Biologically Significant Name Reactions (12 Hours)

Aldol (Glucogenesis), retro-aldol (Glycolysis), benzoin condensation (umpolung decarboxylation of pyruvate in the presence of TPP), Claisen condensation (synthesis of fatty acids), Michael addition (Dehydrases), Cannizzaro (Sugar metabolism), Bayer Villiger reaction (FAD dependent ketone synthesis), Pinacol-pinacolone rearrangement (1,2-carbon carbon shift)

Practical component (12 Sessions x 2 hrs) – 30 Hours

(Wherever wet lab experiments are not possible the principles and concepts can be demonstrated through any other material or medium including videos/virtual labs etc.)

1. Qualitative tests for carbohydrates to identify the given unknown carbohydrate solution: Mohlisch, Barfoed, Fehling/ Tollen/ Benedict tests
2. Qualitative tests for carbohydrates to identify the given unknown carbohydrate solution: Iodine test, Selvinoff, Osazone, Bial's tests
3. Qualitative tests for Amino acids and Proteins: Ninhydrin, Xanthoproteic, Million's, Lead Acetate, Biuret test
4. Qualitative test for Fats
5. To determine the Iodine number of the given oil/fat.
6. To find pKa value of acetic acid
7. To study the titration curve of glycine
8. Absorption spectrum of Protein
9. Absorption spectrum of DNA
10. Estimation of a Reducing sugar in a given sample.

Learning Objectives

The Learning Objectives of this course are as follows:

Structure and functions of various cellular compartments and organelles

- Fundamentals of transport of biomolecules inside the cell and its cytoskeleton
- Cell growth, cell-division and cell-cycle control mechanisms.
- Cell to cell communication and participation of signal transduction pathways, in driving cell response mechanics

Learning outcomes

The Learning Outcomes of this course are as follows:

- Students will learn about how the cell has evolved and the basic types of cells present.
- Students will acquire insights into the composition and structure of cell membrane by navigating through various proposed cell models. Students will also learn the functions in detail about the processes of transport across cell membranes.
- Students will learn about the structure and function of various cellular compartments and organelles along with the concept of protein sorting and distribution in unique ways.
- Students will understand the association between cells through unique types of communication and developing junctions for attachment between neighbouring cells.
- Students will understand various cytoskeleton elements and their participation in maintaining cell shape and integrity. Students will gain knowledge about an overview of cell response to its environment, and involvement of cell- cell signalling mechanisms and to study signal transduction pathways.

SYLLABUS OF DSC- 2

UNIT – I The Cell

(3 Hours)

Historical background, significant landmarks, cell theory, structure of prokaryotic and eukaryotic cells

UNIT – II Cell Membrane and Membrane Transport

(6 Hours)

Functions, different models of membrane structure, types of membrane lipids, membrane proteins: types, methods to study membrane proteins (detergents, RBC ghosts), RBC membrane as a model, membrane carbohydrates, membrane asymmetry and fluidity, lipid rafts.

A. Transport of small molecules: Passive transport (simple diffusion and facilitated diffusion) and active transport and their types (P, V, F and ABC transporter) with example of Na⁺/K⁺ pump.

B. Transport of macromolecules: Endocytosis (pinocytosis, phagocytosis), exocytosis

UNIT – III Cell Organelles

(15

Hours)

Structure and functions of various organelles:

- Nucleus: Different components, nuclear envelope- its structure, pore complex, nucleocytoplasmic, interaction (NLS and NES), nucleolus- structure and functions.
- Endoplasmic reticulum: RER- Biosynthesis and processing of proteins, co-translational and post-translational transport of proteins, signal hypothesis, protein sorting. SER- detoxification, biosynthesis of membrane, carbohydrate metabolism, steroid synthesis.
- Golgi apparatus: Golgi stack (cis, trans and medial cisternae), flow of proteins through Golgi body, glycosylation and protein sorting.

- Lysosomes: Development of different forms of lysosomes, role in cellular digestion, lysosomal storage diseases- Hurler syndrome, Hunter syndrome, Tay-Sachs disease and Inclusion cell disease (I-cell disease).
- Peroxisomes: Assembly, functions- H₂O₂ metabolism, oxidation of Fatty acids, glyoxysomes
- Mitochondria: Detailed structure, endosymbiotic theory, its genome and functions in brief
- Chloroplast: Detailed structure, its genome and functions in brief

UNIT – IV Cell -Cell communication

(9 Hours)

Structures and functions of different types of anchoring junctions (desmosomes and hemidesmosomes), tight junctions, and communication junctions (gap junction and plasmodesmata).

UNIT – V Cytoskeletal Elements

(6 Hours)

Structure, assembly and functions of:

- A. Microtubules: Axonemal and cytoplasmic microtubules (cilia, flagella, centrioles, basal bodies).
- B. Microfilaments: Globular and filamentous actin, general idea about myosin.
- C. Intermediate filaments: Different classes.

Unit VI: Cell Signaling and Cell Cycle

(6 Hours)

Signaling molecules and their receptors (extracellular and intracellular), functions of extracellular receptors; Intracellular signal transduction pathways (cAMP, cGMP, steroid hormone response element). Different phases of cell cycle and their significance, mitosis and meiosis, checkpoints and regulation of cell cycle.

Practical component (30 Hours)

(Wherever wet lab experiments are not possible, the principles and concepts can be demonstrated through any other material or medium including videos/virtual labs etc.)

1. Light microscopy: Principle, construction and types. Study of positive and negative staining using photomicrographs.
2. Fluorescence microscopy: principle and applications. Concept of GFP
3. Electron microscopy: Principle, construction and types. Study of positive and negative staining, freeze fracture, freeze etching, shadow casting, endocytosis, exocytosis and phagocytosis using electron micrographs
4. To explain mitosis and meiosis using permanent slides.
5. To measure cell size using a stage micrometer.
6. To cytochemically demonstrate presence of total and basic proteins in cheek cells or onion peel using mercuric bromophenol blue or fast green.
7. To cytochemically demonstrate presence of carbohydrates in cheek cells or onion peel using periodic acid Schiff's reagent.
8. To cytochemically demonstrate presence of DNA in cheek cells or onion peel using Feulgen reagent.
9. To study the effect of isotonic, hypotonic and hypertonic solutions on cell.

DISCIPLINE SPECIFIC CORE COURSE– 3 (DSC-3): HUMAN PHYSIOLOGY

Credit distribution, Eligibility and Pre-requisites of the Course

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|---------------------------------------|----------|-----------------------------------|----------|---------------------|--|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| HUMAN PHYSIOLOGY AND ANATOMY-I | 4 | 3 | - | 1 | Student should have studied science (Biological science/ physical sciences) | |

Learning Objectives

The Learning Objectives of this course are as follows:

- The course curriculum is a systematic presentation of physiological concepts to ensure appropriate depth and breadth of basic functioning of the human body and its interrelations with respect to heart, lung, kidney, gonads, endocrine glands and digestive system.
- It would give students exposure of physiological concepts needed as foundations for further studies in pharmacology, pathology and pathophysiology etc.
- It would provide a base to understand body defenses and the mechanisms of deranged function of human body
- The curricular objectives are focused primarily on normal body function. Accordingly, wherever possible clinical examples have been illustrated to the underlying physiological

principles.

Learning outcomes

The Learning Outcomes of this course are as follows:

Having successfully completed this course, students shall be able to learn and appreciate:

- The usefulness of dividing the human body in different anatomical planes and sections, cavities, along with the role of feedback system in maintaining homeostasis. Functional anatomy of the epithelial and connective tissues while focusing on integumentary and skeletal system. Overview of structure, types and function of cartilage, bone and joints.
- Structure, function and regulation of components/different formed elements of blood and the mechanism of clotting. Students would be able to understand different blood groups, basis of their classification, their importance in blood transfusions and tissue grafting and basic concepts of blood and bleeding disorders
- Student would be able to understand neurons their role and significance and how as a part of the brain they help in brain physiology. Appreciation of basic concepts of action potential/ graded potential in the conduction of nerve impulse. Action and significance of different neurotransmitters at the synapse along with the mechanism of synaptic transmission using different ligand gated ion channels, G protein coupled receptors and their ligands as example.
- Students would learn organization of brain, with identification of structures and function of different brain regions. Identify different neural pathways and explain their significance. They would understand the innate responses and conditioned response of day today life by studying autonomic nervous system and effect of its stimulation on different organs.
- The five senses which help an individual to perceive the world would be studied in detail. Stimulus modality, sensory adaptation and the role of generator potential in the sensory physiology of touch, gustation, olfaction, hearing and vision. They would recognize and explain the common disorders related to the senses.
- Students would be able to describe and distinguish between the structure, mechanism and regulation of contraction of skeletal, cardiac and smooth muscles. Enlist the energy requirements, characteristic features of different muscle fibers and their role in generating muscle tension. Demonstrate the concept of muscle fatigue, adaptation to physical training, and muscle degeneration and associated disorders.

SYLLABUS OF DSC-3

UNIT – I Body organization and Integumentary system Hours)

(6

General Anatomy of the body, Introduction to various kinds of body planes, cavities and their membranes, Tissues level of organization (Types, origin, function & repair). Structure and functions of human skin.

UNIT – II Blood

(6 Hours)

Composition and Function of Blood and its components (RBC, WBC, platelets and plasma). Hematopoiesis, Hemoglobin structure, function and abnormal hemoglobin. Basic concepts about Anemia and types. Blood Hemostasis (blood coagulation/ clotting, platelet function and role of endothelium).

UNIT – III Nerve physiology

(6 Hours)

Structure, function and types of neuron, conduction of nerve impulse, Resting membrane potential, Action and graded potential. Synapse its types, Synaptic Transmission, Neurotransmitters and their receptors; types and function

UNIT – IV Nervous System I: Organization of nervous system (6 Hours)

Structure, function and organization of Central nervous system, Peripheral nervous system and Autonomic nervous system. Motor physiology: Reflexes, types and reflex arch

UNIT – V Nervous System II: Sensory Physiology (6 Hours)

Concept of receptors in the body and their types, structure, functional anatomy, regulation and common disorders of the following sensations: Vision, Hearing, Taste, Smell and other senses (Touch, Pain, Temp).

UNIT – VI Muscular system (9 Hours)

Functional anatomy of muscular system, types of muscles, neuromuscular junction structure property and transmission, General characteristics, molecular mechanism and properties of skeletal muscle excitation and contraction, energetics and characteristics of whole muscle contraction.

Unit- VII Skeletal System (6 Hours)

Cartilage: structure, types and function. Bones: structure, function, location and types. Joints: structure, function and types

Practical components (30 Hours)

(Wherever wet lab experiments are not possible, the principles and concepts can be demonstrated through any other material or medium including videos/virtual labs etc.)

1. Estimation of haemoglobin (Sahli's method)
2. Determination of total erythrocyte count.
3. Determination of total leukocyte count.
4. Preparation of blood smears and identifying various WBC
5. To perform differential leukocyte count of blood.
6. To study a simple reflex arc
7. To study the sensation of taste, touch and smell.
8. To study different human organs and their sections through permanent histological slides T.S. of brain, spinal cord, skeletal fibres, cardiac muscles, skeletal muscles, cartilage joints and different tissues. (Minimum 8 slides covering the systems mentioned in theory.)

- Textbook of Practical Physiology, 9th edition (2018), CL Ghai; Jaypee Publication, ISBN13: 978-9352705320 ISBN-10: 9352705327

Common Pool of Generic Electives (GE) Courses Offered by ACBR *Category-IV*

Note: Examination scheme and modes shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

GENERIC ELECTIVES (GE-1): CONCEPTS IN BIOTECHNOLOGY

Credit distribution, Eligibility and Pre-requisites of the Course

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course |
|----------------------------------|----------|-----------------------------------|----------|----------------------|--|-----------------------------|
| | | Lecture | Tutorial | Practical / Practice | | |
| CONCEPTS IN BIOTECHNOLOGY | 4 | 3 | - | 1 | The student should have studied science (Biological science/physical sciences) | NA |

Learning Objectives

The Learning Objectives of this course are as follows:

The purpose of this course is to introduce students to importance of Biotechnology in allied fields. It will enable students from diverse backgrounds to understand basic concepts in Gene Cloning and DNA Analysis, and appreciate applications of Biotechnology in everyday life. The course will provide students with an insight into the various molecular biology techniques commonly used in Biotechnology, and some of the relevant bio-safety issues and ethical concerns.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Learn about basic biotechnology techniques and key concepts that are used in isolation and characterization of biomolecules (DNA and proteins).
- Develop basic understanding of the robust techniques with wide applications (such as PCR, DNA sequencing) and appreciate their contribution in development of biotechnology.
- Comprehend the importance of gene cloning in biotechnology and learn the intricacies of gene cloning using plasmids and bacteriophages as cloning vectors.

- Understand the importance of construction of genomic libraries and their specialized screening methods to identify gene of interest.
- Learn the concept and application of DNA fingerprinting, recombinant protein expression, biopharmaceutical protein production, and gene therapy.
- Gain an insight of safe handling of GMO's, their environmental release and ethical practices.

SYLLABUS OF GE-1

UNIT – I Techniques Used in Biotechnology (12 Hours)

Brief history of biotechnology and its importance. Isolation and purification of plasmid DNA. Agarose and Polyacrylamide gel electrophoresis (Native and SDS). Southern and Western hybridization. Polymerase Chain Reaction (PCR): Principle, DNA polymerases in PCR, Primer Designing, Types of PCR - Hot Start, Multiplex and Reverse Transcription and their Applications. Sequencing: Enzymatic (Sanger's dideoxy) method, Introduction to Automated Sequencing.

UNIT – II Process of Gene Cloning, Expression and Protein Purification (15 Hours)

Restriction endonucleases: Restriction and Modification Systems, Nomenclature and Types of Restriction Enzymes (Type I-IV), Recognition of Restriction Sites. Joining of DNA Molecules: Sticky End and Blunt End Ligations, Role of DNA Ligase, Adaptors, Linkers, Homopolymer Tailing. Vectors: Plasmids (pUC Vectors), Bacteriophage (Lambda Phage Derived Replacement And Insertion Vectors), Cosmids, In Vitro Packaging, Expression Vectors (One example each of prokaryotic and eukaryotic expression vectors). Bacterial Transformation, Antibiotic Selection and Blue/White Screening of Transformants. Challenges in Expression of Eukaryotic Proteins in Prokaryotic Hosts

UNIT – III Genomic and cDNA Libraries (18 Hours)

Construction of Genomic and cDNA Libraries, their Screening by Nucleic Acid Hybridization (Colony and Plaque Hybridization).

UNIT – IV Applications of Biotechnology (6 Hours)

DNA Fingerprinting. Using the Example of Human Insulin learn the Importance of Various Applications of Biotechnology: Recombinant Protein Expression, Biopharmaceutical Protein Production and Gene Therapy.

UNIT – V Biosafety and Ethical Issues (6 Hours)

Safe Handling and Disposal of GMOs and Relevant Ethical Issues. Impact of GMOs on the Environment (Bt. Toxin).

Practical component- (12 Sessions x 2 = 24 hrs)

(Wherever wet lab experiments are not possible, the principles and concepts can be demonstrated through any other material or medium including videos/virtual labs etc.)

1. To prepare laboratory reagents.
2. To perform plasmid DNA isolation.
3. To perform agarose gel electrophoresis of isolated plasmid DNA.
4. To perform restriction digestion of plasmid DNA.
5. To perform agarose gel electrophoresis of digested DNA.
6. To study restriction mapping.
7. To amplify DNA using PCR.
8. To perform agarose gel electrophoresis of amplified DNA

Essential readings

GENERIC ELECTIVES (GE-2): LANDMARK DISCOVERIES IN SCIENCE

Credit distribution, Eligibility and Pre-requisites of the Course

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course |
|--|----------|-----------------------------------|----------|---------------------|---|-----------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| LANDMARK DISCOVERIES IN SCIENCE | 4 | 3 | - | 1 | The student should have studied science (Biological science/physical sciences) | NA |

Learning Objectives

The Learning Objectives of this course are as follows:

The objective of the course is to ensure students appreciate the convenience and comfort that they have is all because of discoveries and inventions of the past. Meticulous execution of historical experiments in very little resources would also motivate them towards doing valuable research with enormous facilities that they have. The historical accounts of science provide grounds for interpretation and may be useful in arousing appreciation of science. The course would provide: Detailed analysis of classically designed and executed experiments in Life Sciences over the years. It will provide a foundation of biology by uncovering various players in the machinery of biological processes. It will also be helpful in technical, scientific analysis with historical background for a robust understanding of various discoveries. Critical

analysis of the history of biology would surely help students comprehend futuristic scientific discoveries.

Learning outcomes

The Learning Outcomes of this course are as follows:

The students will be able:

- Students will be able to learn how was light manipulated during the past to peer into previously invisible world—those too small or too far away to be seen by the naked eye.
- Students will learn about experiments that had fundamental contribution to our present understanding of key molecular elements of life. They will understand how to examine microbial cells and colonies, using various techniques to manipulate color, size, and contrast in ways that helped Scientists to identify species and diagnose disease.
- Studying this unit, students would come to know that there were three group of Naturalists working simultaneously to find answers to inheritance, evolution and basic composition of life. Students will be divulged with hereditary aspects of life. They will get familiar with genes and their roles in living organisms.
- Having understood the relationship of genes and inheritance, students would find interesting to learn the mystical molecule that make up these genes. Sequential study of these experiments would step by step unravel the mystery of genetic material.
- Students at this point of course would be curious to know the structure of molecule that forms the genetic material. They would learn how the information present on DNA manifests itself as specific characteristic features and help in diversity among organisms.
- Students will be explained how the in depth knowledge about became the most important tool for in vitro research, modification and applications thereof.
- Students will be briefed about some landmark discoveries which helped the field of medicine to grow tremendously and played a significant role in improving the overall health of the human population.
- Students can be given small projects to write discoveries done in conventional way.
- They will be required to provide a descriptive view of the topics assigned to them. Students should highlight the research topic with reference to current understanding.

SYLLABUS OF GE-2

UNIT – I View of the invisible Biology

(6 Hours)

Rudimentary microscopes to magnify objects; Use of eye glasses as simplest microscopes - Flea or fly glasses; Observing nature in the new world under lens; Book of Optics; Scientific use of Microscopes; Importance of Malphigi microscope that used field lens; Compound Microscope; Robert Hooke's observations in Micrographia; Foldscope by Manu Prakash

UNIT – II Origin of Life – A question

(6 Hours)

Spontaneous generation versus biogenesis; Problem of spores; Microbiology and Medicine - Germ theory of Disease; Recognition of agents of infection – Koch's Postulates.

UNIT – III Understanding Biology by observations

(6 Hours)

A) Study of evolution of life: Darwins Theory (B) Study of Inheritance of Life: classical era with contributions of Aristotle, Epicurus, and others; Modern genetics: Gregor Johann Mendel, his work on pea plants, theory of Mendelian inheritance (C) Study of composition of Life : Levels of cellular and molecular organization; Cells, tissues and organs in our body; Pioneers of chromosome studies; Discovery of nucleic acids; Nuclein verified as a distinct chemical entity; Early identification of purines and pyrimidines; building blocks of Nucleic

acids and proteins; Chemistry of Nucleic acids; Levene's tetranucleotide hypothesis.

UNIT – IV DNA as the hereditary material – An experimental view (4.5 Hours)

Transformation: Classic work of Frederick Griffith; DNA as the Pneumococcal Transforming Factor; In vitro Transformation system; Announcement that the transforming Principle was DNA; Mirsky's Criticism; The Avery, MacLeod and McCarty proclamation; Additional experiments that supported DNA as the transforming principle; Hershey and Chase clinched the role of DNA as the Genetic Material

UNIT – V Solving the puzzle of DNA structure (4.5 Hours)

Early studies of diffraction of X Rays by DNA fibers – contributions of Rosalind Franklin; Use of X – rays in medicines and research; Erwin Chargaff's discovery of base complementarity in DNA; Watson and Crick model of DNA; Contribution of Linus Pauling; DNA is replicated in Semi-conservative Fashion; Deciphering the Genetic Code; One Gene One Enzyme Edict.

UNIT – VI Technical advancements in biology (6 Hours)

Polymerase Chain Reaction – a revolution in modern biology; DNA Manipulations using Restriction enzymes; Discovery of reverse transcriptase leading to development of RT-PCR for RNA amplification; Work of Stanley Cohen and Herbert Boyer; Advent of gene cloning - History and current applications

UNIT – VII Research as a backbone of modern medicine (6 Hours)

(A) Discovery of antimicrobial agents; Contribution of Joseph Lister and later by Alexander Flemming leading to Discovery of Magic bullets; (B) Control of Infectious Diseases – Variolation, mithridatism and vaccination from the view of Edward Jenner; Vaccine production strategies – with examples of BCG and SARS-CoV2 vaccines; Historical timeline of vaccination strategies; (C) Marie Curie – Use of radiation in medicine.

UNIT – VIII Project Work [On any one topic] (6 Hours)

Study historical research papers and provide a descriptive view of research that was carried out by Scientists as Minor Project.

(A) Ancient system of medicine

(B) Contribution of any one Indian Scientists in Biology

(C) Contribution of any Physicists or Chemists in Biology (for topics listed above)

Practical component (if any) - (30 Hours)

(Wherever wet lab experiments are not possible, the principles and concepts can be demonstrated through any other material or medium including videos/virtual labs etc.)

1. Comparison of invisible life under the view of microscopes versus foldscope.
2. Cells as a unit of life and observation under the microscopes.
3. How do the cells divide – a view under the microscope: (mount of an onion root tip, onion bud cells or grasshopper testis).
4. Mendel's laws of inheritance – clues from nature.
5. Extraction of genomic DNA
6. Use of electric field to analyse DNA and other biomolecules.
7. Sneak Peek through the discovery of Polymerase chain reaction (PCR): Demonstration of original method and comparison with today's sophistication.
8. To test Flemming's hypothesis that the mold killed the bacteria.
9. Group Discussion on Research Topics assigned to students.

GENERIC ELECTIVES (GE-3): TOXIC SUBSTANCES AND HUMAN HEALTH

Credit distribution, Eligibility and Pre-requisites of the Course

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course |
|-----------------------------------|---------|-----------------------------------|----------|---------------------|------------------------------------|-----------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| TOXIC SUBSTANCES AND HUMAN HEALTH | 4 | 3 | - | 1 | Open to Students from all subjects | NA |

Learning Objectives

The Learning Objectives of this course are as follows:

In daily life, humans are exposed to several toxic substances. Many household products, medicines, cosmetic products, paints, and even food and water may contain toxic substances.; Frequent or improper use of many consumer products or exposure to higher amounts than prescribed, may cause serious health problems. This paper introduces the common toxic substances to which humans are routinely exposed; and health related issues in case of toxicity.

Learning outcomes

The Learning Outcomes of this course are as follows:

After studying, students will be able to:

- Introduction to the various toxic substances and how humans come in contact with toxic hazards. Definitions of various terminologies used in toxicology, and methods of assessment of toxicity of a substance are also covered.
- Upon contact with humans, toxic compounds may be absorbed in the body, and distributed to various organs to show toxic effects. Toxic compounds, once inside the body, are also metabolized or chemically altered. In most cases, after metabolism, the physicochemical properties of toxicants are altered, which helps in their speedy removal from the body.
- Many household products contain substances/ingredients which, if properly not used or applied on the body in excess, can cause serious health effects. These substances include cleaners, household pesticides, cosmetics, disposable utensils, paints, polish, etc. Students will be introduced to few such ingredients and their harmful effects.
- In addition to nutrients, our food also contains several substances which are unavoidable or added unintentionally. These substances and food adulterants, if taken for long time can cause adverse effects.
- Drugs are used to treat diseases. However, if taken at high dose (such as overdosing), drugs act as potential toxic substances. Moreover, several drugs have side effects even at prescribed dose or if used for prolonged duration.
- Anthropogenic activity and natural causes in some cases leads to contamination of soil, water and air with several potential toxicants. These toxicants enter human body via air that we breathe, drinking water and food. With examples of a few toxic substances, students will be introduced how toxicants enter the body from the environment and the adverse health effects caused by them.

SYLLABUS OF GE-3

UNIT – I Introduction to toxic substances and assessment of toxicity (9 Hours)

Types of toxic substances, human contact/exposure with toxic substances (occupational, intentional, accidental etc.); various definitions (toxin, toxicants, xenobiotics, exposure, acute toxicity, chronic toxicity etc); Dose Response Relationship, efficacy, potency, LD50, TD50, NOAEL, ADI; selective toxicity.

UNIT – II Movement of toxic substances inside the body (6 Hours)

Brief introduction to absorption of toxicants via various routes, concept of bioavailability, first pass metabolism, distribution and excretion.

UNIT – III Household toxicants (9 Hours)

Route of exposure, mechanism of toxicity and health effects of common household toxicants:

- i). Cleaners, disinfectants, air fresheners (sodium hypochlorite, ammonia, phenol, naphthalene, 1, 4-Dichlorobenzene, methanol).
- ii). Garden products, and home mosquito repellents and rat kills (pesticides: organophosphates, pyrethroids, aluminium and zinc phosphide).
- iii). Cosmetic products (metals: lead, cadmium; solvents: toluene, acetone).
- iv). Other products: disposable utensils (styrene), antifreezing agents (ethylene glycol), Volatile Organic Compounds (VOCs).

UNIT – IV Toxicants and toxins in food**(6 Hours)**

Mechanism of toxicity and health effects of:

- i. Pesticide residues (DDT, lindane)
- ii. Toxins (amatoxin, muscarine, bacterial toxins)

Brief discuss on food preservatives, colouring agents and flavouring agents etc, and food adulterants.

UNIT – V Drugs as toxicants**(6 Hours)**

Brief introduction of drugs as toxicants with examples; adverse effects of drugs at therapeutic doses, and overdosing.

UNIT – VI Environmental toxicants**(9 Hours)**

Route of exposure, mechanism of toxicity and health effects of:

- i. Industrial chemicals (mercury, Polycyclic Aromatic Hydrocarbons, dioxins).
- ii. Gaseous air pollutants (nitrogen oxides, sulfur dioxide, carbon monoxide).
- iii. Particulate matter (PM).

Practical component - (30 Hours)

(Wherever wet lab experiments are not possible, the principles and concepts can be demonstrated through any other material or medium including videos/virtual labs etc.)

1. Calculation of LD50 value of an insecticide from the data provided.
2. To estimate formaldehyde content in the given sample.
3. To detect presence of paracetamol in the given sample.
4. Analysis of sodium hypochlorite content in various household products.
5. To detect primary alcohol in sample/ household products.
6. To detect aromatic amines in the sample/ household products.
7. To study various toxic substances in terms of exposure, health effects, from various online resources (such as <https://www.atsdr.cdc.gov/> , TOXNET or other sources)
8. To separate a mixture of naphthol and naphthalene by solvent extraction method.

DEPARTMENT OF GEOLOGY

BSC (Hons.) Geology *Category-I*

DISCIPLINE SPECIFIC CORE COURSE – 1 (DSC-1) Earth System Science

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|----------------------|---------|-----------------------------------|----------|---------------------|-----------------------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Earth System Science | 4 | 3 | 0 | 1 | B.Sc. Hons. Geology students only | NIL |

Learning Objectives

Introduction to the subject Geology. Holistic understanding of Earth as a planet in the Solar System and its relationships with other terrestrial planets. Understanding of the processes occurring in lithosphere, hydrosphere, biosphere, and atmosphere

Learning outcomes

After completion of this course, students will be able to understand and comprehend the connectivity and dynamics of the atmosphere, lithosphere, and hydrosphere of the Earth. A thorough understanding of Geology, its various branches and the overall scope of Earth Science will be possible through this course.

SYLLABUS OF DSC-1

Unit 1:

(12 Hours)

Holistic understanding of dynamic planet 'Earth' and its orbital parameters. Introduction to various branches of Earth Sciences. General characteristics and theories about the origin of the Universe including our Solar System and its planets. The terrestrial and Jovian planets. Interior of the Earth. Meteorites and Asteroids. Earth's origin, size, shape, mass, density, rotational and revolution parameters. Methods to determine age of the Earth. Earth's Magnetic Field and Palaeomagnetism. Applications of paleomagnetism.

Unit 2:

(9 Hours)

Plate Tectonics: Concept of plate tectonics, sea-floor spreading and continental drift. Earthquake and earthquake belts; Volcanoes- types, products and distribution of volcanic belts.

Unit 3:

(9 Hours)

Hydrosphere and Atmosphere: Layers of the Atmosphere. Various cells of the atmospheric circulation. World surface oceanic currents and their distribution. Earth's heat budget. Orogeny and epeirogeny. Major mountain belts of the world.

Unit 4:

(15 Hours)

Understanding the past from geologic records; Nature of geologic records; Standard Geological time scale and introduction to the concept of time in geological studies; Introduction to geochronological methods and their application in geological studies. History of development in concepts of uniformitarianism, catastrophism, and Neptunism, Physiographic divisions of India.

Practical (30 Hours)

1. Study of major geomorphic features and their relationships with outcrops through physiographic models.
2. Detailed study of topographic sheets and preparation of physiographic description of an area
3. Study of distribution of major dams on map of India and their impact on river systems
4. Study of major ocean currents of the World
5. Study of different rock types
6. Study of fossils and their application
7. Study of physiographic map of earth during different Geological ages

Essential readings

- Cesare Emiliani, 1992; Planet Earth: Cosmology, Geology, and the Evolution of Life and Environment
- Arthur Holmes, 197; Holmes Principles Of Physical Geology, by John Wiley & Sons

Suggestive readings (if any)

- Physical Geology, 15th Edition, Charles C. Plummer, Diane H. Carlson, Lisa Hammersley McGraw-Hill Education- 2016
- Essentials of Geology, 13th Edition Frederick K. Lutgens, Edward J. Tarbuck, Dennis G. Tasa- Pearson Publications 2016
- Emiliani, C. (1992). Planet earth: cosmology, geology, and the evolution of life and environment. Cambridge University Press.
- Gross, M. G. (1977). Oceanography: A view of the earth.
- Duff, P. M. D. & Duff, D. (Eds.). (1993). Holmes's principles of physical geology. Taylor & Francis.

DISCIPLINE SPECIFIC CORE COURSE – 2 (DSC-2) : Mineral Science

Credit distribution, Eligibility and Prerequisites of the Course

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|------------------------|----------|-----------------------------------|----------|---------------------|--|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Mineral Science | 4 | 3 | 0 | 1 | B.Sc. Hons. Geology students only | NIL |

Learning Objectives

Major objectives for this course are to understand:

1. the characteristics of major mineral groups in hand specimen and thin section
2. phase equilibria, formation environments and associations of rock-forming minerals
3. crystal symmetry, crystallography, and atomic structure

Learning outcomes

At the end of this course, you will be able to:

1. identify common rock-forming minerals in hand specimens and in thin sections using diagnostic physical, optical, and chemical properties.
2. infer something about the formation environment of a silicate mineral using only its formula;
3. read a phase diagram;
4. predict the physical properties of a substance from its symmetry content;
5. plot crystal faces on a stereo projection

SYLLABUS OF DSC- 2

Unit 1: Chemical and Physical Fundamentals

- Importance of minerals, the definition of a mineral, atoms, ions, periodic table, bonding in minerals, compositional variations in minerals. **(6 Hours)**
- Crystallization, crystal imperfections (defects, zoning, twinning), crystal precipitation, mineral classification schemes, and physical properties of minerals (appearance, crystal shape, strength, density, magnetism, reaction with acid). **(6 Hours)**
- Polarized light, refractive index, uniaxial and biaxial indicatrices, interference figures. **(3 Hours)**

Unit 2: Rock-forming minerals

- Igneous minerals (silicates), phase relations **(6 Hours)**
- Sedimentary minerals (zeolites, clays, sulfates, halides, oxides, carbonates), weathering processes. **(6 Hours)**
- Metamorphic minerals, textures, reactions, phase equilibria. **(3 Hours)**

- Economic minerals (magmatic, hydrothermal, and sedimentary ores; native metals, sulfides and sulfosalts, oxides and hydroxides, gemstones) **(3 Hours)**

Unit 3: Symmetry, Crystallography, and Atomic Structure

- Symmetry, stereo diagrams, forms and crystal morphology. **(3 Hours)**
- Unit cells and lattices in two dimensions and three dimensions, Bravais lattices, unit cell symmetry and crystal symmetry, crystal structures, crystal habit and crystal faces. **(6 Hours)**
- Ionic radii, coordination number, packing, Pauling's rules, silicate structures, substitutions, structures of non-silicates. **(3 Hours)**

Practical:

1. Study of physical properties of minerals in hand specimen
Silicates: Olivine, Garnet, Kyanite, Staurolite, Tourmaline, Serpentine, Talc, Muscovite, Biotite, Quartz, Orthoclase, Plagioclase, Microcline, Nepheline, Sodalite. Quartz varieties: Chert, Flint, Chalcedony, Agate, Jasper, Amethyst, Rosequartz, Smoky quartz, Rock crystal. Native Metals/non-metals, Sulfides, Oxides-Copper, Sulfur, Graphite, Pyrite, Corundum, Magnetite Hydroxides, Halides, Carbonates, Sulfates, Phosphates: Psilomelane, Fluorite, Calcite, Malachite, Gypsum, Apatite.
2. Study of some key silicate minerals under an optical microscope and their characteristic properties.
3. Mineral stoichiometry related numerical.
4. Numericals related to parameters and indices of crystals faces.
5. Stereographic projection of crystal faces.

Essential readings

- Cornelis Klein and Barbara Dutrow, The manual of Mineral Science, Wiley Publication 2007
- Nesse W. D., Introduction to Optical mineralogy.2008, Oxford University Press.
- Deer W. A., Howie.R. A. and Zussman, J., An introduction to the rock-forming minerals 1992

Suggestive readings

1. Cornelis Klein and Barbara Dutrow, The manual of Mineral Science, Wiley Publication 2007
2. Nesse W. D., Introduction to Optical mineralogy.2008, Oxford University Press.
3. Deer W. A., Howie.R. A. and Zussman, J., An introduction to the rock-forming minerals 1992

DISCIPLINE SPECIFIC CORE COURSE– 3 (DSC-3) Concepts of Stratigraphy

Credit distribution, Eligibility and Pre-requisites of the Course

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course(if any) |
|--------------------------|---------|-----------------------------------|----------|---------------------|-----------------------------------|-------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Concepts of Stratigraphy | 4 | 3 | 0 | 1 | B.Sc. Hons. Geology students only | NIL |

Learning Objectives

This is to introduce students with the fundamental concepts of stacking of sediments in both space and time based on principles of stratigraphy and sedimentation.

Learning outcomes

Students will be able to learn the distribution of sedimentary rocks in both space and time and appreciate the stacking of sediments following the fundamental concepts of stratigraphy

SYLLABUS OF DSC-3

Unit 1: Principles of stratigraphy, geological time scale **(3 Hours)**

Unit 2: Stratigraphic units: lithostratigraphic, chronostratigraphic and biostratigraphic units **(2 weeks)**

Unit 3: Stratigraphic classification and correlation. Methods of collecting stratigraphic data, identification of stratigraphic contacts and unconformities. **(6 Hours)**

Unit 4: Facies concept in stratigraphy. Applications of lithostratigraphy **(3 Hours)**

Unit 5: Fossils and stratigraphy; Evolutionary trends, Biozones and zone fossils **(3 Hours)**

Unit 6: Biostratigraphy in relation to other stratigraphic techniques **(6 Hours)**

Unit 7: Radiometric dating (K-Ar, Rb-Sr, U-Pb) and correlation techniques **(6 Hours)**

Unit 8 : Basic principles of magnetostratigraphy, seismic stratigraphy and sequence stratigraphy. **(6 Hours)**

Unit 9: Concept of Stratotypes. Global Stratotype Section and Point (GSSP). International and Indian code for stratigraphic classification. **(6 Hours)**

Practical (30 Hours)

Preparation and study of stratigraphic maps:

- Correlation diagrams using lithologs of fossiliferous and non-fossiliferous stratigraphic units. Geophysical logs.
- Examination of isopach and isofacies maps.

c) Exercises related to stratigraphic classification and correlation.

Essential readings

- Blatt, H., Berry, W.B. and Brande, S., 1991. Principles of stratigraphic analysis. Blackwell scientific publications, Oxford
- Nicols G., 2009 Sedimentology and Stratigraphy 2nd Edition, Wiley-Blackwell
- Brookfield, M.E., 2016 Principles of stratigraphy, Wiley India

COMMON POOL OF GENERIC ELECTIVES (GE) COURSES

Offered by Department of Geology

Category-IV

GENERIC ELECTIVES (GE-1): Essentials of Geology

Credit distribution, Eligibility and Pre-requisites of the Course

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course |
|-----------------------|---------|-----------------------------------|----------|---------------------|-----------------------|-----------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Essentials of Geology | 4 | 4 | 0 | 0 | 12 th Pass | Nil |

Learning Objectives

1. Interactive and interdisciplinary nature of geology
2. Interplanetary scope of geology
3. Introduction to atmosphere, hydrosphere, biosphere and lithosphere

Learning outcomes

1. Earth, its origin and concept of geological time
2. Formation of planets and solar system
3. Composition of inner as well as surficial components of planet earth
4. Major geomorphic features, and compositions of various parts of earth and major earth processes
5. Earth Resources

SYLLABUS OF GE-1

Unit 1: Introduction to geology, scope, sub-disciplines and relationship with other branches of sciences Solar system and its origin: Terrestrial and Jovian planets; Nebular hypothesis. Earth's size, shape, mass, density, rotational and evolutionary parameters Earth in comparison to other bodies in the solar system. (16

Hours)

Unit 2: Internal constitution of the earth - core, mantle and crust (Chemical and mechanical differentiation) Convections in the earth's core and production of magnetic field; Concept of Plate Tectonics as a unifying theory. (16 Hours)

Unit 3: Origin and composition of hydrosphere and atmosphere; Origin of biosphere; Origin of oceans, continents and mountains. (12 Hours)

Unit 4: Geological Time Scale Radioactivity dating and its application in determining the age of the rocks. Earth Resources and their sustainable use. (16 Hours)

Essential readings

- Holmes, A. (1992). Principles of Physical Geology, 1992, Chapman and Hall.
- Emiliani, C. (1992). Planet Earth, Cosmology, Geology and the Evolution of Life and Environment, Cambridge University Press.

3. Gross, M.G. (1977). Oceanography: A view of the Earth, Prentice Hall.
4. Grotzinger, J.P. & Jordan, T.H. (2020) Understanding Earth. 8th Edition, W.H. Freeman and Company

DEPARTMENT OF PHYSICS

BSc. (Hons.) Physics

Category-I

DISCIPLINE SPECIFIC CORE COURSE – 1 (DSC-1) Mathematical Physics I

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course |
|------------------------|---------|-----------------------------------|----------|---------------------|--|---|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Mathematical Physics I | 4 | 3 | 0 | 1 | Class XII pass with Physics and Mathematics as main subjects | Physics and Mathematics syllabus of class XII |

Learning Objectives

The emphasis of the course is on applications in solving problems of interest to physicists. The course will teach the students to model a physics problem mathematically and then solve those numerically using computational methods. The course will expose the students to fundamental computational physics skills enabling them to solve a wide range of physics problems. The skills developed during course will prepare them not only for doing fundamental and applied research but also for a wide variety of careers.

Learning Outcomes

After completing this course, student will be able to,

- Draw and interpret graphs of various elementary functions and their combinations.
- Understand the vector quantities as entities with Cartesian components which satisfy appropriate rules of transformation under rotation of the axes.
- Use index notation to write the product of vectors in compact form easily applicable in computational work.
- Solve first and second order differential equations and apply these to physics problems.
- Understand the functions of more than one variable and concept of partial derivatives.
- Understand the concept of scalar field, vector field, gradient of scalar field and divergence and curl of vector fields.
- Perform line, surface and volume integration and apply Green's, Stokes' and Gauss's theorems to compute these integrals and apply these to physics problems
- Understand the properties of discrete and continuous distribution functions.

In the laboratory course, the students will learn to,

- Prepare algorithms and flowcharts for solving a problem.
- Design, code and test simple programs in Python/C++ to solve various problems.

- Perform various operations of 1-d and 2-d arrays.
- Visualize data and functions graphically using Matplotlib/Gnuplot

SYLLABUS OF DSC – 1

THEORY COMPONENT

Unit 1 (18 Hours)

Functions: Plotting elementary functions and their combinations, Interpreting graphs of functions using the concepts of calculus, Taylor's series expansion for elementary functions.

Ordinary Differential Equations: First order differential equations of degree one and those reducible to this form, Exact and Inexact equations, Integrating Factor, Applications to physics problems

Higher order linear homogeneous differential equations with constant coefficients, Wronskian and linearly independent functions. Non-homogeneous second order linear differential equations with constant coefficients, complimentary function, particular integral and general solution, Determination of particular integral using method of undetermined coefficients and method of variation of parameters, Cauchy-Euler equation, Initial value problems. Applications to physics problems

Unit 2 (12 Hours)

Vector Algebra: Transformation of Cartesian components of vectors under rotation of the axes, Introduction to index notation and summation convention. Product of vectors - scalar and vector product of two, three and four vectors in index notation using δ_{ij} and ϵ_{ijk} (as symbols only – no rigorous proof of properties). Invariance of scalar product under rotation transformation.

Vector Differential Calculus: Functions of more than one variable, Partial derivatives, chain rule for partial derivatives. Scalar and vector fields, concept of directional derivative, the vector differential operator $\vec{\nabla}$, gradient of a scalar field and its geometrical interpretation. Divergence and curl of a vector field and their physical interpretation. Laplacian operator. Vector identities.

Unit 3 (15 Hours)

Vector Integral Calculus: Integrals of vector-valued functions of single scalar variable. Multiple integrals, Jacobian, Notion of infinitesimal line, surface and volume elements. Line, surface and volume integrals of vector fields. Flux of a vector field. Gauss divergence theorem, Green's and Stokes' Theorems (no proofs) and their applications

Probability Distributions: Discrete and continuous random variables, Probability distribution functions, Binomial, Poisson and Gaussian distributions, Mean and variance of these distributions.

PRACTICAL COMPONENT (Hours)

(30

The aim of this lab is not just to teach computer programming and numerical analysis but to emphasize its role in solving problems in Physics. The course will consist of practical sessions and lectures on the related theoretical aspects of the laboratory. Assessment is to be done not only on the programming but also on the basis of formulating the problem.

- Every student must perform at least 6 programs covering each unit.
- The list of recommended programs is suggestive only. Students should be encouraged to do more practice. Emphasis should be given to assess student's ability to formulate a physics problem as mathematical one and solve by computational methods.
- The implementation can be either in Python or C++. Accordingly, the instructor can choose section A or B respectively from Unit 1 and 2. The list of programs is common for both sections. If C++ is used, then for all plotting programs, Gnuplot has to be used.

Basics of scientific computing (Mandatory):

- (a) Binary and decimal arithmetic, Floating point numbers, single and double precision arithmetic, underflow and overflow, numerical errors of elementary floating point operations, round off and truncation errors with examples.
- (b) Introduction to Algorithms and Flow charts. Branching with examples of conditional statements, for and while loops.

Unit 1

Section A:

Basic Elements of Python: The Python interpreter, the print statement, comments, Python as simple calculator, objects and expressions, variables (numeric, character and sequence types) and assignments, mathematical operators. Strings, Lists, Tuples and Dictionaries, type conversions, input statement, list methods. List mutability, Formatting in the print statement.

Control Structures: Conditional operations, if, if-else, if-elif-else, while and for loops, indentation, break and continue, List comprehension. Simple programs for practice like solving quadratic equations, temperature conversion etc.

Functions: Inbuilt functions, user-defined functions, local and global variables, passing functions, modules, importing modules, math module, making new modules. Writing functions to perform simple operations like finding largest of three numbers, listing prime numbers, etc., Generating pseudo random numbers.

OR

Section B:

Introduction to C++: Basic idea of Compilers. Structured programming. Idea of Headers, Data Types, Enumerated Data, Conversion and casting, constants and variables, Mathematical, Relational, Logical and Bit wise Operators. Precedence of Operators, Expressions and Statements, Scope and Visibility of Data, block, Local and Global variables, Auto, static and External variables. Input and output statements. I/O

manipulations, iostream and cmath header files, using namespace.

Control Statements: The if-statement, if-else statement, Nested if Structure, If - Else if – else block, Ternary operator, Goto statement, switch statement, Unconditional and Conditional looping, While loop, Do-while loop, For loop, nested loops, break and continue statements. Simple programs for practice like solving quadratic equations, temperature conversion etc.

Functions: Inbuilt functions. User-defined functions, function declaration, function definition, function prototype, void functions and function arguments, return statement. Local and global variables. The main function. Passing parameter by value and by reference. Inline functions. Function overloading. Writing functions to perform simple operations like finding largest of three numbers, listing prime numbers etc., Generating pseudo random numbers.

Recommended List of Programs (At least Two)

- (a) Make a function that takes a number N as input and returns the value of factorial of N. Use this function to print the number of ways a set of m red and n blue balls can be arranged.
- (b) Generate random numbers (integers and floats) in a given range and calculate area and volume of regular shapes with random dimensions.
- (c) Generate data for coordinates of a projectile and plot the trajectory. Determine the range, maximum height and time of flight for a projectile motion.

Unit 2

Section A:

NumPy Fundamentals: Importing Numpy, Difference between List and NumPy array, Adding, removing and sorting elements, creating arrays using ones(), zeros(), random(), arange(), linspace(). Basic array operations (sum, max, min, mean, variance), 2-d arrays, matrix operations, reshaping and transposing arrays, savetxt() and loadtxt().

Plotting with Matplotlib: matplotlib.pyplot functions, Plotting of functions given in closed form as well as in the form of discrete data and making histograms.

OR

Section B:

Arrays: Array definition, passing arrays to functions, Finding sum, maximum, minimum, mean and variance of given array. 2-d arrays, matrix operations (sum, product, transpose etc). Saving data generated by a C++ program in a file.

Gnuplot: Introduction to Gnuplot. Visualization of discrete data and plotting functions given in closed form and data for graphical visualization. Plotting data from the output file created by a C++ program, making histogram.

Recommended List of Programs (At least Three)

- (a) To plot the displacement-time and velocity-time graph for the un-damped, under-damped

critically damped and over-damped oscillator using matplotlib (or Gnuplot) using given formulae.

- (b) To compute the left, right and central approximations for derivative of a function given in closed form. Plot both the function and derivative on the same graph. Plot (using matplotlib/Gnuplot) the error as a function of step size on a log-log graph, study the behaviour of the plot as step size decreases and hence discuss the effect of round off error.
- (c) To generate array of N random numbers drawn from a given distribution (uniform, binomial, poisson and gaussian) and plot them using matplotlib/Gnuplot for increasing N to verify the distribution. Verify the central limit theorem.
- (d) To implement the transformation of physical observables under Galilean, Lorentz and Rotation transformation

Unit 3

Recommended List of Programs (At least one)

- (a) To find value of π and to integrate a given function using acceptance-rejection method.
- (b) To perform linear fitting of data using the inbuilt function `scipy.stats.linregress` in Python or using Gnuplot. Plot the data points and the fitted line on the same graph.

|------------------------------------|----------|-----------------------------------|----------|---------------------|--|---|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Mechanics DSC – 2 | 4 | 3 | 0 | 1 | Class XII pass with Physics and Mathematics as main subjects | Physics and Mathematics syllabus of class XII |

Learning Objectives

This course reviews the concepts of mechanics learnt at school from a more advanced perspective and goes on to build new concepts. It begins with Newton's Laws of Motion and ends with the Fictitious Forces and Special Theory of Relativity. The students will learn the collisions in the centre of mass frame, rotational motion and central forces. They will be able to apply the concepts learnt to several real world problems. In the laboratory part of the course, the students will learn to use various instruments, estimate the error for

every experiment performed and report the result of experiment along with the uncertainty in the result up to correct significant figures.

Learning Outcomes

Upon completion of this course, students will be able to,

- Learn the Galilean invariance of Newton's laws of motion.
- Understand translational and rotational dynamics of a system of particles.
- Apply Kepler's laws to describe the motion of planets and satellite in circular orbit.
- Understand Einstein's postulates of special relativity.
- Apply Lorentz transformations to describe simultaneity, time dilation and length contraction
- Use various instruments for measurements and perform experiments related to rotational dynamics, elastic properties, fluid dynamics, acceleration due to gravity, collisions, etc.
- Use propagation of errors to estimate uncertainty in the outcome of an experiment and perform the statistical analysis of the random errors in the observations.

SYLLABUS OF DSC- 2

THEORY COMPONENT

Unit 1: (14 Hours)

Fundamentals of Dynamics: Inertial and Non-inertial frames, Newton's Laws of Motion and their invariance under Galilean transformations. Momentum of variable mass system: motion of rocket. Dynamics of a system of particles. Principle of conservation of momentum. Impulse. Determination of Centre of Mass of discrete and continuous objects having cylindrical and spherical symmetry. Differential analysis of a static vertically hanging massive rope

Work and Energy: Work and Kinetic Energy Theorem. Conservative forces and examples (Gravitational and electrostatic), non-conservative forces and examples (velocity dependent forces e.g. frictional force, magnetic force), Potential Energy. Energy diagram. Stable, unstable and neutral equilibrium. Force as gradient of the potential energy. Work done by non-conservative forces.

Collisions: Elastic and inelastic collisions between two spherical bodies. Kinematics of 2 → 2 scattering in centre of mass and laboratory frames.

Unit 2: (12 Hours)

Rotational Dynamics: Angular momentum of a particle and system of particles. Torque. Principle of conservation of angular momentum. Rotation about a fixed axis. Determination of moment of inertia of symmetric rigid bodies (rectangular, cylindrical and spherical) using parallel and perpendicular axes theorems. Kinetic energy of rotation. Motion involving both translation and rotation.

Non-Inertial Systems: Non-inertial frames and fictitious forces. Uniformly rotating frame. Centrifugal force. Coriolis force and its applications.

Unit 3: (7 Hours)

Central Force Motion: Central forces, Law of conservation of angular momentum for

central forces, Two-body problem and its reduction to equivalent one-body problem and its solution. Concept of effective potential energy and stability of orbits for central potentials of the form kr^n for $n = 2$ and -1 using energy diagram, discussion on trajectories for $n=-2$. Solution of the Kepler Problem, Kepler's Laws for planetary motion, orbit for artificial satellites

Unit 4: (12 Hours)

Relativity: Postulates of Special Theory of Relativity, Lorentz Transformations, simultaneity, length contraction, time dilation, proper length and proper time, life time of a relativistic particle (for example muon decay time and decay length). Space-like, time-like and light-like separated events, relativistic transformation of velocity and acceleration, variation of mass with velocity, mass-energy equivalence, transformation of energy and momentum.

PRACTICAL COMPONENT (30 Hours)

Introductory Concepts and related activities (Mandatory)

- **Use of Basic Instruments**

Determination of least count and use of instruments like meter scale, vernier callipers, screw gauge and travelling microscope for measuring lengths.

- **Errors**

- (a) Types of errors in measurements (instrumental limitations, systematic errors and random errors), accuracy and precision of observations, significant figures.
- (b) Introduction to error estimation, propagation of errors and reporting of results along with uncertainties with correct number of significant figures.
- (c) Statistical analysis of random errors, need for making multiple observations, standard error in the mean as estimate of the error.

- **Graph Plotting**

Pictorial visualisation of relation between two physical quantities, Points to be kept in mind while plotting a graph manually.

- **Data Analysis**

Principle of least square fitting (LSF) and its application in plotting linear relations, estimation of LSF values of slope, intercept and uncertainties in slope and intercept.

Mandatory Activities

- Determine the least count of meter scale, vernier callipers, screw gauge and travelling microscope, use these instruments to measure the length of various objects multiple time, find the mean and report the result along with the uncertainty up to appropriate number of significant digits.
- Take multiple observations of the quantities like length, radius etc. for some spherical, cylindrical and cubic objects, find mean of these observations and use them to

determine the surface area and volume of these objects. Estimate the uncertainties in the outcome using law of propagation of errors. Report the result to appropriate number of significant figures.

- Given a data (x, y) corresponding to quantities x and y related by a relation $y = f(x)$ that can be linearised, plot the data points (manually) with appropriate choice of scale, perform least square fitting to determine the slope and intercept of the LSF line and use them to determine some unknown quantity in the relation. Determine the uncertainties in slope and intercept and use these to estimate the uncertainty in the value of unknown quantity.

Every student must perform at least 4 experiments from the following list.

- 1) To study the random errors in observations. It is advisable to keep observables of the order of least count of the instruments.
- 2) To determine the moment of inertia of a symmetric as well as asymmetric flywheel
- 3) To determine coefficient of viscosity of water by Capillary Flow Method (Poiseuille's method).
- 4) To determine g and velocity for a freely falling body using Digital Timing Technique.
- 5) To determine the Young's Modulus of a Wire by Optical Lever Method.
- 6) To determine the vertical distance between two given points using sextant.
- 7) To determine the coefficients of sliding and rolling friction experienced by a trolley on an inclined plane.
- 8) To verify the law of conservation of linear momentum in collisions on air track.

Suggested additional activities:

- 1) Virtual lab collision experiments on two dimensional elastic and inelastic collisions (for example available on following suggested links
 - a) <https://archive.cnx.org/specials/2c7acb3c-2fbd-11e5-b2d9-e7f92291703c/collision-lab/#sim-advanced-sim>

DISCIPLINE SPECIFIC CORE COURSE– 3 (DSC – 3) WAVES AND OSCILLATIONS

Credit distribution, Eligibility and Pre-requisites of the Course

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course |
|---|----------|-----------------------------------|----------|---------------------|--|---|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Waves and Oscillations DSC – 3 | 4 | 2 | 0 | 2 | Class XII pass with Physics and Mathematics as main subjects | Physics and Mathematics syllabus of class XII |

Learning Objectives

This course reviews the concepts of waves and oscillations learnt at school from a more advanced perspective and goes on to build new concepts. It begins with explaining ideas of free oscillations and superposition of harmonic motion leading to physics of damped and forced oscillations. The course will also introduce students to coupled oscillators, normal

modes of oscillations and free vibrations of stretched strings. Concurrently, in the laboratory component of the course students will perform experiments that expose them to different aspects of real oscillatory systems.

Learning Outcomes

On successful completion of this course, the students will have the skill and knowledge to,

- Understand simple harmonic motion
- Understand superposition of N collinear harmonic oscillations
- Understand superposition of two perpendicular harmonic oscillations
- Understand free, damped and forced oscillations
- Understand coupled oscillators and normal modes of oscillations
- Understand travelling and standing waves, stretched strings

SYLLABUS OF DSC – 3

THEORY COMPONENT

Unit 1: Simple Harmonic Motion (12 Hours)

Differential equation of simple harmonic oscillator, its solution and characteristics, energy in simple harmonic motion, linearity and superposition principle, rotating vector representation of simple harmonic oscillation, motion of simple and compound pendulum (Bar and Kater's pendulum), loaded spring.

Superposition of N collinear harmonic oscillations with (1) equal phase differences and (2) equal frequency differences, Beats

Superposition of two perpendicular harmonic oscillations: Graphical and Analytical Methods. Lissajous Figures with equal and unequal frequencies, effect of variation of phase

Unit 2: Damped and Forced Oscillations (8 Hours)

Damped Oscillations: Equation of motion, dead beat motion, critically damped system, lightly damped system: relaxation time, logarithmic decrement, quality factor

Forced Oscillations: Equation of motion, complete solution, steady state solution, resonance, sharpness of resonance, power dissipation, quality factor

Unit 3: Coupled Oscillations (6 Hours)

Coupled oscillators, normal coordinates and normal modes, energy relation and energy transfer, di-atomic molecules, representation of a general solution as a linear sum of normal modes, normal modes of N coupled oscillators.

