Human Physiology- Life Sustaining Systems **Zoo-DSC-9**	**04**	**02**	**Nil**	**02**	Passed 12th Class	**NIL**

Learning Objectives

The learning objectives of this course are as follows:

- The course will provide a thorough understanding of the normal body function and helps to determine the cause of disease.
- It will enable the development of new and more effective treatments and guidelines for maintaining good health.
- It will equip the students with an ability to pursue career in medical and healthcare sector, pharmaceuticals and other related areas.
- It will help in understanding how these systems interact among themselves to maintain stability or homeostasis.

Learning Outcomes

By studying this course, students will be able to:

- Appreciate human physiology and have its enhanced knowledge.
- Recognize and identify principal and physiology of digestion.
- Understand the functions of important physiological systems including the digestive, circulatory, renal and respiratory system.
- Learn an integrative approach to understand how these separate systems interact to yield integrated physiological responses to maintain homeostasis in the body along with feedback mechanisms.
- Amalgamate ideas to make the connection between knowledge of physiology and real-world situations, including healthy lifestyle decisions and problems faced due to homeostatic imbalances.
- Perform, analyze and report on experiments and observations in physiology.
- Know the fundamentals and understand advanced concepts so as to develop a strong foundation that will help them to acquire skills and knowledge to pursue an advanced degree.

SYLLABUS OF DSC-9

UNIT- I Physiology of Digestion 7 hrs

Overview of gastrointestinal tract and its associated glands; digestion; Absorption of carbohydrates, lipids, proteins; Hormonal control of secretion of enzymes in gastrointestinal tract.

UNIT- 2 Blood 4 hrs

Structure and functions of haemoglobin; Blood clotting system, Fibrinolytic system.

UNIT- 3: Physiology of Heart 7 hrs

Structure of heart; Coronary circulation; Origin and conduction of cardiac impulses; Cardiac cycle; Cardiac output and its regulation; nervous and chemical regulation of heart rate.

UNIT- 4: Physiology of Respiration 6 hrs

Overview of respiratory system; Mechanism of respiration, Respiratory volumes and capacities; Transport of oxygen and carbon dioxide in blood; Dissociation curves and the factors influencing it; regulation of respiration.

UNIT- 5: Renal Physiology 6 hrs

Structure of kidney and its functional unit; Mechanism of urine formation; Regulation of water balance; Regulation of acid-base balance.

Practical 60 hrs

(Laboratory periods: 15 classes of 4 hours each)

1. To understand the components of blood, their functions and Hematopoiesis.
2. To study whole blood hemolysis with ammonium chloride solution.
3. Preparation of haemin and haemochromogen crystals.
4. Measurement and statistical analysis of variations observed in the student population in the class for the following parameters:
   a) White blood cells using haemocytometer
   b) Red blood cells using haemocytometer
   c) Hemoglobin
   d) Blood pressure
5. Examination of histological sections of mammalian oesophagus, stomach, duodenum, ileum, rectum, liver, trachea, lung, kidney.
6. Study of Electrocardiogram; Analysis of ECG records and calculation of heart rate.
7. Detection of abnormal constituents in urine and their physiological significance.

		Lecture	Tutorial	Practical/ Practice			
Aquatic Biology **Zoo-DSE-1**	**04**	**03**	**00**	**01**	Passed 12th Class	**NIL**	**Zoology**

Learning Objectives
The learning objectives of this course are as follows:

- This course offers a comprehensive knowledge on life in freshwater and marine environments; lakes; stream and their characteristics, adaptations of organisms, water resource management; nutrient cycling; major threats to aquatic systems, pollution and eutrophication.
- To impart knowledge and understanding of basic laboratory equipment and practice of water quality analysis, to study of aquatic plants.
- To introduce various freshwater and marine ecosystems and its components.
- To understand the biodiversity and productivity of freshwater and marine environments.
- To impart knowledge on various threats and conservation strategies.

Learning Outcomes
By studying this course, students will be able to

- Be acquainted with the physico-chemical environment, and its role in aquatic ecosystem.
- Learn about adaptations unveiled by organisms to survive in these distinctive conditions.
- well-versed with the laws governing the use of freshwater systems, as well as the local, state, federal, and international agencies that enforce these laws to protect endangered and vulnerable species.
- Understand and apply relevant scientific principles in the area of aquatic biology and educate others or work to conserve our natural resources.
- Realize impact of human activities on aquatic organisms.

SYLLABUS OF DSE-1

UNIT-I: Aquatic Biomes **6 hrs**

Brief introduction of the aquatic biomes: Freshwater ecosystem (lakes, wetlands, streams and rivers), Estuaries, Intertidal zones, Oceanic pelagic zone, Marine benthic zone and Coral reefs.

UNIT-2: Lakes **9 hrs**

Lakes: Origin and classification (Glacial, Tectonic, Volcanic and Fluvial Lakes), Lake as an Ecosystem, Lake morphometry, Physico–Chemical Characteristics: Thermal stratification, Vertical distribution of oxygen in lakes, Dissolved Nitrates and Phosphates, Turbidity.

UNIT- 3: Streams and Rivers **9 hrs**

Streams: Different stages of stream development, Physico-chemical environment, Stream flora and fauna. Adaptations of hill stream fishes. Rivers: Origin and characteristics of river. Functions. Concept of watershed management. Ramsar Convention.

UNIT-4: Marine Biology **12 hrs**

Continental shelf, Salinity and density of sea water, Light attenuation in water: Photic, dysphotic and aphotic zones. Adaptations of deep-sea organisms. Marine mammals and their adaptations. Coral reefs: Formation, distribution, fauna and effect of climate change. Physico-chemical characteristics of estuaries, estuarine ecosystem.

UNIT-5: Management of Aquatic Resources **9 hrs**

Major threats to freshwater systems, including pollution and sand mining. Impact of large dams and fragmentation on river ecology and fishery. Thermal pollution and oil spills; Sewage treatment, Water quality assessment- BOD and COD.

Practical **30 hrs**

(Laboratory periods: 15 classes of 2 hours each)

1. Determine the area of a lake using graphimetric and gravimetric method.
2. Identification of following present in a lake ecosystem (3-5 each):
   a) Macrophytes
   b) Phytoplankton
   c) Zooplankton

3. Estimation of pH, dissolved oxygen, alkalinity, free carbondioxide, carbonates and bicarbonates in water collected from a nearby lake/ water body.

4. Estimation of Biochemical oxygen demand of water sample.
5. To demonstrate the following instruments used in limnology and discuss its significance:
   a) Secchi disc
   b) Van Dorn Bottle
   c) Conductivity meter
   d) Turbidity meter
   e) PONAR grab sampler
6. Project Report on a visit to a Sewage treatment plant/Freshwater ecosystem (wetland, lake, river side etc.)/Marine bio-reserve/Fisheries Institutes.

Essential/recommended readings

1. Sullivan O.P. and Reynolds C.S. (2004) The lakes hand book, Limnology and limnetic ecology. Wiley Blockwell.
2. Brian R. Moss (2018) Ecology of Freshwaters: Earth's Blood stream (5thedition). Wiley.
3. Dodds W.K. and Whiles M.R. (2019). Freshwater Ecology: Concepts and Environmental Applications of Limnology (3rd edition). Academic Press.
4. Barrick, M., Odum, E.P., Barrett, G.W., (2005). Fundamentals of Ecology. 5thEdition. Cengage Learning.

Suggested readings:

1. Robert G. Wetzel. (2001)Limnology: Lake and River Ecosystems. 3rdedition.
2. Castro and Huber. MarineBiology.11th Edition, Mc Graw and Hill.

DISCIPLINE SPECIFIC ELECTIVES (DSE-2): Agrochemicals & Pest Management

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Agrochemicals & Pest Management Zoo-DSE-2	04	03	00	01	Passed 12th Class	NIL

Learning Objectives

The learning objectives of this course are as follows:

- This course offers an insight about the role of insects as powerful competitors of man as they cause enormous injury to crops and animals and also act as vectors of many diseases.
- To impart knowledge about various types of pests, their distinguishing features, life cycle, symptoms of infestation and/or damage to crops and human health.
- This course will help the students to understand the concept of insect pests and their population dynamics in relation to changing environmental conditions.
- The students will learn about the various methods used in pest management with *pros* and *cons* of each, and how they could be integrated for effective, economical and eco-friendly pest management programs (IPM).
- To enthuse the students to become entomologists.

Learning Outcomes

By studying this course, students will be able to:

- create awareness about adverse effects of insecticides on the environment and the need for an environment-friendly approach to the management of insect pests.
- gain knowledge about the concepts and tools of pest management.
- Understand the planning of agricultural ecosystem, tolerance of pest damage, and timing of different pest control tactics to effectively manage the pest population.
- learn about the use of different pest control techniques in a harmonious manner.
- understand the role of IPM in sustainable agriculture as the future of modern plant protection and pest control strategy.

SYLLABUS OF DSE-2

UNIT- I: Diversity of insects **6 hrs**

Salient features of insects and reasons for their diversity; Outlines of insect classification up to orders. Significance of insects in the ecosystem.

UNIT-2: Insect morphology and development **9 hrs**

Overview of insect morphology: Distinction between prognathous, hypognathous and opisthognathous head, types of antennae, mouth parts and legs. Insect development and types of metamorphosis.

UNIT-3: Insect crop pests and their management **12 hrs**

Introduction to different types of pests and their status, Factors responsible for emergence of pest, Pest population dynamics.

Bionomics and Control of Crop pests: *Leptocorisa acuta*, *Sesamia inferens*, *Helicoverpa armigera*, *Pyrilla perpusilla*, *Earias vitella*, *Raphidopalpa faveicollis, Papilio demoleus.*

Bionomics and strategies for the management of stored grain pests: *Sitophilus oryzae, Callosobruchus chinensis, Trogoderma granarium* and *Corcyra cephalonica*.

UNIT-4: Medically Important and Household Pests **6 hrs**

Bionomics and management of cockroach, rat flea, mosquitoes, house fly, sand fly, human louse and termites.

UNIT-5: Insect Pest Management **12 hrs**

Overview of pest management tactics: physical, mechanical, cultural, biological, microbial, botanical and genetic control (SIT/SIRM).

Chemical control: Chlorinated hydrocarbons (BHC, Aldrin) organophosphates (Malathion Parathion), carbamates (Carbaryl, Propoxur) and synthetic pyrethroids (Allethrin and Cypermethrin).

Integrated pest management (IPM): Definition, principle, components of IPM and advantages.

Practical **30 hrs**

(Laboratory periods: 15 classes of 2 hours each)

1. Study of the morphology of insects with the help of museum specimens/ slides/ photographs: types of antennae, mouthparts, and legs of insects.
2. Study of two economically important insects representing different orders: Dictyoptera, Hemiptera, Orthoptera, Isoptera, Anoplura (Siphunculata), Diptera, Coleoptera, Hymenoptera and Lepidoptera.
3. Elementary knowledge of collection, preservation and rearing techniques of

insects: Submission of life cycle stages of any two insect pests.

4. Determination of LD_{50}/ LC_{50} of insecticides based on the data provided.
5. Study of Instruments used for chemical control through specimens/videos/photographs.
6. Submission of report based on field trips to entomological institutes, museums, laboratories.

Essential/recommended readings

1. Borror, D.J., Triplehorn, C.A., and Johnson, N.F. (2005) Introduction to the Study of Insects. M Saunders College Publication, USA.
2. Chapman, R.F. (1998) The Insects: Structure and Function. Cambridge University Press, UK.
3. Imms, A. D. (1923) A General Text Book of Entomology. Chapman &Hall, UK.
4. Snodgrass, R. E. (1935) Principles of Insect Morphology. Cornell Univ. Press, USA.
5. Dennis, S. Hill. (2005) Agricultural Insect Pests of the Tropics and Their Management. Cambridge University Press.
6. David, B. V. and Ananthakrishnan, T.N. (2004) General and Applied Entomology. Tata-McGraw Hill, New Delhi.

Suggested readings

1. Duntson, P.A. (2004) The Insects: Structure, Function and Biodiversity. Kalyani Publishers, New Delhi.
2. Atwal, A.S. (1993) Agricultural Pests of India and South East Asia. Kalyani Publishers, New Delhi.
3. Wigglesworth, V.B. (1984) Insect Physiology. VIII Edition, Chapman & Hall, New York.

DISCIPLINE SPECIFIC ELECTIVES (DSE-3): Medical Zoology
Zoo-DSE-3

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Medical Zoology **Zoo-DSE-3**	**04**	**03**	**00**	**01**	Passed 12th Class	**NIL**

Learning Objectives

The learning objectives of this course are as follows:

- This course offers an insight about the various types of human diseases.
- The students will understand the concepts of pathogenic and pathological basis of diseases including infectious diseases caused by viruses, prokaryotes, protozoans, helminthes, vector borne and zoonotic diseases.
- Learn about nutritional deficiencies and lifestyle diseases, endocrine diseases and cancer.

Learning Outcomes

By studying this course, students will be able to:

- understand various types of human diseases.
- clarify the concepts of pathogenic and pathological basis of diseases.
- Recognize deficiencies and lifestyle diseases, endocrine diseases and cancer.
- broaden the understanding of medical importance of studying Zoology.

SYLLABUS OF DSE-3

UNIT-1: Introduction to Infectious diseases **6 hrs**

Concept of Epidemiology, Incidence, Prevalence, Virulence, Pathogenicity, Transmission, Definitive host, Intermediate host, Parasitism, Symbiosis, Commensalism, Reservoir, Zoonosis.

UNIT- 2: Transmission, prevention and control of Viral infection **6 hrs**

Dengue, Polio, Measles, Mumps, influenza, SARS, HIV.

UNIT-3: Bacterial infections **6 hrs**

Tetanus, Diphtheria, Tuberculosis, Typhoid, Cholera; brief account of *Rickettsia, Borellia, Treponema* and *Leptospira*.

UNIT- 4 Protozoan and Helminthic infection **6 hrs**

Life history and pathogenicity of *Entamoeba histolytica, Plasmodium vivax, Trypanosoma gambiense; Wuchereria bancrofti, Faciolopsis buski, Ancylostoma duodenale.*

UNIT-5: Nutritional deficiency and lifestyle-based diseases. 6 hrs

Kwashiorkar, Marasmus, Beri-beri, Scurvy, Pellagra, Anaemia, Night blindness, Rickets, Osteoporosis, Obesity, Cardiovascular diseases (CVD), Atherosclerosis, Diabetes mellitus, Inflammatory Bowel Disease (IBD).

UNIT-6: Endocrine Diseases 9 hrs

Hormonal imbalances leading to diseases: Diabetes insipidus, Acromegaly, Gigantism, Dwarfism, Goitre, Cretinism, Cushing and Crohn's syndrome, Addison's disease.

UNIT-7: Cancer 6 hrs

Definitions, Nomenclature, characteristics of benign and malignant neoplasms, grading and staging of cancer, biology of tumor growth, invasion and metastasis, carcinogens and cancer.

Practical 30 hrs

(Laboratory periods: 15 classes of 2 hours each)

1. Study of Disease specific bacteria and viruses through pictures/micrographs/Videos.
2. Performing of gram staining and study of Acid Fast staining through permanent slides.
3. Urine analysis for abnormal constituents: protein, blood, bile salts and glucose.
4. Study of arthropod vectors associated with human diseases: *Anopheles, Aedes, Culex, Phlebotomus, Xenopsylla*.
5. Study of permanent slides and specimens of *Plasmodium sp, Entamoeba histolytica, Trypanosoma gambiense, Schistosoma haematobium* and *Wuchereria bancrofti.*
6. Study of endocrine diseases through case studies (any 2).
7. Identification and study of cancer cells- Slides/Photomicrographs/Videos.
8. Project work/report: field visit to a research institute/laboratory to study some of the pathological and diagnostic techniques.

Essential/recommended readings

1. Park, K. (2017) Textbook of Preventive and social medicine. 23rdEdition. B.B Publisher.
2. Robbins, Basic Pathology, 9th edition (2012), Kumar, Abbas, Fausto and Mitchell; Saunders Publication, ISBN-13: 978-1437717815
3. Ramnik. Sood (2009) Medical Laboratory Technology Methods and Interpretations, 6th edition; Jaypee Brothers Medical Publishers, ISBN-13: 978-8184484496.

Suggested readings

1. Robbins and Cotran. Pathologic Basis of Disease, 8th edition (2009), Vinay Kumar, Abul. K. Abbas, Jon C. Aster, Nelson Fausto; Saunders Publishers, ISBN-13: 978-1416031215
2. Arora, D.R and Arora, B. (2001) Medical Parasitology. II Edition. CBS Publications

DISCIPLINE SPECIFIC ELECTIVES (DSE-4): Wildlife Conservation & Management

Zoo-DSE-4

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITESOF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Wildlife Conservation &Management **Zoo-DSE-4**	**04**	**03**	**00**	**01**	Passed 12^{th} Class	**NIL**

Learning Objectives

The learning objectives of this course are as follows:

- To acquaint the students with varied aspects of wildlife conservation, including its importance, major threats, and management of their habitats and populations.
- The emphasis will be on developing interest and invoking a sense of responsibility among students towards wildlife conservation.
- The course also explores different techniques, perspectives, and approaches to both identify and achieve wildlife management goals.
- To motivate students to pursue a career in the field of wildlife conservation and management.

Learning Outcomes

By studying this course, students will be able to:

- Appreciate wildlife in general and realize its conservation and management in particular.
- Better understand the application of the principles of ecology and animal behaviour to formulate strategies for the management of wildlife populations and their habitats.
- Understand the management practices required to achieve a healthy ecosystem for wildlife population along with emphasis on conservation and restoration.
- comprehend the key factors for loss of wildlife and important strategies for their in situ and ex situ conservation.
- recognize the techniques for estimation, remote sensing and Global Position Tracking for wildlife.
- gain knowledge about the wildlife diseases and the quarantine policies.
- know about the Protected Area Networks and Ecotourism in India.
- Perform critical thinking, literature review; scientific writing as well as presentations; and participation in citizen science initiatives with reference to wildlife.

SYLLABUS OF DSE-4

UNIT-1: Introduction to Wildlife **3 hrs**

Values of wildlife - positive and negative; Conservation ethics; Importance of conservation; Causes of depletion.

UNIT-2: Evaluation and Management of Wildlife **9 hrs**

Habitat analysis: a) Physical parameters: Topography, Geology, Soil and water; b) Biological Parameters: food, cover, forage; Standard evaluation procedures: Bio-telemetry, Remotesensing and GIS.

UNIT- 3: Management of Habitats **9 hrs**

Setting back succession: Grazing, prescribed fire, mechanical treatment and selective herbicide application; Advancing the successional process and cover construction; Preservation of genetic diversity; Restoration of degraded habitats.

UNIT- 4: Population Estimation **6 hrs**

Faecal analysis of ungulates and carnivores: Faecal samples, slide preparation and hair identification; Pug marks and census methods.

UNIT- 5: Wildlife Health and Rehabilitation **9 hrs**

Care of injured and diseased animal; Quarantine; Common diseases of wild animals: Zoonosis (*Ebola* and S*almonella*), Rabies, Foot and Mouth Disease, *Mycobacterium* TB, Bovine and Avian Flu (Any 3 in detail).

