DISCIPLINE SPECIFIC ELECTIVE (DSE) COURSE: Indian Philosophy

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Texts of Indian Philosophy DSE 9	4	3	1	Nil	12th Passed	"Introduction to Indian Philosophy" DSC 3

Learning Objectives

- This course will introduce students to Indian knowledge systems and values. Stress will be laid in making the student understand notions like Rt*a, Satya and dharma*
- This course will make students aware of their intellectual heritage
- This course will give the necessary instruction so that a student can go and further research in Indian thought and culture

Learning Outcomes

- The students will learn about an aspect of Indian intellectual and cultural heritage
- The students will understand the richness of Indian intellectual heritage and will have a better idea of the basis of Indian thought and culture
- The student will learn to analyze the ancient Indian texts from a scholarly angle and will appreciate their meanings in a better and informed way

UNIT 1 Vedic Values **(12 Hours, 4 Weeks)**

1. Prithvi Sutaka (Rg Veda) hyms 47 to 60
2. The concept of Rt*a, Satya and dharma.*

Essential/Recommended Readings:

1. Pannikar,R. (2001), The Vedic Experience, Mantramanjari: An anthology of the Vedas for modern man and contemporary Celebrations.MotilalBanarsidass Publishers,pp.120-122; 126-129

2. Wezler, A., 'Dharma in the Veda and Dharmasastras', DHARMA(ed. Patrick Olivelle), MLBD, 2009, pg.207 – 231.

UNIT 2. Basic Characteristics of Upaniṣad **(12 Hours, 4 Weeks)**

1. What are the Upaniṣads and what do they mean
2. Characteristics of the Upaniṣads

Essential/Recommended Readings

Swami Krishnananda, Lessons on the Upanishads , The Divine Life Society, pp.06-59.
www.swami-krishnananda.org
Radhakrishnan, S. (1951) The Principal Upaniṣad, Harper Collins, pp 15-26.

UNIT 3 Kena Upaniṣad **(9 Hours, 3 Weeks)**

1. Poetry in Kena Upaniṣad
2. Interpretation of the Poetry

Essential/Recommended Readings

Chapter 1 and 2 (poetry) of Kena Upaniṣad

UNIT 4. Kena Upaniṣad **(12 Hours, 4 Weeks)**

1. Prose in Kena Upaniṣad
2. Interpretation of Prose

Recommended Readings

Chapter 3 and 4 (Prose) of Kena Upaniṣad

Suggestive Readings

- Kane, P.V. (1973). History of Dharmaśāstra, Vol.III,2nd ed. Poona: Bhandarkar Oriental Research Institute.
- Radhakrishnan, S. (1951) The Principal Upaniṣad, Harper Collins, pp579-592.

DISCIPLINE SPECIFIC ELECTIVE (DSE 10): Indian Theories of Consciousness

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Indian Theories of Consciousness DSE 10	4	3	1	Nil	12th Passed	"Introduction to Indian Philosophy" DSC 3

Learning Objectives

- The aim is to make students familiar with and develop a clear understanding of the major concepts such as the nature of the self (*Atman/Brahman*), *paravidya*and*aparavidya*, No-soul theory, karma and rebirth, etc. within spectrum of Indian theories of consciousness.
- To develop a deeper understanding of the nature of the self which ultimately reveals one's own existence or being.
- The reading of original texts help students to know the fundamental tenants of different schools of Classical Indian thought.
- Exposure to various methodologies, interpretations used in the writing style of ancient Indian philosophers..

Learning outcomes

- Students will have knowledge of the Indian Theories of Consciousness given in *Mandukyopanishad,Bhagavadgita, Buddhism, Charvaka, Nyaya and Advaita Vedanta.*
- In all four units students will learn to develop scientific, logical and rational inquiry for understanding the Indian Philosophical systems. Students will able to do a comparative analysis of all systems which will further enhance their debating skills.
- This paper helps to enhance students' ratiocinatively abilities and writing skills which are essential for establishing logical conclusions in all aspects of human existence.

UNIT-I Introduction (12 Hours, 4 weeks)

3. Consciousness in Mandukya Upanishad
4. Consciousness in Bhagavad Gita

Essential/Recommended Readings

Mandukyopanishad., Tr. and Annoted by Swami Nikhilananda, Advaita Ashram, Calcutta, 2000, PP. 7-85.
Bhagavadgītā: Chapter II, Verses 11-30; TheBhagavadgītā (Text and Translation) by R. C. Zahner, Oxford University Press, New York, 1973.

UNIT-II Buudhist Understanding of Consciousness (9 Hours, 3 Weeks)

Essential/Recommended Readings

1. King Milinda's Questions

The Questions of King Milinda, Book II, Translated from Pali by T. W. Rhys David, MotilalBanarsidas, Delhi, 1965, pp 40-99.

UNIT-III Nyaya theory of Consciousness (12 Hours, 4 Weeks)

1. Jayanta Bhatta's Exposition

Essential/Recommended Readings

Nyāyamañjarī of Jayanta Bhaṭṭa, Dehātmavāda (Śarīrātmavādī-cārvāka-mata),Indian Council of Philosophical Research, New Delhi, 1990, pp 109-128

UNIT-IV Advaita Vedanta on Consciousness (12 Hours, 4 Weeks)

1. Sankara's introduction to the Brahmasutra

Sankara's introduction to the Brahmasutra called *Upodghata* , pp.1-4, Brahmasutrasamkarabhashya (edited by Vasudeva Sharma) Published by TukaramJavaji,NimayaSagara,Bombay.

Category III

BA (Prog.) with Philosophy as Minor

DISCIPLINE SPECIFIC CORE COURSE (DSC 2) : Contemporary Indian Philosophy

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Analytic Philosophy DSC 6	4	3	1	NIL	12th Passed	None

Learning Objective

- The course aims at exposing students to Analytic Philosophy, a school of thought that has held a dominant position in Western Philosophy since the beginning of the twentieth century.
- As a philosophical tradition it is characterized by an emphasis on, scientific rigor, argumentative precision and logical clarity in the development of thought and concept.
- Its familiar tools are formal logic, conceptual analysis, and, mathematics.

Learning Outcomes

- The students will develop acquaintance with one of the most vital streams of philosophy in contemporary times
- The students will learn to analyze topics in epistemology, metaphysics, philosophy of mind and language through the methods and techniques of analytic philosophy

Unit 1 Metaphysics **(12 Hours, 4 Weeks)**

1. Fundamental Problems
2. Appearance and Reality
3. The Reality of Matter

Essential/Recommended Reading

1) The Problems of Philosophy - Bertrand Russell (Chapters 1, 2, and 3) in The Problems of Philosophy, OUP, 1980 reprint

Unit 2 Epistemology **(12 Hours, 4 Weeks)**

1. Proof of an external world
2. Knowledge by Acquaintance
3. Knowledge by Description

Essential/Recommended Reading

1) Proof of an External World - G. E. Moore, in G. E. Moore Selected Writings, Thomas Baldwin, ed., Routledge, 1993
2) Knowledge by Acquaintance & Knowledge by Description - Bertrand Russell, The Problems of Philosophy, Chapter 5

Unit 3 Philosophy of Mind **(12 Hours, 4 Weeks)**

1. Can a computer think?
2. Subjective experience

Essential/Recommended Readings

1) Can Computers Think? - John R. Searle, Analytic Philosophy: An Anthology, A. P. Martinich& David Sosa, eds., Wiley Blackwell , 4th edn., 2009, Part IV, Chapter 27
2) What is it Like to be a Bat? - Thomas Nagel, Analytic Philosophy: An Anthology, Part IV, Chapter 25

Unit 4 Philosophy of Language **(9 Hours, 3 Weeks)**

1. Logical Analysis
2. Elimination of Metaphysics

Essential/Recommended Reading

The Elimination of Metaphysics Through Logical Analysis of Language - Rudolph Carnap, 1931, (Translated by Arthur Pap) *www.ditext.com/carnap/elimination.html*

Suggestive Readings

COMMON POOL OF GENERIC ELECTIVES (GE) COURSES

Credit distribution, Eligibility and Pre-requisites of the Course

GENERIC ELECTIVES (GE-18): Legal Philosophy

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Legal Philosophy GE 18	4	3	1	Nil	12th Passed	None

Learning Objectives

The course in Philosophy of Law, seeks to:

- Familiarize students with the nature and purpose of law by examining questions such as "What is (the nature of) law?", "How, if at all, is law connected with morality?" and "What is justice?", and to instruct students about possible answers and arguments provided in legal philosophy and theory.
- Introduce students to philosophical schools such as Legal Positivism and Natural Law.
- Help students critically examine the institution of legal punishment that pertains to the coercive impact of law. Questions such as, "Is it ever right to punish someone?", "What does it mean to say someone is innocent until proven guilty?", "What are the various theories justifying punishment?" will be explored with a view to enhance student sensitivity and understanding of a legal issue.

Learning Outcomes

- The ideal outcome of this course is to make students understand the concept of law, its place in our lives, its formal structure, rules and modalities.
- Students should be able to discuss and argue on crucial legal questions that impact the life of common citizens with sensitivity, acumen, precision and insight.

UNIT 1 Law: Concept, Meaning and Definition (12 Hours, 4 Weeks)

1. Traditional Natural Law Theory – Thomas Aquinas
2. Legal Positivism – Austin
3. Law as System of Rules – Hart
4. Law as Integrity – Dworkin

Essential/Recommended Reading:
Altman, Andrew; *Arguing About Law: An Introduction to Legal Philosophy*, Australia: Wadsworth, 2001, pp 32-58 (Topic 1-4)

UNIT 2 Scope of Legal Obligation (12 Hours, 4 Weeks)

1. The Ambit of Legal Obligation
2. Freedom of Speech

Essential/Recommended Readings:

Fuller, Lon; The Case of the Speluncean Explorers, Harvard Law Review, Vol. 62, No. 4, February 1949, pp 616-645
van Mill, David; Freedom of Speech, The Stanford Encyclopedia of Philosophy, Edward N. Zalta (ed.), Metaphysics Research Lab, Stanford University, 2021, URL = <https://plato.stanford.edu/archives/spr2021/entries/freedom-speech/>

UNIT 3 Legal Issues and India (9 Hours, 3 Weeks)

1. Basic Structure of the Constitution
2. Impact of Judicial Decisions

Essential/Recommended Readings:

Abridged JudgementofKesavanandBharatiVs. State of Kerala; AIR 1973 SC 1461

Baxi, Upendra; Who Bothers about the Supreme Court? The Problem of Impact of Judicial Decisions, Journal of the Indian Law Institute, Vol. 24, No. 4 (October-December 1982), pp. 848-862

UNIT 4 Fundamentals of Law (12 Hours, 4 Weeks)

1. Jury System vs. Judge System
2. Crime and Punishment

Essential/Recommended Readings:

Brooks,Thom; The Right to Trial by Jury, Wiley, Journal of Applied Philosophy, Vol. 21, No. 2, 2004, pp. 197-212
Tebbit, Mark; *Philosophy of Law: An Introduction*, (3rd Edition), Routledge 2017, pp 242-253

GENERIC ELECTIVES (GE-19): Feminist Film Theory

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Feminist Film Theory GE 18	4	3	1	Nil	12th Passed	None

Learning Objective

- This paper examines how the mainstream cinema has been affected by the patriarchal mindset of our society at large, and

- The course deals with the concept of spectatorship in cinema and how this spectatorship could/should be shifted from being focused on the male audience to catering to a female audience.
- The methods of pyscho-analysis, post-feminism, etc. will be taught in this course

Learning Outcomes

- The course anticipates enabling students to understand the link between reality and cinema,
- The course will make students appreciate how the representation of women in the latter has been influenced by the patriarchal structure of the society.
- Through discussions on topics like the male gaze and spectatorship, the course will also equip the students to widen their horizons in terms of thinking about the way our sexuality is placed in variety of contexts.

UNIT 1 – Women in Indian Cinema **(12 Hours, 3 Weeks)**

1. The representation of Women
2. Illusion and Reality in Women's Representation

Essential/Recommended Readings

Women in Indian Cinema, Butalia, Urvashi. (1984). Feminist Review, No. 17, Many Voices, One Chant: Black Feminist Perspectives. Pp. 108-110.

1. Film and the Nation and Women

Singh, Indubala. *Gender Relations and Cultural Ideology in Indian Cinema: A Study of Select Adaptations of Literary Texts*(Chapter-2). Deep and Deep Publications, 2007.

UNIT 4 –Oppositional Gaze **(9 Hours, 3 Weeks)**

1. Black Female Spectators

Essential/Recommended Readings

Hooks, Bell. "The Oppositional Gaze: Black Female Spectators". In *Black Looks: Race and Representation*. Boston: South End Process, 1992.

GENERIC ELECTIVES (GE-20): Care Ethics

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Care Ethics GE 20	4	3	1	Nil	12th Passed	None

Learning Objective

- The course will examine the foundation of ethics as it applies in ethical decision making in various fields of humanistic inter-personal relationships and thereby covers a broad range of topics like mothering/parental care, fields of health care and education.
- Often perceived as a niche area of ethics or soft ethics covering Feminist morality, the paper will stress on the fact that this is a dynamic ethical approach and is equally applicable to field of justice and jurisprudence, and deontological ethics.
- The course will draw upon contemporary readings to familiarize the students about the topic of care ethics.

Learning Outcome

- This course will make students understand the working in the fields of medicine, teaching, law and policy making institutions from the perspective of care ethics
- It will facilitate a reasonable and an empathetic perspective among students.
- Students will be able to critically analyse other notions of care from the angle of care ethics

Unit 1 Care Ethics: Introduction **(12 Hours, 4 Weeks)**

1. Meaning and Nature of Care Ethics
2. Care ethics and its unique methodology (its difference from three traditional theories)

Essential/Recommended Readings

DEPARTMENT OF SANSKRIT
SEMESTER - IV
BA (Hons.) SANSKRIT: DSCs

DSC-10: Modern Sanskrit Literature

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Prerequisite of the course
		Lecture	Tutorial	Practical/ Practice		
Modern Sanskrit Literature	04	3	1	0	XII Passed	Working Knowledge of Sanskrit

Learning Objectives

The purpose of this course is to expose students to the rich & profoundly active tradition of modern creative writing in Sanskrit, enriched by new genres of writing.

Learning Outcomes

This course will enable the students to appreciate the Mahākāvya and Charitakāvya, Gadyakāvya, Rūpaka, GītiKāvya and Other genres and General Survey of Modern Sanskrit Literature. It is supposed to create an awareness of historicity of modern Sanskrit literature.

Detailed Syllabus

Unit I **10 hrs**

Mahākāvya and Caritakāvya:

Svātantryasambhavam (Revaprasada Dwivedi)
Canto 2, Verses 21-45
Bhimāyanam (Prabha Shankar Joshi)
Canto X. Verses 20-29

Unit II **12 hrs**

Gadya and Rūpaka:

Śataparvikā (Abhirāja Rajendra Mishra)
Śārdūla-Śakatam (1-3 Canto, Virendra Kumar Bhattacharya)

Unit III **13 hrs**

Other genres:

Hariram Acharya (Sankalpa Gitih);
Pushpa Dikshit (Bruhi Ko'smin yuge.)
RadhaVallabh Tripathi (Dhivaragitih – Naukamiha saram saram…)

Harshdev Madhava: Haiku - Snanagrihe, Vedanā, Mrityuh 1, Mrtyuh 2;
Mathura Nath Shastri- Kundaliyan (durjana and sajjana maitri)

Unit IV

General Survey **10 hrs**

Brief Introduction to Modern Sanskrit Literature,
Pandita Kshama Rao, S. B. Varnekar, Parmanand Shastri, Janaki Vallabh Shastri, Ram Karan Sharma. Jagannath Pathak, S. Sunderrajan, Haridas Siddhanta Vagish, Mula Shankar M. Yajnika, Mahalinga Shastri, Yatindra Vimal Chowdhury, V Raghavan, Mohan Lal Sharma Pandey, Ramakant Shukla, and their works.

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Prerequisite of the course
		Lecture	Tutorial	Practical/ Practice		
Sanskrit and World Literature	04	3	1	0	XII Passed	Working Knowledge of Sanskrit

Learning Objectives

This course aims to expose students to the spread & influence of Sanskrit literature and culture through the ages in various parts of the world.

Learning Outcomes

Scholars who pursue this course will learn about the cultural contacts between India on the one hand and Europe, West Asia and South East Asia on the other during different phases of history. They will also see how colonialism distorted India's achievements in knowledge production.

They will become aware of Indo European linguistic and cultural affinities, spread of Indian fables, the Upanishads, the Gita and Kalidasa's works in the west. They will be able to appreciate the close relation between Upanishadic thought and Sufism.
They will study how Sanskrit literature has impacted India's cultural ties with South East Asian countries.

Detailed Syllabus

Unit I **12 hrs**

General Survey

The idea of World Literature
Approaches to Sanskrit literature: Romanticism to Utilitarianism and the colonialist agenda
Sanskrit words in Indo -European languages

Unit II **12 hrs**

Indian Philosophical thought and it's Global Spread

Vedantic Thought and its Global impact
Upanishadic thought and Sufism: Dara Shikoh's Persian Translation of Upanishads

Unit III **12 hrs**

Sanskrit Kavya in World Literature

Ramayana in South East Asia
Mahabharata in South East Asian Cultures
Shakuntala in Europe
Journey of Panchatantra

Unit IV **09 hrs**

Sanskrit Studies across the World

Sanskrit studies in the United States of America (USA) and Canada
Sanskrit studies in China and Japan
Sanskrit studies in Europe (United Kingdom (UK), Germany and France)

Books/Readings:

Compulsory Readings

1. Jurgen Lutt, Germany, India and the German Image of India – The Romantic and Utilitarian Image of India in Europe,
2. Ganeri Jonardon: Migrating Texts and Traditions :Dara Shukoh and the Transmission of the Upanishads to Islam
3. Neria H. Hebber; Influence of Upaniṣads in the West, Boloji.com. Retrieved on : 2012-03-02

Course title & Code	Credits	Credit distribution of the Course			Eligibility criteria	Prerequisite of the course
		Lecture	Tutorial	Practical/ Practice		
Indian Epigraphy II	04	3	1	0	XII Passed	Working Knowledge of Sanskrit

Learning Objectives

This course aims at acquainting the students with the basic knowledge of epigraphical resources in Sanskrit, the only source which directly reflects the society, politics, geography and economy of the time.

Learning Outcomes

After the completion of this course, the learners will be aware of the different types of inscription. He will have a sound idea about the relationship between Epigraphy and Historicity.

Detailed Syllabus

Unit I: Selected Inscriptions (Up to 400 AD) **12 hrs**

1. First Pillar Edict Delhi Topra of Ashoka
2. Maski Rock Inscription of Ashoka
3. Girnar Inscription of Rudradaman
4. Naland Copper Inscription of Samudragupt
5. Mehrauli Iron-Pillar Inscription

Unit II Selected Inscriptions (Post 400 AD) **12 hrs**

1. Mandsaur Rock-pillar Inscription of Yashodharman
2. Aihole Inscription of Pulkeshin II
3. Vigrahraj Inscription of Kotla

Unit III: Importance of Epigraphy **12 hrs**

1. Inscriptions as Historical Source Material
2. Proper dating of events
3. Understanding ancient culture and beliefs
4. Learning the social and economic life of ancient people
5. Learning new languages

Unit IV: Chronograms and Dating of Inscriptions **09 hrs**

Essential/recommended readings

1. अभिलेख-मंजूषा, रणजीत सिंह सैनी, न्यूभारतीय बुक कार्पोरेशन, दिल्ली, 2000.
2. उत्कीर्णलेखपञ्चकम्, झा बन्धु, वाराणसी, 1968.

3. उत्कीर्णलेखस्तबकम्, जियालाल काम्बोज, ईस्टर्न बुकलिंकर्स, दिल्ली.
4. भारतीय अभिलेख, एस.एस. राणा, भारतीय विद्याप्रकाशन, दिल्ली, 1978.
5. Select Inscriptions (Vol.I) - D.C. Sircar, Calcutta, 1965.
6. सहाय, शिवस्वरूप : भारतीय पुरालेखों का अध्ययन, मोतीलाल बनारसीदास,दिल्ली. Dani, Ahmad Hasan: *Indian Paleography*, Oxford, 1963.

11. Mahabharata (7 Vols)— (Eng. Tr.) H.P. Shastri, London, 1952-59.
12. Manu's Code of Law—(ed. & trans.) : Olivelle, P. (A Critical Edition and Translation of the Mānava- Dharmaśāstra), OUP, New Delhi, 2006.
13. Ramayana of Valmiki — (Eng. Tr.) H.P. Shastri, London, 1952-59. (3 Vols)
14. Rgveda samhita (6 Vols)— (Eng. Tr.) H.H. Wilson, Bangalore Printing &Publishing Co., Bangalore, 1946.
15. Satapatha brahmana— (with Eng. trans. ed.) Jeet Ram Bhatt, Eastern (3 Vols) Book Linkers, Delhi, 2009.

16. कौटिलीय अर्थशास्त्र —हिन्दी अनुवाद —उदयवीर शास्त्री, मेहरचन्द लछमनदास, दिल्ली,1968.
17. महाभारत (1—6 भाग) — हिन्दी अनुवाद सहित, (अनु०) रामनारायण दत्त शास्त्री पाण्डेय, गीताप्रेस, गोरखपुर.
18. मनुस्मृति (1—13 भाग) — (सम्पा० एवं व्या०) उर्मिला रुस्तगी, जे.पी. पब्लिशिंग हाउस, दिल्ली, 2005
19. शुक्रनीति — हिन्दी अनुवाद, ब्रह्मशंकर मिश्र, चौखम्बा संस्कृत सीरीज, वाराणसी, 1968.
20. श्रीमद्वाल्मीकिरामायण — हिन्दी अनुवाद सहित, (सम्पा०) जानकी नाथ शर्मा, (1 —2 भाग) गीताप्रेस, गोरखपुर.

Examination scheme and mode: Subject to directions from the Examination Branch/University of Delhi from time to time.

DISCIPLINE SPECIFIC CORE COURSE, DISCIPLINE B-4:
DSC-8: Readings from Vedas

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility Criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/Practice		
(Discipline B 4) Readings from Vedas DSC-8	04	3	1	0	XII Passed	Working Knowledge of Sanskrit

Learning Objectives:

This course on Vedic literature aims to introduce the great treasure of India I.e. the Vedic Saṁhitãs to the bachelor degree students. While the course will enable the students to understand the various ways of reading Vedic hymns, they will also be able to understand the Aupaniṣadika view through the selected section on Kathopaniṣad about the Self, Knowledge, ãtman and Mokṣa which propounds Indian Spiritual viewpoint. It will also facilitate the students to know about philosophical, moral, and scientific principles including the source of Indian Intellectual traditions of Vedic period.

Learning Outcomes:

By reading these texts, students will have an impression of the depth of Vedic knowledge and will be able to realize that ideas of Vedic seers are based on philosophical, moral, and scientific principles. By understanding them, students will be able to know and achieve some higher attributes from Vedic heritage about our culture, morals, and thoughts. Thus they may develop curiosity to know more about other Vedic texts and concepts as well. After completing this course students will surely be able to communicate about some important Vedic verses with their meaning and teaching, and thus fundamentals of religious life of India will be revealed to them in its true form. Students will understand the strength of Unity, power of mind, and will realize the importance of earth in their life. From the study of Upaniṣad they will know about philosophical and Psychological insights of our ancestors and can develop this learning further for the benefit of themselves in particular and society in general.

Unit-I: 12 hrs

General introduction to Vedic Literature:

Samhitas, Brahmanas, Aranyakas, Upanishadas, Vedangas.

History of Vedic literature:

Date of vedas: Indian tradition, Western Historians/Thinkers.

Unit-II: **12 hrs**

Readings from the Vedic Saṁhitās:

Ṛgveda:
Agni Sūkta- 1.1, Akṣa Sūkta-10.34,

Yajurveda:
Śivasaṁkalpa Sūkta - 34.1-6

Unit-III **09 hrs**

Readings from the Vedic Saṁhitās:

Atharvaveda:
Bhūmi Sūkta - 12.1.1-12, Samjñāna Sūkta- 10.191.1-4

Unit-IV **12 hrs**

Readings from the Upaniṣad:
Kathopaniṣad - 1.1 to 2.3

Essential/recommended readings:

1. ऋग्वेदसंहिता, सायणाचार्यकृत भाष्य एवं हिन्दी व्याख्या सहित, रामगोविन्द त्रिवेदी, चौखम्बा संस्कृत
प्रतिष्ठान, दिल्ली.
2. शुक्लयजुर्वेदसंहिता, (उव्वट-महीधर भाष्य संवलित, तत्त्वबोधिनीहिन्दी व्याख्या सहित), रामकृष्ण शास्त्री,
चौखम्बा संस्कृत प्रतिष्ठान, दिल्ली.
3. अथर्ववेदसंहिता, सायणाचार्यकृत भाष्य एवं हिन्दी व्याख्या सहित, प्रो विश्वनाथ विद्यालंकार, अजमेर.
4. कठोपनिषद् (शाडकरभाष्य संवलित), जिया लाल काम्बोज, ईस्टर्न बुक लिंकर्स, दिल्ली.
5. कठोपनिषद् (शाङ्करभाष्य संवलित), शशि तिवारी, मेहरचन्द लछमनदास पब्लिकेशन्स्, नई दिल्ली,
प्रथम संस्करण 1981
6. वैदिक संग्रह, कृष्णलाल, इन्दु प्रकाशन, दिल्ली, प्रथम संस्करण 1973.
7. Atharvaveda (Saunakīya): (Ed.) Vishva Bandhu, VVRI, Hoshiharpur, 1960.
8. Suklayajurveda-Samhitā, (Vajasaneyi-Madhyandina), (Ed.) Jagadish Lal Shastri, MLBD, Delhi, 1978.
9. संस्कृत साहित्य का इतिहास, उमाशंकर ऋषि, चौखम्बा भारती अकादमी, वाराणसी , 2017

Suggested Readings:

1. शर्मा, उमाशंकर ऋषि, ऋक्सूक्तनिकरः, चौखम्बा ओरियण्टालिया, वाराणसी.

2. सूर्यकान्त (अनु.)- वैदिक देवशास्त्र, (ए.ए.मैकडनल(,, मेहरचन्द लछमनदास पब्लिकेशन्स, नई दिल्ली,
1962
3. शशि तिवारी, वेदव्याख्यापद्धतयः, प्रतिभा प्रकाशन, दिल्ली, 2014
4. Velankar,H.D., Rksūktāvalī, Vaidika Sanshodhana Mandala, Pune, 1965.
5. Velankar,H.D., Rksūktavaijayanti, Bharatiya Vidya Bhavan, Bombay, 1972.

Examination scheme and mode: Subject to directions from the Examination Branch/University of Delhi from time to time.

Environmental Awareness in Sanskrit Literature	04	3	1	0	Semester II Passed	Nil

Learning Objectives

The main objective of this course is to make the students acquainted with the basic concepts of Indian Environmental Science and salient features of environmental awareness as reflected in Vedic and Classical Sanskrit literature. The National culture of every country depends on its environmental and climatic conditions and human behavior towards natural resources. Nature-friendly thoughts reflected in Sanskrit Literature have benefited the human race for long. Many religious practices were framed by ancient thinkers as a tool to protect nature and natural resources.

Learning outcomes

After completing this course, students will realize themselves to be a part of Nature and Nature, intern, belongs to all creatures.They will learn to be a more careful about the utilization and preservation of natural resources. This will make them better citizens of the world.

Detailed Syllabus

Unit I

Science of Environment: Definition, Scope and Modern Crises:

Modern Challenges and Crises of Environment: Global warming, Climate change, Ozone depletion, explosively increase in Pollution, Decrease in underground water label, River pollution, Deforestation in large scale. Natural calamities such as flood, draft and earthquakes.

Environmental Consciousness in Sanskrit Literature:

Concept of 'Mother Earth' and worship of Rivers in Vedic literature; Brief survey of environmental issues such as protection and preservation of mother nature, planting trees, and water preservation techniques as propounded in the Sanskrit Literature. Buddhist and Jain concepts of ecology, protection of trees, love for animals and birds.

Unit II

Environment Awareness in Vedic Literature:

Environmental Issues and Eco-system in Vedic Literature

Divinity to Nature, Co-ordination between all natural powers of universe; Equivalent words **for Environment in** *Atharvaveda*: *'Vṛtavṛta' (12.1.52), 'Abhivarah,'(1.32.4.), 'Avṛtaḥ' (10.1.30), 'Parivrita' (10.8.31);* **five basic elements of universe covered by environment : Earth, Water, Light, Air, and Ether.** *(Aitareya Upaniṣad 3.3)*
Three constituent elements of environment: Jala (water), *Vāyu* (air), and *Oṣadhi* (plants) (*Atharvaveda*, 18.1.17).
Natural sources of water in five forms: *rain water (Divyah),natural spring(Sravanti), wells and canals (Khanitrimah), lakes (Svayamjah) and rivers(Samudrarthah)* *ṛgveda*, 7.49.2*).*

Environment Preservation in Vedic Literature:
Five elementary sources of environment preservation: *Parvat* (mountain),
***Soma* (water),*Vayu* (air), *Parjanya* (rain) and *Agni* (fire) (*Atharvaveda*, 3.21.10);** Environment **Protection from Sun** (*Rgveda*,1.191.1-16, ***Atharvaveda*,2.32.1-6, *Yajurveda*,4.4,10.6); Congenial atmosphere for the life created by the Union of herbs and plants with sun rays (*Atharvaveda*,5.28.5); Vedic concept of Ozone-layer *Mahat ulb'(ṛgveda*,10.51.1; *Atharvaveda*,4.2.8);** Importance of plants and animals for preservation of global ecosystem; **(*Yajurveda* ,13.37);** Eco friendly **environmental organism in Upaniṣads (*Bṛhadāraṇyaka Upaniṣad*, 3.9.28, *Taittiriya Upaniṣad*,5.101)**

Unit III
Environment Awareness in Puranas and Classical Sanskrit Literature:

Environmental Awareness and Tree plantation **:**
Planting of Trees in *Purāṇas* as a pious activity (*Matsya* ***Purāṇa***, 59.159;153.512 ; *Varāha* ***Purāṇa*** 172. 39), **Various medinal trees to be planted in forest by** king **(*śukranīti*,4.58-62)** Plantation of new trees and preservation of old trees as royal duty of king **(*Arthaśāstra*, 2.1.20); Punishments for destroying trees and plants (*Arthaśāstra*,3.19),** Plantation of trees for recharging under ground water**(*Bṛhatsaṁhitā*, 54.119)**

Environmental Awareness and Water management **:**
Various types of water canels *'Kulyā'* for irigation : canal originated from river *'Nādimatṛ mukha kulyā'*, canal originated from near by mountain *'Parvataparsva vartini kulyā'*, canal originated from pond,*'Hrdasrta kulyā,* **Preservation of water resources** *'Vāpi –kūpa –taḍāga'* **(*Agnipuraṇas*,209-2;*V.Ramayana*,2.80.10-11); Water Harvesting system in *Arthaśāstra* (2.1.20-21); Underground Water Hydrology in Bṛhatsaṁhitā (Dakāgalādhyāya, chapter-54);**

Unit IV
Universal Environmental Issues in the Literature of Kalidasa:

Eight elements of **Environment and concept of *'Aṣṭamūrti'* Siva (*Abhijñānaśākuntalam*); Preservation of forest,water resources, natural resources; protection of animals, birds and plant in Kalidasa's works, Environmental** awareness **in *Abhijñānaśākuntalam* Drama, Eco- system of indian monsoon in *Meghdūt*, Seasonal weather conditions of Indian sub continent in *ṛtusamhara*, Himalayan ecology *in Kumārasaṁbhava*, Oceanography in *Raghuvaṁśa* (canto-13).**

DSE-6: Art of Balanced Living

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the Course			Eligibility criteria	Prerequisite of the course
		Lecture	Tutorial	Practical/ Practice		
Art of Balanced Living	04	3	1	0	Semester II Passed	Nil

Learning Objectives

This course aims at getting the students acquainted with the Art of living as found in Sanskrit literature . It also intends to make the students work on human resource management for being more effective and productive in day to day life situations.

Learning outcomes

After the completion of this course , the learners will be well informed about the various concepts, components and iussues propounded by the philosophical and religious literature in Sanskrit

Detailed Syllabus

Unit I

Method of Self-presentation: Hearing (śravaṇa), Reflection (manana) & meditation (nididhyāsana) - (Bṛhadāraṇyakopaniṣad, 2.4.5) and Vedantasara
Concentration: Concept of Yoga: (Yogasūtra, 1.2); Restriction of fluctuations by practice (abhyāsa) and passionlessness (vairāgya) :(Yogasūtra, 1.12-16)

Unit II

Eight aids to Yoga (aṣṭāṅgayoga): (Yogasūtra - 2.29, 30, 32, 46, 49, 50; 3.1-4).
Yoga of action (kriyāyoga): (Yogasūtra, 2.1)
Four distinct means of mental purity (cittaprasādana) leading to oneness: (Yogasūtra - 1.33)

Unit III

Refinement of Behaviour : Means of improving behaviour:
Jñāna-yoga – Gita Ch. II – 14,15,16,19, Ch XIII- 11,12,14,15,16,19,20,21,23,29,31,32
dhyāna-yoga – VI – 24 to 27, 30, 32,

Unit IV

Bhakti-yoga – Gita Ch. IX – 17,22,23,27,29,34 ; Ch XI – 10,11,12, 13; Ch. - XII – 4, 6 to 12, 20 Karma : A natural impulse, essentials for life journey, harmony with the universe, an ideal duty and a metaphysical dictate - Gītā, Ch. – III 5, 8, 10-16, 20 & 21

Essential/recommended readings

1. वेदान्तसार: राममूर्ति शर्मा नैशनल पब्लिशिंग हाउस दिल्ली ।
2. पातञ्जल योग दर्शन: सुरेश चन्द्र श्रीवास्तव, चौखंबा सुरभारती प्रकाशन, वाराणसी 2008.
3. भगवद्गीता : गीताप्रैस, गोरखपुर
4. उपनिषद रहस्य, एकादश उपनिषद, महात्मा नारायण स्वामी, गोविन्द राम हासानन्द, दिल्ली

Examination scheme and mode: Subject to directions from the Examination Branch/University of Delhi from time to time

DSE-7: Introduction to Ancient Indian Scripts

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Prerequisite of the course
		Lecture	Tutorial	Practical/ Practice		
Introduction to Ancient Indian Scripts	04	3	1	0	XII Passed	Working Knowledge of Sanskrit

Learning Objectives

This course provides an introduction to the history, evolution, and usage of ancient Indian scripts. Students will explore the various scripts used in ancient India, including Brahmi, Kharosthi, and Devanagari, and will learn about the cultural, social, and religious significance of these scripts. The course will also cover the techniques used in the creation of ancient Indian manuscripts and the methods of preservation.

Learning outcomes

Upon completion of this course, students will be able to:

Understand the history and evolution of ancient Indian scripts
Identify and describe the various scripts used in ancient India
Analyze the cultural and religious significance of ancient Indian scripts
Understand the techniques used in the creation of ancient Indian manuscripts
Learn about the methods of preservation used to protect ancient Indian scripts
Develop an understanding of the connection between language and script

Detailed Syllabus

Unit I **12 hrs**

Introduction to Ancient Indian Scripts
- Definition and significance of scripts
- Historical overview of Indian scripts
- Importance of scripts in Indian culture and society
- Major Ancient Indian Scripts

Unit II **12 hrs**

Brahmi Script
- Brahmi script and its evolution
- Introduction to the Brahmi script
- Writing system and pronunciation
- Basic reading and writing exercises
- Kharosthi Script and its Usage

Introduction to Kharosthi script
Historical context and usage of Kharosthi script

Unit III **09 hrs**

Introduction to Gupta script
Characteristics and evolution of Gupta script
Basic reading and writing exercises
Comparison with Brahmi and Kharosthi script

Unit IV **12 hrs**

A. Techniques used in the creation of Ancient Indian Manuscripts
Introduction to ancient Indian manuscripts
Techniques used in manuscript creation
Preservation techniques

B. Social and Cultural Significance of Ancient Indian Scripts

Significance of ancient Indian scripts in social and cultural contexts
Analysis of manuscripts and scripts in different periods up to 8th century AD

Essential/recommended readings

1. Buhler, G, On the origin of the Indian alphabet & numerals.
2. Dani, A. H, Indian Paleography
3. Dhavalikar, M.K. Indian Palaeography. Munshiram Manoharlal Publishers, 2006.
4. Ojha, G. H, Bharatiya Praćina Lipimāla (Hindi)
5. Pandey, R.B, Asoka ke Abhilekha (Hindi), Bharatiya Puralipi (Hindi)
6. Parpola, Asko. Deciphering the Indus Script. Cambridge University Press, 1994.
7. Rana, S.S., Bharatiya Abhilekha
8. Sircar, D.C., Indian Epigraphy, Select Inscriptions (Part - I)
9. Salomon, Richard. Indian Epigraphy: A Guide to the Study of Inscriptions in Sanskrit, Prakrit, and the other Indo-Aryan Languages. Oxford University Press, 1998.
10. Upadhyay, V., Praćina Bharatiya Abhilekha (Hindi)
11. Thapar, Romila, Asoka tatha Maurya Samrajya Ka Patana (Hindi)

Examination scheme and mode: Subject to directions from the Examination Branch/University of Delhi from time to time

DSE-9: Computer Applications for Sanskrit

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the Course			Eligibility criteria	Prerequisite of the course
		Lecture	Tutorial	Practical/ Practice		
Computer Applications for Sanskrit	04	3	1	0	Semester IV Passed	Working Knowledge of Sanskrit

Learning Objectives

This course will introduce the current researches and developments in Sanskrit computing. The primary emphasis will be on tools and techniques developed under government and private funding and on exploring new technologies for Sanskrit.

Learning outcomes

The students will get an overview of computational works undertaken in the field of Sanskrit and a clear idea about how a range of practical linguistic tasks of Sanskrit can be done by developing CL systems. And, they will also know how CL tools can facilitate the learning and teaching process in the field of Sanskrit.

Detailed Syllabus

Unit I **12 hrs**

Interactive Sanskrit Teaching Learning Tools

Introduction to Interactive Sanskrit Learning Tools, Why Interactive Tools for Sanskrit? E-learning, Basics of Multimedia, Web-based tools development, HTML, Web page, etc., Tools and Techniques

Unit II **09 hrs**

Standard for Indian Languages (Unicode)

Unicode Typing in Devanagari Scripts, Typing Tools and Software

Unit III **12 hrs**

Text Processing and Preservation Tools

Text Processing, Preservation Techniques, Text Processing, and Preservation, Tools, and Techniques, Survey

Unit IV **12 hrs**

Optical Character Reader

Optical Character Reader (OCR), Applications of OCR for Sanskrit and Indian Languages, Tool and Techniques, Survey

Essential/recommended readings

1. Teacher's notes, ppt, and handout
2. Bharti A., R. Sangal, V. Chaitanya, "NL, Complexity Theory and Logic" in Foundations of Software Technology and Theoretical Computer Science, Springer, 1990.
3. E-Content suggested by Teacher
4. Tools developed by Computational Linguistics Group, Department of Sanskrit, University of Delhi, Delhi-110007 available at: http://sanskrit.du.ac.in
5. Basic concept and issues of multimedia: http://www.newagepublishers.com/samplechapter/001697.pdf
6. Content creation and E-learning in Indian languages: a model: http://eprints.rclis.org/7189/1/vijayakumarjk_01.pdf
7. HTML Tutorial - W3Schools: www.w3schools.com/html
8. The Unicode Consortium: http://unicode.org/.

DEPARTMENT OF SANSKRIT
SEMESTER - V

DSC-13: Veda and Upanishad

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the Course			Eligibility criteria	Prerequisite of the course
		Lecture	Tutorial	Practical/ Practice		
Veda and Upanishad	04	3	1	0	12th Passed	Working Knowledge of Sanskrit

Learning Objectives

This course on Vedic literature aims to introduce two Vedic Saṁhitās (Rgveda-saṁhitā & Yajurveda-saṁhitā) to bachelor degree students. The students will also be able to read and know about the contents of one famous Upaniṣad, namely, Kathopaniṣad, which propounds basic Vedānta-view. It will also facilitate the students to know about philosophical, moral, and scientific principles including the source of Indian Intellectual traditions of Vedic period.

Learning Outcomes

By reading these texts, the students will have an impression of the depth of Vedic knowledge and will be able to realize that ideas of Vedic seers based on philosophical, moral, and scientific principles. The various commentators of the Vedas like Sayana, Uvata and Dayananda have also contributed in preserving and promoting the knowledge preserved in the Vedas. By understanding them, students will be able to know and achieve some higher attributes from Vedic heritage about our culture, morals, and thoughts. Thus they may develop curiosity to know more about other Vedic texts and concepts as well. After completing this course, students will surely be able to communicate about some important Vedic verses with their meaning and teaching, and thus fundamentals of religious life of India will be revealed to them in its true form. The students will be able to understand the strength of unity, power of mind, and will realize the importance of earth in their life. From the study of Upaniṣad, they will know about philosophical and Psychological insights of our ancestors and can develop this learning further for the benefit of themselves in particular and society in general.

Detailed Syllabus

Unit I **12 hrs**
Introduction to Vedic Literature: Samhita (Period and Contents of Samhitas)

Unit II **10 hrs**
Introduction to Vedic Literature: Brahmana, Ayanyaka and Upanishad (Analysis of Contents)

Unit III **10 hrs**
Rgveda 1.1 (Agni), 1.81 (Indra)

Unit IV **15 hrs**
Kathopanishad (Second Valli)

DSC-14: Sanskrit Grammar: Laghusiddhāntkaumudī

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility Criteria	Prerequisite of the course
		Lecture	Tutorial	Practical/ Practice		
Sanskrit Grammar: Laghusiddhāntkaumudī	04	3	1	0	12th Passed	Working Knowledge of Sanskrit

Learning Objectives

Sanskrit is much known for a long tradition of grammatical and semantic analysis of the language. Panini's grammar has always been highly respected for providing the best model for structural and semantic studies. This course intends to introduce to students the basic structure of Sanskrit language through the the Laghusiddhantakaumudi , the premier text of Sanskrit grammar by Varadaraj.

Learning Outcomes

After completion of this course students will understand the basic structural nuances of Panini's grammar. They will become familiar with fundamental samdhi and compounding patterns. They will also understand some most important primary and secondary suffixes of Sanskrit. The practice of the application of the rules learnt from the reading of the texts will further enhance their knowledge of the structural patterns of Sanskrit language.

Detailed Syllabus

Unit I — 10 hrs

संज्ञा-प्रकरण

माहेश्वरसूत्र ।

प्रत्याहार बनाने की विधि ।

संज्ञाविधायक-सूत्रः हलन्त्यम्, अदर्शनं लोपः, तस्य लोपः, आदिरन्त्येन सहेता, ऊकालोऽज्झ्रस्वदीर्घप्लुतः, तुल्यास्यप्रयत्नं सवर्णम्, अणुदित् सवर्णस्य चाप्रत्ययः, मुखनासिकावचनोऽनुनासिकः, हलोऽनन्तराः संयोगः, सुप्तिङन्तं पदम्

Unit II **अच्-सन्धि** 10 hrs

यण् सन्धि - इको यणचि, परः सन्निकर्षः संहिता, तस्मिन्निति निर्दिष्टे पूर्वस्य, स्थानेऽन्तरतमः ।

दीर्घ सन्धि - अकः सवर्णे दीर्घः ।

अयादिसन्धि - एचोयवायावः, यथासंख्यमनुदेशः समानाम् ।

गुणसन्धि – अदेङ् गुणः, आद्गुणः, उरण् रपरः ।

वृद्धि सन्धि - वृद्धिरादैच्, वृद्धिरेचि, भूवादयो धातवः, उपसर्गाः क्रियायोगे ।

पूर्वरूप सन्धि – एङः पदान्तादति ।

पररूप सन्धि - एङि पररूपम् ।

Unit III **हल् सन्धि एवं विसर्ग सन्धि** 10 hrs

हल् सन्धि:-

श्चुत्व - स्तोः श्चुना श्चुः ।

ष्टुत्व - ष्टुना ष्टुः ।

अनुनासिक - यरोऽनुनासिकेऽनुनासिको वा ।

छत्व – शश्छोऽटि ।

जश्त्व - झलां जशोऽन्ते ।

अनुस्वार- मोऽनुस्वारः ।

विसर्ग सन्धि:-

सत्व - विसर्जनीयस्य सः ।

उत्व - ससजुषो रुः ।

अतो रोरप्लुतादप्लुते, हशि च ।

लोप - भोभगोअघोअपूर्वस्य योऽशि, हलि सर्वेषाम् , ढ्रलोपे पूर्वस्य दीर्घोऽणः, रो रि ।

Unit IV **समास प्रकरण** 15 hrs

अव्ययीभाव समास - समर्थः पदविधिः, अव्ययं विभक्तिसमीपसमृद्धिव्यृद्ध्यर्थाभावात्ययासम्प्रतिशब्दप्रादुर्भावपश्चाद्यथानुपूर्व्ययौगपद्यसादृश्यसम्पत्तिसाकल्यान्तवचनेषु, प्रथमानिर्दिष्टं समास उपसर्जनम्, उपसर्जनं पूर्वम्, नाऽव्ययीभावादतोऽम्त्वपञ्चम्याः, नदीभिश्च ।

तत्पुरुष समास - - द्वितीया श्रितातीतपतितगतात्यस्तप्राप्तापन्नैः, तृतीया तत्कृतार्थेन गुणवचनेन, चतुर्थी तदर्थार्थ बलिहितसुखरक्षितैः, पंचमी भयेन, षष्ठी, सप्तमी शौण्डैः ।

तत्पुरुष के अन्य भेद - विशेषणं विशेष्येण बहुलम्, नञ्, नलोपो नञः, तस्मान्नुडचि

बहुव्रीहि समास - अनेकमन्यपदार्थे, सप्तमीविशेषणे बहुव्रीहौ

DSC-15: Introduction to Nyaya-Vaisheshika Philosophy

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the Course			Eligibility criteria	Prerequisite of the course
		Lecture	Tutorial	Practical/ Practice		
Introduction to Nyaya-Vaisheshika Philosophy	04	3	1	0	12th Passed	Working Knowledge of Sanskrit

Learning Objectives

This course aims at getting the students acquainted with the cardinal principles of the Nyaya-Vaisheshika Philosophy and enablling students to understand Philosophical texts like Tarkasangrah. It also intends to give them an understanding of essential aspects of Indian Philosophy like Pluralism, Theory of Causation, Realism, etc.

Learning Outcomes

After completion of this course students will become familiar with the most important and influential schools of Indian Philosophy i.e. Nyaya-Vaisheshika. They will also be introduced to essential problems of Nyaya-Vaisheshika- Causation, Ontology and Epistemology. This will enable them to engage with other texts in Indian philosophy with some ease.

Detailed Syllabus

Unit I **10 hrs**

Origin and Development of Nyaya-Vaisheshika Philosophy.
Introduction to prominent Acharyas (Gautam, Kanada, Prashasta-Pada, Vatsyayana, and Vachaspati Mishra) and their texts.
Introduction to Navya-Nyaya

UNIT II **10 hrs**

Some Basic Tenets of Nyaya-Vaisheshika- Yatharthavada or Vastuvāda (Realism), Bahu-tattvavāda (Pluralism); Dharma (Property) Dharmi (Substratum) Karyakaraṇavāda (Causation) Asatkaryavada and Arambhavada (doctrine of non-pre-existence of effect in the cause)

Unit III Vaisheshika Ontology (Tarkasangraha) **10 hrs**

Concept of Padartha, Three Characteristics of Padarthas,
Definition of Dravya, Definitions of All Nine Dravyas and their examination
Twenty Four types of Qualities, Five types of Karma.
Sāmānya, Višesa, Samavāya, Abhāva,

Unit: IV **15 hrs**

Nyaya-Epistemology (Tarkasangraha)

Buddhi (Jñana)- Nature of Jñana in Nyaya-Vaisheshika;
Karana and Kaarana
Definitions and types of Pramā
Pratyaksha, Anumana including Hetvabhäsa
Upamana and sabda Pramāṇa,
Types of Ayathartha Anubhava

Suggested Books/Readings:

Compulsory Readings:

1. Athalye & Bodas, **Tarkasamgraha of Annambhatta** (with Dipika & Nyayabodhini), (Ed. & Tr.) Mumbai, 1930.
2. Chatterjee, S. C. & D. M. Datta - Introduction to Indian Philosophy, Calcutta University, Calcutta, 1968 (Hindi Translation available).
3. Mishra, Pankaj Kumar, **Tarkasamgraha** of Annambhatta (with Dipika and its Hindi Translation), (Ed. & Tr), Parimal Publication, Delhi-7, 2013,
4. Narendra Kumar, **Tarkasamgraha**, Hansa Prakashan, Jaipur.

Additional Resources:

1. Bhattacharya, Chandrodaya, The Elements of Indian Logic and Epistemology
2. Chatterjee, S. C., The Nyaya Theory of Knowledge, Calcutta, 1968.
3. Hiriyanna, M., Outline of Indian Philosophy, London, 1956 (also Hindi Translation).
4. Kuppuswami Shastri, A Primer of Indian Logic, Madras, 1951.
5. Maitra, S.K., Fundamental Questions of Indian Metaphysics & Logic,
6. Radhakrishnan, S, Indian Philosophy, Oxford University Press, Delhi, 1990.

Examination scheme and mode: Subject to directions from the Examination Branch/University of Delhi from time to time.

DISCIPLINE SPECIFIC CORE COURSE, DISCIPLINE A 5:
DSC-9: Indian Epigraphy & Paleography

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility Criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/Practice		
(Discipline A 5) Indian Epigraphy & Paleography DSC - 9	04	3	1	0	12th Passed	Working Knowledge of Sanskrit

Learning Objectives:

This course known as the Indian Epigraphy and Paleography provides background and basis of Indian history of ancient period. Students with no knowledge of Sanskrit but interested in acquiring historical facts direct from their source can be benefitted with this course. It is extremely helpful for those who are willing to involve in archaeological studies.

This course provides basics covered in ancient Indian inscriptions. Some of the terminologies available in inscriptions are introduced here. Unit II of this section provides historical facts through the inscriptions.

It introduces background of the Indian epigraphical study. Importance of inscriptions on the basis of contents, their impact and reflections of society, economy, religious, political instances can also be understood here. It helps to understand about prevailing theories of the origin of the Brahmi script. Development of the letters of this script in different regions in a span of time is introduced. Their causes of change are also made clear to illustrate different forms in the script. Unit III provides the history of study of inscriptions in India. A number of Indian and foreign scholars made attempts in this field. Students are made aware about some prominent scholars who made valuable efforts in this field.

Learning Outcomes:

Contents of this course are related to formation of history of ancient India, so it is an inter-disciplinary course within Sanskrit. Students of Sanskrit can understand how important role Sanskrit based inscriptions play in preparing history, and their knowledge of the language can

help historians to make a perfect history, undoubtedly. Similarly students of History will find themselves on the positive ground and direct in touch with material related to history of ancient India.

Syllabus

Unit-I: **15 hrs**

Inscription of Rudradāman.
Eran Pillar Inscription:
Status of Samudragupta
Iron Pillar Inscription of Ćandra

Unit-II: **10 hrs**

Antiquity of writing in India
Observations of foreign scholars
Literary evidences
Observations made by Indian Epigraphists.
Importance of the study of Inscriptions.
Geographical description
Historical evidences
Society, Religion, Literature
Economic Conditions
Administration

Unit-III **10 hrs**

Types of Inscriptions:
Praśasti
Religious
Donations
Grants

Writing material:
Rocks
Pillars
Metal Plates
Statues
Pen, Brush, Chisel, Stylus, Paint/Colour

Unit-IV **10 hrs**

Origin of the Brāhmī Script
Foreign Origin, Indian Origin, Greek origin, Phoenician origin
Theory of South Indian Origin
Theory of Aryan Origin.

History of reading of Indian Inscriptions.
Contribution of Epigraphists: G.H. Ojha, Fleet, Princep, D.C. Sircar, Cunningham, Buhler.

System of dating and use of eras:
Vikram Era, Śaka Era, Gupta Era, Harśa Era.

Essential/recommended readings:

1. Buhler, G, On the origin of the Indian alphabet & numerals.
2. Dani, A. H, Indian Paleography
3. Ojha, G.H, Bhāratīya Prāćīna Lipimāla (Hindi)
4. Pandey, R.B, Bhāratīya Purālipi (Hindi)
5. Rana, S.S., Bhāratīya Abhilekha
6. Sircar, D.C., Indian Epigraphy, Select Inscriptions (Part-I)
7. Upadhyay, V., Prāćīna Bhāratīya Abhilekha (Hindi)

Suggested Readings:

1. Classical Age by Altekar, Majumdar, Sircar
2. श्रेण्य-युग (हिंदी अनुवाद): अल्तेकर, मजुमदार, सरकार
3. गुप्त-सम्राट और उनका काल: उदित नारायण राय

Examination scheme and mode: Subject to directions from the Examination Branch/University of Delhi from time to time.

		Lecture	Tutorial	Practical/Practice		
(Discipline A 6) Basic Elements of Indian Philosophy DSC - 10	04	3	1	0	Passed in Semester-IV	Working Knowledge of Sanskrit

Learning Objectives:

The objective of the Syllabus is to study the basic issues in Indian Philosophy.

Learning Outcomes:

Indian Philosophy teaches critical thinking, close reading, clear writing, and logical analysis. It develops the tools of logic and reason to analyze the ways in which the individual experiences the Universe. It guides the student to understand the language we use to describe the world, and our place within it. Different areas of philosophy are distinguished by the questions they ask. The most important reason to study philosophy is that it is of enormous and enduring interest. Philosophy is important, but it is also enormously enjoyable in which students are provided with the tools and the opportunity to develop and express their own philosophical views.

Syllabus

Unit-I: **09 hrs**

Darśana - concept and aims, Classification of Indian Philosophical schools,
Fundamental issues in Indian Philosophy - Epistemology: Six Pramanas

Unit-II: **12 hrs**

Metaphysics: Realism, Idealism, Causation – Satkaryavada, Asatkaryavada, Parinamavada, Vivartavada
Ethics: Karma & Punarjanma theory

Unit-III **12 hrs**

Schools of Indian Philosophy

Heterodox Schools - Cārvāka – General introduction with emphasis on Challenge to Veda, Rejection of Transcendental Entities, Ethics (Based on Sarvadarshansamgrah)
Jainism – General introduction with emphasis on Anekāntavāda, Syādvāda, Saptabhaṅginyāya, Triratna

Buddhism- General Introduction with emphasis on Four Noble Truths

Unit-IV **12 hrs**

Sāṁkhya – General Introduction with emphasis on Prakṛti, three Guṇas & Puruṣa (Based on Sāṃkhyakārikā)

Yoga - Eight fold path of Yoga (Based on Yogasūtra Sādhanapāda and Yogabhāṣya thereon)

Nyāya Vaiśesika - General Introduction with emphasis on Tarksamgraha – seven padrathas (overview only)

Mīmāṃsā – Concept of dharma

Advaita Vedānta – General Introduction with emphasis on Brahman, Māyā, Jīva and Jagat (Based on Vedāntasāra)

Essential/recommended readings:

1. Bhartiya, Mahesh - *Bhāratīya Darśana Kī Pramukha Samasyāeṁ*, Ghaziabad, 1999.
2. Chatterjee, S. C. & D. M. Datta - *Introduction to Indian Philosophy*, Calcutta University, Calcutta, 1968 (Hindi Translation also).
3. Hiriyanna, M. - *Outline of Indian Philosophy*, London, 1956 (also Hindi Translation).
4. Shastri, Kuppuswami, *A Primer of Indian Logic*, 1951 (only introduction).
5. Bhartiya, Mahesh - *Causation in Indian Philosophy*, Ghaziabad, 1975.
6. Pandey, Ram Chandra - *Panorama of Indian Philosophy* (also Hindi version), M.L.B.D., Delhi, 1966.
7. Raja, Kuhnan - *Some Fundamental Problems in Indian Philosophy*, MLBD, Delhi, 1974.
8. Rishi, Uma Shankar (Ed.), *Sarva-Darshana_Samgraha*, Chowkhamba Vidyabhawan, Varansi, 1984.

Suggested Readings:

1. Hiriyanna, M. - Outline of Indian Philosophy, London, 1956 (also Hindi Translation).
2. Shastri, Kuppuswami, A Primer of Indian Logic, 1951 (only introduction).
3. Bhartiya, Mahesh - Causation in Indian Philosophy, Ghaziabad, 1975.
4. O'Flaherty, Wendy Doniger – Karma and Rebirth in Classical Indian Tradition, MLBD, Delhi, 1983.
5. Radhakrishnan, S. - Indian Philosophy, Oxford University Press, Delhi, 1990.
6. Raja, Kuhnan - Some Fundamental Problems in Indian Philosophy, MLBD, Delhi,1974.
7. Chatterjee, S. C. – *The Nyāya Theory of Knowledge*, Calcutta, 1968.
8. Radhakrishnan, S. - *Indian Philosophy*, Oxford University Press, Delhi, 1990.

Examination scheme and mode: Subject to directions from the Examination Branch/University of Delhi from time to time.

Lexicographical Tradition in Sanskrit	04	3	1	0	12th Passed	Working Knowledge of Sanskrit

Learning Objectives

This course will introduce the theories of writing dictionaries in Sanskrit and its traditions.

Learning outcomes

After doing this course, students will learn the rich lexicographical tradition of Sanskrit field and they will get an outlook of the traditional and modern works in this field which will work as a great source of research tools for their future research endeavors.

Detailed Syllabus

Unit I **12 hrs**

Introduction to Sanskrit Lexicography

Origin and Development
Brief Introduction to Major Lexicons
Types of Dictionaries

Unit II **12 hrs**

Tradition of Sanskrit Lexicons

Early Sanskrit Lexicography:
Saravanukarmani, Nighaṇṭu and Nirukta
Dhātupāṭha, Gaṇapāṭha and Word lists in Śikṣās, Prātiśākhyas

Unit III **12 hrs**

Classical Sanskrit Lexicons

Vācaspatyam:
Textual organisation, Commentaries, Translations and Digitized works
Śabdakalpaduma:
Textual organisation, Commentaries, Translations and Digitized works

Halāyudhakośa:
Textual organisation, Commentaries, Translations, and Digitized works
Amarakośa:
Textual organisation, Commentaries, Translations, and Digitized works
Mankhakośa:
Textual organisation, Commentaries, Translations and Digitized works
Medinīkośa:
Textual organisation, Commentaries, Translations and Digitized works

Unit IV **09 hrs**

Modern Sanskrit Lexicographers

Monier William, Apte, Acharya Vishbandhu, Jainendra Siddhantakosha, Nyayakosha, M. Bloom Field

Essential/recommended readings

Amarakosha compiled by B.L.Rice, edited by N.Balasubramanya, 1970, page

Additional Resources:

Examination scheme and mode: Subject to directions from the Examination Branch/University of Delhi from time to time

Course title & Code	Credits	Credit distribution of the Course			Eligibility Criteria	Prerequisite of the course
		Lecture	Tutorial	Practical/ Practice		
Introduction to Sanskrit Poetics	04	3	1	0	12th Passed	Working Knowledge of Sanskrit

Learning Objectives

This course on an introduction to Sanskrit Poetics aims at providing the students with the knowledge of fundamental principles of Sanskrit Poetics in the Indian tradition on the basis of Kāvyaprakāśa and Sahityadarpana.

Learning outcomes

This course will make students aware of the fundamental principles of Sanskrit Poetics. They will be able to recognize the various genres of Sanskrit Poetics, appreciate the objectives of Sanskrit Poetics, and also analyze the structure of a work in terms of the essential ingredients of Sanskrit Poetics as propounded.

Detailed Syllabus

Unit I **09 hrs**

Kāvya-Prayojana (objectives of poetry)

Kāvya-Prayojana (objectives of poetry) based on Bhāmaha and Mammaṭa.

Unit II **12 hrs**

Kāvya-Hetu (causes of poetry)

Kāvya-Hetu (causes) of poetry based on Daṇḍī, Mammaṭa and Paṇḍitarāja Jagannātha.

Unit III **12 hrs**

Kāvya- Lakṣaṇa (definition)

Kāvya-Lakṣaṇa (definition) based on Bhāmaha, Daṇḍī, Kuntaka, Mammaṭa and Vishvanath.

Unit IV **12 hrs**

Figures of speech (Alaṅkāra)

Figures of speech based on Candrāloka -

Definition of Alaṅkāra, Anuprāsa, Yamaka, Upamā, Rūpaka, Utprekṣā, Bhrānti, Sandeha, Kāvyaliṅga, Śleṣa, Aprastutaprasaṁsā, Arthāntaranyāsa, Vibhāvanā and Viśeṣokti,

Essential/recommended readings

1. Kāvyālaṅkāra - Bhāmaha, Bhāṣyakāra, Devendra Nath Sharma, Bihaar rāṣṭrabhāṣā pariṣad, Patna, 1962.
2. Kāvyaprakāśa - Mammaṭa, Srinivas Shastri, Sahitya Bhandara Meerut.
3. Kāvyādarśa - Daṇḍī, Ramchandra Mishra, Chaukhamba Vidyabhavan, Varanasi.
4. Rasagaṅgādhara - Paṇditarāja Jagannātha, Chaukhamba Vidyabhavan, Varanasi
5. Vakroktijīvitam (1st Unmeṣa) – Kuntaka, Ved Prakash Dindoriya, Shivalik Prakashan, Delhi.
6. Sāhityadarpaṇa – Viśvanātha, Nirupan Vidyalankar, Sahitya Bhandara Meerut
7. Candrāloka – Jayadeva, Subodha Chandra Pant, MLBD, Delhi.

Additional Resources:

1. बलदेव उपाध्याय, संस्कृत—आलोचना, हिन्दी समिति, सूचना विभाग, उ. प्र., 1963.
2. Kane P.V., *History of Sanskrit Poetics* pp.352-991,
3. Kane, P.V., 1961, *History of Sanskrit Poetics* and its Hindi translation by Indrachandra Shastri, Motilal Banarasidas, Delhi.

Examination scheme and mode: Subject to directions from the Examination Branch/University of Delhi from time to time

DSE-11: Phonetics in Sanskrit Tradition

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility Criteria	Prerequisite of the course
		Lecture	Tutorial	Practical/ Practice		
Phonetics in Sanskrit Tradition	04	3	1	0	12th Passed	Working Knowledge of Sanskrit

Learning Objectives

The main objective of this course is to introduce basic concepts of phonetics in Sanskrit. This course aims at acquainting students with the mechanisms of speech production and to train them to perceive, identify and transcribe speech sounds. To make aware the students to phonetics in Indian tradition.

Learning outcomes

After completing this course the students will learn the basics of Sanskrit Phonetics. They will get acquainted with the sound systems, and the speech production mechanism of Sanskrit. They will also learn the traditional Sanskrit theories and principles of Phonetics.

Detailed Syllabus

Unit I **12 hrs**

Brief Introduction to Phonetics

- Definition of Phonetics
- Origin and Development
- Indian Phonetic traditions
- Types of Phonetics

Unit II **09 hrs**

General Introduction to Pratishakyas and Paniniya Shiksha

Unit III **12 hrs**

Introduction to Paniniya Shiksha (Vriddhapaatha)

- Sthana-prakarna
- Karana-prakarna
- Antahprayatna-prakrana
- Bahyaprayatna-prakrana
- Sthanapeedana-prakrana
- Vrittikars-prakrana
- Prakrama—prakrana

Nabhitala-prakrana

Unit IV **12 hrs**

Introduction to Paniniya Shiksha (Shlokatika)

Paniniya Shiksha (Shlokatika)

Based on Shloks 1-22

Essential/recommended readings

1. Paniniya Shiksha- Somlekha, Chaukhamba Sanskrit Pratishthan, Delhi, 2014
2. पाणिनीयशिक्षा, शिवराज आचार्य कौंडिण्न्यायन, CHAUKHAMBHA VIDYA BHAWAN, 2012

DSE-12: Ancient Indian Robotics

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the Course			Eligibility criteria	Prerequisite of the course
		Lecture	Tutorial	Practical/ Practice		
Ancient Indian Robotics	04	3	1	0	Twelfth Passed	Working Knowledge of Sanskrit

Learning Objectives

Ancient Indian Robotics is a comprehensive course that delves into the rich history of robotics in ancient India. The course explores the fascinating world of ancient Indian engineering and automaton technology, shedding light on the remarkable achievements and advancements made by ancient Indian civilizations in the field of robotics. Students will study the principles, designs, and mechanisms of ancient Indian robots, and gain insights into the cultural, social, and scientific contexts that influenced their development. Through a combination of lectures, discussions, and hands-on activities, students will develop a deep understanding of ancient Indian Robotics and its relevance to contemporary technology.

Learning outcomes

After completion of this course, students will be able to

- Explore the historical and cultural background of ancient India and its contributions to the field of robotics.
- Study the principles, designs, and mechanisms of ancient Indian robots.
- Examine the cultural, social, and scientific contexts that influenced the development of ancient Indian Robotics.
- Analyze the impact of ancient Indian Robotics on contemporary technology.
- Foster critical thinking, research skills, and the ability to draw connections between historical developments and present-day technology.

Detailed Syllabus

Unit: I

Historical Background

Introduction to ancient Indian civilization and its technological advancements
Discussion on the significance of studying ancient Indian Robotics in the context of contemporary technology
Examination of ancient Indian texts and scriptures mentioning robots and automata
Exploration of ancient Indian scientific traditions relevant to Robotics

Unit: II

Types of Ancient Indian Robots

Study of various types of ancient Indian robots, such as humanoid robots, animal-shaped robots, and mechanical devices

Analysis of their designs, mechanisms, and functions

Case studies of notable ancient Indian robots, such as the Yantra Sarvasva.

Exploration of religious and mythological beliefs related to robots in ancient Indian society.

Unit: III

Scientific and Mathematical Foundations

Study of scientific concepts/knowledge utilized in ancient Indian Robotics.

Examination of the instruments developed by ancient Indian scientists

Unit: IV

Samarangan-sutrdhar

Verse 101-107, Chapter 31 (दृग्ग्रीवातल ,योगतस्ते गुणानाम् -Ed. T. Ganpati Shastri)

Essential/recommended readings

1. **SamranganSutradhar** by Shukla, Dr.dijendranath, भारत भारती प्रेस, 1 अन्सारी रोड दरयागंज दिल्ली-6 1965
2. **SamranganSutradhar** S.K.Jugnu. ISBN: 9788170803676. 2011. Publisher: Chaukhamba Sanskrit Series.
3. **मयमतम्,** डॉ ० श्रीमती शैलजा पाण्डेय, चौखम्बा सुरभारती प्रकाशन, वाराणसी, 2007
4. **History of Mechanical Inventions in Ancient India** by Debiprasad Chattopadhyaya FIRMA KLM PRIVATE LIMITED 257-B, B. B. Ganguly Street Calcutta 700 012 INDIA
5. **Ancient India and the Indian Robotics** by Jayant Vishnu Narlikar
6. **The Wonder That Was India** by A.L. Basham
7. **Indian Scientific Heritage: An Introduction** by P.R. Sarkar
8. **Indian Civilization and Culture** by S.N. Sadasivan

DEPARTMENT OF SANSKRIT
SEMESTER - VI

DSC-16: Vedic Samhita & Grammar

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the Course			Eligibility criteria	Prerequisite of the course
		Lecture	Tutorial	Practical/ Practice		
Vedic Samhita & Grammar	04	3	1	0	12th Passed	Working Knowledge of Sanskrit

Learning Objectives

This course on Vedic literature aims to introduce two Vedic Samhitās (Samaveda & Atharvaveda) and Vedic Grammar to Bachelor Degree students. Also, the course has a special segment introducing Sri Aurobindo's Commentary on Vedas. It will also facilitate the students to know about philosophical, moral, and scientific principles including the source of Indian Intellectual traditions of the Vedic period.

Learning Outcomes

After completing this course students will be able to communicate some important Vedic verses with their meaning and teaching, and thus fundamentals of the religious life of India will be revealed to them in their true form. The students will be able to understand the strength of unity and power of the mind, and will realize the importance of the earth in their life.

Detailed Syllabus

Unit I **12 hrs**

Rgveda: 10.34 (Aksha Sukta) 10.121 (Hiranyagarbha)
Yajurveda
23.1-12 (Prajapati), 34.1-6 Sivasamkalpa Sukta

Unit II **12 hrs**

Atharvaveda
3-30 (Sammanasya Sukta), 12.1-12 (Pruthivi Sukta)

Unit III **09 hrs**

The Secret of the Veda (Sri Aurobindo)

Chapter V–VII

Unit IV **12 hrs**

Vedic Grammar
Padapatha, Vaidika Svara, Let Lakara, Ktvarthaka & Tumarthaka pratyaya

Essential/Recommended Readings

1. अथर्ववेद संहिता, सुबोध भाष्य, पण्डित श्रीपाद दामोदर सातवलेकर, स्वाध्याय मण्डल, पारडी, जिला-बलसाड, गुजरात, 2010
2. अथर्ववेदसंहिता (सायणभाष्यसहिता हिन्दीभाषानुवादसंवलिता), व्याख्याकारः सम्पादकश्च पण्डित रामस्वरूपशर्मागौडः, चौखम्बा विद्याभवन, वाराणसी, 2011

Sanskrit Composition and Communication	04	3	1	0	12th Passed	Working Knowledge of Sanskrit

Learning Objectives

This paper aims at developing compositional and communicative skills in Sanskrit. Students will learn also learn the art of translation from Sanskrit into Hindi or English and vice versa.

Learning Outcomes

After the completion of this course the learners will be able to develop a critical, linguistic and scientific approach towards Sanskrit language. The practice of essay writing will make the students form ideas and express them in Sanskrit. This practice will also familiarize them with various shastric theories and doctrines of various knowledge domains.

Detailed Syllabus

Unit I **12 hrs**

Compositional Sanskrit: Vibhaktyartha, Voice & Krt

Translation from/to Hindi/English to/from Sanskrit on the basis of cases, Compounds, Voices and kṛt suffixes.

Vibhaktyartha Prakarana of Laghusiddhantakaumudi
Vācya (Voice) – kartṛ, Karma and Bhāva
Selected kṛt Suffixes - tavya, anīyar, yat, ṇyat, ṇvul, tṛc, kta, ktavatu, śatṛ, śānac, tumun, ktvā-lyap, lyuṭ, ghañ, ktin

Unit II **09 hrs**

Communicative Sanskrit

Simple Conversations

Unit III **12 hrs**

Essay on Traditional Subjects

Composition of long/detailed essay on Veda, Upanisad, Sanskrit, Ramayana, Mahabharata, Purana, Gita, prominent classical Sanskrit poets.

Unit IV **12 hrs**

Essay on Comtemporary Subjects

Composition of short essay on contemporary issues and topics.

Essential/Recommended Readings

1. शास्त्री, घरानन्द, लघुसिद्धान्तकौमुदी, मूल एवं हिन्दी व्याख्या, मोतीलाल बनारसीदास,
2. नौटियाल, चक्रधर, बृहद्- अनुवाद- चन्द्रिका, मोतीलाल बनारसीदास, दिल्ली.
3. द्विवेदी, कपिलदेव, रचनानुवादकौमुदी, विश्वविद्यालय प्रकाशन, वाराणसी.
4. द्विवेदी, कपिलदेव, संस्कृत निबन्धशतकम् विश्वविद्यालय प्रकाशन, वाराणसी
5. Kale, M.R, Higher Sanskrit Grammar, MLBD, Delhi (Hindi Translation also available).

Additional Resources:

1. शास्त्री, भीमसेन, लघुसिद्धान्तकौमुदी, भैमीव्याख्या) भाग-1), भैमीव्याख्या, दिल्ली.
2. पाण्डेय, राधामोहन, संस्कृत सहचर, स्टूडेण्ट्स फ्रेण्ड्स, पटना.
3. Apte, V.S.,The Students' Guide to Sanskrit Composition, Chowkhamba Series, Varanasi (Hindi Translation also available).
4. Kanshiram, Laghusiddhantakaumudi (Vol. 1), MLBD, Delhi, 2009.

Examination scheme and mode: Subject to directions from the Examination Branch/University of Delhi from time to time.

DSC-18: Poetics and Literary Criticism

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the Course			Eligibility criteria	Prerequisite of the course
		Lecture	Tutorial	Practical/ Practice		
Poetics and Literary Criticism	**04**	**3**	**1**	**0**	**12th Passed**	**Working Knowledge of Sanskrit**

Learning Objectives

This course on Poetics and Literary Criticism aims at providing the students with the knowledge of fundamental principles of literary criticism in the Indian tradition on the basis of Kāvyaprakāśa and Sahityadarpana.

Learning Outcomes

After completetion of this course the students will be equipped with skills to assess the merits or demerits of works on poetry, prose and drama. They will be able recognize various genres of poetry, appreciate the objectives of poetry and also analyze the structure of a work in terms of the essential ingredients of poetry as propounded. Students will be inspired and encouraged to compose.

Detailed Syllabus

Unit I Introduction to Sanskrit Poetics **12 hrs**

Origin and development of Sanskrit poetics,
Its various names- kriyākalpa, alaṁkāraśāstra, sāhityaśāstra, saundryaśāstra.
Kāvya-Prayojana (objectives) and Kāvya-Lakṣaṇa (definition, based on Sāhityadarpaṇa)
Kāvya-Hetu (causes) of poetry (based on kāvyaprakāśa).

Unit II Forms of Poetry **10 hrs**

Forms of poetry: Dṛśya, Śravya, Miśra, (campū)
Mahākāvya, Khaṇḍakāvya, Gadya-Kāvya: Kathā, Ākhyāyikā (based on Sāhityadarpaṇa)

Unit III **14 hrs**

Śabda-śakti

General introduction to Śabda-śakti (based on Kāvyaprakāśa).
Abhidhā (expression/ denotative power),
Lakṣaṇā (indication/ indicative power) and
Vyañjanā (suggestion/ suggestive power).

Unit IV **09 hrs**

Rasa-sūtra

Rasa: Rasa-sūtra of Bharata and its prominent expositions (based on Kāvyaprakāśa):
Utpattivāda,
Anumitivāda,
Bhuktivāda and
Abhivyaktivāda.

Essential/Recommended Readings

1. Sāhityadarpaṇa: (Ch.VIth), Kārikā 6/1,2,313-37
2. Dwivedi, R.C, The Poetic Light:, Motilal Banarsidas, Delhi.1967.
3. Kāvyaprakāśa, kārikās 4/27, 28 with explanatory notes.
4. Ray, Sharad Ranjan, Sāhityadarpaṇa; Viśvanātha, (Ch I, VI & X) with Eng. Exposition, Delhi.
5. नगेन्द्र, (सं०), काव्यप्रकाश : मम्मटकृत, आचार्य विश्वेश्वर की व्याख्या सहित, ज्ञानमंडल लि०, वाराणसी ।
6. शालिग्राम शास्त्री, साहित्यदर्पण : (व्या०), मोतीलाल बनारसीदास, दिल्ली ।

Additional Resources:

1. बलदेव उपाध्याय, संस्कृत—आलोचना, हिन्दी समिति, सूचना विभाग, उ. प्र., 1963.
2. Kane P.V., History of Sanskrit Poetics pp.352-991,
3. Kane, P.V., 1961, History of Sanskrit Poetics and its Hindi translation by Indrachandra Shastri, Motilal Banarasidas, Delhi.

Examination scheme and mode: Subject to directions from the Examination Branch/University of Delhi from time to time.

BA (Prog.) with SANSKRIT AS MAJOR

DISCIPLINE SPECIFIC CORE COURSE, DISCIPLINE B 5:
DSC-11: Sanskrit Literature: Katha-Kavya

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility Criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/Practice		
(Discipline B 5) Sanskrit Literature: Katha-Kavya DSC – 11	04	3	1	0	12th Passed	Working Knowledge of Sanskrit

Learning Objectives:

This course aims to get the students acquainted with the outline of Sanskrit Katha Kavya through texts Pañcatantram and Hitopadesh with the General Introduction to Sanskrit Literature

Learning Outcomes:

The students will learn the essence of the ways of life depicted and enjoined in the Katha Kavya of Sanskrit language & Literature. They will also learn various aspects and forms of Sanskrit as one of the modern Indian Language through the practice of easy and simple Sanskrit texts of Katha Kavya. The stories prescribed in the texts will help the students to develop an understanding of the moral and ethical values that will be useful in their day today life situations and asset of life. They will be familiar with the general history of Sanskrit Literature and with the style and contents of the works of eminent literary figures. This course will enhance the skill of chaste Sanskrit pronunciation as well as competence and performance of language. This will help them translate and explain the prescribed Sanskrit texts in their native language.

Syllabus

Unit-I: **12 hrs**

Panchatantram: Aparikshitakarakam (पञ्चतन्त्रम्: अपरीक्षितकारकम्)

Kshapanakakatha (**क्षपणककथा**), Brahmaninakulakatha (**ब्राह्मणीनकुलकथा**), Lobhavishta-Chakradharkatha (**लोभाविष्टचक्रधरकथा**)

Unit-II: **12 hrs**

Sinha-Karakabrahmankatha (सिंहकारकब्राह्मणकथा)

Murkha-brahmanakatha (मूर्खब्राह्मणकथा)

Matsyamandukkatha (मत्स्यमण्डूककथा)

Rakshashrgalkatha (राक्षसशृगालकथा)

Unit-III **12 hrs**

Hitopdeshah : Mitralabhah (हितोपदेशः : मित्रलाभः)

Vriddhavyagraha-Lubdhvirakatha (वृद्धव्याघ्र-लुब्धविप्रकथा)

Unit-IV **09 hrs**

Tradition of Kathakavya in Sanskrit Literature
(संस्कृतसाहित्य में कथाकाव्य की परम्परा)
Origin and Development of Kathakavya
(कथाकाव्य का उद्भव और विकास)
Panchtantra, Hitopdesa, Kathasaritsagar, Vetalpanchavimsatika, Simhasanadwatrimsika and Purusapariksha
(पञ्चतन्त्र, हितोपदेश, कथासरित्सागर, वेतालपञ्चविंशतिका, सिंहासनद्वात्रिंशिका और पुरुषपरीक्षा)

Essential/recommended readings:

1. **पञ्चतन्त्रम्, श्रीविष्णुशर्माप्रणीत, व्याख्याकार-पाण्डेय, श्रीश्यामाचरण, मोतीलाल बनारसीदास, वाराणसी, दिल्ली, प्रथम संस्करण: वाराणसी**, 1975
2. **हितोपदेश, श्रीनारायणपण्डितविरचित, सम्पादक-प्रो. बालशास्त्री, चौखम्बा सुरभारती प्रकाशन, वाराणसी, संस्करण**, 2015
3. हितोपदेश, पण्डित जीवानन्द विद्यासागर, सरस्वती प्रेस कलकत्ता ।
4. पञ्चतन्त्रम्, श्यामाचरण पाण्डेय (व्या.), विष्णु शर्मा, मोतीलाल बनारसीदास, दिल्ली, 1975
5. M.R. Kale, Pancatantram (ed. and trans.), Motilal Banarasidass, Delhi 1999
6. Chandra Rajan, Pancatantram (trans.) Penguin Classics, Penguin Books.

Suggested Readings:

1. रमाशंकर त्रिपाठी, संस्कृत साहित्य का प्रामाणिक इतिहास, कृष्णदास अकादमी, वाराणसी
2. उमाशंकर शर्मा 'ऋषि', संस्कृत साहित्य का इतिहास, चौखम्बा सुरभारती, वाराणसी
3. बलदेव उपाध्याय, संस्कृत साहित्य का इतिहास, शारदा निकेतन, वाराणसी

4. A Collection of Ancient Hindu Tales (ed.) Franklin Edgerton, Johannes Hertel, 1908.
5. Krishnamachariar, History of Classical Sanskrit Literature, MLBD, Delhi
6. Dasgupta S.N., A History of Sanskrit Literature: Classical Period, University of Calcutta, 1977.
7. A.B. Keith, History of Sanskrit Literature (हिन्दी अनुवाद, मंगलदेव शास्त्री, मोतीलाल बनारसीदास, दिल्ली)

DISCIPLINE SPECIFIC CORE COURSE, DISCIPLINE B 6:
DSC-12: Indian Aesthetics

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility Criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/Practice		
(Discipline B 6) Indian Aesthetics DSC - 12	04	3	1	0	Passed in Semester-IV	Working Knowledge of Sanskrit

Learning Objectives:

Indian aesthetics is a potent field for the study of literary criticism. It has developed as an independent discipline today, which deals with the historically determined essence of human values, their creation, perception, appreciation and assimilation. It is the science and philosophy of essential analysis of all the fine arts. Indian perception accepts poetry, drama, music, architecture, iconography and painting as independent Arts. The main objective of this paper is to give its brief overview with reference to major trends of Indian Aesthetics.

Learning Outcomes:

This course will enable students to identify the real essence of Beauty propounded by Indian rhetoricians. After the completion of the course the learner will come across the Indian deliberation on aesthetic experience in the form of Rasa and its process. The participant will be able to appreciate the various artistic mods of expressions of Beauty in general and poetry in particular. The course will help the student peep into the historical evolution of the Indian science of aesthetics.

Syllabus

Unit-I: 12 hrs

Aesthetics (Saundaryaśāstra), its nature and components

Beauty (Saundarya): its definition, nature and components : vaya,rūpa, vacana, hāva, Discussion of synonyms of the term Beauty(Saundarya) : ramaṇīyatā, śucitā, lāvaṇya, cārutā, kānti, vicchitti, madhuratā, mugdhatā, manohāritā, śrī.

Unit-II: 09 hrs

Aesthetic experience (Rasa)

Nature of rasa (Aesthetic experience) according to Sāhityadarpaṇa, aesthetic enjoyment – eternal bliss, the ultimate reality (ānandamayatā, alaukikatā)

Unit-III 12 hrs

The process of Aesthetic experience (Rasa)

Constituents of rasa: bhāva (human feelings and emotions) vibhāva (causes or determinants), anubhāva (voluntary gestures), sāttvika bhāva (Involuntary gestures), vyabhicāri bhava (transitory states) and sthāyibhāva(basic mental states), sahṛdaya / sāmājika (Connoisseur / Spectator). anukārya, anukartā, sādhāraṇīkaraṇa (Generalization), four mental stages of rasa realization: vikāsa (cheerfulness), vistāra(exaltation), kṣobha (agitation), vikṣepa (perturbation). number of rasas according to Bharat

Unit-IV 12 hrs

Aesthetic elements (saundarya - tattva)

Art as the mode of expression of saundarya –in fine arts (Architecture, Sculpture and Painting), Main aesthetic elements of literary arts (Poetry and Drama) : alaṅkāra, rīti, dhvani,vakrokti & aucitya.

Prominent thinkers of Indian Aesthetics

Bharata, Bhāmaha, Vāmana, Daṇḍī, Ānandavardhana Abhinavagupta, Kuntaka, Mahimabhaṭṭa, Kṣemendra, Vishvanātha and Jagannātha.

Essential/recommended readings:

1. Sāhityadarpaṇa of Vishvanatha, (Based on karikas3/1-28).
2. Kane P.V., *History of Sanskrit Poetics* pp.352-391,
3. Upadhyaya, Baladeva, *Sanskrit Ālocanā* (for six schools)
4. Pandey, Kantichandra: *Comparative Aesthetics,* vol.1 Chowkhamba Sanskrit series office Varanasi, 2008
5. चतुर्वेदी ब्रजमोहन, भारतीय सौन्दर्यदर्शन, मध्यप्रदेश हिन्दी ग्रन्थ अकादमी, पृ० 5—12, 22—34, 37-42, 42-60,61-76
6. पाण्डेय कान्तिचन्द्र स्वतन्त्र कलाशास्त्र, प्रथम भाग पृ. 593—625.
7. पाण्डेय कान्तिचन्द्र, स्वतन्त्र कलाशास्त्र, प्रथम भाग पृ. 593—625.

Suggested Readings:

1. Gnoli, R. : *The Aesthetic Experience according to Abhinavagupta*, Chowkhamba Sanskrit series office Varanasi.
2. उपाध्याय बलदेव संस्कृत—आलोचना, हिन्दी समिति, सूचना विभाग, उ. प्र., 1963.
3. कृष्णकुमार अलंकारशास्त्र का इतिहास, साहित्य भण्डार,मेरठ,1998
4. Coomarswami A: *Introduction to Indian Art,* Theosophical Society, Adyar, 1956.
5. कृष्णकुमार अलंकारशास्त्र का इतिहास, साहित्य भण्डार,मेरठ,1998

6. पाण्डेय, कान्तिचन्द्र स्वतन्त्र कलाशास्त्र, प्रथम तथा द्वितीय भाग, चौखम्भा संस्कृत सीरीज वाराणसी 1967, 1978.

Examination scheme and mode: Subject to directions from the Examination Branch/University of Delhi from time to time.

DSE-13: Basic Principles of Pāṇinian Grammar

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the Course			Eligibility criteria	Prerequisite of the course
		Lecture	Tutorial	Practical/ Practice		
Basic Principles of Pāṇinian Grammar	04	3	1	0	Nil	Nil

Learning Objectives

This course introduces the basics of Pāṇinian grammar. It provides information related to the grammar written by Pāṇini. The core concept of Paninian grammar will be introduced. The main aim of this course is to introduce the structure of Ashtadhyayi and richness of the Indian linguistic tradition for those who are not Sanskrit scholars but are curious to know about the scientific literature in Sanskrit.

Learning outcomes

The students will get an overview of the Paninian grammar. Within the field of Sanskrit studies, the field of vyākaraṇa (grammar) is said to be the core foundation upon which everything else is built. It will be a deep exploration of the study of grammar starting from absolute scratch. Students will be able to learn how to study Paninian Grammar.

Detailed Syllabus

Unit I

Introduction to Ashtadhyayai

Introduction to Pāṇini
General information of his grammar
Current Pāṇinian tradition
Structure of the Ashtadhyayi
The Phonemic Components: Alphabest (Mahashwara Sutra)
Pratyaharas

Unit II

Core Concept of Ashtadhyayi

Types of Sutras
The concept of Anuvritti, Adhikara, Samjna
Decoding the meaning of the sutras
Technical Terms of Panini

Unit III

Core Concept of Ashtadhyayi

Decoding the meaning of the sutras
Role of Various types of Sutras
Utsarga and Apavada
Brief Introduction to Sanskrit Suffixes: Sup, Tin, Krit, Taddhita

Unit IV

Databases of Panini

Sutrapatha
Dhatupatha:
Classification Dhatus: Gana (10), Pada (3), Idagama (3), karma, ac numbers, anubandha, aadivarna, antyavarna, upadhavarba
Brief Introduction to Dhatus, Lakar
Ganapatha

Essential/recommended readings

1. The Aṣṭādhyāyī Sūtrapāṭha of Panini, with Vārtikas, Gaṇa, Dhātupāṭha, Pāṇinīya-śikṣā and Paribhāṣāpāṭha, second edition, edited by C. Sankara Rama Shastri, printed and published by The Shri Bala Manorama Press, Mylapore, Madras, 1937.
2. The Aṣṭādhyāyī of Pāṇini, translated into English by Shrish Chandra Vasu, first published in 1891, reprinted by Motilal Benarsidass, Delhi, 1962.
3. The Ashtadhyayi of Panini. Vol. 6. Satyajnan Chaterji, 1897.
4. Pawate, Ishtalingappa Siddharamappa. The structure of the Ashtadhyayi. Amar Prakashan, 1987.
5. Mahalakshmi, A. Soumya, and Minal Moharir. "Ashtadhyayi—An Experimental Approach to Enhance Programming Languages and Compiler Design Using." *Recent Findings in Intelligent Computing Techniques: Proceedings of the 5th ICACNI 2017, Volume 3* 709 (2018): 3.
6. Subbanna, Sridhar, and Shrinivasa Varakhedi. "Computational structure of the Ashtadhyayi and conflict resolution techniques." *Sanskrit Computational Linguistics* (2009): 56-65.
7. Dr. Naresh Jha, Ashtadhyayi of Panini (Sanskrit With Hindi Text), 2014, Chaukhamba Surbharati Prakashan.

DSE-14: Introduction to Ancient Indian Mathematics

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the Course			Eligibility criteria	Prerequisite of the course
		Lecture	Tutorial	Practical/ Practice		
Introduction to Ancient Indian Mathematics	04	3	1	0	Twelfth Passed	Working Knowledge of Sanskrit

Learning Objectives

This course provides an in-depth exploration of the rich heritage of ancient Indian mathematics, covering various mathematical concepts, techniques, and achievements that emerged in the Indian subcontinent over centuries. Students will delve into the works of renowned mathematicians such as Aryabhata, Brahmagupta, and Bhaskara, among others. The course aims to highlight the significant contributions of ancient Indian mathematics to various branches of mathematics and its influence on contemporary mathematical thought.

Learning outcomes

By the end of this course, students will be able to:

1. Understand the historical and cultural context of ancient Indian mathematics.
2. Familiarize themselves with the fundamental mathematical concepts and techniques developed by ancient Indian mathematicians.
3. Analyze and interpret ancient Indian mathematical texts.
4. Recognize the contributions of ancient Indian mathematics to modern mathematical fields.
5. Appreciate the interconnectedness of ancient Indian mathematics with other areas of knowledge, including astronomy, philosophy, and linguistics.

Detailed Syllabus

Unit: I

Introduction to Ancient Indian Mathematics

Overview of ancient Indian mathematical traditions
Significance of ancient Indian mathematics in global mathematical history
Major mathematical works and their authors

Unit: II

Life and works of Aryabhata, Brahmagupta, Baskaracharya

Unit: III

Contribution of Aryabhata, Brahmagupta, Baskaracharya

Unit: IV

Some Essentials of ancient Mathematics

Decimal place value system and its origins
Numerical notations and symbols used in ancient Indian mathematics
Basic arithmetic operations (addition, subtraction, multiplication, division) in ancient Indian mathematics
Geometrical concepts and constructions in ancient Indian mathematics
Connection between astronomy and mathematics in ancient India

Essential/recommended readings

1. "Sulba Sutras" - These ancient texts, composed between 800 BCE and 200 BCE, present mathematical techniques for constructing altars and fire pits used in Vedic rituals. They contain geometric and algebraic methods, including the Pythagorean theorem.
2. "Aryabhatiya" by Aryabhata - Written in the 5th century CE, this work is a foundational text of Indian mathematics. It covers various mathematical topics, including arithmetic, algebra, trigonometry, and astronomy. It introduces the concept of zero and provides an approximation for the value of pi.
3. "Brahmasphutasiddhanta" by Brahmagupta - Composed in the 7th century CE, this treatise covers topics such as arithmetic, algebra, geometry, and astronomy. It introduces negative numbers and presents solutions to quadratic equations.
4. "Lilavati" by Bhaskara II - This 12th-century CE work focuses on arithmetic and algebra. It contains a wide range of mathematical problems and their solutions, along with geometric and combinatorial techniques.
5. "Ganita Sara Sangraha" by Mahaviracharya - Written in the 9th century CE, this treatise provides a comprehensive overview of arithmetic and algebra. It covers topics such as number theory, fractions, series, and solutions to linear and quadratic equations"Yuktibhasa" by Jyesthadeva - Composed in the 16th century CE, this work explores advanced topics in algebra and calculus. It introduces the Kerala school's method of calculating with infinite series and provides a comprehensive understanding of calculus in ancient India.
6. "Siddhanta Shiromani" by Bhaskara II - This monumental work, written in the 12th century CE, comprises four parts: Lilavati, Bijaganita, Grahaganita, and Goladhyaya. It covers arithmetic, algebra, geometry, and astronomy, offering insights into advanced mathematical concepts and calculations.
7. "Vedic Mathematics" by Bharati Krishna Tirtha - This modern compilation, published in the 20th century, presents the mathematical principles found in the Vedas. It provides techniques for mental calculations, quick multiplication, division, and square roots, highlighting the mathematical wisdom of ancient India.

Reference readings

1. "Mathematics in Ancient India" by T.K. Puttaswamy and S.K. Rangaswami - This comprehensive book explores the development of mathematics in ancient India, covering various mathematical concepts, techniques, and contributions by Indian mathematicians.

2. "A Source Book in Indian Mathematics" edited by K. Sarma - This anthology brings together translations of key texts in ancient Indian mathematics, providing direct access to original sources and mathematical concepts developed in the Indian subcontinent.
3. "The History of Hindu Mathematics: A Sourcebook" by Bibhutibhusan Datta and Avadhesh Narayan Singh - This book presents an in-depth examination of mathematical ideas and techniques from ancient Indian texts, including arithmetic, algebra, geometry, and astronomy.
4. "Mathematics in India" by Kim Plofker - Offering a scholarly analysis of Indian mathematical traditions, this book covers topics such as number systems, arithmetic, algebra, geometry, and trigonometry, with a focus on historical context and cultural influences.
5. "Indian Mathematics: Engaging with the World from Ancient to Modern Times" edited by Agathe Keller, Clemency Montelle, and Christine Proust - This collection of essays explores various aspects of Indian mathematics, from its ancient roots to contemporary developments, including contributions to astronomy, linguistics, and philosophical thought.
6. "History of Ancient Indian Mathematics" by C. N. Srinivasiengar - This book provides a historical overview of ancient Indian mathematics, tracing its evolution from the Indus Valley Civilization to the medieval period, highlighting the contributions of notable mathematicians and the impact on subsequent mathematical developments

Examination scheme and mode: Subject to directions from the Examination Branch/University of Delhi from time to time.

Revision/Editing
Major Components of a Research Papers
Abstract, Keywords, Background and Introduction, Review of Literatures, Objective, Material (data) and methodology, result and discussions, conclusions, finding, future direction of research, acknowledgement, references

Unit IV **12 hrs**

Dissertation Writing Skill

Overview of the dissertation
Major steps: Proposal, Dissertation Writing, Editing/Review, Presentation and Submission
Essential Elements of Research Proposal:
- Research topic selection
- A brief description of the proposed thesis
- Preliminary outline of the proposed research
- Survey
- Reference list

Structure of Dissertation
- Title Page
- Acknowledgement
- Abstract
- Table of Contents
- List of figures
- List of Tables
- List of Appendixes
- Dissertation Chapters
- References Lists

Essential/recommended readings

DSE-16: Research Methodology for Sanskrit Studies

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility Criteria	Prerequisite of the course
		Lecture	Tutorial	Practical/ Practice		
Research Methodology for Sanskrit Studies	04	3	1	0	12th Passed	Working Knowledge of Sanskrit

Learning Objectives

This course will introduce the basics of research methodology and the methodologies followed in the research field of Arts or Sanskrit. The primary emphasis will be on the study of research methods applicable to undertaking research in Sanskrit.

Learning outcomes

After completing this course the students will get an overview of the various research methodologies. They will be able to understand the specific procedures or techniques to be used to identify, select, process, and analyze information about a research topic.

Detailed Syllabus

Unit I **12 hrs**

Theoretical concept of Research

Introduction, Objectives, and Types of Research
Outline of Research Work
Research Methodologies
Topic Selection and Writing Methods
Material Collection: Primary and Secondary
E-Recourses and Research Tools

Unit II **12 hrs**

Literature Review

Brief Introduction of Survey
Techniques/Methods of Survey
Tools and Techniques of Survey
Step of the Survey

Unit III **12 hrs**

Referencing

What is Referencing?
Step of Referencing
How to make references?
Citation and Citation in Text, Various patterns of Citation in Text and Sample
Various Software for Referencing
Components of referencing, Book, Dictionary, Journal, Conference, News Paper, Magazine, Report, Government Publications, Thesis, Dissertation, Web pages, Internet Resources, Personal Communications (Written, oral and email), Lectures, Video, DVD, Films, etc.)
Introduction of Various Style Sheets of Referencing.
Detail Introduction of the above Style for Sanskrit.
Creation Methods of Reference List and Samples.

Unit IV **09 hrs**

Transliteration

Transliteration Schemes
International Alphabet of Sanskrit Transliteration (IAST)
Indian languages Transliteration (ITRANS)
Introduction to available computational tools for converting
Devanagari Texts to IAST and TTRANS.

Essential/recommended readings

GE-7: Fundamentals of Indian Philosophy

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the Course			Eligibility criteria	Prerequisite of the course
		Lecture	Tutorial	Practical/ Practice		
Fundamentals of Indian Philosophy	04	3	1	0	Semester II Passed	Nil

Learning Objectives

The primary objective of this course is to familiaries the students with the basic issues in Indian Philosophy. The course will give a hand on knowledge of various Fundamental concepts and Theories to enable them to learn the higher concepts and Theories of different Philosophical schools of Indian Philosophy

Learning outcomes

Indian Philosophy teaches critical thinking, close reading, clear writing, and logical analysis. It develops the tools of logic and reason to analyse the ways in which the individual experiences the Universe. It guides the student to understand the language we use to describe the world, and our place within it. Different areas of philosophy are distinguished by the questions they ask. The most important reason to study philosophy is that it is of enormous and enduring interest. Philosophy is important, but it is also enormously enjoyable in which students are provided with the tools and the opportunity to develop and express their own philosophical views.

Detailed Syllabus

Unit I: Fundamentals of Philosophy

Darśana - concept and aims, Classification of Indian Philosophical schools, Fundamental issues in Indian Philosophy- Epistemology: Pramanas

Unit: II Metaphysics:

Satkaryavada, Asatkaryavada, Parinamavada, Vivartavada, Svabhavavada, Consciousness and matter, theories of self

Ethics: Karma & Punarjanma theory, Liberation

Unit: III Schools of Indian Philosophy

Heterodox Schools - **Cārvāka** - General introduction with emphasis on Challenge to Veda, Rejection of Transcendental Entities, Ethics

Jainism: General Introduction with emphasis on Anekantavāda, Syadvāda, Saptabhanginyaya.

Buddhism- General introduction with emphasis on Four Noble Truths

Unit : IV Orthodox Schools

Samkhya- General Introduction with emphasis on Prakṛti, three Gunas & Puruṣa (Based on Samkhyakārikā)

Yoga – Eight-fold path of Yoga

Nyaya Vaisesika - General Introduction Seven Padrathas (overview only) Mimamsa - Svatah Prāmāṇyavāda

Advaita Vedanta - General Introduction with emphasis on Brahman, Māyā, Jīva and Jagat

Essential/recommended readings

1. 1.मिश्र, पंकज कुमार, तर्कसंग्रह तन्वी व्याख्या, परिमल पब्लिकेशन्स, शक्ति नगर, दिल्ली-7, 2013
2. मिश्र, पंकज कुमार, चार्वाक, शिवालिक प्रकाशन, 27/16, शक्ति नगर, दिल्ली-7, 2019

GE-8: Indian Epigraphy & Palaeography

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the Course			Eligibility criteria	Prerequisite of the course
		Lecture	Tutorial	Practical/ Practice		
Indian Epigraphy & Palaeography	04	3	1	0	Semester II Passed	Nil

Learning Objectives

This course provides the students with the knowledge of the Indian Epigraphy and Palaeography and basics of Indian history of ancient period. Learners interested in acquiring historical facts direct from the original source can be benefitted with this course. It is extremely helpful for those who are willing to involve in archaeological studies.

Learning outcomes

After completion of this course , the students will form a solid undersdtanding of the various Inscriptions , antiquity of writing and other issues related to Indian Epigraphy and Palaeography

Detailed Syllabus

Unit: I

Welfare state: repair of dam, mati-saćiva, karma-saciva in Junagadh Inscription of Rudradāman.

Unit: II

1. Eran Pillar Inscription: Status of Samudragupta
2. Meharauli Iron Pillar Inscription of Candra: Victory, Recognition of Chandra

Unit: III

1. **Antiquity of writing in India**

a) Observations from foreign scholars
b) Literary evidences
c) Observations made by Indian Epigraphists.

2. Importance of the study of Inscriptions.

a) Geographical description
b) Historical evidences

e) Society
d) Religion
e) Literature
f) Economic Conditions
g) Administration

1. Writing material:
a) Rocks b) Pillars c) Metal Plates Brush, Chisel, Stylus, Paint/Colour d) Statues e) Pen

Unit: IV

1. Origin of the Brahmi Script
a) Foreign Origin
b) Indian Origin

2. Development of the script upto 700 A.D.

Essential/recommended readings

1. Buhler, G, On the origin of the Indian alphabet & numerals.
2. Dani, A. H, Indian Paleography
3. Ojha, G. H, Bharatiya Praćina Lipimāla (Hindi)
4. Pandey, R.B, Asoka ke Abhilekha (Hindi), Bharatiya Puralipi (Hindi)
5. Rana, S.S., Bharatiya Abhilekha
6. Sircar, D.C., Indian Epigraphy, Select Inscriptions (Part - I)
7. Upadhyay, V., Praćina Bharatiya Abhilekha (Hindi)
8. Thapar, Romila, Asoka tatha Maurya Samrajya Ka Patana (Hindi)

Examination scheme and mode: Subject to directions from the Examination Branch/University of Delhi from time to time.

GE 9: Indian Legal System

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Prerequisite of the course
		Lecture	Tutorial	Practical/ Practice		
Indian Legal System	04	3	1	0	Semester II Passed	Working Knowledge of Sanskrit

Course Objectives

To provide an understanding of law in the Indian knowledge system
To enable students to appreciate the practical and pragmatic aspects of Indian legal thought

Learning Outcomes

Students will acquire a general understanding of various aspects of law
They will understand the tensions between forces of change and status quo
They will appreciate the role of people in the evolution of law
They will learn how a legal system has to be sensitive to peoples' needs

Detailed Syllabus

Unit 1- Concept of law in the Indian knowledge system **09 hrs**

Vyavahara as Law, difference between dharma and vyavahara
Survey of vyavahara literature – smritis, commentaries and nibandhas
Peoples' Practices and the letter of law – Custom as a source of law
Fundamental Principles of Vyavahara

Unit II- Wealth based Disputes **12 hrs**

Labour and Employment
Market Operations
Finance and Banking
Commercial Enterprises
Laws of Inheritance

Unit III- Violence based disputes **12 hrs**

Law of Insolent speech
Law of injury and Death
Crimes against women

Unit IV- Procedure and Evidence **12 hrs**

Types and hierarchy of courts
Legal procedure- Plaint, prima facie assessment, summons, injunctions, Reply, Judgement
Laws of Evidence
Legal Interpretation and Growth of law

Suggested Readings

1. Kane P.V. : History of Dharma Shastra, Bhandarkar Oriental Research Institute, Pune
2. Lingat Robert : Classical Hindu Law,
3. Mathur A.D. : Medieval Hindu Law, Oxford University Press, New Delhi
4. Sarkar Kishori Lal : Mimamsa principles of Interpretation, 1924 (Revised by Matkandey Katju)

Examination scheme and mode: Subject to directions from the Examination Branch/University of Delhi from time to time

GE 10: Fundamentals of Buddhist Philosophy

Credit distribution, Eligibility, and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Prerequisite of the course
		Lecture	Tutorial	Practical/ Practice		
Fundamentals of Buddhist Philosophy	04	3	1	0	Semester II Passed	Working Knowledge of Sanskrit

Learning Objectives

This course provides an introduction to the basic teachings, practices, and history of Buddhism. Students will learn about the key concepts and philosophical ideas in Buddhism, including the Four Noble Truths, the Noble Eightfold Path, and the concept of karma. The course will also cover the history and development of Buddhism in different regions of the world, including South Asia, Southeast Asia, East Asia, and the West.

Learning outcomes

To introduce students to the fundamental teachings and practices of Buddhism
To provide an overview of the historical development of Buddhism in different regions of the world
To develop critical thinking skills by analyzing the philosophical and ethical ideas in Buddhism
To enhance students' ability to articulate their own views on Buddhism

Detailed Syllabus

Unit: I **12 hrs**

Introduction to Buddhism

Basic concepts of Buddhism
The development of Theravada Buddhism
Historical context and cultural background
The role of Buddhism in ancient India

Unit: II **09 hrs**

Life of Buddha

Buddha and his teachings
The Four Noble Truths and the Noble Eight fold Path Buddhism- General Introduction with emphasis on Four Noble Truths Pratityasamutpadvad.

Unit: III **12 hrs**

Buddhist Philosophy

The nature of reality- Shunyavada, Kshanabhangvaad,
Theory of Existence
The concept of karma and rebirth

Unit: IV **12 hrs**

Buddhist Ethics

Five Precepts
Practice of meditation
Role of compassion and wisdom in Buddhist ethics
Role of Buddhism in social justice movements and Environmentalism

Recommended Books/Readings:

1. Bhartiya, Mahesh - Bhāratīya Darśana Kī Pramukha Samasyāem, Ghaziabad, 1999.
2. Bhartiya, Mahesh - Causation in Indian Philosophy, Ghaziabad, 1975.
3. Chatterjee, S. C. & D. M. Datta - Introduction to Indian Philosophy, Calcutta University, Calcutta, 1968 (Hindi Translation also).
4. Hiriyanna, M. - Outline of Indian Philosophy, London, 1956 (also Hindi Translation).
5. O'Flaherty, Wendy Doniger – Karma and Rebirth in Classical Indian Tradition, MLBD, Delhi, 1983.
6. Pandey, Ram Chandra - Panorama of Indian Philosophy (also Hindi version), M.L.B.D., Delhi, 1966.
7. Radhakrishnan, S. - Indian Philosophy, Oxford University Press, Delhi, 1990.
8. Raja, Kuhnan - Some Fundamental Problems in Indian Philosophy, MLBD, Delhi, 1974.
9. Rishi, Uma Shankar (Ed.), Sarva-Darshana_Samgraha, Chowkhamba Vidyabhawan, Varanasi, 1984.
10. Shastri, Kuppuswami, A Primer of Indian Logic, 1951 (only introduction).

Suggested Reading :

Examination scheme and mode: Subject to directions from the Examination Branch/University of Delhi from time to time.

GE 11: Introduction to Jain Philosophy

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the Course			Eligibility criteria	Prerequisite of the course
		Lecture	Tutorial	Practical/ Practice		
Introduction to Jain Philosophy	04	3	1	0	Semester II Passed	Working Knowledge of Sanskrit

Learning Objectives

This course provides an introduction to Jainism, one of the oldest and most influential religious traditions of India. Students will learn about the history, beliefs, practices, and ethical principles of Jainism. The course will also explore Jain contributions to Indian culture, philosophy, and literature. By the end of the course, students will have a basic understanding of Jainism and its significance in Indian society and beyond.

Learning outcomes

To familiarize students with the history and basic principles of Jainism
To explore the role of Jainism in Indian society and culture
To examine the ethical principles and practices of Jainism
To introduce students to Jain literature and philosophy
To encourage critical thinking and reflection on Jainism and its relevance to contemporary issues.

Detailed Syllabus

Unit I
Introduction to Jainism **12 hrs**

Historical background of Jainism
Basic concepts of Jainism: karma, dharma, ahimsa,
Introduction to Jain scriptures: Agamas and commentaries
Major Texts and Philosophers of Jain Philosophy

Unit II **12 hrs**
Jain Philosophy

Jaina Ontology- Dravya, Guna, Paryaya, Concept of seven Dravyas, Astikaaya and Anastikaay
Jain philosophy: the three principles (Anekantavada, Syadvada, and Nayavada)
Contributions of Jainism to Indian philosophy
Jain beliefs about the nature of the soul and the universe

Unit III **12 hrs**

Jain Ethics

Jain practices: meditation, fasting, rituals, etc.
Principle of ahimsa (non-violence) and its implications
Jain ethics and environment

Unit IV **09 hrs**

Jainism and Contemporary Society

Role of Jainism in Indian society and culture
Jainism in the modern world

GE-12 Ancient Indian Polity

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the Course			Eligibility criteria	Prerequisite of the course
		Lecture	Tutorial	Practical/ Practice		
Ancient Indian Polity	04	3	1	0	Semester II Passed	Working Knowledge of Sanskrit

Learning Objectives

Fundamental Concepts of Indian Political thought have been discussed in Dharma-śāstra literature as the scientific branches of knowledge in ancient India. The aim of this course is to make the students acquainted with various aspects of Indian Political Thought and institutions of Polity as propounded in the ancient Sanskrit texts such as Vedic Samhitas, Mahābhārata, Purāṇas, Kauṭilya's Arthaśāstra and other works known as Nītiśāstra.

Learning outcomes

This course will enable the students to appreciate the fundamental concepts of Indian political thoughts discussed in ancient Sanskrit texts such as Vedic Samhitas, Mahābhārata, Purāṇas, Arthaśāstra, and other works known as Nītiśāstra. It is supposed to create an awareness of the various aspects of Indian political thoughts and institutions of polity and at the same time make the people politically conscious from time to time.

Detailed Syllabus

Unit I **09 hrs**

Basic Features of Ancient Indian Political Thought:

Name, Scope, and Sources of Ancient Indian Political Thought:

Various Names of Indian Polity: 'Daṇḍanīti', Arthshastra, 'Dharmaśāstra', Rajshastra 'Nītiśāstra'.

Sources of Ancient Indian Political Thought: Vedic Literature, Purāṇa, Rāmāyaṇa, Mahābhārata, Dharmaśāstra, Nītiśāstra Kautilya's Arthaśāstra and Rajaśāsana (Inscriptions).

Prominent Indian Political Thinkers: Manu, Śukrācārya, Kauṭilya, Kāmandaka, Somadeva Suri.

Unit: II **12 hrs**

Ancient Indian Political Thought: Origin and Development:

Indian Political Thought from Vedic Period to Buddhist Period: Election of King by the People' Visas 'in Vedic period: (Ṛgveda,10.173;10.174, Atharvaveda, 3.4.2; 6.87.1-2), Parliamentary Institutions: 'Sabhā, 'Samiti' and 'Vidatha'

Ṛgveda, 10.85.26),
Democratic practices in the Buddhist Period (Diggnikāya, Mahāparinibbāṇa Sūtta, Anguttaranikāya, 1.213; 4.252, 256)

Unit: III **12 hrs**

Nature, Types and Theories of the State:

Nature of the State in Arthaśāstra (6.1) and Manusmṛti (9.294) with Special Reference to Saptāṅga-Theory (Brief description)

Types of State: Rājya, Svarājya, Bhojya, Vairājya, Mahārājya, Sāmarājya (Aitreya Brāhmaṇa, 8.3.13-14; 8.4.15-16).

Kauṭilya's concept of the Welfare State (Arthaśāstra, 1.13); Essential Qualities of King (Arthaśāstra, 6.1.16-18); Duties of King and State 'Rajadharma' (Mahābhārata, Śāntiparva, 120.1-15; Manusmṛti, 7.1-15; Śukranīti,1.1-15) Constituent Elements of Jain political thought (Somadeva's Nītivākyāmṛta, 9.1.18 and, 19.1.10)

Unit IV **12 hrs**

Cardinal Theories and Ancient Indian Political Thinkers

Cardinal Theories of Indian Political Science:
'Saptāṅga' Theory of State: Svāmī, Amātya, Janapada, Pura, Kośa, Daṇḍa and Mitra (Arthaśāstra-6.1, Mahābhārata-Śantiparva-56.5, Śukranīti, 1.61-62).
'Maṇḍala 'Theory of Inter-State Relations:
'Sadguṇya' Policy of War and Peace Diplomacy:
'Caturvidha Upāya' for balancing the power of State: Śāma, Dāma, Daṇḍa, Bheda.
Three types of State power 'Śakti': Prabhu Śakti, Mantra Śakti, and Utsāha Śakti.

GE 13: Introduction to Smṛti Literature

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the Course			Eligibility Criteria	Prerequisite of the course
		Lecture	Tutorial	Practical/ Practice		
Introduction to Smṛti Literature	04	3	1	0	Semester II Passed	Working Knowledge of Sanskrit

Learning Objectives

The aim of this course is to make the students acquainted with salient ancient Indian social features and aspects propounded in various Smṛti texts. Smṛti literature is a corpus of ancient Indian society. One can find the root of Indian social, and administrative issues and ancient Indian jurisprudence in Smṛti literature. This course provides an opportunity to study and understand ancient Indian Institutions through the original text of Smṛtis.

Learning outcomes

After the completion of this course, students will be able to connect the theoretical model propounded by the Smṛti texts in the forms of the Varnaashram system, Education, marriage, and the Rights of women. The learners will be able to see Dharma as a dynamic institution. This will free them from the traces of fundamentalism and they should become more open-minded and liberal. Learning and developing a critical approach to the institution of caste and women's issues will make the participants sensitive to discriminating practices. Students will be able to understand the importance of Smṛti literature and they will become unbiased towards the myths regarding various Smṛtis.

Detailed Syllabus

Unit I **09 hrs**

Smṛti Literature

Brief Introduction of Smṛti
Concept of Smṛti
Relation between Smṛti and Dharmshastra.
Some Prominent Smṛti and Author- Manu, Yajnyvalkya, Shukracharya, Somdeva, Medhatithi, Vigyaneshwara

Unit II **12 hrs**

Social Institutions

Dharma: Meaning of Dharma, sources of dharma (Manu.2.1, 6, 10, 12) Yaj. 1.7 Ten fold of Dharma & it's versions Manu. 6.91-94

Varna and Ashram System: An organized society,
Concept, Composition, purpose and Relevance of Varnashram (Manu. 1.87, 10.4, 1.88, 1.89, 9.326, 1.90, 1.91, Manu.10.65, 9.335, 4.245, 2.103,2.168)

Ashram System: Bringing balance in human life
Ashram dharma (Mitakshra Teeka on Yaj. 1.1), Different Ashramas depicted in Smṛti-Literature. Marriage (Manu. 3.4), Panch-Mahayagya 3.69-76, 82, Importance of Grihastha ashram 3.77-81, 6.82-90, Social Responsibility of Grihastha.

Unit: III **12 hrs**

Social Institutions

Education: Attaining knowledge: Beginning of education; Manu 2, Yaj. 1.10-115, Gurukul; Manu chap 2 and 3 Yaj 1.10-115, rules regarding dressing, eating, rising up, sleeping, behaving etc.

GE-14: Philosophy of Yoga

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the Course			Eligibility criteria	Prerequisite of the course
		Lecture	Tutorial	Practical/ Practice		
Philosophy of Yoga	04	3	1	0	Semester II Passed	Working Knowledge of Sanskrit

Learning Objectives

This course approaches Patanjali's Aphorisms on Yoga as philosophical psychology. The course aims to make students aware of the importance of balance in life and to make them aware of the theoretical and practical aspects of Balanced Living inherent in Sanskrit texts and apply them to live a better life. Graduates who read this course should be able to see that in order to bring balance in life, a proper understanding of one's life situation is necessary. For this understanding, Shravana, Manana, and Nididhyasana are important tools.

Learning outcomes

Graduates must know the true essence of listening (acquisition of information) manana (reflection) and nididhyasana (unflinching commitment). In this segment, students can learn how to improve concentration. They will be able to identify the causes of indecisiveness and confusion and will learn how emotional stability can lead to clearer thinking. This section should help students to understand the importance of Ashtang yoga and Kriyayoga for the purification mind. Teamwork and social cohesion require interpersonal skills. One needs to know that one's behavior can create conflicts. Students should learn how active engagement with action is most conducive to healthy and successful living. By reading this segment, learners should develop a more balanced approach to life.

Detailed Syllabus

Unit I **12 hrs**

Introduction and History of Yoga Philosophy
Psychology of Yoga
Method of Self-presentation: Hearing (śravaṇa), Reflection (manana) & meditation (nididhyāsana) - (Bṛhadāraṇyakopaniṣad, 2.4.5) and Vedantasara

Unit II **12 hrs**

Concept of Yoga: (Yogasūtra 1.2)
Restriction of fluctuations by practice (abhyāsa) and passionlessness (vairāgya): (Yogasūtra)
Concentration:

Unit III **12 hrs**

Eight Folds of Yoga (aṣṭāṅgayoga)
Yoga of action (kriyāyoga)
Four distinct means of mental purity (cittaprasādana) leading to oneness

Unit IV **09 hrs**

Pancha Kosha: Theory of Personality (5 Insights of great Indian psychology)
Sri Aurovindo's Integral Yoga.

Essential/recommended readings

1. Indian Philosophy
2. उपनिषद् रहस्य
3. एकादश उपनिषद्,
4. *Yoga Sutras of Patanjali*

Additional Resources:

Examination scheme and mode: Subject to directions from the Examination Branch/University of Delhi from time to time.

GE-15: Unveiling the Richness of the Indian Knowledge System

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the Course			Eligibility criteria	Prerequisite of the course
		Lecture	Tutorial	Practical/ Practice		
Unveiling the Richness of the Indian Knowledge System	04	3	1	0	Twelveth Passed	Working Knowledge of Sanskrit

Learning Objectives

This Course aims to shed light on the vast tapestry of the Indian knowledge system, highlighting its historical development, key dimensions, methods of knowledge acquisition, contributions, and its relevance in the modern era. By understanding and appreciating this ancient wisdom, we can foster cross-cultural dialogue, promote interdisciplinary research, and pave the way for a harmonious future that blends the best of traditional wisdom with contemporary knowledge and innovation.

Learning outcomes

The Indian knowledge system is a treasure trove of wisdom that has been nurtured and evolved over several millennia. Rooted in ancient scriptures, philosophical treatises, scientific discoveries, and artistic expressions, this knowledge system encompasses diverse fields such as philosophy, spirituality, mathematics, astronomy, medicine, literature, and more.

After completion of this course, students will be able to explore the intricacies and significance of the Indian knowledge system, its historical development, and its relevance in the modern world.

Detailed Syllabus

Unit: I **10Hrs.**

Introduction

1.1 Background and significance

1.2 Objective of the paper

Unit: II **10Hrs.**

Historical Development of the Indian Knowledge System

2.1 Vedic Period: The Foundation of Indian Thought

2.2 Upanishadic Era: Quest for Ultimate Reality

2.3 Classical Age: Synthesis of Philosophy, Science, and Arts

Unit: III **15Hrs.**

Key Dimensions of the Indian Knowledge System

3.1 Philosophy and Spirituality

3.2 Mathematics and Astronomy

3.3 Medicine and Ayurveda

3.4 Linguistics and Grammar

3.5 Arts and Literature

Unit: IV **10Hrs.**

Epistemology and Methods of Knowledge Acquisition

4.1 Shruti and Smriti: Oral and Textual Traditions

4.2 Guru-Shishya Parampara: Teacher-Student Tradition

4.3 Yoga and Meditation: Self-Realization and Higher States of Consciousness

4.4 Observation and Empirical Analysis

Essential/recommended readings

1. The Vedas
2. The Yoga Sutras of Patanjali
3. The Arthashastra by Chanakya
4. The Bhagavad Git
5. The Ramayana
6. The Mahabharata
7. The Science of Yoga by I.K. Taimni
8. Indian Architecture: Buddhist and Hindu Periods by Percy Brown
9. Indian Music: A Brief Introduction by Guy L. Beck

Reference readings

1. "India: A Sacred Geography" by Diana L. Eck -
2. "The Lost River: On the Trail of the Sarasvati" by Michel Danino
3. "Indian Philosophy: A Very Short Introduction" by Sue Hamilton.
4. "The Upanishads" translated by Swami Prabhavananda and Frederick Manchester
5. "The Cultural Heritage of India" edited by Kapila Vatsyayan

Examination scheme and mode: Subject to directions from the Examination Branch/University of Delhi from time to time.

GE-16: Contributions of the Indian Knowledge System

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the Course			Eligibility criteria	Prerequisite of the course
		Lecture	Tutorial	Practical/ Practice		
Contributions of the Indian Knowledge System	04	3	1	0	Twelfth Passed	Working Knowledge of Sanskrit

Learning Objectives

This Course aims to Gain an understanding of the historical development of the Indian knowledge system, including its foundation in the Vedic period, evolution during the Upanishadic era, synthesis in the classical age.

It will explore the key dimensions of the Indian knowledge system, including philosophy and spirituality, mathematics and astronomy, medicine and Ayurveda, linguistics and grammar, arts and literature, and social sciences and governance.

It will recognize the relevance of the Indian knowledge system in the modern world, including its spiritual and philosophical significance, scientific and technological applications, integration with modern education, and the potential for global exchange and cross-cultural learning.

Learning outcomes

After completion of this course, students will be able to-

- Develop a deeper awareness and appreciation for the rich and diverse knowledge system that has evolved in India over thousands of years. They will gain insights into the historical development, key dimensions, and contributions of the Indian knowledge system, leading to a greater understanding of its cultural and intellectual significance.
- Promote cross-cultural dialogue by showcasing the Indian knowledge system to a wider audience. It highlights the potential for exchanging ideas, perspectives, and insights between different cultures and knowledge systems. This can foster mutual understanding and collaboration, promoting global learning and innovation.
- Recognize the value of integrating traditional wisdom with contemporary knowledge and practices. This can inspire the development of new interdisciplinary approaches and solutions to complex problems.
- Become more aware of the importance of safeguarding traditional knowledge. This may lead to initiatives aimed at preserving and reviving traditional practices and teachings, ensuring their continuity for future generations.
- Gain insights into the need for responsible adaptation, taking into account cultural sensitivity, intellectual property rights, and the preservation of indigenous knowledge systems.

The comprehensive overview of the Indian knowledge system provided in the paper can serve as a foundation for further research and study. It can inspire scholars, researchers, and students to delve deeper into specific areas of interest within the Indian knowledge system and contribute to the ongoing exploration and understanding of this vast body of wisdom.

Detailed Syllabus

Unit: I **15Hrs.**

Contributions of the Indian Knowledge System

1.1 Metaphysical and Philosophical Insights
1.2 Advancements in Mathematics and Astronomy
1.3 Holistic Approach to Medicine and Well-being
1.4 Linguistic Analysis and Grammar Structures
1.5 Artistic Expressions and Literary Masterpieces

Unit: II **15Hrs.**

Relevance of the Indian Knowledge System Today

2.1 Spiritual and Philosophical Relevance
2.2 Scientific and Technological Applications
2.3 Integrating Traditional Wisdom
2.4 Global Exchange and Cross-Cultural Learning

Unit: III **15Hrs.**

Challenges and Future Directions

3.1 Preservation and Documentation
3.2 Reviving Traditional Knowledge in Contemporary Contexts
3.3 Ethical Considerations and Responsible Adaptation
3.4 Embracing the Past to Shape a Harmonious Future

Essential/recommended readings

10. "The Vedas"
11. "The Yoga Sutras of Patanjali"
12. "The Arthashastra" by Chanakya
13. "The Bhagavad Gita"
14. "The Ramayana" by Valmiki
15. "The Mahabharata"
16. "The Science of Yoga" by I.K. Taimni
17. "Indian Architecture: Buddhist and Hindu Periods" by Percy Brown
18. "Indian Music: A Brief Introduction" by Guy L. Beck

These reference books and essential readings will serve as valuable resources for unveiling the richness of the Indian knowledge system, covering various aspects of philosophy, literature, spirituality, arts, and sciences. They offer insights into the profound wisdom and multidimensional heritage of India

Reference readings

1. "India: A Sacred Geography" by Diana L. Eck -
2. "The Lost River: On the Trail of the Sarasvati" by Michel Danino
3. "Indian Philosophy: A Very Short Introduction" by Sue Hamilton.
4. "The Upanishads" translated by Swami Prabhavananda and Frederick Manchester
5. "The Cultural Heritage of India" edited by Kapila Vatsyayan

Examination scheme and mode: Subject to directions from the Examination Branch/University of Delhi from time to time.

GE-17: Ancient Indian Medicinal Science: Unveiling the Secrets of Ayurveda

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the Course			Eligibility criteria	Prerequisite of the course
		Lecture	Tutorial	Practical/ Practice		
Ancient Indian Medicinal Science: Unveiling the Secrets of Ayurveda	**04**	**3**	**1**	**0**	**Twelfth Passed**	**Working Knowledge of Sanskrit**

Learning Objectives

This course offers a comprehensive study of ancient Indian Medicinal Science, focusing on Ayurveda, the traditional system of medicine. Students will explore the foundational principles, concepts, and practices of Ayurveda as documented in ancient texts, such as Charaka Samhita and Sushruta Samhita. Through a combination of lectures, discussions, and practical sessions, students will gain a deep understanding of Ayurvedic principles, diagnosis techniques, treatment modalities, herbal medicine, dietary guidelines, and lifestyle recommendations. The course will also delve into the historical development, philosophical underpinnings, and contemporary relevance of Ayurveda.

Learning outcomes

By the end of the course, students will be able to:

Understand the historical development and cultural context of ancient Indian medicinal science, with a particular focus on Ayurveda.

Identify and explain the fundamental principles and concepts of Ayurveda, such as the five elements (Pancha Mahabhutas), three doshas (Vata, Pitta, Kapha), and the concept of Prakriti (individual constitution).

Analyze the Ayurvedic approach to health and disease, including the concepts of Samprapti (pathogenesis), Tridosha theory, and the role of Agni (digestive fire) and Ama (toxicity).

Apply diagnostic techniques in Ayurveda, including Nadi Pariksha (pulse diagnosis), Jihva Pariksha (tongue examination), and examination of the body constitution.

Evaluate the role of Ayurveda in promoting holistic well-being, preventive healthcare, and the management of specific diseases.

Analyze the philosophical underpinnings of Ayurveda, including the concepts of Prana (life force), Dharma (ethical living), and the interconnectedness of mind, body, and spirit.

Critically assess the contemporary relevance and challenges faced by Ayurveda, including integration with modern healthcare systems, evidence-based research, and ethical considerations. Engage in scholarly discussions and presentations on various aspects of ancient Indian medicinal shastra and Ayurveda.

Detailed Syllabus

Unit: I **10Hrs.**

Introduction

1.1 Historical development and cultural context

1.2 Overview of Ayurveda and its branches

Unit: II 10**Hrs.**

Ayurvedic Philosophy and Principles

Five elements (Pancha Mahabhutas)

Three doshas (Vata, Pitta, Kapha)

Concept of Prakriti (individual constitution)

Unit: III **15Hrs.**

Ayurvedic Diagnosis Techniques

Nadi Pariksha (pulse diagnosis)

Jihva Pariksha (tongue examination)

Examination of body constitution

Samprapti (pathogenesis)

Role of Agni (digestive fire) and Ama (toxicity)

Unit: III **10Hrs.**

Ayurvedic Treatment Modalities

Diet and nutrition in Ayurveda

Lifestyle recommendations

Yoga and meditation practices

Essential/recommended readings

Reference readings

Examination scheme and mode: Subject to directions from the Examination Branch/University of Delhi from time to time.

GE-18: Basics of Hindu Studies

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the Course			Eligibility criteria	Prerequisite of the course
		Lecture	Tutorial	Practical/ Practice		
Hindu Studies	04	3	1	0	Twelfth Passed	Working Knowledge of Sanskrit

Learning Objectives

Hindu Studies is an interdisciplinary course that explores the rich traditions, beliefs, practices, and philosophies of Hinduism. This course provides a comprehensive understanding of Hinduism, one of the world's oldest and complex religions. Students will delve into the historical, cultural, philosophical, and social aspects of Hinduism, examining its scriptures, rituals, deities, festivals, and ethical teachings. Through a combination of lectures, readings, discussions, and experiential learning, students will gain a deep appreciation for the diverse facets of Hinduism and its relevance in the modern world.

Learning outcomes

After completion of this course, students will be able to

- Develop a comprehensive understanding of the origins, historical development, and diversity within Hinduism.
- Examine the major philosophical schools and concepts within Hinduism, such as Vedanta, Yoga, and Bhakti.
- Explore the scriptures, including the Vedas, Upanishads, Bhagavad Gita, and Puranas, and their significance in Hinduism.
- Investigate the practices, rituals, and symbolism associated with Hindu worship and daily life.
- Analyze the social, cultural, and ethical dimensions of Hinduism and their impact on individuals and communities.
- Foster critical thinking, research skills, and the ability to engage in respectful dialogue about Hinduism.

Detailed Syllabus

Unit: I **10Hrs.**

Introduction to Hinduism

Introduction to key terms and concepts in Hinduism
Historical background and cultural context of Hinduism

Sacred Scriptures of Hinduism

Vedas and their significance in Hinduism
Introduction to the Upanishads and their philosophical teachings,
Examination of the Bhagavad Gita and its role in Hindu thought.