Unit 4: Wave Motion (4 Hours)

One dimensional plane wave, classical wave equation, standing wave on a stretched string (both ends fixed), normal modes. Travelling wave solution

PRACTICAL COMPONENT (60 Hours)

Every student must perform at least 5 experiments

- 1) Experiments using bar pendulum:
 - a) Estimate limits on angular displacement for SHM by measuring the time period at different angular displacements and compare it with the expected value of time period for SHM.
 - b) Determine the value of g using bar pendulum.
 - c) To study damped oscillations using bar pendulum
 - d) Study the effect of area of the damper on damped oscillations. Plot amplitude as a function of time and determine the damping coefficient and Q factor for different dampers.
- 2) To determine the value of acceleration due to gravity using Kater's pendulum for both the cases (a) $T_1 \approx T_2$ and (b) $T_1 \neq T_2$ and discuss the relative merits of both cases by estimation of error in the two cases.
- 3) Understand the applications of CRO by measuring voltage and time period of a periodic waveform using CRO. And study the superposition of two perpendicular simple harmonic oscillations using CRO (Lissajous figures)
- 4) Experiments with spring and mass system
 - a) To calculate g , spring constant and mass of a spring using static and dynamic methods.
 - b) To calculate spring constant of series and parallel combination of two springs.
- 5) To study normal modes and beats in coupled pendulums or coupled springs.
- 6) To determine the frequency of an electrically maintained tuning fork by Melde's experiment and to verify $\lambda^2 - T$ Law.
- 7) To determine the current amplitude and phase response of a driven series LCR circuit with driving frequency and resistance. Draw resonance curves and find quality factor for low and high damping.

BSc. Physical Sciences

Multidisciplinary

DISCIPLINE SPECIFIC CORE COURSE – 1 (PHYSICS DSC - 1) MECHANICS

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course |
|-----------------------------------|---------|-----------------------------------|----------|---------------------|--|---|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Mechanics Physics DSC 1 | 4 | 2 | 0 | 2 | Class XII pass with Physics and Mathematics as main subjects | Physics and Mathematics syllabus of class XII |

Learning Objectives

This course reviews the concepts of mechanics learnt at school from a more advanced perspective and goes on to build new concepts. It begins with dynamics of a system of particles and ends with the special theory of relativity. Students will appreciate the concept of rotational motion, gravitation and oscillations. The students will be able to apply the concepts learnt to several real world problems.

Learning outcomes:

Upon completion of this course, students are expected to understand the following concepts.

- Laws of motion and their application to various dynamical situations.
- Conservation of momentum, angular momentum and energy. Their application to basic problems.
- Particle collision (elastic and in-elastic collisions)
- Motion of simple pendulum
- Postulates of special theory of relativity, inertial and non-inertial frame of reference and their transformation, relativistic effects on the mass and energy of a moving body.

In the laboratory course, after acquiring knowledge of how to handle measuring instruments (like screw gauge, vernier calliper and travelling microscope) student shall embark on verifying various principles and associated measurable quantities.

SYLLABUS OF PHYSICS DSC – 1

THEORY COMPONENT

Unit 1: Review of vectors and ordinary differential equation (4 Hours)

Gradient of a scalar field, divergence and curl of vectors field, polar and axial vectors
Second order homogeneous ordinary differential equations with constant coefficients
(Operator Method Only).

Unit 2: Fundamentals of Dynamics (7 Hours)

Dynamics of a system of particles, centre of mass, determination of centre of mass for discrete and continuous systems having spherical symmetry
Conservation of momentum and energy, Conservative and non-Conservative forces, work – energy theorem for conservative forces, force as a gradient of potential energy.
Particle collision (Elastic and in-elastic collisions)

Unit 3: Rotational Dynamics and Oscillatory Motion (8 Hours)

Angular momentum, torque, conservation of angular momentum, Moment of inertia, Theorem of parallel and perpendicular axes (statements only). Calculation of moment of inertia of discrete and continuous objects (1-D and 2-D).
Idea of simple harmonic motion, differential equation of simple harmonic motion and its solution, Motion of simple pendulum, damped harmonic oscillator

Unit 4: Gravitation (3 Hours)

Newton's Law of Gravitation, Motion of a particle in a central force field, Kepler's Laws (statements only)

Unit 5: Special Theory of Relativity (8 Hours)

Frames of reference, Galilean transformations, inertial and non-inertial frames, Michelson Morley's Experiment, postulates of special theory of relativity, length contraction, time dilation, relativistic transformation of velocity, relativistic variation of mass.

References:

Essential Readings:

- 2) An Introduction to Mechanics (2/e), Daniel Kleppner and Robert Kolenkow, 2014, Cambridge University Press.
- 3) Mechanics Berkeley Physics Course, Vol. 1, 2/e: Charles Kittel, et. al., 2017, McGraw Hill Education
- 4) Mechanics, D. S. Mathur, P. S. Hemne, 2012, S. Chand.
- 5) Intermediate Dynamics, Patrick Hamill, 2010, Jones and Bartlett Publishers.

Additional Readings:

- 1) Feynman Lectures, Vol. 1, R. P. Feynman, R. B. Leighton, M. Sands, 2008, Pearson Education.
- 2) University Physics, Ronald Lane Reese, 2003, Thomson Brooks/Cole.
- 3) University Physics, H. D. Young, R. A. Freedman, 14/e, 2015, Pearson Education.
- 4) Fundamentals of Physics, Resnick, Halliday and Walker 10/e, 2013, Wiley.
- 5) Engineering Mechanics, Basudeb Bhattacharya, 2/e, 2015, Oxford University Press.
- 6) Physics for Scientists and Engineers, Randall D Knight, 3/e, 2016, Pearson Education.

PRACTICAL COMPONENT (60 Hours)

The teacher is expected to give basic idea and working of various apparatus and instruments related to different experiments. Students should also be given knowledge of recording and analysing experimental data.

Every student should perform at least 06 experiments from the following list.

- 1) Measurement of length (or diameter) using vernier calliper, screw gauge and travelling microscope.
- 2) Study the random error in observations.
- 3) Determination of height of a building using a sextant.
- 4) Study of motion of the spring and calculate (a) spring constant and, (b) acceleration due to gravity
- 5) Determination of moment of inertia of a flywheel.
- 6) Determination of g and velocity for a freely falling body using digital timing technique.
- 7) Determination of modulus of rigidity of a wire using Maxwell's needle.
- 8) Determination of elastic constants of a wire by Searle's method.
- 9) Determination of value of g using bar pendulum.
- 10) Determination of value of g using Kater's pendulum.

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

DISCIPLINE SPECIFIC CORE COURSE – 2 (DSC - 2) Network Analysis and Analog Electronics

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course |
|--|---------|-----------------------------------|----------|---------------------|--|---|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Network Analysis and Analog Electronics Physics DSC 2 | 4 | 2 | 0 | 2 | Class XII pass with Physics and Mathematics as main subjects | Physics and Mathematics syllabus of class XII |

Learning Objectives

This course offers the basic knowledge to students to design and analyse the network circuit analysis and analog electronics. It gives the concept of voltage, current sources and various electrical network theorems, physics of semiconductor devices including junction diode, bipolar junction transistors, unipolar devices and their applications are discussed in detail. This also develops the understanding of amplifier and its applications.

Learning Outcomes

At the end of this course, students will be able to achieve the following learning outcomes.

- To understand the concept of voltage and current sources, Network theorems, Mesh Analysis.
- To develop an understanding of the basic operation and characteristics of different type of diodes and familiarity with its working and applications.
- Become familiar with Half-wave, Full-wave centre tapped and bridge rectifiers. To be able to calculate ripple factor and efficiency.
- To be able to recognize and explain the characteristics of a PNP or NPN transistor.
- Become familiar with the load-line analysis of the BJT configurations and understand the hybrid model (h- parameters) of the BJT transistors.
- To be able to perform small signal analysis of Amplifier and understand its classification.
- To be able to perform analysis of two stage R-C coupled Amplifier.
- To understand the concept of positive and negative feedback along with applications in case of oscillators.
- To become familiar with construction, working and characteristics of JFET and UJT.

SYLLABUS OF PHYSICS DSC – 2

THEORY COMPONENT

Unit 1: (8 Hours)

Circuit Analysis: Concept of Voltage and Current Sources (ideal and practical). Kirchhoff's Laws. Mesh Analysis, Node Analysis. Star and Delta networks and their Conversion. Superposition Theorem. Thevenin's Theorem. Norton's Theorem. Reciprocity Theorem. Maximum Power Transfer Theorem.

Unit 2: (5 Hours)

Semiconductor Diode: PN junction diode (Ideal and practical), Diode equation (Qualitative only) and I-V characteristics. Idea of static and dynamic resistance, Zener diode working. Rectifiers: Half wave rectifier (Qualitative only), Full wave rectifiers (center tapped and bridge): circuit diagrams, working and waveforms, ripple factor and efficiency.

Filter circuits: Shunt capacitance and series Inductance filter (no derivation).

Regulation: Zener diode as voltage regulator for load and line regulation.

Unit 3: (7 Hours)

Bipolar Junction Transistor: Review of the characteristics of transistor in CE and CB configurations, Regions of operation (active, cut off and saturation), Current gains α and β . Relations between α and β . dc load line and Q point.

Amplifiers: Transistor biasing and Stabilization circuits - Voltage Divider Bias. Thermal runaway, stability (Qualitative only). Transistor as a two-port network, h-parameter equivalent circuit. Small signal analysis of single stage CE amplifier. Input and Output impedance, Current and Voltage gains. Class A, B and C Amplifiers.

Unit 4:

(10

Hours)

Cascaded Amplifiers: Two stage RC Coupled Amplifier and its frequency response.

Sinusoidal Oscillators: Concept of feedback (negative and positive feedback), Barkhausen criterion for sustained oscillations. Phase shift and Colpitt's oscillator. Determination of frequency and condition of oscillation

Unipolar Devices: JFET. Construction, working and I-V characteristics (output and transfer), Pinch-off voltage. UJT, basic construction, working, equivalent circuit and I-V characteristics. UJT Oscillator.

- 2) Integrated Electronics, J. Millman and C.C. Halkias, Tata McGraw Hill (2001)
- 3) Electric Circuits, S. A. Nasar, Schaum Outline Series, Tata McGraw Hill (2004)
- 4) Electric Circuits, K.A. Smith and R. E. Alley, Cambridge University Press(2014)
- 5) 2000 Solved Problems in Electronics, J. J. Cathey, Schaum Outline Series, Tata McGraw Hill (1991)

Additional Readings:

- 1) Microelectronic Circuit, A. S. Sedra, K.C. Smith, A. N. Chandorkar, 6th Edition (2014), Oxford University Press
- 2) Electronic Circuits: Discrete and Integrated, D. L. Schilling and C. Belove, Tata McGraw Hill.
- 3) Electronic Devices and Circuits, David A. Bell, 5th Edition 2015, Oxford University Press.
- 4) Electrical Circuits, M. Nahvi and J. Edminister, Schaum Outline Series, Tata McGraw Hill (2005)

PRACTICAL COMPONENT (60 Hours)

At least 06 experiments from the following.

- 1) To familiarize with basic electronic components (R, L, C, diodes, transistors), digital Multimeter, Function Generator and Oscilloscope
- 2) Verification of
 - a. Thevenin's theorem and
 - b. Norton's theorem.
- 3) Verification of
 - a. Superposition Theorem and
 - b. Reciprocity Theorem
- 4) Verification of the Maximum Power Transfer Theorem.
- 5) Study of the I-V Characteristics of
 - a. p-n junction Diode, and
 - b. Zener diode.

- 6) Study of
 - a. Half wave rectifier and
 - b. Full wave rectifier (FWR).
- 7) Study the effect of
 - a. C- filter and L- filter and
 - b. Zener regulator.
- 8) Study of the I-V Characteristics of UJT and design relaxation oscillator.
- 9) Study of the output and transfer I-V characteristics of common source JFET.
- 10) Study of Voltage divider bias configuration for CE transistor.
- 11) Design of a Single Stage CE amplifier of given gain.
- 12) Study of the RC Phase Shift Oscillator.

Learning Objectives

This course reviews the concepts of mechanics learnt at school from a more advanced perspective and goes on to build new concepts. It begins with a review of vector algebra and ordinary differential equations. The students will learn Newton's laws of motion, conservation of momentum, conservation of energy, concept of simple harmonic motion, Newton's laws of gravitation, elasticity and the Special Theory of Relativity. They will be able to apply the concepts learnt to several real world problems.

Learning Outcomes

Upon completion of this course, students will be able to,

- Learn the laws of motion and their application to various dynamical situations.
- Understand the concept of conservation of momentum, angular momentum and energy. Their application to basic problems.
- Understand the motion of simple pendulum
- Understand the laws of gravitation and basic idea of global positioning system
- Understand the elastic properties
- Postulates of special theory of relativity, inertial and non-inertial frame of reference and their transformation, relativistic effects on the mass and energy of a moving body.

SYLLABUS OF DSC – 1

Vectors: Review of vector algebra. Scalar and vector product

(2 Hours)

Ordinary Differential Equations: First order homogeneous differential equations, second order homogeneous differential equation with constant coefficients

(4 Hours)

Brief review of Newton's laws of motion, dynamics of a system of particles, centre of mass, determination of centre of mass for continuous systems having spherical symmetry. Conservation of momentum and energy, work – energy theorem for conservative forces,

force as a gradient of potential energy, angular momentum, torque, conservation of angular momentum

(9 Hours)

Idea of simple harmonic motion, differential equation of simple harmonic motion and its solution, kinetic energy and potential energy, total energy and their time average for a body executing simple harmonic motion

(4 Hours)

Newton's law of gravitation, motion of a particle in a central force field, Kepler's laws, weightlessness, geosynchronous orbit, basic idea of global positioning system

(4 Hours)

Elasticity: Concept of stress and strain, Hooke's law, elastic moduli, twisting torque on a wire, tensile strength, relation between elastic constants, Poisson's ratio, rigidity modulus

(3 Hours)

Postulates of special theory of relativity, Lorentz transformation relations, length contraction, time dilation, relativistic transformation of velocity

(4 Hours)

PRACTICAL COMPONENT (60 Hours)

Every student should perform at least 06 experiments from the following list.

- 1) Measurements of length (or diameter) using vernier calliper, screw gauge and travelling microscope.
- 2) Determination of height of a building using a sextant.
- 3) Study of motion of the spring and calculate (a) spring constant and, (b) acceleration due to gravity (g)
- 4) Determination of moment of inertia of a flywheel.
- 5) Determination of Young's modulus of a wire by Optical Lever Method.
- 6) Determination of modulus of rigidity of a wire using Maxwell's needle.
- 7) Determination of elastic constants of a wire by Searle's method.
- 8) Determination of value of g using bar pendulum.
- 9) Determination of value of g using Kater's pendulum.

COMMON POOL OF GENERIC ELECTIVES (GE) COURSES
Offered by Department of Physics
Category-IV

COMMON POOL OF GENERIC ELECTIVES (GE) COURSES

Note: Examination scheme and modes shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

GENERIC ELECTIVES (GE – 1): MECHANICS

Credit distribution, Eligibility and Pre-requisites of the Course

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course | Department offering the course |
|---------------------------------|----------|-----------------------------------|----------|---------------------|-----------------------|-----------------------------|---------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | | |
| Mechanics GE 1 | 4 | 3 | 0 | 1 | Class XII pass | NIL | Physics and Astrophysics |

Learning Objectives

This course reviews the concepts of mechanics learnt at school in a more advanced perspective and goes on to build new concepts. It begins with dynamics of a system of particles and ends with the special theory of relativity. Students will appreciate the concept of rotational motion, gravitation and oscillations. The students will be able to apply the concepts learnt to several real world problems. A brief recapitulation of vector algebra and differential equations is also done to familiarize students with basic mathematical concepts which are necessary for a course on mechanics.

Learning Outcomes

Upon completion of this course, students are expected to understand the following concepts.

- Laws of motion and their application to various dynamical situations. And their applications to conservation of momentum, angular momentum and energy.
- Motion of a simple and compound pendulum
- Application of Kepler's laws to describe the motion of satellites in circular orbit.
- The concept of geosynchronous orbits
- Concept of stress and strain and relation between elastic constants
- Postulates of Special Theory of Relativity, Lorentz transformation, relativistic effects on the mass and energy of a moving body.

In the laboratory course, after acquiring knowledge of how to handle measuring

instruments (like vernier calliper, screw gauge and travelling microscope) student shall embark on verifying various principles and associated measurable quantities.

SYLLABUS OF GE – 1

THEORY COMPONENT

Unit 1: Recapitulation of Vectors and Ordinary Differential Equation (8 Hours)

Vector algebra, scalar and vector product, gradient of a scalar field, divergence and curl of vectors field

Ordinary Differential Equations: First order homogeneous differential equations, second order homogeneous differential equation with constant coefficients

Unit 2: Fundamentals of Dynamics (10 Hours)

Review of Newton's laws of motion, dynamics of a system of particles, centre of mass, determination of centre of mass for discrete and continuous systems having spherical symmetry, Conservation of momentum and energy, Conservative and non-Conservative forces, work – energy theorem for conservative forces, force as a gradient of potential energy.

Unit 3: Rotational Dynamics and Oscillatory Motion (14 Hours)

Angular velocity, angular momentum, torque, conservation of angular momentum, Moment of inertia, Theorem of parallel and perpendicular axes, Calculation of moment of inertia of discrete and continuous objects (1-D and 2-D).

Idea of simple harmonic motion, Differential equation of simple harmonic motion and its solution, Motion of a simple pendulum and compound pendulum

Unit 4: Gravitation (5 Hours)

Newton's Law of Gravitation, Motion of a particle in a central force field, Kepler's Laws (statements only), Satellite in circular orbit and applications, geosynchronous orbits

Unit 5: Elasticity (3 Hours)

Concept of stress and strain, Hooke's law, elastic moduli, twisting torque on a wire, tensile strength, relation between elastic constants, Poisson's ratio, rigidity modulus

Unit 6: Special Theory of Relativity (5 Hours)

Postulates of Special Theory of Relativity, Lorentz transformation, length contraction, time dilation, relativistic transformation of velocity, relativistic variation of mass, mass-energy equivalence

PRACTICAL COMPONENT (30 Hours)

The teacher is expected to give basic idea and working of various apparatus and instruments related to different experiments. Students should also be given knowledge of recording and analyzing experimental data.

Every student should perform at least 06 experiments from the following list.

- 1) Measurement of length (or diameter) using vernier calliper, screw gauge and travelling microscope.
- 2) Study the random error in observations.
- 3) Determination of height of a building using a sextant.
- 4) Study of motion of the spring and calculate (a) spring constant and, (b) acceleration due to gravity (g)
- 5) Determination of moment of inertia of a flywheel.
- 6) Determination of g and velocity for a freely falling body using digital timing technique.
- 7) Determination of modulus of rigidity of a wire using Maxwell's needle.
- 8) Determination of elastic constants of a wire by Searle's method.
- 9) Determination of value of g using bar pendulum.
- 10) Determination of value of g using Kater's pendulum.

References (for Laboratory Work):

GENERIC ELECTIVES (GE - 2): MATHEMATICAL PHYSICS

Credit distribution, Eligibility and Pre-requisites of the Course

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course |
|-----------------------------|---------|-----------------------------------|----------|---------------------|----------------------|-----------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Mathematical Physics GE – 2 | 4 | 3 | 1 | 0 | Class XII pass | NIL |

Learning Objectives

The emphasis of course is to equip students with the mathematical tools required in solving problem of interest to physicists. The course will expose students to fundamental computational physics skills and hence enable them to solve a wide range of physics problems.

Learning Outcomes

At the end of this course, the students will be able to,

- Understand functions of several variables.
- Represent a periodic function by a sum of harmonics using Fourier series and their applications in physical problems such as vibrating strings etc.
- Obtain power series solution of differential equation of second order with variable coefficient using Frobenius method.
- Understand properties and applications of special functions like Legendre polynomials, Bessel functions and their differential equations and apply these to various physical problems such as in quantum mechanics.
- Learn about gamma and beta functions and their applications.
- Solve linear partial differential equations of second order with separation of variable method.
- Understand the basic concepts of complex analysis and integration.
- During the tutorial classes, students' skill will be developed to solve more problems related to the concerned topics.

SYLLABUS OF GE – 2

THEORY COMPONENT

Unit 1:

(6 Hours)

Fourier series: Periodic functions. Orthogonality of sine and cosine functions, Convergence of Fourier series and Dirichlet Conditions (Statement only). Expansion of periodic functions in a series of sine and cosine functions and determination of Fourier coefficients. Even and odd functions and their Fourier expansions (Fourier Cosine Series and Fourier Sine Series).

Unit 2: (10 Hours)

Frobenius Method and Special Functions: Singular Points of Second Order Linear Differential Equations and their importance. Frobenius method and its applications to differential equations. Legendre and Bessel Differential Equations.

Unit 3: (14 Hours)

Some Special Integrals: Beta and Gamma Functions and Relation between them. Expression of integrals in terms of Gamma Functions.

Partial Differential Equations: Multivariable functions, Partial derivatives, Functions Solutions to partial differential equations, using separation of variables: Laplace's Equation in problems of rectangular geometry, Solution of 1D wave equation.

Unit 4: (15 Hours)

Complex Analysis: Functions of complex variable, limit, continuity, Analytic function, Cauchy-Riemann equations, singular points, Cauchy Goursat Theorem, Cauchy's Integral Formula, Residues, Cauchy's Residue Theorem.

Essential readings:

- 1) Advanced Engineering Mathematics, Erwin Kreyszig, 2008, Wiley India.
- 2) Complex Variables and Applications, J. W. Brown and R. V. Churchill, 7th Ed. 2003, Tata McGraw-Hill
- 3) Advanced Mathematics for Engineers and Scientists: Schaum Outline Series, M. R Spiegel, 2009, McGraw Hill Education.
- 4) Applied Mathematics for Engineers and Physicists, L.A. Pipes and L.R. Harvill, 2014, Dover Publications.
- 5) Mathematical Methods for Physics and Engineers, K.F Riley, M.P. Hobson and S. J. Bence, 3rd Ed., 2006, Cambridge University Press.

Suggestive readings

- 1) Mathematical Physics, A. K. Ghatak, I. C. Goyal and S. J. Chua, 2017, Laxmi Publications Private Limited.
- 2) Advanced Engineering Mathematics, D. G. Zill and W. S. Wright, 5 Ed., 2012, Jones and Bartlett Learning.
- 3) An introduction to ordinary differential equations, E. A. Coddington, 2009, PHI Learning.
- 4) Differential Equations, George F. Simmons, 2007, McGraw Hill.
- 5) Mathematical methods for Scientists and Engineers, D. A. Mc Quarrie, 2003, Viva Books

GENERIC ELECTIVES (GE – 3): WAVES AND OPTICS

Credit distribution, Eligibility and Pre-requisites of the Course

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course |
|--------------------------|---------|-----------------------------------|----------|---------------------|----------------------|-----------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Waves and Optics GE 3 | 4 | 3 | 0 | 1 | Class XII pass | NIL |

Learning Objectives

This coursework reviews the concept of waves and optics learnt at school level from a more advanced perspective and builds new concepts. This course is divided into two main parts. The first part deals with vibrations and waves. The second part pertains to optics and provides the details of interference, diffraction and polarization.

Learning Outcomes

After the completion of this course, the students will have learnt the following.

- Simple harmonic motion, superposition principle and its application to find the resultant of superposition of harmonic oscillations.
- Concepts of vibrations in strings.
- Interference as superposition of waves from coherent sources.
- Basic concepts of Diffraction: Fraunhofer and Fresnel Diffraction.
- Elementary concepts of the polarization of light.

SYLLABUS OF GE – 3

THEORY COMPONENT

Unit 1: (10 Hours)

Superposition of Harmonic Oscillations: Simple harmonic motion (SHM). Linearity and Superposition Principle. Superposition of two collinear harmonic oscillations having (1) equal frequencies and (2) different frequencies (Beats). Superposition of two perpendicular harmonic oscillations: Graphical and Analytical Methods. Lissajous Figures (1:1 and 1:2) and their uses.

Unit 2: (5 Hours)

Waves Motion: Types of waves: Longitudinal and Transverse (General idea). Travelling waves in a string, wave equation. Energy density. Standing waves in a string - modes of vibration. Phase velocity.

Unit 3: (12 Hours)

Interference of Light: Electromagnetic nature of light. Definition and properties of wave front. Huygens Principle. Interference: Division of amplitude and division of wave front. Young's Double Slit experiment. Fresnel's Biprism. Phase change on reflection: Stoke's treatment. Interference in Thin Films: parallel and wedge-shaped films. Newton's Rings: measurement of wavelength and refractive index.

Unit 4: (12 Hours)

Diffraction: Fraunhofer diffraction - Single slit, Double slit and Diffraction grating. Fresnel Diffraction - Half-period zones, Zone plate, Fresnel Diffraction pattern of a straight edge using half-period zone analysis.

Unit 5: (6 Hours)

Polarization: Transverse nature of light waves. Plane polarized light. Production and detection of linearly polarized light. Malus's Law. Idea of circular and elliptical polarization.

PRACTICAL COMPONENT (30 Hours)

Every student must perform at least 05 experiments out of the list following experiments.

- 1) To determine the frequency of an electrically maintained tuning fork by Melde's experiment and to verify $\lambda^2 - T$ Law.
- 2) To study Lissajous Figures.
- 3) Familiarization with Schuster's focusing and determination of the angle of prism.
- 4) To determine the refractive index of the material of a prism using sodium light.
- 5) To determine the dispersive power of a prism using mercury light.
- 6) To determine wavelength of sodium light using Newton's rings.
- 7) To determine wavelength of sodium light using a plane diffraction grating.
- 8) To verify Malus's Law.
- 9) To determine the wavelength of Laser light using single slit diffraction. (Due care should be taken not to see Laser light source directly as it may cause injury to eyes.)

References (for Laboratory Work):

- 1) Advanced Practical Physics for students, B. L. Flint and H. T. Worsnop, Asia Publishing House
- 2) A Text Book of Practical Physics, Indu Prakash and Ramakrishna, Kitab Mahal
- 3) An advanced course in practical physics, D. Chattopadhyay and P. C. Rakshit, New Central Book Agency

Essential readings:

FOR THEORY COMPONENT

- 1) The Physics of Waves and Oscillations: N K Bajaj, Tata Mcgraw Hill
- 2) Optics: Ajoy Ghatak, Seventh edition, Mcgraw Hill
- 3) Principle of Optics: B. K. Mathur and T. P. Pandya, Gopal Printing Press
- 4) Optics: Brij Lal and N. Subramanyam, S. Chand
- 5) The Fundamentals of Optics: A. Kumar, H. R. Gulati and D. R. Khanna, R. Chand

Suggestive readings:

- 1) Vibrations and Waves: A. P. French, CRC
- 2) The physics of Vibrations and Waves: H. J. Pain, Wiley
- 3) Fundamentals of Optics: Jenkins and White, McGraw Hill
- 4) Optics: E. Hecht and A R. Ganesan, Pearson, India
- 5) Introduction to Optics: F. Pedrotti, L. M. Pedrotti and L. S. Pedrotti, Pearson, India

GENERIC ELECTIVES (GE - 6): INTRODUCTORY ASTRONOMY**Credit distribution, Eligibility and Pre-requisites of the Course**

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course |
|--|----------|-----------------------------------|----------|---------------------|-----------------------|-----------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Introductory Astronomy GE 6 | 4 | 3 | 1 | 0 | Class XII pass | NIL |

Learning Objectives

This course is meant to introduce undergraduate students to the wonders of the Universe. Students will understand how astronomers over millennia have come to understand mysteries of the universe using laws of geometry and physics, and more recently chemistry and biology. They will be introduced to the Indian contribution to astronomy starting from ancient times up to the modern era. They will learn about diverse set of astronomical phenomenon, from the daily and yearly motion of stars and planets in the night sky which they can observe themselves, to the expansion of the universe deduced from the latest observations and cosmological models. Students will also be introduced to internet astronomy and the citizen science research platform in astronomy. The course presupposes school level understanding of mathematics and physics.

Learning Outcomes

- After completing this course, student will gain an understanding of,
- Different types of telescopes, diurnal and yearly motion of astronomical objects, astronomical coordinate systems and their transformations
- Brightness scale for stars, types of stars, their structure and evolution on HR diagram
- Components of solar system and its evolution
- Current research in detection of exoplanets
- Basic structure of different galaxies and rotation of the Milky Way galaxy
- Distribution of chemical compounds in the interstellar medium and astrophysical conditions necessary for the emergence and existence of life
- Internet based astronomy and the collaborative citizen astronomy projects

- India's contribution to astronomy, both in ancient times and in modern era.

SYLLABUS OF GE – 6

Unit 1: (8 Hours)

Introduction to Astronomy and Astronomical Scales: History of astronomy, wonders of the Universe, overview of the night sky, diurnal and yearly motions of the Sun, size, mass, density and temperature of astronomical objects, basic concepts of positional astronomy: Celestial sphere, Astronomical coordinate systems, Horizon system and Equatorial system

Unit 2: (6 Hours)

Basic Parameters of Stars: Stellar energy sources, determination of distance by parallax method, aberration, proper motion, brightness, radiant flux and luminosity, apparent and absolute magnitude scales, distance modulus, determination of stellar temperature and radius, basic results of Saha ionization formula and its applications for stellar astrophysics, stellar spectra, dependence of spectral types on temperature, luminosity classification, stellar evolutionary track on Hertzsprung-Russell diagram

Unit 3: (8 Hours)

Astronomical Instruments: Observing through the atmosphere (Scintillation, Seeing, Atmospheric Windows and Extinction). Basic Optical Definitions for Telescopes: Magnification, Light Gathering Power, Limiting magnitude, Resolving Power, Diffraction Limit. Optical telescopes, radio telescopes, Hubble space telescope, James Web space telescope, Fermi Gamma ray space telescope.

Astronomy in the Internet Age: Overview of Aladin Sky Atlas, Astrometrica, Sloan Digital Sky Survey, Stellarium, virtual telescope

Citizen Science Initiatives: Galaxy Zoo, SETI@Home, RAD@Home India

Unit 4: (8 Hours)

Sun and the solar system: Solar parameters, Sun's internal structure, solar photosphere, solar atmosphere, chromosphere, corona, solar activity, origin of the solar system, the nebular model, tidal forces and planetary rings

Exoplanets: Detection methods and characterization

Unit 5: (12 Hours)

Physics of Galaxies: Basic structure and properties of different types of Galaxies, Nature of rotation of the Milky Way (Differential rotation of the Galaxy), Idea of dark matter

Cosmology and Astrobiology: Standard Candles (Cepheids and SNe Type Ia), Cosmic distance ladder, Olber's paradox, Hubble's expansion, History of the Universe, Chemistry of life, Origin of life, Chances of life in the solar system

Unit 6: (4 Hours)

Astronomy in India: Astronomy in ancient, medieval and early telescopic era of India, current Indian observatories (Hanle-Indian Astronomical Observatory, Devasthal Observatory, Vainu Bappu Observatory, Mount Abu Infrared Observatory, Gauribidanur Radio Observatory, Giant Metre-wave Radio Telescope, Udaipur Solar Observatory, LIGO -

India) (qualitative discussion), Indian astronomy missions (Astrosat, Aditya)

Essential readings:

- 1) Seven Wonders of the Cosmos, Jayant V Narlikar, Cambridge University Press
- 2) Fundamental of Astronomy, H. Karttunen et al. Springer
- 3) Modern Astrophysics, B.W. Carroll and D.A. Ostlie, Addison-Wesley Publishing Co.
- 4) Introductory Astronomy and Astrophysics, M. Zeilik and S.A. Gregory, Saunders College Publishing.
- 5) The Molecular Universe, A.G.G.M. Tielens (Sections I, II and III), Reviews of Modern Physics, Volume 85, July-September, 2013
- 6) Astronomy in India: A Historical Perspective, Thanu Padmanabhan, Springer

- 2) Astrophysics Stars and Galaxies K D Abhyankar, Universities Press
- 3) Textbook of Astronomy and Astrophysics with elements of cosmology, V.B. Bhatia, Narosa Publication.
- 4) Baidyanath Basu, An introduction to Astrophysics, Prentice Hall of India Private Limited.
- 5) The Physical Universe: An Introduction to Astronomy, F H Shu, University Science Books

DEPARTMENT OF CHEMISTRY

BSc. (Hons.) Chemistry

Category-I

DISCIPLINE SPECIFIC CORE COURSE -1 (DSC-1): Atomic Structure & Chemical Bonding

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|---|---------|-----------------------------------|----------|---------------------|---------------------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Atomic Structure & Chemical Bonding (DSC-1: Inorganic Chemistry -I) | 04 | 03 | — | 01 | Physics, Chemistry, Mathematics | -- |

Learning Objectives

The course reviews the structure of the atom, which is a necessary pre-requisite in understanding the nature of chemical bonding in compounds. It provides basic knowledge about ionic and covalent bonding, and explains that chemical bonding is best regarded as a continuum between the two cases. It discusses the periodicity in properties with reference to the s and p block, which is necessary in understanding their group chemistry. The student will also learn about the fundamentals of acid-base and redox titrimetric analysis.

Learning outcomes

By the end of the course, the students will be able to:

- Solve the conceptual questions using the knowledge gained by studying the quantum mechanical model of the atom, quantum numbers, electronic configuration, radial and angular distribution curves, shapes of s, p, and d orbitals, and periodicity in atomic radii, ionic radii, ionization enthalpy and electron affinity of elements.
- Draw the plausible structures and geometries of molecules using radius ratio rules, VSEPR theory and MO diagrams (homo- & hetero-nuclear diatomic molecules).
- Understand the concept of lattice energy using Born-Landé and Kapustinskii equation.
- Calibrate the apparatus used in titrimetric analysis and prepare standard solutions for titration
- Understand the theory and application of various acid-base and redox titrations.
- Comprehend the theory of acid-base indicators

SYLLABUS OF DSC-1

UNIT – I (15 Hours)

Unit 1: Atomic Structure

Recapitulation of concept of atom in ancient India, Bohr's theory & its limitations, atomic spectrum of hydrogen atom.

de Broglie equation, Heisenberg's Uncertainty Principle and its significance. Postulates of wave mechanics, Time independent Schrödinger's wave equation, well behaved wave function, significance of ψ and ψ^2 . Quantum mechanical treatment of H- atom, Quantum numbers and their significance. Normalized and orthogonal wave functions. Sign of wave functions. Radial and angular wave functions for hydrogen atom. Radial function plots, radial probability distribution plots, angular distribution curves. Shapes of *s*, *p*, and *d* orbitals, Relative energies of orbitals.

Pauli's Exclusion Principle, Hund's rule of maximum spin multiplicity, Aufbau principle and its limitations.

UNIT – II (6 Hours)

Unit 2: Periodic properties of Elements & Periodic Trends

Brief discussion of the following properties of the elements, with reference to *s*- & *p*-block and their trends:

- Effective nuclear charge, shielding or screening effect and Slater's rules
- Atomic and ionic radii
- Ionization enthalpy (Successive ionization enthalpies)
- Electron gain enthalpy
- Electronegativity, Pauling's scale of electronegativity. Variation of electronegativity with bond order and hybridization.

UNIT – III (12 Hours)

Unit 3: Ionic bond

General characteristics, types of ions, size effects, radius ratio rule and its limitations. Packing of ions in crystals. Lattice energy, Born-Landé equation with derivation, Madelung constant, importance of Kapustinskii equation for lattice energy. Born-Haber cycle and its applications.

Covalent character in ionic compounds, polarizing power and polarizability. Fajan's rules and consequences of polarization.

UNIT – IV (12 Hours)

Unit 4: Covalent bond

Valence shell electron pair repulsion (VSEPR) theory, shapes of the following simple molecules and ions containing lone pairs and bond pairs of electrons: H₂O, NH₃, PCl₃, PCl₅,

SF₆, ClF₃, I₃, BrF₂⁺, PCl₆⁻, ICl₂⁻, ICl₄⁻, and SO₄²⁻. Application of VSEPR theory in predicting trends in bond lengths and bond angles.

Valence Bond theory (*Heitler-London* approach). Hybridization, equivalent and non-equivalent hybrid orbitals, Bent's rule.

Ionic character in covalent compounds: Bond moment and dipole moment. Percentage ionic character from dipole moment and electronegativity difference.

Molecular orbital diagrams of homo & hetero diatomic molecules [N₂, O₂, C₂, B₂, F₂, CO, NO] and their ions; HCl (idea of s-p mixing and orbital interaction to be given).

Practical component

Practicals: Inorganic Chemistry-I

(30 Hours)

(Laboratory periods: 15 classes of 2 hours each)

1. Titrimetric Analysis:

- (i) Calibration and use of apparatus
- (ii) Preparation of solutions of different Molarity/Normality.

2. Acid-Base Titrations: Principles of acid-base titrations to be discussed.

- (i) Estimation of oxalic acid using standardized NaOH solution
- (ii) Estimation of sodium carbonate using standardized HCl.
- (iii) Estimation of carbonate and hydroxide present together in a mixture.
- (iv) Estimation of carbonate and bicarbonate present together in a mixture.

3. Redox Titration: Principles of oxidation-reduction titrations to be discussed.

- (i) Estimation of oxalic acid using standardized KMnO₄ solution
- (ii) Estimation of water of crystallization in Mohr's salt by titrating with KMnO₄.
- (iii) Estimation of oxalic acid and sodium oxalate in a given mixture.

DISCIPLINE SPECIFIC CORE COURSE – 2 (DSC-2): Basic Concepts and Aliphatic Hydrocarbons

Credit distribution, Eligibility and Prerequisites of the Course

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|--|---------|-----------------------------------|----------|---------------------|---------------------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Basic Concepts and Aliphatic Hydrocarbons (DSC-2: Organic Chemistry-I) | 04 | 03 | -- | 01 | Physics, Chemistry, Mathematics | -- |

Learning Objectives

The core course Organic Chemistry I is designed in a manner that it forms a cardinal part of the learning of organic chemistry for the subsequent semesters. The course is infused with the recapitulation of fundamental concepts of organic chemistry and the introduction of the concept of visualizing the organic molecules in a three-dimensional space. To establish the applications of these concepts, the functional groups-alkanes, alkenes, alkynes are introduced. The constitution of the course strongly aids in the paramount learning of the concepts and their applications.

Learning outcomes

On completion of the course, the student will be able to:

- Understand and explain the electronic displacements and reactive intermediates and their applications in basic concepts.
- Formulate the mechanistic route of organic reactions by recalling and correlating the fundamental concepts.

- Identify and comprehend mechanism for free radical substitution, electrophilic addition, nucleophilic substitution and elimination reactions.
- Understand the fundamental concepts of stereochemistry.
- Understand and suitably use the chemistry of hydrocarbons

SYLLABUS OF DSC- 2

UNIT – I (9 Hours)

Unit I: Basic Concepts of Organic Chemistry

Electronic displacements and their applications: inductive, electromeric, resonance and mesomeric effects and hyperconjugation. Dipole moment, acidity and basicity.

Homolytic and heterolytic fissions with suitable examples. Types, shape and relative stability of carbocations, carbanions, carbenes and free radicals.

Electrophiles & nucleophiles, and introduction to types of organic reactions: addition, elimination and substitution reactions.

UNIT – II (18 Hours)

Unit II: Stereochemistry

Stereoisomerism: Optical activity and optical isomerism, asymmetry, chirality, enantiomers, diastereomers. specific rotation; Configuration and projection formulae: Newman, Sawhorse, Fischer and their interconversion. Chirality in molecules with one and two stereocentres; meso configuration.

Racemic mixture and their resolution. Relative and absolute configuration: D/L and R/S designations (CIP rules).

Geometrical isomerism: *cis-trans*, *syn-anti* and *E/Z* notations.

Conformational Isomerism: Alkanes (Conformations, relative stability and energy diagrams of Ethane, Propane and butane). Relative stability of cycloalkanes (Baeyer strain theory), Cyclohexane conformations with energy diagram. Conformations of monosubstituted cyclohexanes.

UNIT – III (18)

Unit III: Aliphatic Hydrocarbons

Alkanes: Preparation, Halogenation of alkanes, Concept of relative reactivity v/s selectivity.

Alkenes and Alkynes: Methods of preparation of alkenes using Mechanisms of E1, E2, E1cb reactions, Saytzeff and Hoffmann eliminations. Electrophilic additions, mechanism with suitable examples, (Markownikoff/Anti-markownikoff addition), *syn* and *anti*-addition; addition of H₂, X₂, oxymercuration-demercuration, hydroboration-oxidation, ozonolysis, hydroxylation, reaction with NBS, Reactions of alkynes; acidity, Alkylation of terminal alkynes, electrophilic addition: hydration to form carbonyl compounds, Relative reactivity of alkenes and alkynes, 1,2-and 1,4-addition reactions in conjugated dienes, Diels Alder reaction (excluding stereochemistry)

Practical component

Practical (30 Hours)
Credits: 01

(Laboratory periods: 15 classes of 2 hour each)

Note: *Students should be provided with handouts prior to the practical class*

1. Calibration of a thermometer and determination of the melting points of the organic compounds using any one of the following methods-Kjeldahl method, electrically heated melting point apparatus and BODMEL).
2. Concept of melting point and mixed melting point.
3. Concept of recrystallisation using alcohol/water/alcohol-water systems (Any two).
4. Determination of boiling point of liquid compounds (boiling point lower than and more than 100 °C by distillation, capillary method and BODMEL method)
5. Separation of a mixture of two amino acids/sugars by radial/ascending paper chromatography.
6. Separation of a mixture of *o*-and *p*-nitrophenol or *o*-and *p*-aminophenol by thin layer chromatography (TLC).
7. Detection of extra elements

DISCIPLINE SPECIFIC CORE COURSE– 3 (DSC-3): Gaseous and Liquid

Credit distribution, Eligibility and Pre-requisites of the Course

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|--|---------|-----------------------------------|----------|---------------------|---------------------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Gaseous and Liquid State (DSC-3: Physical Chemistry-I) | 04 | 02 | -- | 02 | Physics, Chemistry, Mathematics | -- |

Learning Objectives

The objective of this course is to develop basic and advance concepts regarding gases and liquids. It aims to study the similarity and differences between the two states of matter and reasons responsible for these. The objective of the practicals is to develop skills for working in physical chemistry laboratory. The student will perform experiments based on the concepts learnt in Physical chemistry-I course.

Learning outcomes

By the end of the course, the students will be able to:

- Derive mathematical expressions for different properties of gas and liquid and understand their physical significance.
- Apply the concepts of gas equations and liquids while studying other chemistry courses and every-day life.
- Handle stalagmometer and Ostwald viscometer properly.
- Determine the density of aqueous solutions.
- Dilute the given solutions as per required concentrations.
- Data reduction using numerical and graphical methods.

SYLLABUS OF DSC-3

UNIT – I (24 Hours)

Gaseous state

Kinetic theory of gases- postulates and derivation of kinetic gas equation, Maxwell distribution of molecular velocities and its use in evaluating average, root mean square and most probable velocities and average kinetic energy. Definition, expression, applications and temperature and pressure dependence of each one of the following properties of ideal gases: Collision frequency, Collision diameter, Mean free path. Coefficient of viscosity, definition, units and origin of viscosity of gases, relation between mean free path and coefficient of viscosity, temperature and pressure dependence of viscosity of a gas, calculation of molecular diameter from viscosity

Barometric distribution law, its derivation and applications, alternative forms of barometric distribution law in terms of density and number of molecules per unit volume, effect of height, temperature and molecular mass of the gas on barometric distribution

Behaviour of real gases- Compressibility factor, Z , Variation of compressibility factor with pressure at constant temperature (*plot of Z vs P*) for different gases (H_2 , CO_2 , CH_4 and NH_3), Cause of deviations from ideal gas behaviour and explanation of the observed behaviour of real gases in the light of molecular interactions

van der Waals (vdW) equation of state, Limitations of ideal gas equation of state and its modifications in the form of derivation of van der Waal equation, Physical significance of van der Waals constants, application of van der Waal equation to explain the observed behaviour of real gases.

Isotherms of real gases- Critical state, relation between critical constants and van der Waals constants, correlation of critical temperature of gases with intermolecular forces of attraction, Continuity of states, Limitations of van der Waals equation, Reduced equation of state and law of corresponding states (statement only).

Virial equation of state-Physical significance of second and third virial coefficients, van der Waals equation expressed in virial form, Relations between virial coefficients and van der Waals constants

UNIT – II (6 Hours)

Liquid state

Nature of liquid state, qualitative treatment of the structure of the liquid state

Physical properties of liquids-vapour pressure, its origin and definition, Vapour pressure of liquids and intermolecular forces, and boiling point

Surface tension, its origin and definition, Capillary action in relation to cohesive and adhesive forces, determination of surface tension by (i) using stalagmometer (drop number and drop mass method both) and (ii) capillary rise method, Effects of addition of sodium chloride, ethanol and detergent on the surface tension of water and its interpretation in terms of molecular interactions, Role of surface tension in the cleansing action of detergents

Coefficient of viscosity and its origin in liquids, Interpretation of viscosity data of pure liquids (water, ethanol, ether and glycerol) in the light of molecular interactions, Effects of addition of sodium chloride, ethanol and polymer on the viscosity of water, relative viscosity, specific viscosity and reduced viscosity of a solution, comparison of the origin of viscosity of liquids and gases, effect of temperature on the viscosity of a liquid and its comparison with that of a gas.

Practical component

Practicals

60 Hours

(Laboratory periods: 15 classes of 4 hours each)

1. Gases

- To verify the Charles law using Charles law apparatus
- To determine the value of universal gas constant R using the reaction
$$\text{Mg(s)} + 2\text{HCl (aq)} \rightarrow \text{MgCl}_2 \text{ (aq)} + \text{H}_2 \text{ (g)}$$

2. Surface tension measurements using stalagmometer

- Determine the surface tension of a liquid by drop number method.
- Determine the surface tension of a liquid by drop weight method.
- Study the variation of surface tension with different concentration of detergent solutions. Determine CMC.
- Study the effect of the addition of solutes on the surface tension of water at room temperature and explain the observations in terms of molecular interactions:
 - sugar
 - ethanol
 - sodium chloride
- Study the variation of surface tension with different concentration of sodium chloride solutions.

3. Viscosity measurement using Ostwald's viscometer

- Determination of co-efficient of viscosity of two unknown aqueous solution.
- Study the variation of viscosity with different concentration of sugar solutions.
- Study the effect of the addition of solutes such as (i) polymer (ii) ethanol (iii) sodium chloride on the viscosity of water at room temperature and explain the observations in terms of molecular interactions

- d. Study the variation of viscosity of water with the amounts of a solute and calculate the intrinsic viscosity at room temperature.
- e. Determine the viscosity average molecular mass of the polymer (PVA) using viscosity measurements.

BSc. IN ANALYTICAL CHEMISTRY
Multidisciplinary

DISCIPLINE SPECIFIC CORE COURSE (DS C1-AC1): Basic Principles and Laboratory Operations

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|---|---------|-----------------------------------|----------|---------------------|------------------------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Basic Principles and Laboratory Operations (DSC1-AC1) | 04 | 02 | 00 | 02 | Physics, Chemistry and Mathematics | NIL |

Learning Objectives

The Learning Objectives of this course are as follows:

- make students aware about the SI Units, concentration terms, various analytical methods, and safe usage of chemicals and its waste.

Learning outcomes

The Learning Outcomes of this course are as follows:

- The students will be able to Understand SI units
- The students will be able to Learn the use of analytical equipment
- The students will be able to Know the types of errors in chemical analysis
- The students will be able to handle statistical tests of data

SYLLABUS OF DSC1-AC1

UNIT – I: Basic Concepts (6 Hours)

A. SI Units

- Definitions of the Seven Base Units
- Derived units
- Conversion between units
- Significant figures

B. Chemical concentrations

- Mole, molar mass (calculations in grams and moles)
- Solutions and their concentrations

- Molar concentration
- Analytical molarity
- Equilibrium molarity of a particular species
- Percent concentration
- Parts per million/billion (ppm, ppb)
- Volume ratios for dilution procedures
- p-functions.

UNIT – II: Introduction to Analytical Chemistry and Analytical Methods (4 Hours)

1. General steps in chemical analysis.
2. Introduction to methods of detecting analytes
 - a) Physical
 - b) Electromagnetic radiations
 - c) Electric charge.

UNIT – III: Errors in Chemical Analysis (20 Hours)

- Types of errors
- Accuracy and Precision, Absolute and relative uncertainty, propagation of uncertainty
- The Gaussian distribution
- Mean and standard deviation
- Confidence intervals
- Statistical tests of data (F test, t test, Q test for bad data)
- Method of least squares
- Calibration curve
- Safety with chemicals and waste

Practical component 60 Hours (Credits: 02; Laboratory Periods: 60; 15 Classes of 4 hours each)

1. Description, Use and Calibration of Common Laboratory Apparatus I: Glassware: Volumetric flasks, Burettes, Pipettes, Weighing bottles, Drying ovens.
2. Description, Use and Calibration of Common Laboratory Apparatus II: Different types of Funnels, Chromatographic columns, Chromatographic jars, Desiccators, Filter crucibles, Rubber policeman.
3. Preparing Solutions: Standard solutions (acids and bases), primary standards & secondary standards, and to find out their concentration by any suitable methods.
4. Determination of strength of given strong acid using strong base volumetrically
5. Estimation of sodium carbonate by titrating with hydrochloric acid.
6. Use and maintenance of pH meter. Determination of pH of given dilute solutions of shampoos, soaps, fruit juices, and different soft drinks.
7. Determination of cell constant of a conductometric cell using standard KCl solutions.
8. To check the conductivity of various water samples (*Collect at least four samples*).

DISCIPLINE SPECIFIC CORE COURSE – 2 (DSC2-C1): Fundamentals of Organic Chemistry, Stereochemistry and Hydrocarbons

Credit distribution, Eligibility and Prerequisites of the Course

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|---|---------|-----------------------------------|----------|---------------------|------------------------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Fundamentals of Organic Chemistry, Stereochemistry and Hydrocarbons (DSC2-C1) | 04 | 02 | 00 | 02 | Physics, Chemistry and Mathematics | - |

Learning Objectives

The Learning Objectives of this course are as follows:

- The course is infused with the recapitulation of fundamentals of organic chemistry and visualizing the organic molecules in a three-dimensional space.
- To establish the applications of these concepts different class of mechanism is included.
- The constitution of the course strongly aids in the paramount learning of the concepts and their applications.

Learning outcomes

By the end of the course, the students will be able to:

- Understand and explain the differential behaviour of organic compounds based on fundamental concepts learnt.
- Understand the stereochemistry of aliphatic and aromatic hydrocarbons
- Formulate the mechanism of organic reactions by recalling and correlating the fundamental properties of the reactants involved.
- Learn and identify many organic reaction mechanisms including electrophilic addition, nucleophilic addition, nucleophilic substitution, and electrophilic substitution.
- Understand the mechanism of reactions of hydrocarbons

SYLLABUS OF DSC2-C1

UNIT – I: Fundamentals of Organic Chemistry (4 Hours)

Introduction to carbon compounds, an overview of Fundamentals (Electronic displacement-Inductive effect, Resonance effect, Hyperconjugation, Electromeric Effect). Reactive intermediates and their stability: carbocations, free radicals, carbanions, benzyne, carbene.

Acidity and basicity in carbon compounds (comparison of carboxylic acids, alcohols, phenols, primary, secondary and tertiary aliphatic amines, aniline and its derivative).

UNIT – II: Stereochemistry (8 Hours)

Types of projection formulas of carbon compound - Flying Wedge Formula, Newmann, Sawhorse and Fischer representations and their interconversion.

Stereoisomerism: the concept of chirality (upto two carbon atoms). Configurational Isomerism: geometrical and optical isomerism; enantiomerism, diastereomerism and meso compounds). Threo and erythro; D and L; cis-trans nomenclature; CIP Rules: R/ S (for upto 2 chiral carbon atoms) and E / Z nomenclature (for upto two C=C systems).

Conformational isomerism with respect to ethane, butane and cyclohexane.

UNIT – III: Aliphatic Hydrocarbons (12 Hours)

Functional group approach for the following reactions: preparations, physical property & chemical reactions to be studied with the mechanism in context to their structure.

Alkanes: Preparation: catalytic hydrogenation, Wurtz reaction, Kolbe's synthesis, Grignard reagent. Reactions: Free radical substitution: Halogenation.

Alkenes: Preparation: Elimination reactions: Dehydration of alcohols and dehydrohalogenation of alkyl halides (Saytzeff's rule); cis alkenes (Partial catalytic hydrogenation) and trans alkenes (Birch reduction). Reactions: cis-addition (alk. KMnO_4) and trans-addition (bromine), the addition of HX (Markownikoff's and anti-Markownikoff's addition), Hydration, Ozonolysis, oxymercuration-demercuration, Hydroboration oxidation.

Alkynes: Preparation: Acetylene from CaC_2 and conversion into higher alkynes; by dehalogenation of tetrahalides and dehydrohalogenation of vicinal-dihalides. Reactions: formation of metal acetylides and acidity of alkynes, the addition of bromine and alkaline

KMnO₄, ozonolysis and oxidation with hot alk. KMnO₄. Hydration to form carbonyl compounds.

UNIT – IV: Aromatic Hydrocarbons (6 Hours)

Aromaticity: benzenoids and Hückel's rule. Structure and aromatic character of benzene.

Preparation: methods of preparation of benzene from phenol, benzoic acid, acetylene and benzene sulphonic acid. Reactions: electrophilic substitution reactions in benzene citing examples of nitration, halogenation, sulphonation and Friedel-Craft's alkylation and acylation with emphasis on carbocationic rearrangement, side-chain oxidation of alkylbenzenes.

Practical component (60 Hours) (Credits: 02; Laboratory Periods: 60; 15 C lasses of 4 hours each)

1. Purification of organic compounds by crystallization using the following solvents:
 - a. Water
 - b. Alcohol
 - c. Water + alcohol
2. Determination of the melting points of organic compounds using Kjeldahl method and electrically heated melting point apparatus.
3. To study the effect of impurities on the melting point.
4. To identify the organic compounds using mixed melting point experiment. (*Identify at least two organic compounds*).
5. Determination of boiling point of liquid organic compounds using both distillation and capillary method.
6. Detection of extra elements present in an organic compounds (*Upto two extra elements*).
7. Organic Preparations:
 - a. Bromination of acetanilide, phenol and aniline
 - b. Nitration of nitrobenzene and bromobenzene

BSc. In Industrial Chemistry
Multidisciplinary

**DISCIPLINE SPECIFIC CORE COURSE (DSC-IC 1): INDUSTRIAL
CHEMICALS AND ENVIRONMENT**

**CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE
COURSE**

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|--|---------|-----------------------------------|----------|------------------------|-----------------------------|---|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Industrial Chemicals and Environment, DSC- IC 1 | 04 | 02 | - | 02 | Chemistry+Physics +Maths | NA |

Industrial Chemicals and Environment, DSC- IC 1

Learning Objectives

The Learning Objectives of this course are as follows:

- The objective of this course is to teach the Chemistry of the general industrial separation and purification techniques.
- Production, uses and hazards associated with different industrial gases and chemicals.
- Air pollution, air pollutants, pollutants control procedures, greenhouse effect, global warming,
- Water pollution, water pollutants, industrial effluents and their treatment.
- Water quality parameters and water purification techniques.

Learning outcomes

The Learning Outcomes of this course are as follows:

By the end of the course, the students will be able to:

- Know the various separation and purification techniques used in industries like distillation, solvent extraction, absorption, adsorption etc.
- Know the production, uses and hazards of important gases like oxygen, helium, argon, hydrogen, acetylene, ammonia etc.

- Know the production, uses and hazards of important inorganic chemicals like hydrochloric acid, sulphuric acid, nitric acid, sodium hydroxide, potassium hydroxide etc.
- Learn about air pollution, air pollutants, their control procedure, global warming, ozone depletion, water pollution, water pollutants, effluents from different industries, their treatment, water quality parameters and water purification techniques like reverse osmosis, electrodialysis and ion exchange.

SYLLABUS OF DSC- IC-1

UNIT – I (06 Hours)

Unit 1: General industrial processes

Basic principles of distillation, solvent extraction, solid-liquid leaching and liquid-liquid extraction, separation by absorption and adsorption

UNIT – II (12 Hours)

Unit 2: Industrial Gases and Inorganic Chemicals

(a) *Industrial Gases*: Production, uses and hazards in handling of the following gases: oxygen,

nitrogen, argon, neon, helium, hydrogen, acetylene, chlorine, fluorine and ammonia.

(b) *Inorganic Chemicals*: Production, uses and hazards in handling the following chemicals: hydrochloric acid, nitric acid, sulphuric acid, sodium hydroxide, potassium hydroxide, bleaching

powder, hydrogen peroxide, potash alum, chrome alum, potassium dichromate and potassium permanganate.

UNIT – III (12 Hours)

Unit 3: Environment

(a) *Air Pollution*: Pollutants and their sources, pollution by SO₂, CO, NO_x. Methods of estimation of CO, NO_x, SO_x and their control procedures. Greenhouse effect and global warming, Ozone depletion by oxides of nitrogen, chlorofluorocarbons and halogens, Particulate matter and its types.