UNIT- 6: Protected Areas and their management **9 hrs**

National parks and Sanctuaries; Biosphere reserves; Conservation and Community reserve; Important features of Protected Areas in India; Project Tiger- conservation and management challenges in Tiger reserves; Human-wildlife conflict; Eco-tourism.

Practical **30 hrs**

(Laboratory periods: 15 classes of 2 hours each)

1. Demonstration of basic equipment needed in wildlife studies- use, care and maintenance (Compass, Binoculars, Spottings cope, Range Finders, Global Positioning System, Various types of Cameras and lenses).
2. Familiarization and study of animal evidences in the field: Identification of animals through pugmarks, hoof marks and scats.
3. Trail/ transect monitoring for abundance and diversity estimation of mammals and bird (direct and indirect evidences).
4. Identification of Big cats: Lion, Tiger, Cheetah, Leopard and Jaguar.
5. Project Report: Identification of mammalian fauna, avian fauna, herpeto-fauna through direct and indirect evidences seen on a field trip to a National Park/Wildlife

Sanctuary/Biodiversity Park or any other wildlife conservation site.

Essential/recommended readings:

1. Hudson, P.J., Rizzoli, A., Grenfell, B.T. Heestrbeek, H. and Dobson, A.P. (2002) The Ecology of Wildlife Diseases. Oxford University Press, Oxford.
2. Banerjee, K. (2002) Biodiversity Conservation in Managed and Protected Areas. Agrobios, India.
3. Kenneth Anderson (2000) The Kenneth Anderson Omnibus Vol I. Rupa Publications.
4. Jim Corbett. (2017) Man Eaters of Kumaon. Om Books International.
5. Saha, G.K. and Mazumdar, S. (2017) Wildlife Biology: An Indian Perspective. PH Ilearning Pvt. Ltd. ISBN: 8120353137, 978-812035313.

GENERIC ELECTIVES (GE-5): Food, Nutrition & Health
Zoo-GE-5

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Food Nutrition & Health Zoo-GE-5	04	02	00	02	Passed 12th Class	NIL

Learning Objectives

The learning objectives of this course are as follows:

- This course offers an overview of the concepts of normal food and nutrition required by the human body to maintain good health.
- To understand physiology, biochemistry, pathology, immunology, medicine, food science, and other fields with context to nutrition.
- Learn the concept of malnutrition, lifestyle-related disorders, addiction-related social health problems and eating disorders will be introduced.
- Appreciate knowledge that can be applied in everyday life.
- Learn the role of macronutrients and micronutrients, their nutritional requirements for different age groups during various health conditions.
- The students will be encouraged to pursue further studies in nutrition and health.

Learning Outcomes

By studying this course, students will be able to

- have an in-depth understanding of the dietary sources and role of nutrients in forming a balanced diet.
- appreciate the concept of nutritional requirements for different age groups and in pregnancy and lactation.
- know about the various food allergens and the body's hypersensitivity towards it.
- understand the concept of health and role of various nutrients in mitigating several deficiency disorders.
- identify and analyse the causes of malnutrition, lifestyle-related disorders, addiction-related social health problems and eating disorders.

- appreciate the various techniques from identification of adulterants, estimation of essential nutrients in food products, to measurement of vital anthropometric indicators of health, as widely used by practitioners.

SYLLABUS OF GE-5

UNIT-1: Basic concept of food and nutrition **2 hrs**

Components of nutrients (Macronutrients and Micronutrients).

UNIT-2: Dietary sources and physiological functions **6 hrs**

Carbohydrates, Proteins, Lipids Vitamins and Minerals (Iron, Iodine, Calcium, Selenium, Zinc); beneficial effects of dietary fibres; elementary idea of Probiotics, Prebiotics, Organic Food.

UNIT-3: Nutritional requirements **4 hrs**

Study of different age groups (infants, preschool children, school children, adolescents, adults, elderly) and in pregnant women and lactating mother.

UNIT-4: Concept of a balanced diet **4 hrs**

Food groups, Food Pyramid, Food and Culture; Food Hypersensitivity: Food allergy (nuts and seafood) and Food intolerance (lactose and gluten).

UNIT-5: Health **2 hrs**

Definition and concept of health. Indicators of metabolic health.

UNIT-6: Nutritional deficiencies and disorders **9 hrs**

Symptoms and prevention of the following: Protein Energy Malnutrition (Kwashiorkor and Marasmus), Vitamin deficiency (A, D, B1, B3 B12, C) Mineral deficiency (Iron, Iodine, Calcium, Selenium, Zinc).

Lifestyle-related diseases: Causes, Symptoms and Complications of Hypertension, Diabetes mellitus and Obesity. Role of dietary and lifestyle modifications for the prevention of these diseases.

Eating Disorders: Complications and Management of Anorexia nervosa and Bulimia nervosa.

UNIT-7: Social health problems **3 hrs**

Deleterious effects of addiction-related social health problems: Smoking, alcoholism, and drug dependence.

Practical **60 hrs**

(Laboratory periods: 15 classes of 4 hours each)

1. To detect adulteration in (a) Ghee (b) Sugar (c) Tea Leaves (d) Turmeric.
2. Study of nutrition labelling of any 5 popular packaged foods.
3. Study and comparison of food pyramids of any 3 popular diet trends with focus on their pros and cons.
4. Ascorbic acid estimation in food by titrimetry.
5. Estimation of calcium in food by titrimetry.
6. Measurement of anthropometric indicators of health (BMI, Waist to hip ratio, Skin fold test).
7. Plan the diet chart of any three different age groups using RDA values (infants, preschool children, school children, adolescents, adults and elderly).
8. An exercise based on 24-hour food recall of students for quantification and analysis of the macronutrients' and micronutrients' uptake based on the current RDA values (with focus on nutritional status and risk factors).
9. Project Work on the Indian government initiatives focused on nourishment of school children/ expectant mothers.

   OR

   A small-scale questionnaire-based survey on the knowledge and usage of available resources for quitting smoking and its success/relapse rates.

Essential/recommended readings

1. Gibney MJ et al (2009) Introduction to Human Nutrition, 2nd edition, Wiley-Blackwell, Hoboken
2. ICMR-NIN (2020) Expert Group on Nutrient Requirement for Indians, Recommended Dietary Allowances (RDA) and Estimated Average Requirement (EAR)
3. Elia M et al (2013) Clinical Nutrition, 2nd edition, Wiley-Blackwell, Hoboken

Suggested readings:

1. Mann J and Truswell AS (2017) Essentials of Human Nutrition, 5th edition, Oxford University Press. Oxford
2. Kaveri Chakrabarty and A.S. Chakrabarty (2020) Textbook of Nutrition in Health and Disease, 1st edition, Springer Nature Singapore Pte Ltd

GENERIC ELECTIVES (GE-6): Introduction to Biology
Zoo-GE-6

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Introduction to Biology Zoo-GE-6	04	02	00	02	Passed 12th Class	NIL

Learning Objectives

The learning objectives of this course are as follows:

- The course is designed to acquaint students with the basic concepts of modern biology including processes in cell biology, genetics and variation, process of evolution and also the physic chemical aspects of life.
- It emphasizes on exploring different techniques, perspectives in the fields of biology from microscopy to computational biology.
- The course has been designed keeping in mind the fact that biology helps to understand ourselves and our place and role in the living world.
- It will motivate the students to pursue careers in the field of technology.

Learning Outcomes

By studying this course, students will be able to

- learn the importance of Biology in everyday life, understand the conditions and processes that led to biochemical origin of life on earth.
- compare and contrast evolutionary theory and their application to populations.
- appreciate the different cell types and cellular processes.
- know the basic structure and functioning of cell such as division, processes of information transfer from DNA to proteins.
- have an in-depth understanding of the role and importance various biomolecules like nucleic acids, proteins, lipids and carbohydrates.
- demonstrate practical knowledge of using basic laboratory instrumentation such as microscopes, micropipettes and their applications.
- learn the diverse techniques taught in practical like chromatography, biochemical test, spectrophotometric analysis and also computational biology will hone their analytical skills.

SYLLABUS OF GE-6

UNIT-1: Introduction to concepts of biology **2 hrs**

Themes in the study of biology; a closer look at ecosystem; a closer look at cell; process of science, biology and everyday life.

UNIT-2: Evolutionary history of biological diversity **4 hrs**

Early earth and the origin of life; major events in the history of life; classifying the diversity of various Kingdoms of Life.

UNIT-3: Darwinian view of life and origin of species **9 hrs**

Darwin's theory of evolution; evolution of populations (Hardy-Weinberg principle); Concepts of species; mechanism of speciation.

UNIT-4: Genetic approach to Biology **7 hrs**

Cell and organelles; cell cycle: Mitosis and meiosis; Mendel's laws and variations; model organisms for the genetic analysis.

UNIT-5: Chemical context of living systems **8 hrs**

Structure and function of biomolecules: carbohydrate, protein, lipid, and nucleic acid.

Practical **60 hrs**

(Laboratory periods: 15 classes of 4 hours each)

1. To learn use of microscope and other common instruments used in laboratory.
2. Preparation of normal, molar, and standard solutions, phosphate buffers.
3. Separation of amino acids (*any three*) by paper chromatography.
4. To perform gram staining of bacteria.
5. To prepare temporary mount of human cheek epithelial cells and to study its characteristics.
6. To perform quantitative estimation of protein using the Lowry's method.
7. To perform biochemical test and identify two functional groups of carbohydrates.
8. To retrieve sequence from database and perform Multiple Sequence Alignment.
9. Visit to a cell culture and tissue culture facility and submission of project report.

Essential/recommended readings

1. Campbell, N.A. and Reece, J. B. (2008) Biology 8th edition, Pearson Benjamin Cummings, San Francisco.
2. Raven, P. Hetal (2006) Biology 7th edition Tata McGraw Hill Publications, New Delhi

3. Karp, G. (2010). Cell & Molecular Biology: Concepts & Experiments. VI edition, John Wiley& Sons Inc.

4. De Roberties, E.D.P. & De Roberties. E.M.F. (2009). The cell & Molecular Biology, Lippincott Williams, Wilkins, Philadelphia.
5. Snustad, D.P., Simmons, M.J. (2009). Principles of Genetics. V Edition, John Wiley & Sons Inc.

Suggestive readings

1. Sheeler, P and Bianchi, D.E. (2006). Cell and Molecular Biology, 3rd edition, John Wiley & sons NY.
2. Rideley, M. (2004). Evolution. III Edition, Blackwell publishing.

GENERIC ELECTIVES (GE-7): Water-borne Diseases: Understanding and Management
Zoo-GE-7

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Water-borne Diseases: Understanding and Management Zoo-GE-7	**04**	**02**	**00**	**02**	Passed 12th Class	**NIL**

Learning Objectives

The learning objectives of this course are as follows:

- It deals with interactions between microbial water quality and human health.
- It includes appreciating how the quality of water can be affected by natural, seasonal, accidental, intentional, and man-made activities,
- It will help the students learn how the contaminated water increases the burden of human diseases with particular emphasis on infectious diseases,
- It will help understand the environmental pressures caused by contaminated water and how it drives the emergence and re-emergence of infectious diseases with increased/altered virulence, antibiotic resistance.
- It will motivate students to pursue a career in Health Management

Learning Outcomes

By studying this course, students will be able to

- know the sources of microbial water contamination and its impact on human health.
- understand the relationship between human behaviour and water quality.
- learn remediation strategies for several types of microbial water quality contamination.
- understand epidemiological studies related to water quality and public health.
- be able to grasp the concepts of various water sources and transmission mechanisms of infectious agents from those sources to humans.
- organize and present well-synthesized scientific discussions on topics relevant to waterborne disease and public health.
- develop a critical understanding of the contribution of organisms tothe welfare of society.

- examine the multiple water-borne pathogens, their modes of transport and transmission, their public health effects, and existing methods for disease prevention and remediation.

SYLLABUS OF GE-7

UNIT-1: Introduction to Public Health 4 hrs

Definition, scope, concept, and importance of public health microbiology; Roles of microbiologists in public health; Concept of health and disease; Indicators of health; Basic concept of water pollution and public health hazard in the community.

UNIT- 2: Introduction to Water Quality 8 hrs

Common terms and definitions in water quality, aquatic resources of the world and sources of drinking water; Water, sanitation, and hygiene (WASH) – fact sheets, WHO guidelines and resolutions; common contaminants of drinking water and linkages to disease; Water pollution (water quality properties, types of water pollution, point and non-point sources of water pollution); Types of contaminants influencing water quality; Water Treatment, Control of Water Borne Diseases.

UNIT- 3: Microbiology of Water 3 hrs

Microbiological quality of drinking; water as a causing factor of infectious diseases; water-borne pathogens (types, sources, and transmission); microbial testing of Water; monitoring and surveillance of water quality.

UNIT- 4: Water-Borne Diseases 10 hrs

Source of infection, transmission, symptoms, mitigation, prevention and treatment (with reference to the role of agencies/NGO).

-Bacterial infections- Cholera, Typhoid fever, Botulism, *E. coli* infection, Campylobacteriosis, Dysentery, Typhoid fever.

-Viral infections: Rotavirus, Hepatitis A and E, Poliomyelitis, Polyomavirus infection.

-Protozoal infections: Acanthamoeba keratitis, Amoebiasis, Cryptosporidiosis, Cyclosporiasis, Giardiasis.

- Parasitic worms: Schistosomiasis, Fascioliasis, Strongyloidiasis, Hookworm infections, Giardiasis.

-Vector-borne infections: Malaria, Dengue, Chikungunya, Onchocerciasis, Leishmaniasis, Japanese encephalitis, Dracunculiasis, Lymphatic filariasis,

UNIT- 5: Waterborne Pathogens: Detection Methods 5 hrs

Polymerase chain reaction (PCR) -Multiplex PCR; Quantitative PCR (qPCR), Real-time PCR; Microarrays; Pyro-sequencing; Biosensors; Fluorescence *in situ* hybridization

(FISH); Immunology-based methods.

Practical **(60 hrs)**

(Laboratory periods: 15 classes of 4 hours each)

1. To determine dissolved oxygen in water samples collected from different water bodies by Winkler's Method.
2. To determine temperature, pH, conductivity, total solids, and total dissolved solids in water samples from different locations.
3. To measure the COD of water samples from various sources.
4. Isolation and identification of microorganisms from different water samples.
5. Project report on water quality monitoring system.
6. Visit to WASH Institute (Water Sanitation and Hygiene Institute)/ Shri Ram Institute for Industrial Research.

Essential/recommended readings

1. Aquatic Pollution: An Introductory Text, 3rd Edition, Edward A. Laws, ISBN 9780471348757.
2. Waterborne Disease, 1st edition (January 15, 1997), Paul Hunter, ISBN 0125515707.

Suggestive readings

1. Microbiology of Waterborne Diseases, Steven Percival, Rachel Chalmers, Martha Embrey, Paul Hunter, Jane Sellwood and Peter Wyn-Jones, ISBN 978012551570-2.

DEPARTMENT OF BOTANY
B.Sc. (H) Botany
Category-I

DISCIPLINE SPECIFIC CORE COURSE - 7: Phycology - The World of Algae

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Phycology - The World of Algae DSC-7	4	**2**	**0**	**2**	Class XII pass	Nil

Learning Objective:
To provide students with in-depth knowledge of the unique group of algae that are the primary photosynthetic organisms.

Learning Outcomes:

By studying this course students will gain basic knowledge on algae, with reference to:
- the diversity and general characteristics.
- distinguishing features of taxa belonging to different families.
- the various ecological and economic benefits.

Unit 1: Introduction to Algal World **6 hours**
Relevance of studying algae – Industrial (food, feed, fodder), Environmental (climate change, biofuel, acidification of oceans), Evolutionary (range of thallus organization); General characteristics; Ecology, diversity and distribution; Range of thallus organization; Cell structure; Criteria for classification (cell wall, pigment system, reserve food, flagella); Reproduction and life cycle patterns; Classification by Fritsch; Evolutionary classification of Lee (only up to groups); Significant contributions of eminent Phycologists.

Unit 2: Cyanophyceae (Blue-Green Algae) **3 hours**
General characteristics; Occurrence; Cell structure; Heterocyst (structure and function); Morphology, reproduction and life-cycle of *Nostoc*, economic importance.

Unit 3: Chlorophyceae (Green Algae) **6 hours**
General characteristics; Occurrence; Cell structure; Morphology, reproduction and life-cycle of *Chlamydomonas*, *Volvox*, *Chlorella, Ulva*, *Oedogonium*, *Coleochaete*; *Chara*; Structure and evolutionary significance of *Prochloron*, economic importance.

Unit 4: Xanthophyceae (Yellow-Green Algae) 2 hours
General characteristics; Occurrence; Morphology, reproduction, and life-cycle of *Vaucheria*, economic importance.

Unit 5: Bacillariophyceae (Diatoms) and Dinophyceae (Dinoflagellates) 3 hours

General characteristics, Occurrence, morphology, unique features**,** economic importance.

Unit 6: Phaeophyceae (Brown Algae) 4 hours
General characteristics; Occurrence; Morphology, reproduction, and life-cycle of *Ectocarpus* and *Sargassum*, economic importance.

Unit 7: Rhodophyceae (Red Algae) 4 hours
General characteristics; Occurrence; Morphology, reproduction, and life-cycle of *Gracilaria*, economic importance.

Unit 8: Recent advances in algal studies 2 hours
Model systems and their applications in genetic, molecular and evolutionary studies.

Practicals 60 hours

1. Study of algal diversity in different habitats through botanical excursion and submission of digital catalogue/report of various species observed.
2. ***Nostoc***: Study of vegetative, reproductive structures from temporary mounts and permanent slides; Ultrastructure of Heterocyst through Electron Micrographs.
3. ***Chlorella***: Study of vegetative, reproductive structures from temporary mounts. Study of ultrastructure through Electron Micrographs.
4. ***Volvox***: Study of vegetative, reproductive structures from temporary mounts and permanent slides.
5. ***Oedogonium***: Study of vegetative, reproductive structures from temporary mounts and permanent slides.
6. ***Coleochaete***: Study of vegetative, reproductive structures from temporary mounts and permanent slides.
7. ***Chara***: Study of vegetative, reproductive structures from temporary mounts, specimens and permanent slides.
8. ***Vaucheria***: Study of vegetative, reproductive structures from temporary mounts and permanent slides.
9. **Diatoms** and **Dinoflagellates**: Study vegetative, reproductive structures of at least two taxa from water bodies.
10. ***Ectocarpus***: Study of vegetative, reproductive structures from temporary mounts and permanent slides.
11. ***Sargassum***: Study of vegetative, reproductive structures from temporary mounts, specimens and permanent slides.
12. ***Polysiphonia/ Gracilaria***: Study of vegetative, reproductive structures from temporary mounts and permanent slides.

Suggested Readings:

DISCIPLINE SPECIFIC CORE COURSE – 8: Bryophytes, Pteridophytes and Gymnosperms

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Bryophytes, Pteridophytes and Gymnosperms DSC – 8	**4**	**2**	**0**	**2**	Class XII pass	**Nil**

Learning Objectives:

- Provide a deep understanding of morphology, anatomy, reproduction and developmental biology of these unique groups of non-flowering plants.
- Enhance understanding of diversity, economic value, taxonomy in representative members of phylogenetically important groups.