Unit: II **10Hrs.**

Hindu Philosophical Systems

Overview of the major philosophical schools in Hinduism
Analysis of key concepts, including Atman, Brahman, Karma and Moksha

Hindu Deities and Mythology

Exploration of the major deities in Hinduism, including Brahma, Vishnu, Shiva, Devi, and their manifestations

Unit: III **15Hrs.**

Hindu Rituals and Worship

Study of Hindu rituals and their role in religious and social life
Examination of major Hindu festivals and their significance
Exploration of sacred spaces, temples, and pilgrimage in Hinduism

Ethics and Morality in Hinduism

Analysis of Hindu ethical principles- dharma and karma
Discussion on the concept of moral responsibility and the pursuit of righteousness in Hinduism.

Unit: IV **10Hrs.**

Contemporary Issues and Hinduism

Exploration of the challenges and adaptations of Hinduism in the modern world
Analysis of Hindu nationalism, secularism, and religious pluralism
Reflection on the relevance of Hindu teachings and practices in addressing global challenges

Essential/recommended readings

1. The Hindus: An Alternative History" by Wendy Doniger
2. Hinduism: A Very Short Introduction" by Kim Knott
3. Introduction to Hinduism" by Gavin D. Flood
4. The Bhagavad Gita" translated by Eknath Easwaran
5. The Upanishads" translated by Swami Prabhavananda and Frederick Manchester
6. Indian Philosophy: An Introduction to Hindu and Buddhist Thought" by Richard King
7. The Cambridge Companion to Hinduism edited by Gavin D. Flood
8. Hinduism: A Sourcebook edited by Wendy Doniger
9. The Hindu World: An Encyclopedic Survey of Hinduism edited by Sushil Mittal and Gene Thursby
10. Hinduism: Beliefs and Practices by Jeanine Miller

Reference readings

1. The Rig Veda.
2. The Upanishads
3. The Bhagavad Gita
4. Hinduism: A Very Short Introduction by Kim Knott
5. The Hindus: An Alternative History by Wendy Doniger
6. Indian Philosophy: An Introduction to Hindu and Buddhist Thought" by Richard King
7. The Concept of the Goddess" by David Kinsley
8. The Illustrated Encyclopedia of Hinduism" edited by James G. Lochtefeld
9. A Sourcebook in Indian Philosophy" edited by Sarvepalli Radhakrishnan and Charles A. Moore
10. Hindu Gods and Goddesses" by Swami Harshananda

Examination scheme and mode: Subject to directions from the Examination Branch/University of Delhi from time to time.

B.A. (HONS.) PSYCHOLOGY

SEMESTER – V

Category I

B.A. (Hons.) Psychology Courses for Undergraduate Programme of study with Psychology as a Single Core Discipline

(B.A. Honours in Psychology – 3 years)

DISCIPLINE SPECIFIC CORE COURSE DSC-10 UNDERSTANDING MENTAL AND BEHAVIOURAL DISORDERS

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course Title & Code	Credits	Credit Distribution of the Course			Eligibility Criteria	Pre-requisite of the Course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSC-10 UNDERSTANDING MENTAL DISORDERS	**4**	**3**	**0**	**1**	**Class 12th Pass**	**Basic knowledge of Introductory psychology**

Learning Objectives

- To introduce the field of abnormal/clinical psychology.
- To provide an overview of the clinical picture and etiology of the various psychological disorders.
- To orient the learners to the diagnostic criteria and the related vocabulary of major psychological disorders.

Learning Outcomes

After doing this course the student will be able to:

- Distinguish between normal and abnormal behavior and learn the criteria of determining abnormality.
- Categorize and diagnose disorders according to the current diagnostic systems (current editions of the Diagnostic and Statistical Manual of Mental Disorders and International Classification of Diseases- Mental Disorders section).
- Discriminate between the various anxiety disorders and different mood disorders.

SYLLABUS OF DSC-10

UNIT – I **(18 hours)**

Introduction: Criteria of Abnormality, Causal Factors, Classification, Clinical Assessment

UNIT – II **(18 hours)**

Anxiety Disorders and Obsessive-Compulsive Disorder (Clinical Picture and Dynamics): Generalized Anxiety Disorder, Social anxiety disorder, Specific phobias, Agoraphobia; Obsessive-Compulsive Disorder

UNIT – III **(9 hours)**

Depressive Disorder & Bipolar Disorders (Clinical Picture and Dynamics): Major Depressive disorder, Persistent Depressive disorder, Bipolar I, Bipolar II and Cyclothymia

Practical Component **(30 hours)**

Suggestive Practicals:

- Mental Status Examination (MSE).
- Assessment of mental disorders using a psychometric test.
- Assessment of IQ/ADHD using a psychometric test.
- Case study writing to examine/understand clinical picture, dynamics, diagnosis and differential diagnosis.
- Correlational study of demographic variables and a mental disorder.
- Analysis of mental illness related visual media/text to understand mental disorders.

Tutorial Component: Nil

Essential/Recommended Readings

DISCIPLINE SPECIFIC CORE COURSE DSC 11 POSITIVE PSYCHOLOGY

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course Title & Code	Credits	Credit Distribution of the Course			Eligibility Criteria	Pre-requisite of the Course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSC 11 POSITIVE PSYCHOLOGY	**4**	**3**	**0**	**1**	**Class 12TH Pass**	**Basic knowledge of Introductory psychology**

Learning Objectives

- To understand the core concepts of positive psychology pertaining to Eastern and Western perspectives.
- To develop an understanding of positive states and processes.
- To equip the students with strategies to enhance their happiness and well-being

Learning Outcomes

After doing this course the student will be able:

- To understand and appreciatiate the meaning and conceptual approaches to positive psychology.
- Understand the importance of positive states and processes
- Learn various strategies to enhance happiness and well-being.

SYLLABUS OF DSC-11

UNIT 1 **(12 hours)**

Introduction: Positive Psychology: An Introduction, Perspectives on Positive Psychology: Judeo-Christian, Athenian, Hinduism, Buddhism, Jainism and Islam, Character Strengths and Virtues- Values In Action (VIA) Classification System.

UNIT 2 **(12 hours)**

Positive States and Processes I: Happiness and Well-being, Indian concepts of happiness and well-being (Sukha, Ananda, Panchakosas), Resilience

UNIT 3 **(12 hours)**

Positive States and Processes II: Optimism, Wisdom, Flow, Spirituality

UNIT 4 **(9 hours)**

Positive Psychological Interventions: Positive thinking, Meditation, Gratitude, Kindness

Practical Component **(30 hours)**

Suggestive Practicals

- Identifying and enhancing one's character strengths
- Enhancing happiness/ well-being through an intervention based on positive thinking/meditation/gratitude/kindness
- Cross-sectional comparisons on Optimism/Wisdom/Flow/Mindfulness OR Intervention based on Optimism/Wisdom/Flow/Mindfulness
- Analysis of data from secondary sources- movies, books, news articles/ editorials or any other media sources

DISCIPLINE SPECIFIC CORE COURSE DSC-12 INFERENTIAL STATISTICS IN PSYCHOLOGY

CREDIT DISTRIBUTION, ELIGIBILITY AND PREREQUISITES OF THE COURSE

Course Title & Code	Credits	Credit Distribution of the Course			Eligibility Criteria	Pre-requisite of the Course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSC - 12 INFERENTIAL STATISTICS IN PSYCHOLOGY	4	3	0	1	Class 12th Pass	Knowledge of Descriptive Statistics

Learning Objectives

- The advanced statistics course will assist students in grasping the techniques of inferential statistics necessary for carrying out research.
- They should be able to analyze and interpret statistical data obtained in research.

Learning Outcomes

After doing this course the student will be able:

- To understand advanced statistical techniques.
- To understand the statistical methods used in Statistical Inferences with a concept-focused approach.

SYLLABUS OF DSC-12

UNIT – I **(15 hours)**

Introduction to Inferential Statistics: Parametric and Non-Parametric Statistics, Testing hypothesis about single means (*z* and *t*): Random sampling distribution of means, Null and alternate Hypotheses; One-tailed (directional) and Two-tailed (non-directional) hypothesis; Characteristics of Student's distribution of *t*; Degrees of freedom; Assumptions of *t*-test; Levels of significance versus *p*-values.

UNIT – II **(15 hours)**

Interpreting the results of hypothesis testing: Type I and Type II error, Power of a test; Difference between Two Means (*t*-test) - Independent and Dependent Groups; Confidence Intervals

Unit-III **(15 hours)**

Hypothesis Testing: More than two groups (One way ANOVA): Assumptions and calculation of one-way; Comparison of *t* and *F*. *Post Hoc* Comparisons (conceptual understanding).
Chi-Square: Chi-Square as a Measure of Discrepancy between Expected and Observed Frequencies: Assumptions and calculations.

Suggesive Practicals **(30 hours)**

- Comparison of two groups using t-test
- Comparison of more than two groups using ANOVA
- Use of chi-square

Data sets available online or those from other sources can be used for this purpose.

Tutorial Component :Nil

DISCIPLINE SPECIFIC ELECTIVE COURSE DSE-3 ADVANCED SOCIAL PSYCHOLOGY

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course Title & Code	Credits	Credit Distribution of the Course			Eligibility Criteria	Pre-requisite of the Course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSE:3 ADVANCED SOCIAL PSYCHOLOGY	**4**	**3**	**1**	**0**	**Class 12th Pass**	**Basic knowledge of Social Psychology**

Learning Objectives

- Acquaint the students with contemporary developments and methods in the field of social psychology.
- Enhance the critical thinking skills of the students.
- Understand the concepts of collective behaviour, identity and social inequalities.

Learning Outcomes

After doing this course the student will be able :

- To understand concepts of sociological social psychology and various associated methods.
- To think critically about contemporary issues in the field of social psychology.
- To develop an insight into the dynamics of social and collective behaviour.

SYLLABUS OF DSE -3

UNIT – I **(10 hours)**

Contemporary Perspectives and Methods: Social Psychology as History, Psychological and Sociological Social Psychology, Symbolic Interactionism, Social representations, Discursive Psychology, Ethnomethodology

UNIT – II **(12 hours)**

Collective Behaviour: Constructing Collective Behaviour: Mass Hysteria Theory, Rational Choice in Collective Behaviour: Emergent Norm Theory, Value-Added Theory, Perception Control Theory; Structure of Crowds and Social Movements; Behaviour during Collective Events

UNIT – III **(11 hours)**

Culture and Identity: Perspectives on Identity: Social Identity Theory, Self-Categorization Theory, Social Dominance Theory and Intersectionality; Influence of Status and Power: Effects of subordination; Violence and Social Practices in Human History; Role of Culture

UNIT – IV **(12 hours)**

Inequalities and Social Justice: Constructing Inequality: Social Stratification, Structures of Inequality and Social Stratification Processes in Groups; Systems Justification Theory, Social Justice: Idea and Ideal of Social Justice & Diversity, Distributive, Retributive & Procedural Justice, Principles of Social Psychology of Social Justice.

Practical Component - Nil

Tutorial Component **(15 hours)**

Suggestive Tutorial Activities: *(This is a suggestive not an exhaustive list of activities)*

- Analysis of media products *(like movies, documentaries, social media posts among others)* on the various themes of Collective Behaviour, Identity and Social Justice.
- Selecting an event from history that can be analysed using the various constructs in Social Psychology.
- Group Discussions to understand the idea of Inequality, Social Justice and Diversity.
- Book reviews for relevant themes (e.g.; *The Argumentative Indian by Amartya Sen, India: A Million Mutinies Now by V.S. Naipaul, Intimate Enemy by Ashis Nandy, Colors of Violence by Sudhir Kakar, Indian Identity by Sudhir Kakar, Being Indian by Pavan K. Varma, Tomb of Sand by Geetanjali Shree, Joothan by Om Prakash Valmiki, Pinjar by Amrita Pritam, Tamas by Bhisham Sahni, Maila Aanchal by Phanishwar Nath Renu* among others.)
- Analysis of popular speeches of social and political leaders.
- Working in groups and adapting any event from Indian History into a skit and presenting.

DISCIPLINE SPECIFIC ELECTIVE COURSE DSE-4 GROUP DYNAMICS IN ORGANIZATIONS

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course Title & Code	Credits	Credit Distribution of the Course			Eligibility Criteria	Pre-requisite of the Course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSE- 4 GROUP DYNAMICS IN ORGANIZATIONS	**4**	**3**	**1**		**Class 12th Pass**	**Basic knowledge of Introductory Psychology**

Learning Objectives

- Help students understand the principles and dynamics of group interactions in organizations from a psychological perspective.
- Develop an understanding of issues that groups and teams face, including communication, power and politics in workplaces, and conflict.

Learning Outcomes

After doing this course the student will be able to:

- Recognize and understand the nature and characteristics of groups and teams within organizations.
- Critically examine the ways in which group dynamics shape organizational outcomes.
- Identify and analyze the dynamics of organizational communication, power and politics, sexual harassment, and conflicts and negotiations in organizations.

SYLLABUS OF DSE- 4

UNIT - I **(12 hours)**

Understanding Work Teams: Groups and Teams; Stages of Group Development (Tuckman Model); Characteristics of effective teams; Types of teams; High-Performing Work Teams; Team-effectiveness model; Team-building.

UNIT - II **(12 hours)**

Organizational communication: Functions of communication; Communication model; Direction of communication; Informal communication network; Electronic communication; Barriers to effective communication; Enhancing communication effectiveness.

UNIT - III **(12 hours)**

Power and Politics in Organizations: Classifications of Power (French & Raven); Power Tactics; Sexual Harassment; Causes and consequences of Political Behavior.

UNIT - IV **(9 hours)**

Conflict and Negotiation: Nature of conflict in organizations; Conflict process; Negotiation (Process, Bargaining strategies); Conflict management; Indian approach to resolving conflicts.

Practical Component: Nil

Tutorial Component **(15 hours)**

Suggestive Tutorial Activities *(This is a suggestive and not an exhaustive list of tutorial activities)*

- Self and other awareness exercises that encourage constructive feedback
- Experiential exercises to enhance team building
- Presentations on contemporary topics to enhance communication skills
- Role plays to practice skills of communication, negotiation, etc.
- Team building and problem-solving exercises to demonstrate various stages of Tuckman's model
- Use of icebreakers for conflict management
- Encourage students to think of real-life power and influence tactics to use, e.g. different teachers in classroom situations, and asking them to reflect on how and why it benefited them or backfired.
- Review of literature, e.g. on power in organizations
- Critical discourse analysis to explore communication of organizations

DISCIPLINE SPECIFIC ELECTIVE COURSE DSE-5 PSYCHODIAGNOSTICS

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course Title & Code	Credits	Credit Distribution of the Course			Eligibility Criteria	Pre-requisite of the Course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSE: 5 PSYCHODIAGNOSTICS	**4**	**2**	**0**	**2**	**Class 12th Pass**	**Basic knowledge of Introductory Psychology and familiarity with concepts of test standardization, reliability, validity etc.**

Learning Objectives

- To impart conceptual knowledge of psychodiagnostics, its domains, and purposes.
- To acquaint the students with the procedure of psychological testing of intellectual - cognitive abilities and personality in the clinical setting.
- To develop an understanding of the multiple methods of clinical assessment.
- To underscore the strengths and weaknesses of different methods of clinical assessment.
- To critically evaluate the psychological assessment through the lens of cultural context and ethics.

Learning Outcomes

After doing this course the student will be able to:

- Learn which kinds of tests are used for intellectual, cognitive and personality assessment in clinical contexts.
- Understand the key descriptive features of tests used in the clinical contexts.
- Know salient interpretive possibilities of psychological tests for diagnostic purposes.
- Evaluate the role of multiple methods of assessment in clinical settings.
- Assess the cultural and ethical issues in psychological assessment.

SYLLABUS OF DSE-5

UNIT – I **(12 hours)**

Introduction to Psychodiagnostics of Intellectual and Cognitive Function- Definition and Relevance of Psychodiagnostics; Domains of Assessment: Performance variables, Personality variables; Wechler's Adult Intelligence Scale- IV; Vineland Social Maturity Scale; NIMHANS Neuropsychological Battery; Montreal Cognitive Assessment; Mental Status Examination.

UNIT - II **(12 hours)**

Tests used in Clinical Setting: Assessment of Personality- Minnesota Multiphasic Personality Inventory (MMPI); Temperament and Character Inventory (TCI); Rotter's Incomplete Sentence Blank; Rorschach Inkblot Test; Thematic Apperception Test.

UNIT - III **(6 hours)**

Critical Considerations in Clinical Assessment-; Multi-method assessment (use of interview and observation in clinical settings); Assessment of immediate contexts (school, family, peers); Assessment of strengths.

Practical Component **(60 hours)**

Suggestive Practicals

- Administration and interpretation of rating scales
- Preparation of interpretive report using tests of intelligence/tests of cognitive functions
- Personality testing using self report inventories and semi projective/projective techniques
- Conducting mini Mental status examination in the community/ for an individual
- Conducting clinical interviews
- Behavioural observations and assessment

Tutorial Component: Nil

COMMON POOL OF GENERIC ELECTIVES (GE) COURSES
Offered by Department of Psychology

GENERIC ELECTIVE COURSE GE - 12 IDENTIFYING AND DEALING WITH PSYCHOLOGICAL DISORDERS

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course Title & Code	Credits	Credit Distribution of the Course			Eligibility Criteria	Pre-requisite of the Course (if any)
		Lecture	Tutorial	Practical/ Practice		
GE- 12 IDENTIFYING AND DEALING WITH PSYCHOLOGICAL DISORDERS	**4**	**3**	**0**	**1**	**Class 12th Pass**	**None**

Learning Objectives

- To impart preliminary knowledge about psychological disorders prevalent in society
- To develop an understanding of diagnostic criteria for psychological disorders
- To acquaint the students with the importance of psychological assessment
- To attain an overview of the role of various therapies in dealing with psychological disorders

Learning Outcomes

After doing this course the student will be able:

- To identify clinical picture of various psychological disorders using DSM-5 Classification
- To understand the importance of clinical assessment in diagnosis of psychological disorders
- To understand and appreciate the role of psychological first aid and therapies in treatment of psychological disorders

SYLLABUS OF GE -12

UNIT – I **(15 hours)**

Psychological Disorders: Criteria, Perspectives, Classification (DSM – 5), Psychological Assessment (Clinical Interview, Case History, Tests, Behavioral Assessment).

UNIT – II **(21 hours)**

Clinical Picture of Psychological Disorders: Generalized Anxiety Disorder; Obsessive Compulsive Disorder; Depressive Disorders (Major Depressive Disorder, Persistent Depressive Disorder); Bipolar and related Disorders (Bipolar I Disorder, Bipolar II Disorder, Cyclothymia); Suicide, Schizophrenia, Intellectual Developmental Disorder, Autism Spectrum Disorder, Attention Deficit Hyperactivity Disorder.

UNIT – III **(9 hours)**

Dealing with Psychological Disorders: Psychological First Aid; Biological Intervention (Pharmacological treatment and Electroconvulsive Therapy); Psychotherapy (Brief Description of Psychoanalysis, Behavior Therapy, Cognitive-Behavior Therapy, Client-centered Therapy, Family Therapy, Group Therapy)

Practical component **(30 hours)**

Suggestive Practicals:

- Using the clinical interview to take the case history of a client.
- Visual Media and/or text analysis as an approach to understanding mental disorders.
- Screening for psychological disorders such as Generalized Anxiety Disorder, Major Depressive Disorder, Obsessive Compulsive Disorder, Intellectual Disability, Attention Deficit Hyperactivity Disorder using tests, checklists.
- Conducting demographic surveys to identify individuals at risk of developing psychological disorder/s.

Tutorial component : Nil

GENERIC ELECTIVE COURSE GE-13 PSYCHOLOGY AT THE WORKPLACE

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course Title & Code	Credits	Credit Distribution of the Course			Eligibility Criteria	Pre-requisite of the Course (if any)
		Lecture	Tutorial	Practical/ Practice		
GE-13 PSYCHOLOGY AT THE WORKPLACE	4	3	1	0	Class 12th Pass	None

Learning Objectives

After doing this course the student will be able to:

- Understand the need and scope of application of psychological concepts and theories in organisations.
- Become aware of different challenges and trends that influence people management practices in contemporary organisations.
- Appreciate the evolution of the field of I/O Psychology.
- Understand the key theories of motivation and leadership in the organisations.

Learning Outcomes

After doing this course the student will be able to:

- Apply the basic principles of psychology in work-settings.
- Critically evaluate the contemporary issues that shape management practices in organisations.
- Apply theories and concepts of motivation and leadership in organisations.

SYLLABUS OF GE- 13

UNIT - I **(9 hours)**

Introduction to I/O Psychology: Definition, Evolution of the field, Major Fields of I/O psychology: Personnel Psychology, Organizational Psychology,Human Factors/Ergonomics.

UNIT - II **(9 hours)**

Contemporary Opportunities and Challenges: Telecommuting, Green Business Practices & Sustainability, Workforce Diversity, Gender Discrimination & Sexual Harassment,, Technology, Corporate Social Responsibility, Mental Health and Well being.

UNIT - III **(12 hours)**

Work Motivation: Theories and applications: Maslow's Need-Hierarchy, Herzberg's Two Factor Theory, Goal-Setting Theory, Expectancy Theory, Equity Theory, Job Characteristics Model.

UNIT - IV **(15 hours)**

Leadership: Early approaches to leadership (Trait, Behavioural), Contingency- (Fiedler's contingency model), Contemporary Approaches to Leadership- (Charismatic, Transformational & Transactional Leadership), Managing Diversity as a Core Leadership Competency, Indian Perspective (Nurturant Task Leadership).

Practical Component: Nil

Tutorial Component: **(15 hours)**

Suggestive Tutorial Activities (*This is a suggestive and not an exhaustive list of tutorial activities)*

- Presenting videos on Hawthorne Studies
- Class debates to develop critical thinking, e.g., pros and cons of use of technology in organizations, workplace diversity
- Analysis of corporate social responsibility across different sectors or nations
- Film analysis (character mapping and plot lining) using a theoretical framework, for e.g., Bombshell, She Said, The Assistant
- Case study of effective leaders
- Experiential exercises on what motivates students to come to college
- Review of literature, e.g. on theories of motivation across cultures
- Class presentations on contemporary topics
- Role plays to practice leadership skills

GENERIC ELECTIVE COURSE GE- 14 PSYCHOLOGY OF ADJUSTMENT

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course Title & Code	Credits	Credit Distribution of the Course			Eligibility Criteria	Pre-requisite of the Course (if any)
		Lecture	Tutorial	Practical/ Practice		
GE-14 PSYCHOLOGY OF ADJUSTMENT	4	3	1	0	Class 12th Pass	None

Learning Objectives

- To learn the nature and relevance of adjustment in everyday life.
- To understand the different factors shaping adjustment.
- To understand healthy adjustment strategies in different contexts: relationships, digital world, and work settings.

Learning Outcomes

After doing this course the student will be able to:

- Gain greater grounding in concepts related to psycho-social-emotional adjustment.
- Apply their knowledge to attain better levels of adjustment in different life situations.

SYLLABUS OF GE- 14

UNIT – I **(9 Hours)**

Introduction: Concept of Adjustment, Adjustment as a Lifelong Process, Need for Adjustment, Factors affecting Adjustment, The Role of Psychology in Promoting Adjustment

UNIT – II **(12 Hours)**

Adjustment in Relationships-: Self in a Relational Context (need to belong, affiliation, isolation, social exclusion), Strategies for Adjustment in Varied Relational Contexts: Familial Contexts (Dealing with Family Dynamics, Negotiating Autonomy and Agency), Friendships (Peer Pressure, Bullying, and Social exclusion), Romantic

Relationships (Identity, Intimacy & Isolation and Equity), Conflict Management; Dealing with Loss: Dissolution of Relationships and Bereavement.

UNIT – III **(12 Hours)**

Adjustment In The Digital Age: The Self in a Technological World (Immersion in tech spaces, multiple selves, and information overload), Challenges in the Digital Age (Illusion of choice, social comparison, cyber-victimization, and intrusive social media), Strategies for Adjustment: Self care, digital detox, reconnecting with nature, meaningful digital engagement.

UNIT – IV **(12 Hours)**

Adjustment in Work Settings: Adjustment in the Workplace: Job Satisfaction and its Enhancement; Gender at Work: Diversity Issues, Job satisfaction and subjective well being in a multicultural workplace; Occupational hazards: Work Stress, Sexual harassment, Unemployment, and Burnout; Well-being in Work Settings: Work-life balance (Leisure and Recreation), Mindfulness based stress reduction at work.

Practical Component: Nil

Tutorial Component **(15 Hours)**

Suggestive Tutorial Activities *(This is a suggestive and not an exhaustive list of tutorial activities)*

- Media Analysis (documentaries, short stories, songs, social media posts etc.)
- Group Discussions on topics such as experiences of bullying and social exclusion
- Book Reviews
- Journal keeping
- Reflective writing exercises on past adjustment experiences of self and others
- Research based presentations
- Activities and exercises focussed on the development of skills needed for better adjustment (e.g, assertiveness, self care)
- Self administration of standardized questionnaires to increase self awareness

Essential/ Recommended Readings

DEPARTMENT OF PSYCHOLOGY

Category II

Psychology Courses for Undergraduate Programme of study with Psychology as one of the Core Disciplines

(B.A. Programme with Psychology as Major discipline)

DISCIPLINE SPECIFIC CORE COURSE – 7: STATISTICAL METHODS AND PSYCHOLOGICAL TESTING

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSC-7 Statistical Methods and Psychological Testing	4	3	0	1	Passed Class 12th	Basic knowledge of introductory psychology

Learning Objectives

The Learning Objectives of this course are as follows:

- To foster an understanding of the techniques of descriptive statistics.
- To familiarize students with the statistical skills necessary to interpret scores obtained from psychological tests.
- To learn the fundamentals of psychological testing.

Learning Outcomes

After completing this course, the student will be able to:

- Apply the knowledge of descriptive statistics in psychological testing
- Present numerical data graphically.
- Administer and interpret objective psychological tests

SYLLABUS OF DSC - 7

Unit- I **(10 Hours)**

Relevance of Statistics in Psychology; Descriptive and Inferential Statistics; Scales of Measurement; Graphical Representation of Data (Histogram, Bar Diagram, Frequency Polygon)

Unit- II **(10 Hours)**

Measures of Central Tendency: Definition; Properties and Comparison; Calculation of Mode, Median and Mean from Raw Scores; Measures of Variability: Range; Variance; Standard

Deviation (Properties and Comparison); Calculation of Range, Variance and Standard Deviation from Raw Scores

Unit- III **(15 Hours)**

Standard (z) Scores: Standard Scores; Properties of z-Scores; Transforming Raw Scores Into z-Scores, Determining Raw Scores From z-Scores, Some Common Standard Scores, Comparison of z- Scores and Percentile Ranks; The Normal Probability Distribution: Nature, Properties and Applications

Meaning of Correlation; Correlation and Causation; Calculating Pearson's Correlation Coefficient from Raw Scores

Unit- IV **(10 Hours)**

Defining features of a psychological test, Reliability, Validity, Norms, Types of tests, Applications and Ethical issues.

Practical component – **(30 Hours)**

Suggestive list of practicals:

1. Graphical presentation of data
2. Problems based on mean, median, mode
3. Problems based on variance and standard deviation
4. Problems based on Pearson's correlation
5. Intelligence test
6. Personality test

Essential/recommended readings

Chadha, N. K. (2009). *Applied Psychometry.* SAGE Publications India.

Gregory, R.J. (2017). *Psychological Testing: History, Principles, and Applications* (7th Ed.). Pearson Education.

King, B.M., Rosopa, P.J., & Minium, E.W. (2018). *Statistical Reasoning in the Behavioral Sciences* (7th Ed.). Wiley.

Murphy, K.R. & Davidshofer, C.O. (2019). *Psychological Testing: Principles & Applications* (6th Ed.). Pearson Education.

Suggestive readings

Aron, A., Coups, E.J. & Aron, E.N. (2013). *Statistics for Psychology* (6th Ed.). Pearson Education.

Garrett, H.E. (2005). *Statistics in Psychology and Education.* Paragon International Publishers.

Mangal, S.K. (2010). *Statistics in Psychology and Education* (2nd Ed.). PHI Learning.

Note: **Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.**

DISCIPLINE SPECIFIC CORE COURSE – 8: EMERGENCE AND GROWTH OF PSYCHOLOGY

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSC-8 Emergence and Growth of Psychology	**4**	**3**	**1**	**0**	**Passed Class 12th**	Basic knowledge of introductory psychology

Learning Objectives

The Learning Objectives of this course are:

- To understand the key tenets and historical and contemporary relevance of different schools of Psychology.
- Critically evaluate the limitations of underlying assumptions of psychological theories and principles.

Learning Outcomes

By studying the course students will be able to:

- Appreciate the changing nature and of subject matter and methodologies in the evolution of the discipline.
- Apply psychological concepts and principles in a more informed manner in diverse settings

SYLLABUS OF DSC-8

UNIT – I: (9 Hours)

Early Schools of Psychology- Structuralism, Functionalism and Gestalt Psychology (tenets and contributions), Core and Context of Indian Psychology

UNIT – II: (12 Hours)

Behaviourism - Watsonian Behaviourism, Skinnerian Behaviourism; Emergence of Information Processing Approach of Cognitive Psychology

UNIT – III: **(12 Hours)**

Psychoanalysis - Classical Freudian Approach (Models and Critique), Adlerian Perspective (Central concepts), Feminist Critique of Freudian Psychoanalysis: Contributions of Karen Horney

UNIT – IV: **(12 Hours)**

Third Force Psychology- Rogerian Self Psychology, Maslow's Hierarchy of Needs, Existentialism (Tenets and Contributions)

Tutorial Component – **(15 Hours)**

Suggestive Tutorial Activities:

- Role playing a psychologist
- Turncoat debate on debates in psychology
- Position paper on perspectives in psychology
- Group discussion on applications in psychological theories

Practical Component – NIL

Category III

Psychology Courses for Undergraduate Programme of study with Psychology as one of the Core Disciplines

(B.A. Programme with Psychology as Minor discipline)

DISCIPLINE SPECIFIC CORE COURSE – 7: STATISTICAL METHODS AND PSYCHOLOGICAL TESTING

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSC-7 Statistical Methods and Psychological Testing	4	3	0	1	Passed Class 12th	Basic knowledge of introductory psychology

Learning Objectives

The Learning Objectives of this course are as follows:

- To foster an understanding of the techniques of descriptive statistics.
- To familiarize students with the statistical skills necessary to interpret scores obtained from psychological tests.
- To learn the fundamentals of psychological testing.

Learning Outcomes

After completing this course, the student will be able to:

- Apply the knowledge of descriptive statistics in psychological testing
- Present numerical data graphically.
- Administer and interpret objective psychological tests

SYLLABUS OF DSC-7

Unit- I **(10 Hours)**

Relevance of Statistics in Psychology; Descriptive and Inferential Statistics; Scales of Measurement; Graphical Representation of Data (Histogram, Bar Diagram, Frequency Polygon)

Unit- II **(10 Hours)**

Measures of Central Tendency: Definition; Properties and Comparison; Calculation of Mode, Median and Mean from Raw Scores; Measures of Variability: Range; Variance; Standard

Deviation (Properties and Comparison); Calculation of Range, Variance and Standard Deviation from Raw Scores

Unit- III **(15 Hours)**

Standard (z) Scores: Standard Scores; Properties of z-Scores; Transforming Raw Scores Into z-Scores, Determining Raw Scores From z-Scores, Some Common Standard Scores, Comparison of z- Scores and Percentile Ranks; The Normal Probability Distribution: Nature, Properties and Applications

Meaning of Correlation; Correlation and Causation; Calculating Pearson's Correlation Coefficient from Raw Scores

Unit- IV **(10 Hours)**

Defining features of a psychological test, Reliability, Validity, Norms, Types of tests, Applications and Ethical issues.

Practical component – **(30 Hours)**

Suggestive list of practicals:

1. Graphical presentation of data
2. Problems based on mean, median, mode
3. Problems based on variance and standard deviation
4. Problems based on Pearson's correlation
5. Intelligence test
6. Personality test

SEMESTER - V

B.A. (HONS.) PSYCHOLOGY

Category I

B.A. (Hons.) Psychology Courses for Undergraduate Programme of study with Psychology as a Single Core Discipline

(B.A. Honours in Psychology in three years)

DISCIPLINE SPECIFIC CORE COURSE DSC -13 PERSPECTIVES IN MENTAL AND BEHAVIORAL DISORDERS

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course Title & Code	Credits	Credit Distribution of the Course			Eligibility Criteria	Pre-requisite of the Course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSC - 13 PERSPECTIVES IN MENTAL AND BEHAVIORAL DISORDERS	**4**	**3**	**0**	**1**	**Class 12th Pass**	**Basic knowledge of Mental Disorders**

Learning Objectives

- To introduce the clinical picture and etiological understanding of Schizophrenia spectrum disorders, with focus on Schizophrenia.
- To provide an understanding about personality disorders and substance related disorders.
- To orient the learner to neurodevelopmental disorders.

Learning Outcomes

After doing this course the student will be able to:

- Understand the symptoms and causal factors of schizophrenia
- Recognize the clinical picture of substance related disorders
- Discriminate between different personality disorders
- Identify children with neurodevelopmental disorders

SYLLABUS OF DSC-13

UNIT – I **(15 hours)**

Schizophrenia Spectrum Disorder (Clinical Picture and Dynamics) and Personality Disorders (Clinical Picture only): Schizophrenia, Antisocial Personality Disorder, Borderline Personality Disorder

UNIT – II **(18 hours)**

Somatic Symptom & Related Disorders, Substance Related Disorders and Gender dysphoria (Clinical Picture Only): Functional Neurological Symptom Disorder (Conversion Disorder); Alcohol Use Disorder; Drug Abuse and Dependance (Opioids, Stimulants, Sedatives, Hallucinogens); Gender Dysphoria

UNIT – III **(12 hours)**

Neurodevelopmental Disorders (Clinical Picture Only) – Intellectual Developmental Disorder (Intellectual Disability)/ Specific Learning Disorder (Specific Learning Disabilities), Autism Spectrum Disorder, Attention Deficit Hyperactivity Disorder

Practical Component **(30 hours)**

Suggestive Practicals

- Mental Status Examination (MSE).
- Assessment of mental disorders using a psychometric test.
- Assessment of IQ/ADHD using a psychometric test.
- Case study writing to examine/understand clinical picture, dynamics, diagnosis and differential diagnosis.
- Correlational study of demographic variables and a mental disorder.
- Analysis of mental illness related visual media/text to understand mental disorders.

Tutorial Component : Nil

DISCIPLINE SPECIFIC CORE COURSE DSC – 14 CHILD AND ADOLESCENT DEVELOPMENT

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course Title & Code	Credits	Credit Distribution of the Course			Eligibility Criteria	Pre-requisite of the Course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSC-14 CHILD AND ADOLESCENT DEVELOPMENT	**4**	**3**	**0**	**1**	**Class 12th Pass**	**Basic knowledge of Introductory Psychology**

Learning Objectives

- To trace human development from conception to adolescence.
- To inculcate sensitivity to socio-cultural context of human development.

Learning Outcomes

After doing this course the student will be able to:

- Recognize various issues in human development.
- Identify the milestones in different domains of human development
- Understand the cognitive and socio-emotional factors that influence development
- Comprehend the contributions of various socio-cultural contexts toward shaping human development
- Design a practicum in the area of developmental psychology.

SYLLABUS OF DSC-14

UNIT - I **(9 hours)**

Introduction: Concepts; Themes; Theoretical Perspectives of Human Development (Psychoanalytic, Behavioural, Ethological, Evolutionary, Ecological Perspective); Research Designs.

UNIT - II **(18 hours)**

Stages of Development: Prenatal Development, Birth and Infancy, Adolescence; Developmental stages and child-rearing practices in the Indian context; Socio-cultural contexts of development.

UNIT - III **(18 hours)**

Domains of Human Development: Cognitive Development (Piaget, Vygotsky); Language Development; Emotional Development; Moral Development (Kohlberg).

Practical Component: **(30 hours)**

Suggestive Practicals

- Study on child-rearing practices using test/ case study
- Impact of family environment on socio-emotional development/ cognitive growth.
- Application of Piaget's theory of cognitive development
- Assessment of moral development using test/ dilemmas
- Language assessment using Multilingual Assessment Instrument for Narratives (MAIN)
- Assessment of attachment style and socio-emotional development

DISCIPLINE SPECIFIC CORE COURSE DSC – 15 APPLYING PSYCHOLOGY TO WORK

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course Title & Code	Credits	Credit Distribution of the Course			Eligibility Criteria	Pre-requisite of the Course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSC- 15 APPLYING PSYCHOLOGY TO WORK	**4**	**3**	**0**	**1**	**Class 12th Pass**	**Basic knowledge of Introductory psychology**

Learning Objectives

- Develop an awareness of how psychology can be applied to the workplace
- Help students appreciate the evolution of the field of Industrial/Organizational Psychology
- Develop a deeper understanding of conceptual and theoretical bases of motivation and understanding how to apply them.
- Understand how cultures of organizations affect behaviour at the workplace
- Understand leadership from different theoretical perspectives, especially the Indian approach

Learning Outcomes

After doing this course the student will be able to:

- Become familiar with the underlying concepts of Industrial /Organizational Psychology.
- Understand the evolution of the field of Industrial/Organizational Psychology
- Explain organizational ethics, corporate social responsibility and various other opportunities and managerial challenges managers at the contemporary workplace.
- Apply the understanding of work motivation, leadership and organizational culture in real world settings.
- Critically examine the impact of gender on leadership.
- Identify and assess best practices relating to leadership across various organizational contexts and cultures.

SYLLABUS OF DSC-15

UNIT - I **(12 hours)**

Introduction to the Field: The organizational context; Sub-fields of Industrial/Organizational Psychology; Historical evolution of the field of Industrial/Organizational Psychology; Antecedents of Organizational Behaviour; Scientific Management and Human Relations Movement; Organizational Ethics & Corporate Social Responsibility, Opportunities and Challenges for managers.

UNIT - II **(16 hours)**

Motivation, Stress & Well-being at Work: Motivation at work: Theoretical approaches (Maslow's need hierarchy, Herzberg's two-factor theory; Expectancy, Equity, Goal Setting); Ways to motivate people at the workplace; Indian Perspective; Work stress; Managing stress and well-being in organizations.

UNIT - III **(17 hours)**

Dynamics of Workplace : Organizational culture: Models (Schein and Pareek); Managing Organizational Culture; Leadership: Theories (Trait, Behavioural, Contingency); Indian Perspective; Inspirational Approaches to Leadership (Charismatic and Transformational Leadership); Gender and Leadership.

Practical Component **(30 hours)**

Suggestive Practicals

- Formulation of the research problem based on concepts of Organizational Behaviour
- Data gathering using appropriate methods and /or tools. Reviewing literature/ Locating external sources to design solutions to the research problem chosen.
- Analysis of information using apporoprite methods and/or tools and drawing conclusions and implications for organizations.

Following is the list of illustrative topics on which practicum may be designed:

- Organizational Stress
- Well-being at Workplace
- Organizational Ethics
- Corporate Social Responsibility
- Diversity at the Workplace
- Work Motivation
- Organizational Culture
- Leadership

Tutorial component- Nil

DISCIPLINE SPECIFIC ELECTIVE (DSE) COURSES

DISCIPLINE SPECIFIC ELECTIVE COURSE DSE – 6 PSYCHOLOGY OF DISABILITY

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course Title & Code	Credits	Credit Distribution of the Course			Eligibility Criteria	Pre-requisite of the Course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSE- 6 PSYCHOLOGY OF DISABILITY	**4**	**3**	**1**	**0**	**Class 12th Pass**	**Basic knowledge of Introductory psychology**

Learning Objectives

- To learn the nature and concerns related to disability in India
- To assess definition based conundrums around the concept of disability.
- To understand the heterogeneous nature of disabilities
- To comprehend the scope and relevance of Psychology of Disability as a field, especially in India
- To critically examine models relevant to the Psychology of Disability and understand their manifestations in everyday life.

Learning Outcomes

After doing this course the student will be able to:

- Gain greater grounding in concepts related to disability
- Identify the psycho-socio-cultural phenomena associated with disability.
- Analyze disability related phenomena through a lens of critical consciousness
- Recognize and challenge ableist notions in society

SYLLABUS OF DSE- 6

UNIT – I **(12 hours)**

Conceptualizing Disability: An Introduction: Defining disability and its conundrums; Diagnosis, assessment, certification and its critique; Disability Law and Policy in India: Mental Health Care Act 2017, RPwD Act 2016, National Trust Act, 1999, PwD Act 1995, Rehabilitation Council of India Act, 1992.

UNIT – II **(12 hours)**

Theories and Debates: Models: Charity Model, Medical Model, Social Model, Empowerment Model; Issues of language; Disability and Gender in India; Contemporary debates: Euthanasia and prenatal selection

UNIT - III **(12 hours)**

Accessibility: Built and Digital Spaces, Education, Employment, Mental Health Services: Practising disability inclusive counselling

UNIT - IV **(9 hours)**

Personal Spaces: Family and Marriage, Friendships and Peer Relationships, Sexuality and Reproductive health

Practical component – Nil
Tutorial Component **(15 hours)**

Suggestive Tutorial Activities *(This is a suggestive and not an exhaustive list of tutorial activities)*

- Research based presentations (either by individual students or small groups of students)
- Reviewing published research papers on themes related to the course content
- Documentary screenings
- Book Reviews
- Analysis of media content (films, short stories, songs, social media posts etc.)
- Group discussions on topics such as issues of language, disability and gender in India
- Reflective writing exercises
- Short quizzes

DISCIPLINE SPECIFIC ELECTIVE COURSE DSE – 7 ESSENTIALS OF MEDIA PSYCHOLOGY

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course Title & Code	Credits	Credit Distribution of the Course			Eligibility Criteria	Pre-requisite of the Course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSE -7 ESSENTIALS OF MEDIA PSYCHOLOGY	**4**	**3**	**1**	**0**	**Class 12th Pass**	**Basic knowledge of Introductory psychology**

Learning Objectives

- To educate learners about media and its impact.
- To acquaint learners with the role of media in psychosocial change.
- To help learners understand critical issues related to media.

Learning Outcomes

After doing this course the student will be able to:

- Understand the concept of media and its interface with psychology.
- Distinguish between fantasy and reality.
- Analyse the relationship between advertising and persuasion.
- Critically examine the psychosocial influences of media.

SYLLABUS OF DSE- 7

UNIT – I **(9 hours)**

Introduction to Media Psychology: Nature and scope of media psychology; Classic Theories in Media Studies (Marshall McLuhan, Baudrillard); Research in Media Psychology; Indian perspective of Media Psychology.

UNIT – II **(12 hours)**

Media and the User: Fantasy and Reality; Expressing self and identity through social media; Finding communities (Fandoms, Virtual Communities); Use and Abuse of Internet

UNIT – III **(12 hours)**

Social Impact of Media: Media influences on pro-social behaviours, violence, and aggression; Psycho-social effects (Social Comparisons, Body Image, Substance Use).

UNIT – IV **(12 hours)**

Critical Issues in Media Psychology: Media as a tool for social and political change (Social Media movements, Propaganda); Representations of social groups in media (Gender and Sexuality, Religious Minorities, Disability); Ethics and Media

Practical component (if any) – Nil

Tutorial component **(15 hours)**

Suggestive Tutorial Activities *(This is a suggestive and not an exhaustive list of tutorial activities)*

- Discussions around use of media for campaign promotion like Swachh Bharat Abhiyan, Fit India etc.
- Critical thinking exercises like Advertisement Analyser worksheets
- Questionnaires to understand social media and its impact, such as Social Media Use Questionnaire (e-SMUQ) or Internet Addiction Scale
- Reflective exercise on identifying influence of social media on behaviour
- Documentary screenings and discussions
- Discussions around FOMO and JOMO

DISCIPLINE SPECIFIC ELECTIVE COURSE DSE- 8 PSYCHOLOGY OF GENDER

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course Title & Code	Credits	Credit Distribution of the Course			Eligibility Criteria	Pre-requisite of the Course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSE - 8 PSYCHOLOGY OF GENDER	**4**	**3**	**1**	**0**	**Class12th Pass**	**Basic knowledge of Introductory Psychology**

Learning Objectives

After doing this course the student will be able:

- To be able to define and evaluate gender as a social construct
- To understand the ways gender, power, privilege, and oppression play out across a range of human experiences.

Learning outcomes

- Examine the growth of gender as a construct in psychological research and its methods.
- Critically analyse the different perspectives highlighting the development of the concept of gender in a child.
- Reflect on issues and challenges faced by women, men and LGBTQA+ communities and their resulting mental health outcomes.
- Develop gender sensitivity and learn to apply the principles of promoting equality and equity in various facets of life.

SYLLABUS OF DSE- 8

UNIT - I **(9 hours)**

Conceptualizing Gender: Social construction of gender; History of gender in psychology; Common features of feminist research methodology.

UNIT - II **(12 hours)**

Theories of Gender Development: Psychoanalytic, Cognitive-developmental, Gender schema, Biological and Social Cognitive Theory.

UNIT - III **(12 hours)**

Gender Heterogeneity: Issues and Challenges: Discrimination against gender spectrum, Gender based violence; Mental health concerns.

UNIT - IV **(12 hours)**

Current Frontiers in Psychology of Gender; Gender Sensitization; Prevention of sexual harassment; Promoting equality and equity; Gender neutral parenting.

Practical component– Nil

Tutorial component **(15 hours)**

Suggestive Tutorial Activities *(This is a suggestive and not an exhaustive list of tutorial activities)*

- Literature review on topics such as LGBTQ community in India, Sexual harassment at workplace, gender neutral parenting etc.
- Movie screening and discussion based on themes ofdiversity issues and gender
- Constructing childhood memoirs that shaped sensibilities around the students' gender roles.
- Tracing the activities of an NGO who is working towards gender empowerment.
- Group projects and/or based on gender based concerns.
- Case study analysis of an Indian case around the themes of gender.

Essential/Recommended Readings

COMMON POOL OF GENERIC ELECTIVES (GE) COURSES
Offered by Department of Psychology

GENERIC ELECTIVE COURSE GE - 15 MEDIA PSYCHOLOGY

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course Title & Code	Credits	Credit Distribution of the Course			Eligibility Criteria	Pre-requisite of the Course (if any)
		Lecture	Tutorial	Practical/ Practice		
GE -15 MEDIA PSYCHOLOGY	4	3	1	0	Class 12th Pass	Basic knowledge of Introductory psychology

Learning Objectives

- To develop an understanding of media, media literacy and their psychological implications.
- To examine how we interact with media on the psychological level.
- Understand the benefits of applying media psychology.
- Appreciate the interaction of media and culture.
- Examine media contents and effects and socialization.

Learning Outcomes

After doing this course the student will be able to:

- Understand the psychological power of media and its effects
- Discuss the psychological role of media in creating realities
- Discuss the effect of media on identity, youth and violence
- Demonstrate knowledge and skills for media psychology, media effects and media content
- Describe the relationship between media and social change

SYLLABUS OF GE- 15

UNIT - I **(12 hours)**

Understanding Media Psychology: Defining Media Psychology; Media Influence in everyday life, Media and social Interaction, Media Theories (Linguistic and Communicative theories).

UNIT - II **(12 hours)**

Mass Media and Society: Paradigms in media sociology; Mass Media and Family, Youth Empowerment and Media; Gender Representation in the Media; Critical Evaluation of Mass Media and Indian Society.

UNIT - III **(9 hours)**

Media and Culture: Mass Media and Culture; Communities and sub-cultures,; Intercultural Communication; Ideology and Media Representations; Realistic Conflict Theory.

UNIT - IV **(12 hours)**

Effects of Media: Media Effects Theories; Media Effect on Identity; Media Effect on Women; Social Learning Theory;Media Violence and its Effect on Youth.

Practical Component – Nil

Tutorial Component **(15 hours)**

Suggestive Tutorial Activities *(This is a suggestive and not an exhaustive list of tutorial activities)*

- Reflections on everyday experiences in the light of Theories of Media.
- Panel Discussion (e.g. gender and media, youth and media, family systems and media).
- Analysing the variation of information disseminated in media across cultures and understanding the nuances of communication.
- Learning the effects of media through debates.
- Class projects related to effects of media on Individual and group behaviour.

Essential/Recommended Readings

Giles, D, (2010). *Psychology of the media.* Basingstoke: Palgrave Macmillan.

Kumar, N. (2020). *Media psychology*: *Exploration and application.* Routledge India.

Stever, G. S., Giles, D. C., Cohen, J., Myers, M. E. (2021) *Understanding media psychology.* Routledge.

Suggestive Readings

Bandura, A. (2001). Social cognitive theory of mass communication. *Media psychology, 3* pp. 265-299.

Brewer, G. (2011). *Media psychology*. Basingstoke: Palgrave Macmillan.

Dill, K. E. (2012). *Oxford handbook of media psychology*. New York: Oxford University Press.

Note: **Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.**

GENERIC ELECTIVE COURSE GE-16 FOUNDATIONS OF DEVELOPMENTAL PSYCHOLOGY

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE GE COURSE

Course Title & Code	Credits	Credit Distribution of the Course			Eligibility Criteria	Pre-requisite of the Course (if any)
		Lecture	Tutorial	Practical/ Practice		
GE – 16 FOUNDATIONS OF DEVELOPMENTAL PSYCHOLOGY	**4**	**3**	**0**	**1**	**Class 12th Pass**	**Basic knowledge of Introductory psychology**

Learning Objectives

- To equip the learner with an understanding of the concepts and issues of human development
- To examine and discuss major theories of development such as those of Piaget, Vygotsky, Kohlberg, Erikson, Freud and Bronfenbrenner.
- To enumerate stages and types of development .

Learning Outcomes

After doing this course the student will be able to:

- Develop an understanding of various issues related to human development.
- Understand different domains of development.
- Develop an understanding of human growth from conception to Adulthood.

SYLLABUS OF GE-16

UNIT - I **(9 hours)**

Introduction: Nature, issues and theoretical perspectives – Psychoanalytic, Psychosocial and Ecological perspective. Indian model of human development.

UNIT – II **(12 hours)**

Domains of Development: Cognitive development – Piaget and Vygotsky, Moral development – Kohlberg and Emotional development – Attachment and temperament

UNIT - III **(12 hours)**

Stages of Development I: Prenatal development, Birth and Infancy (Physical and Motor Development).

UNIT - IV **(12 hours)**

Stages of Development II: Adolescence – Physical changes, Socioemotional development – Self, Identity, Family, Peers

Adulthood – Physical changes, Socioemotional development – Career issues, Attraction & Love and Family

Practical Component **(30 hours)**

Suggestive Practicals

- Conservation tasks – Piaget's theory
- Attachment style assessment
- Observation of a 2/3/4 years old baby for progress in developmental domains
- Assessment of emotional expression or regulation
- Assessment of family environment /Assessment of marital adjustment
- Heinz dilemma – Kohlberg's theory
- Assessment of Identity status – Marcia's theory
- Cross-sectional study for crisis experienced – based on Erickson's theory
- Developmental record and its analysis of a new born upto 6 months

Tutorial component: Nil

Essential/Recommended Readings:

Berk, L. E. (2010).*Child development* (9th ed.). New Delhi: Prentice Hall.

Feldman, R.S. & Babu, N. (2023). *Development across the lifespan.*Pearson.

Rangaswami, K. (1992). Indian model of stages in human development and developmental tasks. *Indian Journal of Psychological Medicine, 15* (1) pp 77 – 82.

Note: **Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.**

GENERIC ELECTIVE COURSE GE- 17 NEGOTIATING INTIMATE RELATIONSHIPS

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course Title & Code	Credits	Credit Distribution of the Course			Eligibility Criteria	Pre-requisite of the Course (if any)
		Lecture	Tutorial	Practical/ Practice		
GE-17: NEGOTIATING INTIMATE RELATIONSHIPS	**4**	**3**	**1**	**0**	**Class 12th Pass**	**Basic knowledge of Introductory psychology**

Learning Objectives

- To understand the construct of friendship and intimate relationship
- To develop an understanding of the psychology behind love
- To understand how and when relationships go wrong.
- To establish positive relationships.

Learning Outcomes

After doing this course the student will be able to:

- Recognize the complex nature of romantic love
- Understand the theoretical implication of love
- Identify distress in intimate relationships
- Build and foster a positive relational attitude

SYLLABUS OF GE- 17

UNIT - I **(12 hours)**

Psychology of Friendships and Intimate Relationships: Making friends, Effects of friendships, Factors affecting friendships, Dating, Marriage.

UNIT - II **(12 hours)**

Understanding Love: Types of love; Theories of love (two-factor theory of love; Sternberg's triangular theory); Sexuality.

UNIT - III **(12 hours)**

Signs of Relationship Going Sour: Jealousy; Romantic transgressions; Breakup: Intimate Partner Violence.

UNIT - IV **(9 hours)**

Flourishing Relationships: Positive Families; Building Relationship Satisfaction.

Practical Component (if any)- Nil

Tutorial Component: *(This is a suggestive and not an exhaustive list of tutorial ativities)* **(15 hours)**

- Focus Group Discussion
- Movie Review, e.g. Kabir Singh, Titanic
- Class debates to develop critical thinking, e.g. use of Apps like Tinder
- Analysis of the student's social network of friends and followers on social media
- Self and other awareness exercises that encourage constructive feedback
- Experiential exercises to enhance gratitude, practice forgiveness
- Review of Contemporary Art: Music, Painting etc.
- Review of literature or papers in journals or book, e.g. impact of stressors like natural disasters, pandemic, etc. on love and relationships
- Presentations on contemporary topics
- Use of Sternberg's Triangular Love Scale to assess one's love towards a romantic partner

Category II

(B.A. Programme with Psychology as Major Discipline)

DISCIPLINE SPECIFIC CORE COURSE – 9: ORGANIZATIONAL

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSC-9 Organizational Behaviour	4	3	0	1	Passed Class 12th	Basic knowledge of introductory psychology

Learning Objectives

The Learning Objectives of this course are as follows:

- Develop an awareness of the concepts related to organizational behaviour.
- Help students appreciate the evolution of the field of organizational behaviour and the role of organizational ethics, especially corporate social responsibility.
- Develop a deeper understanding of conceptual and theoretical bases of motivation and employees' work attitudes and their relationship with performance and organizational outcomes.
- Understanding attitudes at work, motivation, leadership processes from different theoretical perspectives.
- Provide practical guidelines to develop entrepreneurial leadership qualities.
- Help the students develop a connection between concepts and practices of organizations.

Learning Outcomes

After completing this course, the student will be able to:

- Familiarise themselves with the underlying concepts of organizational behaviour.
- Understand the evolution of the field of organizational behaviour and recognize the role of organizational ethics, especially corporate social responsibility.
- Apply the understanding of employee attitudes, motivation leadership and organizational culture in real world organizational settings.
- Examine the relationship between gender and leadership.
- Develop an ability to adapt leadership approaches/ practices in a variety of organizational contexts and cultures.
- Identify best practices relating to entrepreneurial leadership.

SYLLABUS OF DSC- 9

Unit- I **(11 Hours)**

Introduction to Industrial/Organizational Psychology- Scope of the Field; Historical Antecedents of Organizational Behaviour; Scientific Management and Human Relations Movement; Organizational Ethics and Corporate Social Responsibility.

Unit- II **(16 Hours)**

Work Related Attitudes and Motivation- Job Satisfaction (Antecedents and consequences of Job Satisfaction); Organizational Commitment.

Early Theories of Work Motivation: Maslow, Herzberg; Contemporary Theories and Applications: Expectancy, Equity, Goal Setting; Indian Approach to Work Motivation.

Unit- III **(18 Hours)**

Organizational Culture and Leadership- Models (Schein and Pareek); Managing Organizational Culture; Leadership Approaches: Overview of Trait Theories and Behavioural Theories, Contingency Theories; Contemporary Issues: Inspirational Approaches to Leadership (Charismatic and Transformational Leadership); Gender and Leadership; Indian Perspective on Leadership (Nurturant Task Leadership); Entrepreneurial leadership and leadership in startups.

Practical component – **(30 Hours)**

Suggestive list of practicals:

1. Understanding contemporary challenges faced by organizations using surveys and interviews.
2. Exploring work motivation in the Indian workplace
3. Studying the impact of organizational citizenship behaviour among employees in different industries and sectors in India.
4. Using standardized psychological tests and scales, students may study work-related attitudes such as job satisfaction, organizational commitment, and organizational justice among different employees and organizations.
5. Using secondary sources of data, case studies or psychological scales, students may study the leadership styles of organizational leaders.
6. Students may also work on relationship between different concepts related to organizational psychology.

DISCIPLINE SPECIFIC CORE COURSE – 10: PERSPECTIVES IN MENTAL AND BEHAVIORAL DISORDERS

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSC 10 – Perspectives in Mental and Behavioral Disorders	4	3	0	1	Passed Class 12th	Basic understanding of mental disorders

Learning Objectives

The Learning Objectives of this course are as follows:

- To introduce the clinical picture and etiological understanding of Schizophrenia spectrum disorders, with focus on Schizophrenia.
- To provide an understanding about personality disorders and substance related disorders.
- To orient the learner to neurodevelopmental disorders.

Learning outcomes

After completing this course, the student will be able to:

- Understand the symptoms and causal factors of schizophrenia
- Recognize the clinical picture of substance related disorders
- Discriminate between different personality disorders
- Identify children with neurodevelopmental disorders

SYLLABUS OF DSC- 10

Unit – I **(15 Hours)**

Schizophrenia Spectrum Disorder (Clinical Picture and Dynamics) and Personality Disorders (Clinical Picture only): Schizophrenia; Antisocial Personality Disorder, Borderline Personality Disorder

Unit – II **(18 Hours)**

Somatic Symptom & Related Disorders, Substance Related Disorders and Gender dysphoria (Clinical Picture Only): Functional Neurological Symptom Disorder (Conversion

Disorder); Alcohol Use Disorder; Drug Abuse and Dependance (Opioids, Stimulants, Sedatives, Hallucinogens); Gender Dysphoria

Unit – III **(12 Hours)**

Neurodevelopmental Disorders (Clinical Picture Only) – Intellectual Developmental Disorder (Intellectual Disability)/ Specific Learning Disorder (Specific Learning Disabilities), Autism Spectrum Disorder, Attention Deficit Hyperactivity Disorder

Practical component – **(30 Hours)**

Suggestive list of practicals:

- Visual Media and/or text analysis as an approach to understanding mental disorders.
- Using the case study approach to understanding clinical picture of mental disorders.
- Assessment of a mental disorder using a psychometric test.
- Using Review of literature to understand schizophrenia/substance related disorders/Personality disorders/Neurodevelopmental disorder.
- Assessment of IQ/ADHD using a psychometric test.
- Correlational study of demographic variables and a mental disorder.

DISCIPLINE SPECIFIC ELECTIVE (DSE) COURSES

Discipline Specific Elective (DSE) Courses for Semester V:

DSE 1: Positive Psychology
DSE 2: Diversity and Inclusion in Institutions
DSE 3: Self and Personal Growth

DISCIPLINE SPECIFIC ELECTIVE COURSE – 1: POSITIVE PSYCHOLOGY

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSE-1 Positive Psychology	4	3	1	0	Passed Class 12th	Basic knowledge of introductory psychology

Learning Objectives

The Learning Objectives of this course are as follows:

- To understand the core concepts of positive psychology pertaining to Eastern and Western perspectives.
- To develop an understanding of positive states and processes.
- To equip the students with strategies to enhance their happiness and well-being

Learning outcomes

After completing this course, the student will be able to:

- To understand and appreciate the meaning and conceptual approaches to positive psychology.
- Understand the importance of positive states and processes
- Learn various strategies to enhance happiness and well-being.

SYLLABUS OF DSE - 1

Unit - I **(12 Hours)**

Introduction: Positive Psychology: An Introduction, Perspectives on Positive Psychology: Judeo-Christian, Athenian, Islam, Hinduism, Buddhism, and Jainism, Character Strengths and Virtues (VIA Classification System)

Unit - II **(12 Hours)**

Positive States and Processes I: Happiness and Well-being, Indian concepts of happiness and well-being (Sukha, Ananda, Panchakosas), Resilience

Unit - III **(12 Hours)**

Positive States and Processes II: Optimism, Wisdom, Flow, Spirituality

Unit - IV **(9 Hours)**

Positive psychology interventions: Positive thinking, Meditation, Gratitude, Kindness

Tutorial component **(15 Hours)**

Suggestive Tutorial Activities:

- Review of relevant articles on Indian views of happiness and well-being
- Role plays to demonstrate the role of positive states and processes
- Group discussion on any secondary source like a book, movie or a podcast related to positive psychology concepts
- Report writing on experiential exercises related to positive psychology interventions in the class

Practical component – NIL

DISCIPLINE SPECIFIC ELECTIVE COURSE – 2: DIVERSITY AND INCLUSION IN INSTITUTIONS

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSE-2 Diversity and Inclusion in Institutions	4	3	1	0	Passed Class 12th	Basic knowledge of introductory psychology

Learning Objectives

The Learning Objectives of this course are as follows:

- To facilitate an understanding and acknowledgment of building the morale for diversity in institutions.
- To build an understanding of the best practices and policies for creating more inclusive environments.

Learning Outcomes

After completing this course, the student will be able to:

- Understand the key principles around diversity, equity, and inclusion; and advocate for the need of building more inclusive institutional places.
- Examine the opportunities and challenges related to diversity issues in institutions, e.g., educational institutions.
- Reflect upon the various strategies used to manage diversity.

SYLLABUS OF DSE-2

Unit - I **(9 Hours)**

Introduction: Understanding diversity, equity, and inclusion; Paradigms of Diversity Management

Unit - II **(12 Hours)**

Differences between EEO, Affirmative Action, and Diversity; Opportunities and challenges of working with diversity

Unit - III **(12 Hours)**

Types of diversity: Disability, Sexual orientation, Caste

Unit - IV **(12 Hours)**

Creating an inclusive environment- Case studies.

Tutorial component **(15 Hours)**

Suggestive Tutorial Activities

- Encourage students to peer mentor minority groups in classroom in a mutually collaborative project.
- Presentations and discussions on diversity and focused concerns across diverse institutions
- Collaboration may be done with other institutions for Diversity, Equity and Inclusion (DEI) activities, e.g., weekly virtual book club meetings may be organized to share books on inclusion.
- Reflective exercises and journal writing
- Film and documentary screening on DEI

Practical component – NIL

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE DISCIPLINE SPECIFIC ELECTIVE COURSE – 3: SELF AND PERSONAL COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSE-3 Self and Personal Growth	4	3	1	0	Passed Class 12th	Basic knowledge of introductory psychology

Learning Objectives

The Learning Objectives of this course are as follows:

- To explore and understand the concept of self.
- To identify the meaning of self in a social world.
- To help the students understand the idea of self from the Indian and Western perspective.
- To facilitate personal growth and the development of an individual.

Learning Outcomes

After completing this course, the student will be:

- Able to understand the idea of self; it's antecedents and place in the social world.
- Able to understand the notion of self from an Indian and western perspective.
- Equipped with skills of self-management.

SYLLABUS OF DSE - 3

Unit – I **(12 Hours)**
Understanding Self
Self-concept: Nature; Factors shaping the self-concept; Sources of self-concept; Impact of culture, gender, and other social factors on the self-concept.
Self and Identity in the social world/context; Influence of social media and technology on self-identity and self-presentation.

Unit – II **(12 Hours)**
Theories of Self
Concept of Self in the Indian context (Ātman, Purusha, Jiva); and its relation to personal growth; The concept of Sat-chit-ananda and its relationship to self-realization and personal growth; Carl Rogers' theory on self; Carl Jung's concept of self: Jung's concept of the self as an archetype and its relationship to individuation; Neuroscience of Self

Unit – III **(6 Hours)**
Managing Self
Self-regulation: Importance and Strategies; Self-presentation: Strategies for enhancing self-presentation skills; Subjective wellbeing: Definition; contributing factors.

UNIT – IV **(15 Hours)**
Personal Growth
Developing character strengths and virtues;
Hope, Optimism and Resilience: Role in coping with adversity and promoting personal growth; Strategies for developing these qualities and enhancing personal growth and well-being; Understanding the challenges and potential barriers to personal growth and strategies for overcoming them.

Tutorial component **(15 Hours)**

Suggestive Tutorial Activities:
- Group Discussion
- Case Study Analysis
- Comparative Analysis
- Self-Reflection Journal
- Strengths Assessment

Practical component – NIL

B.A. (HONS.) PSYCHOLOGY

SEMESTER - VI

DEPARTMENT OF PSYCHOLOGY

Category I

(B.A. Honours in Psychology in three years)

DISCIPLINE SPECIFIC CORE COURSE DSC 16 HUMAN RESOURCE MANAGEMENT: THEORY AND PRACTICE

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSC- 16: HUMAN RESOURCE MANAGEMENT: THEORY AND PRACTICE	**4**	**3**	**0**	**1**	**Class 12th Pass**	**Basic knowledge of Introductory psychology**

Learning Objectives

- To recognize and appreciate the salient role played by Human Resource Management (HRM) in managing organizations.
- To familiarize students with key concepts, policies, and practices relevant to managing human resources in organizations.
- To orient students to the basics of International HRM.
- To develop an analytical and strategic orientation to addressing HRM issues through course readings, discussions, case studies, and in-class exercises.

Learning Outcomes

After doing this course the student will be able to:

- Understand key concepts, principles, and practices of HRM.
- Develop the basic ability to assist HR departments in fulfilling human resource functions, particularly related to recruitment, selection, performance appraisal, and training
- Critically examine organizational policies and practices in the context of new realities of the workforce.

SYLLABUS OF DSC-16

UNIT - I **(12 hours)**

Introduction to Human Resource Management (HRM): HRM and HRD, Strategic and Traditional HRM; HRM Challenges; Overview of International HRM.

UNIT - II **(21 hours)**

Staffing and Maintaining High Performance: Recruitment (sources of recruitment) and Selection - Process and Methods (resume, interviews, testing).
Performance Appraisal – Performance Management Systems, Methods.

UNIT - III **(12 hours)**

Training Process: Identification of training needs- - Training Need Analysis (TNA); Techniques of Training, Overview of Training Evaluation.

Practical Component **(30 hours)**

Suggestive Practicals

- Identification of research gaps in the field
- Gathering and measuring information
- Evaluate outcomes and work out recommendations for HR managers

Following is the list of illustrative topics on which practicum may be designed :

- Challenges faced by HRM managers (work from home, sexual harassment, downsizing, etc.)
- International HRM
- Recruitment
- Selection
- Performance Appraisal
- Training

Tutorial Component: Nil

DISCIPLINE SPECIFIC CORE COURSE – 17: COUNSELLING PSYCHOLOGY

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course Title & Code	Credits	Credit Distribution of the Course			Eligibility Criteria	Pre-requisite of the Course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSC- 17: COUNSELLING PSYCHOLOGY	**4**	**3**	**0**	**1**	**Class 12th Pass**	**Basic knowledge of Introductory psychology**

Learning Objectives

- To develop an understanding of basic concepts, processes, and techniques of Counselling.
- Having a comprehensive understanding of the profession of counselling, particularly in the Indian context.

Learning Outcomes

After doing this course the student will be able to:

- Define counselling and its goals.
- Acquiring basic counselling skills of problem identification,and relationship building (e.g.empathy,listening, paraphrasing, unconditional positive regard).
- Developing qualities of an effective counsellor including increasing self-awareness, reflexivity,self-monitoring and objectivity.
- Helping clients having mild concerns in life;for instance acting as peer counsellors in the college/community.

SYLLABUS OF DSC-17

UNIT - I **(9 hours)**

Introduction: Nature and Goals; Ethics in counseling; Characteristics of a Professional Counselor; Status and Practice of Counselling Psychology in India.

UNIT - II **(12 hours)**

Therapeutic Process: Building Therapeutic Relationships; Working in a Therapeutic Relationship; Termination.

UNIT - III **(24 hours)**

A. **Techniques of Counseling**: Psychoanalytic Techniques (Freud); Behaviour Therapy; Person-centered Therapy; Cognitive Therapy.

B. **Applications**: Family Counselling; Crisis Intervention: Suicide, Grief, and Sexual Abuse

Practical Component **(30 hours)**

Suggestive Practicals

- Need for Counselling among college students/ children/ adolescents using any standardized test.
- To study the self-efficacy of counsellors using any scale for better understanding of personality characteristics of a professional counsellor.
- Information-oriented first interview (Cormier &; Hackney, 2008).
- Practical based on any three micro skills (Pre-post design).
- Construction of a Genogram.
- Aptitude & Interest Assessment in Career Counselling.

Tutorial Component: Nil

DISCIPLINE SPECIFIC CORE COURSE – 18: HEALTH PSYCHOLOGY

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course Title & Code	Credits	Credit Distribution of the Course			Eligibility Criteria	Pre-requisite of the Course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSC- 18: HEALTH PSYCHOLOGY	**4**	**3**	**0**	**1**	**Class 12th Pass**	**Basic knowledge of Introductory psychology**

Learning Objectives

- Understanding Health Psychology and its theoretical perspectives.
- Identifying the characteristics of health behaviours.
- Promoting health enhancing behaviours by using exercise, nutrition and emotional regulation.
- Developing an understanding of interlinkages between culture, health and healing systems.

Learning Outcomes

After learning the course the student will be able to:

- Understand the core concepts of Health Psychology
- Apply of Health Psychology theories and concepts (e.g. health behaviour) in everyday life.
- Analyse the role of Ayurveda, Folk healing and Homeopathy in the creation of health.
- Evaluate the efficacy of various health promotion strategies including nutrition, exercise and emotional management.
- Create inter-linkages between culture and health
- Develop readiness to pursue a specialised degree in Health psychology.

SYLLABUS OF DSC-18

UNIT - I **(12 hours)**

Introduction to Health Psychology: Nature, Goals of Health Psychology, Relationship Between Health and Psychology, Models (Bio-medical Model, Bio-Psychosocial Model of Health, Indian Model of Health).

UNIT - II **(12 hours)**

Behaviour and Health: Characteristics of Health Behaviour; Barriers to Health Behaviour; Theories of Health Behaviour (Health –Belief Model, Theory of Planned Behaviour, Stages of Change Model).

UNIT - III **(12 hours)**

Culture, Health and Healing: Cultural Construction of Health, Ayurveda, Folk Healing, Homeopathy.

UNIT – IV **(9 hours)**

Health Promotion and Management: Exercise, Nutrition and Emotional Regulation.

Practical Component **(30 hours)**

Suggestive Practicals

- Analysis of films and other media sources highlighting health issues.
- Analyzing health based policies of India e.g National Health Policy.
- Using the case study approach to understand relevant health issues.
- Questionnaire based survey on health concerns.
- Practicals based on relevant standardized psychological tests pertaining to health.
- Correlational studies of health based variables.
- Health based interventions of brief duration.

Tutorial Component: Nil

DISCIPLINE SPECIFIC ELECTIVE COURSE- 9 PSYCHOLOGY OF EXCEPTIONAL CHILDREN

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course Title & Code	Credits	Credit Distribution of the Course			Eligibility Criteria	Pre-requisite of the Course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSE- 09: PSYCHOLOGY OF EXCEPTIONAL CHILDREN	**4**	**3**	**0**	**1**	**Class 12th Pass**	**Basic knowledge of Child & Adolescent Psychology / Developmental Psychology**

Learning Objectives

- To develop an understanding of exceptional children.
- To familiarise oneself with the various types/ categories of exceptionalities.
- To understand the differences between children with disabilities, gifted children and twice exceptional children
- To learn methods of assessment of learning disability, giftedness and twice exceptionality.
- To know interventions used with the various areas of exceptionality.

Learning Outcomes

After learning the course the student will be able to:

- Understand the range of potential differences among children with learning disabilities, gifted children and twice exceptional children.
- Screen and identify exceptional children.
- Suggest intervention strategies for exceptional children.

SYLLABUS OF DSE- 09

UNIT - I **(9 hours)**

Introduction: Neurodiversity, Exceptional children, types and their prevalence, Historical perspectives, Inclusion and integration, Overview of special education, Roles and responsibilities of professionals working with exceptional children

UNIT – II **(12 hours)**

Specific Learning Disorder: Definitions, Prevalence, Causes, Assessment, Psychological and Behavioural Characteristics, Intervention and educational considerations for children and adolescents

UNIT – III **(12 hours)**

Gifted & Talented Children: Definition, Prevalence; Origins of Giftedness (genetic and environmental factors); Screening and identification tools; Physical, psychological and behavioural characteristics; Intervention and educational considerations for children and adolescents

UNIT – IV **(12 hours)**

Twice Exceptional Children: Definition, prevalence, types, Psychological and Behavioural Characteristics, Identifying twice exceptional children, interventions and educational considerations for twice exceptional children

Practical Component **(30 hours)**

Suggestive Practicals

- Case study to understand exceptional children.
- Use of special education assessment tool
- Inclusive or exclusive education for exceptional children
- Interview with caregivers of exceptional children/special educators/professionals working with children to understand challenges they experience and strategies they use to cope.
- Reflections on volunteering in programs for exceptional children
- Development of intervention plans for exceptional children

Tutorial Component: Nil

DISCIPLINE SPECIFIC ELECTIVE COURSE -10 RESEARCH METHODS IN PSYCHOLOGY

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course Title & Code	Credits	Credit Distribution of the Course			Eligibility Criteria	Pre-requisite of the Course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSE- 10 RESEARCH METHODS IN PSYCHOLOGY	**4**	**3**	**0**	**1**	**Class 12th Pass**	**Familiarity with Paradigmatic foundations of psychological inquiry and tecniques of data collection**

Learning Objectives

- To present the essential steps, process and considerations of designing research in Psychology
- To introduce the key techniques quantitative and qualitative techniques of data-analysis in psychological research
- To acquaint students with the possibilities in mixed methods research in Psychology

Learning outcomes

After learning the course the student will be able to:

- Understand the utility and key differences of major qualitative data analysis techniques.
- Understand and appreciate the utility and different approaches to mixing methods in psychological research.
- Design a ethically grounded psychological research study and write a proposal for the same

SYLLABUS OF DSE- 10

UNIT – I Introduction to Research Methods in Psychology (10 hours)

Introduction to psychological research and its goals; Common research forms: Exploratory research, Descriptive research and Explanatory research; Delineating Steps of Quantitative and Qualitative Research

UNIT - II Issues of Design in Quantitative and Qualitative Studies (10 hours)

Designing Quantitative and Qualitative Studies: Language of Variables and Hypothesis v/s Language of Cases and Context; Research Question Method Link: Survey, Observation, Interview, Focus Group Discussion; Measurement process in Quantitative and Qualitative

Research: Conceptualisation, Operationalisation, Reliability and Validity; Sampling in Quantitative and Qualitative Research: Types and techniques

UNIT – III Approaches to Quantitative and Qualitative Data Analysis (15 hours)

Quantitative Approaches: Correlation and Regression Analysis; Qualitative Approaches: Thematic analysis, Grounded Theory & Narrative Analysis

UNIT – IV Mixed-methods Research (10 hours)

Why mix methods of research? Using quantitative and qualitative methods as complementary modes of inquiry; Mix-method designs: Triangulation Design, Embedded Design, Explanatory Design, Exploratory Design; Mixed-method sampling; Mixing qualitative methods: Pluralistic Qualitative Research (PQR)

Practical Component (30 Hours)

Suggestive Practicals

- Designing and conducting a correlational study using suitable variables, and standardised tools/questionnaires/tests.
- Conducting an interview /observation/ FGD/ case study as a method of data collection and then analyse it using a suitable method of qualitative data analysis such as thematic analysis.
- Designing a mixed-method study (quantitative-qualitative mixed method or pluralistic qualitative research) and writing a detailed research plan/proposal for the same.

DISCIPLINE SPECIFIC ELECTIVE COURSE 11 – EDUCATIONAL PSYCHOLOGY

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course Title & Code	Credits	Credit Distribution of the Course			Eligibility Criteria	Pre-requisite of the Course (if any)
		Lecture	Tutorial	Practical / Practice		
DSE – 11 EDUCATIONAL PSYCHOLOGY	**4**	**3**	**0**	**1**	**Class 12th Pass**	**Basic knowledge of Introductory psychology**

Learning Objectives

- To familiarize students with core concepts of educational psychology
- To foster an understanding of the teaching-learning process and issues with classroom management and assessment
- To create a vision for better educational institutions that practice positive and inclusive education

Learning Outcomes

After learning the course the student will be able to:

- Develop an understanding of the core concepts of educational psychology.
- Gain an insight into various facets of the teaching learning process, and issues with classroom management and assessment.
- Get sensitised towards the need for positive and inclusive educational practices.

SYLLABUS OF DSE- 11

UNIT - I **(9 hours)**

Introduction: Nature and scope of Educational psychology; Contributions of Psychology to Education; Theoretical perspectives (Behavioural, Piaget, Vygotsky, Brofrenbrenner)

UNIT - II **(12 hours)**

Teaching-learning Process: Learner: Learner Differences and Learning Needs, Teacher: Characteristics of an Effective Teacher: Empathy, Communication, Perspective taking

Skills; Metaphors for Teaching-Learning Process; Teaching Methods and their Applications: Teacher centred and Student centred; Use of ICT: Benefits and challenges.

UNIT - III

(12 hours)

Classroom Management and Assessment: Classroom Management, Psychological testing in education, Issues related to Classroom Assessment, Alternatives to traditional assessment

UNIT - IV

(12 hours)

Towards Better Educational Institutions: Inclusive Education; Addressing Classroom Diversity: Gender, Socio-Economic Status, Linguistic Diversity, Disability; Issues related to Categorization & Labelling, Positive education

Practical Component

(30 hours)

Suggestive Practicals

- Comparison of two or more teaching methods.
- Intervention based on any aspect(s) of positive education.
- Comparison of assessment methods in education.
- Analysis of data from primary/ secondary sources regarding education in India

Tutorial Component- Nil

Essential/Recommended Readings

COMMON POOL OF GENERIC ELECTIVES (GE) COURSES
Offered by Department of Psychology

GENERIC ELECTIVE COURSE – 18: Understanding Human Resources

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course Title & Code	Credits	Credit Distribution of the Course			Eligibility Criteria	Pre-requisite of the Course (if any)
		Lecture	Tutorial	Practical/ Practice		
GE 18 UNDERSTANDING HUMAN RESOURCES	4	3	1	0	Class 12th Pass	Basic knowledge of Introductory psychology

Learning Objectives

- To enable students to understand the HR Management and system in various industries or organisations.
- To help students focus on and analyse the issues and strategies required to select and develop manpower resources.
- To develop relevant skills necessary for application in HR related issues.

Learning outcomes

After learning the course the student will be able to:

- Develop the understanding of the concept of human resource management and to understand its relevance in organisations.
- Effectively manage and plan key human resource functions within organisations.
- Integrate the knowledge of HR concepts to take correct business decisions.

SYLLABUS OF GE-18

UNIT - I **(13 hours)**

Acquisition of Human Resources: Human Resource Planning: Job Analysis (any one technique); Recruitment: Sources, Resume Preparation; Selection: Process; Interview, Testing.

UNIT - II **(9 hours)**

Development of Human Resources: Training- Process, Training Need Analysis, Training methods; Career Development and Planning: Career Development and Life Stages, Career Self –Management.

UNIT - III **(11hours)**

Rewarding Human Resources: Performance Appraisal: Process, Methods: Behaviour Oriented Methods (Absolute- Critical Incidents, Forced Choice, Behaviourally Anchored Rating Scales, BARS and Relative- Forced Distribution, Individual, Paired Comparison); Result Oriented Appraisal; 360 degrees feedback; Creating Performance Management Systems.

UNIT - IV **(12 hours)**

HRM and IHRM: Introduction to Human Resource Management (HRM): HRM and HRD; International Human Resource Management (IHRM): Policies and Practices (Global Talent Management, Expatriate Training, Performance Management).

Practical Component - Nil

Tutorial Component **(15 hours)**

Suggestive Tutorial Activities *(This is a suggestive and not an exhaustive list of tutorial activities)*

- Mock Recruitment Process
- Training Needs Analysis (TNA)
- Performance Appraisal Role Play
- Discussion of case Study on relevant Human Resource Management concerns

Essential/Recommended Readings

Briscoe, D. R., Schuler, R. S. & Claus, L. (2009). *International human resource management: policies and practices for multinational enterprises* (3rd ed.). New York: Routledge.

De Cenzo, D. A. & Robbins, S.P. (2021). *Fundamentals of human resource management.* (14th edn.). NY: Wiley.

Suggestive Readings

Deb, T. (2006). *Strategic approach to human resource management: Concept, Tools & application.* Atlantic Publisher

Note: **Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.**

GENERIC ELECTIVE 19: GROUP PROCESSES AND DYNAMICS AT WORK

CREDIT DISTRIBUTION, ELIGIBILITY AND PREREQUISITES OF THE COURSE

Course Title & Code	Credits	Credit Distribution of the Course			Eligibility Criteria	Pre-requisite of the Course (if any)
		Lecture	Tutorial	Practical/ Practice		
GE-19 GROUP PROCESSES AND DYNAMICS AT WORK	**4**	**3**	**0**	**1**	**Class 12th Pass**	**Basic knowledge of Introductory psychology**

Learning Objectives

- Equip students with an understanding of the principles and processes of group dynamics and interactions from a psychological perspective.
- Facilitate everyday application of various aspects of group dynamics including group interactions, decision-making, communication, and leadership.

Learning Outcomes

After learning the course the student will be able to:

- Demonstrate an understanding of the nature and characteristics of groups and teams within organizations.
- Critically examine the ways in which group dynamics influence group interactions and decision-making processes.
- Identify and analyze the dynamics of communication and reflect on strategies to improve communication in organizations.
- Demonstrate an understanding of various psychological perspectives on leadership in organizations; reflect upon contemporary leadership roles; and apply best practices to group leadership.

SYLLABUS OF GE- 19

UNIT - I **(9 hours)**

Groups and Teams: Basic features of groups (status, norms, roles, cohesiveness); Differences between groups and teams; Stages of Group Development (Tuckman Model); Team-building.

UNIT - II **(12 hours)**

Group Processes and Decision Making: Group Interaction (facilitation, loafing); Group Decision Making (Brainstorming, Group think; Polarization) .

UNIT - III **(12 hours)**

Organizational communication: Objectives of Communication; Communication model; Direction of communication; Grapevine; Barriers to effective communication; Enhancing Communication Effectiveness.

UNIT - IV **(12 hours)**

Leadership in the Contemporary World: Overview to early approaches to leadership (trait, behavioural), Contingency (Fiedler's contingency model), Contemporary issues in leadership- Charismatic, Transformational & Transactional Leadership; Implicit leadership; Authentic leadership; Contemporary leadership roles (Mentoring, Self-leadership, Online leadership); Indian Perspective (Nurturant Task Leadership).

(30 hours)

Practical Component

Suggestive Practicals

- Design and roll out a team building intervention
- Compare the effectiveness of individual vs group decision making OR Identify the dynamics of group decision making- group think and/or group polarization using textual/film/experiential analysis
- Assess your own leadership style using any one standardized tool of leadership / Analyze leadership style of any one leader using archival research.

Tutorial Component: Nil

GENERIC ELECTIVE - 20: DISABILITY AND REHABILITATION

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course Title & Code	Credits	Credit Distribution of the Course			Eligibility Criteria	Pre-requisite of the Course (if any)
		Lecture	Tutorial	Practical/ Practice		
GE-20 DISABILITY AND REHABILITATION	**4**	**3**	**1**	**0**	**Class 12th Pass**	**Basic knowledge of Introductory psychology**

Learning Objectives

- To orient students to the concept of disability and rehabilitation
- To impart information related to models practiced in disability and rehabilitation
- To develop an understanding of ethics, policies and psychosocial aspect of disability and rehabilitation

Learning Outcomes

After learning the course the student will be able to:

- Understand the concept of disability and rehabilitation
- Learn about the skill development and employment perspective
- Apply the policies and acts in welfare of disability and rehabilitation

SYLLABUS OF GE-20

UNIT - I **(12 hours)**

Introduction: Basic overview of Disability (Terminology, types and Neurodiversity); Impairment, Activity and Participation;Disability in India; Basic overview on Rehabilitation (Terminology and types); Role of a Rehabilitation Professional

UNIT - II **(12 hours)**

Models of Disability and Rehabilitation: *Models of Disability*- Medical Model, Social Model, Overview of Charity and Empowerment Models ; *Models of Rehabilitation*- Psycho-social Model, Community Based Rehabilitation Model, Brief orientation to other models:

Home Based Rehabilitation Model, Institute Based Rehabilitation Model; Assessment and Certification of Disability in India.

UNIT – III **(12 hours)**

Psycho-Social Aspects of Rehabilitation: Accessibility and Advocacy; Social support- Family, Self help groups etc; Skill Development and Employment.

UNIT – IV **(9 hours)**

Provision and Ethics: Rehabilitation ethics; Rehabilitation policies and Acts- The Rights of Persons with Disabilities Act , 2016; Mental Health Care Act, 2017; Rehabilitation Council of India Act,1992; Provision and Schemes.

Practical Component – Nil

Tutorial Component: **(15 hours)**

Suggestive Tutorial Activities *(This is a suggestive and not an exhaustive list of tutorial activities)*

- Analysing the review for disability research and making research based student presentations
- Participation in Self- help groups for understanding Community Based Rehabilitation
- Analysing films on disability to promote inclusivity.
- Analysis of Case-Studies related to Disability Rehabilitation
- Study of Government initiatives for educaion and rehabilitation of children with disabilities
- Study of Policy documents on issues of disability

Category II

Psychology Courses for Undergraduate Programme of study with Psychology as one of the Core Disciplines
(B.A. Programme with Psychology as Major/Discipline)

DISCIPLINE SPECIFIC CORE COURSE – 11: COUNSELLING

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSC-11 Counselling Psychology	4	3	0	1	Passed Class 12th	Basic knowledge of introductory psychology

Learning Objectives

The Learning objectives of this course are as follows:

- To develop an understanding of basic concepts, processes and techniques of counselling.
- Having a comprehensive understanding of the profession of counselling, particularly in the Indian context.

Learning Outcomes

After completing this course, the student will be able to:

- Define counselling and its goals.
- Acquiring basic counselling skills of problem identification, and relationship building (e.g., empathy, listening, paraphrasing, unconditional positive regard).
- Developing qualities of an effective counsellor including increasing self-awareness, reflexivity, self-monitoring and objectivity.
- Helping clients having mild concerns in life; for instance, acting as peer counsellors in the college/community.

SYLLABUS OF DSC-11

UNIT – I **(9 hours)**

Introduction-Nature and Goals; Ethics in counseling; Characteristics of a professional counselor; Status and practice of Counselling Psychology in India.

UNIT – II **(12 hours)**

Therapeutic Process- Building Therapeutic Relationships; Working in a Therapeutic Relationship; Termination.

UNIT – III **(24 hours)**

C. **Techniques of Counseling**- Psychoanalytic Techniques (Freud); Behaviour Therapy; Person-centered Therapy; Cognitive Therapy.

D. **Applications**: Family Counselling; Crisis Intervention: Suicide, Grief, and Sexual Abuse

Practical component – **(30 Hours)**

Suggestive list of practicals:

1. Need for Counselling among college students/ children/ adolescents using any standardized test.
2. To study the self-efficacy of counsellors using any scale for better understanding of
3. personality characteristics of a professional counsellor.
4. Information-oriented first interview (Cormier & Hackney, 2008).
5. Practical based on any 3 micro skills (Pre-post design).
6. Construction of a Genogram.
7. Aptitude and Interest Assessment in Career Counselling.

DISCIPLINE SPECIFIC CORE COURSE – 12: DEVELOPMENTAL

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSC-12 Developmental Psychology	4	3	0	1	Passed Class 12th.	Basic knowledge of introductory psychology

Learning Objectives

The Learning Objectives of this course are as follows:

- To assist students in understanding how developmental psychology plays a role in theirown lives and future careers
- Connect students to current research and real-world application
- To gain insight in understanding, explaining and applying key human development issues in real life setting
- To foster awareness about the socio-cultural context of human development.

Learning Outcomes

After completing this course, the student will be able to:

- Critically evaluate theories of lifespan development
- Assess the biological cognitive, emotional and social factors that influence development
- Discuss methodological approaches used to study development
- Examine development issues of children and adolescent in the Indian context.

SYLLABUS OF DSC-12

Unit - I **(15 Hours)**

Nature and Perspectives of Development: Understanding context: family, peers, school; research methods and designs (Longitudinal & Cross-Sectional). Physical development: patterns of growth from prenatal development to adolescence.

Unit - II **(15 Hours)**

Cognitive Development: Brief introduction to cognitive development: Piagetian, Vygotskian. Language development

Unit - III **(15 Hours)**

Emotional Development: Displaying, Recognizing and Interpreting Emotions; Attachment;Theories of Moral development (Kohlberg, Gilligan).

Practical component – **(30 Hours)**

Suggestive list of practicals:

1. Study on child-rearing practices using test/ case study
2. Impact of family environment on socio-emotional development/ cognitive growth.
3. Application of Piaget's theory of cognitive development
4. Assessment of moral development using test/ dilemmas
5. Language assessment using Multilingual Assessment Instrument for Narratives (MAIN)
6. Assessment of attachment style and socio-emotional development

DISCIPLINE SPECIFIC ELECTIVE (DSE) COURSES

Discipline Specific Elective (DSE) Courses for Semester VI:

DSE 4: Psychological Research: Paradigms, Approaches, and Methods
DSE 5: Essentials of Media Psychology
DSE 6: Managing Human Capital at Workplace

DISCIPLINE SPECIFIC ELECTIVE (DSE) COURSE – 4: PSYCHOLOGICAL RESEARCH: PARADIGMS, APPROACHES, AND METHODS

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSE-4 Psychological Research: Paradigms, Approaches, and Methods	4	3	0	1	Passed Class 12th	Basic knowledge of introductory psychology

Learning Objectives

The Learning Objectives of this course are as follows:

- To introduce the paradigmatic foundations of psychological research
- To understand the differences between the quantitative and qualitative traditions of research in psychology
- Present the essential considerations of research in Psychology
- Introduce the process, designs and techniques of data-analysis in the quantitative and qualitative research tradition

Learning Outcomes

After completing this course, the student will be able to:

- Critically analyse and compare paradigmatic frameworks and their underlying assumptions and contributions to the field of psychology
- Appreciate the nuances of quantitative and qualitative traditions of research in Psychology and select an appropriate research tradition for their own research problems.
- Understand the commonalities and differences in features, goals, steps, sampling procedures and ethics of quantitative and qualitative traditions of research.
- Design a quantitative and qualitative research and select an appropriate method of data collection and analysis.

SYLLABUS OF DSE - 4

Unit – I **(18 hours)**

Essential considerations of Psychological Research

Paradigmatic considerations: Positivist, Post-positivist, Interpretivist, Critical Paradigm, and Constructivist.

Psychological research: Goals of research; Steps of Research - Problem identification, Hypothesis formulation, Designing the research, Data collection, Data analysis, and Interpretation; Common research forms - exploratory, descriptive and explanatory; Quantitative and Qualitative research traditions - overview, and differences.

Sampling: Defining Population and Sample, Sampling bias (Sampling error and Non sampling error), Types of Probability and Non-probability sampling.

Unit – II **(12 hours)**

Quantitative Research Techniques

Experimental Method: Causality versus correlation, Laboratory experiments and field experiments; True experimental and quasi-experimental design; Within-subject design, Between subject design, Pre and Post designs.

Survey Research: The logic and types of survey; Designing a survey questionnaire.

Issues of ethics and rigour in quantitative research.

Unit – III **(15 hours)**

Qualitative Research Techniques

Methods of data gathering: Interview, Focus group discussion, Case study, Observational Method, Using secondary data sources.

Techniques of qualitative analysis: content analysis and thematic analysis

Issues of ethics and rigour in qualitative research.

Orientation to Mixed Methods Research: Combining quantitative and qualitative approaches

Practical component – **(30 hours)**

Suggestive list of practicals:

1. To identify and illustrate the basic assumptions of paradigms using different research works.
2. Designing a true experimental or quasi-experimental study using any designs such as between-subjects, within-subjects, or pre-post designs.
3. Conducting a survey which may involve designing a questionnaire, collecting and analysing the data.
4. Conducting an interview (structured, semi-structured, unstructured, life-history etc,)/ observation (participant or non-participant)/ focus group discussion (online or in-person)/ case-study (single/multiple) as a method of data collection. The data obtained may be analysed using a suitable method of data analysis such as thematic or content analysis.
5. Designing a mixed-method study and writing a detailed research plan/proposal for the same.

DISCIPLINE SPECIFIC ELECTIVE (DSE) COURSE – 5: ESSENTIALS OF MEDIA PSYCHOLOGY

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSE 5: Essentials of Media Psychology	4	3	1	0	Passed Class 12th	Basic knowledge of introductory psychology

Learning Objectives

The Learning Objectives of this course are as follows:

- To educate learners about media and its impact
- To acquaint learners with the role of media in psychosocial change.
- To help learners understand critical issues related to media

Learning outcomes

After completing this course, the student will be able to:

- Understand the concept of media and its interface with psychology
- Distinguish between fantasy and reality
- Analyse the relationship between advertising and persuasion
- Critically examine the psychosocial influences of media

SYLLABUS OF DSE - 5

Unit – I **(9 Hours)**

Introduction to Media Psychology- - Nature and scope of media psychology; Classic Theories in Media Studies (Marshall McLuhan, Baudrillard); Research in Media Psychology; Indian perspective of Media Psychology

Unit – II **(12 Hours)**

Media and the User- Fantasy and reality; Expressing self and identity through social media; Finding communities (Fandoms, virtual communities); Use and abuse of internet

Unit – III **(12 Hours)**

Social Impact of Media- Media influences on pro-social behaviours, violence, and aggression; Psycho-social effects (social comparisons, body image, substance use); Advertising and persuasion (Advertising appeals, AIDAS Model)

Unit – IV **(12 Hours)**

Critical Issues in Media Psychology- Media as a tool for social and political change (Social Media movements, Propaganda); Representations of social groups in media (Gender and sexuality, religious minorities, disability); Ethics and Media

Tutorial component **(15 Hours)**

Suggestive Tutorial Activities

- Discussions around use of media for campaign promotion like Swachh Bharat Abhiyan, Fit India etc.
- Critical thinking exercises like Advertisement Analyser worksheets
- Questionnaires to understand social media and its impact, such as Social Media Use Questionnaire (e-SMUQ) or Internet Addiction Scale
- Reflective exercise on identifying influence of social media on behaviour
- Documentary screenings and discussions
- Discussions around FOMO and JOMO

Practical component (if any) - NIL

DISCIPLINE SPECIFIC ELECTIVE (DSE) COURSE – 6: MANAGING HUMAN CAPITAL AT WORKPLACE

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSE 6: Managing Human Capital at Workplace	4	3	1	0	Passed Class 12th	Basic knowledge of introductory psychology

Learning Objectives

The Learning Objectives of this course are as follows:

- To help students understand the various processes and practices related to Human Capital.
- Enable students to develop a connection between concepts, process and practices in organizations.
- Understanding counterproductive behavior in organization.
- To develop the understanding of the importance of employee talent and job analysis at workplace.

Learning outcomes

After completing this course, the student will be:

- Able to understand the different processes and practices related to human capital.
- Able to understand issues, functioning and challenges of managing human capital at workplace.
- Able to develop knowledge and skills related to employee recruitment, Job Analysis and talent management.

SYLLABUS OF DSE - 6

Unit – I **(15 Hours)**

Job Analysis and Talent Management

Basics of job Analysis, Methods for Collecting job Analysis Information, Writing Job Description, Talent Management Process, Profiles in Talent Management: Competencies and Competency-Based Job Analysis.

Unit – II **(15 Hours)**

Attraction and Socialization: An Organizational Perspective
Recruitment Process: Applicant's Perspective, Organizational Socialization: Diversity in Organization.

Unit – III **(15 Hours)**

Counterproductive Behavior at workplace
Nature of Counterproductive Behavior, Ineffective Job Performance, Employee Absenteeism, Employee Turnover, Odd Forms of Counterproductive Behavior .

Tutorial component (15 Hours)

Suggestive Tutorial Activities:

- Case study on an Indian Organization based on primary/secondary data, on Job Analysis/ Talent management
- Case study on an Indian Organization based on Organizational socialization, diversity in organizations
- Role play on Counterproductive Work Behavior.

Practical component (if any) - NIL

B. A. (Hons.) APPLIED PSYCHOLOGY COURSE

SEMESTER - IV

DISCIPLINE SPECIFIC CORE COURSE 10 – Approaches and Practice of Counselling

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSC 10: Approaches and Practice of Counselling	**04**	**03**	**0**	**01**	**Class 12th pass**	**Basic knowledge of Introductory Psychology**

Learning Objectives

The Learning Objectives of this course are as follows:

- To build a comprehensive understanding of the profession of counselling
- To facilitate development of basic counselling skills
- To understand the application of counselling in different contexts

Learning outcomes

The Learning Outcomes of this course are as follows:

- By studying this course the student will be able to understand the nature and scope of counseling psychology, and its difference from other allied fields.
- By studying this course the students will understand the different techniques of counseling based on different approaches.
- By studying this course the students will become aware of the application of counseling in different settings

SYLLABUS OF DSC-

Unit 1: Counselling: process, issues and challenges **(15 hrs)**

Definitions, Process and outcome of Counselling, Counselling and Psychotherapy, Personal and professional aspects of a counsellor (skills), Ethical principles in counselling, Challenges of counselling profession in India.

Unit 2: Approaches to counselling **(15 hrs)**

Behavioural approach (behaviour modification techniques), cognitive approaches (Aaron Beck and Albert Ellis techniques), Freudian techniques, Rogerian approach, positive psychotherapy (Seligman, Rashid and Parks)

Unit 3: Application of counselling **(15 hrs)**

School counselling with a Solution Focused Brief Therapy lens, Super's model of career counselling, Queer affirmative therapy, Bowen's Family systems therapy

Practical **(30 hrs)**

Any 2 practicals based on the topics covered in the above three units. The options are given below:

1. Skill based practicum based on Rogers' Person centered approach
2. Understanding counseling process
3. Externship in school counseling
4. Learning counseling techniques based on CBT or REBT or Psychoanalytic approach or positive psychotherapy

Essential/Recommended Readings:

Note: **Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.**

DISCIPLINE SPECIFIC CORE COURSE 11: Introduction to Psychological Assessment

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical		
DSC 11: Introduction to Psychological Assessment	**4**	**3**	**0**	**1**	**Class 12th pass**	**Basic knowledge of Introductory Psychology**

Learning Objectives

The Learning Objectives of this course are as follows:

- To build a comprehensive understanding psychological assessment
- To facilitate development of basic psychological assessment skills
- To understand the application of Psychological assessment in different contexts

Learning Outcomes

After doing the course, the students would be able to

- Understand the basic principles of psychological assessment and its various phases.
- Develop knowledge of the ethical and legal issues involved in the assessment process
- Familiarise with the steps in test construction and test standardization
- Know about different scales of measuring psychological attributes

UNIT – I **(15 Hours)**

Introduction to Assessment: Historical development of Testing and assessment, Nature, Types and Scope of assessment. Comparison between test and assessment. Ethical and social consideration in testing and assessment (APA basic principles and standard Guidelines).

UNIT – II **(15 Hours)**

Test Construction and Standardisation: Item writing, Item analysis, Norms and Test Standardisation, Reliability, and Validity.

UNIT – III **(15 Hours)**

Types of Scales: Likert, Thurstone, Guttman and Semantic differential scale.
Applications and Future Directions: Uses of Psychological Tests in different settings. Future directions in psychological assessment (Virtual reality, Computer assisted assessment, assessment in multicultural context).

Practical **(30 Hours)**

Total of two Practicums -one each from the following areas:

1 Test Construction/Standardisation; Scale construction
2 Psychological assessment: Assessment through any one psychological tests or scale (e.g. Likert, Thurstone, Guttman and Semantic differential scale)

Essential/recommended readings:

Anastasi, A., & Urbina, S. (2003). *Psychological testing.* (7th ed). New Delhi: Prentice – Hall of India Pvt. Ltd.

Gregory, R. J. (2014). *Psychological testing: History, principals and applications.* (6th ed.) Boston: Pearson Education.

Kaplan, R. M., & Saccuzzo, D. P. (2012). *Psychological testing: Principles, applications and issues.* (8th ed.). New Delhi, India: Cengage.

Miller, L. A., Lovler, R. L., McIntire, S. A. (2013). *Psychological Testing: A Practical Approach.* New Delhi: Sage Publications.

Note: **Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.**

DISCIPLINE SPECIFIC CORE COURSE 12 – Inferential Statistics in Psychology

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSC 12 - Inferential Statistics in Psychology	**4**	**3**	**0**	**1**	**Passed Class 12th**	**Knowledge of Descriptive Statistics**

Learning Objectives

After doing the course, the students would

- The advanced statistics course will assist students in grasping the techniques of inferential statistics necessary for carrying out research.
- They should be able to analyze and interpret statistical data obtained in research.

Learning outcomes

By studying this course, students will be able

- To understand advanced statistical techniques.
- To understand the statistical methods used in Statistical Inferences with a concept-focused approach.

SYLLABUS-

UNIT – I **(15 Hours)**

Introduction to Inferential Statistics: Parametric and Non-Parametric Statistics, Testing hypothesis about single means (*z* and *t*): Random sampling distribution of means, Null and alternate Hypotheses; One-tailed (directional) and Two-tailed (non-directional) hypothesis; Characteristics of Student's distribution of *t*; Degrees of freedom; Assumptions of *t*-test; Levels of significance versus *p*-values;

UNIT – II **(15 Hours)**

Interpreting the results of hypothesis testing: Type I and Type II error, Power of a test; Difference between Two Means (*t*-test) - Independent and Dependent Groups; Confidence Intervals

Unit-III **(15 Hours)**

Hypothesis Testing: More than two groups (One way ANOVA): Assumptions and calculation of one-way; Comparison of *t* and *F*. *Post Hoc* Comparisons (conceptual understanding). Chi-Square: Chi-Square as a Measure of Discrepancy between Expected and Observed Frequencies: Assumptions and calculations.

Practical component **(30 Hours)**

Total of two practicums from any of the following areas:

1 One practical based on comparison of two groups using t test
2 One practical based on comparison of more than two groups using ANOVA
3 One practical based on Chi-square

Data sets available online or those from other sources can be used for this purpose.

Essential/Recommended Readings:

Dyer, C. (2001). *Research in Psychology: A Practical Guide to Research Methodology and Statistics* (2nd ed.). Oxford: Blackwell Publishers.

King, B.M., Rosopa, P.J., & Minium, E.W. (2007). *Statistical Reasoning in the Behavioral Sciences.* (7th Ed.) USA: John Wiley.

Mangal, S.K. (2010). *Statistics in Psychology and Education* (2nd Ed.). PHI Learning.

Suggestive Readings

Note: **Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.**

DISCIPLINE SPECIFIC ELECTIVE COURSE 3 – : Advances in Applied Social Psychology

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSE 3: Advances in Applied Social Psychology	04	03	0	01	Class 12th pass	Social Psychology

Learning Objectives

- To understand Advanced Social Psychology and its various processes including social aspects of brain and behaviour
- To understand psychological aspects of economic and financial management and ongoing recent trends in Social Psychology

Learning outcomes

- By studying this course, the student will be exposed to the area of social neuroscience
- By studying this course, the students will understand the social bases of economic behaviour, like financial planning and decision making.
- By studying this course, the students will become aware of the emerging issues and problems that face social psychologists

SYLLABUS OF DSE-

Unit I **(15 hrs)**

Social Brain and Behaviour: Origins of social brains; Anatomy of brains; Chromosomes, genes and DNA; Research Method of Social Neuroscience; Application of Social Neuroscience; Evolution, Brain plasticity, Culture

Unit II **(15 hrs)**

Social Psychology of Personal Finance: Behavioural Economics and Financial Markets; Loss of aversion; Mental accounting; Decision Paralysis; Personal finance Planning, Tax Morale and Tax Compliance behaviour.

Unit III **(15hrs)**

Emerging Trends in Social Psychology: Social Cure, Social Psychology of Happiness; Social Psychology of religion, Social Psychology applied to environmental studies, Aggression in Every day life (Explaining sexual aggression, Vulnerability factor for sexual victimization,, Hate crime, Aggression on the Road

Practicum: **(30 hours)**

Two practicums to be done, one each from the following two areas:

1) Social Psychology of Personal Finance

2) Emerging Trends in Social Psychology

Essential/Recommended Readings:

Barrett, D. W. (2017). *Social Psychology: Core Concepts and Emerging Trends*. Sage Publication.

Glinonich, K. C., & Nisbett (2016). *Social Psychology*. WW Norton & Co. New York.

Jetten, J., Haslam, C. Haslam, S. A. (2012). *Social Cure: Identity Health and Well-being*. Psychology Press, New York.

Kirchler, E. (2009). *The Economic Psychology of Tax Behaviour*. Cambridge University Press, New York

Krahe, B. (2021). *The Social Psychology of Aggression*. Routledge, U.K.

Note: **Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.**

DISCIPLINE SPECIFIC ELECTIVE COURSE 4 – Foundations of Sports Psychology

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSE 4: Foundations of Sports Psychology	**04**	**03**	**0**	**01**	**Class 12th pass**	**Basic knowledge of Introductory Psychology**

Learning Objectives

- To understand the role of psychology in sports
- To get familiarized with the fundamental concepts of psychology with an emphasis on the application of psychology in sports.
- Through an integrated approach students gain the insight they need to understand, explain & apply key concepts of sports psychology in a real-life setting.
- The study of this course will open another branch of psychology where they can work & contribute to society for instance working with sports organizations, National, State & District sports federations, Educational Setups, National, State & Youth Teams, Individual sportspersons etc.
- Hands-on training for students with the help of practical are listed in the course

Learning Outcomes

- To develop a foundational understanding of Sports Psychology
- To understand the application of psychological principles in Sports Psychology

UNIT-1: BASICS OF SPORTS PSYCHOLOGY **(15 hours)**

Introduction (competitive & non-competitive physical activities): Historical Development (history of sports Psychology in India); Need & Scope of Sports Psychology; Relationship of Sports Psychology with other Sports Sciences (Anthropometry, Physiology, Biomechanics & Nutrition); Role of Sports Psychologist (imp of sports psy for athletes, coaches & others related to sports setting)

UNIT-2: PSYCHOPYSIOLOGICAL ASPECTS IN RELATION TO SPORTS PERFORMANCE **(15 Hours)**

Anxiety, Arousal (inverted u hypothesis, drive theory &IZOF) & Stress in relation to performance & its management; Biofeedback (GSR, EEG & EMG) (Relaxation Techniques (PMR, Autogenic Training, Deep Breathing, Yoga, meditation, & biofeedback-assisted relaxation); Perception & vision in relation to sports (Depth perception, peripheral vision Anticipation, Attention & Concentration (Reaction Time & DM) in relation to performance & Management (Concentration Training, Self-talk, Thought stopping & centering).

UNIT-3: SOCIAL PSYCHOLOGY IN SPORTS **(15 Hours)**

Individual & Team sports (Team Cohesion: Nature, Correlates, and Development); Team Building: (Factor Affecting group performance: Homogeneity of the group, stability of membership, communication structure, social facilitation, and inhibition); Relationship of Team Cohesion to Team Success (cultural influences on teamwork: Building teams in the Indian Sport Context); Impact of the audience on Sport Performance

Practicals: **(30 hours)**

A total of two practicals (from different units) of the following:

1. Any psychological test from the above units: measuring Sports Competitive Anxiety, Mental Toughness Dimensions, Test of Attentional & interpersonal Style etc.
2. Hands-on training on measuring Reaction Time, Anticipation Time, GSR, EMG, etc. assisted with any of the above-listed interventions.
3. FGD/ Simulated Exercise / Workshop /Case study of Indian sportsperson /Team.
4. Any one field based practical from the units above.

Essential/Recommended Readings:

Cox, R (2006). *Sports Psychology*. McGraw -Hill Education

Carron, A.V., Hausenlas, H. A. Mark Eys (2005). *Group Dynamics in Sports*. Organtown, WV: Fitness information Technology, INC, US.

Mohan, J. (2010). *Sports Psychology*: *Emerging Horizons*. New Delhi: Friends Publishers

Weinberg, R. S., & Gould, D. (1995). *Foundation of sports & Exercise psychology*. Champaign, I, Human Kinetics.

Suggestive Readings:

Kamlesh, M. L., Mohan J. (1987) The development of sport psychological research in India . *The Sports Psychologist*, 1, 257-261.

Perry, J. (2016). *Sports Psychology: A complete Introduction*. Hachette UK.

Jarvis, M. (2006). *Sports Psychology: A Students handbook*. Routledge.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVE COURSE 5 – Understanding Self and Others

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE – REQUISITES OF THE COURSE

Course title & Code	Credits	Credit Distribution of the Course			Eligibility Criteria	Pre – requisite of the Course (if Any)
		Lecture	Tutorial	Practical/Practice		
DSE 5: Understanding Self and Others	**4**	**0**	**0**	**4**	**Class 12th pass**	**Basic knowledge of Introductory Psychology**

Learning Objectives

- To be able to understand self and other
- To be able to understand the self; reflecting throughout the journey from childhood; be accountable for one's actions and be in touch with one's own emotions.
- To be able to understand issues related to that of gender and sexuality, group dynamics, diversity and stereotypes
- To demonstrate an understanding of the issues in communication, practice mindfulness, experience creativity and flow and be able to develop coping abilities to deal with stress
- To understand consumer culture and its impact, connect with nature, enjoy music as a way of self-knowledge and develop empathy

Learning Outcomes:

- Developing insights about how to build authentic relationship with self and others and embark on a journey of personal growth.
- Developing the skills of reflexivity and self-reflection.
- Acquiring skills to practice mindfulness, meditation and contemplation to live a deeper and more engaged life.
- Experiencing responsibility for self and others.

Syllabus of DSE-

This is an entirely practicum/experiential based paper. Format of the Practicum (experiential exercises):

- The aim of the practicum is to facilitate an experiential journey towards a deeper insight into self and social world and lead to self-development.
- A series of long workshops spread over the semester can be conducted. Other formats like short retreats followed by workshops may also be explored wherever possible.
- The themes suggested in the next section in varied combinations may be used to structure workshops according to group needs.

The following are only suggestive practicals (experiential exercises) and similar practicals (experiential exercises) can be explored by the teacher. A total of four practicums -one from each unit can be conducted:

Unit 1 **(18 hours)**

1. Exploring the Self: The students undertake an experiential journey that leads to an initial answer to the question 'Who am I?
2. A Journey through Childhood: The students engage with their own childhood experiences and relive its joys, hurts, longings and aspirations. They learn to listen to each other's childhood experiences and empathize with them.
3. Taking Responsibility for One's Decisions: The students engage with situations where a critical decisions needed to be taken and their own response pattern in such situations. The students engage experientially with ways in which they can take much more conscious decisions and not hold others responsible for the default decisions that they allow them to make.
4. Engaging with the Emotional Self: The students explore their emotional selves through different experiential exercises.

Unit 2 **(18 hours)**

1. Gender and Sexuality: The students explore the issues related with gender and sexuality in an environment of openness and trust. Students also dialogue on issues like menstruation, child abuse, marital rape etc. and find ways to protect, care and nourish their own and others' physical and emotional selves.
2. Understanding Group Dynamics: The group dynamics are explored from the perspective of finding creative ways of understanding and resolving conflict. A nuanced understanding of leadership is explored which moves away from domination of 'others' towards listening and empathy as a way creating avenues for leading one's own self.
3. Challenging Stereotypes and Prejudice: The students undertake an experiential journey to confront conditioned habits, negativity, stereotypes and prejudice in one's outlook.
4. Engaging with Diversity: The students can engage with the concept of diversity and its varied dimensions.

Unit 3 **(18 hours)**

1. Communication: Observing the role of active listening, attention and empathy in communication; analyzing verbal and non-verbal communication patterns.

2. Practicing Mindfulness: The students learn to practice mindful ways of 'being' and action.
3. Creativity and Flow: The aim of the workshop is to encourage student-teachers to think originally and find ways of solving problems with open-mindedness, fluency and flexibility. The students learn to experience a state of 'flow' which evokes curiosity, deepens insight, can engage with complexity and sustains intrinsic interests.
4. Dealing with Stress: In this workshop the students examine the concept of the 'hurried psyche' and ways of slowing down that can help release stress and relax.

Unit 4 **(18 hours)**

1. Artificial Desires - The Psychology of Consumer Culture: This workshop helps the students to examine the way in which the 'market' has entered our personal domains. It examines the way in which artificial desires are created and we are held hostage to a market that is geared towards fulfilling these false desires.
2. Connecting with Nature: To understand the value of 'slowing down' and being living in the 'present' through connection with nature. Learning to trust one's own senses and appreciating the beauty, rhythms and simplicity of nature.
3. Music and the Self: The students explore music as a way of self-knowledge.
4. Empathy, Wisdom and Compassion: The students learn to listen to each other with greater compassion and empathy. They collaboratively find way of extending compassion to oneself and others.

B. A. (Hons.) APPLIED PSYCHOLOGY COURSE

SEMESTER - V

DISCIPLINE SPECIFIC CORE COURSE 13: Essentials of Organizational Psychology

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE – REQUISITES OF THE COURSE

Course title & Code	Credits	Credit Distribution of the Course			Eligibility Criteria	Pre – requisite of the Course (if Any)
		Lecture	Tutorial	Practical /Practice		
DSC- 13: Essentials of Organizational Psychology	4	3	0	1	Class 12th Pass	Basic knowledge of Introductory Psychology

Learning Objectives

The learning objectives of this course are as follows:

- To develop an awareness among students regarding the concepts and theories related to Industrial and Organizational psychology (I/0 Psychology) and its historical development especially with reference to contemporary Indian research.
- Help students develop a connection between the determinants of individual, group and organizational processes and apply this understanding to the solution of problems at work.
- Understanding the evolution of the field of organizational psychology and the challenges faced by the field today.

Learning Outcomes

The learning outcomes of this course are as follows:

- Developing knowledge of I/O Psychology, and its historical development (especially w.r.t India).
- Understanding ideas and issues related to organizational behavior, OB model, organizational structure, and organizational designs.
- Displaying knowledge related to employee attitudes such as Job Satisfaction, Work Motivation and Leadership.

UNIT 1 EVOLUTION OF INDUSTRIAL/ORGANIZATIONAL PSYCHOLOGY: (15 Hours)

Historical Background of Industrial and Organizational Psychology with inputs from the Indian context; Historical Antecedents of I/O Psychology OB Models (Robbins and Parikh & Gupta); Challenges faced by the field: Sexual Harassment, Discrimination & Diversity; Elements of Organizational structure; Common Organizational Designs and New Design Options.

UNIT 2 FACTORS EFFECTING PERFORMANCE AT WORKPLACE: (15 Hours)

Nature of Performance at workplace, Performance and productivity, Employee Attitudes: Job Satisfaction and Dissatisfaction, Employee Engagement and Karma Yoga; Workplace Motivation: theories: Herzberg's Two factor theory, Porter and Lawler's Expectancy theory, Edwin Locke's Goal-setting theory, Adam's Equity theory, Deci & Ryan's Self-determination Theory.

UNIT 3. DYNAMICS OF ORGANIZATIONAL PSYCHOLOGY: (15 Hours)

Power and empowerment; Leadership: Nature, Early Approaches (Great Man and Trait Approaches) Fiedler's Contingency theory, Contemporary theories (Burns and Bass Transformational theory, Northouse Authentic leadership theory, Virtual Leadership) Mentorship. Indian perspective on leadership, Issues and challenges to leadership.

PRACTICAL COMPONENT: **(30 Hours PRACTICUM)**

1. One field based practical from the units above
2. One practical to assess any job attitude, leadership, or any other organization-related concept from the units above.

ESSENTIAL/RECOMMENDED READINGS

Greenberg, J. & Baron, R.A. (2010/latest edition). *Behavior in Organizations*. Noida: Dorling Kindersley. (Unit 1: chapter 6; Unit 2: chapter 6, chapter 7, chapter 11; Unit 3: chapter 13)

DISCIPLINE SPECIFIC CORE COURSE DSC-14 UNDERSTANDING MENTAL DISORDERS

DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSC - 14 UNDERSTANDING MENTAL DISORDERS	**4**	**3**	**0**	**1**	**Class 12th Pass**	**Basic knowledge of Introductory Psychology**

Learning Objectives

- To introduce the field of abnormal/clinical psychology.
- To provide an overview of the clinical picture and etiology of the various psychological disorders.
- To orient the learners to the diagnostic criteria and the related vocabulary of major psychological disorders.

Learning Outcomes

- Distinguish between normal and abnormal behavior and learn the criteria of determining abnormality.
- Categorize and diagnose disorders according to the current diagnostic systems (current editions of the Diagnostic and Statistical Manual of Mental Disorders and International Classification of Diseases- Mental Disorders section).
- Discriminate between the various anxiety disorders and different mood disorders.

SYLLABUS-

UNIT – I **(15 Hours)**

Introduction: Criteria of Abnormality, Causal Factors, Classification, Clinical Assessment

UNIT – II **(15 Hours)**

Anxiety Disorders and Obsessive-Compulsive Disorder (Clinical Picture and Dynamics): Generalized Anxiety Disorder, Social anxiety disorder, Specific phobias, Agoraphobia; Obsessive-Compulsive Disorder

UNIT – III **(15 Hours)**

Depressive Disorder & Bipolar Disorders Clinical Picture and Dynamics): Major Depressive disorder, Persistent Depressive disorder, Bipolar I, Bipolar II and Cyclothymia

Practical Component: **(30 Hours)**

Suggestive Practicals:

A total of two practicals from any of the following:

- Mental Status Examination (MSE).
- Assessment of anxiety disorders using any psychometric test.
- Assessment of depression/bipolar disorders using any psychometric test.
- Case study writing to examine/understand clinical picture, dynamics, diagnosis and differential diagnosis.
- Analysis of mental illness related visual media/text to understand mental disorders.

Tutorial component: Nil

DISCIPLINE SPECIFIC CORE COURSE 15: Systems & Theories in Psychology

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSC 15: Systems & Theories in Psychology	**04**	**03**	**01**	**0**	**Class 12th Pass**	**Basic knowledge of Introductory Psychology**

Learning Objectives

The Learning Objectives of this course are as follows:

- To help students understand the evolution of Psychology in Indian and Western thought (including philosophical and general-scientific milestone events that have influenced the development of the discipline.)
- To developing critical thinking skills with increased ability to articulate sound arguments and ask relevant questions regarding theories and principles of psychology

Learning outcomes

The Learning Outcomes of this course are as follows:

- By studying this course the student will be able to view critically different perspectives in Psychology.
- By studying this course the students will appreciate the contribution of Indian thought in Psychology as a discipline in India
- By studying this course the students will become aware of the debates in the discipline and learn to examine issues critically.

SYLLABUS OF DSC-

UNIT – I **(12hours)**

Ontology, epistemology and methodology of Psychology in India and West: Issues in practice of Psychology as a natural and human science, Philosophical questions in Science, Psychology as a science.

Discipline of Psychology in Indian tradition, methodology, applications, and its difference from Western perspectives.

UNIT – II **(12 hours)**

Schools of thoughts in Psychology - I: British empiricism, Structuralism, Functionalism, Classical Behaviourism, Neo-behaviourism (view of human nature, central tenets of the schools)

UNIT – III **(12 hours)**

Schools of thoughts in Psychology - II: Cognitive revolution. Classical Psychoanalysis and neo-Freudians, Humanistic-Existential, Transpersonal-Spiritual perspective (view of human nature and central tenets of the schools)

UNIT – IV **(12 hours)**

Psychology in Indian System of thoughts: Upanishads, Samkhya-Yoga, Advaita Vedanta, Buddhism, Jainism, Sufi tradition, folk traditions with emphasis on Kabir Das (view of human nature, mind and self)

Practical component (if any) - NIL

Suggested Tutorial activities **(30hours)**

Objectivity and subjectivity in Science - a group discussion or science and spirituality - a group discussion (Drawing elements from Fritjof Capra's The Tao of Physics); A class debate on Psychology as a Science; YouTube videos of Shabnam Virmani on Kabir: An experiential journey; Preparing a time line of History of Psychology in India, highlighting important contributions and Psychologists in India; A discussion on the contribution of women Psychologists to the discipline of psychology; A critical evaluation of all the major schools of Psychology and creating a framework for a holistic model

DISCIPLINE SPECIFIC ELECTIVE COURSE 6: Disorders of Childhood and Adolescence

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSE 6: Disorders of Childhood and Adolescence	**04**	**03**	**0**	**01**	**Class 12th Pass**	**Understanding of Mental Disorders**

Learning Objectives

This course has the following objectives:

- Develop an understanding of how maladaptive behaviour appears in different life periods.
- Knowing the common disorders of childhood and adolescence.
- Understanding the clinical picture and etiology of the common disorders of childhood and adolescence.

Learning Outcomes

- To demonstrate a critical understanding of some of the neurodevelopmental disorders as well as Disruptive, Impulse-control, and Conduct Disorders in Clinical Psychology.
- To develop a foundation for a career in Clinical Psychology

Syllabus of DSE-

Unit-1 **(15 hours)**

Introduction to Neurodevelopmental Disorders; ADHD, Autism Spectrum Disorder (Clinical Picture and Etiology)

Unit 2 **(15 hours)**

Intellectual Disabilities, Specific Learning Disorders (Clinical Picture and Etiology)

Unit-3 **(15 hours)**

Introduction to Disruptive, Impulse-control, and Conduct Disorders; Conduct Disorder, Oppositional Defiant Disorder; Introduction to Eating disorders; Anorexia Nervosa, Bulimia Nervosa, Binge-eating disorder (Clinical Picture and Etiology)

PRACTICALS **(30 hours)**

Two practicums to be done, one each from the following two areas:

1. Case-history of at least two cases from the list of disorders mentioned above
2. Screening children for above disorders in schools/communities
3. Assessing stress of caregivers of children with above disorders

Essential/Recommended Readings:

DISCIPLINE SPECIFIC ELECTIVE COURSE 7: Learning and Innovation in Organization

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE – REQUISITES OF THE COURSE

Course title & Code	Credits	Credit Distribution of the Course			Eligibility Criteria	Pre – requisite of the Course (if Any)
		Lecture	Tutorial	Practical/Practice		
DSE 7: Learning and Innovation in Organization	**4**	**3**	**0**	**1**	**Class 12th Pass**	**Essentials of Organizational Psychology**

Learning Objectives

The learning objectives of this course are as follows:

- To understand the advances and innovations in organizations in the context of information technology and globalization
- To develop a conceptual understanding of organizational culture and values with a focus on the Indian context.
- To help students learn about various facets of positive work environment and behavior in organizations.

Learning Outcomes

The learning outcomes of this course are as follows:

- Learners will be able to understand the advances and innovations taking place in organizations.
- Learners will be able to understand the role and impact of technology and globalization at organizational level.
- Leaners will understand the different work cultures, work values, notion of psychological safety and positive work environment in Indian context.

Syllabus of DSE-

UNIT 1- INFORMATION TECHNOLOGY, INNOVATION & GLOBALIZATION **(15 hours)**

OB and advances in technology (Virtual organizations, telecommuting), OB and globalization, Innovations in Organizations: Startups, entrepreneurship.

UNIT 2- ORGANIZATIONAL CULTURE & VALUES **(15 hours)**

Organizational Climate & Culture, Theories of Organizational culture, Organizational Values and Work Values.

UNIT 3- POSITIVE WORK ENVIRONMENT **(15 hours)**

Psychological Safety, PsyCap, Knowledge management, Positive Approach and Positive Thinking, Organizational Performance.

PRACTICAL COMPONENT: **(30 hours)**

Two practicums to be done, one each from the following two areas:

1. Case study on Technology/Innovation/Startups in Organizational settings from Unit 1.
2. Field based practical on Organizational Climate/Organizational Culture/Work Values from Unit 2.

DISCIPLINE SPECIFIC ELECTIVE COURSE 8: Psychology of Sports

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE – REQUISITES OF THE COURSE

Course title & Code	Credits	Credit Distribution of the Course			Eligibility Criteria	Pre – requisite of the Course (if Any)
		Lecture	Tutorial	Practical/Practice		
DSE 8: Psychology of Sports	**4**	**3**	**0**	**1**	**Class 12th Pass**	**Foundations of Sports Psychology**

Learning Objectives

- Understanding the major issues related to psychophysiological aspects of sports performance
- Demonstrating an ability to identify and evaluate psychological problems of sportspersons
- Developing an understanding of the career transitions, exercise and competitions for seniors

Learning Outcomes

- To develop a strong base of knowledge in the ever-expanding field of mental training in sports
- To gain insight into the psychological problems of athletes pertaining to various sports & ways of dealing with those
- Understand potential issues with measurement and interventions in sports
- Hands-on training to students with the help of practical are listed in the course.

Syllabus of DSE-

UNIT-1: Psychopysiological aspects in relation to sports performance (15 hours)

Personality: sports-specific personality traits, personality & performance in sports (POMS by Morgan); Aggression in sports, relationship b/w aggression & sports performance; Motivation, Goal orientation (moral functioning -sportsperson ship) & Goal setting (motivation & sports performance); Activation Techniques: Imagery, VMBR, Psych up technique (pep talk, music & mindfulness training, Self-confidence, self-efficacy in sports)

UNIT – 2: Psychological problems of athletes (15 Hours)

Injury in sports (Understanding the Psychological Factors of Injury and Rehabilitation) , Path to Rehabilitation Failure and to Rehabilitation Success; Eating Disorders (Defining, Causes, Prevention & Treatment of Eating Disorders); Substance Abuse: (Commonly Used Substances: Recognition, Prevention, and Treatment for Substance Abuse); Burnout & overtraining (Prevention & Treatment)

UNIT – 3: Career transitions, exercise & competition for seniors **(15 Hours)**

Career Transitions: Definitions and Causes of Career Transitions; Psychological Reactions to Career Transition, Coping Factors Related to Quality of Career Transition, Career Transition Interventions; Fitness issues for seniors; Competitive Sports in the Elderly

Practicals:

A total of two practicals (from different units) of the following: **(30 Hours)**

- Any psychological test from the above units: measuring Aggression (Aggression Questionnaire Buss & Perry), POMS, Participation Motivation Questionnaire, Willi's sports motivation scale, Vealey's (TSCI) ,SSCI , COI etc.
- Hands-on training on any of the above-listed interventions through simulated Exercise / Workshop.
- Any one field-based practical from the units above.

Essential/Recommended Readings:

DISCIPLINE SPECIFIC ELECTIVE COURSE 9: Psychology of Relationships

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical /Practice		
DSE 9: Psychology of relationships	4	3	0	1	Class 12th Pass	Basic knowledge of Introductory Psychology

Learning Objectives

- To provide an insight into basic facts and key concepts of the relationship science.
- To understand the dynamics of establishing and maintaining close relationships.
- To explore the nature of close relationships in contemporary time.

Learning Outcomes

- Establish effective relationships with family, friends and significant others.
- Learn strategies to effectively deal with distress in relationships and establish positive relationships.
- Appreciate the complex nature of relationships in modern time.

Syllabus of DSE-

UNIT -1 Understanding relationships: **(15 Hours)**

Relationship science: Concepts, development, and types (an overview); *Relationship process*: cognitive and affective; Significance of relationships.

UNIT -II Psychological insights into Close relationships: **(15 Hours)**

Family, Friendship and Romantic relationships: Concepts, nature and challenges. Creating harmony in relationships.

UNIT -III Relationships in contemporary time: **(15 Hours)**

Virtual relationships in social media: Nature, risks and benefits; Parasocial relationships: Main features, levels and effect; Live -in relationships; Queer relationships; Human -pet relationships.