(b) *Water Quality Standards and Water pollution*: Water quality parameters like pH, alkalinity, DO, BOD, COD, chloride, sulphate, available chlorine etc. Water treatment and purification processes (reverse osmosis, electro dialysis, ion exchange). Pollutants and their sources. Effluent treatment (primary, secondary and tertiary treatment). Industrial effluents from the following industries and their treatment: textile, tannery, dairy and petrochemicals and agrochemicals.

Practical component (60 Hours)

Practical

(Credits: 02, Laboratory periods: 60)

1. Determination of dissolved oxygen in water.
2. Determination of Chemical Oxygen Demand (COD).
3. Determination of Biological Oxygen Demand (BOD).

4. Measurement of chloride and sulphate ions of water samples by simple titration method. (With AgNO₃ and potassium chromate).
5. Measurement of salinity of water samples by simple titration method. (With AgNO₃ and potassium chromate).
6. Estimation of total alkalinity of water samples (CO₃²⁻, HCO₃⁻) using double titration method.
7. Determination of Percentage of available chlorine in bleaching powder.
8. Isolation of compounds using solvent extraction method.

Basic Concepts of Organic Chemistry, DSC- C1

Learning Objectives

The Learning Objectives of this course are as follows:

- The course is infused with the recapitulation of fundamentals of organic chemistry and the introduction of the concept of visualizing the organic molecules in a three-dimensional space. To establish the applications of these concepts, a study of diverse reactions through mechanisms is included.
- The constitution of the course strongly aids in the paramount learning of the basic concepts and their applications.

Learning outcomes

By the end of the course, the students will be able to:

- Understand and explain the differential behaviour of organic compounds based on fundamental concepts learnt.
- Understand the fundamental concepts of stereochemistry.
- Formulate the mechanism of organic reactions by recalling and correlating the fundamental properties of the reactants involved.
- Learn and identify many organic reactions and their mechanisms including electrophilic addition, nucleophilic addition, nucleophilic substitution, electrophilic substitution and rearrangement reactions.

SYLLABUS OF DSC- C 1

UNIT – I (6 Hours)

Unit 1: Fundamentals of organic chemistry

Types of Electronic displacements: Inductive effect, Resonance effect, Hyperconjugation, Electromeric Effect. Reactive intermediates and their stability: carbocations, free radicals, carbanions, benzyne, carbenes.

Acidity and basicity in organic compounds (comparison of carboxylic acids, alcohols, phenols, primary, secondary and tertiary aliphatic amines, aniline and its derivatives)

UNIT – II (8 Hours)

Unit 2: Stereochemistry

Types of projection formulae: Flying Wedge Formula, Newmann, Sawhorse and Fischer representations and their interconversion.

Stereoisomerism: Concept of chirality (upto two carbon atoms). Configurational isomerism: geometrical and optical isomerism; enantiomerism, diastereomerism and meso compounds). Threo and erythro; D and L; *Cis-trans* nomenclature; CIP Rules: R/ S (for upto 2 chiral carbon atoms) and *E/Z* nomenclature (for upto two C=C systems).

Conformational isomerism with respect to ethane, butane and cyclohexane.

UNIT – III (16 Hours)

Unit 3: Types of Organic Reactions (Including reactions of alkenes, alkyl and aryl halides, alcohols, aldehydes, ketones) Lectures: 18

Electrophilic addition reactions

Electrophilic addition reaction (with respect to propene, propyne, 3,3-dimethyl-1-butene): Hydration,

Addition of HX in the absence and presence of peroxide, Hydroboration oxidation, Addition of bromine (with stereochemistry).

Nucleophilic addition reactions

Nucleophilic addition reaction of carbonyl compounds: Addition of HCN, ammonia derivatives

(Hydroxylamine, Hydrazine, Semicarbazide and 2,4-DNP), the addition of carbanion (Aldol condensation, Claisen Schmidt, Benzoin condensation, Perkin reaction, reactions involving Grignard reagent).

Elimination and Nucleophilic substitution reactions

Nucleophilic substitution reaction (SN1 and SN2) in alkyl halides (mechanisms with stereochemical aspect), alcohols (with nucleophiles like ammonia, halides, thiols, ambident nucleophiles (cyanide and nitrite ion)), ethers (Williamson ether synthesis), Elimination reaction (E1 & E2), elimination *vs* substitution (*w.r.t.* potassium t-butoxide and KOH); Nucleophilic aromatic substitution in aryl

halides-elimination addition reaction *w.r.t.* chlorobenzene, including the effect of nitro group (on the ring) on the reaction. relative reactivity and strength of C-X bond in alkyl, allyl, benzyl, vinyl and aryl halides towards substitution reactions

Electrophilic substitution reactions

Electrophilic Aromatic substitution with mechanism (benzene)- sulphonation, nitration, halogenation, Friedel craft acylation :*o*-, *m*- and *p*- directive influence giving examples of toluene/nitrobenzene/ phenol/ aniline/ chlorobenzene.

Reactive intermediates and Rearrangement Reactions

Free radicals (Birch Reduction); *Carbocations* (Pinacol-Pinacolone, Wagner-Meerwein, Rearrangement, and Beckmann rearrangement); *Carbanions* (Michael Addition); *Carbenes* (Reimer Tiemann)

Practical component (60 Hours)

Practical

(Credits: 02, Laboratory periods: 60)

1. Purification of an organic compound by crystallization (from water and alcohol) and distillation, Criteria of purity: Determination of M.P.
2. Determination of boiling point of liquid compounds. (Boiling point lower than and more than 100 °C by distillation and capillary method)
3. Detection of extra element
4. Preparations: (Mechanism of various reactions involved to be discussed).
 - a. Bromination of phenol/aniline.
 - b. 2,4-Dinitrophenylhydrazone of aldehydes and ketones
 - c. Semicarbazone of aldehydes/ ketones
 - d. Aldol condensation reaction using green method.
 - e. Bromination of Stilbene.
 - f. Acetanilide to p-Bromoacetanilide.

The above derivatives should be prepared using 0.5-1g of the organic compound. The solid samples must be collected and may be used for recrystallization and melting point.

Course Code: Mathematics DSC-MP 1

Course Title: Calculus

Learning Objectives

The Learning Objectives of this course are as follows:

Course Objectives: The primary objective of this course is to introduce the basic tools of calculus which are helpful in understanding their applications in many real-world problems. Students will be able to understand/create various mathematical models in everyday life.

Learning outcomes

The Learning Outcomes of this course are as follows:

This course will enable the students to:

- i) Understand continuity and differentiability in terms of limits and graphs of certain functions.
- ii) Describe asymptotic behaviour in terms of limits involving infinity.
- iii) Use of derivatives to explore the behaviour of a given function locating and classify its extrema and graphing the function.
- iv) Apply the concepts of asymptotes, and inflexion points in tracing of cartesian curves.
- v) Compute the reduction formulae of standard transcendental functions with applications.

SYLLABUS OF DSC- MP 1

UNIT – I (10 Hours)

Unit 1: Limits, Continuity and Differentiability

Limit of a function, ε - δ definition of a limit, Infinite limits, Continuity and types of discontinuities; Differentiability of a function, Successive differentiation: Calculation of the n th derivatives, Leibnitz theorem; Partial differentiation, Euler's theorem on homogeneous functions.

UNIT – II (10 Hours)

Unit 2: Mean Value Theorems and its Applications

Rolle's theorem, Mean value theorems and applications to monotonic functions and inequalities; Taylor's theorem, Taylor's series, Maclaurin's series expansions of e^x , $\sin x$, $\cos x$, $\log x$ and $\ln x$; Indeterminate forms.

UNIT – III (10 Hours)

Unit 3: Tracing of Curves and Reduction Formulae

Asymptotes (parallel to axes and oblique), Concavity and inflexion points, Singular points, Tangents at the origin and nature of singular points, Curve tracing (cartesian and polar equations). Reduction formulae for $\int \sin^m x \, dx$, $\int \cos^n x \, dx$, and $\int \sin^m x \cos^n x \, dx$ and their applications.

Multidisciplinary

DISCIPLINE SPECIFIC CORE COURSE (DSC-1): Basic Concepts of Organic

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|-------------------------------------|---------|-----------------------------------|----------|---------------------|-----------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Basic Concepts of Organic Chemistry | 04 | 02 | - | 02 | 12 th Pass | NIL |

Learning Objectives

The Learning Objectives of this course are as follows:

- The course is infused with the recapitulation of fundamentals of organic chemistry and the introduction of the concept of visualizing the organic molecules in a three-dimensional space.
- To establish the applications of these concepts, a study of diverse reactions through mechanisms is included.
- The constitution of the course strongly aids in the paramount learning of the basic concepts and their applications

Learning outcomes

The Learning Outcomes of this course are as follows:

- Understand and explain the differential behavior of organic compounds based on fundamental concepts learned.
- Understand the fundamental concepts of stereochemistry.
- Formulate the mechanism of organic reactions by recalling and correlating the fundamental properties of the reactants involved.
- Learn and identify many organic reactions and their mechanisms including electrophilic addition, nucleophilic addition, nucleophilic substitution, electrophilic substitution and rearrangement reactions.

SYLLABUS OF DSC-1

UNIT – I Fundamentals of organic chemistry (6 Hours)

Types of Electronic displacements: Inductive effect, Resonance effect, Hyperconjugation, Electromeric Effect. Reactive intermediates and their stability: carbocations, free radicals, carbanions, benzyne, carbenes. Acidity and basicity in organic compounds (comparison of

carboxylic acids, alcohols, phenols, primary, secondary and tertiary aliphatic amines, aniline and its derivatives)

UNIT – II Stereochemistry (6 Hours)

Types of projection formulae: Flying Wedge Formula, Newmann, Sawhorse and Fischer representations and their interconversion.

Stereoisomerism: Concept of chirality (upto two carbon atoms). Configurational isomerism: geometrical and optical isomerism; enantiomerism, diastereomerism and meso compounds). Threo and erythro; D and L; *Cis-trans* nomenclature; CIP Rules: R/ S (for upto 2 chiral carbon atoms) and *E/Z* nomenclature (for upto two C=C systems).

Conformational isomerism with respect to ethane, butane and cyclohexane.

UNIT – III Types of Organic Reactions (Including reactions of alkenes, alkyl and aryl halides, alcohols, aldehydes, ketones) (18 Hours)

Electrophilic addition reactions

Electrophilic addition reaction (with respect to propene, propyne, 3,3-dimethyl-1-butene): Hydration, Addition of HX in the absence and presence of peroxide, Hydroboration oxidation, Addition of bromine (with stereochemistry).

Nucleophilic addition reactions

Nucleophilic addition reaction of carbonyl compounds: Addition of HCN, ammonia derivatives (Hydroxylamine, Hydrazine, Semicarbazide and 2,4-DNP), the addition of carbanion (Aldol condensation, Claisen Schmidt, Benzoin condensation, Perkin reaction, reactions involving Grignard reagent).

Elimination and Nucleophilic substitution reactions

Nucleophilic substitution reaction (S_N1 and S_N2) in alkyl halides (mechanisms with stereochemical aspect), alcohols (with nucleophiles like ammonia, halides, thiols, ambident nucleophiles (cyanide and nitrite ion)), ethers (Williamson ether synthesis), Elimination reaction ($E1$ & $E2$), elimination vs substitution (*w.r.t.* potassium *t*-butoxide and KOH); Nucleophilic aromatic substitution in aryl halides-elimination addition reaction *w.r.t.* chlorobenzene, including the effect of nitro group (on the ring) on the reaction. relative reactivity and strength of C-X bond in alkyl, allyl, benzyl, vinyl and aryl halides towards substitution reactions

Electrophilic substitution reactions

Electrophilic Aromatic substitution with mechanism (benzene)- sulphonation, nitration, halogenation, Friedel craft acylation :*o*-, *m*- and *p*- directive influence giving examples of toluene/nitrobenzene/ phenol/ aniline/ chlorobenzene.

Reactive intermediates and Rearrangement Reactions

Free radicals (Birch Reduction); *Carbocations* (Pinacol-Pinacolone, Wagner-Meerwein, Rearrangement, and Beckmann rearrangement); *Carbanions* (Michael Addition); *Carbenes* (Reimer-Tiemann).

Practical component (60 Hours)

1. Purification of an organic compound by crystallization (from water and alcohol) and distillation, Criteria of purity: Determination of M.P.
2. Determination of boiling point of liquid compounds. (Boiling point lower than and more than 100 °C by distillation and capillary method)
3. Detection of extra element
4. Preparations: (Mechanism of various reactions involved to be discussed).
 - a. Bromination of phenol/aniline.
 - b. 2,4-Dinitrophenylhydrazone of aldehydes and ketones
 - c. Semicarbazone of aldehydes/ ketones
 - d. Aldol condensation reaction using green method.
 - e. Bromination of Stilbene.
 - f. Acetanilide to p-Bromoacetanilide.

The above derivatives should be prepared using 0.5-1g of the organic compound. The solid samples must be collected and may be used for recrystallization and melting point.

COMMON POOL OF GENERIC ELECTIVES (GE) COURSES
OFFERED BY DEPARTMENT OF CHEMISTRY FOR ODD SEMESTER

GE 1: Chemistry: Atomic Structure and Chemical Bonding

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course |
|---|----------|-----------------------------------|----------|---------------------|----------------------|-------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Atomic Structure and Chemical Bonding (GE-1) | 4 | 2 | | 2 | | Basic knowledge of Chemistry |

Learning Objectives

The Learning Objectives of this course are as follows:

- To discuss the structure of atom as a necessary pre-requisite in understanding the nature of chemical bonding in compounds.
- To provide basic knowledge about ionic and covalent bonding.

Learning Outcomes

By the end of the course, the students will be able to:

- Solve the conceptual questions using the knowledge gained by studying the quantum mechanical model of the atom, quantum numbers, electronic configuration, radial and angular distribution curves, and shapes of s, p, and d orbitals
- Understand the concept of lattice energy and solvation energy.
- Draw the plausible structures and geometries of molecules using radius ratio rules, VSEPR theory and MO diagrams (homo- & hetero-nuclear diatomic molecules).

SYLLABUS OF GE 1

Theory:

Unit – 1: Atomic Structure

(14 Hours)

Review of: Bohr's theory and its limitations, Heisenberg uncertainty principle, Dual behaviour of matter and radiation, De-Broglie's relation, Hydrogen atom spectra, need of a new approach to atomic structure. Time independent Schrodinger equation and meaning of various terms in it. Significance of ψ and ψ^2 , Schrödinger equation for hydrogen atom, radial

and angular parts of the hydrogen wave functions (atomic orbitals) and their variations for 1s, 2s, 2p, 3s, 3p and 3d orbitals (Only graphical representation), radial and angular nodes and their significance, radial distribution functions and the concept of the most probable distance with special reference to 1s and 2s atomic orbitals. Significance of quantum numbers, orbital angular momentum and quantum numbers m_l and m_s . Shapes of s, p and d atomic orbitals, nodal planes, discovery of spin, spin quantum number (s) and magnetic spin quantum number (m_s). Rules for filling electrons in various orbitals, electronic configurations of the atoms, stability of half-filled and completely filled orbitals, concept of exchange energy, relative energies of atomic orbitals, anomalous electronic configurations.

Unit – 2: Chemical Bonding and Molecular Structure

(16 Hours)

Ionic Bonding: General characteristics of ionic bonding, energy considerations in ionic bonding, lattice energy and solvation energy and their importance in the context of stability and solubility of ionic compounds, statement of Born-Landé equation for calculation of lattice energy (no derivation), Born Haber cycle and its applications, covalent character in ionic compounds, polarizing power and polarizability, Fajan's rules. Ionic character in covalent compounds, bond moment, dipole moment and percentage ionic character. **Covalent bonding:** VB Approach: Shapes of some inorganic molecules and ions on the basis of VSEPR (H_2O , NH_3 , PCl_5 , SF_6 , ClF_3 , SF_4) and hybridization with suitable examples of linear, trigonal planar, square planar, tetrahedral, trigonal bipyramidal and octahedral arrangements. Concept of resonance and resonating structures in various inorganic and organic compounds. **MO Approach:** Rules for the LCAO method, bonding and antibonding MOs and their characteristics for ss, s-p and p-p combinations of atomic orbitals, nonbonding combination of orbitals, MO treatment of homonuclear diatomic molecules of 1st and 2nd periods (including idea of s-p mixing) and heteronuclear diatomic molecules such as CO, NO and NO^+ .

Practicals:

(60 Hours)

(Laboratory Periods: 60)

1. Acid-Base Titrations: Principles of acid-base titrations to be discussed.

- (i) Estimation of sodium carbonate using standardized HCl.
- (ii) Estimation of carbonate and hydroxide present together in a mixture.
- (iii) Estimation of carbonate and bicarbonate present together in a mixture.
- (iv) Estimation of free alkali present in different soaps/detergents

2. Redox Titrations: Principles of oxidation-reduction titrations (electrode potentials) to be discussed.

- (i) Estimation of oxalic acid by titrating it with KMnO_4 .
- (ii) Estimation of Mohr's salt by titrating it with KMnO_4 .
- (iii) Estimation of oxalic acid and sodium oxalate in a given mixture.
- (iv) Estimation of Fe (II) ions by titrating it with $\text{K}_2\text{Cr}_2\text{O}_7$ using internal indicator (diphenylamine/ N-phenylanthranilic acid).

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course |
|-------------------------------|---------|-----------------------------------|----------|---------------------|----------------------|------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Bioinorganic Chemistry (GE-3) | 4 | 2 | | 2 | | Basic knowledge of Chemistry |

Learning Objectives

The Learning Objectives of this course are as follows:

- To introduce students to bioinorganic chemistry, currently a frontier area of chemistry providing an interface between organic chemistry, inorganic chemistry and biology.
- To make students learn about the importance of inorganic chemical species, especially metals, in biological systems, through discussions on topics such as the sodium-potassium pump, the applications of iron in physiology, including iron transport and storage system, role of magnesium in energy production and chlorophyll, toxicity of heavy metal ions and their antidotes.

Learning Outcomes

By the end of the course, the students will be able to:

- Classify metal ions in biological systems as essential, non-essential, trace & toxic.
- Diagrammatically explain the working of the sodium-potassium pump in organisms and the factors affecting it
- Understand the role of metal ions such as Mg, Ca and Fe in biological systems.
- Understand the toxicity of heavy metal ions (Hg, Pb, Cd and As) in the physiological system
- Explain the use of chelating agents in medicine

SYLLABUS OF GE-3

Theory:

Unit 1: Introduction

(6 Hours)

A brief introduction to bio-inorganic chemistry. Metal ions present in biological systems and their classification on the basis of action (essential, non-essential, trace & toxic). Classification of metallobiomolecules (enzymes, transport and storage proteins and non-proteins). Brief idea about membrane transport, channels, pumps.

Unit 2: Role of s-block Elements in Biological System

(8 Hours)

Role of metal ions present in biological systems with special reference to Na^+ , K^+ and Mg^{2+} and Ca^{2+} ions: Na/K pump; Ca pump, role of Mg^{2+} ions in energy production and chlorophyll. Role of calcium in bone formation.

Unit 3: Role of iron in Biological System

(8 Hours)

Role of iron in oxygen transport and storage (haemoglobin and myoglobin), Perutz mechanism, Cooperative effect, Bohr effect, comparison of oxygen saturation curves of haemoglobin and myoglobin, carbon monoxide. Storage and transport of iron in humans (ferritin and transferrin).

Unit 4: Toxicity of Heavy Metal Ions

(8 Hours)

Toxicity of heavy metal ions (Hg, Pb, Cd and As), reasons for toxicity and their antidotes

Practicals:

(60 Hours)

WEEKS)

(Laboratory Periods: 60)

1. Spectrophotometric estimation:

- Verify Lambert-Beer's law and determine the concentration of $\text{CuSO}_4/\text{KMnO}_4/\text{K}_2\text{Cr}_2\text{O}_7/\text{CoSO}_4$ in a solution of unknown concentration
- Spectrophotometric estimation of Fe^{2+} ions by using 1, 10-phenanthroline

(iii) Determination of the composition of the Fe^{3+} - salicylic acid complex in solution by Job's method.

2. Complexometric titrations using disodium salt of EDTA:

- Estimation of Zn^{2+} using EBT / Xylenol orange as indicator
- Estimation of Mg^{2+}
- Estimation of Ca^{2+} by substitution method
- To estimate the concentration of Ca in commercially available medicines.
- To estimate the Mg present in multivitamins.

|--|---------|-----------------------------------|----------|---------------------|----------------------|-----------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Basic Concepts of Organic Chemistry (GE-4) | 4 | 2 | | 2 | | |

Learning Objectives

The Learning Objectives of this course are as follows:

- To teach the fundamentals of organic chemistry and the introduction of a new concept of visualizing the organic molecules in a three- dimensional space.
- To establish the applications of these concepts, different types of organic reactions are introduced.

Learning Outcomes

By the end of the course, the students will be able to:

- Understand and explain the differential behavior of organic compounds based on fundamental concepts learnt.
- Formulate the mechanism of organic reactions by recalling and correlating the fundamental properties of the reactants involved.
- Learn and identify many organic reaction mechanisms including free radical substitution, electrophilic addition and electrophilic aromatic substitution.
- Differentiate between various types of organic reactions possible on the basis of reaction conditions

SYLLABUS OF GE-4

Theory:

Unit 1: Basic Concepts

(6 Hours)

Electronic displacements and their applications: Inductive, electromeric, resonance and mesomeric effects and hyperconjugation. Dipole moment, acidity and basicity. Homolytic and heterolytic fissions with suitable examples. Types, shape and relative stability of carbocations, carbanions and free radicals. Electrophiles and nucleophiles
Concept of Aromaticity: Huckel's rule

Unit 2: Stereochemistry

(10 Hours)

Stereoisomerism: Optical activity and optical isomerism, asymmetry, chirality, enantiomers, diastereomers. specific rotation; Configuration and projection formulae: Newmann, Sawhorse, Fischer and their interconversion. Chirality in molecules with one and two stereocentres; meso configuration.
CIP rules: Erythro/Threo, D/L and R/S designations.
Geometrical isomerism: *cis-trans*, *syn-anti* and *E/Z* notations.

Unit 3: Types of Organic Reactions

(14 Hours)

Introduction to substitution, addition, elimination, isomerization, rearrangement, oxidation and reduction reactions.
Free radical substitutions (Halogenation), concept of relative reactivity v/s selectivity. Free radical reactions in the biological reactions

Mechanisms of E1, E2, Saytzeff, Hoffmann eliminations and Cope elimination. Biological dehydration reactions

Electrophilic Additions reactions of alkenes and alkynes: mechanism with suitable examples, (Markownikoff/Antimarkownikoff addition), syn and anti-addition; addition of H₂, X₂, hydroboration-oxidation, ozonolysis, hydroxylation.

Nucleophilic substitution reactions – S_N1 and S_N2 mechanisms with stereochemical aspects and effect of solvent; nucleophilic substitution vs. elimination. Biological methylating agents

Electrophilic aromatic substitution: halogenation, nitration, sulphonation, Friedel Crafts alkylation/ acylation with their mechanism. Directing effects of groups in electrophilic substitution.

Practicals:

(60 Hours)

(Laboratory Periods: 60)

1. Calibration of a thermometer and determination of the melting points of the organic compounds (Kjeldahl method, electrically heated melting point apparatus and BODMEL)
2. Purification of the organic compounds by crystallization using the following solvents:
3. a. Water b. Alcohol c. Alcohol-Water
4. Determination of boiling point of liquid compounds. (Boiling point lower than and more than 100 °C by distillation, capillary method and BODMEL)
5. Acetylation of one of the following compounds: amines (aniline, *o*-, *m*-, *p*- toluidines and *o*-, *m*-, *p*-anisidine) and phenols (β -naphthol, salicylic acid) either by conventional or green method.
6. Bromination of acetanilide/aniline/phenol either by conventional or green method.
7. Nitration of chlorobenzene/nitrobenzene.

GE 7: Chemistry: States of Matter

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course |
|-------------------------|---------|-----------------------------------|----------|---------------------|----------------------|-----------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| States of Matter (GE-7) | 4 | 2 | | 2 | | |

Learning Objectives

The Learning Objectives of this course are as follows:

- To make students learn about the properties of ideal and real gases deviation from ideal behaviour, properties of liquid, types of solids with details about crystal structure.
- To make student learn about the reaction rate, order, activation energy and theories of reaction rates.

Learning Outcomes

By the end of the course, the students will be able to:

- Derive ideal gas law from kinetic theory of gases and explain why the real gases deviate from ideal
- behaviour.
- Explain Maxwell-Boltzmann distribution, critical constants and viscosity of gases.
- Explain the properties of liquids especially surface tension and viscosity.
- Explain symmetry elements, crystal structure specially NaCl, KCl and CsCl
- Define rate of reactions and the factors that affect the rates of reaction.
- Understand the concept of rate laws e.g., order, molecularity, half-life and their determination
- Learn about various theories of reaction rates and how these account for experimental observations.

SYLLABUS OF GE-7

Theory:

Unit 1: Kinetic Theory of Gases

(12 Hours)

Postulates of kinetic theory of gases and derivation of the kinetic gas equation, deviation of real gases from ideal behaviour, compressibility factor, causes of deviation, van der Waals

equation of state for real gases. Boyle temperature (derivation not required), critical phenomena, critical constants and their calculation from van der Waals equation, Andrews isotherms of CO₂, Maxwell Boltzmann distribution laws of molecular velocities and molecular energies (graphic representation – derivation not required) and their importance. Temperature dependence of these distributions, most probable, average and root mean square velocities (no derivation), collision cross section, collision number, collision frequency, collision diameter and mean free path of molecules, viscosity of gases and effect of temperature and pressure on coefficient of viscosity (qualitative treatment only).

Unit 2: Liquids State

(6 Hours)

Surface tension and its determination using stalagmometer, Viscosity of a liquid and determination of coefficient of viscosity using Ostwald viscometer, effect of temperature on surface tension and coefficient of viscosity of a liquid (qualitative treatment only). Effect of addition of various solutes on surface tension and viscosity. Explanation of cleansing action of detergents.

Unit 3: Solid State

(12 Hours)

Forms of solids, symmetry elements, unit cells, crystal systems, Bravais lattice types and identification of lattice planes. Laws of crystallography - law of constancy of interfacial angles. Law of rational indices, Miller indices. X-ray diffraction by crystals, Bragg's law and powder XRD. Powder diffraction patterns of NaCl, CsCl and KCl (qualitative treatment only), defects in crystals. Glasses and liquid crystals.

Practicals:

(60 Hours)

(Laboratory periods: 60)

1. Surface tension measurement (use of organic solvents excluded): Determination of the surface tension of a liquid or a dilute solution using a stalagmometer.
2. Viscosity measurement (use of organic solvents excluded):
 - a) Determination of the relative and absolute viscosity of a liquid or dilute solution using an Ostwald viscometer.
 - b) Study of the variation of viscosity of an aqueous solution with concentration of solute.
3. Solid State: Powder XRD
 - c) Differentiate and classify the given set of the diffraction pattern as crystalline materials or amorphous (Glass) substance.
 - d) Carry out analysis of a given set of powder XRD and determine the type of the cubic crystal structure
 - e) Determination of approximate crystal size from a given set of powder XRD

GE 9: Chemistry: Conductance and Electrochemistry

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course |
|---|---------|-----------------------------------|----------|---------------------|----------------------|------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Conductance and Electrochemistry (GE-9) | 4 | 2 | | 2 | | Basic knowledge of Chemistry |

Learning Objectives

The Learning Objectives of this course are as follows:

- To make students learn about conductance, its measurement and applications.
- To make students learn the principles of electrochemical cells: Electrolytic and Galvanic cell, measurement of, measurement of emf and its applications.

Learning outcomes

By the end of the course, the students will be able to:

- Explain the factors that affect conductance, migration of ions and application of conductance measurement.
- Understand different types of galvanic cells, their Nernst equations, measurement of emf, calculations of thermodynamic properties and other parameters from the emf measurements.
- Understand applications of Emf measurements in relation to determination of activity coefficients, pH of a solution and Potentiometric titrations.

SYLLABUS OF GE-9

Theory:

Unit 1: Conductance

(10 Hours)

Quantitative aspects of Faraday's laws of electrolysis. Arrhenius theory of electrolytic dissociation. Conductivity: equivalent and molar conductivity and their variation with dilution for weak and strong electrolytes, Kohlrausch Law of independent migration of ions. Wein Effect and Debye–Falkenhagen Effect.

Transference number and its experimental determination using Hittorf and moving boundary methods, Ionic mobility, applications of conductance measurements: determination of degree of ionization of weak electrolytes, solubility and solubility products of sparingly soluble salts, ionic product of water, hydrolysis constant of a salt. Conductometric titrations (only acid-base).

Unit 2: Electrochemistry

(20 Hours)

Reversible and irreversible cells with Examples, concept of EMF of a cell, measurement of EMF of a cell, Nernst equation and its importance, types of electrodes, standard electrode potential (reduction Potential) and its application to Gas-ion half-cell. Electrochemical series. Thermodynamics of a reversible cell, calculation of thermodynamic properties: G, H and S from EMF data. Calculation of equilibrium constant from EMF data. Concentration cells with transference and without transference, liquid junction potential; determination of activity coefficients and salt bridge, pH determination using hydrogen electrode. Potentiometric titrations-qualitative treatment (acid-base and oxidation-reduction only).

Practicals:

(60 Hours)

(Laboratory periods: 60)

1. Conductance

- (i) Determination of cell constant.
- (ii) Determination of equivalent conductance, degree of dissociation and dissociation constant of a weak acid.
- (iii) Perform the following conductometric titrations:
 - a) Strong acid vs strong base
 - b) Weak acid vs strong base.

2. Potentiometry

Perform the potentiometric titrations of (i) Strong acid vs strong base, (ii) Weak acid vs strong base and (iii) Mohr's salt vs KMnO_4 .

3. Kapoor, K.L. (2013), **A Textbook of Physical Chemistry**, Vol 3, 3rd Edition, McGraw Hill Education.

Practicals:

1. Khosla, B.D.; Garg, V.C.; Gulati, A. (2015), **Senior Practical Physical Chemistry**, R. Chand & Co.

GE 11: Chemistry: Chemistry of Food Nutrients

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course |
|--|----------|-----------------------------------|----------|---------------------|----------------------|-----------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Chemistry of Food Nutrients (GE-11) | 4 | 2 | | 2 | | |

Learning Objectives

The Learning Objective of this course is as follows:

- To help the students develop a basic understanding of the components of food, their source, properties and interactions as well as changes that occur during processing, storage, and utilization.

Learning Outcomes

On completion of the course, the student will be able to:

- Build a strong understanding of chemistry of food: composition of food, role of each component.
- Understand some of the reactions and changes in individual food components which occur during processing, handling and storage

SYLLABUS OF GE-11

Theory:

Unit 1: Carbohydrates

(6 Hours)

Introduction, sources, functions, classification: monosaccharide, oligosaccharide and polysaccharide, structure and importance of polysaccharides in food chemistry (pectin, cellulose, starch, gums), chemical reactions of sugar: mutarotation, caramelisation; non enzymic browning and its prevention, role of carbohydrates as sweeteners in food.

Unit 2: Lipids

(8 Hours)

Introduction, sources, classification (fatty acids, phospholipids, fats & oils, waxes), common fatty acids present in oils and fats, Omega- 3&6 fatty acids, trans fats, chemical properties- Reichert Meissel value, Polenski value, iodine value, peroxide value, saponification value,

effect of frying on fats, changes in fats and oils- rancidity, lipolysis, flavor reversion, auto-oxidation and its prevention.

Unit 3: Proteins

(8 Hours)

Introduction, sources, classification (simple, conjugated, derived), structure of protein (primary, secondary and tertiary), physico-chemical & functional properties of proteins, protein denaturation.

Unit 4: Vitamins & Minerals

(8 Hours)

Vitamins: Introduction, classification: fat-soluble vitamins & water-soluble vitamins.

Minerals: Introduction, classification: macrominerals (Ca, P, Mg) & microminerals (Se, Fe, I, Co, Zn, Cu, Se, Cr).

Physiological importance of vitamins and minerals, effect of food processing on vitamins and minerals.

Practicals:

(60 Hours)

(Laboratory periods: 60)

1. Determination of moisture in food products by hot air oven-drying method.
2. Colorimetric determination of Iron in vitamin / dietary tablets.
4. 2, 6-Dichlorophenol indophenol method for estimation of vitamin C in a given solution/ lemon Juice/chillies.
5. Estimation of total soluble sugar content by ferricyanide method (volumetric analysis).
6. Determination of saponification value of the given fat/oil.
7. Determination of iodine value of the given fat/oil.
8. Qualitative tests for proteins and carbohydrates.
9. Qualitative estimation of cholesterol by Liebermann Burchard method.

GE 12: Chemistry: Statistical Methods and Data Analysis

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course |
|---|----------|-----------------------------------|----------|---------------------|----------------------|-----------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Chemistry: Statistical Methods and Data Analysis (GE-12) | 4 | 2 | | 2 | | |

Learning Objectives

The Learning Objectives of this course are as follows:

- To give the students insight about the statistical treatment on the chemical analysis data along with illustration about the analysis of collected analytical data that will help them to take up a job of technician, scientist and laboratory manager.
- To explain the presentation of data in different form such as “Table, Graph, Bar Diagram, Pie Chart, Venn diagram” along with their reliability and validity.

Learning Outcomes

At the end of this course student will be:

- Familiar with interpretation and use of analytical data collected by different techniques, significance of different analytical techniques and their applications, reliability and presentation of data for reporting to different forum.

SYLLABUS OF GE-12

Theory:

Unit 1: Basics of Chemical Analysis (4 Hours)

Analytical Chemistry, Qualitative and quantitative analysis, Analytical methodology. Calibration of glass wares, recording laboratory data.

Unit 2: Different Methods of Chemical Analysis (8 Hours)

Titrimetric method: volumetric titrimetry, standard solution, titrimetric curve, calculation; Gravimetric method: precipitation gravimetry, calculation and applications of gravimetry; and Spectrometric methods: introduction, principle and instrument, working quantitative aspects absorbance, applications in chemical analysis

Unit 3: Statistical Method of Chemical Analysis (8 Hours)

Accuracy and Precision, Comparison of precision, Errors, Distribution of random errors, propagation of errors, measurement of errors, significant figure, inter laboratory error, methods of least square analysis of variance, Q test, Z test, T test, statistical treatment of finite sample, recommendations for treating outliers. Minimising errors in analytical procedure.

Unit 4: Data Analysis and Validation (4 Hours)

Confidence interval, Testing of hypothesis, plotting of data, least square method, Figures of merit: sensitivity, detection limit, linear dynamic range, control test, upper control limit and lower control limit, Validation, reporting analytical results and significant figures

Unit 5: Sampling, Standardisation, Labelling and Calibration (6 Hours)

Analytical samples, sample size, constituent sample, real samples, sample, sample handling, preparing laboratory samples, automated sample handling, lab on chip and General laboratory principles, recording laboratory data, standards, comparison of standards, internal standard, external standards calibration, least square method, and multivariant calibration.

Practicals: (60 Hours)

(Laboratory periods: 60)

1. Calibrate the volume of laboratory glass wares i.e. volumetric flask, beaker, burette and calibration constant.
2. Demonstrate the good laboratory practices like effect of dilution, temperature, taking observation, personal and apparatus safety.
3. Determine the quantitative presence of heavy metals like copper, chromium and iron in natural and laboratory samples using volumetric and gravimetric titration.
4. Determine the presence of magnesium ion in heavy water by EDTA method and prepare calibration curve.
5. Evaluate the absolute and method errors in a set of data collected during determination of nitrogen in an organic compound.
6. Calculate the standard deviation and predict precision of analytical results.

- Determine the concentration of pollutant in natural sample after using external standards methods.
- Compare the inter laboratory error of a spectroscopic results.
- Evaluate the limit of detection for colorimetric analysis of dyes and coloured metals in wastes water samples.
- Demonstrate the control of interference by masking by complexation.
- Report the ten analytic results in significant numbers along with standard deviation.
- Determine the confidence limit and interval for a laboratory instrument like breath alcohol analyser
- Demonstrate the internal standard method for calibration of metal estimation.
- Estimate the comparative effectiveness of different types of graphs like line, pi chart and bar graph.
- Demonstrate the working of lab on chip like glucose sensor.

GE 13: Chemistry: Medicines in Daily Life

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course |
|---------------------------------|---------|-----------------------------------|----------|---------------------|----------------------|-----------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Medicines in Daily Life (GE-13) | 4 | 2 | | 2 | | |

Learning Objectives

The Learning Objectives of this course are as follows:

- To make students study the basic details about various medicines of general uses, which are crucial for the various diseases.
- To make students learn about the active pharmaceutical ingredient in some medicines, their synthesis; therapeutic effect and side effects on human physiology.

- To make students aware about the positive and negative effects of medicines those are essential for a healthy day-to-day life.

Learning Outcomes

By the end of the course, the students will be able to:

- Understand the role of different medicines on human physiology.
- Gain the knowledge of active pharmaceutical ingredient and their roles in different disease.
- Learn the proper use of different medicines and their effect and side effects.
- Learn the techniques of administering blood group, pulse rate, blood pressure and may other general diagnostic applications.

SYLLABUS OF GE-13

Theory:

Unit 1: General Introduction

(8 Hours)

Introduction-Health, disease, drugs, chemotherapy, approaches in drug designing, classification of drugs and their origin.

Unit 2: Different class of medicines

(22 Hours)

Structure of active ingredients, uses, dosage, side effects and their natural remedies:

Analgesics and antipyretics- Aspirin, paracetamol, ibuprofen, morphine, codeine

Antibiotics- Amoxicillin, norfloxacin, ciprofloxacin

Antihistamines or antiallergics- Cetirizine and Levocetirizine (role of stereoisomers)

Antiparasitic- Albendazole

Antidiabetics- Insulin, Glipizide and metformin

Antihypertensive – Amlodipine and its natural remedies- Rauwolfia.

Diuretic- Lasix

Antidepressant- Zoloft and its natural treatment

Antifungal – fluconazole, Itraconazole

Antacids- Ideal properties of antacids, combinations of antacids, Sodium 40 Bicarbonate, ranitidine, milk of magnesia, aluminium hydroxide gel

Anticoagulants/antiplatelet drugs- Warfarin, heparin and Ecosprin

Anaesthetics- Atracurium, Desflurane

Poison and Antidote: Sodium thiosulphate, Activated charcoal, Sodium nitrite

Astringents: Zinc Sulphate, Potash Alum

Supplements- zinc and calcium, vitamins

Synthesis of small molecule drugs like aspirin and paracetamol

Practicals:

(60 Hours)

(Laboratory periods: 60)

1. Determination of heart rate and pulse rate, blood pressure and discussion on medicines affecting them.
2. Identification test- Magnesium hydroxide, Sodium bicarbonate, Calcium gluconate.

3. Preparation of inorganic pharmaceuticals- Boric acid Potash alum
4. Determination of sugar content in the given solution.
5. Estimation of zinc and calcium in a given solution.
6. Qualitative analysis of carbohydrates (Glucose, Fructose, Lactose, Maltose, Sucrose).
7. Qualitative tests for Proteins
8. Qualitative analysis of vitamin C.
9. Isolation of paracetamol (API) from a commercial tablet
10. Isolation of aspirin (API) from tablet and recording of melting point (synthesis needs discussion)

GE 15: Chemistry and Society

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course |
|-------------------------------|---------|-----------------------------------|----------|---------------------|----------------------|-----------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Chemistry and Society (GE-15) | 4 | 2 | | 2 | | |

Learning Objectives

The Learning Objectives of this course are as follows:

- To expand the literacy of chemistry, and increase general awareness, background of chemistry and its importance among the non-chemistry student even arts as well as commerce.
- To make a common student understand the importance and role of chemistry in development of civilization, societal issues related to chemistry and their expected solutions.

Learning Outcomes

At the end of this course the student will be able to:

- Increase the literacy of chemistry even in non-science students
- Understand the basic concept, principle and importance of chemistry
- Realize the importance of chemistry in daily life and future requirement

SYLLABUS OF GE-15

Theory:

Unit 1: Basics of chemistry (4 Hours)

Periodic table, Atom and molecules, chemical bonding, properties and chemical reactions with simple examples and illustration.

Unit 2: Chemistry in Heritage (8 Hours)

Extraction and uses of metals like iron and stone in ancient times, metals in ornaments, medicines, weapons and chemistry for preservatives, basics of preservation and few examples of preservatives.

Unit 3: Chemistry in Life (10 Hours)

Edible and non- edible molecules, biochemistry of foods and medicine with examples: Aspirin, Paracetamol. Ibuprofen and Penicillin, Cephalosporin, Chemistry for industry: Artificial sweeteners, Soaps and detergents and cosmetics, Polymer and Plastics: Uses and environmental issues.

Unit 4: Chemical pollution and Toxicity (2 Hours)

Chemical source of water, air and soil pollution, biomagnification and metal toxicity with example and illustrations. monitoring of air pollution.

Unit 5: Testing of chemicals (2 Hours)

Flame test, solubility test, qualitative and quantitative identification of ions in natural samples like metal copper, iron and chromium ores and adulterant in foods.

Unit 6: Future of chemistry (4 Hours)

Basics of green chemistry, Reuse and recycling of by-products, zero waste chemistry and Alternate fuel and energy providing chemicals: biodiesel, natural gas and hydrogen.

Practicals/Hands-on Training:**(60 Hours)****(Laboratory periods: 60)**

1. Determine the calcium and magnesium contents in water samples using EDTA methods.
2. Determine the organic contents and pH of soil sample.
3. Estimate the food adulterants in edible items
4. Quantify the presence metals by flame test method
5. Demonstrate the conversion of PET into bottle into value added products.
6. Determine the quantitative presence of heavy metals like copper and chromium in natural sample like ore.
7. Demonstrate the exothermic and endothermic reaction in laboratory
8. Preparation aspirin and paracetamol as well as identify.
9. Compare the fuel efficiency of biodiesel and petrol.
10. Preparation of representative compound using microwave
11. Demonstrate the biodegradability of natural and synthetic plastics.
12. Demonstrate the protection of rusting of iron after surface spray coating.
13. Estimate the protein contents in edible samples using chemical methods.
14. Small working project on heritage chemistry like bio compatibility of metals and medicinal importance of metals like iron, gold and silver.

GE 19: Radio-chemistry in Energy, Medicine and Environment**CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE**

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course |
|--|----------|-----------------------------------|----------|---------------------|----------------------|-----------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Radio-chemistry in Energy, Medicine and Environment (GE-19) | 4 | 3 | | 1 | | |

Learning Objectives

The Learning Objectives of this course is as follows:

- To give an introduction to nuclear and radiochemical concepts to the students.
- To help students gain fundamental knowledge about the radioisotopes and their real-world applications in medicine, diagnostic techniques, energy, research and environment.

Learning Outcomes

By the end of the course, the students will:

- Learn about radioisotopes, radioactive decay
- Use of radiochemistry in various fields
- Effect of radiations on health
- Learn about nuclear energy and nuclear pollution

SYLLABUS OF GE-19

Theory:

Unit 1: Introduction

(9 Hours)

Atoms, composition of nucleus, mass number, isotopes, nuclear stability, radioactive decay, radioactivity in nature: natural and artificial radioisotopes, elementary particles, radioactive decay (α , β and γ decay), half-life period, types of nuclear reactions: nuclear fission and nuclear fusion.

Unit 2: Nuclear power generation

(6 Hours)

Nuclear Power generation from uranium ore (energy production and nuclear waste), introduction to nuclear reactors for energy and nuclear weapons

Unit 3: Applications of radiochemistry

(15 Hours)

C 14 decay and radioactive dating, irradiation of food, radiotracers for studying chemical reactions (photosynthesis, metabolic studies of drugs, metabolism of organisms, fundamental properties of genetic material), medicinal application of radio chemicals in radiotherapy (use in cancer, hyperthyroidism, blood disorders), radio-pharmaceuticals, diagnostic procedures: CT, PET

Unit 4: Environment radioactivity

(6 Hours)

Natural radioactivity, natural process that release radioactive material in environment, man-made events like Chernobyl disaster, bomb test, use of radiotracers in environmental studies.

Unit 5: Nuclear pollution and safety management

(9 Hours)

Radiation protection standards, basics of radiation hazards, international guidelines on radiation protection, disposal of nuclear waste, nuclear disaster and its managements, Effect of radiation on health: Biological effects of radiation, radiation monitors, dose limits for workers and public,

Practicals:

(30 Hours)

(Laboratory periods: 30)

1. Study the background radiation in different places and identify the probable source. (Data to be provided).
2. Survey the diagnostic procedures involving radio-chemistry in different diagnostic laboratories.
3. Write a report on the radio isotopes used in various diagnostic procedures.
4. Write a report on safety measures taken in diagnostic labs.
5. Write a report on any two nuclear and radiation accidents focusing on their impact on human life, environment and economy.

GE 21: Chemistry in Indology and Physical & Mental Well Being

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course |
|--|---------|--|-----------------------------------|----------|---------------------|----------------------|-----------------------------|
| | | | Lecture | Tutorial | Practical/ Practice | | |
| Chemistry in Indology and Physical & Mental Well Being (GE-21) | 4 | | 3 | | 1 | | |

Learning Objectives

The Learning Objectives of this course is as follows:

- To illuminate the students about the scientific basis and approaches related to the practices that promote physical and mental health/balance, that includes meditation,

sports, Yoga and nutrition. The chemical/biochemical mechanisms that underscore the various states of the mind and body, which drives the general homeostasis or anomalies thereof, shall also be illustrated.

- To make students aware about role of metals in ancient and medieval India
- To make students aware of how Alchemists used metals, chemicals, compounds and ores in medicines
- To make students aware of the different types of instruments used in the ancient and medieval India
- To make students aware of the life and work of ancient and medieval scientists/chemists.

Learning Outcomes:

By the end of the course, the students will:

- Understand about the scientific basis and approaches that promote physical and mental health.
- Know about the chemical/biochemical mechanisms that underline the states of the mind and body
- Understand the role of metals in ancient and medieval India
- Understand how alchemists used metals and chemical compounds in medicines
- Know about the life and contributions of ancient scientists and chemists

SYLLABUS OF GE-21

Theory:

Unit 1: Physical Health Practices

(9 Hours)

Principles of Physical Education, Body composition with respect to health and fitness and different methods of body composition analysis, Calculation of energy expenditure (at rest and during exercise), VO_2 and calculation of VO_2 max, respiratory exchange ratio, blood pressure, Means of fitness development- aerobic and anaerobic exercises, yoga and physical fitness, Exercises and their intensities related to heart rate zone, Different fitness levels for different age groups and gender, Kinesiology, Physiology of Exercise

Unit 2: Mind-body Practices

(6 Hours)

States of mind and types of brain waves, mindfulness meditation in clinical psychology and psychiatry, Desbordes' recent studies on brain activities (Harvard's studies), MRI & functional MRI studies.

Types of meditations- focused attention meditation (FA), open monitoring meditation (OM), transcendental meditation (TM), loving-kindness meditation (LKM), mindfulness meditation (MM) and body-mind meditation (B-M).

Biochemical alterations, such as changes in activity/production of hormones, cytokines, chemokines, interferons, etc., oxygen saturation/desaturation, redox-condition and oxidative balance, progression/regression of certain diseases/health conditions, in response to various states of physical and mental well-being.

Unit 3: Nutrition for Mind/body Homeostasis

(6 Hours)

Role of nutrition in physical and mental health. Nutrients: carbohydrates, Protein, Fat, Vitamins, Minerals, Water-their functions, role of hydration (water balance) during exercise, daily caloric requirement and expenditure.

Metabolism: An overview of ATP release in glycolysis, TCA cycle, electron transport chain. basic concept of balanced diet vs. fad diet (Atkins, ketogenic etc.), Concept of BMI (Body mass index) and BMR (Basal metabolic rate), Obesity and its hazard, Dieting versus exercise for weight control.

Unit 4: Concepts of Atoms, Molecules and Laws of Motion

(3 Hours)

Concepts of atoms and molecules, properties and categories of atoms and molecules, Laws of motion.

Unit 5: Metallurgy

(6 Hours)

Gold, Silver, Copper, Bronze and other alloys; Copper smelting blast furnace and copper extraction; Tron and Steel; Iron smelting blast furnaces from Southern India; Ironworks in Ancient and medieval India; Delhi Iron Pillar; Dhar and Kodachadri Iron pillars; Wootz steel; Zinc and its extraction.

Unit 6: Chemicals

(3 Hours)

Drugs, dyes, pigments, glass, cosmetics and perfumes, etc.

Unit 7: Drugs

(6 Hours)

Eight categories of Gandhasara; Compounds of mercury (Hg) made and used by the Indian Alchemists for medicinal purposes; Use of chemical, compounds and ores in medicines.

Unit 8: Life and work of Ancient Indian Scientists/Chemists

(6 Hours)

(i) Maharshi Kanada (Ancient text and manuscripts), (ii) Nagarjuna (Ras Ratnakar, Kakshaputtantra, Arogya Manjari, Yog Saar, Yoasthak), (iii) Vaagbhatt (Rasratna Samuchchay), (iv) Govindacharya (Rasarnava), (v) Yashodhar (Ras Prakash Sudhakar), (vi) Ramachandra (Rasendra Chintamani), (vii) Somdev (Rasendra Chudamani)

Practicals:

(30 Hours)

(Laboratory periods: 30)

1. Extraction of essential oil from rose petal.
2. Extraction of casein from milk.
3. Determination of pulse rate/blood pressure/oxygen saturation before and after exercise.
4. Determination of acid value of given oil sample.
5. Isolation of piperine from black pepper.
6. Determination of Copper in brass turnings.
7. Extraction of Butea monosperma (Palash) dye for its use in coloration of cloth.
8. Determination of mass loss in mild steel in acidic/basic media.

9. Project on (Do any one):

Ayurveda as alternate medicine system,

Homeopathy in India,

Yogic Practices for mental wellness

Ancient Chemists of India

Other titles can also be suggested by the teacher.

10. Visit to

Iron Pillar, the metallurgical marvel and prepare a brief report.

Industries like Dabur India Ltd.

BHASKARACHARYA COLLEGE OF APPLIED SCIENCE
B.Sc. (HONOURS) POLYMER SCIENCE

Category I

**DISCIPLINE SPECIFIC CORE COURSE -1 (DSC-1) – :
INTRODUCTION TO POLYMER SCIENCE**

**CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF
THE COURSE**

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|---------------------------------|---------|-----------------------------------|----------|---------------------|----------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| INTRODUCTION TO POLYMER SCIENCE | 4 | 3 | 0 | 1 | PCM | PCM |

Learning Objectives

The Learning Objectives of this course are as follows:

- To familiarize with the structure of polymers.
- To acquaint students with knowledge of molecular weight determination and polymersolubility.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Understand physical state of polymers
- Develop fundamental knowledge of thermal transitions of temperature
- Understand structure-property relationship of polymers
- Apply mathematical formulae to depict polymer solution properties

SYLLABUS OF DSC-1
UNIT – I (9 hours)

INTRODUCTION TO POLYMER SCIENCES

Introduction and history of polymeric materials, classification of polymers, configuration and conformation of polymers, nature of molecular interaction in polymers, cumulative interaction, entanglement, random chain model and RMS end-to-end distance, Various structures of copolymers such as linear branched and cross-linked copolymers and their types.

UNIT – II (6 hours)

POLYMER CRYSTALS

Crystal morphologies, extended chain crystals, chain folding, lamellae, spherulites, crystallization, crystallinity, crystallizability & orientation, crystalline melting point, crystallization kinetics, effect of orientation and crystallinity on polymer properties, determination of crystallinity.

UNIT – III (9 hours)

PROPERTIES OF POLYMERS

Physical properties, introduction of mechanical properties (stress–strain curves, tensile, flexural, impact, fatigue, hardness, creep and abrasion), electrical properties (dielectric strength, volume resistivity and power factor)

UNIT – IV (9 hours)

POLYMER MOLECULAR WEIGHT

Nature and structure of polymers: structure-property relationships, molecular weight of polymers (M_n , M_w , M_v and M_z), polydispersity, molecular weight distribution and determination of molecular weight by solution viscosity and end group analysis,

UNIT – V (6 hours)

SOLUTION PROPERTIES OF POLYMERS

Polymer solutions, solubility parameter, athermal solvents, theta solvents, solution viscosity, thermodynamics of polymer solutions, Flory-Huggins theory

UNIT – VI (6 hours)

GLASS TRANSITION BEHAVIOUR OF POLYMERS

Glass transition temperature (T_g) and measurement of T_g , factors affecting the glass transition temperature, WLF equation

Practical component – (30 hours)

1. Chemical identification of polymers- • Unsaturation • Testing of functional groups(associated with polymers).
2. Measurement of glass transition temperature (T_g).
3. To determine the melting point of crystalline polymers.
4. To check the solubility of the given polymeric sample in different solvents.
5. Determination of molecular weight by solution viscosity.
6. Determination of number average molecular weight by end group analysis.
7. To find out the acid number and hydroxyl number of a given polymer.
8. To measure volume resistivity of polymer samples.

Essential/recommended readings

1. Odian, G., (2004) Principles of Polymerization, Wiley-interscience.
2. Gowarikar V.R., (2019) Polymer Science, New Age International Publishers Ltd, 3rd Edition.
3. Billmeyer F.W., (2007) Textbook of Polymer Science, Wiley, India.
4. Shah V., (1998) Handbook of Plastics Testing Technology, Wiley Interscience.

5. Seymour R.B., Carraher C.E., (2003) Polymer Chemistry, Marcel Dekker.
6. Teraoka, I. (2002). Polymer solutions: an introduction to physical properties.
7. Hiemenz, P. C., & Lodge, T. P. (2007). Polymer chemistry. CRC press.

Suggestive readings

1. Brydson J.A., (2016) Plastics Materials, Butterworth Heinemann, 8th Edition.
2. Schultz J.M., (2001) Polymer Crystallization, American Chemical Society.
3. Ghosh P., (2010) Polymer Science and Technology: Plastics, Rubbers, Blends and Composites, Tata McGraw Hill.
4. Shah V., (2006) Handbook of Plastics Testing and Failure Analysis, John Wiley & Sons, Inc., 3rd Edition.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE – 2 (DSC-2): RAW MATERIALS FOR POLYMERS

Credit distribution, Eligibility and Prerequisites of the Course

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|----------------------------|---------|-----------------------------------|----------|---------------------|----------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| RAW MATERIALS FOR POLYMERS | 4 | 3 | 0 | 1 | PCM | |

Learning Objectives

The Learning Objectives of this course are as follows:

- To learn about the resources of polymers
- To learn about basic concepts of polymer latex
- To gain knowledge of properties of monomers and their synthesis XXX

Learning outcomes

The Learning Outcomes of this course are as follows:

- Apply the knowledge of latex manufacturing and compounding
- Apply the knowledge of techniques used in monomer production

SYLLABUS OF DSC- 2

UNIT – I (6 hours)

INTRODUCTION TO CRUDE OIL AND IT'S REFINING

Petroleum oil, natural gas, coal: capabilities and limitations. general consideration of petrochemicals, an overview of petroleum refining, desalting, distillation, cracking and its types

UNIT – II (15 hours)

SYNTHESIS OF MONOMERS FROM PETROCHEMICALS

Ethylene, vinyl acetate, vinyl chloride, ethylene oxide and ethylene glycol, acrylonitrile, methyl methacrylate, isoprene, phenol, styrene, terephthalic acid, adipic acid, caprolactam, hexamethylenediamine

UNIT – III (6 hours)

LATEX

Natural rubber latex: collection process, composition, concentration and stabilization of latex

UNIT – IV (9 hours)

LATEX ADDITIVES AND IT'S COMPOUNDING

Vulcanizing agents, fillers, accelerator, coagulating agent, wetting, dispersing and emulsifying agents, stabilizers, thickening agents and other additives, compounding formulations for product manufacturing

UNIT –V (9 hours)

LATEX PRODUCT MANUFACTURING TECHNIQUES

Latex compound formulation, process of manufacturing, finishing and applications of spreading, casting and dipping (Dipping-principle and procedure of dipping process- different types of dipping –after treatment of latex deposits -Manufacture of dipped goods with formulation and flow chart-defects and remedies . latex casting – principle and procedure of casting-production of cast articles –mould preparation, latex thread and latex foam

Practical component- (30 hours)

1. Analysis of formalin/phenol/epichlorohydrin/Plasticizer
2. Determination of hydroxyl value/carboxyl value/ester value/epoxy value
3. Determination of colour and viscosity by gardner's tube method
4. Fractional distillation of crude oil.
5. To calculate dry rubber content (DRC) of latex.
6. To determine the coagulation strength of latex.
7. Preparation of balloon by dipping process.
8. Latex compounding for preparation of gloves & balloons.
9. Synthesis of adipic acid from cyclohexanol using Conc. HNO₃.
10. To prepare monomers from C₄ hydrocarbons.
11. Determination of percentage purity of phenol.