Learning Outcomes:

At the end of this course students will be able to:

- identify and describe the group of plants that have given rise to land habit and the flowering plants.
- comprehend various phenological stages of the plants belonging to the sub-groups – bryophytes, pteridophytes and gymnosperms.

Unit 1: Bryophytes **9 hours**

Origin of bryophytes through green algal ancestor; Morphology and Reproduction of *Marchantia*, *Anthoceros* and *Funaria* with fertilization & spore dispersal mechanism (excluding developmental stages). Progressive sterilization of sporogenous tissue; Ecological and economic importance of bryophytes with special reference to *Sphagnum*.

Unit 2: Pteridophytes **9 hours**

Fossil pteridophytes (*Rhynia*). Morphology and Reproduction *of Selaginella*, *Equisetum* and *Pteris* (excluding developmental stages). Apogamy and apospory; Heterospory and seed habit; Stelar evolution. Economic importance.

Unit 3: Gymnosperms **9 hours**

Morphology, Sstem anatomy (significance of transfusion tissue) and Reproduction of *Cycas*, *Pinus* and *Gnetum*(excluding developmental stages and secondary growth). Economic importance.

Unit 4: Recent Advances **3 hours**

Model systems (*Physcomitrella*, *Ceratopteris*, *Ephedra*) and their applications in genetic, molecular and evolutionary studies.

Practicals: **60 hours**

1. *Riccia* – Morphology: Vegetative and reproductive structures (Specimen).

2. *Marchantia* - Morphology; V.S. of thallus through Gemma cup, whole mount of Gemmae (temporary slides); V.S. of Vegetative thallus, Antheridiophore, Archegoniophore, L.S. of Sporophyte (permanent slides).

3. *Pellia* - Morphological details through specimens/permanent slides; L.S. Sporophyte (permanent slide).

4. *Porella* - Vegetative Morphological details through specimens/permanent slides.

5. *Anthoceros* – Morphology; Dissection of sporophyte (to show stomata, spores, pseudoelaters, columella) (temporary slide), V.S. of thallus (permanent slide).

6. *Funaria* - Morphology; T.S. Stem (temporary and permanent slides both); Sporophyte: operculum, peristome, spores (temporary slides); Antheridial and archegonial heads, L.S. of capsule, W.M. of protonema (Permanent slides).

5. *Psilotum* – Morphology (specimen); T.S. of rhizome, stem and synangium (permanent slides).

6. *Selaginella* – Morphology (specimen); W.M. of leaf with ligule, T.S. of stem, L.S. of strobilus, W.M. of microsporophyll, megasporophyll (temporary slides); T.S. of rhizophore (permanent slide).

7. *Equisetum* – Morphology (specimen), T.S. of internode, L.S. of strobilus, T.S. of strobilus, W.M. of sporangiophore, W.M. of spores (wet and dry) (temporary slide).

8. *Pteris* - Morphology, T.S. of rachis, V.S. of sporophyll (temporary slides), T.S. of rhizome, W.M. of prothallus with sex organs and young sporophyte (permanent slide).

9. *Cycas* – Morphology, T.S. of coralloid root, T.S. of rachis, V.S. of leaflet, V.S. of microsporophyll, W.M. of spores (temporary slides); T.S. of stem, T.S. of root, L.S. of ovule (permanent slide).

10. *Pinus* - Morphology, T.S. of Needle, L.S. and T.S. of male cone, W.M. of microsporophyll (temporary slides); T.S. of stem, R.L.S. and T.L.S. of stem, L.S. of female cone (permanent slide).

11. *Gnetum* - Morphology (stem, male & female cones); T.S. of stem, L.S. of ovule (permanent slide).

12. Botanical Excursion and submission of digital catalogue/report of various species observed.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE – 9: Genetics and Plant Breeding

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Genetics & Plant Breeding **DSC-9**	**4**	**2**	**0**	**2**	Class XII pass	**Nil**

Learning Objectives:

- To apprise students with the basic principles of Genetics
- To enhance the applications of genetics in plant breeding and agriculture.

Learning Outcomes:

On completion of the course the students will be able to:

- understand the fundamentals of Mendelian inheritance and its deviation in gene interactions.
- describe the concepts of linkage and crossing over and their usage in constructing gene maps.
- become familiar with pedigree analysis.
- learn about principles of population genetics
- gain knowledge about gene mutations and inherited disorders
- learn about various plant breeding techniques / methods

Unit 1. Mendelian Genetics **6 hours**

Mendelism: History; Principles of inheritance, deviations (Incomplete dominance and co-dominance); Chromosome theory of inheritance; Multiple allelism; lethal alleles; Epistasis; Pleiotropy; Penetrance and expressivity; Polygenic inheritance; brief introduction to sex determination.

Unit 2. Extra-Nuclear Inheritance **4 hours**

Chloroplast and mitochondrial genomes; Chloroplast Inheritance: Variegation in Four O` clock plant; Mitochondrial inheritance in yeast; Maternal effect (Shell coiling in Snails).

Unit 3. Linkage, crossing over and chromosome mapping **5 hours**

Linkage and crossing over, Cytological basis of crossing over (Creighton and McClintock experiment in Maize); three factor crosses; interference and coincidence; Sex linkage (*Drosophila*)

Unit 4. Variation in Chromosome number and structure **4 hours**

Deletion; Duplication; Inversion; Translocation; Euploidy and aneuploidy (In Brief).

Unit 5. Mutations **4 hours**

Mutation types; Muller's CIB method, Molecular basis of mutations; Chemical mutagens (Base analogs, deaminating, hydroxylating, alkylating and intercalating agents) and Physical mutagens (Ionising and Non ionising radiations); Transposable genetic elements and their significance (Basic concept).

Unit 6. Population and evolutionary genetics **3 hours**

Hardy Weinberg law (Allele frequencies, genotype frequencies); speciation (modes of speciation and genetics of speciation).

Unit 7. Plant Breeding **4 hours**

Plant breeding- Principle and Practices, domestication and plant introduction (primary and secondary introduction), selection and its types: pure line selection, mass selection and clonal selection; hybridizations (inter-specific and intra-specific), heterosis and its significance.

Practicals: **60 hours**

1. To study meiosis in *Allium cepa* through squash preparation of anthers.
2. To study mitosis in *Allium cepa* through squash preparation of root tips.
3. To understand the deviations of Mendelian dihybrid ratios (12:3:1, 9:3:4, 9:7, 15:1, 13:3, 9:6:1) involved using the seed mixture given. Genetic ratio to be calculated using Chi square analysis.
4. Human Genetics:
   a) Study of autosomal & sex-linked dominant & recessive inheritance through pedigree analyses.
   b) ABO blood group testing using kits,
   c) To study the syndromes (Down's, Klinefelter's, Turner's, Edward's & Patau) through karyotypes
5. To calculate allelic and genotypic frequencies of human dominant and recessive traits using Hardy- Weinberg's principle.
6. To study Xeroderma pigmentosum, Sickle cell anaemia, albinism, haemophilia and colour blindness (Ishihara charts may be used to study colour blindness)
7. To study chromosomal aberrations:
   a) Quadrivalents, lagging chromosomes, dicentric/inversion bridge through photographs/permanent slides
   b) Reciprocal translocation through squash preparations of *Rhoeo* anthers.
8. Demonstration of basic methods of plant breeding (hybridizations): Emasculation, bagging and tagging using available plant material in pots/gardens/field.

Suggested Readings:

1. Gardner, E.J., Simmons, M.J., Snustad, D.P. (1991). Principles of Genetics, 8th edition. New Delhi, Delhi: John Wiley & sons.
2. Griffiths, A.J.F., Doebley,J., Peichel, C, Wassarman D (2020). Introduction to Genetic Analysis, 12th edition. New York, NY: W.H. Freeman and Co.
3. Klug, W.S., Cummings, M.R., Spencer, C.A. (2020). Concepts of Genetics, 12th edition. San Francisco, California: Benjamin Cummings.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

POOL OF DISCIPLINE SPECIFIC ELECTIVES

DISCIPLINE SPECIFIC ELECTIVE COURSE (DSE -1): Evolutionary Biology of Plants

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Evolutionary Biology of Plants **DSE-1**	**4**	**2**	**0**	**2**	Class XII pass	**Nil**

Learning Objectives:

- This course builds on the fundamental points introduced in the core course on Plant Diversity and Evolution and presents a synthesis of various theories, concepts, evidence and methods to study evolution.

Learning Outcomes:

At the end of this course the students will be able to:

- understand the essential theories in evolution
- differentiate between micro and macroevolution and the forces shaping evolution
- construct phylogenetic trees based on morphological and molecular data
- understand evolution of life.

Unit 1: Historical Perspective of Eevolutionary Cconcepts **4 hours**

Pre-Darwinian ideas, Lamarckism, Darwinism, Post-Darwinian era – Modern synthetic theory, Neo-Darwinism

Unit 2: Origin of Life **3 hours**

Chemogeny – An overview of pre-biotic conditions and events; experimental proofs to abiotic origin of micro- and macro-molecules. Current concept of chemogeny – RNA first hypothesis. Biogeny – Cellular evolution based on proto-cell models (coacervates and proteinoid micro-spheres). Evolution of eukaryotes from pprokaryotes

Unit 3: Evidences of Evolution **4 hours**

Paleobiological– Concept of Stratigraphy and geological timescale; fossil study
Anatomical & Embryological – Vestigial organs; homologous and analogous organs (concept of parallelism and convergence in evolution)
Taxonomic –Transitional forms/evolutionary intermediates, living fossils
Phylogenetic – morphology, protein (Cytochrome C) and gene (Globin gene family) based

Unit 4: Microevolution and Macroevolution **8 hours**

Hardy Weinberg equilibrium; Founder effect, Natural and artificial selection. Levels of selection.

Inferring phylogenies- Gene trees, species trees; Patterns of evolutionary change; Adaptive radiation, Evolution and development (evo-devo); Biodiversity- Estimating changes in biodiversity; Taxonomic diversity through the Phanerozoic era.

Unit 5. Forces of Evolution **3 hours**

Mutation, Geneflow, Selection, Genetic Drift, Co-adaptation and co-evolution, Anthropogenic activities, Extinction (in brief)**-** Periodic and Mass-scale – Causes and events.

Unit 6. Speciation **4 hours**

Species concept, Modes of speciation – Allopatric; sympatric; peripatric; Patterns of speciation – Anagenesis and Cladogenesis; Phyletic gradualism and Punctuated eequilibrium (Quantum evolution); Basis of speciation – Isolating mechanisms.

Unit 7. Evolution of Land Plants **4 hours**

Origin of land plants – Terrestrial algae and Bryophytes; alternation of generations. Early vascular plants – Stelar evolution; Sporangium evolution; seed habit and evolution of seed. Angiosperms – Phylogeny of major groups.

Practicals **60 hours**

1. Study of different types of fossils, connecting links/transitional forms and Living fossils (Specimens/slides/photographs)
2. Sampling of quantitative characters (continuous and discontinuous) in a population(height, weight, number of nodes etc)
3. Study of adaptive strategies (colouration, co-adaptation and co-evolution); (Specimens/photographs)
4. Calculations of genotypic, phenotypic and allelic frequencies from the data provided
5. Simulation experiments using coloured beads/playing cards to understand the effects of Selection and Genetic drift on gene frequencies
6. To study and interpret Phylogenetic trees (reading and using trees) - minimum of three examples.

Suggested Readings:

1. Campbell, N.A., Reece J.B., Urry L.A., Cain M.L., Wasserman S.A., Minorsky P.V., Jackson, R.B. (2020). Biology. San Francisco, SF: Pearson Benjamin Cummings.
2. Ridley, M. (2004). Evolution. III Edn. Blackwell Pub., Oxford.
3. Hall, B. K., Hallgrimson, B. (2008) Strickberger's Evolution. IV Edn. Jones and Barlett.
4. Zimmer, C., Emlen, D. J. (2013). Evolution: Making Sense of Life. Roberts & Co.
5. Futuyma, D. (1998). Evolutionary Biology. III Edn. Sinauer Assoc. Inc.
6. Barton, Briggs, Eisen, Goldstein and Patel. (2007). Evolution. Cold Spring Harbor Laboratory Press.
7. Nei, M., Kumar S. (2000). Molecular Evolution and Phylogenetics. Oxford University Press, New York.
8. Futuyma, J. D., Kirkpatrick, M. (2017). Evolution, 4th Ed. Sinauer, Sunderland, MA: Sinauer Associates.

DISCIPLINE SPECIFIC ELECTIVE COURSE (DSE -2): Biostatistics & Bioinformatics for Plant Sciences

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical / Practice		
Biostatistics & Bioinformatics for Plant Sciences **DSE-2**	**4**	**2**	**0**	**2**	Class XII pass	**Nil**

Learning Objective:

- To train students in using computational and mathematical tools to solve biological problems.

Learning Outcomes:

At the end of this course students will be able to:

- use the various online databases and resources for accessing biological data.
- use the different methods of alignment of DNA, RNA and protein sequences and interpret the significance of the same.
- understand the descriptive and inferential statistical tests for interpretation of experimental data.

Unit 1- Introduction to Bioinformatics **3 hours**

Historical background; Aims and scope; Bioinformatics in Genomics, Transcriptomics, Proteomics, Metabolomics; Applications of bioinformatics in crop improvement

Unit 2- Biological databases **4 hours**

Introduction to biological databases - Primary, secondary and composite databases. Study of following databases: NCBI (GenBank, PubChem, PubMed and its tools (only BLAST)), introduction to UniProt, PDB, PlantPepDB.

Unit 3- Basic concepts of Sequence alignment **4 hours**

Similarity, identity and homology. Concepts of alignment (gaps and penalty); Alignment – pairwise and multiple sequence alignments

Unit 4- Molecular Phylogeny **4 hours**

Introduction, methods of construction of phylogenetic trees: maximum parsimony (MP), maximum likelihood (ML) and distance (Neighbour-joining) methods.

Unit 5- Introduction to Biostatistics **2 hours**

Definition, Basics of descriptive and inferential statistics; Limitations and applications.

Unit 6- Data and sampling methods **3 hours**
Primary and secondary data; Sampling methods (in brief); tabulation and presentation of data.

Unit 7- Measures and deviations of central tendencies **4 hours**
Dispersion - range, standard deviation, mean deviation, standard error, skewness and kurtosis, quartile deviation –merits and demerits; Coefficient of variation.

Unit 8-Correlation and Regression **3 hours**
Correlation - types and methods of correlation (I. E. Karl Pearson and Spearman Rank method), Introduction to simple regression equation; similarities and dissimilarities between correlation and regression.

Unit 9- Statistical tests **3 hours**
Statistical inference - hypothesis – (simple hypothesis), student's t test, chi-square test.

(Note: Numerical based questions of unit 7, 8 and 9 should be covered only in practical)

Practicals **60 hours**

1. Biological databases (NCBI, UniProt, PlantPepDB)
2. Literature retrieval from PubMed
3. Sequence retrieval (protein and gene) from NCBI (formats - FASTA, GenBank and GenPept formats)
4. Protein Structure retrieval from PDB (in pdb format) and visualization by viewing tools (Ras Mol/ J mol/Mol*/Swiss 3D Viewer/Pymol)
5. Multiple sequence alignment (MEGA/Clustal omega)
6. Construction of phylogenetic tree (PHYLIP/ MEGA/ Clustal omega).
7. Calculation of standard deviation and coefficient of variation through manual calculation and using Microsoft Excel, using only ungrouped data)
8. Calculation of correlation coefficient values by Karl Pearson's /Spearman Rank methods (through manual calculation and using Microsoft Excel)
9. Student's t-test (using Microsoft Excel), chi square test (Manual and using Microsoft Excel)

Category II

Botany Courses for Undergraduate Programme of study with Botany as one of the Core Disciplines

DISCIPLINE SPECIFIC CORE COURSE (DSC-.....): Plant Cell and Developmental Biology

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Plant Cell and Developmental Biology DSC	**4**	**2**	**0**	**2**	Class XII pass	**Nil**

Learning objectives:
To understand the basics of plant cell structure, development, growth and organisation of plant body.

Learning outcomes:
On completion of the course, the students will

- become familiar with the structure and functions of various components of plant cell
- understand the processes of cell growth and its regulation
- comprehend the structure, organization and functions of various tissues of the plant organs
- get acquainted with the reproductive processes in the life cycle of angiosperms
- appreciate the interactions between the developmental pathways resulting in the differentiation of plant body
- recognise the importance of plant developmental biology in the improvement and conservation of plants

Unit 1. Introduction to Plant Cell: structure and function **5 hour**
Cell as the basic unit of life; differences between plant and animal cell, prokaryotic and eukaryotic cell; Cell Theory.
Structure and functions of cell wall; cell membrane; cell organelles- nucleus, chloroplast, mitochondria, dictyosomes, endoplasmic reticulum, microbodies, cytoskeleton.

Unit 2: **Cell growth** **3 hours**

Cell cycle, regulation (in brief) and significance; mitosis and meiosis; cytokinesis.

Unit 3. **Polarity in plant growth** **3 hours**
Plant body as a bipolar structure; apical, basal and radial patterns of body plan; growth through primary and secondary meristems; organisation of shoot and root apices.

Unit 4. **Differentiation of tissues: vegetative organs** **6 hours**
Structure and functions of tissues (simple and complex); structure of stem, root, and leaf (dicot and monocot); principles of organ differentiation: role of transcription factors in cell, tissue, organ identity and development, cell fate determination by position, and cell-cell signalling; hormones involved in organ differentiation (very briefly).

Unit 5. Differentiation of tissues: reproductive organs **6 hours**
Anther, microsporogenesis and microgametogenesis, general structure of pollen grains and male gametes, male germ unit; ovule, megasporogenesis (monosporic, bisporic, tetrasporic) and megagametogenesis (Polygonum type), ultrastructure and significance of female germ unit; Flower development (ABC model).

Unit 6. Pollination and Fertilization **3 hours**
Pollination types, agents and adaptation; pollen germination; path of pollen tube in pistil; double fertilization

Unit 7. **Development of Embryo and Seed** **4 hours**
Endosperm types, functions; development of embryo from zygote, establishment of apical-basal and radial organisation; development of seed, modes of seed dispersal.