PRACTICALS: **(30 Hours)**

Two practicums to be done, one each from the following two areas:

1. Participatory exercises/activities for relationship building.
2. Focus group discussion or any other qualitative technique to explore the relationship issues and their management or using scale on relationships mentioned in above units.

Essential/Recommended readings

DISCIPLINE SPECIFIC CORE COURSE DSC – 16 PERSPECTIVES IN MENTAL AND BEHAVIORAL DISORDERS

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSC - 16 PERSPECTIVES IN MENTAL AND BEHAVIORAL DISORDERS	4	3	0	1	Class 12th Pass	Basic understanding of mental disorders

Learning Objectives

- To introduce the clinical picture and etiological understanding of Schizophrenia spectrum disorders, with focus on Schizophrenia.
- To provide an understanding about personality disorders and substance related disorders.
- To orient the learner to neurodevelopmental disorders.

Learning outcomes

- Understand the symptoms and causal factors of schizophrenia
- Recognize the clinical picture of substance related disorders
- Discriminate between different personality disorders
- Identify children with neurodevelopmental disorders

SYLLABUS-

UNIT – I **(15 Hours)**

Schizophrenia Spectrum Disorder (Clinical Picture and Dynamics) and Personality Disorders (Clinical Picture only): Schizophrenia; Antisocial Personality Disorder, Borderline Personality Disorder

UNIT – II **(18 Hours)**

Somatic Symptom & Related Disorders, Substance Related Disorders and Gender dysphoria (Clinical Picture Only): Functional Neurological Symptom Disorder (Conversion Disorder); Alcohol Use Disorder; Drug Abuse and Dependance (Opioids, Stimulants, Sedatives, Hallucinogens); Gender Dysphoria

UNIT – III **(12 Hours)**

Neurodevelopmental Disorders (Clinical Picture Only) – Intellectual Developmental Disorder (Intellectual Disability)/ Specific Learning Disorder (Specific Learning Disabilities), Autism Spectrum Disorder, Attention Deficit Hyperactivity Disorder

Practical Component: **(30 Hours)**

Suggestive Practicals

A total of two practicals from any of the following:

- Mental Status Examination (MSE).
- Assessment of mental disorders using a psychometric test.
- Assessment of IQ/ADHD using a psychometric test.
- Case study writing to examine/understand clinical picture, dynamics, diagnosis and differential diagnosis.
- Correlational study of demographic variables and a mental disorder.
- Analysis of mental illness related visual media/text to understand mental disorders.

Tutorial Component : Nil

DISCIPLINE SPECIFIC CORE COURSE 17: MANAGING HUMAN CAPITAL AT WORKPLACE

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE – REQUISITES OF THE COURSE

Course title & Code	Credits	Credit Distribution of the Course			Eligibility Criteria	Pre – requisite of the Course (if Any)
		Lecture	Tutorial	Practical /Practice		
DSC 17: Managing Human Capital at Workplace	**4**	**3**	**0**	**1**	**Class 12th pass**	**Basic knowledge of Introductory Psychology**

Learning Objectives

The learning objectives of this course are as follows:

- To help students understand the various processes and practices related to Human Capital.
- Enable students to develop a connection between concepts, process and practices in organizations.
- Understanding counterproductive behavior in organization.
- To develop the understanding of the importance of employee talent and job analysis at workplace.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Learners will be able to understand the different processes and practices related to human capital.
- Learners will be able to understand issues, functioning and challenges of managing human capital at workplace.
- Learners will be able to develop knowledge and skills related to employee recruitment, Job Analysis and talent management.

UNIT 1 Job Analysis and Talent Management (15 Hours)

Basics of job Analysis, Methods for Collecting job Analysis Information, Writing Job Description, Talent Management Process, Profiles in Talent Management: Competencies and Competency-Based Job Analysis.

UNIT 2 Attraction and Socialization: An Organizational Perspective (15 Hours)

Recruitment Process: Applicant's Perspective, Organizational Socialization: Diversity in Organization.

Unit 3 Counterproductive Behavior at workplace (15 Hours)

Nature of Counterproductive Behavior, Ineffective Job Performance, Employee Absenteeism, Employee Turnover, Odd Forms of Counterproductive Behavior .

PRACTICAL COMPONENT: (30 Hours PRACTICUM)

1. Understanding any one tool for human behavior (FIRO-B, 16PF, MBTI, CWB-C by Spector et al. (2006).
2. Case study on an Indian Organization based on primary data, on Job Analysis, Talent management, Organizational socialization, diversity in organizations, Counterproductive Work Behavior.

DISCIPLINE SPECIFIC CORE COURSE 18: Cultural and Indigenous Perspectives on Psychology

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE – REQUISITES OF THE COURSE

Course Title & Code	Total Credits	Credit distribution of the course			Eligibility Criteria/Pre-requisite	Pre-requisite of the course, if any
		Lecture	Tutorial	Practical		
DSC 18: Cultural and Indigenous Perspectives on Psychology	4	3	0	1	Class 12th pass	Basic knowledge of Introductory Psychology

Learning Objectives

- Understanding the concept of Culture
- Understanding the role of culture in understanding social behavior.
- Exploring psychological insights in the Indian thought traditions.

Learning outcomes

The Learning Outcomes of this course are as follows:

- By studying this course, the student will be exposed to the area of Culture
- By studying this course, the students will understand the cultural influence on social behaviour
- By studying this course, the students will become aware of the emerging issues and challenges of indigenization and psychological perspective Indian traditions.

Syllabus of DSC-

Unit1: **(16 hrs.)**

An introduction to Cultural psychology: What is Cultural Psychology? Relationship between Culture and Psychology: A historical perspective; Dynamics of interdependence (self system and social system); Theoretical issues in cultural Psychology .

Unit2: **(15 hrs.)**

Culture, Self and Social Behavior: Culture and Social structure; Culture, self and identity; Multicultural identities, Culture and social behaviour

Unit: 3 **(14 hrs.)**

Indigenous Psychology: Indian Psychology – Implications and applications; Indian perspective on emotions, self and identity; Indigenization of psychology in India.

Practicum: **(30 hours)**

A total of two practicals (from different units) of the following:

1. Studying culture as a variable
2. Cultural implication on self and identity
3. Exploring role of culture in social behaviour
4. Understanding Indian perspective on emotions, self and identity

DISCIPLINE SPECIFIC ELECTIVE COURSE 10: Organizational Change and Development

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE – REQUISITES OF THE COURSE

Course title & Code	Credits	Credit Distribution of the Course			Eligibility Criteria	Pre – requisite of the Course (if Any)
		Lecture	Tutorial	Practical /Practice		
DSE 10: Organizational Change and Development	**4**	**3**	**0**	**1**	**Class 12th pass**	Essentials of Organizational Psychology

Learning Objectives

The learning objectives of this course are as follows:

- To develop a conceptual and practical understanding of models for planning change and development in organizations with a focus on the Indian context.
- To equip the students in designing different types of intervention strategies for organizational development.
- To acquaint students with the various techniques used in the process of Organizational Development.

Learning Outcomes

The learning outcomes of this course are as follows:

- Learners will be able to develop conceptual understanding of change in organizations.
- Learners will be able to understand action research and its role in organizational development.
- Learners will be able to understand the skills of interventions for organization development through various methods.

Syllabus of DSC-

UNIT 1 ORGANIZATIONAL CHANGE **(15 HOURS)**

Concepts, types of change, Change Models, Resistance to Change, Case studies in the Indian context, Models of Planned Change - Systems Model of Change, Lewin's Force Field Analysis Model, Kotter's Eight-step Change Management Model. Appreciative Inquiry

UNIT 2 ORGANIZATIONAL DEVELOPMENT **(15 HOURS)**

Nature, History and Process of OD, Action Research, Seven Steps in the Cyclical Phase of Planned Change.

UNIT 3 METHODS OF ORGANIZATIONAL DEVELOPMENT (15 HOURS)

Three levels of intervention (Individual, group and organization level). Survey Feedback, Grid Organizational Development, Process Consultation, Gestalt, and Comprehensive Interventions.

PRACTICAL COMPONENT: (30 HOURS)

Two practicums to be done, one each from the following two areas:

1. One practicum based on techniques of appreciative inquiry (eg. Strengths, Opportunities, Aspirations, and Results (SOAR) analysis) Unit 1 or 2.
2. Understanding of Organizational Change/Development based on Case study method for Unit 1 or 3.

DISCIPLINE SPECIFIC ELECTIVE COURSE III
Neurocognitive Disorders

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE – REQUISITES OF THE COURSE

Course title & Code	Credits	Credit Distribution of the Course			Eligibility Criteria	Pre – requisite of the Course (if Any)
		Lecture	Tutorial	Practical /Practice		
DSE 11: **Neurocognitive Disorders**	4	3	0	1	Class 12th pass	Understanding of Mental Disorders

Learning Objectives

- Developing knowledge of the neurocognitive disorders recognised in the latest classification system.
- Recognizing the clinical features of neurocognitive disorders
- Understanding the presumed causes of these disorders.

Learning Outcomes

- To create a foundation for a career in Clinical Psychology
- To show an understanding of the clinical features of brain impairment in adults
- Understand the various neurocognitive disorders in Clinical Psychology

Syllabus of DSE

THEORY

Unit-1

Introduction: Brain Impairment in Adults (Clinical Signs of Brain Damage, Diffuse Versus Focal Damage, The Neurocognitive/Psychopathology Interaction); Delirium (Clinical Picture, and Etiology) **(15 hours)**

Unit-2

Neurocognitive Disorders due to Traumatic Brain Injury, Parkinson's Disease, Huntington's Disease (Clinical Picture, and Etiology) **(15 hours)**

Unit-3

(15 hours)

Neurocognitive Disorder due to Alzheimer's Disease (Clinical Picture, and Etiology)

(30 hours)

PRACTICALS

Two practicums to be done, one each from the following two areas:

1. Clinical case analysis with the use of secondary data obtained from movies.
2. Neuropsychological testing (any one test) which is clinically appropriate.

Essential/Recommended Readings:

Hooley, J.M., Butcher, J.N., Nock, M.K., & Mineka, S. (2017). *Abnormal psychology* (17th ed., global edition). Boston: Pearson.

Dailey, S.F., Gill, C.S., Karl, S.L., & Barrio Minton, C.A. (2014). *DSM-5: Learning Companion for Counselors*. Alexandria, VA: American Counseling Association.

Note: **Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.**

DISCIPLINE SPECIFIC ELECTIVE COURSE 12: Research Methods in Applied Psychology

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSE 12: Research Methods in Applied Psychology	**4**	**3**	**0**	**1**	**Class 12th pass**	**Foundational understanding of Applied Psychology**

Learning Objectives

After doing the course, the students would

- Understand the meaning, purpose and process of research
- Develop knowledge of the ethical issues involved in psychological research
- Know the basic paradigms of research
- Develop a basic understanding of the various qualitative and quantitative research methods
- Understand action research as an important method of research.

Learning outcomes

By studying this course, students will be able

- To understand the importance of research
- To understand the basic concepts and issues pertinent in research
- To be able to carry out a research project by using appropriate research methods and tools
- To be able to appreciate the role of action research in applied settings.
- To be able to understand how to conduct action research.

SYLLABUS OF DSE-

UNIT I

(15 Hours)

Introduction: Paradigms of Research (Positivist and Interpretive), Steps and approaches in quantitative and qualitative research; Experimental and Correlational research; Sampling

techniques, Tools and techniques of data collection (observation, interviews, surveys), Ethics in Psychological Research

(15 hours)

Unit 2:

An introduction to Action Research: What is Action Research, Essential features of action research, Conceptual models of action research, methodology in action research, Action research in social Psychology

(15 hours)

Unit 3:

Participatory Action research: Participatory Rural Appraisal, Participatory Learning and Action, Techniques/ methods of participatory research/action research

(30 Hours)

Practicals

Total of two practicums- one each from the following areas:

1. One practical based on qualitative or quantitative research such as experiment, observation, thematic analysis etc.

2 One practical of the following:

a. Case study on action research
b. Designing action research using mixed method paradigm
c. Field study based on Participatory Rural appraisal
d. Inquiry using participatory learning and action

Essential/Recommended Readings:

Chambers, R. (2005). *Participatory Rural Appraisal: Methods and Applications in Rural Planning*. Concept Publishing Company

DISCIPLINE SPECIFIC ELECTIVE COURSE 13 – CONTEMPORARY THERAPEUTIC APPROACHES

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSE 13: Contemporary therapeutic approaches	**04**	**03**	**0**	**01**	**Class 12th pass**	**Basic knowledge of Counselling**

Learning Objectives

The Learning Objectives of this course are as follows:

- To introduce the students to cutting-edge therapeutic approaches that are globally used, but generally not included within traditional counseling theories
- To facilitate development of evidence based counselling skills

Learning outcomes

The Learning Outcomes of this course are as follows:

- By studying this course the student will be able to broaden their understanding of the scope of counseling psychology
- By studying this course the students will understand newer approaches that are informing contemporary counseling practice.

SYLLABUS OF DSE-

Unit 1 **(15 hrs)**

Case conceptualization and intake interview, Diversity and social justice issues in psychotherapy, Somatic therapy (Levine) and EMDR (Eye movement desensitization and reprocessing by Shapiro), Emotion Focused Therapy

Unit 2 **(15 hrs)**

Narrative therapy, Mindfulness based approach, Dialectical Behaviour Therapy, Acceptance-Commitment Therapy

Unit 3 **(15 hrs)**

Creative approaches in counseling and Psychotherapy (arts, music, dance), Integrative modalities/Common factor approach

Practical **(30 hrs)**

A total of two practicals (from different units) of the following:

1. Skill based practicum based on narrative therapy
2. Skill based practicum based on dialectical behaviour therapy
3. Skill based practicum on Acceptance Commitment Therapy
4. Use of creative approaches in counseling
5. Case conceptualization based on secondary data
6. Mindfulness training
7. Counseling case studies and intake interview using role plays

Essential/Recommended Readings:

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

ANNEXURE-22

Sub: Amendment to Ordinance V

[E.C Resolution No. 14-1/-(14-1-1/-) dated 09.06.2023]

Following addition be made to Appendix-II-A to the Ordinance V (2-A) of the Ordinances of the University;

Add the following:

Syllabi of Semester-IV, V and VI of the following departments under Faculty of Arts based on Under Graduate Curriculum Framework -2022 implemented from the Academic Year 2022-23 :

(i) Arabic

(ii) English

(iii) English (Journalism)

(iv) Urdu

(v) Persian

DEPARTMENT OF ARABIC
Semester-IV

DISCIPLINE SPECIFIC CORE COURSE – 10

UPPER INTERMEDIATE ARABIC: MODERN ARABIC PROSE & POETRY

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Upper Intermediate Arabic: Modern Arabic Prose & Poetry	4	3	1	0	Class XII Pass	Intermediate Level Arabic

Learning Objectives

The Learning Objectives of this course are as follows:

1. To make students learn Modern Arabic Prose & Poetry.
2. To let them know briefly about prominent & distinguished Poets and Prose Writers of Arabic.

Learning outcomes

The Learning Outcomes of this course are as follows:

After completing this course the learner will be able to:

1. Read and comprehend modern Arabic language.
2. Write and comprehend simple Arabic poetry.
3. Learn a few couplets in order to begin comprehending Arabic Poetry.

SYLLABUS OF DSC-10

Unit 1 (15 Hours)

The following lessons from the prescribed book "Al-Qira'at Al-Arabiyya", Volume: 3, Co-Authored by Al-Qasmi, Abdul Quddus & Sajid, Muhammad:

• Al Shabakah Al Dualiyyah (9) • Al Munaafasah ((11) • Al Taaqah Al Shamsiyyah (13) • Min Yaumiyyat Tilmiz Fi Al Madrasah (17) • Al Qiraa'ah (18) • Al Tadkheen (35)	• الشبكة الدولية (9) • المنافسة (11) • الطاقة الشمسية (13) • من يوميات تلميذ في المدرسة (17) • القراءة (18) • التدخين (35)

Unit 2 (15 Hours)

Brief biography of the following poets:

- Hafiz Ibrahim
- Mahmood Sami al-Barudi
- Ahmed Shouqi
- Abdullah Basha Fikri
- Al Shaikh Hasan Al Attar

Unit 3 (15 Hours)

The following poems from their respective Diwans:

• Al-Umm Madrasah Idha A'dadtaha - Hafiz Ibrahim (1-6 Verses) • Siwaaya Bitahnaan Al Aghaareed Yatrub - Mahmood Sami Al Baroodi (1-7 Verses) • Tafdeeka Nafs Shaj - Abdullah Basha Fikri (1-7 Verses) • Ya Ukht Andalus - Ahmad Shauqi (1-9 Verses) • A 'anil Muhibb - Al Shaikh Hasan Al Attar (1-9 Verses)	• الأم مدرسة اذا أعددتها - حافظ إبراهيم (1 to 6 Verses) • سواي بتحنان الأغاريد يطرب- محمود سامي البارودي (1 to 7 Verses) • تفديك نفس شج - عبد الله باشا فكري (1 to 7 Verses) • يا أخت أندلس – أحمد شوقي (1 to 9 Verses) • أعن المحب – الشيخ حسن العطار (1 to 9 Verses)

Practical component (if any) - NIL

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE – 11
UPPER INTERMEDIATE ARABIC GRAMMAR

SEMESTER-4

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Upper Intermediate Arabic Grammar	4	3	1	0	Class XII Pass	Intermediate Level Arabic

Learning Objectives

The Learning Objectives of this course are as follows:

1. To make learners well versed in Syntax and Morphology.
2. To enable them to translate the text of Intermediate level.
3. To develop speaking, reading and writing skills.

Learning outcomes

The Learning Outcomes of this course are as follows:

After completing this course the learner will be able to:

1. Easily derive perfect, imperfect, imperative, prohibitive verbs and active/passive participles from any infinitive of the following irregular patterns.
2. Conjugate 14 or 6 moods of the following verbs and adverbs and use them as per their requirement.
3. Use them in their writings and speaking as per the need.
4. Learn advanced grammar of the Arabic syntax.

SYLLABUS OF DSC-11

Unit 1 (15 Hours)

Morphology

Conjugation of the following irregular verb patterns of (الفعل الثلاثي المزيد فيه) in Perfect, Imperfect (14-mood active & passive), 6-mood conjugation of Imperative, 6-Mood Prohibitive, Active Participle and Passive Participle:

تربّى يتربّى	ألقى يلقي	أراد يريد	أحبّ يحبّ	نادى ينادي	سمّى يسمي
اختار يختار	اهتزّ يهتزّ	انقضى ينقضي	انحاز ينحاز	انشقّ ينشقّ	تلاقى يتلاقى

Unit 2 (15 Hours)

Syntax

▪ المنادى بلام التعريف، منادى المضاف والمضاف إليه، منادى النكرة المعينة	• Al Munada Bi Laam Al Ta'rif, Munada Al Mudaf Wa Al Mudaf Ilaih, Munada Al Nakira Al Mu'ayyana.
▪ الحال وصاحب الحال	• Al Haal Wa Saahibul Haal
▪ تمييز الجملة	• Tamyeezul Jumla
▪ الاستثناء بـــ إلا	• Al Istithnaa Bi Illa
▪ العدد والمعدود	• Al Adad Wal Ma'dood
▪ الجار والمجرور (مفصلا)	• Al Jaar Wal Majroor (In Detail)

Unit 3 (15 Hours)

Morphology

Conjugation of the following irregular verb patterns in detail i.e. 14-mood conjugations of Perfect, Imperfect (active & passive), 6-mood conjugation of Imperative, Prohibitive, Active Participle and Passive Participle each:

استرضى - يسترضي	استراح - يستريح	استقرّ – يستقرّ	اكترى - يكتري

Syntax

▪ كان وأخواتها (مفصلا)	• Kaana Wa Akhawaatuha (In Detail)
▪ اسم ا لتفضيل	• Ism Al Tafzeel
▪ أدوات الشرط	• Adawaat Al Shart
▪ غير المنصرف	• Ghair Al Munsarif

Practical component (if any) - NIL

Essential/recommended readings

1. Dr. W. A. Nadwi: A Practical Approach to the Arabic Language Vol.1 & 2, New Delhi.
2. J. A. Haywood & H. M. : A New Arabic Grammar, New Delhi.
3. Porf. S.A. Rahman: Teach Yourself Arabic, New Delhi.
4. Maulana Abdur rahman Amritsari, Kitab Al Sarf, Panipat.
5. Maulana Abdur rahman Amritsari, Kitab Al Nahw, Panipat.
6. Abdus Sattar Khan: Arabi Ka Muallim, Delhi
7. Ali Jarim Wa Mustafa Amin, Al Nahw Al Wazih Fi Qawaid Al Lugha Al Arabiyya, Delhi.
8. Antuwan Dahdah, Mu'jam Tasrif Al Af'aal Al Arabiyya, Delhi.

Suggestive readings

1. J. A. Haywood & H. M. : A New Arabic Grammar,New Delhi.
2. Maulana Sajid: Tayseer Al-Insha, Delhi
3. Muhammad Rabi Al Hasani Al Nadwi, Muallim Al Insha, Lucknow.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE – 12
UPPER INTERMEDIATE ARABIC TRANSLATION & COMPOSITION

SEMESTER-4

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Upper Intermediate Arabic Translation & Composition	4	3	1	0	Class XII Pass	Intermediate Level Arabic

Learning Objectives

The Learning Objectives of this course are as follows:

1. To enable students to translate simple sentences from English-Arabic & vice versa.
2. To develop writing abilities among students.

Learning Outcomes

The Learning Outcomes of this course are as follows:

After completing this course the learner will be able to:

COMMON POOL OF DISCIPLINE SPECIFIC ELECTIVE (DSE) COURSES FOR SEMESTER V

DISCIPLINE SPECIFIC ELECTIVE COURSE–7 (DSE-7): Children's Literature

No. of hours- 60(Theory- 45 hrs.+Tutorials-15 hrs.)

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
DSE-7 Children's Literature	4	3	1	0	Passed Class XII	NIL

Learning Objectives

The Learning Objectives of this course are as follows:

- To familiarize students with the field of children's writing.
- To convey a sense of diversity within children's literature.

Learning outcomes

The Learning Outcomes of this course are as follows:

- By studying this course, students will be able to appreciate the literary and theoretical complexity of children's writing.
- This course will enable a comprehension of children's literature across time and cultural spaces.

SYLLABUS OF DSE-7:

UNIT – I (15 hours)

1. Roald Dahl: *Fantastic Mr Fox*

2. Antoine de Saint-Exupéry: *The Little Prince*

UNIT – II (15 hours)

3. Roychowdhury, Upendra Kishore. *Goopy Gyne Bagha Byne*. New Delhi: Puffin Books, 2004. pp 3-27

4. Ray, Satyajit. *The Golden Fortress (Sonar Kella)*. trans. Gopa Majumdar, Penguin/Puffin, 2015.

UNIT – III (15 hours)

5. Anderson, M.T. *Feed*, Somerville: Candlewick Press, 2002.

Practical component (if any) - NIL

Essential/recommended readings- as listed in the units

Suggestive readings:

1. Carpenter, Humphrey and Mari Prichard (Eds.). *The Oxford Companion to Children's Literature*. Oxford: Oxford University Press, 1984.

2. Egoff, Sheila, et al. (Eds.) *Only Connect: Readings on Children's Literature*, 3rd Edition. New York: Oxford University Press, 1996.

3. Hunt, Peter. *Criticism, Theory and Children's Literature*. Cambridge, Ma: Basil Blackwell, 1999.

4. Lehr, Susan. *The Child's Developing Sense of Theme: Responses to Literature*. New York: Teachers College Press, 1991.

5. Lukens, Rebecca J. *A Critical Handbook of Children's Literature*, 6th Edition. New York: Longman, 1999.

6. Lurie, Alison. *Don't Tell the Grown-Ups: Subversive Children's Literature*. Boston: Little, Brown, 1990.

7. Townsend, John Rowe. *Written for Children: An Outline of English Children's Literature*. 4th Edition. New York: Harper Collins, 1990.

7. Griffin, James. *On Human Rights*. United Kingdom: OUP, 2009.

COMMON POOL OF GENERIC ELECTIVES (GE) COURSES

NOTE: The Generic Electives for the ODD SEMESTERS will also run for Semester V students.

SEMESTER -VI

BA (Hons.) English

DISCIPLINE SPECIFIC CORE COURSE 16- (DSC-16) : Modern European Drama

No. of hours- 60(Theory- 45 hrs.+Tutorials -15 hrs.)

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSC 16: Modern European Drama	4	3	1	0	Passed Class XII with English from List A in CUET	NIL

Learning Objectives

The Learning Objectives of this course are as follows:

- To analyse the way in which nineteenth and twentieth-century theatre in Europe thinks through political and cultural hierarchies of power, enslavement and liberation.
- To open up a sense of the way in which European drama articulates questions of continuing relevance in the contemporary world such as the individual and the state, the position of women, and issues of dominance.

Learning outcomes

The Learning Outcomes of this course are as follows:

- By studying this course, students will be able to inculcate a basic sense of the way theatre serves as a means of social and cultural investigation and change.

- Students will learn how drama as a genre alters our sense of both the individual and society.

SYLLABUS OF DSC-16:

UNIT – I (15 hours)

1. Henrik Ibsen: *Ghosts* (1881)

UNIT – II (15 hours)

2. Bertolt Brecht: *Mother Courage and Her Children* (1939)

UNIT – III (15 hours)

3. Eugene Ionesco: *Rhinoceros* (1959)

Practical component (if any) - NIL

Essential/recommended readings- as listed in the units

Suggestive readings:

1. Camus, Albert. (i) 'Absurdity and Suicide' (ii) 'The Myth of Sisyphus', *The Myth of Sisyphus*. trans. Justin O'Brien, London: Vintage, 1991. pp 13-17; 79-82

2. Stanislavsky, Constantin. 'Faith and the Sense of Truth', *An Actor Prepares*. United Kingdom: Bloomsbury Academic, 2013. pp 111-139

3. Brecht, Bertolt. 'The Street Scene', 'Theatre for Pleasure or Theatre for Instruction', and 'Dramatic Theatre vs Epic Theatre', *Brecht on Theatre: The Development of an Aesthetic*. ed. and tr. John Willet, London: Methuen, 1992. pp 68–76, 121–128

4. Steiner, George. 'On Modern Tragedy', *The Death of Tragedy*. London: Faber, 1995. pp 303–24

DISCIPLINE SPECIFIC CORE COURSE 17- (DSC-17): Literature and Disability

No. of hours- 60(Theory- 45 hrs.+Tutorials-15 hrs.)

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSC 17: Literature and Disability	4	3	1	0	Passed Class XII with English from List A in CUET	NIL

Learning Objectives

The Learning Objectives of this course are as follows:

- To challenge and reconstitute our sense of what constitutes 'the normal' as a category of thought and action.
- To build a critically compassionate consciousness on the subjects of individual and social identity-construction under conditions of disability.

Learning outcomes

The Learning Outcomes of this course are as follows:

- By studying this course, students will be able to inculcate a basic sense of the theory and field of Disability Studies with specific reference to its articulation through literature.

- This course will encourage students to think of a revolutionised debate on the subject of self/ social-alienation and self/social-restoration under the challenge of disability.

SYLLABUS OF DSC-17:

UNIT – I (15 hours)

1. Firdaus Kanga: *Trying to Grow* (1991)

Learning Objectives

The Learning Objectives of this course are as follows:

- To introduce students to types of detective and speculative fiction.
- To look at generic characteristics of the literature.

Learning outcomes

The Learning Outcomes of this course are as follows:

- By studying this course, students will be able to analyse world writings as reflections on contemporary realities.
- Students will be able to appreciate the vitality and diversity of detective and speculative fictions.

SYLLABUS OF DSE-11:

UNIT – I (15 hours)

1. Doyle, Arthur Conan. *The Hound of the Baskervilles: Another Adventure of Sherlock Holmes*. United States: Grosset & Dunlap, 1902.

UNIT – II (15 hours)

2. Atwood, Margaret Eleanor. *The Handmaid's Tale*. Demco Media, 1985.

UNIT – III (15 hours)

3. Crichton, Michael and Kidd, Chip. *Jurassic Park*. New York: Knopf, 1990.

Practical component (if any) - NIL

Essential/recommended readings- as listed in the units

Suggestive readings:

1. Heinlein, Robert A. 'On the Writing of Speculative Fiction'

https://staging.paulrosejr.com/wp-content/uploads/2016/12/on_the_writing_of_speculative_ficiton.pdf

2. Hayles, Katherine N. 'Towards Embodied Virtuality', *How We Became Posthuman: Virtual Bodies in Cybernetics Literature and Informatics*. Chicago: University of Chicago Press, 1999. pp 1-24

3. Haraway, Donna. 'A Cyborg Manifesto: Science Technology and Socialist-Feminism in the Late Twentieth Century', *Simians Cyborgs and Women: The Reinvention of Nature*. New York: Routledge, 1991. pp 149-181.

4. Rzepka, Charles J. 'Introduction: What is Crime Fiction?', *Companion to Crime Fiction, Blackwell Companions to Literature and Culture*. eds Charles J. Rzepka and Lee Horsley, Oxford: Wiley and Blackwell, 2010. pp 1-9

5. Palmer, Joy. 'Tracing Bodies: Gender Genre and Forensic Detective Fiction', *South Central Review* Vol. 18 No. 3/4, Whose Body: Recognizing Feminist Mystery and Detective Fiction, Autumn-Winter 2001. pp 54-71

DISCIPLINE SPECIFIC ELECTIVE COURSE 12–(DSE-12): British Literature Post World War II

No. of hours- 60(Theory- 45 hrs.+Tutorials-15 hrs.)

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
DSE-12 British Literature Post World War II	4	3	1	0	Passed Class XII	NIL

Learning Objectives

The Learning Objectives of this course are as follows:

- To familiarize students with a specific body of British writings post World War II.
- To highlight diverse voices in literary representations.

Learning outcomes

The Learning Outcomes of this course are as follows:

- By studying this course, students will be able to think critically about the complexities of a multicultural Post-war decolonized Britain.
- Students will be provided knowledge about the manner in which British writings change after World War II.

SYLLABUS OF DSE-12:

UNIT – I (15 hours)

1. John Fowles: *The French Lieutenant's Woman*

UNIT – II (15 hours)

2. Jeanette Winterson: *Sexing the Cherry*

UNIT – III (15 hours)

3. Hanif Kureshi: *My Beautiful Launderette*

4. Seamus Heaney: (i) 'Digging', (ii) 'Casualty'

5. Carol Anne Duffy: (i) 'Text', (ii) 'Stealing'

Practical component (if any) - NIL

Essential/recommended readings- as listed in the units

Suggestive readings:

1. Sinfield, Alan. 'Literature and Cultural Production', *Literature, Politics, and Culture in Postwar Britain*. Berkley and Los Angeles: University of California Press, 1989. pp 23–38

2. Heaney, Seamus. 'The Redress of Poetry', *The Redress of Poetry*. London: Faber, 1995. pp 1–16

3. Waugh, Patricia. 'Culture and Change: 1960-1990', *The Harvest of The Sixties: English Literature And Its Background*, *1960-1990*. Oxford: OUP, 1997.

DISCIPLINE SPECIFIC ELECTIVE COURSE –(DSE-13): Research Methodology

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
DSE-13 Research Methodology	4	3	0	1	Passed Class XII	NIL

Learning Objectives

The Learning Objectives of this course are as follows:

- To offer students practical training in academic writing.
- To introduce the basics of academic research.

Learning outcomes

The Learning Outcomes of this course are as follows:

- By studying this course, students will be able to acquire in-depth and practical knowledge regarding academic reading and writing.
- Students will gain proficiency in writing research papers as part of project work.

SYLLABUS OF DSE-13:

UNIT – I (15 hours)

1. Introduction to Practical Criticism

2. Conceptualizing and Drafting of a Research Proposal

UNIT – II (15 hours)

3. Style Manuals: Notes, References and Bibliography/Annotated Bibliography

UNIT – III (15 hours)

4. Workshop on Topic Development

5. Workshop on Research Proposal

Note: During classes, the workshop mode of teaching is to be favoured for units which indicate the same. In the tutorials, individual guidance is to be given to each student.

Practical component: (30 hours)
Writing a Research Paper (2000 to 2,500 words)

Essential/recommended readings:

1. Flick, Uwe. *Introducing Research Methodology: A Beginner's Guide to Doing a Research Project.* New Delhi: Sage, 2017.

2. Leki, Ilona. *Academic Writing: Exploring Processes and Strategies*. 2nd edn. New York: CUP, 1998.

3. Dev, Anjana N (ed.). *Academic Writing and Composition.* New Delhi: Pinnacle, 2015.

4. Richards, I. A. *Practical Criticism: A Study of Literary Judgement*. New York: Harcourt Brace, 1929.

5. Bailey, Stephen. *The Essentials of Academic Writing for International Students.* London: Routledge, 2015.

6. Orwell, George. *Politics and the English Language*. United Kingdom: Sahara Publisher Books, 1946.

Suggestive Readings:

1. Hamp-Lyons, Liz and Ben Heasley. *Study Writing: A Course in Writing Skills for Academic Purposes*. Cambridge: CUP, 2006.

2. Kumar, Ranjit. *Research Methodology: A Step by Step Guide for Beginners*. New Delhi: Sage, 2014.

3. Phanse, Sameer. *Research Methodology: Logic, Methods and Cases*. New Delhi: OUP, 2016.

4. Griffin, Gabrielle, ed. *Research Methods for English Studies.* 2nd edn. New Delhi: Rawat Publications. 2016 (Indian Reprint)

Common Pool of Generic Elective (GE) Courses for EVEN Semesters

NOTE: The Generic Electives for the EVEN SEMESTERS will also run for Semester VI students.

Department of English (Journalism)
SEMESTER-IV

[UG Programme for Bachelor in Journalism (Honours) degree in three years]

DISCIPLINE SPECIFIC CORE COURSE 10- (DSC-10) : Conflict and War Reporting

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSC 10: Conflict and War Reporting	4	3	0	1	Passed Class XII with English	NIL

Learning Objectives

The Learning Objectives of this course are as follows:

- To inculcate among students, an in-depth awareness of the difficulties involved in conflict reporting while keeping in mind ethical standards to their analysis of conflict reporting.

Learning outcomes

The Learning Outcomes of this course are as follows:

- By studying this course, students will be able to apply a historical perspective to the media coverage of conflict and war reporting.

SYLLABUS OF DSC-10:

UNIT – I (15 hours)

Unit 1: Introduction

- Conflict Reporting and War Reportage: Concepts
- Information warfare and dominance
- Issues & Obstacles in war reporting
- Dimensions of War Coverage: Organizations and Reporters
- Working lives of War Correspondents
- Components and themes in war reporting, construction of 'enemy'
- Concept of 'hybrid war'

UNIT – II (15 hours)

Unit II: Issues

- Risks and Risk Management, Threats to personal safety
- Objectivity, Rationality and accuracy of media coverage
- Competing narratives & Viewpoints
- Cultural differences in reporting the war on terror
- Reporting from a foreign land (Challenges)

UNIT – III (15 hours)

Unit III: Challenges and Ethical Concerns

- Media Opinions and Advocacy
- Contemporary changes in warfare & Media environment
- Women in war reporting: discrimination, derogatory attitudes, sexual harassment
- News Media Visuals, Images of death spectacle
- Technological developments and its uses in war
- Digital Platforms, blogs, Twitter, chats

Practical component: (30 hours)

Students are expected to do projects, critically examining the coverage of wars in each phase of development of the media. The students must submit write ups on the reporting of wars in the context of the limitations of technology in each phase of the

media beginning from the coverage from the era of print journalism to the present times. Debates and discussions will be held on the issues of conflict and the role of international bodies in the call for peace. They must write a critical report comparing the reportage of war on traditional/mainstream media with posts/reports on social media platforms of the Russian-Ukraine war and its implications on international politics and economy. The students can also do an analytical write up on the violent visuals and images of destruction of the Russo-Ukraine war.

Essential/recommended readings

1. Harris, Janet and Kevin Williams. 2018. *Reporting War and Conflict*. Taylor and Francis.
2. Thussu, Daya Kishan and Des Freedman. 2003. *War and the Media*. Sage Publications.
3. Zelizer, Berbie and Stuart Allan. 2004. *Reporting War: Journalism in Wartime*. Routledge.

Suggestive readings:

1. Armoudian, Maria. 2016. *Reporting from the Danger Zone: Frontline Journalists, Their Jobs and an Increasingly Perilous Future.* Introduction, Chapter Two & Conclusion

2. Wolfsfeld, Gadi. “Telling a Good Story.” In *Making Sense of Media & Politics*. Routledge, 2011

3. Galtung, Johan, and Dietrich Fischer. 2013."High road, low road: Charting the course for peace journalism." *Johan Galtung*. Springer Berlin Heidelberg. 95-102. http://reference.sabinet.co.za/webx/access/electronic_journals/track2/track2_v7_n4_a4.htm

4. Jakobsen, Peter Viggo. 2000. “Focus on the CNN Effect Misses the Point: The Real Media Impact on Conflict Management is Invisible and Indirect.” *Journal of Peace Research*. Vol. 37, No. 2 (p. 131-143).

5. Lance Bennett: When the Press Fails. University of Chicago Press. Introduction, 2008

6. Cull, Nicholas. 2009. *Annals of the American Academy of Political and Social Science*. Vol. 616, Public Diplomacy in a Changing World (Mar., 2008), pp. 31-54.

8. Norris, Pippa, Montague Kern & Marion Just. “The Lessons of Framing Terrorism.” In *Framing Terrorism*, 2004

9. Bolt, Neville. 2011. “Conclusion.” From The Violent Image.”, Columbia University Press.

10. Rutkin, Aviva. 2016. “Cyberwar becomes official.” *New Scientist*.

DISCIPLINE SPECIFIC CORE COURSE 11- (DSC-11) : Multimedia Journalism

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSC 11: Multimedia Journalism	4	3	0	1	Passed Class XII with English	NIL

Learning Objectives

The Learning Objectives of this course are as follows:

- To facilitate students with the knowledge of multimedia and its contribution towards journalism. To help students adapt the contemporary practises of multi-media journalism and production.

Learning outcomes

The Learning Outcomes of this course are as follows:

- By studying this course, students will be able to learn how to produce a personal website that showcases their work (also used as a digital portfolio throughout the major); produce a portfolio of photographs; produce an audio and video production; and produce a final multi-media project.

SYLLABUS OF DSC-11:

UNIT – I (15 hours)

UNIT I: Introduction to Multimedia

- Development of multimedia journalism
- Basics of Multi-media Journalism- features and elements
- Importance of multimedia skills in contemporary newsroom
- Writing and editing for online
- Interviewing for the web
- Developing content for multimedia publishing
- Online media law, ethics & multicultural sensitivity

UNIT – II (15 hours)

UNIT II: Multimedia production

- Multimedia production process, multimedia newsroom function
- Online research, planning, sources, news gathering, storyboarding
- Developing website, website design, editing and publishing – Tools and Software

- New forms of journalism – blogs, social media, interactive stories, mobile journalism, citizen journalism, news application

UNIT – III (15 hours)

UNIT III: Packaging and integration

- Basics on developing photos, audio and video production for online, Different forms and formats of online photo stories, Tools, techniques and software for photo editing
- Mobile Journalism- Learning how to shoot, edit and tell stories through mobile phones
- Social media as a tool of reporting and a distribution tool
- Concepts of multimedia narrative, packaging and multimedia documentary
- Social media integration – tools and techniques
- Social media optimization of content
- User Generated Content integration – forms and techniques

Practical component: (30 hours)

Multimedia journalism will involve practical participation of students by means of constantly pitching ideas and learning to align their ideas with a suitable medium across different online platforms. Class discussions on individual multimedia projects and team inputs from the teacher will help create a dynamic online newsroom for the duration of this course.

Teacher will impart knowledge of traditional (DSLRs) and emerging tools, including smartphones, and sharing multimedia storytelling fundamentals, especially creative photo and audio techniques.

Record Man on the Street Interviews, shooting feature videos and podcast using smartphones, story pitch review, writing for the web; expanding the idea of narrative; interviewing tips and techniques

Final project: Producing a multimedia package and making it live online

Essential/recommended readings-

1. Christin, Anne-Marie, ed. *A History of Writing: From Hieroglyph to Multimedia*. Flammarion-Pere Castor, 2002.
2. Garrand, Timothy. *Writing for Multimedia and the Web: A Practical Guide to Content Development for Interactive Media.* CRC Press, 2006.
3. Korolenko, Michael. *Writing for Multimedia: A Guide and Source Book for the Digital Writer.* Pearson. 2005.
4. Savage, Terry Michael, and Karla E. Vogel. *An Introduction to Digital Multimedia.* Jones & Bartlett Publishers, 2013.

5. *Digital Storytelling in the Classroom: New Media Pathways to Literacy, Learning, and Creativity,* Published by Corwin; 2013

6. *Video journalism: Multimedia Storytelling*, Routledge, 2017

Suggestive readings:

1. Poynter Online Media Ethics Bibliography, 2002, https://www.poynter.org/archive/2002/media-ethics-bibliography/

2. *The Principles of Multimedia Journalism: Packaging Digital News*, by Richard Hernandez, Jeremy Rue, 2015

3. *Aim for the Heart: Write, Shoot, Report and Produce for TV and Multimedia* by Al Tompkins, 2011

DISCIPLINE SPECIFIC CORE COURSE-12 (DSC-12) : Broadcast Production

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSC 12: Broadcast Production	4	3	0	1	Passed Class XII with English	NIL

Learning Objectives

The Learning Objectives of this course are as follows:

- To facilitate students with the knowledge of history of broadcasting models in India.
- To enable students to understand the basics of sound and visual grammar of diverse broadcast genres.

- To make the students adept at script writing and production for broadcast media

Learning outcomes

The Learning Outcomes of this course are as follows:

- By studying this course, students will be able to make TV News bulletins, documentaries and other programs.

SYLLABUS OF DSC-12:

UNIT – I (15 hours)

Unit I: **Broadcasting Models**

- Public Service Model in India (Policy and laws)
- Global Overview of Public Service Broadcasting
- Private Broadcasting Model in India; Policy and Laws
- Structure, Functions and Working of a Broadcast Channel
- Public and Private partnership in television and Radio programming (India and Britain case studies)

UNIT – II (15 hours)

UNIT II: Broadcast Genres

- News, Interviews, Features
- Why am I the 'Idiot Box'? -Debates, Issues and Concerns of Television Genre
- Various Evolving Contemporary Television genres: Drama, soap opera, comedy, reality television, children's television, animation, prime time and day time

- Current and emerging trends of broadcast media: Audience effectiveness
- Use of social media by Radio & TV channels,
- Internet TV/ Radio and Mobile TV/Radio

UNIT – III (15 hours)

Unit III: **Advanced Broadcast Production**

- Writing and Producing for Radio
- Public Service Advertisements
- Jingles
- Radio Magazine shows
- Music Video for social comment/as documentary
- Mixing ENG and EFP
- Reconstruction in News based Programming

Practical component: (30 hours)

Students will work in groups under the supervision of faculty member to produce news bulletins as a part of practical component of this course. They can also be encouraged to visit studios of leading news channels to understand the process of television news production thoroughly and familiarize themselves with the rapidly changing newsroom.

- Script writing
- Presentation of experimental genre in Radio/ TV
- Presentation about PSBT and similar organizations

- Script on Music Presentation
- Presentation of Commercial Channel functions.
- Presentation on global broadcasting models & Indian broadcasting models

Essential/recommended readings:

1. Bignell, Jonathan, Jeremy, Orlebar, and Patrica Holland, *The Television Handbook*, London: Routledge, 2005.

2. Chatterji, P.C., *Broadcasting in India*. New Delhi: Sage,1987.

3. Fleming, Carole, and Pete Wilby, *The Radio Handbook*, London: Routledge, 2002.

4. Orlebar, Jeremy, *The Practical Media Dictionary*, London: Arnold, 2003.

5. Page, David, and William Crawley, *Satellites over South Asia*, (1st edition), New Delhi: Sage Publications, 2001.

Suggestive readings:

1. Rajagopal, Arvind, *Politics after Television*, (1stEdition), Cambridge UK: Cambridge University Press, 2001.

2. Saksena, Gopal, *Television in India*, (1st Edition), New Delhi: Vikas Publication House, 1996.

3. Starkey, Guy, and Andrew Crisell, *Radio Journalism*, (1st edition), Los Angeles: Sage, 2009.

4. Thussu, Daya Kishan, *News as Entertainment*, (1st. edition), Thousand Oaks California: Sage, 2007.

5. Verma, and Adarsh Kumar, *Advanced Journalism*, (1st edition), New Delhi:

Har- Anand Publications,1993.

6. Baruah, U.L., *This is All India Radio*. (1st Edition), New Delhi: Publication Division, Ministry of Information and Broadcasting, Govt. of India, 1983.

7. Bhatt, S.C., *Satellite Invasion of India*, (1st Edition), New Delhi: Gyan Publication House, 1994.

8. Sabharwal, Tarjeet, *Satellite Television: An Impact on Social Participation*, Kanishka Publishers, 2008.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

COMMON POOL OF DISCIPLINE SPECIFIC ELECTIVE (DSE) COURSES FOR SEMESTER IV

DISCIPLINE SPECIFIC ELECTIVE COURSE 4– (DSE-4): Introduction to Media and

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
DSE-4 Introduction to Media and Politics	4	3	0	1	Passed Class XII with English	NIL

Learning Objectives

The Learning Objectives of this course are as follows:

- To familiarize students with the uses and impact of media in politics. The students will be able to grasp the language and narrative of issues of political parties and political activities.

Learning outcomes

The Learning Outcomes of this course are as follows:

- By studying this course, students will be able to assess application of the range of theories and methodologies in the field of political communication.
- They will be able to critically evaluate the uses and effects of media on political processes and citizens; and apply theories and principles to developments and trends involving countries, levels of governance, and issues of interest to them.

SYLLABUS OF DSE-4:

UNIT – I (15 hours)

Unit I: Introduction

- Political Communication: Background
- Relationship between Politics and Communication
- Role and Influence of media on political communication
- Influence Agents – opinion leaders, intellectuals, trolls
- Religion and Politics
- Gender and Politics
- Culture and Politics

UNIT – II (15 hours)

Unit II: Political Language

- Political Communication Strategies
- Myths and Ideology
- Strategic uses of political language
- Political Rhetoric
- Political Advertising
- Framing of Issues, Agenda and Narrative setting

- Post-truth and Alternative Facts

UNIT – III (15 hours)

Unit III: Trends

- Political Branding and Image-building
- Digital Platforms – Social Media and Political Engagement
- Political Polarization and Mobilization
- Use of AI, Big Data, Hybrid Intelligence
- Political Humour and Satire, memes and echo chambers

Practical component: (30 hours)
The students must submit a report of how issues are framed in the media. They must be able to contextualise the political rhetoric and the narrative discourse of issues by political leaders. They must also analyse how social media is used for political branding and image building.

Essential/recommended readings-

1. Oates, Sarah (2008). *Introduction to Media and Politics*, Sage Publications
2. Robertson, Alexa (2015). *Media and Politics in a Globalizing World*, Polity Press
3. Rozell, Mark (ed.) (2003). Media Power, Media Politics. Rowman & Littlefield

Suggestive readings:

1. Carey (1995). The press, public opinion and public discourse. In Glasser & Salmon (Eds.), *Public opinion and the communication of consent*, pp, 373-402.

11. Wolfsfeld, Gadi (2011). Making Sense of Media and Politics. Routledge.

DISCIPLINE SPECIFIC ELECTIVE COURSE 5–(DSE-5): Photography and Digital Imaging

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
DSE-5 Photography and Digital Imaging	4	3	0	1	Passed Class XII with English	NIL

Learning Objectives

The Learning Objectives of this course are as follows:

- To familiarize students with the history of photography and
- To enable students to understand diverse types of photography and the process of photo editing.

Learning outcomes

The Learning Outcomes of this course are as follows:

- By studying this course, students will be able to utilize the technology and tools of photography in the production of photographic images to include: the operation of the camera, exposure, lenses etc.

SYLLABUS OF DSE-5:

UNIT – I (15 hours)

UNIT I: History of Photography

- Introduction to history of Photography- Camera obscura, the daguerreotype and Edward Muybridge experiment (Screening of Genius of Photography, BBC Four Series)

- Profile of Famous phtotographers (Henri Cartier Bresson, Robert Capa, Dorothea, Raja Deen Dayal, Raghubir Singh, Raghu Rai, Homai Vyarawalla)

UNIT – II (15 hours)

UNIT II:Understanding the camera

- Introduction to 35mm analog and DSLR operations
- Understanding lenses (standard and zoom) and how perspective shifts with varying focal lengths.
- Exposure Triangle
- Basic rules of composition, framing and rule of the third.

UNIT – III (15 hours)

UNIT III: Types of Photography & Photo Editing

- Photojournalism, News Photography, Sports Photography, Nature photography, Portrait photography, Travel photography, Fashion photography and advertisement photography
- Introduction to editing and post-processing images;
- Photo Editing softwares - Adobe Lightroom or Photoshop.

Practical component: (30 hours)

- Students will make a photo feature on selected topics. Other methods will include lectures, class exercises of following photographs used by various social media and new paper and class discussions on mobile photography trends, as well as other significant debates on topical issues. The students should make photo features on a variety of topics.

Essential/recommended readings- as listed in the units

1. *Photography Changes Everything*, Marvin Heiferman, by Aperture Foundation, 2012

2. *Camera Lucida: Reflections on Photography*- Roland Barthes, Hill and Wang, 1980

3. *On Photography,* Susan Sontag – New York Review of Books, 1977

4. *Ways of Seeing,* John Berger, Penguin Books, 1972

5. *The Photography Book* by Editors of Phaidon Press, 30 April 2000.

Suggestive readings:

1. *Communication Technology for Development,* Pannu. P, Tomar A Yuki, IK international publishing House .2011

2. *All about Photography* by Ashok Dilwali, National Book trust, Year of Publication:2010 New Delhi.

3. *Practical photography* by O.P. SHARMA HPB/FC (14 March 2003)

4. *The Photographer's Guide to Light* by Freeman John Collins & Brown, 2005.

Journal/Magazine Subscriptions and Book Recommendations:

Journals- *Aperture, Photo works, British Journal of Photography, PDN, Amateur Photographer*

Magazines- *Outdoor Photography, Better Photography, National Geographic, Creative Image*

Books, catalogues, DVD materials

DISCIPLINE SPECIFIC ELECTIVE COURSE 6–(DSE-6): Media, Gender and Human Rights

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
DSE-6 Media, Gender and Human Rights	4	3	0	1	Passed Class XII with English	NIL

Learning Objectives

The Learning Objectives of this course are as follows:

- To identify the limits and gaps in contemporary reporting and develop alternative approaches towards creating better democratic culture through media practice.

Learning outcomes

The Learning Outcomes of this course are as follows:

- By studying this course, students will be able to comprehend the intricate interconnections between media narratives and questions around gender, class and caste.

SYLLABUS OF DSE-6:

UNIT – I (15 hours)

UNIT I: Conceptual Frameworks in Gender studies

- Feminist Theory (Liberal feminism, Radical feminism, Socialist feminism) Black Feminism, Dalit Feminism
- Masculinity, Queer Theory, Intersectionality
- Media and Gender - Theoretical concerns
- Media and Gender- Indian debates (Case studies)

UNIT – II (15 hours)

UNIT II: Media: Power and Contestation

- Public Sphere and its critique (Counter Publics)
- Public sphere of the disempowered?
- Media and Social Difference: Caste, Gender and Class

UNIT – III (15 hours)

UNIT III: Human Rights

- Human Rights- Theoretical perspectives,
- Critique, Universal Declaration of Human Rights
- Human Rights and Media
- Social movements and mass media
- Social media, political change, and human rights
- Case studies

Practical component: (30 hours)
The students must critically analyse the issues taken up by the main stream media on human rights and gender. The students should make a report of social movements and evaluate the role of media in highlighting and representing these issues in India.

Essential/recommended readings:

1. Street, John. *Mass media, politics and democracy.* Palgrave Macmillan, 2011.

Common Pool of Generic Electives (GE) Courses for EVEN Semesters

NOTE: The Generic Electives for the EVEN SEMESTERS will also run for Semester IV students.

SEMESTER -V

[UG Programme for Bachelor in Journalism (Honours) degree in three years]

DISCIPLINE SPECIFIC CORE COURSE 13- (DSC-13) : Global Media and Politics

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSC 13: Global Media and Politics	4	3	0	1	Passed Class XII with English	NIL

Learning Objectives

The Learning Objectives of this course are as follows:

- To get an over view of the politics of news dissemination and the dynamics of reporting international issues and events. To understand the use of media by different countries during war times. To grasp the turning points and changing boundaries of journalism with the evolution of technology.

Learning outcomes

The Learning Outcomes of this course are as follows:

- By studying this course, students will be able to comprehend the impact of globalization on media and cultural implications.

SYLLABUS OF DSC-13:

UNIT – I (15 hours)

UNIT I: Media and International Communication

- Propaganda in the inter-war years: Nazi Propaganda
- Radio and international communication

- Media during the Cold War, Vietnam War, Disintegration of USSR;
- Radio free Europe, Radio Liberty and Voice of America
- Communication debates: NWICO, McBride Commission and UNESCO
- Unequal development and Third World concerns: North-South, Rich – Poor

UNIT – II (15 hours)
UNIT II: Conflict and Rise of Global Media

- World Wars and Media Coverage post 1990: Rise of Al Jazeera
- The Gulf Wars: CNN's satellite transmission, embedded Journalism
- 9/11 and implications for the media

UNIT – III (15 hours)
Unit III: Media and Cultural Globalization

- Cultural Imperialism, Cultural politics: media hegemony and
- Global cultures, homogenization, Local/Global, Local/Hybrid
- Discourses of globalization: barrier–free economy, digital divide
- Media conglomerates and monopolies: Ted Turner/Rupert Murdoch
- Global and regional integrations: Zee TV as a Pan-Indian Channel; Bollywood Entertainment: Local adaptations of global programmes: KBC/Big Boss etc.

Practical component: (30 hours)
The students will prepare case studies of the media at various points in time and highlight the turning points and changing boundaries of journalism during each evolving phase of the history of the media. The students will also analyse the changing content of media for international communication in the pre and post globalization phases. The students must compare the entertainment and other cultural products produced by international giants and media conglomerates.

Essential/recommended readings:

DISCIPLINE SPECIFIC CORE COURSE-14 (DSC-14) : Development Communication

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSC 14: Development Communication	4	3	0	1	Passed Class XII with English	NIL

Learning Objectives

The Learning Objectives of this course are as follows:

- To develop an understanding and sensitivity towards developmental concerns.
- To understand the issues and factors that help in development through effective tools of communication.

Learning outcomes

The Learning Outcomes of this course are as follows:

- By studying this course, students will be equipped with critical skills to understand the importance of effective development communication strategies to spread development messages among the poor and weaker sections of society.

SYLLABUS OF DSC-14:

UNIT – I (15 hours)

UNIT 1: Introduction to Development Communication

- Development – Genesis, Meaning, Concept & Measurement (PQLI, HDI, GDI)
- Economic Growth vs. Development

- Human Development
- Development as Freedom
- Models of Development – Basic Needs, Nehruvian, Gandhian Model
- Development communication: Concept and approaches - Diffusion of innovation, Empathy, Magic multiplier
- Paradigms of development: Dominant paradigm, dependency, alternative/new paradigm
- Sustainable Development
- Gender and development
- Development support communication – Definition, genesis, Woods triangle

UNIT – II (15 hours)

UNIT 2: Role of Media in Development Communication

- Use of folk media for development
- Overview and Critical Appraisal of Development Communication Programmes of All India Radio and Doordarshan: Radio Rural Forum, Farm & Home Unit, Krishi Darshan, SITE, Kheda Communication Project.
- Case Studies of Community Video: SEWA, Video Volunteers and Community Radio in India
- ICT for development, e-governance, e-chaupal, national knowledge network
- Using New Media Technologies for Development
- Strategies for designing messages for Print, Radio, Television, New media.

UNIT – III (15 hours)

UNIT 3: Communication for Development and Social Change

- Information needs in rural areas; rural newspapers
- Critical appraisal of mainstream media's reporting of rural problems and issues

- Tribal society: Features, Information needs, Communication Programmes
- Role of development agencies and NGOs in development communication
- Development support communication endeavours in India: Programmes and Communication Strategies
- Health & Family welfare: National Rural Health mission; Ayushman Bharat Yojana.
- Poverty: Jan Dhan Yojna; MGNREGA.
- Education: Beti Bachao Beti Padhao; Mid-day meals scheme.

Practical component: (30 hours)

Students under the guidance of the faculty must undertake visits to mohalla clinics, NGOs, Women's Self-Help groups, Special schools for underprivileged students and other such initiatives in the city to develop content for blogs/ newsletters/magazines from the visits. Interaction with rural journalists and video volunteers (eg. Khabar Lehariya) must be arranged. The students must participate pro-actively to design and execute a development project for a near by village with development support communication techniques.

Essential/recommended readings:

1. Rogers Everett: *Communication and Development- Critical Perspective*, Sage, New Delhi, 2000

2. Srinivas R. Melkote & H. Leslie Steeves: *Communication for Development in The Third World*, Sage Publications, 2001

3. Belmont CA: *Technology Communication Behavior*, Wordsworth Publication, New Delhi, 2001.

4. D V R Murthy: *Development Journalism, What Next?* Kanishka Publication, New Delhi, 2007.

5. Amartya Sen: *Development as freedom*, Alfred A Knopf, New York, 1999.

Suggestive readings:

1. UNDP: Human Development Report (published every year), Oxford University Press, New Delhi.

2. *World Bank: World Development Report* (published every year) Oxford University Press, New Delhi.

3. Wilbur Schramm: *Mass Media and National Development- the role of information in developing countries*, UNESCO/ Stanford University Press, 1964.

4. Ghosh & Pramanik: *Panchayat System in India*, Kanishka Publication, New Delhi, 2007.

5. Shivani Dharmarajan: *NGOs as Prime Movers*, Kanishka Publication, New Delhi, 2007.

6. What Do We Mean By Development: An Article by Nora C Quebral in *International Development Review*, Feb, 1973, P-25.

DISCIPLINE SPECIFIC CORE COURSE 15- (DSC-15) : Media Ethics and the Law

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSC 15: Media Ethics and the Law	4	3	1	0	Passed Class XII with English	NIL

Learning Objectives

The Learning Objectives of this course are as follows:

- To understand the contemporary media practices through contemporary debates.

Learning outcomes

The Learning Outcomes of this course are as follows:

- By studying this course, students will be able to grasp the nuances and the legal provisions laid down in the Constitution of India.

SYLLABUS OF DSC-15:

UNIT – I (15 hours)

UNIT I: Ethical framework and media practice

- Freedom of expression (Article 19(1) (a) and Article 19(1)2)
- Freedom of expression and defamation- Libel and slander, Issues of privacy and surveillance in society
- Right to Information Idea of Fair Trial/Trial by Media
- Issues of Copyright

- Media ethics and cultural dependence
- Live reporting and ethics Legality and Ethicality of Sting Operations,
- Phone Tapping etc. Ethical issues in Social media (IT Act 2000, Sec 66 A and the verdict of The Supreme Court)

UNIT – II (15 hours)

UNIT II: Representation, Regulation and ethics

- Advertisement and Women
- Pornography related laws and case studies- Indecent representation of Women (Prohibition) Act,1986 and rules 1987, Protection of Women against Sexual Harassment Bill, 2007, Sec 67 of IT Act 2000 and 292 IPC etc

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Common Pool of Discipline Specific Elective (DSE) Courses for Semester V

DISCIPLINE SPECIFIC ELECTIVE COURSE 7–(DSE-7): Media and Audiences

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
DSE-7 Media and Audiences	4	3	0	1	Passed Class XII with English	NIL

Learning Objectives

The Learning Objectives of this course are as follows:

- To familiarize students with the diversity of media audiences. To make the students understand the importance of target audience and audience as consumers of varied content on a variety of media and social media platforms.

Learning outcomes

The Learning Outcomes of this course are as follows:

- By studying this course, students will be able to generate content and messages for different audiences on various media platforms.

SYLLABUS OF DSE-7:

UNIT – I (15 hours)

UNIT I: Understanding Media Audiences

- Who are media audiences?

- History of Early Audiences
- Parameters of audiences – politics, religion, race, class, gender, nation
- Homogenous and heterogeneous audiences
- Contesting 'Audiences'

UNIT – II (15 hours)

UNIT II: Sociology of Media Audiences

- Passive and Active Audience - Perspectives
- Ball –Rokeach and DeFleur's dependency theory
- Symbolic Interactionism, interpretive communities
- Post-modern audiences
- Commodification of audiences
- Children as audiences
- Audience ratings and measurement and ethnographies

UNIT – III (15 hours)

UNIT III: New Media Audiences and Contemporary Issues

- 'Old' audiences to 'New' media audiences – mass to interactive
- Mapping Audiences of Digital Technologies - Music, Books, TV, Films, Video Digital news audience – active, interactive, creative
- New media ecosystems: 'audience' subjectivity to 'user subjectivity'
- Issues of privacy, tracking audiences, data mining, authenticity, challenges for audience research

Practical component: (30 hours)
The students must analyse the demographic profile of audiences of different media and social media platforms. They must map the content preferences of digital audiences and compare audience of old media and new media.

Essential/recommended readings:

1. *Media Studies: Content, Audiences, and Production,* edited by Pieter Jacobus Fourie, JUTA, 2006
2. *Media Audiences: Effects, Users, Institutions and Power,* edited by John L. Sullivan, Sage, 2012
3. *The Handbook of Media Audiences,* Virginia Noghtingale, Blackwell, 2011
4. *Media and Audiences: New Perspectives,* Karen Ross and Virginia Nightingale, OUP, 2003
5. *Satellite Television: An Impact on Social Participation,* Sabharwal, Tarjeet, ISBN 978-81-8457-064-9, Kanishka Publishers, 2008

Suggestive readings:

1. *Media Institutions and Audiences:* Nick Lacey, Palgrave 2002

DISCIPLINE SPECIFIC ELECTIVE COURSE 8–(DSE-8): Sports Journalism

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
DSE-8 Sports Journalism	4	3	0	1	Passed Class XII with English	NIL

Learning Objectives

The Learning Objectives of this course are as follows:

- To familiarize students with the coverage of sports by different types of media platforms in India. To help the students to grasp the sports terminologies and to use them in a lucid and simple style while reporting the game to mass audiences.

Learning outcomes

The Learning Outcomes of this course are as follows:

- By studying this course, students will be able to understand the basics of Sports in India and list down various policy making bodies functioning in India & abroad and demonstrate abilities to do sports reporting for print and electronic media.

SYLLABUS OF DSE-8:

UNIT – I (15 hours)

Unit 1: Introduction to Sports

- Sports in India: A Historical Perspective Sports Journalism: Concept & History
- Major national and international sports events Profile of outstanding sports personalities

UNIT – II (15 hours)

Unit 2: Sports Policymaking

- Sports regulatory/ governing bodies in India (Ministry of Sports, SAI, BCCI, IHA, etc)
- International Sports Organisations (FIFA, IOC, etc)
- Sports Budget by Indian Government

UNIT – III (15 hours)

Unit 3: Sports Reporting

- Sports Coverage by Print Media (Sports News, Sports Photography, Sports Features, Interviews)
- Sports Magazines
- Sports Coverage by Television (Sports TV Channels, Commentary & Broadcasting on TV, Special Programmes on Sports, Live Telecasts, Writing Sports News for TV) Sports Coverage by Radio (Commentary & Broadcasting on Radio, writing sports news for radio)
- Sports Newsroom

- Gender Neutral Reporting

Practical component: (30 hours)

The students shall prepare a comprehensive report on the coverage of various sports in newspapers and broadcast media. The students must visit a sports newsroom for reporting live telecasts and commentary on radio.

Essential/recommended readings-

1. Stofer, Kathryan T. *Sports Journalism: An Introduction to Reporting and Writing*, Rowman & Littlefield Publishers, 2019.
2. Richards, Huw. *Routledge Handbook of Sports Journalism*, Taylor and Francis, 2020.

Suggestive readings:

1. Srinivas Rao. *Sports Journalism*, Khel Sahitya Kendra K.S.K. Publishers, 2009

2. Prasidh Kumar. *Sports Journalism*. Apple Books, 2010

3. Phil Andrews. *Sports Journalism: A Practical Introduction*, Sage Publications, 2014

DISCIPLINE SPECIFIC ELECTIVE COURSE 9–(DSE-9): Folk Media and Communication

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
DSE-9 Folk Media and Communication	4	3	0	1	Passed Class XII with English	NIL

Learning Objectives

The Learning Objectives of this course are as follows:

- To create awareness among students about the definition of folk, complex relationship to Indian social structure, transformations in folk media practice and orient them towards effective and hybrid use of folk media.

Learning outcomes

The Learning Outcomes of this course are as follows:

- By studying this course, students will be able to explore different folk media forms of development projects. The students will be able to understand the importance of folk media in addressing significant issues in the Indian context.

SYLLABUS OF DSE-9:

UNIT – I (15 hours)

UNIT I: Folk Media and its Forms

- Understanding Oral Tradition and Folk as 'Medium'
- Folk Media: Concept and Characteristics
- Folk Media: 'People as Producers'
- Gender and caste in folk
- Forms of Folk Media: Theatre, Music, Dance and other Narrative forms
- Objectives of Folk Media: Aesthetic expression, Expressional and Communicational
- Folk Media: Scope and Limitations

UNIT – II (15 hours)

UNIT II: Folk media and Development

Government Agencies and Promotion of Folk Artists: Song Drama Division, Publications Division, The Directorate of Advertising and Visual Publicity (DAVP) and Ministry of Rural Development.

UNIT – III (15 hours)

UNIT III: Culture and Folk Media

- Conceptualizing Folk culture and folk media
- Influence of Modern technology on Folk Communication: (A Comparative understanding)

- Folk Communities: Art for whose sake? (In the context of 'Art for Art's sake' debate)

Common Pool of Generic Elective (GE) Courses for ODD Semesters

NOTE: The Generic Electives for the ODD SEMESTERS will also run for Semester V students.

SEMESTER -VI

[UG Programme for Bachelor in Journalism(Honours) degree in three years]

DISCIPLINE SPECIFIC CORE COURSE-16 (DSC-16) : Social Media and Communication

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSC 16: Social Media and Communication	4	3	0	1	Passed Class XII with English	NIL

Learning Objectives

The Learning Objectives of this course are as follows:

- To understand the dynamics of social media platforms and their significance in daily life.

Learning outcomes

The Learning Outcomes of this course are as follows:

- By studying this course, students will be able to explore new avenues of internet mediated communication.

SYLLABUS OF DSC-16:

UNIT – I (15 hours)

UNIT I: Understanding Social Media: Nature and Concepts

- Definition of social media,
- Social, para-social and asocial nature of social media
- Social media concepts and theories

- Social media-Impersonal, interpersonal, hyper-personal
- Virtual Identity
- Evolution and rise of social media- a brief historical perspective
- Social network sites and logistics of interaction, features and characteristics
- Applications-politics, government, social support, democracy

UNIT – II (15 hours)

UNIT II: Use and relevance of Social media in Journalism

- Sources of news
- News aggregators
- News Consumption cultures-feedback and sharing
- Crowd sourcing, micro blogging
- Social Media Activism, hash-tag activism, Cultural polarisation
- Social Media Integration

UNIT – III (15 hours)

UNIT III: Social Media Marketing

- Social Media Marketing – Introduction
- Social Media Management – Strategies, Tools and Technologies
- Social Media Audience Measurement
- Case studies of successful social media marketing campaigns

Practical component: (30 hours)

The students will analyse the features of different social media platforms and understand the strategies of communicating on these platforms. The students can critically examine the social media campaigns of each social media platform. They can compare the marketing strategies of organisations/institutions for reaching out to target publics.

Essential/recommended readings:

1. Coban, and Baris, *Social Media and Social Movements: The Transformation of communication Patterns*, New York: Lexington, 2016
2. Fuchs Christian, *Social Media: A Critical Introduction*, London: Sage, 2014.
3. Lipschultz, and Harris Jeremy, *Social Media Communication: Concepts, Practices*, Data, Law, New York: Routledge, 2014.
4. Seargeant, Philip and Tagg, and Caroline, *The Language of social media: Identity and Community on the Internet*, New York: Palgrave Macmillan, 2014.

Suggestive readings:

1. Trottier, Daniel and Fuchs, and Christian, *social media, Politics and the state: protests, Revolutions, Riots, Crime and Policing in the* Age of Facebook, Twitter and You Tube, New York: Routledge, 2015.

DISCIPLINE SPECIFIC CORE COURSE-17 (DSC-17) : Introduction to Cinema Studies

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSC 17: Introduction to Cinema Studies	4	3	0	1	Passed Class XII with English from List A in CUET	NIL

Learning Objectives

The Learning Objectives of this course are as follows:

- To historicize cinema as historically specific cultural forms.

Learning outcomes

The Learning Outcomes of this course are as follows:

- By studying this course, students will be able to achieve a critical vocabulary about cinema which takes them beyond reading films as just entertainment.

SYLLABUS OF DSC-17:

UNIT – I (15 hours)

UNIT I: Language of Cinema

- Focus on visual Language: Shot, Scene, Mis-en-scene
- Deep focus, Continuity Editing, Montage,
- Diegetic and Non-Diegetic Sound; Off -Screen Sound; Sync Sound;
- The use of colour as a stylistic Element
- Difference between story, plot, screenplay

UNIT – II (15 hours)

UNIT II: History of Cinema

- Beginnings of Cinema (Photography to cinema)
- Soviet Cinema- Eisenstein and Pudovkin
- Classical Hollywood Cinema
- Italian Neorealism
- French New-Wave
- Beginnings of Indian cinema (Phalke, Nationalist movement and cinema)
- 1950s - Cinema and the Nation (Guru Dutt, Raj Kapoor)
- The Indian New-Wave
- Regional cinema formations
- Globalization and Indian Cinema

UNIT – III (15 hours)

UNIT III: Alternative Visions

- Third Cinema
- Non-Fiction Cinema
- Feminist Film Theory- Apparatus Theory and Male Gaze
- Auteur- Film Authorship with a special focus on Satyajit Ray or Hitchcock

Practical component: (30 hours)

Students can be encouraged to work on projects that correspond to various film movements in the world, analyze film clips, and undertake visits to film archives and produce journals / blogs as a collective project on films.

Suggested Class Screenings:

- *Rear Window* (1954) Director Alfred Hitchcock (Language of Cinema)
- *Battleship Potemkin* (1925) Director Sergei Eisenstein (Language of Cinema)
- *Man with a Movie Camera* (1929) Director Dziga Vertov
- *Shots from Lumiere Brothers*
- *Rome Open City (1945)* directed by Roberto Rosselini (Italian Neo Realism)
- *Breathless* (1960) Director Jean Luc Godard (French New Wave)
- *Pather Panchali (1955)* Director Satyajit Ray
- *Mandabi (1969)* Director Ousmane Sembane
- Clips from *The Hour of the Furnaces* (1968) Directors Gettino and Solanas, Films by Costa Gavras
- *Battle of Algiers* (1966) Director Gille Pontecorvo
- *Nishant (1975)* by Shyam Benegal/Aakrosh by Govind Nihalani (Indian New wave)
- *Pyaasa (1957)* by Guru Dutt
- *Mother India (1957)* by Mehboob Khan

- *Jagte Raho (1956)* Raj Kapoor

Essential/recommended readings:

1. Villarejo, Amy. *Film Studies : The Basics*, Routledge, 2006.(Unit I & II)

2. Vincendeau, Ginette. "European cinema" *World Cinema: critical approaches*, 2000. (For Unit III) 65-82)

3. Robert Stam, " Film Theory: An Introduction". Massachusetts & Oxford: Blackwell Publishers: 2000

4. Nowell-Smith.G, *The Oxford History of World Cinema. Oxford: Oxford University Press*, 1996

5. Duggal.V, Menon & Bhattacharya*. Film Studies: An Introduction,* Worldview Publications. 2019.

Suggestive readings:

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Common Pool of Discipline Specific Elective (DSE) Courses for Semester VI

DISCIPLINE SPECIFIC ELECTIVE COURSE 10–(DSE-10): Media Automation

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
DSE-10 Media Automation	4	3	0	1	Passed Class XII with English	NIL

Learning Objectives

The Learning Objectives of this course are as follows:

- To familiarize students with the interconnections between media and automation applications and the ethical issues associated with them. The students will understand the future of the media industries with the induction of AI and Robots.

Learning outcomes

The Learning Outcomes of this course are as follows:

- By studying this course, students will be able to understand the nature of automation and artificial intelligence with special reference to media industries.
- They will be able to comprehend current trends and developments in news, advertising, social media and political communication with respect to the use of automation, AI, big data and the ensuing ethical challenges and issues.

SYLLABUS OF DSE-10:

UNIT – I (15 hours)

Unit I: Technologies, Terms and Concepts

- Big data and the algorithmic world
- Automation Technologies
- Algorithms: what are they, and why do they matter
- Automation in Media industry

UNIT – II (15 hours)

Unit II: Automation Applications

- Algorithmic journalism and computer assisted reporting
- News bots: automating news and information dissemination
- Digital Advertising and Algorithms
- Social Media Automation
- Political Campaigning and use of Data

UNIT – III (15 hours)

Unit III: Ethical Issues and Challenges

- Critical perspectives of AI, robots and ethics
- Human-machines communication
- Big Data, surveillance and privacy
- Fake news and open-source journalism

Practical component: (30 hours)
The students will prepare a comprehensive report on the media automation applications in the industry. They will write a critical report on the use of Artificial Intelligence and Robots in news and information dissemination.

Essential/recommended readings:

1. Gillespie, T. (2016). Algorithm. In B. Peters (Ed.), *Digital keywords: A vocabulary of information society and culture* (pp. 18-30). Princeton: Princeton University Press.

2. Striphas, T. (2012). What is an algorithm? *Culture Digitally*.

DISCIPLINE SPECIFIC ELECTIVE COURSE 11–(DSE-11): Development Journalism

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
DSE-11 Development Journalism	4	3	0	1	Passed Class XII with English	NIL

Learning Objectives

The Learning Objectives of this course are as follows:

- To familiarize students with an understanding and sensitivity towards developmental concerns.

Learning outcomes

The Learning Outcomes of this course are as follows:

- By studying this course, students will be equipped with skills to write development features and develop development material for different media platforms.

SYLLABUS OF DSE-11:

UNIT – I (15 hours)

UNIT I: Development and Development Journalism

- Models of development, major development paradigms -dominant paradigm. Alternative paradigm – participatory approach.
- Evolution of development journalism, agriculture extension, development support communication,
- Communication for social change, media advocacy, new age media, use of ICTs for development, Participatory development journalism

UNIT – II (15 hours)

UNIT II: Development stories:

- Researching and writing a development story,
- Development with a human face,
- Packaging of the development story,
- Development feature writing,
- Conflict of interests,
- mobilizing support for development.

UNIT – III (15 hours)

UNIT III: Media specific development coverage:

- The differences in approach between print and broadcast development journalism,
- packaging attractive ideas, visuals and documentation,
- Folk media,
- community radio for local development,
- Niche, rural and tribal communication media, newspapers and magazines
- Development communication agencies and websites.
- Critical appraisal of mainstream media's reporting of development issues.

Practical component: (30 hours)

Students under the guidance of the faculty must undertake visits to mohalla clinics, NGOs, Women's Self-Help groups, Special schools for underprivileged students and other such initiatives in the city to develop content for blogs/ newsletters/magazines from the visits. Interaction with rural journalists and video volunteers (eg. Khabar Lehariya) must be arranged too.

Essential/recommended readings:

1. A Manual of Development Journalism – Alan Chalkley, Vikas Publications, 1970.

2. Participatory Communication, Working for change and development – Shirley A .White, K Sadanandan Nair and Joseph Ascroft, Sage, 1994.

3. Development Communication and Media Debate – Mridula Menon, Kanishka Publsihers, 1997.

4. India, the Emerging Giant – Arvind Panagariya, Oxford University Press, 2008.

5. Participatory Video, Images that Transform and Empower – Shirley A. White (Editor), Sage Publications, 2003.

6. The Art of Facilitating Participation – Shirley A . White (Editor), Sage Publications, 1999.

7. Television and Social Change in Rural India – Kirk A. Johnson, Sage Publications, 1999

8. *Communication, Modernization and Social Development.* K. Mahadevan, Kiran Prasad, Ito Youichi and Vijayan K. Pillai.

Suggestive readings:

1. Everybody Loves a Good Drought. Stories from India's Poorest Districts, P. Sainath, 2000.

2. Designing messages for development communication: An audience participation-based approach (communication and human values).by Bella M Mody, Sage Publications, 1991.

3. Development Journalism/Communication: The Status of the Concept, Christine L. Ogan, Sage, 1982

4. Development Journalism: What Next? An Agenda For The Press, D. V. R. Murthy, Kanishka Publishers Distributors, 2006

5. Communication for Development: theory and practice for empowerment and social justice, Melkote, Srinivas R, Steeves, H. Leslie, Sage (New Delhi), 2015

DISCIPLINE SPECIFIC ELECTIVE COURSE 12–(DSE-12): Research Methodology for Media

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
DSE-12 Research Methodology for Media	4	3	0	1	Passed Class XII with English	NIL

Learning Objectives

The Learning Objectives of this course are as follows:

- To familiarise students on how to write a research paper and a research report.

Learning outcomes

The Learning Outcomes of this course are as follows:

- By studying this course, students will be able to write a research proposal and undertake research. T
- Students will be equipped to work as researchers independently as well as for various organisations.

SYLLABUS OF DSE-12:

UNIT – I (15 hours)

UNIT I: Introduction to Research and Basic Elements

- Definition, basic and applied research,
- Scientific approach, theoretical framework,
- Steps of research: selection of the problem, review of literature, statement of hypothesis and research question, methodology and methods, research design, sampling, data analysis and interpretation, presentation of results,
- Replication and ethical perspectives of mass media research
- Concepts and constructs,
- Independent and dependent variables,
- Nature of Measurement, levels of measurement, measurement scales, Specialized Rating Scales, Reliability and Validity, Research question and Hypothesis

UNIT – II (15 hours)

UNIT II: Sampling and Methods

- Universe, population, need for sampling, sampling methods: probability and non-probability, representativeness of the samples, sampling error, sample size
- Quantitative and Qualitative Techniques: content analysis, survey method, audience and readership surveys, designing questionnaires, observation methods, experimental research, case studies, field experiments, focus groups, intensive interviews, longitudinal research, Historical research, Ethnographies, Textual analysis, Discourse analysis

UNIT – III (15 hours)

UNIT III: Media Research Approaches

- Representational approach
- Media and the senses
- Academic writing, Citations, Bibliography

Practical component: (30 hours)

The students will present and submit a research proposal in his/her area of interest under the guidance of the faculty.

Essential/recommended readings-

1. Wimmer, Roger, D and Dominick, Joseph,R. *Mass Media Research,* Thomson Wadsworth, 2006, pgs1-60; 65-81;83-98.

2. Arthur Asa Berger. *Media Research Techniques*, Sage Publications, 1998.

3. John Fiske. *Introduction to Communication Studies*, Routledge Publications,1982.

6. Mankekar, Purnima. *Screening Culture, Viewing Politics*. Duke; 1999.

7. Buck-Morss, Susan. 1994. "The Cinema Screen as Prosthesis of Perception: A Historical Account." In The Senses Still, ed. Nadia Seremetakis, Chicago: University of Chicago Press (Chapter 4).

8. Hirschkind, Charles. 2006. The Ethical Soundscape: Cassette Sermons and Islamic Counterpublics. New York: Columbia University Press.

Suggestive readings-

1. Kothari, C.R. *Research Methodology: Methods and Techniques*, New Age International Ltd. Publishers, 2004, pgs1-55; pp. 95-120.

2. Bertrand, Ina and Hughes, Peter. 2005. *Media Research Methods; Audiences, institutions, Texts*. New York; Palgrave

Common Pool of Generic Elective (GE) Courses for EVEN Semesters

NOTE: The Generic Electives for the EVEN SEMESTERS will also run for Semester VI students.

Semester-IV
DEPARTMENT OF URDU

COURSES OFFERED BY DEPARTMENT OF URDU
Category I

(Provide the details of the Discipline Specific Courses offered by your department for the UG Programme with your discipline as the Single Core Discipline)

[UG Programme for Bachelor in Urdu (Honours) degree in three years]

DISCIPLINE SPECIFIC CORE COURSE -10 (DSC-10) – : URDU QASIDA

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Urdu Qasida	4	3	1	0	Urdu in class XII or X	Nil

Learning Objectives

The Learning Objectives of this course are as follows:

- To give knowledge of classical poetry particularly Qasida, which is written specially in praise of kings and their throne, kingdom, military squad etc.
- To give knowledge of such poetic form which is not in use in these days?
- To give a glimpse of classical literature with special reference to Urdu Qasida.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Knowledge about classical form of poetry Qasida.
- Appreciate nuances of Qasida.
- Demonstrating conceptual and textual understanding.

SYLLABUS OF DSC-10

UNIT – I (15 Hours)

1. Qasida ka Fan
2. Qaside ke Ajzaye Tarkibi
3. Urdu mein Qaside ka Aaghaz-o-Irteqa

UNIT – II (15 Hours)

1. Sauda ki Qasida Nigari
2. Zauq ki Qasida Nigari

UNIT – III (15 Hours)

1. Uth Gaya Bahman-o-de ka chamanistan se amal (Sauda)
2. Zahe Nishat agar kijiye use tahreer (Zauq)

Practical component (if any) - NIL

Essential/recommended readings

1. Intekhab-e-Qasaid – Uttar Pradesh Academy

Suggestive readings

1. Urdu me Qasida Nigari – Abu Mohd Sahar
2. Urdu Qasida Nigari ka Tanqeedi Jaeza – Mahmood Ilahi
3. Sher-ul-Hind – Abdus Salam Nadvi
4. Sauda – Sheikh Chand
5. Mirza Mohmmad Rafi Sauda – Khaliq Anjum
6. Kulliyat-e-Zauq – Tanveer Ahmad Alvi

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE – 11 (DSC-11): URDU MASNAVI

CREDIT DISTRIBUTION, ELIGIBILITY AND PREREQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Urdu Masnavi	4	3	1	0	Urdu in Class XII or X	Nil

Learning Objectives

The Learning Objectives of this course are as follows:

- To give knowledge of classical society of India through Urdu Masnavi.
- To give a glimpse of classical literature with special reference to Urdu Masnavi.
- Through Urdu Masnavi student can learn about lifestyle, rituals and customs of Indian society of 18th and 19th centuries.

Learning Outcomes

The Learning Outcomes of this course are as follows:

- Demonstrating conceptual and textual understanding.
- Knowledge about classical form of poetry Masnavi.
- Appreciate nuances of Masnavi.

SYLLABUS OF DSC -11

UNIT – I (15 Hours)

1. Masnavi ka Fan
2. Urdu Masnavi ka Aaghaz-o-Irteqa
3. Dakan me Urdu Masnavi ka Irteqa
4. Shumali Hindme Urdu Masnavi ka Irteqa

UNIT – II (15 Hours)

1. MeerHasan ki Masnavi Nigari
2. Pandit Daya Shankar Naseem ki Masnavi Nigari
3. Nawab Mirza Shauq ki Masnavi Nigari

UNIT – III (15 Hours)

1. Masnavi Sehar-ul-Bayan – Meer Hasan (Aaghaz-e-Dastan se Paristan me jane tak)
2. Gulazar-e-Naseem – Naseem (Ibteda se Pahunchna Tajulmaluk ka ek Andhe ke Takiye par tak)
3. Zahar-e-Ishq – Mirza Shauq (Mukammal)

Practical component (if any) - NIL

Essential/recommended readings

1. Urdu Masnavi ka Irteqa – Abdul Qadir Sarwari
2. Urdu Masnavi Shumali Hind mein – Gyan Chand Jain
3. Urdu Masnavi ka Irteqa Shumali Hind mein – Syed Mohammad Aqil
4. Urdu ki Teen Masnaviyan – Khan Rasheed
5. Masnaviyat-e-Shauq – Rasheed Hasan Khan
6. Masnavi Sehar-ul-Bayan - Rasheed Hasan Khan
7. Masnavi Gulzar-e-Naseem - Rasheed Hasan Khan
8. Tareekh-e-Masnviyat-e-Urdu – Syed Jalaluddin

Suggestive readings (if any)

DISCIPLINE SPECIFIC CORE COURSE– 12 (DSC-12): POET GHALIB

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course(if any)
		Lecture	Tutorial	Practical/ Practice		
Poet Ghalib	4	3	1	0	Urdu in Class XII or X	Nil

Matn ki Tadrees

Learning Objectives

The Learning Objectives of this course are as follows:

- To give knowledge of speciality of Mirza Ghalib as a poet and his writings.
- To develop Understanding of poetry and its importance for development of social consciousness.

Learning Outcomes

The Learning Outcomes of this course are as follows:

- Knowledge about classical poet Ghalib.
- Appreciate the importance of Ghalib in Urdu poetry.
- Explain the couplets of Ghalib.

SYLLABUS OF DSC-12

UNIT – I (15 Hours)

1. Ghalib: Sawaneh aur Shakhshiyat
2. Ghalib ki Ghazalgoi ki Aham Khususiyat
3. Tasauvvuf aur Ghalib
4. Ghalib ki Ishqiya Ghazalgoi
5. Ghalib ki falsafiyana Ghazalgoi

UNIT – II (15 Hours)

1. Ghalib ki Shairi meinrang-e-Zarafat
2. Ghalib ki Inferadiyat
3. Ghalib ki ghazal mein izahar-e-gham
4. Mohasin Kalam-e-Ghalib
5. Ghalib Haivan-e-Zareef

UNIT – III (15 Hours)

1. Diwan-e-Ghalib (Radeef Alif) (Matn ki Tadrees)

Practical component (if any) - NIL

Essential/recommended readings

1. Diwan-e-Ghalib
2. Yadgar-e-Ghalib – Altaf Husain Hali
3. Ghalib Shakhshiyat-o-Shairi – Rasheed Ahmad Siddiqui
4. Ghalib Taqleed aur Ijtihad – Khursheedul Islam
5. Irfan-e-Ghalib – Aal Ahmad Suroor
6. Mohasin-e-Kalam-e-Ghalib – Abdurrahman Bijnori
7. Atraaf-e-Ghalib – Syed Abdullah
8. Naqd-e-Ghalib – Khumaruddin Ahmad Aarzoo
9. Ghalib Shanasi – Z. Ansari

Suggestive readings

Category II

(MultidisciplinaryCourses for Undergraduate Programme of study with Urdu discipline as one of the Core Disciplines)

(For e.g. courses for B.A. Programmes with Urdu (discipline's name) as Major discipline)

DISCIPLINE SPECIFIC CORE COURSE (DSC-7): URDU FICTION-NOVEL

- Lala Ganesh Das
- Diwan Kirpa Ram
- Ghulam Nabi Khanyari
- Pir Ghulam Hassan Shah

UNIT – V (3 Weeks/9 Hours)

Famous Sufi saints of Jammu and Kashmir:

- Mir Sayyid Ali Hamadani
- Syed Bulbul Shah
- Mir Shams-ud-Din Araqi
- Lal Ded

Essential/recommended readings:

1. Ibrahim, Molvi Mohammad: Tazkira-o-Auliay-e-Kashmir, Srinagar, 1960
2. Puri, Mohammad Khaleel Mir Jaan: Tarikh Khaleel Mir Jaanpuri, Srinagar
3. Khaniari, Ghulam Nabi: Wajiz ut Tareekh, Translated in Urdu by Mohammad Yusuf Lone, Srinagar, 1862
4. Ansari, Nurul Hasan: Farsi Adab-be-Ahd-e-Aurangzeb, Department of Persian, University of Delhi, Delhi, 2006
5. Ahmed, Shams ud din, Waqiyat-e-Kashmir, Delhi, 2000

6. Ahmed, Shams ud din: Shams-ul-Tawareekh, Delhi, 2001
7. Ram, Diwan Kirpa: Gulabnama, Translated in English by Sukhdev Singh Charak, Light and Life Publishers
8. Shah, Pir Ghulam Hassan: Taareekh-e-Hassan, Translated in Urdu by Prof. Sharif Husain Qasemi, Ali Mohammad and Sons, Lal Chowk, Srinagar
9. Das, Ganesh: Rajadarshini, Translated in English by Sukhdev Singh Charak, JK Book House
10. Bhat, Ghulam Rasul: Morkheen Kashmir Ki Tareekhein, City Book Centre, Srinagar, 2008
11. Abidi, Amir Hasan: Hindustan Mein Farsi Adab, Indo-Persian Society, Delhi, 1984.
12. Naeemuddin: Hindustan Mein Farsi Adab, M.S. Publications, Lal Kuan, Delhi, 1985

DISCIPLINE SPECIFIC ELECTIVE COURSE – DSE 15: Study of Classical Persian literature: Prose

Credit distribution, Eligibility and Pre-requisites of the Course:

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Study of Classical Persian literature: Prose	4	3	1	NIL	Class XII pass	NIL

Learning Objectives

The Learning Objectives of this course are as follows:

1. To acquaint the students with the classical Persian prose literature
2. To make the students aware of the famous classical Persian prose writers like Abul Fazl Baihaqi, Daulat Shah Samarqandi and Ne'mat Khal Aali etc.

Learning outcomes

The Learning Outcomes of this course are as follows:

- By studying this course, the students will have the ability to apply critical and theoretical approaches to classical Persian prose literature
- By studying this course, the students will be familiar with the famous classical Persian prose writers like Abul Fazl Baihaqi, Daulat Shah Samarqandi and Ne'mat Khal Aali etc.

SYLLABUS OF DSE- 15

UNIT – I (3 Weeks/9 Hours)

- Kimiya-i-Saadat, Abu Hamid Imam Muhammad Ghazali (Nasr-e-Kohan; pp.250-266)

UNIT – II (3 Weeks/9 Hours)

Life and works of Famous Prose writers:

- Abul Fazal Baihaqi
- Imam Ghazali
- Nizamul Mulk Tusi

UNIT – III (3 Weeks/9 Hours)

Life and works of Famous Prose writers:

- Daulat Shah Samarqandi
- Abul Fazal Allami
- Nemat Khan Aali

UNIT – IV (3 Weeks/9 Hours)

- Importance & features of Classical Persian Prose

UNIT – V (3 Weeks/9 Hours)

Famous Sufi saints of Jammu and Kashmir:

- Mir Sayyid Ali Hamadani
- Syed Bulbul Shah
- Mir Shams-ud-Din Araqi
- Lal Ded

Essential/recommended readings:

1. Nasr-e-Kohan; Intersharat-e-Vizarat-e-Farhang-o-Hunar, Idareh Kull-e Nigarish, Tehran, Iran-1354.
2. Shafaq, Razazadeh: Tarikh-e-Adabiyat-e-Iran, Translated in Urdu by Sayyed Mubarizuddin Raf'at, Nadwatul Musannefin, Delhi-1955.
3. Shibli Nomani: Shair-ul Ajam, Shibli Academy, Azamgarh (U.P.).

DISCIPLINE SPECIFIC ELECTIVE COURSE – DSE 16: Modern Persian Literature: Prose

Credit distribution, Eligibility and Pre-requisites of the Course:

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/		

				Practice		
Modern Persian Literature: Prose	**4**	**3**	**1**	**NIL**	**Class XII pass**	**NIL**

Learning Objectives

The Learning Objectives of this course are as follows:

1. To acquaint students with the chief characteristics of Modern Persian Prose
2. To provide knowledge about some prominent Modern Persian Prose writers and their literary contributions

Learning outcomes

The Learning Outcomes of this course are as follows:

- By studying this course, the students will have the ability to gain knowledge about the essence of modern Persian prose
- By studying this course, the students will be familiar with different genres and writings of prominent modern prose writers of Iran will enable the students to learn the literary importance of their works and also the study will provide them an opportunity to know different aspects of modern Iranian society and culture

SYLLABUS OF DSE- 16

UNIT – I (3 Weeks/9 Hours)

- A brief overview of modern Persian prose

UNIT – II (4 Weeks/12 Hours)

- Social and political conditions of modern Iran

UNIT – III (4 Weeks/12 Hours)

A brief introduction of the following prose writers:

- Mohammad Ali Jamalzada
- Saeed Nafisi
- Sadiq Hidayat
- Bozurg Alavi
- Jalal Ale Ahmad
- Simin Danishwar
- Ibrahim Gulistan
- Jamal Mir Sadeqi

UNIT – IV (4 Weeks/12 Hours)

A brief introduction of the following prose writers:

- Behram Sadeqi
- Houshang Gulshiri
- Samad Behrangi
- Mehmud Daulatabadi
- Houshang Muradi Kirmani
- Mohsin Makhmalbaf
- Saiyyad Mehdi Shujaee
- Razia Tujjar

Essential/recommended readings:

1. Nasr-e-Kohan; Intersharat-e-Vizarat-e-Farhang-o-Hunar, Idareh Kull-e Nigarish, Tehran, Iran-1354.
2. Shafaq, Razazadeh: Tarikh-e-Adabiyat-e-Iran, Translated in Urdu by Sayyed Mubarizuddin Raf'at, Nadwatul Musannefin, Delhi-1955.
3. Shibli Nomani: Shair-ul Ajam, Shibli Academy, Azamgarh (U.P.).

ANNEXURE-23

Sub: Amendment to Ordinance V

[E.C Resolution No. 14/ (14-1-4) dated 09.06.2023]

Following addition be made to Appendix-II-A to the Ordinance V (2-A) of the Ordinances of the University;

Add the following:

Syllabi of Semester-IV, V and VI of the following departments under Faculty of Interdisciplinary and Applied Sciences based on Under Graduate Curriculum Framework -2022 implemented from the Academic Year 2022-23.

DEPARTMENT OF BIOCHEMISTRY
BSc. (Hons.) Biochemistry
Semester IV

DISCIPLINE SPECIFIC CORE COURSE - (DSC-10)
METABOLISM OF AMINO ACIDS AND NUCLEOTIDES

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Metabolism of Amino Acids and Nucleotides (BCH-DSC-401)	4	2L	00	2P	Class XII with Science and Biology	NIL

Learning Objectives

The main objective of the course is to offer detailed and comprehensive knowledge about the synthesis and degradation pathways of amino acids and nucleotides and their importance in the proper functioning of the cells. This course also interrelates the metabolism of these

molecules with respect to health diseases in addition to providing an overview of inhibitors of metabolism for treating the diseases of metabolic disorders.

Learning outcomes

On successful completion of the course, students will be able to:

1. Explain the importance of nitrogen cycle.
2. Explain the degradation and biosynthetic pathways of amino acids and nucleotides in humans.
3. Discuss the importance of amino acids as precursors to a variety of important biomolecules.
4. Examine the role of inhibitors of nucleotide metabolism as chemotherapeutic drugs
5. Discuss the integration of the amino acid, nucleotide, carbohydrate and lipid metabolism

SYLLABUS OF DSC-10

BCH-DSC-10 : METABOLISM OF AMINO ACID AND NUCLEOTIDES
Semester – IV

THEORY (Credits 2)

Total Hours: 30

Unit I: Overview of Nitrogen and Amino Acid Metabolism (6 Hours)

Nitrogen cycle, incorporation of ammonia into biomolecules, Role of essential and non-essential amino acids in growth and development, Metabolic fates of amino groups. Transamination, role of pyridoxal phosphate, Glucose-alanine cycle, Krebs bicycle, urea cycle, its regulation and inherited defects of urea cycle, Gamma Glutamyl cycle.

Unit II: Catabolism, Biosynthesis and precursor functions of amino acids (10 Hours)

Catabolic pathways of individual amino acids, Glucogenic and ketogenic amino acids. Metabolism of one carbon unit, Overview of amino acid synthesis: Biosynthesis of non-essential amino acids and its regulation, Disorders of amino acids metabolism, phenylketonuria, alkaptonuria, maple syrup urine disease, methyl malonic acidemia (MMA), homocystinuria, and Hartnup's disease, ***Precursor Functions of Amino Acids*****:** Biosynthesis of creatine and creatinine, polyamines (putrescine, spermine, spermidine), catecholamines (dopamine, epinephrine, norepinephrine) and neurotransmitters (serotonin, GABA)

Unit III: Biosynthesis and Degradation of Nucleotides (10 Hours)

De novo synthesis of purine and pyrimidine nucleotides, regulation and salvage pathways, Digestion of nucleic acids, degradation of purine and pyrimidine nucleotides, Inhibitors of nucleotide metabolism. Lesch Nyhan Syndrome, Gout and SCID (Adenosine deaminase deficiency), Biosynthesis of deoxyribonucleotides and its regulation, conversion to triphosphates, biosynthesis of coenzyme nucleotides

Unit IV: Integration of Metabolism **(4 Hours)**

Integration of metabolic pathways (carbohydrate, lipid and amino acid metabolic pathways), tissue specific metabolism (brain, muscle, and liver).

2.3 Practical (Credits 2)

Total Hours: 60

1. Assay of serum transaminase – SGOT and SGPT
2. Estimation of serum urea.
3. Estimation of serum uric acid.
4. Estimation of serum creatinine.
5. Glutamate Dehydrogenase Assay
6. Aspartate Transcarbomylase kinetics
7. Case studies on SCID, Gout and Lesch Nyhan Syndrome.

2.4 Essential readings:

- Berg, J.M., Tymoczko, J.L. and Stryer L., (2012) W.H. Biochemistry (7th ed.), Freeman and Company (New York), ISBN:10: 1-4292-2936-5, ISBN:13:978-1-4292-2936-4.
- Devlin, T.M. (2011) Textbook of Biochemistry with Clinical Correlations (7th ed.), John Wiley & Sons, Inc. (New York), ISBN:978-0-470-28173-4 / BRV ISBN:978-0-470-60152-5.
- Nelson, D.L. and Cox, M.M. (2017) Lehninger: Principles of Biochemistry (7th ed.) W.H. Freeman & Company (New York), ISBN:13: 9781464126116 / ISBN:10- 1464126119.
- Principles of Biochemistry (2013) 4th ed., Voet, Donald, Voet, Judith & Pratt, charlotte. Wiley & Sons, Inc. (New Jersey), ISBN:978-1-11809244-6.
- Victor Rodwell, David Bender, et al. (2018) ISE Harper's Illustrated Biochemistry Thirty-First Edition, McGraw Hill (A and L Lange series), ISBN-10. 1259837939; ISBN-13. 978-1259837937.

3. Keywords

Metabolism, essential and non-essential amino acids, Nucleotides, Biosynthesis, Salvage pathway, metabolic disorders, HGPRT, Adenosine deaminase

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE – (DSC-11)
Hormones: Biochemistry and Function

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Hormones: Biochemistry and Function (BCH-DSC-402)	**4**	**2L**	**0**	**2P**	**Class XII with Science and Biology**	**NIL**

Learning Objectives

The course is designed to enable the students to understand and appreciate the delicate network and balance of hormones required for the healthy functioning of the human body. The course emphasizes on studying the different types of hormones along with their physiological action. The students will be taught the consequences of any hormonal imbalances (over and underproduction of hormones) with special emphasis on human diseases. It provides an understanding of the different endocrine factors that regulate metabolism, growth, electrolyte and mineral homeostasis, glucose homeostasis, stress physiology and reproductive function. It also prepares a student for postgraduate studies in any course related to molecular medicine.

Learning outcomes

On successful completion of the course, students will be able to:

1. Explain the molecular mechanism and signaling pathways mediating Hormone Action
2. Describe the physiological role of each hormone in regulating growth, appetite, metabolism and reproduction
3. Examine the regulatory mechanisms regulating Hormone secretion and release.
4. Discuss the basis of endocrine diseases taking case studies.

SYLLABUS OF DSC-11

BCH-DSC-11 : HORMONES : BIOCHEMISTRY AND FUNCTION
Semester – IV

2.2 Course Contents
Theory (2 credits)

Total Hours: 30

Unit 1: Introduction to hormones and Hypothalamic- hypophyseal system: (5 Hours)

Introduction to hormones; Hypothalamic - pituitary axis- anatomy, histology, vasculature, and secretions. Physiological and biochemical actions of hypothalamic hormones and Anterior

pituitary hormones; Hormone feed- back regulatory cascade. Posterior pituitary hormones – structure, physiology and biochemical actions of AVP and Oxytocin; Diabetes insipidus.

Unit 2: Hormones regulating growth, energy metabolism and calcium homeostasis
(10 Hours)

Regulation of Growth: growth hormone and somatomedin, Endocrine disorders - gigantism, acromegaly, dwarfism, pygmies.

Thyroid gland- Biosynthesis of thyroid hormone and its regulation: Role of TRH, TSH in T_4 synthesis and response. Physiological and biochemical action of Thyroxine. Pathophysiology of thyroxine secretion: Goiter, Graves' disease, cretinism, myxedema.

Regulation of calcium homeostasis: PTH, Vitamin D and calcitonin. Mechanism of Ca^{2+} regulation involving bone, skin, liver, gut and kidneys. Pathophysiology - rickets, osteomalacia, osteoporosis.

Unit 3: Hormones regulating glucose homeostasis, stress physiology and electrolyte balance: (10 Hours)

Hormones of the Pancreas: structure, synthesis, regulation of release, incretins, physiology and biochemical actions of insulin and glucagon. Role of these hormones in blood glucose homeostasis; Pathophysiology - diabetes type I and type II. GIT hormones: Secretin, gastrin and incretins.

Physiology and action of Aldosterone; the Renin Angiotensin System. Physiology and Biochemical actions of Cortisol; Role of POMC and CRH in cortisol synthesis; Adrenal medullary hormones: epinephrine and norepinephrine. The Fight or flight response; Dual receptor hypothesis. General adaptation syndrome: acute and chronic stress response. Pathophysiology – Addison's disease, Conn's syndrome, Cushing syndrome.

Unit 4: Reproductive hormones: (5 Hours)

Male and female sex hormones. Interplay of hormones during ovarian and uterine phases of menstrual cycle; Placental hormones; role of hormones during parturition and lactation. Hormone based Contraceptives.

2.3 Practical (2 Credits)

Total Hours: 60

1. Glucose tolerance test.
2. Estimation of serum Ca^{2+}.
3. Determining the thyroid profile by estimating T_4 and TSH under normal and pathophysiological conditions. Or Estimation of estrogen during different days of the menstrual cycle.
4. Presentation Assignments on GI Tract hormones and Adipokines
5. HCG based pregnancy test.
6. Estimation of serum electrolytes.
7. Case studies: Diabetes Insipidus, Acromegaly and dwarfism, Diabetes Mellitus, Rickets, Osteoporosis, Cushing syndrome

2.4 Essential readings:

1. Vander's Human Physiology (2008) 11th ed.,Widmaier, E.P., Raff, H. and Strang, K.T. McGraw Hill International Publications, ISBN: 978-0-07-128366-3.
2. Sherwood, L. (2012) Introduction to Human Physiology 8th edition; Brooks/Cole, Cengage Learning. ISBN-13: 978-1133104544.
3. Victor Rodwell, David Bender, et al. (2018) ISE Harper's Illustrated Biochemistry Thirty-First Edition, McGraw Hill (A and L Lange series), ISBN-10. 1259837939; ISBN-13. 978-1259837937

Suggested readings:

1. Endocrinology (2007) 6th ed., Hadley, M.C. and Levine, J.E. Pearson Education (New Delhi), Inc. ISBN: 978-81-317-2610-5.
2. Guyton, A.C. and Hall, J.E., (2016) Reed Textbook of Medical Physiology 13th ed., Elseviers India Pvt. Ltd. (New Delhi). ISBN: 978-1455770052

3. Keywords

Hypothalamic-hypophyseal axis, hormones, calcium and glucose homeostasis, hormonal disorders.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE – (DSC-12)
Gene Organization, Replication and Repair

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Gene Organization, Replication and Repair (BCH-DSC-403)	4	2L	0	2P	Class XII with Science and Biology	NIL

Learning Objectives

The objective of the course is to introduce to the students, the basic concepts of genome, DNA structure, genes, chromatin and chromosomes. It provides an understanding of DNA replication, recombination, mutations and repair processes in a way that students can apply this knowledge in understanding the life processes and develop an interest to pursue high quality research.

Learning outcomes

After completion of this course, learners will be able to:

1. Analyse the structure of DNA and various forms of DNA and learn about organisation of genome in various life forms, supercoiling of DNA and its significance
2. Perform isolation of DNA and analyse the purity of isolated DNA sample
3. Evaluate the molecular basis of processes like DNA replication, recombination and transposition and demonstrate the significance of these processes
4. Perform various methods of DNA estimation
5. Discuss the various ways in which the DNA can be damaged leading to mutations, lesions and repair mechanisms

SYLLABUS OF DSC-12
BCH-DSC-12 : GENE ORGANIZATION, REPLICATION AND REPAIR
Semester – IV

2.2 Course Contents

Theory (2 Credits)

Total Hours: 30

Unit I: Structure of DNA and genomic organization **(8 Hours)**

Watson and Crick model of DNA, various forms of DNA, Supercoiling of DNA, linking number, Topoisomerases, Topoisomerase inhibitors and their clinical importance, Definition

of a gene, organization of genes in viruses, bacteria and eukaryotes, concept of split genes, introns, exons, satellite DNA, highly repetitive DNA.

Unit II: Replication of DNA **(10 Hours)**

The chemistry of DNA synthesis, DNA polymerase, the replication fork, enzymes and proteins in DNA replication, *E coli* DNA polymerases, stages of replication: initiation, elongation, origin of replication, relationship between replication and cell division, replication in eukaryotes, end replication problem, telomerases. Comparison of replication in prokaryotes and eukaryotes. Inhibitors of DNA replication and applications in medicine.

Unit III: Recombination and transposition of DNA **(6 Hours)**

Homologous recombination, enzymes in homologous recombination, site-specific recombination, recombinases. Transposition, DNA transposition by cut and paste and replicative mechanism.

Unit IV: Mutations and DNA Repair **(6 Hours)**

Importance of mutations in evolution of species, Types of mutations, DNA damage by hydrolysis, alkylation, oxidation and radiation. Mutations caused by base analogs and intercalating agents. Ames test. Replication errors and their repair, mismatch repair system. Repair of DNA damage-direct reversal of DNA damage, base excision repair, nucleotide excision repair, translesion DNA synthesis. DNA repair diseases.

2.3 Practical (2 Credits)

Total Hours: 60

1. DNA estimation by DPA
2. Separation of nitrogenous bases by paper chromatography
3. To plot the ultraviolet absorption spectrum of DNA
4. Isolation of chromosomal DNA from *E coli* cells
5. Determination of DNA concentration and purity by UV absorption.
6. Determination of the melting temperature of DNA
7. Demonstration of the mechanism of Transposition and Recombination (Dry Lab)
8. Ames test
9. Exercise with *in silico* tools (NCBI, GenBank, EMBL, DDBJ, NBD, BLAST and Clustal omega)

2.4 Essential readings:

- Lehninger: Principles of Biochemistry (7th ed.) (2017) Nelson, D.L. and Cox, M.M W.H. Freeman & Company (New York), ISBN:13: 9781464126116 / ISBN:10-1464126119.
- Molecular biology of the gene: (7th ed), (2014) Watson, J. D., Baker, T. A., Bell, S. P., Gann, A., Levine, M., & Losick, R. International). Pearson.

Suggested readings:

- Genetics - A Conceptual Approach,) (6^{th} ed). (2012), Pierce, B.A. W.H. Freeman & Co. (New York), ISBN:13:978-1-4292-7606-1 / ISBN:10:1-4292-7606-

- Lewin's Gene X (10th edition) (2018). Lewin, B., Krebs, J.E., Kilpatrick, S.T., Goldstein, E.S., Bartlett Learning publishers, LLC, ISBN: 978-0-7637-6632-0.
- The Cell: A Molecular Approach (7th ed.) (2009). Cooper, G.M. and Hausman, R.E. ASM Press & Sunderland (Washington DC), Sinauer Associates, MA. ISBN:978-0- 87893-3030.
- *Biochemistry* (6th ed.) (2016). Garrett, R. H., & Grisham, C. M. Brooks Cole. ISBN: 9781305882409

3. Keywords

DNA, Double helix, Supercoiling, Recombination, Transposition, DNA Repair

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

POOL OF DSEs

DISCIPLINE SPECIFIC ELECTIVE COURSE – (DSE-4)
BIOCHEMICAL MECHANISMS AND RESPONSES IN PLANTS

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Biochemical Mechanisms and Responses in Plants (BCH-DSE-4)	04	02	0	02	Class XII with Science and Biology	Basic courses allied to biological science

Learning Objectives

The course aims to provide thorough understanding of metabolic processes in plants and the role of different biosynthetic pathways in growth and development of plants. The course will also impart basic concepts and applications of plant secondary metabolites.

Learning outcomes

On successful completion of the course students will be able to:

1. Describe the structure and function of plant cell organelles in plant metabolism.
2. Explain the various plant biochemical processes and metabolic pathways including photosynthesis, photorespiration, nitrogen fixation and assimilation and plant secondary metabolism and their biological significance.
3. Discuss the role of plant hormones in plant growth and development.
4. Evaluate the various plant responses to different abiotic and biotic stress conditions.
5. Plan and execute plant tissue culture.

SYLLABUS OF DSE-4

BCH-DSE-4 : BIOCHEMICAL MECHANISMS AND RESPONSES IN PLANTS
Semester – IV

2.2 Course Contents

Theory (Credits – 2)

Total Hours : 30

Unit I: Photosynthesis and Respiration **(8 Hours)**

Introduction to Plant cells, Cell wall, Vacuole and Tonoplast membrane, Plastids and Peroxisomes. Overview to photosynthesis and Carbon assimilation, Light reaction and photosystems, Cyclic and non-cyclic photophosphorylation, Calvin cycle and its regulation, C4 cycle and Crassulacean acid metabolism (CAM), Photorespiration. Photoinhibition. Glycolytic pathway and its alternative reactions in plants, Translocation of metabolites across mitochondrial membrane, TCA cycle, electron transport chain in plants, alternative NAD(P)H oxidative pathways.

Unit II: Nitrogen metabolism (7 Hours)

Nitrogen cycle; Biological nitrogen fixation; Structure and function of Nitrogenase complex. Nitrate assimilation: Nitrate and Nitrite reductase. Primary and secondary ammonia assimilation in plants; ammonia assimilation by glutamine synthetase-glutamine oxoglutarate aminotransferase (GS-GOGAT) pathway.

Unit III: Plant physiology and Secondary metabolites (10 Hours)

Plant vascular system; Plant hormones and their role in plant growth and development; Regulation of plant morphogenetic processes by light. Plant stress responses to abiotic and biotic stresses: Water deficit, temperature, salinity, insect manifestation. Secondary metabolites: types, structure and functions of Alkaloids, Phenolics and terpenoids.

Unit IV: Plant tissue culture (5 Hours)

Cell and tissue culture techniques, types of cultures: organ and explant culture, callus culture, cell suspension culture and protoplast culture. Plant regeneration pathways: organogenesis and somatic embryogenesis. Applications of cell and tissue culture and somaclonal variation. Germplasm storage and cryo-preservation. Brief introduction to transgenic plants.

2.3 Practical:

Credits: 2 Total Hours : 60

1. Induction of hydrolytic enzymes (proteases /amylases/lipase) in germinating wheat seeds.
2. Effect of plant hormones on plant growth (Phytochrome effects on lettuce germination/ Gibberellic acid effect on α-amylase secretion in barley seeds).
3. Extraction and assay of Urease from Jack bean.
4. Estimation of carotene/phenols/tannins in fruits and vegetables.
5. Estimation of ascorbic acid in fruits and vegetables.
6. Effect of light on chlorophyll production.
7. Separation and analysis of chloroplast proteins (Rubisco) using SDS-PAGE.
8. Plant tissue culture

2.4 Essential readings:

1. Buchann (2015). Biochemistry and Molecular Biology of plant. (2nd ed.). I K International. ISBN-10: 8188237116, ISBN- 978047 07 14218
2. Caroline Bowsher, Martin steer, Alyson Tobin (2008). Plant Biochemistry. Garland Science. ISBN 978-0-8153-4121-5.

4. Taiz, L. and Zeiger, E. (2010). Plant Physiology (5th ed.). Sinauer Associates Inc. ISBN-13: 978-0878938667, ISBN-10: 0878938664

4. Keywords

Plant cell, photosynthesis, respiration, nitrogen fixation and assimilation, secondary metabolism, stress biology.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVE COURSE – (DSE-5)
NUTRITIONAL BIOCHEMISTRY

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Nutritional Biochemistry (BCH-DSE-5)	04	02	0	02	Class XII with Science and Biology	Basic courses allied to biological science

Learning Objectives

This course provides students with knowledge and understanding of the characteristics, function, metabolism and deficiency of macro and micronutrients in the human body. It involves integrated learning between the areas of Biochemistry and Nutrition.

Learning outcomes

On successful completion of the course students will be able to:

1. Critically analyse and evaluate concepts in nutritional biochemistry that are important for an understanding of human nutrition.
2. Demonstrate the relationship between nutrition and health.
3. Discuss the macro and micronutrients and their nutritional deficiencies.
4. Describe techniques used in the assessment of nutritional status and nutritional disorders.
5. Explain drug nutrient interactions.

SYLLABUS OF DSE-5

BCH-DSE-5 : NUTRITIONAL BIOCHEMISTRY
Semester – IV

2.2 Course Contents

Theory (Credits – 2)

Total Hours: 30

Unit I: Introduction to Nutrition and Energy Metabolism (4 Hours)

Defining nutrition, role of nutrients. Unit of energy, Food energy, SDA. Energy expenditure and its components, Energy Balance, Recommended Nutrient Intakes (RNI) and Recommended Dietary Allowances for different age groups.

Unit II: Macronutrients (10 Hours)

Food sources of carbohydrates, functions of carbohydrates, RDA, Factors affecting bioavailability, Glycemic index and glycemic load. Dietary fiber and the role of fibre in health. Role of Gut microbiome in maintaining health. Role of prebiotics and probiotics in nutritive health.

Essential Fatty Acids; Functions of EFA, AI, excess and deficiency of EFA, factors affecting bioavailability. Dietary implications of ratios of n6 and n3, MUFA, PUFA and SFA, Cholesterol in the body.

Functions of proteins in the body. RDA for different age groups. Essential and Nonessential amino acids. Complete and incomplete protein, Amino Acid Interactions: Antagonism, Toxicity, Imbalance, Amino acid complementation and Supplementation in foods. Protein quality determinants NPU, Biological Value, PDCAAS, Nitrogen balance. PEM: Marasmus and Kwashiorkor.

Unit III: Fat and water soluble Vitamins (9 Hours)

Vitamin A, D, E, K and dietary sources, RDA, Role of Vitamin A in Visual cycle and overview of other functions. Role of Vitamin K in Gamma carboxylation (blood clotting). Role of Vitamin E as an antioxidant. Role of Vitamin D in maintenance of bone physiology and overview of other functions. Vitamin C- Dietary sources, RDA, role in collagen synthesis. The B Complex vitamins- Dietary sources, RDA. Functions and role in metabolism, Role of Vitamin B12 and Folate in Haematopoiesis and Neurology. Biochemical basis for deficiency symptoms, Hypervitaminosis.

Unit IV: Minerals (7 Hours)

Minerals: Dietary Sources, RDA. Sodium, Potassium, Calcium, Iron, Chloride, Copper and Phosphorus- Function, metabolism, Excretion, Deficiency, Toxicity, Trace Elements Iodine, Fluoride, Mg, Zn, Se, Chromium, Molybdenum: Function, Metabolism, deficiency, Toxicity and Sources.

2.3 Practical:

Credits: 2 **Total Hours: 60**

1. Anthropometric identifications for nutrition related diseases, BMR calculation
2. Determination of oxidative stress: TBARS in serum, antioxidant enzymes in hemolysate/plant sources.
3. Estimation of A/E vitamin in serum.
4. Estimation of minerals in drugs/food/serum.
5. Determination of nutritive value of foods.
6. Understanding fortification and supplementation
7. Presentation and discussion on Food as medicine.
8. Group discussion on Nutrient-nutrient and drug-nutrient interactions
9. Case studies on nutritional disorders.

2.4 Essential readings:

1. Coombs Jr. G. F., (2008). *The vitamins, Fundamental aspects in Nutrition and Health.* Elsevier's Publications. ISBN-13- 978-0-12- 183493-7.

1. Devlin, T. M., (2011). *Textbook of Biochemistry with Clinical Correlations.* John Wiley & Sons, Inc. (New York), ISBN: 978-0-4710-28173-4.

3. Keywords

Nutrition, macronutrients, micronutrients, energy balance, nutrient deficiency

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

POOL OF GENERIC ELECTIVES

GENERIC ELECTIVE COURSE - (GE-7)
CELLULAR COMMUNICATIONS

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Cellular Communications (BCH-GE-7)	04	02	0	02	Class XII with Science and Biology	Basic course in cell biology

Learning Objectives

- Explain the concept of Cell-cell communication.
- Describe the various types of receptors, signal transduction pathways, second messengers and effector molecules.
- To understand how signalling pathways, regulate cell motility, metabolism, growth, organogenesis, and cell death.
- Discuss the crosstalk between signal transduction pathways crosstalk and are auto-regulated.
- To know about various diseases associated with cellular communication pathway defects.

Learning outcomes

On successful completion of the course, students will be able to:

1. Describe various types of cell - cell communication.
2. Discuss the various types of receptors and signal transduction pathways in bacteria, plants and animal system.
3. Explain the importance of various signalling pathways in the regulation of metabolism, growth, organogenesis and cell death.
4. Discuss the cellular communication defects that lead to various types of diseases including cancers.

SYLLABUS OF GE-7

BCH-GE-7 : CELLULAR COMMUNICATIONS
SEMESTER - IV

2.2 Course Contents

Theory (Credit 2)

Total Hours : 30

Unit: 1 Introduction to cell- cell communication. (2 Hours)

Chemical signalling - endocrine, paracrine, autocrine, intracrine and neuroendocrine mechanisms. Cognate signalling.

Unit: 2 Receptors and Signal transduction pathways (16 Hours)

Hormone receptors - extracellular and intracellular. Receptor - hormone binding, Scatchard analysis. G-Protein-coupled Receptors: Heterotrimeric G proteins, Second messengers: cAMP, cGMP, Lipid-derived Second Messengers (IP3, DAG) NO, Calcium Signalling. Effector systems - adenylyl cyclase, guanylyl cyclase, PDE, PLC. Protein kinases (PKA, PKB, PKC, PKG).

Enzyme linked receptors: Receptor Tyrosine Kinases: EGF, insulin and erythropoietin. Ras - MAP kinase cascade, and JAK - STAT pathway.
Ion-channel linked receptors; Neurotransmitter receptors (Acetylcholine receptor). Nerve transmission.

Intracellular receptors: Cytoplasmic and nuclear receptors. Steroid hormone, thyroid hormone receptors. Gene regulation.

Integrin receptors. Integrin signalling. Cell matrix communication Receptor Regulation. Cross talk.

Unit 3: Photoreceptors and signal transduction in plants (4 Hours)

Phytochromes, cryptochromes and phototropins signalling.

Unit 4: Cell death signalling (4 Hours)

Apoptosis, Autophagy

Unit 5: Bacterial signalling (4 Hours)

Quorum sensing, autoinducers, chemotaxis.

2.3 Practical

Credit: 2 **Total Hours : 60**

1. Yeast response to mating pherohormones .
2. Study of Chemotaxis response in Tetrahymena/ paramecium/ dictostylium
3. Study change in heart rate (sympathetic response) on exposure to caffeine (cAMP mediated) in zebrafish larvae.
4. Chemotaxis/ motility assay in microbes.
5. Effect of plant hormones on plant growth or photomorphogenesis in response to light. (Phytochrome effects on lettuce germination/ Gibberellic acid effect on α-amylase secretion in barley seeds)

Essential readings:

1. Lodish, U. H. (2016) Molecular Cell Biology. W.H. Freeman, 2016.
2. Nelson, D. L., & Cox, M. M. (2021). Lehninger principles of biochemistry (8th ed.). W.H. Freeman. ISBN:9781319230906

Chemical signaling, Receptors, signal transduction, GPCRs, RTKs, Photoreceptors, cell death signaling, bacterial signalling

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

GENERIC ELECTIVES COURSE - (GE-8)
BIOCHEMICAL CORRELATION OF DISEASES

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
BIOCHEMICAL CORRELATION OF DISEASES (BCH-GE-8)	**04**	**02**	**0**	**02**	**Class XII with Science and Biology**	**XIIth pass in biology**

Learning Objectives

The course aims to provide students with knowledge and understanding of the spectrum of human diseases. It will introduce the concept of a well-balanced diet, healthy lifestyle, the biochemical mechanism of diseases, treatment strategies, mechanism of action of drugs and drug resistance against various antimicrobials. The course also aims to outline the various strategies that could be employed for prevention of infectious and non-infectious diseases.

Learning outcomes

On successful completion of the course students will be able to:

1. Discuss the importance of a balanced diet, regular exercises and healthy lifestyle in leading a disease-free life.
2. Explain the functioning of the immune system and endocrine system and the basis of various autoimmune and hormonal disorders.
3. Correlate the genetic mutation and metabolic disorders.
4. Discuss the molecular mechanism of microbial pathogenicity, drug resistance and implications in public health management.

SYLLABUS OF GE-8

BCH-GE-8 : BIOCHEMICAL CORRELATION OF DISEASES
SEMESTER - IV

2.2 Course Contents

Theory (Credit 2)

Total Hours: 30

Unit I: Inherited Metabolic diseases and Hormonal disorders (9 Hours)

Introduction to inherited Metabolic diseases. Alkaptonuria, Phenylketonuria; Glycogen storage diseases (Von Gierke disease, Cori disease); Lipid storage diseases: Gaucher's disease; SCID. Overview of the endocrine disorders: Cushing's disease, Diabetes insipidus.

Unit II: Nutritional deficiency and lifestyle-based diseases (7 Hours)

Concept of nutrition and balanced diet; Protein-energy malnutrition: Kwashiorkor and Marasmus; Vitamin deficiency diseases: Beri-Beri, Scurvy, Pellagra, Nutritional deficiency Anemia, Night blindness, Rickets. Lifestyle-based diseases: Atherosclerosis, Diabetes Mellitus-II.

Unit III: Autoimmune diseases (6 Hours)

Concepts in immune recognition-self and non-self-discrimination, organ specific autoimmune diseases- Hashimoto's thyroiditis, Graves' disease, Myasthenia Gravis, Diabetes Melitus-I, Systemic diseases: Systemic lupus erythematosus (SLE), Rheumatoid arthritis.

Unit IV: Infectious diseases (8 Hours)

Classification of infectious diseases; Role of sanitation, drugs and vaccines in prevention, transmission and treatment of infectious diseases. Diseases caused by viruses: Polio, Influenza, HIV and COVID. Diseases caused by bacteria: Tetanus, Tuberculosis. Protozoan infections: Malaria; Parasitic infections: Kala Azar.

2.3 Practical:

Credits: 2 **Total Hours : 60**

1. Anthropometric measurements: BMI, Waist/Hip Ratio, Mid Arm Muscle Area (MAMA), Mid Arm Area (MAA).
2. Measurement of Blood pressure
3. Determination of blood Lipid Profile: Triglyceride, Cholesterol
4. Glucose tolerance test
5. Widal test
6. Permanent slides of malarial parasites/Leishmania
7. Case studies related to autoimmune diseases, life-style disorders and hormonal imbalance

2.4 Essential readings:

3. Keywords

Lifestyle and metabolic disorders, nutritional deficiency, hormonal disorder, autoimmunity and infectious diseases.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

GENERIC ELECTIVES COURSE – (GE-9)
FUNDAMENTALS OF MOLECULAR BIOLOGY

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Fundamentals of Molecular Biology (BCH-GE-9)	04	02	0	02	Class XII with Science and Biology	Basic courses allied to biological science

Learning Objectives

This course is designed to introduce the concepts of how the genetic material is organized within genomes and the difference in the architecture of the genome in various organisms. It deals with the replication of the genetic material in prokaryotes and eukaryotes as well as the expression of genes into RNA as well as proteins; all being crucial life processes required for the perpetuity and successful functioning of living organisms. It also introduces the concept of regulation of gene expression in prokaryotes.

Learning outcomes

On successful completion of the course, students will be able to:

1. Perform the isolation of bacterial genomic DNA and assess its purity
2. Evaluate the characteristic properties of DNA and RNA using biochemical assays like Dische test and Bial's test.
3. Identify the different nitrogenous bases present in Nucleic acids
4. Compare the DNA replication in prokaryotes and eukaryotes.
5. Discern the processes of conversion of the information stored in the genetic code into mRNA as well as proteins.

SYLLABUS OF GE-9

BCH-GE-9 : FUNDAMENTALS OF MOLECULAR BIOLOGY
SEMESTER - IV

2.2 Course Contents

Theory (Credit 2)

Total Hours: 30

Unit 1 Genome organization in organisms (3 Hours)

Definition of a gene, organization of genes in viruses, bacteria and eukaryotes. Supercoiling of DNA, linking number, topoisomerases.

Unit 2 Replication of genomes (9 Hours)

General features of DNA replication, properties of prokaryotic and eukaryotic DNA polymerases. Three stages of DNA replication, end replication problem, telomerase, Inhibitors of DNA replication and applications in medicine.

Unit 3 Transcription (10 Hours)

Transcription in prokaryotes, RNA polymerase, sigma factor, bacterial promoters, identification of DNA binding sites by DNA footprinting, various stages of RNA synthesis, initiation, elongation and termination, rho-dependent and rho-independent termination. Concept of operons (Lac operon). Eukaryotic RNA polymerases. Inhibitors of transcription and applications in medicine.

Unit 4 Translation (8 Hours)

Features of the genetic code, structure of ribosomes, charging of tRNAs, amino acyl tRNA synthetases; three stages of protein synthesis - initiation, elongation and termination. Inhibitors of protein synthesis.

2.3 Practicals

CREDITS: 2 **Total Hours: 60**

1. Quantitative determination of DNA and RNA by absorbance at 260 nm.
2. Estimation of DNA by Dische's reagent.
3. Estimation of RNA by Bial's reagent.
4. Separation of nitrogenous bases by paper chromatography.
5. Isolation of chromosomal DNA from *E. coli* and estimation of its purity by 260nm/280nm absorbance.

2.4 Suggested Readings

1. Nelson, D.L. and Cox, M.M. (2013). *Lehninger: Principles of Biochemistry* (6^{th} ed.,) W.H. Freeman & Company (New York), ISBN-13; 978-1-4641-0962-1 / ISBN:10-14641-0962-1.

2. Berg, J.M., Tymoczko, J.L. and Stryer, L., (2012). *Biochemistry* (7th ed.,) W.H Freeman and Company (New York), ISBN: 13:978-1-4292-7635-1.
3. Watson, J.D., Baker, T.A., Bell, S.P., Gann, A., Levine, M. and Losick, R. (2008) *Watson: Molecular Biology of the Gene* (7th ed.), Cold Spring Harbor Laboratory Press, Cold spring Harbor (New York), ISBN:0-321-50781 / ISBN-13: 9780321762436.

3. Keywords

Genes, Replication, Transcription, Translation, Genetic code, Protein synthesis.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

SEMESTER V
BSC (HONS.) BIOCHEMISTRY

DISCIPLINE SPECIFIC CORE COURSE – (DSC-13)
MOLECULAR CELL BIOLOGY

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Molecular Cell Biology (BCH-DSC-501)	4	2L	0	2P	Class XII with Science and Biology	NIL

Learning Objectives

The course aims to provide advanced knowledge about the function of cellular organelles and the mechanism of protein sorting in the cell. It will also provide details of cellular communications in the cell and understanding of molecular regulation of cell growth and cell death. The course will outline the molecular details of cancer development and treatment.

Learning outcomes

On successful completion of the course, students will be able to:

1. Explain the process of protein trafficking in the cell and role of various regulatory proteins involved in the process.
2. Discuss the different modes of cellular communication in a multicellular organism
3. Explain the regulatory mechanisms involved in controlling the process of mitosis, meiosis, apoptosis, necrosis and autophagy.
4. Examine the molecular and genetic basis of cancer development and various molecular approaches used for cancer treatment.