Essential/recommended readings

1. Kumar D., Chandra R., (2001) Latex Technology, Dhanpat Rai & Co.
2. Rao B.K.B., (2007) Textbook on Petrochemicals, Khanna Publishers.

3. Blackley, D.C., "High Polymer Latices", Vol 1 and 2, Chapman and Hall, 1997
4. Mausser, R.F., "The Vanderbilt Latex Hand book" 3rd edn. R.T. Vanderbilt Company, 1987.

Suggestive readings

1. Rao B.K.B., (2007) Modern Petroleum Refining Processes, Oxford and IBH
2. Maiti S., (2002) Introduction to Petrochemicals, Oxford & IBH Publ. Co.
3. Speight J.G., (2006) Chemistry and Technology of Petroleum, CRC Press.
4. Martin J. M., Smith W.K., (2007) Handbook of Rubber Technology, CBS Publishers.

DISCIPLINE SPECIFIC CORE COURSE– 3 (DSC-3): UNIT

Credit distribution, Eligibility and Pre-requisites of the Course

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|---------------------|---------|-----------------------------------|----------|---------------------|----------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| UNIT OPERATIONS | 4 | 3 | 0 | 1 | PCM | PCM |

Learning Objectives

The Learning Objectives of this course are as follows:

- To understand concepts of unit operations and their importance in polymer industries
- To learn about the concepts of separation equipments used in the process industry

Learning outcomes

The Learning Outcomes of this course are as follows:

- Select suitable criteria for solving material and energy balance problems
- Illustrate energy and material balance equations for open and closed systems

SYLLABUS OF DSC-3

UNIT – I (6 hours)

INTRODUCTION TO UNIT OPERATIONS

Unit operations: concept and requirement, material and energy balances (with and without chemical reactions), energy transport in non-isothermal systems

UNIT – II (9 hours)

MECHANICAL OPERATIONS

Mechanical Operations: Size reduction and its equipment (ball mill, jack crusher, end and

edge roller mill), filtration: theory of filtration, filter aids, filter media, industrial filters including filter press, rotary filter, edge filter, etc., factors affecting filtration

UNIT – III (15 hours)

HEAT TRANSFER

Conduction (Fourier law, Reynolds number), convection, radiation, heat exchangers (tube shell, shell plate)

UNIT – IV (15 hours)

MASS TRANSFER MECHANISM

Mass diffusion, factors affecting diffusion, gas absorption (Henry's Law, Langmuir Absorption Isotherm, BET equation), types of distillation, drying

Practical component (30 hours)

1. Handling of jaw crusher, ball mill for crushing and grinding.
2. Calculate the rate of evaporations of different volatile liquids.
3. Distillation of various liquid mixtures.
4. To evaluate diffusion percentage of a plasticizer in a PVC.
5. Filtration of solids from slurry.
6. Calculation of pressure drop and pipe size.
7. Heat Transfer through different materials like glass and plastics.
8. Analysis of different adsorption isotherms.

Essential/recommended readings

1. McCabe W., Smith J., Harriott P., (2005) Unit Operations in Chemical Engg., McGraw-Hill Education.
2. Chattopadhyaya P., (2003) Unit Operations in Chemical Engg., Vol. 1 & Vol. 2, Khanna Publishers.
3. Coulson J.M., Richardson J.F., (2010) Chemical Engg., Vol. 1, Elsevier.

Suggestive readings

1. Kumar D. S., (2009) Heat and Mass Transfer, S K Kataria & Sons.
2. Rao G. K., (2002) Solved Example in Chemical Engg., Khanna Publishers.
3. Treybal R., (2012) Mass Transfer Operations, Tata McGraw Hill.

**COMMON POOL OF GENERIC ELECTIVE COURSES
OFFERED BY BHASKARACHARYA COLLEGE OF APPLIED
SCIENCES IN POLYMER SCIENCE**

**GENERIC ELECTIVES (GE-1): BASICS OF POLYMER
SCIENCE**

Category-IV

Credit distribution, Eligibility and Pre-requisites of the Course

| Course title &Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course | Department offering the course |
|----------------------------------|----------|-----------------------------------|----------|---------------------|----------------------------|-----------------------------|--------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | | |
| BASICS OF POLYMER SCIENCE | 4 | 2 | 0 | 2 | All Science Streams | NIL | Polymer Science |

Learning Objectives

The Learning Objectives of this course are as follows:

- To familiarize with the structure of polymers will be introduced to students.
- To acquaint students with knowledge of molecular weight determination and polymersolubility

Learning outcomes

The Learning Outcomes of this course are as follows:

- Understand concept of crystalline and amorphous states of polymers
- Correlate flexibility with the glass transition temperature
- Understand structure-property relationship of polymers
- Apply mathematical formulae to depict polymer solution properties

SYLLABUS OF GE-1

UNIT – I (10 hours)

INTRODUCTION TO POLYMERS

Introduction and classification of polymers, configuration and conformation of polymers,

nature of molecular interaction in polymers, entanglement, various structures of copolymers such as linear branched and cross-linked copolymers, Polymer solutions, solubility parameter, solution viscosity, polymer solubility, thermodynamics of polymersolutions

UNIT – II (10 hours)

PROPERTIES OF POLYMERS

Physical properties, stress–strain behaviour, mechanical properties (tensile, flexural, impact, fatigue, hardness, creep, abrasion), introduction to flow & glass transition temperature (T_g) and its measurement of T_g , factors affecting the glass transition temperature

UNIT – III (10 hours)

MOLECULAR WEIGHT OF POLYMERS

Nature and structure of polymers – structure-property relationships, Molecular weight of polymers (M_n , M_w etc.), polydispersity, molecular weight distribution and determination of molecular weight by viscosity, end group analysis, cryoscopy, ebulliometry, light scattering & ultracentrifugation methods

Practical component (60 hours)

1. Chemical identification of polymers: Functional groups (associated with polymers).
2. Determination of molecular weight by solution viscosity/end group analysis.
3. To check the solubility of the given polymeric sample in different solvents.
4. To determine the melting point of crystalline polymers.
5. Determination of heat deflection temperature & vicat softening point of polymers.
6. Acid value of acrylic acid
7. Estimation of hydroxyl value by PVA and Cyclohexanol
8. Determination of epoxy equivalent weight of the epoxy resin.
9. Determination of saponification value of oil.
10. Study of three component systems.

Essential/recommended readings

1. Brydson J.A., (2016) *Plastics Materials*, Butterworth Heinemann, 8th Edition.
2. Ghosh P., (2010) *Polymer Science and Technology: Plastics, Rubbers, Blends and Composites* Tata McGraw-Hill.
3. Gowarikar V.R., (2019) *Polymer Science*, New Age International Publishers Ltd, 3rd Edition
4. Billmeyer F.W., (2007) *Textbook of Polymer Science*, Wiley, India.
5. Shah V., (1998) *Handbook of Plastics Testing Technology*, Wiley interscience publications

Suggestive readings

1. Schultz J.M., (2001) *Polymer Crystallization*, American Chemical Society.
2. Seymour R.B., Carraher C.E., (2000) *Polymer Chemistry*, Marcel Dekker.

GENERIC ELECTIVES (GE-2): ADVANCED ANALYTICAL TECHNIQUES

Credit distribution, Eligibility and Pre-requisites of the Course

| Course title& Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course |
|--------------------------------|---------|-----------------------------------|----------|---------------------|----------------------|-----------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| ADVANCED ANALYTICAL TECHNIQUES | 4 | 2 | 0 | 2 | All Science Streams | NIL |

Learning Objectives

The Learning Objectives of this course are as follows:

- To acquaint the students with the advanced instrumental techniques and their applications in characterization of polymeric materials

Learning outcomes

The Learning Outcomes of this course are as follows:

- Learn the electronic microscope for characterization of morphology of polymeric materials
- Elucidate crystallinity of various polymers and their characterization on the basis of their thermal stability and glass transition temperature

SYLLABUS OF GE-2 UNIT – I (6 hours)

INTRODUCTION

Basic principle of spectroscopy, molecular and atomic spectra, Lambert-Beer's law, Frank-Condon principle, electromagnetic radiation and its properties, interaction of radiation with matter, statistical method of analysis

UNIT – II (6 hours)

SPECTROSCOPIC TECHNIQUES

Principles and applications in structural determination of polymers (functional group, tacticity, molecular structure, purity, unsaturation etc.): Infra-red spectroscopy, UV-Vis spectroscopy, electron spin resonance, raman, nuclear magnetic resonance spectrometer

UNIT – III (8 hours)

CHROMATOGRAPHY TECHNIQUES IN POLYMER

Thin layer chromatography, high performance liquid chromatography, gel permeation chromatography (GPC), gas chromatography.

UNIT – IV (10 hours)

MICROSCOPIC AND X-RAY TECHNIQUES

Optical microscopy, electron microscopy (SEM, TEM, AFM) and XRD: basics and applications (size, morphology, crystallinity etc.) in polymers characterization

Practical component- (60 hours)

1. Study of UV stabilization of polymer samples by UV-visible spectrophotometer.
2. Calculate weight percentage of inorganic and organic ingredients in polymeric compounds.
3. Determination of K-value of PVC.
4. Quantitative determination of impurities by UV-Vis. spectrophotometer.
5. Characterization of Filler Content /Ash Content of common polymers by Thermogravimetric Analysis, (TGA).
6. Identification of additives in a processed polymer by chromatography.
7. Interpretation of FTIR, NMR and Raman spectra of polymers

Essential/recommended readings

1. Willard H.H., Merritt L.L., Dean J.A. (1988) Instrumental method of analysis, Wadsworth Publishing Company.
2. Skoog D.A, (1997) Principle of Instrumental Analysis, Harcourt College Pub.
3. Shah V., (2007) Handbook of Plastic Testing, Technology, Wiley-Inter science.
4. Banwell C.N., McCash E.M., (2008) Fundamentals of Molecular Spectroscopy, Fourth Edition, Tata McGraw-Hill.

Suggestive readings -

1. Tanaka T., (1999) Experimental Methods in Polymer Sciences, Academic Press.
2. Silverstein R.M., (1991) Spectrometric identification of organic compounds, John Wiley.
3. Macomber R.S., (2008) A complete introduction to NMR spectroscopy, Wiley-interscience.

GENERIC ELECTIVES (GE-3): POLYMERS AND ENVIRONMENT

Credit distribution, Eligibility and Pre-requisites of the Course

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course |
|--------------------------|---------|-----------------------------------|----------|---------------------|----------------------|-----------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| POLYMERS AND ENVIRONMENT | 4 | 2 | 0 | 2 | All Science Streams | NIL |

Learning Objectives

The Learning Objectives of this course are as follows:

- To give understanding of basics of care to be taken while handling polymer products.
- To know the Safety and hazardous of their manufacturing processes.
- To impart Knowledge of the subject will help students to see the environmental impact of plastic and resin.
- To understand the current benefits and concerns surrounding the use of plastics and look to future priorities, challenges and opportunities.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Understand basics of environmental and safety issues in the chemical industry.
- Understand safety in handling monomer and resins
- Impact of final product of polymer on environment after use and its waste management

SYLLABUS OF GE-3

UNIT – I (8 hours)

ENVIRONMENTAL APPROACH OF PLASTIC WASTE

Health and safety, Plastics in the society, Plastics in the environment, Plastic waste management, Plastic waste in the marine and terrestrial environment, Plastic material degradation, regulations for hazardous chemicals in articles/plastic products, coated articles. Separation techniques of plastic wastes (density, float sink and froth floatation methods, optical, spectroscopic, sorting by melting temperature etc.).

UNIT – II (8 hours)

PLASTIC SEGREGATION

Thermoplastic waste management: 4 R's approach (reduce, reuse, recycle (mechanical and chemical), recover), recycling classification- - primary - secondary - tertiary - quaternary recycling with examples.

UNIT – III (14 hours)

RECYCLING

Disposal processes and Various waste treatment methods – controlled tipping, pulverization, compositing, Energy from waste – (incinerators- pyrolysis, factors affecting incineration), new developments in thermal disposal of refuse, on-site disposal methods, compacting and baling. Recycling of Polyolefins, PVC, PET, Polystyrene, Polyamides (Nylon-6 and Nylon- 6,6). Recycling of Thermosets –reclaiming of rubber –pyrolysis, depolymerization of scrap rubber, tyre retreading, uses of recycled rubber.

Practical component- (60 hours)

1. Primary recycling of plastic waste collected from the environment.
2. Secondary recycling of MSW by incorporating and blending the recyclable waste with virgin polymers.
3. To study composting of natural/biopolymers.
4. Separation of polymer mixture by sink flotation technique.
5. Separation of polymer mixture by selective dissolution technique.
6. Recovery of BHET from PET by chemical recycling process
7. Recovery of Adipic Acid from Nylon 66 by chemical recycling technique
8. To study the effect of vulcanized rubber at varying ratio (in powder form) on mechanical properties of rubber vulcanizate
9. Preparation of plasticizer from polyester waste.
10. Preparation of reclaim from tyre waste.

Essential/recommended readings

1. Chandra, R., & Adab, A. (1994). Rubber & Plastic Waste: Recycling, Reuse and Future Demand. CBD Publishers.
2. Scheirs, J., & Long, T. E. (Eds.). (2005). Modern polyesters: chemistry and technology of polyesters and copolyesters. John Wiley & Sons.

Suggestive readings

1. Blow, S. (1998). Handbook of Rubber Technology.
2. Brandrup, J., Bittner, M., Michaeli, W., & Menges, G. (1996). Recycling and Recovery of Plastics, Hanser. Gardner, München.
3. Goodship, V. (2007). Introduction to plastics recycling. iSmithers Rapra Publishing.
4. Brydson J.A., (2016) Plastics Materials, Butterworth Heinemann, 8th Edition

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Sri Venkateswara College

COURSES OFFERED BY DEPARTMENT OF
BOTANY, BIOCHEMISTRY, ZOOLOGY, CHEMISTRY AND PHYSICS

B.Sc. (Hons.) Biological Science

Category-I

DISCIPLINE SPECIFIC CORE COURSE – 01: Basic concepts of Biomolecules

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (If any) |
|--------------------------------|---------|-----------------------------------|----------|---------------------|---|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Basic concepts of Biomolecules | DSC-101 | 2 | 0 | 2 | 10+2 from any recognized Board with Biology & Candidates must appear in CUET in the following subject combination: Physics+ Chemistry+ Biotechnology Biology/ | Nil |

Learning Objectives

The Learning Objectives of this course are as follows:

- to develop a basic understanding of the structure, bonding, stability, stereochemistry and reactivity of organic molecules with focus on biomolecules.
- This basic knowledge will empower the students to develop an understanding about chemistry and biology of biomolecules such as proteins and nucleic acids. This course also provides a basic understanding of the chemistry of carbohydrates and lipids.
- This knowledge will help students to better understand the biological applications of these biomolecules.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Understand and apply the fundamental principles of chemistry which include bonding, electronic effects, molecular forces and stability of reactive intermediates to biomolecules.
- Gain an insight into the influence of chemical bond polarization on a molecular structure and its reactivity.
- Identify the type of metabolic reaction and draw reaction mechanisms for key metabolic processes.
- Recognize stereochemistry of a biomolecule and give a rational explanation of its biological reactivity based on stereochemistry.
- Understand the chemistry and biological functions of carbohydrates and lipids

SYLLABUS OF DSC-1

Unit I: Basic Concepts

(6 hours)

Electronic displacements and their applications: Inductive, electromeric, resonance and hyperconjugation. Dipole moment, acidity and basicity. Types, shape and relative stability of carbocations, carbanions and free radicals. Electrophiles and nucleophiles, Intramolecular and intermolecular molecular forces including hydrophobic, hydrophilic interactions and hydrogen bond (emphasis on effect of these forces on the stability of biomolecules),

Unit II: Stereochemistry

(8 hours)

Stereochemistry and its importance to biological systems, Stereoisomerism: Optical activity and optical isomerism, asymmetry, chirality, enantiomers, diastereomers. Mesomers, specific rotation; Resolution of racemic modification, Configuration and projection formulae: Newmann, Sawhorse, Fischer projections and their interconversion. Chirality in molecules with one and two stereocentres; CIP rules: Erythro/Threo, D/L and R/S designations.; Relative and absolute configuration; thalidomide case and chiral drugs; Geometrical isomerism: cis-trans, syn-anti and E/Z nomenclature.; Cis-trans isomerism in vision.

Unit III: Biologically significant chemical reactions

(6 hours)

Aldol condensation (Glucogenesis), Retro-aldol (Glycolysis), Benzoin condensation (umpolung-decarboxylation of pyruvate in the presence of TPP), Claisen condensation (Synthesis of fatty acids), Michael addition (Dehydrases), Cannizzaro (Sugar metabolism), Baeyer Villiger reaction (FAD dependent ketone synthesis), Pinacole-pinacolone rearrangement (1,2-carbon carbon shift), Isomerisation (Glycolysis), Redox reaction (Lactate dehydrogenase).

Unit IV: Carbohydrates

(6 hours)

Classification of carbohydrates, reducing and non-reducing sugars, biological functions, linkage between monosaccharides, general properties and reactions of glucose and fructose, their open chain structure, epimers, mutarotation and anomers, reactions of monosaccharides, configuration, cyclic structure (exclude structure elucidation) and Haworth projection formulae of glucose and fructose: structure of disaccharides (sucrose, maltose, lactose); polysaccharides- classification, structure of important members, storage polysaccharides (Glycogen, Starch) and structural polysaccharides (Cellulose, chitin, peptidoglycans and glycosaminoglycans)

Unit V: Lipids

(8 hours)

Introduction, classification, biological importance of triglycerides, phospholipids, glycolipids, eicosanoids and steroids (cholesterol). Oils, Fats and Waxes: Common fatty acids present in oils and fats, essential fatty acids, characteristics of fatty acids and fats (saponification, iodine, acid, acetyl and peroxide values). Rancidity and reversion of fats; waxes, trans-fats and their biological significance.

Practical component: (60 hours)

1. Purification of organic compounds by recrystallization using the following solvents:
 - i. Water
 - ii. Water-Alcohol
 - iii. Alcohol
2. Criterion of purity of organic compound- melting point, mixed melting point and boiling point of organic compounds.
3. Estimation of saponification value of fat/oil.
4. Estimation of iodine value of fat/oil.
5. Qualitative tests for carbohydrates and lipids
6. Chromatography
 - a) To separate a mixture of sugars by circular paper chromatography
 - b) To separate a mixture of lipids in a sample by Thin Layer Chromatography.

Essential/recommended readings

- A Guidebook to mechanism in organic chemistry (2003) 6 th ed., Sykes, P. New York: John Wiley & Sons. Inc
- Organic Chemistry (2014) 7 th ed., Morrison, R.T., Boyd, R.N., Bhattacharjee, S. K., Pearson Education
- Stereochemistry of Organic Compounds (1994), Eliel, E. L., Wilen, S. H. John Wiley& Sons.
- Stereochemistry: Conformation and Mechanism (2015) 8 th ed., Kalsi, P. S. New Age International
- Organic Chemistry (2013), Madan, R. L. Tata McGraw Hill Education Private Limited, New Delhi
- Organic Chemistry (2020) 8th Edn., Bruice, P. Y., Pearson

Suggestive readings: Nil

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE – 2: Photobiology

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (If any) |
|---------------------|---------|-----------------------------------|----------|---------------------|---|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Photobiology | DSC-102 | 2 | 0 | 2 | 10+2 from any recognized Board with Biology & Candidates must appear in CUET in the following subject combination: Physics+ Chemistry+ Biotechnology Biology/ | Nil |

Learning Objectives

The Learning Objectives of this course are as follows:

- The course explores the physical properties of light and its interplay with living organisms. Light as a source of energy and information has shaped life on earth over the last 3.6 billion years. We see the world around us because the light reflected to the retina is processed to our brain (Photoreception), we breathe in oxygen because it has been evolved by the plants around us due to the light dependent Photosynthesis. Where there is no natural light, some organisms produce their own (Bioluminescence). Maintaining coordination with the changing light regime with changing seasons is fundamentally important to various aspects of living organisms across latitudes (Photoperiodism). Every part of the spectrum is used in one way or the other by different life forms. In this paper students will be able to appreciate the delicate processes of life that are dependent on light.

Learning outcomes

A student studying this course can:

- Understand and appreciate the dual nature of light.
- Comprehend the impact of light on biodiversity from pole to pole.
- Gain knowledge about the various photoreceptors in plants and animals and will appreciate and understand the mechanism of photosynthesis.
- Understand bioluminescence, photoperiodism and biological rhythms.
- Gain knowledge about the ecological and physiological responses to light.

SYLLABUS OF DSC-2

Unit 1: Introduction to Light and Life (6 hours)

Latitudinal Diversity gradient. Altitudinal and latitudinal variations in light intensity and photoperiod. Light as an ecological factor affecting distribution, physiological processes of plants and animals (Phyto and Zoo geography), in terrestrial and aquatic ecosystems.

Unit 2: Bioluminescence and Photoreception (6 hours)

Discovery, diversity and functions of Bioluminescence. Comparative account of chemistry and functional roles of photoreceptors in plants: chlorophylls, carotenoids, phycobiliproteins, bacteriochlorophylls, etc. Photoreception in animals, evolution of eyes, color vision and visual processing in the human eye.

Unit 3: Photosynthesis (6 hours)

History, Spectrum of autotrophs, Photosynthetic equation, Photosynthetic electron transport (cyclic and non-cyclic), photolysis of water, oxygen-evolving complex (OEC), concept of Reaction centers, Q-cycle, Dark Reactions in Photosynthesis, C₃, C₄, CAM cycle, photorespiration (C₂ cycle).

Unit 4: Photoperiodism (6 hours)

Phytochrome mediated responses in Plants, Animal responses to changing photoperiodism. Morphological, Anatomical, Physiological and behavioral adaptations to extreme light conditions in plants and animals.

Unit 5: Ecological and physiological responses to Light (6 hours)

Morphological and physiological color change in animals. Light as an inducer for biosynthesis/activation of biomolecules (Vitamin D, Melatonin, Thymine dimer formation, RuBisCo. Three rhythm domains, Biological clocks and circadian rhythms, night shift disorders and jet lag.

Practical component: (60 hours)

1. To study light penetration in water using Secchi disc.
2. To demonstrate the effect of light on soil fauna using Berlese funnel setup.
3. To study the effect of light and darkness on the chromatophores of fish.
4. To test / survey for color blindness using Ishihara charts.
5. To study various Bioluminescent organisms using photographs- *Photinus pyralis*, *Aequorea victoria*, Vampire squid, Anglerfish, Lanternfish, Viperfish, Black dragonfish, *Omphalotus nidiformes*
6. Diel vertical migration using photographs
7. Measurement of light using Luxmeter under various conditions
8. To study structure of chloroplast- through photographs
9. Separation of Chloroplast pigments by Paper Chromatography/ Chemical Separation of

Chloroplast pigments

10. To study the effect of Light intensity and CO₂ concentration on the rate of Photosynthesis
11. Demonstration of Hill's Reaction and study the effect of Light intensity (any 2 light conditions).
12. Demonstration of Etiolation and de-etiolation.

Essential/ recommended Readings:

- Björn, L. O. (2015) 3rd Ed. *Photobiology: Science of Light and Life*, L.O. Björn., Springer
- Buchanan, B. B., Gruissem, W., and Jones, R. L. (2000). *Biochemistry and molecular biology of plants*. Rockville, Md.: American Society of Plant Physiologists.
- Huner, N. and Hopkins, W. (2013). *Introduction to Plant Physiology*. In: 4th ed. John Wiley & Sons, Inc.
- Kohen E., Santus R., Hirschberg J.G. (1995) 1st Ed., *Photobiology* Academic Press
- Randall D., Burggren W., & French k. (2001) 5th Ed. *Eckert, Animal Physiology Mechanisms and Adaptations*. W.H. Freeman and Co.

Suggested Readings:

- Gross M. (2003). *Light and Life*. Oxford University Press
- Shimomura O., (2012) *Bioluminescence: Chemical Principles and Methods*, World Scientific,
- Taiz, L., & Zeiger, E. (1991). *Plant physiology*. Redwood City, Calif: Benjamin/Cummings Pub. Co.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE – 3: Diversity in lifeforms I

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|----------------------------------|----------------|-----------------------------------|----------|---------------------|---|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Diversity in Life forms I | DSC-103 | 2 | 0 | 2 | 10+2 from any recognized Board with Biology & Candidates must appear in CUET in the following subject combination: Physics+ Chemistry+ Biotechnology Biology/ | Nil |

Learning Objectives

The Learning Objectives of this course are as follows:

- The course will acquaint students with variations and variability in the living world and the objectives of biological classification. The course covers important aspects of biodiversity and its components with emphasis on understanding the features of Kingdom Animalia and Plantae and systematic organization of the same based on their evolutionary relationships. Students will also understand the importance of taxonomy and structural organization of animals from Protista to Echinodermata to appreciate the diversity of non-chordates living in varied habitats. They will study about the general characteristics and significance of Algae, Fungi, Bryophytes and Pteridophytes

Learning outcomes

After studying this course the student will be able to:

- Understand characteristic features of different plant and animal life forms.
- Identify, classify and differentiate diverse non-chordates based on their morphological, anatomical and systemic organization.
- Understand similarities and differences in life functions among various non-chordates.
- Appreciate and understand the relevance of wild relatives of cultivated plants, their domestication and green revolution.
- Understand the general characteristics, classification, economic importance, morphology, asexual and sexual reproduction of Algae, Fungi, Bryophytes and Pteridophytes

SYLLABUS OF DSC-3

Please provide weekly distribution

Unit I: Algae and Fungi

(6 hours)

Importance of biodiversity in daily life. Biodiversity crisis and biodiversity loss,

Five kingdom classification and the position of Algae, Fungi, Bryophytes and Pteridophytes.

Algae: Study of general characteristics, Outline Classification, Economic Importance, Thallus Organization and Reproduction in Nostoc, Polysiphonia, Ectocarpus.

Fungi – General Characteristics, Outline Classification, Economic Importance, Thallus Organization and Reproduction in Rhizopus and Puccinia, Lichens (crustose, foliose and fruticose), Mycorrhiza (ectomycorrhiza and endomycorrhiza, VAM)

Unit II: Bryophytes and Pteridophytes

(8 hours)

Bryophytes: General Characteristics; Outline Classification; Ecological and Economic Importance; Morphology, Structure and Reproduction (comparative) in *Marchantia* and *Anthoceros*

Pteridophytes: General Characteristics; Outline Classification; Economic Importance; Morphology, Structure and Reproduction in *Selaginella*

Unit III Introduction to Animal Life Forms

(6 hours)

Introduction to animal diversity, Basic Taxonomy (Linnaean system of classification, Whittaker's five kingdom classification, ICZN Rules), General Characteristics of Non-Chordata and Chordata.

Unit IV: Non-Chordata Taxonomy and Diversity

(10 hours)

Study of General Characteristics and Classification up to classes (Protista, Porifera, Cnidaria, Platyhelminthes, Aschelminthes, Annelida, Arthropoda, Mollusca, Echinodermata)

Practical component: (60 hours)

FLORA

1. Study of Vegetative and Reproductive Structures through Temporary Preparations and Permanent Slides- *Nostoc*, *Oedogonium*, *Polysiphonia*; *Chlamydomonas* (Through Photograph/Electron photomicrograph)
2. Study of Asexual Stage from Temporary/ Tease Mounts- *Rhizopus Albugo*; *Puccinia* - WM uredospores, teleutospores, Section of Leaf through pustules to show conidia
3. *Marchantia*-Morphology of Thallus, W.M. Rhizoids, V.S. Thallus through Gemma Cup, Antheridiophore (Permanent slide), Archegoniophore (Permanent Slide)), *Funaria*-Morphology of Gametophyte bearing Sporophyte, W.M. Rhizoids, W.M. Leaf, W.M. Operculum, W.M. Peristome, W.M. Spores (all Temporary Slides), L.S. Capsule (Permanent Slide).
4. *Selaginella*- Morphology, T.S. Stem, W.M. Strobilus, W.M. Microsporophyll and Megasporophyll (all Temporary Slides), L.S. Strobilus (Permanent Slide), *Pteris*-Morphology, V.S. Sporophyll, W.M. Sporangium, W.M. Spores (all Temporary Slides), W.M. Prothallus with Sex Organs (Permanent Slide).

FAUNA

5. **Study of following specimens:** *Euglena*, *Paramecium*, *Sycon*, , *Tubipora*, *Taenia solium*, *Ascaris Phertima*, *Hirudanaria*, *Peripatus*, *Scolopendra*, *Julus*, *Cancer*, *Daphnia*, *Apis*, *Pila*, *Dentalium*, *Octopus*, *Asterias*
6. **Dissections / Virtual demonstration:** Nervous system of Cockroach, Salivary apparatus and Ovary of Cockroach.
7. Study of adult *Fasciola hepatica*, *Taenia solium* and their life stages (Slides/micro-photographs).
8. Study of following permanent Slides.
 - a. T.S. and L.S. of *Sycon*.
 - b. Crustacean larvae (W.M. Mysis, W.M. Megalopa, W.M. Zoea).
9. To study faunal composition of water samples (Lucky drop method).
10. Field trip on: Biodiversity park/reserve/ NBPGR. (Botany + Zoology)

Essential/ recommended readings:

- Barnes, R.D. (1982). *Invertebrate Zoology*, 5th. Edition
- Campbell N. A., (2008). *Biology* 8th Edition, Pearson
- Barrington, E.J.W. (2012). *Invertebrate Structure and Functions*. II Edition, EWP Publishers
- Singh, V. (2010). *A text book of botany*. Rastogi Publications.
- Ennos, R., & Sheffield, E., (2000). *Plant Life*. UK: University Press, Cambridge.

Suggested readings:

- Ingrowille, M., (1992). *Diversity and Evolution of land plants*. Chapman and Hall
- Wilson, E. O., (1998). *Biodiversity*. National Academic Press.
- Barnes, R.D. (2006). *Invertebrate Zoology*, VII Edition, Cengage Learning, India.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DEPARTMENT OF ANTHROPOLOGY

BSc (Hons.) Anthropology

Category-I

DISCIPLINE SPECIFIC CORE COURSE – 1: Introduction to Biological Anthropology

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|---|---------|-----------------------------------|----------|---------------------|------------------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Introduction to Biological Anthropology | 4 | 3 | 0 | 1 | Class X II pass with biology | NIL |

Learning Objectives

The Learning Objectives of this course are as follows:

1. In order to acquaint the students with the fundamental concepts of Biological Anthropology
2. To introduce the student a foundational understanding of human variation and evolution of human and non-human primates

Learning outcomes

The Learning Outcomes of this course are as follows:

1. The students will comprehensively learn the scope and focal theme of biological anthropology along with its implications.
2. They will also learn the emergence of mankind in the context of human evolution and variation.
3. Further, this paper will help them in learning the role of evolutionary forces in bio-cultural human adaptations in the context of changing environment.

SYLLABUS OF DSC-1

UNIT – I History, Concepts, Aims and Scope (9 hours)

1. History and development of Biological Anthropology
2. Basic concepts of human evolution and variation
3. Scope and relationship of biological anthropology with other disciplines

UNIT – II Theories of Evolution (12 hours)

1. Pre-Darwinian Theories of Evolution
2. Darwinism and Synthetic theory of evolution

UNIT – III The primates (12 hours)

1. Classification and characteristics of living primates, Primate radiation

2. Primate Locomotion, Comparative anatomy and behaviour of human and non-human primates
3. Significance of non-human primate study in biological anthropology

UNIT – IV Human Variation and Concept of Race (12 hours)

1. Traditional and modern methods of studying human variation
2. Racial Classification of Mankind
3. Indian Racial classifications: Risley, Guha and Sarkar
4. UNESCO statement on Race and Current understanding of Race

Practical component (if any) - (30 hours)

Somatometry

1. Height/ Stature; Sitting height; Body weight
2. Maximum Head Length; Maximum Head Breadth; Minimum Frontal Breadth; Maximum Bizygomatic Breadth; Bigonial Breadth; Head Circumference
3. Physiognomic Facial Height; Morphological Facial Height; Physiognomic Upper Facial Height; Morphological Upper Facial Height
4. Nasal Height; Nasal Length; Nasal Breadth; Cephalic Index; Nasal Index

Somatoscopy

1. Head form; Facial form; Nose form; Eye form; Hair form
2. Skin colour; Hair Colour; Eye Colour

Essential/recommended readings

1. Campbell, G. (2016). The Ethnology of India. Wentworth Press.
2. Ember, C. R., Ember, M. Peregrine, P.N (2015). Anthropology (Twelfth Edition). Pearson Education Inc. Boston, USA [Unit-1: Chapter-1 and 2; Unit-2; Chapter -3 and 4; Unit-3: Chapter-5 and 6]
3. Eugenia Shanklin (1993). Anthropology and Race: The Explanation of Differences. Cengage Learning: 1 edition [Unit-4].
4. Jurmain R., Kilogre L., Trevathan W., Ciochon R.L. (2012). Introduction to Physical Anthropology. Wadsworth Publications, USA. [Unit-1: Page-3-23; Unit-2: Page 25-113; Unit-3: Page-143-225].
5. Statement of Race: Annotated Elaboration and Exposition of the Four Statements on Race (1972). Issued by UNESCO. Oxford University Press. 14.
6. Trudy R. Turner (2005). Biological Anthropology and Ethics: From Repatriation of Genetic Identity. State University of New York Press [Unit-3; Page 27-64].
7. Winfried Henke and Ian Tattersall (Eds.) (2007). Handbook of Paleoanthropology (Volume II). Springer.
8. Winfried Henke and Ian Tattersall (Eds.) (2007). Handbook of Paleoanthropology (Volume III). Springer

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

**DISCIPLINE SPECIFIC CORE COURSE – 2:
Society and Culture: Concepts and Approaches**

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|--|---------|-----------------------------------|----------|---------------------|-----------------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Society and Culture: Concepts and Approaches | 4 | 3 | 0 | 1 | Class XII pass with biology | NIL |

Learning Objectives

The Learning Objectives of this course are as follows:

1. The course introduces concepts of Society and Culture and their role in shaping human lives
2. Raises awareness about ethnocentrism and cultural relativism
3. Outlines some basic concepts and approaches to social and cultural changes

Learning outcomes

The Learning Outcomes of this course are as follows:

The students will be able to:

1. Critically interrogate who we are and what we do.
2. Understand the basic concepts and methods of social and cultural Anthropology.
3. Understand how social and cultural differences operate in the world.

SYLLABUS OF DSC-2

UNIT – I Concept of Society (12 hours)

Concept of Society, Status and Role, Group, Association, Community and Institutions Social Fact, Social Action, Social Conflict

UNIT – II Concept of Culture (12 hours)

Culture and its attributes, Enculturation, Ethnocentrism, Cultural Relativism, Paradoxes of Culture, Cultural Change, Culture Trait, Culture Complex, Culture Area Tangible and Intangible Culture

UNIT – III Emergence and Historical Development of Social Anthropology (12 hours)

Early writings: Colonial accounts of travelers and administrators; Ethnography, Ethnology and Social Anthropology; Scope and Relevance; Relationship with other disciplines.

UNIT – IV Approaches to Culture and Society (9 hours)

Evolutionism, Diffusionism, and Historical Particularism

Practical component (if any) – (30 hours)

Research projects based on everyday life experiences from different walks of life in different cultures. Students will be required to operationalize various concepts, identify the variables and examine their relationships in small field settings.

Essential/recommended readings

1. De Annemarie Waal Malefijt (1916) Images of Man: A History of Anthropological Thought. Random House.
2. Barnard, A. (2021). History and theory in anthropology (Second Edition). Cambridge: Cambridge University Press (Selected Chapters).
3. Davis, K. (1973). Human society. New York: Macmillan. (Page: 289-391).
4. Durkheim, E. (2013). The Rules of Sociological Method and Selected Texts on Sociology and its Method Edited by Steven Lukes (Second Edition). Houndmills: Palgrave Macmillan. (Page: 20-49, 78-100).
5. Eriksen, T. H. (2015). Small Places, Large Issues: An Introduction to Social and Cultural Anthropology (Fourth Edition). London: Pluto Press (Selected Chapters).
6. Gluckman, M. (1956). Custom and Conflict in Africa. Oxford: Basil Blackwell. (Page: 1-26, 27-53).
7. Marx, K. and F. Engels. (2008). The Communist Manifesto (with an introduction by David Harvey). London: Pluto. (Page: 31-82)
8. Michael Wesch. 2018. The Art of Being Human (First Edition). Manhattan, Kansas: New Prairie (Whole book).
9. Linton R (1936) Study of Man; Manchester: D Appleton-Century.
10. Rapport N. and Overing J. (2004). Key Concepts in Social and Cultural Anthropology. London: Routledge. (Page: 333-343, 92-102).

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE – 3: Introduction to Archaeological Anthropology

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|---|---------|-----------------------------------|----------|---------------------|-----------------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Introduction to Archaeological Anthropology | 4 | 3 | 0 | 1 | Class XII pass with biology | NIL |

Learning Objectives

The Learning Objectives of this course are as follows:

1. The course will enhance students understanding of human prehistory in the light of human origins.
2. The course will help students to develop concepts pertaining to the fundamentals of archaeological anthropology

Learning outcomes

The Learning Outcomes of this course are as follows:

Students will learn on evolutionary relationships of different extinct/hominids in the context of emergence of various stone tool types and settlements.

SYLLABUS OF DSC-3

UNIT – I Introduction (9 hours)

1. Definition and scope of archaeological anthropology
2. Relation with other disciplines
3. Methods of studying archaeological anthropology

UNIT – II Methods of Estimation of Time and Reconstruction of the Past (12 hours)

1. Absolute dating methods
2. Relative dating methods
3. Geochronology of Pleistocene Epoch
4. Glacial and Interglacial
5. Pluviation and Inter Pluviation
6. Different types of geoclimatic events.

UNIT – III Understanding Culture (12 hours)

1. Technique of tool manufacture and estimation of their relative efficiency
2. Classification of tools: primary and combination fabrication techniques
3. Typology and cultural nomenclature

UNIT – IV Earliest Evidence of Culture in the World (12 hours)

Konso, Olorgesailie, Olduvai Gorge, Pirro Nord, Dmanisi, Attirampakkam, Isampur

Practical component (if any) (30 hours)

Typo-technological Analysis of Prehistoric Tools: Identification, Interpretation and Drawings of the tool Types

1. Core Tool Types
2. Flake Tool Types
3. Blade Tool Types

Essential/recommended readings

1. Renfrew Colin and Bahn Paul (2012) Archaeology: Theories, Methods and Practice. New York: Thames & Hudson, 6th Edition.

2. Fagan Brian M. and Nadia Durrani (2014). In the Beginning: An Introduction to Archaeology, London: Routledge, 14th Edition.

12. Oakley, K.P. (1972). Man the Tool Maker. London. Trustees of the British Museum Natural History.
13. Sankalia, H.D. (1982). Stone Age Tools: Their techniques, Names and Probable Functions. Poona: Deccan College.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

**COMMON POOL OF GENERIC ELECTIVE COURSES
OFFERED BY DEPARTMENT OF ANTHROPOLOGY**

Category-IV

GENERIC ELECTIVES (GE-1)

Credit distribution, Eligibility and Pre-requisites of the Course

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course |
|--------------------------------------|---------|-----------------------------------|----------|---------------------|------------------------------|-----------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Forensic and Criminal investigations | 4 | 3 | 0 | 1 | Class X II pass with biology | NIL |

Learning Objectives

The Learning Objectives of this course are as follows:

- Give exposure of Forensic Science to students which focus on the investigation process of a crime.
- Enhance understanding of forensic applications and criminal investigations by teaching and research.
- Develop skills in forensic identification and problem solving methods.
- Keep up to date knowledge about all recent developments and emerging trends in Forensic science and criminal investigation.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Understand the aim, concept and significance of Forensic Science and Criminal Investigation.
- To make aware about recent techniques and developments of Forensic Science and Criminal Investigation.

SYLLABUS OF GE-1

UNIT – I: Forensic Science, Crime Scene Management and criminal investigation (9 hours)

- Introduction, history, development, laws and branches of Forensic Science.
- Organizational set-up of Forensic science laboratories.
- Crime scene protection, isolation, documentation, sketching, field notes and photography.
- Definition, concept, types and scope of crime, various control and prevention methods of crime.
- Criminology, criminal anthropology and criminal law

UNIT – II Forensic Ballistics and Explosives (9 hours)

- History, background, classification and characteristics of Firearms
- Internal, External, Terminal (wound) ballistics

- Classification, synthesis and characteristics of explosives.
- Examination and identification of firearms and explosives evidences.

UNIT – III Forensic Chemistry and toxicology (9 hours)

- Introduction, sampling, presumptive, screening and analytical techniques in Forensic Chemistry.
- Definition, classification and extraction of poisons.
- Toxicological techniques used in poisoning cases.
- Classification of drugs, Field and laboratory tests of drugs of abuse.

UNIT – IV Questioned Documents and fingerprint examination (9 hours)

- Classification of forensic documents, importance of natural variation and disguised writing
- Class and individual characteristics of handwriting and documents examination.
- History and classification of fingerprints, Conventional and modern methods of developing latent fingerprint.
- Automated Fingerprint Identification System (AFIS).

UNIT – V Forensic anthropology, Serology and DNA profiling (9 hours)

- Personal identification of living and non- living individual through various anthropological techniques.
- Forensic morphometric techniques of skeleton remains, Human and non-human identification.
- Sex determination, stature and age estimation from skeleton remains
- History, biochemistry and genetics of ABO, Rh, MN and other blood systems. Blood pattern analysis and blood stains ageing.
- DNA profiling and its application in criminal and civil investigations.

Practical component (if any) -

1. Descriptive study of organizational structure of a forensic science laboratory.
2. Interpretation of crime scene notes, photos, sketches, crime scene reconstruction and mock crime scene investigation.
3. Linkage of suspected bullet and cartridge case with the class and individual characteristics of firearms.
4. TLC and spot test for different toxic and drugs substances
5. Forensic identification of class and individual characteristics of handwriting
6. Examination of passports and currency notes
7. Various powder and chemical methods used for latent fingerprints.
8. Ridge characteristics, counting, and fingerprint comparison
9. Morphometric examination of skeleton remains
10. Sex determination, age and stature estimation from skeleton remains.
11. Examination of blood groups from fresh and dried blood stains
12. Preliminary and confirmatory tests for blood stains.

GENERIC ELECTIVES (GE-2)

Credit distribution, Eligibility and Pre-requisites of the Course

| Course t itle & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course |
|---|---------|-----------------------------------|----------|---------------------|------------------------------|-----------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Anthropology of Sustainable Development | 4 | 3 | 0 | 1 | Class X II pass with biology | NIL |

Learning Objectives

The Learning Objectives of this course are as follows:

The objective of the paper is to understand the discourse around the idea of sustainable environment along with relevant issues and emerging challenges in managing the planetary crisis and the problems due to environmental degradations.

Learning outcomes

The Learning Outcomes of this course are as follows:

By studying the paper, the students will be able to:

- Understand the nature and scope of sustainable development, basic concepts in it.
- Know the importance of traditional ecological knowledge in sustainable development
- Contemporary issues and challenges in sustainable development and environmental degradation, biodiversity and conservation.

SYLLABUS OF GE-2

UNIT – I (9 hours)

Notion of Sustainable Development Genesis and Approaches; Economy, Equity and Environment: Idea of Triple Bottom-line

UNIT – II (12 hours)

United Nation's Sustainable Development Goals, Interconnections and Integration, Cultural diversity and Execution of SDG: Ethnographic Cases, Frameworks of Assessment

UNIT – III (12 hours)

Issues of planetary Crisis and idea of sustainable livelihood, Alternative and Sustainable use of natural resources: water, energy, mines and materials

UNIT – IV (12 hours)

Environmental Issue: Biodiversity, Indigenous Knowledge, Traditional Practices associated with sustainable nature

Practical component (if any) - (30 hours)

- I. Prepare an evaluative study/ a project based on any contemporary issue in India by employing various sources viz. books, journals, magazines, government reports newspaper articles, etc.
2. Presentation of the project and group discussion

Essential/recommended readings

1. Brightman, Marc. and Lewis, Jerome. (2021). Anthropology of Sustainability: Beyond development and progress. Palgrave Macmillan
2. Carroll, Bryce. (2017). An Introduction to Sustainable Development. Larsen & Keller Education.
3. Corsi, Patrick. (2017). Going Past Limits to Growth: A Report to the Club of Rome EU-Chapter. John Willey & Sons Inc.
4. Elliott, Jennifer A. (2013). An introduction to sustainable development. New York: Routledge.
5. Eversole, Robyn. (2018). Anthropology for Development: From Theory to Practice. Routledge.

6. Meadows, Donella H; Meadows, Dennis L; Randers, Jorgen; and William, W. Behrens III. (1972). The Limits to growth: A report for the Club of Rome's project on the predicament of mankind. New York: Universe Books.
7. Sachs, Jeffrey. D. (2015). The age of sustainable development. New York. Columbia University Press

GENERIC ELECTIVES (GE-3)

Credit distribution, Eligibility and Pre-requisites of the Course

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course |
|---------------------------------------|---------|-----------------------------------|----------|---------------------|------------------------------|-----------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Biodiversity and indigenous Knowledge | 4 | 3 | 0 | 1 | Class X II pass with biology | NIL |

Learning Objectives

The Learning Objectives of this course are as follows:

The course will help the students in understanding how indigenous knowledge and biodiversity are complementary phenomena essential to human development. Students will recognize indigenous knowledge as an important national resource and understand the collective knowledge of biodiversity and its use

Learning outcomes

The Learning Outcomes of this course are as follows:

1. Students will learn basic concepts of biodiversity and indigenous knowledge along with the rich traditional resources in management and conservation of biological diversity.
2. The course will help students to understand concepts pertaining to conservation of biodiversity and protection of indigenous knowledge including the indigenous management strategies of farmers.
3. They will also learn policies and laws relating to biodiversity conservation including protection of intellectual property rights relating to indigenous knowledge.

SYLLABUS OF GE-3

UNIT – I (9 hours)

Biodiversity: basic concept, UN Convention on biodiversity, health implications of biological diversity; conservation of biological diversity- policies and law.

UNIT – II (12 hours)

Human-animal interface- interface between human and animal world; Zoonotic diseases types, etiology and prevention, biodiversity and genetic resources.

UNIT – III (12 hours)

Indigenous Knowledge: basic concept, critique of western scientific knowledge, historical context of the emergence of indigenous knowledge, contemporary relevance of indigenous knowledge, indigenous knowledge in biodiversity conservation.

UNIT – IV (12 hours)

Problems of Indigenous Knowledge: issues pertaining to transfer of indigenous knowledge, debates for making indigenous knowledge universal, politics of indigenous knowledge, notion of identity and property; Intellectual Property Rights related to biodiversity and indigenous knowledge, protection of plant varieties.

Practical component (if any) -

Project Report on Indian Cases pertaining to Indigenous Knowledge, Intellectual Property Rights and Biodiversity

Essential/recommended readings

1. Antweiler, C. (2004). Local Knowledge Theory and Methods: An Urban Model from Indonesia. In *Investigating Local Knowledge: New Directions, New Approaches* (eds.) Alan Bicker, Paul Sillitoe & John Pottier. Ashgate. 1-34

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

GENERIC ELECTIVES (GE-4)

Credit distribution, Eligibility and Pre-requisites of the Course

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course |
|--|---------|-----------------------------------|----------|---------------------|-----------------------------|-----------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Health Systems, Promotion and Management | 4 | 3 | 0 | 1 | Class XII pass with biology | NIL |

Learning Objectives

The Learning Objectives of this course are as follows:

1. To understand basic idea of health systems, health promotion
2. To assess the health care management strategies
3. To understand the public health value of health promotion in different health systems

Learning outcomes

The Learning Outcomes of this course are as follows:

The students will learn the basic concepts of health system research, creatively design health promotion strategies and understand various challenges of health care management.

SYLLABUS OF GE-4

UNIT – I (9 hours)

Introduction to the basic concepts of health systems, health promotions and health management

UNIT – II (12 hours)

Models, Contexts and Agents of health promotion; practice framework of health promotion: lifestyle, diet, and physical activity

UNIT – III (12 hours)

Health system of (India vs International), health system framework: private and state functioning, health system spending and financing

UNIT – IV (12 hours)

Health care institutes/centre management: health care resource, clinical and technological challenges, cost containment, hospital waste management, health care emergency management

Practical component (if any) -

Project report based on activity related health promotion, or data collection related to health systems or management

Essential/recommended readings

Josep Figueras, Martin McKee, Jennifer Cain & Suszy Lessof. Health Systems in Transition: Learning from Experience. World Health Organization, 2003.

- Bruce R. Schatz, Richard B. Berlin Jr. (auth.). Healthcare Infrastructure: Health Systems for Individuals and Populations [ed.]. Springer-Verlag London, 2011

Michael J. Reilly, David S. Markenson. Health Care Emergency Management: Principles and Practice [1 ed.], 2010

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

GENERIC ELECTIVES (GE-5)

Credit distribution, Eligibility and Pre-requisites of the Course

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course |
|----------------------------|---------|-----------------------------------|----------|---------------------|-----------------------------|-----------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Anthropology and Fieldwork | 4 | 3 | 0 | 1 | Class XII pass with biology | NIL |

Learning Objectives

The Learning Objectives of this course are as follows:

The objective of the course is to introduce the students to the technique of fieldwork, a highly sophisticated qualitative research method developed in the discipline over a century. The students shall learn the innovative ways of designing and doing fieldwork in different anthropological settings.

Learning outcomes

The Learning Outcomes of this course are as follows:

The students will learn how to design and undertake fieldwork using anthropological tools of research. They will also learn the intellectual trajectory of the field work tradition affecting various disciplines.

SYLLABUS OF GE-5

UNIT – I Fieldwork Tradition in Anthropology (9 hours)

The Beginning: Reports of travellers, administrators and missionaries
Invention of the 'non-western others' and the colonial agenda

UNIT – II Designing Field Research (12 hours)

Conceiving the universe of study
Identifying techniques of data collection
Pre-testing and Pilot study
Community immersion and researchers' identity

UNIT – III The Changing notion of Anthropological Field (12 hours)

Anthropological field in the era of globalisation
Mobility and interconnection: multi-sited ethnography

UNIT – IV Data Analysis and Report Writing (12 hours)

Qualitative and thematic analysis, content analysis
Analysis of metaphors and narratives
Language of representation and persuasion

Practical component (if any) – (30 hours)

The students shall prepare a project report using fieldwork as a method of data collection. Practical exercises will include task such as identification of units and universal study, designing tools of field research and to pre-test it for ensuring reliability and validity.

Essential/recommended readings

Madan & Beteille. (1975). Encounter and Experience: Personal Accounts of Fieldwork. University Press of Hawaii.

- Brewer, D. John. (2000). Ethnography. McGraw Hill Companies.
- Malinowski, B. (1922). Agronauts of Western Pacific: An Account of Native Enterprise and Adventure in the Archipelagoes of Melanesian New Guinea. London: Routledge & Kegan Paul Ltd.

- Patnaik, S. M. (2011). Culture. Identity and Development: An Account of Team Ethnography among the Bhil of Jhabau. Jaipur: Rawat Publications.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

GENERIC ELECTIVES (GE-6)

Credit distribution, Eligibility and Pre-requisites of the Course

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course |
|----------------------------------|---------|-----------------------------------|----------|---------------------|------------------------------|-----------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Genetic Research in Anthropology | 4 | 3 | 0 | 1 | Class X II pass with biology | NIL |

Learning Objectives

The Learning Objectives of this course are as follows:

1. To introduce human genetics through anthropological perspectives where impetus will be laid on building an understanding of biochemical and molecular markers and their relevance in anthropology.
2. The course focuses on application of anthropological genetics in mendelian populations and molecular basis of complex diseases.
3. The course also focuses on aspects of field work, data collection, ethical, legal and social issues in genetic research in anthropology.

Learning outcomes

The Learning Outcomes of this course are as follows:

1. The students will be trained to use biochemical markers with respect to disease profile.
2. The students can be better equipped to understand the importance of mendelian populations in genetic research that can be applied to disease genetics.
3. The students will be skilled with basic laboratory techniques for molecular markers.
4. The students will be better equipped to comprehend fieldwork and data collection along with an understanding of ethical and legal aspects of genetic research.

SYLLABUS OF GE-6

UNIT – I Basic concepts (9 hours)

History and relevance of genetic research in anthropology, evolution of genetic markers as a tool in human research, concept of Hardy-Weinberg Equilibrium principle.

UNIT – II Methods of genetic research in anthropology (9 hours)

Twin studies, genetic linkage studies, pedigree analysis, candidate gene studies, cohort studies, cross-sectional studies, hypothesis and technology driven research

UNIT – III Data collection in human genetic studies (9 hours)

Field work and data collection strategies, quantitative and qualitative data collection in field

UNIT – IV Techniques in human genetics (9 hours)

Agglutination, electrophoresis, PCR, sequencing techniques

Unit-V: Ethical, legal and social issues in genetic research (9 hours)

Ethical guidelines and practices in genetic research, legal and social issues in genetic research, Indian national guidelines for collaborative research in genetics.

Practical component (if any) - (30 hours)

1. ABO blood group
2. DNA extraction
3. Identification of genetic mutation through specific technique

Essential/recommended readings

1. Speicher, M. R., Motulsky, A. G., & Antonarakis, S. E. (Eds.). (2010). Vogel and Motulsky's human genetics. Berlin, Heidelberg: Springer Berlin Heidelberg.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DEPARTMENT OF ENVIRONMENTAL SCIENCE

B.Sc. (H) ENVIRONMENTAL SCIENCE

Category-I

DISCIPLINE SPECIFIC CORE COURSE – 1: ENVIRONMENTAL AND EARTH SURFACE PROCESSES

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|--|----------|-----------------------------------|----------|---------------------|------------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| ENVIRONMENTAL AND EARTH SURFACE PROCESSES | 4 | 2 | 0 | 2 | Class X II pass | NIL |

Learning Objectives

- Introduce students to the basic structure and composition of the Earth
- Explore various surface processes and their impact on and role in living systems
- Analyse interactive processes in the inner as well as outer Earth's surface

Learning outcomes

After this course, students will be able to learn the following skills.

- Acquire environmental field mapping skills to identify rocks, landforms, soils, and minerals
- Analyse surface and near-surface processes and products;
- Develop the current status of earth's processes while correlating it with global changes through time.
- Correlate landform and environmental conditions based on the evolution of the earth
- Relate and interpret the geological history of an area based on rock analyses
- Use satellite data to interpret Earth's geology or landscape

SYLLABUS OF DSC-1

UNIT – I HISTORY OF EARTH (6 hours)

Solar system formation and planetary differentiation; formation of the Earth: formation and composition of core, mantle, crust, atmosphere and hydrosphere; Geological time scale and major changes on the Earth's surface; Holocene and the emergence of humans, role of humans in shaping landscapes; development of cultural landscapes.

UNIT – II EARTH SYSTEM PROCESS (8 hours)

Movement of lithosphere plates; mantle convection and plate tectonics, major plates and hot spots; sea floor spread; earthquakes; volcanic activities; orogeny; isostasy; gravitational and

magnetic fields of the earth; continental drift and present-day continents, paleontological evidences of plate tectonics; continental collision and formation of the Himalaya and mountains.

UNIT – III MINERALS AND ROCKS (8 hours)

Minerals and important rock forming minerals; rock cycle: lithification and metamorphism; Three rock laws; rock structure, igneous, sedimentary and metamorphic rocks; weathering: physical, biogeochemical processes; erosion: factors and agents of erosion; rivers and streams, glacial and aeolian transportation and deposition of sediments by running water, wind and glaciers

UNIT IV– EARTH SURFACE PROCESSES (8 hours)

Atmosphere: evolution of earth's atmosphere, composition of atmosphere, physical and optical properties, circulation; interfaces: atmosphere–ocean interface, atmosphere land interface, ocean–land interface; land surface processes: fluvial and glacial processes, rivers and geomorphology; types of glaciers, glacier dynamics, erosional and depositional processes and glaciated landscapes; coastal processes

Unit V: IMPORTANCE OF BEING A MOUNTAIN (8 hours)

Formation of Peninsular Indian Mountain systems - Western and Eastern Ghats, Vindhyas, Aravallis, etc. Formation of the Himalaya; development of glaciers, perennial river systems and evolution of monsoon in Indian subcontinent; formation of Indo-Gangetic Plains, arrival of humans; evolution of Indus Valley civilization; progression of agriculture in the Indian subcontinent in Holocene.