Practicals (60 hours)
1. Study of plant cell - through peel mount (*Tradescantia,* or any other); whole mount (*Hydrilla*) - cytoplasmic streaming.
2. Study of cell components - nucleus (Feulgen/acetocarmine staining); mitochondria (Janus green B staining); cell wall (PAS staining).
3. To study mitotic index. (pictures or permanent slides -24h-period or under different temperatures/environmental conditions may be used).
4. Study tissues and organs structure through temporary preparations of macerated material and sections - T.S. of dicot stem- *Helianthus/ Cucurbita*, *Hydrilla/ Nympaea petiole, Casuarina,* stem with secondary growth - *Helianthus, Salvadora/ Bignonia;* T.S. of monocot stem - *Zea mays*, *Dracaena;* T.S. of dicot root with and without secondary growth- *Cicer*, monocot root - *Zea mays*, V.S. of dicot leaf- *Vernonia/Hamelia*etc., *Nerium, Hydrilla;* V.S. of monocot leaf- *Zea mays, Triticum/Dracaena/Crinum;* peel mountstostudy epidermal structures - types of stomata, trichomes, laticifers; Shoot apex and root apex through micrographs.
5. Study Reproductive structures (i) Anther - T.S. of anther of any large flower like *Datura/ Hamelia/ Kigelia*); whole mounts of pollen grains; ii) pollen development through micrographs of T.S. anther at different stages of development (with secretory, amoeboid tapetum); (iii) types of ovule through permanent slides/specimens/ micrographs; (iv) Polygonum type of embryo sac development through micrographs; (v) ultrastructure of egg apparatus and central cell through micrographs.
6. Study (i) pollen viability (TTC/FDA); (ii) pollen germination; (iii) growth of pollen tube in cleared pistil.

7. Study (i) dicot and monocot embryo development (through permanent slides); (ii) structure of seed (L.S. of seed)

Category III:

B.Sc. programme in Applied Life Sciences with Agrochemicals and Pest Management Botany (H) Courses for Undergraduate Programme of study with Botany as a Single Core Discipline

DISCIPLINE SPECIFIC CORE COURSE (DSC 03)

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the core course			Eligibility criteria	Pre-requisite of the course (If any)
		Lecture	Tutorial	Practical/ Practice		
Genetics and Molecular Biology ALSBOTDSC03	**4**	**2**	**0**	**2**	**XII pass with Science with Biology/ Biotechnology**	**NIL**

Learning Objectives:

The learning objectives of this course are as follows:

- To understand the basic concept of Mendelian genetics and comprehensive study of Mendelian extensions.
- To provide adequate knowledge about Linkage, Crossing over and Mutations.
- To provide brief knowledge of population and evolutionary genetics.
- To impart detailed understanding about the structureof nucleic acids and their types. .
- To understand key events of Molecular biology comprising mechanism of DNA Replication, Transcription and Translation in Prokaryotes and Eukaryotes.
- To give comprehensive explanation of Transcriptional Regulation with examples of lac operon and tryptophan operon in prokaryotic as well as eukaryotic organisms along with the key concept of Gene Silencing.

Learning Outcomes:

By studying this course, students will be able to:

- Analyse the basic concepts of Mendelian genetics and its extension, Linkage and Crossing over, Mutations and population genetics.

- Explicate the mechanism of replication, transcription, translation in prokaryotes and eukaryotes.
- Comprehend the mechanism of gene regulation and gene silencing.

Unit 1: Mendelian Genetics and Extensions (3 Hours)
Mendel's work on transmission of traits, Co-dominance, Incomplete dominance, Multiple alleles, Lethal Genes, Epistasis, Pleiotropy, Polygenic inheritance, Pedigree analysis.

Unit 2: Extra-chromosomal Inheritance (2 Hours)
Cytoplasmic inheritance: Chloroplast variegation in Four 'O clock plant, Kappa particles in *Paramecium*, Maternal effect-shell coiling pattern in snail.

Unit 3: Linkage, Crossing over and Chromosomal Mapping (3 Hours)
Linkage and crossing over, Recombination mapping - two point and three points.

Unit 4: Mutations (3 Hours)
Chromosomal mutations, Deletion, Duplication, Inversion, Translocation, Aneuploidy and Polyploidy, Gene mutations.

Unit 5: Population and Evolutionary Genetics (2 Hours)
Allelic frequencies, Genotypic frequencies, Gene pool, Hardy-Weinberg Law.

Unit 6: The Genetic Material: DNA and RNA (4 Hours)
DNA structure: Salient features of double helix, Types of DNA, DNA denaturation and renaturation, Nucleosome, Chromatin structure- Euchromatin, Heterochromatin (Constitutive and Facultative), RNA structure and its types.

Unit 7: Replication of DNA (3 Hours)
Mechanism of prokaryotic DNA replication, Chemistry of DNA synthesis, Enzymes and proteins involved in DNA replication, Comparison of replication in prokaryotes and eukaryotes.

Unit 8: Transcription and Processing of RNA (4 Hours)
Mechanism of transcription in prokaryotes and eukaryotes, Split genes: concept of introns and exons, Removal of introns, Spliceosome machinery group I & group II intron splicing, alternative splicing, eukaryotic mRNA processing (5' cap, 3' poly A tail).

Unit 9: Translation (3 Hours)
Mechanism of translation in prokaryotes and eukaryotes: initiation, elongation and termination of polypeptides,Proteins and enzymes involved in translation.

Unit 10: Regulation of transcription in prokaryotes and eukaryotes (3 Hours)
Prokaryotes: Regulation of lactose metabolism and tryptophan synthesis in *E. coli*, Eukaryotes: Transcription factors, Heat shock proteins, Gene silencing.

PRACTICAL (Credit: 02)
(Laboratory practical- 15 classes of 4 hours each)

1. To study Mendelian and Non- Mendelian gene interaction ratios (9:7, 9:6:1, 13:3, 15:1, 12:3:1, 9:3:4) through seeds.
2. To study linkage, recombination, gene mapping using marker-based data from *Drosophila*.

3. Karyotype and Idiogram preparation through photographs.
4. PTC testing in a population and calculation of allelic and genotypic frequencies.
5. Study of abnormal human karyotype and pedigrees.
6. Isolation of genomic DNA from Cauliflower curd.
7. Qualitative analysis of DNA using gel electrophoresis.
8. Estimation of DNA by Diphenylamine method.
9. Separation of nucleotide bases by paper chromatography.
10. Purity and quantitative estimation of isolated DNA by UV-VIS spectrophotometer.
11. Study of Molecular techniques: PCR, Southern, Northern and Western Blotting and PAGE.

Essential/ Recommended readings:

1. Snustad D.P. and Simmon M.J. (2012) *Genetics* 6 th Ed., John Wiley & Sons. (Singapore)
2. PierceB.A, (2012) *Genetics - A Conceptual Approach*, 4 th Ed., W.H. Freeman & Co. (New York)
3. Griffiths A.J.F., Wessler S. R, Carroll S. B and Doebley J. (2010) *An Introduction to Genetic Analysis*, 10th Ed., W.H. Freeman & Company (New York).
4. Watson J.D., Baker, T.A., Bell, S.P., Gann, A., Levine, M. and Losick, R. (2007) *Molecular Biology of the Gene*, 6th Ed. Pearson Benjamin Cummings, CSHL Press, New York, U.S.A.

Suggestive readings:

1. Klug, W.S., Cummings, M.R. and Spencer, C.A. (2009)*Concepts of Genetics*. 9th Ed. Benjamin Cummings. U.S.A.
2. Russell, P. J. (2010) *Genetics- A Molecular Approach*. 3rd Ed. Benjamin Cummings, U.S.A.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVE COURSE (DSE01)

Course title & Code	Credits	Credit distribution of the core course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Ecology, Conservation and Restoration ALS BOT DSE 01	**4**	**2**	**0**	**2**	**XII pass with Science with Biology/ Biotechnology**	**NIL**

Learning Objectives:

- To develop a scientific understanding of the diverse aspects of ecology.
- To familiarize students with the interactions between the organisms and their physical environment.
- To understand various attributes of populations and communities with the help of theoretical concepts and field studies.
- To make students understand various factors that lead to variations among populations of a species.
- To familiarize students about the concepts of conservation and restoration.

Learning Outcomes:

By studying this course,students will be able to:

- Gain knowledge aboutthebasic concepts of ecology.
- Comprehend the characteristics of the community, ecosystem development and climax theories.
- Explicate the relationship of evolution of various species and their environment.
- Analyse the basic field studies including data collection and its interpretation.
- Explicate the Conservation and Restoration methods.

Unit 1: Introduction to Ecology (3 Hours)

Autecology and Synecology, Laws of limiting factors, Study of physical factors: Temperature and Light.

Unit 2: Population (4 Hours)

Unitary and Modular populations, Unique and group attributes of population: density, natality, mortality, Life tables, Fecundity table, Survivorship curves, Intraspecific population regulation: density-dependent and independent factors.

Unit 3: Species Interactions (5 Hours)

Types of species interactions, Interspecific competition: Lotka-Volterra model of competition, Gause's Principle, Niche concept, Predation, Predator defence mechanisms.

Unit 4: Community (4 Hours)

Community characteristics: species richness, dominance, diversity, abundance, guilds, ecotone and edge effect, Ecological succession with examples and types.

Unit 5: Ecosystem (5 Hours)

Types of Ecosystems: terrestrial and aquatic ecosystems, Vertical stratification in tropical forest, Food chain: detritus and grazing food chains, linear and Y-shaped food chains, Food web, Energy flow through the ecosystem: Ecological pyramids and Ecological efficiencies, Biogeochemical cycles: Nitrogen cycle.

Unit 6: Conservation (5 Hours)

Ecology in wildlife conservation and management: In-situ conservation (Biosphere Reserves, National Parks, Wildlife Sanctuaries), Ex-situ conservation (botanical gardens, gene banks, seed and seedling banks, DNA banks),Principles of Environmental impact assessment.

Unit 7: Restoration (4 Hours)

Restoration ecology: Afforestation, Social forestry, Agro-forestry, Joint Forest management, Role of remote sensing in management of natural resources.

PRACTICAL (Credit: 02)

(Laboratory practical- 15 classes of 4 hours each)

1. Study of life tables and plotting of survivorship curves of different types from hypothetical/real data.
2. Determination of population density and abundance in a natural or a hypothetical community by quadrat method.
3. Quantitative analysis of herbaceous vegetation in the college campus and comparison with Raunkiaer's Frequency distribution law.
4. Study of morphological features of hydrophytes and xerophytes in the ecosystems.
5. Measurement of temperature, turbidity/penetration of light and pH of any two water samples.
6. Comparison of Dissolved oxygen content in different water samples using Winkler's titration method.
7. Comparison of organic carbon of two soil samples using Walkley and Black's rapid titration method.
8. Comparison of CO_2 and alkalinity in two different water samples.
9. Estimation of Total Dissolved Solids (TDS) in water samples.
10. Perform Rapid field tests to detect the presence of Carbonates, Nitrate, Sulphate, Chloride, Organic matter and Base deficiency in two soil samples.
11. A visit to a National Park/Biodiversity Park/Wildlife Sanctuary/Urban Forest.

Essential/Recommended readings:

1. Sharma, P.D. (2012). *Ecology and Environment*. Rastogi Publications.
2. Singh J.S., Singh S.P., and Gupta S. R. (2014) *Ecology, Environment Science and Conservation*. S. Chand and Company Limited.
3. Odum, E.P. and Barrett G. W. (2004) *Fundamentals of Ecology*. Indian Edition (5th)Brooks/Cole Publishers.

Suggestive readings:

1. Smith T. M. and Smith R. L. (2015). *Elements of Ecology*. 9th International Edition, Publisher: Benjamin Cummings.
2. Saha G.K. and Mazumdar S. (2020) *Wildlife Biology*, An Indian Perspective. Publisher: PHI Learning Private Limited
3. Futuyma, Douglas and Mark, Kirkpatrick (2017). *Evolutionary Biology* (3rd Edition), Oxford University Press

Category IV:
B.Sc. Biological Sciences (Hons)for Undergraduate Programme of study with Botany as a Single Core Discipline

DISCIPLINE SPECIFIC CORE COURSE –9 :

Course title & Code	Credits	Credit distribution of the core course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Functional Ecology (BS-DSC303)	4	2	-----	2	Class XII pass with Biology and chemistry, as one of the papers in Class XII	Nil

Learning Objectives

• To understand the basic concepts in ecology and levels of organization in an ecosystem
• Obtain a basic understanding of the various aspects of a 'population' and interactions among individuals of the same as well as different species.
• To understand the structure and functions of the community and its processes.
• To comprehend the components of an ecosystem, energy flow and nutrient cycling.
• To appreciate the applied aspects required in restoration of degraded ecosystems.
• To understand trade-offs in life history characteristics of organisms and various behaviors shownby organisms.

Learning outcomes
By the end of the course, the student will be able to:
• To comprehend the principles and applications of ecology and ecosystem.
• Know about the importance of ecosystem in general and the effects of changes inecosystem.
• Understand the techniques used for the quantitative and qualitative estimation of bioticand abiotic components of an ecosystem.
• Gain knowledge about the density, frequency and diversity of species in an ecosystem.
• Understand about key interactions between organisms like competition , predation ,parasitism etc.
• Participate in citizen science initiatives from an ecological perspective

DISCIPLINE SPECIFIC CORE COURSE –9 :XXX
SYLLABUS OF DSC-9
Theory
Unit 1: Introduction to Ecology **3 Hours**
History of ecology, Autecology and synecology, levels of Organisation, Laws of limiting factors (Liebig's law of minimum, Shelford's law of tolerance), ecological range (Eury and Steno).
Unit 2: Population Ecology **12 Hours**
Population: Unitary and Modular populations; Metapopulation: Density, natality, mortality, life tables, fecundity tables, survivorship curves, sex ratio, age pyramids, dispersal and

dispersion; carrying capacity, population dynamics (exponential and logistic growth equation and patterns), r and K selection, density-dependent and independent population regulation; Niche concept, Population interactions: Positive and negative interactions; Competition, Gause's Principle for competition with laboratory and field examples, Lotka-Volterra equation for predation.

Unit 3: Community Ecology **8 Hours**

Community structure: Dominance, diversity, species richness, abundance, stratification; Diversity indices; Ecotone and edge effect; Community dynamics (succession): Primary and secondary succession, Succession on a bare rock. Climax: monoclimax and polyclimax concepts (preclimax, postclimax, disclimax etc.). Concept of keystone, indicator and flagship species with plant and animal examples.

Unit 4: Ecosystem Ecology **7 Hours**

Concept, components, and types of ecosystems (example of Pond ecosystem in detail showing abiotic and biotic components), BOD, eutrophication. Energy flow (Grazing and Detritus food chain), linear and Y-shaped energy flow model, black box model, food web. Ecological pyramids and Ecological efficiencies.

PRACTICALS CREDITS: 2 **Total 60 Hours**

1. To understand the principle and working of ecological instruments such as Anemometer, Hygrometer, Luxmeter, Rain gauge, turbidity meter, pH meter, Soil thermometer, MinMax thermometer.
2. To study biotic interactions using specimens/ photographs/ permanent slides of Parasitic angiosperms, Saprophytic angiosperms, root nodules, velamen roots, lichens , corals .
3. To study plant-microbe interactions by preparing temporary stained mounts of VAM fungi / mycorrhizal roots/ root nodules.
4. Mark recapture method for determining population density of animals
5. To determine a minimal quadrat area for sampling
6. To determine density, frequency and abundance of herbaceous vegetation by quadrat method
7. To estimate dissolved oxygen content of a given water sample using Winkler's method.
8. Plotting of survivorship curves from hypothetical life table data.XXX

DISCIPLINE SPECIFIC Elective –DSE-1 :

Course title & Code	Credits	Credit distribution of the core course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Medicinal and Ethnobotany (BS-DSE-1)	4	2	-----	2	Class XII pass with Biology and NA chemistry, as one of the papers in Class XII	Nil

Learning Objectives:
Plants are imperative to mankind with almost all plants known to possess medicinal values. There is an increased emphasis on indigenous system of medicine which has lent prime focus on medicinal plants. Keeping the therapeutic importance of medicinal plants in mind this course is designed to provide education and training on diverse perspectives of medicinal plants. The course also offers comprehensive knowledge about understanding the difference between ancient wisdom and themodern system of medicine.

Learning Outcomes:
On successful completion of the course, a student will:
• Be able to identify the common medicinal plants in their vicinity.
• Learn about the traditional healing sciences namely Ayurveda, Siddha and Unani, which have been used since the ancient times.
• Appreciate the importance of conservation strategies for medicinal plants.
• Be able to understand the importance of medicinal plants, significance of ethnobotany, role of ethnic groups in the conservation of medicinal plants.
Course Contents - Theory

Unit 1: History, Scope and Importance of Medicinal Plants No. of Hours-10

Introduction to indigenous systems of medicines- Ayurveda, Unani and Siddha system of medicine)- Ayurveda: History, origin, Panchamahabhutas, Saptadhatu and Tridosha concepts, Siddha: Origin of Siddha medicinal systems, Basis of Siddha system. Unani: History, concept: Umoor-e- tabiya. Plants used in Ayurveda, Siddha and Unani medicine with special reference to Carum carvi, Plantago ovata, Allium sativum, Asparagus racemosus, Vitis vinifera, Linum usitatissimum, Amaranthus paniculatus. Polyherbal formulations (with special reference to Safi, Chyawanprash, Trifala, Swalin, Amukkara Choorna, Gandhak rasayana). Natural products – Compounds responsible for biological activity of medicinal plants: their biology, and pharmacology (Curcumin, Vinblastine, Vincristine, Ecliptine, Cinchonine, Azadirachtin, Artemisinin).

Unit 2: Conservation of Endangered and Endemic Medicinal Plants No. of Hours -8

Definition: endemic and endangered medicinal plants, Red list criteria; In situ conservation: Biosphere reserves, sacred groves, National Parks; Ex situ conservation: Botanical Gardens,

herbal gardens, Ethnomedicinal plant gardens. Germplasm conservation, cryopreservation (Cryo banks and DNA banks), Role of NBPGR and JNTBGRI in conservation of plants, Propagation of Medicinal Plants: In vitro and In vivo strategies. Adulteration of Herbal drugs. Organoleptic, microscopic and phytochemical evaluation of plant drugs.

Unit 3: Ethnobotany and Folk Medicines **No. of Hours :12**

Introduction, concept, scope and objectives; Ethnobotany in India: Methods to study ethnobotany; Folk medicines of ethnobotany, Role of ethnobotany in modern medicine with special reference to *Rauvolfia serpentina*, *Trichopus zeylanicus*, *Artemisia, Withania*. Major and minor ethnic groups of India and their lifestyles. Application of natural products to certain diseases- Jaundice, cardiac, infertility, diabetics, blood pressure and skin diseases. Role of ethnic groups in conservation of plant genetic resources; Brief account of biopiracy and IPR.

PRACTICAL
Credit: 2 **Total Hours - 60**

1. Identification of any ten common medicinal plants in the surrounding area and study their characteristic features.
2. Collection, identification and preparation of herbarium of any five medicinal plants.
3. Extraction and qualitative estimation of active principle compounds (alkaloids, tannins, saponins and flavanoids) from any four medicinal plants. (*Aloe vera, Ocimum* sp*, Azadirachta , Catharanthus, Adhatoda, Withania*)
4. Study of components and medicinal uses of common polyherbal formulations used in the traditional system of medicine (Ayurveda, Unani and Siddha).
5. Study of organoleptic, macroscopic and microscopic parameters of any two medicinal plants.
6. To compare the total phenolic content of few locally available medicinal plants
7. Field trip: Industries/Institutes/herbal garden/ medicinal gardens/ nurseries/tribal museum.
8. e-presentations (System of medicine, Conservation strategies, propagation of medicinal plants, folk medicines, application of natural products to certain diseases listed in the syllabus)

Essential readings:

1. Abdin, M. Z. and Abrol, Y. P., (2006). Traditional Systems of Medicine. Narosa Publishing House, New Delhi.
2. Kumar, S., (2018). Ethnobotany. Kojo press, New Delhi.