SYLLABUS OF DSC-13

BCH-DSC-501 : MOLECULAR CELL BIOLOGY
SEMESTER - V

Theory (2 Credits)

Total Hours: 30

Unit I: Protein Sorting and Secretory Pathway **(7 Hours)**

Overview of the endomembrane system; Co-translational and post-translational targeting of proteins into Endoplasmic Reticulum; Protein Modifications, Folding and Quality Control in ER; Protein targeting to Golgi complex and Lysosomes; Exocytosis; Sorting of Proteins to Mitochondria, Chloroplasts and Peroxisomes.

Unit II: Cellular Signaling (10 Hours)

Chemical signaling- endocrine, paracrine, autocrine, intracrine and neuroendocrine mechanisms. Hormone receptors- extracellular and intracellular. G protein coupled receptors, G proteins, second messengers- cAMP, cGMP, IP3, DAG, Ca^{2+}, Effector systems- adenylyl cyclase, guanylyl cyclase, PDE, PLC. Protein kinases (PKA, PKB, PKC, PKG). Receptor tyrosine kinases-EGF, Insulin and Ras-MAP kinase cascade. Non-receptor tyrosine kinase-erythropoietin receptor JAK-STAT pathway. Intracellular receptor family: Steroid hormone receptor and NO receptors.

Unit III: Cell cycle and Apoptosis (8 Hours)

Overview of the cell cycle; Stages of eukaryotic cell cycle; Events of Mitotic Phase and Cytokinesis; Role of cyclins and cyclin-dependent kinases; Molecular mechanisms of cell cycle regulation and Cell Growth; Meiosis and its regulation; Cell death: Apoptosis, Necrosis and Autophagy; Intrinsic and extrinsic apoptotic pathways; Regulation of apoptotic pathways.

Unit IV: Molecular Basis of Cancer Biology (5 Hours)

Types of cancer; Stages of cancer development; Properties of Cancerous Cells; Genetic basis of cancer; Cancer causing agents: radiations, chemical carcinogens and introduction to viral oncogenes; Role of cancer critical genes: oncogenes and tumor suppressor genes; Molecular approaches for cancer treatment.

2.3 Practical (2 Credits)

Total Hours: 60

1. Isolation of organelles by subcellular fractionation and validation of separated organelles by marker enzymes.
2. Study the changes in heart rate (sympathetic response) on exposure to caffeine (cAMP mediated) in model organisms.
3. Preparation of hepatocyte primary culture and cell enumeration.
4. Study of cell viability/death assay by use of trypan blue and MTT assay.
5. Polyploidy in onion root tip by colchicine treatment.
6. Study of apoptosis through analysis of DNA fragmentation patterns.
7. Identification and study of cancerous cells using permanent slides and photomicrograph.

2.4 Essential readings:

1. Cooper, G.M. (2018). The Cell: A Molecular Approach. (8th ed.). Sinauer Associates Inc: Oxford University Press. ISBN: 9781605357072

3. Alberts, B., Johnson, A., Lewis, J., Morgan, D., Raff, M., Roberts, K., Walter, P. (2014). Molecular Biology of the Cell. (6th ed.). Garland Science. ISBN: 978-0815345244

4. Lodish, H., Berk, A., Kaiser, C.A., Krieger, M., Bretscher, A., Ploegh. A., Martin, K.C., Yaffe, M., Amon, A. (2021). Molecular Cell Biology (9th ed.). W.H. Freeman & Company (New York). ISBN-13: 978-1319208523/ ISBN-10: 1319208525

Suggested readings:

1. Kleinsmith, L. J., Hardin, H., Wayne G., Becker, M. (2009). The World of the cell (7th ed.). ISBN-13: 978-0805393934 / ISBN-10: 0805393935.

3. Keywords

Protein Sorting, Protein Modification, exocytosis, Cellular communication, autophagy, mitosis, meiosis, Apoptosis, Necrosis, Cancer, Oncogenes, Chemotherapeutics.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE – (DSC-14)
CONCEPTS IN GENETICS AND EVOLUTION

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Concepts in Genetics and Evolution (BCH-DSC-502)	4	2L	0	2P	Class XII with Science and Biology	NIL

Learning Objectives

The aim of the course is to provide an understanding of both classical and modern concepts in the areas of mapping techniques, transmission, molecular, quantitative, population and evolutionary Genetics. Practicals are well correlated with the theory topics and designed to support skill-oriented learning outcomes. The course also works as preparation for further studies in a Master's programme in molecular biology or related topics.

Learning outcomes

On successful completion of the course, students will be able to:

1. Explain the principles of Mendelian genetics, extensions and applications.
2. Examine the various factors that confer genotypic and phenotypic variability.
3. Correlate human and viral genetics to create linkage and genetic maps.
4. Perform experiments using genetic model system *Drosophila melanogaster*.
5. Analyse biological data using statistical tools
6. Discuss the principles of transmission and inheritance in real life situations.

SYLLABUS OF DSC-14

BCH-DSC-502 : CONCEPTS IN GENETICS AND EVOLUTION
SEMESTER - V

2.2 Course Contents

Theory (2 Credits)

Total Hours: 30

Unit I: Mendelian and Non-Mendelian genetics (8 Hours)

Revision of Mendelian Genetics; Allelic variation and gene function - dominance relationships, multiple alleles, lethal alleles and null alleles. Complementation test using examples from

Drosophila eye colour mutants to differentiate allelic variants from gene interaction. Pleiotropic gene interaction - epistatic and non- epistatic, interaction between gene(s) and environment. Penetrance and expressivity, norm of reaction and phenocopy.

Unit II: Linkage, crossing over and mapping techniques (9 Hours)

Linkage and crossing over, genetic mapping in eukaryotes, centromere mapping with ordered tetrads, cytogenetic mapping with deletions and duplications, detection of linked loci by pedigree analysis in humans, LOD score, somatic cell hybridization for positioning genes on chromosomes and physical maps using molecular markers.

Unit III: Molecular genetics (8 Hours)

Sex determination: Genetic basis of sex determination in Humans, *Drosophila melanogaster* and *C. elegans. Non-nuclear inheritance and Epigenetics:* Extra nuclear inheritance, tests for organelle heredity and maternal effect; Mechanism of dosage compensation; X chromosomal inactivation in humans and *Drosophila melanogaster.* Epigenetic mechanisms of transcriptional regulation. Monoallelic expressions and Genomic imprinting.

Unit IV: Quantitative and Evolutionary Genetics (5 Hours)

Inheritance of complex traits, analysis of quantitative traits, quantitative trait loci (QTL), narrow and broad sense heritability, and their identification. Hybrid vigor and transgressive inheritance.

Molecular evolution - analysis of nucleotide and amino acid sequences, homologous sequences, molecular phylogenies, phenotypic evolution and speciation, Understanding the concept of fitness with respect to evolutionary genetics.

2.3 Practical (2 Credits)

Total Hours :60

1. Understanding Mendelian genetics (dry lab).
2. Monohybrid crosses in *Drosophila* for studying autosomal/sex-linked inheritance.
3. Squash preparation of salivary glands of Dipteran larva to observe polytene chromosomes.
4. Smear technique to demonstrate sex chromatin in buccal epithelial cells/neutrophils.
5. Understanding Hardy-Weinberg principle. PTC testing in a population and calculation of allelic and genotype frequencies.
6. Understanding chromosomal structure.
   - The study of normal and abnormal human karyotype (dry lab).
   - understanding polyploidy by studying karyotypes in plants
7. Study of human pedigrees (dry lab).

2.4 Essential readings:

1. Principles of Genetics (2015) 7th ed., Snustad, D.P. and Simmons, M.J., John Wiley & Sons. (Singapore), ISBN: 9781119142287
2. Genetics - A Conceptual Approach (2020), 7th ed., Pierce, B.A., W.H. Freeman & Co. (New York), ISBN: 978-01346047

Suggested readings:

1. An Introduction to Genetic Analysis (2017), 11th ed., Griffiths, A.J.F, Wessler, S. R, Carroll, S. B. and Doebley, J., W.H. Freeman & Company (New York), ISBN: 1464109486

2. Klug, W.S., Cummings, M.R., Spencer, C.A. (2019). Concepts of Genetics. Edition 12. Benjamin Cummings.

3. Keywords

Complementation, Allelic and gene interaction, Gene mapping, Non-nuclear inheritance and Epigenetics, Sex determination, Quantitative and Evolutionary Genetics

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE – (DSC-15)
GENE EXPRESSION AND REGULATION

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Gene Expression and Regulation (BCH-DSC-503)	4	2L	0	2P	Class XII with Science and Biology	NIL

Learning Objectives

The objective of the course is to introduce to the students the basic knowledge about how genes are transcribed and how translation takes place in prokaryotes and eukaryotes and how these processes are regulated, so that students can apply this knowledge in enhancing their analytical and problem-solving skills.

Learning outcomes

After completion of this course, learners will be able to:

1. Analyse the processes of transcription and translation in prokaryotes and eukaryotes
2. Discuss the features of the genetic code and various experimental approaches used to crack the code
3. Perform estimation of RNA by orcinol method
4. Discuss the molecular basis of RNA processing and RNA splicing
5. Perform isolation of RNA from bacteria and plant cells
6. Evaluate the various ways in which transcription and translation are regulated

SYLLABUS OF DSC-15

BCH-DSC-503 : GENE EXPRESSION AND REGULATION
SEMESTER - V

2.2 Course Contents
Theory (2 credits)

Total Hours: 30

Unit I: Transcription in Prokaryotes and Eukaryotes (10 Hours)

Transcription cycle in bacteria, Sigma factor, bacterial promoters and RNA Polymerases, various stages of RNA synthesis- initiation, elongation and termination, rho-dependent and rho-independent termination. Introduction of basal eukaryotic transcription machinery: three classes of eukaryotic RNA polymerases – I, II and III, and their respective promoters. Details of transcription by RNA polymerase II, features of RNA polymerase II core promoters. Inhibitors of eukaryotic and prokaryotic transcription and their applications.

Unit II: RNA Processing **(4 Hours)**

Various types of mRNA processing- polyadenylation and capping, brief overview of rRNA and tRNA processing. Chemistry of RNA splicing, the spliceosome machinery, group I and group II introns, alternative splicing.

Unit III: Translation **(7 Hours)**

Salient features of the genetic code, triplet nature, degenerate, wobble hypothesis, codon usage bias. Experimental approaches used to decipher the genetic code. Messenger RNA, transfer RNA, charging of tRNA. Structure of the ribosome. Three stages of translation-initiation, elongation and termination in prokaryotes and eukaryotes.

Unit IV: Regulation of gene expression **(9 Hours)**

Concept of operons, regulatory proteins, activators, repressors, DNA binding domains, regulation of *lac* and *trp* operon, riboswitches. Eukaryotic gene regulation by chromatin remodelling, regulation of galactose metabolism in yeast, action of enhancers and insulators, working of activators and repressors, synthesis and mechanism of action - siRNA and miRNA.

2.3 Practical (2 Credits)

Total Hours: 60

1. Quantitative estimation of RNA by Orcinol Method
2. Extraction of total RNA from bacteria /yeast
3. To study growth curve and diauxic growth curve in *E. coli*
4. To study inducible promoter activity by reporter assay
5. To study the effect of inhibitors on protein synthesis
6. DNA Footprinting (Dry Lab)

2.4 Essential readings:

1. Nelson, D.L. and Cox, M.M (2017) *Lehninger: Principles of Biochemistry* (7th ed.) W.H. Freeman & Company (New York), ISBN:13: 9781464126116 / ISBN:10-1464126119.

Biochemical Applications in Forensic Sciences (BCH-DSE-2)	04	02	0	02	Class XII with Science and Biology	NIL

Learning Objectives

The course aims to provide an understanding of the applications of biochemistry in forensic sciences through analysis of evidence, which will help students develop analytical and problem-solving skills for real life situations. With a background of the DSC of Biochemistry, the students get an insight into a major area of application of Modern Biology. The course will keep abreast with all recent developments and emerging trends in forensic science like DNA fingerprinting, brain mapping and facial reconstruction; thus, helping interested students take up forensic science as a future course of study.

Learning outcomes

On successful completion of the course students will be able to:

1. Explain the fundamental concepts and principles of forensic science and their significance.
2. Demonstrate forensic investigation, preservation of evidences, as well as chemical, physical and biological analysis of biological samples
3. Establish the age, sex and identity of an individual of an individual by document evaluation, fingerprints, footprints and DNA analysis.
4. Analyze samples for drug testing, ink and stain testing and document and handwriting verification.
5. Perform Narco Analysis, polygraphy, lie detection and facial reconstruction.

SYLLABUS OF DSE-2

BCH-DSE-2 : BIOCHEMICAL APPLICATIONS IN FORENSIC SCIENCES
Semester – V

2.2 Course Contents

Theory (Credits – 2)

Total Hours : 30

Unit I: Introduction to forensic science and application of biological sciences to forensic investigation (10 Hours)

History and Development of Forensic Science, Biochemical analysis of various biological evidences: blood, semen, viscera, bite marks, and hair. Establishment of identity of individuals: fingerprints, footprints, blood and DNA. Anthropology – skeletal remains, Odontology. Time of death - rigor mortis, liver mortis, algor mortis, forensic entomology. Biochemical basis for determination of cause of death. case studies

Unit II: Application of chemical sciences to forensic investigation (6 Hours)

Detection of drugs of abuse and narcotics in biological samples, Toxicological examination of viscera, detection of petroleum products and food adulteration. Analysis of inks and their use in questioned document identification. Blood spatter analysis, Case studies

Unit III: DNA Fingerprinting (6 Hours)

Introduction to DNA-and source of DNA in Forensic case work, Techniques of DNA fingerprinting-RFLP, STR, PCR, DNA fingerprinting in paternity disputes, mass disaster and other forensic case work, studying kinship by DNA profiling: Related individuals have similar DNA profiles, DNA profiling and the remains of the Romanovs. Sex identification by DNA analysis: PCRs directed at Y chromosome-specific sequences, Amelogenin gene typing. Case studies

Unit IV: Recent advances in forensics (8 Hours)

Narco analysis: theory, forensic significance, future prospect, *Brain mapping:* introduction, EEG, P-3000 wave, forensic applications, limitation of technique, *Polygraph*: Principle and technique, polygraph as forensic investigative tool, use of psychoactive drugs in forensic analysis. NHRC guidelines for polygraph test. *Facial reconstruction*: Method and technique, facial reconstruction in forensic identification, Case studies.

2.3 Practicals

Credit: **2** **Total Hours : 60**

1. Definition, Identification and Mapping of Crime scene
2. Collection, Preservation, Packaging, and Labeling of biological evidence for their forensic investigation.
3. Preliminary and Confirmatory test for blood/semen/saliva

4. Examination of Micro Evidences: fiber, hair, pollen and soil
5. Fingerprint development from various surfaces and their microscopic and chemical examination
6. Handwriting identification based on class characteristic and individual characteristics
7. Identification of dyes, drugs and ink by TLC
8. Blood spatter analysis
9. DNA Fingerprinting: Sex determination through Y specific STRs and Maternal lineage identification through mitochondrial DNA comparisons.
10. Field trip to a forensic laboratory

2.4 Essential readings:

- James, S.H., Nordby, J.J. & Bell, S. (2014). *Forensic Science: An Introduction to Scientific and Investigative Techniques, Fourth Edition*: Taylor & Francis. ISBN 9781439853832
- Jones, P., & Williams, R.E. (2009). *Crime Scene Processing and Laboratory Workbook First Edition*: CRC Press. ISBN 9780429249976
- Saferstein, R. (2018). *Criminalistics: An Introduction to Forensic Science, Twelveth edition*: Pearson Education. ISBN 10:0134477596, ISBN 13: 9780134477596
- Veeraraghavan, V. (2009). *Handbook of Forensic Psychology, First Edition*: Selective & Scientific Books, ISBN 13: 9788189128166.

Suggested readings:

- Lee, H., Palmbach, T. & Miller, M. (2001). *Henry Lee's crime scene handbook, First Edition*: Academic Press ISBN 9780080507989
- Parikh, C.K. (2016). *Parikh's textbook of medical jurisprudence, forensic medicine and toxicology: for classrooms and courtrooms*, *Seventh Edition*: CBS Publishers and Distributors. ISBN 9788123926469

3. Keywords

Forensic biology; blood spatter analysis; toxicology; narco-analysis; DNA fingerprinting; polygraph; odontology; forensic entomology.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVE COURSE – (DSE-3)
MICROBIOLOGY

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Microbiology (BCH-DSE-3)	04	02	0	02	Class XII with Science and Biology	XIIth pass with biology

Learning Objectives

The course aims to trace the history of development of the discipline of Microbiology and to emphasize the existence of the immense diversity in the microbial world and maintenance of microbes under laboratory conditions. Through this course students will be introduced to the concept of different modes of gene transfer in bacteria. Further, students will be made aware about the applications of microorganisms in food and industry.

Learning outcomes

On successful completion of the course students will be able to:

1. Identify different types of microbes
2. Perform routine microbiological practices including sterilisation, media preparation, maintenance of microbial culture, microbial growth etc.
3. Plan basic research using microbes
4. Discuss the varied applications of microbes.

SYLLABUS OF DSE-3

BCH-DSE-3 : MICROBIOLOGY
Semester – V

2.2 Course Contents

Theory (Credits – 2)

Total Hours : 30

Unit I: History and Diversity of Microbial world **(8 Hours)**

Spontaneous generation versus biogenesis, contributions of Anton von Leeuwenhoek, Joseph Lister, Paul Ehrlich, Richard Petri, Charles Chamberland, Edward Jenner, Louis Pasteur,

Robert Koch, Martinus W. Beijerinck, Sergei Winogradsky, Alexander Fleming, Elie Metchnikoff and Emil von Behring. General characteristics of different groups: Acellular microorganisms (Viruses, Viroids, Prions) and Cellular microorganisms (Bacteria, Archaea, Algae, Fungi and Protozoa. Cell-wall: Composition and detailed structure of Gram positive and Gram-negative cell walls, mechanism of Gram staining

Unit II: Microbial Nutrition, Growth and Control (6 Hours)

Nutritional types of microorganisms, growth factors, culture media- synthetic and complex, types of media; isolation of pure cultures, growth curves, mean growth rate constant, generation time; influence of environmental factors on growth of microbes: effect of pH, temperature, solute, oxygen concentration, pressure and radiations. Sterilization, disinfection and antiseptics.

Unit III: Microbial Genetics (6 Hours)

Conjugation, Transformation and Transduction. Gene mapping in Bacteria

Unit IV: Application of Microbes (10 Hours)

Basic design of fermenter, continuous and discontinuous culture. Preparation of fermented food products such as curd and cheese. Preparation of alcoholic beverages like wine and beer. Treatment of waste-water (Municipal treatment plant) and sewage. Bioremediation and biodegradation. Human microbiome: Role in health and disease**.** Soil Microbiome: Role in plant health

2.3 Practical:

Credits: 2 Total Hours : 60

1. To prepare and sterilise the culture media for the growth of microorganisms
2. To perform various culture transfer techniques: Solid to solid (streaking), liquid to solid (spreading), liquid to liquid, solid to liquid and determine CFU/ml
3. To study growth curve of bacteria
4. To study the effect of pH/temperature on the growth of bacteria
5. To perform gram staining
6. To determine the effect of antibiotics using disc diffusion test
7. Study of different shapes of bacteria, fungi, algae, protozoa using permanent slides/pictographs

2.4 Essential readings:

1. Willey, J., Sherwood, L., Woolverton, C. (2017). Prescott's Microbiology (10th ed.). McGraw Hill international. ISBN 13: 9781259657573.
2. Chan, M. J., Krieg E. C. S., Pelczar, N. R. (2004) Microbiology (5th ed.). McGraw Hill International. ISBN 13: 9780094623206.
3. Pierce, B.A. (2012) Genetics - A Conceptual Approach, (6th ed.), W.H. Freeman & Co. (New York), ISBN:13:978-1-4292-7606-1 / ISBN:10:1-4292-7606-1
4. Cappuccin, and Sherman N., Microbiology: A Laboratory manual (10th ed.). Benajamin/ Cummings. ISBN 1o J. G.3: 9780321840226. 86

Suggested readings:

1. Madigan, M. T., Martinko J. M., & Stahl D. A., (2010) Brock Biology of Microorganisms (13th ed.). Pearson Education International. ISBN 13: 9780321649638.
2. Snustad, D.P. and Simmons, M.J. (2012) Genetics (6th ed.), John Wiley & Sons. (Singapore), ISBN: 978-1-118-09242-2

3. Keywords

Microbiological Techniques, Media, Sterilization, Growth curve

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVE COURSE – (DSE-6)
IN-SILICO TOOLS IN PROTEOMICS AND GENOMICS

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
In-silico Tools in Proteomics and Genomics (BCH-DSE-6)	04	02	0	02	Class XII with Science and Biology	Basic courses allied to Biological sciences

Learning Objectives

The objective of this course is to impart basic understanding of computational biology with a broader knowledge of genomics and proteomics. In silico tools used in the study of genomes and proteins will be emphasized. The course presents an overview of theoretical knowledge, and practical methods for characterization of functional elements in DNA and Protein data. Students will be trained in the basic theory and application of programs used for database searching, protein and DNA sequence analysis, genome analysis, prediction of protein structures and protein-protein interactions.

Learning outcomes

On successful completion of the course students will be able to:

1. Discuss the basics of bioinformatics and computational biology
2. Describe the use of several softwares/tools in omics biology.
3. Discuss, access and use biological databases in the public domain.
4. Explain protein structure using visualization softwares.
5. Perform sequence alignments
6. Discuss the fundamental aspects of *in-silico* protein structure prediction.
7. Explain the applications of bioinformatics from genomes to personalized medicine.
8. Describe the concept of drug designing using a bioinformatic approach.

SYLLABUS OF DSE-6

BCH-DSE-6 : In-silico Tools in Proteomics and Genomics
Semester – V

2.2 Course Contents

Theory
Credits: 2 **(30 Hours)**

Unit I: Introduction to omics biology **No. of hours: 4**

History of omics biology, introduction to central dogma, Scope of bioinformatics, Tools and databases (sequence alignment, BLAST, NCBI and PDB databases)

Unit II: Genomics **No. of hours: 9**

Introduction to Genomics, Structure and Organization of Prokaryotic and Eukaryotic Gene. Genome Sequencing, Human Genome Project, Genome Browsers, Gene annotation, Gene Identification and Sequence analysis

Unit III: Protein structure prediction and proteomics **No. of hours: 9**

Introduction to proteomics, 2D gel Electrophoresis, Mass spectroscopy, computational prediction of protein 2D and 3D structure - Homology Modeling, Fold Recognition and *ab-intio* methods, protein - protein interactions (yeast two hybrid system, pull down assay), Protein Disordered Regions

Unit IV: Applications of genomics and proteomics **No. of hours: 8**

Functional Genomics, Comparative genomics, Proteomics in Drug discovery, Protein-Drug interaction studies, Computer Aided Drug Discovery (CADD). Role of genomics and proteomics in Diagnostics and Therapeutics. Role of AI in genomics and proteomics.

2.3 Practical:

Credits: 2 **(60 Hours)**

1. Sequence retrieval (protein and gene) from NCBI.
2. Sequence Analysis - BLAST suite of tools for pairwise alignment.
3. Gene Prediction Tools (Genscan/Glimmer)
4. Structure download (protein and DNA) from PDB & Molecular view by visualization Software (Pymol/Rasmol)
5. Protein Secondary Structure Prediction Tools (GORR)
6. Protein Tertiary Structure Prediction (Homology Modelling/SWISS Model)
7. Protein -Protein Interaction Databases (STRING)
8. Protein-Ligand Docking and Interaction studies (CADD)

2.4 Essential readings:

1. David M. (2004). Bioinformatics: Sequence and Genome Analysis. Cold Spring Harbor Laboratory Press; ISBN 978-087969712-9.
2. Pevsner, J. (2003). Bioinformatics and Functional Genomics (1st ed.), John Wiley & Sons, Inc. (New Jersey); ISBN: 0-47121004-8.
3. Baxevanis A.D. and Ouellette Francis B.F. (2005), Bioinformatics: A Practical Guide to the Analysis of Genes and Proteins (3rd ed.), John Wiley & Sons, Inc. (New Jersey), ISBN: 0-47147878-4.
4. Ghosh, Z. and Mallick, B., (2008) Bioinformatics – Principles and Applications, (1st ed.) Oxford University Press (India), ISBN: 9780195692303.
5. Introduction to Proteomics – Tools for the new biology (1st Ed.) by Liebler, D.C., Humana Press Inc., New Jersey, USA. 2002.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

POOL OF GENERIC ELECTIVES

GENERIC ELECTIVE COURSE - (GE-5)
NUTRITION AND FOOD SCIENCE

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Nutrition and Food Science (BCH-GE-5)	04	02	0	02	Class XII with Science	NIL

Learning Objectives

The course aims to provide the basic knowledge of food and its importance in nutrition. The students will understand the importance of a balanced diet and the association of life style disorders with unhealthy food eating habits. They will be able to understand the concept of under and over nutrition and the deficiency diseases that result due to deficiency of micronutrients in diet.

Learning outcomes

On successful completion of the course students will be able to:

- Describe the importance of food in our life
- Explain how food is spoiled and learn about some common food borne diseases/ food allergies
- Elaborate the functions of macro and micronutrients in our body
- Apply the knowledge gained to rationalize the diseases associated with malnutrition/ overnutrition and deficiency diseases

BCH-GE-5 : NUTRITION AND FOOD SCIENCE
SEMESTER – V

2.2 Course Contents
Theory
Credits: 2 **Total Hours: 30**

Unit 1 –Basics of Food Science and Nutrition **(10 Hours)**

Definition of Food, Nutrition, Nutrient, Nutritional status

Energy value of foods, determination, physiological fuel values, SDA of foods, BMR & RMR, factors influencing BMR. Recommended allowance-RDA for Indians, basis for requirement, energy allowance for different growth pattern of children, energy allowance for various activities and different age groups. Balanced diet, fad diets

Unit 2– Macronutrients (10 Hours)

Introduction to macronutrients and their function, digestion, absorption and assimilation of carbohydrates, lipids and proteins, Glycemic response and glycemic index of foods, dietary fiber- types, properties, sources and its role, importance of essential fatty acids, their requirements and deficiency, role & nutritional significance of PUFA, MUFA, SFA, omega-3/omega 6 fatty acid, essential amino acids, dietary protein quality- PER, NPU, BV, chemical score and PDCAAS. Factors affecting protein bio-availability including anti-nutritional factors, protein toxicity, amino acid complementation and Supplementation in foods

Unit 3 – Micronutrients (10 Hours)

Fat soluble vitamins: Sources, physiological importance and deficiency diseases. Water soluble vitamins: Sources, physiological importance and deficiency diseases. Minerals: Sources, physiological importance and diseases due to excess or deficiency of Ca, P, Na, K, Fe, Zn, S, Mg, Se, Cu.

Unit 4 – Food and Health (5 Hours)

Food as medicine: medicinal value of functional foods such as garlic, ginger, turmeric, tulsi, fenugreek, ajwain, aloe vera, moringa, role of Gut microbiome in maintaining health, pre and probiotics, various types of food additives: emulsifiers, preservatives and food colors, benefits and risks associated with these, food allergies, food spoilage, food poisoning, food borne diseases, Cholera, Hepatitis, Typhoid, Botulism

2.3 Practicals

Credits: 2 Total Hours:60

1. Analysis of food labels for the presence of nutrients and other additives.
2. Estimation of carbohydrate content in food
3. Degree of unsaturation of any three different oils using Bromine test
4. Acid value / peroxide value of oil
5. Estimation of vitamin E / vitamin C in food
6. Morphological identification of important yeast and mold in foods (slides and culture)-
7. Assessment of diet chart for the presence/absence of nutrients
8. Case studies: PEM (Marasmus and Kwashiorkor), Diabetes, Obesity, Vitamin and mineral deficiency

2.4 Essential readings:

1. Mahan, L.K., Strings, S. E., Raymond, J. (2012) *Krause's Food and Nutrition Care process.* Elsevier's Publications. ISBN: 978-1-4377-2233-8.

2. Rosalind Gibson (2005). *Principles of Nutritional Assessment.* Oxford University Press. ISBN: 978019517169
3. Nelson, D.L., Cox, M.M. (2017). *Lehninger: Principles of Biochemistry* (7th ed.). New York, WH: Freeman and Company. ISBN13: 9781464126116, ISBN10: 1464126119
4. Vasudevan, D.M., & Das, K.S. (2020). *Practical textbook of biochemistry for medical students* (3rd ed.). Jaypee Brothers Medical

Suggested readings:

1. Practical Biochemistry, Damodaran Geetha K, Jaypee Brothers Medical Publishers Private Limited; 1st edition (1 January 2011), ISBN: 9789350251416, 9789350251416
2. Plummer, D.T. (1998) *An Introduction to Practical Biochemistry* (3rd ed.), Tata McGraw Hill Education Pvt. Ltd. (New Delhi); ISBN: 13: 978-0-07-099487-4 / ISBN:10: 0-07-099487-0.
3. Malik, D., Narayanasamy, N., Vavilala, P., Takur, J., Sinha, N., (2022). Textbook of Nutritional Biochemistry. Springer Singapore, ISBN978-981-19-4149-8.

5. Devlin, T. M., (2011). *Textbook of Biochemistry with Clinical Correlations.* John Wiley & Sons, Inc. (New York), ISBN: 978-0-4710-28173-4.

3. Keywords:

Food, Nutrition, macronutrients, micronutrients, food as medicine, food spoilage, food allergies

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

GENERIC ELECTIVE COURSE - (GE-6)
PHYSIOLOGY AND SPORTS AND EXERCISE

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Physiology of Sports and Exercise (BCH-GE-6)	**04**	**02**	**0**	**02**	**Class XII with Science**	**Basic course on human physiology**

Learning Objectives

To learn the changes in human body systems due to exercise and sporting activities in an integrated manner. To gain knowledge about sports training. Understanding the basic system physiology in sports. To understand the physiological adaptation and metabolic changes during exercise at varying intensities. To gain skill in measurement of various physiological responses.

Learning outcomes

On successful completion of the course students will be able to:

- Explain the effect of exercise in detail and in application perspective.
- Measure the changes and interpret them in the context of sports.
- Describe the system concepts behind sports performance.
- Explain human body functioning during exercise and thus provide appropriate nutrition/fuel.

BCH-GE-6 : PHYSIOLOGY OF SPORTS AND EXERCISE
SEMESTER - V

2.2 Course Contents

Theory

Credits: 2 **Total Hours : 30**

Unit I: Introduction to Exercise Physiology (Total Hours: 4)

Structure, types and Function of Skeletal Muscle. Fuel for Exercise: Aerobic and anaerobic muscle metabolism, Muscle Fatigue.

Unit II: Cardiovascular and Pulmonary control in Sports Performance (Total Hours : 10)

Heart rate and Blood Pressure. Electrophysiology of Heart, Introduction and interpretation of EKG/ECG, Pacemakers and its Rhythms. Mechanics of ventilation during exercise. Cardiorespiratory Responses to physical activities. Training of cardiorespiratory responses in different types of physical activities for maximising output.

Unit III: Hormonal Effects on Physical Activities (Total Hours: 8)

Role of epinephrine, cortisol, sex hormones, growth hormones and growth factors on physical endurance. Effect of aging on Sport performance.

Unit IV: Drugs and Doping in Sports (Total Hours : 8)

History and evolution of Doping and Anti-doping in Sports, Prevalence of Doping in Sports, Doping Control in Sports, Role of Athlete Support Personnel in Preventing Deliberate and Inadvertent Use of Prohibited Substances, WADA Rules and Regulations.

2.3 Practical:

Credits: 2 **Total Hours: 60**

1. BMI Estimation with and without software - Techniques of taking various anthropometric measurements; Skinfold measurement and Body Fat Percentage calculations.
2. Aerobic Power Field Assessments; Cooper 1.5-Mile Run/Walk Test and 12-Minute Run/Walk Test/Rockport Fitness Walking Test.
3. Tests for anaerobic power; Wingate Test/Anaerobic Cycling Power
4. High-Intensity Fitness Testing/ AAHPER health related physical fitness test Léger 20 m Shuttle Run Test/ Margaria - Kalamen Stair Climb Test,
5. Pulmonary Function Testing: Ratio of Forced expiratory volume (FEV1/FEV6) by spirometry, Lung Volumes and Capacities
6. Determination of age by Radiography (Dry lab)
7. Blood Pressure Measurements: Effects of Body Position, Dynamic Exercise and Isometric Contractions on BP.

8. Determination of Physiological adaptation with training through Submaximal Exercise Testing; Submaximal Bench Step Test/Submaximal Cycle Ergometer Test

2.4 Essential readings:

1. Physiology of Sport and Exercise 6th Edition with Web Study Guide-Loose-Leaf Edition by W. Larry Kenney, Jack Wilmore, David Costill.
2. Endocrinology of Physical Activity and Sport, Second Edition Constantini, Naama, Hackney, Anthony C, 2013.
3. David R. Mottram, Neil Chester (2018) Drugs in Sports, Routledge, ISBN:1351838989. Portefield, Jason (2008) Doping: athletes and drugs, Rosenn Publishing, New York, ISBN:1-4042-1917-5.
4. Laboratory Manual for Exercise Physiology 2nd Edition. With Web Study Guide, Human Kinetics by G. Gregory Haff, Charles Dumke, 2018.
5. Physiological Tests for Elite Athletes 2nd Edition by Australian Institute of Sport Rebecca Tanner, Christopher Gore, 2012.

Suggested readings:

1. A Textbook of Sports & Exercise Physiology by Dey Swapan Kumar, Jaypee Publishers
2. Exercise Physiology: Theory and Application to Fitness and Performance 10th Edition by Scott Powers and Edward Howley 2018.
3. Exercise Physiology: Nutrition, Energy, and Human Performance 8th Edition by William D. McArdle, Frank I. Katch, Victor L. Katch
4. Practical ECG for Exercise Science and Sports Medicine by Greg Whyte, Sanjay Sharma, Human Kinetics, 2010
5. ACSM's Guidelines for Exercise Testing and Prescription, 10th Edition by American College of Sports Medicine. Wolters Kluwer, 2017.

3. Keywords

Muscle metabolism, Muscle Fatigue, Cardiorespiratory Responses, Sport performance, Prohibited Substances

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

GENERIC ELECTIVES COURSE - (GE-10)
INTERMEDIARY METABOLISM

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
INTERMEDIARY METABOLISM (BCH-GE-10)	04	02	0	02	Class XII with Science and Biology	Basic courses allied to biological sciences

Learning Objectives

The course aims to familiarise the learner with the pathways of fuel and energy metabolism with an emphasis on their interrelationship and integrated regulation.

Learning outcomes

On successful completion of the course learners will be able to:

1. Discuss the underpinnings of fuel metabolism
2. Describe the mechanism of ATP synthesis.
3. Discuss the biosynthesis and degradation pathways.
4. Evaluate the interrelationships of carbohydrate and lipid metabolism
5. Discuss the biosynthesis and degradation of amino acids and nucleotides
6. Correlate the integration of metabolism

SYLLABUS OF GE-10

BCH-GE-10 : INTERMEDIARY METABOLISM
SEMESTER - V

2.2 Course Contents
Theory (Credit 2)

Total Hours : 30

Unit I: Carbohydrate metabolism **(14 Hours)**

Glycolysis as a universal pathway, anaerobic glycolysis, fermentation, gluconeogenesis, reciprocal regulation of glycolysis and gluconeogenesis, Pentose phosphate pathway, Pyruvate dehydrogenase complex, oxidation of acetyl CoA. TCA cycle, amphibolic role, ATP calculation, Glycerol-3-phosphate and malate-aspartate shuttle.

Unit II: Fatty acid catabolism **(6 Hours)**

TAG as energy source, β oxidation of saturated fatty acids in mitochondria, Fatty acid activation and overview of regulation, formation of ketone bodies and metabolism

Unit III: Amino acid and nucleotide metabolism (6 Hours)

Transamination, Deamination, urea cycle and its regulation, Glucose-alanine cycle, Krebs bicycle, Nucleotide Biosynthesis - salvage pathways, Degradation.

Unit IV Integration of metabolism (4 Hours)

Metabolic shifts in absorptive, post absorptive, fasting and starvation states.

2.3 Practical:

Credits: 2 **Total Hours : 60**

1. Estimation of blood glucose by GOD-POD method
2. Demonstration of alcohol fermentation by yeast.
3. Estimation of serum cholesterol.
4. Estimation of serum TAGs.
5. Estimation of urea in serum
6. Estimation of uric acid in serum

2.4 Essential readings:

1. Nelson, D.L. and Cox, M.M. (2017). Lehninger: Principles of Biochemistry (7th ed.). W.H. Freeman & Company (New York), ISBN:13: 9781464126116 / ISBN:10-1464126119.

3. Campbell, M.K., Farrel, S.O. (2012) Biochemistry 7th ed, S.O. Brooks/Cole, Cengage Learning (Boston); ISBN: 13:978-1-111-42564-7 ISBN:10:1-4292-2936-5.
4. An Introduction to Practical Biochemistry (1998) 3rd ed., Plummer D. T., Tata McGraw Hill Education Pvt. Ltd. (New Delhi), ISBN:13: 978-0-07-099487-4 / ISBN:10:0-07-099487-0.

Suggested Readings:

1. Principles of Biochemistry (2013) 4th ed., Voet, Donald, Voet, Judith &Pratt, charlotte. Wiley & Sons, Inc. (New Jersey), ISBN:978-1-11809244-6.

3. Keywords

Catabolism, anabolism, Glycolysis, TCA, Glycogen metabolism, Gluconeogenesis, nucleotide metabolism, beta oxidation, salvage pathway and integration

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

SEMESTER VI
BSc. (Hons.) Biochemistry

DISCIPLINE SPECIFIC CORE COURSE – (DSC-16)
HUMAN PHYSIOLOGY

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Human Physiology (BCH-DSC-601)	4	2L	0	2P	Class XII with Science and Biology	NIL

Learning Objectives

The objective of the course is to provide a comprehensive study of the molecular and cellular mechanisms that govern the integrative working and regulation of the various organ systems in the human body. The course will provide a foundation of the physiological principles and the application of the same in real-life situations. It will prepare students for higher education in any field related to medical physiology.

Learning outcomes

On successful completion of the course, students will be able to:

1. Explain the homeostatic control and functioning of the human body systems
2. Discuss the regulatory mechanism regulating different organ system.
3. Describe the functioning of the different organ systems.
4. Explain the basis of various physiological diseases.
5. Perform and analyse various physiological tests that examine the function of various systems of the human body.

SYLLABUS OF DSC-16

BCH-DSC-16 : HUMAN PHYSIOLOGY
SEMESTER - VI

2.2 Course Contents
Theory (2 Credits)

Total Hours: 30

Unit I: Circulatory system **(7 Hours)**

Homeostasis: definition and control mechanisms (negative and positive feedback mechanisms). Blood Composition and Blood coagulation. Anatomy of Heart. Heartbeat Coordination: Cardiac action potential and Pacemaker potential. Cardiac cycle. Cardiac output and its regulation. The role of blood vessels in circulation: Arteries, Veins and Blood capillaries.

Unit II: Life Processes (15 Hours)

Respiratory physiology: Ventilation and lung mechanics. Inspiration, Expiration, Lung compliance and its determinants. Transport of oxygen and carbon dioxide in blood. Regulation of respiration.

Renal physiology: Cell biology of the Bowmans' capsule. Physiology of glomerular filtration and GFR. Tubular processing of the glomerular filtrate. Urine concentration: The counter current multiplier system. Blood buffer systems.

Gastrointestinal physiology: Propulsion, motility, digestion and assimilation of food. Secretory functions of the gastrointestinal tract. Enteric nervous system. Regulation of GI tract functions. Hepatic physiology and Enterohepatic circulation.

Unit III: Introduction to muscular and neural physiology (4 Hours)

Molecular mechanisms of skeletal and smooth muscle contraction: role of troponin, tropomyosin, and calcium in contraction, excitation-contraction coupling. Overview of Central and Peripheral Nervous System and neural conduction.

Unit IV: Reproductive Physiology (4 Hours)

Sex determination and differentiation. Oogenesis, Spermatogenesis, capacitation and transport of sperm, blood-testis barrier. Fertilization, Implantation and Placentation.

2.3 Practical (2 Credits)

Total Hours: 60

1. Hematology:
    a. Determination of Packed Cell Volume, Bleeding Time and Clotting Time.
    b. Preparation of blood smear and estimation of differential leucocyte count.
    c. Enumeration of Blood cells: RBC and WBC
    d. Estimation of hemoglobin and calculation of blood indices
2. Serum Proteins Electrophoresis
3. Understanding the anatomy/structure of following: Heart, GI Tract, Kidney and Nephron, Neuron, Lung and alveoli, skeletal, smooth and cardiac muscle
4. Pulmonary function tests: Understanding Lung capacities and Lung volumes using Spirometry
5. Determination of the Blood Pressure.
6. Case studies: Renal clearance, Gastrointestinal disorder, Anemia, Jaundice (any two)
7. Virtual Lab on ECG

DISCIPLINE SPECIFIC CORE COURSE – (DSC-17)
BASICS OF IMMUNOLOGY

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Basics of Immunology (BCH-DSC-602)	4	2L	0	2P	Class XII with Science and Biology	NIL

Learning Objectives

The course is designed to understand the basic concepts in Immunology. It is important to understand the structure of the cells and organs associated with the immune system to appreciate their function in fighting infections. So, the students will study their structure and the various receptors associated with them. They will be exposed to the concept of antigen antibody and the types of immune responses generated in the body. The recognition of the antigen by B and T cells and the role of Major histocompatibility complex in generation of immune response will be elaborated.

Learning outcomes

On successful completion of the course, students will be able to:

1. Explain the concept of innate and adaptive immunity.
2. Describe the structure and function of cells and organs of the immune system
3. Discuss the Attributes of an immunogen, structure and the functions associated with different isotypes of antibodies
4. Explain the humoral immune response and antibody diversity.
5. Explain the Antigen presentation mechanisms and generation of cell mediated immunity

SYLLABUS OF DSC-17

BCH-DSC-17 : BASICS OF IMMUNOLOGY
SEMESTER - VI

2.2 Theory (2 Credits)

Total Hours: 30

Unit 1 : Introduction to the Immune System: (8 Hours)

Historical Perspective, Innate and Adaptive immunity and their role in generation of immune response, Primary and Secondary Immune Response, Cells and Organs of the Immune System, Hematopoiesis, Antigens, Properties of Immunogen, Haptens, Adjuvants, B Cell and T Cell Epitopes, Structure and Effector Functions of Different Types of Antibodies, Biological Activities of Subclasses of Antibodies, Antigenic Determinants on Immunoglobulins, Immunoglobulin Superfamily, B cell receptor,

Unit 2 : **Innate Immunity:** **(6 Hours)**

Anatomical Barriers, Soluble and Membrane Bound Molecular Sensors (PRRs), Inflammation, Phagocytic cells and Innate Immunity, Toll like receptors, Activation Pathways of Complement System, Regulation and Biological Consequences of Complement Activation.

Unit 3 : **Humoral Immune Response** **(8 Hours)**

B Cell Development, Maturation & Differentiation, Clonal Selection theory, Genetic basis of Antibody Diversity, Class switching.

Unit 4 : **Cell mediated Immune Response** **(8 Hours)**

Major Histocompatibility, General Organization and Inheritance of the MHC, Antigen Presenting Cells, Processing and Presentation of Antigen by the endocytic and cytosolic pathways, Development, Maturation & Differentiation of T cells, Role of Cytotoxic T lymphocytes, T cell and B cell interactions

2.3 Practical (2 Credits)

Total Hours: 60

1. Immunodiffusion –Double immunodiffusion and Single radial immunodiffusion
2. Differential Leucocyte Count
3. Visualization of lymphoid Organs and lymphatic system (Videos)
4. Isolation of lymphocytes from blood/spleen
5. Complement mediated lysis.
6. Active and Passive agglutination reactions
7. Dot blot and ELISA

2.4 Essential readings:

1. Kuby Immunology (2007) 6th ed., Kindt, T.L., Goldsby, R.A. and Osborne, B.A., W.H. Freeman and Company (New York), ISBN:13: 978-0-7167-8590-3/ISBN: 10:0-7617-8590-0.
2. Immunology: A Short Course (2009) 6th ed., Coico, R. and Sunshine, G., John Wiley & sons, Inc. (New Jersey), ISBN: 978-0-470-08158-7.

Suggested Readings:

1. Janeway's Immunobiology (2012) 8th ed., Murphy, K., Mowar, A., and Weaver, C.T., Garland Science (London & New York), ISBN: 978-0-8153-4243-4
2. Cellular and Molecular Immunology (2021), 10th edition, Abbas, A.K., Lichtman, A.H., Shiv Pillai, Elsevier, ISBN: 9780323757485

3. Keywords:

Immunity, innate, adaptive, antibody, MHC, Humoral and Cell mediated immune response, Processing of antigens

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE – (DSC-18)
FUNDAMENTALS OF RECOMBINANT DNA TECHNOLOGY

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Fundamentals of Recombinant DNA Technology (BCH-DSC-603)	4	2L	0	2P	Class XII with Science and Biology	Basic course in Molecular Biology

Learning Objectives

The objective of the course is to teach the basics of theoretical and practical aspects of recombinant DNA technology and various techniques for DNA manipulation in prokaryotes and eukaryotes.

Learning outcomes

On successful completion of the course, students will be able to:

1. Perform restriction digestion of DNA samples.
2. Prepare genomic and cDNA libraries,
3. Perform basic cloning techniques to design a recombinant protein in a bacterial system.
4. Design primers for PCR, perform DNA amplification by PCR, and understand the principles of DNA sequencing.

SYLLABUS OF DSC-18

BCH-DSC-18 : FUNDAMENTALS OF RECOMBINANT DNA TECHNOLOGY
SEMESTER - VI

2.2 Course Contents

Theory (2 Credits)

Total 30 hours

Unit 1: Principles of gene cloning **(14 hours)**

Restriction and modification systems, restriction endonucleases and other enzymes used in gene cloning. Cloning vectors used in *E. coli*: plasmids pBR322, pUC, pGEM3Z. Ti-plasmid, and viral vectors (λ bacteriophage, CMV and SV40), high-capacity vectors BAC and YAC. Ligation of DNA molecules. Linkers, adapters and homopolymer tailing.

Unit 2: Selection for recombinants and clone identification (5 hours)

Uptake of DNA by cells and selection of recombinants. Making cDNA and Genomic DNA libraries. Clone identification by colony hybridization.

Unit 3: Expression of cloned genes (6 hours)

Vectors for expression of foreign genes in *E. coli,* expression cassettes: Hybrid promoters trc, tac. Challenges in producing recombinant protein in *E. coli.* Production of recombinant protein by eukaryotic cells. Fusion tags and their role in purification of recombinant proteins.

Unit 4: Polymerase chain reaction, DNA sequencing and Site Directed Mutagenesis

(5 hours)

Fundamentals of polymerase chain reaction, Types of PCR; reverse transcriptase PCR, Primer designing. DNA sequencing by Sanger's method including automated DNA sequencing, pyrosequencing. Site–directed mutagenesis (overlap extension method).

2.3 Practical (2 Credits)

Total: 60 hours

1. Isolation of plasmid DNA from *E. coli* cells.
2. Digestion of plasmid DNA with restriction enzymes.
3. Preparation of competent cells and transformation with plasmid DNA.
4. Amplification of a DNA fragment by PCR.
5. Alpha-Complementation of β−galactosidase for Blue and White selection.
6. Hyper expression of a recombinant protein (SDS PAGE).
7. Poly histidine-tagged recombinant protein and purification using Ni– affinity resin

2.4 Essential readings:

- Brown, T.A. (2016) Gene Cloning and DNA Analysis (7th ed.), Wiley-Blackwell publishing (Oxford, UK), ISBN: 978-1-4051-8173-0.
- Primrose, S.B., and Twyman, (2006) Principles of Gene Manipulation and Genomics (7th ed.), R. M., Blackwell publishing (Oxford, UK) ISBN:13: 978-1-4051-3544-3.
- Glick B.R., Pasternak, J.J. and Patten, C.L., (2010) *Molecular Biotechnology:* Principles and Applications of Recombinant DNA (4th ed.), ASM Press (Washington DC), ISBN: 978-1-55581-498-4 (HC).
- Michael R Green and J. Sambrook (2014) Molecular Cloning: A laboratory manual, (4th ed.), Cold spring Harbor laboratory press (3vol.), ISBN: 978-1-936113-42-2.

Suggested readings:

- Brown, T.A. (2007) Genomes (3rd ed.), Garland Science publishing, ISBN: ISBN 0 8153 4138 5.

3. Keywords

Genetic Engineering, cloning, Recombinant Protein expression and purification, Biotechnology.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

POOL OF DISCIPLINE SPECIFIC ELECTIVES

DISCIPLINE SPECIFIC ELECTIVE COURSE – (DSE-4)
BIOCHEMICAL MECHANISMS AND RESPONSES IN PLANTS

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Biochemical Mechanisms and Responses in Plants (BCH-DSE-4)	04	02	00	02	Class XII with Science and Biology	Basic courses allied to biological sciences

Learning Objectives

The course aims to provide thorough understanding of metabolic processes in plants and the role of different biosynthetic pathways in growth and development of plants. The course will also impart basic concepts and applications of plant secondary metabolites.

Learning outcomes

On successful completion of the course students will be able to:

1. Describe the structure and function of plant cell organelles in plant metabolism.
2. Explain the various plant biochemical processes and metabolic pathways including photosynthesis, photorespiration, nitrogen fixation and assimilation and plant secondary metabolism and their biological significance.
3. Discuss the role of plant hormones in plant growth and development.
4. Evaluate the various plant responses to different abiotic and biotic stress conditions.
5. Plan and execute plant tissue culture.

SYLLABUS OF DSE-4

BCH-DSE-4 : BIOCHEMICAL MECHANISMS AND RESPONSES IN PLANTS
Semester – VI

2.2 Course Contents

Theory (Credits – 2)

Total Hours : 30

Unit I: Photosynthesis and Respiration **(8 Hours)**

Introduction to Plant cells, Cell wall, Vacuole and Tonoplast membrane, Plastids and Peroxisomes. Overview to photosynthesis and Carbon assimilation, Light reaction and photosystems, Cyclic and non-cyclic photophosphorylation, Calvin cycle and its regulation, C4 cycle and Crassulacean acid metabolism (CAM), Photorespiration. Photoinhibition. Glycolytic pathway and its alternative reactions in plants, Translocation of metabolites across mitochondrial membrane, TCA cycle, electron transport chain in plants, alternative NAD(P)H oxidative pathways.

Unit II: Nitrogen metabolism (7 Hours)

Nitrogen cycle; Biological nitrogen fixation; Structure and function of Nitrogenase complex. Nitrate assimilation: Nitrate and Nitrite reductase. Primary and secondary ammonia assimilation in plants; ammonia assimilation by glutamine synthetase-glutamine oxoglutarate aminotransferase (GS-GOGAT) pathway.

Unit III: Plant physiology and Secondary metabolites (10 Hours)

Plant vascular system; Plant hormones and their role in plant growth and development; Regulation of plant morphogenetic processes by light. Plant stress responses to abiotic and biotic stresses: Water deficit, temperature, salinity, insect manifestation. Secondary metabolites: types, structure and functions of Alkaloids, Phenolics and terpenoids.

Unit IV: Plant tissue culture (5 Hours)

Cell and tissue culture techniques, types of cultures: organ and explant culture, callus culture, cell suspension culture and protoplast culture. Plant regeneration pathways: organogenesis and somatic embryogenesis. Applications of cell and tissue culture and somaclonal variation. Germplasm storage and cryo-preservation. Brief introduction to transgenic plants.

2.3 Practical:

Credits: 2 Total Hours : 60

1. Induction of hydrolytic enzymes (proteases /amylases/lipase) in germinating wheat seeds.
2. Effect of plant hormones on plant growth (Phytochrome effects on lettuce germination/ Gibberellic acid effect on α-amylase secretion in barley seeds).
3. Extraction and assay of Urease from Jack bean.
4. Estimation of carotene/phenols/tannins in fruits and vegetables.
5. Estimation of ascorbic acid in fruits and vegetables.
6. Effect of light on chlorophyll production.
7. Separation and analysis of chloroplast proteins (Rubisco) using SDS-PAGE.
8. Plant tissue culture

2.4 Essential readings:

1. Buchann (2015). Biochemistry and Molecular Biology of plant. (2nd ed.). I K International. ISBN-10: 8188237116, ISBN- 978047 07 14218
2. Caroline Bowsher, Martin steer, Alyson Tobin (2008). Plant Biochemistry. Garland Science. ISBN 978-0-8153-4121-5.

3. Dey, P. M. and J.B. Harborne, J.B., (Editors) (1997). Plant Biochemistry. Academic Press. ISBN-10:0122146743, ISBN-13:978-0122146749. 94
4. Taiz, L. and Zeiger, E. (2010). Plant Physiology (5th ed.). Sinauer Associates Inc. ISBN-13: 978-0878938667, ISBN-10: 0878938664

3. Keywords

Plant cell, photosynthesis, respiration, nitrogen fixation and assimilation, secondary metabolism, stress biology.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVE COURSE – (DSE-5)
NUTRITIONAL BIOCHEMISTRY

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Nutritional Biochemistry (BCH-DSE-5)	04	02	0	02	Class XII with Science and Biology	Basic courses allied to biological sciences

Learning Objectives

This course provides students with knowledge and understanding of the characteristics, function, metabolism and deficiency of macro and micronutrients in the human body. It involves integrated learning between the areas of Biochemistry and Nutrition.

Learning outcomes

On successful completion of the course students will be able to:

1. Critically analyse and evaluate concepts in nutritional biochemistry that are important for an understanding of human nutrition.
2. Demonstrate the relationship between nutrition and health.
3. Discuss the macro and micronutrients and their nutritional deficiencies.
4. Describe techniques used in the assessment of nutritional status and nutritional disorders.
5. Explain drug nutrient interactions.

SYLLABUS OF DSE-5

BCH-DSE-5 : NUTRITIONAL BIOCHEMISTRY
Semester – VI

2.2 Course Contents
Theory (Credits – 2)

Total Hours: 30

Unit I: Introduction to Nutrition and Energy Metabolism (4 Hours)

Defining nutrition, role of nutrients. Unit of energy, Food energy, SDA. Energy expenditure and its components, Energy Balance, Recommended Nutrient Intakes (RNI) and Recommended Dietary Allowances for different age groups.

Unit II: Macronutrients **(10 Hours)**

Food sources of carbohydrates, functions of carbohydrates, RDA, Factors affecting bioavailability, Glycemic index and glycemic load. Dietary fiber and the role of fibre in health. Role of Gut microbiome in maintaining health. Role of prebiotics and probiotics in nutritive health.

Essential Fatty Acids; Functions of EFA, AI, excess and deficiency of EFA, factors affecting bioavailability. Dietary implications of ratios of n6 and n3, MUFA, PUFA and SFA, Cholesterol in the body.

Functions of proteins in the body. RDA for different age groups. Essential and Nonessential amino acids. Complete and incomplete protein, Amino Acid Interactions: Antagonism, Toxicity, Imbalance, Amino acid complementation and Supplementation in foods. Protein quality determinants NPU, Biological Value, PDCAAS, Nitrogen balance. PEM: Marasmus and Kwashiorkor.

Unit III: Fat and water soluble Vitamins **(9 Hours)**

Vitamin A, D, E, K and dietary sources, RDA, Role of Vitamin A in Visual cycle and overview of other functions. Role of Vitamin K in Gamma carboxylation (blood clotting). Role of Vitamin E as an antioxidant. Role of Vitamin D in maintenance of bone physiology and overview of other functions. Vitamin C- Dietary sources, RDA, role in collagen synthesis. The B Complex vitamins- Dietary sources, RDA. Functions and role in metabolism, Role of Vitamin B12 and Folate in Haematopoiesis and Neurology. Biochemical basis for deficiency symptoms, Hypervitaminosis.

Unit IV: Minerals **(7 Hours)**

Minerals: Dietary Sources, RDA. Sodium, Potassium, Calcium, Iron, Chloride, Copper and Phosphorus- Function, metabolism, Excretion, Deficiency, Toxicity, Trace Elements Iodine, Fluoride, Mg, Zn, Se, Chromium, Molybdenum: Function, Metabolism, deficiency, Toxicity and Sources.

2.3 Practical:

Credits: 2 **Total Hours: 60**

1. Anthropometric identifications for nutrition related diseases, BMR calculation
2. Determination of oxidative stress: TBARS in serum, antioxidant enzymes in hemolysate/plant sources.
3. Estimation of A/E vitamin in serum.
4. Estimation of minerals in drugs/food/serum.
5. Determination of nutritive value of foods.
6. Understanding fortification and supplementation
7. Presentation and discussion on Food as medicine.
8. Group discussion on Nutrient-nutrient and drug-nutrient interactions
9. Case studies on nutritional disorders.

2.4 Essential Readings:

1. Coombs Jr. G. F., (2008). *The vitamins, Fundamental aspects in Nutrition and Health.* Elsevier's Publications. ISBN-13- 978-0-12- 183493-7.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVE COURSE – (DSE-7)
MOLECULAR BASIS OF NON-COMMUNICABLE HUMAN DISEASES

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Molecular Basis of Non-communicable Human Diseases (BCH-DSE-7)	04	02	00	02	Class XII with Science and Biology	Course in human physiology

Learning Objectives

Non-communicable diseases are a diverse group of chronic diseases that are not transferred between individuals. NCDs have long-term health consequences and often create a need for long-term treatment and care. This course is aimed at providing the learner with an understanding of the multiple aetiological factors that lead to NCDs. It will also discuss the molecular and biochemical basis of the symptoms of major NCDs like Cardiovascular disease, Cancer, lifestyle disorders, chronic renal and lung disease. Apart from the major NCDs some other NCDs will also be taught. The practicals will address the diagnostics of some of these NCDs. The course will not only help students get an insight into some aspects of molecular medicine but will also give them some background if they wish to pursue a post-graduation in molecular medicine or any other relevant field.

Learning outcomes

On successful completion of the course students will be able to:

1. Discuss the relationship between lifestyle and noncommunicable diseases.
2. Analyze the various molecular and biochemical interactions that contribute to the cause of NCDs.
3. Explain the networking between different endogenous and exogenous factors that contribute to NCDs burden.
4. Describe specific biomarkers that can be used to diagnose a disease or Disorder.
5. Perform tests of various diagnostic parameters that are used to identify NCDs.
6. Discuss the disease burden in today's urban society and also understand the wide spectrum of symptom diversity that occurs in such diseases through case studies.

SYLLABUS OF DSC-7

BCH-DSC-7 : MOLECULAR BASIS OF NON-COMMUNICABLE HUMAN DISEASES
Semester – VI

2.2 Course Contents

Theory (Credits – 2)

Total Hours : 30

Unit 1: Multifactorial complex disorders (10 Hours)

Understanding the definition of multifactorial diseases. Polygenic diseases and the relationship of environmental factors and genetic makeup in the onset of diseases: Polycystic ovarian syndrome, COPD, ARDS, Emphysema, Chronic and acute renal failure, Glomerulonephritis; Cancer: Molecular basis for neoplastic growth, metastasis, and cancer pathology; Cancer immunity; Molecular approaches to cancer treatment: Cervical cancer and preventive vaccine, Biomarkers for early detection of cancer- breast, prostrate, hepatic.

Unit 2: Metabolic and Lifestyle disorders (10 Hours)

Obesity and eating disorders like Anorexia nervosa and Bulimia. Diabetes mellitus, Metabolic syndrome and the relationship with hypertension, hypothyroidism and stress. Cardiovascular disorders and Atherosclerosis-defining the broad spectrum of ailments that fall in this category, understanding the factors that contribute to the syndrome, stages of disorder and the management of the condition. Irritable bowel syndrome- biochemistry behind the disorder and the influence of diet, stress and environment on the condition.

Unit 3: Diseases due to misfolded proteins (5 Hours)

Introduction to protein folding and proteasome removal of misfolded proteins; Etiology and molecular basis for Alzheimer's, Prion diseases, Huntington's Chorea, Sickle cell Anemia, Thalassemia.

Unit 4: Monogenic diseases (5 Hours)

Inborn errors in metabolism: PKU, Alkaptonuria, Maple syrup urine disease; Receptor and transport defects: Cystic fibrosis, Long QT syndrome, familial hypercholesterolemia, and clotting disorders (Hemophilia and Deep vein Thrombosis).

2.3 Practicals

Credits: 2 **Total Hours: 60**

1. Assessment of Obesity and metabolic syndrome
2. Estimation of glycosylated haemoglobin
3. Permanent slides for different types of cancer
4. Diagnosis of Thalassemia / Sickle cell Anemia
5. D dimer test / CRP tests
6. Serum LDH isozymes as a diagnostic tool

7. TropT as a cardiac marker
8. Biomarkers used in cancer diagnosis (virtual)
9. Case Studies on NCDs
10. Role of vaccination in adults to prevent NCDs with age: Group discussion.

2.4 Essential readings:

1. Textbook of Biochemistry with Clinical Correlations (2011) Devlin, T.M. John Wiley & Sons, Inc. (New York), ISBN: 978-0-4710-28173-4.

RESEARCH METHODOLOGY

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Research Methodology (BCH-DSE-8)	04	02	00	02	Class XII with Science and Biology	NIL

Learning Objectives

The main objective of this paper is to provide students with a general introduction to the methodological foundations and tools used in research for an understanding of the ways to identify problems, develop hypotheses and research questions and design research projects. The course will expose students to the range of designs used in research in laboratory, field experiments, surveys and content analysis. It will also provide an introduction to the concept of controls, statistical tools and computer applications used in research. In addition, the course will impart knowledge of scientific writing, oral presentation and the various associated ethical issues.

Learning outcomes

On successful completion of the course students will be able to:

1. Describe the importance of research in knowledge generation.
2. Explain the research process
3. Evaluate the importance of the major quantitative and qualitative research methods
4. Construct an effective research proposal
5. Examine the importance of research ethics
6. Record and analyse data using computer software
7. Prepare a Scientific presentation and article.

SYLLABUS OF DSE-8

BCH-DSE-8 : RESEARCH METHODOLOGY
Semester – VI

2.2 Course Contents

Theory (Credits – 2)

Total Hours: 30

Unit I: Introduction to Research (4 Hours)

Objectives and characteristics of research; significance of research, types of research methods-qualitative and quantitative; basic and applied; descriptive and analytical; various phases of research-problem identification, generation of hypothesis, experimental design, results and discussion. Writing a research proposal-schematic presentation.

Unit II: Basic principles of research design (8 Hours)

Review of literature using appropriate sources – reviews, patents, research papers, books and e-resources; Significance of controls in research, Types of research designs – exploratory, descriptive, experimental, survey and case study.

Unit III: Statistical tools and Report writing (12 Hours)

Data collection, analysis and graphical presentation; Sample – types and characteristics; Basic Statistical Tools - Measures of central tendency, Arithmetic mean, Median, Mode, Standard deviation, Co-efficient of variation (Discrete serious and continuous serious), Correlation, Regression, Multiple Regression, hypothesis testing, P-value, data analysis and interpretation; Report writing, format of publications and presentations-oral and poster.

Unit IV: Scientific conduct and ethics in Research (6 Hours)

Biosafety and Ethics - compliance and concerns; Plagiarism-Software tools and Creative Commons; Introduction to Intellectual Property Rights; Citation and acknowledgement, Impact factor, h-index, Indian and international funding agencies.

2.3 Practical:

Credits: 2 **Total Hours: 60**

1. Citation formats and citation generator
2. Plagiarism tools
3. Design of a research survey on a specific problem
4. Writing a concept note / research proposal
5. Writing of a mini-review paper
6. Systematic review, meta data analysis and presentation
7. Poster/oral presentations

2.4 Essential readings:

1. Cresswell, J. (2009) *Research Design: Qualitative and quantitative Approaches* Thousand Oaks CA, (3rd ed.), Sage Publications
2. Kothari, C.R. (2004) *Research Methodology: Methods and Techniques* (2nd ed.), New Age International Publishers.
3. Kumar, R. (2011) *Research Methodology: A Step-by-Step Guide for Beginners* (5th ed.), SAGE publisher
4. Walliman, N. (2017*) Research Methods: The Basics,* **(**2nd ed.), London; New York: Routledge
5. *WHO (2001) Health Research Methodology – A Guide for Training in Research Methods.*

3. Keywords

Research methodology; Patents; Plagiarism; Ethics; Biosafety; Report writing

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

POOL OF GENERIC ELECTIVES

GENERIC ELECTIVE COURSE - (GE-7)
CELLULAR COMMUNICATIONS

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Cellular Communications (BCH-GE-7)	04	02	00	02	Class XII with Science and Biology	Basic course in Cell Biology

Learning Objectives

- Explain the concept of Cell-cell communication.
- Describe the various types of receptors, signal transduction pathways, second messengers and effector molecules.
- To understand how signalling pathways, regulate cell motility, metabolism, growth, organogenesis, and cell death.
- Discuss the crosstalk between signal transduction pathways crosstalk and are auto-regulated.
- To know about various diseases associated with cellular communication pathway defects.

Learning outcomes

On successful completion of the course, students will be able to:

1. Describe various types of cell - cell communication.
2. Discuss the various types of receptors and signal transduction pathways in bacteria, plants and animal system.
3. Explain the importance of various signalling pathways in the regulation of metabolism, growth, organogenesis and cell death.
4. Discuss the cellular communication defects that lead to various types of diseases including cancers.

SYLLABUS OF GE-7

BCH-GE-7 : CELLULAR COMMUNICATIONS
SEMESTER - VI

2.2 Course Contents

Theory (Credit 2)

Total Hours : 30

Unit: 1 Introduction to cell- cell communication. (2 Hours)

Chemical signalling - endocrine, paracrine, autocrine, intracrine and neuroendocrine mechanisms. Cognate signalling.

Unit: 2 Receptors and Signal transduction pathways (16 Hours)

Hormone receptors - extracellular and intracellular. Receptor - hormone binding, Scatchard analysis. G-Protein-coupled Receptors: Heterotrimeric G proteins, Second messengers: cAMP, cGMP, Lipid-derived Second Messengers (IP3, DAG) NO, Calcium Signalling. Effector systems - adenylyl cyclase, guanylyl cyclase, PDE, PLC. Protein kinases (PKA, PKB, PKC, PKG).

Enzyme linked receptors: Receptor Tyrosine Kinases: EGF, insulin and erythropoietin. Ras - MAP kinase cascade, and JAK - STAT pathway.
Ion-channel linked receptors; Neurotransmitter receptors (Acetylcholine receptor). Nerve transmission.

Intracellular receptors: Cytoplasmic and nuclear receptors. Steroid hormone, thyroid hormone receptors. Gene regulation.

Integrin receptors. Integrin signalling. Cell matrix communication Receptor Regulation. Cross talk.

Unit 3: Photoreceptors and signal transduction in plants (4 Hours)

Phytochromes, cryptochromes and phototropins signalling.

Unit 4: Cell death signalling (4 Hours)

Apoptosis, Autophagy

Unit 5: Bacterial signalling (4 Hours)

Quorum sensing, autoinducers, chemotaxis.

2.3 Practical

Credit: 2 **Total Hours : 60**

6. Yeast response to mating pherohormones .
7. Study of Chemotaxis response in Tetrahymena/ paramecium/ dictostylium
8. Study change in heart rate (sympathetic response) on exposure to caffeine (cAMP mediated) in zebrafish larvae.
9. Chemotaxis/ motility assay in microbes.
10. Effect of plant hormones on plant growth or photomorphogenesis in response to light. (Phytochrome effects on lettuce germination/ Gibberellic acid effect on α-amylase secretion in barley seeds)

Essential readings:

Suggested readings:

1. ZFIN protocols
2. Harris UM. A., McGee, S. A., and Batzi J. M. (2018). Uncooking Yeast: Cells Signalling a Rise to Inquiry. Tested Studies for Laboratory Teaching. Proceedings of the Association for Biology Laboratory Education. 38 (9) 1-48
4. Plant physiology and biotechnology laboratory manual. Compiled by: David Law, Lada Malek and JoAnne Henderson. 2006. https://old.amu.ac.in/emp/studym/99997510.pdf

3. Keywords

Chemical signaling, Receptors, signal transduction, GPCRs, RTKs, Photoreceptors, cell death signaling, bacterial signalling

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

GENERIC ELECTIVES COURSE - (GE-8)
BIOCHEMICAL CORRELATION OF DISEASES

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
BIOCHEMICAL CORRELATION OF DISEASES (BCH-GE-8)	04	02	00	02	Class XII with Science and Biology	XIIth pass with biology

Learning Objectives

The course aims to provide students with knowledge and understanding of the spectrum of human diseases. It will introduce the concept of a well-balanced diet, healthy lifestyle, the biochemical mechanism of diseases, treatment strategies, mechanism of action of drugs and drug resistance against various antimicrobials. The course also aims to outline the various strategies that could be employed for prevention of infectious and non-infectious diseases.

Learning outcomes

On successful completion of the course students will be able to:

1. Discuss the importance of a balanced diet, regular exercises and healthy lifestyle in leading a disease-free life.
2. Explain the functioning of the immune system and endocrine system and the basis of various autoimmune and hormonal disorders.
3. Correlate the genetic mutation and metabolic disorders.
4. Discuss the molecular mechanism of microbial pathogenicity, drug resistance and implications in public health management.

SYLLABUS OF GE-8

BCH-GE-8 : BIOCHEMICAL CORRELATION OF DISEASES
SEMESTER - VI

2.2 Course Contents

Theory (Credit 2)

Total Hours: 30

Unit I: Inherited Metabolic diseases and Hormonal disorders (9 Hours)

Introduction to inherited Metabolic diseases. Alkaptonuria, Phenylketonuria; Glycogen storage diseases (Von Gierke disease, Cori disease); Lipid storage diseases: Gaucher's disease; SCID. Overview of the endocrine disorders: Cushing's disease, Diabetes insipidus.

Unit II: Nutritional deficiency and lifestyle-based diseases (7 Hours)

Concept of nutrition and balanced diet; Protein-energy malnutrition: Kwashiorkor and Marasmus; Vitamin deficiency diseases: Beri-Beri, Scurvy, Pellagra, Nutritional deficiency Anemia, Night blindness, Rickets. Lifestyle-based diseases: Atherosclerosis, Diabetes Mellitus-II.

Unit III: Autoimmune diseases (6 Hours)

Concepts in immune recognition-self and non-self-discrimination, organ specific autoimmune diseases- Hashimoto's thyroiditis, Graves' disease, Myasthenia Gravis, Diabetes Melitus-I, Systemic diseases: Systemic lupus erythematosus (SLE), Rheumatoid arthritis.

Unit IV: Infectious diseases (8 Hours)

Classification of infectious diseases; Role of sanitation, drugs and vaccines in prevention, transmission and treatment of infectious diseases. Diseases caused by viruses: Polio, Influenza, HIV and COVID. Diseases caused by bacteria: Tetanus, Tuberculosis. Protozoan infections: Malaria; Parasitic infections: Kala Azar.

2.3 Practical:

Credits: 2 **Total Hours : 60**

8. Anthropometric measurements: BMI, Waist/Hip Ratio, Mid Arm Muscle Area (MAMA), Mid Arm Area (MAA).
9. Measurement of Blood pressure
10. Determination of blood Lipid Profile: Triglyceride, Cholesterol
11. Glucose tolerance test
12. Widal test
13. Permanent slides of malarial parasites/Leishmania
14. Case studies related to autoimmune diseases, life-style disorders and hormonal imbalance

2.4 Essential readings:

3. Keywords

Lifestyle and metabolic disorders, nutritional deficiency, hormonal disorder, autoimmunity and infectious diseases.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

GENERIC ELECTIVES COURSE - (GE-11)
TOOLS OF GENETIC ENGINEERING

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Tools for Genetic Engineering (BCH-GE-11)	04	02	00	02	Class XII with Science and Biology	Basic course in Molecular Biology

Learning Objectives

The objective of the course is to teach:

- Basics of theoretical and practical aspects of recombinant DNA technology.
- Various techniques for DNA manipulation in prokaryotes and eukaryotes.

Learning outcomes

On successful completion of the course, students will be able to:

1. Grow bacterial culture and obtain single isolated colonies
2. Estimate the concentration of DNA by UV spectroscopy
3. Extract plasmid DNA from recombinant *E. coli*
4. Perform restriction digestion and evaluate the end products by agarose gel electrophoresis
5. Perform Polymerase chain reaction and amplify a DNA fragment
6. Explain the various methods for expression of recombinant genes in *E.coli*
7. Perform gene cloning

SYLLABUS OF GE-11

BCH-GE-11 : TOOLS FOR GENETIC ENGINEERING
SEMESTER - VI

2.2 Course Contents

Theory (Credit 2)

Total Hours: 30

UNIT I: Introduction to recombinant DNA technology **(5 Hours)**

Overview of gene cloning. Restriction and Modification systems, Restriction endonucleases, DNA modifying enzymes (DNA polymerase I, Taq polymerase, DNAse I, DNA Ligase).

UNIT II: Cloning vectors for prokaryotes and eukaryotes **(6 Hours)**

Salient features of vectors (pBR322, pUC8, Lambda bacteriophage, Ti plasmid) used in cloning.

UNIT III: **Introduction of DNA into cells and selection of recombinants (9 Hours)**

Ligation of DNA molecules: linker, adapters, homopolymer tailing. Introduction of DNA into bacterial cells, selection of transformed cells, insertional inactivation. Identification of recombinant phages. cDNA and Genomic DNA libraries. Clone identification by colony and plaque hybridization.

UNIT IV: Basics of Polymerase Chain Reaction and DNA sequencing (5 Hours)

Fundamentals of polymerase chain reaction, designing primers for PCR. DNA sequencing by chain-termination method, pyrosequencing.

UNIT V: Expression of cloned genes (5 Hours)

Vectors for expression of foreign genes in *E. coli,* expression cassettes. Hybrid promoters trc, tac, λpL and T7 promoter-based expression–vectors. Challenges in producing recombinant protein in *E. coli.* Fusion tags (poly-histidine, GST) and their role in purification of recombinant proteins.

2.3 Practicals

Credits : 2 **Total Hours: 60**

1. Growing a culture of *E.coli* and obtaining isolated colonies by streak-plate method.
2. DNA estimation by UV spectrophotometry.
3. Isolation of plasmid DNA from *E. coli.*
4. Restriction digestion of plasmid DNA and agarose gel electrophoresis.
5. Amplification of a DNA fragment by PCR (demonstration)

2.4 Essential Readings

1. Gene Cloning and DNA Analysis (2016) 7th ed., Brown, T.A., Wiley Blackwell Publishing (Oxford, UK), ISBN: 978-1-119-07256-0.
2. Molecular Biotechnology: Principles and Applications of Recombinant DNA (2010) 4th ed., Glick B.R., Pasternak, J.J. and Patten, C.L., ASM Press (Washington DC), ISBN: 978-1-55581-498-4 (HC).

3. Key Words

Genetic Engineering, Recombinant Proteins, PCR, DNA Sequencing

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DEPARTMENT OF MICROBIOLOGY
SEMESTER-IV
B.Sc. (Hons.) Microbiology

DISCIPLINE SPECIFIC CORE COURSE – 10: ADVANCES IN CELL BIOLOGY

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
MICROB-DSC401: ADVANCES IN CELL BIOLOGY	4	3	0	1	Class XII pass with Biology/ Biotechnology/ Biochemistry	Basic Concepts of Cell Biology

Learning Objectives

The Learning Objectives of this course are as follows:

- The major objective of this course is to introduce the students to the essentials of eukaryotic cell biology.
- The students will gain knowledge about the physical and chemical architecture of cells as well as structural and functional details of different cell organelles.
- They will become familiar with cell cycle events, and mechanisms of cell communication and cell death.
- They will be educated about the hallmarks, etiology and diagnosis of cancers.
- They will be introduced to the cutting edge science of stem cell technology, their production and various applications.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Student will be able to describe the different components of cell signalling pathways used for cell communication.
- Student will be able to recall cell division, mechanisms of cell cycle regulation, and types of cell death.
- Student will be able to evaluate the importance of stem cells and their associated technologies and applications.

- Student will be able to describe the different types of cancers, their causes, characteristics, diagnosis, and treatment modalities.
- Student will be able to analyze DNA by Feulgen staining followed by microscopic observation. Student will be able to analyze the different stages of cell division: mitotic stages by temporary mount and meiosis stages by the permanent mount.
- Student will be able to evaluate chromosome polyploidy by colchicine treatment of plant material followed by staining.

SYLLABUS OF DSC-10

UNIT – I (20 hours)

Cell Signalling: Modes of cell-cell signalling: endocrine, paracrine, autocrine. Signalling molecules: nitric oxide, carbon monoxide, steroid hormones, neurotransmitters, peptide hormones and growth factors. Cell surface receptors and receptor-ligand interactions: G protein-coupled receptors, receptor protein tyrosine kinases, cytokine receptors. Signal transduction: cyclic AMP, cyclic GMP and MAP kinase pathways.

UNIT – II (10 hours)

Cell Cycle and Cell Death: Phases and regulation of eukaryotic cell cycle. Mitosis and meiosis. Types of cell death: necrosis, apoptosis and autophagy, mitophagy. Characteristics and pathways of apoptosis: intrinsic and extrinsic.

UNIT – III (5 hours)

Cell Renewal: Stem cells: characteristics and types: somatic stem cells, embryonic stem cells, induced pluripotent stem cells. Therapeutic applications of stem cells.

UNIT – IV (10 hours)

Cancer biology: Hallmarks of cancer. Causes of cancer: carcinogens, cancer-causing microorganisms. Proto-oncogenes and oncogenes. Tumor suppressor genes. Characteristic features of cancer cells. Types of cancers. Cancer stem cells. Approaches to cancer diagnosis. Currently available cancer treatment modalities (including bone marrow transplantation, immune cell and oncolytic viral therapies).

Practical component

UNIT 1: (20 hours)

Cell division and cytochemical analysis of DNA: Performance of cytochemical staining of DNA by Feulgen stain. Microscopic examination and analysis of the different stages of mitosis through temporary mounts of stained onion root tip. Microscopic examination and analysis of the different stages of meiosis through temporary mounts / permanent slides.

Unit 2: (10 hours)

Chromosome polyploidy and properties of cancer cells: Study of polyploidy in onion root tip by colchicine treatment followed by acetocarmine stain. Identification and

study of properties of different types of cancerous cells through light and electron micrographs.

Essential/recommended readings

Theory:

1. Molecular Cell Biology by H. Lodish, A. Berk, C. Kaiser, M. Krieger, A. Bretscher, H.Ploegh, A. Amon and K.C. Martin. 9th edition. W.H. Freeman, UK. 2021.
2. Essential Cell Biology by B. Alberts, K. Hopkin, A.D. Johnson, D. Morgan, and M. Raff. 5th edition. W.W. Norton & Co, USA. 2019.

5. Essential Cell Biology Vol 1: Cell Structure- A Practical Approach by J. Davey and M.Lord. Oxford University Press, UK. 2003.
6. Essential Cell Biology Vol 2: Cell Function- A Practical Approach by J. Davey and M. Lord. Oxford University Press, UK. 2003.

Suggestive readings

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE –11:
MICROBIAL PHYSIOLOGY AND METABOLISM- II

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
MICROB-DSC402: **MICROBIAL PHYSIOLOGY AND METABOLISM-II**	**4**	**3**	**0**	**1**	**Class XII pass with Biology/ Biotechnology/ Biochemistry**	**Microbial Physiology and Metabolism-I**

Learning Objectives

The Learning Objectives of this course are as follows:

- The main objective of this course is to enable students to understand the underlying mechanisms governing various physiological and metabolic features of prokaryotes.
- These include transport mechanisms for the uptake of nutrients, bacterial growth, and the diversity of prokaryotes due to (i) adaptations to the different habitats in which they grow and (ii) metabolic pathways for energy production and carbon and nitrogen assimilation.
- The course will build the strong foundation needed by the students for further studies in the advanced fields of microbiology including metabolic engineering.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Student will be able to elaborate on various pathways of fermentation in microbes.
- Student will be able to discuss the classification of chemolithotrophs and phototrophs along with mechanisms of energy production and cellular carbon synthesis.
- Student will be able to describe the nitrogen cycle and its assimilation and dissimilation by processes like nitrogen fixation, ammonia assimilation, nitrification, denitrification etc.

- Student will be able to evaluate the diversity of metabolic pathways in microbes by designing and formulation of microbial culture media and studying the effect of changing chemical environment on fungal growth using various carbon sources.
- Student will be able to evaluate the diversity of metabolic pathways in microbes by studying the effect of changing chemical environment on bacterial growth using various nitrogen sources.

SYLLABUS OF DSC-11

UNIT – I (8 hours)

Microbial fermentations: Principles of fermentation. Alcohol fermentation and Pasteur effect. Lactate fermentation (homofermentative and heterofermentative pathways). Concept of linear and branched fermentation pathways.

UNIT – II (12 hours)

Metabolism in chemolithotrophic autotrophs: Physiological groups of chemolithotrophs (aerobic and anaerobic). Detailed mechanism of energy production and generation of reducing power in H2 oxidizers and methanogens.

UNIT – III (13 hours)

Metabolism in phototrophic autotrophs: Families of phototrophic bacteria, bacterial photosynthetic pigments, generation of energy and reducing power in purple and green bacteria (anoxygenic photosynthesis) and cyanobacteria (oxygenic photosynthesis), photophosphorylation (cyclic and non- cyclic). Production of cellular carbon (C1 metabolism) in autotrophs by Calvin cycle & reductive TCA pathway and by acetyl-CoA in methanogens.

UNIT – IV (12 hours)

Nitrogen Metabolism: Biological nitrogen fixation: Diversity, mechanism of nitrogen fixation, nitrogenase activity and its physiological regulation, alternate nitrogenases, ammonia assimilation, assimilatory nitrate reduction. dissimilatory nitrate reduction (denitrification, nitrate/ nitrite and nitrate/ ammonia respiration).

Practical component

UNIT 1: (15 hours)

Carbon metabolism: Comparison of the growth of A. niger in minimal medium containing different carbon sources (glucose, fructose and lactose) on different days of growth using dry weight method.

Unit 2: (15 hours)

Nitrogen metabolism: Study of the effect of nitrogen sources (ammonium, nitrate and peptone) on the growth of E. coli. Investigation any one bacterium for its nitrifying / denitrifying properties

Essential/recommended readings

Theory:

1. Fundamentals of Bacterial Physiology and Metabolism by Rani Gupta and Namita Gupta. Springer Nature Singapore Pvt. Ltd., Singapore. 2021.
2. Lehninger Principles of Biochemistry by D.L. Nelson and M.M. Cox. 8th edition. W.H. Freeman and Company, UK. 2021.
3. Brock Biology of Microorganisms by M.T. Madigan,J. Aiyer,D. Buckley,W.Sattley and D. Stahl.16th edition. Pearson, USA. 2021.
4. Prescott's Microbiology by J. M. Willey, K. Sandman and D. Wood. 11th edition. McGrawHill Higher Education, USA. 2019.
5. Microbial Biochemistry by G.N. Cohen. 2nd edition. Springer, Germany. 2014.
6. The Physiology and Biochemistry of Prokaryotes by D. White, J. Drummond and C. Fuqua. 4th edition. Oxford University Press, UK. 2011.
7. Microbial Physiology by S.R. Reddy and S.M. Reddy. Scientific Publishers India. 2007.
8. Microbial Physiology by A.G. Moat, J.W. Foster and M.P. Spector. 4th edition. John Wiley& Sons, USA. 2002.

Practicals:

1. Essentials of Practical Microbiology by A. Sastry and S. Bhat. 2nd edition. Jaypee Brothers Medical Publishers, India. 2021.
2. Microbiology: A Laboratory Manual by J. Cappuccino and C.T. Welsh. 12th edition. Pearson Education, USA. 2020.

5. Applied Microbial Physiology: A Practical Approach by P. M. Rhodes and P. F. Stanbury. IRC Press. 1997.

Suggestive readings

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE – 12:
VIROLOGY

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
MICROB-DSC403: **VIROLOGY**	**4**	**3**	**0**	**1**	**Class XII pass with Biology/ Biotechnology/ Biochemistry**	**NIL**

Learning Objectives

The Learning Objectives of this course are as follows:

- The major objective of this course is to make students aware of the extent to which the tiniest of microorganism (viruses) leave their impact on human and animal health as well as in agriculture.
- Students will get acquainted with the structures and replication strategies of bacterial, plant and human viruses.
- Students will gain in-depth knowledge of how viruses infect their host, spread across a population, and cause diseases.
- They will learn of preventive measures used for protection against viral infections, and control
- They will acquire knowledge of emerging and re- emerging viruses in context to public health threats taking coronavirus as the case study.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Student will be able to describe the nature, properties and structure of viruses, and be knowledgeable about sub-viral particles, giant viruses and viral taxonomy.
- Student will be able to discuss bacterial viruses, their salient features, and replication strategy of important bacteriophages.
- Elaborate on plant viruses, modes of transmission and their economic importance.
- Student will be able to evaluate the salient features and replication strategies of important human viruses, and will have understood the concept of oncogenesis, DNA and RNA cancer-causing viruses.
- Student will be able to describe how to prevent viral infections using vaccines and antiviral compounds.

- Student will be able to assess the problems of emerging and re-emerging viruses, having an understanding of the rise of coronavirus as the major public health crisis along with the implemented management protocols.

SYLLABUS OF DSC-12

UNIT – I (9 hours)

Introduction to Virology: History of virology. Nature and general properties of viruses, concept of viroids, virusoids, satellite viruses, prions, giant viruses (mama, mimi and pandora virus), virophages (Sputnik). Structure of viruses: Capsid symmetry, enveloped and non- enveloped viruses. Isolation, purification and cultivation of viruses. Viral taxonomy: Classification and nomenclature of different groups of viruses.

UNIT – II (8 hours)

Bacteriophages: Diversity, one step multiplication curve. T4 phage: Unusual bases, terminal redundancy, lytic cycle, assembly, maturation and release of progeny virions. Lambda phage: genome structure, concept of early and late proteins, lytic cycle and lysogeny. øX174 phage: Overlapping genes, and rolling circle replication.

UNIT – III (3 hours)

Plant Viruses: Diversity, modes of transmission (non-persistent, semi persistent and persistent), salient features of replication of Geminivirus. Economic importance of plant viruses : adverse and beneficial effects. Virus-like particles (VLPs) and their applications in medicine.

UNIT – IV (18 hours)

Human Viruses: Diversity, routes of transmission: vertical and horizontal (vector-borne, air-borne, oral-faecal borne) infection cycle. Replication of Human Immuno Deficiency Virus (HIV) and Polio Virus. Overlapping genes. Partial double stranded genomes: Hepatitis B. Segmented genomes: Influenza virus. Non-segmented genomes: Picornavirus. Assembly with example of Polio virus. Oncogenic viruses: types of oncogenic DNA and RNA viruses. Emerging and Re-emerging viruses: H1N1, Dengue, Ebola, Zika virus and associated pandemics and epidemics. Case study of the SARS-CoV2 Corona virus as the recent public health threat: emergence, epidemiology, management protocols, emergence of variants, global impact

UNIT – V (7 hours)

Prevention and Control of Viral Diseases: Antiviral compounds and their mode of action: AZT, ritonavir, lamivudine. Interferons and their mode of action. General principles of viral vaccines: live attenuated vaccines, inactivated viral vaccine, subunit vaccine, recombinant viral vaccine.

Practical component

UNIT 1: (22 hours)

Structure and isolation of viruses: Principle and use of electron microscopy to study virus structure. Use of electron micrographs for studying the structural characteristics of the following viruses: Bacterial viruses: ϕX174, T4, λ. Plant viruses: caulimo, gemini, tobacco ringspot, cucumber mosaic and alfalfa mosaic viruses. Human viruses: rhabdo, influenza, paramyxo, hepatitis B and retroviruses.

Isolation of bacterial and plant viruses: Isolation and enumeration of bacteriophages (PFU) from water/sewage samples using double agar layer technique. Qualitative analysis of lytic and lysogenic phage by observation of plaque phenotypes (clear versus turbid). Isolation of plant viruses from infected leaves followed by locally inoculating healthy plant leaves to confirm isolation and infectivity. Use of the local lesion assay to observe characteristic lesions formed on the plant leaves and measure of infectivity of the virus by enumeration of the number of local lesions on the inoculated leaves.

Unit 2: (8 hours)

Isolation and propagation of animal viruses: Principle and working method of using chick embryo cultivation technique. Demonstration of the method using videos. Cytopathic effects of viruses: observation of the physical attributes of virus-infected cells of different types with suitable photographs and images.

Essential/recommended readings

B.Sc. (Hons.) Microbiology

DISCIPLINE SPECIFIC CORE COURSE – 13: PRINCIPLES OF MOLECULAR BIOLOGY-I

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
MICROB-DSC501: **PRINCIPLES OF MOLECULAR BIOLOGY-I**	**4**	**3**	**0**	**1**	**Class XII pass with Biology/ Biotechnology/ Biochemistry**	**NIL**

Learning Objectives

The Learning Objectives of this course are as follows:

- The major objective of this course is for the student to gain comprehensive knowledge of the basic concepts of molecular biology.
- The student will become familiar with DNA-related cellular processes and will become aware of the central dogma of molecular biology, learning about the propagation of information through DNA replication and the unidirectional flow of information from DNA to RNA to proteins through transcription and translation

Learning outcomes

The Learning Outcomes of this course are as follows:

- Student will be able to describe DNA and RNA as genetic material and the structure and properties of the different DNA types as well as the various kinds of RNA.
- Student will be able to explain the process of propagation of information in prokaryotes and eukaryotes by DNA replication and the various enzymes and other proteins that modulate this process.
- Student will be able to describe the basic prokaryotic and eukaryotic transcription processes, including the RNA polymerases and general transcription factors involved, differentiate between the processes in prokaryotes and eukaryotes.
- Student will be able to evaluate the relevance of the double helical structure of DNA in the propagation of genetic material.
- Student will be able to demonstrate the isolation of genomic DNA and plasmid from bacterial cells, and analyze them through agarose gel electrophoresis.

SYLLABUS OF DSC-13

UNIT – I (12 hours)

Structure and properties of nucleic acids: Types of genetic material: DNA and RNA. Structure of DNA: characteristic features of double helix. Properties of different types of DNA: A, B and Z. Denaturation and renaturation of DNA, factors affecting renaturation kinetics, concept of Tm. Principle and method of cot curve analysis of DNA. Factors affecting DNA topology: role of topoisomerases I and II. Concept of linking number. Concept of concatenation and concatamerization. DNA organization in prokaryotes and eukaryotes. Structure and function of RNA: rRNA, tRNA and mRNA.

UNIT – II (17 hours)

Replication of DNA in prokaryotes and eukaryotes: Semi-conservative DNA replication. Unidirectional and bidirectional DNA replication. DNA replication modes with one example each: D-loop (mitochondrial), Θ (theta), rolling circle. Structure of origins of replication in prokaryotes versus eukaryotes, initiators and replicators. Mechanism of origin activation in prokaryotes (E.coli) and eukaryotes (S.cerevisiae). Mechanism of DNA replication: semi-discontinuous replication, leading and lagging strand synthesis. Replication machinery in prokaryotes and eukaryotes: primase, DNA polymerases, DNA ligase. Mechanisms for maintaining fidelity of replication. Differences in prokaryotic and eukaryotic DNA replication. Regulation of replication in prokaryotes and eukaryotes. Replication of chromosome ends: mechanism of action of telomerase, importance of telomerase in ageing.

UNIT – III (16 hours)

Transcription in prokaryotes and eukaryotes: Distinction between replication and transcription. Concept of transcription unit. Concept of operon and polycistronic transcription in prokaryotes. RNA polymerases in prokaryotes and eukaryotes. Structure and properties of promoter in prokaryotes and eukaryotes. Role of enhancers and silencers in gene regulation. General transcription factors in eukaryotes. Process of transcription initiation and elongation in prokaryotes and eukaryotes. Transcription termination: rho-dependent and rho-independent termination mechanisms. Inhibitors of transcription and their mechanism. Comparison of the transcription process in prokaryotes versus in eukaryotes

Practical component

UNIT 1: (12 hours)

Study of different types of DNA and RNA:

Student research study project: Discovery of DNA as genetic material. Discovery of structure of DNA: the double helix.

Study of the structure and properties of different types of DNA using micrographs and/or models: A-DNA, B-DNA and Z-DNA. Study of the structure and properties of various RNAs using micrographs: mRNA, rRNA, tRNA, miRNA, siRNA, guide RNA, xistRNA, snRNA, snoRNA. Discussion on the importance of the double helix

structure in DNA replication by semi- conservative mode: the Meselson & Stahl experiment.

Unit 2: (18 hours)

Isolation and analysis of DNA:

Isolation of genomic DNA from Escherichia coli cultures: cell lysis and DNA precipitation. Analysis of the isolated genomic DNA: principle and working method of agarose gel electrophoresis. Isolation of plasmid DNA using alkaline lysis method. Analysis of the isolated plasmid DNA by agarose gel electrophoresis. Identification of the different forms of plasmid DNA by agarose gel electrophoresis.

DNA estimation: colorimetric estimation of DNA using salmon sperm DNA or calf thymus DNA as standard: diphenylamine method. Spectrophotometric method using absorbance at 260 nm.

Essential/recommended readings

Theory:

1. Lewin's Essential Genes by J. Krebs, E. Goldstein and S. Kilpatrick. 4th edition. Jones andBartlett Publishers, USA. 2020.
2. Karp's Cell and Molecular Biology by G. Karp, J. Iwasa and W. Marshall. 9th edition. Wiley, USA. 2019
3. Molecular Biology by D. Clark, N. Pazdernik and M. McGehee. 3rd edition. Academic Cell, USA. 2018.
4. Lewin's Genes XII by J. Krebs, E. Goldstein and S. Kilpatrick. 12th edition. Jones and BartlettLearning, USA. 2017.
5. Becker's World of the Cell by J .Hardin and G.P. Bertoni. 9th edition. Pearson, USA. 2015.
6. Principles of Genetics by D.P. Snustad and M.J. Simmons. 7th edition. Wiley and Sons, UK. 2015.
7. Molecular Biology of the Gene by J.D. Watson, T.A. Baker, S.P. Bell, A. Gann, M. Levine and R. Losick. 7th edition. Pearson Education, USA. 2014.
8. Cell and Molecular Biology by E.D.P. De Robertis and E.M.F. De Robertis. 8th edition. Lippincott Williams and Wilkins, USA. 2006.

Practicals:

1. Molecular Cloning: A Laboratory Manual by M. Green and J. Sambrook Volumes 1-3. 4th edition. Cold Spring Harbor Laboratory Press, USA. 2012.
2. An Introduction to Practical Biochemistry by D. Plummer. 3rd edition. McGraw Hill Education, India. 2017.

Suggestive readings

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE – 14:
BASIC CONCEPTS OF IMMUNOLOGY

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
MICROB-DSC502: **BASIC CONCEPTS OF IMMUNOLOGY**	**4**	**3**	**0**	**1**	**Class XII pass with Biology/ Biotechnology/ Biochemistry**	**None**

Learning Objectives

The Learning Objectives of this course are as follows:

- The main objective of this course is to give the students insight into how the human body tackles diseases and what mechanisms of defense are used in protection processes.
- The students will develop a clear understanding of the various components of the immune system and will become aware of the characteristics of antigens, their types and various antibodies produced by the system to defend us from the invading microorganisms.
- The student also learns about the major histocompatibility complex, the complement system, monoclonal antibodies and cytokines, which are of paramount importance in triggering an efficient immune response.

Learning outcomes

The Learning Outcomes of this course are as follows:

- The student will be able to describe various types of immune responses and the basic processes involved therein, how the immune system protects us from infection using various lines of defense.
- The student will be able to explain the characteristics and functions of the cells of the immune system as well as the structure and functioning of various organs of the immune system, and immunodiagnostic techniques.
- The student will be able to explain the important properties of antigens as well as how environmental factors affect antigen immunogenicity; the structure, types, and functions of antibodies, monoclonal and chimeric antibodies.

- The student will be able to describe the major histocompatibility complex proteins and their loci in the genome along with the two distinct pathways for processing and presentation of exogenous and endogenous antigens.
- The student will be able to discuss the mechanisms by which the complement system is activated via three distinct pathways so as to support the antibodies and phagocytes to clear microbes and damaged cells with utmost efficacy.

SYLLABUS OF DSC-14

UNIT – I (10 hours)

Basic Introduction to immune system: Components of innate immunity: Anatomical and physiological barriers, chemical mediators, non-specific defence mechanisms, inflammatory response, phagocytosis, Pattern Recognition Receptors (PRR). Features of Adaptive Immunity, Cytokines and cytokine receptor families with emphasis on IL-2R.

UNIT – II (10 hours)

Cells and organs of Immune System: Hematopoiesis, structures, functions and properties of cells of lymphoid lineage (T cell, B cell, NK cell) and myeloid lineage (macrophage, neutrophil, eosinophil, basophil, mast cell, dendritic cell). Separation of cells using Flow Cytometry. Primary and secondary immune organs (bone marrow, thymus, spleen, lymph nodes, GALT).

UNIT – III (15 hours)

Antigens and antibodies: Properties of Antigens: foreignness, molecular size, heterogeneity. Antigenicity and immunogenicity, environmental factors affecting immunogenicity of an antigen, adjuvants, epitopes of an antigen (T and B cell epitopes), T-dependent and T-independent antigens, haptens.

Elucidation of antibody structure; types, functions and properties of antibodies, antigenic determinants on antibodies (isotypic, allotypic, idiotypic), monoclonal and chimeric antibodies, immunoglobulin superfamily. Immunodiagnostics by SDS-PAGE, western blotting, ELISA and its types, immunofluorescence, immunoelectron microscopy.

UNIT – IV (5 hours)

T Cell Receptor, Major Histocompatibility Complex and Antigen Presentation: Structure and functions of TCR-CD3 complex, MHC I & MHC II molecules, organization of MHC locus (mouse and human), antigen processing pathways (cytosolic and endocytic).

UNIT – V (5 hours)

Complement and Activation Pathways: Components of complement system, Complement activation pathways (classical, alternative and lectin) and their biological consequences.

Practical component

UNIT 1: (18 hours)

Introduction to Immunology:

Student study research project: The contributions of the following scientists to the development of the field of immunology: Edward Jenner, Paul Ehrlich, Peter Medawar, MacFarlane Burnet, Neils K Jerne, Susumu Tonegawa, Jules Bordet, Peter C. Doherty & Rolf M. Zinkernagel, Cesar Milstein & Georges E. Kohler, and George Snell, Jean Dausset & Baruj Benacerraf.

Cells of Immune system:

Familiarizing students with the haemocytometer and its uses. Determining total leucocyte count in the given blood sample: making a smear of human blood and performing total and differential leukocyte count, determining percent count neutrophils, lymphocytes, eosinophils, basophils and monocytes. Study of the association of abnormal blood counts with diseases like leukopenia, leukocytosis, neutropenia.

Unit 2: (12 hours)

Basic Immunodiagnostic techniques:

Concepts of agglutination and identification of human blood groups. Understanding the concepts of immunoprecipitation by performing double immunodiffusion (Ouchterlony method). Principles, working methods and applications of Lateral Flow Test and Plate/ Dot ELISA. Performance of Plate/ Dot ELISA, and Lateral Flow Test using any diagnostic kit.

Essential/recommended readings

Theory:

1. Immunology: A short course by R. Coico. 8th edition. Wiley- BlackwellScientific Publication, UK. 2021
2. Cellular and Molecular Immunology by A.K. Abbas, A.H. Lichtman and S. Pillai. 10th edition.Elsevier, USA. 2021.
3. Kuby Immunology by J. Punt, S. Stranford, P. Jones and J. Owen. 8 th edition.
4. W.H. Freemanand Company, USA. 2018.
5. Roitt's Essential Immunology by P. Delves, S. Martin, D. Burton and I.M. Roitt. 13th edition.Wiley- Blackwell Scientific Publication, UK. 2017.
6. Janeway's Immunobiology by K. Murphy and C. Weaver. 9th edition. Garland Science Publishers, USA. 2016.
7. Basic and Clinical Immunology by M. Peakman and D. Vergani. 2nd edition. ChurchillLivingstone, UK. 2009.
8. Immunology by C. Richard and S. Geoffrey. 6th edition. Wiley- Blackwell Scientific Publication, UK. 2009.

Practicals:

1. A Handbook of Practical and Clinical Immunology Volumes I & 2 by G. P. Talwar and S.K. Gupta. 2nd edition. CBS Publishers, India. 2017.
2. Practical Immunology, A Laboratory Manual by S. Balakrishnan, K. Karthik and S. Duraisamy. Lambert Academic Publishing, India. 2017.

3. Microbiology: A Laboratory Manual by J. Cappuccino and C.T. Welsh. 11th edition. Pearson Education, USA. 2016.
4. Laboratory Manual on Immunology and Molecular Biology by D. Dwivedi and V. Singh. Lambert Academic Publishing, India. 2013.
5. Practical Immunology by F.C. Hay, M.R. Olwyn and M.R. Westwood. 4th edition. Wiley Blackwell Publishing. 2002.

Suggestive readings

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE –15: MEDICAL MICROBIOLOGY

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
MICROB-DSC503: MEDICAL MICROBIOLOGY	4	3	0	1	Class XII pass with Biology/ Biotechnology/ Biochemistry	None

Learning Objectives

The Learning Objectives of this course are as follows:

- The main objective of this course is to introduce the students to the fundamental features of medical microbiology.
- Students will recognize the diversity of microbial pathogens and their virulence mechanisms. They will be introduced to specific infectious diseases of global relevance, diagnostic methods, and methods to manage infectious diseases.
- They will become familiar with the functional aspects of antimicrobial chemotherapy and anti- microbial resistance and will gain insights into the recent development of new molecular diagnostic methods as well as the global spread and emergence of infectious agents.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Student will be able to explain the terms in describing disease causalities, pathogenic features of microbial agents of disease, and their transmission, and will be able to describe the diverse nature of the human microbiome and its significance.
- Student will be able to describe the spectrum of diseases caused by bacterial pathogens, and the course of disease development and accompanying symptoms. Student will be able to to discuss the methods of transmission, epidemiological aspects, preventive measures, treatments.
- Student will be able to explain the human diseases caused by viruses including emerging viral pathogens, giving an understanding of the etiology, course of disease development, symptoms, diagnosis and management of these diseases.
- Student will be able to elaborate on the fungal and protozoan diseases with respect to their etiology, symptoms, transmission, diagnosis and control.
- Student will be able to explain the basic concepts of handling clinical specimens, and approaches used to aid in detection/ diagnosis of infectious agents using immunological and molecular biology-based methods.
- Student will be able to evaluate the mode of action of different antimicrobial agents, concept of antimicrobial resistance and immunization schedule followed in India.

SYLLABUS OF DSC-15

UNIT – I (7 hours)

Introduction to pathogenicity, infection and human microbiota: Commonly used terms and nomenclature: pathogen, infection, invasion, virulence and its determinants, endotoxins and exotoxins, carriers and their types. Opportunistic, nosocomial, acute, latent and chronic infections. Sepsis and septic shock. Modes of transmission of pathogens. Role of microbiome in human health. Factors governing the microbiota of skin, throat and upper respiratory tract, gastrointestinal tract, urogenital tract (with examples of microorganisms in each instance).

UNIT – II (12 hours)

Bacterial pathogens causing common diseases in humans: Symptoms, transmission, prophylaxis and treatment of the diseases caused by: Bacillus anthracis, Clostridium tetani, Clostridium difficile, Escherichia coli, Helicobacter pylori, Mycobacterium tuberculosis, Staphylococcus aureus, Salmonella enterica Typhi, Treponema pallidum, Vibrio cholerae

Unit III: (12 hours)

Viral diseases in humans: Etiology, symptoms, transmission, diagnosis, prophylaxis, and treatment of the following diseases: Polio, Chicken pox, Mumps, Measles, Herpes, Hepatitis, Rabies, AIDS, Influenza (swine flu and bird flu), Dengue, Japanese Encephalitis, Rota virus infections, COVID-19.

UNIT – IV (4 hours)

Protozoan and fungal diseases in humans: Etiology, symptoms, transmission, diagnosis and control of Malaria and Kala azar. Types of mycoses. Detailed study of certain mycoses. Cutaneous mycoses: Tinea pedis (Athlete's foot). Systemic mycoses: Aspergillosis. Opportunistic mycoses: Candidiasis, Mucormycosis.

UNIT – V (10 hours)

Diagnostics and therapeutics in infectious diseases:

Collection, transport and culturing of clinical samples. Principles of different diagnostic tests: Agglutination-based tests (Widal and VDRL test), lateral flow assay-based kits, immunofluorescence test for syphilis, Nucleic acid based diagnostic techniques: Rapid PCR and RT-PCR.

Anti-microbial chemotherapy: General characteristics and mode of action of anti-microbial agents. Antibacterial with one example each: inhibitor of nucleic acid synthesis, inhibitor of cell wall synthesis, inhibitor of cell membrane function, inhibitor of protein synthesis. Antifungal: mechanisms of action of amphotericin B, griseofulvin. Antiviral: mechanism of action of amantadine, tamiflu, acyclovir. Antimicrobial resistance: mechanisms of drug resistance, MDR, XDR, TDR, NDM-1, ESBL, MRSA, VRSA, ESKAPE pathogens.

Practical component

UNIT 1: (16 hours)

Identification and analysis of the cultural, morphological and biochemical characteristics of bacteria: E. coli, Salmonella, Pseudomonas, Staphylococcus, Bacillus, Klebsiella (any three).

Study of the composition and use of important differential media for identification of bacteria: mannitol salt agar, deoxycholate citrate agar / Salmonella Shigella (SS) agar, MacConkey / EMB Agar.

Identification of bacteria based on biochemical characteristics: IMViC (Indole test, Methyl Red test, Voges-Proskauer test, Citrate test), Triple Sugar Iron (TSI) test, nitrate reduction test, urease test and catalase test.

Group project: Study of skin microbiome: Study of the bacterial flora of skin by swab method: Isolation of bacteria from skin on general purpose media (nutrient agar) and/or selective media (mannitol salt agar). Study of colony characteristics of the obtained isolates followed by Gram staining and microscopy to determine the gram character, shape and arrangement of cells.

Unit 2: (14 hours)

Study of antibiotic sensitivity and rapid detection of infectious diseases: Principle and performance of antibacterial sensitivity test by Kirby-Bauer method. Concept of MIC values. Determining MIC of any two antibiotics for any two bacteria.

Principles and working of rapid antigen tests. Demonstration of lateral flow kit for rapid antigen detection of COVID19. Principle and working of antibody detection test: Dengue test / Widal test for typhoid.

Essential/recommended readings

Theory:

1. Brock Biology of Microorganisms by M.T. Madigan,J. Aiyer,D. Buckley,W.Sattley and D. Stahl.16th edition. Pearson, USA. 2021.
2. Prescott's Microbiology by J. M. Willey, K. Sandman and D. Wood. 11th edition. McGrawHill Higher Education, USA. 2019.
3. Textbook of Microbiology by R. Ananthanarayan and C.K.J. Paniker. 10th edition. Universities Press, India. 2017.
4. Jawetz, Melnick and Adelberg's Medical Microbiology by K.C. Carroll, S.A. Morse, T.A.Mietzner and S. Miller. 27th edition. McGraw Hill Education. 2016.
5. Microbiology: An Introduction by G.J. Tortora, B.R. Funke and C.L. Case. 9thedition.Pearson Education, USA. 2007.
6. DNA microarrays for the diagnosis of infectious diseases by E. Donatin E and M. Drancourt. Med Mal Infect. 2012; 42(10):453-459. Doi:10.1016/j.medmal.2012.07.017

Practicals:

1. A Handbook of Practical and Clinical Immunology Volumes I & 2 by G. P. Talwar and S.K. Gupta. 2nd edition. CBS Publishers, India. 2017.
2. Practical Immunology, A Laboratory Manual by S. Balakrishnan, K. Karthik and S. Duraisamy. Lambert Academic Publishing, India. 2017.
3. Microbiology: A Laboratory Manual by J. Cappuccino and C.T. Welsh. 11th edition. Pearson Education, USA. 2016.
4. Laboratory Manual on Immunology and Molecular Biology by D. Dwivedi and V. Singh. Lambert Academic Publishing, India. 2013.
5. Practical Immunology by F.C. Hay, M.R. Olwyn and M.R. Westwood. 4th edition. Wiley Blackwell Publishing. 2002.

Suggestive readings

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

SEMESTER-VI

B.Sc. (Hons.) Microbiology

DISCIPLINE SPECIFIC CORE COURSE – 16: PRINCIPLES OF MOLECULAR BIOLOGY-II

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
MICROB-DSC601: PRINCIPLES OF MOLECULAR BIOLOGY-II	4	3	0	1	Class XII pass with Biology/ Biotechnology/ Biochemistry	Principles of Molecular Biology-I

Learning Objectives

The Learning Objectives of this course are as follows:

- The major objective of this course is for the student to gain comprehensive knowledge of the basic concepts of molecular biology.
- The student will become familiar with DNA-related cellular processes and will become aware of the central dogma of molecular biology, learning about the propagation of information through DNA replication and the unidirectional flow of information from DNA to RNA to proteins through transcription and translation.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Student will be able to explain RNA processing events including capping, polyadenylation and splicing. Can discourse on the concepts of RNA interference through siRNA and miRNA.
- Student will be able to discuss the mechanisms of translation of proteins in both prokaryotes and eukaryotes, and convey information about the inhibitors of protein synthesis.
- Student will be able to analyze and explain various mechanisms of gene regulation in prokaryotes and eukaryotes at the level of transcription and post-transcriptional

processes, as well as epigenetic mechanisms of gene regulation through chromatin modifications, the role of lncRNAs in gene regulation.

- Student will be able to demonstrate the procedure of isolation and analyze RNA by colorimetric and spectrophotometric methods, resolve proteins by electrophoresis on SDS-PAGE.

SYLLABUS OF DSC-16

UNIT – I (15 hours)

RNA processing and its applications: Difference in structure of prokaryotic and eukaryotic mRNA. Split gene theory, introns and exons. Processing of eukaryotic mRNA: capping and polyadenylation mechanisms and enzymes involved. RNA splicing: Group I and Group II introns and the mechanisms of splicing linked to them. Spliceosome machinery. Concepts of alternative splicing and trans-splicing. Processing of rRNA. RNA interference and its significance. Brief overview of siRNA and miRNAs.

UNIT – II (14 hours)

Translation in prokaryotes and eukaryotes: Translational machinery: ribosome structure in prokaryotes and eukaryotes, tRNA structure, aminoacyl tRNA synthetases and charging of tRNA. Mechanism of initiation, elongation and termination of polypeptide synthesis in prokaryotes and eukaryotes, highlighting the differences in the processes between the two groups of organisms. Mechanisms for maintaining the fidelity of translation.

UNIT – III (16 hours)

Regulation of gene expression in prokaryotes and eukaryotes: Principles of transcriptional regulation in prokaryotes: negative versus positive regulation using lac, trp and ara operons as examples. Gene regulation during sporulation in Bacillus. Yeast mating-type switching. Mechanisms of epigenetic regulation of gene expression: regulation of gene expression by DNA methylation, histone acetylation and histone methylation. Regulation of gene expression by DNA methylation in prokaryotes versus in eukaryotes. Histone methylation as both, positive as well as negative regulator of gene expression. Gene regulation by long noncoding RNAs (lncRNAs).

Practical component

UNIT 1: (15 hours)

Analysis of RNA and its applications:

RNA isolation and estimation: Total RNA isolation from yeast / bacterial cells. Colorimetric analysis of RNA with yeast tRNA as standard, using orcinol reagent or UV spectrophotometry. Northern blot analysis of processed RNA through virtual lab.

Student group research study project: use of mRNA in vaccines – case study of the COVID19 mRNA vaccines: CCMB vaccine technology/platform (based on Pfizer-

BioNTech/Moderna technology) versus Gennova vaccine technology/platform (based on HDT Bio Corp technology)
or
Student group research study project: trans-splicing in trypanosomatids.

Unit 2: (15 hours)
Analysis of proteins:
Analysis of total cell protein of bacteria by SDS-PAGE.
Student group research study project: drugs that inhibit protein translation and their mechanism of action.

Essential/recommended readings

Theory:

1. Lewin's Essential Genes by J. Krebs, E. Goldstein and S. Kilpatrick. 4th edition. Jones andBartlett Publishers, USA. 2020.
2. Karp's Cell and Molecular Biology by G. Karp, J. Iwasa and W. Marshall. 9th edition. Wiley, USA. 2019
3. Molecular Biology by D. Clark, N. Pazdernik and M. McGehee. 3rd edition. Academic Cell, USA. 2018.
4. Lewin's Genes XII by J. Krebs, E. Goldstein and S. Kilpatrick. 12th edition. Jones and BartlettLearning, USA. 2017.
5. Becker's World of the Cell by J .Hardin and G.P. Bertoni. 9th edition. Pearson, USA. 2015.
6. Principles of Genetics by D.P. Snustad and M.J. Simmons. 7th edition. Wiley and Sons, UK. 2015.
7. Molecular Biology of the Gene by J.D. Watson, T.A. Baker, S.P. Bell, A. Gann, M. Levine and R. Losick. 7th edition. Pearson Education, USA. 2014.
8. Cell and Molecular Biology by E.D.P. De Robertis and E.M.F. De Robertis. 8th edition. Lippincott Williams and Wilkins, USA. 2006.

Practicals:

1. Molecular Cloning: A Laboratory Manual by M. Green and J. Sambrook Volumes 1-3. 4th edition. Cold Spring Harbor Laboratory Press, USA. 2012.
2. An Introduction to Practical Biochemistry by D. Plummer. 3rd edition. McGraw Hill Education, India. 2017.

Suggestive readings

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE – 17: ADVANCES IN IMMUNOLOGY

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
MICROB-DSC602: **ADVANCES IN IMMUNOLOGY**	**4**	**3**	**0**	**1**	**Class XII pass with Biology/ Biotechnology/ Biochemistry**	**Basic concepts of Immunology**

Learning Objectives

The Learning Objectives of this course are as follows:

- The main objective of this course is to provide a detailed insight to the student about crucial roles played by human immune system in generation of an optimum immune response as well as in serious conditions arising by immune dysfunction such as infections, hypersensitivity, immunodeficiency and autoimmunity.
- Also the importance of immune system in cases of cancer and organ transplant. The course further enhances the student's understanding of how various immunodiagnostics and other advances in immunology have changed the face of modern medicine.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Student will be able to discuss the generation of humoral and cell-mediated immune response and the killing mechanisms available within the host body.
- Student will be able to describe immunity disorders like hypersensitivity, autoimmunity and immunodeficiency.
- Student will be able to explain organ transplantation and the role of the immune system in acceptance or rejection of the grafts, and ways to manage it.
- Student will be able to describe types of cancers, the antigens and immune response involved, tumor evasion mechanisms, diagnosis and treatment.
- Student will be able to describe vaccine formulation and its types, adjuvants, and National Immunization Schedule.

SYLLABUS OF DSC-17

UNIT – I (12 hours)

Generation of Immune Response: B cell development, generation of humoral immune response, primary and secondary immune response, generation of cell-mediated immune response (TCR, Self MHC restriction, T cell activation, co-stimulatory signals), killing mechanisms by CTL and NK cells.

UNIT – II (12 hours)

Immune Dysfunction: Types of hypersensitivities with one examples each, mechanism, manifestations and detection of type I hypersensitivity; Autoimmunity: types and mechanisms (Hashimoto's thyroiditis, Goodpasture's syndrome, IDDM, Rheumatoid arthritis, Multiple sclerosis, SLE); Immunodeficiency: Animal models (nude and SCID mice), disorders (SCID, DiGeorge syndrome, Chediak- Higashi syndrome, LAD, CGD).

UNIT – III (8 hours)

Transplantation Immunology: Types of grafts (autograft, isograft, allograft & xenograft), HLA typing, immunologic basis of graft rejection (sensitization & effector stages), role of T cells in graft rejection, GVHD, clinical manifestations of graft rejection (hyperacute, acute and chronic rejection), immunosuppressive therapies (general and specific), immunoprivileged sites

UNIT – IV (8 hours)

Cancer Immunology: Immune surveillance, types of cancers, malignant transformation of cells, tumor antigens (TATA and TSTA), immune response to cancer, tumor evasion, immunodiagnosis and cancer immunotherapy

UNIT – V (5 hours)

Vaccines: Active immunization, designing vaccines, boosters, types of vaccines: live attenuated, toxoid, conjugate/ multivalent, subunit, peptide, recombinant (vector based), DNA and RNA vaccines, use of adjuvants, National Immunization Schedule (NIS).

Practical component

UNIT 1: (20 hours)

Immunological techniques based on antigen - antibody interactions: Principles, working methods and applications of the following immunological techniques: ELISPOT, western blotting, immunofluorescence, flow cytometry, immunoelectron microscopy. Performance of SDS-PAGE to separate the different types of immunoglobulins. Detection of Type I hypersensitivity by RIST and RAST. MLR and Microcytotoxicity tests for HLA typing using pictures.

Unit 2: (12 hours)

Student group research studies:

Student group research project I: Experimental Systems in Immunology: Primary lymphoid cell culture systems. Animal models: Nude mouse, SCID mouse, SPF (Specific Pathogen Free) colony mice, dirty mice.

Student group research project II: short-term and long-term immune response to COVID-19 vaccines: case study of Covaxin.

Essential/recommended readings

Theory:

1. Immunology: A short course by R. Coico. 8th edition. Wiley- BlackwellScientific Publication, UK. 2021
2. Cellular and Molecular Immunology by A.K. Abbas, A.H. Lichtman and S. Pillai. 10th edition.Elsevier, USA. 2021.
3. Kuby Immunology by J. Punt, S. Stranford, P. Jones and J. Owen. 8 th edition.
4. W.H. Freemanand Company, USA. 2018.
5. Roitt's Essential Immunology by P. Delves, S. Martin, D. Burton and I.M. Roitt. 13th edition.Wiley- Blackwell Scientific Publication, UK. 2017.
6. Janeway's Immunobiology by K. Murphy and C. Weaver. 9th edition. Garland Science Publishers, USA. 2016.
7. Basic and Clinical Immunology by M. Peakman and D. Vergani. 2nd edition. ChurchillLivingstone, UK. 2009.
8. Immunology by C. Richard and S. Geoffrey. 6th edition. Wiley- Blackwell Scientific Publication, UK. 2009.

Practicals:

1. A Handbook of Practical and Clinical Immunology Volumes I & 2 by G. P. Talwar and S.K. Gupta. 2nd edition. CBS Publishers, India. 2017.
2. Practical Immunology, A Laboratory Manual by S. Balakrishnan, K. Karthik and S. Duraisamy. Lambert Academic Publishing, India. 2017.
3. Microbiology: A Laboratory Manual by J. Cappuccino and C.T. Welsh. 11th edition. Pearson Education, USA. 2016.
4. Laboratory Manual on Immunology and Molecular Biology by D. Dwivedi and V. Singh. Lambert Academic Publishing, India. 2013.
5. Practical Immunology by F.C. Hay, M.R. Olwyn and M.R. Westwood. 4th edition. Wiley Blackwell Publishing. 2002.

Suggestive readings

DISCIPLINE SPECIFIC CORE COURSE –18: INDUSTRIAL MICROBIOLOGY

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
MICROB-DSC603: INDUSTRIAL MICROBIOLOGY	4	3	0	1	Class XII pass with Biology/ Biotechnology/ Biochemistry	None

Learning Objectives

The Learning Objectives of this course are as follows:

- The major objective of this course is to give students an overview of the applications of fermentation processes in industry.
- The students will gain in-depth knowledge of different types of fermentation processes, fermenter designs and operations. They will become aware of large scale culturing methods of microorganisms for production of bioactives of industrial importance.
- Students will also gain an insight into steroid biotransformation and enzyme immobilization

Learning outcomes

The Learning Outcomes of this course are as follows:

- Student will be able to describe important developments in industrial microbiology and explain different types of fermentation processes.
- Student will be able to discuss the design, operations and applications of different types of fermenters and the measurement and control of fermentation parameters.
- Student will be able to demonstrate use of various methods to isolate, screen, preserve and maintain industrially important microbial strains, the different types of media used in fermentation processes.
- Student will be able to demonstrate use of various techniques for the recovery and purification of industrial products produced by microorganisms.
- Student will be able to explain the principles of large-scale microbial production and recovery of industrial products.
- Student will be able to demonstrate microbiological transformations of steroids and use the methods of enzyme immobilization to exploit their advantages and applications in the industry.

SYLLABUS OF DSC-18

UNIT – I (7 hours)

Development of industrial microbiology: Important developments in industrial microbiology and contribution of following scientists: Louis Pasteur, Carl Wilhelm Scheele, Casimir Funk, Alexander Fleming, Selman A. Waksman, Howard W Florey and Ernst B Chain. Types of fermentation processes: aerobic and anaerobic fermentations, solid-state and liquid-state (stationary and submerged) fermentations, batch, fed-batch and continuous fermentations

UNIT – II (10 hours)

Bioreactors and analysis of fermentation parameters: Parts of a typical fermenter. Types of bioreactors and their applications: Laboratory, pilot-scale and production fermenters, continuously stirred tank reactor, air-lift fermenter. Measurement and control of parameters: pH, temperature, dissolved oxygen, foaming and aeration.

UNIT – III (7 hours)

Selection of industrially important microbial strains: Sources of industrially important microorganisms, their isolation and screening (primary and secondary). Preservation and maintenance of stock and working cultures. Crude and synthetic fermentation media, inoculum and production media. Crude media components: molasses, corn-steep liquor, sulphite- waste liquor, whey, yeast extract. , peptone and tryptone.

UNIT – IV (4 hours)

Recovery methods for fermentation products: Physiochemical and biological methods for cell disruption, centrifugation, batch filtration, precipitation, solvent-solvent extraction spray drying and lyophilization.

UNIT – V (17 hours)

Upstream and downstream processing of microbial products, steroid biotransformation and enzyme immobilization: Citric acid, ethanol, glutamic acid, Vitamin B12, Wine (white, rose & red), beer, antibiotics (penicillin,streptomycin) and enzymes (amylase, protease, lipase and glucose oxidase). Microbiological transformation of steroids and its applications. Methods of enzyme immobilization: cross linking, entrapment, adsorption and covalent bonding. Advantages and applications of immobilized enzymes: glucose isomerase and penicillin acylase

Practical component

UNIT 1: (18 hours)

Aerobic fermentation processes: Microbial production of enzymes (amylases/lipase/protease) by liquid-state static /submerged fermentation and its detection by plate-assay method using an agar-based medium. Estimation of enzyme activity spectrophotometrically. Production of amino acids (glutamic acid /lysine) using a suitable bacterial culture, its detection by paper chromatography and its

colorimetric estimation using buffered ninhydrin reagent. Microbial production of citric acid by solid-state /liquid state fermentation using Aspergillus niger, its detection by chromatographic techniques and its quantitative estimation by titration.

Unit 2: (12 hours)

Anaerobic fermentation processes: Ethanol production by submerged fermentation using Saccharomyces cerevisiae, its detection by qualitative tests and its estimation spectrophotometrically using a suitable reagent.

A visit to any educational institute/industry to understand different types of fermenters/ bioreactors: laboratory-scale, pilot-scale and production fermenter, and their components (spargers, baffles, impellers etc

Essential/recommended readings

Theory:

1. Industrial Microbiology by A.H. Patel. 2nd edition. Laxmi publication Pvt Ltd/Trinity Press. 2022.
2. Industrial Microbiology by L.E. Casida. 2nd edition. New Age International publisher. 2019.
3. Modern Industrial Microbiology and Biotechnology by N. Okafor and B.C. Okeke. 2nd edition. CRC press, UK. 2018.
4. Crueger's Biotechnology: A Textbook of Industrial Microbiology by W. Crueger,

A. Crueger and K.R.Aneja. 3rd edition. Medtech Publisher, India. 2017.

9. Industrial Microbiology: An Introduction by M.J. Waites, N.L. Morgan, J.S . Rockey and G.Higton. Wiley –Blackwell. 2001.
10. Microbial Biotechnology: Fundamentals of Applied Microbiology by A.N. Glazer and H.Nikaido. 1st edition. W.H. Freeman and Company, UK.1995.

Practicals:

1. Microbiology: A Laboratory Manual by J. Cappuccino and C.T. Welsh. 12th edition. Pearson Education, USA. 2020.
2. Laboratory manual of Microbiology and Biotechnology by K.R. Aneja. 2nd edition. Scientific International Pvt. Ltd., Delhi. 2018.
3. Manual of Industrial Microbiology and Biotechnology edited by R.H. Baltz, A.L. Demain, and J.E. Davies. 3rd edition. American Society for Microbiology. 2010.
4. Microbial technology. Vol I- Microbial processes and Vol II -Fermentation technologyedited by H.J. Peppler and D. Perlman. 2nd edition. Academic Press, USA. 2009.

Suggestive readings

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

SEMESTER -IV

DEPARTMENT OF ELECTRONIC SCIENCE

Category I

(B.Sc. Honours in Electronics)

DISCIPLINE SPECIFIC CORE COURSE – 10: Electrical Technology

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Electrical Technology	4	3	-	1	Class XII passed with Physics + Mathematics/Applied Mathematics + Chemistry OR Physics + Mathematics/Applied Mathematics + Computer Science/Informatics Practices	Circuit Theory & Network Analysis (DSC-2, Sem I), Basic Instrumen-tation & Measure-ment Techniques (DSC-4, Sem II)

Learning Objectives

The Learning Objectives of this course are as follows:

The paper deals with Electrical and Electronic systems viz.; Working, construction and principle of DC and AC machines, transformers and polyphase circuits. The paper covers the related concepts such as control of speed, generation of Torque, various losses, efficiency and breaking mechanisms of various commonly used electromechanical systems such as stepper, induction and universal motors. The understanding of mathematical relations between the various parameters, imparts enough knowledge to optimize the output response under a given condition.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Discuss the working principle of a Transformer and analyze its specifications
- Understand the working of DC Machines, DC Generators and DC Motors
- Classify Induction motors into Polyphase and single phase motors and understand their working
- Evaluate the working of Synchronous generators and synchronous motors and their comparative study with induction motors

SYLLABUS OF ELDSC-10 **Total Hours- Theory: 45 Hours, Practicals: 30 Hours**

UNIT – I (10 Hours)

Transformers: Overview of types of transformers, EMF equation, Transformer Losses, No load operation, Operation under load, Phasor diagram, Equivalent circuit of transformer, Voltage regulation, Condition for maximum efficiency, All day efficiency, short circuit and open circuit tests.

Polyphase Circuits: Line and phase relations in three phase circuits.

DC Machines: Overview of Basic constructional features and physical principles involved in electrical machines, lap and wave connections.

UNIT – II (13 Hours)

D.C. Generators: Principle of operation, Concept of armature reaction and commutation, E.M.F. Equation, Methods of excitation, Characteristics of separately excited and Self excited (Shunt, Compound and Series) generators, Losses and efficiency.

D.C. Motors: Comparison of generator and motor action, Principle of operation, Back EMF, Maximum power, Torque and speed relation, Characteristics of series, shunt and Compound excited motors, Losses & efficiency, Three-point starter, Factors affecting speed of DC motors.

UNIT – III (12 Hours)

Poly Phase Induction Motors: General constructional features, Types of rotors, Rotating magnetic field (single phase, two phase and three phase), Ferrari's Principle, Production of torque, Slip, Starting Torque, Running Torque, Torque equation, Torque-slip characteristics (Breakdown Torque), factors affecting speed of Induction motor.