Practical component (if any) - (60 hours)

1. Field survey and learning what and how are to be collected, observed, and recorded as a young field environmental geologist.
2. Field visit to identify natural agents derived landform and geomorphic features.
3. Field surveys and learning indicators of geomorphology, external features, texture, colour, mineral composition, and minerals to identify the rock types
4. Mapping of igneous, sedimentary, and metamorphic rocks and drawing sketches to highlight important features of different rock types
5. Megascopic identification of mineral samples: bauxite, calcite, chalcopryite, feldspar, galena, gypsum, hematite, magnetite, mica, quartz, talc, tourmaline;
6. Estimate the relative density of soil and conduct sedimentation analysis using hydrometer method.
7. Determine plastic limit of soil and determine soil permeability
8. Study any glacier, its flow direction, identification of glacial erosional and depositional landforms, and analysis.
9. Read, prepare and interpret geological maps to analyze petrographical and structural features.
10. Read and interpret topographical maps, aerial photographs, satellite imagery, and digital elevation models for the earth's surface features
11. Locate the epicenter of an earthquake
12. Interpret earth's history using igneous and sedimentary rock

Suggestive readings

DISCIPLINE SPECIFIC CORE COURSE – 2: ENVIRONMENTAL PHYSICS

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|-----------------------|---------|-----------------------------------|----------|---------------------|----------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| ENVIRONMENTAL PHYSICS | 4 | 2 | 0 | 2 | Class X II pass | NIL |

Learning Objectives

- Build conceptual understanding of the environment by understanding the underlying principles of physics governing environmental processes
- Develop perspective on the concepts of physics associated with the movement of particles, chemicals, and gaseous across the environmental compartments
- Gain insights into physics of plant-soil-water interface determining ecosystem processes

Learning outcomes

After this course, students will be able to

- Apply principles of physics to manage soil, water, and plant growth, especially in extreme environment

- Acquire skills to predict and manage pollutant movement across the environmental phases using concepts of physics
- Assess the impact of change in soils properties and field data at the microscale on tracking environmental contaminants
- Analyse soil particle size fractions and determine their impact on the movement of water and other solutes
- Correlate environmental processes in the ocean and terrestrial ecosystems on weather and climate 16
- Use satellite data to interpret radiation data and its impact on living organisms and ecosystems

SYLLABUS OF DSC-2

UNIT – I Environmental spectroscopy (6 hours)

Basic concepts of light and matter; quantum mechanics (relation between energy, wavelength and frequency), black body radiation, Kirchhoff's law, Boltzmann equation, Introduction to the concept of absorption and transmission of light, Beer–Lambert law, photovoltaic and solar cells.

UNIT – II Ocean and Atmosphere (6 hours)

Oceanic waves and circulation, Atmospheric temperature, pressure, circulation, precipitation and other features, Lapse rate (dry and moist adiabatic), Scattering of light, Rayleigh and Mie scattering, Electromagnetic radiations and spectrum, Greenhouse effect.

UNIT – III Soil and Water Physics (6 hours)

Phase transition of water and its consequences for marine and freshwater life, and rock structures, Clausius–Clapeyron equation of thermodynamics and liquid–vapor phase transition, Soil temperature and heat flow, Aggregation of soil particle size fractions, Stress, strain and strength of soil bodies, Diffusion and dispersion in soils and water. Redistribution, retention and evaporation of soil moisture and gaseous components

UNIT – IV Movement of pollutants in environment (6 hours)

Diffusion and dispersion, point and area source pollutants, pollutant dispersal; Gaussian plume model, mixing heights, hydraulic potential, Darcy's equation, types of flow, turbulence

UNIT – V: Eco-physics (6 hours)

Soil–Plant–Water Relations, Water entry into soil, Water and energy balance, Plant up take and water use efficiency; Open or closed ecosystems, Macroscopic flows of matter or energy, Disturbance or catastrophe and phase space changes in ecosystems, Thermodynamic entropy, Ecosystem efficiency, Simulated landscapes.

Practical component (if any) – (60 hours)

1. Analyze the variations in hydraulic conductivity of different soil types
2. Determine the soil temperature and thermal conductivity in different soil particle size fractions
3. Find association between heat transfer ability and the soil types
4. Estimate radon released by different materials with time
5. Monitor the health of green plants and variations in photosynthesis with varying fluorescence

- Interpret the Gaussian plume model for the movement of pollutants in the environment.
- Analyze the principle and applications of black body radiation and Beer–Lambert law.
- Simulate the meteorogram of any geographical region and interpret it.

Suggestive readings

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE – 3: ENVIRONMENTAL CHEMISTRY

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|-------------------------|---------|-----------------------------------|----------|---------------------|----------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| ENVIRONMENTAL CHEMISTRY | 4 | 2 | 0 | 2 | Class X II pass | NIL |

Learning Objectives

- Design strategies based on principles of environmental chemistry to The Learning Objectives of this course are as follows:
- Develop concepts of environmental chemistry as a fundamental principle of various environmental processes
- Link pollutant chemistry as a basis of pollution potential of contaminants
- Gain insights into chemical reactions that govern the movement of chemical contaminants across the environmental compartments and develop solutions that influence pollutant chemistry.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Synthesize knowledge on the structure and functions of environmental compartments based on the principles of environmental chemistry
 - Acquire analytical and technical skills to recognize and estimate different environmental chemicals
 - Apply concepts of environmental chemistry to develop low-cost methods to treat potable and industrial wastewater and manage the quality of water, soil, and air
 - Relate and interpret the contaminants exposure and its adverse impacts on living organisms and the health of ecosystems
- influence the environmental fate of contaminants
- Discuss global environmental issues in the background of the chemistry of pollutants

SYLLABUS OF DSC-3

UNIT – I Fundamentals of environmental chemistry (10 hours)

Atomic structure, electronic configuration, periodic properties of elements (ionization potential, electron affinity and electronegativity), types of chemical bonds (ionic, covalent, coordinate and hydrogen bonds); mole concept, molarity and normality, quantitative volumetric analysis.

Thermodynamic system; types of chemical reactions; acids, bases and salts, solubility products; solutes and solvents; redox reactions, concepts of pH and pE, electrochemistry, Nernst equation, electrochemical cells.

Basic concepts of organic chemistry, hydrocarbons, aliphatic and aromatic compounds, organic functional groups, polarity of the functional groups, synthesis of xenobiotic compounds like pesticides and dyes, synthetic polymers.

UNIT – II Atmospheric chemistry (8 hours)

Composition of atmosphere; photochemical reactions in atmosphere; smog formation, types of smog (sulphur smog and photochemical smog), aerosols; chemistry of acid rain, case studies; reactions of NO₂ and SO₂; free radicals and ozone layer depletion, role of CFCs in ozone depletion.

UNIT – III Water chemistry (6 hours)

Chemical and physical properties of water; alkalinity and acidity of water, hardness of water, calculation of total hardness; solubility of metals, complex formation and chelation; colloidal particles; heavy metals in water

UNIT – IV Soil chemistry (6 hours)

Soil composition; relation between organic carbon and organic matter, inorganic and organic components in soil; soil humus; cation and anion exchange reactions in soil; nitrogen, phosphorus and potassium in soil; phenolic compounds in soil.

Practical component (if any) - (60 hours)

1. Prepare buffers/solutions of different molarity and normality using the given stocks solutions

2. Determine the variations in pH of different soils and water samples using various methods.
3. Estimate hardness of given water samples
4. Determine cation exchange capacity of given soils samples
5. Determine the suitability of water for use for agriculture, industrial and domestic purposes based on selected water parameters
6. Estimate contents of selected heavy metals in given water and soil samples and identify their possible sources
7. Analyse variations in air quality index of different regions and correlate with anthropogenic or natural factors
8. Estimate organic matter contents in different soil types
9. Assess soil health based on the concentration of selected macro elements

Common Pool of Generic Electives (GE) Courses
Offered by Department of Environmental Studies

Category - IV

GENERIC ELECTIVES (GE-1)

Credit distribution, Eligibility and Pre-requisites of the Course

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course |
|--------------------------------|----------|-----------------------------------|----------|---------------------|-----------------------------|-----------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| ENVIRONMENT AND SOCIETY | 4 | 2 | 0 | 2 | 12th Pass | NIL |

Learning Objectives

- Examine the relationship between the environment and society
- Enable students to understand and appreciate the role played by environment, society, and, their interface in shaping environmental decisions
- Think critically on environmental issues and different solutions
- Learning outcomes

Learning outcomes

The Learning Outcomes of this course are as follows:

SYLLABUS OF GE-1

UNIT – I Introduction (4 hours)

Social and cultural construction of ‘environment’; environmental thought from historical and contemporary perspective in light of the concepts of Gross Net Happiness and Aldo Leopold’s Land Ethic

UNIT – II Issues in Environmentalism (4 hours)

Significant global environmental issues such as acid rain, climate change, and resource depletion; historical developments in cultural, social and economic issues related to land, forest, and water management in a global context; interface between environment and society.

UNIT – III Development -Environment Conflict (4 hours)

Developmental issues and related impacts such as ecological degradation; environmental pollution; development-induced displacement, resettlement, and rehabilitation: problems, concerns, and compensative mechanisms; discussion on Project Affected People (PAPs).

UNIT- IV Urbanization and environment (4 hours)

Production and consumption oriented approaches to environmental issues in Indian as well as global context; impact of industry and technology on environment; urban sprawl, traffic congestion and social-economic problems; conflict between economic and environmental interests.

UNIT – V Environment and Social Inequalities (4 hours)

Inequalities of race, class, gender, region, and nation-state in access to healthy and safe environments; history and politics surrounding environmental, ecological and social justice; environmental ethics, issues and possible solutions.

UNIT – VI Regulatory Framework (4 hours)

Brief account of Forest Conservation Act 1980 1988; Forest Dwellers Act 2008; Land Acquisition Act 1894, 2007, 2011, 2012; Land Acquisition Rehabilitation and Resettlement Act 2013

UNIT- VII Community participation (6 hours)

State, corporate, civil society, community, and individual-level initiatives to ensure sustainable development; case studies of environmental movements (Appiko Movement, Chipko Movement, Narmada Bachao Andolan); corporate responsibility movement; appropriate technology movement; environmental groups and movements, citizen groups; role played by NGOs; environmental education and awareness.

Practical component (if any) - (60 hours)

1. Analyse the cultural construction of the environment in a country of your choice
2. Compare and contrast the perception of the environment in countries with varying levels of environmental quality
3. Critically evaluate the developmental status and type of environmental issues across societies from region within a country and different countries.
4. Determine the socio-demographic and industrial characteristics of a region and correlate them with the environmental issues of that region?
5. Identify the relationship between societies varying in cultures and environment and analyse the role of economic factors in changing the relationship over time
6. Show any relationship between natural resource use and changing population dynamics of the community
7. Evaluate the pattern of natural resource use by people and their likelihood of participating in the conservation of natural resources
8. Demonstrate any pattern between the resources use and population dynamics, industrial activities, and employment generation in a given region
9. Analyse attitudes, knowledge, and values towards an environmental resource of a population or stakeholder and what trade-off is the public willing to make for conservation of the resource.
10. Determine access to resources across members of a society and suggest measures for equitable sharing of resources or associated benefits, if required.
11. Select an environmental policy/regulation and identify its impact on society over time.

GENERIC ELECTIVES (GE-2)

Credit distribution, Eligibility and Pre-requisites of the Course

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course |
|--|---------|-----------------------------------|----------|---------------------|-----------------------|-----------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| HUMAN WILDLIFE CONFLICT AND MANAGEMENT | 4 | 2 | 0 | 2 | 12 th Pass | NIL |

Learning Objectives

- Analyze causal factors determining conflicts between humans and wildlife
- Gaining insights into complexity of habitat sharing between wildlife and human societies Acquire deeper understanding of causal factors of habitat shrinkage and its impact on wild life dynamics and threats and benefits to human societies
- Reveal the nexus between humans-culture-economy-wildlife
- Develop scientific and social perspective of wildlife conservation.

Learning Outcomes

After successful completion of this course, students will be able to:

- Develop clear perspective on human-wildlife conflict by defining and examining its historical & present-day status
- Discriminate the underlying factors associated with successful & unsuccessful efforts on providing solutions to human-wildlife conflicts
- Demonstrate the relevance of cultural factors in understanding the issues and providing acceptable and practical solutions
- Critically evaluate different case studies for identifying factors that may have major impact in resolving human-wildlife conflicts

SYLLABUS OF GE-2

UNIT – I Introduction to wildlife management (4 hours)

Need of environmental management; wildlife conservation: moral obligation? philosophy of wildlife management; why is it necessary to worry about human wildlife conflicts? What is the role of government, wildlife biologists and social scientists, concept of deep and shallow ecology.

UNIT – II Evolution of the concept of wildlife management (6 hours)

Journey of mankind from predator to conservator; prehistoric association between wildlife and humans: records from Bhimbetka wall paintings; conservation of wildlife in the reign of king Ashoka: excerpts from rock edicts; Bishnoi community; understanding wildlife

management, conservation and policies regarding protected areas in 21st century; positive values provided by wildlife conservation (monetary, recreational, scientific and ecological benefits)

UNIT – III Wildlife conservation laws in India (4 hours)

Types of protected areas (Wildlife Sanctuaries, National Parks, Biosphere Reserves); IUCN categories of protected areas, Natural World Heritage sites; concept of core and buffer area in a protected range, brief introduction to Wildlife Protection Act of 1972, Forest act 1927, Environmental Protection Act 1986, and Forest conservation Act 1920; introduction of Tiger task force, Status of current protected areas in India.

UNIT – IV Socio-economic and legal basis of conflicts (6 hours)

Concepts of development and encroachment, who is the intruders: human or animal? Impact of conflict on humans and wildlife, impact of habitat fragmentation, social inequality in terms of forest conservation: luxury hotels within protected areas vs. displacement of native tribes, forest produce as a need vs. forest exploitation, introduction to tribal rights in India, demographic profile of tribes in India, importance of forest produce to tribal populations, Scheduled tribes and other traditional Forest dwellers (Recognition of forest right) Act, 2006.

UNIT – V Wildlife conflicts (4 hours)

Insight into the important conflicts: Keoladeo National park conflict of Bharatpur, Human and elephant conflicts of Kerala, Fisherman and tiger conflict of Sundarbans forest, shifting cultivation in North east India.

UNIT—VI Human wildlife coexistence (6 hours)

Symbiotic relationship between tribals and forest, forest and development, focus on the inclusive growth of tribes: community participation in forest management, case study of Chipko movement, sacred groves forests, India's Bishnoi community and their conservation practices; ecological- economic welfare and development: conservation of indigenous culture and traditions, role of international organizations: Man and biosphere programmes; concept of conservation reserves and community reserves, importance of wildlife corridors in minimizing the conflicts and conservation.

Practical component (if any) -

1. Prepare a case study that has potential to develop as a human-wildlife conflicts in the area of your choice.
2. Write a case study describing different aspect of human-wildlife conflict and depict all associated factors in a schematic diagram
3. Using a case study, demonstrate the importance of historical facts in providing solutions in the present day
4. Evaluate merits and demerits of multistage sampling technique while collecting information on human-wildlife conflicts
5. Develop a questionnaire to identify the causal factors of human-wildlife conflicts emerging in a target regions
6. Analyze the roles of psychological factors in development of human-wildlife conflicts
7. Evaluate the relationship between resource scarcity and abundance in determining humanwildlife conflicts
8. Correlate the success and failure in resolving human-wildlife conflicts with existence of institutional framework

9. Use methods of triangulating information, field observations, photography and Problem Animal Control Report as complementary methods to focused interviews to understand the problem and suggest the solution
10. Understanding the significance of mediation among different policies on societal benefits and wildlife conservation to resolve human-wildlife conflicts

GENERIC ELECTIVES (GE-3)

Credit distribution, Eligibility and Pre-requisites of the Course

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course |
|------------------------|---------|-----------------------------------|----------|---------------------|-----------------------|-----------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| GENDER AND ENVIRONMENT | 4 | 2 | 0 | 2 | 12 th Pass | NIL |

Learning Objectives

The paper is designed to expose students to the concept of gender in society and its relevance in the environmental context. The principal objective of the course is to enable students to examine environmental issues from a gender-sensitized perspective

Learning outcomes

After the course, students will be able to:

- Identify causal factors of making women more vulnerable to environmental calamities and issues
- Reveal the reality of gender inequalities across the countries, challenging the development of risk resilient individuals and communities
- Demonstrate significant contributions of women as stakeholders while decisions making, educating, and evolving action plans across sectors to provide long-term solutions to environmental problems.
- Show the women's role as a leader in transitioning toward equitable and sustainable societies and industries

SYLLABUS OF GE-3

UNIT – I Introduction (4 hours)

The socially constructed 'gender' concept

UNIT – II Gender and society (6 hours)

Gender existence in society; gender: matriarchy and patriarchy as means of social exclusion (case studies in an Indian context); gender equity issues in rural and urban settings.

UNIT – III Gender and the environment (4 hours)

Relevance of the concept in an environmental context; evolution of gender hierarchies in historical and contemporary perspective; gendered division of roles in cultural, social and economic perspective; gender inequalities

UNIT – IV Gender, resources and the environment (4 hours)

Knowledge about the environment among men and women; differential dependencies on environmental resources; implications of gendered responses to environmental degradation.

UNIT – V Gender and environmental management (6 hours)

Women's participation in environmental movements and conservation; historical and contemporary case studies; role of women in environmental education, awareness and sustainable development.

UNIT – VI Strategies for change (6 hours)

Need for gender equity; Instruments for change: education, media, action groups, policy and management; equity in resource availability and consumption for a sustainable future

Practical component (if any) -

1. Using a case study, demonstrate the value of a gender-inclusive approach in the success of the environmental protection programme
2. Develop a context and show the importance of women's role in environmental conservation by emphasizing gender gaps in access to (a) power, (b) education, (c) markets, and (d) cultural practices.
3. Analyze the national gender policy or laws restricting or promoting women's participation in resolving environmental issues
4. Critically evaluate the national environmental policies for their gender sensitivity by taking an example of climate change-related policies across the sectors, including agriculture, forestry, and water.

5. Identify the gender gaps in policies related to climate change, energy access, natural resource access, and ecosystem services benefits
6. Determine the gender gaps in livelihood activities depend on ecological resources, such as agriculture, fisheries, and forestry, access to new technologies, and capacity-building in STEM (science, technology, engineering, or mathematics) for resolving environmental issues
7. Examine the impact of environmental awareness programmes involving or targeting women, especially to reduce vulnerability to climate change, access to renewable energy, skill development in energy entrepreneurship
8. Find out the variations in perspectives of women and men on environmental security across the societies within and outside country
9. Focused survey in neighbourhood community to gain insights into perception and solution to same environmental issues locally, nationally, and globally
10. Develop an action plan to address an environmental issue selected in practical 9 by incorporating livelihood strategies and economic and decision-making empowerment for women
11. Collect sex-disaggregated data and analyze the success of different environmental conservation programme based on the role of gender while focusing on involvement in decision making, participation in the action plan, the target of information dissemination, avenues of communication, major beneficiaries, and marginalized groups.

GENERIC ELECTIVES (GE-4)

Credit distribution, Eligibility and Pre-requisites of the Course

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course |
|---------------------|---------|-----------------------------------|----------|---------------------|-----------------------|-----------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| GREEN TECHNOLOGIES | 4 | 2 | 0 | 2 | 12 th Pass | NIL |

Learning Objectives

- Gain insights into interdisciplinary aspects of green systems and the environment, and sustainability
- Develop a new perspective on product life cycles for improving efficiency and promoting environmental conservation
- Understand product formulation, process complexity, and infrastructure design to promote sustainability
- Integrate technical and scientific skills for environmental security and industrial sustainability for nation's development

Learning outcomes

Apply principles of green chemistry for environmentally safe products

- Design processes that rely on using environmentally benign chemicals and developing economically viable products
- Minimize environmental hazards by improved design for developing industrial products
- Using biotechnology to improve industrial methods and chemical processes as less or non hazardous, green, safe, and economically acceptable.
- Implement a combination of technical and scientific skills to understand environmental problems better, use resources, manage waste, and develop green infrastructure

SYLLABUS OF GE-4

Unit I: Green technologies (6 hours)

Definition and concepts: green technology, green energy, green infrastructure, green economy, and, green chemistry; sustainable consumption of resources; individual and community level participation such as small-scale composting pits for biodegradable waste, energy conservation; encouraged use of public transport instead of private transport; 3 R's of green technology: recycle, renew and reduce; paradigm shift from 'cradle to cradle' to 'cradle to grave'

Unit II: Green infrastructure, planning and economy (6 hours)

Green buildings; history of green buildings, need and relevance, construction, costs and benefits; LEED certified building; Eco-mark certification: importance and implementation;

Green planning: role of governmental bodies, land use planning, concept of green cities, waste reduction and recycling in cities, role of informal sector in waste management, public transportation for sustainable development, green belts. ; Introduction to UNEP's green economy initiative, inclusive economic growth of the society, REDD+ initiative, and cap and trade concept; green banking.

Unit III: Applications of green technologies (6 hours)

Increase in energy efficiency: Energy efficient fume hoods, motion detection lighting, or programmable thermostats. Green House Gas (GHG) emissions reduction: carbon capture and storage (CCS) technologies, purchase and use of carbon offsets, alternative forms of transportation for employees, such as carpools, fuel efficient vehicles, and mass transit, methane emissions reduction and/or reuse). Pollution reduction and removal: Physico-chemical and biological methods

Unit IV: Green chemistry (6 hours)

Introduction to green chemistry; principles and recognition of green criteria in chemistry; bioAnnexure-VII38 degradable and bio-accumulative products in environment; green nanotechnology; reagents, reactions and technologies that should be and realistically could be replaced by green alternatives; photodegradable plastic bags.

Unit V: Green future (6 hours)

Agenda of green development; reduction of ecological footprint; role of green technologies towards a sustainable future; major challenges and their resolution for implementation of green technologies; green practices to conserve natural resources (organic agriculture, agroforestry, reducing paper usage and consumption, etc.); emphasis on waste reduction instead of recycling, emphasis on innovation for green future; role of advancement in science in developing environmental friendly technologies.

Practicals/Hands-on Exercise

1. Analyze practices of an industry of your choice from India and outside country that has adopted green technology for brand image and economic edge
2. Identify, explain and discuss the ecological principles adopted by the industry selected in practical 1 and analyze their importance
3. Select an industry of your choice where cleaner production is required to improve quality of life and weight its economic, social, and environmental costs
4. Recommend clean development mechanisms and methods of converting waste into wealth in an industry that plays a significant role in your native area or the nation's GDP.
5. Develop a plan for carbon credit and carbon trading where it is not prevalent so far and compare it with a similar plan from a developing or developed country
6. Conduct a Life Cycle Assessment and its elements of a product widely used in your family or residential complex and recommend methods/processes that can help achieve a green tag.
7. Compare and contrast the use of conventional and non-conventional energy sources in your state or country and devise a method for transitioning completely to complete green energy
8. Assess the types and quantity of biomass used as an energy source in your country and evolve a plan to switch towards greener methods in the next 5 years

9. Develop a feasibility status of developing and integrating solar, wind, tidal, and geothermal energy in your nation
10. Evolve an action plan for water recycling for your residential complex by considering the quantity available, type of usage, and existing infrastructure
11. Analyze a case study of commercial green building in your state and discuss the ecological principle(s) adopted for this purpose.

DEPARTMENT OF HOME SCIENCE

BSc. (Hons.) Home Science

Category-II

DISCIPLINE SPECIFIC CORE COURSE – 1 (DSC-HH101) Human Development I: The Early Years

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|--------------------------------------|---------|-----------------------------------|----------|---------------------|------------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Human Development I: The Early Years | 4 | 3 | 0 | 1 | Class XII with Science | - |

Learning Objectives

1. To develop an understanding about the discipline of Human Development
2. To gain an insight of development in different domains from conception to early childhood

Learning outcomes

After completing this course, students will be able to:

1. Develop an understanding about the discipline of Human Development
2. Acquire knowledge of development in different domains from conception through infancy and early childhood.
3. Understand the salient features of human development by getting acquainted with various methods of studying children.

SYLLABUS

Unit I: Introduction to Human Development (9 hours)

Unit Description: The unit presents the student with an overview of the discipline of Human Development. The student will develop an understanding of basic ideas and terms that are central to the study of Human Development.

Subtopics: • Human Development: Definitions, nature and scope • Domains and stages of development • Principles of development • Contexts of development

Unit II: Prenatal development and childbirth (9 hours)

Unit Description: The unit describes the process of development from conception to birth and elaborates on the hereditary and environmental influences that play a role in prenatal development

Subtopics: • Conception and stages of prenatal development • Influences on prenatal development • Prenatal care • Childbirth: Methods and birth complications

Unit III: Neonate and infant development (12 hours)

Unit Description: The unit draws focus to the first two years of life and provides an understanding of the physical-motor, socio-emotional, cognitive and language development of infants.

Subtopics: • Capacities of the neonate • Infant care practices • Physical motor development
• Socio-emotional development • Language development • Cognitive development

Unit IV: Development during early childhood (12 hours)

Unit Description: The unit traces the progression in development that occurs from 2-6 years of life.

Subtopics: • Physical Motor Development • Socio-Emotional Development • Language Development • Cognitive Development

PRACTICAL (30 hours)

Unit 1 • Narrative method: recalling and recording an event • Exploring cultural practices and traditions during - Pregnancy - birth - Infant care

Unit 2 • Observation method: - observing infants and preschool children in everyday settings - recording the observations • Neonatal assessment (APGAR scale and Neonatal reflexes) • Multi-media resources to study prenatal development, infancy, early childhood

DISCIPLINE SPECIFIC CORE COURSE – 2 (DSC-HH 102) Food Science and Nutrition

Credit distribution, Eligibility and Prerequisites of the Course

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|----------------------------|---------|-----------------------------------|----------|---------------------|------------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Food Science and Nutrition | 4 | 3 | 0 | 1 | Class XII With Science | - |

Learning Objectives

1. To understand the relationship between food, nutrition and health.
2. To describe the function of various nutrients and list their sources.
3. To understand the nutritional contribution of and effect of cooking on different food groups.
4. To describe ways of reducing nutrient losses during cooking and methods of enhancement of nutritional quality of foods.
5. To be able to prepare dishes using principles of food science.

Learning outcomes

After completing this course, students will be able to:

1. Understand the relationship between food, nutrition and health.
2. Describe the digestion, absorption and function of various nutrients and list their sources.
3. Understand the nutritional contribution of and effect of cooking on different food groups.
4. Understand ways of reducing nutrient losses during different methods of cooking and methods of enhancement of nutritional quality of foods.
5. Prepare dishes using principles of food science and assess serving size and nutritional contribution.

SYLLABUS OF DSC- 2

Unit I: Basic Concepts in Food and Nutrition

(5 hours)

Unit Description: An introduction to the sciences of food and nutrition and their relationship to health and disease.

Subtopics: ● Basic terms used in study of food and nutrition ● Understanding relationship between food, nutrition and health ● Functions of food-Physiological, psychological and social

Unit II: Nutrients

(15 hours)

Unit Description: Functions, dietary sources and clinical manifestations of deficiency/ excess of the nutrients

Subtopics: ● Energy, Carbohydrates, lipids and proteins ● Fat soluble vitamins ● Water soluble vitamins ● Minerals

Unit III: Food groups

(15 hours)

Unit Description: Structure, composition, products, nutritional contribution, selection and changes during cooking of various food groups

Subtopics: ● Cereals and Pulses ● Fruits and vegetables ● Milk & milk products ● Eggs ● Meat, poultry and fish ● Fats and Oils ● Spices and herbs ● Beverages

Unit IV: Methods of Cooking and Enhancing the Nutritional Quality of Foods

(10 hours)

Unit Description: Different methods of cooking and ways to improve nutrient retention or improve nutritional quality

Subtopics: ● Dry, moist, frying and microwave cooking ● Advantages, disadvantages and the effect of various methods of cooking on foods ● Preventing losses of nutrient during cooking ● Improving nutritional quality of diets by Food synergy, Germination, Fermentation, Fortification and Genetic Modification of foods

Practical component – 30 Hours

Unit I • Weights and measures; preparing market order and table setting

Unit II Food preparation, understanding the principles involved, nutritional quality and portion size- • Cereals: Boiled rice, pulao, chapati, paratha-plain/stuffed, poori, pastas • Pulses: Whole, dehusked, pulse curry • Vegetables: Dry preparation, vegetable curry • Milk preparations: Kheer, porridge, custard • Egg preparations: Boiled, poached, fried, scrambled, omelettes, egg pudding • Soups: Plain and cream soups • Baked products: cakes, biscuits/cookies • Snacks and Breakfast Cereals: pakoras, cutlets, samosas, cheela, upma/poha, sandwiches • Salads: salads and salad dressings

Essential readings

1. Chadha R and Mathur P (eds)(2015). Nutrition: A Lifecycle Approach. Hyderabad: Orient Blackswan.
2. Rekhi T and Yadav H (2014). Fundamentals of Food and Nutrition. New Delhi: Elite Publishing House Pvt Ltd.
3. Srilakshmi B (2014). Food Science, 6th Edition. Delhi: New Age International Ltd.
4. Khanna K, Gupta S, Seth R, Mahna R, Rekhi T (2004). The Art and Science of Cooking: A Practical Manual, Revised Edition. New Delhi: Elite Publishing House Pvt Ltd.
5. Raina U, Kashyap S, Narula V, Thomas S, Suvira, Vir S, Chopra S (2010). Basic Food Preparation: A Complete Manual, Fourth Edition. Hyderabad: Orient Black Swan

Suggestive readings (if any)

1. Bamji MS, Krishnaswamy K, Brahman GNV (2016). Textbook of Human Nutrition, 4th edition. New Delhi: Oxford and IBH Publishing Co. Pvt. Ltd.
2. Byrd-Bredbenner C, Moe G, Beshgetoor D, Berning J. (2013). Wardlaw's Perspectives in Nutrition, International Edition, 9th edition, New York: McGraw- Hill.
3. Sethi P, Lakra P. Aahar Vigyan, Poshan evam Suraksha (Hindi); First Ed; 2015; Delhi: Elite Publishing House (P) Ltd.

DISCIPLINE SPECIFIC CORE COURSE– 3 (DSC-3) COMMUNICATION CONCEPTS AND THEORIES

Credit distribution, Eligibility and Pre-requisites of the Course

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|-------------------------------------|---------|-----------------------------------|----------|---------------------|-----------------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Communication Concepts and Theories | 4 | 3 | 0 | 1 | Class XII pass with Science | |

Learning Objectives

1. To learn about the concept, nature, and scope of communication.
2. To understand the process of communication with the help of theories, models, and elements of communication.
3. To recognize and appreciate the role of Perception, Empathy, Persuasion, Culture and Listening in communication.
4. To be able to comprehend the various communication transactions and their role in day-to-day life with special reference to public communication.
5. To understand the relationship between culture and communication and its applications in real life settings.

Learning outcomes

The students would be able to:

1. Develop a clear understanding of the concepts of human communication.
2. Comprehend the elements and models governing the process of effective communication.
3. Gain understanding about the related concepts of communication such as Perception, Empathy, Persuasion and Listening
4. Understand the various communication transactions as well as the qualities and skills required of an effective public speaker.
5. Appreciate the role and application of factors for effective communication.

SYLLABUS OF DSC-3

Unit I: Communication: Core Concepts

(10 Hours)

Unit Description: The Unit 1 explores the fundamentals of Human Communication tracing the history of communication from the olden times to the present times. It highlights the concept, nature, types, scope, and postulates of communication and discusses the functions performed through communication

Subtopics: ● Historical background, concept, nature, functions, and scope of communication ● Types of Communication – Formal and informal communication; Verbal and Non-verbal communication; Digital and Non-digital communication ● Verbal communication- Principles, types, effective use of verbal messages for communication ● Non-verbal communication- functions, types, skills, channels of non-verbal communication, inter-relationship between culture and non-verbal skills ● Elements of communication - Source, Message, Channel, Receiver, Feedback, Context, Noise & Effects

Unit II: Communication Models and Theories

(10 Hours)

Unit Description: The Unit II emphasizes the models and theories of the communication process. The further delves on the importance of these models and theories for understanding the effectiveness of communication as a process.

Subtopics: ● Models of Communication: Types of models- Linear, Interaction and Transaction models, (Models by Aristotle, Harold Laswell, Shannon & Weaver, Charles Osgood, Wilbur Schramm, Helical model) ● Theories of Communication: Mass Society, Propaganda, Limited Effects, Individual Difference and Personal Influence

Unit III: Factors for Effective Communication

(13 Hours)

Unit Description: The Unit delves with intricate concepts such as Empathy, Persuasion, Perception and Listening that are associated with communication. The unit also discusses the relationship between culture and communication.

● Factors for effective communication: Definitions, goals and principles of Empathy, Perception, and Persuasion ● Empathy: Concept and Theories ● Perception: Concept and Theories ● Listening in Human Communication-Listening process, significance of good listening, styles of listening, barriers to listening, culture and listening, listening theories ● Culture and communication- Relationship between culture and communication, signs, symbols and codes in communication

Unit IV: Communication Transactions and Learning

(12 Hours)

Unit Description: The Unit III elucidates upon the various levels of communication transactions. This Unit in particular lays thrust on the Public communication and 'need and importance' of communication for learning. The unit also highlights the concept of communication for development.

Subtopics: ● Levels of communication transactions ● Public communication- Concept, types, techniques and skills in public speaking, qualities of an effective public speaker, overcoming speaker apprehension ● Communication, and Learning: Learning as Communication Process, Domains of Learning. Theories of learning ● Audio-Visual Aids in communication- definitions, functions, classification including Edgar Dale's Cone of Experience ● Communication for Development- Concept and approaches

Practical components – 30 Hours

- Exercises to understand visual communication: Elements of Art and Principles of Design
- Exercises to explore dimensions of non-verbal communication
- Hands on practice with different types of public speaking
- Exercises in effective listening skills
- Exercises on building empathy for effective communication
- Analysis and designing of IEC materials

Essential readings

Devito, J. (2012). Human Communication. New York: Harper & Row.

Barker, L. (1990). Communication, New Jersey: Prentice Hall, Inc; 171.

Anand, S. & Kumar, A. (2016). Dynamics of Human Communication. New Delhi: Orient Black Swan.

Vivian, J. (1991). The Media of Mass Communication. Pearson College Div; 11th edition (19 March 2012).

Punhani & Aggarwal (2014). Media for Effective Communication. Elite Publishers, New Delhi.

Suggestive readings

Patri, V. R. and Patri, N. (2002). Essentials of Communication. Greenspan Publications

Baran, S. (2014). Mass Communication Theory. Wadsworth Publishing.

Stevenson, D. (2002). Understanding Media Studies: Social Theory and Mass Communication, Sage Publications.

McQuail, D. (2000). Mass Communication Theories. London: Sage Publications.

BSC. (HONS.) FOOD TECHNOLOGY

Category-I

DISCIPLINE SPECIFIC CORE COURSE – 1 (DSC-FT01) Fundamentals of Food Technology

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|---------------------------------|---------|-----------------------------------|----------|---------------------|------------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Fundamentals of Food Technology | 4 | 3 | 0 | 1 | Class XII with PCM/PCB | - |

Learning Objectives

1. To understand the basic principles of food science and technology.
2. To understand the structure, composition, nutritional value, changes during processing and storage of various plant and animal foods.

Learning outcomes

1. Appreciate the principles of food science and technology.
2. Attain knowledge of the structure, composition, nutritional quality and post-harvest changes in various plant foods
3. Comprehend the structure and composition of various animal foods.
4. Understand the fundamentals of various plant and animal food processing

SYLLABUS OF DSC-1

Unit I: Introduction to Food Science and Technology (4 Hours)

The unit presents the student with an overview of the food science and technology.

Unit II: Structure, Nutritional Composition and Technological aspects of Plant foods (12 Hours)

Unit Description: Cereals, Millets and Pulses

Subtopics: Introduction to cereals, nutri-cereals (millets), pseudo cereals. ● Wheat- Structure and composition, types of wheat, Diagrammatic representation of longitudinal structure of wheat grain. ● Malting, dextrinization, gelatinization, types of browning Maillard & caramelization. ● Rice- types of rice, parboiling of rice- advantages and disadvantages. ● Pulses- Introduction to pulses and legumes. ● Naturally occurring toxic constituents in pulses, types of processing- soaking, germination, decortication, cooking and fermentation.

Unit III: Structure, Nutritional Composition and Technological aspects of Plant foods (13 Hours)

Unit Description: Edible Oils, Fruits and Vegetables

Subtopics: Fats & Oils- Classification of lipids, saturated fatty acids, unsaturated fatty acids, essential fatty acids, trans fatty acids. ● Refining of oils-different methods, hydrogenation ● Rancidity –Types- hydrolytic and oxidative rancidity and its prevention. Fruits & Vegetables- Classification of fruits and vegetables, composition, pigments, types of fibre. ● Enzymatic browning and its prevention, ● Post-harvest

changes in fruits and vegetables – Climacteric and non-climacteric, ripening, physicochemical changes-physiological and horticultural maturity, pathological changes, during the storage of fruits and vegetables.

Unit IV: Nutritional Compositional and Technological aspects of Animal foods

(16 Hours)

Unit Description: Flesh Foods - Meat, Fish, Poultry and Milk and Milk products

Subtopics: ● Meat – Definition of carcass, composition of meat, post-mortem changes in meat- rigor mortis, tenderization of meat, curing and ageing of meat. ● Fish - Classification and composition of fish, aquaculture, characteristics of fresh fish, Types of spoilage in fish- microbiological, physiological, biochemical. ● Poultry - Structure and composition of egg, egg proteins, characteristics of fresh egg, deterioration of egg quality. difference between broiler and layers. ● Milk & Milk Products- Definition of milk, composition of milk and types of market of milk, milk processing- homogenization, pasteurization.

Practical component – 30 Hours

1. To study enzymatic browning in fruits & vegetables.
2. To study different types of non-enzymatic browning.
3. To study gelatinization behavior of various starches.
4. To study the concept of gluten formation of various flours.
5. To study germination.
6. To study dextrinization in foods.
7. To perform quality inspection of egg.

Essential readings

1. Bawa. A.S., Chauhan, O.P, Raju. P.S. (2013) ed. Food Science. New India Publishing Agency
2. Potter, N. N., & Hotchkiss, J. H. (2012). Food science. Springer Science & Business Media.
3. Srilakshmi, B. (2018). Food science. New Age Publishers. 7th edition.

Suggestive reading

1. De, Sukumar. (2007). Outlines of Dairy Technology. Oxford University Press
2. Kent, N.L.(2018). Kent's Technology of Cereals: An introduction for students of food science and agriculture. Elsevier. 5th edition.
3. Meyer. (2006). Food Chemistry. CBS publishers and distributors.
4. Stewart, G.F., & Amerine, M.A.(2012). Introduction to Food Science and Technology. Elsevier, 2nd Edition.
5. Rao, E.S. (2019) Fundamentals of Food Technology and Preservation, Variety Books, New Delhi.

DISCIPLINE SPECIFIC CORE COURSE – 2 (DSC-FT02) Principles of Food Science

Credit distribution, Eligibility and Prerequisites of the Course

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|----------------------------|---------|-----------------------------------|----------|---------------------|------------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Principles of Food Science | 4 | 3 | 0 | 1 | Class XII with PCM/PCB | - |

Learning Objectives

1. To impart basic concepts of food science, food chemistry and food sanitation.
2. To introduce the concept of food microbiology, sensory science and food packaging.

Learning outcomes

Understand the basic concepts of

1. Structure and composition, food science and food sanitation.
2. Food microbiology, sensory science and food packaging

SYLLABUS OF DSC- 2

Unit I: Surface Chemistry and Structural properties of foods (12 Hours)

Unit Description: Surface Chemistry and Structural properties of foods

Subtopic: Introduction to engineering properties of food and biomaterials, structure and chemical composition of foods, physical properties and surface chemistry (colloids, emulsions, foam, sols, gels, pectin gels) and application

Unit II: Sensory properties of foods (10 Hours)

- Basic description of taste, flavour, odour, colour and texture.
- Theories of gustation, olfaction, colour and texture.
- Techniques of sensory evaluation (Descriptive and Discriminative tests)

Unit III: Basic Food Microbiology (8 Hours)

Introduction to types of microorganisms, Food as a substrate for microorganism, bacterial growth curve, Factors affecting growth of microbes : Intrinsic and Extrinsic

Unit IV: Waste management and sanitation (9 Hours)

Properties of Waste water, hardness of water, break point chlorination, physical and chemical nature of impurities, BOD, COD, waste water treatment, detergents and sanitizers used in food industry, CIP and COP system with reference to food industry

Unit V: Introduction to Food Packaging (6 Hours)

Objectives of packaging, types of packaging materials (paper, glass, plastic, metal and wood, rigid and flexible packaging) and properties

Practical component – 30 Hours

1. Preparation and standardization of reagents
2. Determination of moisture content of food samples
3. Demonstration of fat/ protein estimation
4. Preparation of degree brix solution
5. Application of colloidal chemistry to food preparation
6. To perform sensitivity / threshold tests for basic taste
7. Introduction to microscopy and study of morphology of bacteria, yeast and mold using permanent slides.
8. Determination of alkalinity/ hardness of water
9. Determination of BOD/COD and total dissolved solids of water samples
10. Identification and testing (Thickness, GSM) of different types of packaging materials

Essential readings

- Coles, R., McDowell, D., & Kirwan, M. J. (Eds.). (2003). Food packaging technology (Vol. 5). CRC press.
- De, S. (1996). Outlines of dairy technology. Oxford University Press.
- DeMan, J. M., Finley, J. W., Hurst, W. J., & Lee, C. Y. (2018). Principles of food chemistry, 4th ed. Springer.
- Frazier, W.C. and Westhoff, D.C.(2004). Food Microbiology.New Delhi. TMH Publication
- Shadaksharaswamy, M., & Manay, N. S. (2011). Food, facts and principles. 4 th ed. New Age international publisher. New Age International.
- Meyer LH.(2006). Food Chemistry, CBS Publication, New Delhi.
- Potter N.N., Hotchkiss J.H. (2007). Food Science,5th ed. CBS Publication, New Delhi
- Ranganna, S. (2002). Handbook of Analysis of quality control for fruit and Vegetables products 2nd Ed. Tata Mcgraw Hill pub. Co. Ltd. New Delhi

Suggestive readings (if any)

- Jenkins, W.A. and Harrington, J.P. (1991). Packaging Foods with Plastics, Technomic Publishing Company Inc., USA.
- Norman, G. Marriott. and Robert, B. Gravani. (2018). Principles of Food Sanitation,6th ed. New York, Springer

DISCIPLINE SPECIFIC CORE COURSE– 3 (DSC-FT03) MILK & MILK PRODUCTS TECHNOLOGY

Credit distribution, Eligibility and Pre-requisites of the Course

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course(if any) |
|--|----------|-----------------------------------|----------|---------------------|------------------------------------|-------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| MILK & MILK PRODUCTS TECHNOLOGY | 4 | 3 | 0 | 1 | Class XII pass with PCM/PCB | |

Learning Objectives

1. Processing of milk and milk products at industry level
2. To know the compositional and technological aspects of milk
3. To study processed milk products

Learning outcomes

1. Understand the importance of Dairy industry
2. Understand the various properties and composition of milk.
3. Understand the technology of manufacturing of various products like Butter, ghee, Yoghurt, Dahi, Shrikhand, Ice-cream, Milk powder, channa, Paneer, Cheese (cheddar), Khoa
4. Understand market milk industry stages of milk processing and working of a few Dairy equipment's

SYLLABUS OF DSC-3

Unit I: Physical properties of milk (7 Hours)

• Color • Taste • pH and buffering capacity • Refractive index • Viscosity • Surface tension • Freezing & boiling point • Specific heat and electrical conductivity

Unit II: Composition of milk (16 Hours)

Unit Description: Macro nutrients and micronutrients of milk; milk sugar, fat and protein.

Subtopics: • Lactose (alpha and beta forms and their differences) • Significances of lactose in dairy industry • Composition and structure • Fat constants (Saponification value, Iodine value, RM value, Polenske value, peroxide value) • Difference between casein and serum protein • Different types of casein (acid and rennet) • Uses of casein

Unit III: Market milk industry and milk products (22 Hours)

Processing of milk and milk products

Subtopics: • Systems of collection of milk reception • Platform testing • Various stages of processing; Filtration, Clarification Homogenization, Pasteurization • Description and working of clarifier, cream separator, homogenizer and plate heat exchanger • Principle of processing of following milk products -Butter, ghee, yoghurt, dahi, shrikhand, ice-cream, milk powder, channa, paneer, cheese (cheddar), khoa

Practical components – 30 Hours

1. To determine specific gravity of milk
2. To determine acidity of milk
3. To perform COB test in milk
4. To estimate milk protein by Folin method
5. To estimate milk fat by Gerber method
6. To prepare casein and calculate its yield
7. To perform MBRT test in milk
8. Schematic diagram of pasteurization of milk in dairy industry
9. Study energy regeneration in dairy industry
10. Study and schematic diagram of CIP in dairy industry

Essential readings

- De, Sukumar. (2007). Outlines of dairy technology. Oxford University Press.
- Webb B.H.and Alford (2005). Fundamentals of dairy chemistry. CBS Publisher.

Suggestive readings

- P.F. Fox, T. Uniacke-Lowe and J.A.O' Mahony (2005). Dairy Science and Technology. Taylor & Francis.
- P. Walstra, Jan T.M. Wouters and Tom J. Geurts (2015). Dairy chemistry and Biochemistry. Springe.

BSC. (PROG.) HOME SCIENCE
Category-II

DISCIPLINE SPECIFIC CORE COURSE – 1 (DSC-1) –: INTRODUCTION TO RESOURCE MANAGEMENT

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|--|----------|-----------------------------------|----------|---------------------|-----------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Introduction to Resource Management | 4 | 3 | - | 1 | Class XII pass | - |

Learning Objectives

The Learning Objectives of this course are as follows:

1. To comprehend the fundamentals of resource management, their purpose and utilization in today's context and conservation approaches.
2. To understand the functions and processes of management in a scientific manner for optimum use of resources.

Learning outcomes

The Learning Outcomes of this course are as follows:

The students will be able:

1. Comprehend the concept and fundamentals of resource management in a changing scenario.
2. Acquaint themselves with the available resources, their uses and conservation approaches.
3. Utilize resources in an efficient and judicious manner.
4. Understand the functions and processes of management in a scientific manner for the optimum use of resources.

SYLLABUS OF DSC-1

UNIT – I Basics of Management

(9 Hours)

This unit will develop understanding regarding the concept of management and role of motivation in management.

Subtopics:

- Concept, nature, universality and scope of management
- Theories and Approaches to Management
- Ethics in management
- Motivation in management

UNIT – II Functions of Management

(12 Hours)

Students will be able to develop complete understanding of different management functions and their importance in the process of management.

Subtopics:

- Decision Making: Concept, significance and steps involved in decision-making process.
- Planning: Nature and characteristics, classification of plans & steps in planning.
- Organizing: Concept, significance and steps involved in organizing process.
- Supervision: Types of supervision (directing & guiding), factors of effective supervision.

- Controlling: Types of control, steps in controlling, requirements of effective control.
- Evaluation: Types and steps of evaluation.

UNIT – III Time and Energy Management (12 Hours)

This unit will orient the students towards application of management processes to time and energy as important resources.

Subtopics:

- Time Management: Concept, Tools of time management, types of time plans, Steps in making a time plan.
- Energy Management: Concept, principles of body mechanics, types of fatigue.
- Work Simplification: Techniques, Classes of Change.

UNIT – IV Prenatal Development (12 Hours)

Students will gain understanding of prenatal through presentations on stages of prenatal development and factors which have an impact.

Subtopics:

- Stages of prenatal development
- Factors affecting prenatal development

Practical component

Unit I: Identification and Development of managerial competencies

Activities:

- Micro Lab and Who am I
- SWOT analysis
- Self
- Case studies: Individuals
- Case studies: Organizations
- Building Decision making abilities
- Team building management games
- Decision Making through Case Analysis

Unit II: Time and Energy Management

Activities:

- Time Management:
 - Evaluation of time plans through case analysis:
 - o Case Study - 1
 - o Case study - 2
 - Analysis of time use pattern of self
 - Preparation and evaluation of time plans
- Work improvement using time and motion study techniques
 - pathway chart or travel chart / process chart - observe, record, and analyze an activity.
 - pathway chart or travel chart / process chart - observe, record, and analyze an activity with improvement.

Essential readings

1. Goel, S. Ed. (2016). Management of resources for sustainable development. New Delhi: Orient Blackswan Pvt. Ltd.
2. Moore, T. J. (2021). Family resource management (4th ed.), ISBN-13: 978-1544370620.
3. Chhabra, T.N. (2020) Business Organization & Management. ISBN: 9789385071102
4. Griffin, R. W. (2016). Fundamentals of Management. Cengage Learning.

- Griffin, R. W. (2013). Management: Principles and practices (11th ed.). South-Western Cengage Learning.
- Rao, V.S. P. (2008). Principles & practice of management. Konark Publishers Pvt. Ltd.
- Koontz, H., & O' Donnell, C. (2005). Management: A systems and contingency analysis of managerial functions. New York: McGraw-Hill Book Company.

Suggestive readings:

- Kreitner, R. (2009). Management Canada: Houghton Mifflin Harcourt Publishing Company.
- Robbin, S.P. (2009). Fundamentals of management. Pearson Education.
- Steidl, R. & Bratton, E. (1968). Work in the Home. USA: John Wiley & Sons, Inc.

DISCIPLINE SPECIFIC CORE COURSE – 2 (DSC-2): FASHION CONCEPTS

Credit distribution, Eligibility and Prerequisites of the Course

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|-------------------------|----------|-----------------------------------|----------|---------------------|-----------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| FASHION CONCEPTS | 4 | 3 | - | 1 | Class XII pass | - |

Learning Objectives

The Learning Objectives of this course are as follows:

- To understand the basics of fashion and the fashion industry.
- To impart knowledge about functions and theories of clothing.
- To develop sensitivity towards selection of garments and garment design.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Identify the role and functions of clothing and recognize the factors affecting the selection and evaluation of clothing.
- Explain the concept of fashion, its terminology, sources and factors affecting it.
- Being aware of global fashion centers.
- Apply the knowledge of elements and principles in design interpretation.

SYLLABUS OF DSC- 2

UNIT – I Clothes and Us

(12 Hours)

This unit introduces the student to key concepts of how and why people started to wear clothes, and what factors are at play in the current times for selecting clothing for the individual.

- Clothing functions and theories of origin
- Clothing terminology
- Individuality and conformity, conspicuous consumption and emulation
- Body shapes
- Selection and Evaluation of quality of ready-made garments
- Selection of clothes for self

UNIT – II Understanding Fashion

(12 Hours)

This unit will deal with the basic concepts in understanding fashion, from key terms to the why and how of fashion and more contemporary knowledge of fast and slow fashions.

- Fashion cycle
- Terminology
- Theories of fashion adoption
- Sources of fashion research

- Factors favouring and retarding fashion
- Role of a Designer
- Fast Fashion: Characteristics of Fast Fashion, Fast Fashion and Consumer
- Slow Fashion: Characteristics, Slow Fashion as a process, importance of changing from fast to slow fashion.

UNIT – III Design in Garments

(9 Hours)

This unit orients the student from a design perspective in garments; the various elements that comprise a garment and the various principles that govern and guide in developing a good design.

UNIT – IV Fashion

(12 Hours)

This unit will apprise the student on the forecasting process for fashions, functioning of the industry and various garment categories for production

- Structure and Functioning of Fashion Industry
- Forecasting: Fashion seasons
- Garment Categories
- Fashion Centres
- Careers in Fashion

Practical component – 30 Hours

Unit I: Hand stitches

This unit will impart hands-on skill for making small products using upcycling of used articles of clothing or home textiles and how value addition may be achieved in garments by using popular embroidery stitches.

- Prepare samples of -
- Basic hand stitches for creating a seam and edge finishing.
- Decorative Hand Stitches

Develop an upcycled product.

Unit II: Elements & Principles of Design

This unit will train the students to identify the various elements of a design that a garment uses and the principles that create an aesthetic design. Eventually a student will be able to effectively use these elements and principles of design to create well designed garments.

- Create a collection of garments for analysis from print and visual media.
- Analyze the various elements that comprise the garments.
- Identify the various principles of design used in the selected garments

Essential readings

1. Brown, Patty, Rice J., 1998, Ready to Wear Apparel Analysis. Prentice Hall.
2. Marshall S G, Jackson H O, Stanley MS, Kefgen M & Specht T, 2009, Individuality in
3. Clothing & Personal Appearance, 6th Edition, Pearson Education, USA.
4. Tate S.L., Edwards M.S., 1982, The Complete Book of Fashion Design, Harper and Row Publications, New York.
5. Fringes G.S., 1994, Fashion From Concept to Consumer, 6th edition, Prentice Hall, New Jersey.

Suggestive readings

1. R. Andrew, 2018, Key Concepts for Fashion Industry, Bloomsbury Publishing, India.
2. Reader's Digest (Eds.). 2002, New Complete Guide to Sewing, (Canada) Ltd. Montreal.

DISCIPLINE SPECIFIC CORE COURSE – 3 (DSC-3): INTRODUCTORY LIFE SCIENCES FOR HOME SCIENCE

Credit distribution, Eligibility and Prerequisites of the Course

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|--|----------|-----------------------------------|----------|---------------------|-----------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| INTRODUCTORY LIFE SCIENCES FOR HOME SCIENCE | 4 | 2 | - | 2 | Class XII pass | - |

Learning Objectives

The Learning Objectives of this course are as follows:

1. To introduce students to animal and plant diversity, and its significance for human life.
2. To make students aware of the fundamentals of cell structure, physiology and growth.
3. To enable students to appreciate the interdependence of ecosystems and its environmental underpinnings.
4. To make students aware of basics of immunology, genetics and biotechnological applications.

Learning outcomes

The Learning Outcomes of this course are as follows:

1. The students would be able to identify animals and plants of human concerns and ecological importance.
2. The students would be able to appreciate the existential link between plants, microbes, animals and humans.
3. The students would develop hands-on experience on plant propagation methods along with a functional understanding of plant physiology.
4. The students would understand the importance of prenatal screening, and biotechnology.
5. The student would be able to make a pedigree chart of a family and identify the inheritance pattern of a character.