COMMON POOL OF GENERIC ELECTIVES (GE)

GENERIC ELECTIVES (GE-11): Industrial and Environmental Microbiology

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical / Practice		
Industrial and Environmental Microbiology **GE-11**	4	2	0	2	Class XII pass	Nil

Learning Objectives:

- To introduce students to understand the uses of microbes in industry: concepts, principles, scope and applications.
- To introduce students to the role of microbes in the environment: concepts, principles, scope and application.

Learning Outcomes:

Upon successful completion of the course, students will be able to:

- understand how microorganisms are involved in the manufacture of industrial products.
- know about design of bioreactors, factors affecting growth and production of bioproducts.
- understand the rationale in medium formulation & design for microbial fermentation, sterilization of medium and air.
- comprehend the different types of fermentation processes and the underlying principles in upstream and down- stream processing.
- learn the occurrence, abundance, distributionandrole of microorganisms in the environment.Also, learn different methods for microbial isolation and detection from different habitats.
- understand the basic principles of environmental microbiology and their application in waste water treatment, bioremediation and role of microbes in agriculture.

Unit 1: Introduction **4 hours**

Scope and importance of microbes in Industry and Environment (Institutes of microbial research). Bioremediation. Distribution and isolation of microbes in the air, soil and water.

Unit 2: Bioreactors/ Fermenters and Fermentation process **4 hours**

Solid-state and liquid state (stationary and submerged) fermentations; batch and continuous fermentations; components of a typical bioreactor, types of bioreactors.

Unit 3: Microbial production of industrial importance **12 hours**

Microorganisms generally regarded as safe (GRAS), types of media, conditions necessary for the growth and production of industrially important products, downstream processing and uses; filtration, centrifugation, cell disruption, solvent extraction, precipitation and ultrafiltration, lyophilization, spray drying.

Production of enzyme (amylase); organic acid (citric acid); alcohol (ethanol); antibiotic (penicillin).

Unit 4: Enzyme immobilization **3 hours**

Definition, Methods of immobilization, their advantages and applications, large scale production and application of penicillin acylase.

Unit 5: Microbial flora of water **4 hours**

Microorganisms as indicators of water quality: coliform and faecal coliform; role of microbes in sewage and waste water treatment system.

Unit 6: Microbes and agriculture **3 hours**

Legume root nodule symbiosis, Mycorrhizae, Arbuscular Mycorrhiza Fungi (AMF) and its importance in agriculture.

Practicals: **60 hours**

1. Principle and functioning of instruments in microbiological laboratory (autoclave, laminar flow, incubator, fermenters).
2. Sterilization methods: Wet and dry methods, membrane filters, chemicals.
3. Preparation of different culture media (Potato dextrose agar/Czapek-Dox agar, Luria Bertani) for isolation of microorganisms from soil using serial dilution agar plating method and study of aero-microflora.
4. Culturing techniques: Streak plate method, pour plate method and spread plate method.
5. To study the ability of microorganisms to hydrolyse casein/ starch.
6. Production of alcohol using sugar/ jaggery.
7. Observation of AMF colonization in plant roots.
8. A visit to any educational institute/ industry to understand the uses of microbes for industrial applications and a report to be submitted for the same.

Suggested Readings:

GENERIC ELECTIVES (GE-12)

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Environmental Biotechnology & Management **GE-12**	**4**	**2**	**0**	**2**	Class XII pass	**Nil**

Learning Objectives:
The course aims to build awareness of:

- various global and regional environmental concerns due to natural causes and/or human activities.
- different types of pollution and their impacts on the environment.
- existing and emerging technologies that are important in the area of environmental biotechnology to fulfill Sustainable Development Goals.

Learning Outcomes:
After completion of course the student will be able to:

- demonstrate awareness about emerging concerns such as climate change, waste management; biodegradation of xenobiotic compounds; bioremediation, etc.
- relate applications of biotechnology for alleviating the environmental concerns
- appreciate the scientific, ethical and/or social issues
- understand the national and international legislations, policies and role of public participation in Environmental Protection

Unit 1: Environment **5 hours**
Basic concepts and issues, global environmental problems - ozone layer depletion, UV-B, greenhouse effect and acid rain due to anthropogenic activities, their impact and biotechnological approaches for management. Fate of pollutants in the environment, Bioconcentration, Biomagnification.

Unit 2: Microbiology of waste water treatment 7 hours

Aerobic process - activated sludge, oxidation ponds, trickling filter. Anaerobic process - anaerobic digestion, anaerobic filters, up-flow anaerobic sludge blanket reactors. Treatment schemes for waste waters of dairy and sugar industries.

Unit 3: Xenobiotic compounds 7 hours

Organic (Bio degradation of petroleum products and pesticides) and inorganic (metals, phosphates, nitrates). Bioremediation of xenobiotics in environment - ecological consideration, Bioaccumulation and Biosorption of metals

Unit 4: Treatment of toxic compounds: Role of immobilized cells/enzymes, microbial remediation 5 hours

Biopesticides, bioreactors, bioleaching, biomining, biosensors, biotechniques for air pollution abatement and odour control. Bioindicators and Bioprospecting

Unit 5: International Legislations, Policies for Environmental Protection 3 hours
Stockholm Conference (1972) and its declaration, WCED (1983) and Brundtland Report (1987), Rio Earth Summit-UNCED (1992) and its declaration, Montreal Protocol - 1987, Kyoto Protocol- 1997. Environmental ethics

Unit 6: National Legislations, Policies for Pollution Management 3 hours
Water Pollution (Prevention and Control) Act-1974, Air Pollution (Prevention and Control) Act-1981, National Environmental Policy - 2006, Central and State Pollution Control Boards: Constitution and power.

Practicals: 60 hours

1. To determine the pH and total hardness of water samples collected from different places (polluted and non-polluted sites)
2. To determine the salinity of water samples (polluted and non-polluted sites)
3. To determine the dissolved oxygen of two water samples.
4. To determine the alkalinity of water samples.
5. To determine the pH and rapid field test of soil samples (Chloride, Nitrate, and Sulphate).
6. To study microbessuspended in air and water samples.
7. A visit to any educational institute/ industry to understand the uses of microbes in environmental management and a report to be submitted for the same.

Suggested Readings:

1. De, A. K. (2022). Environmental Chemistry, 10th Edition, New Delhi. New Age International Pvt. Limited
2. Dennis, A., Seal, K.J., Gaylarde, C.C. (2004). Introduction to Biodeterioration, Cambridge University Press

GENERIC ELECTIVES (GE-13): Plant Biotechnology

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical / Practice		
Plant Biotechnology **GE-13**	**4**	**2**	**0**	**2**	Class XII pass	**Nil**

Learning Objective

To give students knowledge of techniques used in plant biotechnology and its applications.

Learning Outcomes:

After completion of this course, students will be able to:

- understand the basic concepts, principles, and methods in plant biotechnology.
- will be able to explain the usage of the acquired knowledge in biotechnological, pharmaceutical, medical, ecological, and agricultural applications.

Unit 1: Introduction and Scope of Plant Biotechnology **2 hours**

Historical perspective, Current paradigms in plant biotechnology, GM crops, International/National institutions

Unit 2: Plant Tissue Culture **10 hours**

Plasticity and Totipotency of plant cells – why and how do plants grow from a single cell; Nutrient media and role of vitamins and hormones. Regeneration of plants in the laboratory: Direct and indirect organogenesis, somatic embryogenesis; Brief account of micropropagation, haploids, triploids and cybrids and their applications; artificial seeds

Unit 3:Cloning and transformation techniques **10 hours**

What is cloning?; Restriction and modifying enzymes, plasmids as cloning vehicles, Transformation of bacterial cells, selection of transformants and clones – antibiotic selection, blue-white selection; How do we make transgenic plants: *Agrobacterium*-mediated transformation, Direct gene transfer by Electroporation, Microinjection, Microprojectile bombardment. Selection of transgenic plants - selectable marker and reporter genes (Luciferase, GUS, GFP).

Unit 4: Applications **8 hours**

Applications of transgenic plants in enhancing crop productivity: Pest resistant (Bt-cotton, Bt Brinjal) and herbicide resistant plants (Round Up Ready soybean);

Transgenic crops with improved quality traits (FlavrSavr tomato, Golden rice); Improved horticultural varieties (Moondust carnations); Role of transgenics in bioremediation (Superbug), Edible vaccines; Genetically engineered products - Human Growth Hormone and Humulin; Transgenic plants and their role in understanding plant biology, Biosafety regulations for transgenic plants.

Practicals **60 hours**

1. a. Preparation of Murashige & Skoog's (MS) medium.
   b. Demonstration of in vitro sterilization and inoculation methods using leaf and nodal explants of *Nicotiana* / *Datura / Brassica*.
2. Study anther, embryo, endosperm culture, micropropagation and somatic embryogenesis (photographs/slides).
3. Study isolation of protoplasts and production of artificial seeds.
4. Study methods of gene transfer: A*grobacterium*-mediated, direct gene transfer by electroporation, microinjection, microprojectile bombardment (through digital resources).
5. Study various steps of genetic engineering for production of *Bt*cotton, Golden rice, Flavr Savr tomato.
6. Plasmid and genomic DNA isolation, Restriction digestion and agarose gel electrophoresis of DNA.
7. Visit to a plant tissue culture / Biotechnology laboratory and to submit a field report.

Suggested Readings:

1. Bhojwani, S.S., Bhatnagar, S.P. (2015). The Embryology of Angiosperms, 6th edition. New Delhi, Delhi: Vikas Publication House Pvt. Ltd.
2. Bhojwani, S.S., Razdan, M.K., (1996). Plant Tissue Culture: Theory and Practice. Amsterdam, Netherlands: Elsevier Science.
3. Newmann, Karl-Hermann (2020). Plant Cell and Tissue Culture: A Tool in Biotechnology, 2nd Edition {Springer}
4. Glick, B.R., Pasternak, J.J. (2022). Molecular Biotechnology Principles and Applications of Recombinant DNA, 6th Edition. Washington, U.S.: ASM Press.
5. Stewart, C.N. Jr. (2016). Plant Biotechnology and Genetics: Principles, Techniques and Applications, 2nd Edition. New Jearsey, U.S.: John Wiley & Sons Inc.

Additional Resources:

2. Singh, B. D. (2022). Plant Biotechnology, Delhi, Medtech

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

GENERIC ELECTIVES (GE-14): Plant Tissue Culture

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Plant Tissue Culture **GE-14**	4	**2**	**0**	2	Class XII pass	**Nil**

Learning Objectives

To give students knowledge of techniques used in plant tissue culture and its applications.

Learning Outcomes

The successful students will be able to:

- learn the basic concepts, principles and processes in plant cell and tissue culture.
- understand the use of tissue culture techniques in plant improvement.
- apply the concepts and principles of plant cell and tissue culture in biotechnological and agricultural fields.
- become an entrepreneur by establishing their own plant tissue culture lab.

Unit 1 Introduction **3 hours**

Historical perspective, Important contributions of Haberlandt, White, Reinert & Steward, Murashige, Skoog, Cocking, Guha & Maheshwari, Morrel & Martin.

Terminologies: Cell culture,organ culture, explant, callus, totipotency, plasticity, regeneration, somaclonal variants.

Unit 2 Types and composition of Media **4 hours**

Role of nutrients, vitamins, hormones and supplements in nutrient medium. Composition of MS and White medium.

Unit 3 Techniques of Plant Tissue Culture **4 hours**

Collection of plant material, sterilization of tissue (maintenance of aseptic conditions by use of autoclave and laminar flow chamber), filter sterilization, inoculation.

Unit 4 Protoplast culture **5 hours**

Protoplast isolation (mechanical and enzymatic), culture, purification (viability test) and fusion (spontaneous, induced), selection of fused protoplasts, applications.

Unit 5Micropropagation **5 hours**

Selection of plant material and suitable explant, methodology, plant regeneration pathways-somatic embryogenesis, organogenesis, difference between somatic and zygotic embryos.

Unit 6 Tissue culture applications **9 hours**

Anther culture, Production of haploids, triploids and cybrids, artificial seeds (production & advantages), embryo rescue, virus elimination, secondary metabolite production; Cryopreservation; Germplasm conservation. Novel sources of variation.

Practicals **60 hours**

l. To study the equipment used in tissue culture: autoclave and laminar air flow chamber.
2. Preparation of Murashige & Skoog's (MS) medium.
3. Demonstration of sterilization and inoculation methods using leaf and nodal explants of tobacco, carrot, *Datura*, *Brassica* etc. (any two).
4. Study of anther, embryo and endosperm culture.
5. Study of micropropagation, somatic embryogenesis & artificial seeds.
6. Isolation of protoplasts.
7. Visit to a plant tissue culture laboratory and submission of field report.

Suggested Readings:

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

GENERIC ELECTIVES (GE-15): Inheritance in Biology

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Inheritance in Biology **GE-15**	**4**	**2**	**0**	2	Class XII pass	**Nil**

Learning Objectives:

- Mendelian and non-Mendelian inheritance: How is genetic information transferred across generations?
- Genetic defects in humans: Causes, inheritance and diagnostics
- Mutations: Types and agents
- DNA fingerprinting: DNA as a tool for establishing unique identity

Learning Outcomes:

Students will get familiarized with the concepts and principles of inheritance, sex determination, causal agents of genetic changes (mutations) and defects (congenital diseases) in humans. The course will also enable students to learn how genetic information is used to detect diseases and also to establish unique identity of an individual.

Section A: Information transfer across generations: Transmission Genetics

Unit 1: Chromosomal Inheritance **7 hours**

Principles of Mendelian inheritance; Chromosomal theory of inheritance, Incomplete dominance and co- dominance; Multiple allelism; lethal alleles; Epistasis; Pleiotropy; Penetrance and expressivity; Polygenic inheritance; Linkage and crossing over.

Unit2: Extra-chromosomal Inheritance: **4 hours**

Chloroplast Inheritance: Variegation in Four O` clock plant; Mitochondrial inheritance: petite mutants in yeast; Maternal effect- shell coiling in snails.

Section B: Male or Female? What determines the gender of the offspring?

Unit 3: Sex determination **3 hours**

Mechanism of sex determination in Insects (*Drosophila*), Plants (*Melandrium, Coccinia*)and humans (Sex determination regions/genes-TDF, SRY and Testicular feminisation), Dosage compensation in humans.

Section C: Human Genetics

Unit 4: Genetic defects-Structural **3 hours**

Autosomal and sex linked, congenital defects: Hemophilia, Thalassemia, Sickle cell anemia, Phenylketonuria, Cystic fibrosis, pedigree analysis

Unit 5: Genetic Defects-Variation in Chromosome number **3 hours**
Syndromes associated with chromosomal abnormalities: Down, Turner, Klinefelter, Edward and Patau.

Section D: Molecular Genetics
Unit 6: Heritable changes (mutations) and their causes **3 hours**
Physical and chemical mutagens, Transposable genetic elements and their role in mutations.

Unit 7: Diagnostics for human genetic disorders **3 hours**
Molecular, chromosomal and biochemical testing

Unit 8: DNA fingerprinting as molecular signatures- applications **4 hours**
Forensics (case studies), Paternity testing, unique identity establishment, conservation, finding adulterants in food/drugs.

Practicals **60 hours**

1. To understand the genetic interaction involved using the given seed mixture. Genetic ratios to be calculated using Chi square analysis.
2. Pedigree analysis (Sex linked dominant and recessive; autosomal dominant and recessive)
3. To study/list human dominant and recessive traits and to observe the listed physical traits among the students present in the class. Analyse the results.
4. To study the syndrome through photographs (Klinefelter, Turner, Downs /Patau/Edwards)
5. To demonstrate variation in the ability to taste PTC (Phenylthiocarbamide) in a given population.
6. Chromosomal and gene mutations: Complex translocation ring, quadrivalents, lagging chromosomes, dicentric/inversion bridge, sickle cell anaemia, xeroderma pigmentosum
7. To study sex chromosomes in *Drosophila, Melandrium, Coccinia* and human through photographs.

Suggested Readings:

1. Gardner, E.J., Simmons, M.J., Snustad, D.P. (1991). Principles of Genetics, 8th edition. New Delhi, Delhi: John Wiley & sons.
2. Griffiths, A.J.F., Wessler, S.R., Carroll, S.B., Doebley, J. (2020). Introduction to Genetic Analysis, 12th edition. New York, NY: W.H. Freeman and Co.
3. Klug, W.S., Cummings, M.R., Spencer, C.A. (2020). Concepts of Genetics, 12th edition. San Francisco, California: Benjamin Cummings.
4. Campbell, N.A., Urry,L.A., Cain, M.L., Wasserman,S.A., Minorsky, P.V., Reece, J.B. (2020). Biology, 12th Edition. Harlow,England : Pearson

Additional Resources:

1. Hartl, D.L., Ruvolo, M. (2019). Genetics: Analysis of Genes and Genomes, 9th edition. New Delhi, Delhi: Jones and Bartlett Learning.
2. Snustad, D.P., Simmons, M.J. (2019). Principles of Genetics, 67th edition. New Delhi, Delhi: John Wiley & sons.
3. Singh, B. D. (2023). Fundamentals of Genetics, 6th edition. MedTech.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

SWAMI SHRADDHANAND COLLEGE

Bachelor of Science (Hons.) in Applied Life Sciences with Agrochemicals and Pest Management

Botany Component

DISCIPLINE SPECIFIC CORE COURSE (DSC 03)

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the core course			Eligibility criteria	Pre-requisite of the course (If any)
		Lecture	Tutorial	Practical/ Practice		
Genetics and Molecular Biology ALS BOT DSC 03	**4**	**2**	**0**	**2**	**XII pass with Science with Biology/ Biotechnology**	**NIL**

Learning Objectives:

The learning objectives of this course are as follows:

- To understand the basic concept of Mendelian genetics and comprehensive study of Mendelian extensions.
- To provide adequate knowledge about Linkage, Crossing over and Mutations.
- To provide brief knowledge of population and evolutionary genetics.
- To impart detailed understanding about the structure of nucleic acids and their types. .
- To understand key events of Molecular biology comprising mechanism of DNA Replication, Transcription and Translation in Prokaryotes and Eukaryotes.
- To give comprehensive explanation of Transcriptional Regulation with examples of lac operon and tryptophan operon in prokaryotic as well as eukaryotic organisms along with the key concept of Gene Silencing.

Learning Outcomes:

By studying this course, students will be able to:

- Analyse the basic concepts of Mendelian genetics and its extension, Linkage and Crossing over, Mutations and population genetics.
- Explicate the mechanism of replication, transcription, translation in prokaryotes and eukaryotes.
- Comprehend the mechanism of gene regulation and gene silencing.

Unit 1: Mendelian Genetics and Extensions (3 Hours)

Mendel's work on transmission of traits, Co-dominance, Incomplete dominance, Multiple alleles, Lethal Genes, Epistasis, Pleiotropy, Polygenic inheritance, Pedigree analysis.