Single Phase Induction Motors: General constructional features, Study and applications: Split phase motors, Capacitor start & run motor, Reluctance Motor, Stepper Motor, Universal motor

UNIT – IV (10 Hours)

Synchronous Machines: Principle of operation and construction features of Alternators (synchronous generators), E.M.F. equation, Principle of synchronous motor, methods of starting, Power developed in Synchronous motor, factors for failure to start, applications, comparison of synchronous and induction motor

Practical component (if any) – Electrical Technology

(Hardware and Circuit Simulation Software)

Learning outcomes

The Learning Outcomes of this course are as follows:

- Understand the working of DC series, shunt and Induction motors
- Study the working of transformer
- Study of Stepper motor, Universal motor
- Write a technical report on the experiment performed.

LIST OF PRACTICALS (Total Practical Hours- 30 Hours)

1. Study of characteristics of DC Series motor.
2. Study of characteristics of DC Shunt motor.
3. Study of control of DC motor using SCR.
4. Study of characteristics of single-phase induction motor.
5. Study of Stepper motor.
6. Study of Universal motor.
7. Study of Open Circuit Test on single phase transformer.
8. Study of Short Circuit Test on single phase transformer.

Note: Students shall sincerely work towards completing all the above listed practicals for this course. In any circumstance, the completed number of practicals shall not be less than seven.

Essential/recommended readings

1. B.L. Thareja, A.K. Thareja, A Textbook of Electrical Technology-Vol-II, S.Chand
2. J.B. Gupta, Electrical Technology (Electrical Machines), Katsons
3. I. J. Nagrath and D. P. Kothari, Electrical Machines, Tata McGraw Hill
4. H. Cotton, Advanced Electrical Technology, CBS Publishers and Distributors, New Delhi
5. S. Ghose, Electrical Machines, Pearson Education

Suggestive readings

1. G. Mc. Pherson, An introduction to Electrical Machines & Transformers, John Wiley & Sons
2. N. K. De and P. K. De, Electric Drives, Prentice Hall of India

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE – 11: Microprocessor

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Microprocessor	**4**	**3**	**-**	**1**	**Class XII passed with Physics + Mathematics/Applied Mathematics + Chemistry OR Physics + Mathematics/Applied Mathematics + Computer Science/Informatics Practices**	**Digital Electronics (DSC 5, Sem II)**

Learning Objectives

The Learning Objectives of this course are as follows:

- To understand basic architecture of 8085 microprocessor.
- To understand the instruction set and write programs in assembly language.
- To interface 8085 microprocessor with common Programmable Peripheral Devices.
- To understand the differences in the architecture and addressing modes of 8 bit and 16 bit Microprocessor.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Understand the basic blocks of microcomputers i.e. CPU, Memory, I/O and architecture of microprocessors.
- Acquiring skills in writing assembly language program for 8085 microprocessor.
- Apply knowledge and demonstrate proficiency of designing hardware interfaces for memory, I/O and programmable peripheral interface devices with 8 bit microprocessor.
- Derive specifications of an 8 bit microprocessor based system as per required application.

SYLLABUS OF ELDSC-11 **Total Hours- Theory: 45 Hours, Practicals: 30 Hours**

UNIT – I (11 Hours)

Introduction to Microprocessor: Introduction, Applications, Basic block diagram, Speed, Word size, Memory capacity, Classification of microprocessors (mention of different microprocessors being used)

Microprocessor 8085: Features, Architecture -block diagram, General purpose registers, register pairs, flags, stack pointer, program counter, types of buses. Multiplexed address and data bus, generation of control signals, pin description of microprocessor 8085. Basic interfacing concepts, Memory mapped I/O and I/O mapped I/O.

UNIT – II (12 Hours)

8085 Instructions: Operation code, Operand & Mnemonics. Instruction set of 8085, instruction classification, addressing modes, instruction format. Data transfer instructions, arithmetic instructions, increment & decrement instructions, logical instructions, branch instructions and machine control instructions. Assembly language programming examples.

UNIT – III (11 Hours)

Stack operations, subroutine, call and return instructions. Delay loops, use of counters, timing diagrams-instruction cycle, machine cycle, T- states, time delay.

Interrupt structure of 8085A microprocessor, processing of vectored and non-vectored interrupts, latency time and response time; Handling multiple interrupts.

UNIT – IV (11 Hours)

Programmable Peripheral Interface (PPI): 8255- I/O interface, 8253/8254- Timer interface, 8259- Priority Interrupt Controller.

Designing of a microprocessor based system: Traffic Light Controller using PPI.

Comparison of 8085 Microprocessor with 8086 Microprocessor (Internal Architecture, Data Addressing Mode).

Practical component (if any) – Microprocessor

(Hardware and Assembly Language)

Learning outcomes

The Learning Outcomes of this course are as follows:

- Proficient in use of IDE's for designing, testing and debugging microprocessor based system.
- Interface various I/O devices and design and evaluate systems that will provide solutions to real-world problem.

- Prepare the technical report on the experiments carried.

LIST OF PRACTICALS (Total Practical Hours- 30 Hours)

8085 Assembly language programs:

1. Program to transfer a block of data.
2. Program for multibyte addition/subtraction.
3. Program to multiply two 8-bit numbers.
4. Program to divide a 16 bit number by 8 bit number.
5. Program to search a given number in a given list.
6. Program to generate terms of Fibonacci series.
7. Program to find minimum and maximum among N numbers.
8. Program to find the square root of an integer.
9. Program to find GCD of two numbers.
10. Program to sort numbers in ascending/descending order.
11. Program to verify the truth table of logic gates.
12. Interfacing using PPI 8255/8253/8259.

Note: Students shall sincerely work towards completing all the above listed practicals for this course. In any circumstance, the completed number of practicals shall not be less than eleven with hardware interfacing.

Essential/recommended readings

1. Microprocessor Architecture, Programming and Applications with 8085, Ramesh S. Gaonkar, Wiley Eastern Limited- IV Edition.
2. 8085 Microprocessor : Programming and Interfacing, N. K SRINATH, PHI Learning(2014).

Suggestive readings

1. 8085 Microprocessor and its Applications, A Nagoor Kani, Tata Mcgraw Hill, Third Edition.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE – 12: Communication Systems

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Principles of Communication Systems	4	3	-	1	Class XII passed with Physics + Mathematics/Applied Mathematics + Chemistry OR Physics + Mathematics/Applied Mathematics + Computer Science/Informatics Practices	Circuit Theory & Network Analysis (DSC-2, Sem I), Analog Electronics-I(DSC-6, Sem II) and Signals & Systems (DSC-9, Sem III)

Learning Objectives

The Learning Objectives of this course are as follows:

- To introduce concepts of various analog modulation techniques used in communication systems and analyse their comparative performance.
- To understand Pulse analog modulation and Pulse digital transmission techniques

Learning outcomes

The Learning Outcomes of this course are as follows:

- Be conversant with the requirements and the protocols employed in the fundamental components of a communication network.
- Understand the concept and basic circuits used in Continuous Wave analog modulation
- Understand the Principles of Sampling and Pulse Communication
- Insight on Digital Transmission.

SYLLABUS OF ELDSC-12 Total Hours- Theory: 45 Hours, Practicals: 30 Hours

UNIT – I (11 Hours)

Introduction: Block diagram of an electronic communication system, electromagnetic spectrum-band designations and applications, need for modulation, concept of channels and base-band signals. Block diagram of Transmitter and Super Heterodyne Receiver. Concept of Noise and Signal to noise ratio.

UNIT – II (11 Hours)

Amplitude Modulation: Concept of modulation index and frequency spectrum and Power Relations in AM. Generation of AM by Square Law and Collector Modulator, Diode Detection, Concept of Double side band suppressed carrier, Single side band suppressed carrier by Filter Method, Pilot Carrier Modulation, Vestigial Side Band modulation, and Independent Side Band Modulation.

UNIT – III (11 Hours)

Angle modulation: Frequency and Phase modulation, modulation index and frequency spectrum, equivalence between FM and PM, Generation of FM (Block diagram of direct and indirect methods), FM detector (PLL). Concept of Pre-emphasis and De-emphasis. Comparison between AM, FM and PM.

UNIT – IV (12 Hours)

Pulse Analog Modulation: Sampling theorem, Aliasing and Aperture Effect, PAM, PWM, PPM -Generation and detection techniques, Multiplexing-TDM and FDM.

Pulse Code Modulation: Need for digital transmission, Block Diagram of PCM, Uniform and Non- uniform Quantization, Quantization Noise, Companding, Line Coding. Introduction to Delta Modulation and DPCM.

Practical component (if any) – Principles of Communication Systems
(Hardware and Circuit Simulation Software)

Learning outcomes

The Learning Outcomes of this course are as follows:

- Understand basic elements of a communication system.
- Analyse the baseband signals in time domain and in frequency domain.
- Build understanding of various analog (CW) and Pulse modulation and demodulation techniques
- Prepare the technical report on the experiments carried

LIST OF PRACTICALS (Total Practical Hours- 30 Hours)

The practical needs to be performed on Scilab/ MATLAB/Multisim or any other equivalent software besides hardware.

1. Study of Amplitude Modulation.

2. Study of Frequency Modulation.
3. Study of AM Transmitter and Receiver.
4. Study FM Transmitter and Receiver.
5. Study of Pulse Amplitude Modulation
6. Study of Pulse Width Modulation
7. Study of Pulse Position Modulation.
8. Study of Pulse Code Modulation
9. Study of Delta Modulation

Note: Students shall sincerely work towards completing all the above listed practicals for this course. In any circumstance, the completed number of practicals shall not be less than eight.

Essential/recommended readings

1. Electronic Communication Systems Fourth Edition by George Kennedy and Bernard Davis.
2. Principles of Electronic Communication Systems Second Edition by Taub and Schilling.
3. Electronic Communication Systems Fifth Edition by Wayne Tomasi.

Suggestive readings

1. Principles of Electronic Communication Systems by Louis E. Frenzel
2. Communication Systems (Analog and Digital) by R.P.Singh and S.D.Sapre

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVES (DSE) COURSES OFFERED BY THE DEPARTMENT

DISCIPLINE SPECIFIC ELECTIVES (DSE-1)

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Internet of Things	4	3	-	1	Class XII passed with Physics + Mathematics/Applied Mathematics + Chemistry OR Physics + Mathematics/Applied Mathematics + Computer Science/Informatics Practices	Digital Electronics (DSC-5 , Sem II) , Basic Instrumentation & Measurement Techniques (DSC-4, Sem 2)

Learning Objectives

This course describes the Internet of Things (IoT), the technology used to build these kinds of devices, how they communicate, how they store data, and the kinds of distributed systems needed to support them. Broad objectives are:

- To introduce the terminology, technology and its applications
- To introduce the concept of M2M (machine to machine) with necessary protocols
- To introduce the Python Scripting Language commonly used in IoT devices/systems
- To introduce the Arduino / Raspberry Pi platform, widely used in IoT applications
- To introduce the implementation of web-based services on IoT devices

Learning outcomes

The Learning Outcomes of this course are as follows:

- Understand internet of Things, its hardware and software components and the IoT value chain structure (device, data cloud).
- Interface I/O devices, sensors & communication modules.

- Understand IoT sensors and technological challenges faced by IoT devices, with a focus on wireless, energy, power, and sensing modules
- Remotely monitor data and control devices and develop real life IoT based projects.

SYLLABUS OF ELDSE-2A **Total Hours- Theory: 45 Hours, Practicals: 30 Hours**

UNIT – I (11 Hours)

Introduction to Internet of Things - Definition and Characteristics of IoT, Architectural overview (cellular, star, mesh, ring)

Physical design of IoT: Things in IoT, IoT protocols in Link Layer, Network/Internet Layer, Transport Layer, Application Layer (with specific reference to Communication protocols as MQTT, ZigBee, Bluetooth, CoAP, UDP, TCP, WebSocket etc.,), Basics of Networking, Security aspects in IoT.

Logical design of IoT: Functional blocks, Communication Models, Communication APIs, Enabling Technologies, IoT levels and deployment templates, Design principles

IoT and M2M- Definitions, differences between M2M & IoT systems, Software defined networks (SDN), network function virtualization (NFV), difference between SDN and NFV for IoT, Basics of IoT System Management with SNMP, NETCONF -YANG

UNIT – II (11 Hours)

Transducers, Sensors and Actuators: Review of Transducers, Concept of Sensing and Actuation, Sensor characteristics (static/dynamic), Sensor classification (passive/active, analog/digital, scalar/vector), Actuator classification (Electric/Fluid Power/ Linear Chain /Manual / Linear vs Rotary)

Types of Sensors: Contact and Proximity, Position, Velocity, Force, Humidity, Tactile unipolar and bipolar Stepper motors Sensors- Light sensor, temperature sensor, voltage sensor, ADC and DAC, Temperature and Humidity Sensor DHT11, Motion Detection Sensors, Wireless Bluetooth Sensors, Level Sensors, USB Sensors, Embedded Sensors, Distance Measurement with ultrasound sensor etc.

Selection of Transducers for various IoT applications, Wireless Sensor Networks

UNIT – III (12Hours)

Computing (using Arduino, Raspberry Pi), I/O interfaces.

Software components- Programming API's (using Python/Node.js/Arduino). Introduction to Arduino/Raspberry Pi- Installation, Interfaces (serial, SPI, I2C)

Raspberry Pi: Communication with devices through the pins of the Raspberry Pi, RPi. GPIO library, Python Functions, setting up the pins, General purpose IO Pins, Protocol Pins, GPIO Access, applying digital voltages, and generating Pulse Width Modulated signals, Tkinter Python library, accessing pins through a graphic user interface

OR

Arduino: Introduction to the Arduino environment, the Arduino board, the Arduino IDE, and the Arduino compatible shields together with their libraries. Arduino board main components, inputs, and outputs. Arduino Integrated Development Environment (IDE), Compiling Code, Arduino Shields and Libraries.

Basics of C programming, composition of an Arduino programs, Arduino tool chain, Arduino IDE, basic structure of a sketch, including the use of the setup() and loop() functions. Accessing the pins from a sketch for input and output, introduction on debugging embedded software on an Arduino, UART communication protocol, Synchronization, parity and stop, the use of the Serial library to communicate with the Arduino through the serial monitor.

Programming – Python programs with Arduino/Raspberry Pi with focus on interfacing external gadgets, controlling output, reading input from pins

Note: It is optional to choose either Arduino or Raspberry Pi environment

UNIT – IV (11 Hours)

IoT Physical Devices and Endpoints, Domain specific IoTs, IoT Physical Servers and Cloud Offerings

Cloud Computing: Characteristics, Introduction to Cloud Service models (SaaS, PaaS, IaaS, XaaS etc.,) Deployment models, Cloud storage APIs, IoT-Cloud convergence, Communication Enablers

Webservices – Web server for IoT, Python-Web frameworks, RESTful Web API, ThingSpeak API, MQTT, IoT security, Basics of symmetric and non-symmetric encryption standards

IoT Application Development - Solution framework for IoT applications- Implementation of Device integration, Data acquisition and integration

Device data storage- Unstructured data storage on cloud/local server, Authentication, authorization of devices.

IoT Case Studies based on Smart Environment, Industrial automation, Transportation, Agriculture, Healthcare, Home Automation

Practical component (if any) – Internet of Things

Learning outcomes

The Learning Outcomes of this course are as follows:

- Interfacing of various sensors using Arduino/Raspberry Pi
- Interfacing using Bluetooth, Web server, TCP, ThinkSpeak Cloud, MQTT broker

LIST OF PRACTICALS (Total Practical Hours- 30 Hours)

1. Connect an LED to GPIO pin 24 and a Switch to GPIO 25 and control the LED with the switch. The state of LED should toggle with every press of the switch.
2. To interface DHT11 sensor with Arduino/Raspberry Pi and write a program to print temperature and humidity readings.
3. To interface motor using relay with Arduino/Raspberry Pi and write a program to turn ON motor when push button is pressed.

4. To interface Bluetooth with Arduino/Raspberry Pi and write a program to send sensor data to smartphone using Bluetooth.
5. To interface Bluetooth with Arduino/Raspberry Pi and write a program to turn LED ON/OFF when '1'/'0' is received from smartphone using Bluetooth.
6. Create a traffic light signal with three colored lights (Red, Orange and Green) with a duty cycle of 5-2-10 seconds.
7. Create an application that has three LEDs (Red, Green and white). The LEDs should follow the cycle (All Off, Red On, Green On, White On) for each clap (use sound sensor).
8. Write a program on Arduino/Raspberry Pi to upload/retrieve temperature and humidity data using ThingSpeak cloud.
9. Write a program on Arduino/Raspberry Pi to publish/subscribe temperature data using MQTT broker.
10. To install MySQL database on Raspberry Pi and perform basic SQL queries.
11. Write a program to create TCP server on Arduino/Raspberry Pi and respond with humidity data to TCP client when requested.
12. Create a web application for the above applications wherever possible with functionalities to get input and send output.

Note: Students shall sincerely work towards completing all the above listed practicals for this course. In any circumstance, the completed number of practicals shall not be less than eleven.

Essential/recommended readings

1. Internet of Things - A Hands-on Approach, Arshdeep Bahga and Vijay Madisetti, Universities Press, 2015, ISBN: 9788173719547
2. Dr. SRN Reddy, Rachit Thukral and Manasi Mishra, "Introduction to Internet of Things: A practical Approach", ETI Labs
3. Getting Started with Raspberry Pi, Matt Richardson & Shawn Wallace, O'Reilly (SPD), 2014, ISBN: 9789350239759
4. Raspberry Pi Cookbook, Software and Hardware Problems and solutions, Simon Monk, O'Reilly (SPD), 2016, ISBN 7989352133895
5. Adrian McEwen, "Designing the Internet of Things", Wiley

Suggestive readings

2. Peter Friess,'Internet of Things – From Research and Innovation to Market Deployment', River Publishers, 2014
3. N. Ida, Sensors, Actuators and Their Interfaces, SciTech Publishers, 2014.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVES (DSE-2)

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Operating Systems	**4**	**3**	**-**	**1**	**Class XII passed with Physics + Mathematics/Applied Mathematics + Chemistry OR Physics + Mathematics/Applied Mathematics + Computer Science/Informatics Practices**	**Programming Fundamentals using Python (DSC-1, Sem I)/ Algorithm Design and Analysis(DSE-1B, Sem III)**

Learning Objectives

COURSE OVERVIEW: Operating systems course is intended as a general introduction to the techniques used to implement operating systems and related kinds of systems software. The topics covered will be functions and structure of operating systems, process management (creation, synchronization, and communication); processor scheduling; deadlock prevention, avoidance, and recovery; main-memory management; virtual memory management (swapping, paging, segmentation and page-replacement algorithms); control of disks and file-system structure and implementation.

The Learning Objectives of this course are as follows:

- To explain main components of OS and their working
- To familiarize the operations performed by OS as a resource Manager
- To introduce various scheduling policies of OS.
- To teach the different memory management techniques.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Learn multiprogramming, multithreading concepts for a small operating system.
- Create, delete, and synchronize processes for a small operating system.
- Implement simple memory management techniques.
- Implement CPU and disk scheduling algorithms.
- Use services of modern operating system efficiently

- Learn basic file system.

SYLLABUS OF ELDSE-2B **Total Hours- Theory: 45 Hours, Practicals: 30 Hours**

UNIT – I (11 Hours)

Overview: Introduction, Computer-System Organization and Architecture, Multiprocessor and Clustered Systems, OS Operations, Multiprogramming and Multitasking, Resource management- process management, memory management, file-system management, Mass- storage management, I/O System management systems, protection and security. Virtualization, Distributed systems, Real Time Embedded Systems, Free and Open source Operating systems and Operating system services.

UNIT – II (12 Hours)

Process management: Basic concepts, Scheduling Criteria, Scheduling algorithms- FCFS, SJF, Priority, RR and Multilevel Queue. Process synchronization.

Concurrency and Synchronization: The Critical-section problem, Semaphores, Deadlock Characterization, Prevention, Avoidance, Detection and Recovery.

UNIT – III (12 Hours)

Memory management: Basic hardware, Address binding, Physical and Logical address space, Swapping, Memory allocation strategies -Fixed and Variable Partitions, Fragmentation, Paging, Segmentation, Demand Paging and virtual memory, Page Replacement Policies - FIFO, OPR, LRU.

UNIT – IV (10 Hours)

File system: Concept of a file, access methods, directory structure, file system mounting, file sharing, protection, file system structure, file system implementation, Directory implementation, allocation methods, free-space management, efficiency and performance, Disk scheduling algorithms- FCFS, SSTF, SCAN and C-SCAN.

Practical component (if any) – Operating Systems
(Python software)

Learning outcomes

The Learning Outcomes of this course are as follows:

- Implement various process scheduling algorithms
- Implement various priority based scheduling algorithms
- Implement various page replacement algorithms
- Implement various disk scheduling algorithms

LIST OF PRACTICALS (Total Practical Hours – 30 Hours)

1. Write a program to implement FCFS scheduling algorithm.
2. Write a program to implement Round Robin Process scheduling algorithm.

3. Write a program to implement SJF Process scheduling algorithm.
4. Write a program to implement non-preemptive priority-based scheduling algorithm.
5. Write a program to implement preemptive priority-based scheduling algorithm.
6. Write a program to implement SRJF scheduling algorithm.
7. Write a program to implement first-fit, best-fit and worst-fit allocation strategies.
8. Write a program to implement FIFO Page replacement algorithm.
9. Write a program to implement OPR Page replacement algorithm.
10. Write a program to implement LRU Page replacement algorithm.
11. Write a program to implement SCAN Disk Scheduling algorithm.
12. Write a program to implement SSTF Disk Scheduling algorithm.

Note: Students shall sincerely work towards completing all the above listed practicals for this course. In any circumstance, the completed number of practicals shall not be less than eleven.

Essential/recommended readings

1. Abraham Silberschatz, Peter Baer Galvin, Greg Gagne, "Operating Systems Concepts", Tenth Edition, John Wiley & Sons, 2018, ISBN:978-1-118-06333-0.
2. D.M.Dhamdhere, "Operating Systems", 2nd Edition, Tata McGraw Hill, 2011.

Suggestive readings

1. Andrew S Tanenbaum, Herbert Bos "Modern Operating Systems" , Fourth Edition, Pearson Education India, 2016. ISBN 978-9332575776.
2. William Stallings, "Operating Systems Internals and Design Principles", Seventh Edition, Pearson Education, 2018. ISBN 978-9352866717.

5. Achyut S Godbole, Atul Kahate, "Operating Systems", 3rd Edition, Tata McGraw Hill, 2011.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVES (DSE-3)

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Network Synthesis	**4**	**3**	**-**	**1**	**Class XII passed with Physics + Mathematics/Applied Mathematics + Chemistry OR Physics + Mathematics/Applied Mathematics + Computer Science/Informatics Practices**	**Circuit Theory & Network Analysis (DSC-2, Sem I), Engineering Mathematics DSC(7, Sem III)/Signals and Systems (DSC-9, Sem III)**

Learning Objectives

The Learning Objectives of this course are as follows:

- To study the basic frequency domain techniques and two port network parameters.
- To study the elements of network synthesis.
- To study and synthesise the one port networks with two kinds of elements.
- To study the synthesis of transfer function.
- To study and design the filters

Learning outcomes

The Learning Outcomes of this course are as follows:

- Apply the knowledge of frequency domain techniques and two port network parameters.
- Understand the basic concepts of network synthesis.
- Synthesise the one-port networks and transfer function.
- Determine the frequency response of filters.

SYLLABUS OF ELDSE-2C Total Hours- Theory: 45 Hours, Practicals: 30 Hours

UNIT – I (12 Hours)

Circuit Analysis: Concept of Poles and Zeros in complex frequency/s-plane, Initial and Final Value Theorem, Representation of Circuit Elements in s-domain, Circuit Analysis using Laplace Transform Method, The System Function for R-C and R-L Networks and their Impulse and Step Responses.

Two Port Network Parameters: Impedance (Z) Parameters, Admittance (Y) Parameters, Transmission (ABCD) Parameters, Hybrid (h) Parameters.

UNIT – II (10 Hours)

Elements of Network Synthesis: Causality and Stability, Hurwitz Polynomial, Sturm's Theorem, Positive Real Functions, Basis Synthesis Procedures.

UNIT – III (11 Hours)

Synthesis of One Port Networks with Two Kinds of Elements: Properties of L-C Immittance Functions, Synthesis of L-C Driving-Point Immittances, Properties of R-C Driving Point Impedances, Synthesis of R-C Impedances or R-L Admittances, Properties of R-L Impedances and R-C Admittances, Synthesis of R-L-C Functions.

UNIT – IV (12 Hours)

Transfer Function Synthesis: Properties of Transfer Functions, Synthesis of L-C Ladder Network with a 1-ohm Resistive Termination, Synthesis of Constant-Resistance Networks (Bridge and Lattice Type).

Filter Design: Ideal Filters, Low Pass Filter Design using Butterworth and Chebyshev approximation and Comparison between them.

Practical component (if any) – Network Synthesis
(Hardware/Software/Simulation Software)

Learning outcomes

The Learning Outcomes of this course are as follows:

- Verify the operation and response of typical electrical circuits.
- Determine the various parameters for two-port networks.
- Prepare the technical report on the experiments carried.

LIST OF PRACTICALS (Total Practical Hours – 30 Hours)

1. Mesh and Node Analysis of circuits using AC Sources.
2. Computation and plot of Poles, Zeros and Stability of a Function.
3. Study of step response of RC Network.

4. Study of step response of RL Network
5. Computation and plot of Inverse-Laplace Transform of a Function.
6. Determination of Impedance (Z) and Admittance (Y) parameters of Two-Port Network.
7. Determination of ABCD Parameters of Two-Port Network.
8. Determination of Hybrid (h) Parameters of Two-Port Network.
9. Designing of a Low Pass Filter (Butterworth Approximation) and study of its Frequency Response.
10. Designing of a Low Pass Filter (Chebyshev Approximation) and study of its Frequency Response.

Note: Students shall sincerely work towards completing all the above listed practicals for this course. In any circumstance, the completed number of practicals shall not be less than nine.

Essential/recommended readings

1. Kuo, F. F., "Network Analysis and Synthesis", 2nd Ed., Wiley India (2013).
2. M. E. Van Valkenburg, "Introduction to Modern Network Synthesis", Wiley Eastern (1984).

Suggestive readings

1. Aatre, V. K., "Network Theory and Filter Design", 3rd Ed., New Age International (2014).

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

COMMON POOL OF GENERIC ELECTIVES (GE) COURSES OFFERED BY THE DEPARTMENT

GENERIC ELECTIVES (GE-1)

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Instrumentation	4	3	-	1	Class XII passed with Maths/Applied Maths	Idea about basic circuit elements like R, C and L, Ammeter, Voltmeter

Learning Objectives

The Learning Objectives of this course are as follows:

- Explain the importance and working principle of different electronic measuring instruments.
- Use the complete knowledge of various instruments and transducers to make measurements in the laboratory.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Familiarize with the working principle of different measuring instruments
- Understand measuring instruments used in the laboratory like oscilloscopes, signal generators
- Understand working principle of transducers
- Familiarize with the working principle of data acquisition devices and biomedical instruments.

SYLLABUS OF ELGE-4A Total Hours- Theory: 45 Hours, Practicals: 30 Hours

UNIT – I (10 Hours)

DC and AC indicating Instruments: Accuracy and precision, Types of errors, PMMC galvanometer, sensitivity, Loading effect , Conversion of Galvanometer into ammeter, Voltmeter and Shunt type ohmmeter, Multimeter.

UNIT – II (12 Hours)

Oscilloscopes: CRT, wave form display and electrostatic focusing, time base and sweep synchronisation, measurement of voltage, frequency and phase by CRO, Oscilloscope probes, Dual trace oscilloscope, DSO :Block diagram, principle and working, Advantages and applications, CRO specifications (bandwidth, sensitivity, risetime).

Signal Generators: Function generators.

UNIT – III (10 Hours)

Transducers: Basic requirements of transducers, Transducers for measurement of nonelectrical quantities: Types and their principle of working , measurement of Linear displacement, Acceleration, Flow rate, Liquid level, strain, Force, Pressure, Temperature.

UNIT – IV (13 Hours)

Data acquisition systems: Block diagram, brief description of preamplifier, signal conditioner, instrumentation amplifier, A/D and D/A converter blocks, computer-controlled test and measurement system.

Bio-medical instrumentation: Bio-Amplifiers: Different types of Bio-OP-Amps, Electrodes for ECG , block diagram of ECG system, brief analysis of graphs.

Practical component (if any) – Instrumentation
(Hardware and Circuit Simulation Software)

Learning outcomes

The Learning Outcomes of this course are as follows:

- To measure various electrical parameters.
- To measure characteristics of various sensors and transducers.
- Understand ECG pattern.
- Prepare the technical report on the experiments carried.

LIST OF PRACTICALS (Total Practical Hours – 30 Hours)

1. Design of ammeter and voltmeter using galvanometer.
2. To determine the Characteristics of resistance transducer - Strain Gauge
3. To determine the Characteristics of LVDT.
4. To determine the Characteristics of Thermistors and RTD.
5. Measurement of temperature by Thermocouples and study of transducers like AD590 (two terminal temperature sensor), PT-100, J- type, K-type.

6. Characterization of bio potential amplifier for ECG signals.
7. Measurement of heart sound using electronic stethoscope. Study on ECG heart rate monitor /simulator
8. Study of pulse rate monitor with alarm system.

Note: Students shall sincerely work towards completing all the above listed practicals for this course. In any circumstance, the completed number of practicals shall not be less than seven.

Essential/recommended readings

1. Electrical and Electronics Measurement and Instrumentation Sahwany A.K.
2. Handbook of biomedical instrumentation: Khandpur R S, TMH
3. Electron measurements and instrumentation techniques: Cooper W D and Helfric A D, PHI, 1989.
4. Biomedical instrumentation and measurements: Leslie-Cromwell, Fred J Weibell, Erich A Pfieffer, PHI, 1994.
5. Mechatronics – principles and applications, Godfrey C Onwubolu, Elsevier, 2006

Suggestive readings

1. Electrical Measurement in Measuring Instruments. Goldwing E.W. and Widdies
2. Measurement systems applications and design: Doeblin E O, McGraw Hill, 1990.
3. Instrumentation devices and systems: Rangan, Sarma, Mani, TMH
4. Instrumentation measurement and analysis: Nakra B C, Chaudry K K, TMH

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

GENERIC ELECTIVES (GE-2)

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Mobile Application Development	**4**	**1**	**-**	**3**	**Class XII passed in any stream**	**Idea about the Computer System Configuration like processor, RAM, ROM, different Operating Systems etc.**

Learning Objectives

In this course, student will be developing foundational programming skills to support graphical element presentation and data manipulation from basic functions through to advance processing. You will continue to build your skill set to use and apply core graphics, touch handling and gestures, animations and transitions, alerts and actions as well as advanced algorithms, threading and more. By the end of this course, you will be able to develop a more advanced, fully functioning app. currently this course is taught using Flutter UI SDK.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Explain the concepts on: Elements of user interface, Model-View-Controller architecture, Data persistence and storage, Multithreading, Mobile web vs. mobile app, Services, broadcasts and notifications, Sensor management and location-based services.
- Describe different mobile application models/architectures and patterns.
- Familiarize with data type, data operators, exception handling and file management
- Describe the components and structure of a mobile development framework (Flutter SDK) in the development of a mobile application

SYLLABUS OF ELGE-4B Total Hours- Theory: 15 Hours, Practicals: 90 Hours

UNIT – I

Introduction: What is mobile Application Programming, Different Platforms, Architecture and working of Android, iOS and Windows phone 8 operating system, Comparison of Android, iOS and Windows phone 8.

About Flutter: Understanding Flutter, Flutter framework, Introduction to Android studio, Flutter SDK - Installing and Configuring, Introduction to Dart writing Dart code, Dart Pad, Installing Dart SDK.

UNIT – II

Basic DART Programming Concepts: Introduction, Main () function, Dart variables, Dart Data Types, Dart Conditional Operators: - if- Else statements, Loop operators, Break statements, switch case statements.

Dart Functions & Object -Oriented Programming: Functions- its structure, creating a function, function Return Data Types, Void function, variable scope, OOP- Objects and classes, creating a Class, Adding Methods to classes, Providing constructors for classes, Class – Getters and Setters, Class Inheritance, Abstract Class, Dart Project Structure and Dart Libraries.

UNIT – III

Flutter Widgets Fundamentals: Scaffold, Image, Container, Column and Row, Icon Widgets, Layouts, Card Widgets, App Icon for iOS and Android apps, Hot reload and Hot Restart, Stateful and Stateless Widgets, Using custom Font.

Navigation and Routing: Button, Floating Action Button

Visual, Behavioral and Motion- Rich Widgets Implementation: Bottom Navigation Bar, ListTile, ListView, Drawer, DataTable, Selectable Text, Stack, Input and Selections, Text field, Checkbox group and Radio Button, Date Picker, Time Picker, Slider, Switch, Dialogs, Alerts and Panels.

UNIT – IV

App testing & Publishing: Testing and feedback for your App, setting up a test environment, Usability Testing, starting your Test Session, Analyzing your Test, Publishing Flutter Apps, Publishing Android App on Google Play store.

Understanding Flutter Versions, Flutter macOS Setup, macOS development Environment, Publishing iOS app on Apple store.

Practical component (if any) – Mobile Application Development
(Flutter and Dart Software)

Learning outcomes

The Learning Outcomes of this course are as follows:

- Proficient in use of IDE‘s for designing and development of various android based applications.
- Design and developed various applications using various components GUI component, GPS, SD card.
- Prepare the technical report on the projects carried

LIST OF PRACTICALS (Total Practical Hours- 90 Hours)

1. Develop an application that uses GUI components, Font and Colors.
2. Develop an application that uses Layout Managers and event listeners.
3. Develop a native calculator application.
4. Write an application that draws basic graphical primitives on the screen.
5. Develop an application that makes use of database.
6. Implement an application that implements multi-threading.
7. Develop a native application that uses GPS location information.
8. Implement an application that writes data to the SD card.
9. Implement an application that creates an alert upon receiving a message.
10. Write a mobile application that creates alarm clock.
11. Develop an application for working with Menus and Screen Navigation.
12. Develop an application for working with Notifications

List of Projects: -

1. Counter App
2. Calculator App
3. Audio recorder App
4. Voice to text Converter
5. Tic-tac-toe Game

Note: Students shall sincerely work towards completing all the above listed practicals for this course. In any circumstance, the completed number of practicals shall not be less than eleven and Projects less than four.

Essential/recommended readings

1. Flutter for Beginners: A Genius guide to flutter App development, Edward Thornton.
2. Beginning App Development with Flutter Book, Rap Payne.
3. Quick Start Guide to Dart Programming, Sanjib Sinha, Apress Publication.
4. Dart Apprentice: Beginning Programming with Dart, Jonathan Sande and Matt Galloway.

Suggestive readings

1. Flutter Complete Reference: Create beautiful, fast and native apps for any device, Alberto Miola.
2. Beginning Flutter: A Hands-on Guide to App Development, Marco L. Napoli.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

SEMESTER-V
DEPARTMENT OF ELECTRONIC SCIENCE
Category I

(B.Sc. Honours in Electronics)

DISCIPLINE SPECIFIC CORE COURSE – 13: Embedded System

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Embedded System	4	3	-	1	Class XII passed with Physics + Mathematics/Applied Mathematics + Chemistry OR Physics + Mathematics/Applied Mathematics + Computer Science/Informatics Practices	Microprocessor (DSC 11, Sem IV)

Learning Objectives

The Learning Objectives of this course are as follows:
This course introduces the student to the fundamental understanding of an embedded system. It is designed to make student familiar with the features, architectures and design issues involved in embedded system. The course focuses both on hardware and software components. Important serial communication protocols are also included. Syllabus covers microcontroller programming in C, which is platform independent.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Describe the fundamental concepts and features related to embedded systems .
- Understand the AVR RISC architecture and Instruction set.
- Interface I/O devices with microcontroller using parallel ports, serial ports, ADC etc.
- Learn the concepts of hardware & software interrupts and Timer

- Design simple embedded systems including their hardware as well as software.

SYLLABUS OF ELDSC-13 Total Hours- Theory: 45 Hours, Practicals: 30 Hours

UNIT – I (11 Hours)

Introduction: Overview of Embedded Systems, Requirements and Applications, Introduction to microcontrollers, Harvard architecture and Von Neumann architecture, RISC and CISC microcontrollers.

AVR Microcontroller: ATMega32 AVR RISC microcontroller architecture, Status Register, General Purpose Register file, Program memory and data memory organisation, Reset sources (Power-on, Brownout & Watchdog Timer).

UNIT – II (11 Hours)

Instruction Set: Addressing Modes, Data Transfer Instructions, Arithmetic and Logic Instructions, Branch Instructions, Bit and Bit-test Instructions, MCU Control Instructions., Introduction to AVR Programming in C, C datatypes, operators for AVR, simple programs for control, loop, arithmetic & logical operations and bit manipulation.

UNIT – III (12 Hours)

Peripheral I: Configuring I/O ports, Pull-up resistors, reading and writing data to I/O ports. Introduction to Interrupts, interrupt vector address and priority, ISR, External Interrupts. Introduction to Timers, Timers as delay generators and event counters, Timer0 modes of operation.

UNIT – IV (11 Hours)

Peripheral II: Analog-to-Digital Converter (ADC), Basics of Serial Communication, Universal Synchronous and Asynchronous serial Receiver and Transmitter (USART), Serial Peripheral Interface (SPI), Two Wire Interface (TWI) / I2C bus.

Practical component (if any) – Embedded System

(Hardware and AVR studio or similar IDE Software)

(Students are required to perform listed experiments and make a Mini Project)

Learning outcomes

The Learning Outcomes of this course are as follows:

- Student will be able to program AVR microcontrollers using AVR studio/similar IDE.
- Learn different interfacing techniques and standards to control various input output devices with the microcontroller.
- Student will be equipped with sufficient knowledge to implement mini projects.

LIST OF PRACTICALS (Total Practical Hours- 30 Hours)

1. (i) Blink LED at a constant rate.
   (ii) Blink LED at linearly increasing rate until the LED appears always on.
2. Use LFSR (linear feedback shift register) based random number generator to generate a random number and display it.
3. To interface 4 Keys with Port A and Port B each. Write a program to read the data from Port A and Port B and display its sum (and other arithmetic & logical operations) on output device.
4. To interface a LED/Buzzer with an o/p pin of AVR microcontroller. Write a program to blink the LED / Beep the Buzzer at (i) a constant rate (ii) linearly increasing rate using Timer.
5. To interface a 4x4 Keypad/push button keys with I/O pins of AVR microcontroller. Write a program to display the number of the key pressed in Binary number format on LED array or decimal number format on 7-segment LED or text display on an LCD or Serial Monitor.
6. To interface a potentiometer with ADC of AVR microcontroller. Write a program to display the dc input voltage on an output device (LED array / 7-segment LED / LCD / Serial Monitor).
7. To control the intensity of an LED/pitch of buzzer using PWM mode of Timer 0.
8. To interface a DC motor or Stepper motor and to write a program to control its speed.

Mini Project

(Any one of the following mini project or on similar concepts incorporating data acquisition from sensors/ input device, data analysis & control and display of result on any output device) (individual project only)

Project Idea 1: Weather Monitoring System -
Input - Temperature, humidity, wind speed etc.
Output - Display instantaneous values, average value, MAX / MIN value and predicted value for the next hour

Project Idea 2: Electronic Voting Machine -
Input - 8 Voting keys, Control Keys (Master Clear, Display Result, etc)
Output - Display device showing instructions, messages and results in accordance to the key pressed

Project Idea 3: Health Monitoring System -
Input – Pulse rate, Blood Pressure, SpO2, etc.
Output - Display device showing results

Note: Students shall sincerely work towards completing all the above listed practicals for this course. In any circumstance, the completed number of practicals shall not be less than seven and make a Mini Project.

Essential/recommended readings

1. “AVR Microcontroller and Embedded Systems: Using Assembly and C”, Muhammad Ali Mazidi, Sarmad Naimi, Sepehr Naimi, PHI,2013
2. “Programming and Customizing the AVR Microcontroller”, D V Gadre, McGraw- Hill,2000
3. “Atmel AVR Microcontroller Primer: Programming and Interfacing”, Steven F. Barrett, Daniel J. Pack, Morgan & Claypool Publishers,2012
4. “Embedded system Design”, Frank Vahid and Tony Givargis, John Wiley, 2002

Suggestive readings

1. “An Embedded Software Primer”, David E Simon, Addison Wesley,1999
2. AVR Microcontroller Datasheet, Atmel Corporation, www.atmel.com

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE – 14: Electromagnetics

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Electromagnetics	**4**	**3**	**-**	**1**	**Class XII passed with Physics + Mathematics/ Applied Mathematics + Chemistry OR Physics + Mathematics/ Applied Mathematics + Computer Science/ Informatics Practices**	**Engineering Mathematics (DSC 7, Sem III)**

Learning Objectives

The Learning Objectives of this course are as follows:
The syllabus of the paper is very carefully framed with the objective to well verse the students of the programme about

- Ability to apply knowledge of mathematics in solving electromagnetic problems.
- To understand the concept of electromagnetic waves in low frequency and high frequency applications.
- This paper is the backbone in the development of new integrated devices and applications of electromagnetic principles in various allied disciplines such as communications, microwaves, radar, electromagnetic interference & electromagnetic compatibility, remote sensing and fibre optics.
- Basic laws of electromagnetics required for any student who wants to pursue his career in research

Learning outcomes

The Learning Outcomes of this course are as follows:

- Getting familiar with vector algebra, coordinate system and coordinate conversion
- Understanding electrostatic fields and magnetostatic fields.
- A balanced presentation of static and time-varying fields.

- Physical interpretation of Maxwell's equation and problem solving in different media
- Understanding of propagation of an electromagnetic wave.

SYLLABUS OF ELDSC-14 **Total Hours- Theory: 45 Hours, Practicals: 30 Hours**

UNIT – I (14 Hours)

Vector Analysis: Scalars and Vectors, Vector Algebra, Rectangular (Cartesian) Coordinate System, Vector Components and Unit Vector, Vector Field, Products, Cylindrical Coordinates, Spherical Coordinates, Differential Length, Area and Volume, Line Surface and Volume integrals, Del Operator, Gradient of a Scalar, Divergence and Curl of a Vector ,Divergence and Stokes Theorem, the Laplacian.

Electrostatic Fields: Coulomb's Law and Electric Field, Electric Potential, Electric Flux Density, Gauss's Law and Applications, Divergence Theorem and Maxwell's First Equation, Electric dipole. Electric Fields in Conductors, Current and Current Density, Continuity of Current, Metallic Conductor. Dielectric materials, Polarization in Dielectrics, Dielectric Constant, Isotropic and Anisotropic dielectrics. Electrostatic Energy, Boundary Condition, Poisson equation and Laplace equation, Uniqueness Theorem.

UNIT – II (10 Hours)

Magnetostatics: Biot Savert's law, Magnetic dipole, Ampere's Circuital Law, Maxwell's Equation, Magnetic Flux and Magnetic Flux Density, Scalar and Vector Magnetic Potentials. Magnetization in Materials and Permeability, Anisotropic materials. Magnetic Energy, Boundary Conditions

UNIT – III (10 Hours)

Time-Varying Fields and Maxwell's Equations: Faraday's Law of Electromagnetic Induction, stationary and moving loop in time varying magnetic field, Displacement Current, Maxwell's Equations in differential and integral form and Constitutive Relations. Time varying potential, Lorentz condition for potential. Wave Equation for Potentials. Time Harmonic Electromagnetic Fields and use of Phasors

UNIT – IV (11 Hours)

Electromagnetic Wave Propagation: The Electromagnetic Spectrum, Wave Equation in a source free isotropic homogeneous media, Uniform Plane Waves propagation in Lossless and Lossy unbounded homogeneous media, Plane Wave Propagation in Good conductor, wave Impedence, Skin Depth and skin effect, Wave Polarization: Linear, elliptical and Circular. Flow of Electromagnetic Power and Poynting Vector.

Practical component (if any) – Electromagnetics
(using Scilab/MATLAB/ any other similar freeware)

Learning outcomes

The Learning Outcomes of this course are as follows:

- Understand the plotting of vectors, and transformation among various coordinate systems in 2D and 3D.
- Understand the graphical representation of scalar and vector fields including gradient, divergence and curl.
- Understand the graphical representation of electric and magnetic fields for various types of charge and current distributions respectively.
- Understand the flow of energy and power associated with electromagnetic waves.

LIST OF PRACTICALS (Total Practical Hours- 30 Hours)

1. Understanding and Plotting Vectors.
2. Point to point and Vector Transformation from Cartesian to cylindrical co-ordinate system and vice versa.
3. Point to point and Vector Transformation from Cartesian to Spherical co-ordinate system and vice versa.
4. Point to point and Vector Transformation from Cylindrical to Spherical co-ordinate system and vice versa.
5. Representation of the Gradient of a scalar field, Divergence and Curl of Vector Fields.
6. Plots of Electric field due to charge distributions.
7. Find the Magnetic field from a given Electric field for a Uniform plane wave.
8. Find a Poynting Vector for a given electromagnetic field at a given point.

Note: Students shall sincerely work towards completing all the above listed practicals for this course. In any circumstance, the completed number of practicals shall not be less than seven.

Essential/recommended readings

1. Murray. R. Spiegel, Vector Analysis, Schaum series, Tata McGraw Hill (2006)
2. M. N. O. Sadiku, Elements of Electromagnetics, Oxford University Press (2001)
3. D. C. Cheng, Field and Wave Electromagnetics, Pearson Education (2001)
4. J. A. Edminster, Electromagnetics, Schaum Series, Tata McGraw Hill (2006)
5. Introduction to Electrodynamics, D.J. Griffiths, Pearson Education (2012)
6. Electromagnetic Wave and Radiating System, Jordan and Balmain, Prentice Hall (1979)

Suggestive readings

1. N. Narayan Rao, Elements of Engineering Electromagnetics, Pearson Education (2006)
2. W. H. Hayt and J. A. Buck, Engineering Electromagnetics, Tata McGraw Hill (2006)

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE – 15: Basic VLSI Design

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Basic VLSI Design	4	3	-	1	Class XII passed with Physics + Mathematics/Applied Mathematics + Chemistry OR Physics + Mathematics/Applied Mathematics + Computer Science/Informatics Practices	Semiconductor Devices(DSC 3, Sem I), Digital Electronics(DSC 5, Sem II)

Learning Objectives

The Learning Objectives of this course are as follows:
This course introduces the student to basic principle of MOS Transistor operation, SPICE model, MOS transistor and Inverter layout, CMOS layout, Inverter design, CMOS inverter, inverter characteristics and specifications. Static and Sequential MOS Logic design, pass transistor logic, static & dynamic latches, flip flops, static & dynamic registers, Monostable sequential circuits. MOS memory design, RAM & ROM cells, Logic families performance.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Understand the concept of models of MOS devices and their implementation in designing of CMOS inverter
- Measure the performance parameters like threshold voltage, noise margins, time delays etc.
- Familiarize with the techniques and components involved in combinational MOS circuit designs.
- Describe the various types of semiconductor memories and issues involved in them

SYLLABUS OF ELDSC-15 Total Hours- Theory: 45 Hours, Practicals: 30 Hours

UNIT – I (12 Hours)

Metal Oxide Semiconductor (MOS): Introduction to basic principle of MOS transistor, large signal MOS models (long channel) for digital design. MOS SPICE model, MOS Transistor layout(PMOS and NMOS)

UNIT – II (12 Hours)
MOS Inverter: Inverter principle, Depletion and enhancement load inverters, the basic CMOS inverter, transfer characteristics, logic threshold, Noise margins, Dynamic behaviour, Propagation Delay and Power Consumption.

UNIT – III (11 Hours)
Combinational MOS Logic Design: Static MOS design, Pass Transistor logic, complex logic circuits.
Sequential MOS Logic Design - Static latches, Flip flops & Registers, Dynamic Latches & Registers, Monostable sequential circuits.

UNIT – IV (10 Hours)
Memory Design: ROM & RAM cells design. Dynamic MOS design- Dynamic logic families and performances.
Design for testability: Introduction, Fault types and models, Controllability and observability, AdHoc Testable design techniques, Scan –based techniques.

Practical component (if any) – Basic VLSI Design
(PSpice/other Simulation Software)

Learning outcomes

The Learning Outcomes of this course are as follows:

- Reproduce the characteristics of digital circuits like inverter and other logic gates based on CMOS technology.
- Design the digital circuit components like latches, multiplexers etc.
- Perform experiments and the circuit design and collect and analyse the data
- Prepare the technical report on the experiments carried

LIST OF PRACTICALS (Total Practical Hours- 30 Hours)

1. To plot the (i) output characteristics & (ii) transfer characteristics of an n-channel and p-channel MOSFET.
2. To design and plot the static and dynamic characteristics of a digital CMOS inverter.
3. To design and plot the output characteristics of a 3-inverter ring oscillator.
4. To design and plot the dynamic characteristics of 2-input NAND, NOR, XOR and XNOR logic gates using CMOS technology.
5. To design and plot the characteristics of a 4x1 digital multiplexer using pass-transistor logic.
6. To design and plot the characteristics of a positive and negative latch/master-slave edge triggered registers based on multiplexers.

7. To prepare layout for given logic function and verify it with simulations.
   To measure propagation delay of a given CMOS Inverter circuit.

Note: Students shall sincerely work towards completing all the above listed practicals for this course. In any circumstance, the completed number of practicals shall not be less than six.

Essential/recommended readings

1. Weste and Eshraghian, —Principles of CMOS VLSI design, Addison-Wesley, 2002.
2. Basic VLSI design: Douglas A Pucknell, Kamran Eshraghian, PHI, 3rd edition

Suggestive readings

1. Kang & Leblebigi —CMOS Digital IC Circuit Analysis & Design- McGraw Hill, 2003.
2. Rabey, —Digital Integrated Circuits Design, Pearson Education, Second Edition, 2003.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVES (DSE) COURSES OFFERED BY THE DEPARTMENT

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Computer Networks	4	3	-	1	Class XII passed with Physics + Mathematics/Applied Mathematics + Chemistry OR Physics + Mathematics/Applied Mathematics + Computer Science/Informatics Practices	Programming Language (DSC 1, Sem I)/ Algorithm Design and Analysis(DSE 1B, Sem III), Operating System(DSE 2B, Sem IV)

Learning Objectives

The course objectives include learning about computer network organization and implementation, obtaining a theoretical understanding of data communication and computer networks, and gaining practical experience. This course introduces the student to the fundamental understanding of the architecture and principles of today's computer networks. It introduces various protocols and their functionalities. This course will help to understand The Internet and its impact on the computer network architecture**.**

Learning outcomes

The Learning Outcomes of this course are as follows:

- Describing computer network in terms of a layered model.
- Implementing data link, network, and transport layer protocols in a simulated networking environment
- Determine different types of errors and data flow within networks.
- Planning logical sub-address blocks with a given address block.
- Describing the standard protocols involved with the INTERNET, TCP/IP, based communications.

SYLLABUS OF ELDSE-3A **Total Hours- Theory: 45 Hours, Practicals: 30 Hours**

UNIT – I (11 Hours)

Network Basics and Physical layer: Data Communication- Components, Network topologies, OSI Reference Model, Internet (TCP/IP) Model, Digital Signals, Digital-to-Digital Encoding, Transmission Media- Guided and Unguided, Addressing, Transmission Impairment, Nyquist Bit rate, Shannon Capacity and Line Codling Schemes, Switching-Circuit Switching, Message Switching and Packet Switching, Network Connecting Devices- Repeaters, Hubs, Switches, Bridges, Routers and Gateway.

UNIT – II (12 Hours)

Data Link Layer and MAC: Character and Bit Oriented Framing, Flow and Error Control, Error Detection and Correction Codes- Parity, Hamming Code, Cyclic Redundancy Check and Checksum, Stop and Wait Protocol, Sliding Window Protocol and Piggybacking, Go-Back-N ARQ, Selective Repeat ARQ. Random Access Protocols-ALOHA, CSMA, CSMA/CD, CSMA/CA, Controlled Access Protocols- Reservation, Token Passing and Polling, Channelization Protocols-FDMA, TDMA and CDMA.

UNIT – III (12Hours)

Network Layer: IPV4 Addresses- Classful and Classless, Subnet Addressing, NAT, Datagram Format, Internet Control Protocols- ARP, RARP and ICMP, Routing algorithms - Shortest Path and Distance Vector, Approaches to Congestion Control, IPV4 issues, Need for IPV6,IPv6 Packet Format, IPV6 Unicast and Multicast Addressing

UNIT – IV (10 Hours)

Transport and Application Layer: Transport Services, Connection management, TCP and UDP protocols, Congestion Control and Quality of Service, Application Layer-DNS, FTP, WWW and HTTP.

Practical component (if any) – Computer Networks

(The practical will need to be Simulated on Cisco Packet Tracer or an equivalent platform. All Programming experiments to be done with Python)

Learning outcomes

The Learning Outcomes of this course are as follows:

- Implement a simple network with hubs and switches.
- Understand the various LAN topologies
- Describe how packets are delivered in the Internet.
- Describe what classful addressing scheme is.
- Grasp the error detection and correction algorithms

LIST OF PRACTICALS (Total Practical Hours- 30 Hours)

1. Create a simple network with a switch and two end devices in Cisco Packet Tracer. Configure the PCs, set their IP address and capture Ping from one PC to the other and vice versa.. Mention the uses of PING command.
2. Study Network Commands: tracert, ipconfig and ipconfig/all.
3. Implement MESH/STAR/RING/BUS topology in Packet tracer.
4. Write a program to add a parity bit to a 7 bit data input by a user/ add redundant bits to a 7 bit data using Hamming Code to be implemented at the sender's site.
5. Write a program to detect and correct a single bit error while transmitting a 7-bit Hamming Code word to be implemented on the receiver side.
6. Write a program to implement CRC at the sender's site.
7. Write a program to show Byte and Bit stuffing in a frame.
8. Set a six-computer network with a switch using Packet Tracer and show Unicast and Broadcast addressing.
9. Connect two different networks using a router in Packet tracer and show movement of packets from one to the other.
10. Write a program to determine the class of the given IPV4 Address in Dotted Decimal or Binary Notation.
11. Implement FTP Server in Packet Tracer and show transfer of data.
12. Study HTTP /DNS on the Packet Tracer.

Note: Students shall sincerely work towards completing all the above listed practicals for this course. In any circumstance, the completed number of practicals shall not be less than eleven.

Essential/recommended readings

1. Behroz A. Forouzan, " Data Communication and Networking", TMH, 5th Edition.
2. A.S.Tanenbaum, " Computer Network", Pearson Education, 4th Edition.

Suggestive readings

1. James Kurose , "Computer Networking: A Top-Down Approach", Pearson Education, 7th Edition.
2. Douglas E. Comer, "Internetworking with TCP/IP Principles, Protocol and Architecture Volume 1" , 6th Edition
3. Peterson and Davis, "Computer Networks: A Systems Approach", Pearson, 5th edition
4. Fall Kevin and W. Richard Stevens , "TCP/IP Illustrated: The Protocols" Volume 1.
5. William Stallings, "Data and Computer Communication", Tenth Edition.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVES (DSE-2)

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Quantum and Spintronics Devices	4	3	-	1	Class XII passed with Physics + Mathematics/Applied Mathematics + Chemistry OR Physics + Mathematics/Applied Mathematics + Computer Science/Informatics Practices	Semiconductor Devices(DSC 3, Sem I), Engineering Mathematics (DSC 7, Sem III)

Learning Objectives

The objective of the course is to make the students understand the inadequacies of Classical Physics and know the basic postulates of Quantum Mechanics. Spintronics, a portmanteau meaning "spin transport electronics", where both charge and spin degrees of freedom of electrons are employed simultaneously to produce a device with new functionality, is a fascinating and promising field of research. It has the potential to revolutionize the field of electronics. Two physical bases of Spintronics, i.e., GMR and TMR have already been commercialized in read heads of the hard disk drive. It is extremely important and necessary to have a clear concept of spintronics so that students get exposure to such modern-day cutting-edge technology. Students will also learn general concepts about Spin-based quantum computing which is a leading technology for the realization of scalable quantum computers and other sectors too.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Understand the limitation of classical physics and basic concepts of quantum Mechanics
- Understanding the concept of spintronics and spin-orbit
- Comprehend the spin relaxation and transport
- Design the spintronics devices using the laws
- Know the basic principles of various spintronic devices (sensors, memories, etc.)

SYLLABUS OF ELDSE-3B **Total Hours- Theory: 45 Hours, Practicals: 30 Hours**

UNIT – I (11 Hours)

Introduction to Quantum Mechanics: Inadequacies of Classical physics, Wave-particle duality, de Broglie waves, Schrödinger equation, expectation values, Uncertainty principle.

Basics of Quantum Mechanics: Solutions of the one-dimensional Schrödinger equation for a free particle, particle in a box, particle in a finite well. Reflection and transmission by a potential step and by a rectangular barrier. Basic understating of the Linear algebra of quantum computing.

UNIT – II (12 Hours)

History & Background of spintronics : GMR, Datta-Das, Spin relaxation, Spin injection, Spin detection

Electron Spin in Solids: Quantum Mechanics of spins, Pauli equation, Spin-Orbit coupling, Zeeman splitting, Current density, Magnetization, Bloch states with SO coupling, Electronic structure of GaAs, Dresselhaus and Rashba spin splitting, Optical orientation and spin pumping, Stern-Gerlach experiments with electron spins, Detection of free electron spin

UNIT – III (11 Hours)

Transport in magnetic materials and Spin injection: Materials for spin electronics, Nanostructures for spin electronics, Spin-polarized transport, Electrochemical potential, Spin accumulation, Spin diffusion, FN junction, Rashba formalism of linear spin injection, Equivalent circuit model, Silsbee-Johnson spin-charge coupling

UNIT – IV (11 Hours)

Spintronic Devices: Datta-Das spin-FET, P-N junctions, Magnetic bipolar diode, Magnetic bipolar transistor, Magnetic tunneling devices, MRAM, New memory technologies

Practical component (if any) – Quantum and Spintronics Devices
Hardware and Simulation-Based Lab Experiments
(Scilab/MATLAB/SPICE/Verilog A)

Learning outcomes

The Learning Outcomes of this course are as follows:

- Perform lab experiment on splitting of atomic energy levels under magnetic field by Zeeman Effect
- Perform simulations to under spin phenomenon using transport and magnetic elemental modules using Scilab/MATLAB/SPICE/Verilog A

- Extending use of elemental modules to build Spin Circuit Models for complex structures

LIST OF PRACTICALS (Total Practical Hours – 30 Hours)

1. Study of Zeeman Effect

Simulation using Transport and Magnetic Elemental Modules to understand Spin Phenomenon and build Spin Circuit Models using Scilab/MATLAB/SPICE/Verilog A (https://nanohub.org/groups/spintronics) for the following

2. Non Magnet
3. Ferromagnet
4. Magnetic Tunnel Junction
5. Rashba Spin Orbital
6. Giant Spin Hall Effect
7. Spin Pumping
8. Pure Spin Conductor
9. Magnetic Coupling

Note: Students shall sincerely work towards completing all the above listed practicals for this course. In any circumstance, the completed number of practicals shall not be less than eight.

Essential/recommended readings

1. Beiser, Concepts of Modern Physics, McGraw-Hill Book Company (1987)
2. Sadamichi Maekawa, —Concepts in Spin Electronics, Oxford University Press (2006).
3. Bandyopadhyay S, Cahay M. Introduction to Spintronics. CRC press; 2015.

Suggestive readings

1. Isaac Chuang and Michael Nielsen, Quantum Computation and Quantum Information, Cambridge University Press, 2000.
2. Supriyo Bandyopadhyay and Marc Cahay, Introduction to Spintronics, CRC press, 2008

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVES (DSE-3)

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Telecommunication Switching Systems and Networks	**4**	**3**	**-**	**1**	**Class XII passed with Physics + Mathematics/Applied Mathematics + Chemistry OR Physics + Mathematics/Applied Mathematics + Computer Science/Informatics Practices**	**Principles of Communication System(DSC 12, Sem IV)**

Learning Objectives

The Learning Objectives of this course are as follows:

- To introduce and develop a conceptual understanding of telecommunication networks.
- To develop an understanding of basic traffic engineering and get familiar with the basics of modern telephone networks and data networks.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Understand the basics of various Switching Systems.
- Learn in detail about Time Division Switching.
- Understand the basics of Traffic Engineering.
- Learn the fundamentals of Data Networks.
- Understand the functionality of Telephone Networks and gain familiarity with ISDN.

SYLLABUS OF ELDSE-3C Total Hours- Theory: 45 Hours, Practicals: 30 Hours

UNIT – I (11 Hours)

Introduction: Evolution of Telecommunications, Simple Telephone Communication, Manual Switching System, Major Telecommunication Networks, Strowger Switching System, Crossbar Switching.
Electronic Space Division Switching: Stored Program Control, Centralized SPC, Distributed SPC, Enhanced Services, Multi-stage Switches.

UNIT – II (12 Hours)
Time Division Switching: Time Multiplexed Space Switching, Time Multiplexed Time Switching, Combination Switching, Three-stage Combination Switching, *n*-stage Combination Switching.
Traffic Engineering: Network Traffic Load and Parameters, Grade of Service and Blocking Probability, Modelling Switching Systems, Incoming Traffic and Service Time Characterization, Introduction to Blocking Models, Loss Estimates and Delay Systems.

UNIT – III (11 Hours)
Data Networks: Block diagram, features and working of EPABX systems. Data Transmission in PSTNs, Data Rates in PSTNs, Modems, Switching Techniques for Data Transmission, Circuit Switching, Store and Forward Switching. Data Communication Architecture, ISO-OSI Reference Model, Link to Link layers, Physical Layer, Data Link Layer, Network Layer, End to End Layers, Transport Layer, Session Layer, Presentation Layer, Satellite Based Data Networks, LAN, Metropolitan Area Network, Fibre Optic Networks, and Data Network Standards.

UNIT – IV (11 Hours)
Telephone Networks and ISDN: Subscriber Loop Systems, Switching Hierarchy and Routing, Transmission Plan, Transmission Systems, Numbering Plan, Charging Plan, Signalling Techniques, Inchannel Signalling, Common Channel Signalling, Cellular Mobile Telephony.
Integrated Services Digital Networks (ISDN): ISDN services, Network and Protocol Architecture, Transmission Channels.

Practical component (if any) – Telecommunication Switching Systems and Networks ***(MATLAB/SCILAB /Any other softwares)***

Learning outcomes

The Learning Outcomes of this course are as follows:

- To learn about the various switching networks.
- To learn about traffic in the context of Telecommunication Network.
- To design and study a Local Area Network.

LIST OF PRACTICALS (Total Practical Hours – 30 Hours)

1. Simulation of Basic Switching Systems.

2. Simulation of TDMA.
3. Simulation of basic traffic parameters.
4. Simulation of PCM.
5. To study and perform TDM-PCM.
6. Study of EPABX System and its features
7. Study of LAN Trainer Kit.
8. Study of Optical Fiber Communication System.

Note: Students shall sincerely work towards completing all the above listed practicals for this course. In any circumstance, the completed number of practicals shall not be less than seven.

Essential/recommended readings

1. Thiagarajan Viswanathan, Manav Bhatnagar, 'Telecommunication Switching Systems and Networks', Prentice Hall of India Learning Pvt. Ltd., 2015
2. J. E Flood, 'Telecommunications Switching, Traffic and Networks', Pearson Education, 2006
3. John C Bellamy, Digital Telephony, John Wiley International Student Edition, 3rd Edition, 2000
4. Tomasi, Introduction to Data Communication and Networking, Pearson Education, 1st Edition, 2007

Suggestive readings

1. Behrouz A. Forouzan, Data Communications and Networking, TMH, 2nd Edition, 2002

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

COMMON POOL OF GENERIC ELECTIVES (GE) COURSES OFFERED BY THE DEPARTMENT

GENERIC ELECTIVES (GE-1)

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Fundamentals of 8085 Microprocessor	**4**	**3**	**-**	**1**	**Class XII passed with Physics + Mathematics/Applied Mathematics + Chemistry OR Physics + Mathematics/Applied Mathematics + Computer Science/Informatics Practices**	**Working of different logic gates**

Learning Objectives

The Learning Objectives of this course are as follows:

- Various kinds of number systems and their basics.
- Fundamental understanding of the operations of microprocessors
- Assembly language programming
- Interfacing microprocessor with the real world.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Convert various number systems and operations thereof.
- Draw block diagrams after familiarization with internal architecture of 8085 microprocessor, its instruction set and basic programming.
- Write assembly language programs for 8085 microprocessor.
- Acquire skills in memory and peripheral interfacings to solve real world problems..

SYLLABUS OF ELGE-5A **Total Hours- Theory: 45 Hours, Practicals: 30 Hours**

UNIT – I (11 Hours)

Number systems: Binary, Hexadecimal - Conversion from Binary to Decimal and vice-versa, Binary to Hexadecimal and vice-versa, Decimal to Hexadecimal and vice versa, Addition and Subtraction of Binary Numbers and Hexadecimal Numbers. Subtraction using 2's Complement, Signed Number Arithmetic.

Introduction to Microprocessors: Introduction to Microprocessors, Microcontrollers and Microcomputers, Basic Block Diagram, Speed, Word Size, Memory Capacity, Classification of Microprocessors, Computer languages, Tri-state Logic, Address bus, Data bus and Control bus.

UNIT – II (12 Hours)

Microprocessor 8085: Features, Architecture, Pin Diagram, Block Diagram, Internal Registers, Microprocessor Operations – Microprocessor Initiated Operations, Internal Data and Peripheral or Externally Initiated Operations. Demultiplexing of Multiplexed Address and Data bus, Generation of Control Signals.

Interfacing of Memory Chips: Basic concepts in Memory Interfacing Structures, Address Allocation Technique, Address Decoding Techniques, Memory Map. Interfacing of I/O Devices with 8085, LEDs and Toggle-switches as examples, Memory-Mapped I/O and Peripheral-mapped I/O**.**

UNIT – III (11 Hours)

8085 Instructions: Instruction Set, Instruction Classification, Addressing Modes.

Data Transfer Instructions, Arithmetic Instructions, Increment & Decrement Instructions, Logical instructions, Branch instructions and Machine Control Instructions. Concept of Timing Diagram, Instruction cycle, Machine cycle and T- state. Assembly Language Programming Examples.

UNIT – IV (11 Hours)

Stack Operations: Stack, Subroutine, Call and Return operations, Advanced Subroutine Concepts.

Delay Loops: Looping, Counting and Indexing using Data Transfer, use of Counters. Time Delay Routines, Debugging Counter and Time Delay Programs.

Interrupt Structure of 8085 Microprocessor: Concept of Interrupt Mechanism, Hardware and Software Interrupt of 8085, Interrupts and Vector Locations, RST Instructions, Interrupt Related Instructions, SIM and RIM.

Introduction to Peripheral Programmble Interfacing Devices

Practical component (if any) – Fundamentals of 8085 Microprocessor
(Assembly Language Programming)

Learning outcomes

The Learning Outcomes of this course are as follows:

- Write simple programs to understand the instruction set of 8085 microprocessor.
- Interface various I/O devices with microprocessor.
- Prepare the technical report on the experiments carried out.

LIST OF PRACTICALS (Total Practical Hours – 30 Hours)

1. Program to transfer a block of data.
2. Program for multibyte addition.
3. Program for multibyte subtraction.
4. Program to multiply two 8-bit numbers.
5. Program to divide two 8-bit numbers.
6. Program to search a given number in a given list.
7. Program to generate terms of Fibonacci series.
8. Program to find the square root of an integer.
9. Program to sort numbers in ascending/descending order.

Note: Students shall sincerely work towards completing all the above listed practicals for this course. In any circumstance, the completed number of practicals shall not be less than eight.

Essential/recommended readings

1. Microprocessor Architecture, Programming and Applications with 8085, Ramesh S.Gaonkar - Wiley Eastern Limited- IV Edition.
2. Microprocessor 8085 and Its Interfacing, Sunil Mathur, PHI Learning Pvt. Ltd.

Suggestive readings

1. Fundamentals of Microprocessor & Microcomputer: B. Ram, Dhanpat Rai Publications.
2. Microcomputers and Microprocessors by John E Uffenbeck

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

GENERIC ELECTIVES (GE-2)

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Artificial Intelligence and Machine Learning	**4**	**3**	**-**	**1**	**Class XII passed with Maths/Applied Maths**	**Python Programming fundamentals**

Learning Objectives

Artificial Intelligence (AI) has emerged as one of the most rapidly growing technology sectors in today's time. This fascinating technology area which deals with designing 'machines which can think' is finding widespread application in almost every industrial and domestic sector. Rapid advancement in the field of AI has also led to complete revolution in the other technology areas including Robotics, embedded systems and Internet of Things.

This course will give an opportunity to gain knowledge in some of the fundamental aspects of AI. The main objective of this well-structured classroom program is to cover all the main topics related to designing machines which can replicate human intelligence and its applications in industry, defence, healthcare, agriculture, and other areas. This course will give the students advanced and professional graduate-level foundation in Artificial Intelligence.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Build intelligent agents for search and games
- Solve AI problems through programming with Python
- Learning optimization and inference algorithms for model learning
- Design and develop programs for an agent to learn and act in a structured environment

SYLLABUS OF ELGE-5B Total Hours- Theory: 45 Hours, Practicals: 30 Hours

UNIT – I (11 Hours)

Introduction: Concept of AI, history, current status, scope, Modeling Techniques: Turing Test Approach, Cognitive Modeling Approach, Rational Agent Approach and Laws of Thought Approach, AI System Architecture: Concept of Agent & Environment, Types of Agents: Reactive Agent, Model based Reflex Agent, Omniscient Agent, Goal

Based Agent, Utility based Agent and Learning Agent, Types of Environment, PEAS representation of Intelligent Agents.

UNIT – II (12 Hours)

Problem Solving Agents: AI Problem Formulation, State space representation, Problem Solving Search Algorithms: Uninformed Search Algorithms: Breadth first search, Depth First Search, Depth Limited Search, Uniform Cost Search and Bidirectional Search, Heuristic Search Algorithms: concept of Heuristic Function, Greedy Best First Search and A* search algorithm.
Simple AI problems (such as Water Jug Problem, Maze Problem, 8-Tile Puzzle problem, Traveling Salesman Problem).

UNIT – III (11 Hours)

Game Search Algorithms: Minimax Search Algorithm and Alpha-Beta Pruning.
Probabilistic Reasoning Model: Probability, conditional probability, Bayes Rule, Bayesian Networks- representation, construction and inference, Temporal model: concept of Transition probability, Markov Model and Hidden Markov model.

UNIT – IV (11 Hours)

Introduction to Machine Learning: Overview of types of Machine Learning: Supervised Learning, Unsupervised Learning and Reinforcement Learning. Passive and Active Reinforcement Learning
Markov Decision Process Model: MDP formulation, utility theory, utility functions, value iteration, policy iteration and Q- Learning. Elements of MDP Model, concept of Sequential Decision Processing, Example of MDP Problem: Agent in a grid world

Practical component (if any) – Artificial Intelligence and Machine Learning
(Algorithms to be implemented in Python programming language)

Learning outcomes

The Learning Outcomes of this course are as follows:

- Implement AI algorithms to solve single player puzzles (problems)
- Implement Adversarial (Game search) to design an intelligent game playing system
- Apply Bayesian statistics to apply probabilistic reasoning models
- Analyze the given data sets using basic machine learning algorithms

LIST OF PRACTICALS (Total Practical Hours- 30 Hours)

1. Program to solve the given search tree using Breadth First Search
2. Program to solve the given search tree using Depth First Search
3. Program to solve the given search tree using Depth Limited Search
4. Program to solve the given search tree using Uniform Cost Search
5. Program to solve the given search tree using Greedy Best First Search

6. Program to solve the given search tree using A* Search
7. Program to solve the given game search tree using Minimax Search
8. Program for construction and inference of a Bayesian network
9. Write a Program to perform Regression on given data sets

Note: Students shall sincerely work towards completing all the above listed practicals for this course. In any circumstance, the completed number of practicals shall not be less than eight.

Essential/recommended readings

1. Stuart Russell and Peter Norvig, —Artificial Intelligence: A Modern Approach , 3rd Edition, Prentice Hall
2. Elaine Rich and Kevin Knight, —Artificial Intelligence, Tata McGraw Hill
3. Trivedi, M.C., —A Classical Approach to Artificial Intelligence, Khanna Publishing House, Delhi.
4. Introduction to Machine Learning with Python, by Andreas C. Müller, Sarah Guido, O'Reilly Media, Inc., 2016

Suggestive readings

1. David Poole and Alan Mackworth, —Artificial Intelligence: Foundations for Computational Agents, Cambridge University Press 2010
2. Saroj Kaushik, —Artificial Intelligence, Cengage Learning India, 2011

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

SEMESTER-VI
DEPARTMENT OF ELECTRONIC SCIENCE
Category I

(B.Sc. Honours in Electronics)

DISCIPLINE SPECIFIC CORE COURSE – 16: Digital Signal Processing

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Digital Signal Processing	4	3	-	1	Class XII passed with Physics + Mathematics/Applied Mathematics + Chemistry OR Physics + Mathematics/Applied Mathematics + Computer Science/Informatics Practices	Signals and Systems (DSC 9, Sem III)

Learning Objectives

The Learning Objectives of this course are as follows:
To introduce the techniques of modern digital processing that are fundamental to a wide variety of application areas. Special emphasis is placed on the basic concepts related to discrete-time signals and systems, the analysis of signals in time and frequency using Fourier and Z transform. Introduction to techniques involved in the architecture and design of digital filters.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Grasp fundamentals of discrete time signals, linear time-invariant systems, Z-transform and Fourier transform
- Analyze linear time-invariant systems using Fourier and Z transform

- Understand the Design techniques of Digital FIR and IIR filters using direct methods and methods involving conversion of the analog filter into the digital filter by various transformations.
- Use DFT to perform frequency analysis of signals and application of FFT algorithms.

SYLLABUS OF ELDSC-16 **Total Hours- Theory: 45 Hours, Practicals: 30 Hours**

UNIT – I (10 Hours)

Discrete Time Sequences and Systems: Introduction to Discrete Time sequences, Properties of DT systems.

Fourier Transform: Fourier Transform, Properties of Fourier Transform, Inverse Fourier Transform, Transfer Function of LSI systems.

UNIT – II (12 Hours)

Z-Transform: Definition, Unilateral Z- transform, Region of Convergence and its properties, Properties of Z-Transform, Initial and final value theorem.

Inverse Z Transform: Long division, Partial fraction, and Residual methods. Parseval's Theorem and applications.

System Function: Linear constant coefficient difference equation, Representation and analysis of Discrete Time Systems, Stability, Causality, Realisation of Digital Linear Systems: Block diagram, signal flow graph, structure for IIR and FIR systems

UNIT – III (12 Hours)

Discrete Fourier Transform: DFT assumptions and Inverse DFT, magnitude and phase representation Matrix relations, relationship with Fourier Transform, Linear and circular convolution, properties of DFT, Computation of DFT. FFT Algorithms- Decimation in time FFT. Decimation in frequency FFT, FFT using radix 2 FFT — Butterfly structure, Concept of Gibb's phenomenon and word length effects.

UNIT – IV (11 Hours)

Digital Filters: Comparison of Analog and Digital Filters, Types of Digital Filters: FIR and Hanning, Hamming, Blackman, Design of IIR Filters by Approximation of Derivates, Impulse Invariant Method, Bilinear Transformation, Butterworth Filter.

Practical component (if any) – Digital Signal Processing
(Scilab/MATLAB/Python other Mathematical Simulation software)

Learning outcomes

The Learning Outcomes of this course are as follows:

- Simulate, synthesize and process signals using a software tool.

- Apply transform methods for representing signals and systems in the time and frequency domain.
- Simulation and design of FIR and IIR Filters

LIST OF PRACTICALS (Total Practical Hours- 30 Hours)

1. Write a program to generate discrete time Unit Sample, Unit Step, Unit ramp and Sinusoidal sequences.
2. Write a program to find the Fourier Transform of a sequence.
3. Write a program to find the pole-zero plot of a function.
4. Write a program to find a function's Z transform and inverse Z transform.
5. Write a program to find the circular convolution of two sequences.
6. Write a program to find the DFT of a sequence using the direct method.
7. Write a program to find the DFT of a sequence using FFT.
8. Magnitude Response of Low Pass Filter and High Pass Filter.
9. Design FIR Filter using Window Function.
10. Convert Analog Filter to Digital IIR Filter

Note: Students shall sincerely work towards completing all the above listed practicals for this course. In any circumstance, the completed number of practicals shall not be less than nine.

Essential/recommended readings

1. A.V. Oppenheim and Schafer, Discrete Time Signal Processing, Prentice Hall, 1999.
2. John G. Proakis and D.G. Manolakis, Digital Signal Processing: Principles, Algorithms and Applications, Prentice Hall, 2007.

Suggestive readings

1. S. Salivahanan, Digital Signal Processing, McGraw Hill, 2015.
2. Tarun Kumar Rawat, Digital Signal Processing, Oxford University Press, 2015.
3. Monson Hayes, Digital Signal Processing: Second Edition, Schaum's Outline Series

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE – 17: Photonics

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Photonics	**4**	**3**	**-**	**1**	**Class XII passed with Physics + Mathematics/Applied Mathematics + Chemistry OR Physics + Mathematics/Applied Mathematics + Computer Science/Informatics Practices**	**Electro-magnetics (DSC 14, Sem V)**

Learning Objectives

The Learning Objectives of this course are as follows:

- This course introduces the student to the fundamental understanding of light as an electromagnetic wave and various phenomenon like interference, diffraction and polarization and their applications.
- Interaction between a photon and electron and its relevance to laser and various other optoelectronic devices.
- Understand the propagation of wave in planar optical waveguides and optical fibers.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Describe the optics and simple optical systems.
- Understand the concept of light as a wave and its propagation in optical fibres, and relevance of this to optical effects such as interference , diffraction, polarization and hence to lasers, holography and optical waveguides.
- Use mathematical methods to predict optical effects with e.g. light-matter interaction, wave propagation in guided media, dispersion, wave optics

SYLLABUS OF ELDSC-17 Total Hours- Theory: 45 Hours, Practicals: 30 Hours

UNIT – I (12 Hours)

Light as an Electromagnetic Wave: Plane waves in homogeneous media, concept of spherical waves. Reflection and transmission at an interface, total internal reflection, Brewster's Law.
Interference : Interference by division of wavefront, Young's double slit, Division of Amplitude, thin film interference, anti-reflecting films, Newton's rings.
Diffraction: Fraunhoffer Diffraction by a single slit, double slit, Diffraction grating: Resolving power and Dispersive power

UNIT – II (11 Hours)
Holography: Basic Principle , Construction and reconstruction of hologram.
Polarization: Linear, circular and elliptical polarization, polarizer-analyzer and Malus' law; Double refraction by crystals, Half wave and quarter wave plates. Electro optic Effect, Faraday Rotation
Liquid Crystal Displays: Types, Working Principle.

UNIT – III (11 Hours)
Light Emitting Diodes: Construction, materials and operation.
Lasers: Interaction of radiation and matter, Einstein coefficients, Condition for amplification, Laser cavity , Examples of common lasers. The semiconductor injection laser diode.
Photodetectors: Photo transistors and Photodiodes (p-i-n, avalanche), quantum efficiency and responsivity.

UNIT – IV (11 Hours)
Guided Waves and the Optical Fibre: Maxwell's Equations, TE modes in symmetric step index planar slab waveguides, effective index, field distributions, Step index optical fibre, total internal reflection, single mode and multimode fibres, attenuation and dispersion in optical fibres.

Practical component (if any) – Photonics
(Hardware Lab augmented with virtual lab)

Learning outcomes

The Learning Outcomes of this course are as follows:

- Perform experiments based on the phenomenon of light/photons.
- Measure the parameters such as wavelength, resolving power, numerical aperture etc. using the appropriate photonic/optical technique.
- Prepare the technical report on the experiments carried.

LIST OF PRACTICALS (Total Practical Hours- 30 Hours)

1. To determine Brewster's angle.
2. To determine wavelength of sodium light using Newton's Rings.
3. To determine the resolving power and Dispersive power of Diffraction Grating.
4. Diffraction experiments using a laser.

5. Viewing of different types of holograms.
6. To verify the law of Malus for plane polarized light.
7. Study of Faraday Rotation.
8. Study of Electro-optic Effect.
9. To determine characteristics of LEDs and Photo- detector.
10. To measure the numerical aperture of an optical fiber.

Note: Students shall sincerely work towards completing all the above listed practicals for this course. In any circumstance, the completed number of practicals shall not be less than nine.

In addition to the above hardware lab , teaching learning process can be further augmented using following/any other ONLINE virtual labs:

- Amrita Vishwa Vidyapeetham Virtual Lab https://vlab.amrita.edu/
- Virtual Labs ofcvlab.vesit.ves.ac.in

Essential/recommended readings

1. Ajoy Ghatak, Optics, Tata McGraw Hill, New Delhi (2005)
2. E. Hecht, Optics, Pearson Education Ltd. (2002)
3. Ghatak A.K. and Thyagarajan K., —Introduction to fiber optics, Cambridge Univ. Press. (1998)

Suggestive readings

1. J. Wilson and J. F. B. Hawkes, Optoelectronics: An Introduction, Prentice Hall India (1996)
2. S. O. Kasap, Optoelectronics and Photonics: Principles and Practices, Pearson Education (2009)

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE – 18: Semiconductor Device Technology

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Semiconductor Device Technology	**4**	**3**	**-**	**1**	**Class XII passed with Physics + Mathematics/Applied Mathematics + Chemistry OR Physics + Mathematics/Applied Mathematics + Computer Science/Informatics Practices**	**Semi-conductor Devices (DSC 3, Sem I)**

Learning Objectives

The Learning Objectives of this course are as follows:

- The course deals with properties of materials required for Semiconductor Devices
- It deals with various processing steps
- It gives an account of how the Semiconductor Devices are fabricated (with details of all processes involved)

Learning outcomes

The Learning Outcomes of this course are as follows:

- Summarize the developments in the field of microelectronics technologies
- Describe the crystal growth, diffusion, oxidation, lithography, etching and various film deposition processes.
- Explain the process sequence for PN junction, BJT, CMOS and BiCMOS fabrication

SYLLABUS OF ELDSC-18 Total Hours- Theory: 45 Hours, Practicals: 30 Hours

UNIT – I (11 Hours)

Semiconductor materials: Single crystal, polycrystalline and amorphous forms. Properties of Silicon and Gallium Arsenide. Materials used for doping Silicon and Gallium Arsenide

Crystal growth techniques: Starting material (SiO_2), MGS, EGS, Growth of bulk Silicon single crystals using Czochralski (CZ) technique, Doping while crystal growth (Distribution of dopants, Effective Segregation Coefficient), Float Zone (FZ) technique, GaAs bulk single crystal growth by LEC technique, Bridgman-Stockbarger technique.
Wafer Cleaning Technology : Basic Concepts, Wet cleaning, Dry cleaning

UNIT – II (12 Hours)
Epitaxy Deposition: Vapor-Phase Epitaxy, Molecular Beam Epitaxy, Growth of GaAs films by MOCVD.
Oxidation: Importance of Silicon Dioxide in Silicon, Thermal Oxidation Process, Kinetics of Growth for thick and thin Oxide, Dry and Wet oxidation. Effects of high pressure and impurities on oxidation rates, Impurity redistribution during Oxidation, Oxide Quality, Chemical vapour deposition of silicon oxide, properties of silicon oxide, step coverage, P-glass flow

UNIT – III (11 Hours)
Diffusion: Thermal Diffusion, Diffusion Equation, Diffusion Profiles. Extrinsic Diffusion Concentration Dependent Diffusivity, Lateral Diffusion, Doping through Ion Implantation, and its comparison with Thermal Diffusion.
Lithography: Clean room, Optical Lithography, Electron beam lithography, Photoresist, Photo masks, Wet Chemical Etching, Common etchants

UNIT – IV (11 Hours)
Metallization: Filament evaporation, e-beam evaporation, sputtering techniques used for metals (Aluminium, Gold, Copper etc..) deposition on Silicon and GaAs
Process Integration (IC): Isolation techniques. Fabrication of Monolithic Resistor, Inductor, Capacitor. PN junction, BJT, NMOS, PMOS, CMOS structures.
Concept of Bipolar Technology and MOSFET Technology for Devices

Practical component (if any) – Semiconductor Device Technology
(Scilab/MATLAB/other Simulation Software)

Learning outcomes

The Learning Outcomes of this course are as follows:

- Operate the advanced computer simulations tools as well as visit research laboratories for better understanding of semiconductor fabrications processes.
- Perform the simulation of semiconductor crystal growth and device fabrication processes like oxidation and diffusion.
- Perform experiments to calculate the electronic parameters like resistivity, mobility, carrier concentration and band gap etc in semiconductors.
- Operate the deposition system for fabrications of thin films

LIST OF PRACTICALS (Total Practical Hours- 30 Hours)

1. To measure the resistivity of semiconductor crystal with temperature by four – probe method.

2. To determine the type (n or p) and mobility of semiconductor material using Hall effect.
3. CZ technique Simulation
4. Float zone technique Simulation
5. Oxidation process Simulation
6. Diffusion Process Simulation
7. To design a pattern using photolithographic process and its simulation
8. Process integration simulation
9. Determination of Optical Bandgap through transmission spectra.
10. Visit to Research Lab/institutions to see the live demonstrations of the processes and preparation of a report.

Note: Students shall sincerely work towards completing all the above listed practicals for this course. In any circumstance, the completed number of practicals shall not be less than nine.

Essential/recommended readings

1. Gary S.May and S.M.Sze , Fundamentals of Semiconductor Fabrication, John Wiley& Sons(2004)

Suggestive readings

3. Ludmila Eckertova, Physics of Thin films, 2nd Edition, Plenum Press (1986).

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVES (DSE) COURSES OFFERED BY THE DEPARTMENT

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Medical Electronics & Instrumentation	**4**	**3**	**-**	**1**	**Class XII passed with Physics + Mathematics/Applied Mathematics + Chemistry OR Physics + Mathematics/Applied Mathematics + Computer Science/Informatics Practices**	**Basic Instrument-ation & Measure-ment Techniques (DSC 4, Sem II), Micro-processor (DSC 11, Sem IV)**

Learning Objectives

- This course introduces the student to the fundamental understanding of various types of Biomedical Signals and their physiological aspects.
- The students analyse the various types of Biomedical instruments and their working and practical implementation.
- Learn about Modern Imaging systems like CT and MRI techniques and various other cardiac instruments.
- Learn about Instrumentation for clinical lab: blood cell counter, oximeter, blood gas and blood ph analyser.
- Learn about the emerging fields like EEG, ECG, EMG etc.
- To learn about patient safety and precaution for instruments and electrodes.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Understand the basic knowledge of physiology and generation of bio electric signals (ECG, EMG, EEG etc.) in humans.
- Describe cardio vascular monitoring systems , Bed side monitor, ECG-Telemetry.
- Describe the basic knowledge on respiratory and pulmonary measurements.
- Describe modern methods of imaging techniques like CT, X-Ray, NMR and MRI.

- Describe conditions for patient safety
- Describe instrumentation for clinical Lab like Blood cell counters, oximeter, blood gas and blood pH analyser..

SYLLABUS OF ELDSE-4A **Total Hours- Theory: 45 Hours, Practicals: 30 Hours**

UNIT – I (10 Hours)
Biomedical signals and transducers
Physiological systems of human body: Introduction, Origin of biomedical signals, Use of microprocessors, Microcontrollers and computers in medical instruments, **Transducers:** Ultrasound transducer, Radiation and chemical thermometry, optical fibre sensor, biosensors, optical glucose sensor, Electrodes & its types: for ECG, EMG & EEG
.
UNIT – II (12 Hours)
Cardiovascular monitoring systems: Patient cardiovascular Monitoring systems Cardiovascular System, blood pressure measurement, cardiac rate and output measurement, Cardiac monitor- Waveforms, ECG amplifier, phonocardiography, Ballisto cardiography, Eco-Cardiograph, Bed side monitor –block diagram- measuring parameters-cardiac tachometer-Alarms-Lead fault indicator-central monitoring. Telemetry – modulation systems – choice of carrier frequency – single channel telemetry systems, Cardiac pacemakers: Introduction, Cardiac defibrillators

UNIT – III (12Hours)
Imaging Systems
X-rays: Properties and production, Block diagram of x-ray machine, Diagnostic radiology, Dental X-ray, Basic principle and components of X-Ray Computed Tomography (CT)
MRI: Principle and NMR imaging components
Introduction to Ultrasonic imaging system.

UNIT – IV (11 Hours)
Patient's safety: Precaution, safety codes for electro medical equipment, Electric safety analyser, Testing of biomedical equipment.
Instrumentation for Clinical Laboratory: Blood cell counters, Oximeter, Blood flow meter, Blood gas analysers, Blood pH analyser.
Measurement in Respiratory system: Physiology of respiratory system, Measurement of breathing mechanics Spiro meter, Respiratory therapy equipment Inhalators ventilators & Respirators, Humidifiers, Nebulizers Aspirators.

Practical component (if any) – Medical Electronics & Instrumentation

Learning outcomes

The Learning Outcomes of this course are as follows:

- Familiarize with functioning of biomedical instrumentation
- Perform experiments on the biomedical instruments, collect & analyze the data
- Prepare the technical report on the experiments carried

LIST OF PRACTICALS (Total Practical Hours- 30 Hours)

1. To simulate Bio potential Amplifier.
2. Study on ECG simulator.
3. Study on EEG simulator.
4. Study on EMG simulator.
5. Study of various leads and electrode position for ECG and EEG.
6. Study of pulse rate monitor (Pulse oximetry).
7. To simulate defibrillator.
8. Measurement of heart sound using electronic stethoscope.
9. Simulation of blood cell counter.
10. Study of NMR using virtual lab.
11. Visit to a Diagnostic lab/Pathology lab/Hospital to understand working of various instruments and preparation of a report.

Note: Students shall sincerely work towards completing all the above listed practicals for this course. In any circumstance, the completed number of practicals shall not be less than ten.

Essential/recommended readings

1. Khandpur R. S. - Handbook of Biomedical Instrumentation, TMH.
2. Joseph J. Carr & John M. Brown, Introduction to Biomedical Equipment Technology, Pearson.
3. Shakti Chatterjee, —Textbook of Biomedical Instrumentation System‖, Cengage Learning.
4. Prof. S.K.VenkataRam-Bio-Medical Electronics and Instrumentation, Galgotia Publications.

Suggestive readings

1. Bertil Jacobson & John G. Webster - Medicine and Clinical Engineering, PHI.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVES (DSE-2)

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Advance Computer System Architecture	**4**	**3**	**-**	**1**	**Class XII passed with Physics + Mathematics/Applied Mathematics + Chemistry OR Physics + Mathematics/Applied Mathematics + Computer Science/Informatics Practices**	**Microprocessor (DSC 11, Sem IV) or equivalent to Computer System Architecture, Operating system(DSE 2B, Sem IV)**

Learning Objectives

- To give the students an elaborate idea about the different memory systems and buses.
- To introduce the advanced processor architectures to the students.
- To make the students know about the importance of multiprocessor and multicomputer.
- To study about data flow computer architectures
- To make students know about the Parallelism concepts

Learning outcomes

The Learning Outcomes of this course are as follows:

- Demonstrate concepts of parallelism in hardware/software.
- Discuss memory organization and mapping techniques.
- Describe architectural features of advanced processors.
- Interpret performance of different pipelined processors.
- Explain data flow in arithmetic algorithms
- Development of software to solve computationally intensive problems.

SYLLABUS OF ELDSE-4B Total Hours- Theory: 45 Hours, Practicals: 30 Hours

UNIT – I (10 Hours)

Computer Architecture & Organization: Instruction codes, Computer instructions, Basics of Input/Output & Interrupts, Complete computer description & design of basic

computer. Control Unit: Hardwired vs. Micro programmed control unit. Flynn's classification.

UNIT – II (11 Hours)

Memory Hierarchy: Hierarchical memory organization, Types of Cache Memory, Memory Interleaving, Replacement algorithms + write policy, Concept of Virtual Memory and Virtual Machine.

Parallel Processing: Definition, Theory of Parallelism. Parallel Computer Models, Implicit Parallelism vs. explicit parallelism, Levels of parallelism. Software Parallelism, Hardware Parallelism.

UNIT – III (12 Hours)

Pipelining: Basic Concepts of pipelining, Linear pipeline processor, Asynchronous and Synchronous models, speed up, Efficiency, Throughput, Instruction pipeline. Pipeline hazards and their Resolution Mechanisms like data forwarding, Delayed Branch, Branch Prediction, Dynamic Branch Prediction, Concept of Vector processing.

UNIT – IV (12 Hours)

Instruction Level Parallelism (ILP) Instruction-level Parallelism: Introduction, Challenges, Limitations, Basic Compiler Techniques for ILP, Branch Prediction, Out of order execution, Dynamic Scheduling, Limitations of ILP. Introduction to Thread Level Parallelism (TLP) and Data Level Parallelism (DLP). Introduction to Virtualisation Architecture, Virtualisation as a concept of Cloud Computing.

Practical component (if any) – Advance Computer System Architecture
(FPGA/Virtual Lab/Tejas Architecture Simulator)

LIST OF PRACTICALS (Total Practical Hours – 30 Hours)

1. To design a 4-bit common bus using 4:1 mux to transfer data from register to bus.
2. To design a 2-bit combinational shifter circuit which implements the logical shift, circular shift, arithmetic shift for both direction.
3. To design 2 bit arithmetic circuit which performs the following arithmetic operations add, add with carry, subtract, subtract with borrow, increment and decrement.
4. Design of Arithmetic Logical Unit ALU
5. Design of Memory: Design of a RAM cell
6. Design of Memory: Design of a 4X4 RAM
7. Design of Direct Mapped Cache
8. Design of Associative Cache
9. Using Architectural Simulator Tejas as
    a. Emulator
    b. Transfer Engine

c. Translational Modules
d. Micro architectural Simulation

Note: Students shall sincerely work towards completing all the above listed practicals for this course. In any circumstance, the completed number of practicals shall not be less than eight, experiment no. 9 is compulsory.

Essential/recommended readings

1. “Computer Architecture: A Quantitative Approach”, by John L. Hennessy and David A. Patterson, Morgan Kaufmann, 5th edition, 2011, ISBN: 9780123838728.
2. “Computer System Architecture” by M. Morris Mano (Pearson Publication)

Suggestive readings

1. “Computer Organization and Architecture”, William Stallings, Prentice Hall, 10th edition, 2015, ISBN-10: 013293633X, ISBN-13: 978-0132936330
2. "Advanced computer architecture", Kai Hwang, TMH. 2000

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVES (DSE-3)

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Transmission Lines, Antenna and Wave Propagation	**4**	**3**	**-**	**1**	**Class XII passed with Physics + Mathematics/Applied Mathematics + Chemistry OR Physics + Mathematics/Applied Mathematics + Computer Science/Informatics Practices**	**Electromagnetics (DSC 14, Sem V)**

Learning Objectives

The Learning Objectives of this course are as follows:

- Fundamentals of propagation of electromagnetic waves.
- Basics of transmission lines along with its parameters.
- Wave propagation in different modes of the waveguides.
- Antenna parameters and its radiation mechanism.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Understand reflection and transmission of uniform plane wave.
- Explain the functioning of transmission line and its performance parameters.
- Understand wave propagation in waveguides and different modes of propagation.
- Explain the radiation mechanism and characteristics of an antenna.

SYLLABUS OF ELDSE-4C **Total Hours- Theory: 45 Hours, Practicals: 30 Hours**

UNIT – I (11 Hours)

Electromagnetic Wave Propagation: Plane Wave reflection at Oblique Incidence:- Laws of Reflection, Snell's Law of Refraction, Parallel and Perpendicular polarisations, Fresnel's Equations and Brewster Angle, Wave propagation in dispersive media, Concept of phase velocity and group velocity

UNIT – II (11 Hours)

Transmission Lines: Typical Transmission lines- Coaxial, Two-Wire, Microstrip and Coplanar, Transmission Line Parameters, Transmission Line Equations, Wave propagation in Transmission lines:- lossy, lossless and Distortionless lines, Input Impedance, Standing Wave Ratio, Power, Shorted Line, Open-Circuited Line and Matched Line, Quarter wave transformer as transmission line application.

UNIT – III (11 Hours)

Waveguides: Introduction to Parallel plate waveguide, Rectangular waveguide, Transverse Electromagnetic (TEM), Transverse Magnetic (TM) and Transverse Electric (TE) modes, cutoff frequency and dominant mode, Intrinsic Impedance, Power transmission and attenuation:- conductor loss and dielectric loss and Rectangular cavity resonator and its resonant frequency.

UNIT – IV (12 Hours)

Antenna: Concept of retarded potentials, Radiation Mechanism, types of antennas, power radiated by Hertzian dipole and its radiation resistance, qualitative analysis of half-wave dipole and quarter-wave monopole antenna, Antenna characteristics, Radiation Pattern, Beamwidth, Bandwidth, Radiation Intensity, Directive Gain, Directivity, Power Gain, Radiation Efficiency, Input Impedance, Effective Area and the Friis Transmission Equation.

Practical component (if any) – Transmission Lines, Antenna and Wave Propagation
(MATLAB/SCILAB /Any other softwares)

Learning outcomes

The Learning Outcomes of this course are as follows:

- Understand the phasor and its graphical representation for electromagnetic fields.
- Learn reflection and transmission of plane electromagnetic wave.
- Represent graphically various parameters of transmission line.
- Plot field configuration for different modes of the waveguide.
- Understand the radiation pattern and other characteristics of an antenna.

LIST OF PRACTICALS (Total Practical Hours – 30 Hours)

1. Program to determine the phasor of forward propagating field
2. Program to determine the instantaneous field of a plane wave
3. Program to find the electric and magnetic fields of reflected and transmitted wave at the interface of different types of media
4. Program to find the characteristic impedance and the phase constant of a distortionless line
5. Program to find the power dissipated of the lossy transmission line
6. Program to find the total power transmitted through the lossless transmission line
7. Program to plot the field configuration for TE and TM modes in waveguide
8. Program to determine the operating range of frequency for TE10 mode of air filled rectangular waveguide
9. Program to determine Directivity, Bandwidth and Beamwidth of an antenna.
10. Program to plot the radiation pattern of a Hertzian dipole and calculate its radiation resistance.

Note: Students shall sincerely work towards completing all the above listed practicals for this course. In any circumstance, the completed number of practicals shall not be less than nine.

Essential/recommended readings

1. M. N. O. Sadiku, Principles of Electromagnetics, Oxford University Press (2001)
2. Karl E. Longren, Sava V. Savov, Randy J. Jost., Fundamentals of Electromagnetics with MATLAB, PHI
3. J. A. Edminister, Electromagnetics, Schaum Series, Tata McGraw Hill (2006)
4. N. Narayan Rao, Elements of Engineering Electromagnetics, Pearson Education (2006)
5. G. S. N. Raju, Antennas and Propagation, Pearson Education (2001) Transmission Lines,

Suggestive readings

1. W. H. Hayt and J.A. Buck, Engineering Electromagnetics, Tata McGraw Hill (2006)
2. D. C. Cheng, Field and Wave Electromagnetics, Pearson Education (2001)

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

COMMON POOL OF GENERIC ELECTIVES (GE) COURSES OFFERED BY THE DEPARTMENT

GENERIC ELECTIVES (GE-1)

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Microcontroller Systems	**4**	**3**	**-**	**1**	**Class XII passed with Physics + Mathematics/Applied Mathematics + Chemistry OR Physics + Mathematics/Applied Mathematics + Computer Science/Informatics Practices**	**Basic C language program-ming**

Learning Objectives

The Learning Objectives of this course are as follows:

- Understand architecture of Microcontroller.
- Write assembly language / C programs for the microcontroller.
- Apply knowledge and demonstrate proficiency of designing hardware interfaces for memory and I/O.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Explain the concepts related to architecture of microcontrollers
- Demonstrate knowledge of the development tools for a microcontroller, and write assembly language code according to specifications
- Design systems for common applications like general I/O, counters, data acquisition etc.
- Interfacing the external devices to the controller according to the user requirements to create novel products and solutions for the real - time problems.

SYLLABUS OF ELGE-6A **Total Hours- Theory: 45 Hours, Practicals: 30 Hours**

UNIT – I (11 Hours)

Introduction to microcontroller: Introduction to Microcontroller based system, Difference between Microprocessor and Microcontroller, Classification of microcontrollers based on architecture and Instruction Set (Overview of Harvard architecture and Von Neumann architecture, RISC and CISC microcontrollers), Microcontroller Features - Brown out Detector, Watch Dog Timer.

UNIT – II (12 Hours)

Architectural Overview of AVR Microcontroller: Block diagram description of ATMEGA32, Pin Description of ATMEGA32, AVR status register, General Purpose Register File, X, Y & Z registers, Stack Pointer, System Clock and Clock Options in AVR, System Control and Reset, Sleep Modes, AVR ATmega32 Memories: Flash Program Memory, SRAM Data Memory, EEPROM Data Memory & I/O Memory.

UNIT – III (11 Hours)

Instruction set of AVR Microcontroller: Addressing modes, Instruction set of AVR microcontroller, Data transfer, Arithmetic, Logic and Compare, Rotate and Shift, Branch and Call instructions, Bit manipulation instructions, MCU Control Instructions, Simple programs in Assembly Language / C Language

UNIT – IV (11 Hours)

AVR on-chip peripherals: General purpose I/O Ports, AVR I/O Port Programming, Introduction to interrupts, External interrupts, 8 and 16-bit Timers, Timer programming.

Practical component (if any) – Microprocessor System
(Hardware and AVR Studio/ Other suitable IDE)

Learning outcomes

The Learning Outcomes of this course are as follows:

- Be proficient in use of IDE‘s for assembly/ C programming for the microcontroller.
- Interface various I/O devices to provide solutions to real-world problems.
- Prepare the technical report on the experiments carried.

LIST OF PRACTICALS (Total Practical Hours – 30 Hours)

1. Program to transfer a block of data.

2. Program to find the sum/subtraction of two 8-bit numbers.
3. Program to find the sum of N 8-bit numbers.
4. Program to find multiplication/ Division of two 8-bit numbers.
5. Program to find smallest of N numbers
6. Program to find the square root of 8-bit number.
7. Program to sort the numbers in ascending/ descending order.
8. Flash LED at observable rate.
9. Interface Input Switches and output LEDs.
10. Interface 7 segment display.

Note: Students shall sincerely work towards completing all the above listed practicals for this course. In any circumstance, the completed number of practicals shall not be less than nine.

Essential/recommended readings

1. Programming and Customizing the AVR Microcontroller, By Dhananjay Gadre, McGraw Hill Education

Suggestive readings

1. The AVR Microcontroller and Embedded Systems Using Assembly and C, By Muhammad Ali Mazidi, Sarmad Naimi and Sepehr Naimi, Pearson Education.
2. AVR ATmega32 data sheet- ATMEL Corporation

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

GENERIC ELECTIVES (GE-2)

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Arduino/ Rpi App Development	4	2	-	2	Class XII passed with Maths/Applied Maths	Basic C language programming

Learning Objectives

This course introduces the student to the fundamental understanding of Arduino/Rpi processors. After completion of this course students should be well versed in programming the microcontroller. They should be able to use various sensors and make microcontroller respond to the external environment.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Understand the basic concepts of Arduino Uno / Raspberry Pi and the programming environments.
- Understand digital and analog ports of a microcontroller and their usage.
- Understand the working of various sensors and their application in robotics.
- Design different circuits and display their outputs using LCD and other indicator

SYLLABUS OF ELGE-6B Total Hours- Theory: 30 Hours, Practicals: 60 Hours

UNIT – I (8 Hours)

Basic functionality of the Arduino/ Rpi board and its processor, Setting and configuring the board: Pin diagram of Arduino/Rpi development board, Integrated Development Environment (IDE), IDEs like AVR Studio, WIN AVR, ARM 11, Installing and configuring for Robot programming, In System Programmer (ISP), loading programs on Robot, Differentiating Arduino board from Rpi board.

UNIT – II (8 Hours)

Introduction of Embedded C Programming and programming concepts for Arduino/ LINUX for Rpi, Digital Ports: Data Read and Write, Interfacing LEDs, Buzzer, Switches, 7 segment displays, LED dot matrix, Traffic lights, Introduction to 2 x 16 Characters LCD, Basic LCD control, Displaying message on LCD.

UNIT – III (6 Hours)

Sensors: IR range sensor of different range, Analog IR proximity sensors, Ultrasound scanner, LDR, Gyroscope and Accelerometer, Magnetometer, GPS receiver.

UNIT – IV (8 Hours)

Communication with Arduino/ Raspberry Pi : Wired RS232 (serial) Communication, Wireless ZigBee Communication, USB Communication, Simplex infrared Communication (IR remote to robot), Reading and writing to SD card.

Practical component (if any) – Arduino/Rpi App Development
(Supporting IDE)

Learning outcomes

The Learning Outcomes of this course are as follows:

- Familiarize with the Arduino/Rpi microcontroller development boards.
- Understand interfacing of various display devices viz. 7-segment display, LED dot matrix, LCD.
- Understand various sensors, their applications and designing control experiments using

LIST OF PRACTICALS (Total Practical Hours- 60 Hours)

1. To blink an LED/interface a Buzzer using a digital pin of the processor.
2. To display binary count on LEDs using digital port of the processor.
3. To display decimal count on a 7-segment display.
4. To read data from a digital port of the processor and then display it on other digital port.
5. To print a message on LCD.
6. To display different patterns on LED dot matrix.
7. To read the voltage of a potentiometer using analog port of the processor and depict the variation on LEDs/LCD.
8. To interface IR proximity sensor to determine if some obstacle is nearby.
9. To interface Ultrasonic sensor to determine if some object is in the facing direction.
10. To interface LDR and display if its dark or bright on 7 segment/LCD.
11. To design a Traffic Light System
12. To design a Voice Control Home Automation
13. To design a PWM based variable system
14. To design a wireless appliance controlling system.

Note: Students shall sincerely work towards completing all the above listed practicals for this course. In any circumstance, the completed number of practicals shall not be less than twelve.

Essential/recommended readings

1. Michal Mc Roberts “Beginning Arduino” Second Edition, Technology in Action
2. Massimo Banzi, “Getting started with Arduino” 2nd Edition, Orelly 2011
3. Richard Blum, “ Arduino Programming in 24 Hours”, Pearson Education, 1st edition, 2015.

Suggestive readings

1. Simon Monk, “Raspberry Pi Cookbook: Software and Hardware Problems and Solutions”, O'Reilly Reprints; Second edition 2016

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

SEMESTER-IV
DEPARTMENT OF INSTRUMENTATION
Category I

(B.Sc. Honours in Instrumentation)

DISCIPLINE SPECIFIC CORE COURSE – 10: Biomedical Instrumentation (INDSC4A)

CREDIT DISTRIBUTION, ELIGIBILITY, AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Biomedical Instrumentation (INDSC4A)	04	03	-	01	Class XII passed with Physics + Mathematics/Applied Mathematics + Chemistry/ Computer Science/Informatics Practices	Sensors and Transducers

Learning Objectives

The Learning Objectives of this course are as follows:

- To identify and describe various biomedical signals.
- To describe the origin of biopotentials and explain the role of biopotential electrodes.
- To understand the synchronization between the physiological systems of the body.
- To understand the basic measurement principles behind biomedical instrumentation.
- To realize the working principle of numerous biomedical imaging techniques.
- To analyze the applications of biosensing in different domains of healthcare.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Analyze the origin of various bioelectric signals (ECG, EEG) and the method of recording using different types of electrodes.
- Develop basic knowledge about the Cardiovascular, respiratory and nervous systems.

- Develop an understanding of the measurement principles of medical instrumentation including measurement of respiratory function, cardiac variables, blood pressure as well as medical devices.
- Design various biomedical instruments with the help of respective transducers.

SYLLABUS OF DSC-10

Unit-1 **(10 Hours)**

Biopotentials, Bio amplifiers, and Bioelectrodes: Introduction to bio-electric potential, bio- amplifier, components of man Instrument system, types of biomedical systems, design factors and limitations of biomedical instruments, terms, and transducers to measure various physiological events, types of bio-potential electrodes (Body surface electrodes, Internal electrodes, Microelectrodes), electrolyte interface, electrode circuit model, impedance and polarization, Properties of electrodes

Unit-2 **(13 Hours)**

Cardiac vascular system & measurements: ECG: origin, Instrumentation, the bipolar system lead system I, II, III, Einthoven's triangle, Augmented lead system, unipolar chest lead system, types of display. Blood pressure measurements: direct, indirect. Pacemakers- Internal, External

Unit-3 **(11 Hours)**

Respiratory Measurement Systems: Types of volume, types of measurements, Instrumentation of respiratory system, principle & types of pneumograph, Spirometer, pneumotachometers, nitrogen washout technique

Unit-4 **(11 Hours)**

Nervous system: Action potential of the brain, brain wave, Instrumentation of Electroencephalography (EEG), electrodes used for recording EEG analysis. Conventional X-ray, properties, generation of X-ray, Thermal imaging system, working, IR detectors, applications.

Practical component: **(30 hours)**

1. Characterization of biopotential amplifier for ECG signals.
2. Study on ECG simulator.
3. Recording of EEG.
4. Measurement of blood pressure and measurement of heart sound using a stethoscope.
5. Study of pulse rate monitor with alarm system.
6. Determination of pulmonary function using a spirometer.
7. Measurement of respiration rate using thermistor /other electrodes.
8. Study of Respiration Rate monitor/ apnea monitor.

Essential/recommended readings

1. Cromwell L., Wiebell F. J., Pfeiffer EA, Biomedical Instrumentation and Measurements, 2nd Edition, Prentice Hall (2010).
2. Carr J. J, Brown J. M. Introduction to Biomedical Equipment Technology, 4th Edition, Pearson Education Inc (2010).
3. Khandpur R.S., Handbook of Biomedical Instrumentation, 2nd Edition, Tata McGraw-Hill Publishing (2009).
4. Joseph D. Bronzino, The Biomedical Engineering Handbook, IEEE Press (2015), 4th edition, Volume 1.

Suggestive readings

1. Richard Aston, Principles of Biomedical Instrumentation & Measurement, 1st edition, Merrill Publishing Company (1990).
2. Mandeep Singh, Introduction to Biomedical Instrumentation, 2nd Edition, PHI learning private limited (2014).

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE – 11: Machine Learning (INDSC4B)

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Machine Learning (INDSC4B)	**04**	**02**	**-**	**02**	**Class XII passed with Physics + Mathematics /Applied Mathematics + Chemistry/ Computer Science/Informatics Practices**	**Understanding of Mathematics & programming language**

Learning Objectives

The Learning Objectives of this course are as follows:

- Students have an understanding of issues and challenges of Machine Learning.
- Students should be able to select data, model selection, model complexity etc.
- Understanding of the strengths and weaknesses of many popular machine learning approaches.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Identify the characteristics of datasets and compare the trivial data and big data for various applications.
- Understand machine learning techniques and computing environments that are suitable for the applications under consideration .
- Solve problems associated with batch learning and online learning, and the big data characteristics such as high dimensionality, dynamically growing data and in particular scalability issues.
- Develop scaling up machine learning techniques and associated computing techniques and technologies for various applications.
- Implement various ways of selecting suitable model parameters for different machine learning techniques.
- Integrate machine learning libraries, and mathematical and statistical tools with modern

- technologies like hadoop distributed file system and mapreduce programming model
- Familiarize with Simple Linear Regression and Logistic Regression.
- Appreciate the various nuances of Multiple Regressions and Model Building.
- Identify and apply the Classification algorithms.
- Apply the Clustering algorithms for developing applications

SYLLABUS OF DSC-11

UNIT – 1 **(8 hours)**

Introduction to Machine Learning: varieties of machine learning, Supervised Learning, Unsupervised Learning, Reinforcement Learning. Dimensionality Reduction, Subset Selection, Shrinkage Methods, Principal Components Regression: Linear Classification, Logistic Regression, Linear Discriminant Analysis, Optimization, Classification-Separating Hyperplanes Classification.

UNIT – 2 **(8 hours)**

Learning input/output functions, sample application. Boolean functions and their classes, CNF, DNF, decision lists and Bias – Variance, Version spaces for learning, version graphs, learning search of a version space, candidate elimination methods.

UNIT – 3 **(8 hours)**

Artificial Neural Networks (Early models, Back Propagation, Initialization, Training & Validation) Parameter Estimation (Maximum Likelihood Estimation, Bayesian Parameter Estimation) Decision Trees: ID4, C4.5, CART, Evaluation Measures, Hypothesis Testing.

UNIT – 4 **(6 hours)**

Clustering, Gaussian Mixture Models, Spectral Clustering, Ensemble Methods Learning Theory, Graphical Models.

K-Nearest Neighbors: Computational geometry; Voronoi Diagrams; Delaunay Triangulations K-Nearest Neighbor algorithm; Wilson editing and triangulations. Aspects to consider while designing K-Nearest Neighbor, Support Vector Machines and its classifications. Linear learning machines and Kernel space, Making Kernels and working in feature space.

Practical component: **(60 hour)**

Hardware requirement: i5 Processor, 8GB RAM, Internet Connection

Software Environment: IDE recommended PYCHARM (Recommended), JUPYTER, VISUAL STUDIO

1. Introduction to pandas and NumPy
2. Prediction based on different dataset: Vegetable Quality Prediction, Housing Price Prediction, Air Quality Prediction, Car Price Prediction

3. Prediction of diseases e.g. Liver Disease Prediction, Heart Disease Prediction, Crop disease.
4. Credit Default Prediction, Airline Passengers Prediction, Stock Price Prediction.
5. Bank Marketing, Media Content Problem, Online Retail Case Study
6. Energy Efficiency Analysis, Movie Sentiment Analysis, Car Evaluation
7. Program to demonstrate Simple Linear Regression
8. Program to demonstrate Logistic Regression using SCIKIT learn
9. Program to demonstrate Logistic Regression
10. Program to demonstrate k-Nearest Neighbor flowers classification
11. Program to demonstrate Decision Tree – ID3 Algorithm
12. Program to demonstrate Naïve- Bayes Classifier
13. Program to demonstrate Back-Propagation Algorithm
14. Program to demonstrate k-means clustering algorithm
15. Program to demonstrate K-Means Clustering Algorithm on Handwritten Dataset
16. Program to demonstrate K-Medoid clustering algorithm
17. Program to demonstrate DBSCAN clustering algorithm
18. Program to demonstrate SVM based classification
19. Program to demonstrate PCA on face recognition
20. Program to demonstrate PCA and LDA on Iris dataset
21. Mini Project works shall be given with a batch of four students considering different datasets such as digit dataset, face dataset, flower dataset and micro-array dataset.

Essential/recommended readings

1. Introduction to Machine learning, Nils J.Nilsson
2. Pattern Recognition and Machine Learning. Christopher Bishop. First Edition, Springer, 2006.
3. Pattern Classification. Richard Duda, Peter Hart and David Stock. Second Edition, Wiley-Interscience, 2000.
4. Machine Learning. Tom Mitchell. First Edition, McGraw-Hill, 1997.
5. T. Hastie, R. Tibshirani, J. Friedman. The Elements of Statistical Learning, 2e, 2008.

Suggestive readings

1. Christopher Bishop. Pattern Recognition and Machine Learning. 2e.
2. Tom M. Mitchell, “Machine Learning”, McGraw-Hill, 2010
3. Bishop, Christopher. Neural Networks for Pattern Recognition. New York, NY: Oxford University Press, 1995.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE – 12: Optical Instrumentation (INDSC4C)

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Optical Instrumentation (INDSC4C)	**04**	**03**	**-**	**01**	**Class XII passed with Physics + Mathematics/ Applied Mathematics + Chemistry/ Computer Science/Informatics Practices**	**Optics and Electronics**

Course Learning Objectives

The Learning Objectives of this course are as follows:

- To understand concepts of light and optical effects
- To impart in-depth knowledge of opto-electronic devices and optical measurements
- To provide basic knowledge of interferometry and refractometers
- To introduce the concept of optical fiber-based sensing and measurements

Course Learning Outcomes

The Learning Outcomes of this course are as follows:

- Explain different light phenomenon, optical effects and their applications
- Design photo detector circuits using LED and Lasers as sources
- Understand the optical measurements using interferometers
- Analyze Fiber optic fundamentals and Measurements

SYLLABUS OF DSC-12

Unit-1 **(12 hours)**

Light as Source and optical effects: Concept of light, coherent and incoherent light sources, classification of different light phenomenon (interference, diffraction and polarization), Diffraction grating, Electro-optic effect, Acousto-optic effect and Magneto-optic effect.

Unit-2 **(12 hours)**

Opto–Electronic Devices: Light emitting diode (LED), Materials used to fabricate LEDs, Characteristics of LEDs, LED based optical communication, Lasers: Concept of laser (Spontaneous emission, stimulated emission and stimulated absorption), Ruby laser, He-Ne laser, semiconductors laser. Detectors: Photo diode, PIN diode, Photo-conductors, Solar cells.

Unit-3 **(10 hours)**

Interferometry for optical measurements: Michelson's Interferometer and its application, Rayleigh's interferometers, Abbe Refractometer, Fabry-Perot Interferometer, Holography: Concept of holography in brief (Recording and reconstruction).

Unit-4 **(11 hours)**

Optical Fiber for sensing and measurements: Step index and graded index fibers, Single and multi-mode fibers, Characteristics of optical fiber, Fiber losses, Fiber optic communication system, Dispersion measurement, Active and passive optical fiber sensors, Single mode fiber sensor, Fiber-optic refractive index sensor

Practical component: **(30 hours)**

1. To study characteristics of LED
2. To determine the slit width using He-Ne laser
3. To determine the wavelength of monochromatic source using Michelson interferometer.
4. Determine the numerical aperture and bending loss of optical fiber
5. To find the wavelength of a laser using transmission diffraction grating
6. To measure the intensity pattern of a single slit using He-Ne laser
7. To find the I-V characteristics of a solar cell
8. To measure the refractive index of the prism using a spectrometer.

Essential/recommended readings

1. Ajoy Ghatak, Optics, Tata McGraw Hill, New Delhi (2008)
2. S. O. Kasap, Optoelectronics and Photonics: Principles and Practices, Pearson Education (2009)
3. E. Hecht, Optics, Pearson Education Ltd. (2002)
4. Rajpal S. Sirohi, Wave Optics and its Application, 1st ed. (2001)
5. Pollock, Fundamentals of OPTOELECTRONICS, (1994)
6. Photonic Devices and Systems –by Robert G. Hunsperger, Taylor & Francis, 1994,
7. G. Hebbar, "Optical Fiber Communication", Cengage

Suggestive reading

1. J. Wilson and J. F. B. Hawkes, Optoelectronics: An Introduction, Prentice H. India (1996)

2. Ghatak A.K. and Thyagarajan K., “Introduction to fiber optics,” Cambridge Univ.Press. (1998)
3. 10. A. Yariv, Optical Electronics/C.B.S. College Publishing, New York, (1985)

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVES (DSE) COURSES OFFERED BY THE DEPARTMENT

DISCIPLINE SPECIFIC ELECTIVE: Linear Integrated Circuits (INDSE4A)

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical / Practice		
Linear Integrated Circuits(INDSE4A)	04	03	-	01	Class XII passed with Physics + Mathematics/Applied Mathematics+ Chemistry / Computer Science/Informatics	Understanding of Analog electronics & Operational Amplifiers

Learning Objectives

The Learning Objectives of this course are as follows:

- Familiarity and designing of various non-linear circuits using op-amp
- Familiarity and designing of multivibrators using 555 timer.
- Use of op-amp in designing of D/A and A/D convertors.
- Familiarity with different Linear ICs like 380, 555, 565, 566, 78xx and 79xx.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Design and explain the working of log & anti-log amplifier, analog multiplier and precision rectifier using op-amp.
- Design and explain the working of D/A and A/D convertors using op-amp.
- Design and explain the working of different types of multivibrators using IC 555.
- Use the regulator ICs for regulation purposes.

SYLLABUS OF DSE-2

UNIT – 1 **(12 hours)**

Sample and hold circuits, logarithmic amplifiers, antilogarithmic amplifiers, analog multipliers, Precision rectifier circuit: Half wave rectifier, full wave rectifier, bridge rectifier, peak rectifier, clipper, clamping, and applications of precision rectifier circuits.

UNIT – 2 **(12 hours)**

D/A convertor: Binary weighted resistors, R/2R resistor. A/D convertor: Successive approximation.

Power Amplifiers: Monolithic power amplifier (IC 380), use of power boosters (IC 3329/03), application of power amplifiers

UNIT – 3 **(12 hours)**

Multivibrators (IC 555): Pin and block diagram, Astable and monostable multivibrator circuit, applications of astable and monostable multivibrators.

Phase locked loops (PLL): Block diagram, operating principle, phase detector types, monolithic phase locked loops (IC565). Application of PLL IC 565: Frequency multiplier and frequency shift keying. Voltage controlled oscillator (IC 566).

UNIT – 4 **(9 hours)**

Voltage Regulators IC: Fixed voltage regulator (IC 78xx and IC 79xx), adjustable voltage regulator (IC 317 and IC 337), switching regulator (IC 1723) and special regulator.

Practical component: **(30 hours)**

1. Designing of precision half wave rectifier circuit.
2. Designing of precision full wave rectifier circuit.
3. Designing of precision positive and negative clipper circuit.
4. Designing of precision positive and negative clamper circuit.
5. Designing of binary weighted D/A convertor OR R/2R resistor D/A convertor
6. Design an astable multivibrator using IC 555.
7. Design a monostable multivibrator using IC 555.
8. Design a voltage regulator circuit using voltage regulator IC.

Essential/recommended readings

1. Skoog &Lerry, Instrumental Methods of Analysis, Saunders College R. A. Gayakwad, Op-Amps and Linear IC's, Pearson Education 4th Edition, May 2015.

2. R. F. Coughlin and F. F. Driscoll, Operational amplifiers and Linear Integrated circuits, Pearson Education (2001).
3. J. Millman and C.C. Halkias, Integrated Electronics, Tata McGraw-Hill, (2001).
4. A.S. Sedra and K.C. Smith, Microelectronics Circuit, Oxford (2011).

Suggestive readings

1. A.P.Malvino, David J Bates, Electronic Principals, 7th Edition, Tata McGraw-Hil Education, (July 2017).

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVE: Statistical Tools and Techniques (INDSE4B)

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Statistical Tools and Techniques (INDSE4B)	04	03	-	01	Class XII passed with Physics + Mathematics/Applied Mathematics/Biology+ Chemistry / Computer Science/Informatics	Class X Mathematics

Learning Objectives

The Learning Objectives of this course are as follows:

- To develop the students' ability to deal with numerical and quantitative issues in industries.
- To enable the use of statistical, graphical, and algebraic techniques wherever relevant.
- To have a proper understanding of Statistical applications in different fields.
- To identify and discuss critically, the uses and limitations of statistical analysis.

Learning Outcomes

The Learning Outcomes of this course are as follows:

- Describe and discuss the key terminology, concepts tools, and techniques used in statistical analysis
- Understand the concept of probability and sampling distributions

- Perform different parametric and non-parametric tests for various statistical analysis.

SYLLABUS OF DSE-02

Descriptive statistics: Graphical and Tabular representation of data. Measures of Central Tendency, Measures of Dispersion, Measures of Skewness and Kurtosis.

Unit-1 **(13 hours)**

Correlation and Regression: Linear Regression and Correlation.

Unit-2 **(12 hours)**

Probability and Distributions: Introduction to probability, Experiment, sample space, event, probability, conditional probability, Baye's Theorem, Random Variables, Probability Distributions- Normal, Binomial, Poisson, Mathematical Expectation.

Unit-3 **(10 hours)**

Sampling and Sampling Distributions: Sampling distributions and Standard errors. One and two-sample estimation of means and proportions. One and two-sample tests of hypothesis- means, proportions and variances, t-test, Chi-square test.

Unit-4 **(10 hours)**

Nonparametric Statistics: Nonparametric tests, Sign test, Signed-Rank test, Rank-Sum test, Kruskal-Wallis test, Runs test.

Practical component: **(30 hours)**

1. Collection, tabulation, and statistical interpretation of data.
2. To study measures of central tendency- mean, median, mode.
3. To study measures of dispersion- range, standard deviation, variance.
4. To study the coefficient of variation.
5. To study measures of skewness.
6. To study the continuous and discrete distribution.
7. To study nonparametric tests.

Essential/recommended readings

1. Probability and Statistics for Engineers and Scientists by Walpole, Myers, Myers and Ye, 9th Edition, Pearson Education, 2012.
2. Mathematical Statistics and Applications by John E. Freund, 8th Edition, Prentice Hall, India, 2014.
3. Introduction to Statistical Quality Control by Montgomerry, 8th Edition, John Wiley and Sons, 2019.

Suggested Books:

4. Principles of Biostatistics by M. Pagano and K. Gauvrean: Thompson learning (2nd edition); 2018.
5. Biostatistics: A Foundation for Analysis in the Health Sciences by W. W. Daniel and Chad L. Cross; John Wiley and Sons Inc (11th edition); 2018 .

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVE: Virtual Instrumentation (INDSE4C)

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Virtual Instrumentation Techniques and Applications (INDSE4C)	04	02	-	02	Class XII passed with Physics + Mathematics/Applied Mathematics+ Chemistry / Computer Science/Informatics	Electronic Instruments & programming language

Learning Objectives

The Learning Objectives of this course are as follows:

- To understand the importance of Virtual Instrumentation and study its applications.
- To learn the basic programming concepts in LabVIEW.
- To understand the basics of data acquisition for designing a Virtual Instrument.
- To recognize the various building blocks of Virtual instrumentation and use them for PC-based Measurement.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Understand the importance and applications of Virtual Instrumentation.
- Learn the basic programming concepts in LabVIEW.
- Recognize the components of Virtual instrumentation and use them for PC Based Measurement.

SYLLABUS OF DSE-02

Unit 1 **(6 hours)**

Introduction to Virtual Instrumentation: Historical perspective, advantages, Block diagram and Architecture of a Virtual Instrument, Data Flow Techniques, Graphical programming in the data flow, comparison with Conventional programming.

Unit 2 **(10 hours)**

LabVIEW Programming Environment: Basic operations, Controls/ Indicators, Auto indexing, Debugging, Timing issues (counters).

VI Programming Techniques: Modular programming: VIS and sub-VIS, loops, Arrays, Clusters, Graphs, Charts, Case & Sequence structures. Formula nodes, Local and Global variables, String & file input.

Unit 3 **(10 hours)**

Instrument Control: GPIB Communication, Instrument I/O Assistant, Virtual Instrument Software Architecture (VISA), Instrument Drivers, Serial Port Communication

Data Acquisition Basics: Signals Handling and Classification, Signal Conditioning, Analog Interfacing (I/O), Counters & Timers, Digital (I/O) - DAQ Hardware, DAQ Software Architecture, DAQ Assistant

Unit 4 **(4 hours)**

Developing applications on LabVIEW: Process control, Waveform generator, Motion control using a stepper motor.

Practical Components **(60 hours)**

1. The length and breadth of a rectangle and the radius of a circle are inputs. Build a VI to calculate the area and perimeter of the rectangle and the area and circumference of the circle.
2. Convert a binary number to a decimal number.
3. Compute the equations (X1 + 2)*3 and 5 + X2*log(X2) using functions, Expression node, and Express Formula for the given inputs X1 and X2.
4. Build a VI to find the factorial of a number.
5. Create a VI to find the sum of first n natural numbers using a While Loop with a feedback node.
6. Write a program in LabVIEW to read a positive number n and to generate the following number series using (a) a For Loop and (b) a While Loop
   1, 22, 32, 42, …, n2
   0, 2, 4, 6, …, n
7. Create a VI to compare the element of two clusters if the value of the corresponding element is the same switch on LED in the output cluster.
8. Build an array of cluster controls in which each cluster consists of a numeric control and a 1D numeric array (with 5 elements). This forms a database of marks of students. The numeric control indicates the roll number and the array indicates the test marks of five subjects. Build logic to modify the mark in a particular subject of a particular student. Input the roll number, the subject in which the mark is to be changed, and the new marks. Display the changed database on a separate array indicator.
9. Create a 1D numeric array that consists of ten elements and rotate it ten times. For each rotation display the equivalent binary number of the first array element in the

form of a Boolean array. Also, display the reversed Boolean array. Provide delay to view the rotation.