SYLLABUS OF DSC- 3

Section A – Botany

UNIT – I Introduction to the Plants: Cytology, Morphology and Economic Botany (8 Hours)

Fundamentals of Plant diversity, Plant morphology and Plant Resource Utilization

Subtopics

- Introduction to Plant Diversity
- Types of a cell: Prokaryotes and Eukaryotes
- Plant cell- An Overview, Types, Structure and Function
- Angiosperm plants: Morphology (Parts of plants with modifications and Life cycle)
- Plant Nutrition and Soil: Essential Elements and Functions, Nutrient cycles, Biofertilizers, Bio-enzymes
- Introduction to Economically important plants: Fibre Crops, Medicinal Plants, Oil Crops, Timber Plants, Food Crops

UNIT – II Plant Physiology, Propagation of Plants and Gardening

(7 Hours)

Basics of plant physiology, Plant propagation and Gardening

Subtopics

- Important physiological processes (Diffusion, Osmosis and plasmolysis)
- Brief account of transpiration, photosynthesis and respiration in plants
- Seed Propagation
- Vegetative Propagation: Cuttings – stem leaf and root, Layering, Grafting
- Gardening: Concept and Types with example of Kitchen Garden, Community gardens, and Maintenance of Plants
- Role of Plants in Air pollution Control
- Introduction to Organic farming, Climate smart agriculture

Section B – Zoology

UNIT – III Animal Diversity and Human needs

(8 Hours)

Animal diversity and importance in human life

Subtopics

- Types, Structure and Function of Animal Cell and its Components
- Animals and their ecosystem services (role of animals in pollination, seed dispersal, soil health, food security, domestic animals)
- Animal diversity in human environment: threats and conservation, human-animal conflict
- Economic importance and control of common household pests e.g. cockroach, housefly, mosquitoes and termites
- Identification and control of important stored grain pests
- Zoonotic disease: Transmission, Prevention and Control (Taeniasis, Ascariasis, Malaria, COVID-19, Bird flu, Rabies, Tuberculosis)

UNIT – IV Genetics, Immunity and Biotechnology

(7 Hours)

Basics of genetics, birth defects, immunity and biotechnology

Subtopics

- Structure and Function of Genes and Chromosome
- Laws of Heredity and sex linked inheritance
- Case Studies: Inheritance of Thalassaemia, Sickle Cell Anaemia and Phenylketonuria (PKU)
- Overview of Birth defects: Types and Causes with example like Down's syndrome etc.
- Basics of Human Immunity
- Introduction to Biotechnology: Application in Animal Improvement and Medicines

Practical component – 30 Hours

SECTION A- BOTANY

1. Study the role of sunlight during photosynthesis
2. Study the rate of transpiration on both the surfaces of leaves
3. Assessment of soil quality: determination of soil pH, test for nitrates, nitrites
4. Preparation of soil mixture, potting and re-potting
5. Raising of healthy seedlings in a nursery bed
6. Propagation of plants through stem cutting, air layering and underground layering
7. Propagation of plants by approach grafting and veneer grafting
8. Identification and classification of economically important Food Crops, Medicinal, Fibre crops, Timber Plants and Oil Crops
9. Identification, care and maintenance of important plants in controlling air pollution
10. Preparation of temporary mount of onion peel

11. Preparation of temporary mount of epidermis of Rhoeo plant to study distribution of stomata on upper and lower surface of leave

SECTION B- ZOOLOGY

1. Study of cell structure through temporary slides: Blood Cells
2. Study of cell structure through temporary slides: Neurons
3. Study of cell cycle stages through permanent slides: Mitosis
4. Study of cell cycle stages through permanent slides: Meiosis
5. Identification of few common animal and birds in the human environment
6. Estimation of species richness and abundance of animal/ birds in the human environment using point count method
7. Estimation of species richness and abundance of animal/ birds in the human environment using transect method
8. Identification of life cycle stages of two common household pests: Termite and Mosquito
9. Methods of pest control and its application in houses (through audio/ visual/ seminar/visit)
10. Pedigree chart preparation & analysis
11. Demonstration of vermicomposting: preparation and monitoring of the setup at home
12. Case study of a zoonotic/ parasitic disease: COVID-19 pandemics/ bird flu

Essential readings

1. Jordan E. L. and Verma P. S. 2009. Invertebrate Zoology, S. Chand and Co. Ltd, New Delhi.
2. Raven P. and Johnson G. 2010. Biology. Tata McGraw Hill Publication, New Delhi.
3. Soni N. K. and Soni V. 2010. Fundamentals of Botany. Tata McGraw Hill Publication, New Delhi.
4. K. Park. 2016. Textbook of preventive and social medicine. Banarsidas Bhanot Publishers.
5. Singh J. S., Singh S. P. and Gupta S. R. 2017. Ecology, Environment Science and Resource Conservation. S.Chand (G/L) & Company Ltd, India.

Suggestive readings

1. Chadha K. L. 2012. Handbook of Horticulture. ICAR Publication, New Delhi.
2. Gopalaswamianger K.S. 1991. Complete gardening in India. Messers Nagaraj and Co., Madras.
3. Magurran, A.E. 1988. Ecological Diversity and Measurement. Croom Helm Limited, Australia.
4. Gupta R. 2015. Fundamentals of Zoology: Theory and Practice. Elite Publishing House Pvt. Ltd., New Delhi.
5. Hartman H. T and Kester D. 1986. Plant Propagation: Principles and Practices Prentice Hall of India Pvt. Ltd., New Delhi.
6. Kotpal, R. L. 2000. Modern Textbook of Zoology. Rastogi Publications, Meerut.
7. Upadhyay R. 2017. Elements of Plant Science. Elite Publishing House, New Delhi.
8. Vij, U and Gupta, R. 2011. Applied Zoology. Phoenix Publishing House, New Delhi.

B.A (Prog.) with Nutrition and Health Education (NHE) as Major

Category-II

DISCIPLINE SPECIFIC CORE COURSE – DSC-1-NHE: FUNDAMENTALS OF NUTRITION

Credit distribution, Eligibility and Pre-requisites of the Course

| Course Title & Code | Credits | Credit distribution of the course | | | Eligibility Criteria | Prerequisite of the course |
|----------------------------------|---------|-----------------------------------|----------|---------------------|----------------------|----------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Fundamentals of Nutrition | 4 | 3 | 1 | - | Class XII Pass | NIL |

Learning Objectives:

1. To familiarize students with fundamentals of nutrition and their relation to health.
2. To study the functions, dietary sources and clinical manifestations of deficiency or excess of nutrients.
3. To create awareness about enhancing nutritional quality of food.

Learning Outcomes:

After completion of the course, the students will be able to:

1. Understand basic concepts in nutrition and interpret relation between food, nutrition and health.
2. Describe functions, dietary sources and clinical manifestations of deficiency or excess of important nutrients.
3. Understand healthy cooking practices and minimizing nutrient losses.
4. Describe various methods of enhancing nutritional quality of food.

SYLLABUS OF DSC-1

Theory:

Unit 1: Basic Concepts in Nutrition

(7 Hours)

- *Unit Description:* This unit will introduce the basic terms in nutrition
- *Subtopics:*
 - Basic terms used in study of nutrition – food, health, nutrients, nutritional status, malnutrition.
 - Macronutrients, micronutrients, nutraceuticals, phytochemicals, antioxidants and balanced diet.
 - Understanding relationship between food, nutrition and health.

Unit 2: Energy, Macronutrients and Water

(13 Hours)

- *Unit Description:* This unit will introduce the students to energy components, macronutrients and water.
- *Subtopics:*
 - Energy- Components of energy expenditure and factors affecting energy requirement.

- Classification, functions, dietary sources and clinical manifestations of deficiency/excess of the following:
 - Carbohydrates including dietary fibre.
 - Dietary fat and fatty acids; introduction to lipoproteins (LDL & HDL)
 - Protein including protein quality

Unit 3: Micronutrients (18 Hours)

- *Unit Description:* This unit will introduce the various vitamins and minerals present in foods.
- *Subtopics:*
 - Functions, dietary sources and clinical manifestations of deficiency /excess of the following:
 - Fat soluble vitamins – A, D, E and K.
 - Water soluble vitamins – thiamine, riboflavin, niacin, pyridoxine, folic acid, vitamin B₁₂ and vitamin C.
 - Minerals – calcium, iron, iodine, zinc, sodium and potassium.

Unit 4: Enhancing Nutritional Quality of Food

(7 Hours)

- *Unit Description:* This unit will explain ways to minimize nutrient losses and enhance nutritional quality of food
- *Subtopics:*
 - Minimizing nutrient losses during food preparation.
 - Enhancing nutritional quality by supplementation, germination, fermentation and fortification.

Essential/recommended readings:

1. Rekhi, T., & Yadav, H. (2015). *Fundamentals of Food and Nutrition*. Delhi: Elite Publishing House Pvt. Ltd.
2. Mudambi, S. R., & Rajagopal M. V. (2012). *Fundamentals of food, nutrition and diet therapy*; (6th ed.). Delhi: New Age International (P) Ltd.
3. Sethi, P., & Lakra, P. (2015). *Aahar Vigyan, Poshan Evam Suraksha*. Delhi: Elite Publishing House Pvt. Ltd.
4. Chadha, R., & Mathur, P. (2015). *Nutrition: A life cycle approach*. Delhi: Orient Blackswan.
5. Srilakshmi, B. (2018). *Food science* (7th ed.) Delhi: New Age International (P) Ltd.

Suggested readings:

1. Roday, S. (2013). *Food science and nutrition*. (2nd ed.). Oxford University Press.
2. Wardlaw, G. M., & Hampl, J. S. (2019). *Perspectives in nutrition*. (11th ed.). New York, NY: McGraw Hill.
3. Agarwal, A., & Udipi. S. (2014). *Textbook of human nutrition*, Jaypee Brothers Medical Publishers (P) Ltd, New Delhi.

DISCIPLINE SPECIFIC CORE COURSE – DSC-2-NHE: INTRODUCTION TO FOODS

Credit distribution, Eligibility and Pre-requisites of the Course

| Course Title & Code | Credits | Credit distribution of the course | | | Eligibility Criteria | Prerequisite of the course |
|-----------------------|---------|-----------------------------------|----------|---------------------|----------------------|----------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Introduction to Foods | 4 | 3 | - | 1 | Class XII Pass | NIL |

Learning Objectives:

1. To introduce students with the functions of food.
2. To explain the nutritional contribution, selection, changes in cooking and storage of different food groups.
3. To generate awareness about various methods of cooking.

Learning Outcomes:

After completion of the course, the students will be able to:

1. Understand various functions of food and factors affecting food choices.
2. Acquaint themselves to select, purchase and store food safely.
3. Describe various methods of cooking and principles underlying them.

SYLLABUS OF DSC-2

Theory:

Unit 1: Basic Concepts of Food

(8 Hours)

- *Unit Description:* This unit will introduce the concept of food, functions of food and factors affecting food choices.
- *Subtopics:*
 - Definition of food including organic food, genetically modified foods, convenience foods, health foods.
 - Functions of food.
 - Factors affecting food choices.

Unit 2: Plant Based Food Groups

(15 Hours)

- *Unit Description:* This unit will introduce nutritional contribution, selection, changes in cooking and storage of the plant-based food groups.
- *Subtopics:*
 - Nutritional contribution, selection, changes in cooking and storage of the following:
 - Cereal and cereal products
 - Pulses
 - Vegetable and fruits
 - Sugars
 - Oils and fats

Unit 3: Animal Based Food Groups

(8 Hours)

- *Unit Description:* This unit will introduce nutritional contribution, selection, changes in cooking and storage of the animal-based food groups.

- *Subtopics:*
 - Nutritional contribution, selection, changes in cooking and storage of the following:
 - Milk and milk products
 - Eggs and flesh foods

Unit 4: Methods of Cooking Foods (14 Hours)

- *Unit Description:* This unit will introduce advantages and principles of cooking and various cooking methods.
- *Subtopics:*
 - Advantages of cooking
 - Principles of cooking
 - Preliminary steps in food preparation
 - Cooking methods:
 - Moist heat methods
 - Dry heat methods
 - Methods using fat as a medium
 - Others – microwave, solar cooking

Practical:

Unit 1: Cooking methods I (16 Hours)

- *Subtopics:*
 - Cooking employing dry heat methods
 - Cooking employing moist heat methods

Unit 2: Cooking methods II (14 Hours)

- *Subtopics:*
 - Cooking using frying as a cooking method
 - Cooking using microwave

Essential/recommended readings:

1. Rekhi, T., & Yadav, H. (2015). *Fundamentals of Food and Nutrition*. Delhi: Elite Publishing House Pvt. Ltd.
2. Mudambi, S. R., & Rajagopal M. V. (2012). *Fundamentals of food, nutrition and diet therapy*; (6th ed.). Delhi: New Age International (P) Ltd.
3. Sethi, P., & Lakra, P. (2015). *Aahar Vigyan, Poshan Evam Suraksha*. Delhi: Elite Publishing House Pvt. Ltd.
4. Srilakshmi, B. (2018). *Food science* (7th ed.) Delhi: New Age International (P) Ltd.
5. Raina, U., & Kashyap, S. (2010). *Basic Food Preparation – a complete manual* (4th ed.). Delhi: Orient Black Swan.

Suggested readings:

1. Roday, S. (2013). *Food science and nutrition*. (2nd ed.). Oxford University Press.
2. Wardlow, G. M., & Hampl, J. S. (2019). *Perspectives in nutrition*. (11th ed.). New York, NY: McGraw Hill.
3. Agarwal, A., & Udipi. S. (2014). *Textbook of human nutrition*, Jaypee Brothers Medical Publishers (P) Ltd, New Delhi.
4. Chadha, R., & Mathur, P. (2015). *Nutrition: A life cycle approach*. Delhi: Orient Blackswan.

B.A (Prog.) with Nutrition and Health Education (NHE) as Non-Major

Category-III

DISCIPLINE SPECIFIC CORE COURSE – DSC-2-NHE: INTRODUCTION TO FOODS

Credit distribution, Eligibility and Pre-requisites of the Course

B.A (Prog.) with Apparel Design and Construction (ADC) as Major

Category-II

**DISCIPLINE SPECIFIC CORE COURSE – DSC-1-ADC:
FUNDAMENTALS OF APPAREL DESIGN AND CONSTRUCTION**

Credit Distribution, Eligibility and Pre-requisites of the Course

| Course Title & Code | Credits | Credit distribution of the course | | | Eligibility Criteria | Prerequisite of the course |
|---|---------|-----------------------------------|----------|---------------------|----------------------|----------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Fundamentals of Apparel Design & Construction | 4 | 2 | - | 2 | Class XII Pass | NIL |

Learning Objectives:

1. To familiarise the students with the terminologies and concepts related to apparel design and its construction
2. To provide the basic knowledge of the different tools and processes involved in garment design and construction
3. To familiarise the students with the concepts related to apparel finishes and quality
4. To provide an introduction to home and technical textiles

Learning Outcomes:

After completion of the course, the students will be able to:

1. Define basic apparel design and construction terminologies
2. Identify and describe the functions of tools used in garment design and pattern making
3. Describe the importance and types of fabric grain.
4. Explain the steps of garment construction such as the preparation of the fabrics, laying out the patterns, cutting and marking the fabrics
5. Explain different types of pattern layout on various fabrics.
6. Make different types of temporary, permanent and decorative stitches.
7. Finish plain seam using various techniques
8. Construct a flanged pillow cover and Petticoat
9. Identify and describe the types of home textiles and technical textiles

SYLLABUS OF DSC-1

Theory:

Unit 1: Introduction to Apparel Design

(10 Hours)

- *Unit Description:* This unit introduces the students to common terminologies and concepts associated with garment design. It also deals with the aspects and factors affecting garment design and the type of trimmings that would add to the aesthetic aspects of the design.
- *Sub Topics:*

- Common terms: Apparel, Seam, Seam Finish, Seam allowance, Basic Blocks, Pattern, Grading, Stay stitching, Facing, Binding, Hem, Yoke, Gusset, Nap, Darts, Pleats, Tucks, Gathers
- Garment Design: Aspects (Function, Structure, Decoration) and types (Structural and Applied/Decorative), Application of structural and decorative design in a garment
- Trimmings – Types, selection and application of trimmings on apparels.
- Garment designing according to age, climate, occasion, occupation, fashion

Unit 2: Basics of Apparel Construction

(10 Hours)

- *Unit Description:* This unit provides the basic knowledge of the tools and steps associated with apparel construction.
- *Sub Topics:*
 - Fabric grain – types, identification and importance in apparel construction
 - Common tools and equipment required for measuring, drafting, pinning, marking, cutting, sewing, pressing
 - Preparation of fabrics for clothing construction- Pre-shrinking, Grain straightening, truing
 - Steps in Clothing Construction – Pattern layout, pinning, marking, cutting and sewing
 - Pattern Layout - general guidelines, basic layouts- lengthwise, partial lengthwise, crosswise, double fold, open, combination fold

Unit 3: Application of Textiles and Garment Quality

(10 Hours)

- *Unit Description:* This unit familiarises the students of the Application of textiles as apparel, at home and in the industry. It also introduces the students to the concept of readymade garment quality and the criteria for quality evaluation.
- *Sub Topics:*
 - Apparel/Garment Classification
 - Home Textiles – Categories, Standard Sizes and Fabrics used for Towels, Bed Linen
 - Technical Textiles – Medical textiles, Protective textiles, Sports textiles, Smart textiles
 - Garment Labels: Types and importance of labels with special reference to care labels
 - Evaluating the quality of readymade garments: overall appearance, fabric, fit, workmanship, finishing, price
 - Project work: Evaluation of Readymade garment Quality

Practical:

Unit 1: Hand Stitches and Basic Blocks

(30 Hours)

- *Sub Topics:*
 - Hand Stitches
 - i. Temporary hand stitches - even, uneven, pin, machine, diagonal basting, thread mark
 - ii. Permanent hand stitches - hemming, blind hemming, back stitch, fine stitch
 - iii. Decorative hand stitches – stem, chain, herringbone, running, lazy-daisy, satin
 - iv. Fastener attachment – Button and buttonhole, Hook and eye, Press Button
 - Child's basic bodice and basic sleeve block.
 - Adaptation of child's basic sleeve to flared, puffed sleeve

Unit 2: Machine Sewing and Design Analysis

(30 Hours)

• Sub Topics:

- Introduction to sewing machine - Practice of running sewing machine on paper and fabric on straight lines, curved lines and corners.
- Plain seam and seam finishes - Pinking, Turned and Stitched, Edge stitched, hand overcast, over-locked, Piped/Bound
- Samples of pleats, tucks, gathers
- Construction of a flanged pillow cover, petticoat
- Analysis of the use of structural and Decorative designs in garments.

Essential/ Recommended Readings:

- Colton V. (1995). Reader's Digest- Complete Guide to Sewing. New York: The Reader's Digest Association, Inc.
- Brown, P. and Rice, J. 1998, Ready-to-wear Apparel Analysis, Prentice Hall, Frings G. (1996). Fashion-From Concept to Consumer (5th Edition). USA: Prentice Hall Publications
- Kallal, M. J., 1985, Clothing Construction, Macmillan Publishing Company, New York,
- Marshall S G, et al. (2009). Individuality in Clothing & Personal Appearance (6th Edition). USA: Pearson Education,
- Vanderhoff M., Franck L., Campbell L., (1985). Textiles for Homes and People. Massachusetts: Ginn and Company.

Suggested Readings:

- Cunningham G. (1976). Singer Sewing Book. New York: The Singer Company.
- Gayatri V. (2007). Cutting and Stitching Practical. New Delhi: Asian Publishers.
- Stamper, A.A., S. H. Sharp and L.B. Donnell, 1986, Evaluating Apparel Quality, Fairchild Publications, America
- Verma P. (2003). Vastra Vigyan Evam Paridhan. Bhopal: Hindi Granth Academy

DISCIPLINE SPECIFIC CORE COURSE – DSC-2-ADC: UNDERSTANDING FABRICS

Credit Distribution, Eligibility and Pre-requisites of the Course

| Course Title & Code | Credits | Credit distribution of the course | | | Eligibility Criteria | Prerequisite of the course |
|-----------------------|---------|-----------------------------------|----------|---------------------|----------------------|----------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Understanding Fabrics | 4 | 3 | - | 1 | Class XII Pass | NIL |

Learning Objectives:

1. To impart knowledge regarding production, properties and usage of textile fibres and yarns
2. To apprise the learners about the various techniques of fabric production and their properties
3. To familiarise the students with the concepts related to fabric finishes and quality.

Learning Outcomes:

After completion of the course, the students will be able to:

1. Classify textile fibres based on length and origin.
2. Identify different types of textile fibres using various tests.

3. Compare and select fabrics for different end uses based on their properties
4. Describe the properties of textile yarns based on their characteristics
5. Identify different textile fabrics based on their construction
6. Refer to fabrics by their popular trade names and their characteristics
7. Select fabrics for different end uses based on their regular and functional finishes
8. Describe the desirable fabric properties for garment construction
9. Inspect the fabrics and identify the quality related problems.

SYLLABUS OF DSC-2

Theory:

Unit 1: Textile Fibres

(10 Hours)

- *Unit Description:* This unit provides basic knowledge of textile fibres to create a better understanding of the properties and end use of the fabrics made from different fibres
- *Sub Topics:*
 - Textile Fibre classification based on their Origin (natural and man-made) and Length (staple and filament)
 - Identification of textile fibres through Physical examination (Visual and Feeling test), Burning test, Microscopic test, Chemical test
 - Natural and Manmade Fibres - Properties and end-uses (Cotton, Linen, Wool, Silk, Rayon, Acetate, Nylon, Polyester, Acrylic, Spandex)
 - Newer Fibres – Properties and end uses

Unit 2: Textile Yarns

(10 Hours)

- *Unit Description:* This unit provides basic knowledge of the yarn making processes and yarn properties to create a better understanding the fabrics made from them.
- *Sub Topics:*
 - Yarn manufacturing process – Basic steps of Mechanical and chemical spinning
 - Types of yarn – Spun and Filament, Simple and Fancy/Novelty
 - Yarn properties – Yarn count, Yarn twist

Unit 3: Fabric Construction

(15 Hours)

- *Unit Description:* This unit provides knowledge of the most common fabric construction methods to help understand the properties of the fabrics better. It also deals with the quality aspects of the fabric and the procedures for checking their required quality specifications.
- *Sub Topics:*
 - Fabric construction methods – weaving, knitting, lace, net, felt and non-woven, braiding – properties and end uses
 - Weaving : Basic loom - parts and operations
 - Basic and fancy weaves – plain, twill, satin, dobby, jacquard, pile, leno, surface figure weaves
 - Knitting: Basic Construction, Characteristics and usage
 - Blended fabrics – Reasons for blending, Properties of common Blended Fabrics

- Glossary of Common Fabrics
- Fabric characteristics - texture, hand, weight, width
- Fabric Quality -Fabric inspection systems, Common Fabric defects, Acceptable quality level
- Visit to Weavers' Service Facility and writing a report on the visit

Unit 4: Fabric Finishes

(10 Hours)

- *Unit Description:* This unit deals with the common routine and functional finishes applied on fabrics to provide a better understanding of fabric performance properties.
- *Sub Topics:*
 - Aims and classification of Fabric finishes
 - Basic/ Routine finishes - Scouring, Bleaching, De-sizing, Singeing, Mercerisation, Tentering, Calendaring
 - Functional finishes - Crease resistant, flame retardant, Anti-microbial, moth proofing

Practical:

Unit 1: Identification of Fibres and Yarns

(10 Hours)

- *Subtopics:*
 - Identification of fibres – Physical Examination, Burning Test, Demonstration of Chemical and Microscopic Test
 - Identification of yarns by visual examination – spun & filament yarns, ply & novelty yarns

Unit 2: Analysis of Fabric Properties

(20 Hours)

- *Subtopics:*
 - Analysis of Fabric properties - Dimensional Stability, Thread Count, GSM
 - Calculation of Yarn Count
 - Preparation of samples of basic weaves through paper/ribbon weaving
 - Preparation of a file containing fabric swatches of various Fibres, Yarns, Fabrics, Weaves, Fabric defects.

Essential Readings:

1. Corbman P.B. (1985). Textiles-Fibre to Fabric. New York: McGraw Hill Book Co.
2. Grover E. B. & Hamby D. S., (1969), Handbook of textile testing and quality control, New Delhi: Wiley Eastern Ltd. Handbook of textile testing,
3. Rastogi, D. & Chopra, S. (Eds.) (2017). Textile Science. New Delhi, India: Orient Black Swan Publishing Limited.
4. Sekhri S. (2013). Textbook of Fabric Science: Fundamentals to Finishing. Delhi, India: PHI Learning.

Suggested Readings:

1. Allec C., Johnson I., Joseph P. (2011). Fabric Science (6th Edition). New York: Fairchild Publications.
2. Bureau of Indian standards, (1990), Testing and grading of textile fibers, Part I-III, New Delhi
3. Tortora (1992) Understanding Textiles. 4th Ed., New York Macmillan Publishing Company
4. Verma P. (2003). Vastra Vigyan Evam Paridhan. Bhopal: Hindi Granth Academy.

DISCIPLINE SPECIFIC CORE COURSE – DSC-1-HDFE: THEORETICAL FOUNDATIONS IN HUMAN DEVELOPMENT

Credit distribution, Eligibility and Pre-requisite of the Course

| Course Title & Code | Credits | Credit distribution of the course | | | Eligibility Criteria | Prerequisite of the course |
|---|---------|-----------------------------------|----------|---------------------|----------------------|----------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Theoretical Foundations in Human Development | 4 | 3 | - | 1 | Class XII Pass | NIL |

Learning Objectives:

1. To enable an understanding of the significance of the theoretical basis of Human Development.
2. To gain an in-depth understanding of selected theories in Human Development.

Learning Outcomes:

After completing this course, the students will be able to:

1. Gain an insight into the importance and role of theories in Human Development.
2. Develop an understanding of selected theories in Human Development.
3. Become aware of the concepts and perspectives related to Human Development.

THEORY
(Credits: 3, Periods: 45)

Unit I: Introduction to theories in Human Development (6 hours)

- *Unit Description:* The unit will introduce themes in the area of human development covering nature/nurture, heredity/environment, continuity/discontinuity, individual differences and similarities.
- *Subtopics:*
 - Key themes in the study of Human Development- Nature/nurture, heredity/environment, continuity/discontinuity, individual differences and similarities.

Unit II: Psycho-analytic perspectives on Human Development (13 hours)

- *Unit Description:* The unit will introduce the Psycho-analytical perspectives on Human Development by Sigmund Freud and Eric H. Erikson.
- *Subtopics:*
 - Psycho-sexual theory by Sigmund Freud

- Psycho-social theory by Eric H. Erikson

Unit III: Theories on Cognitive Development (13 hours)

- *Unit Description:* The unit will introduce the theoretical perspective with regard to cognitive development. This unit will be covering theories by Jean Piaget and Lev Vygotsky.
- *Subtopics:*
 - Theory of Cognitive Development by Jean Piaget
 - Socio-cultural theory of Cognitive Development by Lev Vygotsky

Unit IV: Selected Theories in Child Development (13 hours)

- *Unit Description:* The unit will introduce theories in the area of child development. This unit will be covering theories by Urie Bronfenbrenner, Albert Bandura, John Bowlby and so on.
- *Subtopics:*
 - Ecological Systems Theory by Urie Bronfenbrenner
 - Social Learning Theory by Albert Bandura
 - Attachment Theories (John Bowlby, Mary Ainsworth, Harry Harlow)

PRACTICAL (Credit: 1; Periods: 30)

- **Unit 1: Biography of any one theorist of human development (15 hours)**
- **Unit 2: Application of any one theory in real life situations (15 hours)**

Essential / recommended readings:

1. Newman, P.R., & Newman, B.M. (2015). *Theories of Human Development*. New York: Routledge
2. Rice, P. (2000). *Human Development: A Lifespan Approach* (4th edition). (and all further editions). New Jersey, Prentice-Hall Inc
3. Srivastava, V.N., Srivastava D.N. (2020). *Adhunik vikasatmak manovigyan*. Shi Vinod Pustak Mandir.
4. Allen, B.P. (2006). *Personality theories: Development, growth and diversity* (5th ed.) Needham Heights, MA: Allyn and Bacon

Suggested Readings:

1. Berk, L. E. (2000). *Child development*. New Delhi: Prentice Hall.
2. Berk, L. E. (2017). *Exploring Lifespan Development*. New York: Pearson
3. Berger, J.M. (2010). *Personality* (8th ed.). Belmont, CA: Thomson/Wadsworth. *Journal of Developmental Psychology*
4. Santrock, J.W. (2007). *Lifespan Development* (3rd ed.). New Delhi, Tata- McGraw Hill

DISCIPLINE SPECIFIC CORE COURSE – DSC-2-HDFE: PRINCIPLES OF CHILD DEVELOPMENT

Credit distribution, Eligibility and Pre-requisite of the Course

| Course Title & Code | Credits | Credit distribution of the course | | | Eligibility Criteria | Prerequisite of the course |
|---------------------------------|---------|-----------------------------------|----------|----------------------|----------------------|----------------------------|
| | | Lecture | Tutorial | Practical / Practice | | |
| Principles of Child Development | 4 | 3 | -- | 1 | Class XII Pass | Nil |

Learning Objectives:

1. To familiarize students with the concept of child development as a field of study.
2. To introduce students with various methods of child study
3. To create an understanding of prenatal development

Learning Outcomes:

After completing this course, the students will be able to:

1. Get familiarized with the concept of child development as a field of study.
2. Develop an understanding of prenatal development.
3. Learn about the basics of techniques of data collection.

THEORY

(Credits:3, Periods: 45)

Unit I: Introduction to Child Development

(10 hours)

- *Unit Description:* This unit will introduce child development as a field of study. It also will provide insights into the historical perspective regarding development of children.
- *Subtopics:*
 - Definition, Scope and importance of child development as a field of study
 - Historical foundation of child development

Unit II: Introduction to methods of Child Study

(11 hours)

- *Unit Description:* The unit will introduce the methods of child study through the examples of well framed interviews, questionnaires.
- *Subtopics:*
 - Observation
 - Interview
 - Questionnaire
 - Case study

Unit III: Aspects of Development

(11 hours)

- *Unit Description:* The unit will introduce about the aspects of development through discussion on the principles of development, developmental norms.
- *Subtopics:*

- Principles of Development
- Developmental Norms

Unit IV: Prenatal Development

(13 hours)

- *Unit Description:* The unit will introduce prenatal development through presentations on stages of prenatal development and factors which have an impact.
- Subtopics:
 - Stages of prenatal development
 - Factors affecting prenatal development

PRACTICAL

(Credit:1, Periods:30)

Unit I: Recording/documenting any two methods of data collection

(20 hours)

Unit 2: Review of any one documentary related to prenatal development

(10 hours)

Essential / recommended readings:

1. Berk, L. E. (2013). *Child development (9th edition)*. New Delhi: Prentice Hall.
2. Colley, D. and Cooper, P. (Eds.) (2017). *Attachment and emotional development in the classroom*. Oxford City: Jessica Kingley Publishers
3. Verma, P., Srivastava, D. N. and Singh, A. (1996). *Bal manovigyan and bal vikas*. Agra: Agrawal Publication.
4. Singh, A. (2015). *Foundation of human development: a lifespan approach*. Hyderabad: Orient Longman.

Suggested Readings:

1. Bee, H. L. (2011). *The developing child*. London: Pearson.
2. Papilla, D.E., Olds, S. W. and Feldman, R. D. (2004). *Human development*. New York: Mcgraw Hill.
3. Singh, A. (2015). *Foundation of human development: a lifespan approach*. Hyderabad: Orient Longman.
4. Singh, V. (2007). *Bal vikas avam bal manovigyan*. Jaipur: Panchsheel Prakashan.

B.A. (Prog.) with Food Technology (FT) as Major
Category-II

DISCIPLINE SPECIFIC CORE COURSE – DSC-1-FT: BASICS IN FOOD AND NUTRITION

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course Title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|------------------------------|---------|-----------------------------------|----------|---------------------|----------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Basics in Food and Nutrition | 4 | 3 | 0 | 1 | Class XII Pass | NIL |

LEARNING OBJECTIVES:

1. To familiarize students with the relationship between food, nutrition, nutrients and health
2. To describe the functions, sources, deficiencies and excess of various nutrients
3. To make students understand the principles and methods of conserving and enhancing nutrients during cooking food
4. Prepare dishes using basic principles of food science and nutrition.

LEARNING OUTCOMES:

After completion of the course, the students will be able to:

1. Understand the basic concepts related to of the vibrant field of nutrition
2. Gain theoretical and practical knowledge about balanced diet, energy, macro nutrients and micro-nutrients
3. Judiciously adopt healthier methods of cooking based on the available resources
4. Adopt methods of processing food which would help to conserving/ enhancing nutrients while processing food.

SYLLABUS OF DSC-1-FT

THEORY:

UNIT I: Basic Concepts and Introduction to Food and Nutrition (5 Hours)

- *Unit Description:* This unit will introduce the vibrant field of nutrition to the

students. They will be appraised about the relationship of food with health and basics of a balanced diet.

- *Subtopics:*
 - Basic terms in food, nutrition and health
 - Functions of food
 - Foods groups
 - Balanced diet

UNIT II: Energy and Macronutrients

(12 Hours)

- *Unit Description:* The students will learn about the concepts of energy in food and its role in maintain good health. They will also learn about the energy giving macronutrients.
- *Subtopics:*
 - Energy: definition and units of measurement, factors affecting energy requirements, energy density of foods, energybalance.
 - Macronutrients: Functions, dietary sources and clinical manifestations of deficiency/ excess of carbohydrates, lipids and proteins.

UNIT III: Micronutrients

(16 Hours)

- *Unit Description:* This unit will help students to learn about the role of micronutrients in maintaining good health, effects of deficient and high intake, food sources.
- *Subtopics:*
 - Functions, dietary sources and clinical manifestations of deficiency/ excess of the following nutrients:
 - Fat soluble vitamins-A, D, E and K
 - Water soluble vitamins – thiamine, riboflavin, niacin, pyridoxine, folate, vitamin B12 and vitamin C
 - Minerals – calcium, iron, zinc and iodine

Unit IV: Theory of Cooking and Enhancing Nutrients

(12 Hours)

- *Unit Description:* The basic principles/methods of cooking food and ways of enhancing, conserving nutrients while cooking or processing food.
- *Subtopics:*
 - Methods of cooking food: dry heat, moist heat and combination
 - Methods of conserving nutrients
 - Methods of enhancing the nutritional quality of foods - supplementation, germination, fermentation, fortification and genetic modification of foods

PRACTICAL:

No. of Students per Practical Class Group: 10-15

- | | |
|---|-----------|
| | (2 Hours) |
| 1. Prepare educational aid on balanced diet or food groups | |
| 2. Preparing market order, selection of raw material | (2 Hours) |
| 3. Weights and measures | (2 Hours) |
| 4. Identification of presence/absence of food groups in given samples of food products/dishes/snacks available in college canteen | (2 Hours) |
| 5. Estimation of Edible portion size (peas/cauliflower/bottle gourd, potato, green leafy vegetables, one seasonal fruit) | (2 Hours) |
| 6. Pre-preparation Methods I: Washing, Peeling, Cutting, Chopping, Grating | (2 Hours) |
| 7. Pre-preparation methods II: blanching, kneading, whipping, whisking | (2 Hours) |
| 8. Dry-heat methods of cooking like roasting, grilling, frying | (2 Hours) |
| 9. Moist-heat methods of cooking like steaming, boiling, pressure cooking | (2 Hours) |
| 10. Planning and preparation of energy rich snack/dish. | (3 Hours) |
| 11. Planning and preparation of protein rich snack/dish. | (3 Hours) |
| 12. Planning and preparation of micronutrient (Vitamin A, Vitamin C) rich snack/dish. | (3 Hours) |
| 13. Planning and preparation of micronutrient (Calcium, iron) rich snack/dish | (3 Hours) |

DISCIPLINE SPECIFIC CORE COURSE – DSC-2-FT: FOOD SCIENCE PART-I

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course Title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|---------------------|---------|-----------------------------------|----------|---------------------|----------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Food Science Part-I | 4 | 3 | 0 | 1 | Class XII Pass | NIL |

LEARNING OBJECTIVES:

1. To introduce the students to the vibrant field of food science and food technology
2. To impart theoretical and practical knowledge about composition, nutritive value and processing of cereals, pulses, fruits, vegetables and meat.
3. To familiarize students with basics of food adulteration.

LEARNING OUTCOMES:

After completion of the course, the students will be able to:

1. Define food science and describe its association with other related fields; and understand the role of food science in food and health industry.
2. Describe composition, nutritive value and processing of cereals, pulses, fruits, Vegetables, meat, fish and poultry.
3. Justify scientifically the changes occurring in food during processing, handling and Storage. Describe enzymatic and non-enzymatic browning reactions in various foods.
4. Describe harmful effects of adulteration on health and will be able to detect presence of common adulterants in food.

THEORY:

UNIT I: Introduction to Food Science and Technology

(15 Hours)

- *Unit Description:* This unit will introduce the students to the field of Food Science and Technology. It will also give information on basics of nutrition and food adulteration.
- *Subtopics:*
 - Definition, scope and current trends in food science and technology.
 - Basic introduction to macro and micronutrients-classification

and functions of various nutrients

- Definitions- food, safe food, nutrient, nutrition, balanced diet
- Commonly found food adulterants and their effect on health

UNIT II: Cereals and Pulses

(10 Hours)

- *Unit Description:* The unit will focus on various aspects of composition, nutritive value and processing of cereals, millets and pulses.
- *Subtopics:*
 - Composition and nutritive value, types of cereals and millets
 - Gelatinization of starch and the factors affecting it, dextrinization, germination and fermentation
 - Toxic constituents in pulses.

UNIT III: Fruits and Vegetables

(12 Hours)

- *Unit Description:* The unit is about composition, nutritive value and processing aspects fruits and vegetables. It also describes about various browning reactions that take place during food processing.
- *Subtopics:*
 - Classification of fruits and vegetables, composition and nutritive value; effect of processing on pigments.
 - Browning Reactions- enzymatic & non-enzymatic, role in food preparation and prevention of undesirable browning.

UNIT IV: Meat, Fish and Poultry

(8 Hours)

- *Unit Description:* The unit will focus on composition, nutritive value and processing aspects of meat, fish and poultry.
- *Subtopics:*
 - Composition and nutritive value
 - Types of meat, fish and poultry and their selection/purchasing criteria
Rigor mortis, Tenderization and Curing.

PRACTICAL:

GE HS 001
CARE AND WELLBEING ACROSS THE LIFESPAN

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course |
|--|---------|-----------------------------------|----------|---------------------|-----------------------|-----------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| CARE AND WELLBEING ACROSS THE LIFESPAN | 4 | 3 | 0 | 1 | 12 th Pass | NIL |

Learning Objectives

1. To understand the concept of care and well-being across the lifespan and talk in context to the current social world.
2. To demonstrate skills to promote well-being of self and others in the society.
3. To gain familiarity of programmes and policy initiatives present on care and wellbeing in India

Course Outcomes:

1. The student will be able to develop an understanding of the concept and dimensions of care and wellbeing of individuals in the contemporary social world.
2. The student will acquire knowledge of the many influences on care and wellbeing across human lifespan.
3. The student will build capacity to promote wellbeing of self and society at large.
4. The student will be familiar with program and policy initiatives present on care and wellbeing in India.

THEORY
(Credits 3; Periods 45)

| | |
|---|-----------------|
| Unit I: Care and Human Development Unit Description: The unit offers information about the concept of care across lifespan. | 12 Hours |
| Subtopics: <ul style="list-style-type: none"> ● Definition, concepts & relevance of care ● Vulnerable periods in life that require care ● Principles & components of care ● Psychological, social, emotional and spiritual | |

| | |
|--|-----------------|
| Unit II: Well-being and Human Development Unit Description: The unit provides information regarding the concept of wellbeing across lifespan, life crises and factors and experiences that promote wellbeing in human development. | 9 Hours |
| Subtopics: <ul style="list-style-type: none"> ● Concept of well-being: physical, psychological, spiritual ● Life crises and well-being ● Factors & experiences that promote well-being | |
| Unit III: Care and wellbeing: Birth to adolescent years Unit Description: The unit focuses on the care and wellbeing from the period before birth up to the adolescent years. | 12 Hours |
| Subtopics: <ul style="list-style-type: none"> ● Antenatal care: maternal, fetal and neonatal care ● Care of the young child ● Adolescent reproductive health and wellbeing ● Community and school health programs ● Nutrition and health for all ages | |
| Unit IV: Care and wellbeing Adulthood and Aging Unit Description: The unit addresses the care and wellbeing issues of the caregiver, role of the family, health, medical and insurance schemes and provisions for the care of the elderly. | 12 Hours |
| Subtopics: <ul style="list-style-type: none"> ● Adulthood and old age: changing and adapting ● Stress, coping strategies and well-being of caregivers ● Counselling, yoga and meditation techniques ● Institutions, schemes and facilities for older adults | |

Suggested Readings

1. Singhi, P. (1999). Child health & well-being: Psychological care within & beyond hospital walls. In T.S. Saraswathi (Ed.). Culture, socialization and human development. New Delhi: Sage.
2. Childhood in south Asia: A critical look at issues, policies and programmes. Conn.USA: Information Age.

PRACTICAL (Credit 1; Periods 30)

| | |
|--|-----------------|
| <ul style="list-style-type: none"> ● Use of various tools to understand care needs at different stages- childhood, adolescence, adulthood: Interview, Observation, Movies and Documentaries ● Lectures/ Talks/workshops on- Self-care and well-being, Counselling and Yoga/meditation ● Profile an organization to a senior citizen home/childcare institution to study care and well-being ● Psychometric tests- Well-being scale, Self-concept tests, Subjective well-being scale (WHO), any 2 personality tests | 30 Hours |
|--|-----------------|

GE HS 005 : FUNDAMENTALS OF HUMAN NUTRITION

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course |
|---------------------|---------|-----------------------------------|----------|------------|----------------------|-----------------------------|
| | | Lecture | Tutorial | Practical/ | | |

| | | | | | | |
|--|----------|----------|----------|-----------------|-----------------------------|------------|
| | | | | Practice | | |
| FUNDAMENTALS OF HUMAN NUTRITION | 4 | 3 | 0 | 1 | 12th Pass | NIL |

Learning Objectives

1. To understand the relationship between food, nutrition and health.
2. To classify foods into various food groups and explain the concept of a balanced diet.
3. To describe the importance of various nutrients as well as list their food sources.
4. To be able to plan and prepare nutritious meals for an adult.

Course Outcomes

1. Relate how food affects health.
2. Classify foods into various food groups and explain the concept of a balanced diet.
3. Understand the importance of various nutrients and how these can be obtained from the diet.
4. Describe the considerations for planning and preparing balanced and nutritious meals for adults.

THEORY (Credits 3; Periods 45)

| Units | No. of Hours |
|--|---------------------|
| Unit I: Basic Concepts in Nutrition Unit Description: Understanding basic terminology used in nutritional sciences and the importance of nutrition | 10 Hours |
| Subtopics: <ul style="list-style-type: none"> ● Basic terms used in nutrition ● Understanding relationship between food, nutrition and health ● Functions of food-Physiological, psychological and social ● Basic food groups and concept of balanced diet | |
| Unit II: Nutrients Unit Description: Functions, dietary sources, requirements, effects of deficiency and/ or excess consumption of the various nutrients. | 20 Hours |
| Subtopics: <ul style="list-style-type: none"> ● Energy- Concept of energy balance ● Carbohydrates and dietary fibre ● Lipids ● Proteins ● Fat soluble vitamins ● Water soluble vitamins ● Minerals | |

| | |
|---|-----------------|
| Unit III: Healthy Eating Unit Description: Nutritional concerns and dietary guidelines for healthy eating for adults. | 15 Hours |
| Subtopics: <ul style="list-style-type: none"> ● Factors influencing food choices ● Planning balanced meals and diets ● Nutritional concerns for adults ● Dietary guidelines for prevention of diet related lifestyle disorders ● Importance of physical activity and other lifestyle factors | |

Essential Readings

PRACTICAL

(Credit 1; Periods 30)

| Practical | No. of Lectures |
|--|------------------------|
| 1. Making the right food choices a. Nutrient rich sources from different food groups b. Concept of high fat, salt, sugar (HFSS) foods c. Reading food labels | 10 |
| 2. Planning a nutritious meal for adults a. Concept of food exchanges b. Calculating nutritional quality of diets c. Balancing meals according to nutrient requirements d. Healthy snacking options | 20 |

GE HS 005 : TRAINING AND CAPACITY BUILDING

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course |
|---------------------------------------|----------------|--|-----------------|----------------------------|-----------------------------|------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| TRAINING AND CAPACITY BUILDING | 4 | 3 | 0 | 1 | 12th Pass | NIL |

Learning Objectives

1. To study the concept and significance of training and capacity building.
2. To understand the training process and the functions of different phases of training.
3. To know how different training approaches can be used to achieve various development goals.
4. To develop skills in designing, implementing and evaluating training programmes.

Course Outcomes

1. The student will be able to know the importance and scope of training for development.
2. The student will be able to learn the functions of different phases of the training process.
3. The student will be able to understand and critically evaluate the different training approaches and methodologies.

4. The student will be able to develop skills in planning, executing and evaluating training programmes for different stakeholders.

THEORY
(Credits 3; Periods 45)

| | |
|--|-----------------|
| Unit I: Training: Concept and Role in Development Unit Description: This Unit explores the concept, significance and different agencies involved in training for development. The unit focuses on adult learning and various approaches to train them. The Unit discusses the importance of evaluation and follow-up of training programmes. Various NGOs, GOs and Corporate initiatives in community development will also be discussed. | 9 Hours |
| Subtopics: <ul style="list-style-type: none"> ● Nature, scope, advantages and limitations of training ● Goals, approaches and types of training ● Characteristics and principles of adult learning ● Government policies for training and capacity building of different stakeholders ● Agencies involved in training and development - NGOs, GOs and Corporate | |
| Unit II: Roles and Responsibilities and Self-development of a Trainer Unit Description: This Unit elaborates on the roles and responsibilities of a trainer. The various types of skills required of a trainer will be discussed. Concepts of self, self-development and personality development of a trainer will also be covered. | 12 Hours |
| Subtopics: <ul style="list-style-type: none"> ● Roles and responsibilities of a trainer before, during and after a training programme ● Soft skills required by a trainer - communication, group mobilization leadership, team building, decision-making, networking and problem solving ● Technology-based skills - ICTs for facilitating the various aspects of the training process ● Concept of self and self-development of a trainer ● Need for personality development | |
| Unit III: Methods and Techniques of Training Unit Description: This Unit provides an insight into the different types of training methods and techniques which can be used in offline and online training programmes, including training in blended mode. | 12 Hours |

| | |
|---|-----------------|
| <p>Subtopics:</p> <ul style="list-style-type: none"> ● Tools and techniques for training (Brainstorming, Buzz Groups, Panel Discussion, Role Play, Focus Group Discussions, Films, Games and Stories) ● New techniques and innovations in training methods especially using technology | |
| <p>Unit IV: Designing, Executing and Evaluating Training Modules</p> <p>Unit Description: This Unit focuses on analyzing training modules developed by different organizations - Government, National and International NGOs. The process of developing, mobilizing resources and implementing training programmes will be discussed. It also focuses on different ways of evaluating training programs for different stakeholders involved in the field of development.</p> | 12 Hours |
| <p>Subtopics:</p> <ul style="list-style-type: none"> ● Analysis of training programmes for different stakeholders ● Tools and techniques for training needs assessment ● Understanding various learning goals and outcomes for specific target groups ● Development of Training modules and materials ● Implementation of training programmes ● Methods of evaluation and follow-up of training | |

GE HS 013 : SUSTAINABLE FASHION

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course |
|----------------------------|----------|-----------------------------------|----------|---------------------|-----------------------------|-----------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Sustainable Fashion | 4 | 3 | 0 | 1 | 12th Pass | NIL |

Learning Objectives

- Spreading awareness about issues and challenges of sustainable fashion
- Make students conscious consumers of textiles and apparel
- Inculcating habits of reducing textile waste generation

Course Outcomes

- The student will be able to gain knowledge of issues and challenges related to over consumption and non-sustainable fashion.
- The student will be able to learning to choose garment consciously and become informed consumer
- The student will be able to using green laundry practices to help environment
- The student will be able to increasing life cycle of garments for less waste generation

THEORY
(Credits 3; Periods 45)

| | |
|--|-----------------|
| Unit I: Fashion & Sustainability Learning aspects of sustainability in relation to fashion and textiles. | 9 Hours |
| Subtopics: <ul style="list-style-type: none"> ● Basics of sustainability ● The Fashion Business & sustainability issues ● Ethical & sustainable fashion in the changing global scenario ● Circular fashion ● Start-ups and big brands dealing with sustainability ● Measuring sustainability – How brands do it | |
| Unit II: Green Consumption Factors that should be kept in mind while selecting and purchasing apparel | 12 Hours |
| Subtopics: <ul style="list-style-type: none"> ● Volumes of textile waste: Over consumption challenges ● Fashion based on values ● Locally made, globally relevant ● Local and connected: Designing with local artisans ● Reducing the speed in fashion consumption: Slow fashion, Durability, Appropriateness, Multifunctional garments, Trans-seasonal garments, emotionally durable design ● Standards, labels and organisations dealing with sustainable textiles and apparel | |
| Unit III: Ethical care and Maintenance Green practices for laundry and care of apparel. | 12 Hours |
| Subtopics: <ul style="list-style-type: none"> ● Laundering frequency: Reducing consumers' need to clean ● Laundry detergents and softeners: Effectiveness and environmental concerns ● Machine vs line drying: Energy costs vs consumer needs ● Special care laundry: Environmental impacts and changing consumer demands | |
| <ul style="list-style-type: none"> ● More efficient laundering practices ● Designing sustainable clothing that enables: low-impact care, extended use | |
| Unit IV: Intelligent Disposal Ways to increase the life of garments to reduce waste generation. | 12 Hours |

| | |
|---|--|
| Subtopics: <ul style="list-style-type: none"> ● Slowing the flow of materials ● Take-back schemes ● Waste management strategies: Reuse of goods, repair and reconditioning of goods, recycling of goods, zero waste pattern ● Collaborative consumption: Sharing, pass me down, give away ● Vintage Clothing: The world of second-hand clothing ● Traditional Practices in Indian culture leading to sustainable consumption | |
|---|--|

2. Gwilt, A. (2020). A practical guide to sustainable fashion. Bloomsbury Publishing.

GE HS 020 :VISUAL MERCHANDISING

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course |
|-----------------------------|----------|-----------------------------------|----------|---------------------|-----------------------------|-----------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Visual Merchandising | 4 | 3 | 0 | 1 | 12th Pass | NIL |

Learning Objectives

1. To introduce the concept and significance of visual merchandising in store design.
2. To impart knowledge regarding different types of visual displays and ways of achieving them.
3. To develop skill in creating aesthetically pleasing visual displays.

Course Outcomes

1. The student will be able to apprehend the key terms and principles involved in the components of visual merchandising.

2. The student will be able to understand the importance of visual merchandising and attractive visual display in communicating with customers.
3. The student will be able to create aesthetic visual displays on different themes in store design.

THEORY
(Credits 3; Periods 45)

| | |
|---|-----------------|
| Unit I: Introduction to Visual Merchandising Unit Description: The focus of this unit would be on understanding the concept, significance and key elements of visual merchandising. | 7 Hours |
| Subtopics: <ul style="list-style-type: none"> ● Concept and Significance of Visual Merchandising ● Key elements of Visual Merchandising - Store Exterior, Store Layout, Store Interior, Interior display ● Factors Influencing Visual Merchandising ● Role of Visual Merchandiser | |
| UNIT II: Store Design Unit Description: This unit attempts to acquaint the students with various store designs, its components and the importance of colour and lighting therein. | 13 Hours |
| Subtopics: <ul style="list-style-type: none"> ● Objectives and Characteristics ● Types of store design ● Interior components ● Exterior components ● Colour ● Lighting design | |
| Unit III: Design Display Unit Description: This unit will orient the students in understanding the various components of design displays. | 15 Hours |
| Subtopics: <ul style="list-style-type: none"> ● Concept, Purpose, style and importance of displays ● Types of window displays ● Factors in window display ● Signage and Graphics ● Understanding of display fixtures ● Budgeting | |

| | |
|--|-----------------|
| Unit IV: Materials and Technologies Unit Description: This unit will acquaint the students with the materials and technologies used in visual display and the global trends. | 10 Hours |
| <ul style="list-style-type: none"> ● Selection of materials ● Use of Latest Technologies: Augmented and Virtual reality tools, Robotics ● Global Trends | |

GENERIC ELECTIVE (GE) – FT-01: FOOD PROCESSING AND PRESERVATION

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course |
|---|----------|-----------------------------------|----------|---------------------|-----------------------------|-----------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| FOOD PROCESSING AND PRESERVATION | 4 | 3 | 0 | 1 | 12th Pass | NIL |

LEARNING OBJECTIVES:

1. To impart basic concept of Food colloids, Freezing, Dehydration processes and equipment used during the processing
2. To understand the Principles of thermal processing, Minimal Processing and hurdle technology
3. To understand the concepts of water disposal and sanitation.

COURSE OUTCOMES:

1. Understand the basic concepts of Food colloids, Freezing, Dehydration processes

- and equipment used during the processing
2. Understand the Principles of thermal processing, Minimal Processing and hurdle technology
 3. Understand the concepts of water disposal and sanitation.

UNIT I

Food Processing Operations

20 Hours

Unit Description: Food Processing operations

Subtopics

- **Refrigeration and Freezing**

Requirements of refrigerated storage - controlled low temperature, air circulation and humidity, changes in food during refrigerated storage, progressive freezing, changes during freezing
Freezing methods -direct and indirect, still air sharp freezer, blast freezer, fluidized freezer, plate freezer, spiral freezer and cryogenic freezing.

- **Dehydration**

Normal drying curve , effect of food properties on dehydration, change in food during drying, drying methods and equipments: air convection dryer, tray dryer, tunnel dryer ,continuous belt dryer , fluidized bed dryer, dryer, drum dryer, vacuum dryer , freeze drying, foam mat drying.

- **Thermal Processing of Foods**

Classification of thermal processes, Principles of thermal processing, commercial canning operations, Aseptic Processing, UHT Irradiation and microwave heating. Principles, Dosage, Applications of Irradiation, Mechanism of microwave heating and applications.

UNIT II:

10 Hours

Technology of Colloids in Food

Unit Description: Technology of Colloids in Food

Subtopics:

Surface chemistry (colloids, emulsions, foam, sols, gels, pectingels)

Unit III: Water Disposal and Sanitation

10 Hours

Unit Description: Water Disposal and Sanitation

Subtopics:

Waste water , hardness of water, break point chlorination, physical and chemical nature of impurities, BOD, COD, waste water treatment, milkplant sanitation, CIP system, sanitizers used in food industry

Unit IV: Minimal processing and hurdle technology

05 Hours

Unit Description: Minimal processing and hurdle technology

PRACTICAL

DURATION: 30 HRS (CREDIT 1)

- Study of canning equipment (Forming, Flanging, Seaming, Exhausting and Retort)
- Canning of foods

- Preservation of food by the process of freezing
- Drying of food using Tray dryer/other dryers
- Study of thawing characteristics of frozen foods
- Preparation of brix solution and checking by hand refractometer
- Analysis of water
- Minimal Processing of food
- Application of colloidal chemistry in food preparation

ESSENTIAL READINGS:

1. Deman, J.M. (2007). Principles of Food Chemistry, 3rd Ed. Springer.
2. Potter, N. and Hotchkiss H. (2007). Food Science. New Delhi: CBS Publication.
3. Ramaswamy, H. and Marcotte, M. (2009). Food Processing Principles and Applications. CRC Press.

SUGGESTED READINGS:

1. Fellows' Food Processing Technology Principles and Practice 5th Edition (2022) Elsevier Publishing

TEACHING LEARNING PROCESS

- Lectured based teaching
- Power point presentations
- Experimental learning through practicals
- Along with pedagogy of flipped classroom students are encouraged to participate actively in the classroom through regular presentations on curriculum based topics, peer assessment

ASSESSMENT METHODS

- As per University of Delhi norms
- Assessment methods - quiz, identification tests, assignments
- End semester exams for theory and practical
- Feedback given to students for improving
- Continuous evaluation of practicals

KEYWORDS

Food Preservation, Food Processing, Colloidal chemistry, BOD, COD, Sanitation, Effluent system.

BSc. (Life Science)

B.Sc. (Life Science) with Botany as one of the core discipline

Category-III

(Semester-I)

Based on

Undergraduate Curriculum Framework 2022 (UGCF)

(Effective from Academic Year 2022-23)

University of Delhi

| Course Title | Nature of the Course | Total Credits | Components | | | Eligibility Criteria/ Prerequisite |
|-------------------------------|----------------------|---------------|------------|----------|-----------|---|
| | | | Lecture | Tutorial | Practical | |
| Plant Diversity & Systematics | DSC-Botany | 04 | 02 | - | 02 | Chemistry+Physics+Biology/ Biological studies/Biotechnology |

Semester I

DISCIPLINE SPECIFIC CORE COURSES (DSC) SEMESTER-I

Course Code BOT-DSC-1

Course Title: **Plant Diversity and Systematics**

Total Credits: **04 (Credits: Theory 02, Practical 02)**

Total Hours: **Lectures- 30, Practical- 15 classes of 4 hours each**

Objective:

To make students aware about the diversity of plants and microbes present on the planet and their evolutionary relationships.