Unit 2: Extra-chromosomal Inheritance (2 Hours)

Cytoplasmic inheritance: Chloroplast variegation in Four 'O clock plant, Kappa particles in *Paramecium*, Maternal effect - shell coiling pattern in snail.

Unit 3: Linkage, Crossing over and Chromosomal Mapping (3 Hours)

Linkage and crossing over, Recombination mapping - two point and three points.

Unit 4: Mutations (3 Hours)

Chromosomal mutations, Deletion, Duplication, Inversion, Translocation, Aneuploidy and Polyploidy, Gene mutations.

Unit 5: Population and Evolutionary Genetics (2 Hours)

Allelic frequencies, Genotypic frequencies, Gene pool, Hardy-Weinberg Law.

Unit 6: The Genetic Material: DNA and RNA (4 Hours)

DNA structure: Salient features of double helix, Types of DNA, DNA denaturation and renaturation, Nucleosome, Chromatin structure- Euchromatin, Heterochromatin (Constitutive and Facultative), RNA structure and its types.

Unit 7: Replication of DNA (3 Hours)

Mechanism of prokaryotic DNA replication, Chemistry of DNA synthesis, Enzymes and proteins involved in DNA replication, Comparison of replication in prokaryotes and eukaryotes.

Unit 8: Transcription and Processing of RNA (4 Hours)

Mechanism of transcription in prokaryotes and eukaryotes, Split genes: concept of introns and exons, Removal of introns, Spliceosome machinery group I & group II intron splicing, alternative splicing, eukaryotic mRNA processing (5' cap, 3' poly A tail).

Unit 9: Translation (3 Hours)

Mechanism of translation in prokaryotes and eukaryotes: initiation, elongation and termination of polypeptides, Proteins and enzymes involved in translation.

Unit 10: Regulation of transcription in prokaryotes and eukaryotes (3 Hours)

Prokaryotes: Regulation of lactose metabolism and tryptophan synthesis in *E. coli*, Eukaryotes: Transcription factors, Heat shock proteins, Gene silencing.

PRACTICAL (Credit: 02)

(Laboratory practical- 15 classes of 4 hours each)

1. To study Mendelian and Non- Mendelian gene interaction ratios (9:7, 9:6:1, 13:3, 15:1, 12:3:1, 9:3:4) through seeds.
2. To study linkage, recombination, gene mapping using marker-based data from *Drosophila*.
3. Karyotype and Idiogram preparation through photographs.
4. PTC testing in a population and calculation of allelic and genotypic frequencies.
5. Study of abnormal human karyotype and pedigrees.
6. Isolation of genomic DNA from Cauliflower curd.
7. Qualitative analysis of DNA using gel electrophoresis.
8. Estimation of DNA by Diphenylamine method.
9. Separation of nucleotide bases by paper chromatography.
10. Purity and quantitative estimation of isolated DNA by UV-VIS spectrophotometer.
11. Study of Molecular techniques: PCR, Southern, Northern and Western Blotting and PAGE.

Essential/ Recommended readings:

5. Snustad D.P. and Simmon M.J. (2012) *Genetics* 6 th Ed., John Wiley & Sons. (Singapore)
6. Pierce B.A, (2012) *Genetics - A Conceptual Approach*, 4 th Ed., W.H. Freeman & Co. (New York)

7. Griffiths A.J.F., Wessler S. R, Carroll S. B and Doebley J. (2010) *An Introduction to Genetic Analysis*, 10th Ed., W.H. Freeman & Company (New York).
8. Watson J.D., Baker, T.A., Bell, S.P., Gann, A., Levine, M. and Losick, R. (2007) *Molecular Biology of the Gene*, 6th Ed. Pearson Benjamin Cummings, CSHL Press, New York, U.S.A.

Suggestive readings:

3. Klug, W.S., Cummings, M.R. and Spencer, C.A. (2009) *Concepts of Genetics*. 9th Ed. Benjamin Cummings. U.S.A.
4. Russell, P. J. (2010) *Genetics- A Molecular Approach*. 3rd Ed. Benjamin Cummings, U.S.A.

DISCIPLINE SPECIFIC ELECTIVE COURSE (DSE 01)

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the core course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Ecology, Conservation and Restoration ALS BOT DSE 01	**4**	**2**	**0**	**2**	**XII pass with Science with Biology/ Biotechnology**	**NIL**

Learning Objectives:

The learning objectives of this course are as follows:

- To develop a scientific understanding of the diverse aspects of ecology.
- To familiarize students with the interactions between the organisms and their physical environment.
- To understand various attributes of populations and communities with the help of theoretical concepts and field studies.
- To make students understand various factors that lead to variations among populations of a species.
- To familiarize students about the concepts of conservation and restoration.

Learning Outcomes:

By studying this course, students will be able to:

- Gain knowledge about the basic concepts of ecology.
- Comprehend the characteristics of the community, ecosystem development and climax theories.
- Explicate the relationship of evolution of various species and their environment.
- Analyse the basic field studies including data collection and its interpretation.
- Explicate the Conservation and Restoration methods.

Unit 1: Introduction to Ecology **(3 Hours)**

Autecology and Synecology, Laws of limiting factors, Study of physical factors: Temperature and Light.

Unit 2: Population (4 Hours)

Unitary and Modular populations, Unique and group attributes of population: density, natality, mortality, Life tables, Fecundity table, Survivorship curves, Intraspecific population regulation: density-dependent and independent factors.

Unit 3: Species Interactions (5 Hours)

Types of species interactions, Interspecific competition: Lotka-Volterra model of competition, Gause's Principle, Niche concept, Predation, Predator defence mechanisms.

Unit 4: Community (4 Hours)

Community characteristics: species richness, dominance, diversity, abundance, guilds, ecotone and edge effect, Ecological succession with examples and types.

Unit 5: Ecosystem (5 Hours)

Types of Ecosystems: terrestrial and aquatic ecosystems, Vertical stratification in tropical forest, Food chain: detritus and grazing food chains, linear and Y-shaped food chains, F ood web, Energy flow through the ecosystem: Ecological pyramids and Ecological efficiencies, Biogeochemical cycles: Nitrogen cycle.

Unit 6: Conservation (5 Hours)

Ecology in wildlife conservation and management: In-situ conservation (Biosphere Reserves, National Parks, Wildlife Sanctuaries), Ex-situ conservation (botanical gardens, gene banks, seed and seedling banks, DNA banks), Principles of Environmental impact assessment.

Unit 7: Restoration (4 Hours)

Restoration ecology: Afforestation, Social forestry, Agro-forestry, Joint Forest management, Role of remote sensing in management of natural resources.

PRACTICAL (Credit: 02)

(Laboratory practical- 15 classes of 4 hours each)

12. Study of life tables and plotting of survivorship curves of different types from hypothetical/real data.
13. Determination of population density and abundance in a natural or a hypothetical community by quadrat method.
14. Quantitative analysis of herbaceous vegetation in the college campus and comparison with Raunkiaer's Frequency distribution law.
15. Study of morphological features of hydrophytes and xerophytes in the ecosystems.
16. Measurement of temperature, turbidity/penetration of light and pH of any two water samples.

17. Comparison of Dissolved oxygen content in different water samples using Winkler's titration method.
18. Comparison of organic carbon of two soil samples using Walkley and Black's rapid titration method.
19. Comparison of CO_2 and alkalinity in two different water samples.
20. Estimation of Total Dissolved Solids (TDS) in water samples.
21. Perform Rapid field tests to detect the presence of Carbonates, Nitrate, Sulphate, Chloride, Organic matter and Base deficiency in two soil samples.
22. A visit to a National Park/Biodiversity Park/Wildlife Sanctuary/Urban Forest.

Essential/Recommended readings:

4. Sharma, P.D. (2012). *Ecology and Environment*. Rastogi Publications.
5. Singh J.S., Singh S.P., and Gupta S. R. (2014) *Ecology, Environment Science and Conservation*. S. Chand and Company Limited.
6. Odum, E.P. and Barrett G. W. (2004) *Fundamentals of Ecology*. Indian Edition (5th) Brooks/Cole Publishers.

Suggestive readings:

4. Smith T. M. and Smith R. L. (2015). *Elements of Ecology*. 9th International Edition, Publisher: Benjamin Cummings.
5. Saha G.K. and Mazumdar S. (2020) *Wildlife Biology*, An Indian Perspective.Publisher: PHI Learning Private Limited
6. Futuyma, Douglas and Mark, Kirkpatrick (2017). *Evolutionary Biology* (3rd Edition), Oxford University Press

Note: Examination scheme and mode shall be as prescribed by the Examination Branch University of Delhi, from time to time.

CHEMISTRY COMPONENT

DISCIPLINE SPECIFIC CORE COURSE (DSC 03)

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Organic Chemistry; ALS CHEM DSC 03	4	2	0	2	XII pass with Science with Biology/ Biotechnology	NIL

Learning Objectives:

The Learning Objectives of this course are as follows:

- To teach the fundamentals of organic chemistry.
- To introduce the basic concepts of stereochemistry of organic molecules.
- To familiarize students to different types of organic reactions.
- To inculcate the basics of reaction mechanism through different reactive intermediates.

Learning Outcomes:

By studying this course, students will be able to:

- Explain the relative behavior of organic compounds based on fundamental concepts learnt.
- Illustrate the mechanism of organic reactions by recalling and correlating the fundamental properties of the reactants involved.
- Differentiate between various types of organic reactions possible on the basis of reaction conditions.

Unit 1: Basic Concepts **(6 Hours)**

Electronic displacements and their applications: Inductive, electromeric, resonance (mesomeric) effects and hyperconjugation. Dipole moment, acidic and basic behaviour of organic molecules.

Homolytic and heterolytic fission. Types, shape and relative stability of carbocations, carbanions and free radicals. Electrophiles and nucleophiles.

Unit 2: Stereochemistry **(10 Hours)**

Stereoisomerism: Concept of asymmetry and Optical activity, Chirality in molecules with one and two stereocentres. Fischer projection, enantiomers, diastereomers and meso structures. Specific rotation.

Configuration: CIP rules: Erythro/Threo, D/L and R/S designations.
Geometrical isomerism: *cis-trans, syn-anti* and *E/Z* notations.
Conformational Isomerism: Newmann, Sawhorse, Fischer and their interconversion.
Conformations, relative stability and energy diagrams of Ethane, Propane and butane. Relative stability of cycloalkanes (Baeyer strain theory), Cyclohexane conformations with energy diagram. Conformations of monosubstituted cyclohexanes.

Unit 3: Types of Organic Reactions (10 Hours)

Introduction to substitution, addition, elimination, rearrangement, oxidation and reduction reactions.
Nucleophilic substitution reactions-SN1 and SN2 mechanisms with stereochemical aspects and effect of solvent.
Elimination reactions: E1 and E2 mechanisms, Saytzeff, Hoffmann eliminations and Cope elimination. nucleophilic substitution vs. elimination.
Free radical substitutions: Halogenation of alkanes and concept of relative reactivity and selectivity.
Electrophilic addition reactions of alkenes and alkynes: mechanism with suitable examples, (Markownikov's/anti-Markownikov's addition), syn and anti-addition; addition of hydrogen, halogens, hydroboration-oxidation, ozonolysis and hydroxylation.

Unit 4: Aromaticity (4 Hours)

Concept of Aromaticity: Electrophilic aromatic substitutions (with their mechanism): halogenation, nitration, Friedel Crafts alkylation/ acylation, sulphonation. Orientation and reactivity in mono-substituted aromatic compounds.

PRACTICAL (Credit: 02)

(Laboratory practical- 15 classes of 4 hours each)

1. Purification of organic compounds by crystallization (from water and alcohol) and distillation.
2. Calibration of thermometer.
3. Criteria of purity: Determination of melting point.
4. Effect of impurity on the melting point.
5. Determination of boiling point of liquid compounds (boiling point lower than and more than 100 °C by distillation and inverse capillary method).
6. Detection of extra elements.

7. Separation of a mixture of two amino acids/sugars by radial/ascending paper chromatography.
8. Preparations (Mechanism of various reactions involved to be discussed):
    a. Bromination of phenol/aniline
    b. Benzoylation of phenol/aniline
    c. Nitration of nitrobenzene/toluene

The above derivatives should be prepared using 0.5-1 g of the organic compound. The solid samples must be collected and may be used for recrystallization and melting point.

DISCIPLINE SPECIFIC ELECTIVE COURSE (DSE 01)

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Introduction to Heterocyclic Chemistry; ALS CHEM DSE 01	**4**	**2**	**0**	**2**	**XII pass with Science with Biology/ Biotechnology**	**NIL**

Learning Objectives:

The Learning objectives of this course are as follows:

- To teach students the fundamentals of heterocyclic chemistry.
- To make them familiar with classification and nomenclature of heterocyclic compounds.
- To study structural characteristics, physical properties, synthesis and chemical reactions of heterocyclic compounds.
- To know the importance of heterocyclic compounds.

Learning Outcomes:

By studying this course, students will be able to:

- Classify and name heterocyclic compounds.
- Analyze the important synthetic routes, physical properties, chemical properties and reactivity of five and six membered heterocyclic compounds.
- Explain the heterocyclic structures in biologically active compounds.
- Apply the study of heterocyclic compounds in medicine, agrochemicals, dyes and pigments, plastics and polymers.

Unit 1: Introduction and Nomenclature (4 Hours)

Introduction and classification of heterocyclic compounds. Nomenclature: Trivial names of common ring systems, Systematic (Hantzsch-Widman) nomenclature for heterocyclic compounds, naming of fused ring systems and Replacement nomenclature.

Unit 2: General Properties and Synthesis of Five and Six Membered Heterocyclic Compounds (8 Hours)

General discussion on the following aspects of five and six membered heterocyclic compounds containing one heteroatom: Structure, aromaticity, basicity, physical properties and general methods of synthesis of Furan, Pyrrole (Paal-Knorr synthesis, Knorr pyrrole synthesis, Hantzsch synthesis), Thiophene and Pyridine (Hantzsch synthesis).

Unit 3: Reactions of Five and Six Membered Heterocyclic Compounds (10 Hours)

Furan, Pyrrole, Thiophene: Orientation and reactivity towards electrophilic substitution reactions with mechanism.
Discussion on the following reactions: Nitration, sulphonation, halogenation, formylation, acylation, mercuration and carboxylation. Reactions exhibiting acidic/basic character. Oxidation, reduction and addition reactions. Diels-Alder reaction, reaction with diazonium salt.
Pyridine: Electrophilic substitution, nucleophilic substitution, oxidation and reduction reactions.

Unit 4: Importance of Heterocyclic Compounds (8 Hours)

Structure and importance of the following selected biologically active compounds to be discussed:
Heterocyclic Amino Acids: Proline, Hydroxyproline, Histidine, Tryptophan. Heterocyclic Vitamins; Niacin (Vitamin B3), Pyridoxine (Vitamin B6), Riboflavin (Vitamin B2), Thiamin (Vitamin B1) and Ascorbic acid (Vitamin C).
Pigments of Life: Hemoglobin and Chlorophyll.
Nucleic acids: Ribonucleic Acid (RNA) and Deoxyribonucleic Acid (DNA), Purines and Pyrimidines.

Structure and importance of the following selected Natural Products**:** Alkaloids, Marine Heterocycles, Halogenated Heterocycles, Macrocycles containing Oxazoles and Thiazoles, Anthocyanins and Flavones.

Structure and importance of heterocyclic compounds in Medicine, Agrochemicals, Dyes and pigments, Plastics and polymers.

PRACTICAL (Credit: 02)

(Laboratory practical- 15 classes of 4 hours each)

The following synthesis should be done by using 0.5-1 g of the organic compound. The solid samples must be collected and may be used for recrystallization and melting point.

1. Synthesis of oxygen containing heterocyclic compounds:
   (a) Phthalic anhydride (b) 7- Hydroxy-4-methylcoumarin

2. Synthesis of nitrogen containing heterocyclic compounds:
   (a) Phthalimide (b) Phthaloylglycine
3. Synthesis of Imidazole derivatives:
   (a) Benzimidazole (b) 2-Benzylbenzimidazole (c) 2-Methylbenzimidazole
4. Synthesis of Pyrazole derivatives:
   (a) 3-Methyl-2-pyrazolin-5-one (b) 3, 5-Dimethylpyrazole
5. Synthesis of Pseudothiohydantoin

ZOOLOGY COMPONENT

DISCIPLINE SPECIFIC CORE (DSC 03)

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Cell Biology and Biochemistry ALS ZOO DSC 03	4	2	0	2	XII pass with Science with Biology/ Biotechnology	NIL

Learning Objectives:

The learning objectives of this course are as follows:

- To understand structure and functions of various cellular compartments and cell organelles.
- To learn about cell-cycle and its regulation.
- To acquire the knowledge of biomolecules and metabolic pathways.
- To study about enzyme action.

Learning Outcomes:

By studying this course, students will be able to:

- correlate the structure of various cell components with their function.
- describe the metabolic fate of carbohydrates, proteins and fats and understand the mechanics of enzyme action.

Unit 1: Basic structure of cell and cell organelles (12 Hours)

Prokaryotic and eukaryotic cells. Structure of cell membrane: various models, fluidity of membrane. Eukaryotic cell organelles: Mitochondria, Chloroplast, Endoplasmic reticulum, Golgi body and Lysosomes. Nucleus: Nuclear Envelope- structure of nuclear pore complex, chromatin- euchromatin and heterochromatin; DNA packaging in eukaryotes.

Unit 2: Cell Cycle **(3 Hours)**

Cell division**:** Mitosis and Meiosis. Regulation of cell cycle.

Unit 3: Biomolecules and Metabolic pathways **(11 Hours)**

Introduction to Biomolecules: Carbohydrates, Lipids, and Proteins. Glycolysis, Kreb's Cycle, Pentose phosphate pathway, Gluconeogenesis, Glycogen Metabolism. β oxidation of palmitic acid. Transamination, Deamination and Urea Cycle.

Unit 4: Enzyme action and regulation **(4 Hours)**

Mechanism of action (induced fit theory), Enzyme Kinetics (Michaelis Menten equation for single enzyme single substrate reactions), Enzyme inhibition and regulation.

PRACTICAL **(Credit: 02)**

(Laboratory practical- 15 classes of 4 hours each)

1. Preparation of a temporary stained squash of onion root tip and to study various stages of mitosis.
2. Study of various stages of meiosis through permanent slides.
3. Cytochemical demonstration of DNA by Feulgen reaction.
4. Perform qualitative tests to identify functional groups of carbohydrates in given solutions (Glucose, Fructose, Sucrose, Lactose)
5. Study of activity of salivary amylase under optimum conditions.
6. Separation and identification of amino acids by paper chromatography

Essential/Recommended readings

1. Becker, Kleinsmith, and Hardin (2018) *The World of the Cell*, IX Edition, BenjaminCummings Publishing, San Francisco.
2. Karp, G. (2015). *Cell and Molecular Biology: Concepts and Experiments*, VIII Edition, John Wiley & Sons Inc.

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Biostatistics and Bioinformatics ALS ZOO DSE 01	**4**	**2**	**0**	**2**	**XII pass with Science with Biology/ Biotechnology**	**NIL**

Learning Objectives:

The learning objectives of this course are as follows:

- To acquaint the students of the application of statistical methods for analysing the biological data.
- To impart the theoretical and practical knowledge of biological databases and use of various software for their analysis.