10. Create two 2D numeric arrays and add them. Change the number of rows and number of columns of each array and see the result.
11. Create a 1D array and find its reverse.
12. Build a VI to plot a circle in the XY graph using a For Loop.
13. Build a VI that generates a 1D array of random numbers and sort the ascending descending array and also find the max. and min. value array element.
14. Build a cluster control that consists of a seven-segment LED display, a switch, a string control, and numeric control. Split the cluster elements using the Unbundle function and alter the values of some of the cluster controls. Bundle them again and display them in a cluster indicator.
15. Using a for loop determines the number of odd numbers between a range of numbers entered by the user.
16. Write a for loop which takes the given values of u from a numeric control labeled coefficient of kinetic friction. Calculate f‟ from theta=0 to 90 degree in 1-degree increment then display the resulting array f‟ values on a waveform graph.
17. Create a VI to check whether the cluster elements are in range or not. Specify the upper and lower limits. Display the coerced output and a cluster of LEDs to indicate whether a particular cluster element is in the range or not.
18. Split an input string into two outputs with reference to a separating character. Find the length of the input string and reverse the string.
19. Write a program to solve x2+bx+c=0.
20. Build a VI to generate two waveforms of different amplitude and frequency add the signal to find the resultant and plot it on the separate waveform graph.

Essential/recommended readings

1. John Essick , Hands-on Introduction to LabVIEW for Scientists and Engineers, 3rd Edition, 2015.
2. Gary Johnson, LABVIEW Graphical Programming, McGraw Hill, 4th Edition, 2006.
3. Lisa K. Wells and Jeffrey Travis, LABVIEW for Everyone, PHI, 3rd Edition, 2006.
4. James K, PC interfacing and data acquisition, 2002.
5. Skolkoff, Basic concepts of LABVIEW 4, PHI, 1998.

Suggested Books

1. Technical Manuals for DAS Modules of Advantech and National Instruments. L.T. Amy, Automation System for Control and Data Acquisition, ISA, 4thEdition, 1992.
2. S. Gupta, J.P. Gupta, PC Interfacing for Data Acquisition and Process Control, ISA, 2nd Edition, 2nd Edition, 1994.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

COMMON POOL OF GENERIC ELECTIVES (GE) COURSES OFFERED BY THE DEPARTMENT

GENERIC ELECTIVE: Signal and image processing (INGE4A)

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Signal and image processing (INGE4A)	04	03	-	01	Class XII passed with Mathematics/ Applied Mathematics/ Computer Science/Informatics Practices	Engineering Mathematics

Learning Objectives

The Learning Objectives of this course are as follows:

- To understand the fundamental concepts of signal and Image processing.
- To explore DFT for 1-D and 2-D signal and FFT for 1-D signal
- To apply processing techniques on 1-D and Image signals.
- To apply signal and image processing techniques for edge detection.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Apply the concept of DT Signal and DT Systems.
- Classify and analyze discrete time signals and systems
- Implements Digital Signal Transform techniques DFT and FFT.
- Use the enhancement techniques for digital Image Processing
- Differentiate between the advantages and disadvantages of different edge detection techniques
- Develop small projects of 1-D and 2-D Digital Signal Processing.

SYLLABUS OF GE-4

UNIT – 1 **(12 hours)**

Discrete Time Signals and Systems: Introduction, discrete time sequences, Examples of sequences – step, impulse, ramp, sine and exponential, properties of signals and sequences, interpolation and decimation, linear time invariant systems and their properties, stability, causality, system responses, convolution and correlation, sum, solutions of system using difference equations, ZIR, ZSR, natural and forced responses. Z-Transform.

UNIT – 2 **(11 hours)**

Discrete Fourier Transform: Introduction to DTFT and DFT, Relation between DFT and DTFT, IDFT, Properties of DFT without mathematical proof (Scaling and Linearity, Periodicity, Time Shift and Frequency Shift, Time Reversal, Convolution Property and Parsevals' Energy Theorem). DFT computation using DFT properties. Transfer function of DT System in frequency domain using DFT. Linear and Circular Convolution using DFT, Convolution of long sequences, Introduction to 2-D DFT.

UNIT – 3 **(11 hours)**

Fast Fourier Transform: Need of FFT, Radix-2 DIT-FFT algorithm, DIT-FFT Flow graph for N=4 and 8, Inverse FFT algorithm. Spectral Analysis using FFT. FIR and IIR filter.

Representation of Digital Image, Image File Formats, Fundamental steps in Digital Image Processing, Elements of visual perception, Image sensing and Acquisition, Image Sampling and Quantization, Imaging geometry.

UNIT – 4 **(11 hours)**

Image Enhancement:

Spatial Domain: Basic relationship between pixels- Basic Gray level Transformations Histogram Processing – Smoothing spatial filters- Sharpening spatial filters.

Frequency Domain: Smoothing frequency domain filters- sharpening frequency domain filters Homomorphic filtering, Image Compression and Image Segmentation

Practical component: **(30 hours)**

1. (a) Represent basic signals like:Unit Impulse, Ramp, Unit Step, Exponential.
   (b) To generate discrete sine and cosine signals with a given sampling frequency.
2. (a) To represent complex exponentials as a function of real and imaginary parts.
   (b) To determine impulse and step response of two vectors using MATLAB.
3. (a) To perform convolution between two vectors using MATLAB.
   (b) To perform cross correlation between two vectors using MATLAB.

4. To compute DFT and IDFT of a given sequence using MATLAB.
5. To perform linear convolution of two sequences using DFT using MATLAB.
6. (a) To determine z-transform from the given transfer function and its ROC using MATLAB.
   (b)To determine rational z-transform from the given poles and zeros using MATLAB.
7. To determine partial fraction expansion of rational z-transform using MATLAB
8. Implementation of Image negative, Gray level Slicing and Thresholding
9. Implementation of Contrast Stretching, Dynamic range compression & Bit plane Slicing
10. Implementation of Histogram Processing, Image smoothing/ Image sharpening

Essential/recommended readings

1. John G. Proakis, Dimitris and G.Manolakis, 'Digital Signal Processing: Principles, Algorithms, and Applications' 4th Edition 2007, Pearson Education.
2. A. Anand Kumar, 'Digital Signal Processing', PHI Learning Pvt. Ltd. 2013.
3. Rafel C. Gonzalez and Richard E. Woods, 'Digital Image Processing', Pearson Education Asia, 3rd Edition, 2009.
4. S. Sridhar, 'Digital Image Processing', Oxford University Press, Second Edition, 2012.

Suggestive readings

1. Sanjit K Mitra, 'Digital Signal Processing: A Computer Based Approach', TataMcGraw Hill, 3rd Edition.
2. S. Salivahanan, A. Vallavaraj, and C. Gnanapriya, 'Digital Signal Processing', Tata McGraw Hill Publication 1st Edition (2010).
3. S. Jayaraman, E. Esakkirajan and T. Veer Kumar, 'Digital Image Processing' TataMcGraw Hill Education Private Ltd, 2009.
4. Anil K. Jain, 'Fundamentals and Digital Image Processing', Prentice Hall of India Private Ltd, 3rd Edition.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

GENERIC ELECTIVE : Nuclear and Biomedical Instrumentation (INGE4B)

CREDIT DISTRIBUTION, ELIGIBILITY, AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Nuclear and Biomedical Instrumentation (INGE4B)	04	03	-	01	Class XII passed with Physics+ Mathematics/Applied Mathematics/ Biology + Chemistry	Chemistry & Analog Electronics

Learning Objectives

The Learning Objectives of this course are as follows:

- To gain the basic technical knowledge of biomedical instrumentation.
- To familiarize with various bioelectric signals and understand their source of generation.
- To understand the working principle and applications of medical imaging instruments and the modalities involved in each technique.
- To apprehend the essential operation of the nuclear medicine system.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Learn the technical vocabulary associated with basic instrumentation and design and fundamental signal analysis
- Develop a clear understanding of the various bioelectric signals produced by the body which could be obtained and analyzed using the basic implementation of Instrumentation
- Explain and compare the origin, instrumentation, and analysis of biological signals produced by the cardiovascular, respiratory, and nervous system

- Understand the basic difference between the working principle, instrumentation, and application of different medical imaging systems such as ultrasound, X-ray, and Computed tomography
- Infer the measurement principle and operating conditions of various detectors used in a nuclear medicine system

SYLLABUS OF GE-4

UNIT – 1 **(7 hours)**

Introduction to bioelectric potential, bio-amplifier, components of man Instrument system, design factors of biomedical instruments, types of biopotential electrodes.

UNIT – 2 **(14 hours)**

Measurement of Biopotentials: Cardiac vascular system, Origin of (Electrocardiography) ECG signals, Instruments of ECG, bipolar system lead system I, II, III, Einthoven's triangle, Augmented lead system, unipolar chest lead system, types of display.

The nervous system, Action potential of the brain, brain wave, Instrumentation Electroencephalography (EEG).

Measurement of Physiological Parameter: Respiratory system, Types of volume, types of measurements, Instrumentations of the respiratory system, pneumograph, principle & types of pneumograph, Spirometer.

UNIT – 3 **(14 hours)**

Medical Imaging System: Ultrasound, properties, beam width, its generation & detection, types of transducers, diagnostic application – A Scan, B Scan, and M Scan

Radiography: Conventional X-ray, properties, generation of X-ray, X-ray Computed Tomography (CT scanner), and Computer-aided tomography (CAT).

UNIT – 4 **(10 hours)**

Medicine System: Introduction to nuclear medicine system, safety aspects, Nuclear detectors, Gas filled detectors: Ionization, Proportional, and Geiger Muller (GM) Counter, Scintillation counter – principle, operating condition.

Practical component: **(30 hours)**

1. Characterization of biopotential amplifier for ECG signals.
2. Study on ECG simulator.
3. Recording of EEG.
4. Heart sound measurement using an electronic stethoscope.
5. Study of pulse rate monitor with alarm system.
6. Determination of pulmonary function.
7. Study on ultrasound transducers based on the medical systems.
8. Study of Respiration Rate monitor/ apnea monitor.
9. Study of conventional X-ray and CT film.

Essential/recommended readings

1. Cromwell L., Wiebell F. J., Pfeiffer EA, Biomedical Instrumentation and Measurements, Prentice Hall, 2nd edition, 2010.
2. Carr J. J, Brown J. M. Introduction to Biomedical Equipment Technology, Fourth edition, Pearson Education, Inc, 4th edition, 2010.
3. Khandpur R.S., Handbook of Biomedical Instrumentation, Tata McGraw-Hill Publishing, India, 2nd edition, 2009.
4. Joseph D. Bronzino, The Biomedical Engineering Handbook, 4th Edition (2015), Volume 1, IEEE Press.

Suggestive readings

1. Richard Aston, Principles of Biomedical Instrumentation & Measurement, 1st edition, Merrill Publishing Company (1990).
2. Mandeep Singh, Introduction to Biomedical Instrumentation, 2nd Edition, PHI learning private limited (2014).

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

SEMESTER-V
DEPARTMENT OF INSTRUMENTATION
Category I

(B.Sc. Honours in Instrumentation)

DISCIPLINE SPECIFIC CORE COURSE – 13: Advance Biomedical Instrumentation (INDSC5A)

CREDIT DISTRIBUTION, ELIGIBILITY, AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Advance Biomedical Instrumentation (INDSC5A)	04	02	-	02	Class XII passed with Physics + Mathematics/Applied Mathematics + Chemistry/ Computer Science/Informatics Practices	Biomedical & Electronic Instrumentation

Learning Objectives

The Learning Objectives of this course are as follows:

- To realize the importance of the instruments used in critical care units of the hospital.
- To understand the principle behind the measurement of biochemical signals.
- To understand the concept of instruments used in medical imaging diagnostics and therapeutics.
- To appreciate the efficiency of the surgical and diathermy apparatus in the medical incision.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Understand instruments used in critical care and operating units of hospitals
- Gain knowledge of the instruments used for biochemical analysis in healthcare
- Understand the concepts of various medical imaging techniques and their applications

- Understand instruments used for medical assistance and therapy

SYLLABUS OF DSC-13

Unit-1 **(8 Hours)**

Ventilators: Basic principles and types of ventilators.

Anaesthesia Machine: Need of anaesthesia, anaesthesia delivery system, breathing circuits. **Clinical Laboratory Instruments**: General principle and working of Blood Gases Analyzer, Auto-analyser, Blood Cell Counters, ELISA reader.

Unit-2 **(8 Hours)**

Medical Imaging System: Ultrasound, properties, its generation & detection, types of transducers, real-time ultrasonic imaging, linear array scanners, X-ray computed tomography (CT Scanner) principle, contrast scale, scanning system, processing Unit, viewing, storage. Magnetic Resonance Imaging: Basic principle, working and construction.

Unit-3 **(6 Hours)**

Nuclear Medicine System: radioactive emissions, gamma camera, imaging system, ECT (emission coupled tomography) and its different approaches: positron emission tomography (PET), Single-photon emission computed tomography (SPECT).

Unit-4 **(8 Hours)**

Surgical Scopy and Diathermy Equipments: Fibre Optics- Endoscopes -light sources, video processors, camera, and fibre optic cable, Principles and applications. Diathermy: Working Principle, Construction, and different types (Infrared radiation (IR), ultraviolet (UV), short wave, microwave, ultrasonic, and Surgical Diathermy).

Practical component: **(60 Hours)**

1. Study of ultrasound transducers based on the medical system.
2. Study of vital organs (such as Heart, Kidney, liver, etc) using Ultrasonography.
3. Demonstration of X-ray/Computed Tomography/nuclear imaging.
4. Experiment based on clinical instruments such as Blood cell counter/ ELISA reader.
5. Estimation of serum total protein using a spectrometer.
6. Estimation of sodium and potassium in blood serum or urine sample.
7. Project based on designing and applications of Biomedical Instrumentation.

Essential/recommended readings

1. Carr J. J, Brown J. M. Introduction to Biomedical Equipment Technology, Fourth edition, Pearson Education Inc (2010), 2nd edition
2. Khandpur R.S., Handbook of Biomedical Instrumentation, Second edition, Tata McGraw- Hill Publishing (2009), 2nd edition

3. Joseph D. Bronzino, The Biomedical Engineering Handbook, IEEE Press (2015), 4th edition, Volume 1.
4. Richard Aston, Principles of Biomedical Instrumentation & Measurement, Merrill Publishing Company, (1990), 1st edition
5. Mandeep Singh, Introduction to Biomedical Instrumentation, PHI learning private limited (2014), 2nd Edition.
6. Cromwell L., Wiebell F. J., Pfeiffer EA, Biomedical Instrumentation and Measurements, Second edition, Prentice Hall (2010), 2nd Edition.

Suggestive readings

1. John G Webster, Medical Instrumentation Applications and Design, John Willey, 5th Edition, 2020.
2. L A Geddes, L E Baker, Principles of Applied Medical Instrumentation, John Wiley, Edition 3, 1989.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE – 14: Essentials of microprocessor 8085 & 8086 (INDSC5B)

CREDIT DISTRIBUTION, ELIGIBILITY, AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Essentials of microprocessor 8085 & 8086 (INDSC5B)	04	03	-	01	Class XII passed with Physics + Mathematics/Applied Mathematics + Chemistry/ Computer Science/Informatics Practices	Digital Electronics

Learning Objectives

- To understand the general architecture of a microcomputer system
- To comprehend the architecture and organization of 8085 and 8086 microprocessor
- To learn the Interfacing of 8-bit microprocessor with memory and peripheral chips involving system design
- To interpret and classify the instruction set of 8085 microprocessor and distinguish the use of different instructions and apply it in assembly language programming
- To understand difference between RISC and CISC based microprocessors

Learning outcomes

- Describe the general architecture of a microcomputer system
- Understand the architecture and organization of 8085 and 8086 microprocessor
- Learn the Interfacing of 8-bit microprocessor with memory and peripheral chips involving system design
- Interpret and classify the instruction set of 8085 microprocessor and distinguish the use of different instructions and apply it in assembly language programming
- Differentiate between RISC and CISC based microprocessors

- Understand the architecture and operation of Programmable Interface Devices and realize the programming & interfacing of it with 8085 microprocessor

SYLLABUS OF DSC-14

Unit-1 **(15 hours)**

8085 Microprocessor: Introduction to Microprocessor 8085, Pin description of 8085, Architecture, registers of 8085, addressing modes. Instruction Type and Instruction Set, Machine Cycle, Instruction Cycle, Timing Diagram, Memory System, Hardware Interfacing or Types of I/O Addressing-Interfacing Memory and Peripheral (I/o Mapped I/O and memory mapped I/O)

Unit-2 **(10 hours)**

Programming: Assembly Language Programming, Stacks and Subroutine

Interrupts of 8085: Hardware and Software interrupts, Difference between RISC and CISC Processor

Unit-3 **(10 hours)**

Interfacing ICs: Programmable Peripheral Interface: 8255, 8253

Unit-4 **(10 hours)**

Introduction to 8086 Microprocessor: Introduction to microprocessor 8086: Architecture of 8086, Pin Diagram, Physical memory organization, Memory Segmentation (8086), General bus operation, Minimum and Maximum Mode, Addressing modes (8086), Difference between microprocessor and microcontroller.

Practical component: **(30 hours)**

1. To write an assembly language program to perform-addition, subtraction.
2. To write an assembly language program to find count of even numbers/odd numbers from given block of data.
3. To write an assembly language program to find largest/smallest number in given block of data.
4. To write an assembly language program to perform-multiplication, division.
5. To write an assembly language program to convert a number from one number system to another.
6. To perform addition/subtraction by interfacing 8085 with 8255 in simple I/O and polling mode.
7. To generate a square/rectangular wave by interfacing 8253 with 8085.
8. To write an assembly language program to generate first N terms of an A.P. series.
9. To write an assembly language program to generate first N terms of Fibonacci series.
10. To write an assembly language program to arrange the given list of number in ascending / descending order.

Essential/recommended readings

1. Ramesh Gaonkar, Microprocessors architecture, programming and Applications, WileyEastern Ltd. (2013), 6th Edition.
2. P.K Ghosh & P.R Sridhar, 0000 to 8085 microprocessor, John Wiley & Sons, 2nd Edition.
3. Liu Gibson, Microprocessor Systems: The 8086/8088 family Architecture, Programming&Design, PHI, 2015, 2nd Edition.
4. K. Udaya Kumar & B.S. Uma Shankar, The 8085 Microprocessor: Architecture, Programming, and Interfacing", Pearson Education, 1st Edition, 2008.
5. Barry B. Brey and C R Sarma, The Intel Microprocessors 8086/8088, 80186/80188, 80286,80386, 80606, Pearson Education Limited, 8th Edition, 2005.
6. K. M. Bhurchandi, *Advanced Microprocessors & Peripherals*. Tata McGraw-Hill Education, 2013.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE – 15: Power devices and Electrical Machines (INDSC5C)

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Power devices and Electrical Machines (INDSC5C)	04	03	-	01	Class XII passed with Physics + Mathematics/Applied Mathematics + Chemistry/ Computer Science/Informatics Practices	Semiconductor devices

Learning Objectives

The Learning Objectives of this course are as follows:

- Use of electronics for control and conversion of electrical power.
- To learn various high-power devices, their construction, and their applications.
- To understand the working, construction, and principle of DC and AC machines.
- To provide the clear understanding of working and construction of Transformer
- To give knowledge about different types of Power Supply.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Understand different power devices and study their construction, characteristics and turning on circuits.
- Understand the analysis of controlled rectifiers for different loads, inverters, DC choppers and AC voltage controllers.
- Familiarize with the basics of DC Machines, Generators and Motors.
- Acquire knowledge about fundamental of Transformer.

SYLLABUS OF DSC-15

Unit-1 **(13 Hours)**

Power Devices and their applications: SCR, structure, I-V characteristics, Turn-On and Turn-Off characteristics, ratings, Factors affecting the characteristics/ratings of SCR, and Gate-triggering circuits. Applications of SCR: Basic series inverter circuit, Chopper

circuit – Basic concept, step up and step-down choppers. Diac and Triac: Basic structure, working and I-V characteristic of, application of a Diac as a triggering device for a Triac.

Unit-2 **(13 Hours)**

Types of Motor: Comparison of the generator and motor action & interchangeability, the principle of operation, the significance of back EMF, maximum power, Torque and speed relation, Characteristics of series, shunt and Compound excited motors & applications, losses & efficiency, the necessity of motor starters, Three-point starter, Speed control of DC motors. Induction Motors, Single and three phase Motors, Stepper Motors, and Servo Motors.

Unit-3 **(10 Hours)**

Transformer: Types of transformers, Transformer Construction, E.M.F. equation, Transformer Losses, Condition for maximum efficiency, all day efficiency, Auto transformers.

Unit-4 **(9 Hours)**

Supplies: Regulated power supply, Uninterrupted power supply (UPS) and Switched mode power supply (SMPS).

Practical Components **(30 Hours)**

1. Study of I-V characteristics of DIAC
2. Study of I-V characteristics of a TRIAC
3. Study of I-V characteristics of an SCR.
4. Study of Load characteristics of D.C. motor.
5. Study of Speed control of D.C. motor.
6. Study of Load characteristics of Servomotor.
7. Study of speed control and blocked rotor test on single phase Inductor motor.

Essential/recommended readings

1. Electrical Technology, 25th Edition (2017), B. L. Thareja and A. K. Thareja, S. Chand & Sons.
2. Power Electronics: Circuits, Devices and Applications, 3rd Edition (2014), M.H. Rashid, Pearson Education
3. Power Electronics, 2nd Edition (2007), M. D. Singh, K. B. Khanchandani, Tata McGraw Hill.
4. Electronic Principles, 7th Edition (2007), A. Malvino, D. J. Bates, Tata McGraw Hill.
6. Power Electronics, 4th Edition (2002), P. S. Bimbhra, Khanna Publishers.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVES (DSE) COURSES OFFERED BY THE DEPARTMENT

DISCIPLINE SPECIFIC ELECTIVE COURSE: Reliability and Quality Control (INDSE5A)

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Reliability and Quality Control (INDSE5A)	04	03	-	01	Class XII passed with Physics + Mathematics/Applied Mathematics/ + Chemistry/Computer Science/Informatics Practices	Statistics & probability

Learning Objectives

The Learning Objectives of this course are as follows:

- To provide the thorough understanding of concepts of reliability
- To clarify the basic knowledge of quality concepts and techniques for quality improvement
- To teach, how to use various control charts for improving the product quality
- To provide the clear understanding of different sampling plans and methods

Learning outcomes

The Learning Outcomes of this course are as follows:

- Acquire the basic knowledge of quality concepts and techniques for quality improvement
- Learn to use various control charts for improving the quality of products
- Describe and compare the different sampling plans and methods
- Understand the concepts of reliability

SYLLABUS OF DSE-3

UNIT – 1 **(12 hours)**

Quality Concepts: Meaning of Quality, Approaches- Deming's Approach, Juran's Approach, Quality of Product, Quality of Service, Cost of Quality, Value of Quality, Difference between Inspection, Quality Control and Quality Assurance, Evaluation of Quality control, Quality Improvement Techniques Pareto Diagrams, Cause-Effect Diagrams Quality Circles, Kaizen, six sigma.

UNIT – 2 **(11 hours)**

Control Charts: Chance and assignable causes, Statistical Basis of the Control Charts (basic principles, choices of control limits, sample size and sampling frequency, rational subgroups, analysis of pattern on control charts, warning limits, ARL, sensitizing rules for control charts, Control Charts for X-bar & R and control chart for attribute (p, np, c).

UNIT – 3 **(11 hours)**

Acceptance Sampling: Meaning, objective, and types of research, approaches, Principle of acceptance sampling, Producer's and consumer's risk. AOQL and LTPD, Sampling plans: single, double, OC curve.

UNIT – 4 **(11 hours)**

Reliability: Different types and modes of failure, causes of failure in electronic components, reliability theory, hazard rate, failure density function, availability, maintainability, mean time to failure and repair system structures: series, parallel, K-type, Fault tree analysis.

Practical component: **(30 hours)**

1. Descriptive statistics
2. Control charts for variable
3. Control charts for attribute
4. OC curve
5. Single sampling and double sampling
6. AOQ curve

Essential/recommended readings

1. D. C. Montgomery , Introduction to Statistical Quality Control, 8th edition, John Wiley and sons (2019).
2. Reliability Engineering by S.Shreenath, 4th Edition, East West Press (2008).
3. Statistical Quality Control by M. S. Mahajan, 1st Edition, Dhanpat Rai Publishing Co Pvt Ltd (2016).

Suggestive readings

1. Reliability Engineering and Quality Management by O.N. Pandey & Bhupesh Aneja, 1st Edition, 2011.
2. Modern Methods for Quality Control and Improvement, by Harrison M. Wadsworth, Kenneth S. Stephens, A. Blanton Godfrey, Second edition (17 May 2008)

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVE COURSE : Communication Systems (INDSE5B)

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Communication Systems (INDSE5B)	04	03	-	01	Class XII passed with Physics + Mathematics/ Applied Mathematics+ Chemistry /Computer Science/Informatics	Analog and Digital Electronics

Learning Objectives

The Learning Objectives of this course are as follows:

- Understand basic elements of a communication system.
- Analyze baseband signals in time and frequency domain.
- Understand various analog and digital modulation/demodulation techniques along with their performances in various transmission environments.
- To understand working of radio receivers and transmitters

Learning outcomes

The Learning Outcomes of this course are as follows:

- Learn in detail about the various components of communication systems like transmitter, modulator, channel, and receiver
- Gain in-depth knowledge of analog (amplitude, frequency, and phase) and digital modulation and demodulation techniques
- Understand different multiplexing techniques for efficient utilization of available bandwidth

SYLLABUS

Unit-1 **(10 hours)**

Basic communication system: Block diagram, Noise, Analog and digital communication, Types of communication systems: optical communication, cellular communication and satellite communication, LAN

Unit-2 **(11 hours)**

Amplitude Modulation, Frequency and phase modulation: Definition - AM waveforms - Frequency spectrum and bandwidth - Modulation index - DSB-SC, SSB-SC, Vestigial SB - Comparison and application of various AM schemes, Definition-Relationship between FM & PM - Frequency deviation - Spectrum and transmission BW of FM, comparison of AM and FM systems.

Unit-3 **(12 hours)**

Radio Transmitter and Receiver: AM transmitters-High level and low level transmitters - SSB transmitters - FM transmitters - Block diagram. AM receivers-operation - performance parameters - Communication Transceivers - Block diagram - SSB receiver - FM receivers - Block diagram.

Unit-4 **(12 hours)**

Digital Communication: Pulse Analog Modulation: Sampling theorem, Errors in Sampling. Pulse Amplitude Modulation (PAM), Time Division Multiplexing (TDM). Pulse Width Modulation (PWM) and Pulse Position Modulation(PPM). Generation and detection of PAM, PWM, PPM, PCM- Need for digital transmission, Quantizing, Uniform and Non-uniform Quantization, Quantization Noise, Companding, Coding, Digital Formats. Decoding, Regeneration, Transmission noise and Bit Error Rate. Differential Pulse Code Modulation, Delta Modulation, Quantization noise, Adaptive Delta Modulation.

Practical component: **(30 hours)**

1. Study of Amplitude Modulation and Demodulation
2. Study of Frequency Modulation and Demodulation
3. Study of Single Side Band Modulation and Demodulation
4. Study of AM Transmitter and Receiver
5. Study FM Transmitter and Receiver
6. Study of Pulse Amplitude Modulation
7. Study of Pulse Width Modulation
8. Study of Pulse Position Modulation
9. Study of Pulse Code Modulation

Essential/recommended readings

1. Electronic communication systems- Kennedy, 3rd edition, McGraw international publications
2. Principles of Electronic communication systems – L. E. Frenzel, 3rd edition, McGraw Hill
3. Modern Digital and Analog Communication Systems, B. P. Lathi (2nd Edition).
4. Communication systems, R.P.Singh and S.D.Sapre 2nd edition TMH 2008
5. Advanced electronic communications systems – Tomasi, 6th edition, PHI
6. L. W. Couch II, Digital and Analog Communication Systems, Pearson Education.
7. T. G. Thomas and S. Chandra Sekhar, Communication Theory, Tata McGraw Hill.

Suggestive readings

1. H. Taub and D. Schilling, Principles of Communication Systems, Tata McGraw Hill
2. W. Tomasi, Electronic Communication Systems: Fundamentals through Advanced, Pearson Education
3. S. Haykin, Communication Systems, Wiley India.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVE COURSE : Computer Aided Design (INDSE5C)

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Computer Aided Design (INDSE5C)	04	02	-	02	Class XII passed with Physics + Mathematics/Applied Mathematics+ Chemistry / Computer Science/Informatics	Analog and Digital Electronics

Learning Objectives

The Learning Objectives of this course are as follows:

- To familiarize with MultiSim and PSPICE circuit simulation tools
- To verify response of various analog and digital circuits
- To provide knowledge of Industry standard TCAD simulation tools like Silvaco-ATLAS and and Synopsis-SENTAURUS

Learning outcomes

The Learning Outcomes of this course are as follows:

- Simulate and verify the functionality of diodes and transistor circuits using MultiSim and PSpice software
- Design and verify devices/ circuits using TCAD tools

SYLLABUS OF DSE-3

UNIT – 1 **(6 hours)**

Introduction to Multisim software: MultiSim Environment: Design Process, setting environment preferences, Multisim GUI, Schematic capture of circuits: Placing components, wiring components, Measuring instruments in MultiSim, simulation and result display in MultiSim

UNIT – 2 **(6 hours)**

Electronics circuit design using Multisim: Resistive circuits, Design of Bridge rectifier, Half-Wave rectifier, clippers and clampers using a diode, DC transfer curve analysis, Transient analysis, simulation of digital circuits.

UNIT – 3 **(8 hours)**

Introduction to PSpice software Understanding the SPICE Environment, Schematic Designing Brief Introduction of p spice simulator, Using Model Editor, Understanding the PSPICE Environment, Using Magnetic Parts Editor, Using Stimulus Editor, Drawing a Circuit Preparation for Simulation: Preparing schematic for simulation, Understand the sources for simulation, Understand different markers and errors

UNIT – 4 **(10 hours)**

Introduction to Industry standard TCAD tools, Silvaco- ATLAS device simulation software, Synosis-SENTAURUS. Online Simulation resources-NANOHUB. Simulation of n-channel MOSFET; Silicon on Insulator.

Practical component: **(60 hours)**

1. Designing RC Low pass filter using MULTISIM
2. Designing active RC Low pass filter (OpAmp based) using MULTISIM
3. Half wave rectifier using MULTISIM
4. Wein bridge Oscillator using MULTISIM
5. Simulating high pass filter Circuit using PSPICE
6. Designing active RC High pass filter (OpAmp based) using PSPICE
7. Half wave rectifier using PSPICE
8. Designing and Simulating Full wave rectifier using PSPICE
9. Output characteristics of MOSFET using SILVACO-ATLAS/ Synopsis TCAD
10. Transfer characteristics of MOSFET using SILVACO-ATLAS/ Synopsis TCAD

Essential/recommended readings

1. Introduction To PSpice Using OrCADfor Circuits and Electronics, Muhammad H. Rashid,Paperback – Import,3rd Edition, 2003.
2. Electronic Devices and circuit theory, Robert Boylstead and Louis Nashelsky, PHI, 10th Edition, 2009.
3. https:i/nanohub.org/resources/tools
4. https ://www.silvaco. com/contenVkbase/device.pdf

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

COMMON POOL OF GENERIC ELECTIVES (GE) COURSES OFFERED BY THE DEPARTMENT

GENERAL ELECTIVE COURSE : Industrial Safety Instruments (INGE5A)

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Industrial Safety Instruments (INGE5A)	04	03	-	01	Class XII passed with Mathematics/Applied Mathematics/ Biology/+ Chemistry + Physics	Class XII Science

Learning Objectives

The Learning Objectives of this course are as follows:

- To provide knowledge on design features for a process industry and safety in the operation of various equipment in industry.
- To understand the various hazards and prevention in the commissioning stage of industry.
- To recognise and identify the safe operation of equipment in the process industry.
- To plan and train for emergency planning in a process industry.
- To get fundamental knowledge on safe storage of chemicals.

Learning outcomes

The Learning Outcomes of this course are as follows:

- This course would make them familiar with safe design of equipment which are essential to the chemical industry and leads to the design of entire process industries.
- Students would understand the problems and find innovative solutions while industries facing problems in commissioning and maintenance stages.

- Students would understand the chemical plant operations.
- Students can prepare emergency planning for chemical industry problems.
- Students would be able to create safe storage systems

SYLLABUS OF GE-5

UNIT – 1 **(11 hours)**

Need for safety. Safety and productivity. Definitions: Accident, Injury, Unsafe act, Unsafe Condition, Dangerous Occurrence, Reportable accidents. Theories of accident causation. Safety organization- objectives, types, functions, Role of management, supervisors, workmen, unions, government and voluntary agencies in safety. Safety policy. Safety Officer-responsibilities, authority. Safety committee-need, types, advantages. Design process, conceptual design and detail design.

UNIT – 2 **(11 hours)**

Personal protection in work environment

Personal protection in the work environment, Types of PPEs, Personal protective equipment respiratory and non-respiratory equipment. Standards related to PPEs. Monitoring Safety Performance: Frequency rate, severity rate, incidence rate, activity rate. Housekeeping: Responsibility of management and employees. Advantages of good housekeeping. 5 s of housekeeping. Work permit system- objectives, hot work and cold work permits. Typical industrial models and methodology. Entry into confined spaces.

UNIT – 3 **(12 hours)**

Electrical safety and hazards

Introduction – electrostatics, electromagnetism, stored energy, energy radiation and electromagnetic interference –Indian electricity act and rules-statutory requirements from electrical inspectorate- international standards on electrical safety – first aid-cardiopulmonary resuscitation (CPR). Primary and secondary hazards - shocks, burns, scalds, falls - Human safety in the use of electricity - Classes of insulation-voltage classifications -current surges- over current and short circuit current-heating effects of current electrical causes of fire and explosion. Lightning hazards, lightning arrestor, installation – earthing, specifications, earth resistance, earth pit maintenance.

UNIT – 4 **(11 hours)**

Hazard and risk, Types of hazards Classification of Fire, Types of Fire extinguishers, fire explosion and toxic gas release, Structure of hazard identification and risk assessment. Identification of hazards: Inventory analysis, Fire and explosion hazard rating of process plants - The Dow Fire and Explosion Hazard Index, Preliminary hazard analysis, Hazard and Operability study (HAZOP)) – methodology, criticality analysis, corrective action and follow-up. Control of Chemical Hazards, Hazardous properties of chemicals, Material Safety Data Sheets (MSDS)

Practical component: **(30 hours)**

1. Conduct the inspection and evaluate the hazards using analytical instruments and methods.
2. Conduct unaided safety inspection of a workplace, identifying the more common hazards, deciding whether they are adequately controlled and, where necessary, suggesting appropriate and cost effective remedial action.
3. At the end of the course a safety assessment report can be added in the Mini project report along with Industry inspection report.

Essential/recommended readings

1. R.K Jain (2000) Industrial Safety, Health and Environment management systems, Khanna Publications.
2. Paul S V (2000), Safety management System and Documentation training Programme handbook, CBS Publication.
3. Krishnan, N.V. (1997). Safety management in Industry. Jaico Publishing House, New Delhi.
4. John V. Grimaldi and Rollin H.Simonds. (1989) Safety management. All IndiaTraveller Book Seller, Delhi.
5. Ronald P. Blake. (1973). Industrial safety. Prentice Hall, NewDelhi.

Suggested books

1. Alan Waring. (1996). Safety management system. Chapman & Hall, England.
2. Vaid, K.N., (1988). Construction safety management. National Institute of Construction Management and Research, Mumbai
3. Montgomery, D.C., “Design and Analysis of experiments”, John Wiley and Sons, 8th edition, 2012.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

GENERAL ELECTIVE COURSE : Instruments for chemical analysis (INGE5B)

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Instruments for chemical analysis (INGE5B)	04	03	-	01	Class XII passed with Mathematics/Applied Mathematics/ Biology/ + Chemistry + Physics	Analog electronics and Chemistry till class XII

Learning Objectives

- To understand the principle, instrumentation, characteristics and working mechanisms of common spectroscopic, chromatographic, and potentiometric instruments
- To learn about the applications of potentiometry, GC and HPLC in different industries (food, chemical, pharmaceutical, petroleum, etc.)
- To understand the concept of qualitative and quantitative analysis
- To understand the planar and column chromatography for different applications

Learning outcomes

At the end of this course, students will be able to

- Understand the principle, instrumentation, characteristics and working mechanisms of common spectroscopic, chromatographic, and potentiometric analytical instruments.
- Explore the potential of analytical techniques of potentiometry, GC and HPLC in different industries (food, chemical, pharmaceutical, petroleum, etc.
- Carry out the qualitative and quantitative analysis of a given sample.
- Utilize planar and column chromatography for different applications.

SYLLABUS OF GE-5

Unit-1 **(11 hours)**

Molecular Spectroscopy: Ultraviolet-Visible (UV-Vis) spectroscopy: principle, instrumentation, and applications. Infra-Red spectroscopy: principle, instrumentation, and applications

Unit-2 **(10 hours)**

Atomic spectroscopy: Theory, instrumentation and application of flame photometry and atomic-absorption spectroscopy.

Unit-3 **(14 hours)**

Planar chromatography: Theory and application of paper and thin layer chromatography. Column chromatography: Principle, instrumentation and application of Gas Liquid Chromatography and High-Performance Liquid Chromatography.

Unit-4 **(10 hours)**

Potentiometry: Introduction, reference and indicator electrodes, ion selective electrodes: glass electrode and its applications.

Practical component: **(30 hours)**

1. Verification of Beer's Law and determination of concentration of the unknown solution using colorimeter.
2. Spectrometric determination of iron using a double beam spectrophotometer.
3. To learn the operation of a pH meter and determine pKa value for bromophenol blue using a double beam spectrophotometer.
4. To study the effect of organic solvents on membrane permeability of beetroot using colorimeter/ spectrophotometer.
5. Determination of concentration of solutes in a mixture using colorimeter.
6. Spectrum analysis using FT-IR (Qualitative analysis).
7. Determination of concentration of sodium, calcium, lithium and potassium in sample using flame photometer.
8. Paper chromatographic separation of samples from different origins (Biological/pharmaceutical/food).
9. Thin layer chromatographic (TLC) separation of samples from different origin (Biological/pharmaceutical/food).
10. Qualitative and quantitative analysis of organic compounds using Gas chromatography.

Essential/recommended readings

1. Skoog & Lerry, Instrumental Methods of Analysis, Saunders College Publications, New York, 4th edition, 1970.

2. H.H. Willard, L.L Merrit, J.A. Dean, F. A. Settle, Instrumental Methods of Analysis, CBS Publishers, 7th edition, 1988.
3. Skoog, Holler and Crouch, Principles of Instrumental Analysis, Cengage Learning, 6th edition, 2007
4. James W. Robinson, Eileen Skelly Frame, George M. Frame II, Undergraduate Instrumental Analysis, CRC Press, 7th edition, 2014
5. Vogel's Textbook of Qualitative Chemical Analysis, ELBS, 4th edition 1978.

Suggestive readings

1. W. Kemp, Organic Spectroscopy, ELBS, 3rd Edition, 1996.
2. R.S Khandpur, Handbook of Analytical Instruments, Tata McGraw-Hill, 3rd Edition 2006.
3. B.K Sharma, Instrumental Methods of Chemical Analysis, Krishna Prakashan Media, 1st Edition, 2011

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Semester-VI
ELECTRONIC SCIENCE

DEPARTMENT OF INSTRUMENTATION
Category I

(B.Sc. Honours in Instrumentation)

DISCIPLINE SPECIFIC CORE COURSE – 16: Analytical Instrumentation II (INDSC6A)

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Analytical Instrumentation II (INDSC6A)	04	03	-	01	Class XII passed with Physics + Mathematics/Applied Mathematics + Chemistry/ Computer Science/Informatics Practices	Understanding of electronics and Chemistry till class XII

Learning Objectives

- To understand the perspective of different advanced analytical methods
- To understand the principle, instrumentation, and application of various electro analytical instruments
- To disseminate with principle and instrumentation of thermo analytical instruments along with their applications for analysing products of different origin
- To familiarize with detail principle, instrumentation, operation and applications of IR spectroscopy
- To differentiate between principle, instrumentation and operation of Atomic absorption and atomic emission spectroscopy.
- To understand the principle, instrumentation, and applications of Gas Chromatography (GC) and High-Performance Liquid Chromatography (HPLC)

Learning outcomes

At the end of this course, students will be able to

- Appreciate the potential of different analytical methods for resolving various scientific challenges.
- Describe the principle, instrumentation and application of electro analytical instruments.
- Understand the principle and instrumentation of thermo analytical instruments along with their applications for analyzing products of different origin.
- Understand the different terms, principle, instrumentation, operation, and applications of IR spectroscopy.
- Differentiate between principle, instrumentation and operation of atomic absorption spectroscopy and atomic emission spectroscopy.

SYLLABUS OF DSC-16

Unit-1 **(14 hours)**

Infrared Spectroscopy: Theory, diatomic molecule as a simple harmonic oscillator, instrumentation, sample handling techniques. Fourier Transform Infrared Spectroscopy (FTIR): instrumentation and advantages.

Atomic Spectroscopy: Principle, comparison of atomic and molecular spectroscopy, Atomic emission spectroscopy (AES): Flame photometer and its instrumentation, atomization process, types of flames- fuel/ oxidant combinations, instrumentation, Interferences and applications. Introduction to Atomic absorption spectroscopy (AAS).

Unit-2 **(10 hours)**

Electro analytical Methods of Analysis: Potentiometry: Introduction, reference electrode, indicator electrodes, ion-selective electrodes: glass electrode and liquid membrane electrode and their applications, potentiometric titrations.

Unit-3 **(12 hours)**

Gas Chromatography (GC): Principle, Carrier gasses, different types of injection systems, columns, stationary phases, and detectors. Isothermal mode, temperature-programming mode, applications.

Unit-4 **(9 hours)**

High Performance Liquid Chromatography (HPLC): mobile phase, isocratic and gradient elution, pumps, injection systems, columns, stationary phases, normal phase and reverse phase chromatography, detectors, and applications.

Practical component: **(30 hours)**

1. Determination of concentrations of sodium/calcium/lithium/potassium in sample using Flame Photometer.

2. Determination of concentration of sodium/calcium/lithium/potassium ions in sample by standard addition method using flame photometer
3. Spectrum interpretation using FTIR.
4. Qualitative/Quantitative analysis of samples using Gas chromatography.
5. Qualitative/Quantitative analysis of samples using High Performance Liquid Chromatography
6. Potentiometric titrations: (i) Strong acid with strong base (ii) weak acid with strong base and (iii) dibasic acid with strong base
7. Potentiometric titration of Mohr's salt with potassium dichromate
8. pH metric titrations of (i) strong acid and strong base (ii) weak acid and strong base

Essential/recommended readings

1. Skoog & Lerry, Instrumental Methods of Analysis, Saunders College Publications, New York, 4th edition, 1970.
2. H.H. Willard, L.L Merrit, J.A. Dean, F. A. Settle, Instrumental Methods of Analysis, CBS Publishers, 7th edition, 1988.
3. Skoog, Holler and Crouch, Principles of Instrumental Analysis, Cengage Learning, 6th edition, 2007
4. James W. Robinson, Eileen Skelly Frame, George M. Frame II, Undergraduate Instrumental Analysis, CRC Press, 7th edition, 2014
5. Vogel's Textbook of Qualitative Chemical Analysis, ELBS, 4th edition 1978.

Suggestive readings

1. W. Kemp, Organic Spectroscopy, ELBS, 3rd Edition, 1996.
2. R.S Khandpur, Handbook of Analytical Instruments, Tata McGraw-Hill, 3rd Edition 2006.
3. B.K Sharma, Instrumental Methods of Chemical Analysis, Krishna Prakashan Media, 1st Edition, 2011

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE – 17: Analog Devices and Circuits (INDSC6B)

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Analog Devices and Circuits (INDSC6B)	04	03	-	01	Class XII passed with Physics + Mathematics/Applied Mathematics + Chemistry/ Computer Science/Informatics Practices	Semiconductor devices

Learning Objectives

The Learning Objectives of this course are as follows:

- To introduce different types of diodes like Tunnel diode, Varactor diode, Schottky diode, Photodiode etc.
- To explain construction and characteristics of JFETs, MOSFETs and UJT
- The student should be able to explain and calculate small signal parameters of MOSFET.
- To learn the basics of MOSFET Circuits.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Explain the operation of Tunnel diode, Varactor diode, Schottky diode, Photodiode etc.
- Reproduce the I-V characteristics of JFET, MOSFET and UJT.
- Analysis of the operation of MOS transistor
- Ability to understand the fundamentals of MOSFET circuits.

SYLLABUS OF DSC-17

UNIT – 1 **(8 hours)**

Special purpose electronic devices: Principal of operation and Characteristics of Tunnel Diode, Varactor Diode, Schottky Diode, Photo diode, Photoconductive cells, IR emitter, Liquid crystal displays, Solar cells, and Thermistor.

UNIT – 2 **(12 hour)**

Junction Field Effect Transistors (JFET): JFET, Construction, Idea of Channel Formation, Pinch-Off and Saturation Voltage, Current-Voltage Output Characteristics. FET Amplifiers: FET Common source Amplifier, Common Drain Amplifier, Generalized FET Amplifier, FET biasing.

UNIT – 3 **(13 hours)**

Metal Oxide Semiconductor Field Effect Transistor (MOSFET): Types of MOSFETs, Circuit symbols, Working and Characteristic curves of Depletion type MOSFET (both N channel and P Channel) and Enhancement type MOSFET (both N channel and P channel). Biasing of MOSFETs, Small Signal Parameters, Common Source amplifier circuit analysis.

UJT, Basic construction and working, Equivalent circuit, intrinsic Standoff Ratio, Characteristics, and Relaxation oscillator

UNIT – 4 **(12 hours)**

MOS Inverter: Introduction, Voltage Transfer Characteristic (VTC), Noise Immunity and Noise margins, Resistive-Load Inverter, CMOS Inverter, DC Characteristics of CMOS Inverter, Calculation of VIL, VIH, VOL, VOH and Vth, Design of CMOS Inverters, Supply Voltage Scaling in CMOS Inverters, Power, and Area considerations

Practical component: **(30 hours)**

1. To verify practically the response of various special purpose electronic devices.
2. To Study the I-V Characteristics of JFET.
3. To Study the I-V Characteristics of MOSFET
4. To obtain the frequency response of a MOSFET amplifier in common source configuration with given specifications.
5. To Study I-V Characteristics of the UJT.
6. NMOS inverter: (a)Transient analysis using Step input and Pulse input. (b) DC analysis (VTC).
7. CMOS inverter: (a)Transient analysis using Step input and Pulse input. (b) DC analysis (VTC).

Essential/recommended readings

1. R. L. Boylestad, L. Nashelsky, K. L. Kishore, Electronic Devices and Circuit Theory, Pearson Education (2006)
2. J. R. C. Jaegar and T. N. Blalock, Microelectronic Circuit Design, Tata McGraw Hill (2010)
3. Donald E. Neaman, “Electronic Circuit, Analysis and Design”, Tata McGraw Hill Publishing Company Limited, Second Edition, 2006.
4. J. Millman and C. C. Halkias, Integrated Electronics, Tata McGraw Hill (2001)
5. CMOS Digital Integrated circuits – Analysis and Design by Sung – Mo Kang, Yusuf Leblebici, TATA McGraw-Hill Pub. Company Ltd.

Suggestive readings

1. D. L. Schilling and C. Belove, Electronic Circuits: Discrete and Integrated, Tata McGraw Hill (2002)
2. Michael Shur, “Physics of Semiconductor Devices,” Prentice Hall
3. Thomas L. Floyd, David M. Buchla, Electronics Fundamentals: Circuits, Devices & Applications, 8th Edition, Pearson education, 2014.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time

DISCIPLINE SPECIFIC CORE COURSE – 18: Control Systems (INDSC6C)

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Control Systems (INDSC6C)	04	03	-	01	Class XII passed with Physics + Mathematics/Applied Mathematics + Chemistry/ Computer Science/Informatics Practices	Engineering Mathematics

Learning Objectives

The Learning Objectives of this course are as follows:

- To study how to interpret and apply block diagram representations of control systems and design PID controllers based on empirical tuning rules
- To help the students understand and practice feedback and feed-forward control architecture and discuss the importance of performance, robustness and stability in control system design
- To teach about how to solve the steady state and transient analysis of a system for standard inputs
- Introduce students how to compute stability of linear systems using the Routh array test and use this to generate control design constraints
- To teach students the use Evans root locus techniques in control design for real world systems

Learning outcomes

The Learning Outcomes of this course are as follows:

- Interpret and apply block diagram representations of control systems and design PID controllers based on empirical tuning rules
- Define and explain feedback and feed-forward control architecture and discuss the importance of performance, robustness and stability in control system design
- Solve the steady state and transient analysis of a system for standard inputs

- Compute stability of linear systems using the Routh array test and use this to generate control design constraints
- Use Evans root locus techniques in control design for real world systems
- Compute gain and phase margins from Bode diagrams and Nyquist plots and understand their implications in terms of robust stability

SYLLABUS OF DSC-18

UNIT – 1 **(11 hours)**

Introduction to Control System: Introduction of open loop and closed loop control systems, mathematical modelling of physical systems (Electrical, Mechanical), derivation of transfer function, Armature controlled and field controlled DC servomotors, block diagram representation & signal flow graph, reduction technique, Mason's Gain Formula, effect of feedback on control systems.

UNIT – 2 **(11 hours)**

Time Domain Analysis: Time domain performance criteria, transient response of first, second, steady state errors and static error constants, performance indices.

Concept of Stability: Asymptotic stability and conditional stability, Routh – Hurwitz criterion, relative stability analysis, Root Locus plots and their applications.

UNIT – 3 **(12 hours)**

Frequency Domain Analysis: Frequency Domain Analysis: Correlation between time and frequency response, Polar plots, frequency domain specifications, Logarithmic plots (Bode Plots), gain and phase margins, Nyquist stability criterion, relative stability using Nyquist criterion.

UNIT – 4 **(11 hours)**

State Space Analysis: Definitions of state, state variables, state space, representation of systems, Solution of time invariant, homogeneous state equation, state transition matrix and its properties.

Controllers and Compensation Techniques: Basic Control Actions: Proportional, Integral and Derivative controls, response with P, PI and PID Controllers, Basic concept of compensation, Lag, Lead and Lag-Lead networks.

Practical component: **(30 hours)**

1. To study characteristics of :
   a. Synchro transmitter receiver
   b) Synchro as an error detector
1. To study position control of DC motor
2. To study speed control of DC motor
3. To find characteristics of AC servo motor
4. To study time response of type 0,1 and 2 systems
5. To study frequency response of first and second order systems

6. To study time response characteristics of a second order system.
7. To study effect of damping factor on performance of second order system
8. To study frequency response of Lead and Lag networks.
9. Study of P, PI and PID controller.

Essential/recommended readings

1. J. Nagrath& M. Gopal, Control System Engineering, New Age International, 2021, 7th Edition.
2. K. Ogata, Modern Control Engineering, Prentice Hall of India, 2015, 5th Edition.
3. B. C. Kuo , "Automatic control system", Prentice Hall of India, 2010, 9th Edition.
4. B. S. Manke, Linear Control Systems, Khanna Publishers, Delhi, 7th Edition.

Suggestive readings

1. N.K Jain, Automatic Control System Engineering, DhanpatRai Publication, 2019, Standard Edition.
2. Veenadevi S V and Sujatha Hiremath, Control System, I K International Publishing House Pvt Ltd, 2022.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVES (DSE) COURSES OFFERED BY THE DEPARTMENT

DISCIPLINE SPECIFIC ELECTIVE COURSE : Artificial Intelligence (INDSE6A)

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical / Practice		
Artificial Intelligence (INDSE6A)	04	03	-	01	Class XII passed with Physics + Mathematics /Applied Mathematics + Chemistry / Computer Science/Informatics Practices	Class XII Mathematics, Any programming language

Learning Objectives

The Learning Objectives of this course are as follows:

- To realize the significance of Artificial Intelligence and expert systems in today‟s era
- To study neural networks and become able to design neural network based algorithms
- To study fuzzy logic and use it as an alternative tool for modeling.
- To study genetic algorithms and learn about optimizing solutions using genetic algorithms
- Become able to apply the knowledge of artificial control tools to any control application
- To be able to work with imprecise and uncertain solution data for solving problems.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Realize the significance of Artificial Intelligence and expert systems

- Learn the neural network algorithms, modeling using fuzzy logic and optimizing
- solutions using genetic algorithms
- Apply the knowledge of artificial control tools to any control application
- Work with imprecise and uncertain solution data for solving problems

SYLLABUS OF DSE

UNIT – 1 **(12 hours)**

The concept and importance of Artificial Intelligence, human intelligence vs machine intelligence, General concept of knowledge, Acquisition, Knowledge representation and organization, Expert systems: advantages, disadvantages, Expert system architecture, functions of various parts, mechanism and role of inference engine, Role of expert systems in instrumentation and control.

UNIT – 2 **(11 hours)**

Neural Networks: Biological Neural-system, Mathematical Models of Neurons, ANN architecture, Artificial neuron models, Types of activation functions, Learning rules, Learning Paradigms-Supervised, Unsupervised and Reinforcement Learning, ANN training algorithms perceptron, training rules, Delta, Back Propagation Algorithm, parameters in BPN, Hopfield Networks, Recurrent networks, Associative Memories, Applications in identification, optimization, pattern recognition etc.

UNIT – 3 **(11 hours)**

Fuzzy Logic: Introduction to Fuzzy Logic, Classical and Fuzzy Sets, Membership Function, Fuzzy rule generation. Operations on Fuzzy Sets: Compliment, Intersections, Unions, Combinations of Operations, Approximate reasoning, Aggregation, Fuzzy logic modeling and control, fuzzification, inferencing and defuzzification, Linguistic Variables, Arithmetic Operations on Intervals & Numbers. Applications of Fuzzy Logic in process Control and motion control.

UNIT – 4 **(11 hours)**

Genetic Algorithm: An Overview: Introduction and concept as a process modeling tool, creation of off-springs, encoding, fitness function, reproduction, cross over, insertion, deletion and mutation scaling, Fitness, Implementation of Genetic algorithm, applications.

Hybrid Systems: Introduction to Neuro-fuzzy systems, Fuzzy-Expert system, Fuzzy-GA systems.

Practical component: **(30 hours)**

1. Implementation of perceptron learning model
2. Pattern recognition using Hopfield network
3. Identification using associative memories
4. Implement fuzzy logic operations on fuzzy sets

5. Implement conversion of given crisp temperature into its equivalent fuzzy variable
6. Implement conversion of error into its equivalent fuzzy variable
7. Design model of fuzzy logic PID controller
8. Design fuzzy logic based temperature control system
9. Design fuzzy logic based washing machine/aircraft landing system

Essential/recommended readings

1. Ross Timothy. J, Fuzzy logic with Engineering Applications, McGraw Hill, New York, 3rd Edition.
2. Hagan M.T , Demuth H.B, Beale M.H, Neural Network Design, PWS Publishing Company, Thomson Learning, 1st Edition.
3. N.P.Padhy, Artificial Intelligence and Intelligent Systems, Oxford University Press, 1st Edition.
4. Rajasekaran S., VijayalakshmiPai G. A., Neural Networks, PHI Learning Pvt. Ltd., 2003, 1st Edition.

Suggestive readings

1. Klir George J , Yuan B, Fuzzy Sets and Fuzzy Logic Theory and Applications, Prentice Hall PTR, 1st Edition.
2. J. Nilsson, “Artificial Intelligence: A new Synthesis”, Elsevier Publishers.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE: Process Control Dynamics (INDSE6B)

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Process Control Dynamics (INDSE6B)	04	03	-	01	Class XII passed with Physics + Mathematics/ Applied Mathematics+ Chemistry / Computer Science/Informatics Practices	Control Systems and Mathematics

Learning Objectives

The Learning Objectives of this course are as follows:

- To study about the importance and application of good instrumentation system for the efficient design of process control loops for process engineering plants
- To teach students about the basic elements of process control including analysis, tuning and design of the control system using tools of differential equations and transfer functions, with the specific focus on PID control strategy
- To help students understand and discuss about the major issues in the control applications in chemical engineering processes with specific attention to reactor and distillation units
- To study additional techniques of frequency response for robust design based on stability margins. Also, to explore other advanced control strategies currently used in the process industries

Learning outcomes

The Learning Outcomes of this course are as follows:

- Understand the importance and application of good instrumentation system for the efficient design of process control loops for process engineering plants
- Know about the basic elements of process control including analysis, tuning and design of the control system using tools of differential equations and transfer functions, with the specific focus on PID control strategy

- Interpret the major issues in the control applications in chemical engineering processes with specific attention to reactor and distillation units
- Understand additional techniques of frequency response for robust design based on stability margins. Also, to explore other advanced control strategies currently used in the process industries

SYLLABUS OF DSE

UNIT – 1 **(12 hours)**

Introduction: Dynamics of Processes, Dead time processes, Inverse response behaviour of processes, Dynamic Behaviour of first and second order systems. Interacting and non-interacting Systems. Batch & Continuous Process, concept of self-regulation, Controller Principle, discontinuous, continuous and composite controller modes/actions (P, I, D, PI, PD and PID), Pneumatic, Hydraulic, Electronic controllers. Need for controller tuning.

UNIT – 2 **(11 hours)**

Controls: Cascade control, Selective control, Ratio Control, Split range control, feed forward control, Feed forward combined with feedback control, Inferential Control, dead time and inverse response compensators, selective control, Adaptive control, Examples from Distillation columns, Chemical Reactors, Heat Exchangers and Boiler.

UNIT – 3 **(11 hours)**

Discrete-State process control: Variables, process specification and event sequence description, Sampling and reconstruction, Transform analysis of sampled-data systems: z transform and its evaluation, inverse z transform, pulse transfer function, stability analysis in z-plane, implementation of digital controller. PLC Block Diagram, Scan cycle, memory organization, addressing, programming.

UNIT – 4 **(11 hours)**

Converters and Actuators: I/P, P/I converters, Final control elements, Pneumatic and electric actuators. Types of control valves, Valve positioner and its importance, Inherent and Installed characteristics of control valves.

Practical component: **(30 hours)**

1. Study of PID controller response and it‟s tuning
2. Study of ON-OFF and Proportional controller responses on temperature loop.
3. Analysis of Flow loop/Level loop/Temperature loop/Pressure loop.
4. Tuning of controllers on a pressure loop.
5. Control valve characteristics with and without positioner.
6. Study of cascade control
7. Study of ratio control/selective control
8. Study of feed forward control

9. Study of pneumatic/ hydraulic controllers
10. Problem solving/Ladder Programming in PLC.

Essential/recommended readings

1. Eckman. D.P, Automatic Process Control, Wiley Eastern Ltd., New Delhi, 1993, Original Edition.
2. Johnson C.D., Process Control Instrument Technology, Prentice Hall Inc. 1988, 7th Edition.
3. Bequette B. W., Process Control Modelling, Design and Simulation, PHI Learning, Original Edition.
4. Ogata K., Discrete Time Control Systems, Pearson Education, 2nd Edition.
5. Kuo B. C. , "Automatic control system", Prentice Hall of India, 2010, 9th Edition.
6. Nagrath I. J. and Gopal M., Control System Engineering, New Age International,2021, 7th Edition.
7. Stephanopoulis G., Chemical Process Control, Prentice Hall of India, New Delhi, 1990, Original Edition.
8. Liptak B.G., Instrument Engineers Handbook, Process Control, Chilton Book Company, 3rd Edition.

Suggestive readings

1. Harriott P., Process Control, Tata McGraw Hill, Edition 1972.
2. Anderson N.A., Instrumentation for Process Measurement and Control, Chilton company 1980, 3rd Edition.
3. Pollard A., Process Control, Heinemann educational books, London, 1971, Original Edition.
4. Smith C.L. and Corripio A. B., Principles and Practice of Automatic Process Control, John Wiley and Sons, New York, 2nd Edition.
5. Shinskey, Process Control Systems, McGraw Hill, Singapore, 1996, 4th Edition.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVE COURSE: Research Methodology (INDSE6C)

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Research Methodology (INDSE6C)	04	03	-	01	Physics + Mathematics /Applied Mathematics / Biology + Chemistry / Computer Science/Informatics Practices	Elementary Statistics

Learning Objectives

The Learning Objectives of this course are as follows:

- To understand some basic concepts of research and its methodologies
- To select and define appropriate research problem and parameters
- To write a research report and thesis

Learning outcomes

The Learning Outcomes of this course are as follows:

- Acquire the basic knowledge of quality concepts and techniques for quality improvement
- Learn to use various control charts for improving the quality of products
- Describe and compare the different sampling plans and methods
- Understand the concepts of reliability

SYLLABUS OF DSE

Unit -1 **(12 hours)**

Introduction and Design of research : Meaning, Objectives and Importance of Research, Types of research, need and purpose of research, approaches to research, components of the research problem, criteria for selecting the problem, necessity of defining the problem.

Unit – 2 **(10 hours)**

Importance of literature review in defining a problem, Critical literature review – Identifying gap areas from literature review - Development of working hypothesis, various tools for literature survey-Searching journals, metrics of Journals, e book, monograph, patents, Citations, Intellectual Property Rights.

Unit -3 **(12 hours)**

Data Collection and Analysis: Observation and Collection of data - Methods of data collection – Modeling, Mathematical Models for research, Sampling Methods- Data processing and Analysis strategies. Data Analysis with Statistical Packages – Hypothesis-testing, Sampling, Sampling Error, Statistical Methods/Tools - Measures of Central Tendency and Variation, Test of Hypothesis- z test, t test, F test, ANOVA, Chi square, correlation and regression analysis, Error Estimation.

Unit - 4 **(11 hours)**

Writing Research Articles and Thesis: Data Presentation- Types of tables and illustrations, Guidelines for writing the abstract, introduction, methodology, results and discussion, conclusion sections of a manuscript. References – Styles and methods, Citation and listing system of documents. Ethical considerations in Research, precautions in preparing report, plagiarism

Practical component: **(30 hours)**

Use latest software package like SPSS/any similar, to conduct experiments based on:

1. Measures of central tendency
2. Normal distribution
3. Chi square test
4. T test
5. Z-test

Essential/recommended readings

1. Ranjit Kumar, Research Methodology, A step by step guide for beginners, SAGE Publications (2015)
2. D. C. Montgomery, Introduction to Statistical Quality Control, 8th edition, John Wiley and sons (2019).
3. Leedy, P. D. and Ormrod, J. E., 2004 Practical Research: Planning and Design, Prentice Hall.
4. C.R Kothari, Research Methodology: Methods and Techniques, New Age International Publishers (2015)

Suggestive readings

1. Prabhat Pandey, Meenu Mishra Pandey, Research Methodology: Tools and Techniques, Bridge Center (2015)
2. S.P Gupta, Statistical Methods, 46th edition, Sultan Chand & Sons (2021)

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

COMMON POOL OF GENERIC ELECTIVES (GE) COURSES OFFERED BY THE DEPARTMENT

GENERIC ELECTIVE : Standardization and Quality Control (INGE6A)

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Standardization and Quality Control (INGE6A)	4	3	-	1	Class XII passed with Mathematics/ Applied Mathematics + Biology/ Computer Science/Informatics Practices	Probability and Statistics

Learning Objectives

The Learning Objectives of this course are as follows:

- To introduce the basic concepts of Total Quality Management.
- To enable the student on how to apply various Statistical Process Control (SPC) techniques to ensure the quality level of products.
- To understand the significance of Control Charts and Acceptance sampling in modern quality control systems.
- To make students learn the national and international quality assurance standards.

Course Learning Outcome

The Learning Outcomes of this course are as follows:

- Apply the principles and techniques of Total Quality Management in improving quality practices within an industrial or service organization

- Use statistical process control (SPC) techniques such as pareto charts, control charts and cause-effect diagrams recognized throughout industries to ensure the quality level of products
- Understand the role of Acceptance Sampling (AS) in modern quality control systems
- Develop an understanding of national and international quality assurance standards such as ISO 9000 and 14001

SYLLABUS OF GE

Unit-1 **(11 hours)**

Quality Concepts: Meaning of Quality, Dimensions of Quality, Quality Approaches-Deming's Approach, Juran's Approach, Difference between Inspection, Quality Control and Quality Assurance, Evaluation of Quality control, Quality Improvement Techniques-Quality Circles, Kaizen, Six Sigma.

Unit-2 **(12 hours)**

Quality Control: Graphical and Tabular representation of data, Measures of Central Tendency, Measures of Dispersion, Random Variables, Chance and assignable causes of variation, Quality Control Tools-Histogram, Pareto Chart, Cause-Effect Diagram, Control Charts. Control Chart for variables (X-bar & R), Control limits, Warning Limits, Process Capability, Sample Size and Sampling Frequency, Sensitizing rules for Control Charts, Control Chart for Attributes (p, np, c).

Unit-3 **(11 hours)**

Acceptance Sampling: Advantages and Disadvantages of Sampling, Types of Sampling, Lot formation, Principle of acceptance sampling, OC curve, Producer’s and consumer’s risk, Acceptable Quality Level, Lot Tolerance Percentage Defective, Sampling plans: single, double, Average outgoing Quality, AOQL.

Unit-4 **(11 hours)**

ISO 9001-2000 & 14000 Series of Standards: History and Evolution of ISO 9000 Series, Importance and overview of ISO 9000- 1998 Series standards, structure of ISO 9000-2000 Series standards, clauses of ISO 9000 series standards and their interpretation and implementation, quality system documentation and audit. Environmental management concepts, and requirement of ISO 14001, benefits of environmental management Systems.

Practical component: **(30 hours)**

Use latest statistical software package like SPSS to conduct experiments based on:

1. Descriptive statistics
2. Histogram
3. Pareto Chart
4. Control charts for variables
5. Control charts for attributes
5. OC curve
6. AOQ curve

Essential/recommended readings

1. D. C. Montgomery, Introduction to Statistical Quality Control, John Wiley and sons, 6th edition, 2008.
2. Subburaj Ramasamy, Total Quality management, Tata McGraw Hill, 2 nd Edition, 2012
3. E. L. Grant & R.S. Leavenworth-Statistical Quality Control, 7th Edition, 2000.
4. Kaoru Ishikawa-Guide to Quality Control, Asian Productivity Organization, Series, 1986

Suggestive readings

1. M. S. Mahajan, Statistical Quality Control, 1st Edition, Dhanpat Rai Publishing Co Pvt Ltd (2016).
2. Ranjit Kumar, Research Methodology, A step by step guide for beginners, SAGE Publications (2015)
3. Prabhat Pandey, Meenu Mishra Pandey, Research Methodology: Tools and Techniques, Bridge Center (2015)
4. S.P Gupta, Statistical Methods, 46th edition, Sultan Chand & Sons (2021)

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

GENERAL ELECTIVE COURSE : Wireless Networks (INGE6B)

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Wireless Networks (INGE6B)	**04**	**03**	**-**	**01**	**Class XII passed with Mathematics/Applied Mathematics/ + Computer Science/Informatics**	Mathematics in class XII and digital communication

Learning Objectives

The Learning Objectives of this course are as follows:

- To understand the concept about Wireless networks, protocol stack and standards
- To understand and analyze the network layer solutions for Wireless networks
- To study about fundamentals of 3G Services, its protocols and applications
- To have in depth knowledge on internetworking of WLAN
- To learn about evolution of 4G and 5G Networks, its architecture and applications

Learning outcomes

The Learning Outcomes of this course are as follows:

- Conversant with the latest 3G/4G networks and its architecture
- Design and implement wireless network environment for any application using latest wireless protocols and standards
- Ability to select the suitable network depending on the availability and requirement
- Implement different type of applications for smartphones and mobile devices with latest network strategies

SYLLABUS OF GE

UNIT – 1 **(12 hours)**

WIRELESS LAN

Introduction-WLAN technologies: Infrared, UHF narrowband, spread spectrum -IEEE 802.11: System architecture, protocol architecture, physical layer, MAC layer, 802.11b, 802.11a – Hiper LAN, BRAN (Broadband Radio Access Networks), HiperLAN2 Bluetooth: Architecture, Radio Layer, Baseband layer, Link manager Protocol, security IEEE 802.16-WIMAX: Physical layer, MAC, Spectrum allocation for WIMAX.

UNIT – 2 **(11 hours)**

MOBILE NETWORK LAYER

Introduction - Mobile IP: IP packet delivery, Agent discovery, tunneling and encapsulation, IPV6- Network layer in the internet- Mobile IP session initiation protocol - mobile ad-hoc network: Routing, Destination Sequenced distance vector, Dynamic source routing

UNIT – 3 **(11 hours)**

MOBILE TRANSPORT LAYER

TCP enhancements for wireless protocols - Traditional TCP: Congestion control, fast retransmit/fast recovery, Implications of mobility - Classical TCP improvements: Indirect TCP, Snooping TCP, Mobile TCP, Time out freezing, Selective retransmission, Transaction oriented TCP - TCP over 3G wireless networks.

UNIT – 4 **(11 hours)**

4G NETWORKS

Introduction – 4G vision – 4G features and challenges - Applications of 4G – 4G Technologies: Multicarrier Modulation, Smart antenna techniques, OFDM-MIMO systems, Adaptive Modulation and coding with time slot scheduler, Cognitive Radio.

5G NETWORKS

Introduction – 5G vision – 5G features and challenges - Applications of 5G – 5G Technologies

Practical component: **(30 hours)**

1. Program in NS 3 to connect WIFI TO BUS(CSMA)
2. Program in NS 3 to create WIFI SIMPLE INFRASTRUCTURE MODE
3. Program in NS 3 to create WIFI SIMPLE ADHOC MODE
4. Program in NS 3 to connect WIFI TO WIRED BRIDGING
5. Program in NS 3 to create WIFI TO LTE(4G) CONNECTION
6. Program in NS3 for CREATING A SIMPLE WIFI ADHOC GRID
7. Introduction to GSM Architecture

Essential/recommended readings

1. Wireless Communication and Networks, Second Edition, Williant Stallings.

2. Erik Dahlman, Stefan Parkvall, Johan Skold and Per Beming, "3G Evolution HSPA and LTE for Mobile Broadband", Second Edition, Academic Press, 2008.
3. Anurag Kumar, D.Manjunath, Joy kuri, "Wireless Networking", First Edition, Elsevier 2011.
4. Simon Haykin, Michael Moher, David Koilpillai, "Modern Wireless Communications", First Edition, Pearson Education 2013

Suggestive readings

1. Jochen Schiller, "Mobile Communications", Second Edition, Pearson Education 2012.
2. Vijay Garg, "Wireless Communications and networking", First Edition, Elsevier 2007.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

ANNEXURE-24

Sub: Amendment to Ordinance V

[E.C Resolution No. 27-1/ (27-1-13/-) dated 25.08.2023]

Following addition be made to Appendix-II-A to the Ordinance V (2-A) of the Ordinances of the University;

Add the following:

Following Value Addition Courses (VAC) have been added to the Pool of Value Addition Courses based on Undergraduate Curriculum Framework -2022 implemented from the Academic Year 2022-23 :

1. Vedic Mathematics -III
2. Vedic Mathematics – IV
3. VAC : National Cadet Corps – III

(Details are as per Annexure-I)

Annexure-I

Vedic Mathematics - III

Course Title and Code	Credits	Credit Distribution of the Course			Eligibility Criteria	Prerequisite of the Course
		Lecture	Tutorial	Practical/ Practice		
Vedic Mathematics- III	02	1	0	1	Pass in Class 12th	Vedic Mathematics-II

Course Objectives:

- Foster the love for mathematics by creating a positive attitude through Vedic and Ancient Indian Mathematics
- Help students appreciate ancient Indian Mathematics and its contribution to the world.
- Enhance conceptual as well as computational proficiency in trigonometric ratios and complex numbers
- Understand the conceptual ideas of coordinate geometry as developed and used in Ancient and medieval India
- Discuss the rich heritage of mathematical temperament of Ancient India

Learning Outcomes:

- Improved critical as well as logical thinking
- Familiarity with the mathematical procedures of geometry
- Ability to perform calculations in trigonometric ratios with ease.
- Appreciate the Mathematical advancements of Ancient India.

Syllabus of *Vedic Mathematics - III*

Unit I: Contribution of Indian Mathematicians -**Trigonometry**	**Sessions/Lectures**
• Baudhayana • Apastamba • Aryabhata I, II • Bhaskara I, II • Lilavati	3
Unit II: **Trigonometric Ratios**	
• Introduction of Trigonometric ratios • Trigonometric Identities • BN of Complementary angles • BN of sum and difference ($\alpha \pm \beta$) of an angle	4
Unit III: **Real-life Applications of Trigonometry**	

• Application Trigonometry-Height and Distance • Inverse Trigonometric Function	3
Unit IV: Vedic **Geometry**	
• Angle between two lines • Perpendicular distance from point to line • Baudhayan Geometry • *Jyothishya Shastram*-Introduction of Astronomy, Astrology & Time Computation • *Shilpa Shastram*- Introduction of temple architecture and constructions	5

Note: **Some of the theoretical concepts would be dealt with during practice hours.**

Practical/ Practice Component (15 sessions of 2 hours each= 30 hours)

The students are expected to demonstrate the application of Vedic Maths: *Sutra* and *Upsutra*

- Conduct workshops under the supervision of the course teacher to spread awareness on the utility of Vedic Mathematics.
- Students may share their experience with the class teacher in the form of audio-video presentations of 15 minutes.
- If required, students can share their experiences in the form of a Project Report.
- Any other Practical/Practice as decided from time to time

Essential Readings

- Vedic Mathematics, Swami Bharati Krishna Trithaji, *Motilal Banarsidas, New Delhi.*
- The Power of Vedic Mathematics with Trigonometry, *Atul Gupta, Jaico Publishing house.*
- Vedic Mathematics For All Ages, Vandana Singhal, *Motilal Banarsidas Publishers.*
- Studies in Indian Mathematics and Astronomy, Aditya Kolachana, K. Mahesh, K. Ramasubramanian, *Springer, Singapore*
- Elements of Vedic Mathematics, Udayan S. Patankar, Sunil M. Patankar, TTU Press.
- Vedic Mathematics: The Problem Solver, Ronak Bajaj, *Black Rose Publications.*
- Vedic Geometry Course, S. K. Kapoor, *Lotus Press*
- Gardner, Robert and J.F. Staal. *Altar of Fire*. Documentary. The Film Study Center at Harvard University, 1976

Suggested Readings

- A Modern Introduction to Ancient Indian Mathematics, T S Bhanumurthy, *Wiley Eastern Limited, New Delhi*
- Essential of Vedic Mathematics, Rajesh Kumar Thakur, *Rupa Publications, New Delhi*
- Vedic Mathematics - Modern Research Methods, Tiwari P., *Cumpus Books International*
- A Treatise on Astronomy By Bhaskaracharya, *Cosmo Publication.*
- Astronomical Applications of Vedic Mathematics, K. R. Williams, *Motilal Banarsidass Publishers, Delhi.*

Assessment Method

Subject to directions from the Examination Branch/University of Delhi from time to time

****

Value Addition Course

Vedic Mathematics - IV

Course Title and Code	Credits	Credit Distribution of the Course			Eligibility Criteria	Prerequisite of the Course
		Lecture	Tutorial	Practical/ Practice		
Vedic Mathematics- IV	02	1	0	1	Pass in Class 12th	Vedic Mathematics-III

Course Objectives:

- Foster the love for mathematics by creating a positive attitude through Vedic and Ancient Indian Mathematics
- Enhance conceptual as well as reduce its fear through Vedic Mathematics
- Understand application of triangular array of numbers with *Meru Prastar*
- To become computational proficiency in differential and integral calculus
- Appreciate the rigour in mathematics conceptual understanding that existing in ancient India

Learning Outcomes:

- Improved critical as well as logical thinking
- Familiarity with the mathematical procedures of Pingala's *Meru* Prastar
- Ability to perform differentiation and integration of expressions faster with ease.
- Appreciate the Mathematical advancements of Ancient India.

Syllabus of *Vedic Mathematics - IV*

Unit I: Contribution of Indian Mathematicians	**Sessions/Lectures**
• Pingala • Mahavira • Narayan Pandit • Jyesthadeva • Parmeshvaran • Madhavan	**3**
Unit II: **Wonder World of Indian Mathematics-*Meru Prastar***	
• Pingal's binary number system, • Different types of *Meru Prastar* (including Pascal triangle) • Applications of *Meru Prastar*	**4**
Unit III: **Lightening Complex numbers**	

• Introduction of Complex number • Baudhayan form of Complex • Addition & Subtraction of Complex Number • Multiplication of Complex numbers	4
Unit IV: **Enlighten Calculus**	
• Introduction to differentiation • Application of derivatives • Introduction to Integration • Application of Integration	4

Note: **Some of the theoretical concepts would be dealt with during practice hours.**
Practical/ Practice Component (15 sessions of 2 hours each= 30 hours)

The students are expected to demonstrate the application of Vedic Maths: *Sutra* and *Upsutra*

- Conduct workshops under the supervision of the course teacher to spread awareness on the utility of Vedic Mathematics.
- Students may share their experience with the class teacher in the form of audio-video presentations of 15 minutes.
- If required, students can share their experiences in the form of a Project Report.
- Any other Practical/Practice as decided from time to time

Essential Readings

- Vedic Mathematics, Swami Bharati Krishna Trithaji, *Motilal Banarsidas, New Delhi.*
- The Power of Vedic Mathematics with Trigonometry, *Atul Gupta, Jaico Publishing house.*
- Studies in Indian Mathematics and Astronomy, Aditya Kolachana, K. Mahesh, K. Ramasubramanian, *Springer, Singapore*
- Elements of Vedic Mathematics, Udayan S. Patankar, Sunil M. Patankar, TTU Press.
- Vedic Mathematics For All Ages, Vandana Singhal, *Motilal Banarsidas Publishers.*
- Vedic Geometry Course, S. K. Kapoor, *Lotus Press*

Suggested Readings

- A Modern Introduction to Ancient Indian Mathematics, T S Bhanumurthy, *Wiley Eastern Limited, New Delhi*
- Essential of Vedic Mathematics, Rajesh Kumar Thakur, *Rupa Publications, New Delhi*
- Learning Vedic Mathematics, S. K. Kapoor, *Lotus Press Publications*
- Vedic Mathematics Made Easy, Dahaval Bathia, *Jaico Publishing, New Delhi*

Assessment Method

Subject to directions from the Examination Branch/University of Delhi from time to time

VAC : NATIONAL CADET CORPS – III

Credit distribution, eligibility criteria and pre-requisites of the course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/Practice		
National Cadet Corps -III	2	1	0	1	Pass in Class 12th	Enrolled as NCC Cadet and in semester three.

Learning Objectives:

The course aims to:

- Provide understanding about the life history and leadership qualities of great leaders, sportsperson & entrepreneurs.
- Provide understanding of the various aspects of types of mindset.
- Provide understanding of the methods and qualities of public speaking.
- Provide knowledge about the organization related to disaster management and their functioning.
- Provide understanding about the various types of adventure activities.

Learning Outcomes:

After completing this course, the cadets will be able to:-

- Admire and get inspired from the accomplishments of leaders from various walks of life.
- Develop public speaking skills.
- Understand the importance of positive mindset and optimistic attitude in life.
- Appreciate the need & requirements for disaster management and their role in disaster management activities.

SYLLABUS OF NATIONAL CADET CORPS-II

Unit I: Personality Development (5 Weeks)

- Group Discussion- Change your Mindset
- Public Speaking

Unit II: Leadership (4 Weeks)

- Case Studies- APJ Abdul Kalam, Deepa Malik, Maharana Pratap, N.R. Narayana Murthy

Unit III: Disaster Management (4 Weeks)

- Organisation of NDMA
- Types of Disasters
- Essential Services
- Types of Assistance

Unit IV: Adventure Activities- (2Weeks)

- Parasailing
- Slithering
- Rock Climbing
- Cycling and Trekking

Practical Component: **(15 Weeks)**

- Drill
- Map Reading/Principles of Flight & Airmanship/Naval Communication, Navigation & Seamanship
- Weapon Training
- Field Craft & Battle Craft
- Social Service & Community Development
- Obstacle Training

Suggested Readings:

- DGNCC Cadet's Hand Book - Common Subjects -All Wings (in English)
- DGNCC Cadet's Hand Book - Common Subjects -All Wings(in Hindi)
- DGNCC Cadet's Hand Book — Specialised Subjects —Army, Navy and Air Wing

Examination scheme and mode: Subject to directions from the Examination Branch, University of Delhi from time to time.

ANNEXURE-25

Sub: Amendment to Ordinance V

[E.C Resolution No. 14-1/-(14-1-3/-) dated 09.06.2023]

Following addition be made to Appendix-II-A to the Ordinance V (2-A) of the Ordinances of the University;

Add the following:

Syllabi of Semester-IV, V and VI of the following departments under Faculty of Social Sciences based on Under Graduate Curriculum Framework -2022 implemented from the Academic Year 2022-23 :

(i) Political Science

(ii) Social Work

SEMESTER-IV
DEPARTMENT OF POLITICAL SCIENCE
Category I

Political Science Courses for Undergraduate Programme of study with Political Science as a Single Core Discipline
(B.A. Honours in Political Science in three years)

DISCIPLINE SPECIFIC CORE COURSE – 10: Public Administration in India

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Public Administration in India DSC-10	4	3	1	--	Passed Class XII	NIL

Learning Objectives
The paper seeks to provide an introduction to the different dimensions of public administration in India. It seeks to acquaint the student with an analytical and critical understanding of the institution of Indian bureaucracy, with issues of decentralization, financial management, public accountability, e-governance and some specific dimensions of citizens and social welfare policies.

Learning outcomes
With this course, we expect that students will be able to:
- Have a clear picture of the complex institutional structure of Indian administration at present
- Understand the building blocks of local governance, in rural and urban areas
- Explain the processes by which different budgeting systems work for this structure
- Analyse the processes of implementation of different social welfare policies by the administrative institutions.

SYLLABUS OF DSC-10

UNIT – I (8 Hours)
Indian Administration

a. Structure of the Civil Services: Evolution
   i. Historical Legacy
   ii. Civil Service in the Constitutional Framework; appointment training, promotion
b. PMO, Cabinet Secretariat
c. Major Initiatives in Administrative Reforms

UNIT – II (8 Hours)
Decentralization and Local Self Governance

a. Meaning and Types: Rural and Urban
b. PRIs and implementation of public policies

UNIT – III (7 Hours)
Budget

a. Concept of Budget and Budget Cycle in India
b. Types of Budget: Line Budget, Performance Planning Budget, Zero Based Budget
c. Budget making: role of the Finance Ministry

UNIT – IV (7 Hours)
Technology and Public Administration in India

a. E-Governance: The Journey of E-Governance in India
b. Models of E-Governance: Case-Study of Digital India Mission

UNIT – V (8 Hours)
Social Welfare Policies

a. Education: Right to Education
b. Health: National Health Mission
c. Food: Right to Food Security
d. Employment: MGNREGA

UNIT – VI (7 Hours)
Issues and Debates in Indian Administration

a. Ethics in Administration: Integrity vs. Corruption
b. Accountability: RTI, Lokpal, Citizens' Charter
c. Relationship between Political Executive and Permanent Executive
d. Generalists and Specialists
e. Gender sensitivity and gender participation

Essential/recommended readings

Unit 1. Indian Administration

Basic Readings

K.S. Chalam, 'Constitutional Status of Civil Service In India' in K.S. Chalam [ed.], Governance in South Asia: State of The Civil Services, Sage Publishers, 2014.

Devesh Kapur and Pratap Bhanu Mehta, Public Institutions in India: Performance and Design, Oxford University Press, 2007.

DISCIPLINE SPECIFIC CORE COURSE – 11: Concepts in Comparative Political Analysis

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Concepts in Comparative Political Analysis DSC-11	4	3	1	-	Passed Class XII	NIL

Learning Objectives

This paper offers critical perspectives into salient concepts in comparative politics. These concepts provide the tools for understanding political processes and institutions through comparisons across political systems and political regimes. The course aims to make students familiar with electoral systems and party system to make sense of the different ways in the representation is achieved. The experiences with constitutionalism and constitutional designs which facilitate federal sharing of power, the ideas of nationalism in anti-colonial movements, and development models that have driven nation and state building processes across the world comprise the core themes of this course. The course attempts to cover these themes

by deploying concepts which provide the lens for understanding different political systems and processes reinforced with examples and case studies.

Learning outcomes

After studying this course, the students would

- acquire an understanding of a range of concepts such as nationalism and constitutionalism
- learn how to distinguish between different kinds of political systems based on their electoral design and party systems
- demonstrate knowledge of federal designs and ideas of political community based on different notions of nationalism
- understand development models historically and empirically

SYLLABUS OF DSC- 11

UNIT – I (6 Hours)

Socio-Economic Structures

Capitalism, Socialism, Colonialism and Neo-liberalism

UNIT – II (7 Hours)

Discourses on Nationalism

Civic and Ethnic nationalisms, Ideological basis of anti-colonial nationalism (Gandhi, Mao, Frantz Fanon and Amilcar Cabral)

UNIT – III (6 Hours)

Constitutionalism

Evolution of the idea of constitutionalism, post-colonial constitutionalism

UNIT – IV (7 Hours)

Federalism

Historical context

Federation and Confederation: debates around territorial division of power.

UNIT – V (7 Hours)

State and Regime types

Capitalist, Welfare, Populist and Security state

UNIT – VI (6 Hours)

Electoral System

Definition and procedures: Types of electoral systems (First Past the Post, Proportional Representation, Mixed Representation

UNIT – VII (6 Hours)

Party System

Historical contexts of emergence of political parties, types of parties and party systems.

Global Politics DSC 12	**4**	**3**	**1**	**-**	**Passed Class XII**	**NIL**

Learning Objectives

This course aims to familiarize the students with key concepts and issues of global politics by providing an overall frame that de-centres the Eurocentric notion of the origins and development of global politics and introduces students to the alternative locations of global politics through history as well as in the contemporary contexts. Through the conceptual frames of geo-politics, geo-economics and geo-strategy, students will learn about various dimensions of the contemporary dynamics of global politics. Students will debate questions of dominance, control, and identity by examining the cultural frames of global politics. The course also offers insights into key and pressing contemporary global issues ranging from climate change, nuclear proliferation and migration to the rise and impact of global terrorism and, human security. It also discusses politics at the grassroots level through the lens of global social movements in an interconnected world. Throughout, the course attempts to foreground the perspectives from the Global South in order to pluralize and truly globalize the domain of global politics.

Learning outcomes

At the end of the course, students would acquire

- a basic clarity on the meaning, nature and significance of global politics.
- ability to analyse global politics beyond its conventional Eurocentric accounts.
- conceptual tools to understand its dynamics in the contemporary context.
- an understanding of the debates on the changing nature of global politics in terms of de-globalization and post-globalization along with territorialization and deterritorialization.
- the ability to understand the operational aspects of geo-politics, geo-economics, and geo-strategy in the context of global politics.
- the skills to analyze discourses on cultural frames of global politics

- an enhanced understanding of contemporary global issues like- ecology, environment, proliferation of nuclear weapons, global terrorism, human security, and migration.

SYLLABUS OF DSC-12

UNIT – I (10 Hours)
Locating Global Politics

UNIT – II (12 Hours)
Changing Nature of Global Politics

a. Globalization to de-globalization, and post-globalization
b. Geo-politics, Geo-economics, and Geo-strategy
c. Territorialisation and De-territorialisation
d. Cultural Frames of Global Politics

UNIT – III (12 Hours)
Contemporary Global Issues

a. Ecological Issues: Climate Change, and International Environmental Agreements
b. Proliferation of Nuclear Weapons in Post- Cold War Era
c. Global Terrorism and Its Impact
d. Migration
e. Human Security

UNIT – IV (11 Hours)
Global Social Movements

a. Environment Movements
b. Women Movements
c. Peace Movements

Essential/recommended readings

Unit 1 Locating Global Politics

Essential readings:

Hobson, J.M. (2004). *The Eastern origins of Western civilization* (pp. 1-26). Cambridge: Cambridge University Press.

Acharya, Amitav (2014), "Who Are the Norm Makers? The Asian-African Conference in Bandung and the Evolution of Norms" in Special Section on "Principles from the Periphery: The Neglected Southern Sources of Global Norms", *Global Governance*, 20 (3): 405- 417.

Additional readings:

Hobson, J.M. (2020), "Globalization" in A. B. Tickner, & K. Smith (eds.), *International Relations from the Global South: Worlds of difference* (pp. 221-239). Routledge.

Pieterse, Jan Nederveen (2017), "Oriental Globalization: Past and Present", in Delanty, Gerard (eds.), *Europe and Asia Beyond East and West*, New York: Routledge, pp. 61-73.

Getachew, A. (2019), *Worldmaking after Empire: The rise and fall of self-determination (pp. 1-13).* Princeton: Princeton University Press.

Unit 2 Changing Nature of Global Politics

a. Globalization to de-globalization, and post-globalization

Essential readings:

Ritzer, G. (2010), *Globalization: A Basic Text, West* Sussex: Wiley-Blackwell, pp. 33-62.

Stager, M. (2009). *Globalization: A Very Short Introduction*, London: Oxford University Press, pp. 1-16.

Kornprobst, M. & Paul, T.V. (2021), "Globalization, deglobalization and the liberal international order", *International Affairs*, 97 (5): 1305-1316.

Flew, T. (2020). "Globalization, neo-globalization and post-globalization: The challenge of populism and the return of the national", *Global Media and Communication*, 16 (1): 19-39.

Additional Readings:

Held, D., & McGrew A. (2003), "The Great Globalization Debate: An introduction" in D. Held, & A. McGrew. (eds.), *Global Transformations Reader: Politics, Economics and Culture.* Cambridge: Polity Press, pp. 1-50.

Paul, T.V. (2021). "Globalization, deglobalization and reglobalization: Adapting liberal international order". *International Affairs*, 97 (5): 1599-1620.

James, Harold (2017), "Deglobalization as a Global Challenge", *Centre for International Governance Innovation (CIGI) Papers No. 135*, URL: https://www.cigionline.org/sites/default/files/documents/Paper%20no.135WEB_1.pdf

b. Geo-politics, Geo-economics, and Geo-strategy

Essential Readings:

Chaturvedi, S. (2012), "Geopolitics" in B.S. Chimni, & S. Mallavarapu (eds.), *International Relations: Perspectives for the Global South*, New Delhi: Pearson, pp: 149-166.

DISCIPLINE SPECIFIC ELECTIVE COURSE – 2b: India's National Security: Major Challenges and Strategic Thinking

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
India's National Security: Major Challenges and Strategic Thinking DSE-2b	**4**	**3**	**1**	**-**	**Passed Class XII**	**NIL**

Learning Objectives

This course aims to link India's internal and external security challenges with its long term strategic thinking, approach and responses to the same. It introduces the historical dimensions of India's security challenges and the policy responses to students before equipping them with tools to conceptually analysing these. The course then discusses the intellectual foundations of India's strategic thinking drawn from both classical texts and past

practices. Students will also learn about the major contemporary debates on India's strategic culture. The course will engage students in understanding both internal and external dimensions of India's major security challenges. Some of the key external challenges, it focuses on, include India's securitized borders, maritime security threats, nuclearization, and terrorism. In the internal realm, issues pertaining to Jammu & Kashmir, the North-east, Naxalism, along with cyber and information warfare have been discussed. The final component of the course introduces the students to an array of India's strategic responses ranging from non-alignment, forging strategic partnerships and military responses to pursuing multilateral strategies in the contemporary world.

Learning outcomes

At the end of the course, students would acquire the ability to:

- Understand the ways in which, the security threats to India have evolved historically and how have these been met.
- Appreciate the intellectual and historical foundations of Indian strategic thinking.
- Develop a nuanced understanding of India's strategic culture.
- Learn about India's internal and external security threats in its multifarious dimensions.
- Understand how has India evolved a whole array of strategic responses such as nonalignment, forging strategic partnerships and bilateral as well as multilateral partnerships to address diverse challenges it faces.

SYLLABUS OF DSE-2b

UNIT – I (7 Hours)

Understanding India's National Security

1.1 India's Security Policy: A Historical Perspective

1.2 Contemporary Dimensions of India's National Security Framework

1.3 Conceptualizing India's National Security

UNIT – II (9 Hours)

Intellectual Foundations of India's Strategic Thinking

2.1 Textual Traditions: Ramayana & Mahabharata

2.2 Kautilya

2.3 Non-Textual Conceptualizations: Swaraj, Martial Culture

UNIT – III (7 Hours)

India's strategic culture

3.1 Evolution and conceptualization

3.2 Contemporary Trends

UNIT – IV (13 Hours)

India's National Security Challenges

4.1 External Challenges

4.1.1 India's Neighbourhood (Cross-border terrorism, securitised borders, water sharing conflicts and nuclearization

4.1.2 Maritime Security

4.2 Internal Challenges

4.2.1 Maoism/Naxalist Challenge

4.2.2 Separatist Movements (J&K and the Northeast)

4.2.3 Cyber Warfare

UNIT – V (9 Hours)
India's Strategic Responses

5.1 Non-Alignment
5.2 Strategic Partnerships
5.3 Military Responses
5.4 Multilateral Alliances

Essential/recommended readings

Unit wise reading list

Unit 1: Understanding India's National Security

1.1 India's Security Policy: A Historical Perspective

Essential Readings

Raju G C Thomas, "The Strategic Environment and Defence Policies" in *Indian Security Policy* (Princeton: Princeton University Press, 1986) pp. 10-49

Sanjay Chaturvedi, "Indian Geopolitics: 'Nation-State' and the Colonial Legacy" in Kanti Bajpai and Siddharth Mallavarapu (eds.) *International Relations in India: Theorising the Region and Nation* (Orient Longman, 2005) pp. 238-281

Additional Readings

David Malone, "History: A Vital Foundation of India's International Relations" in *Does the Elephant Dance: Contemporary Indian Foreign Policy* (Oxford University Press, 2011) pp. 19-46

Shyam Saran, "Sources of India's World View" in *How India Sees the World: Kautilya to the 21st Century* (Juggernaut, 2018) pp. 9-24

Shivshankar Menon, "The Stage and Inheritance" in *India and Asian Geopolitics: The Past, Present* (The Brookings Institutions, 2021) pp. 11-36

Sumit Ganguly, "India's National Securty" in David M. Malone, C. Raja Mohan, and Srinath Raghavan (eds.) *The Oxford Handbook of Indian Foreign Policy* (Oxford University Press, 2015) pp. 145-159

L.P. Singh, "Learning the Lessons of History" in Brahma Chellaney (eds.) *Securing India's Future in the New Millennium* (Orient Longman, 1999) pp. 1-22

Harsh Pant and Kartik Bommakanti, "India's national security: challenges and dilemmas", *International Affairs*, 95 (4) (2019):835-857.

1.2 Contemporary Dimensions of India's National Security Framework

Essential Readings

Kanti Bajpai "India: Modified Structuralism" in Muthaiah Alagappa (eds.) *Asian Security Practice* (Stanford University Press, 1998) pp. 157-197

Rashed Uz Zaman, “Kautilya: The Indian Strategic Thinker and Indian Strategic Culture”, *Comparative Strategy*, Volume 25, No. 3 (2006) 231-247

George Modelski, “Kautilya: Foreign Policy and International System in the Ancient Hindu World”, *The American Political Science Review*, Vol-58, No-3 (Sept., 1964). pp. 549-560.

2.3 Non-Textual Conceptualizations: Swaraj, Martial Culture

Essential Readings

Arpita Anand, ‘A ‘Regional’ Intervention in the Debate on India’s Strategic Culture: Maratha Statecraft in *Agyapatra*,’ *Journal of Defence Studies*, 15:3, July-September 2021. Available at: https://idsa.in/jds/a-regional-intervention-in-the-debate-on-indias-strategic-culture-aanant

Jayashree Vivekanandan, “Strategy, Legitimacy and the Imperium: Framing the Mughal Strategic Discourse,” in Kanti Bajpai, Saira Basit and V. Krishnappa (eds.) *India’s Grand Strategy: History, Theory, Cases* (New Delhi: Rutledge, 2014) pp. 63-85.

Unit 3: India's strategic culture (4 Lectures)

3.1. Evolution and conceptualization

Essential Readings

Kanti Bajpai and Amitabh Mattoo “Introduction” in *Kanti Bajpai, Amitabh Mattoo and George Tanham (eds.) Securing India: Strategic Thought and Practice* (New Delhi: Manohar, 1996) pp. 15-27

Jaswant Singh, “Strategic Culture” in *Defending India* (New Delhi: Palgrave Macmillan, 1999) pp. 1-60

3.2 Contemporary Trends

Essential Readings

Michael Liebig, ‘Interrogating ‘Hyphenated Cultures’: India’s Strategic Culture and Intelligence Culture’, *Journal of Defence Studies*, 15:3, July-September 2021. Available at: https://idsa.in/jds/interrogating-hyphenated-cultures-mliebig

Amrita Narlikar, “Peculiar Chauvinism or Strategic Calculation? Explaining the Negotiating Strategy of a Rising India”, in *International Affairs*, Vol. 82 (1) (2006): 59-76

Additional Readings

George K. Tanham, “Indian Strategic Thought: An Interpretive Essay” in *Kanti Bajpai, Amitabh Mattoo and George Tanham (eds.) Securing India: Strategic Thought and Practice* (New Delhi: Manohar, 1996) pp. 28-111

George K. Tanham, “Indian Strategy in Flux?” in *Kanti Bajpai, Amitabh Mattoo and George Tanham (eds.) Securing India: Strategic Thought and Practice* (New Delhi: Manohar, 1996) pp. 112-139

Unit 4: India’s National Security Challenges

4.1 External Challenges:

4.1.1 India’s Neighborhood

S. Muni, ‘Problem Areas in India’s Neighbourhood Policy’, *South Asian Survey*, Vol. 10 (2) (2003): 185-196.

i. Cross-Border terrorism:

Essential Readings

Sanjeev Kumar HM, Chp 3 in *The India-Pakistan Sub-conventional War: Democracy and Peace in South Asia* (New Delhi: Sage, 2022), pp. 162-192.

Additional Readings

K. Santhanam, “Sources of Terror: India” in *South Asia Post-9/11: Searching for stability* (Observer Research Foundation, 2003), pp. 31-35

S.D. Muni “Introduction” in *Responding to Terrorism in South Asia* (Manohar, 2006) pp. 11-29

ii. Securitised Borders

Essential Readings

Shyam Saran, “The Pakistan Puzzle” in *How India Sees the World: Kautilya to the 21st Century* (Juggernaut, 2018) pp. 77-106

Alka Acharya, "China" in Kanti Bajpai and Harsh Pant (eds.) *India's Foreign Policy* (Oxford University Press, 2013) pp. 356-369

Additional Readings

Shyam Saran, “The India-China Border Dispute and After” in *How India Sees the World: Kautilya to the 21st Century* (Juggernaut, 2018) pp. 123-149

Shiv Shankar Menon, “India and China” in *India and Asian Geopolitics: The Past, Present* (The Brookings Institution, 2021) pp. 317-339

Tanvi Madan, “China in Three Avatars in Kanti Bajpai, Saira Basit and V. Krishnappa (eds.) *India’s Grand Strategy: History, Theory, Cases* (New Delhi: Rutledge, 2014) pp. 308-359

Bharat Karnad, "An Elephant with a Small Footprint: The Realist Roots of India’s Strategic Thought and Policies" in Kanti Bajpai, Saira Basit and V. Krishnappa (eds.) *India’s Grand Strategy: History, Theory, Cases* (New Delhi: Rutledge, 2014) pp. 200-233

iii. Water Sharing

Essential Readings

Brahma Chellaney, “Water: The latest India-Pak Battle Line” in *Water: Asia’s New Battleground* (Georgetown University Press, 2011) pp. 286-296.

Medha Bisht, “From the edges of borders: reflections on water diplomacy in South Asia” *Water Policy* 21 (2019): 1123–1138

Jonathan Holslag, “Assessing the Sino-Indian Water Dispute,” *Journal of International Affairs*, 64:2, Spring/Summer 2011, pp. 19-35.

Additional Readings

K. Warikoo, “Perspectives of Indus Waters treaty” in Ranabir Samaddar and Helmut Reifeld (eds.) *Peace as Process: Reconciliation and conflict Resolution in South Asia* (Konrad Adenauer Foundation, 2001) pp. 281-298

Brahma Chellaney, “Nepal and Bhutan as Subregional Energy Hub” in *Water: Asia’s New Battleground* (Georgetown University Press, 2011) pp. 281-286

Brahma Chellaney, “Exploiting the Riparian Advantage: A key test case” in *Water: Asia’s New Battleground* (Georgetown University Press, 2011) pp. 141-197 (Includes Bangladesh)

iv. Nuclearization

Essential Readings

Ashley J. Tellis, *India’s Emerging Nuclear Doctrine: Exemplifying the Lessons of Nuclear revolution, NBR Analysis*, 12:2, May 2001, pp. 1-16; 103-110.

Sundaram, K. and MV Ramana. "India and the policy of no first use of nuclear weapons." *Journal of Peace and Nuclear Disarmament* 1, no. 1 (2018). Taylor & Francis: 152-68.

Additional Readings

Bharat Karnad, “New Attractions of the Bomb: The Nuclearized Twenty-First Century World” in *India's Nuclear Policy* (Praeger Security International, 2008) pp. 5-34

Rajesh Basrur, “India and China: A managed nuclear rivalry?” *Washington Quarterly*, 42, no. 3 (2019). Taylor & Francis: 151-70.

Category II

Political Science Courses for Undergraduate Programme of study with Political Science as one of the Core Disciplines

(B.A. Programmes with Political Science as Major discipline)

DISCIPLINE SPECIFIC CORE COURSE (DSC-4A): Comparative Government and Politics

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Comparative Government and Politics MDSC-4A	4	3	1	-	Passed Class XII	NIL

Learning Objectives

The purpose of this course is to equip students to understand government and politics though a comparative perspective. The course aims at familiarising students with the manner in which comparison is used as a method to understand the historical transformations in governmental forms, regime types, and political systems. It also hopes to make students understand the different modalities through which power circulates and resides in society and the distinct mechanisms through which consent is elicited from the people. The course is expected to bring to the students a thorough understanding of the historical contexts in which political systems and institutional structures take distinct forms and acquire features that distinguish them. The course hopes to bring out the specificities of these forms not just through historical signposts but also across different political cultures in the global North and South.

Learning outcomes

On successful completion of the course, students would demonstrate:

- An in-depth understanding of nature and scope of comparative politics.
- Knowledge of regime forms as distinct from classification of political systems
- Knowledge of various kinds of electoral systems and party systems across countries
- An understanding of the manner in which power exists in society
- Analytical capacity to engage with contemporary debates on welfare, populism, and authoritarianism.

SYLLABUS OF MDSC-4A

UNIT – I (7 Hours)
The nature, scope and methods of comparative political analysis

UNIT – II (8 Hours)
Classifications of political systems

(a) Parliamentary and Presidential
(b) Federal and Unitary

UNIT – III (7 Hours)
Electoral Systems

First past the post, Proportional representation and Mixed systems

UNIT – IV (8 Hours)
Party Systems

Single-party, bi-party and multi-party systems

UNIT – V (7 Hours)
Structures of Power in Society

Classical elitist theory, power elites, pluralism and theory of ruling class

UNIT – VI (8 Hours)
Comparing Regimes

Democratic**,** Authoritarian, Welfare, Populism and Security Regimes

DISCIPLINE SPECIFIC CORE COURSE (DSC-4B): Public Institutions in India

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Public Institutions in India MDSC-4B	**4**	**3**	**1**	**-**	**Passed Class XII**	**NIL**

Learning Objectives

The aim of this course is to familiarize students with institutions that are significant in the functioning of Indian democracy. It is designed to help students get a thorough understanding of the different functions performed by public institutions including maintaining law and order, eliciting accountability from the state, regulating the institutional space, and enhancing state accountability and its capacity to frame and implement social and economic policies. The purpose is to make students aware of the complex functions performed by the institutions of the state in contemporary contexts.

Learning outcomes

After completing this course, students will

- understand the design and performance of specific institutions
- become aware of the historical contexts in which institutions emerge
- develop the tools to understand the challenges faced by contemporary institutions
- acquire an understanding of what enhances institutional capacity of states

SYLLABUS OF MDSC-4B

UNIT – I (6 Hours)
Studying Public Institutions

UNIT – II (6 Hours)
Framing Public Policy

Niti Aayog

UNIT – III (6 Hours)
Conducting Elections

Election Commission of India (ECI)

UNIT – IV (6 Hours)
Securing Citizens

The Police

UNIT – V (7 Hours)
Ensuring Rights

National Human Rights Commission of India (NHRC)

UNIT – VI (7 Hours)
Regulatory Institutions

Reserve Bank of India (RBI)

UNIT – VII (7 Hours)
Transparency and Accountability

Comptroller and Auditor General (CAG)

Central Vigilance Commissioner (CVC)

The course aims at familiarising students with the manner in which comparison is used as a method to understand the historical transformations in governmental forms, regime types, and political systems. It also hopes to make students understand the different modalities through which power circulates and resides in society and the distinct mechanisms through which consent is elicited from the people. The course is expected to bring to the students a thorough understanding of the historical contexts in which political systems and institutional structures take distinct forms and acquire features that distinguish them. The course hopes to bring out the specificities of these forms not just through historical signposts but also across different political cultures in the global North and South.

Learning outcomes

On successful completion of the course, students would demonstrate:

- An in-depth understanding of nature and scope of comparative politics.
- Knowledge of regime forms as distinct from classification of political systems
- Knowledge of various kinds of electoral systems and party systems across countries
- An understanding of the manner in which power exists in society
- Analytical capacity to engage with contemporary debates on welfare, populism, and authoritarianism.

SYLLABUS OF MDSC-4A

UNIT – I (7 Hours)

The nature, scope and methods of comparative political analysis

UNIT – II (8 Hours)

Classifications of political systems

(a) Parliamentary and Presidential

(b) Federal and Unitary

UNIT – III (7 Hours)
Electoral Systems

First past the post, Proportional representation and Mixed systems

UNIT – IV (8 Hours)
Party Systems

Single-party, bi-party and multi-party systems

UNIT – V (7 Hours)
Structures of Power in Society

Classical elitist theory, power elites, pluralism and theory of ruling class

UNIT – VI (8 Hours)
Comparing Regimes

Democratic**,** Authoritarian, Welfare, Populism and Security Regimes

Essential/recommended readings

Discipline Specific Elective (DSE) Courses for Sem – IV
[Category II and III – Multidisciplinary]

DISCIPLINE SPECIFIC ELECTIVE COURSE – 2a: Gandhi and the Contemporary World

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Gandhi and the Contemporary World MDSE-2a	4	3	1	-	Passed Class XII	NIL

Learning Objectives

The Course has been designed to acquaint student with the core foundations of Gandhi's thoughts, methods and his position on key important issues of national and global concern. These issues range from the social, political, cultural to religious and economic questions which engaged the intellectual minds in his times and even today. As a celebrated champion of non-violent struggle Gandhi is anonym for fight against injustice, discrimination and unfair treatments.

Learning outcomes

After reading this module the student will be able to answer:

- What are the core principles of Gandhian thought on which he scrutinizes all actions?
- How Gandhi applied those principles in shaping his positions on social, political, economic and religious questions?
- The students will be able to answer how Gandhi presented the critique of the Western Civilization.
- The students will be able to know the position of Gandhi on key questions of contemporary debates in India like Religious conversion, protection of cow, language issue and Hinduism.
- The student will be able to know how Gandhi's use of the term Swadeshi does not just limit to economic aspects but all gametes of national life.

SYLLABUS OF MDSE-2a

UNIT – I (12 Hours)

Truth and Non-violence

UNIT – II (8 Hours)

Gandhian Thought: Theory and Action

a. Theory of Satyagraha
b. Satyagraha in Action: Peasant Satyagraha, Temple Entry and Critique of Caste, Social Harmony and Communal Unity

UNIT – III (9 Hours)

Gandhi on Modern Civilization and Ethics of Development

a. Conception of Modern Civilization and Alternative Modernity
b. Critique of Development

UNIT – IV (8 Hours)

Gandhi and the Idea of Political

a. Swaraj
b. Swadeshi

UNIT – V (8 Hours)

Gandhi's views on

a. Hinduism
b. Religious Conversion
c. Cow Protection
d. Language Questions

DISCIPLINE SPECIFIC ELECTIVE COURSE – 2b: India's National Security: Major Challenges and Strategic Thinking

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
India's National Security: Major Challenges and Strategic Thinking MDSE-2b	**4**	**3**	**1**	**-**	**Passed Class XII**	**NIL**

Learning Objectives

This course aims to link India's internal and external security challenges with its long term strategic thinking, approach and responses to the same. It introduces the historical dimensions of India's security challenges and the policy responses to students before equipping them with tools to conceptually analysing these. The course then discusses the

intellectual foundations of India's strategic thinking drawn from both classical texts and past practices. Students will also learn about the major contemporary debates on India's strategic culture. The course will engage students in understanding both internal and external dimensions of India's major security challenges. Some of the key external challenges, it focuses on, include India's securitized borders, maritime security threats, nuclearization, and terrorism. In the internal realm, issues pertaining to Jammu & Kashmir, the North-east, Naxalism, along with cyber and information warfare have been discussed. The final component of the course introduces the students to an array of India's strategic responses ranging from non-alignment, forging strategic partnerships and military responses to pursuing multilateral strategies in the contemporary world.

Learning outcomes

At the end of the course, students would acquire the ability to:

- Understand the ways in which, the security threats to India have evolved historically and how have these been met.
- Appreciate the intellectual and historical foundations of Indian strategic thinking.
- Develop a nuanced understanding of India's strategic culture.
- Learn about India's internal and external security threats in its multifarious dimensions.
- Understand how has India evolved a whole array of strategic responses such as nonalignment, forging strategic partnerships and bilateral as well as multilateral partnerships to address diverse challenges it faces.

SYLLABUS OF MDSE-2b

UNIT – I (7 Hours)

Understanding India's National Security

1.1 India's Security Policy: A Historical Perspective

1.2 Contemporary Dimensions of India's National Security Framework

1.3 Conceptualizing India's National Security

UNIT – II (9 Hours)

Intellectual Foundations of India's Strategic Thinking

2.1 Textual Traditions: Ramayana & Mahabharata

2.2 Kautilya

2.3 Non-Textual Conceptualizations: Swaraj, Martial Culture

UNIT – III (7 Hours)

India's strategic culture

3.1 Evolution and conceptualization

3.2 Contemporary Trends

UNIT – IV (13 Hours)

India's National Security Challenges

4.1 External Challenges

4.1.1 India's Neighbourhood (Cross-border terrorism, securitised borders, water sharing conflicts and nuclearization

4.1.2 Maritime Security

4.2 Internal Challenges

4.2.1 Maoism/Naxalist Challenge

4.2.2 Separatist Movements (J&K and the Northeast)

4.2.3 Cyber Warfare

UNIT – V (9 Hours)
India's Strategic Responses

5.1 Non-Alignment
5.2 Strategic Partnerships
5.3 Military Responses
5.4 Multilateral Alliances

Essential/recommended readings

Unit wise reading list

Unit 1: Understanding India's National Security

1.1 India's Security Policy: A Historical Perspective

Essential Readings

Raju G C Thomas, "The Strategic Environment and Defence Policies" in *Indian Security Policy* (Princeton: Princeton University Press, 1986) pp. 10-49

Sanjay Chaturvedi, "Indian Geopolitics: 'Nation-State' and the Colonial Legacy" in Kanti Bajpai and Siddharth Mallavarapu (eds.) *International Relations in India: Theorising the Region and Nation* (Orient Longman, 2005) pp. 238-281

Additional Readings

David Malone, "History: A Vital Foundation of India's International Relations" in *Does the Elephant Dance: Contemporary Indian Foreign Policy* (Oxford University Press, 2011) pp. 19-46

Shyam Saran, "Sources of India's World View" in *How India Sees the World: Kautilya to the 21st Century* (Juggernaut, 2018) pp. 9-24

Shivshankar Menon, "The Stage and Inheritance" in *India and Asian Geopolitics: The Past, Present* (The Brookings Institutions, 2021) pp. 11-36

Sumit Ganguly, "India's National Securty" in David M. Malone, C. Raja Mohan, and Srinath Raghavan (eds.) *The Oxford Handbook of Indian Foreign Policy* (Oxford University Press, 2015) pp. 145-159

L.P. Singh, "Learning the Lessons of History" in Brahma Chellaney (eds.) *Securing India's Future in the New Millennium* (Orient Longman, 1999) pp. 1-22

Harsh Pant and Kartik Bommakanti, "India's national security: challenges and dilemmas", *International Affairs*, 95 (4) (2019):835-857.

1.2 Contemporary Dimensions of India's National Security Framework

Essential Readings

Kanti Bajpai "India: Modified Structuralism" in Muthaiah Alagappa (eds.) *Asian Security Practice* (Stanford University Press, 1998) pp. 157-197

Arvind Gupta, "National Security Environment" and "Non-traditional Security Issues in National Security" in *How India Manages its National Security* (Penguin Random House, 2018).

Rohan Mukherjee & David M. Malone, "Indian Foreign policy and Contemporary Security Challenges", *International Affairs*, Volume 87 (1), pp. 87–104 (2011)

1.3 Conceptualizing India's National Security

Essential Readings

Anshuman Behera and Areeba Ahsanat Moazzam, “India’s National Security Discourse: A Conceptual Introduction”, in Anshuman Behera & Sitakanta Mishra (eds.), *Varying Dimensions of India’s National Security* (Springer 2022) pp. 3-18

P. S. Raghavan, “National Security Determinants of Foreign Policy”, in Arvind Gupta and Anil Wadhwa (Ed.*), India’s Foreign Policy: Surviving in a Turbulent World*, New Delhi: (Sage Publications, 2020) pp. 34-44

Additional Readings

Arvind Gupta, “How Good is India’s National Security System?” in *How India Manages its National Security* (Penguin Random House, 2018)

David M. Malone, “India’s Contemporary Security Challenges: More Internal than External?” in *Does the Elephant Dance? Contemporary Indian Foreign Policy* (Oxford University Press, 2011) pp. 47-74

Unit 2: Intellectual Foundations of India’s Strategic Thinking

2.1 Textual Traditions: Ramayana and Mahabharata

Essential Readings

Swarna Rajagopalan, “Grand Strategic Thought in the Ramayana and Mahabharata” in Kanti Bajpai, Saira Basit and V. Krishnappa (eds) *India’s Grand Strategy: History, Theory, Cases* (New Delhi: Rutledge, 2014) pp. 31-62

Additional Readings

Amrita Narlikar and Aruna Narlikar, “India’s Negotiation Strategy: The Heroism of Haed Bargaining?” in *Bargaining with a Rising India: Lessons from the Mahabharata* (Oxford: Oxford University Press, 2014) pp. 24-71.

Sharad Patil, “Myth and Reality of Ramayana and Mahabharata”, *Social Scientist*, Vol.4, No. 8 (1976): 68-72.

2.2 Kautilya

Essential Readings

Subrata K. Mitra, “Kautilya and the Strategic Culture of India” in Subrata K. Mitra and Michael Liebig (eds.) *Kautilya’s Arthashastra: An Intellectual Portrait* (Nomos, 2016) pp. 288-316

Additional Readings

Rashed Uz Zaman, “Kautilya: The Indian Strategic Thinker and Indian Strategic Culture”, *Comparative Strategy*, Volume 25, No. 3 (2006) 231-247

George Modelski, “Kautilya: Foreign Policy and International System in the Ancient Hindu World”, *The American Political Science Review*, Vol-58, No-3 (Sept., 1964). pp. 549-560.

2.3 Non-Textual Conceptualizations: Swaraj, Martial Culture

Essential Readings

Arpita Anand, ‘A ‘Regional’ Intervention in the Debate on India’s Strategic Culture: Maratha Statecraft in *Agyapatra*,’ *Journal of Defence Studies*, 15:3, July-September 2021. Available at: https://idsa.in/jds/a-regional-intervention-in-the-debate-on-indias-strategic-culture-aanant

Jayashree Vivekanandan, “Strategy, Legitimacy and the Imperium: Framing the Mughal Strategic Discourse,” in Kanti Bajpai, Saira Basit and V. Krishnappa (eds.) *India’s Grand Strategy: History, Theory, Cases* (New Delhi: Rutledge, 2014) pp. 63-85.

Unit 3: India's strategic culture (4 Lectures)

3.1. Evolution and conceptualization

Essential Readings

Kanti Bajpai and Amitabh Mattoo “Introduction” in *Kanti Bajpai, Amitabh Mattoo and George Tanham (eds.) Securing India: Strategic Thought and Practice* (New Delhi: Manohar, 1996) pp. 15-27

Jaswant Singh, “Strategic Culture” in *Defending India* (New Delhi: Palgrave Macmillan, 1999) pp. 1-60

3.2 Contemporary Trends

Essential Readings

Michael Liebig, ‘Interrogating ‘Hyphenated Cultures’: India’s Strategic Culture and Intelligence Culture’, *Journal of Defence Studies*, 15:3, July-September 2021. Available at: https://idsa.in/jds/interrogating-hyphenated-cultures-mliebig

Amrita Narlikar, “Peculiar Chauvinism or Strategic Calculation? Explaining the Negotiating Strategy of a Rising India”, in *International Affairs*, Vol. 82 (1) (2006): 59-76

Additional Readings

George K. Tanham, “Indian Strategic Thought: An Interpretive Essay” in *Kanti Bajpai, Amitabh Mattoo and George Tanham (eds.) Securing India: Strategic Thought and Practice* (New Delhi: Manohar, 1996) pp. 28-111

George K. Tanham, “Indian Strategy in Flux?” in *Kanti Bajpai, Amitabh Mattoo and George Tanham (eds.) Securing India: Strategic Thought and Practice* (New Delhi: Manohar, 1996) pp. 112-139

Unit 4: India’s National Security Challenges

4.2 External Challenges:

4.1.1 India’s Neighborhood

S. Muni, ‘Problem Areas in India’s Neighbourhood Policy’, *South Asian Survey*, Vol. 10 (2) (2003): 185-196.

v. Cross-Border terrorism:

Essential Readings

Sanjeev Kumar HM, Chp 3 in *The India-Pakistan Sub-conventional War: Democracy and Peace in South Asia* (New Delhi: Sage, 2022), pp. 162-192.

Additional Readings

K. Santhanam, “Sources of Terror: India” in *South Asia Post-9/11: Searching for stability* (Observer Research Foundation, 2003), pp. 31-35

S.D. Muni “Introduction” in *Responding to Terrorism in South Asia* (Manohar, 2006) pp. 11-29

vi. Securitised Borders

Essential Readings

Shyam Saran, “The Pakistan Puzzle” in *How India Sees the World: Kautilya to the 21st Century* (Juggernaut, 2018) pp. 77-106

Alka Acharya, "China" in Kanti Bajpai and Harsh Pant (eds.) *India's Foreign Policy* (Oxford University Press, 2013) pp. 356-369

Additional Readings

Shyam Saran, “The India-China Border Dispute and After” in *How India Sees the World: Kautilya to the 21st Century* (Juggernaut, 2018) pp. 123-149

Shiv Shankar Menon, “India and China” in *India and Asian Geopolitics: The Past, Present* (The Brookings Institution, 2021) pp. 317-339

Tanvi Madan, “China in Three Avatars in Kanti Bajpai, Saira Basit and V. Krishnappa (eds.) *India’s Grand Strategy: History, Theory, Cases* (New Delhi: Rutledge, 2014) pp. 308-359

Bharat Karnad, "An Elephant with a Small Footprint: The Realist Roots of India’s Strategic Thought and Policies" in Kanti Bajpai, Saira Basit and V. Krishnappa (eds.) *India’s Grand Strategy: History, Theory, Cases* (New Delhi: Rutledge, 2014) pp. 200-233

vii. Water Sharing

Essential Readings

Brahma Chellaney, “Water: The latest India-Pak Battle Line” in *Water: Asia’s New Battleground* (Georgetown University Press, 2011) pp. 286-296.

Medha Bisht, “From the edges of borders: reflections on water diplomacy in South Asia” *Water Policy* 21 (2019): 1123–1138

Jonathan Holslag, “Assessing the Sino-Indian Water Dispute,” *Journal of International Affairs*, 64:2, Spring/Summer 2011, pp. 19-35.

Additional Readings

K. Warikoo, “Perspectives of Indus Waters treaty” in Ranabir Samaddar and Helmut Reifeld (eds.) *Peace as Process: Reconciliation and conflict Resolution in South Asia* (Konrad Adenauer Foundation, 2001) pp. 281-298

Brahma Chellaney, “Nepal and Bhutan as Subregional Energy Hub” in *Water: Asia’s New Battleground* (Georgetown University Press, 2011) pp. 281-286

Brahma Chellaney, “Exploiting the Riparian Advantage: A key test case” in *Water: Asia’s New Battleground* (Georgetown University Press, 2011) pp. 141-197 (Includes Bangladesh)

viii. Nuclearization

Essential Readings

Ashley J. Tellis, *India’s Emerging Nuclear Doctrine: Exemplifying the Lessons of Nuclear revolution, NBR Analysis*, 12:2, May 2001, pp. 1-16; 103-110.

Sundaram, K. and MV Ramana. "India and the policy of no first use of nuclear weapons." *Journal of Peace and Nuclear Disarmament* 1, no. 1 (2018). Taylor & Francis: 152-68.

Additional Readings

Bharat Karnad, “New Attractions of the Bomb: The Nuclearized Twenty-First Century World” in *India's Nuclear Policy* (Praeger Security International, 2008) pp. 5-34

Rajesh Basrur, “India and China: A managed nuclear rivalry?” *Washington Quarterly*, 42, no. 3 (2019). Taylor & Francis: 151-70.

Harsh V. Pant and Yogesh Joshi, *Indian Nuclear Policy*, New Delhi, Oxford University Press, 2018.

Vipin Narang, “Introduction” in *Seeking the Bomb: Strategies of Nuclear Proliferation* (Princeton University Press, 2022) pp. 1-14

4.1.2 Maritime Security

Essential Readings

S. Jaishankar, Chapter 8, “The Pacific Indian: A Re-Emerging Maritime Outlook,” in *The India Way: Strategies for an Uncertain World* (New Delhi: Harper Collins, 2020), pp. 179-200.

Rajeswari Pillai Rajagopalan, “India’s maritime strategy”, in Anit Mukherjee and C. Raja Mohan (eds.) *India’s Naval Strategy and Asian Security* (London: Routledge, 2016) pp. 13-36.

Additional Readings

Rahul Roy Chaudhary “India’s Maritime Security” *India International Centre Quarterly*, Vol. 26, no. 1 (1999): 129-139

Vijay Sakhuja, “Maritime security order in Asia: a perspective from India” in Joachim Krause and Sebastian Bruns (eds.) *Routledge Handbook of Naval Strategy and Security* (London: Routledge, 2016) pp. 315-327

4.2 Internal Challenges

4.2.1 Naxalism/ Maoism

Essential Readings

P.V Ramana, “State Response to the Maoist Challenge: An Overview,” in V.R. Raghavan (ed.), *The Naxal Threat: Causes, State Responses and Consequences* (New Delhi: Vij Books, 2011), pp. 71-94.

Additional Readings

E. N. Rammohan, “Rise of Naxalism, its implications for National Security and the way Forward,” in V.R. Raghavan (ed.), *The Naxal Threat: Causes, State Responses and Consequences* (Mew Delhi: Vij Books, 2011), pp. 95-112.

Ramachandra Guha, “Adivasis, Naxalites and Indian Democracy” *Economic and Political Weekly* 42(32) (2007): 3305-3312

4.2.2 Separatist Movements (J&K/ Northeast)

Kashmir

Essential Readings

Navnita C. Behera, “India’s Political Gambit” in *Demystifying Kashmir* (Brookings, 2006) pp. 30-72

COMMON POOL OF GENERIC ELECTIVES (GE) COURSES

OFFERED BY THE DEPARTMENT OF POLITICAL SCIENCE

Pool of GE offered in Semester-I to III will also be available for Semester-IV to VI

GENERIC ELECTIVES (GE-1): Ideas in Indian Political Thought

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course	Department offering the course
		Lecture	Tutorial	Practical/ Practice			
Ideas in Indian Political Thought GE-1	4	3	1	-	Passed class XII	NIL	Political Science

Learning Objectives

This paper is designed for students who are from other disciplines and wish to have a basic understanding of the various themes that has shaped Indian society and politics. It revolves around key concepts based on original texts which would help the students to critically engage with the ideas.

Learning outcomes

After completion of this course, students will be able to

- answer about the nature and form of statecraft that existed in Ancient India.
- explain how the texts in ancient India interpreted Dharma and Danda
- answer what were sources and mechanisms to practice Nyay in ancient India.
- make distinction between Rastra and Rajya.
- explain the meaning and foundations of Varna and how are they different from caste.

SYLLABUS OF GE-1

UNIT – I (7 Hours)
Dharma and Danda: Kautilya

UNIT – II (6 Hours)
Gender: Tarabai Shinde

UNIT – III (6 Hours)
Culture and Nationalism: Vivekananda

UNIT – IV (6 Hours)

Swaraj: Gandhi

UNIT – V (6 Hours)
Nyaya: Ambedkar

UNIT – VI (7 Hours)
Hindutva: Savarkar

UNIT – VII (7 Hours)
Integral Humanism: Deen Dayal Upadhyaya

Essential/recommended readings

1. Dharma and Danda: Kautilya

GENERIC ELECTIVES (GE-2) : Introduction to the Indian Constitution

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Introduction to the Indian Constitution GE-2	4	3	1	-	Passed Class XII	NIL

Learning Objectives

The course aims to introduce the students to the foundational text of constitutional democracy in India - the Indian Constitution. By providing an overview of the socio-political context of its origin and its basic tenets, which provide the organizing framework for democracy in India, the course expects to bring historical insights in making the constitutional text comprehensible. The course traces the history of the Constitution both in the colonial legislations and in the declaration and reports produced in the course of the Indian National Movement. It focuses on the creation and the working of the Constituent Assembly as part of a transformative vision for independent India. The basic features of the Constitution form the core themes of the course introducing students to the philosophy behind them and the final form in which they were adopted in the Indian Constitution to make it a document for social revolution. The course aims at providing students with both a textual and a contextual introduction to the Indian Constitution.

Learning outcomes

On successful completion of the course, the students will demonstrate

- Knowledge of the origin and contents of the Indian Constitution
- Awareness of the rights and duties of the citizens and the obligations of the state
- Familiarity with the functioning of constitutional governance in India and the division of power between different tiers of the government.

SYLLABUS OF GE-2

UNIT – I (8 Hours)

Constitutional antecedents and the making of the Constitution of India

UNIT – II (7 Hours)

Basic features of the Indian Constitution

UNIT – III (8 Hours)
Fundamental Rights

UNIT – IV (7 Hours)
Obligations of State and Duties of Citizens

UNIT – V (7 Hours)
Organs of Constitutional Governance- Legislature, Executive and Judiciary

UNIT – VI (8 Hours)
Centre-State Relations and Decentralization

Essential/recommended readings
Readings:

1. Constitutional antecedents and the making of the Constitution of India

(a) Constitutional antecedents

GENERIC ELECTIVES (GE-3): Nationalism in India

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Nationalism in India GE-3	4	3	1	-	Passed Class XII	NIL

Learning Objectives

The course aims to help students understand the national movement in India. It looks at the movement from different theoretical perspectives that highlight its varied dimensions. The course begins by looking at the Indian responses to colonial dominance in the nineteenth century, and traces the development of the anti-colonial struggle up to the mid-20th century. It successively focuses on the events leading to the Partition and the Independence in 1947. In the process, the course also tries to focus on the various tensions and debates within nationalism in India as it engaged with the questions of communalism, class struggle, caste and gender.