Learning Outcomes:

This course will be able to impart basic knowledge and understanding of:

- the diversity of plants and microbes
- the possible relationships between each group
- their general characteristics
- approaches used for identification and classification of various groups of plants

Unit 1: Diversity of Life

Lectures: 01

Classifying the diversity of life: Domains of Life –Eubacteria, Archaea and Eukaryotes

Unit 2: Microbes

Lectures: 04

Viruses: General account; Replication, Lytic and Lysogenic cycle; Bacteria: structure, wall-less forms (L-forms, Mycoplasma), asexual reproduction and genetic recombination

Unit 3: Algae

Lectures: 03

Brief introduction of major classes: Blue-green, Green, Brown and Red algae. Diagnostic features of identification; morphology, reproduction and classification with special reference to *Nostoc*, *Volvox* and *Spirogyra*.

Unit 4: Fungi

Lectures: 03

Diagnostic features of identification; morphology, reproduction and classification with special reference to *Rhizopus*, *Penicillium* and *Agaricus*; Lichens (a general account).

Unit 5: Bryophytes, Pteridophytes and Gymnosperms

Lectures: 06

Characteristic features of identification; morphology and reproduction of Bryophytes, Pteridophytes and Gymnosperms with special reference to *Marchantia*, *Funaria*, *Pteris* and *Pinus* (only morphology).

Unit 6: Angiosperms

Lectures: 02

Diagnostic features, Structure of flower, types of inflorescence

Unit 7: Systematics

Lectures: 01

Aims, fundamental components of systematics, description, identification, nomenclature, phylogeny, biosystematics.

Unit 8: Systematics in Practices

Lectures: 07

Taxonomic Hierarchy- Concept of taxa and categories, Botanical Nomenclature- principles and rules; Type method; Author citation; Valid publication; Rejection of names, Principle of priority and its limitations, names of hybrids and cultivars.

Unit 9: Systems of classification

Lectures: 03

Classification: Artificial, Natural and Phylogenetic. An outline of Bentham and Hooker's (up to series only) and Engler and Prantl's (up to Subclasses) systems of classification and their merits and Demerits. APG System.

Practicals: (60 hours)

1. **Viruses:** Electron Micrographs of TMV and Bacteriophage, Specimens of virus infected plants (any two).
2. **Bacteria:** Electron Micrographs of a bacterium, types through permanent slides/photographs, specimens of infected plants (any two).
3. **Algae:** Study of vegetative and reproductive structures of (a) *Nostoc* (b) *Volvox* (c) *Spirogyra* through temporary preparations and permanent slides.
4. **Fungi:** Study of vegetative and reproductive structures of (a) *Rhizopus*, (b) *Penicillium* and (c) *Agaricus* through temporary preparations and permanent slides/specimens/photographs.
5. **Lichens:** Crustose, Foliose and Fruticose (specimens/ digital resources)
6. **Bryophytes:** Study of (a) *Marchantia*: morphology of thallus, W.M. rhizoids and scales, V.S. thallus through gemma cup, W.M. gemmae (all temporary slides), V.S. antheridiophore, archegoniophore, L.S. sporophyte (all permanent slides), (b) *Funaria*: detailed study and classification from W.M. rhizoids, operculum, peristome, spores and permanent slides of archegonia, antheridia and capsule.
7. **Pteridophytes:** Study of *Pteris*: T. S. of Rachis, V.S. of Sporophyll and W.M. of sporangium.
8. **Gymnosperms:** Study of *Pinus* morphology of long & dwarf shoot, male and female cones (specimens) and T.S. of needle (permanent slides only).

9. **Herbarium technique:** Mounting of a properly dried and pressed specimen of any wild plant on the herbarium sheet with complete herbarium label.
10. Taxonomic study of characters of one plant from each of the following families (any four): Malvaceae, Solanaceae, Asteraceae, Fabaceae, Liliaceae.

B.Sc. (Life Science) with Chemistry as one of the core discipline
Category-III

(Semester-I)
Based on
Undergraduate Curriculum Framework 2022 (UGCF)
(Effective from Academic Year 2022-23)

University of Delhi

| Course Title | Nature of the Course | Total Credits | Components | | | Eligibility Criteria/ Prerequisite |
|-------------------------------------|----------------------|---------------|------------|----------|-----------|---|
| | | | Lecture | Tutorial | Practical | |
| Basic Concepts of Organic Chemistry | DSC-Chemistry | 04 | 02 | - | 02 | Chemistry+Physics+Biology/ Biological studies/Biotechnology |

Course Code : CHEM-DSC-01

Course Title: Basic Concepts of Organic Chemistry

Total Credits: 04 (Credits: Theory-02, Practical-02)

Total Lectures: Theory- 30, Practical- 15 classes of 4 hours each

Objectives: The course is infused with the recapitulation of fundamentals of organic chemistry and the introduction of the concept of visualizing the organic molecules in a three-dimensional space. To establish the applications of these concepts, a study of diverse reactions through mechanisms is included. The constitution of the course strongly aids in the paramount learning of the basic concepts and their applications.

Learning Outcomes:

By the end of the course, the students will be able to:

- Understand and explain the differential behavior of organic compounds based on fundamental concepts learnt.
- Understand the fundamental concepts of stereochemistry.
- Formulate the mechanism of organic reactions by recalling and correlating the fundamental properties of the reactants involved.
- Learn and identify many organic reactions and their mechanisms including electrophilic addition, nucleophilic addition, nucleophilic substitution, electrophilic substitution and rearrangement reactions.

Unit 1: Fundamentals of organic chemistry

Lectures: 05

Types of Electronic displacements: Inductive effect, Resonance effect, Hyperconjugation, Electromeric Effect. Reactive intermediates and their stability: carbocations, free radicals, carbanions, benzyne, carbenes.

Acidity and basicity in organic compounds (comparison of carboxylic acids, alcohols, phenols, primary, secondary and tertiary aliphatic amines, aniline and its derivatives)

UNIT 2: Stereochemistry

Lectures: 07

Types of projection formulae: Flying Wedge Formula, Newmann, Sawhorse and Fischer representations and their interconversion.

Stereoisomerism: Concept of chirality (upto two carbon atoms). Configurational isomerism: geometrical and optical isomerism; enantiomerism, diastereomerism and meso compounds). Threo and erythro; D and L; *Cis-trans* nomenclature; CIP Rules: R/ S (for upto 2 chiral carbon atoms) and *E/Z* nomenclature (for upto two C=C systems).

Conformational isomerism with respect to ethane, butane and cyclohexane.

UNIT 3: Types of Organic Reactions (Including reactions of alkenes, alkyl and aryl halides, alcohols, aldehydes, ketones)

Lectures: 18

Electrophilic addition reactions

Electrophilic addition reaction (with respect to propene, propyne, 3,3-dimethyl-1-butene): Hydration, Addition of HX in the absence and presence of peroxide, Hydroboration oxidation, Addition of bromine (with stereochemistry).

Nucleophilic addition reactions

Nucleophilic addition reaction of carbonyl compounds: Addition of HCN, ammonia derivatives (Hydroxylamine, Hydrazine, Semicarbazide and 2,4-DNP), the addition of carbanion (Aldol condensation, Claisen Schmidt, Benzoin condensation, Perkin reaction, reactions involving Grignard reagent).

Elimination and Nucleophilic substitution reactions

Nucleophilic substitution reaction (S_N1 and S_N2) in alkyl halides (mechanisms with stereochemical aspect), alcohols (with nucleophiles like ammonia, halides, thiols, ambident nucleophiles (cyanide and nitrite ion)), ethers (Williamson ether synthesis), Elimination reaction ($E1$ & $E2$), elimination vs substitution (*w.r.t.* potassium *t*-butoxide and KOH); Nucleophilic aromatic substitution in aryl halides-elimination addition reaction *w.r.t.* chlorobenzene, including the effect of nitro group (on the ring) on the reaction. relative reactivity and strength of C-X bond in alkyl, allyl, benzyl, vinyl and aryl halides towards substitution reactions

Electrophilic substitution reactions

Electrophilic Aromatic substitution with mechanism (benzene)- sulphonation, nitration, halogenation, Friedel craft acylation :*o*-, *m*- and *p*- directive influence giving examples of toluene/nitrobenzene/ phenol/ aniline/ chlorobenzene.

Reactive intermediates and Rearrangement Reactions

Free radicals (Birch Reduction); *Carbocations* (Pinacol-Pinacolone, Wagner-Meerwein, Rearrangement, and Beckmann rearrangement); *Carbanions* (Michael Addition); *Carbenes* (Reimer-Tiemann).

PRACTICALS:

60 hours

(Laboratory periods: 15 classes of 4 hours each)

1. Purification of an organic compound by crystallization (from water and alcohol) and distillation, Criteria of purity: Determination of M.P.
2. Determination of boiling point of liquid compounds. (Boiling point lower than and more than 100 °C by distillation and capillary method)
3. Detection of extra element
4. Preparations: (Mechanism of various reactions involved to be discussed).

- a. Bromination of phenol/aniline.
- b. 2,4-Dinitrophenylhydrazone of aldehydes and ketones
- c. Semicarbazone of aldehydes/ ketones
- d. Aldol condensation reaction using green method.
- e. Bromination of Stilbene.
- f. Acetanilide to p-Bromoacetanilide.

The above derivatives should be prepared using 0.5-1g of the organic compound. The solid samples must be collected and may be used for recrystallization and melting point.

| | | | Lecture | Tutorial | Practical | |
| Diversity of Animals | DSC-Zoology | 04 | 02 | - | 02 | Chemistry+Physics+Biology/ Biological studies/Biotechnology |

Course Code : ZOO-DSC-01

Course Title: Diversity of Animals

Total Credits: 04 (Credits: Theory-02, Practical-02)

Total Lectures: Theory- 30 hrs., Practical- 15 classes of 4 hours each

Objectives: The objective of this course is to teach the students concepts of morpho- taxonomy as well as understand the characteristics and physiological aspects of unicellular and metazoan animals. The course lays emphasis on creating awareness and concern towards significance of animal diversity for human survival and its socio- economic importance. In addition to this, the course is aimed at nurturing skills of conducting scientific inquiry and experimentation in the field of animal diversity to acquire knowledge of fundamental concepts and theories of animal diversity.

Learning Outcomes:

By the end of the course, the students will be able to:

- Acquire knowledge of diversity of non-chordate and chordates.
- Learn characteristics, morphotaxonomy, structural organization and physiological life system of diverse animal groups.
- Understand the economic importance of non-chordates and chordates and their importance in the ecosystem.
- Learn evolutionary relationships and phylogeny of invertebrates and vertebrates to structural as well as functional similarities.

Unit I– Introduction

02 hrs.

Introduction to five kingdom classification system, General characters of kingdom Animalia and basis of its classification (with special reference to coelom), Concept of Taxonomic Hierarchy (up to species level), significance of binomial nomenclature.

Unit II: Protista to Pseudocoelomates

09 hrs.

Characteristics of acoelomates and pseudocoelomates. Locomotory organelles and locomotion in Protozoa, Canal system in Porifera, Polymorphism in Cnidaria (Hydrozoa), Life cycle of *Taenia solium* and its Parasitic adaptations, Life cycle of *Ascaris lumbricoides* and its Parasitic adaptations.

Unit III: Coelomates

09 hrs.

General features of coelomates, Metamerism in Annelida, Vision in Arthropoda, Metamorphosis in Insects. Torsion and detorsion in Gastropoda. Pearl Formation, Water-vascular system in Asteroidea

Unit IV: Chordates

10 hrs.

Salient features of protochordates and chordates, Retrogressive metamorphosis in protochordates, Osmoregulation, Migration, and Parental care in fishes, Parental care in Amphibians, Flight adaptations and Migration in birds, Biting mechanism in snakes, Origin of mammals.

PRACTICAL

[60 hours]

1. General Characteristics and Classification up to classes: Protista, Porifera, Cnidaria, Platyhelminthes, Nematelminthes. Study of museum specimens: *Amoeba*, *Euglena*, *Paramecium*, *Sycon*, *Euplectella*, *Obelia*, *Physalia*, *Aurelia*, *Metridium*, larval stage of *Taenia solium*, Male and female *Ascaris lumbricoides*.
2. General Characteristics and Classification up to classes: Annelida, Arthropoda, Mollusca, Echinodermata. Study of museum specimens: *Aphrodite*, *Nereis*, *Chaetopterus*, *Pheretima*, *Hirudinaria*, *Palaemon*, *Cancer*, *Limulus*, *Palaemon*, *Scolopendra*, *Chiton*, *Dentalium*, *Pila*, *Unio*, *Octopus*, *Pentaceros*, *Echinus*, *Cucumaria*, *Antedon*.
3. Study of following specimens, general characteristics and classification: *Balanoglossus*, *Amphioxus*, *Herdmania*.
4. Study of following specimens, general characteristics and classification up to order: *Petromyzon*, *Pristis*, *Exocoetus*, *Hippocampus*, *Hyla*, *Salamander*, *Ichthyophis/Uraeotyphlus*, *Naja*, *Viper*, *Hydrophis*, *Chameleon*, *Uromastix*, *Milvus*, *Anas*, *Psittacula*, *Loris*, *Pteropus*, *Sorex*.
5. Submission of report on an excursion to a Sanctuary/ Biodiversity Park.

Note: Classification to be followed from Ruppert, E.E., Fox, R.S., Barnes R.D. “*Invertebrate Zoology*” 7th Edition., Cengage Learning, India” & Young, J. Z. (2004) *The Life of Vertebrates*. III Edition. Oxford university press.

Teaching Learning Process:

- Blend of conventional blackboard teaching, modern teaching learning tools and computational infrastructure- based instructions and Practical training.
- Problem solving and quizzes for enhanced understanding of the concepts.
- Explaining the handling and usage of the hardware and software required for solution to the given set of problems.

Assessment Methods:

- Presentations by Individual Student/ Group of Students
- Class Tests at Periodic Intervals.
- Written assignment(s)
- End semester University Theory Examination Presentations by Individual Student/ Group of Students

6. Amendment to Appendix -II-A to the Ordinance V (2-A) of the Ordinances of the University vide EC Resolution 18-1-6 dated 18.08.2022 regarding Syllabi of 1st Semester of Department under Faculty of Commerce & Business Studies

Add the following:

Syllabi of Semester-I of the Commerce department under Faculty of Commerce & Business Studies based on Under Graduate Curriculum Framework -2022 to be implemented from the Academic Year 2022-23.

FACULTY OF COMMERCE AND BUSINESS

DEPARTMENT OF COMMERCE

B.Com (Hons.)

Category I

**DISCIPLINE SPECIFIC CORE COURSE -1 (DSC-1) –:
Management Principles and Applications**

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|---|---------|-----------------------------------|----------|---------------------|----------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Management Principles and Applications BCH: DSC-1.1 | 4 | 3 | 1 | 0 | Pass in XII | NIL |

Learning Objectives

The course aims to familiarize the learner with extant and emerging management theories and practices for reflective and holistic thinking on management principles and practices.

Learning outcomes

The Learning Outcomes of this course are as follows:

1. describe the various levels of management and applicability of management principles.
2. evaluate a company's competitive landscape as per Porter's Five-force model.
3. demonstrate various types of authority, delegation and decentralization in authority
4. demonstrate various types of leadership styles and identify the motivation techniques used by leaders.
5. discuss the impact of emerging issues in management.

SYLLABUS OF DSC-1

Unit 1: Introduction (8 hours)

Meaning and importance of management; Coordination mechanisms in organisations; Management theories- classical, neo-classical and modern constructions of management; Managerial functions; Managerial roles (Mintzberg); Managerial competencies. Indian Ethos for Management: Value-Oriented Holistic Management; Learning Lessons from Bhagavat Gita and Ramayana.

Unit 2: Planning (16 hours)

Organisational objective setting; Decision-making environment (certainty, risk, uncertainty); Techniques for individual and group decision-making; Planning vis-à-vis Strategy- meaning and elements of the business firm environment- micro, meso, and macro; Industry structure, Business-level strategic planning.

Unit 3: Organising (12 hours)

Decentralization and Delegation; Factors affecting organisational design; Departmentalization; Organisational structures and Organograms: traditional and modern, comparative suitability and changes over time; formal- informal organisations' interface.

Unit 4: Directing and Controlling (16 hours)

Motivation- meaning, importance and factors affecting motivation; Leadership- meaning, importance and factors affecting leadership, leadership styles, and followership. Controlling- Principles of controlling; Measures of controlling and accountability for performance.

Unit 5: Salient Developments and Contemporary Issues in Management (8 hours)

Management challenges of the 21st Century; Factors reshaping and redesigning management purpose, performance and reward perceptions- Internationalisation, Digitalisation, Entrepreneurship & Innovation, Values & Ethics - Case studies on Indian corporates like Tata, Bhilwara Group, IOC and Godrej, Workplace diversity, Democracy and Sociocracy, Subaltern management ideas from India.

Practical Exercises:

The learners are required to

1. participate in a role-play activity for describing the various levels of management and applicability of management principles in defining the policies of the chosen organisation.
2. identify a company and evaluate its competitive landscape as per Porter's Five-force model.
3. a) prepare a comparative analysis of organizational structures of various companies.
b) create a simulation exercise in class to demonstrate various types of authority, delegation and decentralization in authority
4. demonstrate various types of leadership styles in the form of role-play and identify the motivation techniques used by leaders.
5. discuss the impact of emerging issues in management.

DISCIPLINE SPECIFIC CORE COURSE – 2 (DSC-2): Business Laws

Credit distribution, Eligibility and Prerequisites of the Course

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|--|---------|-----------------------------------|----------|---------------------|----------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Business Laws BCH: DSC- 1.2 | 4 | 3 | 1 | 0 | Pass in XII | NIL |

Learning Objectives

To impart basic knowledge of the important business laws relevant for the inception and conduct of general and business activities with relevant case laws.

Learning outcomes

The Learning Outcomes of this course are as follows:

1. examine basic aspects of contracts vis-a-vis agreements and subsequently enter into valid business propositions.
2. describe various modes of discharge of contract and remedies available in case of a breach.
3. recognize and differentiate between the special contracts.
4. analyse the rights and obligations under the Sale of Goods Act.
5. apply skills to form and manage entrepreneurial ventures as LLP.

SYLLABUS OF DSC- 2

Unit 1: The Indian Contract Act, 1872 (8 hours)

Contract – meaning, characteristics and kinds; Essentials of a valid contract - offer and acceptance, consideration, contractual capacity, free consent, the legality of objects; Void agreements; Quasi–contracts.

Unit 2: Discharge of Contract and Remedies for Breach (16 hours)

Modes of discharge of contract: performance of a contract, mutual agreement, supervening impossibility, lapse of time, operation of law, breach of contract; Remedies for breach of contract: rescission, suit for damages, quantum meruit, suit for specific performance; suit for injunction.

Unit 3: Introduction to Special Contracts (12 hours)

Contracts of Indemnity and Guarantee; Contracts of Bailment and Pledge; Contract of Agency.

Unit 4: The Sale of Goods Act, 1930 (16 hours)

Contract of sale; Meaning and the difference between a sale and agreement to sell; Conditions and Warranties; Transfer of ownership in goods including sale by non-owners; Performance of the Contract of Sale; Unpaid seller – meaning and rights of an unpaid seller against the goods.

Unit 5: The Limited Liability Partnership Act, 2008 (8 hours)

Salient Features and Nature of LLP; Small LLP; Difference between LLP and Partnership, LLP and Company; LLP Agreement; Incorporation Document; Incorporation by Registration; Registered office of LLP and change therein; Change and Rectification of the name of LLP; Partners and Designated Partners: Partners and their Relations; Extent and limitation of liability of LLP and partners; Whistleblowing; Conversion into LLP.

Practical Exercises –

The learners are required to

1. identify components of valid contracts present in the rent agreement/ sale deed/appointment letters used or seen in day-to-day life.
2. identify and enumerate types of damages in case of breach of contract under different real-life situations.
3. prepare a list of gratuitous and non-gratuitous bailment contracts entered into daily life.
4. analyse some case studies where ‘caveat venditor’ is applicable.
5. examine the RUN form and FiLLip webform from notification on the MCA portal and enlist the mandatory fields.

DISCIPLINE SPECIFIC CORE COURSE– 3 (DSC-3): Financial Accounting

Credit distribution, Eligibility and Pre-requisites of the Course

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|--|---------|-----------------------------------|----------|---------------------|----------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Financial Accounting BCH: DSC-1.3 | 4 | 3 | 0 | 1 | Pass in XII | NIL |

Learning Objectives

The course aims to help learners to acquire conceptual knowledge of financial accounting, to impart skills for recording various kinds of business transactions and to prepare financial statements.

Learning outcomes

The Learning Outcomes of this course are as follows:

1. apply the generally accepted accounting principles while recording transactions and preparing financial statements.
2. demonstrate the accounting process under a computerised accounting system.
3. measure business income applying relevant accounting standards.
4. evaluate the impact of depreciation and inventories on Business Income.
5. prepare the Financial Statements of sole proprietor firms and Not-For-Profit Organisations.
6. prepare the accounts for Inland Branches, Departments and Leases.

SYLLABUS OF DSC-3

Unit 1: Theoretical Framework and Accounting Process: (6 hours)

(A) Conceptual Framework

- (i) Accounting as an information system, the users of financial accounting information and their needs. An overview of Artificial Intelligence and Data Analytics in Accounting.
- (ii) Qualitative characteristics of accounting information. Functions, advantages and limitations of accounting. Branches of accounting. Basis of accounting: cash basis and accrual basis. Capital and revenue expenditures and receipts. Events occurring after the balance sheet date, Extraordinary Items, Prior Period Items, Accounting Estimate. Accounting Policies, Fair Value, Meaning, Recognition and Disclosure Requirements of Provision, Contingent Liability and Contingent Asset.

- (iii) Financial Accounting Principles: Meaning and need; Generally Accepted Accounting Principles(GAPP): Entity, Money Measurement, Going Concern, Cost, Revenue Recognition, Realization, Fundamental Accounting Assumptions, Accruals, Periodicity, Full Disclosure, Consistency, Materiality, and Prudence (Conservatism). Fundamental Accounting Assumptions as per AS 1.
- (iv) Accounting Standards: Concept, benefits, and Process of formulation of Accounting Standards including Ind AS (IFRS converged standards) and IFRSs; convergence vs adoption; Application of accounting standards (AS and Ind AS) on various entities in India. International Financial Accounting Standards (IFRS) –meaning, need, and scope.

(B) Accounting Process

From the recording of a business transaction to the preparation of trial balance including adjustment, transfer and closing entries. Application of Generally Accepted Accounting Principles in recording financial transactions and preparing financial statements and accounting treatment of GST.

Unit 2: Business Income, Accounting for Property, Plant and Equipment, and Valuation of Inventory: (9 hours)

- (a) Business income: Concept of Revenue and Business Income, Measurement of business income; relevance of accounting period, continuity doctrine and matching concept in the measurement of business income; Objectives of measurement of Business income.
- (b) Revenue recognition with reference to AS 9.
- (c) Accounting for Property, Plant, and Equipment with reference to AS 10. Impact of Depreciation on measurement of business income. Accounting for Intangible Assets with reference to AS 26.
- (d) Valuation of Inventory with reference to AS 2. Impact of inventory valuation on measurement of business income by using FIFO, LIFO, and Weighted Average Method.

Unit 3: Financial Statements of Sole Proprietorship and Not-for-Profit Organisations: (9 hours)

Preparation of Financial Statements of Sole Proprietorship and Not-for-Profit Organisations.

Unit 4: Accounting for Inland Branches, Departments and Leases: (12 hours)

- (a) Accounting for Inland Branches: Concept of Dependent branches; Branch Accounting as per- Debtors System, Stock and Debtors' System.
- (b) Accounting for Departments (excluding Mark-up Account).
- (c) Accounting for Leases with reference to AS 19.

Unit 5: Computerised Accounting Systems: (9 hours)

Computerised Accounting Systems: computerised Accounts by using any popular accounting software Creating a Company; Configure and Features settings; Creating Accounting Ledgers and Groups; Creating Stock Items and Groups; Vouchers Entry including GST; Generating Reports - Cash Book, Ledger Accounts, Trial Balance, Profit and Loss Account, Balance Sheet, Cash Flow Statement. Selecting and shutting a Company; Backup, and Restore data of a Company.

Notes:

1. The relevant Accounting Standards (both AS and Ind-AS) for all of the above topics should be covered.

- Zokaityte, A. (2017). Financial Literacy Education. Palgrave Macmillan, London.

Note: Readings will be updated by the Department of Commerce and uploaded on Department's website.

Assessment Method:

1. There shall be 2 credit hours for lectures.
2. Theory exam shall carry 100 marks (including Internal Assessment of 25 Marks). The theory exam will be for 3 hours.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

GENERIC ELECTIVES (GE-3) Marketing for Beginners

Credit distribution, Eligibility and Pre-requisites of the Course

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course |
|--|---------|-----------------------------------|----------|---------------------|----------------------|-----------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Marketing for Beginners BCH: GE-1.3 | 4 | 3 | 1 | 0 | Pass in XII | NIL |

Learning Objectives

The structure of this course is to provide a basic understanding of concepts, principles, tools and techniques of marketing and to provide knowledge about various developments in the marketing scenario in India.

Learning outcomes

The Learning Outcomes of this course are as follows:

1. evaluate the companies following societal marketing concepts and along with their social initiatives.
2. judge the segmentation of a product, service, event, or organisation of companies.
3. analyse the process of value creation through marketing decisions involving product, pricing and distribution.
4. compare the pricing strategies of various companies.
5. explain marketing decisions involving product promotion and acquire knowledge about the various developments in the marketing area.

SYLLABUS OF GE-3

Unit 1: Introduction to Marketing and Marketing Environment (12 hours)

Introduction to Marketing: Concept, Scope and Importance; Marketing Philosophies; Marketing Mix for goods and services.

Marketing Environment: Need for studying marketing environment; Micro environment- company, suppliers, marketing intermediaries, customers, competitors, publics; Macro environment- demographic, economic, natural technological, politico-legal and socio-cultural factors.

Unit 2: Consumer Behaviour and Marketing Strategies (12 hours)

Consumer Behaviour: Need for studying consumer Behaviour; Stages in consumer buying decision process, Factors influencing consumer's buying decisions.

Marketing Strategies: Market segmentation-concept and bases of segmenting consumer markets; Market Targeting; Product Positioning- concept and bases.

Unit 3: Product Decisions (8 hours)

Concept and classification; Product mix; Branding; Packaging; Labeling; Product support services; Product life cycle concept and marketing strategies.

Unit 4: Pricing Decisions and Distribution Decisions (12 hours)

Pricing Decisions: Objectives; Factors affecting the price of a product; Pricing strategies for new products- penetration pricing and skimming pricing.

Distribution Decisions: Channels of Distribution: types and functions; Wholesaling and retailing; factors affecting the channels of distribution; Logistics Decisions.

Unit 5: Promotion Decisions and Developments in Marketing (16 hours)

Promotion Decisions: Communication process; Importance of promotion; Promotion tools: advertising, personal selling, sales promotion, public relations, publicity and direct marketing

Developments in Marketing: Sustainable Marketing; Rural marketing; Social marketing; Digital marketing – an overview.

Practical Exercises:

The learners are required to

1. select the examples of companies who are following societal marketing concepts and discuss their social initiatives.
2. suggest the suitable bases for segmentation of a product, service, event, or organisation of your choice.
3. list out the companies whose product has reached the maturity stage and explain the marketing strategies adopted by them.
4. identify the companies following skimming and penetration pricing policy.
5. analyse the rural marketing strategies of a business organisation.

GENERIC ELECTIVES (GE- 4) Accounting for Everyone

Credit distribution, Eligibility and Pre-requisites of the Course

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course |
|--|---------|-----------------------------------|----------|---------------------|----------------------|-----------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Accounting for Everyone BCH: GE-1.3 | 4 | 2 | 1 | 1 | Pass in XII | NIL |

Learning Objectives

Objective: The course aims to help learners coming from non-commerce backgrounds acquire basic knowledge of financial accounting and to impart preliminary skills for recording various kinds of financial transactions and preparing financial statements.

Learning outcomes

The Learning Outcomes of this course are as follows:

1. Analyze various terms used in accounting;
2. Make accounting entries and prepare cash books and other accounts necessary while running a business;
3. Prepare profit and loss account and balance sheet;
4. Prepare accounts based on accounting software;
5. Analyze information from the company's annual report.

SYLLABUS OF GE-4

Unit 1: Introduction to Accounting and Accounting Principles (9 hours)

Accounting - Meaning, Importance, Need, objectives, advantages and limitations. Accounting as an information system, user of accounting information, sources of accounting information. Some Basic Accounting Terms –Transactions, Accounts, Assets, Liabilities, Capital, Drawings, Expenditure and Expense, Income, Revenue, Gain, Profit, Surplus, Loss, Deficit.

Accounting Principles Basis of Accounting – Cash, Accrual and Hybrid. Difference between Double Entry system and Single entry system (accounting for incomplete records).

Unit 2: Recording of transactions (9 hours)

Identification of transactions and events for recording, Classifications of accounts (Traditional): Personal Account, Real Account and Nominal Account, Classifications of accounts (Modern): Assets, Liabilities, Capital, Income and expenses. Accounting Equation, Rules of debit and credit. Basis of recording – vouchers, Journalising the transactions.

Unit 3: Preparation of Accounts and Depreciation Accounting (9 hours)

Preparation of Ledger, Cash Book including bank transactions and depreciation accounting: concept, features, causes, methods (SLM and WDV), charging to assets account.

Unit 4: Preparation of Financial Statement (9 hours)

Trial Balance; Concept of Revenue and Capital expenditure; Preparation of Trading and Profit & Loss Account and Balance Sheet for a sole proprietor with basic adjustments.

Unit 5: Accounts from Incomplete Records (9 hours)

Meaning, features, reasons and limitations of accounting from incomplete records. Determining profit and loss using the Statement of affairs method.

Practical Exercises:

(30 hours)

1. Download annual reports of business Organisations from the websites and go through the contents of the annual report and present the salient features of the annual report using some ratios and content analysis including textual analysis.
2. Prepare a bank reconciliation statement from the individual passbooks.
3. Prepare Trading and Profit & Loss Account, Balance Sheet, and Cash Flow Statement collecting necessary data from small business firms.
4. Prepare financial statements using appropriate software.

GENERIC ELECTIVES (GE- 5) COMPUTER APPLICATIONS IN BUSINESS

Credit distribution, Eligibility and Pre-requisites of the Course

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course |
|--|---------|-----------------------------------|----------|---------------------|----------------------|-----------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Computer Applications in Business BCH: GE-1.5 | 4 | 1 | 0 | 3 | Pass in XII | NIL |

Learning Objectives

This paper aims to impart computer knowledge that will enable them the ability to handle and analyse data for decision making and present it to the person concerned in the form of presentations and/or reports in the fast-moving business world.

Learning outcomes

The Learning Outcomes of this course are as follows:

1. describe the various concepts and terminologies used in computing, computer networks and the internet.
2. examine document creation for report making and communication.
3. identify and make good presentations.
4. analyse various computations using various functions in the area of accounting and finance and represent the business data using suitable charts. s/he should also be able to

manipulate and analyse the business data for a better understanding of the business environment and decision-making.

5. identify the spreadsheet knowledge acquired through this paper in solving real-life problems that help in decision making.

Unit 1: Introduction (4 hours)

Computing: Concept of computing, Data and information; Computing Interfaces: Graphical User Interface (GUI), Command Line Interface (CLI), Touch Interface, Natural Language Interface (NLI); data processing; applications of computers in business.

Computer Networks: Meaning of computer network; objectives/ needs for networking; Applications of networking; Basic Network Terminology; Types of Networks; Network Topologies; Distributed Computing: Client Server Computing, Peer-to-peer Computing; Wireless Networking; Securing Networks: firewall.

Basic Internet Terminology: I.P. Address, Modem, Bandwidth, Routers, Gateways, Internet Service Provider (ISP), World Wide Web (www), Browsers, Search Engines, Proxy Server, Intranet and Extranet; Basic Internet Services; Internet Protocols: TCP/IP, FTP, HTTP(s), Uses of the Internet to Society; Cyber Security: Cryptography, digital signature.

Unit 2: Word Processing (3 hours)

Introduction to word Processing, Word processing concepts, Use of Templates and styles, Working with word documents: Editing text, Find and replace text, Formatting, spell check, Autocorrect, Auto-text; Bullets and numbering, Tabs, Paragraph Formatting, Indent, Page Formatting, Header and footer, page break, table of contents, Tables: Inserting, filling and formatting a table; Inserting Pictures and Video; Mail Merge (including linking with spreadsheet files as data source); Printing documents; Citations, references and Footnotes.

Unit 3: Preparing Presentations (2 hours)

Basics of presentations: Slides, Fonts, Drawing, Editing; Inserting: Tables, Images, texts, Symbols, hyperlinking, Media; Design; Transition; Animation; and Slideshow, exporting presentations as pdf handouts and videos.

Unit 4: Spreadsheet basics (2 hours)

Spreadsheet concepts, Managing worksheets; Formatting, conditional formatting, Entering data, Editing, and Printing and Protecting worksheets; Handling operators in the formula, Projects involving multiple spreadsheets, Organizing Charts and graphs; Flash-fill; Working with Multiple worksheets; controlling worksheet views, naming cells and cell ranges.

Spreadsheet functions: Mathematical, Statistical, Financial, Logical, Date and Time, Lookup and reference, Text functions and Error functions.

Working with Data: Sort and filter; Consolidate; Tables; Pivot tables; What-if-analysis: Goal seek, Data tables and Scenario manager.

Unit 5: Spreadsheet projects (4 hours)

Creating business spreadsheet: Loan repayment scheduling; forecasting: stock prices, costs & revenues; Payroll statements; handling annuities and unequal cash flows; Frequency distribution and its statistical parameters and break-even analysis.

Note:

1. The General Purpose Software referred in this course will be notified by the University Departments every three years. If the specific features, referred to in the detailed course

above, are not available in that software, to that extent it will be deemed to have been modified.

2. There shall be a practical examination of 50 Marks (2 hours duration), a theory exam of 25 marks (1 hour duration) and an Internal Assessment of 25 marks (Class Test-10 Marks, Workbook- 10 Marks and attendance- 5 marks).
3. There shall be 1 lecture period per class and 6 Practical Lab periods per batch to be taught in the Computer Laboratory.

Practical Exercises

(60 hours)

The learners are required to do the practical exercises which include, but are not limited to, the following:

1. Analyze and compare the different mobile payment apps (at least 5) on the basis of their pros and cons and prepare a report on the same in word document using a table of contents, bullets, numbering, citations, etc. Also prepare a presentation for the same.
2. Using mail merge utility of word processing for either sending letters or for creating any other document like salary slip/ utility bills to be delivered to multiple recipients using data from a business organization or of the peer students.
3. Identify a topic related to any business operation and prepare a PowerPoint Presentation with all the above functions therein.
4. Prepare a Spreadsheet document with any hypothesized data and perform all the above functions therein.
5. By taking secondary data from a company's income statement and balance sheet for five to ten years, all the learners are required to conduct the Ratio Analysis and forecast values for different items of these statements for the next five to ten years.
6. Using logical, mathematical and statistical functions of the spreadsheet, the learners should be able to analyse the results of the class test using hypothesized data to determine the students who passed or failed, assigning them ranks like first, second, third, etc., finding out a number of absentees, counting no. of students scoring marks with distinction, etc.
7. The learners should be able to prepare repayment schedules of the loans that they borrow, prepare a payroll statement using spreadsheet functions listed above and analyse different investment opportunities using financial functions.
8. By taking live data from the website of the Government of India, use a Spreadsheet for preparing frequency distribution, and graphs, and calculate statistical measures like mean, median, mode, standard deviation, Correlation etc.

GENERIC ELECTIVES (GE- 6)

Bhartiya Gyan Parampara (Indian Knowledge System)

Credit distribution, Eligibility and Pre-requisites of the Course

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course |
|---|---------|-----------------------------------|----------|---------------------|----------------------|-----------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Bhartiya Gyan Parampara (Indian Knowledge System) BCH: GE- 1.6 | 4 | 3 | 1 | 0 | Pass in XII | NIL |

Learning Objectives

The course aims to familiarize the students with the astonishing breadth and depth of the Indian scientific and knowledge tradition.

Learning outcomes

The Learning Outcomes of this course are as follows:

1. apportion the experience of the Gurukul system of education Indian culture
2. explain the concept of oneness (Ekatma Bhav).
3. use meditation on Panchkoshas and Chakras for enhancing productivity.
4. apply the management principles from the epics and compare them with the policies and schemes of the Government of India.

Unit 1: Bhartiya Gyan Parampara (Indian Knowledge System) – An Overview (16 hours)

Importance of Ancient Knowledge; Defining Indian Knowledge System; The Indian Knowledge System Corpus- A Classification Framework; Some unique aspects of Indian Knowledge System: Nuances of an Oral Tradition. History of Traditional Indian Trade and commerce: Silk, cotton, sugar, spices etc., silk route. Traditional mercantile system

Unit 2: Knowledge: Framework and Classification (16 hours)

Tarka: The Indian Art of Debate- The Knowledge Triangle; Prameya – A Vaisesikan Approach to Physical Reality- Dravyas, Attributes, Action; Vaisesikan Worldview of ‘Existence’; Pramana; Samasya; Framework for establishing Valid Knowledge – Deductive/ Inductive Logic Framework, Potential Fallacies in the Reasoning Process, Established Tenets in a Field of Study. Knowledge management; Types of knowledge management , Knowledge barriers, Knowledge Retention

Unit 3: Health, Wellness and Psychology (16 hours)

Impact of Yoga Way of life on Emotional Intelligence of Managers; Ayurveda- Definition of Health; Tri- dosas – Relationship to Health; The Body- Mind- Intellect- Consciousness Complex; Consciousness- The True Nature of an Individual; Five layered Consciousness of an Individual (Panchkoshas); Chakra System (Energy centres). Consciousness: Management by consciousness, Levels of Individual and Organizational consciousness, Self-consciousness, beyond self-consciousness.

Unit 4: Governance and Public Administration (12 hours)

Ramayana on Great Attributes, Dos, and Don'ts of a King; Arthasastra- Governance and Administration; Relevance of Arthasastra; Kautilyan State; Vidura- niti – Advice to a King- The Amatya, Settlements and Land Use (Janapada), Fortified Capital city (Durga), Treasury and State Economy (Kosa), Law & Order and Security (Danda), Foreign Policy and Allies (Mitra); Public Administration- Perspectives from the Epics. Indigenous banking system: Methods of the Indigenous banking system; Promissory note, Dastavez, Rahan, Functions of the indigenous banking system; Advancing loans, discounting Hundis; Type of Hundi, Darshni Hundi, Muddati Hundi.

Practical Exercises:

1. visit a Gurukul/ Ashram and have your own experience (anubhooti) of the Indian ancient knowledge system.
2. muktchintan (brainstorming) on topics life worldview of existence.
3. practise of meditation on Panchkoshas and Chakras.
4. muktchintan (brainstorming) on the perspectives from the epics and the real-life scenario of their applicability in the policies and schemes of the Government of India like Foreign policy, Defence policy, Innovation and Start-up Policy, Global Initiatives like One Sun One World One Grid: India's Initiative; Vaccine Diplomacy, International Yoga Day.

GENERIC ELECTIVES (GE- 7) Basic Personal Taxation

Credit distribution, Eligibility and Pre-requisites of the Course

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course |
|--|---------|-----------------------------------|----------|---------------------|----------------------|-----------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Basic Personal Taxation BCH: GE-1.7 | 4 | 3 | 1 | 0 | Pass in XII | NIL |

Learning Objectives

To provide basic knowledge and equip students with the application of principles and provisions of the Income-tax Act, 1961 applicable to individuals and the relevant Rules; and to enable the students to apply them to real-world situations.

Learning outcomes

The Learning Outcomes of this course are as follows:

1. analyse the basic concepts of income tax and determine the residential status of different persons;
2. compute income under the heads 'salaries' and 'income from house property';
3. compute income under the heads 'Profits and gains of business or profession' and 'capital gains';
4. compute income under the head 'income from other sources' and understand the provisions relating to income of other persons included in assessee's total income; and
5. analyse various deductions and computation of total income and tax liability of individuals.

Unit 1: Introduction (12 hours)

Origin of Tax System in India; Taxation – Voluntary practice to the involuntary system, Kautilya's philosophy of Taxation.

Basic concepts: Income, agricultural income, person, assessee, assessment year, previous year, gross total income, total income, the maximum marginal rate of tax; Permanent Account Number (PAN). Residential status (only individual); Scope of total income on basis of residential status.

Unit 2: Computation of Income – 1 (16 hours)

Income from Salaries: Meaning, the basis of charge, different forms, allowances, perquisites.

Income from house property: Basis of charge, computing income from letting out, self-occupied and partly let out and partly self-occupied, provisions related to unrealised rent, taxation of arrears of rent. Deductions from Annual Value (Sec 24).

Unit 3: Computation of Income – 2 (16 hours)

Profits and gains of business or profession: Basis of charge, computing business or profession income, the relevance of method of accounting, scheme of deductions and allowances, specific deductions under the act, specific disallowances under the act.

Unit 4: Computation of Income -3 (16 hours)

Capital gains: Basis of charge, capital asset, transfer of a capital asset, consideration, cost of acquisition, cost of improvement, indexation, computation of capital gains.

Income from other sources: Basis of charge, the relevance of method of accounting, dividend, interest on securities, winnings from lotteries, crossword puzzle, horse race, card games and their taxation, deduction from total income.

Practical Exercises:

The learners are required to:

1. discuss selected provisions of the Income-tax Act, 1961 from the official website of the Government of India;
2. refer to the Finance Act to learn about the amendments done in various provisions of the Income-tax Act, 1961;
3. refer relevant notifications and circulars from the official website of Government of India;

4. use tax calculators available on the official website of Government of India; and
5. explore and attempt online filing of Returns of Income & TDS on the Income tax e-filing website under ITR-1 and ITR-2.

Essential/ Recommended Readings:

- Ahuja, G., & Gupta, R. (2022). Systematic Approach to Income Tax. Commercial Law House, Delhi.
- Lal, B. B. (2011). Income Tax Law and Practice. Konark Publications, New Delhi.
- Pagare, D. (2021). Law and Practice of Income Tax. Sultan Chand and Sons, New Delhi.
- Singhania, V. K., & Singhania, M. (2021). Students' Guide to Income Tax. University Edition. Taxmann Publications Pvt. Ltd., New Delhi.

Suggestive Readings

- Current Tax Reporter. Current Tax Reporter, Jodhpur.
- Income Tax Reports. Company Law Institute of India Pvt. Ltd., Chennai.
- Taxman. Taxman Allied Services Pvt. Ltd., New Delhi.

Note: Readings will be updated by the Department of Commerce and uploaded on Department's website.

Assessment

Total Marks: 100

Internal Assessment: 25 Marks

End Semester University Exam: 75 Marks

The Internal Assessment for the course may include Class participation, Assignments, Class tests, Projects, Field Work and Presentations, amongst others as decided by the faculty.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

7. Amendment to Appendix -II-A to the Ordinance V (2-A) of the Ordinances of the University vide EC Resolution 18-1-1 & 18-1-10 dated 18.08.2022 regarding Syllabi of 1st Semester of Department under Faculty of Education and Cluster Innovation Centre

Add the following:

Syllabi of Semester-I of the Department of Education under Faculty of Education and Semester-I of Cluster Innovation Centre based on Under Graduate Curriculum Framework -2022 to be implemented from the Academic Year 2022-23.

**DEPARTMENT OF EDUCATION
BA (Prog.) with Education as Major
Category II**

(B.A Programme Courses for Undergraduate Programme of study with Education discipline as one of the Core Disciplines)

DISCIPLINE SPECIFIC CORE COURSE – 1 (DSC-1): Basic Concepts and Ideas in Education

Credit distribution, Eligibility and Prerequisites of the Course

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|--|---------|-----------------------------------|----------|---------------------|----------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Basic Concepts and Ideas in Education DSC 1 | 4 | 3 | 1 | - | Class XII Pass | NIL |

Learning Objectives

The Learning Objectives of this course are as follows:

- This is a discipline course in education, which aims to provide the basics of education and the nature of education (Liberal).
- It establishes the interdisciplinary nature of education by acquainting the student with its interconnectedness with other disciplines: philosophy, psychology, sociology, economics and polity. It intends to clarify the significant concepts in education.
- The students will be able to know and understand how educational aims are framed.
- They will also be able to comprehend the linkages between social institutions and education. Social change and its relationship with education will be understood.
- The students will develop analytical and critical thinking based on the themes and issues in education in a philosophical and social context.

Learning outcomes

The Learning Outcomes of this course are as follows:

- The learners are expected to know the concept of education and its interconnections with other relevant disciplines and its nature.
- The learners are expected to understand various theoretical concepts in education.
- The learners are expected to understand how the aims of education are formulated and how they are influenced by various socio-cultural forces/aspects.
- The learners will establish the importance of education for all human beings.
- The learners will develop critical thinking and analytical ability to evaluate written texts and formulate their response to reality.
- The learners will understand the role of ethics, morals and values in education.

SYLLABUS OF DSC- 1

Unit 1: Basic Ideas in Education

(20 Hours)

- Education: Its meaning, processes, purpose and aims; its liberal and interdisciplinary nature

- Major concepts in Education: Schooling and Education, Teaching, Training, Learning, Indoctrination, and Propaganda.
- Epistemological basis of education: Knowledge, Belief, Inquiry, Reason
- Ethics, values and ideals

Unit 2: Understanding Education and Society

(20 Hours)

- Education and Socialisation: Agencies of Socialisation—Home, Family, Community, School and Media.
- Culture and Education: Role of education in preservation, transformation, and promotion of Culture; culture and ideology.
- Constitutional Values: Equality, Freedom, Justice, Secularism, Human Rights
- Bases for formulating Aims of Education: With reference to the constitution and other socio-cultural forces in India.

Unit 3: Thinkers in Education

(20 Hours)

Each thinker is to be studied with reference to their perspectives on education

- Sri Aurobindo
- J. Krishnamurti
- John Dewey
- J.J. Rousseau
- Paulo Freire

Practicum/ Suggested Projects / Assignments (Any Two)

- Read the Position Paper titled 'Aims of Education' (NCF 2005 or any recent position paper) and present your understanding.
- Beginning with the Preamble of the Constitution of India, focus on the ideas of Justice, Liberty, Equality, and Secularism and present your understanding of these concepts and how education can help to achieve them.
- Identify any one aim of education and study the current practices of any school to understand how this aim is being realised.
- A detailed study of one educational thinker concerning his ideas on the nature of the child, teacher, and school and their relevance and challenges in the contemporary context.
- Reflective critical essay on one's socialisation with reference to home, school, community and media.

- Interview school teacher(s) and discuss their understanding of the meaning of education.

Note: Based on the above, the teacher may design other relevant projects/ assignments

Teaching Learning Process:

The course will be taught through interactive pedagogic methods, such as classroom discussion, debates, film discussions, critical media analysis, collaborative learning tasks which enhance reading comprehension of core writings in the area and innovative projects. Reflective expression and learning will be encouraged.

Assessment Method

The assessment will be formative in nature and will include student participation. Individual and group tasks and assignments will be given. Summative evaluation will be done through an end-semester examination.

DISCIPLINE SPECIFIC CORE COURSE (DSC-2): Education in Contemporary India

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|---------------------------------------|---------|-----------------------------------|----------|----------------------|----------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical / Practice | | |
| Education in Contemporary India DSC 2 | 4 | 3 | 1 | - | Class XII Pass | NIL |

Learning Objectives

The Learning Objectives of this course are as follows:

- The course aims to acquaint students with modern education in contemporary India.
- It would familiarize them with key debates prevalent during the anti-colonial struggle and subsequent developments in post - independent India.
- The course will introduce education within the framework of constitutional principles and rights - based approach.

Learning outcomes

The Learning Outcomes of this course are as follows:

- The learners are expected to discuss the influence of colonialism on education and the changes that have unfolded.
- The learners will trace the modern education system in India and the expansion of women's education through the experiences of pioneering women.
- The learners will explain the alternatives posited by M.K. Gandhi and Rabindranath Tagore to colonial education.
- The learners will discuss the constitutional provisions relevant to education.
- The learners will exhibit an understanding of India's federal structure and democratic decision- making with reference to education.

SYLLABUS OF DSC-2

Unit 1: Colonialism and Modern Education

(24 Hours)

- Modern education in India; Impact of Colonialism on traditional systems of education; Emergence of modern school system and universities
- Women and modern education: educational endeavors of Rokeya Sultana, Pandita Ramabai, Jyotiba and Savitribai Phule
- Aims and purpose of colonial education and alternative visions with reference to Nai Taleem of Gandhi and My school of Tagore

Unit 2: Going to school and college in India

(16 Hours)

- Education and Development with reference to Human Development Index, Gender Development Index.
- Factors affecting access to different levels of education; the need for Right to Education.
- Challenges and issues in development of education: regional disparities, gender, religious, class and caste based variations in education based on an introduction to reading of data

Unit 3: Constitution and Education

(20 Hours)

- Importance of Constitutional values and their relevance to education
- Provisions in the Constitution relevant to education: Acts and Amendments; religious minority and linguistic minority Rights, Rights against discrimination, Right to equality, and Right to Education
- Education and the role of Center and State: Union, State and Concurrent lists, Panchayati Raj and local bodies
- Role of Judiciary, Legislature and Executive in education with specific reference to RTE Act 2009 (21A) and other amendments

Suggested Projects/ Assignments: Any two

- Review of Swami and Friends by RK Narayan with reference to education in colonial times.
- Essay on Gandhi's ideas of education through handicrafts.
- Review of Jyotirao Phule's Ghulamgiri with reference to education of the caste oppressed.

- Reflective essays/ presentations on student's own schooling and educational experiences
- Preparing educational status reports based on reading of data tables done in class for specific social groups.
- Documenting educational testimonies of family members/migrant workers/ children living on the streets/ child workers/homeless people.
- Case study of the Unnikrishnan Judgement 1993.
- Essay on Ambedkar's idea of education for social transformation.

Note: On the basis of the above, the teacher may design his/her own relevant assignments and projects.

Education, Contemporary India

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Category III

B.A. Programme Courses for Undergraduate Programme of study with Education discipline as one of the Core Disciplines as non-Major or Minor discipline)

DISCIPLINE SPECIFIC CORE COURSE – 1 (DSC-1): Basic Concepts and Ideas in Education

Credit distribution, Eligibility and Prerequisites of the Course

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|---|---------|-----------------------------------|----------|---------------------|----------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Basic Concepts and Ideas in Education DSC 1 | 4 | 3 | 1 | - | Class XII Pass | NIL |

Learning Objectives

The Learning Objectives of this course are as follows:

- This is a discipline course in education, which aims to provide the basics of education and the nature of education (Liberal).
- It establishes the interdisciplinary nature of education by acquainting the student with its interconnectedness with other disciplines: philosophy, psychology, sociology, economics and polity. It intends to clarify the significant concepts in education.
- The students will be able to know and understand how educational aims are framed.
- They will also be able to comprehend the linkages between social institutions and education. Social change and its relationship with education will be understood.
- The students will develop analytical and critical thinking based on the themes and issues in education in a philosophical and social context.

Learning outcomes

The Learning Outcomes of this course are as follows:

- The learners are expected to know the concept of education and its interconnections with other relevant disciplines and its nature.
- The learners are expected to understand various theoretical concepts in education.
- The learners are expected to understand how the aims of education are formulated and how they are influenced by various socio-cultural forces/aspects.
- The learners will establish the importance of education for all human beings.
- The learners will develop critical thinking and analytical ability to evaluate written texts and formulate their response to reality.
- The learners will understand the role of ethics, morals and values in education.

SYLLABUS OF DSC- 1

Unit 1: Basic Ideas in Education

(20 Hours)

- Education: Its meaning, processes, purpose and aims; its liberal and interdisciplinary nature
- Major concepts in Education: Schooling and Education, Teaching, Training, Learning, Indoctrination, and Propaganda.
- Epistemological basis of education: Knowledge, Belief, Inquiry, Reason
- Ethics, values and ideals

Unit 2: Understanding Education and Society

(20 Hours)

- Education and Socialisation: Agencies of Socialisation—Home, Family, Community, School and Media.
- Culture and Education: Role of education in preservation, transformation, and promotion of Culture; culture and ideology.
- Constitutional Values: Equality, Freedom, Justice, Secularism, Human Rights
- Bases for formulating Aims of Education: With reference to the constitution and other socio-cultural forces in India.

Unit 3: Thinkers in Education

(20 Hours)

Each thinker is to be studied with reference to their perspectives on education

- Sri Aurobindo
- J. Krishnamurti
- John Dewey
- J.J. Rousseau
- Paulo Freire

Practicum/ Suggested Projects / Assignments (Any Two)

- Read the Position Paper titled 'Aims of Education' (NCF 2005 or any recent position paper) and present your understanding.
- Beginning with the Preamble of the Constitution of India, focus on the ideas of Justice, Liberty, Equality, and Secularism and present your understanding of these concepts and how education can help to achieve them.
- Identify any one aim of education and study the current practices of any school to understand how this aim is being realised.
- A detailed study of one educational thinker concerning his ideas on the nature of the child, teacher, and school and their relevance and challenges in the contemporary context.
- Reflective critical essay on one's socialisation with reference to home, school, community and media.
- Interview school teacher(s) and discuss their understanding of the meaning of education.

Note: Based on the above, the teacher may design other relevant projects/ assignments

CLUSTER INNOVATION CENTRE (CIC)

Category I

B.Tech. (Information Technology and Mathematical Innovations) in four years)

DISCIPLINE SPECIFIC CORE COURSE -1 (DSC-1): Single and Multivariable Calculus

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|--|---------|-----------------------------------|----------|---------------------|----------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Single and Multivariable Calculus, DSC-1 | 04 | 3 | 0 | 1 | Class XII pass | Mathematics till XII |

Learning Objectives

Calculus is the most powerful tool in mathematics with widespread applications. The goal of this course is for students to gain proficiency in calculus computation. The course builds up on the topics, namely limits and continuity, differentiation and integration. These topics will use to solve application problem in a variety of fields such as physics, biology, business and economics.

Learning outcomes

- A good understanding of basic concepts of limits, derivatives, continuity, asymptotes, sequence and series, integrals, vector valued functions, partial differentiation, multiple integrals, etc.
- Able to find points of discontinuity for functions and classify them and understand the consequences of the intermediate value theorem for continuous functions.
- Able to solve applied problems using basic concepts of calculus.
- Able to explain why calculus is valuable in daily life.
- Create a project using the fundamental knowledge and principle of differential and integral calculus that helps to provide a hands-on experience of the same.
- Able to plot and manipulate the curves appropriately to make various real-life models like studying the projectile motion in firecrackers and the flow of water in fountain.
- Create animations of given problems using MATHEMATICA software.

SYLLABUS OF DSC-1

UNIT – I (12 Hours)

Limits and continuity

Limits at infinity - Indeterminate forms - Special limits involving exponential and logarithmic functions – Asymptotes - Graphs of function and its derivatives - Optimization problems - Fluency in differentiation - Concavity and inflexion points - Sequences, infinite series including Taylor approximations, Power series

UNIT – II (12 Hours)

Integration

Parametric equations of curves, arc length and surface area-Vector valued functions, differentiation and integration of vector valued functions

UNIT – III (12 Hours)

Functions of several variables

Level curves and surfaces - Limits and continuity of functions of two and three real variables - Partial differentiation (two variables), partial derivative as a slope, partial derivative as a rate, Maxima and Minima

UNIT – IV (9 Hours)

Multiple Integrals

Line, surface and volume integrals - Applications of Green's, Stokes and Gauss's Theorem.

Practical component – 30 Hours

Engineering Kitchen Activity (Symbolic Mathematics Software) [Laboratory]

- Introduction of basic functions
- Plotting of graphs of functions and their derivatives
- Manipulating the parameters in a graph
- Fitting of a curve
- Parametric plot of curves (Eg. Trochoid, Cycloid, Epicycloid)
- Obtaining surfaces of revolution of curves
- Plotting functions of two variables and their level curves
- Graphical illustration of limits for functions of two variables
- Innovation Project

Essential/recommended readings

1. *Calculus*, T. M. Apostol, Volumes 1 and 2, Wiley Eastern, 1980.
2. *Calculus - Single and Multivariable*, Hughes-Hallett et al., John-Wiley and Sons, 2003.
3. *Calculus*, James Stewart, Thomson, 2003.
4. *Calculus and Analytic Geometry*, G. B. Thomas and R. L. Finney, Addison-Wesley, 1998.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE – 2 (DSC-2): Discrete Mathematics and its Applications

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|--|---------|-----------------------------------|----------|---------------------|----------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Discrete Mathematics and its Applications, DSC-2 | 04 | 3 | 1 | 0 | Class XII pass | Mathematics till XII |

Learning Objectives

The objective of this paper is to familiarize the student with basic concepts of logic and combinatorics. The aim of the paper is also to conceptualize the terminologies of graph theory, isomorphism, paths, cycles, circuits, graph coloring in various physical situations. Throughout this paper, students will be encouraged to develop their own algorithms and to analyze their computational complexities. Further, students may develop codes in any of the programming language for implementation of various algorithms.