Learning Outcomes:

By studying this course, students will be able to:

- use statistical formulae for analyzing data.
- apply statistical tests like Chi-square tests, Z-test and t- test etc. for testing hypothesis.
- Use different biological databases and bioinformatic tools.

Unit 1: Introduction to Biostatistics **(2 Hours)**

Definition, Aim and Scope, Applications and limitations of biostatistics.

Unit 2: Measures of Central Tendency and Dispersion **(6 Hours)**

Mean, Median and Mode; Variance, Standard deviation, Standard error, Co-efficient of Variance.

Unit 3: Testing of Hypothesis and Statistical Tests **(7 Hours)**

Type-I and Type-II errors; Confidence Intervals and Confidence Levels, Chi-square test, Z-test and t-test.

Bioinformatics

Unit 4: Introduction to Bioinformatics (3 Hours)

Historical background, Aims and scope, Bioinformatics in Genomics, Transcriptomics, Proteomics, Metabolomics, Systems biology, Applications and Limitations in bioinformatics.

Unit 5: Biological Databases (5 Hours)

Introduction to biological databases; Primary, secondary and composite databases; Nucleic acid databases (GenBank, DDBJ, EMBL and NDB); Protein databases (PIR, SWISS-PROT, TrEMBL, PDB).

Unit 6: Basic Concepts of Sequence Alignment (7 Hours)

Scoring Matrices (PAM, BLOSUM), Methods of Alignment (Dot matrix, Dynamic Programming, BLAST and FASTA); Local and global alignment, pair wise and multiple sequence alignments; Similarity, identity and homology of sequences.

PRACTICAL (Credit: 02)

(Laboratory practical- 15 classes of 4 hours each)

Part - A Biostatistics

1. To compute Coefficient of Variance from samples provided.
2. To collect data on different parameters of animal samples and test significant difference between means (Z-test, t-test).
3. To compute 'test of independence' and test for 'goodness of fit' with samples/data provided.
4. To learn graphical representations of statistical data with the help of computers (e.g. MS Excel).

Part - B Bioinformatics

1. To learn about biological databases and their characteristics.
2. To retrieve nucleotide and protein sequences from the databases.
3. To perform pair-wise alignment of sequences (BLAST).

4. To perform multiple sequence alignment (Clustal X)

B.Sc (H) Biomedical Science

SEMESTER –III

Biomedical Science: *II Year*

DISCIPLINE SPECIFIC CORE COURSE -7 (BIOMED-DSC-07) MEDICAL MICROBIOLOGY

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility Criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Medical Microbiology DSC-07	4	3	0	1	XII Passed	Basic knowledge of biology

Learning objectives

The Learning Objectives of this course are as follows:

- The Medical Microbiology course has been formulated to impart basic and medically relevant information on microbes.
- The microbial structure, growth and development. Methods of isolation and characterization of microbes and role of sterilization in the context of study of microbes.
- Pathogenic microbes and the diseases caused by them are included to broaden the perspective of the subject.
- This course will also focus on mechanisms of microbial pathogenesis and the host response, and the scientific approaches that are used to investigate these processes.
- The course also deals with the problem of emerging antimicrobial resistance with reference to known pathogens.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Medical microbiology describes a broad perspective to study structure, classification, and diseases caused by microbes including bacteria, fungi, protozoa and viruses. The course helps to understand the nature of microorganism, their systematic classification and contribution of various scientists in the discovery of disease causing pathogen and its etiology. It also describes various culture media used for cultivation of microbes, their optimum physical, chemical and cultural requirements, techniques for purification and preservation of microbes.
- This course explains the various types of microbial cells, shape, size, molecular structure and their role in pathogenesis. The basic nutrient requirements of microorganism and how they behave in variable atmospheric conditions is also included. Analyzing optimum growth conditions that facilitate in growth and cultivation of useful microorganisms are also mentioned.
- Microbial genetics helps to understand the basic phenomenon of gene functioning and effects of various mutagens on microorganism, elucidates different methods of gene transfer and explains causes of genetic variation.
- Course also elucidates the interaction between host and their pathogens, mode of transmission of infectious diseases and their cure.
- This course also explains pathogenesis, etiology, clinical symptoms, control and cure of microbial diseases in addition to introducing antimicrobial action of antibiotics. Describes basic structural and morphological variation in various viruses, classification and their life cycle. Introduction to requirements of viruses for multiplication and detailed study of common disease causing viruses, virusoids and prions is also included.

SYLLABUS OF BIOMED-DSC-07

Unit I: Fundamental concepts (10 hrs)

a) History of microbiology with special emphasis on contribution of Louis Pasteur and Robert Koch in Medical Microbiology.
b) Major Divisions of life- Domains, Kingdoms; Requirements for microbial growth, growth factors, culture media- synthetic and complex, types of media. Techniques for obtaining pure cultures of microbes, preservation and storage of bacterial cultures, growth curve and generation time, control of microbial growth.

Unit II: Bacterial cell: fine structure and function (10 hrs)

Size, shape and arrangement of bacterial cells; Cell membrane, cytoplasmic matrix, inclusion bodies (e.g.Carboxysomes, magnetosomes, gas vacuoles, cyanophycean granules, PHB granules, glycogen granules), nucleoid, ultrastructure of gram positive and gram negative bacterial cell wall, sex pili, capsule, flagella & motility and endospore.

Unit III: Microbial genetics **(08 hrs)**

Mutants-auxotrophs and prototrophs, bacterial recombination: general and site specific and replicative, bacterial plasmids fertility factor, col plasmid, bacterial conjugation (Hfr, F′, F^+, F^-), transformation, transduction- both generalized and specialized.

Unit IV: Host-pathogen relationship in the infectious diseases **(05 hrs)**

Relationship between normal microbiota and host, opportunistic microorganisms, nosocomial infections. Development and spread of infectious diseases: invasion, pathogen, parasite, pathogenicity, virulence, carriers and their types. Routes, mechanisms of invasion and establishment of infection.

Unit V: Microbial diseases **(06 hrs)**

Respiratory tract infections: with tuberculosis in detail, gastrointestinal tract infections, staphylococcal food poisoning. Life cycle of *Candida albicans* and *Plasmodium*.

Unit VI: Virus and virusoids **(06 hrs)**

General life cycle of a virus, structure, enveloped and un-enveloped viruses, plaque assay, growth curve, classification based on genetic material and detail study of influenza, SARS COV-2 and HIV virus with curative agent. Viroids, virusoids and prions.

Practical **(30 hrs)**

(Wherever wet lab experiments are not possible, the principles and concepts can be demonstrated through any other material or medium including videos/virtual labs etc.)

1. Preparation of different media: synthetic media Davis-Mingioli media, complex media-nutrient agar or Luria agar media.
2. Isolation and purification of pure bacteria: streaking for single colonies
3. Propagation of pure bacteria in liquid culture
4. Gram's staining; gram positive and gram negative bacteria

5. Capsule staining of *Bacillus subtilis*/*Klebsiella*
6. Endospore staining of *Bacillus subtilis*
7. Study and plotting the growth curve of *E. coli* using turbidometric method
8. Isolation of bacteriophages from soil/sewer water and calculation of the plaque forming units (pfu)
9. To perform antibacterial testing by Kirby-Bauer method
10. Field visit to a clinical microbiology lab/diagnostic lab to familiarize with latest tools and techniques used in microbial research

Essential readings:

DISCIPLINE SPECIFIC CORE COURSE -8 (BIOMED-DSC-08) MEDICINAL CHEMISTRY

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
MEDICINAL CHEMISTRY DSC-08	4	3	0	1	XII Passed	Basic knowledge of Enzymes and proteins

Learning objectives

The introduction of Medicinal Chemistry course at undergraduate level to Biomedical Science students has been conceived to make them understand:

- Concealed chemical science interlinked to other science disciplines such as biophysics, chemistry, biology, biochemistry, pharmacology etc.
- Application of the area in revealing new drug design and targets through studying the drug-receptor interactions and signaling mechanism in cell for lead discovery.
- Various drug targets in the body and drug development strategies with mechanism of action and concept of drug resistance.

Learning Outcomes

- After completing the course, students shall be able to understand the various stages involved in drug development. Further, they will be able to explore various kinds of drug targets including protein, enzymes, nucleic acids etc.
- They will also appreciate the process of drug-receptor interactions; identify association between chemical structure and its physicochemical properties. After the completion of the course, the learners will demonstrate a strong foundation via problem solving, critical thinking and analytical reasoning in the fundamentals of medicinal chemistry, physicochemical principles of drug action and measurement of drug effects, comprehend the physicochemical basis for the rational drug design, analogue synthesis, and mechanism of action of drugs.
- Additionally, this course will involve extensive laboratory work. The students will be able to

design and carry out small molecule (low molecular drug-relevant compounds) synthesis. They will do the natural product isolation along with their purification and characterization through chromatography and spectroscopic methods and analyze the results of such experiments.

- They will also actively participate group exercises; communicate the results of experiments conducted in oral as well as written formats. Further, they will appreciate the central role of chemistry in our daily life and will also learn safe handling of hazardous chemicals and follow the SOP for chemical waste disposal.

SYLLABUS OF BIOMED-DSC-08

Unit-1: General introduction (02 hrs)

Definition and scope of Medicinal Chemistry

Unit-2: Principles of Drug Design (10 hrs)

Introduction to Structure Activity Relationship (SAR) of morphine/salicylic acid, strategies in the search for new lead compounds, analogue synthesis versus rational drug design, concept of prodrugs. Affinity, efficacy and potency of drugs. Concepts of agonist, antagonist and inverse agonist, competitive, non-competitive, suicide inhibitors.

Unit-3: Physicochemical principles of drug action and measurement of drug effects (10 hrs)

Partition coefficient, drug dissolution, acid-base properties, surface activity, bioavailability, stereochemical aspects of drug action, electronic structure (Hammett correlations) and determining relationship between chemical and biological data (Hansch approach). Kinetic analysis of ligand receptor interactions using Scatchard plot, Double reciprocal plot, Hill plot, forces involved, relationship between dose and effect (graded and quantal response).

Unit-4: Drug target classification (15 hrs)

a. Proteins as drug targets.
   i. Receptors: the receptor role, ion channels, membrane bound enzyme activation, desensitization and sensitization of receptors, agonist (e.g. endorphins) and antagonists(e.g. caffeine)
   ii. Enzymes: Enzyme inhibitors, medicinal use of enzyme inhibitors (e.g. clavulanic acid)

b. Nucleic acids as drug targets. Classes of drugs that interact with DNA: DNA intercalators (amsacrine), Groove binders (netropsin), DNA alkylators (amines: mechlorethamine; nitrosoureas: carmustine), concept of antisense therapy.

Unit-5: How drugs trigger the signals-molecular aspects (08 hrs)

Structure and functions of cell surface receptors, signal transduction mechanism (GPCRs, tyrosine kinase, guanylate-cyclase linked receptors and intracellular receptors that regulate DNA transcription).

Practical (30 hrs)

(Wherever wet lab experiments are not possible, the principles and concepts can be demonstrated through any other material or medium including videos/virtual labs etc.)

1. Preparation, recrystallization and purity of following drugs/compounds by melting point and TLC
   i. Hippuric acid.
   ii. Benzocaine,
   iii. Benzoquinone
   iv. Phenacetin
   v. s-benzyl thiouronium salt.
2. Determination of partition coefficient of aspirin in octanol-water system.
3. Extraction of caffeine from tea leaves.
4. Study absorption properties of caffeine.
5. Extraction of piperine from black pepper.
6. Phytochemical screening of *Curcuma longa* by solvent extraction: Terpenes and polyphenols

DISCIPLINE SPECIFIC CORE COURSE- 9 (BIOMED-DSC-09) BIOSTATISTICS

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
BIOSTATISTICS – DSC 09	4	3	0	1	XII Passed	Basic knowledge of biology

Learning objectives

The Learning objectives of this course are as follows:

- To acknowledge, appreciate and effectively incorporate the basic statistical concepts indispensable for carrying out and understanding biological hypotheses, experimentation as well as validations.
- The course is aimed to create awareness about the applications of statistics in biological sciences along with building confidence in students to test their experimental data with an appropriate test of significance.

Learning outcomes

Having successfully completed this course, students shall be able to:

- Appreciate the importance of statistics in biological sciences. They will also understand the concept of different variables and data types, and also the sampling techniques.
- Learn different measures of central tendency and dispersion with their applications. The students will also learn symmetric and asymmetric distributions, and kurtosis of distributions.
- Identify the degree of uncertainty in making important decisions, learning joint probability, conditional probability, Bayes' theorem and solving its application-level problems.
- Learn about the characteristics of normal, binomial and Poisson probability distributions. They will learn how to identify which type of distribution fits the given data and estimate

probabilities for random variables in these distributions

- Determine the strength of the relationship between two variables and also to predict the value of one variable given a value of another variable.
- Learn how to formulate statistical hypotheses for testing and application of different tests of significance for hypothesis testing for different biological problems.

SYLLABUS OF BIOMED-DSC-09

Unit I: Introduction to Biostatistics (02 hrs)

Types of data in biology, random variables: discrete and continuous. sample and population, techniques of sampling (random and stratified), sampling and non-sampling errors.

Unit II: Descriptive Statistics (08 hrs)

Measures of central tendency: arithmetic mean, mode, median and partition values. Measures of dispersion: range, standard deviation, coefficient of variance and covariance, masures of skewness: Pearson's Coefficient of skewness, and concept of kurtosis (platykurtic, mesokurtic and leptokurtic).

Unit III: Probability (05 hrs)

Basic concepts, addition and multiplication, rules of probability, conditional probability, Bayes' theorem and its applications in biostatistics.

Unit IV: Probability distributions (06 hrs)

Binomial and normal distributions along with their properties and relationships. Introduction to poisson distribution.

Unit V: Correlation and Linear Regression (06 hrs)

Correlation analysis: scatter diagrams, Pearson's and Spearman's coefficient of correlation, coefficient of determination.

Simple linear regression analysis: method of least squares, equations of lines of regression and their applications in biostatistics.

Unit VI: Hypothesis testing (18 hrs)

Sampling distributions and standard error, Null and Alternate hypothesis, Basic concept and illustrations of type I and type II errors, concept of confidence interval estimation. Large sample

tests for single mean and difference of means.

Student's t-distribution: test for single mean, difference of means and paired t-test. Chi-square distribution: test for goodness of fit, independence and homogeneity. F-test, one-way and two-way analysis of variance (ANOVA).Non-parametric analysis: The Sign test and The Wilcoxon signed-rank test.

Practical **(30 hrs)**

The computer-based experiments are designed for students to solve biostatistics problems. All theoretical concepts would be covered in the practical using any spreadsheet software like MS EXCEL.

1. Represent different types of data in tables and graphs (Line chart, histogram, bar chart, frequency polygon, pie chart).
2. Calculate various measures of central tendency (Arithmetic mean, mode, median and partition values) and dispersion (Range, standard deviation, coefficient of variance and covariance).
3. Calculate probabilities for different distributions- normal and binomial.
4. Prepare scatter plot between two variables and interpret the relationship between them using correlation and simple linear regression analysis.
5. Perform large sample test for single mean and difference of means.
6. Perform Student’s t-test for one sample, independent samples, and paired samples.
7. Perform Chi-square test.
8. Perform One-way ANOVA.
9. Perform Two-way ANOVA.
10. Perform Non-parametric analysis: The Sign test or The Wilcoxon signed-rank test.

POOL OF DSE FOR 3rd SEMESTER & 4th SEMESTER

DISCIPLINE SPECIFIC ELECTIVE COURSE –1 (BIOMED-DSE-1) PROTEINS AND ENZYMES

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
PROTEINS AND ENZYMES BIOMED-DSE-01	4	3	0	1	XII Passed	Basic knowledge of Biochemistry

Learning objectives

The Learning Objectives of this course are as follows:

- The objective of this course is to provide an overview of protein biochemistry and enzymology.
- Proteins and enzymes, being the most versatile functional entities, hold several applications in life sciences research as well as in industry and biomedicine.
- The biochemical, structural, and functional aspects of the interaction of proteins and enzymes will be introduced in this course.

Learning outcomes

The Learning outcomes of this course are as follows:Having successfully completed this course, students shall be able to learn and appreciate:

- The unique features and characteristics of proteins and enzymes and their applications in research, medicine, and industry.
- The relationship between three–dimensional structure of proteins and enzymes and their functions.

- The basic mode of action of enzymes and their remarkable regulation.
- The protein misfolding and the diseases associated with it.
- The students would be able to understand the various biomedical applications of enzymes.
- The students would be able to gain hands-on experience in working with proteins and enzymes from various sources. Hence, it will improve their learning skills and imbibe the basic concepts of this field.

SYLLABUS OF BIOMED-DSE 01

Unit I: Structural organization of proteins (08 hrs)

Organization of protein structure- primary, secondary, tertiary, and quaternary. Secondary structures – helices, sheets and turns. Motifs, domains and their functional importance. Native and denatured state of a protein. Physico-chemical interactions that maintain the native structure of a protein.

Unit II: Protein folding and diseases related to protein misfolding (10 hrs)

Protein folding (Hydrophobic collapse), Anfinsen theory, Levinthal paradox and protein folding in the cytoplasm. Protein denaturation by chaotropic agents such as urea, GnHCl. Concept of how mutation causes protein misfolding (loss-of-function to toxic-gain-of function) and related diseases such as Alzheimer's disease, Prion diseases, Tay-Sachs disease and Huntington disease.

Unit III: Enzymes: characteristics and kinetics (14 hrs)

Classification of enzymes and nomenclature. Concept of multi-functional enzyme and multi-enzyme complex. Fischer's lock & key and Koshland's induced fit hypotheses. Enzyme specificity. Enzyme kinetics- Michaelis-Menten equation, Lineweaver-Burk plot. To understand the physiological significance of K_m, V_{max}, K_{cat} and the factors affecting enzyme activity. Basics of enzyme inhibition- reversible (competitive, uncompetitive, non-competitive) and irreversible inhibition.

Unit IV: Regulation of enzyme activity (06 hrs)

Allosteric regulation, feedback inhibition, reversible covalent modification (Phosphorylation, glycosylation and acetylation using example of glycogen phosphorylase/glycogen synthase). proteolytic activation- zymogens.

Unit V: Biomedical application of enzymes (07 hrs)

Applications of enzymes in the diagnosis of diseases using creatine kinase and glucose oxidase and in therapy (streptokinase). Enzyme inhibitors as drugs. Principle of enzyme immunoassay. Enzyme immobilization and its applications, concept of abzymes. Industrial applications of enzymes (biosensor - HRP; food industry- rennin; cosmetics-collagen, etc)

Practical (30 hrs)

(Wherever wet-lab experiments are not possible, the principles and concepts can be demonstrated through any other material or medium including videos/virtual labs, etc.)

1. Enzyme-based diagnostic assay (any one).
2. Measurement of enzyme activity and calculation of specific activity of an enzyme.
3. Effect of pH on enzyme activity.
4. Effect of temperature on enzyme activity
5. Visualization of 3D protein structure using suitable software.
6. Analysis of type of enzyme inhibition from the given experimental data
7. To study the effect of protein denaturants such as acid, alkali, heat and any organic solvent on protein.
8. Study of images of various toxic protein oligomeric species, associated with human diseases (amyloids, disordered aggregates, amorphous aggregates).