Learning outcomes

On successful completion of the course, students would:

- Gain an understanding of the different theoretical views on the emergence and development of nationalism in India and the tensions that existed between them
- Demonstrate knowledge of the historical trajectory of the development of the nationalist movement in India, with specific focus on its different phases
- Understand the contribution of various social movements in the anti-colonial struggle
- Demonstrate awareness of the history of partition and independence

SYLLABUS OF GE-3

UNIT – I (8 Hours)

Approaches to the Study of Nationalism in India: Nationalist, Imperialist, Marxist, and Subaltern

UNIT – II (8 Hours)

Reformism and Anti-Reformism in the Nineteenth Century: Major Social and Religious Movements in 19th century

UNIT – III (11 Hours)

Nationalist Politics and Expansion of its Social Base

a. Phases of Nationalist Movement: Liberal Constitutionalists; Swadeshi; Revolutionaries, Socialists and Communists; Beginning of Constitutionalism in India
b. Gandhi and Mass Mobilisation: Non-Cooperation Movement, Civil Disobedience Movement, and Quit India Movement
c. Socio-cultural Organizations and National Movement

UNIT – IV (9 Hours)

Social Movements

Peasants, Tribals, Workers, Women and anti-caste movements

UNIT – V (9 Hours)

Partition, Independence and Integration of states

Communalism in Indian Politics, The Two-Nation Theory and Partition, Independence and Integration of Indian States

Essential/recommended readings

GENERIC ELECTIVES (GE-4): Understanding International Relations

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Understanding International Relations GE-4	4	3	1	-	Passed Class XII	NIL

Learning Objectives

This course aims to make students understand the intersections between politics, economics, culture and nature that shape human life in the contemporary world. These intersectional relations foreground the multiple interactions that constitute the reality of the group life of humans. The issues around which the course is designed consists of the role of state in international politics, cultural identities such as the nation and, issues such as global poverty and global inequalities. Additionally, the course dwells on the psycho-cultural and politico-economic causes of violence, oppression and injustices that make the world a contested space. It examines the ways in which information technology shapes the course of human life in the age of globalization and how the phenomenon of the international manifests both in the virtual and the material world. Going beyond the Westphalian conception of territoriality, the course looks at the ways in which International Relations manifests in the realm of art/cinema/museums.

Learning outcomes

On successful completion of the course, students would be able to:

- Understand the nature of the contemporary world in which we live through connected histories, economies and societies.
- Analyze the ways in which our world is shaped in both territorial and non-territorial forms leading to basic planetary understandings of both human and non-human relations.
- Enhance cognitive abilities to map out the multiple and complex interactions in international relations between peoples, histories and civilisations.

- To understand the role of the state and its interface with the market, probe into the cultural identities of a nation, analyse global poverty and climate change politics.
- To critically analyse the politics of 'common yet differentiated responsibilities.'
- Think critically about issues of global inequalities, violence, and injustices in the age of globalization.
- Appreciate the ways in which aesthetic articulation(s) problematize and interrogate the international and our ways of being therein.

SYLLABUS OF GE-4

UNIT – I (7 Hours)
Making Sense of the World

1.1 What is International Relations?
1.2 Understanding Space: How do we sense our planet
1.3 Ways of knowing and being: - Peoples, Histories and Civilisations

UNIT – II (12 Hours)
States, Nations and Markets

2.1 State and Diffusion of authority/power
2.2 Nations and Nationalism
2.3 States and Markets

UNIT – III (12 Hours)
Inequalities

3.1 Politico-military inequalities: big states, small states
3.2 Economic inequalities: rich states, poor states
3.3 Climate Change: Global commons and differentiated responsibilities

UNIT – IV (7 Hours)
Sites of Conflict and Forms of Violence

4.1 Changing Landscape/ Nature of Conflict
4.2 Forms of Violence

UNIT – V (7 Hours)
Knowing our Virtual and Creative World: The Visual Turn in International Relations

5.1 Internet
5.2 Museums
5.3 Cinemas

Essential/recommended readings

1.1. What is International Relations?

GENERIC ELECTIVES (GE-5): Governance: Issues and Challenges

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Governance: Issues and Challenges GE-5	4	3	1	-	Passed Class XII	NIL

Learning Objectives

This paper deals with concepts and different dimensions of governance highlighting the major debates in the contemporary times. There is a need to understand the importance of the concept of governance in the context of a globalising world, environment, administration, development. The essence of governance is explored through the various good governance initiatives introduced in India.

Learning outcomes

On successful completion of the course, the students will be

- acquainted with the changing nature of governance in the era of globalization.
- introduced to the most contemporary ideas of sustainable development and green governance.
- familiarised with a rigorous introduction to the best practices in India on good governance.

SYLLABUS OF GE-5

UNIT – I (10 Hours)

Government and Governance: Concepts

a) Role of State in The Era of Globalisation

b) State, Market and Civil Society

UNIT – II (8 Hours)

Governance and Development

Changing Dimensions of Development Strengthening Democracy through Good Governance

UNIT – III (8 Hours)

Environmental Governance

a) Human-Environment Interaction

b) Green Governance: Sustainable Human Development

UNIT – IV (9 Hours)

Local Governance

a) Democratic Decentralisation

b) People's Participation in Governance

UNIT – V (10 Hours)

Good Governance Initiatives in India: Best Practices

a) Public Service Delivery

b) Electronic Governance

c) Citizens Charter & Right to Information

d) Corporate Social Responsibility

GENERIC ELECTIVES (GE-6): Western Political Philosophy

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Western Political Philosophy GE-6	4	3	1	-	Class XII	NIL

Learning Objectives

This course familiarizes the students with the manner in which the political questions are posed and answered normatively by select thinkers. The aim is to introduce to the students the questions, ideas and values of political philosophy addressed by political thinkers and juxtapose the same to contemporary political thinking.

Learning outcomes

By the end of the course students would be able to:

- Understand how to read and decode the classics and use them to engage contemporary socio-political issues.
- Connect with historically written texts and their interpretations.
- Clearly present their own arguments and thoughts about contemporary issues and develop ideas to engage with the latter.

SYLLABUS OF GE-6

UNIT – I (15 Hours)

Classical Political Philosophy

a) Plato
b) Aristotle

UNIT – II (30 Hours)

Renaissance and Modern Political Philosophy

a) Machiavelli
b) Hobbes
c) Rousseau
d) Mill
e) Marx

Essential/recommended readings

Unit 1

R. Kraut (1996) 'Introduction to the study of Plato', in R. Kraut (ed.) *The Cambridge Companion to Plato*. Cambridge: Cambridge University Press, pp. 1-50.

I. Hampsher-Monk (2001) *A History of Modern Political Thought: Major Political Thinkers from Hobbes to Marx,* Oxford: Blackwell Publishers.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

GENERIC ELECTIVES (GE-7): Politics of Globalisation

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Politics of Globalisation GE-7	4	3	1	-	Passed Class XII	NIL

Learning Objectives

This course examines the paradoxes of contemporary globalisation. It has been crafted in a manner as to introduce to the students from diverse disciplinary backgrounds the complex multifaceted nature of the contemporary phenomenon of globalization. Students will learn about the evolution of globalization by examining whether globalization is a mere historical process, or, it is also a socio-cultural, politico-economic and, psychological phenomenon and, understand these through different conceptual frames. It then makes the students understand the debates that have been put forth for and against globalization. The course introduces the discourse regarding the Eurocentric formulations of globalization and the ways in which the non-European voices have historically been marginalized in the shaping of Western modernity. Students will also learn about the political, economic and cultural facets of globalization. As a political phenomenon, the course seeks to understand as to how globalization has impacted upon the functioning of the sovereignty of nation-states. In the realm of economy, it introduces the impact of time/space compression upon the macroeconomic structures of trade and finance as well as the structural transformation that information and communications technology has brought in the working of the global political economy. As a cultural phenomenon, the course also discusses the new global mobilizations in the form of global social movements, movements of people across borders and the political and economic impact of global epidemics.

Learning outcomes

Upon successful completion of this course, students will have the knowledge and skills to:

- Understand the nature, significance, and principal debates in the literature on globalisation and the concept of globalization as both a historical process and, a socio-cultural phenomenon.
- Study various approaches which will augment student's knowledge on international political economy.
- Demonstrate basic knowledge of the interconnectedness of global issues, processes, and dynamics.
- Develop insight into the alternative understanding of globalisation and various critical aspects related to it like who are the beneficiaries in this process.
- Understand diverse global challenges like global migration and epidemics.
- Learn the ways in which globalization holds promise for a better world and a developed world and, at the same time, understand how it is laden with deep-seated tendencies to engender strands of inequalities and spur erosion of local cultures.

SYLLABUS OF GE-7

UNIT – I (9 Hours)
Conceptualizing Globalisation

1.1 Is Globalisation New? Historical Perspectives
1.2 Approaches to Understand globalisation
1.3 The Globalisation Debate

UNIT – II (9 Hours)
Globalization: A Eurocentric Project?

2.1 The Question of Post-Coloniality
2.2 Making Sense of Globalization for the People at the Margins

UNIT – III (9 Hours)
Sovereign State in a Globalised World

3.1 Political Dimensions
3.2 Shift from State to Market?

UNIT – IV (9 Hours)
Role of International Institutions: Multi-dimensionality of Globalisation

4.1 World Bank, International Monetary Fund, World Trade Organisation and, G-20
4.2 The Globalisation of Trade
4.3 Global Epidemics and Working of World Health Organization

UNIT – V (9 Hours)
Responses and Resistances to Globalization

5.1 Global Social Movements
5.2 International Migration

Essential/recommended readings

Unit 1. Conceptualizing Globalisation

Essential Readings

1.1 Is Globalisation New? Historical Perspectives

GENERIC ELECTIVES (GE-8): Introduction to Public Policy

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Introduction to Public Policy GE-8	4	3	1	-	Passed Class XII	NIL

Learning Objectives

The paper seeks to provide an understanding to the concept of Public Policy. Public Policy is a proposed course of action of a government to realize its socio-economic objectives. The essence of public policy lies in its effectiveness in translating the governing philosophy into programmes and policies and making it a part of community living. This course will help to understand the complexities of public policy and its interaction with the socio-economic structure.

Learning outcomes

By the end of this course a student will acquire the following knowledge and skills.

a. Contextualization of knowledge;
b. Praxis and technique;
c. Critical Thinking;
d. Research and Communication

SYLLABUS OF GE-8

UNIT – I (10 Hours)

Public Policy

(a) Concept, Characteristics and Significance

(b) Determinants of Public Policy
(c) Policy Impact: Socio-Economic

UNIT – II (10 Hours)
Theoretical Approaches to Public Policy

(a) Elite Theory
(b) Group Theory
(c) Incremental Theory
(d) Rational Choice Theory

UNIT – III (10 Hours)
Process of Public Policy

(a) Policy Formulation
(b) Policy Implementation
(c) Policy Evaluation

UNIT – IV (15 Hours)
Public Policy: Case Studies

(a) Education – National Education Policy (NEP) 2020
(b) Health – National Health Mission (NHM)
(c) Employment – Mahatma Gandhi National Rural Employment Guarantee Act (MNREGA)
(d) Economic Empowerment – Pradhan Mantri Jan-Dhan Yogana (PMJDY), Direct Benefit Transfer (DBT)

Essential/recommended readings

Unit 1

Anderson, J. (1975) Public Policy making. New York: Thomas Nelson and Sons Ltd.

Dye, T. (2002) Understanding Public Policy. New Delhi: Pearson.

Unit 2

Henry, Nicholos (2019) Public Administration and Public Affairs. New York: Routledge.

Simon, Herbert A. (1997) Administrative Behavior. New York: MacMillan.

Unit 3

Sapru, R.K. (1996) Public Policy: Formulation, Implementation and Evaluation. New Delhi: Sterling.

Self, Peter (1972) Administrative Theories and Politics. London: Allen and Unwin.

Unit 4

National Education Policy (NEP) 2020, Ministry of Human Resource Development, Government of India.

National Health Mission, Ministry of Health, Government of India.

Mahatma Gandhi National Rural Employment Guarantee Act-2005, Ministry of Rural Development, Government of India.

Note: **Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.**

GENERIC ELECTIVES (GE-9): Women and Politics in India: Concepts and Debates

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Women and Politics in India: Concepts and Debates GE-9	4	3	1	-	Passed Class XII	NIL

Learning Objectives

The course attempts to bring together feminist theory and praxis by focussing on conceptual categories theorized by feminism and the mobilization of the feminist epistemology to focus on key concerns surrounding the everyday existence of women. This course would serve as the fundament introduction to the history of women's movement with particular emphasis on the women's movement in India. The course opens up the question of women's agency, taking it beyond the question of women empowerment and locates women as radical social agents. It attempts to question the complicity of social structures and relations in preserving gender inequality. This is extended to cover new forms of precarious work and labour under the new economy.

Learning outcomes

After completing this course, the students will be able to:

- Understand the concept of patriarchy, feminism, gender, etc.
- Understand the intersection between family, community and state in feminist debates
- Demonstrate awareness of the history of the women's movement in India
- Show familiarity with and awareness of the key issues taken up by the women's movement

SYLLABUS OF GE-9

UNIT – I (8 Hours)
Patriarchy and Feminism

a. Sex-Gender Debates
b. Public and Private Dichotomy
c. Power

UNIT – II (7 Hours)
Family and Community

UNIT – III (7 Hours)

Law, State and Women

UNIT – IV (8 Hours)
History of the Women's Movement in India

UNIT – V (7 Hours)
Violence against women

UNIT – VI (8 Hours)
Women and Labour: Unpaid labour, Reproductive and care work, Sex work

GENERIC ELECTIVES (GE-10): Digital Social Sciences

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Digital Social Sciences GE-10	4	3	1	-	Passed Class XII	NIL

Learning Objectives

Digital technology in the discipline of Social Science cannot be viewed only as a tool for research but as something that transforms the nature of Social Science and the object of its study- the society- in course of researching about it. This very aspect of digital technology and its capacity for social transformation is the mainstay of the emerging field of Digital Social Sciences. The course aims to introduce students to this field of Digital Social Science sby primarily focussing on two intertwined aspects of the field- first, impact of digital technologies on the society and two, the role of digital technologies in the study of Social Sciences or the study of society. The intertwined aspect of the twin focus can be alternately formulated as the attempt of the course to understand social change taking place under the impact of digital technology while digital technology providing with the tools to map out these changes. The course begins with a basic introduction to digital literacy and its contribution to pedagogic Social Science and proceeds by way of foundational introduction to prominent technologies and digital spaces through which the aspects of the social can be understood. The course throws light on how the digital turn has redefined the contours of debates surrounding personal identity and social identification through biometrical techniques having consequences both for social welfare and social surveillance; whether access to the digital spaces is impacting social cleavages, creating space for democracy or re-entrenching social inequality through the digital divide; is the digital economy offering new forms of employment or restructuring the vulnerability of the forms of labour; and how is algorithm driven digital space reformulating social choice and social classification. These are some of the illustrative questions through which the course intends to reflect upon the evolving relationship between digital technologies and social sciences.

Learning outcomes

On successful completion of the course, the students would demonstrate:

- An understanding of digital technology and the ways in which it shapes the society.
- An understanding into how digital tools are used as research and pedagogic devises to map out social changes
- Clarity on concepts of the digital world such as Big Data, Artificial Intelligence, Algorithm, etc.
- Familiarity with digital techniques such as the biometrics and digital spaces such as the Social Media in the sphere of communication or the Gig Economy in the market sphere

SYLLABUS OF GE-10

UNIT – I (6 Hours)
Digital Literacy in Social Sciences

UNIT – II (7 Hours)
Digital Information and Science of Society

UNIT – III (6 Hours)
Biometrics and identification

UNIT – IV (7 Hours)
Access to Technology and the Internet

UNIT – V (7 Hours)
Social Media and Public Sphere

UNIT – VI (6 Hours)
Labour in Digital Economy

UNIT – VII (6 Hours)
Artificial Intelligence and Algorithm

POLITICAL SCIENCE- SEMESTER-V

Category I

(B.A. Honours in Political Science in three years)

STRUCTURE OF FIFTH SEMESTER

DISCIPLINE SPECIFIC CORE COURSE – 13: Western Political Philosophy - I

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Western Political Philosophy - I DSC-13	4	3	1	-	Passed Class XII	NIL

Learning Objectives

This course goes back to Greek antiquity and familiarizes the students with the manner in which the political questions were first posed and answered normatively. The aim is to introduce to the students the questions, ideas and values of political philosophy addressed by political thinkers and juxtapose the same to contemporary political thinking. The course aims to provide a critical grasp of the philosophical issues at the heart of politics.

Learning outcomes

By the end of the course students would be able to:

- Understand how to read and decode the classics and use them to engage contemporary socio-political issues.
- Connect with historically written texts and their interpretations.
- Clearly present their own arguments and thoughts about contemporary issues and develop ideas to engage with the latter.

SYLLABUS OF DSC-13

UNIT – I (8 Hours)
Text and Interpretation

UNIT – II (14 Hours)
Antiquity

Plato

Philosophy and Politics, Virtues, Justice, Philosopher King/Queen, Communism, Plato on Democracy, Women and Guardianship, Philosophic Education and Good

Aristotle

Man as zoon politikon, State and Household, Citizenship, Justice, Virtue, Regimes

UNIT – III (8 Hours)

Interlude:

Machiavelli

Vice and Virtue, Power, Political ethics, Religion and morality, Republicanism, statecraft

UNIT – IV (15 Hours)

Possessive Individualism

Hobbes

Human nature, State of Nature, Social Contract and the role of consent, State and sovereignty

Locke

Laws of Nature, Natural Rights, Consent, Justification of Property, Right to Resist, Toleration

Essential/recommended readings

		Lecture	Tutorial	Practical/ Practice		
Modern Indian Political Thought DSC-14	**4**	**3**	**1**	**-**	**Passed Class XII**	**NIL**

Learning Objectives

The objective of this course is to study important themes through individual thinkers. The course has been designed to give students a glimpse of the richness and diversity within Indian political thought. The thinkers have been consciously selected to represent a wide spectrum of ideologies and vantage points within the modern Indian thought tradition. Selected extracts from original texts are also included to be discussed in the class. This will help students to have experience in understanding how these thinkers build up their arguments and develop their views on the respective themes.

Learning outcomes

After studying this course, the students will be able to:

- Develop critical understanding about modern Indian thought.
- Thematically explore ideas in order to locate the topical debates on important subjects on a historical trajectory
- Reflect over the diverse possibilities exhibited in the writings of the respective thinkers.
- Think about issues and debates in contemporary India from multiple vantage points including its historical significance in the Indian tradition.

- Develop toleration and respect for diverse opinion and at the same time, to admire and appreciate the plurality within the modern Indian intellectual tradition.

SYLLABUS OF DSC- 14

DISCIPLINE SPECIFIC CORE COURSE – 15: Political Process in India

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Political Process in India DSC 15	**4**	**3**	**1**	**-**	**Passed Class XII**	**NIL**

Learning Objectives

This course aims at familiarising the students with the processes through which politics makes itself manifest in India. It involves looking at the different modes through which power is exercised and dispersed in society along the axes of caste, class, religion, ethnicity and gender. It seeks insights from political sociology to understand how political process is mediated through and structured by various forms of social power. It enables students to comprehend the relationship between caste, religion and politics, the constitutional recognition and institutional arrangements for self-government, autonomy and development in the context of tribal communities as reflected in the Fifth and Sixth Schedules, and the various constitutional and legal provisions that enable the state to empower the marginalised and vulnerable in society. It also provides students with the analytical tools for understanding the different dimensions of the Indian state as it governs through regulation, welfare and coercion. The course enables the students to understand the party system in India, its changing form in response to democratic churnings and electoral competition, and the role played by them in the articulation of political power. It draws attention to the constitutional, statutory and institutional arrangements for regulating electoral competition through the study of electoral reforms and the Election Commission of India.

Learning outcomes

On successful completion of the course, the students will demonstrate:

- Understanding of political process in India and its interaction with social cleavages of caste, class, gender, ethnicity and religion
- Familiarity with the ways in which the state in India responds to social groups and vulnerable sections
- Knowledge of political parties and the party system in India
- Awareness of the manner in which representation and electoral competition play out in Indian politics

SYLLABUS OF DSC-15

UNIT – I (8 Hours)
Political Parties and the Party System

Political Parties: National and State Parties;
Trends in the Party System: From the Congress System to ascendancy of Bhartiya Janata Party

UNIT – II (7 Hours)
Elections and Electoral Processes

Electoral Process, Representation and social determinants of voting behaviour; Election Commission and Electoral Reforms

UNIT – III (8 Hours)
Religion and Politics

Debates on Secularism and Communalism

UNIT – IV (8 Hours)
Caste and Politics

Caste in Politics and the Politicization of Caste; Intersectionality of Caste, Class and Gender, reservation and affirmative action policies

UNIT – V (7 Hours)
Tribes and Politics

Policies and Challenges: Fifth and Sixth Schedules; Forest Rights Act; Development and Issues of Displacement

UNIT – VI (7 Hours)
Dimensions of the State in India

Welfare, Regulatory and Coercive

Discipline Specific Elective (DSE) Courses for Sem – V

DISCIPLINE SPECIFIC ELECTIVE COURSE – 3a: International Political Economy

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
International Political Economy DSE-3a	4	3	1	-	Passed Class XII	NIL

Learning Objectives

This course introduces to the students the significant linkages that exist between politics and economics in the domain of International Relations by apprising them about the meaning, nature and conceptual foundations of the field of International Political Economy. In doing this the course examines the structural functional linkages that exist between the macro-economic global structure and the systemic contours of global politics. Students will learn about the traditional as well as critical theoretical frameworks employed to examine the nature and functioning of international political economy. These theories include economic nationalism, liberalism and neo-Marxism on the one hand and historical sociology, feminism and postcolonialism on the other. Based on these conceptual and theoretical foundations, the course then attempts at delineating the major issues pertaining to the nature and functioning of the global political economy specially focusing on international trade, development and finance. The course also looks at the key constitutive elements of global economic governance including multilateral and regional institutions, regimes and multinational corporations. Further, the course introduces the students to key concerns pertaining to global economic crises, and the indicators of information communications technology (ICT), cyber economy and the global civil society.

Learning outcomes

By the completion of the course the students would be able to:

- Develop a basic understanding of the structural functional linkages that connect the realms of politics and economics.
- Learn to use the conceptual tools and theoretical frameworks for understanding the nature and basic functioning of the international political economy.
- Understand the structural drivers that determine the contours of international trade and finance.
- Develop an understanding about the Global South's contribution to this field both in the domain of ideas and working of the global political economy.
- Understand how our economic life is getting transformed on account of the information and communication technology, the cyber economy and interventions of the global civil society.

SYLLABUS OF DSE-3a

UNIT – I (2 Hours)

Introduction: Understanding the intersectionality between politics and economy

UNIT – II (14 Hours)

Theoretical Perspectives

a. Economic Nationalism, Liberalism and Structuralism
b. Historical Sociology, Feminism and Postcolonialism

UNIT – III (12 Hours)

International Trade and Development

a. International trade
b. Multinational corporations
c. Perspectives from the Global South and the Indian Story

UNIT – IV (8 Hours)

International Finance

a. International finance and monetary structure
b. International and regional financial institutions

UNIT – V (9 Hours)

New Directions and New Challenges

a. ICT and Cyber economy
b. Economic Crises
c. Global Civil Society

Essential/recommended readings

Unit 1. Introduction: Understanding the intersectionality between politics and economy

Essential Readings

DISCIPLINE SPECIFIC ELECTIVE COURSE – 3b: Understanding Ambedkar

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Understanding Ambedkar DSE-3b	4	3	1	-	Passed Class XII	NIL

Learning Objectives

This course is broadly intended to introduce Ambedkar's ideas and their relevance in contemporary India, by looking beyond caste. Ambedkar's philosophical contributions towards Indian economy and class question, sociological interpretations on religion, gender, caste and cultural issues; ideas on politics such as concepts of nation, state, democracy, law and constitutionalism are to be pedagogically interrogated and interpreted. This will help students to critically engage themselves with the existing social concerns, state and economic structures and other institutional mechanisms. This also will facilitate them to strengthen their creative thinking with a collective approach to understand ongoing social, political, cultural and economic issues of the society.

Learning outcomes

The course is designed to provide students the original writings and ideas of Ambedkar on diverse issues beyond caste and equip them to critically engage with the ideas, interpretations. By engaging with the original sources as well as secondary writings on Ambedkar's ideas that cover, caste, class, gender, religion, state, democracy and constitution the students will be able to understand a thinker in the context and contemporaneity. At the end of the course, students shall be equipped with the method of understanding the ideas, philosophy and relevance of a particular thinker. Students shall also be able to reflect on the method of the thinker's engagement with the then context, issues and concepts. Finally, the students shall be equipped in understanding the conceptual and philosophical diversity, situatedness and significance of Ambedkar beyond his contribution in the sphere of social justice and drafting the Indian constitution. The course thus

provides an opportunity to the students to understand Ambedkar for his several important contributions in the field of religion, state, democracy, gender, economy and history.

SYLLABUS OF DSE-3b

UNIT – I (3 Hours)
Introducing Ambedkar

Approach to Study Polity, History, Economy, Religion and Society

UNIT – II (10 Hours)
Caste and Religion

Caste, Untouchability and Critique of Hindu Social Order
Islam and Partition of India
Religion and Conversion

UNIT – III (8 Hours)
Women's Question

Ambedkar on Women
Hindu Code Bill
Uniform Civil Code

UNIT – IV (8 Hours)
Political Vision

Nation and Nationalism
Democracy and Citizenship

UNIT – V (8 Hours)
Constitutionalism

Rights and Representations
Constitution as an Instrument of Social Transformation

UNIT – VI (8 Hours)
Economy and Class Question

Planning and Development
Land and Labour References

Political Science Courses for Undergraduate Programme of study with Political Science as one of the Core Disciplines

(B.A. Programmes with Political Science as Major discipline)

DISCIPLINE SPECIFIC CORE COURSE (DSC-5A): Introduction to International Relations

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Introduction to International Relations MDSC-5A	4	3	1	-	Passed Class XII	Nil

Learning Objectives

This course introduces students to the historical and conceptual foundations of the discipline of IR. It discusses the evolution of the discipline in the aftermath of the Second World War with theories being its main foundation and the lens through which it understood and explained the world. The disputations and challenges to these theories led to the emergence of "debates" which are then discussed and understood as the disciplines' dominant 'self-image'. This is followed by an elaboration of the discipline's major theoretical frameworks, each giving a different picture of the world — realism/neorealism, liberalism/neoliberalism, Marxism/Neo-Marxism and feminism. The course then examines major concepts–such as power, state and human rights. Students will also learn about the global governance with a case study of climate change negotiations. Finally, the course introduces scholarship from India within the wider context of Global South towards the development of a more inclusive IR from a Non-Western perspective.

Learning outcomes

At the end of the course students will be able to:

- Understand the ways in which IR as a discipline evolved from a Eurocentric vantage point to the emergence of a critical movement to shape a more inclusive, historical and a global IR.
- Appreciate the ways in which scholarship from postcolonial countries such as India contribute to understanding the world around us.
- Analyse key concepts and concerns of IR such as war and peace, state, sovereignty and human rights to understand how these forces shape the world towards more efficient global governance.
- Develop critical understandings of power hierarchies and unequal relationships through the lens of feminism and Marxism.
- Understand the important aspects of Non-Western IR that can help students investigate and shape the future course of the discipline.
- Develop a basic understanding of the Indian contributions to the discipline of international relations.

SYLLABUS OF MDSC-5A

UNIT – I (9 Hours)
Disciplinary history of International Relations

1.1. What is International Relations?
1.2. Debates: Idealism/Realism & Science/Classical Methods, Inter-paradigm Debate

UNIT – II (16 Hours)
Theories of International Relations

2.1. Realpolitik/Realism/Neo-realism
2.2. Liberalism/Neo-liberalism
2.3. Marxism/Neo-Marxism
2.4. Feminism

UNIT – III (14 Hours)
Concepts & Issues

3.1. State and Sovereignty
3.2. War and Peace
3.3. Human Rights
3.4. Global governance: climate change negotiations

UNIT – IV (6 Hours)
IR Beyond Eurocentrism

4.1 Non-western Perspectives
4.2 Indian Contributions to International Relations

Essential/recommended readings

Unit 1. Disciplinary history of IR

1.1. What is IR?

Essential Readings

Grieco, Joseph, John Ikenberry and Michael Mastanduno, (2014) *Introduction to International Relations: Enduring Questions and Contemporary Perspectives*, New York: Palgrave Macmillan, Chapter one, pp. 2-30.

Devetak, Richard, Anthony Burke and Jim George, (2007), *An introduction to International Relations*, Cambridge: Cambridge University Press, Introduction, pp. 1-18.

Additional Readings

Mansbach, Richard W. and Kirsten L Taylor, 2008, *Introduction to Global Politics*, New York: Routledge, Chapter two, pp. 1-32.

Reus-Smit, Christian, 2020, *A Very short introduction to International Relations*, Oxford University Press, Chapter one, 7-27.

1.2. Debates: Idealism/Realism & Science/Classical Methods and Inter-paradigm Debate

Essential Readings

Tim Dunne, Milja Kurki, and Steve Smith, (eds.) (2013), *International Relations Theories, Discipline and Diversity*, Oxford University Press: UK, 3rd edition. Chapter one. pp. 1-13.

Mansbach, Richard W. and Kirsten L Taylor, (2008), *Introduction to Global Politics*, New York: Routledge, Chapter one. pp 9-24.

Waever, O., (1996). The rise and fall of the inter-paradigm debate. In S. Smith, K. Booth, & M. Zalewski (Eds.), International theory: Positivism and beyond. Cambridge: Cambridge University Press. pp. 149-185.

Additional Readings

Weber, Cynthia, (2005), *International Relations Theory: A Critical Introduction*, London: Routledge. Chapter one. pp. 1-12.

Mearsheimer, J. (2005), "E.H. Carr vs Idealism: The Battle Rages On", *International Relations,* 19(2), pp. 139-153.

Mingst A. Karen and Jack L. Snyder (2017*),* Woodrow Wilson: The Fourteen Points*, Essential Readings in World politics,* 6th edition, US: W.W. Norton and Company, pp. 32-34.

Unit 2: Theories of IR

2.1. Realpolitik/Realism/Neo-realism

Essential Readings

Nirmal Jindal, (2020). Kautilya's Realpolitik 'in Nirmal Jindal, Kamal Kumar, (eds.) International Relations: Theory and Practice, Sage Publications, India. Pp.151-170.

DISCIPLINE SPECIFIC CORE COURSE (DSC-5B): Modern Indian Political Thought

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Modern Indian Political Thought MDSC-5B	4	3	1	-	Passed Class XII	NIL

Learning Objectives

The objective of this course is to study important themes through individual thinkers. The course has been designed to give students a glimpse of the richness and diversity within Indian political thought. The thinkers have been consciously selected to represent a wide spectrum of ideologies and vantage points within the modern Indian thought tradition. Selected extracts from original texts are also included to be discussed in the class. This will help students to have experience in understanding how these thinkers build up their arguments and develop their views on the respective themes.

Learning outcomes

After reading this course, the students will be able to:

- Develop critical understanding about modern Indian thought.
- Thematically explore ideas in order to locate the topical debates on important subjects on a historical trajectory
- Reflect over the diverse possibilities exhibited in the writings of the respective thinkers.
- Think about issues and debates in contemporary India from multiple vantage points including its historical significance in the Indian tradition.
- Develop toleration and respect for diverse opinion and at the same time, to admire and appreciate the plurality within the modern Indian intellectual tradition.

SYLLABUS OF MDSC-5B

UNIT – I (4 Hours)
Understanding Modern Indian Political Thought

UNIT – II (8 Hours)
Nation and Nationalism

Swami Vivekananda, Rabindranath Tagore and Gandhi

UNIT – III (10 Hours)

State and Democracy

Jawaharlal Nehru, Deendayal Upadhyay, Ram Manohar Lohia, and Bhimrao Ramji Ambedkar

UNIT – IV (8 Hours)

Rights

Rammohan Roy, Tarabai Shinde

UNIT – V (8 Hours)

Swaraj

Bal Gangadhar Tilak, Mohandas Karamchand Gandhi

UNIT – VI (7 Hours)

Hindutva and Hinduism

Savarkar

Category III

Political Science Courses for Undergraduate Programme of study with Political Science as one of the Core Disciplines

(B.A. Programmes with Political Science as non-Major or Minor discipline)

DISCIPLINE SPECIFIC CORE COURSE (DSC-5A): Introduction to International Relations

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Introduction to International Relations MDSC-5A	4	3	1	-	Passed Class XII	NIL

Learning Objectives

This course introduces students to the historical and conceptual foundations of the discipline of IR. It discusses the evolution of the discipline in the aftermath of the Second World War with theories being its main foundation and the lens through which it understood and explained the world. The disputations and challenges to these theories led to the emergence of "debates" which are then discussed and understood as the disciplines' dominant 'self-image'. This is followed by an elaboration of the discipline's major theoretical frameworks, each giving a different picture of the world — realism/neorealism, liberalism/neoliberalism, Marxism/Neo-Marxism and feminism. The course then examines major concepts–such as power, state and human rights. Students will also learn about the global governance with a case study of climate change negotiations. Finally, the course introduces scholarship from India within the wider context of Global South towards the development of a more inclusive IR from a Non-Western perspective.

Learning outcomes

At the end of the course students will be able to:

- Understand the ways in which IR as a discipline evolved from a Eurocentric vantage point to the emergence of a critical movement to shape a more inclusive, historical and a global IR.
- Appreciate the ways in which scholarship from postcolonial countries such as India contribute to understanding the world around us.
- Analyse key concepts and concerns of IR such as war and peace, state, sovereignty and human rights to understand how these forces shape the world towards more efficient global governance.
- Develop critical understandings of power hierarchies and unequal relationships through the lens of feminism and Marxism.
- Understand the important aspects of Non-Western IR that can help students investigate and shape the future course of the discipline.
- Develop a basic understanding of the Indian contributions to the discipline of international relations.

SYLLABUS OF MDSC-5A

UNIT – I (9 Hours)
Disciplinary history of IR

1.1. What is International Relations?
1.2. Debates: Idealism/Realism & Science/Classical Methods, Inter-paradigm Debate

UNIT – II (16 Hours)
Theories of IR

2.1. Realpolitik/Realism/Neo-realism
2.2. Liberalism/Neo-liberalism
2.3. Marxism/Neo-Marxism
2.4. Feminism

UNIT – III (14 Hours)
Concepts & Issues

3.1. State and Sovereignty
3.2. War and Peace
3.3. Human Rights
3.4. Global governance: climate change negotiations

UNIT – IV (6 Hours)
IR Beyond Eurocentrism

4.1 Non-western Perspectives
4.2 Indian Contributions to IR

Essential/recommended readings

Unit 1. Disciplinary history of IR

1.1. What is IR?

Essential Readings

Grieco, Joseph, John Ikenberry and Michael Mastanduno, (2014) *Introduction to International Relations: Enduring Questions and Contemporary Perspectives*, New York: Palgrave Macmillan, Chapter one, pp. 2-30.

Devetak, Richard, Anthony Burke and Jim George, (2007), *An introduction to International Relations*, Cambridge: Cambridge University Press, Introduction, pp. 1-18.

Additional Readings

Mansbach, Richard W. and Kirsten L Taylor, 2008, *Introduction to Global Politics*, New York: Routledge, Chapter two, pp. 1-32.

Reus-Smit, Christian, 2020, *A Very short introduction to International Relations*, Oxford University Press, Chapter one, 7-27.

1.2. Debates: Idealism/Realism & Science/Classical Methods and Inter-paradigm Debate

Essential Readings

Tim Dunne, Milja Kurki, and Steve Smith, (eds.) (2013), *International Relations Theories, Discipline and Diversity*, Oxford University Press: UK, 3rd edition. Chapter one. pp. 1-13.

Mansbach, Richard W. and Kirsten L Taylor, (2008), *Introduction to Global Politics*, New York: Routledge, Chapter one. pp 9-24.

Waever, O., (1996). The rise and fall of the inter-paradigm debate. In S. Smith, K. Booth, & M. Zalewski (Eds.), International theory: Positivism and beyond. Cambridge: Cambridge University Press. pp. 149-185.

Additional Readings

Weber, Cynthia, (2005), *International Relations Theory: A Critical Introduction*, London: Routledge. Chapter one. pp. 1-12.

Mearsheimer, J. (2005), "E.H. Carr vs Idealism: The Battle Rages On", *International Relations,* 19(2), pp. 139-153.

Mingst A. Karen and Jack L. Snyder (2017*),* Woodrow Wilson: The Fourteen Points*, Essential Readings in World politics,* 6th edition, US: W.W. Norton and Company, pp. 32-34.

Unit 2: Theories of IR

2.1. Realpolitik/Realism/Neo-realism

Essential Readings

Nirmal Jindal, (2020). Kautilya's Realpolitik 'in Nirmal Jindal, Kamal Kumar, (eds.) International Relations: Theory and Practice, Sage Publications, India. Pp.151-170.

Baylis, John and Steve Smith (2001), "Realism", *The Globalisation of World Politics: An Introduction to International Relations*, New York: Oxford University Press. pp. 141-161.

Additional Readings

Malviya, Ritambhara (2020), "Realism and neorealism", in Nirmal Jindal, Kamal Kumar, (eds.) *International Relations: Theory and Practice*, Sage Publications, India. pp.151-170., Chapter 4, 59-74.

Richard Ned Lebow, "Classical Realism," and John J. Mearsheimer, "Structural Realism," in Tim Dunne, Milja Kurki, and Steve Smith, (eds.) (2013) *International Relations Theories, Discipline and Diversity*. Oxford University Press: UK, 3rd edition, pp. 59-93.

Waltz, Kenneth, *An Interview on a Theory of International Relations and the Role of structure*, Online at http://globetrotter.berkeley.edu/people3/Waltz/waltz-con0.html

2.2. Liberalism/Neo-liberalism

Essential Readings

Baylis, John and Steve Smith (2001), "Liberalism", *The Globalisation of World Politics: An Introduction to International Relations*, New York: Oxford University Press. pp. 162-181.

Robert Jackson, Georg Sørensen (2019). 'Liberalism 'in *Introduction to International Relations, Theories and Approaches*, Oxford University Press: New York, Chapter 4, pp.107-142.

Additional Readings

Jon C. W. Pavehouse and Joshua S. Goldstein, (2018). "Chapter 3-Liberal and Social Theories," in *International Relations*, 11th Edition, Pearson: New York, pp. 83-121.

Doyle, Michael W. (1986), "Liberalism and World Politics", *The American Political Science Review*, December, Vol. 80, no. 4, pp.1151-1169.

Keohane, Robert O. (2012), "Twenty Years of Institutional liberalism", *International Relations,* 26:2, pp. 125-138.

2.3. Marxism/Neo-Marxism

Essential Readings

Hobden Stephen and Richard Wyn Jones (2014), “Marxist theories of International Relations”, in John Baylis, Steve Smith and Patricia Owens (et.al), *The Globalization of World Politics*, Sixth Edition, UK: Oxford, pp.116-129.

Wallerstein, I. (2000), “The Rise and Future Demise of World Capitalist System: Concepts for Comparative Analysis”, in Michael Smith and Richard Little (eds), *Perspectives on World Politics*, New York: Routledge, pp. 305-317.

Additional Readings

Discipline Specific Elective (DSE) Courses for Sem – V
[Category II and III – Multidisciplinary]

DISCIPLINE SPECIFIC ELECTIVE COURSE – 3a: International Political Economy

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
International Political Economy MDSE-3a	4	3	1	-	Passed Class XII	NIL

Learning Objectives

This course introduces to the students the significant linkages that exist between politics and economics in the domain of International Relations by apprising them about the meaning, nature and conceptual foundations of the field of International Political Economy. In doing this the course examines the structural functional linkages that exist between the macro-economic global structure and the systemic contours of global politics. Students will learn about the traditional as well as critical theoretical frameworks employed to examine the nature and functioning of international political economy. These theories include economic nationalism, liberalism and neo-Marxism on the one hand and historical sociology, feminism and postcolonialism on the other. Based on these conceptual and theoretical foundations, the course then attempts at delineating the major issues pertaining to the nature and functioning of the global political economy specially focusing on international trade, development and finance. The course also looks at the key constitutive elements of global economic governance including multilateral and regional institutions, regimes and multinational corporations. Further, the course introduces the students to key concerns pertaining to global economic crises, and the indicators of information communications technology (ICT), cyber economy and the global civil society.

Learning outcomes

By the completion of the course the students would be able to:

- Develop a basic understanding of the structural functional linkages that connect the realms of politics and economics.
- Learn to use the conceptual tools and theoretical frameworks for understanding the nature and basic functioning of the international political economy.
- Understand the structural drivers that determine the contours of international trade and finance.
- Develop an understanding about the Global South's contribution to this field both in the domain of ideas and working of the global political economy.
- Understand how our economic life is getting transformed on account of the information and communication technology, the cyber economy and interventions of the global civil society.

SYLLABUS OF MDSE-3a

UNIT – I (2 Hours)

Introduction: Understanding the intersectionality between politics and economy

UNIT – II (14 Hours)

Theoretical Perspectives

c. Economic Nationalism, Liberalism and Structuralism
d. Historical Sociology, Feminism and Postcolonialism

UNIT – III (12 Hours)

International Trade and Development

a. International trade
b. Multinational corporations
c. Perspectives from the Global South and the Indian Story

UNIT – IV (8 Hours)

International Finance

a. International finance and monetary structure
b. International and regional financial institutions

UNIT – V (9 Hours)

New Directions and New Challenges

a. ICT and Cyber economy
b. Economic Crises
c. Global Civil Society

Essential/recommended readings

Unit 1. Introduction: Understanding the intersectionality between politics and economy

Essential Readings

DISCIPLINE SPECIFIC ELECTIVE COURSE – 3b: Understanding Ambedkar

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Understanding Ambedkar MDSE-3b	4	3	1	-	Passed Class XII	Nil

Learning Objectives

This course is broadly intended to introduce Ambedkar's ideas and their relevance in contemporary India, by looking beyond caste. Ambedkar's philosophical contributions towards Indian economy and class question, sociological interpretations on religion, gender, caste and cultural issues; ideas on politics such as concepts of nation, state, democracy, law and constitutionalism are to be pedagogically interrogated and interpreted. This will help students to critically engage themselves with the existing social concerns, state and economic structures and other institutional mechanisms. This also will facilitate them to strengthen their creative thinking with a collective approach to understand ongoing social, political, cultural and economic issues of the society.

Learning outcomes

The course is designed to provide students the original writings and ideas of Ambedkar on diverse issues beyond caste and equip them to critically engage with the ideas, interpretations. By engaging with the original sources as well as secondary writings on Ambedkar's ideas that cover, caste, class, gender, religion, state, democracy and constitution the students will be able to understand a thinker in the context and contemporaneity. At the end of the course, students shall be equipped with the method of understanding the ideas, philosophy and relevance of a particular thinker. Students shall also be able to reflect on the method of the thinker's engagement with the then context, issues and concepts. Finally, the students shall be equipped in understanding the conceptual and philosophical diversity, situatedness and significance of Ambedkar beyond his contribution in the sphere of social justice and drafting the Indian constitution. The course thus

provides an opportunity to the students to understand Ambedkar for his several important contributions in the field of religion, state, democracy, gender, economy and history.

SYLLABUS OF MDSE-3b

UNIT – I (3 Hours)
Introducing Ambedkar

Approach to Study Polity, History, Economy, Religion and Society

UNIT – II (10 Hours)
Caste and Religion

Caste, Untouchability and Critique of Hindu Social Order
Islam and Partition of India
Religion and Conversion

UNIT – III (8 Hours)
Women's Question

Ambedkar on Women
Hindu Code Bill
Uniform Civil Code

UNIT – IV (8 Hours)
Political Vision

Nation and Nationalism
Democracy and Citizenship

UNIT – V (8 Hours)
Constitutionalism

Rights and Representations
Constitution as an Instrument of Social Transformation

UNIT – VI (8 Hours)
Economy and Class Question

Planning and Development
Land and Labour References

SEMESTER-VI
DEPARTMENT OF POLITICAL SCIENCE
Category I

(B.A. Honours in Political Science in three years)

DISCIPLINE SPECIFIC CORE COURSE – 16: Public Policy

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Public Policy DSC-16	4	3	1	-	Passed Class XII	Nil

Learning Objectives

The success of government lay at good policy making and their effective implementation. Public policies are intended at securing a good life for the people and the citizens. The present course comprises of all aspects of the public policy i.e., how is it formed, what are the forces and factors that shape it, how is it monitored, implemented and evaluated. The module gives the conceptual understanding of public policy and provides insights to critically examine them in normative and empirical frameworks.

Learning outcomes

After reading this module students will learn:

- The meaning of public policy and how different theories have emerged to understand it.
- How public policies are formulated? What are the agencies involved in it?
- How Public policies are monitored and evaluated? What are the important tools for it?
- What are the principles that are normally employed to evaluate public policies?
- What is corporate social responsibility and why it is important for the corporates to take up this responsibility?

SYLLABUS OF DSC-16

UNIT – I (8 Hours)

Introduction

a. Formulation, implementation and evaluation
b. Theories of Public Policy: Elite Theory, Group Theory, Incremental Theory, Political System Theory, Public Process Theory

UNIT – II (14 Hours)

Public Policy Design and Implementation

a. Policy Design: What, Who, How and Why (Michael Howlett), Herbert Simon

b. Policy Monitoring: Tools and Techniques
c. Policy Implementation, Decentralization and Local Government in Public Policy implementation
d. State Capacity Building (Francis Fukuyama)

UNIT – III (8 Hours)

Public Policy Evaluation

a. Principles for evaluation
b. Methods and Techniques of Evaluation

UNIT – IV (15 Hours)

Politics of Policy

a. Normative analysis of policy issues
b. The interrelationship between Business and Government Policy, Corporate Social Responsibility
c. The interrelationship between Nongovernmental Organisations and Government Policy

DISCIPLINE SPECIFIC CORE COURSE – 17: Comparative Political Systems

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Comparative Political Systems DSC-17	4	3	1	-	Passed Class XII	Nil

Learning Objectives

The aim of this course is to train students in the application of comparative methods to the study of different political systems with respect to institutions and their functioning in these countries from a comparative perspective.Students will be familiarised with the defining features like political tradition, state formation, constitution and division of power, structure of government, electoral system, political parties, party system, and the contemporary social and economic challenges in these societies.

Learning outcomes

This paper will provide students with a comprehensive understanding of a range ofpolitical systems fromdifferent continentsin a historical context. The students will engage in studying different countries in detail with reference to their political tradition and state formation, constitution and division of power, political parties and elections, political economy and contemporary challenges. The critical analysis of different political systems will delineate the institutional structures, processes and their functioning in these systems. The course content would also help students develop analytical skills to understand not just the similarities and differences but the uniqueness of some cases as well that highlight how the matrix of diverse determinants and variables result in different discourses in different countries.

DISCIPLINE SPECIFIC CORE COURSE – 18: India's Foreign Policy: Challenges and Strategies

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
India's Foreign Policy: Challenges and Strategies DSC 18	**4**	**3**	**1**	**-**	**Passed Class XII**	**Nil**

Learning Objectives

This course seeks to equip students to engage with the key sources, theoretical underpinnings, and the structural/functional dimensions of the foreign policymaking processes in India. Theoretical grounding will apprise students about the shift in India's identity as a postcolonial state to an 'emerging power' in the contemporary multipolar world. It will familiarize the students with the domestic, regional and international drivers and constraints; how these intersect and have shaped the evolution and practice of India's foreign policy. Students will learn about critical issues and developments of its foreign policy at the bilateral, regional, and global levels with a special focus on India's bargaining strategies and positioning in international climate change negotiations, international economic governance and international security regimes. It will develop analytical skills among the students to comprehend the impending foreign policy conundrums and give students a basic yet nuanced understanding of India's opportunities and challenges in its foreign policymaking in the contemporary world.

Learning outcomes

At the end of this course, the students would have acquired:

- basic knowledge of the sources, theoretical perspectives and key drivers of India's foreign policy.
- analyse the opportunities and challenges India faces in securing its interests as an emerging global power.
- an insight about India's position in changing global power equations particularly its bilateral ties with powerful nations like the US and Russia along with India's largest neighbour, China.
- an enhanced understanding of India's sub-regional, regional, and global issues of concern.

- grasp of India's negotiation strategies in dealing with global trade, environment, and security regimes.
- recognise the ways in which India deploys its soft power in the world.

SYLLABUS OF DSC-18

UNIT – I (10 Hours)
India's Foreign Policy: As a postcolonial state

a. Sources of India's Foreign Policy
b. Theorizing India's Foreign Policy
c. Dimensions of India's Foreign Policy: Domestic and International
d. From Non-Alignment to Strategic Engagements in a Multipolar World

UNIT – II (9 Hours)
India and the Changing Global Power Equations

a. India and the USA
b. India and Russia
c. India and China

UNIT – III (9 Hours)
India in South Asia: Issues and Challenges

a. Issues: Land and boundary, Migration, and Refugee crisis
b. Debating Regional Strategies: SAARC and BIMSTEC

UNIT – IV (10 Hours)
Challenges of India's Foreign Policy in the Global Domain

a. Negotiating Styles and Strategies: Trade, Security and Climate Change
b. India's Engagements in Multilateral Forums: BRICS

UNIT – V (7 Hours)
India as an Emerging Power

a. India in the Changing International Order
b. Soft power diplomacy

Essential/recommended readings

Unit 1: India's Foreign Policy: As a postcolonial state

1.a. Sources of India's Foreign Policy

Essential Readings

Shahi, D. (2019). *Kautilya and Non-Western IR Theory*. Switzerland: Palgrave Pivot, pp. 95-126.

Rajagopalan, S. (2014). "Grand Strategic Thought" in the Ramayana and Mahabharata. In Kanti Bajpai, Saira Basit and V. Krishnappa (eds.), *India's Grand Strategy: History, Theory, Cases* (1st ed.,) (pp. 31-62). New Delhi: Routledge.

Additional Readings

Jaishankar, S. (2021). *The India Way: Strategies for an Uncertain World*. New Delhi: Harper Collins India, pp. 45-68.

Narlikar, A., & Narlikar, A. (2014). *Bargaining with a Rising India: Lessons from the Mahabharata*. Oxford: OUP, pp. 1-23.

Dixit, J.N. (1998). *Across Borders: Fifty Years of India's Foreign Policy.* New Delhi: Thomson Press, pp. 1-13.

Discipline Specific Elective (DSE) Courses for Sem – VI

DISCIPLINE SPECIFIC ELECTIVE COURSE – 4a: Understanding Security

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Understanding Security DSE-4a	4	3	1	-	Passed Class XII	Nil

Learning Objectives

This course is grounded in the field of security studies in international relations and, aims to provide the students a foundational understanding of the concept of security in the contemporary world. The conceptualisation of security has evolved over the past decades, encompassing diverse sectors, and incorporating referents from different levels. Students will learn about the traditional notions of security focusing on state and military as well as its individual and societal dimensions of security. In view of the fast-evolving global context, the course aims at explaining it in relation with other concepts such as power, peace and identity in international relations. The course introduces to students traditional as well as contemporary approaches to study the concept of security. Alongside the concerns of national security, the course apprises students about the emerging security issues ranging from energy security and cyber security to issues of public health. Finally, this course aims to familiarise students to the emerging non-western perspectives in the field of security studies.

Learning outcomes

By the end of the course the students would be able to:

- Develop a comprehensive understanding of the concept of security and how it relates to other key concepts such as power, peace and identity in International Relations.
- Learn about the traditional and non-traditional sectors and various levels of analysis of security
- Understand the traditional and contemporary approaches to study the concept of security
- Analyse the range of security issues and challenges in the contemporary world and nature of policy response to them
- Develop analytical skills to understand the non-western perspectives to the concept of security.

SYLLABUS OF DSE-4a

UNIT – I (14 Hours)

Conceptualizing Security

1.1. Security and core concepts in IR: Power, Peace and Identity
1.2. Sectors of Security: Traditional and Non-Traditional Security
1.3. Levels of Security Referents: Individual, State, Region, Society, Globe
1.4. Indian understanding of security

UNIT – II (14 Hours)

Major Approaches to Understanding Security

2.1. Traditional approaches (Realism, Liberalism)
2.2. Critical approaches to security
2.3. Constructivism and security
2.4. Gender and security
2.5. Securitization

UNIT – III (10 Hours)

Security Issues and Challenges in the Contemporary World

3.1. National Security: From within and outside
3.2. New Threats to Security (Energy Security, Cyber Security, Public Health)

UNIT – IV (7 Hours)

Non-western Perspectives

Essential/recommended readings

Unit 1: **Conceptualizing Security**

Williams, P.D. (ed.) (2008). *Security Studies: An Introduction*. Abingdon: Routledge, pp. 1-12

1.1. Security and core concepts in IR: Power, Peace and Identity

Essential readings

Buzan, Barry (1984). Peace, Power and Security: Contending Concepts in the Study of International Relations, *Journal of Peace Research*, *21:2*, pp. 109-125.

Bilgin, Pinar (2010). Identity/Security. In J.P. Burgess (Ed.), *The Routledge Handbook of New Security Studies* (1st ed.). Routledge. https://doi.org/10.4324/9780203859483

Additional Readings

Baldwin D. A. (1997). 'The Concept of Security, in *Review of International Studies*, *23*: 5-26.

Booth, Ken. (1991). Security and Emancipation, *Review of International Studies*, 17 (4): 313-326.

1.2. Sectors of Security: Traditional and Non-Traditional Security

Essential readings

Buzan, Barry & Lene Hansen (2009). Defining International Security Studies, in *The Evolution of International Security Studies*. Cambridge: Cambridge University Press. pp. 8-19

Mallavarappu, S. (2008). International relations theory and non-traditional approaches to security. *WISCOMP Perspectives* 27. http://wiscomp.org/Publications/141%20-%20Perspectives%2027%20-%20International%20Relations%20Theory%20and%20Non-Traditional%20Approaches%20to%20Security.pdf

Additional Readings

DISCIPLINE SPECIFIC ELECTIVE COURSE – 4b: Understanding Savarkar

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Understanding Savarkar DSE-4b	4	3	1	-	Passed Class XII	Nil

Learning Objectives

Vinayak Damodar Savarkar was one of the important leaders of the Indian National movement. He was a revolutionary who gradually turned to lay the foundation of Hindu Nationalism in India after release from the jail at Andaman and Nicobar. He remained at the thick of controversies due to his opposition due to his thoughts on Indian Nationalism which was essentially against Gandhian methods and approach to making national movement hostage to the whims of a particular community. His works Hindutva still continues to dominate the discourse of Indian politics wherein he is referred to by both his opponents and the supporters. He was a prolific writer both in Marathi and English. He had a clearly defined socio-political thought which he articulated through his poems, essays, stories, plays and the political speeches. It is therefore it is important to study his revolutionary journey as well his political thoughts and his position on key issues of India both before and after independence.

Learning outcomes

At the end of the course:

- The students will be able to understand his role and contribution in the freedom movement**.**
- They will be able to contextualise his thoughts on Hindutva and differentiate it from Hinduism.
- Students will be able to answer what impact religious conversion has on the cultural and political geography of a nation.
- They will be able to understand how he differed from Ambedkar on caste and untouchability questions and what was his response to this important question.

SYLLABUS OF DSE-4b

UNIT – I (6 Hours)
Savarkar and Indian Historiography

UNIT – II (9 Hours)
Savarkar and Indian National Movement

UNIT – III (9 Hours)
Hindutva and Hinduism

UNIT – IV (7 Hours)
Savarkar and Language Questions in India

UNIT – V (7 Hours)
Religious Conversion

UNIT – VI (7 Hours)
Untouchability and Caste Questions

Essential/recommended readings

DISCIPLINE SPECIFIC ELECTIVE COURSE – 11: Research Methods in Politics

NOTE: 'Research Methodology' is offered as one of the DSE courses in VI and VII Semesters. Students can opt for it either in VI semester or VII semester

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Research Methods in Politics DSE-11	4	3	1	-	Passed Class XII	Nil

Learning Objectives

The course would serve as the first formal introduction to the basics of social science research in the specific context of the discipline of Political Science. As an elementary course to introduce the students to the fundamentals of research in the study of politics, the purpose of the course is twin-fold - first, two familiarise students with the different methodologies to study the discipline of politics; second, to walk them through the application of these methods through selected texts. By the time

this course is offered, the students would be familiar with the salient analytical frameworks and arguments in the discipline. This course offers the students the opportunity to understand the methods by which these frameworks were arrived, the tools that were used to make them comprehensible, and the debates that the arguments spawned. The course is divided into three parts. The first will introduce the student to some key debates. The second takes them through the praxis of research by asking elementary questions such as, how to conceptualize a research problem, how to formulate research questions, etc. The third aims to introduce them to specific methodologies by using the strategy of reading a well-known work to discern the method used accompanied by an article that reflects upon that method.

Learning outcomes

On successful completion of the course, students would demonstrate:

- Preliminary training in basic elements of social science research
- Familiarity with how to conceptualize a research problem
- Familiarity with diverse methodologies used in the study of politics
- Skills to identify and understand the use of specific methodologies in a text

SYLLABUS OF DSE-11

UNIT – I (12 Hours)

Introduction

a. Human Enquiry and Social Science Research
b. What is political inquiry? Why do we need it?
c. Issues of objectivity and Interpretation in political enquiry
d. Epistemological Debate- Quantitative and Qualitative analysis

UNIT – II (15 Hours)

Conceptualizing Research

a. Review of Literature
b. Formulation of a research problem
c. Framing research questions
d. Sources and citations

UNIT – III (18 Hours)

Methods in the study of politics and their application?

a. Empirical
b. Discourse Analysis
c. Archival
d. Ethnography

Essential/recommended readings

Category II

Political Science Courses for Undergraduate Programme of study with Political Science as one of the Core Disciplines

(B.A. Programmes with Political Science as Major discipline)

DISCIPLINE SPECIFIC CORE COURSE (DSC-6A): Perspectives on Public Administration

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Perspectives on Public Administration MDSC-6A	4	3	1	-	Passed Class XII	Nil

Learning Objectives

The course provides an introduction to the discipline of public administration. This paper encompasses public administration in its historical context with an emphasis on the various classical and contemporary administrative theories. The course also explores some of the non-mainstream trends, including feminism and perspectives from the Global South on public administration.

Learning outcomes

On completion of this course, the student can be expected to

- have a comprehensive understanding of the conceptual roots of the discipline of Public Administration
- understand how theorising is done in this discipline
- how new perspectives like that of gender influence the orientation of both theory and practice in the discipline.

SYLLABUS OF MDSC-6A

UNIT – I (9 Hours)

Public Administration as a Discipline

a. Ancient Roots of Public Administration: Perspectives from India (Kautilya's Arthashastra)
b. Modern PA: An overview of the theoretical journey
c. Principles of Public Administration
d. Theorising Public Administration

UNIT – II (16 Hours)

Mainstream/ Traditional Theoretical Perspectives:

a. Scientific management (F.W.Taylor)

b. Ideal-type bureaucracy (Max Weber)
c. Human relations theory (Elton Mayo)
d. Rational decision-making (Herbert Simon)
e. Ecological approach (Fred Riggs)

UNIT – III (14 Hours)

Contemporary Theoretical Perspectives

a. New Public Management, New Public Service
b. Multiple Perspectives on Governance: Good Governance, Collaborative Governance, Network Governance, Digital Governance

UNIT – IV (6 Hours)

Gender Perspectives on Public Administration

a. Gender and Governance
b. Gender sensitivity and participation in administration

Essential/recommended readings

Unit 1. Public Administration as a Discipline

a. Ancient Roots of Public Administration

Kumar, A. Administration in Kautilya's Arthashastra in M.M. Shankhder & G. Kaur *Politics in India* Deep and Deep Publicaitons, New Delhi, 2005, pp. 83-94.

DISCIPLINE SPECIFIC CORE COURSE (DSC-6B): Comparative Political Systems

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Comparative Political Systems MDSC-6B	4	3	1	-	Passed Class XII	Nil

Learning Objectives

The aim of this course is to train students in the application of comparative methods to the study of different political systems with respect to institutions and their functioning in these countries from a comparative perspective.Students will be familiarised with the defining features like political tradition, state formation, constitution and division of power, structure of government, electoral system, political parties, party system, and the contemporary social and economic challenges in these societies.

Learning outcomes

This paper will provide students with a comprehensive understanding of a range ofpolitical systems fromdifferent continentsin a historical context. The students will engage in studying different countries in detail with reference to their political tradition and state formation, constitution and division of power, political parties and elections, political economy and contemporary challenges. The critical analysis of different political systems will delineate the institutional structures, processes and their functioning in these systems. The course content would also help students develop analytical skills to understand not just the similarities and differences but the uniqueness of some cases as well that highlight how the matrix of diverse determinants and variables result in different discourses in different countries.

Discipline Specific Elective (DSE) Courses for Sem – VI [Category II and III – Multidisciplinary]

DISCIPLINE SPECIFIC ELECTIVE COURSE – 4a: Gender in International Relations: Theories, Concepts and Practices

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Gender in International Relations: Theories, Concepts and Practices MDSE-4a	**4**	**3**	**1**	**-**	**Passed Class XII**	**Nil**

Learning Objectives

This paper engages with the need to study gender in International Relations (IR). It highlights the fact that gender and IR mutually constitute each other. Students are introduced to feminist theorizing to provide them with the tools to critically assess global problems and the way gender is currently being counted in IR. This paper focuses on concepts like State and Sovereignty; Nation and Nationalism and Security to expose and bridge the limitations of conventional IR. Finally, this paper emphasises the need to understand the role of gender in practising IR by looking into the spheres of foreign policy, international institutions, war and conflicts.

Learning outcomes

After completing this course, students would be able to:

- understand the issues of IR from a feminist perspective.
- hone their critical thinking skills by developing the ability to interpret, analyse, and assess international issues from this perspective.
- develop their research and writing skills to explore uncharted terrains in IR from a feminist perspective.

SYLLABUS OF MDSE-4a

UNIT – I (3 Hours)

Introduction

a. Why study gender in IR
b. How gender and IR mutually constitute each other

UNIT – II (14 Hours)

Gendering IR - I: Theoretical Contributions

a. The feminist challenge to mainstream/malestream IR theories

b. Masculinity and Hegemonic Masculinity
c. Queer theories and IR

UNIT – III (14 Hours)
Gendering IR - II: Conceptual Contributions

a. State and Sovereignty
b. Nation and Nationalism
c. Security

UNIT – IV (14 Hours)
Gendering IR practices

a. Gender and Foreign Policy
b. Gender and International Institutions
c. Gender, War and Conflicts

DISCIPLINE SPECIFIC ELECTIVE COURSE – 4b: Understanding Savarkar

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Understanding Savarkar MDSE-4b	4	3	1	-	Passed Class XII	Nil

Learning Objectives

Vinayak Damodar Savarkar was one of the important leaders of the Indian National movement. He was a revolutionary who gradually turned to lay the foundation of Hindu Nationalism in India after release from the jail at Andaman and Nicobar. He remained at the thick of controversies due to his opposition due to his thoughts on Indian Nationalism which was essentially against Gandhian methods and approach to making national movement hostage to the whims of a particular community. His works Hindutva still continues to dominate the discourse of Indian politics wherein he is referred to by both his opponents and the supporters. He was a prolific writer both in Marathi and English. He had a clearly defined socio-political thought which he articulated through his poems, essays, stories, plays and the political speeches. It is therefore it is important to study his revolutionary journey as well his political thoughts and his position on key issues of India both before and after independence.

Learning outcomes

At the end of the course:

- The students will be able to understand his role and contribution in the freedom movement.
- They will be able to contextualise his thoughts on Hindutva and differentiate it from Hinduism.
- Students will be able to answer what impact religious conversion has on the cultural and political geography of a nation.

- They will be able to understand how he differed from Ambedkar on caste and untouchability questions and what was his response to this important question.

SYLLABUS OF MDSE-4b

UNIT – I (6 Hours)
Savarkar and Indian Historiography

UNIT – II (9 Hours)
Savarkar and Indian National Movement

UNIT – III (9 Hours)
Hindutva and Hinduism

UNIT – IV (7 Hours)
Savarkar and Language Questions in India

UNIT – V (7 Hours)
Religious Conversion

UNIT – VI (7 Hours)
Untouchability and Caste Questions

Essential/recommended readings

Hindu Mahasabha Presidential Speech of VD Savarkar.

Unit 6: Untouchability and Caste Questions

Kanungo, P. (2007). Co-Opting Dalits into the Hindutva Fold [Review of Hindutva and Dalits: Perspectives for Understanding Communal Praxis, by Anand Teltumbde]. Economic and Political Weekly, 42(20), 1852–1854.

Savarkar, Vinayak Damodar (2014). Savarkar Samagra, Essays on Social Questions, Vol. 7. Prabhat Prakashan, Delhi.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVE COURSE – 11: Research Methods in Politics

NOTE: 'Research Methodology' is offered as one of the DSE courses in VI and VII Semesters. Students can opt for it either in VI semester or VII semester. However, a student pursuing multidisciplinary studies in three core disciplines shall have to choose research methodology in VI semester, if she/he wishes to Major in one of the three disciplines in the fourth year.

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Research Methods in Politics MDSE-11	4	3	1	-	Passed Class XII	Nil

Learning Objectives

The course would serve as the first formal introduction to the basics of social science research in the specific context of the discipline of Political Science. As an elementary course to introduce the students to the fundamentals of research in the study of politics, the purpose of the course is twin-fold - first, two familiarise students with the different methodologies to study the discipline of politics; second, to walk them through the application of these methods through selected texts. By the time this course is offered, the students would be familiar with the salient analytical frameworks and arguments in the discipline. This course offers the students the opportunity to understand the methods by which these frameworks were arrived, the tools that were used to make them comprehensible, and the debates that the arguments spawned. The course is divided into three parts. The first will introduce the student to some key debates. The second takes them through the praxis of research by asking elementary questions such as, how to conceptualize a research problem, how to formulate research questions, etc. The third aims to introduce them to specific methodologies by using the strategy of reading a well-known work to discern the method used accompanied by an article that reflects upon that method.

Learning outcomes

On successful completion of the course, students would demonstrate:

- Preliminary training in basic elements of social science research
- Familiarity with how to conceptualize a research problem
- Familiarity with diverse methodologies used in the study of politics
- Skills to identify and understand the use of specific methodologies in a text

SYLLABUS OF MDSE-11

UNIT – I (12 Hours)

Introduction

a. Human Enquiry and Social Science Research
b. What is political inquiry? Why do we need it?
c. Issues of objectivity and Interpretation in political enquiry
d. Epistemological Debate- Quantitative and Qualitative analysis

UNIT – II (15 Hours)

Conceptualizing Research

a. Review of Literature
b. Formulation of a research problem
c. Framing research questions
d. Sources and citations

UNIT – III (18 Hours)

Methods in the study of politics and their application?

a. Empirical
b. Discourse Analysis
c. Archival
d. Ethnography

DEPARTMENT OF SOCIAL WORK

Category I

Semester- IV

[UG Programme for Bachelor in Social Work (Honours) degree in three years]

DISCIPLINE SPECIFIC CORE COURSE -10 (DSC-10) – : UDERSTANDING SOCIAL PSYCHOLOGY

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
UDERSTANDING SOCIAL PSYCHOLOGY DSC 10	4	3	0	1	12th Pass	NIL

Learning Objectives

The learning objectives of this course are as follows:

- To understand the fundamentals of social psychology and its relevance to social work practice
- To understand interpersonal and societal issues related with individual, groups and communities
- To understand group behaviour, interaction processes to guide the social work practice

Learning Outcomes

At the end of the semester, the student will be able to

- Describe the basic concepts and processes of social psychology
- Identify various factors influencing group behaviour in the society
- Demonstrate the application of various concepts of social psychology in field work settings

SYLLABUS OF DSC-10

Unit I : Nature and Scope of Social Psychology **15 Hours**

Unit Description: This unit will provide a conceptual understanding of the methods of social psychology. It will also cover significance of social psychology for social work profession.

Subtopics:

- Social psychology: definition, concept and scope
- Methods of social psychology: Interview schedule, questionnaire, observation, experimentation and socio-metric method
- Relevance of social psychology to social work practice

Unit II: Processes in Social Psychology

Unit Description: This unit will introduce the students to the basic processes of social psychology. This will enhance the knowledge of the students to learn various aspects influencing the individual, group and community behaviour. **15 Hours**

Subtopics:

- Social perception, Social influence & Interpersonal attraction
- Public opinion, propaganda, prejudice and stereotypes
- Social attitudes: Definition, features, formation and change

Unit III: Understanding Groups and Crowds **15 Hours**

Unit Description: This unit will help to learn about the group, crowd and mob behaviour and their influence on the life of people in the community.

Subtopics:

- Group: Definition, types and functions, stages and process
- Crowd and mob: Characteristics, behaviour and dynamics
- Leaderships: Traits, styles and types

Practical component **30 Hours**

Unit IV: Application of Social Attitudes and Leadership

Unit Description: This unit will focus on the application aspects of social attitude, leadership, prejudice and stereotypes prevailing in the society. The student will learn to integrate social psychology into practice.

Subtopics:

- Project on implimentation any one measurement of scale
- Case studies (1-2) on prejudice and stereotypes from the field settings /media
- Project on leadership styles from field settings/ workshop/media/interative sessions

Essential readings

DISCIPLINE SPECIFIC CORE COURSE – 11 (DSC-11): WORKING WITH COMMUNITIES

Credit distribution, Eligibility and Prerequisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
WORKING WITH COMMUNITIES DSC 11	4	3	0	1	12th Pass	NIL

Learning Objectives

The learning objectives of this course are as follows:

- To understand community dynamics and community organization as a method of social work.
- To understand different aspects of community in the context of community organization.
- To enhance understanding of models, strategies and process involved in working with communities.

Learning Outcomes

At the end of the semester, the student will be able to:

- Identify the community power structure and various programmes of community development.
- Apply the tools, techniques and skills to work directly in the communities.
- Demonstrate familiarity with community organization as a macro method of social work.

SYLLABUS OF DSC- 11

Unit I: Understanding Community **15 Hours**

Unit Description: This unit will provide a conceptual understanding about the community. It will also explain the various types, functions and power structures of the community.

Subtopics:

- Concept of community: meaning, definitions and elements
- Types of community: Urban, rural, tribal, functional and virtual communities
- Functions of the community, community power structure and diversities

Unit II: Introducing Community Practice **15 Hours**

Unit Description: This unit will give an opportunity to the students to learn about the community practice as a macro method of social work. The unit will also discuss the basic assumptions and principles of community organization and people's participation as a key feature.

Subtopics:

- Concept of community organization: Nature, evolution, characteristics, basic assumptions and principles of community organization
- Community development: Concept, aims, objectives, basic elements and community development as a goal of community organization
- People's participation: Rationale, types and methods

Unit III: Processes of Community Practice **15 Hours**

Unit Description: This unit will introduce the students to the various steps involved in the process of community practice. The unit will also cover various models and approaches of community organization.

Subtopics:

- Steps of community organization, Role of community organizer
- Models: Locality Development, Social Planning and Social Action
- Approaches: Welfarist, Social Development and Empowerment

Practical component **30 Hours**

Unit IV: Application of Community Practice

Unit Description: This unit will engage the students in practice-learning activities related to community development programme and micro-planning for various issues.

Subtopics:

- Identification of the needs/problems and assessment of a community (field settings/own neighbourhood) by using participatory methods (assignment/project work).
- Programme planning/micro-planning and preparation of action plan for taking action in a short-term and long term manner (assignment/project work).
- Best practices of community empowerment programme and success stories of civic driven initiatives or people's participation for extending cooperation and collaboration towards community development (assignment/project work/case study).

Essential Readings

- Gangrade, K.D. (1971). *Community Organization in India*. Mumbai: Popular Prakashan.
- Gangrade, K.D. (2001). *Working with community at the grassroots level: Strategies and programmes.*New Delhi:Radha Publications.

DISCIPLINE SPECIFIC CORE COURSE– 12 (DSC-12): FIELD WORK PRACTICUM- IV

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
FIELD WORK PRACTICUM IV **DSC 12**	**4**	**0**	**0**	**4**	**12th Pass**	**NIL**

Learning Objectives

The learning objectives of this course are as follows:

- To learn to mobilize clients/beneficiaries to utilize the services provided by the agency.
- To coordinate the services provided by governmental and non-governmental organizations in meeting the additional needs of the clients/beneficiaries.
- To learn to apply theoretical base i.e. methods, principles, approaches, models, skills and techniques while working with individuals, families and groups.

Learning Outcomes:

At the end of the semester, the students will be able to:

- Mobilize clients/beneficiaries to create awareness about needs, problems, rights, responsibilities etc.
- Coordinate the services provided by governmental and non-governmental organizations/institutions in meeting the felt needs of the clients/beneficiaries.
- Demonostrate sensitivity towards the issues related to social justice, human rights for marginalized groups and develop skills of writing effective field work records.

SYLLABUS OF DSC-12

Practical component– 100% Field work (Direct field work: 120 hours)

Tasks/Activities:

1. Perform the assigned tasks during scheduled concurrent field work. The field work agency will remain the same in an academic year. Every student will be assigned a College supervisor for personalized learning and mentoring throughout the academic year.

2. Field work includes- observation visits, orientation programmes, task-based field visits, individual conferences/ mentoring, group conference scientific or experienced based paper presentation, report writing, critical discussion of the reports, workshops, seminars and skill-oriented sessions. Direct field work hours have to be 120 hours in a semester.
3. Establish contact and develop rapport with the agency personnel& volunteers, individuals, families and groups and perform the assigned tasks during concurrent field work.
4. Work with individuals, families and groups alongwith volunteers, paraprofessionals/outreach workers in the agency and/or community and deal with cases (3-4), work with families (3-4) and form group/s.
5. Work with volunteers, para-professionals/outreach workers in the field work agency such as - non-governmental organisations (NGOs) or voluntary organisations (VOs) and governmental organisations (GOs); and/or community.
6. Student will perform the agency-based field work tasks assigned by the respective Agency Supervisor.
7. Regular reporting to all concerned persons (both at agency and college level) during scheduled field visits, meetings and supervisory/individual conferences to seek regular guidance. Minimum 80% of attendance is required in each components of field work.
8. Prepare daily report in prescribed format and submit to the college supervisor on weekly basis. Prepare learning plan, agency/community profile in a timely and appropriate manner to both the College and Agency Supervisor. Students will engage in 3 hours of report writing per week.
9. The field work reports and progress of the student should be discussed during the scheduled Individual Conference (IC) with the college supervisor on weekly basis. The student must attend Group conferences (GC), prepare group conference paper in consultation with college supervisor, thus learning the roles of presenter, chairperson, and recorder. The individual mentoring (IC & GC) to students by the college supervisor will include 1 hour per week.
10. Attend skill development workshops in which the values, principles, methods, techniques, tools etc. are translated into practice skills, i.e. “learning by doing“. The skill workshop will target: (i) Role Plays; (ii) Use of motivational songs and other interactive visual media; (iii) Preparation for street plays including script writing/street theatre; (iv) Simulation exercises; (v) Films screening; (vi) Practice of counselling techniques; (vii)

Practice of participative techniques; (viii) Communication; (ix) Mock interviews; and (x) Strategic planning for advocacy.

11. The students are required to submit self-evaluation report in the prescribed format for term end examination. Field work practicum follows continuous evaluation by the supervisor.

Students shall invest 60 hours out of class/field for the purpose of writing report of the field work separately.

Essential Readings

SUMMER INTERNSHIP/ FIELD WORK PRACTICUM/BLOCK PLACEMENT

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
SUMMER INTERNSHIP/ FIELD WORK PRACTICUM/BLOCK PLACEMENT	**2**	**0**	**0**	**2**	**12th pass**	**NIL**

Learning Objectives

The learning objectives of this course are as follows:

- To understand field work organization's philosophy, structure, functions and service delivery system.
- To undertake need assessment of the target group using social work theoretical approaches.
- To undertake projects to address identified needs of the target groups.

Learning Outcomes:

At the end of the semester, the students will be able to:

- Describe organization's nature of work and service delivery system.
- Demonstrate their skills, techniques, methods and principles in meeting the felt needs of the clients/beneficiaries.
- Acquire a training completion certificate from the organization.

Tasks/Activities:

1. Students will be required to undergo two-weeks block placement training in a social welfare agency or Government organizations in or outside Delhi. The block placement agencies/projects will be selected with the consent/choice of students.

2. Identification and assessment of needs/problems, ability to integrate theoretical knowledge with field practice (i.e. methods, principles, skills, techniques)in accordance with learning plan, ability to utilize administrative skills etc.
3. Independent planning and execution of any one or two selected projects.
4. Block placement reports will be submitted to the college supervisor in the form of project file at the completion of the training. The student shall invest additional 20 hours for project file completion.
5. A confidential report from the concerned organization will be required for successful completion of the training.
6. The college may organize presentation of the learning from block placement/summer training of the students after the completion for assessment.

Assessment will be done by the college based on project report, presentation and confidential report from the concerned organization.

SEMESTER- V

DEPARTMENT OF Social Work

Category I

[UG Programme for Bachelor in Social Work (Honours) degree in three years]

DISCIPLINE SPECIFIC CORE COURSE – 14 (DSC-14): SOCIAL ACTION AND MOVEMENTS

Credit distribution, Eligibility and Prerequisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
SOCIAL ACTION AND MOVEMENTS DSC 14	4	3	0	1	12th Pass	NIL

Learning Objectives

The Learning objectivs of this course are as follows:

- To understand conceptual issues in defining social action and social movements.
- To learn various theoretical perspectives on social movements.
- To understand various conventional and contemporary approaches to social action and movements.

Learning outcomes

At the end of the semester the students will be able to

- Describe conceptual issues related with social action and movements
- Evaluate the approaches of social action and its relevance to social work profession
- Critically appraise various social movements and their impact on Indian social structure.

SYLLABUS OF DSC- 14

Unit I : Basic Concepts of Social Action and Social Movements **15 Hours**

Unit Description: This unit will provide a conceptual understanding of meaning, goals and scope of social action and movements.

Subtopics:

- Concept, definitions, scope and relevance of social action
- Models of social action, Strategies, and skills for social action
- Social Movements: Concept, nature, component and stages.

Unit II: Social Work and Social Action **15 Hours**

Unit Description: This unit will introduce students to the basic fundamentals of social action for various types of professional social work practice.

Subtopics:

- Critical Social Work practice: conscientisation and critical awareness
- Radical social work practice
- Structural Social Work practice

Unit III: Approaches of Social Action **15 Hours**

Unit Description: This unit will focus on various approaches to social action. It will help students to develop a perspective and take an approach as suitable to the situation.

Subtopics:

- Anti-oppressive social work practice
- Paulo Friere and Saul Alinskey's contribution to Social Action
- Gandhian contribution to social action –Stages and tactics

Practical component **30 Hours**

Unit IV: Interface between social movements and social work

Unit Description: This unit will focus on the application and practice-based approach where students will learn to integrate theory and practice of social action into real life situation.

Subtopics:

- Project report on any one of following movements : Feminist movement, J.P movement, Anti corruption movement, Water Movement in India.
- Project report on any one of the socially disadvantage groups: SC & ST, Dalits, indigenous movements, LGBTQIA+
- Project Report on any one of the environmental movements: Narmada Bachao Andolan , Tehri, Chipko Andolan

DISCIPLINE SPECIFIC CORE COURSE– 15 (DSC-15): FIELD WORK PRACTICUM- V

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
FIELD WORK PRACTICUM V **DSC 12**	**4**	**0**	**0**	**4**	**12th Pass**	**NIL**

Learning Objectives

The learning objectives of this course are as follows:

- To learn to mobilize clients/beneficiaries to utilize the services provided by the agency and improve skills in communication and networking with other organizations.
- To coordinate the services provided by governmental and non-governmental organizations in meeting the additional needs of the clients/beneficiaries.
- To learn to apply theoretical base i.e. methods, principles, approaches, models, skills and techniques while working with individuals, families and groups.

Learning Outcomes:

At the end of the semester, the students will be able to:

- Mobilize clients/beneficiaries to create awareness about needs, problems, rights, responsibilities, etc.
- Coordinate the services provided by governmental and non-governmental organizations/institutions in meeting the felt needs of the clients/beneficiaries.
- Demonstrate sensitivity towards the issues related to social justice, human rights for marginalized groups in urban and rural settings and develop skills of writing effective field work records

SYLLABUS OF DSC-15

Practical component– 100% Field work (Direct field work: 120 hours)

Tasks/Activities:

1. Perform the assigned tasks during scheduled concurrent field work. The field work agency will remain the same in an academic year. Every student will be assigned a College supervisor for personalized learning and mentoring throughout the academic year.

2. Field work includes- observation visits, orientation programmes, task-based field visits, individual conferences/ mentoring, group conference scientific or experienced based paper presentation, report writing, critical discussion of the reports, workshops, seminars and skill-oriented sessions. Direct field work hours have to be 120 hours in a semester.
3. Establish contact and develop rapport with the agency personnel& volunteers, individuals, families and groups and perform the assigned tasks during concurrent field work.
4. Work with individuals, families and groups along with volunteers, paraprofessionals/outreach workers in the agency and/or community and deal with cases (3-4), work with families (3-4) and form group/s.
5. Work with volunteers, para-professionals/outreach workers in the field work agency such as - non-governmental organisations (NGOs) or voluntary organisations (VOs) and governmental organisations (GOs); and/or community.
6. Student will perform the agency-based field work tasks assigned by the respective Agency Supervisor.
7. Regular reporting to all concerned persons (both at agency and college level) during scheduled field visits, meetings and supervisory/individual conferences to seek regular guidance. Minimum 80% of attendance is required in each components of field work.
8. Prepare daily report in prescribed format and submit to the college supervisor on weekly basis. Prepare learning plan, agency/community profile in a timely and appropriate manner to both the College and Agency Supervisor. Students will engage in 3 hours of report writing per week.
9. The students must get the reports checked during the scheduled Individual Conference (IC) with the college supervisor on weekly basis. Attend Group conferences (GC), prepare group conference paper in consultation with college supervisor, thus learning the roles of presenter, chairperson, and recorder. The individual mentoring (IC & GC) to students by the college supervisor will include 1 hour per week.
10. Attend skill development workshops in which the values, principles, methods, techniques, tools etc. are translated into practice skills, i.e. “learning by doing“. The skill workshop will target: (i) Role Plays; (ii) Use of motivational songs and other interactive visual media; (iii) Preparation for street plays including script writing/street theatre; (iv) Simulation exercises; (v) Films screening; (vi) Practice

of counselling techniques; (vii) Practice of participative techniques; (viii) Communication; (ix) Mock interviews; and (x) Strategic planning for advocacy.

11. Organize programme with organizations/community by using programme media and prepare a report on community dynamics including - demography, power structure, diversity/identity (gender, age, occupation, linguistic etc.). Mobilize community resources and develop network/linkages in implementation of programmes.
12. Attending five-days 'Rural Camp' for exposure about the socio-economic, political, cultural situations and problems of rural life. The rural camp will be organized under the guidance of the faculty members. Attending rural camp is compulsory and performance of the students will counted towards the final award of marks in field work evaluation.
13. The students are required to submit self-evaluation report in the prescribed format for term end examination. Field work practicum follows continuous evaluation by the supervisor.

Students shall invest 60 hours out of class/field for the purpose of writing report of the field work separately.

COMMON POOL OF GENERIC ELECTIVES (GE) COURSES

GENERIC ELECTIVES (GE-9) : SOCIAL WORK RESPONSE TO SUBSTANCE

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course	Department offering the course
		Lecture	Tutorial	Practical/ Practice			
SOCIAL WORK RESPONSE TO SUBSTANCE ABUSE GE 9	4	3	1	0	12th Pass	NIL	Social Work

Learning Objectives

The learning objectives of this course are as follows:

- To build a basic understanding of the concept of substance abuse
- To understand the impact of substance abuse on individual and society
- To learn various programmes and legal measures to control substance abuse by government and non-government organizations.

Learning outcomes

At the end of the semester, the student will be able to:

- Evaluate the impact of substance abuse on health of individuals and society.
- Critically assess various programmes of government and Non Government Organization to prevent and control substance abuse.
- Critically appraise the functioning of drug de-addiction centres and role of social work profession.

SYLLABUS OF GE-9

Unit I: Understanding Substance Abuse **15 Hours**

Unit Description: This unit will describe various concepts related to substance abuse. The students will also learn about various theories and socio-cultural perspectives of addictive behaviour.

Subtopics:

- Substance abuse: Meaning, Definition and its causes
- Types of substance abuse and related risk factors
- Theories of addiction, social, cultural and psychological perspectives of addiction

Unit II: Psychoactive substances and impact **10 Hours**

Unit Description: To familiarize students with various psychoactive substances and their impact on physical, mental and social health of individuals and families.

Subtopics:

- Categories of psychoactive substances
- Impact of Substance abuse on Physical Health, Mental Health, Social relationship
- Crime and Substance abuse

Unit III: Policies, Programmes and Substance abuse **10 Hours**

Unit Description: This unit will describe various programmes and legislations to curb substance abuse in Indian context.

Subtopics:

- Prevention and control of substance abuse : Role of educational institutions, families, Government and Non-Government Organizations
- Drug De-addiction centres: functioning and approaches, Ways to say no to drugs, Alcohol Anonymous groups, peer support groups for recovery addicts
- Narcotic Drugs & Psychotropic substance Act 1985

Unit IV: Social Work Intervention in Substance Abuse **10 Hours**

Unit Description: This unit will introduce the role of social work profession in addressing the issues related to substance abuse.

Subtopics:

- Role of Social Worker in prevention and control of substance abuse: Individual ,Group and Community level
- Cognitive and Dialectical behaviour theory
- Family practice and Group Work in the field of Addiction

Practical component (if any) - NIL

GENERIC ELECTIVES (GE-10):GLOBAL SOCIAL CONCERNS AND INTERNATIONAL SOCIAL WORK

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course	Department offering the course
		Lecture	Tutorial	Practical/ Practice			
GLOBAL SOCIAL CONCERNS AND INTERNATIONAL SOCIAL WORK GE 10	4	3	1	0	12th Pass	NIL	Social Work

Learning Objectives

The Learning Objectives of this course are as follows:

- To understand the scenario of global social work.
- To learn about the functioning of major International social welfare organizations.
- To understand the various approaches and practice of social work at global level.

Learning Outcomes

At the end of the semester the students will be able to:

- Identify contemporary social issues and concerns prevailing at global level
- Evaluate the role of various international organizations to enhance well-being of the people around the world.
- Critically appraise integrated social work practice approach in global context.

SYLLABUS OF GE-10

Unit-1: Contemporary Issues at Global Level **15 Hours**

Unit Description: This unit will provide a conceptual understanding about the contemporary issues and concerns prevailing at global level.

Subtopics:

- Global spread of social work: origin, expansion and recent trends
- Global Issues: poverty, environment & climate change and pandemic
- Social Work with family issues and homeless people

Unit II: Empowering Approach to Social Work **10 Hours**

Unit Description: This unit will introduce the students to the emerging approach to social work profession. This will also explain various elements, basic strategies, phases, functions, role and client system.

Subtopics:

- Elements and basic strategies of empowering approach
- Phases of empowering practice
- Social work functions and role in empowering process

Unit III: Integrated-Perspective Approach to Social Work **10 Hours**

Unit Description: This unit will discuss the integrated-perspective approach to social work. This unit will also discuss about various viewpoints and social justice and human rights perspective.

Subtopics:

- Social Justice and Human Rights in Global perspective
- The Social System View, The Ecological Perspective and the Ecosystem View, Integrated perspective approach to social Work
- Comparison of contemporary social work practice in UK, USA and India

Unit IV: International Organizations of Social Work and Social Welfare **10 Hours**

Unit Description: This unit will focus on the international organizations of social work and social welfare through which the students will learn about various international collaborations to enhance well-being and welfare of the people.

Subtopics:

- International organizations of social work: International Association of schools of Social Work (IASSW), International Federation of Social Workers (IFSW) and International Council on Social Welfare (ICSW)
- UN agencies and International NGOs: UNICEF, WHO, UNDP, Red Cross, YMCA/YWCA
- International-domestic practice interface and global interdependence of social work

DISCIPLINE SPECIFIC ELECTIVE COURSE – 7 (DSE-7): DISASTER MANAGEMENT AND SOCIAL WORK

Credit distribution, Eligibility and Prerequisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DISASTER MANAGEMENT AND SOCIAL WORK DSE 7	4	3	0	1	12th Pass	NIL

Learning Objectives

The learning objectives of this course are as follows:

- To learn the basic concept, typology and impact of disaster
- To understand the process of mitigation and management of disasters
- To acquire critical understanding of the disaster management policy and programmes in India.

Learning outcomes

At the end of the semester the students will be able to

- Apply the methods, values and ethics of social work profession in the field of disaster management.
- Critically appraise the national disaster management policy and programmes in India.
- Demonstrate skills and sensitivity to work with different organizations for disaster management.

SYLLABUS OF DSE- 7

Unit I : Basic Conceptual Framework **15 Hours**

Unit Description: This unit will provide a conceptual understanding of various types of disasters and related impact on individuals and communities.

Subtopics:

- Basic concept: Disaster, Hazard, Risk, Vulnerability
- Types of disasters: natural (famine, drought, flood, cyclone, tsunami, earthquake) and manmade disasters (riots, industrial, militancy)

- Impact of disasters: Physical, Socio-economic, ecological, political and psychological

Unit II: Disaster Management in Different Phases **15 Hours**

Unit Description: This unit will introduce the students to the different phases of disaster management. This will also help students to learn about post disaster measures in reconstruction, rehabilitation and recovery.

Subtopics:

- Pre-disaster: Prevention, mitigation and preparedness
- During disaster: search, rescue, evacuation, relief mobilization and management
- Post-disaster: Reconstruction, rehabilitation and recovery

Unit III: Disaster Management Policy and Programmes **15 Hours**

Unit Description: This unit will help to learn about the different policies and programmes for prevention. It also cover the different guidelines set up at National and International level.

Subtopics:

- Disaster management policy and programmes in India
- National disaster management framework; administrative and institutional structure for disaster management
- International and National Techno-legal framework: Yokohama Strategy, Hyogo Framework for Action, Sendai framework; Disaster Management Act, 2005, National guidelines for disaster management

Practical component **30 Hours**

Unit IV: Social Work Intervention in Emergencies and Disaster

Unit Description: This unit will focus on the application and practice-based approach where students will learn to integrate theory and practice in emergencies and disasters.

Subtopics:

- Project Report/Case Study: Social Work Intervention: Contingency planning, fund raising, mobilization, management of human resource, relief material procurement, crisis management, rapid health assessment, emergency health management, livelihood security and social justice concerns.
- Project Report/Case Study: Community based disaster preparedness (CBOP) and managements (CBDM)
- Project Report/Case Study: Post-disaster trauma care and counselling including grief counselling

Learning Objectives

The learning objectives of this course are as follows:

- To understand the concept of disability, needs and challenges of persons with disability (PWDs)
- To familiarize students with the functioning of various government and non-government organisations working with PWDs
- To develop understanding of various approaches, strategies and models for working with PWDs and promoting an inclusive society

Learning outcomes

At the end of the semester the students will be able to

- Describe the concept, types and the causes of disability and develop skills to analyse the issues of PWDs
- Critically appraise different international, government, civil society initiatives for PWDs
- Demonstrate sensitivity and required skills for working with persons with disability.

SYLLABUS OF DSE- 9

Unit I: Understanding Disability **15 Hours**

Unit Description: The students will learn about various types of disability and be sensitized to the needs and concerns of persons with disability (PWD).

Subtopics:

- Disability, Impairment, Handicap: Concept, Meaning, magnitude and Causes
- Categories of persons with disability - physical, sensory, neurological/mental, blood related disorders and multiple disability
- Genesis and development of categorization of PWDs, Needs and challenges of persons with disability

Unit II: Models and programmes for PwDs **15 Hours**

Unit Description: This unit will introduce various models of disability and programmes for the benefit of PWDs. The learners will understand the process of inclusion through affirmative actions of persons with disability as a stakeholder in the development process.

Subtopics:

- Models of Disability: Biomedical, cultural, empowerment, moral, charity, economic, social, diversity
- Assistance to Disabled persons for purchasing / fitting of aids/ appliances (ADIP) Scheme, Rehabilitation Centres, District primary education programme, Sarv Shiksha Abhiyan, Inclusive education and Higher education Service delivery: Disability certification, pension, travel concessions, employment/entrepreneurship for PWDs
- Equal opportunity cells: Roles, functions, barrier free physical infrastructures in institutions and public places

Unit III: Mainstreaming Disability **15 Hours**

Unit Description: Students will learn about national and international measures towards mainstreaming persons with disability and developing inclusive societies.

Subtopics:

- UN Convention on the Rights of Persons with Disabilities,
- Rights of the persons with Disability Act (RPWD Act)2016, Rehabilitation Council Act 1992, The Mental Health Act 2017
- Constitutional Provisions, Legal Jurisprudence and relevant judgements to ensure the Rights of Persons with Disabilities

Practical component **30 Hours**

Unit IV: Disability and Social Work Profession

Unit Description: This unit will focus on the relevance of social work profession for the empowerment of persons with disabilities. The students will be introduced to the government departments and civil society organizations working with PWDs.

Subtopics:

- Project report: Principles, ethics and practice of rehabilitation (Social, Economic and Community based), Role of a Social worker in various settings related to disabilities, Formation of alliances, networks and advocacy groups of PWDs
- Project Report/ Observation visit report: Government Institutions: Department of Empowerment of Persons with Disability (Divyangjan), Ministry of Social Justice & Empowerment, The National Trust, National Institute for Empowerment of Persons with Multiple Disabilities (NIEPMD), Pt. Deendayal Upadhyaya National Institute for Persons with Physical Disabilities (PDUNIPPD), National Institute for Locomotor Disabilities (NILD), Indian Sign Language, Research & Training Centre (ISLRTC)
- Case Study: Civil Society Organizations for PWDs: Functions, programmes and Challenges

Essential readings

SEMESTER- VI

DEPARTMENT OF Social Work

Category I

[UG Programme for Bachelor in Social Work (Honours) degree in three years]

DISCIPLINE SPECIFIC CORE COURSE -16 (DSC-16)– : SOCIAL POLICY AND DEVELOPMENT

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
SOCIAL POLICY AND DEVELOPMENT DSC 16	4	3	0	1	12th Pass	NIL

Learning Objectives

The learning objectives of this course are as follows:

- To develop understanding of social policy and social planning.
- To understand the concept, process, indicators and determinants of social development.
- To develop capacity to formulate strategies necessary for social development.

Learning outcomes

At the end of the semester, the student will be able to

- Describe various concepts related to social policy and social planning
- Enumerate factors related to social and human development
- Apply the knowledge of various concepts of social policy and development in field practice.

SYLLABUS OF DSC-16

Unit I : Understanding Social Policy **15 Hours**

Unit Description: This unit will provide a conceptual understanding, significance and principles of social policy. It will also cover legislative framework contributing to social policy in India.

Subtopics:

- Social policy: Concept, significance and process
- Principles and models of social policy
- Social Policy and Indian Constitution: Fundamental Rights, Fundamental Duties and Directive Principles of State Policy(DPSP).

Unit II: Social Planning **15 Hours**

Unit Description: This unit will introduce the students to the basic concept of social planning. This will enhance the knowledge of the students to learn various aspects related to social planning.

Subtopics:

- Social Planning: Concept, scope, principles and types
- Inter-relationship between social policy, planning and development
- Planning Commission, Niti Aayog and social planning in India

Unit III: Introduction to Social and Human Development **15 Hours**

Unit Description: This unit will help to learn about the concept of social development and other factors contributing to human development.

Subtopics:

- Social Development: concept, dimensions, prerequisites, strategies, indicators and models of Development (capitalism, socialism and mixed economy)
- Factors of Development: Economic, social, cultural, political, sustainable development, MDGs and SDGs
- Human Development: Concept, definitions, objectives and Human Development Index (HDI) by UNDP

Practical component **30 Hours**

Unit IV: Application of social policy in social work

Unit Description: This unit will focus on various aspects of practical and field experiences with respect to formulation and implementation of social policy.

Subtopics:

- Process of social policy formulation: case study/report based on experiencial sharing by NGOs professionals/bureaucrats
- Project work: specific programmes and schemes related to any one social policy
- Case study related to implementation of social policy (any one)

Essential Readings

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE – 17 (DSC-17): UNDERSTANDING RESEARCH IN SOCIAL WORK

Credit distribution, Eligibility and Prerequisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
UNDERSTANDING RESEARCH IN SOCIAL WORK DSC 17	4	3	0	1	12th Pass	NIL

Learning Objectives

The learning objectivs of this course are as follows:

- To familiarize students with the nature of social science research and its application in the study of social phenomena.
- To help students learn the research process and develop abilities to prepare research design.
- To learn the process of data collection, organization, presentation, analysis and report writing.

Learning outcomes

At the end of the semester the students will be able to:

- Describe the basic steps involved in research process.
- Identify the process involved in tools designing and their implementation for data collection
- Demonstrate skills in drafting research proposal.

SYLLABUS OF DSC- 17

Unit I : Research as Scientific Method **15 Hours**

Unit Description: This unit will introduce students to the basics of research in social sciences, its principles and ethics in research.

Subtopics:

- Basics of Research: Meaning, definition, nature, types of research- Basic and applied, application of research in social sciences
- Social science research and social work research : Meaning, nature, significance and difference
- Research as scientific exercise: Principles of scientific methods, Ethics of social research

Unit II: Research Process **15 Hours**

Unit Description: This unit will focus on introducing the students with formulating research problem and hypothesis as well as types of research designs.

Subtopics:

- Formulation of research problem, Review of literature, Hypotheses: concept, meaning and process of formulation, Referencing and report writing,
- Research design: exploratory, descriptive, experimental
- Concept of universe, sample, sampling unit and source list, Types of sampling framework – Probability and non-probability

Unit III: Data collection and management **15 Hours**

Unit Description: This unit will help students to know about the data collection tools and statistical method to analyse the data.

Subtopics:

- Sources of data (primary and secondary), Methods of data collection(interview, observation, case study and focus group discussion)
- Tools of data collection- interview schedule, interview guide, questionnaire, observation guide, FGD guideline.
- Science of statistics- concept, definition, functions and limitations, Descriptive statistics – measures of central tendency (mean, median, mode), Descriptive Analysis : Measures of dispersion (range, mean deviation, standard deviation, coefficient of variation)

Practical component **30 Hours**

Unit IV: Application of Research methods

Unit Description: This unit will focus on practical and hands on experience in the development of research tools, data collection and management.

Subtopics:

- Project work: development of any one tool of data collection
- Project work: Proposal formulation, tool administration and data collection
- Project Work: Data editing, classification, presentation and Analysis

Essential readings

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time

DISCIPLINE SPECIFIC CORE COURSE– 18 (DSC-18): FIELD WORK PRACTICUM- VI

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
FIELD WORK PRACTICUM VI **DSC 18**	**4**	**0**	**0**	**4**	**12th Pass**	**NIL**

Learning Objectives:

The learning objectives of this course are as follows:

- Develop ability to affect changes in improving service delivery by introducing innovations in practice.
- Improve skills in communication and networking with other organizations.
- Learn to make use of practice-learning instructions.

Learning Outcomes:

At the end of the semester, the students will be able to:

- Perform assigned tasks in order to imbibe core competencies required for an efficient social work practitioner.
- Engage in meaningful discussions during supervisory conferences/interactions.
- Develop an ability to narrate the learning experiences, assessment of services and resources and participate in service delivery.
- Imbibe the ethics and values of Social Work profession including attributes for the same.

SYLLABUS OF DSC-18

Practical component– 100% Field work (Direct field work: 120 hours)

Tasks/Activities:

1. The field work agency will remain the same in an academic year. Every student will be assigned a College supervisor for personalized learning and mentoring throughout the academic year.
2. Student will perform the agency-based field work tasks assigned by the respective Agency Supervisor.
3. Field work includes- observation visits, orientation programmes, task-based field visits, individual conferences/ mentoring, group conference scientific or experienced based paper presentation, report writing, critical discussion of the reports, workshops,

seminars and skill-oriented sessions. Direct field work hours have to be 120 hours in a semester.

4. Establish contact and develop rapport with the agency personnel & volunteers, individuals, families and groups and perform the assigned tasks during concurrent field work.
5. Perform the assigned tasks during scheduled concurrent field work.
6. Work with individuals, families and groups along with volunteers, paraprofessionals/outreach workers in the agency and/or community and deal with cases (2-3), work with families (3-4) and form group/s.
7. Work with volunteers, para-professionals/outreach workers in the field work agency such as - non-governmental organisations (NGOs) or voluntary organisations (VOs) and governmental organisations (GOs); and/or community.
8. Organize programme with them by using programme media and prepare a report on community dynamics including - demography, power structure, diversity/identity (gender, age, occupation, linguistic etc.).
9. Regular reporting to all concerned persons (both at agency and college level) during scheduled field visits, meetings and supervisory/individual conferences to seek regular guidance. Minimum 80% of attendance is required in each components of field work.
10. Prepare learning plan, agency/community profile in a timely and appropriate manner to both the College and Agency Supervisor. Students will engage in 3 hours of report writing per week.
11. Make use of practice-learning instructions given by the agency and college supervisor and mobilize resources and develop network.
12. Prepare field work reports in prescribed format and submit to the college supervisor on weekly basis.
13. The students must get the reports checked during the scheduled Individual Conference (IC) with the college supervisor on weekly basis. Attend Group conferences (GC), prepare group conference paper in consultation with college supervisor, thus learning the roles of presenter, chairperson, and recorder. The individual mentoring (IC & GC) to students by the college supervisor will include 1 hour per week.
14. Attend skill development workshops in which the values, principles, methods, techniques, tools etc. are translated into practice skills, i.e. “learning by doing“. The skill workshop will target: (i) Role Plays; (ii) Use of motivational songs and other interactive visual media; (iii) Preparation for street plays including script writing/street theatre; (iv) Simulation exercises; (v) Films screening; (vi) Practice of counselling techniques; (vii) Practice of participative techniques; (viii) Communication; (ix) Mock interviews; and (x) Strategic planning for advocacy.
15. The students are required to submit self-evaluation report in the prescribed format for term end examination. Field work practicum follows continuous evaluation by the supervisor.

Students shall invest 60 hours out of class/field for the purpose of writing report of the field work separately.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

COMMON POOL OF GENERIC ELECTIVES (GE) COURSES

GENERIC ELECTIVES (GE-11):SOCIAL WORK WITH FAMILIES

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course	Department offering the course
		Lecture	Tutorial	Practical/ Practice			
SOCIAL WORK WITH FAMILIES GE 11	4	3	1	0	12th Pass	NIL	Social Work

Learning Objectives

The Learning Objectives of this course are as follows:

- To understand families as social systems and factors affecting family functioning
- To understand the government and non-government efforts for the welfare of the families
- To sharpen the skills, techniques, knowledge and therapies required for working with the families

Learning outcomes

At the end of the semester, the student will be able to:

- Describe concepts of family structure, issues and challenges in contemporary context
- Critically appraise the policies, programmes and services related to family
- Apply the skills, techniques and therapies of social work profession while working with families

SYLLABUS OF GE-11

Unit I: Understanding Family **15 Hours**

Unit Description: This unit will provide a conceptual understanding of family as an institution and its importance in society.

Subtopics:

- Family– Concept, Definition, types of families, Social functions of families
- Changing structure and functioning of family system
- Impact of urbanization on Family

Unit II: Understanding Family Issues and Concerns **10 Hours**

Unit Description: This unit will focus on the concept of marriage, relationships and issues faced by families in contemportary context.

Subtopics:

- Stress and change over the family life cycle: Marital problems, Work and family stresses
- Divorce, Remarriage and live-in-relationships, Family violence, Abuse and neglect
- Dealing with children, adolescents, coping with ageing, Drug and Alcohol abuse,

Unit III: Family Welfare and Services **10 Hours**

Unit Description: This unit will provide an understanding of strengthening family system through various government and non-government initiatives.

Subtopics:

- Family Management- nature, principles and family budgeting
- Family Welfare Policy and Programmes
- Family Life Education – objectives, process, method, pre-marital counselling

Unit IV: Social Work intervention with families **10 Hours**

Unit Description: This unit will introduce the social work intervention to handle family issues and concerns. This will enhance the competency of the students to learn about family counselling skills and family therapies.

Subtopics:

- Skills and techniques of working with families
- Ecological approach, system approach to family needs assessment and interventions
- Family counselling and family therapy

Practical component (if any) - NIL

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
EMERGING AREAS OF SOCIAL WORK PRACTICE GE 12	4	3	1	0	12th Pass	NIL

Learning Objectives

The learning objectives of this course are as follows:

- To learn the issues and challenges faced by individuals and communities in contemporary context
- To learn the specific skills for working in various settings namely health, CSR, Environment and disability
- To understand the role of social work profession in addressing the contemporary concerns in emerging settings

Learning outcomes

At the end of the semester the students will be able to:

- Describe the issues and challenges faced by individuals and communities in contemporary context
- Demonostrate specific skills required for working with various settings namely health, CSR, Environment and disability
- Critically appraise the social work interventions for working with emerging social work areas

SYLLABUS OF GE-12

Unit I : Health and social work **15 Hours**

Unit Description: This unit will provide a conceptual understanding of health. This will also focus on emerging health issues and approaches of social work in health setting.

Subtopics:

- Meaning and definition of health (Physical and mental health), Social work in pandemic time, Pollution and health concerns
- Lifestyle diseases: communicable and non-communicable (HIV/AIDS, T.B., Cancer, diabetes, obesity, PCOD)
- Field of gerontology and chronic illness: Needs of older persons, physical and mental concerns of older persons, Palliative and hospice care,

Unit II: Social Work and Corporate Social Responsibility (CSR) **10 hours**

Unit Description: This unit will introduce concept of CSR and industry participation in development.

Subtopics:

- Corporate Social Responsibility (CSR), case studies of CSR in India.
- Prevention of human exploitation in industries, concept of welfare in capitalist order, labour issues and trade unions
- Critical reflection on inequality and poverty in capitalist system, Resistance against exploitation of MNCs and corporates

Unit III: Environmental social work **10 Hours**

Unit Description: This unit will introduce definition and components of environment and various environmental issues and the role of civil society organisations in environment conservation.

Subtopics:

- Environment: Definition and components, Global and local environmental issues, concept of Green social work
- Sustainable Development: Concept, potentialities and challenges, sustainable development and technology.
- Environmental movements and Role of civil society organisations in environment conservation. case studies: NBA, Chipko movement, Niyamgiri movement, Plachimada Strike against MNC.

Unit IV: Disability and Social Work **10 Hours**

Unit Description: This unit will focus on concerns of people with disabilities. This will also cover various programmes for rehabiliataion and mainsteaming of PWDs.

Subtopics:

- Concept and meaning: Disability, Impairment, Handicap, and differently abled
- Causes of disability, Categories of persons with disability: Physical, orthopaedic, visual, motor and sensory, intellectual and multiple disability, Needs and problems of persons with disability
- Prevention of Disability, Rehabilitation programmes for the PWDs, Mainstreaming PWDs as empowerment ideology

Practical component (if any) - NIL

DISCIPLINE SPECIFIC ELECTIVE COURSE – 10 (DSE-10): QUANTITATIVE, QUALITATIVE AND MIXED RESEARCH METHODS

Credit distribution, Eligibility and Prerequisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
QUANTITATIVE, QUALITATIVE AND MIXED RESEARCH METHODS DSE 10	4	3	0	1	12th Pass	NIL

Learning Objectives

The learning objectives of this course are as follows:

- To understand the nature, scope and significance of research in social work practice
- To develop an ability to see the linkages between practice, research and theory
- To learn the process of data collection, organization, presentation, analysis and report writing

Learning outcomes

At the end of the semester the students will be able to

- Enumerate the concept of quantitative and qualitative research and its significance in field practice
- Draft research proposal and apply research process in practice/field
- Demonstrate skills, techniques and integrate theories of social work resesch in field work and research practice

SYLLABUS OF DSE- 10

Unit I: Quantitative Research Method **15 Hours**

Unit Description: This unit will introduce the quantitative research method, data processing and data analysis with different types of methods.

Subtopics:

- Quantitative Research Methods- Scales, Questionnaire, interview schedule, statistical Data processing.
- Tabulation and presentation of Statistics: (1) Measures of Central Tendency- Mean, Median, Mode (2) Measures of Variability: Standard Deviation and Mean Deviation.
- Correlation-Meaning and Scope Significance Tests: Pearson's Chi-Square and 't' test.

Unit II: Qualitative Research Methods **15 Hours**

Unit Description: This unit will help to learn about the qualitative research methods and tools of data collection. The unit will also cover different measures of analysing the data and report writing.

Subtopics:

- Qualitative Research Methods- Nature, Concept and Definition of Qualitative Research, Advantages and disadvantages of Qualitative Research
- Tools of Data Collection in Qualitative Research: Observation, Focus Group Discussion, In-depth Interview, Case Studies.
- Analysis of qualitative data, Possible biases and measures to ensure objectivity, Content analysis, framework analysis

Unit III: Mixed Research Method **15 Hours**

Unit Description: This unit will focus on the mixed research methods. This will also emphasize on validity and reliability of this method as well as report writing and evaluation.

Subtopics:

- Integration/mixing quantitative and qualitative data, Triangulation
- Validity and Reliability in Mixed Methods Research
- Reporting and Evaluating: Quantitative, Qualitative and Mixed Methods Research

Practical component **30 Hours**

Unit IV: Report prepartion and plagiarism check

Unit Description: This unit will provide hands on experience of preparing reports based on quantative and qualitative data. The unit also covers process of plagiarism check and its siginifcance.

Subtopics:

- Project work: Quantative data collection and analysis using statistical measures
- Project Work: Qualiatative data collection, transcription and analysis
- Project Work: Report preparation, plagiarism checking using software

DISCIPLINE SPECIFIC ELECTIVE COURSE – 11 (DSE-11): PUBLIC HEALTH POLICIES AND PROGRAMMES

Credit distribution, Eligibility and Prerequisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
PUBLIC HEALTH POLICIES AND PROGRAMMES DSE 11	4	3	0	1	12th Pass	NIL

Learning Objectives

The learning objectives of this course are as follows:

- To develop capacity to apply conceptual framework of public health system in India
- To understand public health programs for children, women and elderly
- To gain a critical perspective towards national health policy, programs and legislations.

Learning outcomes

At the end of the semester the students will be able to

- Evalute health care system and develop competencies in managing health systems at different levels.
- Develop action plan for identified public health issues according to national health programs.
- Apply conceptual framework to understand national policy in health care.

SYLLABUS OF DSE- 11

Unit I: Public Health **15 Hours**

Unit Description: To understand the concept of public health and introduce different types of health systems in India.

Subtopics:

- Public Health: Definition, principles, Social determinants of Health
- Public health system in India
- Present health scenario in India

Unit II: Basic Epidemiology and National Policy for health, programs and Legislations **15 Hours**

Unit Description: To comprehend the basic epidemiology in order to understand the national policies, programs and legislations.

Subtopics:

- National Health Policy 2017, Government health schemes and Programmes.
- Non-Communicable Diseases- (Cancer, Diabetes) and Communicable disease- (Tuberculosis, STI, HIV/AIDS)
- Epidemic Diseases Act, 1897, the Disaster Management Act of 2005, Draft of the Public Health (Prevention, Control and Management of Epidemics, Bio-terrorism and Disasters) Act, 2017 in the light of Public Health Emergency

Unit III: National Health Programmes in India-I

Unit Description: To develop an understanding about the objectives, action plan, achievements and constraints of various National Health Programmes. **15 Hours**

Subtopics:

- National Rural Health Mission,
- RMNCH +A
- National Urban Health Mission.

Practical component

Unit IV: **Social work applications in health care** **30 Hours**

Unit Description: To develop an understanding about the objectives, action plan, achievements and constraints of various National Health Programmes.

Subtopics:

- Case study of Universal Immunization Programme and/or Integrated Child Development Scheme
- Project Work: Analysis on the field of the Water supply and Sanitation program
- Project Work/Case Study: Understanding the ground realities of the program with its challenges and concerns

DISCIPLINE SPECIFIC ELECTIVE COURSE – 12 (DSE-12): PEACE BUIDLING AND CONFLICT RESOLUTION

Credit distribution, Eligibility and Prerequisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
PEACE BUIDLING AND CONFLICT RESOLUTION DSE 12	4	3	0	1	12th Pass	NIL

Learning Objectives

The learning objectives of this course are as follows:

- To develop an understanding about the theories of peace and conflict and to conceptualise key issues and debates around it.
- To develop knowledge about various peace processes in resolving conflict in India and international levels.
- To develop an ability to work on peace building and conflict resolution.

Learning outcomes

At the end of the semester the students will be able to

- Describe the emergence of various social conflicts and their impact on society
- Critically examine the role of professional social workers in peace building processes.
- Evaluate indigenous and international initiatives for peace building and conflict resolution.

SYLLABUS OF DSE- 12

Unit I : Conceptual Framework of Peace Building and Conflict Resolution **15 Hours**

Unit Description: This unit will provide a conceptual understanding of indigenous and international approaches to theorise peace and social conflict.

Subtopics:

- Definition, conceptual framework and context of Conflict
- Social Conflicts in India – Land and Agrarian Conflict, Caste, Communalism, Gender based Conflict, Regionalism and Armed Conflict
- International Conflicts – Inter State and Intra State conflict, Ethnic, Territorial, Communal, Economic, Armed Conflict

Unit II: Conflict Analysis: Strategy and Skills **15 Hours**

Unit Description: This unit will focus on developing an understanding about diverse set of strategies, values and skills essential in building peace and resolving conflicts.

Subtopics:

- Conflict Audit - Stages of Conflict, steps of conflict audit, Mapping entry points, role of actors.
- Conflict induced Trauma and Social Work Interventions
- Case Reflections from India's experience as Multi-Cultural Society : Significance of decentralization and Conscientisation

Unit III: Peace building : Definition, Structures and Contestations

Unit Description: This unit will help students in developing an understanding about concept of building peace, steps, processes and structures that play significant role in peace building. **15 Hours**

Subtopics:

- Restoration and Rebuilding – Role of National-Regional-Local structures, key actors from civil society.
- Peace Building – Social Inclusion, Community Mobilisation and Social Movements, response of Civil Society, role of National and international organisations
- Case reflections from State Human Rights Commission, UNHCR, Grass root and indigenous organisations in peace building, Gandhian Thought and Mobilisation

Practical component **30 Hours**

Unit IV: Role of Social Work in Peace building

Unit Description: This unit will help to learn about role of social workers in peace building and conflict resolution.

Subtopics:

- Project Work/Case Study: Conflict management and conflict resolution Approaches (Analytical, problem solving, conflict transformation and inter personal mediation)
- Project Work/Case Study: Models of Conflict mitigation for Peace building, Building Resilience, Social Analysis - Dialogue, Representation and Social Inclusivity
- Project Work/Case Study: Anti-Oppressive Social Work : Redefining Nature of Engagement and People's Participation

ANNEXURE-26

Sub: Amendment to Ordinance V

[E.C Resolution No. 14/ (14-1-7/) and 27-1-2/ dated 09.06.2023 and 25.08.2023 respectively]

Following addition be made to Appendix-II-A to the Ordinance V (2-A) of the Ordinances of the University;

Add the following:

Syllabi of Semester-IV, V and VI of the following departments under Faculty of Mathematical Sciences based on Under Graduate Curriculum Framework -2022 implemented from the Academic Year 2022-23.

FACULTY OF MATHEMATICAL SCIENCES

1. Department of Mathematics
2. Department of Statistics
3. Department of Operational Research
4. Department of Computer Science

DEPARTMENT OF MATHEMATICS

Category-I

B.Sc. (Hons.) Mathematics, Semester-IV

DISCIPLINE SPECIFIC CORE COURSE – 10: SEQUENCES AND SERIES OF FUNCTIONS

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Sequences and Series of Functions	4	3	1	0	Class XII pass with Mathematics	DSC-2: Real Analysis DSC-5: Calculus DSC-8: Riemann Integration

Learning Objectives: The objective of the course is to introduce:

- The sequences and series of real-valued functions as a generalization to the sequences and series of real numbers.
- The situations under which the process of convergence of a sequence and series of real-valued functions may commute with the processes of calculus while taking differentiation, or integration.
- An important class of series functions (i.e., power series), and the elementary functions-exponential, logarithmic and trigonometric.

Learning Outcomes: This course will enable the students to:

- Learn about Cauchy criterion for uniform convergence and Weierstrass *M*-test for uniform convergence of series of real-valued functions.
- Know about the constraints for the inter-changeability of differentiation, and integration with infinite sum of a series of functions.
- Handle the convergence of power series and properties of the limit function, including differentiation and integration of power series.
- Appreciate utility of polynomials in the space of continuous functions.

SYLLABUS OF DSC-10

UNIT – I: Sequences of Functions **(18 hours)**

Pointwise and uniform convergence of sequence of functions, The uniform norm, Cauchy criterion for uniform convergence, Continuity of the limit function of a sequence of functions, Interchange of the limit and derivative, and the interchange of the limit and integral of a sequence of functions, Bounded convergence theorem.

UNIT – II: Series of Functions **(12 hours)**

Pointwise and uniform convergence of series of functions, Theorems on the continuity, differentiability and integrability of the sum function of a series of functions, Cauchy criterion and the Weierstrass *M*-test for uniform convergence.

UNIT – III: Power Series **(15 hours)**

Definition of a power series, Radius of convergence, Absolute convergence (Cauchy-Hadamard theorem), Differentiation and integration of power series, Abel's theorem, Weierstrass's approximation theorem; The exponential, logarithmic and trigonometric functions: Definitions and their basic properties.

Essential Readings

DISCIPLINE SPECIFIC CORE COURSE – 11: MULTIVARIATE CALCULUS

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Multivariate Calculus	4	3	1	0	Class XII pass with Mathematics	DSC-2: Real Analysis DSC-5: Calculus DSC-8: Riemann Integration

Learning Objectives: The primary objective of this course is to introduce:

- The extension of the studies of single variable differential and integral calculus to functions of two or more independent variables.
- The geometry and visualisation of curves and surfaces in two dimensions (plane) and three dimensions (space).
- The techniques of integration to functions of two and three independent variables.
- The applications of multivariate calculus tools to physics, economics, optimization etc.

Learning Outcomes: This course will enable the students to:

- Learn the conceptual variations when advancing in calculus from one variable to multivariable discussion.
- Understand the maximization and minimization of multivariable functions subject to the given constraints on variables.
- Learn about inter-relationship amongst the line integral, double, and triple integral formulations.
- Familiarize with Green's, Stokes' and Gauss divergence theorems, and learn applications.

SYLLABUS OF DSC-11

UNIT – I: Calculus of Functions of Several Variables (18 hours)

Basic concepts, Limits and continuity, Partial derivatives, Tangent planes, Total differential, Differentiability, Chain rules, Directional derivatives and the gradient, Extrema of functions of two variables, Method of Lagrange multipliers with one constraint.

UNIT – II: Double and Triple Integrals (15 hours)

Double integration over rectangular and nonrectangular regions, Double integrals in polar co-ordinates, Triple integrals over a parallelopiped and solid regions, Volume by triple integrals, Triple integration in cylindrical and spherical coordinates, Change of variables in double and triple integrals.

UNIT – III: Green's, Stokes' and Gauss Divergence Theorem (12 hours)

Vector field, Divergence and curl, Line integrals and applications to mass and work, Fundamental theorem for line integrals, Conservative vector fields, Green's theorem, Area as a line integral, Surface integrals, Stokes' theorem, Gauss divergence theorem.

Essential Reading

1. Strauss, Monty J., Bradley, Gerald L., & Smith, Karl J. (2007). Calculus (3rd ed.). Dorling Kindersley (India) Pvt. Ltd. Pearson Education. Indian Reprint.

Suggestive Reading

DISCIPLINE SPECIFIC CORE COURSE – 12: NUMERICAL ANALYSIS

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Numerical Analysis	4	3	0	1	Class XII pass with Mathematics	DSC-2: Real Analysis DSC-5: Calculus

Learning Objectives: The main objective of this course is to introduce:

- Various computational techniques to find approximate value for possible root(s) of algebraic and non-algebraic equations.
- Methods to solve system of linear equations and ordinary differential equations.
- The use of computer algebra system (CAS) by which the numerical problems can be solved both numerically and analytically, and to enhance the problem-solving skills.

Learning Outcomes: This course will enable the students to:

- Learn some numerical methods to find the zeroes of nonlinear functions of a single variable, up to a certain given level of precision.
- Learn Gauss−Jacobi, Gauss−Seidel methods to solve system of linear equations.
- Get aware of using interpolation techniques, for example in finding values of a tabulated function at points which are not part of the table.
- Learn finding numerical solutions of difference equations which are obtained converting differential equations using techniques from calculus.

SYLLABUS OF DSC-12

UNIT – I: Methods for Solving Algebraic and Transcendental Equations (12 hours)

Rate and order of convergence; Bisection method, Method of false position, Fixed point iteration method, Newton's method, and Secant method, their order of convergence and convergence analysis.

UNIT – II: Techniques to Solve Linear Systems and Interpolation (15 hours)

LU decomposition and its applications; Iterative methods: Gauss−Jacobi, Gauss−Seidel methods; Lagrange and Newton interpolation, Piecewise linear interpolation.

UNIT – III: Numerical Differentiation and Integration (18 hours)

First and higher order approximation for the first derivative, Approximation for the second derivative; Numerical integration by closed Newton−Cotes formulae: Trapezoidal rule, Simpson's rule and its error analysis; Euler's method to solve ODE's, Modified Euler method, Runge−Kutta Method (fourth-order).

Essential Reading

1. Bradie, Brian. (2006). A Friendly Introduction to Numerical Analysis. Pearson Education India. Dorling Kindersley (India) Pvt. Ltd. Third impression 2011.

- Jain, M. K., Iyengar, S. R. K., & Jain, R. K. (2012). Numerical Methods for Scientific and Engineering Computation. (6th ed.). New Age International Publisher, India, 2016.

Note: Non programmable scientific calculator may be allowed in the University examination.

Practical (30 hours)- Practical / Lab work to be performed in Computer Lab: Use of computer algebra system (CAS) software: Python/SageMath/Mathematica/MATLAB/Maple/Maxima/ Scilab etc., for developing the following numerical programs:

1. Bisection method.

2. Newton-Raphson method.
3. Secant method.
4. LU decomposition method.
5. Gauss−Jacobi method.
6. Gauss−Seidel method.
7. Lagrange interpolation.
8. Newton interpolation.
9. Trapezoidal rule.
10. Simpson's rule.
11. Euler's method.
12. Runge−Kutta Method (fourth-order).

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

B.Sc. (Hons) Mathematics, Semester-IV, DSE-Courses

DISCIPLINE SPECIFIC ELECTIVE COURSE – 2(i): BIOMATHEMATICS

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Biomathematics	4	3	1	0	Class XII pass with Mathematics	DSC-6: Ordinary Differential Equations

Learning Objectives: The main objective of this course is to:

- Develop and analyse the models of the biological phenomenon with emphasis on population growth and predator-prey models.
- Interpret first-order autonomous systems of nonlinear differential equations using the Poincaré phase plane.
- Apply the basic concepts of probability to understand molecular evolution and genetics.

Learning Outcomes: This course will enable the students to:

- To learn and appreciate study of long-term behavior arising naturally in study of mathematical models and their impact on society at large.
- To understand spread of epidemic technically through various models and impact of recurrence phenomena.
- Learn what properties like Chaos and bifurcation means through various examples and their impact in Bio-Sciences.

SYLLABUS OF DSE-2(i)

UNIT – I: Mathematical Modeling for Biological Processes (15 hours)

Formulation a model through data, A continuous population growth model, Long-term behavior and equilibrium states, The Verhulst model for discrete population growth, Administration of drugs, Differential equation of chemical process and predator-prey model (Function response: Types I, II and III).

UNIT – II: Epidemic Model: Formulation and Analysis (15 hours)

Introduction to infectious disease, The SIS, SIR and SEIR models of the spread of an epidemic, Analyzing equilibrium states, Phase plane analysis, Stability of equilibrium points, Classifying the equilibrium state; Local stability, Limit cycles, Poincaré-Bendixson theorem.

UNIT – III: Bifurcation, Chaos and Modeling Molecular Evolution (15 hours)

Bifurcation, Bifurcation of a limit cycle, Discrete bifurcation and period-doubling, Chaos,

Stability of limit cycles, Introduction of the Poincaré plane; Modeling molecular evolution: Matrix models of base substitutions for DNA sequences, Jukes-Cantor and Kimura models, Phylogenetic distances.

Essential Readings

1. Robeva, Raina S., et al. (2008). An Invitation to Biomathematics. Academic press.
2. Jones, D. S., Plank, M. J., & Sleeman, B. D. (2009). Differential Equations and Mathematical Biology (2nd ed.). CRC Press, Taylor & Francis Group.
3. Allman, Elizabeth S., & Rhodes, John A. (2004). Mathematical Models in Biology: An Introduction. Cambridge University Press.

Suggestive Readings

- Linda J. S. Allen (2007). An Introduction to Mathematical Biology. Pearson Education.
- Murray, J. D. (2002). Mathematical Biology: An Introduction (3rd ed.). Springer.
- Shonkwiler, Ronald W., & Herod, James. (2009). Mathematical Biology: An Introduction with Maple and MATLAB (2nd ed.). Springer.

DISCIPLINE SPECIFIC ELECTIVE COURSE – 2(ii): MATHEMATICAL MODELING

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Mathematical Modeling	4	3	0	1	Class XII pass with Mathematics	DSC-6: Ordinary Differential Equations

Learning Objectives: Primary objective of this course is to introduce:

- Mathematical modeling as the representation of a system by a set of mathematical relations or equations.
- Mathematical epidemiological models susceptible-infectious-recovered (SIR) and its variant SEIR (S-Exposed-IR) for the spread of diseases.
- Monte Carlo simulation techniques, and simplex method for solving linear programming problems.

Learning Outcomes: This course will enable the students to:

- Understand the methodology of solving SIR models for disease spread.
- Learn significance of dieting model that provides important insights and guides to a biomedical issue that is of interest to the general public.
- Understand nonlinear systems and phenomena with stability analysis ranges from phase plane analysis to ecological and mechanical systems.

- Use Monte Carlo simulation technique to approximate area under a given curve, and volume under a given surface.

SYLLABUS OF DSE-2(ii)

UNIT – I: Mathematical Epidemiological and Dieting Models (15 hours)

Modeling concepts and examples, Scaling of variables, and approximations of functions; SIR and SEIR models for disease spread: Methodology, Standard and solvable SIR models, Basic reproduction number; Dieting model with analysis and approximate solutions.

UNIT – II: Modeling with Nonlinear Systems and Phenomena (15 hours)

Stability and the phase plane, Almost linear systems; Ecological models: Predators and competitors, Critical points, Oscillating populations, Survival of single species, Peaceful coexistence of two species, Interaction of logistic populations, Wildlife conservation preserve; Nonlinear mechanical systems: Hard and soft spring oscillations, Damped nonlinear vibrations.

UNIT – III: Simulation and Optimization Modeling (15 hours)

Monte Carlo simulating deterministic, and probabilistic behavior, Generating random numbers; Linear programming model: Geometric and algebraic solutions, Simplex method and its tableau format, Sensitivity analysis.