Learning outcomes

After completing this course, student should be able to;

- Familiarize with basic concepts of logic
- Understand combinatorics principles: sets, permutations, combinations, recurrence relations etc.
- Conceptualize basic terminologies of graph theory, isomorphism, connectivity etc
- Understand concepts of paths, cycles, circuits and their applications in various fields
- Learn different shortest path algorithms, their computational complexities, implementation & programming
- Understand travelling salesman problem and its importance
- Understand the concept of graph coloring with real applications, planar graphs and algorithms
- Conceptualize trees, spanning trees and algorithms

UNIT – I (16 Hours)

Logic and Combinatorics

Propositional Logic; Truth tables; Conditional statements; Logic and Bit operations; Propositional and logical equivalences; De Morgan's law; Applications of propositional logic. Sets, counting of sets - Permutation - Combination - Inclusion - exclusion - Generating functions - Recurrence relations

UNIT – II (16 Hours)

Graph Theory

Introduction - Basic terminologies - Graph representation - Euler relation Isomorphism- Connectivity - Cut vertices and edges - Covering - Euler and Hamilton paths and circuits

UNIT – III (16 Hours)

Applications of Graph Theory

Shortest Path Algorithms: Dijkstra's algorithm - Travelling salesman problem - Scheduling problems - Matching - Independent sets - Coloring - *Planar graph*: idea of region - Euler formula - Kuratowski theorem and application

UNIT – IV (12 Hours)

Tree

Basic terminology, traversal, Prefix code - Idea of data compression: Huffman code - Spanning tree - Minimum spanning tree: Prim's and Kruskal method.

Practical component – NIL

Essential/recommended readings

1. *Discrete and Combinatorial Mathematics*, Ralph Grimaldi, International Edition, 2003.
2. *Discrete Mathematical Structures*, Bernard Kolman, Robert Busby, Sharon Ross, International Edition, 2008.
3. *Discrete Mathematics and Its Applications*, K. H. Rosen, McGraw-Hill, 2008.

DISCIPLINE SPECIFIC CORE COURSE– 3 (DSC-3): Programming Fundamentals

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|---------------------------------|---------|-----------------------------------|----------|---------------------|----------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Programming Fundamentals, DSC-3 | 04 | 3 | 0 | 1 | Class XII pass | Mathematics till XII |

Learning Objectives

This course aims at providing the fundamental knowledge of programming. This course trains students to design code, write programs to instruct computer systems. In addition, the course objective is to give an understanding of real-world data, tasks and their representation in terms of programs.

Learning outcomes

After completing this course, students will have:

- understanding of Programming Concepts
- understanding of real-world applications development through programs
- understanding of independent data and collection of data and their organization

- understanding of memory allocation on runtime
- understanding of the program life cycle
- understanding of testing, coding guidelines, debugging and integration.

SYLLABUS OF DSC-3

UNIT – I (12 Hours)

Philosophy of programming and algorithm

Algorithm and its characteristics-Programming philosophy-Problem solving process-Programming language concepts-Program life cycle

UNIT – II (12 Hours)

Data representation and storage

Data definition structures such as types-constants-variables-Expressions such as arithmetic-logical-Precedence and associative rules-Control Structures-Functions-Variable scope

UNIT – III (9 Hours)

Multiple data item and processing

Preprocessing - Arrays, Structures – Strings - Pointers - Memory allocation

UNIT – IV (12 Hours)

Permanent storage and information handling

Files handling – Coding guidelines - testing & debugging-System testing & Integration

Practical component – 30 Hours

Engineering Kitchen Activity [Laboratory]

- User input and output programs having mathematical operations
- Pattern printing programs
- Programs for operators implementation
- Programs to implement function
- Programs to implement collection such as Array and String
- Programs to implement structure
- Innovation Project

Essential/recommended readings

1. *C++: The Complete Reference, Fourth Edition*, Herbertz Schildt, McGraw Hill, 2015.
2. *The C++ Programming Language, 4th Edition*, Bjarne Stroustrup, Addison-Wesley, 2013.
3. *Computer Science: A Structured Approach Using C++ 2nd Edition*, Behrouz A. Forouzan, Richard F. Gilberg, 2004
4. *The C Programming Language (Ansi C Version)*, Brian W. Kernighan, Dennis M. Ritchie, 1990.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

COMMON POOL OF GENERIC ELECTIVES (GE) COURSES

NOTE: The core papers offered in the B.Tech. Course at CIC are Mathematics and Information Technology. Therefore, the students will choose GE offered by Physics and Chemistry faculty members of CIC.

GENERIC ELECTIVES (GE-1): Engineering Physics I

Credit distribution, Eligibility and Pre-requisites of the Course

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course | Department offering the course |
|-----------------------------|---------|-----------------------------------|----------|---------------------|----------------------|-----------------------------|--------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | | |
| Engineering Physics I, GE-1 | 4 | 2 | 0 | 2 | Class XII pass | Science Till Class X | Physics Faculty of CIC |

Learning Objectives

This interactive learning module intends to provide basic theoretical understanding of Classical Mechanics with special emphasis on learning how these theoretical concepts are applied in designing mechanical and energy efficient systems etc.

Learning outcomes

- Understanding of physics principles in machines.
- Ability to conceptualize and build machines for real life use.
- Reverse engineering of mechanical devices and redesigning of such objects.
- Practical hands-on skills and understanding of simple engineering concepts derived from Mechanics.

SYLLABUS OF GE-1

UNIT – I (8 Hours)

Classical mechanics at work

Newtonian Mechanics (Kinematics & Dynamics) - Classical Mechanics at work - deconstructing mechanical systems - Universal Gravitation

UNIT – II (8 Hours)

Oscillation & Rotation

Oscillations - Inertial & Non-inertial frames - Central force motion - Understanding rotational dynamics

UNIT – III (8 Hours)

Machines

Efficiency and mechanical advantage in simple and complex machines: Levers, Pulley, Wheel & Axles, Gear systems, Hydraulic systems

UNIT – IV (6 Hours)

Energy Applications

Forms of energy and conversion between different forms of energy.

Practical component – 60 Hours

Engineering Kitchen Activities [Laboratory]

- Concepts of measurement, error, precision, accuracy. Concept of scale. Understanding Measuring Instruments
- Understanding oscillation using simple and compound pendulums
- Mechanics system with 850 Universal Interface – understanding Newtonian Dynamics
- Measurement of Moment of inertia from rotational dynamics
- Roller coaster dynamics – computer simulation and physical verification
- Coupled pendulum motion – using webcam and image analysis
- Ballistic Pendulum
- Understanding physics of complex machines – one implementation of “Tod-Phod-Jod” concept.
- Visualization in 3D and understand how things work – Building a CAD model in 3D to trace the flow of power, energy, information and material.
- Innovation project – designing instruments, machines, prototypes, applets

Essential/recommended readings

1. *Classical Mechanics*. Herbert Goldstein, Pearson Education, 2011.
2. *A Textbook of Machine Design*. R. S. Khurmi, and J. K. Gupta, S. Chand Publishing, 2005.

GENERIC ELECTIVES (GE-2): Engineering Chemistry I

Credit distribution, Eligibility and Pre-requisites of the Course

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course | Department offering the course |
|-------------------------------|---------|-----------------------------------|----------|---------------------|----------------------|-----------------------------|--------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | | |
| Engineering Chemistry I, GE-2 | 04 | 2 | 0 | 2 | Class XII pass | Science Till Class X | Chemistry Faculty of CIC |

Learning Objectives

This course is designed in such way, so that it provides a flavor of interesting, innovative, programmable and multifunctional materials of chemistry. Students will be exposed to a lot of applications of materials from various walks of our day to day life. Different forms of materials (Biomolecules, drugs, nanomaterials, environment friendly materials etc.) will be discussed at length. Innovative applications of these extremely important materials for drug development, electronic material development, biosensing (like glucose monitoring / disease detection) and environmental remediation etc. will be elaborated, so that students become more aware of the useful materials, which may further be designed, developed and utilized by society as a whole.

Learning outcomes

- Students will be exposed to important aspects related to biomolecules, which are one of the most important constituents of our life.
- Students will get basic knowledge about programmable and multifunctional materials, which are being used in various walks of life nowadays.
- Students will be aware of the basic and advanced forms of nanomaterials and their applications in different fields.
- Importance of green chemistry will be understood through related examples.
- Students will be able to understand the importance of designing drugs and their development through various concepts of marketing.

SYLLABUS OF GE-2

UNIT – I (8 Hours)

Programmable and Multifunctional Materials

Basic features and properties of Biomolecules (Carbohydrates, Proteins, Nucleic Acids and Fats) along with their applications in our day to day life as food, medicine, drugs, enzymes for catalysis etc.; Programmable and Multifunctional DNA-Based Materials for various Applications; Chemical and Biological sensors.

UNIT – II (8 Hours)

Nanochemistry and Nanoscience in our day to day life

Synthesis of Nanoparticles (Green and Chemical Methods; Bottom up and Bottom down approach), Various kinds of nanomaterials and nanostructures (Nanoparticles, Nanoclusters, Nanorods, Quantum dots, Nanotubes, Nanorobots etc.) and their applications in various fields like biomedical, electronics, and environment etc.

UNIT – III (8 Hours)

Green Chemistry and it's applications in various fields

Green Chemistry, it's principles and applications in day to day life, Twelve Principles of Green Chemistry; Use of green chemistry for producing environmentally benign chemical products for varied applications.

UNIT – IV (6 Hours)

Designing of Drugs and their development

Discovery and designing of drugs (from concept to marketing); Organic therapeutic agents used in various diseases, their management and economics in market.

Practical component –60 Hours

1. Three-dimensional modelling of DNA structure using various open access softwares available in public domain; Molecular Dynamics simulation of DNA (very simple and rudimentary coarse grained (CG) models, where DNA can be simulated as rods and proteins as ovoids/ spheres)
2. Understanding of principle, designing, fabrication and application of a nano-biosensor (Examples like glucose biosensors or diagnostic kits for COVID-19 etc. can be studied at length).
3. Simulation of a single nano-particle for understanding it's physical and chemical properties in solution
4. Practical assignments on computer-aided drug design/ In-silico drug designing using databases (like Pubchem, zinc database, drug bank etc.), ligand designing softwares, 2D and 3D structure making open access softwares like chem-draw, chimera, pymol etc. and ligand-target interaction (using various molecular docking softwares).

Essential/recommended readings

1. DNA Beyond Genes: From Data Storage and Computing to Nanobots, Nanomedicine, and Nanoelectronics by Vadim V. Demidov
2. Templated DNA Nanotechnology Functional DNA Nanoarchitectonics, 2019, by Govindraju, T.
3. DNA: The Secret of Life by James Watson
4. Structural DNA Nanotechnology by Nedrian Seeman
5. Nanotechnology: Importance and Applications, January 2019, by M.H. Fulekar
6. Scalable Green Chemistry: Case Studies from the Pharmaceutical Industry, by Stefan Koenig

BA (Hons.) Humanities & Social Sciences

Category II

(UG Courses for Undergraduate Programme of study with Humanities & Social Sciences discipline as one of the Core Disciplines)

DISCIPLINE SPECIFIC CORE COURSE -1 (DSC-01) –: Humanities & Social Sciences: Concepts & Scope

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|---|---------|-----------------------------------|----------|---------------------|----------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Humanities & Social Sciences: Concepts & Scope (DSC-01) | 4 | 3 | 1 | 0 | Class XII pass | Nil |

Learning Objectives

The Learning Objectives of this course are as follows:

- Students will be exposed to fundamental and methodological issues in Humanities & Social Sciences.
- Students will be introduced to the expanse of the field of Humanities and Social Sciences.

Learning Outcomes

The Learning Outcomes of this course are as follows:

- The students will be able to appreciate the concepts of multidisciplinary, interdisciplinary and transdisciplinarity.

- The students will develop critical thinking with respect to identifying interlinkages between various disciplines of social sciences and humanities.
- The students will be able to apply a variety of disciplines to find a solution to social problems.

SYLLABUS OF DSC-1

UNIT – I: Concepts and Scope

(16 Hours)

- Understanding Humanities & Social Sciences
- Approaches to studying Humanities & Social Sciences
- Emergence & growth of Humanities and Social-sciences
- Multidisciplinarity, interdisciplinarity & transdisciplinarity – scope & impediments
- Knowledge creation- Subjectivity versus Objectivity

UNIT – II: Humanities & Social Sciences, perspectives of Cultural Studies

(16 Hours)

- Cultural Studies – Language and cultural studies
- Meaning formation and meaning creation
- Culture and identity; multiculturalism

UNIT – III: Understanding Religion

(12 Hours)

- Religion, culture & society – construction of religion
- Religion as an institution
- Religion & Secularism

UNIT – IV: Human Rights

(16 Hours)

- Concept of Human Rights; universalism vs relativism
- Universal Declaration of Human Rights 1948; Constitution of India (Part III-IV); Protection of Human Rights Act 1993
- Rights of Vulnerable Groups (children, women, elderly, PwD, other marginalised population)

Suggestive readings

- Allen F. Repko, William H. Newel & Rick Szostak (2012). Case Studies in Interdisciplinary Research. Sage Publications.
- Allen F. Repko (2008). Interdisciplinary Research: Process and Theory.

- Dennis J. Sporre (2011). Perceiving the Arts: An Introduction to the Humanities, 10th Edition.
- Frank J. Zulke & Jacqueline P. Kirley (2002). Through the Eyes of Social Sciences (6th ed). Waveland Press
- Hunt, E. F. & Colander, D. C. (2016). Social science: An introduction to the study of society (14th ed.). Boston: Pearson/Allyn and Bacon.
- Richard Paul Janaro & Thelma C. Altshuler (2011). The Art of Being Human: Humanities as a Technique for Living Person. Pearson Publication.
- Alvin Gouldner- coming crises of western sociology – last chapter is on reflexivity

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE – 2 (DSC-02): Technology and Society

Credit distribution, Eligibility and Prerequisites of the Course

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|---------------------------------|---------|-----------------------------------|----------|---------------------|----------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Technology and Society (DSC-02) | 4 | 3 | 1 | 0 | Class XII pass | NIL |

Learning Objectives

The Learning Objectives of this course are as follows:

- To analyse the fundamental questions, concepts and development of technology.
- To explore the way technology works to shape human experience and wellbeing.
- To acquire the critical understanding of ethical and social implications of science and technology.

Learning Outcomes

The Learning Outcomes of this course are as follows:

- Students will be acquainted with the basic knowledge of the development of technology over time.
- Students will acquire the knowledge of technology society relationship.
- Students will be skilled to comment on the practical ethics in various aspects of technology-society interaction.

SYLLABUS OF DSC- 2

UNIT – I Concept and History of Technology (16 Hours)

- Meaning, Concept and Nature of Technology
- History of Science & Technology
- Technological Process - Invention, Innovation and Diffusion
- Technological Development and Progress
- Approaches to Technology
- Limits of Science & Technology

UNIT – II Technology and Social Change (12 Hours)

- Human-Technology Relationship
- Technology and Social Change
- Gender, Science and Technology
- Technology and Inequality
- Technology & Human Well-being
- Technology and Environmental Change

UNIT – III Philosophical and Ethical Implications of Technology (16 Hours)

- Philosophy of Technology - Humanities & Analytical Philosophies of Technology
- Technoethics: History and Development
- Current Issues: Cybercrimes, Privacy, Citizen Journalism
- Emerging Issues: Artificial Intelligence, Bioinformatics, Genetic Engineering, Nanotechnology,
- Virtual Worlds and Metaverse

UNIT – IV Alternate and Responsible Technologies (16 Hours)

- Technology and the Future of Humanity
- Technology for Sustainable Energy and Ecology
- Technology Policies
- Laws and Regulations

Suggestive readings (if any)

- Albert Borgmann. Technology and the Character of Contemporary Life. University of Chicago Press, 1984
- Andrew Feenberg. Questioning Technology. Routledge, 1999
- Bryan Bunch. The History of Science and Technology. Houghton Mifflin Company, 2004
- James Smith. Science and Technology for Development: Development Matters.

ZedBooks, 2009.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE– 3 (DSC-03): Qualitative and Quantitative Social Inquiry

Credit distribution, Eligibility and Prerequisites of the Course

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course (if any) |
|--|---------|-----------------------------------|----------|---------------------|----------------------|--------------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Qualitative and Quantitative Social Inquiry (DSC-03) | 4 | 3 | 1 | 0 | Class XII pass | NIL |

Learning Objectives

The Learning Objectives of this course are as follows:

- To introduce students to the fundamentals of social science inquiry.
- To acquaint students with knowledge on undergraduate research.

Learning Outcomes

The Learning Outcomes of this course are as follows:

- Students will be able to examine issues for research in Humanities & Social Sciences.

- Students will acquire basic skills of research.
- Students will acquire skills of scientific communication.

SYLLABUS OF DSC- 03

UNIT – I: Examining issues in Humanities & Social Sciences (12 Hours)

Identifying areas to examine; sources of idea generation; arriving at an idea; social examination and ethical concerns; drafting of research project/proposal.

UNIT – II: Using data in social inquiry (16 Hours)

Descriptive and inferential statistics; Quantitative and qualitative statistical variables; Introduction to spreadsheet; Graphical presentation of data through frequency curve, histogram, bar graphs and pie chart.

UNIT – III: Collecting and analysing data (16 Hours)

Identification of appropriate sample in social inquiry; Understanding the need of a proper questionnaire to collect primary data; Constructing a questionnaire; Analysing the responses of a questionnaire graphically.

UNIT – IV: Presenting findings (16 Hours)

Discussing quantitative and qualitative findings; Report writing; Communicating findings - poster presentation, academic writing, seminar presentation, popular writing.

Suggestive readings (if any)

1. *Statistics for the Social Science*, R. Mark Sirkin, Sage Publishing, 2005.
2. *Applied Statistics for Social and Management Science*, Abdul Qauder Miah, Springer, 2016.
3. *Statistics Without Tears: An Introduction for Non-Mathematicians*, Derek Rowntree, Penguin Mathematics, 2018.
4. Few, Stephen (2012). *Show Me the Numbers. Designing Tables and Graphs to Enlighten* (Second Edition). Analytics Press.
5. Kieran Healey (2018). *Data Visualization: A Practical Introduction*
6. Gary King, Robert Keohane and Sidney Verba (1994). *Designing Social Inquiry: Scientific Inference in Qualitative Research*.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

COMMON POOL OF GENERIC ELECTIVES (GE) COURSES

GENERIC ELECTIVES (GE-01A): Fundamentals of Cognition and Emotions

Credit distribution, Eligibility and Pre-requisites of the Course

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course |
|---|---------|-----------------------------------|----------|---------------------|----------------------|-----------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | |
| Fundamentals of Cognition and Emotions (GE-01A) | 4 | 3 | 1 | 0 | Class XII pass | Nil |

Learning Objectives

The Learning Objectives of this course are as follows:

- The course is aimed at giving students a basic understanding of human behaviour and factors determining individual differences.
- The course will introduce students to the impact of culture on human behaviour.
- The course is aimed at strengthening critical executive function skills in students.

Learning Outcomes

The Learning Outcomes of this course are as follows:

- Students will develop insight on how behaviour functions and what influences behaviour.
- Students will develop more effective problem solving behaviour and decision making skills.
- Students will be able to negotiate the complexities of emotional development.

SYLLABUS OF GE-01A

UNIT – I: What is Human Behaviour?

(16 Hours)

- Defining Human Behaviour; Behaviour and Cognition, Behaviour and Affect and Behaviour and Action

- Genes, Evolution and Behaviour
- Measuring Human Behaviour
- Complexities of defining Human Behaviour
- Consciousness and Conscious Experience

UNIT – II: Learning and Behaviour

(12 Hours)

- Theories of Learning
- Culture, Learning and Behaviour

UNIT – III: Language and Thinking

(16 Hours)

- Functions, Properties and Production of Language
- Why do we think? Problem Solving & Decision Making

UNIT – IV: Emotions and Behaviour

(16 Hours)

- Characteristics of emotions - biology, cognition, affect & action
- Theories of Emotions
- Assessing emotions
- Culture and emotions

Essential/recommended readings

- Baron, R. & Misra.G. (2013). Psychology. New Delhi: Pearson.
- Cacioppo (2013). Discovering Psychology: The Science Of Mind, 1st Edition.USA: Cengage Learning.
- Ciccarelli, S. K., & Meyer, G. E. (2010). Psychology: South Asian Edition. NewDelhi: Pearson Education.
- Passer, M.W. & Smith, R.E. (2010). Psychology: The science of mind and Behaviour. New Delhi: Tata McGraw-Hill.
- Kalat, J. W. (2011). Introduction to Psychology (9th Ed). USA: Cengage Learning

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

GENERIC ELECTIVES (GE-01B): Fundamentals of Tourism

Credit distribution, Eligibility and Pre-requisites of the Course

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course | Department offering the course |
|----------------------------------|---------|-----------------------------------|----------|---------------------|----------------------|-----------------------------|--------------------------------|
| | | Lecture | Tutorial | Practical/ Practice | | | |
| Fundamentals of Tourism (GE-01B) | 4 | 3 | 1 | 0 | Class XII Pass | Nil | Faculty of History of CIC |

Learning Objectives

The Learning Objectives of this course are as follows:

- To acquaint students with the basics of tourism industry.
- To expose students to the wealth of natural and cultural tourism resources of India.
- To encourage students to find innovative ways for the designing and promotion of sustainable tourism.

Learning Outcomes

The Learning Outcomes of this course are as follows:

- Students will be able to appreciate the relevance and role of tourism.
- Students will gain awareness of the rich natural and cultural wealth of India.
- Students will be skilled to design new tourism products to tap the untapped tourism capacity of the country.

SYLLABUS OF GE-01B

UNIT – I: Understanding Tourism

(16 Hours)

Definitions and Concept of Tourism; History and Development; Forms and Types of Tourism; Tourism Purposes and Motivations

UNIT – II: Tourism Resources and Products (16 Hours)
A's of Tourism; Characteristics and Types of Tourism Products; Natural and Cultural Tourism Products; Tourism Resources and Products of India

UNIT – III: Tourism Impacts (12 Hours)
Economic Impacts; Socio-cultural and Political Impacts; Environmental Impacts

UNIT – IV: Towards Sustainable Tourism Practices (16 Hours)
Principles and Dimensions of Sustainable Tourism; Tourism Planning and Policies; New Tourism Policy of India; Sustainable Entrepreneurship in Tourism

Practical component (if any) - NIL

Essential/recommended Readings

- Michael Luck, Peter Robinson, and Stephen L. J. Smith (2013). Tourism, CABI Publishing
- Howell, David W. (1989). Passport: An Introduction to the Travel and Tourism, Ohio.
- WTO (2011). Handbook on Tourism Product Development
- Chopra, Suhita. (1991). Tourism Development in India, Ashish Publishing House, New Delhi.
- Ministry of Tourism, Govt. of India. India Tourism Statistics. 2014

- Ratten, V. et.al. (2020), Tourism Innovation: Technology, Sustainability and Creativity, Routledge
- Eric Zeulow (2015). A History of Modern Tourism. Red Globe Press

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

GENERIC ELECTIVES (GE-01C): Communication: Concepts and Processes

Credit distribution, Eligibility and Pre-requisites of the Course

| Course title & Code | Credits | Credit distribution of the course | | | Eligibility criteria | Pre-requisite of the course | Department offering the Course |
|--|---------|-----------------------------------|----------|---------------------|----------------------|-----------------------------|---|
| | | Lecture | Tutorial | Practical/ Practice | | | |
| Communication: Concepts and Processes (GE-01C) | 4 | 3 | 1 | 0 | Class XII Pass | Nil | Faculty of Media & Communication of CIC |

Learning Objectives

The Learning Objectives of this course are as follows:

- To help students understand the relation between thought, language and communication.
- To encourage students to identify the construction and deconstruction of meaning in the process of communication.
- To motivate students to recognise the importance of different elements of a communication process.
- To let students discover and employ different forms of communication.

Learning Outcomes

The Learning Outcomes of this course are as follows:

- The students will be able to identify and appreciate the nature of the relationship between thought, language and communication.
- The students will be able to critically engage with the construction and deconstruction of meaning in the process of communication.
- The students will be able to apply different forms of communication in their everyday personal and professional context.

SYLLABUS OF GE-01C

UNIT – I: Thought and Language

(16 Hours)

Thought and cognitive process of language

Universal Grammar and basic structure of communication
Language as a system of signs

UNIT – II: Interpretation, Language and Communication

(12 Hours)

Human thought process and the construction of meaning
Deconstruction of meaning

Basic argumentation and its implications

UNIT – III: Elements and Process of Communication

(16 Hours)

Source, Message, Sender, Receiver, Context, Environment

Noise - Linguistic, Geographical, Psychological, Cultural, Ideological

UNIT – IV Forms of Communication

(16 Hours)

Verbal and Non-verbal communication

Intrapersonal communication

Interpersonal communication

Group communication

Mass Communication

Practical component (if any) - NIL

Essential/recommended readings -

NIL

Suggestive readings

- Vakyapadiya by K A Subramania Iyer
- Syntactic Structures by Noam Chomsky
- General Linguistics by Ferdinand de Saussure

- Levi Straus, Tristes Tropiques
- The death of the Author- Ronald Barth
- Of Grammatology by Jacques Derrida
- Media and Communication by Paddy Scannel
- Communication of Innovations: A Journey with Ev Rogers Edited by ArvindSinghal and James W Dearing
- Nonverbal Communication: An Applied Approach by Jonathan M Bowman
- Communication in Everyday Life: The Basic Course Edition With Public Speaking

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

8. Amendment to Appendix -II-A to the Ordinance V (2-A) of the Ordinances of the University vide EC Resolution 18-1-7 dated 18.08.2022 regarding Syllabi of 1st Semester of Department under Faculty of Music & Fine Arts

Add the following:

Syllabi of Semester-I of the Department of Music under Faculty of Music & Fine Arts based on Under Graduate Curriculum Framework -2022 to be implemented from the Academic Year 2022-23.

Faculty of Music & Fine Arts
B.A. (Hons.) Hindustani Music
Vocal/Instrumental (Sitar/Sarod/Guitar/Violin/Santoor)
Category-I

DSC – 1: GENERAL THEORY

| Course Title & Code | Credits | Credit distribution of the course | | | Eligibility Criteria | Pre-requisite of the course |
|-----------------------------|---------|--------------------------------------|---|---|-------------------------|--------------------------------|
| | | L | T | P | | |
| GENERAL THEORY (101) | 4 | 4 | 0 | 0 | Class XII Pass | Nil |

Learning Objectives:

- To initiate a relative beginner into the world of Hindustani music, where he is made aware of the rich cultural heritage of India, that Indian classical music is.
- To teach him the very basics of Indian music, such as sound, notes, scales, tempo, rhythm etc., so that his foundation can be made strong.
- To discuss in detail, the two notation systems of Hindustani music, that are essential for reading a composition.

Learning Outcomes:

- The student will come to know what the basic terminologies of Indian music are, which will help him in the proper understanding of not just Hindustani music, but also Indian music as a whole. Having understood the basic concepts like Laya (tempo), Tala (rhythmic cycle), Alap (tonal elaborations), the student will be on course to becoming a performing artiste in Hindustani music.
- The student will develop the ability to read and write the notations of compositions according to a well-defined notion system, which in turn, will help him in learning new compositions by various composers of Hindustani music.
- He/she will grasp the various theoretical aspects of the prescribed ragas, like how it arises, what are the general grammatical rules that govern the ragas in this course, etc.
- He/she will come to understand the concept of Tala and the use of various talas in Hindustani music, especially ragas.

Syllabus:

Unit - I (12 Hours)

- Sangeet
- Nada and its properties
- Shruti
- Svara
- Saptak
- Raga
- Vadi, Samvadi, Anuvadi, Vivadi
- Thata
- Jati

Unit - II (8 Hours)

The concept of Alap in a Hindustani raga -

- In vocal forms (Dhrupad-Dhamar and Khayal)
- In instrumental music

Unit - III (8 Hours)

- Tala - Theka, Sam, Tali, Khali, Vibhag, Matra

- Laya – Vilambit, Madhya & Drut

Unit - IV (8 Hours)

- Varna
- Alankar
- Tan
- Gamak

Unit - V (8 Hours)

Knowledge of the notation systems of the following musicians –

- Pt. Vishnu Narayan Bhatkhande
- Pt. Vishnu Digambar Paluskar

Unit - VI (8 Hours)

- Vibration
- Forced Vibration
- Free Vibration
- Equal tempered scale
- Just Intonation

Unit - VII (4 Hours)

- Study of the following talas in detail – Teentala, Ektala & Dadra
- Study of the application of talas in musical forms
- Ability to write the notation of the talas in dugun, tigung and chaugun

Unit - VIII (4 Hours)

- Study of the ragas of this semester – Bhairav, Alhaiya Bilawal, Yaman & Bhupali
- Comparative study of the ragas with each other
- Ability to write the notation of compositions in prescribed ragas

Suggestive readings:

- Paranjape, S.S. (1964) Bhartiya Sangeet ka Itihas, Varanasi, U.P., Chaukhamba Surbharti Prakashan

- Paranjape, S.S. (1972) Sangeet Bodh, Bhopal, M.P., Madhya Pradesh Hindi Granth Academy
- Bhathkande, V.N. (1975) Bhathkande Sangeet Shastra, part 1, Hathras, UP, Sangeet Karyalaya

DSC – 2: Stage Performance

| Course Title & Code | Credits | Credit distribution of the course | | | Eligibility Criteria | Pre-requisite of the course |
|----------------------------|---------|-----------------------------------|---|---|----------------------|-----------------------------|
| | | L | T | P | | |
| STAGE PERFORMANCE (102) | 4 | 0 | 0 | 4 | Class XII Pass | Nil |

Learning Objectives:

- To teach the student the fundamentals of singing and playing, such as voice production, holding of the Sitar and the correct placement of the hands on the instrument, the right posture for sitting, breathing exercises to enhance lung capacity for singing etc.
- To demonstrate tonal exercises, such as *palta-s* and *alankar-s*, vital for both singing and playing.
- To initiate his training in the realm of performance, with the most basic of all ragas, like Yaman and Bhairav.

Learning Outcomes:

- The student will become well-versed with the techniques of singing or playing, as the case may be.

- The student will be able to achieve dexterity of the voice (singing) and hand (playing), through regular practice of the tonal exercises at home.
- The students will know how to tune their respective instruments – Tanpura for vocal students and Sitar, Sarod etc. for instrumental students.
- Having learnt the Notation system in the Theory, the student will be able to read and learn new compositions in the prescribed ragas.
- He will grasp the various grammatical aspects of the prescribed ragas, like how they arise, what are the respective rules that govern these ragas, how do the notes move in the ragas, what are the performing times of the ragas etc.
- He will learn the art of singing or playing, especially with regard to having the Tabla as an accompanying instrument.
- He will possess a fairly good idea of how a raga is to be performed after learning the basic ragas.

Syllabus:

Prescribed Ragas:

1. Bhairav
2. Alhaiya Bilawal
3. Yaman
4. Bhupali

Unit I – Vocal Music (60 Hours)

- A detailed performance of Vilambit and Drut Khayal with gayaki to be presented in any one raga
- Presentation of one semi classical, devotional or folk song

Unit II – Instrumental Music (60 Hours)

- A detailed performance of Maseetkhani and Razakhani Gats with elaboration to be presented in any one raga
- Presentation of a dhun, devotional or light music composition

Note: Students of Vocal and Instrumental music will have to prepare according to the requirements of their respective Units.

Suggestive readings:

- Bhatkhande, V.N. (2000) Kramik Pustak Malika, Part-I, Hathras, U.P., Sangeet Karyalaya
- Bhatkhande, V.N. (2000) Kramik Pustak Malika, Part-II, Hathras, U.P., Sangeet Karyalaya

- Patwardhan, V.R., (2001) Raga Vigyan, Part-I, Pune, MH, Dr. Madhusudhan Patwardhan
- Patwardhan, V.R., (1999) Raga Vigyan, Part-II, Pune, MH Dr. Madhusudhan Patwardhan
- Patwardhan, V.R., (1967) Raag Vigyan, Part-III, Pune, MH, Dr. Madhusudhan Patwardhan
- Mishra, Lalmani, (1979) Tantrinada, Kanpur, U.P. Sahitya Ratnalaya
- Aggarwal, V.K. and Nagpal, Alka (2004) Sitar and its Compositions, Part-I-II, Delhi, Sanjay Prakashan
- Mahajan, Anupam (2003) Compositions in Instrumental Music (Traditional and New Creation), Delhi, Sanjay Prakashan

DSC – 3: Practical Assessment

| Course Title & Code | Credits | Credit distribution of the course | | | Eligibility Criteria | Pre-requisite of the course |
|--------------------------------------|---------|--------------------------------------|---|---|-------------------------|--------------------------------|
| | | L | T | P | | |
| PRACTICAL ASSESSMENT (103) | 4 | 0 | 0 | 4 | Class XII Pass | Nil |

*Practical assessment is a viva paper.

Learning Objectives:

- To assess the understanding of the student regarding the grammatical rules of the prescribed ragas
- To make an assessment of the student regarding his ability to perform different compositions in different talas
- To assess the student on his ability to sing Khayal, Dhrupad and Dhamar in different ragas

Learning Outcome:

- The student shall be able to demonstrate the various aspects of a raga with regard to its various rules and regulations
- The student shall be able to sing Khayal, Dhrupad and Dhamar in different ragas
- The student shall be able to perform a raga in different talas
- The student shall be able to demonstrate his ability to tune his instrument

Syllabus:

Prescribed Ragas:

1. Bhairav

2. Alhaiya Bilawal
3. Yaman
4. Bhupali

Unit I – Vocal Music (60 Hours)

- Vilambit and Drut Khayal with gayaki in all the prescribed ragas mentioned above
- Dhrupad-Dhamar or Sadra composition in each of the prescribed ragas with Alap, Layakari & Upaj
- Knowledge and demonstration of the following talas - Teentala, Ektala & Dadra
- Basic knowledge of Tanpura and its tuning

Unit II – Instrumental Music (60 Hours)

- Maseetkhani and Razakhani gat with elaboration in all the ragas prescribed above
- Knowledge and demonstration of the following talas - Teentala, Ektala & Dadra
- Basic knowledge of the student's respective instrument and its tuning

Note: Students of Vocal and Instrumental music will have to prepare according to the requirements of their respective Units.

Suggestive readings:

- Bhatkhande, V.N. (2000) Kramik Pustak Malika, Part-I, Hathras, U.P., Sangeet Karyalaya
- Bhatkhande, V.N. (2000) Kramik Pustak Malika, Part-II, Hathras, U.P., Sangeet Karyalaya
- Patwardhan, V.R., (2001) Raga Vigyan, Part-I, Pune, MH, Dr. Madhusudhan Patwardhan
- Patwardhan, V.R., (1999) Raga Vigyan, Part-II, Pune, MH Dr. Madhusudhan Patwardhan
- Patwardhan, V.R., (1967) Raag Vigyan, Part-III, Pune, MH, Dr. Madhusudhan Patwardhan
- Mishra, Lalmani, (1979) Tantrinada, Kanpur, U.P. Sahitya Ratnalaya
- Aggarwal, V.K. and Nagpal, Alka (2004) Sitar and its Compositions, Part-I-II, Delhi, Sanjay Prakashan
- Mahajan, Anupam (2003) Compositions in Instrumental Music (Traditional and New Creation), Delhi, Sanjay Prakashan

**B. A. (Hons.) Music – Karnatak Music
(Vocal & Instrumental- Veena/Violin)**

Category-I

DSC – 1: GENERAL THEORY

| Course Title & Code | Credits | Credit distribution of the course | | | Eligibility Criteria | Pre-requisite of the course |
|-----------------------------|---------|--------------------------------------|---|---|-------------------------|--------------------------------|
| | | L | T | P | | |
| GENERAL THEORY (101) | 4 | 4 | 0 | 0 | Class XII Pass | Nil |

Learning Objectives:

- Education plays a significant role in building the nation. There are quite a large number of highly regarded educational institutions, engaged in imparting education in different fields in our country. Majority of them have entered recently into semester system to match with international educational standards. However, our present education system is churning out youth, who have to compete locally, regionally, nationally as well as globally. The present alarming situation necessitates transformation and/or redesigning of system, not only by introducing innovations but developing “learner-centric approach. They are focused on the overall development of the student both academically and professionally.
- The present under-graduate course in Karnatak Music is designed in such a way that, after going through the entire course of study, candidates will have a consolidated knowledge in the subject that takes them ahead further to upgrade their knowledge.
- The holistic approach in tutoring makes them motivated and proficient in both practice as well as theory of Karnatak Music.

Learning Outcomes:

- Develop the ability to define some musical concepts, describe the characteristic features of ragas,
- Gain knowledge about the rudiments of Western Classical Music and contributions of prominent composers of Karnatak music.
- Understanding of the classification of musical instruments, constructions and its playing techniques.

Syllabus:

Unit I (8 Hours)

Definition and brief explanation of

- Nada – Ahata and Anahata Nada, Varieties in Ahata Nada
- Sruti – Nyuna, Pramana & Purna sruti
- Swara – Prakriti and Vikritiswaras, Swarasthanas,
- Vadi, Samvadi, Anuvadi, Vivadi
- Tala, Laya, Kaalapramana

Unit II (12 Hours)

Raga Lakshanas of prescribed ragas.

- Sankarabharanam,
- Mohanam
- Bilahari
- Arabhi
- Pantuvarali
- Kalyani
- Kedaragoula
- Vasantha
- Anandabhairavi

Unit III (8 Hours)

Raga classification –

- Janaka, Janya system,
- Varja & Vakra,
- Bhashanga & Upanga,
- Panchamantya, Dhaivatantya, & Nishaadantya

Unit IV (8 Hours)

- Scheme of 35 talas, Chapu tala and It's varieties, Shadangas

Unit V (4 Hours)

- Introduction to notation,
- Melody
- Polyphony

- Harmony

Unit VI (12 Hours)

- Life and contribution of Musical Trinity

Unit VII (8 Hours)

- Classification of musical instruments in general
- Construction, tuning and playing technique of Tambura/Veena/Violin.

Suggestive readings:

- Sambamoorthy, P. Prof. (Vol 3, 1971), A dictionary of South Indian Music, Madras, Indian Music Publishing House

Learning Objectives:

- The main focus of the course is to develop an aptitude towards the classical subject opted and inculcate the abilities to maintain the classicism in the art along with well approved principles.

Learning Outcomes:

- Students will develop the ability to perform simple Varnams in two degrees of speed and compositions of Prominent composers in the prescribed ragas
- They will be focused on the principles of performance

Syllabus:

Prescribed Ragas,

- Sankarabharanam,
- Mohanam
- Bilahari
- Arabhi
- Pantuvarali
- Kalyani
- Kedaragoula
- Vasantha
- Anandabhairavi

Unit I (32 Hours)

- Simple Varnams in 2 degrees of speed

Unit II (88 Hours)

- 3 kritis of Tyagaraja
- 2 Kritis of Muthuswamy Dikshitar
- 1 kriti each of
 - Shyama shastri
 - Subbaraya Shastri
 - Swati Tirunal
 - Patnam Subramanya Iyer.

Suggestive readings:

- PanchapakesaIyer, A.S. (2002), Ganamrutha Varna Malika, Chennai, Karnatic Music Book Centre • Kriti Mani Malai - T K Govinda Rao.

**B.A. (Hons.) Music - Percussion Music
(Tabla/Pakhawaj)**

DSC – 1: GENERAL TERMINOLOGY

| Course Title & Code | Credits | Credit distribution of the course | | | Eligibility Criteria | Pre-requisite of the course |
|-------------------------------------|---------|--------------------------------------|---|---|----------------------|--------------------------------|
| | | L | T | P | | |
| GENERAL TERMINOLOGY (101) | 4 | 4 | 0 | 0 | Class XII Pass | Nil |

Learning Objectives:

The main focus of the course is to establish a better understanding of the Percussion Music-Tabla/Pakhawaj to the students of the B.A. (Hons.). Therefore, the course is more practically inclined along with relevant theory for achieving better understanding. This helps the students acquire theoretical and practical skills and idea about the chronological sequence of Tabla/Pakhawaj Playing, thus giving them a holistic approach in Percussion Music-Tabla/Pakhawaj. A project work helps gaining in-depth study on the chosen topic. This enhances the student's skill to face the challenges at his work place too.

Learning Outcomes:

- The student study about the general aspects of Percussion music
- Student understands the basic terminologies of Indian music
- Student learns to write the practical compositions according to the Notation system
- Student studies about the theoretical aspects of Talas

Syllabus:

Unit – I (8 Hours)

- Sangeet
- Laya
- Matra
- Tali
- Khali
- Vibhag
- Sam
- Avartan

- Tala

Unit – II (12 Hours)

- Peshkar
- Kayada
- Palta
- Rela
- Tihai
- Uthan
- Chakradar
- Farmaishi
- Paran
- Gat
- Dupalli
- Tripalli
- Choupalli
- Khali - Bhari ki Gat

Unit – III (8 Hours)

- Naad
- Swar
- Shruti
- Saptak
- Raga
- Alankar
- Andolan
- Meend
- Ghaseet
- Krintan

Unit – IV (8 Hours)

- Pitch
- Intensity
- Timbre
- Vibration
- Frequency

Unit – V (8 Hours)

- Classification of Instruments
- Avanaddha vadya
- Brief structural knowledge of Tabla & Pakhawaj.

Unit – VI (12 Hours)

Brief introduction of following instruments:

- Mridangam
- Dholak
- Khanjari
- Nakkara
- Rudra Veena
- Tanpura
- Sitar
- Sarod
- Sarangi
- Bansuri
- Sahnai.

Unit – VII (4 Hours)

- Study of V.N. Bhathkhande Tala Notation System.
- Theory book prepared for prescribed unit.

Suggested readings:

- Mishra, Pt. Chhote Lal (2004) Taal Prasoon, Kanishka Publishers, New Delhi
- Kumar, Dr. Ajay, Banaras Gharane Ke Pravartak Pandit Ramshai ji ki Tabla Vadan Parampra (2022), Kanishka Publishers, Delhi
- Shivpuji, Gurunath (1988) Laya Shastra, M.P. Hindi Granth Academy, Bhopal
- Pathak, Jadish Narayan (1967) Sangeet Shastra Praveen, R. Pathak, Allahabad
- Shrivastava, Girish Chandra (1999) Taal Parichay, Bhag - I, Rubi Prakashan, Allahabad
- Mishra, Dr. Lalmani, (2002) Bhartiye Sangeet Vadya, Bhartiye Gyanpeeth, New Delhi
- Kasliwal Suneera (2001) Classical Musical Instruments, Rupa & Co. New Delhi

DSC – 2: STAGE PERFORMANCE

| Course Title & Code | Credits | Credit distribution of the course | | | Eligibility Criteria | Pre-requisite of the course |
|----------------------------|---------|--------------------------------------|---|---|----------------------|--------------------------------|
| | | L | T | P | | |
| STAGE PERFORMANCE (102) | 4 | 0 | 0 | 4 | Class XII Pass | Nil |

Learning Objectives:

- To teach the student the fundamentals of Tabla/Pakhawaj playing, such as voice production, correct holding and placement of hands on the instrument.
- To demonstrate systematically the solo playing order of Tabla/Pakhawaj.
- To initiate his training in the realm of performance, with the most basic of all talas like Teentaal, Jhaptaal, Dhamar and Chautala.

Learning Outcomes:

- The student is able to give a practical demonstration of the prescribed Talas.
- Student is able to demonstrate various aspects of Talas and their differentiation.

Syllabus:**TABLA****Study of Prescribed Talas : Unit-I (16 Hours)**

- Teentala
- Jhaptala
- Ektaala
- Chautala
- Keharwa
- Dadra

Unit – I (40 Hours)

- Solo performance of 10 minutes in Teentala with following:
- Uthan/ Peshkar
- Kayada
- Baant
- Chakradar Tukra
- Paran

Unit – II (40 Hours)

- One Chakradar Uthan
- Two advance Kayada with four Paltas and Tihai in Teentala
- One Baant with four Paltas and Tihai in Teentala.
- Two Sadharan Tukra,
- Two Chakradar Tukra
- One Paran in Teentala.

Unit – III (8 Hours)

- Variation of Theka in Teentala.

Unit – IV (16 Hours)

- Basic Knowledge of tuning of the Instrument (Tabla).
- Notation book to be prepared for compositions writing.

PAKHAWAJ

Study of Prescribed Talas : Unit-1A (16 Hours):

- Chautala
- Dhamar
- Sooltal
- Tevra
- Ektala
- Jhaptala

Unit – IIA (40 Hours)

- Solo performance of 10 minutes in Chautala with following:
- Theke ka Prakar
- Stuti Paran
- Rela
- Paran
- Chakradar
- Tihai

Unit – IIIA (8 Hours)

- Knowledge of different Uthan and Tihai (1,3,4,7,9,11).

Unit – IVA (8 Hours)

- Varieties of Theka

Unit – VA (24 Hours)

- Prastar of Madhyalaya with four variations
- Two Sadharan Paran
- One Chakradar Paran
- One Ganesh Stuti Paran

Unit – VIA (24 Hours)

- Knowledge of playing Sadharan Paran in Dhamar & Sooltala with Padhant (Tali-Khali).
- Basic knowledge of tuning of the Instrument (Pakhawaj).
- Notation book to be prepared for compositions writing.

Note: Students of B.A. (Hons.) Percussion Music have to prepare according to the requirements of their respective Units.

Suggestive readings:

- Mishra, Pt. Chhote Lal (2004) Taal Prasoon, Kanishka Publisher, New Delhi
- Kumar, Dr. Ajay, Banaras Gharane Ke Pravartak Pandit Ramshai ji ki Tabla Vadan Parampra (2022), Kanishka Publishers, Delhi
- Das, Purushottam, Mridang Vadan, Sangeet Natak Akademi
- Saxena, S.K. (1994) Indian Concept of Rhythm, Kanishka Publisher, New Delhi
- Patwardhan, Datatrye Vashudev, (1955) Mridanga Tabla Vadan Paddhati, Vinayek Rao Patwardhan, Pune
- Shrivastava Girish Chandra, (2009) Taal Parichaye Bhaag II, Rubi Parkashan, Allahabad
- Saxena, Sudhir Kumar (2006) The Art of Tabla Rhythm, Sangeet Natak Academy, New Delhi

DSC – 3: PRACTICAL ASSESSMENT

| Course Title & Code | Credits | Credit distribution of the course | | | Eligibility Criteria | Pre-requisite of the course |
|-------------------------------|---------|--------------------------------------|---|---|----------------------|--------------------------------|
| | | L | T | P | | |
| PRACTICAL ASSESSMENT (103) | 4 | 0 | 0 | 4 | Class XII Pass | Nil |

*Practical assessment is a viva paper.

Learning Objectives:

- Enabling the students to face the technical and critical questions both in practical and theoretical aspects of Tabla and Pakhawaj.
- Most importantly the accompanying aspect of the instrument while accompanying with Vocal and Instrumental compositions is rendered to the students.

Learning Outcomes:

- The student is able to demonstrate various aspects of Talas.
- Student is also able to differentiate between similar Talas, thereby making a comparative analysis.

Contents

TABLA

Study of Prescribed Talas : Unit-I (8 Hours)

- Teentala
- Jhaptala
- Ektala
- Chautala
- Keharwa
- Dadra

Unit – II (32 Hours)

Ability to perform solo recital in Teentala with the following:

- Uthan / Peshkar
- Kayada
- Baant
- Chakradar, Tukra & Paran

Unit – III (16 Hours)

- Ability to do padhant in compositions with Tali-Khali.

Unit – IV (16 Hours)

- To demonstrate the Theka and playing knowledge of prescribed Talas with Thah, Dugun, & Chaugun laya.

Unit –V (24 Hours)

- Ability to accompany with Bhajan.

Unit – VI (24 Hours)

- Basic knowledge of Tabla tuning.
- Notation book to be prepared for compositions writing.

PAKHAWAJ

Study of Prescribed Talas : Unit-IA (8 Hours)

- Chautala
- Dhamar
- Sooltal
- Tevra
- Ektala
- Jhaptala
- Rupak
- Keherwa
- Dadra

Unit – IIA (32 Hours)

- Ability to perform solo recital in Chautala with various compositions.

Unit – IIIA (40 Hours)

- Ability to Padhant compositions in Tali Khali.
- Demonstrate the Theka and playing knowledge of prescribed Talas in Thah, Dugun, & Chaugun laya.

Unit – IVA (40 Hours)

- Ability to accompany with Bhajan.
- Basic knowledge of Pakhawaj tuning.
- Notation book to be prepared for compositions writing.

Note: Students of Percussion Music have to prepare according to the requirements of their respective Units.

Suggestive readings:

- Mishra, Pt. Chhote Lal (2004) Taal Prasoon, Kanishka Publisher, New Delhi

B.A. (PROG.) MUSIC – HINDUSTANI MUSIC (VOCAL/INSTRUMENTAL)

DSC-1(A/B): Fundamentals of Indian Music (Non-major)

| Course Title& Code | Credits | Credit distributions of the course | | | Eligibility Criteria | Prerequisite of the course (if any) |
|---|---------|------------------------------------|----------|-----------|----------------------|-------------------------------------|
| | | Lecture | Tutorial | Practical | | |
| FUNDAMENTALS OF INDIAN MUSIC DSC-1 A | 4 | 2 | 0 | 2 | Class XII Pass | Nil |

SEMESTER-1

Theory: Component-1 Course: DSC 1 (A/B)

Paper Name: Fundamentals of Indian Music

Credits:2

Learning Objectives

- The foremost emphasis of the course is on establishing better understanding of the different aspects of Hindustani music.
- Basic knowledge of the instruments – Tanpura/ Sitar.
- Biographies of the musicians, composers and musicologists will help students to know about the great musicians.
- Theoretical knowledge of Ragas and Talas.

Learning Outcomes (LO)

- The student will learn and understand the definitions of the musical phrases and will be able to effectively communicate the same.
- The student will gain qualitative knowledge on the study of important melodic terminology, and will be able to successfully display the same.
- The students will be able to attain in depth understanding of musical instruments such as the Tanpura and Sitar and skillfully illustrate their various section.
- The student will be able to acquire cognition about the biographies of renowned musicians, thereby deriving influence from their musical pursuits.
- The student will be able to illustrate the prescribed Ragas and Talas which will further illuminate their Practical demonstration.

Contents:

Unit I

Sangeet, Shruti , Swara and its types- Shuddhaswara, vikritswara, chalswara, achalswara, Vadi, Samvadi, Anuvadi, VivadiSwar. **(8 Hours)**

Unit II –

Saptak , Laya- vilambit Madhya & drutlaya, Nada – Ahata and Anahata Nada- tarta –teevrata - jati. **(4 Hours)**

Unit III - Raga and its Jati- audav-shadav- sampoorana, Aroh, Avroh, Pakad. **(4 Hours)**

Unit IV - Tala: Matra,Tali, Khali, Vibhag. **(2 Hours)**

Unit V - Basic knowledge of the following instruments with diagrams and labelling: Tanpura for Vocal students, Sitar for Instrumental students. **(2 Hours)**

Unit VI –

Biographies & contributionsof the following musicians: Amir Khusrau, Swami Haridas, Tansen, Purandardas, Ameer Khan, Maseet Khan, Raza Khan. **(6 Hours)**

Unit VII - Study of prescribed Ragas: **(2 Hours)**

- Alhaiya Bilawal
- Khamaj
- Bhairav

Unit VIII - Study of prescribed Talas with Dugun : **(4 Hours)**

- Teentala
- Dadra
- Kaharwa
- Jhaptal

Practical : Component -60 Hours

Course : DSC 1(A) Practical : Performance & Viva –Voce

Credit : 2

Learning Objectives:

Ability to play/sing Alankar.

Performance based on Raga and Tala in prescribed syllabus. Learn different techniques to sing and play.

Learn to play basic Harmonium.

Learning Outcomes (LO):

The students will gain proficiency in learning the five rudimentary Alankars and will be able to adeptly demonstrate them, thereby attaining a firm grasp on the accuracy of Swaras.

The student will be able to display their mastery over Swarmalika in one of the prescribed Ragas, which becomes the fulcrum to learning the intrinsic nature of the Raga.

The student will be able to skillfully exhibit DrutKhayals in the two specified Ragas. This becomes a preamble to acquiring performance skills.

The student will be able to achieve deciphering of the twelve musical notes by the ear, giving them a resilient hold on the Swaras.

The student will be able to recite the Thekas with their Dugun and Tali-Khali in the given Talas, achieving a stable foothold on rhythm.

The student will be able to obtain understanding of the fundamental knowledge of playing the Tanpura and Harmonium which becomes a core for further learning and self reliance.

The practical file for internal assessment will be presented with

Illustrations of Ragas, notations of traditional compositions, Talas with Dugun. This also becomes a valuable note file for references.

Contents:

Prescribed Ragas :

- **AlhaiyaBilawal**
- **Khamaj**
- **Bhairav**

Vocal Music: (30 Hours)

Five Alankars.

Lakshangeet/Swarmalika in any one of the Ragas.

DrutKhayal in any two of the prescribed Ragas.

Identifying Shuddha and VikritSwaras when sung or played .

Ability to recite the following Thekas and their Dugun with Tali& Khali-

- Teentala
- Jhaptala
- Kaharwa
- Dadra

Basic knowledge of playing Tanpura.

Practical file with details of Ragas

Notations of compositions .

Talas with Dugun.

Instrumental Music: (30 Hours)

Five Alankars.

Razakhani gat in any two of the prescribed Ragas.

Basic technique of Jhala Playing.

Identifying Shuddha and Vikrit Swaras when sung or played .

Ability to recite the following Thekas and their Dugun with Tali& Khali-

- Teentala
- Jhaptaala
- Kaharwa
- Dadra

Practical file with details of Ragas.

Notations of compositions.

Talas with Dugun.

SEMESTER-1

GE-1

Practical: Performance & Viva –Voce
(60 Hours)
Credit:2

Learning Objective

- The practical course design is such that the student gains the fundamental expertise in-decoding the 12 notes of the Hindustani Classical Music system, along with singing and playing of five basic Alankars which become a swivel for mastering tunefulness.
- A firm hold on rhythm is achieved by practice of keeping beats of recommended Talas on the palm in continuous rounds.
- Students are introduced to singing/playing of two elementary yet significant Ragas Alhaiya Bilawal and Bhupali, which are intended to further enrich their propensities as musicians while demonstrating a seven note Raga and five note one.
- The purpose of guided listening and discussions is to train the students by the ear, enabling them in deciphering various musical notes and Ragas by listening.

Learning Outcome(LO)

- Practical knowledge of the Swar and Alankars sets the foundation of Indian music among the students.
- Verbal demonstration of Talas enables them to understand rhythmic cycles.
- Guided listening with discussion of instrumental music/semi-classical forms increase and encourage interest among the students.

Content:

Prescribed Ragas:

- Alhaiya Bilawal
- Bhoopali

Vocal Music:

- Basic knowledge of Swaras (Shuddha and Vikrit).
 Five Alankaras with bol patterns.
 Aaroha, Avaroha and Pakad of Raga Alhaiya Bilawal & Bhoopali with a Lakshana Geet or a drut khayal / Razakhani Gat.
- Ability to keep the theka of following talas by hand beats - Tala-Teentaala, Jhaptaal & Kaharwa with Thaah and dugun.

- Guided listening & discussion of compositions /dhun based on raga.

Instrumental Music:

- Basic knowledge of Swaras (Shuddha and Vikrit).
Five Alankaras with bol patterns.
Aaroha, Avaroha and Pakad of Raga Alhaiya Bilawal & Bhoopali with a Lakshana Geet or a drut khayal / Razakhani Gat.
- Ability to keep the theka of following talas by hand beats - Tala-Teentaala, Jhaptaal & Kaharwa with Thaah and dugun.
- Guided listening & discussion of compositions /dhun based on raga.

Note: The candidate opting the course will start from Level One.