Essential Readings

1. Mickens, Ronald E. (2022). Mathematical Modelling with Differential Equations. CRC Press, Taylor & Francis Group.
2. Edwards, C. Henry, Penney, David E., & Calvis, David T. (2023). Differential Equations and Boundary Value Problems: Computing and Modeling (6th ed.). Pearson.
3. Giordano, Frank R., Fox, William P., & Horton, Steven B. (2014). A First Course in Mathematical Modeling (5th ed.). Brooks/Cole, Cengage Learning India Pvt. Ltd.

Suggestive Readings

- Barnes, Belinda & Fulford, Glenn R. (2015). Mathematical Modeling with Case Studies, Using Maple and MATLAB (3rd ed.). CRC Press. Taylor & Francis Group.
- Ross, Shepley L. (2014). Differential Equations (3rd ed.). Wiley India Pvt. Ltd.
- Simmons, George F. (2017). Differential Equations with Applications and Historical Notes (3rd ed.). CRC Press. Taylor & Francis Group.

Practical (30 hours)- Practical work to be performed in Computer Lab: Modeling of the following problems using: R/Python/SageMath/Mathematica/MATLAB/Maxima/Scilab etc.

1. a) Simulation of SIR model and its variants using some initial parameter values, and finding basic reproduction number for analysis.
   b) Analysis of the dieting process, which includes both body-mass loss and gain.
2. Nonlinear Systems and Phenomena.
   a) Plot phase plane portraits and solutions of first-order equations.
   b) Obtain interesting and complicated phase portraits for almost linear systems.

c) Discuss large wildlife conservation preserve model and obtain (i) The period of oscillation of the rabbit and fox populations, (ii) The maximum and minimum numbers of rabbits and foxes.

d) Discuss the Rayleigh and van der Pol models.

3. (i) Random number generation and then use it for the following:
   a) Simulate area under a given curve.
   b) Simulate volume under a given surface.

   (ii) [2] Chapter 7 (Projects 7.4 and 7.5).

DISCIPLINE SPECIFIC ELECTIVE COURSE – 2(iii): MECHANICS

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Mechanics	4	3	1	0	Class XII pass with Mathematics	DSC-5: Calculus DSC-6: Ordinary Differential Equations

Learning Objectives: The main objective of this course is to:

- Starting Newtonian laws, learning various technical notions which explains various states of motion under given forces.
- Deals with the kinematics and kinetics of the rectilinear and planar motions of a particle including constrained oscillatory motions of particles, projectiles, and planetary orbits.
- Understand hydrostatic pressure and thrust on plane surfaces.

Learning Outcomes: This course will enable the students to:

- Understand necessary conditions for the equilibrium of particles acted upon by various forces and learn the principle of virtual work for a system of coplanar forces.
- Apply the concepts of center of gravity, laws of static and kinetic friction.
- Learn that a particle moving under a central force describes a plane curve and know the Kepler's laws of the planetary motions.
- Evaluate the hydrostatic pressure at any given depth in a heavy homogeneous liquid at rest under gravity.

SYLLABUS OF DSE-2(iii)

UNIT – I: Statics **(15 hours)**

Fundamental laws of Newtonian mechanics, Law of parallelogram of forces, Equilibrium of a particle, Lamy's theorem, Equilibrium of a system of particles, External and internal forces, Couples, Reduction of a plane force system, Work, Principle of virtual work, Potential energy and conservative field, Mass centers, Centers of gravity, Friction.

UNIT – II: Dynamics (18 hours)

Kinemetics of a particle, Motion of a particle, Motion of a system, Principle of linear momentum, Motion of mass center, Principle of angular momentum, Motion relative to mass center, Principle of energy, D'Alembert's principle; Moving frames of reference, Frames of reference with uniform translational velocity, Frames of reference with constant angular velocity; Applications in plane dynamics- Motion of a projectile, Harmonic oscillators, General motion under central forces, Planetary orbits.

UNIT – III: Hydrostatics (12 hours)

Shearing stress, Pressure, Perfect fluid, Pressure at a point in a fluid, Transmissibility of liquid pressure, Compression, Specific gravity, Pressure of heavy fluid- Pressure at all points in a horizontal plane, Surface of equal density; Thrust on plane surfaces.

Essential Readings

1. Synge, J. L., & Griffith, B. A. (2017). Principles of Mechanics (3rd ed.). McGraw-Hill Education. Indian Reprint.
2. Ramsey, A. S. (2017). Hydrostatics. Cambridge University Press. Indian Reprint.

Suggestive Readings

- Roberts, A. P. (2003). Statics and Dynamics with Background Mathematics. Cambridge University Press.
- Ramsey, A. S. (1985). Statics (2nd ed.). Cambridge University Press.

B.A. (Prog.) Semester-IV with Mathematics as Major
Category-II

DISCIPLINE SPECIFIC CORE COURSE (DSC-4): INTRODUCTION TO GRAPH THEORY

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Introduction to Graph Theory	4	3	1	0	Class XII pass with Mathematics	NIL

Learning Objectives: The primary objective of this course is to introduce:

- Problem-solving techniques using various concepts of graph theory.
- Various properties like planarity and chromaticity of graphs.
- Several applications of these concepts in solving practical problems.

Learning Outcomes: This course will enable the students to:

- Good familiarity with all initial notions of graph theory and related results and seeing them used for some real-life problems.
- Learning notion of trees and their enormous usefulness in various problems.
- Learning various algorithms and their applicability.
- Studying planar graphs, Euler theorem associated to such graphs and some useful applications like coloring of graphs.

SYLLABUS OF DSC-4

UNIT-I: Graphs, Types of Graphs and Basic Properties (12 hours)

Graphs and their representation, Pseudographs, Subgraphs, Degree sequence, Euler's theorem, Isomorphism of graphs, Paths and circuits, Connected graphs, Euler trails and circuits, Hamiltonian paths and cycles, Adjacency matrix, Weighted graphs, Travelling salesman problem, Dijkstra's algorithm.

UNIT-II: Directed Graphs and Applications, Trees (18 hours)

The Chinese postman problem; Digraphs, Bellman-Ford algorithm, Tournaments, Directed network, Scheduling problem; Trees and their properties, Spanning trees, Kruskal's algorithm, Prim's algorithm, Acyclic digraphs and Bellman's algorithm.

UNIT-III: Planar Graphs, Graph Coloring and Network Flows (15 hours)

Planar graphs, Euler's formula, Kuratowski theorem, Graph coloring, Applications of graph

coloring, Circuit testing and facilities design, Flows and cuts, Max flow-min cut theorem, Matchings, Hall's theorem.

Essential Reading

1. Goodaire, Edgar G., & Parmenter, Michael M. (2011). Discrete Mathematics with Graph Theory (3rd ed.). Pearson Education Pvt. Ltd. Indian Reprint.

Suggestive Readings

- Bondy, J. A. & Murty, U.S.R. (2008), Graph Theory with Applications. Springer.
- Chartrand, Gary, & Zhang, P. (2012). A First Course in Graph Theory. Dover Publications.

- West, Douglas B. (2001). Introduction to graph theory (2nd ed.). Pearson India.

DISCIPLINE SPECIFIC CORE COURSE – 4 (Discipline A-4): ABSTRACT ALGEBRA

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Abstract Algebra	4	3	1	0	Class XII pass with Mathematics	NIL

Learning Objectives: The primary objective of the course is to introduce:

- Modular arithmetic, fundamental theory of groups, rings, integral domains, and fields.
- Symmetry group of a plane figure, and basic concepts of cyclic groups.
- Cosets of a group and its properties, Lagrange's theorem, and quotient groups.

Learning Outcomes: This course will enable the students to:

- Appreciate ample types of groups present around us which explains our surrounding better, and classify them as abelian, cyclic and permutation groups.
- Explain the significance of the notion of cosets, normal subgroups and homomorphisms.
- Understand the fundamental concepts of rings, subrings, fields, ideals, and factor rings.

SYLLABUS OF DISCIPLINE A-4

UNIT-I: Introduction to Groups (12 hours)

Modular arithmetic; Definition and examples of groups, Elementary properties of groups, Order of a group and order of an element of a group; Subgroups and its examples, Subgroup tests; Center of a group and centralizer of an element of a group.

UNIT-II: Cyclic Groups, Permutation Groups and Lagrange's Theorem (18 hours)

Cyclic groups and its properties, Generators of a cyclic group; Group of symmetries; Permutation groups, Cyclic decomposition of permutations and its properties, Even and odd

permutations and the alternating group; Cosets and Lagrange's theorem; Definition and examples of normal subgroups, Quotient groups; Group homomorphisms and properties.

UNIT-III: Rings, Integral Domains and Fields (15 hours)

Definition, examples and properties of rings, subrings, integral domains, fields, ideals and factor rings; Characteristic of a ring; Ring homomorphisms and properties.

Essential Reading

1. Gallian, Joseph. A. (2017). Contemporary Abstract Algebra (9th ed.). Cengage Learning India Private Limited, Delhi. Indian Reprint (2021).

Suggestive Reading

DSE Courses of B.Sc. (Physical Sciences/Mathematical Sciences) Semester-IV

Category-III

DISCIPLINE SPECIFIC ELECTIVE COURSE – 2(i): ELEMENTS OF DISCRETE MATHEMATICS

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Elements of Discrete Mathematics	4	3	1	0	Class XII pass with Mathematics	NIL

Learning Objectives: Students are introducing to:

- Order (or partial order) and related properties.
- Notion of a lattice which is also a step towards abstract algebra.
- Concept of Boolean algebra and its applications to minimizing a Boolean polynomial and switching circuits, which has further applications in computer science.

Learning Outcomes: This course will enable the students to:

- Understand the basic concepts of sets, relations, functions, and induction.
- Understand mathematical logic and logical operations to various fields.
- Understand the notion of order and maps between partially ordered sets.
- Minimize a Boolean polynomial and apply Boolean algebra techniques to decode switching circuits.

SYLLABUS OF DSE-2(i)

UNIT-I: Sets, Relations and Functions (18 hours)

Sets, Propositions and logical operations, Conditional statements, Mathematical induction, Relations and equivalence relation, Equivalence classes, Partial order relation, Partially ordered set, Hasse diagrams, Chain, Maximal and minimal elements, least and greatest elements, Least upper bound, Greatest lower bound, Zorn's lemma, Functions and bijective functions, Functions between POSETS, Order isomorphism.

UNIT-II: Lattices (12 hours)

Lattice as a POSET, Lattice as an algebra and their equivalence, Bounded lattices, Sublattices, Interval in a lattice, Products and homomorphism of lattices, Isomorphism of lattices; Distributive, Complemented, Partition and pentagonal lattices.

UNIT-III: Boolean Algebra and Switching Circuits (15 hours)

Boolean algebra, De Morgan's laws, Boolean expressions, Truth tables, Logic diagrams, Boolean functions, Disjunctive normal forms (as join of meets), Minimal forms of Boolean

polynomials, Quine Mc-Cluskey method, Karnaugh maps, Switching circuits, Applications of switching circuits.

Essential Readings

- Various properties like planarity and chromaticity of graphs.
- Several applications of these concepts in solving practical problems.

Learning Outcomes: This course will enable the students to:

- Good familiarity with all initial notions of graph theory and related results and seeing them used for some real-life problems.
- Learning notion of trees and their enormous usefulness in various problems.
- Learning various algorithms and their applicability.
- Studying planar graphs, Euler theorem associated to such graphs and some useful applications like coloring of graphs.

SYLLABUS OF DSE-2(ii)

UNIT-I: Graphs, Types of Graphs and Basic Properties (12 hours)

Graphs and their representation, Pseudographs, Subgraphs, Degree sequence, Euler's theorem, Isomorphism of graphs, Paths and circuits, Connected graphs, Euler trails and

circuits, Hamiltonian paths and cycles, Adjacency matrix, Weighted graphs, Travelling salesman problem, Dijkstra's algorithm.

UNIT-II: Directed Graphs and Applications, Trees (18 hours)

The Chinese postman problem; Digraphs, Bellman-Ford algorithm, Tournaments, Directed network, Scheduling problem; Trees and their properties, Spanning trees, Kruskal's algorithm, Prim's algorithm, Acyclic digraphs and Bellman's algorithm.

UNIT-III: Planar Graphs, Graph Coloring and Network Flows (15 hours)

Planar graphs, Euler's formula, Kuratowski theorem, Graph coloring, Applications of graph coloring, Circuit testing and facilities design, Flows and cuts, Max flow-min cut theorem, Matchings, Hall's theorem.

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Linear Programming	4	3	1	0	Class XII pass with Mathematics	NIL

Learning Objectives: The primary objective of this course is to introduce:

- The solution of linear programming problem using simplex method.
- The solution of transportation and assignment problems.
- Game theory which makes possible the analysis of the decision-making process of two interdependent subjects.

Learning Outcomes: This course will enable the students to:

- Learn about the simplex method used to find optimal solutions of linear optimization problems subject to certain constraints.
- Write the dual of a linear programming problem.

- Solve the transportation and assignment problems.
- Learn about solution of rectangular games using graphical method and dominance.
- Formulate game to a pair of associated prima-dual linear programming problems.

SYLLABUS OF DSE-2(iii)

UNIT-I: Linear Programming Problem, Simplex Method, and Duality (18 hours)

Standard form of the LPP, graphical method of solution, basic feasible solutions, and convexity; Introduction to the simplex method**:** Optimality criterion and unboundedness, Simplex tableau and examples, Artificial variables; Introduction to duality, Formulation of the dual problem with examples.

UNIT-II: Transportation and Assignment Problems (15 hours)

Definition of transportation problem, finding initial basic feasible solution using Northwest-corner method, Least-cost method, and Vogel approximation method; Algorithm for solving transportation problem; Hungarian method of solving assignment problem.

UNIT-III: Two-Person Zero-Sum Games (12 hours)

Introduction to game theory, rectangular games, Mixed strategies, Dominance principle; Formulation of game to primal and dual linear programming problems.

Essential Readings

COMMON POOL OF GENERIC ELECTIVES (GE) Semester-IV COURSES OFFERED BY DEPARTMENT OF MATHEMATICS

Category-IV

GENERIC ELECTIVES (GE-4(i)): ELEMENTS OF REAL ANALYSIS

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Elements of Real Analysis	4	3	1	0	Class XII pass with Mathematics	NIL

Learning Objectives: The primary objective of this course is to introduce:

- The real line with algebraic, order and completeness properties.
- Convergence and divergence of sequences and series of real numbers with applications.

Learning Outcomes: This course will enable the students to:

- Understand the basic properties of the set of real numbers, including completeness and Archimedean with some consequences.
- Recognize bounded, convergent, monotonic and Cauchy sequences
- Learn to apply various tests such as limit comparison, ratio, root, and alternating series tests for convergence and absolute convergence of infinite series of real numbers.

SYLLABUS OF GE-4(i)

UNIT-I: Basic Properties of the Set of Real Numbers (12 hours)

Field and order properties of $\mathbb{R}$, basic properties and inequalities of the absolute value of a real number, bounded above and bounded below sets, Suprema and infima, The completeness axiom and the Archimedean property of $\mathbb{R}$.

UNIT-II: Real Sequences (18 hours)

Convergence of a real sequence, Algebra of limits, The squeeze principle and applications, Monotone sequences, Monotone convergence theorem and applications, Cauchy sequences, Cauchy criterion for convergence and applications.

UNIT-III: Infinite Series of Real Numbers (15 hours)

Convergence and divergence of infinite series of real numbers, Necessary condition for convergence, Cauchy criterion for convergence of series, Tests for convergence of positive term series, Applications of the integral test, Comparison tests, D'Alembert's ratio test, Cauchy's *n*th root test, Raabe's test; Alternating series, Leibniz alternating series test, Absolute and conditional convergence.

DEPARTMENT OF MATHEMATICS

Category-I

B.Sc. (Hons.) Mathematics Semester-V

DISCIPLINE SPECIFIC CORE COURSE – 13: METRIC SPACES

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Metric Spaces	4	3	1	0	Class XII pass with Mathematics	DSC-2: Real Analysis DSC-5: Calculus

Learning Objectives: The objective of the course is to introduce:

- The usual idea of distance into an abstract form on any set of objects, maintaining its inherent characteristics, and the resulting consequences.
- The two important topological properties, namely connectedness, and compactness of metric spaces with their characterizations.

Learning Outcomes: This course will enable the students to:

- Learn various natural and abstract formulations of distance on the sets of usual or unusual entities. Become aware one such formulations leading to metric spaces.
- Analyse how a theory advances from a particular frame to a general frame.
- Appreciate the mathematical understanding of various geometrical concepts, viz. balls or connected sets etc. in an abstract setting.
- Know about Banach fixed point theorem, whose far-reaching consequences have resulted into an independent branch of study in analysis, known as fixed point theory.

SYLLABUS OF DSC-13

UNIT – I: Topology of Metric Spaces (18 hours)

Definition, examples, sequences and Cauchy sequences, Complete metric space; Open and closed balls, Neighborhood, Open set, Interior of a set, Limit point of a set, Derived set, Closed set, Closure of a set, Diameter of a set, Cantor's theorem, Subspaces.

UNIT – II: Continuity and Uniform Continuity in Metric Spaces (15 hours)

Continuous mappings, Sequential criterion and other characterizations of continuity, Uniform continuity; Homeomorphism, Isometry and equivalent metrics, Contraction mapping, Banach fixed point theorem.

UNIT – III: Connectedness and Compactness (12 hours)

Connectedness, Connected subsets of $\mathbb{R}$, Connectedness and continuous mappings, Compactness and boundedness, Characterizations of compactness, Continuous functions on compact spaces.

Essential Reading

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

DISCIPLINE SPECIFIC CORE COURSE – 14: RING THEORY

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Ring Theory	4	3	1	0	Class XII pass with Mathematics	DSC-7: Group Theory

Learning Objectives: The primary objective of this course is to:

- Introduce the fundamental theory of rings, and their homomorphisms.
- Develop the basic concepts of polynomial rings and irreducibility tests for polynomials over the ring of integers, and rational numbers.
- Introduce polynomial analog of a prime number.
- Describe polynomial rings, principal ideal domains, Euclidean domains and unique factorization domains, and their relationships.

Learning Outcomes: This course will enable the students to:

- Learn about the fundamental concept of rings, integral domains, and fields.
- Know about ring homomorphisms and isomorphisms theorems of rings, and construct quotient fields for integral domains.
- Appreciate the significance of unique factorization in rings and integral domains.
- Apply several criteria for determining when polynomials with integer coefficients have rational roots or are irreducible over the field of rational numbers.

SYLLABUS OF DSC-14

UNIT – I: Introduction to Rings and Ideals (18 hours)

Definition and examples of rings, Properties of rings, Subrings, Integral domains and fields, Characteristic of a ring; Ideals, operations on ideals, ideal generated by a set and properties, Factor rings, Prime ideals and maximal ideals, Principal ideal domains.

UNIT – II: Ring Homomorphisms and Polynomial Rings (15 hours)

Definition, examples and properties of ring homomorphisms; First, second and third

isomorphism theorems for rings; The field of quotients; Polynomial rings over commutative rings, Division algorithm and consequences.

UNIT–III: Unique Factorization Domain and Divisibility in Integral Domains (12 hours)
Factorization of polynomials, Reducibility tests, Mod *p* Irreducibility test, Eisenstein's criterion, Unique factorization in $\mathbb{Z}[x]$; Divisibility in integral domains, Irreducibles, Primes, Unique factorization domains, Euclidean domains.

Essential Readings

1. Gallian, Joseph. A. (2017). Contemporary Abstract Algebra (9th ed.). Cengage Learning India Private Limited, Delhi. Indian Reprint 2021.

DISCIPLINE SPECIFIC CORE COURSE – 15: PARTIAL DIFFERENTIAL EQUATIONS

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Partial Differential Equations	4	3	0	1	Class XII pass with Mathematics	DSC-6: Ordinary Differential Equations

Learning Objectives: The main objective of this course is to introduce:

- Basic concepts of first and second order linear/nonlinear partial differential equations.
- Modeling of wave equation, heat equation, Burgers equation, traffic flow and their solutions.

Learning Outcomes: The course will enable the students to learn:

- The method of characteristics and reduction to canonical forms to solve first and second order linear/nonlinear partial differential equations.
- The macroscopic modeling of the traffic flow, where the focus will be on modeling the density of cars and their flow, rather than modeling individual cars and their velocity.
- The Cauchy problem and solutions of wave equations with initial boundary-value problems, and non-homogeneous boundary conditions.

SYLLABUS OF DSC-15

UNIT – I: First Order Partial Differential Equations (15 hours)
Basic concepts, classification, construction, and geometrical interpretation; Method of characteristics and general solutions, Cauchy problem for a first-order PDE, Canonical

forms of first-order linear equations; Method of separation of variables; Charpit's method for solving non-linear PDEs.

UNIT – II: Classification and Solutions of Second-Order Linear PDEs (12 hours)

Classification (hyperbolic, parabolic, and elliptic), reduction to canonical forms, and general solutions of second-order linear PDEs; Higher order linear partial differential equations with constant coefficients.

UNIT – III: Applications of Partial Differential Equations (18 hours)

Mathematical models: The vibrating string, vibrating membrane, conduction of heat in solids, the gravitational potential, conservation laws and the Burgers equation, Traffic flow; Cauchy problem and wave equations: Solutions of homogeneous wave equations with initial boundary-value problems, and non-homogeneous boundary conditions, Cauchy problem for non-homogeneous wave equations.

Essential Readings

1 Myint-U, Tyn & Debnath, Lokenath. (2007). Linear Partial Differential Equations for Scientists and Engineers (4th ed.). Birkhäuser. Indian Reprint.

2 Sneddon, Ian N. (2006). Elements of Partial Differential Equations, Dover Publications. Indian Reprint.

Suggestive Readings

- Abell, Martha & Braselton, J.P. (2004) Differential Equations with Mathematica, Elsevier, Academic Press, Third Edition.
- Stavroulakis, Ioannis P & Tersian, Stepan A. (2004). Partial Differential Equations: An Introduction with Mathematica and MAPLE (2nd ed.). World Scientific.

Practical (30 hours)- Practical / Lab work to be performed in a Computer Lab:

Modeling of the following similar problems using SageMath/Python/Mathematica/ MATLAB/Maple/Maxima/Scilab:

1. General solution of first and second order partial differential equations.
2. Solution and plotting of Cauchy problem for first order PDEs.
3. Plotting the characteristics for the first order partial differential equations.
4. Solution of vibrating string problem using D'Alembert formula with initial conditions.
5. Solution of heat equation $u_t = k\, u_{xx}$ with initial conditions.
6. Solution of one-dimensional wave equation with initial conditions:
   i. $u(x,0) = f(x),\ u_t(x,0) = g(x),\ x \in \mathbb{R}, t > 0$
   ii. $u(x,0) = f(x),\ u_t(x,0) = g(x),\ u(0,t) = 0,\ x \in \mathbb{R}, t > 0$
   iii. $u(x,0) = f(x),\ u_t(x,0) = g(x),\ u_x(0,t) = 0,\ x \in \mathbb{R}, t > 0$
7. Solution of traffic flow problem with given initial conditions, and plotting of the characteristic base curves and the traffic density function.

B.Sc. (Hons) Mathematics, Semester-V, DSE-Courses

DISCIPLINE SPECIFIC ELECTIVE COURSE – 3(i): MATHEMATICAL DATA SCIENCE

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title &	Credits	Credit distribution of the course	Eligibility	Pre-requisite of

Code		Lecture	Tutorial	Practical/ Practice	criteria	the course (if any)
Mathematical Data Science	4	3	0	1	Class XII pass with Mathematics	Basic knowledge of R/Python DSC-3: Probability & Statistics

Learning Objectives: The main objective of this course is to:

- Introduce various types of data and their sources, along with steps involved in data science case-study, including problems with data and their rectification and creation methods.
- Cover dimensionality reduction techniques, clustering algorithms and classification methods.

Learning Outcomes: The course will enable the students to:

- Gain a comprehensive understanding of data science, its mathematical foundations including practical applications of regression, principal component analysis, singular value decomposition, clustering, support vector machines, and *k*-NN classifiers.
- Demonstrate data analysis and exploration, linear regression techniques such as simple, multiple explanatory variables, cross-validation and regularization using R/Python.
- Use real-world datasets to practice dimensionality reduction techniques such as PCA, SVD, and multidimensional scaling using R/Python.

SYLLABUS OF DSE-3(i)

UNIT-I: Principles of Data Science (12 hours)

Types of Data: nominal, ordinal, interval, and ratio; Steps involved in data science case-study: question, procurement, exploration, modeling, and presentation; Structured and unstructured data: streams, frames, series, survey results, scale and source of data – fixed, variable, high velocity, exact and implied/inferred; Overview of problems with data – dirty and missing data in tabular formats – CSV, data frames in R/Pandas, anomaly detection, assessing data quality, rectification and creation methods, data hygiene, meta-data for inline data-description-markups such as XML and JSON; Overview of other data-source formats – SQL, pdf, Yaml, HDF5, and Vaex.

Unit-II: Mathematical Foundations (15 hours)

Model driven data in R^n, Log-likelihoods and MLE, Chebyshev, and Chernoff-Hoeffding inequalities with examples, Importance sampling; Norms in Vector Spaces– Euclidean, and metric choices; Types of distances: Manhattan, Hamming, Mahalanobis, Cosine and angular distances, KL divergence; Distances applied to sets– Jaccard, and edit distances; Modeling text with distances; Linear Regression: Simple, multiple explanatory variables, polynomial, cross-validation, regularized, Lasso, and matching pursuit; Gradient descent.

Unit-III: Dimensionality Reduction, Clustering and Classification (18 hours)

Problem of dimensionality, Principal component analysis, Singular value decomposition (SVD), Best *k*-rank approximation of a matrix, Eigenvector and eigenvalues relation to SVD, Multidimensional scaling, Linear discriminant analysis; Clustering: Voronoi diagrams, Delaunay triangulation, Gonzalez's algorithm for *k*-center clustering, Lloyd's algorithm for *k*-means clustering, Mixture of Gaussians, Hierarchical clustering, Density-based clustering

and outliers, Mean shift clustering; Classification: Linear classifiers, Perceptron algorithm, Kernels, Support vector machines, and *k*-nearest neighbors (*k*-NN) classifiers.

Essential Readings

1. Mertz, David. (2021). Cleaning Data for Effective Data Science, Packt Publishing.
2. Ozdemir, Sinan. (2016). Principles of Data Science, Packt Publishing.
3. Phillips, Jeff M. (2021). Mathematical Foundations for Data Analysis, Springer. (https://mathfordata.github.io/).

Suggestive Readings

- Frank Emmert-Streib, et al. (2022). Mathematical Foundations of Data Science Using R. (2nd ed.). De Gruyter Oldenbourg.
- Wes McKinney. (2022). Python for Data Analysis (3rd ed.). O'Reilly.
- Wickham, Hadley, et al. (2023). R for Data Science (2nd ed.). O'Reilly.

Practical (30 hours)- Practical work to be performed in Computer Lab using R/Python:

1. To explore different types data (nominal, ordinal, interval, ratio) and identify their properties.
2. To deal with dirty and missing data, such as imputation, deletion, and data normalization.
3. Use the real-world datasets (https://data.gov.in/) to demonstrate the following:
   a) Data analysis and exploration, linear regression techniques such as simple, multiple explanatory variables, cross-validation, and regularization.
   b) Dimensionality reduction techniques such as principal component analysis, singular value decomposition (SVD), and multidimensional scaling.
   c) Clustering algorithms such as *k*-means, hierarchical, and density-based clustering and evaluate the quality of the clustering results.
   d) Classification methods such as linear classifiers, support vector machines (SVM), and *k*-nearest neighbors (*k*-NN).

DISCIPLINE SPECIFIC ELECTIVE COURSE – 3(ii): LINEAR PROGRAMMING AND APPLICATIONS

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Linear Programming and Applications	4	3	1	0	Class XII pass with Mathematics	DSC-4: Linear Algebra

Learning Objectives: Primary objective of this course is to introduce:

- Simplex Method for linear programming problems.
- Dual linear programming problems.
- The applications of linear Programming to transportation, assignment, and game theory.

Learning Outcomes: The course will enable the students to:

- Learn about the basic feasible solutions of linear programming problems.
- Understand the theory of the simplex method to solve linear programming problems.
- Learn about the relationships between the primal and dual problems.
- Solve transportation and assignment problems.
- Understand two-person zero sum game, games with mixed strategies and formulation of game to primal and dual linear programing problems to solve using duality.

SYLLABUS OF DSE-3(ii)

UNIT– I: Introduction to Linear Programming (12 hours)

Linear programming problem: Standard, Canonical and matrix forms, Geometric solution; Convex and polyhedral sets, Hyperplanes, Extreme points; Basic solutions, Basic feasible solutions, Correspondence between basic feasible solutions and extreme points.

UNIT– II: Optimality and Duality Theory of Linear Programming Problem (18 hours)

Simplex method: Optimal solution, Termination criteria for optimal solution of the linear programming problem, Unique and alternate optimal solutions, Unboundedness; Simplex algorithm and its tableau format; Artificial variables, Two-phase method, Big-M method. Duality Theory: Motivation and formulation of dual problem, Primal-Dual relationships, Fundamental theorem of duality; Complementary slackness.

UNIT – III: Applications (15 hours)

Transportation Problem: Definition and formulation, Northwest-corner, Least- cost, and Vogel's approximation methods of finding initial basic feasible solutions; Algorithm for solving transportation problem.

Assignment Problem: Mathematical formulation and Hungarian method of solving.

Game Theory: Two-person zero sum game, Games with mixed strategies, Formulation of game to primal and dual linear programming problems, Solution of games using duality.

Essential Readings

DISCIPLINE SPECIFIC ELECTIVE COURSE – 3(iii): MATHEMATICAL STATISTICS

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/		

				Practice		
Mathematical Statistics	**4**	**3**	**1**	**0**	**Class XII pass with Mathematics**	**DSC-3: Probability & Statistics DSC-11: Multivariate Calculus**

Learning Objectives: The main objective of this course is to introduce:

- The joint behavior of several random variables theoretically and through illustrative practical examples.
- The theory underlying modern statistics to give the student a solid grounding in (mathematical) statistics and the principles of statistical inference.
- The application of the theory to the statistical modeling of data from real applications, including model identification, estimation, and interpretation.
- The idea of Fisher information to find the minimum possible variance for an unbiased estimator, and to show that the MLE is asymptotically unbiased and normal.

Learning Outcomes: The course will enable the students to:

- Understand joint distributions of random variables including the bivariate normal distribution.
- Estimate model parameters from the statistical inference based on point estimation and hypothesis testing.
- Apply Rao-Blackwell theorem for improving an estimator, and Cramér-Rao inequality to find lower bound on the variance of unbiased estimators of a parameter.
- Understand the theory of linear regression models and contingency tables.

SYLLABUS OF DSE - 3(iii)

UNIT–I: Joint Probability Distributions (15 hours)

Joint probability mass function for two discrete random variables, Marginal probability mass function, Joint probability density function for two continuous random variables, Marginal probability density function, Independent random variables; Expected values, covariance, and correlation; Linear combination of random variables and their moment generating functions; Conditional distributions and conditional expectation, Laws of total expectation and variance; Bivariate normal distribution.

UNIT-II: Sampling Distributions and Point Estimation (15 hours)

Distribution of important statistics such as the sample totals, sample means, and sample proportions, Central limit theorem, Law of large numbers; Chi-squared, *t*, and *F* distributions; Distributions based on normal random samples; Concepts and criteria for point estimation, The methods of moments and maximum likelihood estimation (MLE); Assessing estimators: Accuracy and precision, Unbiased estimation, Consistency and sufficiency, The Neyman factorization theorem, Rao-Blackwell theorem, Fisher Information, The Cramér-Rao inequality, Efficiency,

UNIT-III: Confidence Intervals, Tests of Hypotheses and Linear Regression Analysis (15 hours)

Interval estimation and basic properties of confidence intervals, One-sample *t* confidence interval, Confidence intervals for a population proportion and population variance.
Statistical hypotheses and test procedures, One-sample tests about a population mean and a population proportion, *P*-values for tests; The simple linear regression model and its estimating parameters; Chi-squared goodness-of-fit tests, Two-way contingency tables.

Category-II

DISCIPLINE SPECIFIC CORE COURSE (DSC-5): LINEAR PROGRAMMING

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Linear Programming	4	3	1	0	Class XII pass with Mathematics	NIL

Learning Objectives: The primary objective of this course is to introduce:

- The solution of linear programming problem using simplex method.
- The solution of transportation and assignment problems.
- Game theory which makes possible the analysis of the decision-making process of two interdependent subjects.

Learning Outcomes: This course will enable the students to:

- Learn about the simplex method used to find optimal solutions of linear optimization problems subject to certain constraints.
- Write the dual of a linear programming problem.
- Solve the transportation and assignment problems.
- Learn about solution of rectangular games using graphical method and dominance.
- Formulate game to a pair of associated prima-dual linear programming problems.

SYLLABUS OF DSC-5

UNIT-I: Linear Programming Problem, Simplex Method, and Duality (18 hours)

Standard form of the LPP, graphical method of solution, basic feasible solutions, and convexity; Introduction to the simplex method**:** Optimality criterion and unboundedness, Simplex tableau and examples, Artificial variables; Introduction to duality, Formulation of the dual problem with examples.

UNIT-II: Transportation and Assignment Problems (15 hours)

Definition of transportation problem, finding initial basic feasible solution using Northwest-corner method, Least-cost method, and Vogel approximation method; Algorithm for solving transportation problem; Hungarian method of solving assignment problem.

UNIT-III: Two-Person Zero-Sum Games (12 hours)

Introduction to game theory, rectangular games, Mixed strategies, Dominance principle; Formulation of game to primal and dual linear programming problems.

Essential Readings

DISCIPLINE SPECIFIC CORE COURSE – 5 (Discipline A-5): ELEMENTS OF REAL ANALYSIS

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Elements of Real Analysis	4	3	1	0	Class XII pass with Mathematics	NIL

Learning Objectives: The primary objective of this course is to introduce:

- The real line with algebraic, order and completeness properties.
- Convergence and divergence of sequences and series of real numbers with applications.

Learning Outcomes: This course will enable the students to:

- Understand the basic properties of the set of real numbers, including completeness and Archimedean with some consequences.
- Recognize bounded, convergent, monotonic and Cauchy sequences
- Learn to apply various tests such as limit comparison, ratio, root, and alternating series tests for convergence and absolute convergence of infinite series of real numbers.

SYLLABUS OF DISCIPLINE A-5

UNIT-I: Basic Properties of the Set of Real Numbers (12 hours)

Field and order properties of $\mathbb{R}$, basic properties and inequalities of the absolute value of a real number, bounded above and bounded below sets, Suprema and infima, The completeness axiom and the Archimedean property of $\mathbb{R}$.

UNIT-II: Real Sequences (18 hours)

Convergence of a real sequence, Algebra of limits, The squeeze principle and applications, Monotone sequences, Monotone convergence theorem and applications, Cauchy sequences, Cauchy criterion for convergence and applications.

UNIT-III: Infinite Series of Real Numbers (15 hours)

Convergence and divergence of infinite series of real numbers, Necessary condition for convergence, Cauchy criterion for convergence of series, Tests for convergence of positive term series, Applications of the integral test, Comparison tests, D'Alembert's ratio test, Cauchy's *n*th root test, Raabe's test; Alternating series, Leibniz alternating series test, Absolute and conditional convergence.

DISCIPLINE SPECIFIC ELECTIVE COURSE – 1(i): COMBINATORICS

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Combinatorics	4	3	1	0	Class XII pass with Mathematics	NIL

Learning Objectives: The primary objective of this course is to:

- Introduce various techniques of permutations, combinations, and inclusion-exclusion.
- Learn basic models of generating functions and recurrence relations in their application to the theory of integer partitions.

Learning Outcomes: After completing the course, student will:

- Enhance the mathematical logical skills by learning different enumeration techniques.
- Be able to apply these techniques in solving problems in other areas of mathematics.
- Be trained to provide reasoning and arguments to justify conclusions.

SYLLABUS OF DSE-1(i)

UNIT – I: Basics of Combinatorics **(15 hours)**

Basic counting principles, Permutations and Combinations (with and without repetitions), Binomial coefficients, Multinomial coefficients, Counting subsets of size k; Set-partitions, The inclusion-exclusion principle and applications.

UNIT – II: Generating Functions and Recurrence Relations **(18 hours)**

Generating functions: Generating function models, Calculating coefficients of generating functions, Polynomial expansions, Binomial identity, Exponential generating functions. Recurrence relations: Recurrence relation models, Divide-and-conquer relations, Solution of linear recurrence relations, Solutions by generating functions.

UNIT – III: Partition **(12 hours)**

Partition theory of integers: Ordered partition, Unordered partition, Ferrers diagram, Conjugate of partition, Self-conjugate partition, Durfee square, Euler's pentagonal theorem.

Essential Readings

1. Sane, Sharad S. (2013). Combinatorial Techniques. Hindustan Book Agency (India).
2. Tucker, Alan (2012). Applied Combinatorics (6th ed.). John Wiley & Sons, Inc.

Suggestive Readings

DISCIPLINE SPECIFIC ELECTIVE COURSE – 1(ii): ELEMENTS OF NUMBER THEORY

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Elements of Number Theory	4	3	1	0	Class XII pass with Mathematics	NIL

Learning Objectives: The primary objective of this course is to introduce:

- The Euclidean algorithm and linear Diophantine equations, the Fundamental theorem of arithmetic and some of the open problems of number theory viz. the Goldbach conjecture.
- The modular arithmetic, linear congruence equations, system of linear congruence equations, arithmetic functions, and multiplicative functions, e.g., Euler's Phi-function.
- Introduction of the simple encryption and decryption techniques, and the numbers of specific forms viz. Mersenne numbers, Fermat numbers etc.

Learning Outcomes: This course will enable the students to:

- Get familiar with the basic number-theoretic techniques.
- Comprehend some of the open problems in number theory.
- Learn the properties and use of number-theoretic functions and special types of numbers.
- Acquire knowledge about public-key cryptosystems, particularly RSA.

SYLLABUS OF DSE-1(ii)

UNIT – I: Divisibility and Prime Numbers (12 hours)

Revisiting: The division algorithm, divisibility and the greatest common divisor. Euclid's lemma; The Euclidean algorithm, Linear Diophantine equations; The Fundamental theorem of Arithmetic, The sieve of Eratosthenes, Euclid theorem and the Goldbach conjecture; The Fibonacci sequence and its nature.

UNIT – II: Theory of Congruences and Number-Theoretic Functions (21 hours)

Congruence relation and its basic properties, Linear congruences and the Chinese remainder theorem, System of linear congruences in two variables; Fermat's little theorem and its generalization, Wilson's theorem and its converse; Number-theoretic functions for sum and the number of divisors of a positive integer, Multiplicative functions, The greatest integer function; Euler's Phi-function and its properties.

UNIT – III: Public Key Encryption and Numbers of Special Form (12 hours)

Basics of cryptography, Hill's cipher, Public-key cryptosystems and RSA encryption and decryption technique; Introduction to perfect numbers, Mersenne numbers and Fermat numbers.

Essential Reading

1. Burton, David M. (2011). Elementary Number Theory (7th ed.). McGraw-Hill Education Pvt. Ltd. Indian Reprint 2017.

Suggestive Readings

- Robbins, Neville (2007). Beginning Number Theory (2nd ed.). Narosa Publishing House Pvt. Ltd. Delhi.
- Rosen, Kenneth H. (2011). Elementary Number Theory and its Applications (6th ed.). Pearson Education. Indian Reprint 2015.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVE COURSE – 1(iii): MATHEMATICAL PYTHON

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Mathematical Python	4	3	0	1	Class XII pass with Mathematics	Basic knowledge of Python

Learning Objectives: The Learning Objectives of this course are as follows:

- To be able to model and solve mathematical problems using Python Programs.
- To experience utility of open-source resources for numerical and symbolic mathematical software systems.

Learning Outcomes: This course will enable the students to use Python:

- For numerical and symbolic computation in mathematical problems from calculus, algebra, and geometry.
- To tabulate and plot diverse graphs of functions and understand tracing of shapes, geometries, and fractals.
- To prepare smart documents with LaTeX interface.

SYLLABUS OF DSE - 1(iii)

Theory

UNIT – I: Drawing Shapes, Graphing and Visualization (15 hours)

Drawing diverse shapes using code and Turtle; Using matplotlib and NumPy for data organization, Structuring and plotting lines, bars, markers, contours and fields, managing subplots and axes; Pyplot and subplots, Animations of decay, Bayes update, Random walk.

UNIT – II: Numerical and Symbolic Solutions of Mathematical Problems (18 hours)

NumPy for scalars and linear algebra on *n*-dimensional arrays; Computing eigenspace, Solving dynamical systems on coupled ordinary differential equations, Functional programming fundamentals using NumPy; Symbolic computation and SymPy: Differentiation and integration of functions, Limits, Solution of ordinary differential equations, Computation of eigenvalues, Solution of expressions at multiple points (lambdify), Simplification of expressions, Factorization, Collecting and canceling terms, Partial fraction decomposition, Trigonometric simplification, Exponential and logarithms, Series expansion and finite differences, Solvers, Recursive equations.

UNIT – III: Document Generation with Python and LaTeX (12 hours)

Pretty printing using SymPy; Pandas API for IO tools: interfacing Python with text/csv, HTML, LaTeX, XML, MSExcel, OpenDocument, and other such formats; Pylatex and writing document files from Python with auto-computed values, Plots and visualizations.

Practical (30 hours): Software labs using IDE such as Spyder and Python Libraries.

- Installation, update, and maintenance of code, troubleshooting.
- Implementation of all methods learned in theory.
- Explore and explain API level integration and working of two problems with standard Python code.

Essential Readings

B.Sc. (Prog.)/ BA (Prog.) Semester-V with Mathematics as non-Major

Category-III

DISCIPLINE SPECIFIC CORE COURSE – 5 (Discipline A-5): ELEMENTS OF REAL ANALYSIS

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Elements of Real Analysis	4	3	1	0	Class XII pass with Mathematics	NIL

Learning Objectives: The primary objective of this course is to introduce:

- The real line with algebraic, order and completeness properties.
- Convergence and divergence of sequences and series of real numbers with applications.

Learning Outcomes: This course will enable the students to:

- Understand the basic properties of the set of real numbers, including completeness and Archimedean with some consequences.
- Recognize bounded, convergent, monotonic and Cauchy sequences
- Learn to apply various tests such as limit comparison, ratio, root, and alternating series tests for convergence and absolute convergence of infinite series of real numbers.

SYLLABUS OF DISCIPLINE A-5

UNIT-I: Basic Properties of the Set of Real Numbers (12 hours)

Field and order properties of $\mathbb{R}$, basic properties and inequalities of the absolute value of a real number, bounded above and bounded below sets, Suprema and infima, The completeness axiom and the Archimedean property of $\mathbb{R}$.

UNIT-II: Real Sequences (18 hours)

Convergence of a real sequence, Algebra of limits, The squeeze principle and applications, Monotone sequences, Monotone convergence theorem and applications, Cauchy sequences, Cauchy criterion for convergence and applications.

UNIT-III: Infinite Series of Real Numbers (15 hours)

Convergence and divergence of infinite series of real numbers, Necessary condition for convergence, Cauchy criterion for convergence of series, Tests for convergence of positive term series, Applications of the integral test, Comparison tests, D'Alembert's ratio test, Cauchy's *n*th root test, Raabe's test; Alternating series, Leibniz alternating series test, Absolute and conditional convergence.

DSE Courses of B.Sc. (Physical Sciences/Mathematical Sciences) Semester-V

Category-III

DISCIPLINE SPECIFIC ELECTIVE COURSE – 3(i): BIOMATHEMATICS

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Biomathematics	4	3	1	0	Class XII pass with Mathematics	Discipline A-3: Differential Equations

Learning Objectives: The main objective of this course is to:

- Develop and analyse the models of the biological phenomenon with emphasis on population growth and predator-prey models.
- Interpret first-order autonomous systems of nonlinear differential equations using the Poincaré phase plane.
- Apply the basic concepts of probability to understand molecular evolution and genetics.

Learning Outcomes: The course will enable the students to:

- Get a better comprehension of mathematical models, utilised in biology.
- To identify and explain the findings from models of population studies, species' communication, adaptation, and dynamics of disorder.
- Create a basic model of molecular evolution by making use of probability and matrices.

SYLLABUS OF DSE-3(i)

UNIT – I: Mathematical Modeling for Biological Processes (15 hours)

Formulation a model through data, A continuous population growth model, Long-term behavior and equilibrium states, The Verhulst model for discrete population growth,

Administration of drugs, Differential equation of chemical process and predator-prey model (Function response: Types I, II and III).

UNIT – II: Epidemic Model: Formulation and Analysis (15 hours)

Introduction to infectious disease, The SIS, SIR and SEIR models of the spread of an epidemic, Analyzing equilibrium states, Phase plane analysis, Stability of equilibrium points, Classifying the equilibrium state; Local stability, Limit cycles, Poincaré-Bendixson theorem.

UNIT – III: Bifurcation, Chaos and Modeling Molecular Evolution (15 hours)

Bifurcation, Bifurcation of a limit cycle, Discrete bifurcation and period-doubling, Chaos, Stability of limit cycles, Introduction of the Poincaré plane; Modeling molecular evolution: Matrix models of base substitutions for DNA sequences, Jukes-Cantor and Kimura models, Phylogenetic distances.

DISCIPLINE SPECIFIC ELECTIVE COURSE-3(ii): MATHEMATICAL PYTHON

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Mathematical Python	4	3	0	1	Class XII pass with Mathematics	Basic knowledge of Python

Learning Objectives: The Learning Objectives of this course are as follows:

- To be able to model and solve mathematical problems using Python Programs.
- To experience utility of open-source resources for numerical and symbolic mathematical software systems.

Learning Outcomes: This course will enable the students to use Python:

- For numerical and symbolic computation in mathematical problems from calculus, algebra, and geometry.
- To tabulate and plot diverse graphs of functions and understand tracing of shapes, geometries, and fractals.
- To prepare smart documents with LaTeX interface.

SYLLABUS OF DSE - 3(ii)

Theory

UNIT – I: Drawing Shapes, Graphing and Visualization (15 hours)

Drawing diverse shapes using code and Turtle; Using matplotlib and NumPy for data organization, Structuring and plotting lines, bars, markers, contours and fields, managing subplots and axes; Pyplot and subplots, Animations of decay, Bayes update, Random walk.

UNIT – II: Numerical and Symbolic Solutions of Mathematical Problems (18 hours)

NumPy for scalars and linear algebra on *n*-dimensional arrays; Computing eigenspace, Solving dynamical systems on coupled ordinary differential equations, Functional programming fundamentals using NumPy; Symbolic computation and SymPy: Differentiation and integration of functions, Limits, Solution of ordinary differential equations, Computation of eigenvalues, Solution of expressions at multiple points (lambdify), Simplification of expressions, Factorization, Collecting and canceling terms, Partial fraction decomposition, Trigonometric simplification, Exponential and logarithms, Series expansion and finite differences, Solvers, Recursive equations.

UNIT – III: Document Generation with Python and LaTeX (12 hours)

Pretty printing using SymPy; Pandas API for IO tools: interfacing Python with text/csv, HTML, LaTeX, XML, MSExcel, OpenDocument, and other such formats; Pylatex and writing document files from Python with auto-computed values, Plots and visualizations.

Practical (30 hours): Software labs using IDE such as Spyder and Python Libraries.

- Installation, update, and maintenance of code, troubleshooting.
- Implementation of all methods learned in theory.
- Explore and explain API level integration and working of two problems with standard Python code.

Essential Readings

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVE COURSE-3(iii): MECHANICS

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Mechanics	4	3	1	0	Class XII pass with Mathematics	Discipline A-1: Topics in Calculus Discipline A-3: Differential Equations

Learning Objectives: The main objective of this course is to:

- Starting Newtonian laws, learning various technical notions which explains various states of motion under given forces.
- Deals with the kinematics and kinetics of the rectilinear and planar motions of a particle including constrained oscillatory motions of particles, projectiles, and planetary orbits.
- Understand hydrostatic pressure and thrust on plane surfaces.

Learning Outcomes: This course will enable the students to:

- Understand necessary conditions for the equilibrium of particles acted upon by various forces and learn the principle of virtual work for a system of coplanar forces.
- Apply the concepts of center of gravity, laws of static and kinetic friction.
- Learn that a particle moving under a central force describes a plane curve and know the Kepler's laws of the planetary motions.
- Evaluate the hydrostatic pressure at any given depth in a heavy homogeneous liquid at rest under gravity.

SYLLABUS OF DSE-3(iii)

UNIT – I: Statics (15 hours)

Fundamental laws of Newtonian mechanics, Law of parallelogram of forces, Equilibrium of a particle, Lamy's theorem, Equilibrium of a system of particles, External and internal forces, Couples, Reduction of a plane force system, Work, Principle of virtual work, Potential energy and conservative field, Mass centers, Centers of gravity, Friction.

UNIT – II: Dynamics (18 hours)

Kinemetics of a particle, Motion of a particle, Motion of a system, Principle of linear momentum, Motion of mass center, Principle of angular momentum, Motion relative to mass center, Principle of energy, D'Alembert's principle; Moving frames of reference, Frames of reference with uniform translational velocity, Frames of reference with constant angular velocity; Applications in plane dynamics- Motion of a projectile, Harmonic oscillators, General motion under central forces, Planetary orbits.

UNIT – III: Hydrostatics (12 hours)

Shearing stress, Pressure, Perfect fluid, Pressure at a point in a fluid, Transmissibility of liquid pressure, Compression, Specific gravity, Pressure of heavy fluid- Pressure at all points in a horizontal plane, Surface of equal density; Thrust on plane surfaces.

Essential Readings

3. Synge, J. L., & Griffith, B. A. (2017). Principles of Mechanics (3rd ed.). McGraw-Hill Education. Indian Reprint.
4. Ramsey, A. S. (2017). Hydrostatics. Cambridge University Press. Indian Reprint.

Suggestive Readings

- Ramsey, A. S. (1985). Statics (2nd ed.). Cambridge University Press.

COMMON POOL OF GENERIC ELECTIVES (GE) Semester-V COURSES OFFERED BY DEPARTMENT OF MATHEMATICS

Category-IV

GENERIC ELECTIVES (GE-5(i)): NUMERICAL METHODS

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Numerical Methods	4	3	0	1	Class XII pass with Mathematics	NIL

Learning Objectives: The core purpose of the course is to:

- Acquaint students with various topics in numerical solutions of nonlinear equations in one variable, interpolation and approximation, numerical differentiation and integration, direct methods for solving linear systems, numerical solution of ordinary differential equations using Computer Algebra System (CAS).

Learning Outcomes: The course will enable the students to:

- Find the consequences of finite precision and the inherent limits of numerical methods.
- Appropriate numerical methods to solve algebraic and transcendental equations.
- Solve first order initial value problems of ODE's numerically using Euler methods.

SYLLABUS OF GE-5(i)

UNIT-I: Errors and Roots of Transcendental and Polynomial Equations (12 hours)

Errors: Roundoff error, Local truncation error, Global truncation error; Order of a method, Convergence, and terminal conditions; Bisection method, Secant method, Regula−Falsi method, Newton−Raphson method.

UNIT-II: Algebraic Linear Systems and Interpolation (18 hours)

Gaussian elimination method (with row pivoting); Iterative methods: Jacobi method, Gauss−Seidel method; Interpolation: Lagrange form, Newton form, Finite difference operators.

UNIT-III: Numerical Differentiation, Integration and ODE (15 hours)

First and second order numerical derivatives; Trapezoidal rule, Simpson's rule for numerical integration; Ordinary differential equation: Euler's, and Runge-Kutta method.

Essential Readings

1. Chapra, Steven C. (2018). Applied Numerical Methods with MATLAB for Engineers and Scientists (4th ed.). McGraw-Hill Education.
2. Fausett, Laurene V. (2009). Applied Numerical Analysis Using MATLAB. Pearson. India.
3. Jain, M. K., Iyengar, S. R. K., & Jain R. K. (2012). Numerical Methods for Scientific and Engineering Computation (6th ed.). New Age International Publishers. Delhi.

Suggestive Reading

- Bradie, Brian (2006). A Friendly Introduction to Numerical Analysis. Pearson Education India. Dorling Kindersley (India) Pvt. Ltd. Third Impression, 2011.

Note: Non programmable scientific calculator may be allowed in the University examination.

Practical (30 hours): Practical/Lab work to be performed in Computer Lab: Use of computer algebra software (CAS), for example Python/SageMath/Mathematica/MATLAB/ Maple/ Maxima/Scilab etc., for developing the following numerical programs:

1. Bisection method
2. Secant method and Regula−Falsi method
3. Newton-Raphson method
4. Gauss−Jacobi method and Gauss−Seidel method
5. Lagrange interpolation and Newton interpolation
6. Trapezoidal rule and Simpson's rule
7. Euler's, and Runge-Kutta methods for solving first order initial-value problems of ordinary differential equations.

GENERIC ELECTIVES (GE-5(ii)): MATHEMATICAL PYTHON

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course

DEPARTMENT OF MATHEMATICS

Category-I

B.Sc. (Hons.) Mathematics, Semester-VI

DISCIPLINE SPECIFIC CORE COURSE – 16: ADVANCED GROUP THEORY

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Advanced Group Theory	4	3	1	0	Class XII pass with Mathematics	DSC-7: Group Theory

Learning Objectives: The objective of the course is to introduce:

- The concept of group actions.
- Sylow's Theorem and its applications to groups of various orders.
- Composition series and Jordan-Hölder theorem.

Learning Outcomes: This course will enable the students to:

- Understand the concept of group actions and their applications.
- Understand finite groups using Sylow's theorem.
- Use Sylow's theorem to determine whether a group is simple or not.
- Understand and determine if a group is solvable or not.

SYLLABUS OF DSC-16

UNIT – I: Group Actions **(18 hours)**

Definition and examples of group actions, Permutation representations; Centralizers and Normalizers, Stabilizers and kernels of group actions; Groups acting on themselves by left multiplication and conjugation with consequences; Cayley's theorem, Conjugacy classes, Class equation, Conjugacy in S_n, Simplicity of A_5.

UNIT – II: Sylow Theorems and Applications **(15 hours)**

p-groups, Sylow p-subgroups, Sylow's theorem, Applications of Sylow's theorem, Groups of order pq and p^2q (p and q both prime); Finite simple groups, Nonsimplicity tests.

UNIT – III: Solvable Groups and Composition Series **(12 hours)**

Solvable groups and their properties, Commutator subgroups, Nilpotent groups, Composition series, Jordan-Hölder theorem.

Essential Readings

1. Dummit, David S., & Foote, Richard M. (2004). Abstract Algebra (3rd ed.). John Wiley & Sons. Student Edition, Wiley India 2016.
2. Gallian, Joseph. A. (2017). Contemporary Abstract Algebra (9th ed.). Cengage Learning India Private Limited, Delhi. Indian Reprint 2021.
3. Beachy, John A., & Blair, William D. (2019). Abstract Algebra (4th ed.). Waveland Press.

Suggestive Readings

- Fraleigh, John B., & Brand Neal E. (2021). A First Course in Abstract Algebra (8th ed.). Pearson.
- Herstein, I. N. (1975). Topics in Algebra (2nd ed.). Wiley India. Reprint 2022.
- Rotman, Joseph J. (1995). An Introduction to the Theory of Groups (4th ed.). Springer.

DISCIPLINE SPECIFIC CORE COURSE – 17: ADVANCED LINEAR ALGEBRA

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Advanced Linear Algebra	4	3	1	0	Class XII pass with Mathematics	DSC-4: Linear Algebra

Learning Objectives: The objective of the course is to introduce:

- Linear functionals, dual basis and the dual (or transpose) of a linear transformation.
- Diagonalization problem and Jordan canonical form for linear operators or matrices using eigenvalues.
- Inner product, norm, Cauchy-Schwarz inequality, and orthogonality on real or complex vector spaces.
- The adjoint of a linear operator with application to least squares approximation and minimal solutions to linear system.
- Characterization of self-adjoint (or normal) operators on real (or complex) spaces in terms of orthonormal bases of eigenvectors and their corresponding eigenvalues.

Learning Outcomes: This course will enable the students to:

- Understand the notion of an inner product space in a general setting and how the notion of inner products can be used to define orthogonal vectors, including to the Gram-Schmidt process to generate an orthonormal set of vectors.
- Use eigenvectors and eigenspaces to determine the diagonalizability of a linear operator.
- Find the Jordan canonical form of matrices when they are not diagonalizable.

- Learn about normal, self-adjoint, and unitary operators and their properties, including the spectral decomposition of a linear operator.
- Find the singular value decomposition of a matrix.

SYLLABUS OF DSC-17

UNIT-I: Dual Spaces, Diagonalizable Operators and Canonical Forms (18 hours)

The change of coordinate matrix; Dual spaces, Double dual, Dual basis, Transpose of a linear transformation and its matrix in the dual basis, Annihilators; Eigenvalues, eigenvectors, eigenspaces and the characteristic polynomial of a linear operator; Diagonalizability, Direct sum of subspaces, Invariant subspaces and the Cayley-Hamilton theorem; The Jordan canonical form and the minimal polynomial of a linear operator.

UNIT-II: Inner Product Spaces and the Adjoint of a Linear Operator (12 hours)

Inner products and norms, Orthonormal basis, Gram-Schmidt orthogonalization process, Orthogonal complements, Bessel's inequality; Adjoint of a linear operator with applications to least squares approximation and minimal solutions to systems of linear equations.

UNIT-III: Class of Operators and Their Properties (15 hours)

Normal, self-adjoint, unitary and orthogonal operators and their properties; Orthogonal projections and the spectral theorem; Singular value decomposition for matrices.

Essential Reading

1. Friedberg, Stephen H., Insel, Arnold J., & Spence, Lawrence E. (2019). Linear Algebra (5th ed.). Pearson Education India Reprint.

Suggestive Readings

- Hoffman, Kenneth, & Kunze, Ray Alden (1978). Linear Algebra (2nd ed.). Prentice Hall of India Pvt. Limited. Delhi. Pearson Education India Reprint, 2015.
- Lang, Serge (1987). Linear Algebra (3rd ed.). Springer.

DISCIPLINE SPECIFIC CORE COURSE – 18: COMPLEX ANALYSIS

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Complex Analysis	4	3	0	1	Class XII pass with Mathematics	DSC-2 & 11: Real Analysis, Multivariate Calculus

Learning Objectives: The main objective of this course is to:

- Acquaint with the basic ideas of complex analysis.
- Learn complex-valued functions with visualization through relevant practicals.

- Emphasize on Cauchy's theorems, series expansions and calculation of residues.

Learning Outcomes: The accomplishment of the course will enable the students to:

- Grasp the significance of differentiability of complex-valued functions leading to the understanding of Cauchy-Riemann equations.
- Study some elementary functions and evaluate the contour integrals.
- Learn the role of Cauchy-Goursat theorem and the Cauchy integral formula.
- Expand some simple functions as their Taylor and Laurent series, classify the nature of singularities, find residues, and apply Cauchy Residue theorem to evaluate integrals.

SYLLABUS OF DSC-18

UNIT – I: Analytic and Elementary Functions (15 hours)

Functions of a complex variable and mappings, Limits, Theorems on limits, Limits involving the point at infinity, Continuity and differentiation, Cauchy-Riemann equations and examples, Sufficient conditions for differentiability, Analytic functions and their examples; Exponential, logarithmic, and trigonometric functions.

UNIT – II: Complex Integration (15 hours)

Derivatives of functions, Definite integrals of functions; Contours, Contour integrals and examples, Upper bounds for moduli of contour integrals; Antiderivatives; Cauchy-Goursat theorem; Cauchy integral formula and its extension with consequences; Liouville's theorem and the fundamental theorem of algebra.

UNIT – III: Series and Residues (15 hours)

Taylor and Laurent series with examples; Absolute and uniform convergence of power series, Integration, differentiation and uniqueness of power series; Isolated singular points, Residues, Cauchy's residue theorem, Residue at infinity; Types of isolated singular points, Residues at poles and its examples, An application to evaluate definite integrals involving sines and cosines.

Essential Reading

1. Brown, James Ward, & Churchill, Ruel V. (2014). Complex Variables and Applications (9th ed.). McGraw-Hill Education. Indian Reprint.

Suggestive Readings

- Bak, Joseph & Newman, Donald J. (2010). Complex Analysis (3rd ed.). Undergraduate Texts in Mathematics, Springer.
- Mathews, John H., & Howell, Rusell W. (2012). Complex Analysis for Mathematics and Engineering (6th ed.). Jones & Bartlett Learning. Narosa, Delhi. Indian Edition.
- Zills, Dennis G., & Shanahan, Patrick D. (2003). A First Course in Complex Analysis with Applications. Jones & Bartlett Publishers.

Practical (30 hours)- Practical / Lab work to be performed in Computer Lab:

Modeling of the following similar problems using SageMath/Python/Mathematica/Maple/ MATLAB/Maxima/ Scilab etc.

1. Make a geometric plot to show that the *n*th roots of unity are equally spaced points that lie on the unit circle $C_1(0) = \{z : |z| = 1\}$ and form the vertices of a regular polygon with *n* sides, for *n* = 4, 5, 6, 7, 8.
2. Find all the solutions of the equation $z^3 = 8i$ and represent these geometrically.
3. Write parametric equations and make a parametric plot for an ellipse centered at the origin with horizontal major axis of 4 units and vertical minor axis of 2 units.
   Show the effect of rotation of this ellipse by an angle of $\frac{\pi}{6}$ radians and shifting of the centre from (0,0) to (2,1), by making a parametric plot.
4. Show that the image of the open disk $D_1(-1-i) = \{z : |z+1+i| < 1\}$ under the linear transformation $w = f(z) = (3 - 4i)\, z + 6 + 2i$ is the open disk:
   $$D_5(-1 + 3i) = \{w: |w + 1 - 3i| < 5\}.$$
5. Show that the image of the right half-plane Re $z = x > 1$ under the linear transformation $w = (-1 + i)z - 2 + 3i$ is the half-plane $v > u + 7$, where $u = \text{Re}(w)$, etc. Plot the map.
6. Show that the image of the right half-plane A = {z: Re $z \geq \frac{1}{2}$} under the mapping $w = f(z) = \frac{1}{z}$ is the closed disk $\overline{D_1(1)} = \{w: |w - 1| \leq 1\}$ in the w- plane.
7. Make a plot of the vertical lines $x = a$, for $a = -1, -\frac{1}{2}, \frac{1}{2}, 1$ and the horizontal lines $y = b$, for $b = -1, -\frac{1}{2}, \frac{1}{2}, 1$. Find the plot of this grid under the mapping $f(z) = \frac{1}{z}$.
8. Find a parametrization of the polygonal path $C = C_1 + C_2 + C_3$ from $-1 + i$ to $3 - i$, where C_1 is the line from: $-1 + i$ to -1, C_2 is the line from: -1 to $1 + i$ and C_3 is the line from $1 + i$ to $3 - i$. Make a plot of this path.
9. Plot the line segment '*L*' joining the point $A = 0$ to $B = 2 + \frac{\pi}{4} i$ and give an exact calculation of $\int_L e^z dz$.
10. Evaluate $\int_C \frac{1}{z-2} dz$, where *C* is the upper semicircle with radius 1 centered at $z = 2$ oriented in a positive direction.
11. Show that $\int_{C_1} z dz = \int_{C_2} z dz = 4 + 2i$, where C_1 is the line segment from $-1 - i$ to $3 + i$ and C_2 is the portion of the parabola $x = y^2 + 2y$ joining $-1 - i$ to $3 + i$.
    Make plots of two contours C_1 and C_2 joining $-1 - i$ to $3 + i$.
12. Use the ML inequality to show that $\left|\int_C \frac{1}{z^2+1} dz\right| \leq \frac{1}{2\sqrt{5}}$, where *C* is the straight-line segment from 2 to $2 + i$. While solving, represent the distance from the point z to the points i and $-i$, respectively, i.e., $|z - i|$ and $|z + i|$ on the complex plane $\mathbb{C}$.
13. Find and plot three different Laurent series representations for the function:
    $f(z) = \frac{3}{2+z-z^2}$, involving powers of z.
14. Locate the poles of $f(z) = \frac{1}{5z^4+26z^2+5}$ and specify their order.
15. Locate the zeros and poles of $g(z) = \frac{\pi \cot(\pi z)}{z^2}$ and determine their order. Also justify that Res (g, 0) = $-\pi^2/3$.

16. Evaluate $\int_{C_1^+(0)} \exp\left(\frac{2}{z}\right) dz$, where $C_1^+(0)$ denotes the circle $\{z: |z| = 1\}$ with positive orientation. Similarly evaluate $\int_{C_1^+(0)} \frac{1}{z^4+z^3-2z^2} dz$.

B.Sc. (Hons) Mathematics, Semester-VI, DSE-Courses

DISCIPLINE SPECIFIC ELECTIVE COURSE – 4(i): MATHEMATICAL FINANCE

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Mathematical Finance	4	3	0	1	Class XII pass with Mathematics	DSC-3, 11, & 15: Probability and Statistics, Multivariate Calculus, & PDE's

Learning Objectives: The main objective of this course is to:

- Introduce the application of mathematics in the financial world.
- Understand some computational and quantitative techniques required for working in the financial markets and actuarial sciences.

Learning Outcomes: The course will enable the students to:

- Know the basics of financial markets and derivatives including options and futures.
- Learn about pricing and hedging of options.
- Learn the Itô's formula and the Black–Scholes model.
- Understand the concepts of trading strategies.

SYLLABUS OF DSE-4(i)

Unit - I: Interest Rates, Bonds and Derivatives (15 hours)

Interest rates, Types of rates, Measuring interest rates, Zero rates, Bond pricing, Forward rates, Duration, Convexity, Exchange-traded markets and Over-the-counter markets, Derivatives, Forward contracts, Futures contracts, Options, Types of traders, Hedging, Speculation, Arbitrage, No Arbitrage principle, Short selling, Forward price for an investment asset.

Unit - II: Properties of Options and the Binomial Model (15 hours)

Types of options, Option positions, Underlying assets, Factors affecting option prices, Bounds for option prices, Put-call parity (in case of non-dividend paying stock only), Early exercise, Trading strategies involving options (except box spreads, calendar spreads and diagonal spreads), Binomial option pricing model, Risk-neutral valuation (for European and American options on assets following binomial tree model).

Unit - III: The Black-Scholes Model and Hedging Parameters (15 hours)

Brownian motion (Wiener Process), Geometric Brownian Motion (GBM), The process for a stock price, Itô's lemma, Lognormal property of stock prices, Distribution of the rate of return, Expected return, Volatility, Estimating volatility from historical data, Derivation of the Black-Scholes-Merton differential equation, Extension of risk-neutral valuation to assets following GBM (without proof), Black–Scholes formulae for European options, Hedging parameters - The Greek letters: Delta, Gamma, Theta, Rho and Vega; Delta hedging, Gamma hedging.

Essential Readings

1. Hull, John C., & Basu, S. (2022). Options, Futures and Other Derivatives (11th ed.). Pearson Education, India.
2. Benninga, S. & Mofkadi, T. (2021). Financial Modeling, (5th ed.). MIT Press, Cambridge, Massachusetts, London, England.

Suggestive Readings

- Luenberger, David G. (2013). Investment Science (2nd ed.). Oxford University Press.
- Ross, Sheldon M. (2011). An elementary Introduction to Mathematical Finance (3rd ed.). Cambridge University Press.
- Day, A.L. (2015). Mastering Financial Mathematics in Microsoft Excel: A Practical Guide for Business Calculations (3rd ed.). Pearson Education Ltd.

Note: Use of non-programmable scientific calculator is allowed in theory examination.

Practical (30 hours)- Practical/Lab work using Excel/R/Python/MATLAB/MATHEMATICA

1. Computing simple, nominal, and effective rates. Conversion and comparison.
2. Computing price and yield of a bond.
3. Comparing spot and forward rates.
4. Computing bond duration and convexity.
5. Trading strategies involving options.
6. Simulating a binomial price path.
7. Computing price of European call and put options when the underlying follows binomial model (using Monte Carlo simulation).
8. Estimating volatility from historical data of stock prices.
9. Simulating lognormal price path.
10. Computing price of European call and put options when the underlying follows lognormal model (using Monte Carlo simulation).

11. Implementing the Black-Scholes formulae.
12. Computing Greeks for European call and put options.

DISCIPLINE SPECIFIC ELECTIVE COURSE – 4(ii): INTEGRAL TRANSFORMS

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Integral Transforms	4	3	1	0	Class XII pass with Mathematics	DSC-6,15: ODE's, PDE's DSC-8, 10: Riemann Integration, Sequences & Series of Functions

Learning Objectives: Primary objective of this course is to introduce:

- The basic idea of integral transforms of functions and their applications through an introduction to Fourier series expansion of a periodic function.
- Fourier transform and Laplace transform of functions of a real variable with applications to solve ODE's and PDE's.

Learning Outcomes: The course will enable the students to:

- Understand the Fourier series associated with a periodic function, its convergence, and the Gibbs phenomenon.
- Compute Fourier and Laplace transforms of classes of functions.
- Apply techniques of Fourier and Laplace transforms to solve ordinary and partial differential equations and initial and boundary value problems.

SYLLABUS OF DSE-4(ii)

UNIT-I: Fourier Series and Integrals (18 hours)

Piecewise continuous functions and periodic functions, Systems of orthogonal functions, Fourier series: Convergence, examples and applications of Fourier series, Fourier cosine series and Fourier sine series, The Gibbs phenomenon, Complex Fourier series, Fourier series on an arbitrary interval, The Riemann-Lebesgue lemma, Pointwise convergence, uniform convergence, differentiation, and integration of Fourier series; Fourier integrals.

UNIT-II: Integral Transform Methods (15 hours)

Fourier transforms, Properties of Fourier transforms, Convolution theorem of the Fourier transform, Fourier transforms of step and impulse functions, Fourier sine and cosine

transforms, Convolution properties of Fourier transform; Laplace transforms, Properties of Laplace transforms, Convolution theorem and properties of the Laplace transform, Laplace transforms of the heaviside and Dirac delta functions.

UNIT-III: Applications of Integral Transforms (12 hours)

Finite Fourier transforms and applications, Applications of Fourier transform to ordinary and partial differential equations; Applications of Laplace transform to ordinary differential equations, partial differential equations, initial and boundary value problems.

Essential Readings

1. Tyn Myint-U & Lokenath Debnath (2007). Linear Partial Differential Equations for Scientists and Engineers (4th ed.). Birkhauser. Indian Reprint.
2. Lokenath Debnath & Dambaru Bhatta (2015). Integral Transforms and Their Applications (3rd ed.). CRC Press Taylor & Francis Group.

Suggestive Readings

- Baidyanath Patra (2018). An Introduction to Integral Transforms. CRC Press.
- Joel L. Schiff (1999). The Laplace Transform-Theory and Applications. Springer.
- Rajendra Bhatia (2003). Fourier Series (2nd ed.). Texts and Readings in Mathematics, Hindustan Book Agency, Delhi.
- Yitzhak Katznelson (2004). An Introduction to Harmonic Analysis (3rd ed.). Cambridge University Press.

DISCIPLINE SPECIFIC ELECTIVE COURSE – 4(iii): RESEARCH METHODOLOGY

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Research Methodology	4	3	0	1	Class XII pass with Mathematics	NIL

Learning Objectives: The main objective of this course is to:

- Prepare the students with skills needed for successful research in mathematics.
- Develop a basic understanding of how to pursue research in mathematics.
- Prepare students for professions other than teaching, that requires independent mathematical research, critical analysis, and advanced mathematical knowledge.
- Introduce some open source softwares to carry out mathematical research.
- Impart the knowledge of journals, their rankings and the disadvantages of rankings.

Learning Outcomes: The course will enable the students to:

- Develop researchable questions and to make them inquisitive enough to search and verify new mathematical facts.
- Understand the methods in research and carry out independent study in areas of mathematics.
- Write a basic mathematical article and a research project.
- Gain knowledge about publication of research articles in good journals.
- Communicate mathematical ideas both in oral and written forms effectively.

SYLLABUS OF DSE - 4(iii)

UNIT– I: How to Learn, Write, and Research Mathematics (17 hours)

How to learn mathematics, How to write mathematics: Goals of mathematical writing, general principles of mathematical writing, avoiding errors, writing mathematical solutions and proofs, the revision process, What is mathematical research, finding a research topic, Literature survey, Research Criteria, Format of a research article (including examples of mathematical articles) and a research project (report), publishing research.

UNIT- II: Mathematical Typesetting and Presentation using LaTeX (16 hours)

How to present mathematics: Preparing a mathematical talk, Oral presentation, Use of technology which includes LaTeX, PSTricks and Beamer; Poster presentation.

UNIT- III: Mathematical Web Resources and Research Ethics (12 hours)

Web resources- MAA, AMS, SIAM, arXiv, ResearchGate; Journal metrics: Impact factor of journal as per JCR, MCQ, SNIP, SJR, Google Scholar metric; Challenges of journal metrics; Reviews/Databases: MathSciNet, zbMath, Web of Science, Scopus; Ethics with respect to science and research, Plagiarism check using software like URKUND/Ouriginal by Turnitin.

Essential Readings

1. Bindner, Donald, & Erickson Martin (2011). A Student's Guide to the Study, Practice, and Tools of Modern Mathematics. CRC Press, Taylor & Francis Group.
2. Committee on Publication Ethics- COPE (https://publicationethics.org/)
3. Declaration on Research Assessment. https://en.wikipedia.org/wiki/San_Francisco_Declaration_on_Research_Assessment
4. Evaluating Journals using journal metrics; (https://academicguides.waldenu.edu/library/journalmetrics#s-lg-box-13497874)
5. Gallian, Joseph A. (2006). Advice on Giving a Good PowerPoint Presentation (https://www.d.umn.edu/~jgallian/goodPPtalk.pdf). MATH HORIZONS.
6. Lamport, Leslie (2008). LaTeX, a Document Preparation System, Pearson.
7. Locharoenrat, Kitsakorn (2017). Research Methodologies for Beginners, Pan Stanford Publishing Pte. Ltd., Singapore.
8. Nicholas J. Higham. Handbook for writing for the Mathematical Sciences, SIAM, 1998.
9. Steenrod, Norman E., Halmos, Paul R., Schiffer, M. M., & Dieudonné, Jean A. (1973). How to Write Mathematics, American Mathematical Society.

10. Tantau, Till,Wright, Joseph, & Miletić, Vedran (2023). The BEAMER class, Use Guide for Version 3.69. TeX User Group. (https://tug.ctan.org/macros/latex/contrib/beamer/doc/beameruserguide.pdf)
11. University Grants Commission (Promotion of Academic Integrity and Prevention of Plagiarism in Higher Educational Institutions) Regulations 2018 (The Gazette of India: Extraordinary, Part-iii-Sec.4)

Practical (30 hours): Practical work to be performed in the computer lab of the following using any TeX distribution software:

1. Starting LaTeX, Preparing an input file, Sequences and paragraphs, Quotation marks, Dashes, Space after a period, Special symbols, Simple text- generating commands, Emphasizing text, Preventing line breaks, Footnotes, ignorable input.
2. The document, The document class, The title page, Sectioning, Displayed material, Quotations, Lists, Displayed formulas, Declarations.
3. Running LaTeX, Changing the type style, Accents, Symbols, Subscripts and superscripts, Fractions, Roots, Ellipsis.
4. Mathematical Symbols, Greek letters, Calligraphic letters, Log-like functions, Arrays, The array environment, Vertical alignment, Delimiters, Multiline formulas.
5. Putting one thing above another, Over and underlining, Accents, Stacking symbols, Spacing in math mode, Changing style in math mode, Type style, Math style.
6. Defining commands, Defining environments, Theorems.
7. Figure and tables, Marginal notes, The tabbing environment, The tabular environment.
8. The Table and contents, Cross-references, Bibliography and citation.
9. Beamer: Templates, Frames, Title page frame, Blocks, Simple overlays, Themes.
10. PSTricks
11. Demonstration of web resources.

B.A. (Prog.) Semester-VI with Mathematics as Major
Category-II

DISCIPLINE SPECIFIC CORE COURSE (DSC-6): ELEMENTARY MATHEMATICAL ANALYSIS

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Elementary Mathematical Analysis	4	3	1	0	Class XII pass with Mathematics	Discipline A-5: Elements of Real Analysis

Learning Objectives: The primary objective of this course is to introduce:

- Sequential criterion for limits and continuity of real-valued functions.
- Riemann integral of real-valued function f on $[a, b]$ using Darboux sums.
- Pointwise and uniform convergence of sequences and series of functions.

Learning Outcomes: This course will enable the students to:

- Apply sequential continuity criterion for the proof of intermediate value theorem.
- Understand the basic tool used to calculate integrals.
- Apply uniform convergence for term-by-term integration in power series expansion.

SYLLABUS OF DSC-6

UNIT-I: Continuous Functions **(12 hours)**

Sequential criterion for limits and continuity of functions, Continuity on intervals, Intermediate value theorem and applications; Uniform continuity.

UNIT-II: The Riemann Integral **(15 hours)**

Riemann integration, criterion for integrability and examples; Integrability of continuous and monotone functions, Algebraic properties of the Riemann integral, Fundamental theorem of calculus (first form).

UNIT-III: Uniform Convergence **(18 hours)**

Sequences and series of functions: Pointwise and uniform convergence, Uniform Cauchy criterion, Weierstrass M-test, Implications of uniform convergence in calculus; Power series, Radius and interval of convergence, Applications of Abel's theorem for power series.

Essential Reading

1. Denlinger, Charles G. (2011). Elements of Real Analysis. Jones & Bartlett India Pvt. Ltd. Student Edition. Reprinted 2015.

Suggestive Readings

- Bartle, Robert G., & Sherbert, Donald R. (2011). Introduction to Real Analysis (4th ed.). John Wiley & Sons. Wiley India Edition 2015.
- Ross, Kenneth A. (2013). Elementary Analysis: The Theory of Calculus (2nd ed.). Undergraduate Texts in Mathematics, Springer. Indian Reprint.

DISCIPLINE SPECIFIC CORE COURSE – 6 (Discipline A-6): PROBABILITY AND STATISTICS

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Probability and Statistics	4	3	0	1	Class XII pass with Mathematics	NIL

Learning Objectives: The primary objective of this course is to:

- Make the students familiar with the basic statistical concepts and tools which are needed to study situations involving uncertainty or randomness.
- Render the students to several examples and exercises that blend their everyday experiences with their scientific interests to form the basis of data science.

Learning Outcomes: This course will enable the students to:

- Understand some basic concepts and terminology-population, sample, descriptive and inferential statistics including stem-and-leaf plots, dotplots, histograms and boxplots.
- Learn about probability density functions and various univariate distributions such as binomial, hypergeometric, negative binomial, Poisson, normal, exponential, and lognormal.
- Understand the remarkable fact that the empirical frequencies of so many natural populations, exhibit bell-shaped (i.e., normal) curves, using the Central Limit Theorem.
- Measure the scale of association between two variables, and to establish a formulation helping to predict one variable in terms of the other, i.e., correlation and linear regression.

SYLLABUS OF DISCIPLINE A-6

UNIT-I: Descriptive Statistics, Probability, and Discrete Probability Distributions (15 hours)

Descriptive statistics: Populations, Samples, Stem-and-leaf displays, Dotplots, Histograms, Qualitative data, Measures of location, Measures of variability, Boxplots; Sample spaces

and events, Probability axioms and properties, Conditional probability, Bayes' theorem, and independent events; Discrete random variables & probability distributions, Expected values; Probability distributions: Binomial, geometric, hypergeometric, negative binomial, Poisson, and Poisson distribution as a limit.

UNIT-II: Continuous Probability Distributions **(15 hours)**

Continuous random variables, Probability density functions, Uniform distribution, Cumulative distribution functions and expected values, The normal, exponential, and lognormal distributions.

UNIT-III: Central Limit Theorem and Regression Analysis **(15 hours)**

Sampling distribution and standard error of the sample mean, Central Limit Theorem, and applications; Scatterplot of bivariate data, Regression line using principle of least squares, Estimation using the regression lines; Sample correlation coefficient and properties.

Practical (30 hours): Software labs using Microsoft Excel or any other spreadsheet.

1) Presentation and analysis of data (univariate and bivariate) by frequency tables, descriptive statistics, stem-and-leaf plots, dotplots, histograms, boxplots, comparative boxplots, and probability plots ([1] Section 4.6).
2) Fitting of binomial, Poisson, and normal distributions.
3) Illustrating the Central Limit Theorem through Excel.
4) Fitting of regression line using the principle of least squares.
5) Computation of sample correlation coefficient.

Essential Reading

1. Devore, Jay L. (2016). Probability and Statistics for Engineering and the Sciences (9th ed.). Cengage Learning India Private Limited. Delhi. Indian Reprint 2022.

Suggestive Reading

- Mood, A. M., Graybill, F. A., & Boes, D. C. (1974). Introduction to the Theory of Statistics (3rd ed.). Tata McGraw-Hill Pub. Co. Ltd. Reprinted 2017.

DSE Courses of B.A. (Prog.) Semester-VI

Category-II

DISCIPLINE SPECIFIC ELECTIVE COURSE – 2(i): DISCRETE DYNAMICAL SYSTEMS

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		

Discrete Dynamical Systems	**4**	**3**	**0**	**1**	**Class XII pass with Mathematics**	**NIL**

Learning Objectives: The primary objective of this course is to introduce:

- The fundamental concepts of discrete dynamical systems and emphasis on its study through several applications.
- The concepts of the fixed points, chaos and Lyapunov exponents for linear and nonlinear equations have been explained through examples.
- Various applications of chaos in higher dimensional models.

Learning Outcomes: This course will enable the students to:

- Understand the basic concepts of difference equation, chaos and Lyapunov exponents.
- Obtain fixed points and discuss the stability of the dynamical system.
- Find Lyapunov exponents, Bifurcation, and Period-doubling for nonlinear equations.
- Analyze the behavior of different realistic systems with chaos cascade.

SYLLABUS OF DSE-2(i)

UNIT-I: Discrete-time Models (12 hours)

Dynamical systems concepts and examples; Some linear models: Bouncing ball, investment growth, population growth, financial, economic and linear price models; Nonlinear models: Density-dependent population, contagious-disease, economic and nonlinear price models; Some linear systems models: Prey-predator, competing species, overlapping-generations, and economic systems.

UNIT-II: Linear Equations, Systems, their Solutions and Dynamics (18 hours)

Autonomous, non-autonomous linear equations and their solutions, time series graphs; Homogenous, non-homogeneous equations and their solutions with applications; Dynamics of autonomous linear equations, fixed points, stability, and oscillation; Homogeneous, non-homogeneous linear systems and their dynamics, solution space graphs, fixed points, sinks, sources and saddles.

UNIT-III: Nonlinear Equations, their Dynamics and Chaos (15 hours)

Autonomous nonlinear equations and their dynamics: Exact solutions, fixed points, stability; Cobweb graphs and dynamics: Linearization; Periodic points and cycles: 2-cycles, m-cycles, and their stability; Parameterized families; Bifurcation of fixed points and period-doubling; Characterizations and indicators of chaos.

Practical (30 hours)- Use of Excel/SageMath/MATHEMATICA/MATLAB/Scilab Software:

1. If Rs. 200 is deposited every 2 weeks into an account paying 6.5% annual interest compounded bi-weekly with an initial zero balance:
   (a) How long will it take before Rs. 10,000/- is in account?
   (b) During this time how much is deposited and how much comes from interest?

(c) Create a time series graph for the bi-weekly account balances for the first 40 weeks of saving scenario.

[1] Computer Project 2.5 pp. 68

2. (a) How much can be borrowed at an annual interest rate of 6% paid quarterly for 5 years in order to have the payments equal Rs. 1000/- every 3 months.
   (b) What is the unpaid balance on this loan after 4 years.
   (c) Create a time series graph for the unpaid balances each quarter for the loan process.
   [1] Computer Project 2.5 pp. 68
3. Four distinct types of dynamics for any autonomous linear equation:
   $x_{n+1} = a\, x_n + b$ for different values of a and b.
   [1] Dynamics of autonomous linear equation, pp. 74
4. Find all fixed points and determine their stability by generating at least the first 100 iterates for various choices of initial values and observing the dynamics
   a. $I_{n+1} = I_n - r\, I_n + s\, I_n\,(1 - I_n\, 10^{-6})$
      for: (i) $r = 0.5, s = 0.25$, (ii) $r = 0.5, s = 1.75$, (iii) $r = 0.5, s = 2.0$.
   b. $P_{n+1} = \frac{1}{P_n} + 0.75\, P_n + c$
      for: $(i)\ c = 0$; $(ii)\ c = -1$; $(iii)\ c = -1.25$; $(iv)\ c = -1.38$.
   c. $x_{n+1} = a\, x_n\,(1 - x_n^2)$
      for: $(i)\ a = 0.5$; $(ii)\ a = 1.5$; $(iii)\ a = 2.25$; $(iv)\ a = 2.3$.

   [1] Computer Project 3.2 pp. 110
5. Determine numerically whether a stable cycle exists for the given parameter values, and if so, its period. Perform at least 200 iterations each time and if a cycle is found (approximately), use the product of derivatives to verify its stability.
   a. $P_{n+1} = r\, P_n\, \left(1 - \frac{P_n}{5000}\right)$, for: $(i)\ r = 3.4$; $(ii)\ r = 3.5$;
      $(iii)\ r = 3.566$; $(iv)\ r = 3.569$; $(v)\ r = 3.845$.
   b. $P_{n+1} = r\, P_n\, e^{-P_n/1000}$
      for: $(i)\ r = 5$; $(ii)\ r = 10$; $(iii)\ r = 14$; $(iv)\ r = 14.5$; $(v)\ r = 14.75$.

   [1] Computer Project 3.5 pp. 154
6. Find through numerical experimentation the approximate intervals of stability of the (a) 2-cycle; (b) 4-cycle; (c) 8-cycle; (d) 16-cycle; (e) 32-cycle for the following
   a. $f_r(x) = r\, x\, e^{-x}$
   b. $f_r(x) = r\, x^2\,(1 - x)$
   c. $f_a(x) = x\,(a - x^2)$
   d. $f_c(x) = \frac{2}{x} + 0.75\, x - c$

   [1] Computer Project 3.6 pp. 164
7. Through numerical simulation, show that each of the following functions undergoes a period doubling cascade: (**[1] Computer Project 3.7 pp.175**)
   a. $f_r(x) = r\, x\, e^{-x}$
   b. $f_r(x) = r\, x^2\,(1 - x)$
   c. $f_r(x) = r\, x\, e^{-x^2}$
   d. $f_r(x) = \frac{r\, x}{(x^2+1)^2}$
   e. $f_a(x) = x\,(a - x^2)$

8. Discuss (a) Pick two initial points close together, i.e., that perhaps differ by 0.001 or 0.00001, and perform at least 100 iterations of $x_{n+1} = f(x_n)$. Do solutions exhibit sensitive dependence on initial conditions?
   (b) For several random choices of x_0 compute at least 1000 iterates x_n and draw a frequency distribution using at least 50 sub-intervals. Do dense orbits appear to exit?
   (c) Estimate the Lyapunov exponent L by picking several random choices of x_0 and computing $\frac{1}{N}\sum_{n=1}^{N} \ln|f'(x_n)|$ for $N = 1000, 2500, 5000, etc.$
   Does L appear to be positive? i). $f(x) = 2 - x^2$ ii). $f(x) = \frac{2}{x} + \frac{3x}{4} - 2.$
   [1] Computer Project 3.8 pp. 187
9. Show that $f(x) = r\,x\,(1-x)$ for $r > 4$ and $f(x) = 6.75\,x^2\,(1-x)$ have horseshoes and homoclinic orbits, and hence chaos. **[1] Computer Project 3.8 pp. 188**
10. Find the fixed point and determine whether it is a sink, source or saddle by iterating and graphing in solution space the first few iterates for several choices of initial conditions. **[1] Computer Project 4.2 pp. 207**
    a. $x_{n+1} = x_n - y_n + 30$
       $y_{n+1} = x_n + y_n - 20.$
    b. $x_{n+1} = x_n + y_n$
       $y_{n+1} = x_n - y_n.$

DISCIPLINE SPECIFIC ELECTIVE COURSE – 2(ii): INTRODUCTION TO MATHEMATICAL MODELING

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		

Introduction to Mathematical Modeling	**4**	**3**	**0**	**1**	**Class XII pass with Mathematics**	**Discipline A-3: Differential Equations**

Learning Objectives: The main objective of this course is to introduce:

- Compartmental models and real-life case studies through differential equations, their applications and mathematical modeling.
- Choosing the most appropriate model from competing types that have been fitted.
- Fitting a selected model type or types to the data and making predictions from the collected data.

Learning Outcomes: The course will enable the students to:

- Learn basics of differential equations and compartmental models.
- Formulate differential equations for various mathematical models.
- Construct normal equation of best fit and predict the future values.

SYLLABUS OF DSE-2(ii)

UNIT-I: Compartmental Models (15 hours)

Compartmental diagram and balance law; Exponential decay, radioactive dating, and lake pollution models; Case study: Lake Burley Griffin; Drug assimilation into the blood; Case study: Dull, dizzy or dead; Exponential growth, Density-dependent growth, Equilibrium solutions and stability of logistic equation, Limited growth with harvesting.

UNIT-II: Interacting Population Models and Phase-plane Analysis (15 hours)

SIR model for influenza, Predator-prey model, Ecosystem model of competing species, and model of a battle.

UNIT-III: Analytic methods of model fitting and Simulation (15 hours)

Fitting models to data graphically; Chebyshev approximation criterion, Least-square criterion: Straight line, parabolic, power curve; Transformed least-square fit, Choosing a best model. Monte Carlo simulation modeling**:** Simulating deterministic behavior (area under a curve, volume under a surface); Generating random numbers: middle-square method, linear congruence; Simulating probabilistic behavior.

Essential Readings

1. Barnes, Belinda & Fulford, Glenn R. (2015). Mathematical Modelling with Case Studies, Using Maple and MATLAB (3rd ed.). CRC Press, Taylor & Francis Group.
2. Giordano, Frank R., Fox, William P., & Horton, Steven B. (2014). A First Course in Mathematical Modeling (5th ed.). CENGAGE Learning India.

Suggestive Readings

- Albright, Brian, & Fox, William P. (2020). Mathematical Modeling with Excel (2nd ed.). CRC Press, Taylor & Francis Group.

- Edwards, C. Henry, Penney, David E., & Calvis, David T. (2015). Differential Equations and Boundary Value Problems: Computing and Modeling (5th ed.). Pearson.

Practical (30 hours)- Practical / Lab work to be performed in Computer Lab:

Modeling of the following problems using Mathematica/MATLAB/Maple/Maxima/Scilab etc.

1. Plotting the solution and describe the physical interpretation of the Mathematical Models mentioned below:
   a. Exponential decay and growth model.
   b. Lake pollution model (with constant/seasonal flow and pollution concentration).
   c. Case of single cold pill and a course of cold pills.
   d. Limited growth of population (with and without harvesting).
   e. Predatory-prey model (basic volterra model, with density dependence, effect of DDT, two prey one predator).
   f. Epidemic model of influenza (basic epidemic model, contagious for life, disease with carriers).
   g. Ecosystem model of competing species
   h. Battle model

2. Random number generation and then use it to simulate area under a curve and volume under a surface.
3. Write a computer program that finds the least-squares estimates of the coefficients in the following models.
   a. $y = a\,x^2 + b\,x + c$
   b. $y = a\,x^n$

4. Write a computer program that uses Equations (3.4) in [3] and the appropriate transformed data to estimate the parameters of the following models.
   a. $y = b\,x^n$
   b. $y = b\,e^{a\,x}$
   c. $y = a \ln x + b$
   d. $y = a\,x^2$
   e. $y = a\,x^3$.

DISCIPLINE SPECIFIC ELECTIVE COURSE – 2(iii): RESEARCH METHODOLOGY

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/		

				Practice		
Research Methodology	**4**	**3**	**0**	**1**	**Class XII pass with Mathematics**	**NIL**

Learning Objectives: The main objective of this course is to:

- Prepare the students with skills needed for successful research in mathematics.
- Develop a basic understanding of how to pursue research in mathematics.
- Prepare students for professions other than teaching, that requires independent mathematical research, critical analysis, and advanced mathematical knowledge.
- Introduce some open source softwares to carry out mathematical research.
- Impart the knowledge of journals, their rankings and the disadvantages of rankings.

Learning Outcomes: The course will enable the students to:

- Develop researchable questions and to make them inquisitive enough to search and verify new mathematical facts.
- Understand the methods in research and carry out independent study in areas of mathematics.
- Write a basic mathematical article and a research project.
- Gain knowledge about publication of research articles in good journals.
- Communicate mathematical ideas both in oral and written forms effectively.

SYLLABUS OF DSE - 2(iii)

UNIT– I: How to Learn, Write, and Research Mathematics (17 hours)

How to learn mathematics, How to write mathematics: Goals of mathematical writing, general principles of mathematical writing, avoiding errors, writing mathematical solutions and proofs, the revision process, What is mathematical research, finding a research topic, Literature survey, Research Criteria, Format of a research article (including examples of mathematical articles) and a research project (report), publishing research.

UNIT- II: Mathematical Typesetting and Presentation using LaTeX (16 hours)

How to present mathematics: Preparing a mathematical talk, Oral presentation, Use of technology which includes LaTeX, PSTricks and Beamer; Poster presentation.

UNIT- III: Mathematical Web Resources and Research Ethics (12 hours)

Web resources- MAA, AMS, SIAM, arXiv, ResearchGate; Journal metrics: Impact factor of journal as per JCR, MCQ, SNIP, SJR, Google Scholar metric; Challenges of journal metrics; Reviews/Databases: MathSciNet, zbMath, Web of Science, Scopus; Ethics with respect to science and research, Plagiarism check using software like URKUND/Ouriginal by Turnitin.

Essential Readings

1. Bindner, Donald, & Erickson Martin (2011). A Student's Guide to the Study, Practice, and Tools of Modern Mathematics. CRC Press, Taylor & Francis Group.
2. Committee on Publication Ethics- COPE (https://publicationethics.org/)
3. Declaration on Research Assessment. https://en.wikipedia.org/wiki/San_Francisco_Declaration_on_Research_Assessment
4. Evaluating Journals using journal metrics; (https://academicguides.waldenu.edu/library/journalmetrics#s-lg-box-13497874)
5. Gallian, Joseph A. (2006). Advice on Giving a Good PowerPoint Presentation (https://www.d.umn.edu/~jgallian/goodPPtalk.pdf). MATH HORIZONS.
6. Lamport, Leslie (2008). LaTeX, a Document Preparation System, Pearson.
7. Locharoenrat, Kitsakorn (2017). Research Methodologies for Beginners, Pan Stanford Publishing Pte. Ltd., Singapore.
8. Nicholas J. Higham. Handbook for writing for the Mathematical Sciences, SIAM, 1998.
9. Steenrod, Norman E., Halmos, Paul R., Schiffer, M. M., & Dieudonné, Jean A. (1973). How to Write Mathematics, American Mathematical Society.
10. Tantau, Till,Wright, Joseph, & Miletić, Vedran (2023). The BEAMER class, Use Guide for Version 3.69. TeX User Group. (https://tug.ctan.org/macros/latex/contrib/beamer/doc/beameruserguide.pdf)
11. University Grants Commission (Promotion of Academic Integrity and Prevention of Plagiarism in Higher Educational Institutions) Regulations 2018 (The Gazette of India: Extraordinary, Part-iii-Sec.4)

Practical (30 hours): Practical work to be performed in the computer lab of the following using any TeX distribution software:

1. Starting LaTeX, Preparing an input file, Sequences and paragraphs, Quotation marks, Dashes, Space after a period, Special symbols, Simple text- generating commands, Emphasizing text, Preventing line breaks, Footnotes, ignorable input.
2. The document, The document class, The title page, Sectioning, Displayed material, Quotations, Lists, Displayed formulas, Declarations.
3. Running LaTeX, Changing the type style, Accents, Symbols, Subscripts and superscripts, Fractions, Roots, Ellipsis.
4. Mathematical Symbols, Greek letters, Calligraphic letters, Log-like functions, Arrays, The array environment, Vertical alignment, Delimiters, Multiline formulas.
5. Putting one thing above another, Over and underlining, Accents, Stacking symbols, Spacing in math mode, Changing style in math mode, Type style, Math style.
6. Defining commands, Defining environments, Theorems.
7. Figure and tables, Marginal notes, The tabbing environment, The tabular environment.
8. The Table and contents, Cross-references, Bibliography and citation.
9. Beamer: Templates, Frames, Title page frame, Blocks, Simple overlays, Themes.
10. PSTricks
11. Demonstration of web resources.

B.Sc. (Prog.)/ BA (Prog.) Semester-VI with Mathematics as non-Major

Category-III

DISCIPLINE SPECIFIC CORE COURSE–6 (Discipline A-6): PROBABILITY AND STATISTICS

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Probability and Statistics	4	3	0	1	Class XII pass with Mathematics	NIL

Learning Objectives: The primary objective of this course is to:

- Make the students familiar with the basic statistical concepts and tools which are needed to study situations involving uncertainty or randomness.
- Render the students to several examples and exercises that blend their everyday experiences with their scientific interests to form the basis of data science.

Learning Outcomes: This course will enable the students to:

- Understand some basic concepts and terminology-population, sample, descriptive and inferential statistics including stem-and-leaf plots, dotplots, histograms and boxplots.

- Learn about probability density functions and various univariate distributions such as binomial, hypergeometric, negative binomial, Poisson, normal, exponential, and lognormal.
- Understand the remarkable fact that the empirical frequencies of so many natural populations, exhibit bell-shaped (i.e., normal) curves, using the Central Limit Theorem.
- Measure the scale of association between two variables, and to establish a formulation helping to predict one variable in terms of the other, i.e., correlation and linear regression.

SYLLABUS OF DISCIPLINE A-6

UNIT-I: Descriptive Statistics, Probability, and Discrete Probability Distributions (15 hours)
Descriptive statistics: Populations, Samples, Stem-and-leaf displays, Dotplots, Histograms, Qualitative data, Measures of location, Measures of variability, Boxplots; Sample spaces and events, Probability axioms and properties, Conditional probability, Bayes' theorem, and independent events; Discrete random variables & probability distributions, Expected values; Probability distributions: Binomial, geometric, hypergeometric, negative binomial, Poisson, and Poisson distribution as a limit.

UNIT-II: Continuous Probability Distributions (15 hours)
Continuous random variables, Probability density functions, Uniform distribution, Cumulative distribution functions and expected values, The normal, exponential, and lognormal distributions.

UNIT-III: Central Limit Theorem and Regression Analysis (15 hours)
Sampling distribution and standard error of the sample mean, Central Limit Theorem, and applications; Scatterplot of bivariate data, Regression line using principle of least squares, Estimation using the regression lines; Sample correlation coefficient and properties.

Practical (30 hours)

Software labs using Microsoft Excel or any other spreadsheet.

1) Presentation and analysis of data (univariate and bivariate) by frequency tables, descriptive statistics, stem-and-leaf plots, dotplots, histograms, boxplots, comparative boxplots, and probability plots ([1] Section 4.6).
2) Fitting of binomial, Poisson, and normal distributions.
3) Illustrating the Central Limit Theorem through Excel.
4) Fitting of regression line using the principle of least squares.
5) Computation of sample correlation coefficient.

Essential Reading

1. Devore, Jay L. (2016). Probability and Statistics for Engineering and the Sciences (9th ed.). Cengage Learning India Private Limited. Delhi. Indian Reprint 2022.

Suggestive Reading

- Mood, A. M., Graybill, F. A., & Boes, D. C. (1974). Introduction to the Theory of Statistics (3rd ed.). Tata McGraw-Hill Pub. Co. Ltd. Reprinted 2017.

DSE Courses of B.Sc. (Physical Sciences/Mathematical Sciences) Sem-VI

Category-III

DISCIPLINE SPECIFIC ELECTIVE COURSE – 4(i): ELEMENTARY MATHEMATICAL ANALYSIS

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Elementary Mathematical Analysis	4	3	1	0	Class XII pass with Mathematics	Discipline A-5: Elements of Real Analysis

Learning Objectives: The primary objective of this course is to introduce:

- Sequential criterion for limits and continuity of real-valued functions.
- Riemann integral of real-valued function *f* on [a, b] using Darboux sums.
- Pointwise and uniform convergence of sequences and series of functions.

Learning Outcomes: This course will enable the students to:

- Apply sequential continuity criterion for the proof of intermediate value theorem.
- Understand the basic tool used to calculate integrals
- Apply uniform convergence for term-by-term integration in power series expansion.

SYLLABUS OF DSE-4(i)

UNIT-I: Continuous Functions (12 hours)

Sequential criterion for limits and continuity of functions, Continuity on intervals, Intermediate value theorem and applications; Uniform continuity.

UNIT-II: The Riemann Integral (15 hours)

Riemann integration, criterion for integrability and examples; Integrability of continuous and monotone functions, Algebraic properties of the Riemann integral, Fundamental theorem of calculus (first form).

UNIT-III: Uniform Convergence (18 hours)

Sequences and series of functions: Pointwise and uniform convergence, Uniform Cauchy criterion, Weierstrass M-test, Implications of uniform convergence in calculus; Power series, Radius and interval of convergence, Applications of Abel's theorem for power series.

Essential Reading

1. Denlinger, Charles G. (2011). Elements of Real Analysis. Jones & Bartlett India Pvt. Ltd. Student Edition. Reprinted 2015.

Suggestive Readings

DISCIPLINE SPECIFIC ELECTIVE COURSE-4(ii): INTRODUCTION TO MATHEMATICAL MODELING

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Introduction to Mathematical Modeling	4	3	0	1	Class XII pass with Mathematics	Discipline A-3: Differential Equations

Learning Objectives: The main objective of this course is to introduce:

- Compartmental models and real-life case studies through differential equations, their applications and mathematical modeling.
- Choosing the most appropriate model from competing types that have been fitted.
- Fitting a selected model type or types to the data and making predictions from the collected data.

Learning Outcomes: The course will enable the students to:

- Learn basics of differential equations and compartmental models.
- Formulate differential equations for various mathematical models.
- Construct normal equation of best fit and predict the future values.

SYLLABUS OF DSE-4(ii)

UNIT-I: Compartmental Models (15 hours)

Compartmental diagram and balance law; Exponential decay, radioactive dating, and lake pollution models; Case study: Lake Burley Griffin; Drug assimilation into the blood; Case study: Dull, dizzy or dead; Exponential growth, Density-dependent growth, Equilibrium solutions and stability of logistic equation, Limited growth with harvesting.

UNIT-II: Interacting Population Models and Phase-plane Analysis (15 hours)

SIR model for influenza, Predator-prey model, Ecosystem model of competing species, and model of a battle.

UNIT-III: Analytic methods of model fitting and Simulation (15 hours)

Fitting models to data graphically; Chebyshev approximation criterion, Least-square criterion: Straight line, parabolic, power curve; Transformed least-square fit, Choosing a best model. Monte Carlo simulation modeling**:** Simulating deterministic behavior (area under a curve, volume under a surface); Generating random numbers: middle-square method, linear congruence; Simulating probabilistic behavior.

Essential Readings

1. Barnes, Belinda & Fulford, Glenn R. (2015). Mathematical Modelling with Case Studies, Using Maple and MATLAB (3rd ed.). CRC Press, Taylor & Francis Group.
2. Giordano, Frank R., Fox, William P., & Horton, Steven B. (2014). A First Course in Mathematical Modeling (5th ed.). CENGAGE Learning India.

Suggestive Readings

- Albright, Brian, & Fox, William P. (2020). Mathematical Modeling with Excel (2nd ed.). CRC Press, Taylor & Francis Group.
- Edwards, C. Henry, Penney, David E., & Calvis, David T. (2015). Differential Equations and Boundary Value Problems: Computing and Modeling (5th ed.). Pearson.

Practical (30 hours)- Practical / Lab work to be performed in Computer Lab:

Modeling of the following problems using Mathematica/MATLAB/Maple/Maxima/Scilab etc.

1. Plotting the solution and describe the physical interpretation of the Mathematical Models mentioned below:
   a. Exponential decay and growth model.
   b. Lake pollution model (with constant/seasonal flow and pollution concentration).
   c. Case of single cold pill and a course of cold pills.
   d. Limited growth of population (with and without harvesting).
   e. Predatory-prey model (basic volterra model, with density dependence, effect of DDT, two prey one predator).
   f. Epidemic model of influenza (basic epidemic model, contagious for life, disease with carriers).
   g. Ecosystem model of competing species
   h. Battle model

2. Random number generation and then use it to simulate area under a curve and volume under a surface.
3. Write a computer program that finds the least-squares estimates of the coefficients in the following models.
   a. $y = a\,x^2 + b\,x + c$
   b. $y = a\,x^n$

4. Write a computer program that uses Equations (3.4) in [3] and the appropriate transformed data to estimate the parameters of the following models.
   a. $y = b\,x^n$
   b. $y = b\,e^{a\,x}$
   c. $y = a \ln x + b$
   d. $y = a\,x^2$
   e. $y = a\,x^3$.

DISCIPLINE SPECIFIC ELECTIVE COURSE-4(iii): RESEARCH METHODOLOGY

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Research Methodology	4	3	0	1	Class XII pass with Mathematics	NIL

Learning Objectives: The main objective of this course is to:

- Prepare the students with skills needed for successful research in mathematics.
- Develop a basic understanding of how to pursue research in mathematics.
- Prepare students for professions other than teaching, that requires independent mathematical research, critical analysis, and advanced mathematical knowledge.
- Introduce some open source softwares to carry out mathematical research.
- Impart the knowledge of journals, their rankings and the disadvantages of rankings.

Learning Outcomes: The course will enable the students to:

- Develop researchable questions and to make them inquisitive enough to search and verify new mathematical facts.
- Understand the methods in research and carry out independent study in areas of mathematics.
- Write a basic mathematical article and a research project.
- Gain knowledge about publication of research articles in good journals.
- Communicate mathematical ideas both in oral and written forms effectively.

SYLLABUS OF DSE - 4(iii)

UNIT– I: How to Learn, Write, and Research Mathematics (17 hours)

How to learn mathematics, How to write mathematics: Goals of mathematical writing, general principles of mathematical writing, avoiding errors, writing mathematical solutions and proofs, the revision process, What is mathematical research, finding a research topic, Literature survey, Research Criteria, Format of a research article (including examples of mathematical articles) and a research project (report), publishing research.

UNIT- II: Mathematical Typesetting and Presentation using LaTeX (16 hours)

How to present mathematics: Preparing a mathematical talk, Oral presentation, Use of technology which includes LaTeX, PSTricks and Beamer; Poster presentation.

UNIT- III: Mathematical Web Resources and Research Ethics (12 hours)

Web resources- MAA, AMS, SIAM, arXiv, ResearchGate; Journal metrics: Impact factor of journal as per JCR, MCQ, SNIP, SJR, Google Scholar metric; Challenges of journal metrics; Reviews/Databases: MathSciNet, zbMath, Web of Science, Scopus; Ethics with respect to science and research, Plagiarism check using software like URKUND/Ouriginal by Turnitin.

COMMON POOL OF GENERIC ELECTIVES (GE) Semester-VI COURSES OFFERED BY DEPARTMENT OF MATHEMATICS

Category-IV

GENERIC ELECTIVES (GE-6(i)): INTRODUCTION TO MATHEMATICAL MODELING

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Introduction to Mathematical Modeling	4	3	0	1	Class XII pass with Mathematics	GE-3(i): Differential Equations

Learning Objectives: The main objective of this course is to introduce:

- Compartmental models and real-life case studies through differential equations, their applications and mathematical modeling.
- Choosing the most appropriate model from competing types that have been fitted.
- Fitting a selected model type or types to the data and making predictions from the collected data.

Learning Outcomes: The course will enable the students to:

- Learn basics of differential equations and compartmental models.
- Formulate differential equations for various mathematical models.
- Construct normal equation of best fit and predict the future values.

SYLLABUS OF GE-6(i)

UNIT-I: Compartmental Models (15 hours)

Compartmental diagram and balance law; Exponential decay, radioactive dating, and lake pollution models; Case study: Lake Burley Griffin; Drug assimilation into the blood; Case study: Dull, dizzy or dead; Exponential growth, Density-dependent growth, Equilibrium solutions and stability of logistic equation, Limited growth with harvesting.

UNIT-II: Interacting Population Models and Phase-plane Analysis (15 hours)

SIR model for influenza, Predator-prey model, Ecosystem model of competing species, and model of a battle.

UNIT-III: Analytic methods of model fitting and Simulation (15 hours)

Fitting models to data graphically; Chebyshev approximation criterion, Least-square criterion: Straight line, parabolic, power curve; Transformed least-square fit, Choosing a best model. Monte Carlo simulation modeling**:** Simulating deterministic behavior (area under a curve, volume under a surface); Generating random numbers: middle-square method, linear congruence; Simulating probabilistic behavior.

Essential Readings

1. Barnes, Belinda & Fulford, Glenn R. (2015). Mathematical Modelling with Case Studies, Using Maple and MATLAB (3rd ed.). CRC Press, Taylor & Francis Group.
2. Giordano, Frank R., Fox, William P., & Horton, Steven B. (2014). A First Course in Mathematical Modeling (5th ed.). CENGAGE Learning India.

Suggestive Readings

- Edwards, C. Henry, Penney, David E., & Calvis, David T. (2015). Differential Equations and Boundary Value Problems: Computing and Modeling (5th ed.). Pearson.

Practical (30 hours)- Practical / Lab work to be performed in Computer Lab: Modeling of the following problems using Mathematica/MATLAB/Maple/Maxima/Scilab etc.

1. Plotting the solution and describe the physical interpretation of the Mathematical Models mentioned below:
   a. Exponential decay and growth model.
   b. Lake pollution model (with constant/seasonal flow and pollution concentration).
   c. Case of single cold pill and a course of cold pills.
   d. Limited growth of population (with and without harvesting).
   e. Predatory-prey model (basic volterra model, with density dependence, effect of DDT, two prey one predator).
   f. Epidemic model of influenza (basic epidemic model, contagious for life, disease with carriers).
   g. Ecosystem model of competing species
   h. Battle model
2. Random number generation and then use it to simulate area under a curve and volume under a surface.
3. Write a computer program that finds the least-squares estimates of the coefficients in the following models.
   a. $y = a\,x^2 + b\,x + c$
   b. $y = a\,x^n$
4. Write a computer program that uses Equations (3.4) in [3] and the appropriate transformed data to estimate the parameters of the following models.
   a. $y = b\,x^n$
   b. $y = b\,e^{a\,x}$
   c. $y = a \ln x + b$
   d. $y = a\,x^2$
   e. $y = a\,x^3$.

GENERIC ELECTIVES (GE-6(ii)): DISCRETE DYNAMICAL SYSTEMS

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Discrete Dynamical Systems	4	3	0	1	Class XII pass with Mathematics	NIL

Learning Objectives: The primary objective of this course is to introduce:

- The fundamental concepts of discrete dynamical systems and emphasis on its study through several applications.
- The concepts of the fixed points, chaos and Lyapunov exponents for linear and nonlinear equations have been explained through examples.
- Various applications of chaos in higher dimensional models.

Learning Outcomes: This course will enable the students to:

- Understand the basic concepts of difference equation, chaos and Lyapunov exponents.
- Obtain fixed points and discuss the stability of the dynamical system.
- Find Lyapunov exponents, Bifurcation, and Period-doubling for nonlinear equations.
- Analyze the behavior of different realistic systems with chaos cascade.

SYLLABUS OF GE-6(ii)

UNIT-I: Discrete-time Models (12 hours)

Discrete dynamical systems concepts and examples; Some linear models: Bouncing ball, investment growth, population growth, financial, economic and linear price models; Nonlinear models: Density-dependent population, contagious-disease, economic and nonlinear price models; Some linear systems models: Prey-predator, competing species, overlapping-generations, and economic systems.

UNIT-II: Linear Equations, Systems, their Solutions and Dynamics (18 hours)

Autonomous, non-autonomous linear equations and their solutions, time series graphs; Homogenous, non-homogeneous equations and their solutions with applications; Dynamics of autonomous linear equations, fixed points, stability, and oscillation; Homogeneous, non-homogeneous linear systems and their dynamics, solution space graphs, fixed points, sinks, sources and saddles.

UNIT-III: Nonlinear Equations, their Dynamics and Chaos (15 hours)

Autonomous nonlinear equations and their dynamics: Exact solutions, fixed points, stability; Cobweb graphs and dynamics: Linearization; Periodic points and cycles: 2-cycles, m-cycles,

and their stability; Parameterized families; Bifurcation of fixed points and period-doubling; Characterizations and indicators of chaos.

Practical (30 hours)- Use of Excel/SageMath/MATHEMATICA/MATLAB/Scilab Software:

1. If Rs. 200 is deposited every 2 weeks into an account paying 6.5% annual interest compounded bi-weekly with an initial zero balance:
   (a) How long will it take before Rs. 10,000/- is in account?
   (b) During this time how much is deposited and how much comes from interest?
   (c) Create a time series graph for the bi-weekly account balances for the first 40 weeks of saving scenario.
   [1] Computer Projects 2.5 pp. 68
2. (a) How much can be borrowed at an annual interest rate of 6% paid quarterly for 5 years in order to have the payments equal Rs. 1000/- every 3 months.
   (b) What is the unpaid balance on this loan after 4 years.
   (c) Create a time series graph for the unpaid balances each quarter for the loan process.
   [1] Computer Projects 2.5 pp. 68
3. Four distinct types of dynamics for any autonomous linear equation:
   $x_{n+1} = a\, x_n + b$ for different values of a and b.
   [1] Dynamics of autonomous linear equation, pp. 74
4. Find all fixed points and determine their stability by generating at least the first 100 iterates for various choices of initial values and observing the dynamics
   a. $I_{n+1} = I_n - r\, I_n + s\, I_n\,(1 - I_n\, 10^{-6})$
      for: (i) $r = 0.5, s = 0.25$, (ii) $r = 0.5, s = 1.75$, (iii) $r = 0.5, s = 2.0$.
   b. $P_{n+1} = \frac{1}{P_n} + 0.75\, P_n + c$
      for: $(i)\ c = 0$; $(ii)\ c = -1$; $(iii)\ c = -1.25$; $(iv)\ c = -1.38$.
   c. $x_{n+1} = a\, x_n\,(1 - x_n^2)$
      for: $(i)\ a = 0.5$; $(ii)\ a = 1.5$; $(iii)\ a = 2.25$; $(iv)\ a = 2.3$.
   [1] Computer Projects 3.2 pp. 110
5. Determine numerically whether a stable cycle exists for the given parameter values, and if so, its period. Perform at least 200 iterations each time and if a cycle is found (approximately), use the product of derivatives to verify its stability.
   a. $P_{n+1} = r\, P_n\left(1 - \frac{P_n}{5000}\right)$, for: $(i)\ r = 3.4$; $(ii)\ r = 3.5$;
      $(iii)\ r = 3.566$; $(iv)\ r = 3.569$; $(v)\ r = 3.845$.
   b. $P_{n+1} = r\, P_n\, e^{-P_n/1000}$
      for: $(i)\ r = 5$; $(ii)\ r = 10$; $(iii)\ r = 14$; $(iv)\ r = 14.5$; $(v)\ r = 14.75$.
   [1] Computer Projects 3.5 pp. 154
6. Find through numerical experimentation the approximate intervals of stability of the (a) 2-cycle; (b) 4-cycle; (c) 8-cycle; (d) 16-cycle; (e) 32-cycle for the following
   a. $f_r(x) = r\, x\, e^{-x}$
   b. $f_r(x) = r\, x^2\,(1 - x)$
   c. $f_a(x) = x\,(a - x^2)$
   d. $f_c(x) = \frac{2}{x} + 0.75\, x - c$

[1] Computer Projects 3.6 pp. 164

7. Through numerical simulation, show that each of the following functions undergoes a period doubling cascade:
   a. $f_r(x) = r\,x\,e^{-x}$
   b. $f_r(x) = r\,x^2\,(1-x)$
   c. $f_r(x) = r\,x\,e^{-x^2}$
   d. $f_r(x) = \frac{r\,x}{(x^2+1)^2}$
   e. $f_a(x) = x\,(a-x^2)$

   [1] Computer Projects 3.7 pp. 175
8. Discuss (a) Pick two initial points close together, i.e., that perhaps differ by 0.001 or 0.00001, and perform at least 100 iterations of $x_{n+1} = f(x_n)$. Do solutions exhibit sensitive dependence on initial conditions?
   (b) For several random choices of x_0 compute at least 1000 iterates x_n and draw a frequency distribution using at least 50 sub-intervals. Do dense orbits appear to exit?
   (c) Estimate the Lyapunov exponent L by picking several random choices of x_0 and computing $\frac{1}{N}\sum_{n=1}^{N} \ln|f'(x_n)|$ for $N = 1000, 2500, 5000, etc.$
   Does L appear to be positive? i). $f(x) = 2 - x^2$ ii). $f(x) = \frac{2}{x} + \frac{3x}{4} - 2.$
   [1] Computer Projects 3.8 pp. 187
9. Show that $f(x) = r\,x\,(1-x)$ for $r > 4$ and $f(x) = 6.75\,x^2\,(1-x)$ have horseshoes and homoclinic orbits, and hence chaos. **[1] Computer Projects 3.8 pp. 188**
10. Find the fixed point and determine whether it is a sink, source or saddle by iterating and graphing in solution space the first few iterates for several choices of initial conditions.
    a. $x_{n+1} = x_n - y_n + 30$
       $y_{n+1} = x_n + y_n - 20.$
    b. $x_{n+1} = x_n + y_n$
       $y_{n+1} = x_n - y_n.$

    [1] Computer Projects 4.2 pp. 207

Semester 4

DEPARTMENT OF STATISTICS

B. Sc. (H) Statistics

Category I

DISCIPLINE SPECIFIC CORE COURSE-10: SAMPLING DISTRIBUTIONS

CREDIT DISTRIBUTION, ELIGIBILITY, AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the Course			Eligibility Criteria	Pre-requisite of the Course (if any)
		Lecture	Tutorial	Practical/ Practice		
Sampling Distributions	4	3	0	1	Class XII with Mathematics	Basic knowledge of probability and probability distributions

Learning Objectives:

The learning objectives of this course are as follows:

- To introduce the modes of convergence and their relation to limit laws, with a focus on the central limit theorem.
- To introduce the concept of sampling distributions and their applications in statistical inference.
- To describe the statistical ideas behind the procedure of hypothesis testing.
- To explain the assumptions and conditions under which to apply different tests of hypothesis about population parameters and draw appropriate conclusions from the analysis.

Learning Outcomes:

After successful completion of this course, students will be able to:

- Understand the basics of convergence theory and its importance in limit laws.
- Apply the concept of the central limit theorem and the relevance of the theorem in inferential statistics.
- Analyze data by using suitable hypothesis testing procedures in real-life applications related to large and small samples.
- Apply the knowledge of the idea of sampling distributions and appreciate their importance in the field of statistics.
- Integrate the knowledge of various sampling distributions like chi-square, t, and F distributions in hypothesis testing problems.

SYLLABUS OF DSC-10

Theory

UNIT I **(10 Hours)**

Modes of Convergence and Central Limit Theorem

Convergence in probability, convergence with probability one, convergence in the mean square, convergence in distribution – definitions and relations between the various modes.

Chebyshev's inequality, Weak Law of Large Numbers (WLLN), and Strong Law of Large Numbers (SLLN) along with examples and applications.

Basic idea and relevance of Central Limit Theorem (CLT), De-Moivre Laplace theorem, Lindeberg Levy theorem, Liapunov Theorem (only statement), and applications of CLT.

UNIT II **(4 Hours)**

Order Statistics

Basic concept and discussion on the area of applications, probability distribution and cumulative distribution function of a single order statistic, joint probability distribution of two and the general case of all order statistics, distribution of range, and distribution of sample median.

UNIT III **(9 Hours)**

Sampling Distributions and Test of Hypotheses

Concepts of parameter, statistic, sampling distribution of a statistic, standard error. Sampling distribution of sample mean, standard errors of the sample mean, sample variance, and sample proportion.

Null and alternative hypotheses, level of significance, Type I and Type II errors, their probabilities and critical region, determination of sample size, confidence intervals, and p-value.

Tests of significance and confidence intervals for - single proportion, difference of two proportions, single mean, difference of two means, and difference of two standard deviations.

UNIT IV **(10 Hours)**

Exact Sampling Distribution

Chi-Square distribution: Definition and derivation of the probability distribution of Chi-square distribution with n degrees of freedom, nature of the curve for different degrees of freedom, mean, mode, variance, moment generating function, cumulant generating function, additive property, and limiting form of the Chi-square distribution, Applications of Chi-Square distribution.

UNIT V **(12 Hours)**

Exact Sampling Distributions (continued)

Student's t-statistic and Fishers t-statistic: definition and derivation of their sampling distributions, nature and characteristics of graph of t distribution, moments, limiting form and applications of the t distribution.

F-statistic: Definition and derivation of the sampling distribution, the graph of F distribution, moments, and applications of the F distribution. Relationship between t, F, and Chi-square distributions.

PRACTICAL / LAB WORK – 30 Hours

List of Practicals:

1. Large Sample Tests:
   a) Testing of significance and confidence intervals for single proportion and difference of two proportions.
   b) Testing of significance and confidence intervals for single mean and difference of two means.
   c) Testing of significance and confidence intervals for the difference of two standard deviations.
2. Tests based on Chi-Square Distribution:
   a) Testing of significance and confidence intervals for the population variance has a specific value.
   b) Testing for the goodness of fit.
   c) Testing of significance for the independence of attributes.
   d) Testing based on a 2 x 2 contingency table without and with Yates' corrections.
3. Tests based on t- Distribution and F- Distribution:
   a) Testing of significance and confidence intervals for single mean and difference of two means and paired t-test.
   b) Testing of significance and confidence intervals of an observed sample correlation coefficient.
   c) Testing and confidence intervals of equality of two population variances.

Practical work to be conducted using electronic spreadsheet / EXCEL/ Statistical Software Package/ SPSS/ calculators.

DISCIPLINE SPECIFIC CORE COURSE-11: TOTAL QUALITY MANAGEMENT

CREDIT DISTRIBUTION, ELIGIBILITY, AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the Course			Eligibility Criteria	Pre-requisite of the Course (if any)
		Lecture	Tutorial	Practical/ Practice		
Total Quality Management	4	3	0	1	Class XII with Mathematics	Introductory statistics and familiarity probability distributions

Learning Objectives:

The learning objectives of this course are as follows:

- To introduce statistical and management techniques,
- To explain the approach of Quality control being used in industry to manufacture goods and services of high quality at low cost.
- To introduce Six-sigma, TQM which is in high demand in the market both in the manufacturing as well as the service sector

Learning Outcomes:

After completing this course, students will be able to:

- Understand the concept of quality, its historical background, and ISO standards.
- Apply the statistical process control tools and product control tools.
- Understand the idea of Six sigma- Lean manufacturing, TQM
- Comprehend the Six sigma training plans, Voice of customers (VOC), Critical to Quality (CTQ)
- Analyze the data to find the root cause of defects through DMAIC (Define-Measure-Analyze-Improve-Control).

SYLLABUS OF DSC-11

Theory

UNIT I **(9 Hours)**

Basics of Quality Management

Quality: Definition, dimensions of quality, its concept, application, and importance. Brief historical perspective of quality control and improvements, Quality Gurus, and Quality Hall of Fame. Quality system and standards: Introduction to ISO quality standards, Quality registration.

Introduction to Process and Product Control, Statistical Process Control - Seven tools of SPC, Chance and Assignable causes of quality variation.

UNIT II **(12 Hours)**

Statistical Control Charts

Statistical Control Charts- Construction and Statistical basis of 3-σ Control charts,. Control charts for variables: X-bar & R-chart, X-bar & s-chart. Rational Sub-grouping, Revised and Modified Control Limits. Control charts for attributes: np-chart, p-chart, c-chart and u-chart. Comparison between control charts for variables and control charts for attributes. Analysis of patterns on a control chart, estimation of process capability.

UNIT III **(12 Hours)**

Sampling Plans

Acceptance sampling plan: Principle of acceptance sampling plans. Single and Double sampling plans, their Operating Characteristic (OC), Acceptance Quality Level (AQL), Lot Tolerance Percent Defective (LTPD), Average Outgoing Quality (AOQ), Average Outgoing Quality Limit (AOQL), Average Sample Number (ASN), and Average Total Inspection (ATI) functions with graphical interpretation, use, and interpretation of Dodge and Romig's sampling inspection plan tables.

UNIT IV **(12 Hours)**

Six-Sigma

Overview of Six Sigma, Lean Manufacturing, and Total Quality Management (TQM). Organizational Structure and Six Sigma training plans- Selection Criteria for Six Sigma roles and training plans. Voice of customers (VOC): Importance and VOC data collection. Critical to Quality (CTQ), Introduction to DMAIC (Define-Measure-Analyze-Improve-Control).

PRACTICAL / LAB WORK – 30 Hours

List of Practical:

1. Construction and interpretation of statistical control charts for
   a) $\bar{X}$ and R-chart for known parameters.
   b) $\bar{X}$ and R-chart with revised control limits for unknown parameters.
   c) $\bar{X}$ and s-chart
   d) np-chart
   e) p-chart with fixed sample size
   f) p-chart with variable sample size.
   g) c-chart
   h) u-chart
2. Construction and interpretation of OC, AQL, LTPD, ASN, ATI, AOQ, and AOQL curves under a Single sample inspection plan
3. Construction and interpretation of OC, AQL, LTPD, ASN, ATI, AOQ, and AOQL curves under a Single sample inspection plan for varying acceptance numbers.
4. Calculation of process capability and comparison of 3-sigma control limits with specification limits.

5. Plan a single sampling plan using Dodge and Romig sampling inspection tables.

Practical work to be conducted using electronic spreadsheet / EXCEL/ Statistical Software Package/ SPSS/ calculators.

ESSENTIAL READINGS:

- Ehrlich, B. Harris (2002): Transactional Six Sigma and Lean Servicing, 2nd Edition, St. Lucie Press.

SUGGESTED READING:

- Gupta S.C., Kapoor V.K.(2007): Fundamentals of Applied Statistics. 4th Edition, Sultan Chand and Sons., New Delhi.
- Hoyle, David (1995): ISO Quality Systems Handbook, 2nd Edition, Butterworth Heinemann Publication.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE-12: TIME SERIES ANALYSIS

CREDIT DISTRIBUTION, ELIGIBILITY, AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the Course			Eligibility Criteria	Pre-requisite of the Course (if any)
		Lecture	Tutorial	Practical / Practice		
Time Series Analysis	4	3	0	1	Class XII with Mathematics	Introductory probability theory and statistics, Calculus, and matrix algebra

Learning Objectives:

The learning objectives of this course are as follows:

- To introduce basic time series analysis, trend, and seasonality,
- To understand spectral analysis,
- To familiarise students with stationary processes,
- To understand various time series models,

- To use nonstationary and seasonal time series models,
- To introduce forecasting techniques and forecasting methods.

Learning Outcomes:

After successful completion of this course, students will be able to:

- Understand the important time series models and their applications in various fields.
- Formulate real-life problems using time series models.
- Use statistical software to estimate the models from real data, and draw conclusions and develop solutions from the estimated models.
- Use visual and numerical diagnostics to assess the soundness of their models.
- Communicate the statistical analyses of substantial data sets through explanatory text, tables, and graphs.
- Combine and adapt different statistical models to analyze larger and more complex data.
- Possess skills to understand the components and forecast values of a time series at future time points.

SYLLABUS OF DSC-12

Theory

UNIT I **(6 Hours)**

Time Series Data and its Components

Introduction to times series data and its applications; Components of a time series and its decomposition; Estimation of trend and the seasonal component.

.

UNIT II **(9 Hours)**

Spectral Analysis and Stationarity

Simple sinusoidal model; Periodogram, and Harmonic Analysis; Variate-difference method; Time series, and Stochastic process; Stationarity; Autocorrelation; meaning, definition, causes, the consequence, and test for autocorrelation.

UNIT III **(15 Hours)**