Essential readings:

- Nelson, D. L., & Cox, M. M. (2021). *Lehninger: Principles of Biochemistry* (8th ed.). Macmillan. ISBN: 9781319322328.

DISCIPLINE SPECIFIC ELECTIVE COURSE –02 (BIOMED-DSE-02) PRACTICES IN BIOSAFETY

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
PRACTICES IN BIOSAFETY BIOMED-DSE-02	4	3	0	1	XII Passed	Basic knowledge of biology

Learning objectives

- Recent advances in the field of Biomedical Research have brought into focus the need for certain practices and strategies to prevent exposure to pathogens and toxins.
- The inventions in the field of Genetic Engineering have significantly influenced agriculture, medicine and food processing industry. Thus implementation of biosafety enables number of procedures and rules that will be helpful in protecting humans and environment from disease causing microorganisms, pests, additives, contaminants and residues etc.
- Topics such as responsible use of biotechnology, biosafety levels, genetically modified (GM) food, biosafety regulations, impact of biotech processes on environment are of major significance in present scenario.

Learning outcomes

- In this students would understand application of biotechnology in different fields like agriculture, environment, industrial manufacturing, food processes, health and medicine etc. It will enable them to recognize implication of recombinant biomolecules and organisms on our society.

- This would enable students to know about various hazardous biological substances one can come across while working in the laboratory or day today life, and the steps taken to minimize the risk. The students would understand different regulations for handling biohazard and radioactive material.
- The course should kindle the inquisitiveness in students about genetically modified and living modified organisms (GMO & LMO) and their impact on the environment.

SYLLABUS OF BIOMED-DSE-02

Unit I: Introduction to biosafety (04 hrs)

Historical background of Biosafety, definition of biosafety, application of biosafety and need for biosafety.

Unit II: Social responsibility of biotechnology and biomedical research (08 hrs)

Legal and socio-economic impacts of biotechnology. Social responsibility towards safety measures.Social and ethical implications of biological weapons (Bioterrorism).Implication of recombinant biomolecules and organisms. Implication of gain of function research. Importance of biotechnology: benefits and limitations of transgenic to human health, society and the environment.

Unit III: Biosafety and importance of containment facility (08 hrs)

Components of biosafety (biohazard and biosecurity), measures of biosafety, containment (good laboratory practices and techniques, safety equipment, design facility), types of containment (physical and biological). Biosafety levels (BSL 1, 2, 3, 4), barriers (physical and secondary).

Unit-IV: Genetically modified organism: concerns and challenges (10 hrs)

Government of India definition of genetically modified organisms (GMOs) and living modified organisms (LMOs), roles of institutional biosafety committee, review committee on genetic manipulation (RCGM), genetic engineering approval committee (GEAC) for GMO applications in food and agriculture, environmental release of GMO in rDNA biosafety guidelines of India. Biosafety assessment procedures for biotech foods and related products, including transgenic food crops, case studies of relevance. Biosafety assessment of pharmaceutical products such as drugs/vaccines etc.

Unit-V: Handling and transportation of GM, infectious and radioactive materials (09 hrs)

Classification of infectious organisms, transportation of genetically modified/infectious organisms, General preparation of shipments for transport: Basic triple packaging system, marking of packages, labelling, precautions, monitoring strategies and methods for detecting transgenic; radiation safety and non-radio -isotopic procedures.

Unit VI: Biosafety guidelines and regulations (06 hrs)

Aim of biosafety guidelines, biosafety and risk assessment issues; regulatory framework; national biosafety policies and law, the cartagena protocol on biosafety, WTO and other international agreements related to biosafety.

Practical (30 hrs)

(Wherever wet lab experiments are not possible the principles and concepts can be demonstrated through any other material or medium including videos/virtual labs)

1. Protocol for development of recombinant / engineered proteins as therapeutics
2. Preparation of comparative account on BSL 1, 2,3,4. (poster, oral presentation, video)
3. Categorization of list of provided hazardous materials and its handling & disposal
4. To study GEAC guidelines on genetically modified crops (Bt-cotton/Bt-brinjal)
5. To develop an understanding of the role and composition of an ethical committee for research by a presentation mode.
6. To study and develop a flowchart to demonstrate spread and containment of any two infectious diseases (typhoid, SARS, Ebola, Dengue, Tuberculosis and Covid).
7. Preparation of chart explaining significance of various symbols used in chemistry and biology laboratories/ reagent bottles and equipment.

Essential Readings:

DISCIPLINE SPECIFIC ELECTIVE COURSE –03 (BIOMED-DSE-03) SOCIAL AND PREVENTIVE MEDICINE

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
SOCIAL AND PREVENTIVE MEDICINE **BIOMED-DSE-03**	**4**	**3**	**0**	**1**	**XII Passed**	Student should have studied science (Biological science/ Physical sciences)

Learning objectives

- The origin of medicine to alleviate human suffering from disease, and control of disease is as old as origin of human itself. Various civilizations practiced their own methods to treat and control diseases.
- The modern form of medicine that has evolved over time, is composed of two main branches viz: Curative medicine and Preventive medicine/Public health. It has been realized that causes of diseases are multifactorial- a disease can have multiple causes/factors such as social, economic, genetic, psychological and environmental factors.
- In the centre of modern medicine is epidemiology, which is concerned with measuring distribution patterns and determinants of disease in a Population/community, and needs of health related services.
- The health related services are delivered through health programmes and health systems to various risk groups such as at risk-mothers, at risk-infants, elderly or chronically ill patients.

Learning outcomes

- Introduction to various concepts of health and disease, factors determining health of individuals or population/community, interaction of factors in causing disease. Students will also be introduced to the concepts of levels of prevention adopted to achieve a state of health or to preserve health.
- Epidemiology is in the core of basic science of social preventive and medicine, and is concerned with study/measurement of the distribution and determinants of health related issues. Students will be introduced to the concepts of epidemiology, various methods and approaches that are used to measure the intensity and distribution of health related issues in the community/population.
- Introduction to the various definitions/ concepts related to natural history of disease viz: mode of disease transmission and progress of infection/disease in the host. Students would get opportunity to learn natural history of communicable disease, diagnosis, treatment and control, and various health programmes for prevention (with examples of certain prevalent diseases in India. Through examples of few diseases prevalent in India and globally, epidemiology of those diseases which are considered as lifestyle diseases or multi-factorial diseases will be introduced.
- The definition of health also includes dimensions of social and mental well-being. Therefore, mental illness has been recognized as one of the important health issues. Students will be introduced to the various types of mental illness and its prevention.
- Infertility is a worldwide problem, and estimates of infertility in India are about 4-6 percent. Childlessness is social and demographic implications. The etiology of infertility is variable. Mother and children are considered as special-risk group in a population, and is a priority group in any community. The mother, and the growth and development of fetus/ infants are at the risk of several health problems. Further, under certain circumstances, their survival too is at risk. The multitude of problems affecting the health of mother and child constitutes serious health problems in a developing country. Students will be introduced to the various maternal and child health related problems/ complications (and their prevention), from conception to the birth of infants.
- Health has been declared a fundamental human right and has to be delivered by the governments to all. Therefore, there is a system to promote and provide health services to every individual living in urban or rural settings. Students will be introduced briefly about the system of health care and various levels of health care in India.

SYLLABUS OF BIOMED-DSE-03

Unit I: Basic concepts of health and disease **(06 hrs)**

Definition, determinants and indicators of health and disease, demography (transition, and sources of demographic data, registries), survey methodology including census procedures and sampling. epidemiological triad. Multi-factorial aetiology of disease. Concepts of prevention and control.

Unit II: Epidemiology and epidemiological methods **(06 hrs)**

Definition and history, components of epidemiological studies viz. disease frequency, distribution and determinants. Basic measurements/tools in epidemiology: rates, ratios and proportions (mortality and morbidity rates and ratios, prevalence, incidence); epidemiological studies: descriptive, analytical, randomized controlled trials. Concept of association and causation. Brief introduction to modern epidemiological tools.

Unit III: Epidemiology of diseases **(16 hrs)**

Various definitions: epidemic, endemic, pandemic, sporadic, nosocomial infections etc. Cases, carriers, transmission of disease, concept of incubation period, generation time, communicable period and secondary attack rate.

a. Communicable diseases: control and health care programs for of national importance (extent of problem in India and worldwide, main clinical features, diagnosis, treatment & resistance, immunization and prevention practices, health programmes (if applicable):

Respiratory infections:	*Tuberculosis*
Intestinal infections:	*Cholera*
Arthropod-borne infections:	*Malaria*
Zoonosis:	*Rabies*
Sexually transmitted infection:	*AIDS*

b. Non-communicable disease: control and health care programs for of national importance (extent of problem, diagnosis, treatment and control, health programmes (if applicable): Hypertension, stroke, diabetes, breast cancer.

Unit IV: Mental health **(05 hrs)**

Introduction and scope. Features of mentally healthy person, signs of poor mental health, types of mental health (anxiety and depression), and prevention. National Mental Health Programme

(NMHP).

Unit V: Infertility, mother and child health (06 hrs)

Measures of fertility and factors affecting fertility, child health, maternal health, immunization programme.

Unit VI: Health care system in India (06 hrs)

Concept of health care, levels of health care, brief introduction to Primary Health Care in India (village level, sub-centre level, primary health centre level, community health centre level, hospitals).National Programme for Health Care of the Elderly (NPHCE).

Practical (30 hrs)

(Wherever wet lab experiments are not possible, the principles and concepts can be demonstrated through any other material or medium including videos/virtual labs etc.)

1. To explore any publically available database for tuberculosis/typhoid and study its epidemiology in the Indian population.
2. To study the epidemiology of malaria including geographical and seasonal distributions in India through a public database.
3. To study various parameters like risk factors, incidence, prevalence, mortality rate and DALYs. for any specific type of cancer prevalent in India through NCRP or any other public database.
4. To study the burden and causes of any hematological disorder in the Indian population.
5. To explore and analyse various national and international disease databases like ICMR/WHO/CDC/ etc.
6. To prepare a questionnaire for any health condition studied in S.No. 1-5.

7-10. To prepare a poster/ presentation using any digital media to communicate about the epidemiology and to create awareness about any health condition studied in S.No. 1-5.

Essential reading

- Park, K. (2021), 26th Edition, *Park's Textbook of Preventive and Social Medicine*,

Banarsidas Bhanot Publisher, ISBN-13 : 978-9382219163.

Suggestive reading:

- Bonita, Ruth, Beaglehole, Robert, Kjellström, Tord& World Health Organization. (2006) 2nd edition. *Basic Epidemiology*, World Health Organization, ISBN 978 92 4 154707 9.

GENERIC ELECTIVE COURSE -04 (BIOMED-GE-04): BIOCHEMICAL BASIS OF LIFE

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
BIOCHEMICAL BASIS OF LIFE BIOMED-GE-04	4	3	0	1	XII Passed	Basic knowledge of biology

Learning objectives

The Learning Objectives of this course are as follows:

- The objective of this course is to address how the wonderful and remarkable properties of living organisms arise from the various biomolecules, the building blocks.
- The course focuses on the chemical complexity and organization of molecules in a living cell, extraction and transformation of energy
- It gives insights into the changes that occurred during the gradual evolution of life.

Learning outcomes

The Learning Outcomes of this course are as follows:

- The fundamental Chemistry of Life: students will gain an understanding of the elements found in living systems and appreciate the importance of water as the solvent for living systems. It is important to learn about the units used for expressing the biochemical basis of a living system. Students will learn the unit system for the molecular mass of biomolecules, units used for the concentration of solutions, and units for expressing the distances, etc.
- Cellular foundations of life**: a** stepwise organization of a living system, starting from the smallest unit to an entire living organism would be the focal point in this unit.

- Molecular basis of life**: s**tudents will understand the monomeric forms of different types of biomolecules. In addition, the relationship between the structure and function of biomolecules would also be learnt.
- Physical foundation of life: students would learn the concept of enthalpy, entropy and free energy in a living system and understand the importance of the energy currency and the significance of coupled biochemical reactions.
- Biochemical events in the origin of life: students would learn the origin of life and the nature of transformative changes that occurred for life to evolve from the pre-biotic world to the modern times.

SYLLABUS OF BIOMED-GE-04

Unit I: The fundamentals of chemistry of life (06 hrs)

Carbon chemistry of life, structure and importance of water, diverse inorganic ions, major elements (C, H, O, N, S), trace elements. Units used in biochemistry such as those expressed for the atomic mass unit (daltons), concentration (moles/litre) and distance (in nanometer-scale).

Unit II: Cellular foundations of life (06 hrs)

Levels of organization in a living system. The important features of living cells, subcellular organelles in eukaryotic cells and subcellular organization in prokaryotic cells. Brief description on phototrophs, chemotrophs, autotrophs and heterotrophs.

Unit III: Molecular basis of life (12 hrs)

Common functional groups and linkages in biomolecules.

Macromolecules: classification, building blocks, structural and functional diversity. Structural and functional forms of macromolecules: Proteins (collagen, albumin, hormones (insulin), enzyme (proteases, nucleases, amylases and lipases); Polysaccharides (starch, glycogen, cellulose), Nucleic acids, Lipids (cholesterol and triglycerides).

Unit IV: Physical foundation of life (11 hrs)

Enthalpy, Entropy, Free Energy, Standard Free Energy, Equilibrium constant, Open and closed systems, endergonic and exergonic reactions, the energy currency in a biological system (ATP), energy coupling reactions.

Unit V: Biochemical events in the origin of life **(10 hrs)**

Landmark events in the evolution of life. Biochemical basis of the origin of aerobic and anaerobic world. Evolution of biological monomers and polymers from pre-biotic compounds. Properties of DNA as genetic material. Structural and functional analysis of eukaryotes and prokaryotes, with suitable examples.

Practical **(30 hrs)**

(Wherever wet lab experiments are not possible, the principles and concepts can be demonstrated through any other material or medium including videos/virtual labs etc.)

1. Preparation of buffer at a specific molarity and pH.
2. Numerical problems based on Enthalpy, Free Energy and Entropy.
3. Comparative analysis of protein content in egg white and egg yolk using Bradford method.
4. Detection of a glucose polymer (starch) in rice/potato/corn, using iodine test.
5. To assess the differential solubility of lipids in aqueous and organic solvents.
6. Extraction of DNA from plant/microbial cells by the spooling method.
7. Demonstration of agarose gel electrophoresis for analyzing the isolated DNA.
8. To compare the structural features of a prokaryotic and eukaryotic cell by studying their electron micrographs.

Essential readings

GENERIC ELECTIVE-05 (BIOMED-GE-05) HEALTH AND BODY DEFENSE SYSTEM

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
HEALTH AND BODY DEFENSE SYSTEM BIOMED-GE-05	4	3	0	1	XII Passed	Basic knowledge of biology

Learning objectives

The Learning Objectives of this course are as follows:

- Characteristics of a healthy body and ways to improve one's health and well-being.
- Body defense system is a comprehensive study of the organization and functioning of the immune system with its network of cells and molecules. Understanding the biology of the immune system is key to developing strategies towards prevention and cure to a number of disorders and diseases that result due to malfunctioning and dysregulation of the immune system.
- This paper covers the organization and functioning of the various branches of immune system, namely, Innate and adaptive Immunity to combat different pathogens. Various Immunological techniques will also be taught to the students.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Students learn various aspects of health and immune system in normal and infectious stage

which equips students to design better strategies for combating the immunological disorders. Students will be given an overview to various pathogens and immune system in Invertebrates and Vertebrates.

- Students learn historical perspective of the extensive field of Immunology. They are introduced to the important concepts of Immunology.
- Students will be familiarized with origin and maturation of all blood cell types in bone marrow and thymus. They will understand the process of haematopoiesis, functions of various types of cells and roles played by them in generating immune responses against pathogens.
- The unit entails different barriers of Innate Immunity, Cells, Complement system, Patterns on the pathogens recognized by receptors of Innate Immune system, pathogen killing by the immune cells and concept & the importance of the Inflammation in an Immune response.
- Students will learn about the cells of adaptive immune system, the concept of antigen, antibody molecules and role of major histocompatibility complex & associated cells in the processing and presentation of antigen. The students will explore the branches of adaptive immunity - the humoral and cell mediated, their components and interplay of these components in combating the infection. The students will also be able to understand the significance of various kinds of growth factors and cytokines in the activations of various lymphocytes
- The students will be given knowledge about the principle, methodology and applications of various laboratory techniques involving antigen-antibody reaction.
- Vaccine based immunotherapies and their designing will assist them to think about new path for combating with pathogens and working mechanisms of immune system.
- The students will be made aware about the importance of diet and lifestyle in promoting Immunity and health.

SYLLABUS OF BIOMED-GE-05

Unit I: Hallmarks of health (06 hrs)

Basic aspects of healthy body: cells, tissue and organ system, difference between prokaryotes and eukaryotes. Key differences between bacteria, fungi, protozoans and viruses.

Requirements for ahealthy body according to age and gender. Survival strategies of host against the invading pathogens: bacterial defense against bacteriophage, immune system of plants, invertebrates (mollusca) and vertebrates.

Unit II: Introduction and Organization of Immune System (06 hrs)

Historical background, general concepts of the immune system, innate and adaptive immunity; active and passive immunity, contributions of Sir Edward Jenner and Louis Pasteur in vaccine development. Lymphoid organs: thymus, bone marrow and haematopoiesis, lymph nodes, spleen

Unit III: Innate Immune response (09 hrs)

Physical and chemical barriers; cells of the innate immune system: natural killer cells, monocytes and macrophages; neutrophils, eosinophils, basophils, mast cells and dendritic cells: structure, phenotypic and functional aspects.

Complement system: components of the complement activation classical, alternative and lectin pathways; biological consequence of complement activation.

Mechanisms of pathogen killing by macrophages and neutrophils: receptor/non receptor mediated endocytosis, phagosome formation, phagolysosome formation, respiratory burst phenomenon.

Inflammation: concept, hall marks of inflammation.

Unit IV: Adaptive Immune Response (10 hrs)

Cells of the adaptive immune system: T and B lymphocytes; characteristics of adaptive immune response: self and non-self recognition, specificity, diversity and memory, primary and secondary immune response, allergen/ allergy.

Antigens: antigenicity and immunogenicity, haptens. Properties (foreignness, molecular size, heterogeneity, route and dose of administration, solubility and degradability); host factors (genotypes, gender, nutrition);blood group antigens and transfusion reactions.

Basic function of major histocompatibility complex

Importance of Antigen presentation; types of antibodies and their function; cell mediated immune response. Major steps in T cell differentiation in thymus: thymic selection, self MHC restriction, T cell receptor assembly. Phenotypic characteristics of naïve T-cells ($CD4^+$ and $CD8^+$ T-cells). Migration of naïve T-cells from thymus to secondary lymphoid organs. Activation of T-cells, proliferation of clonally selected T cells and their effector functions, concepts of T-helper 1 (TH_1) and T-helper 2 (TH_2) cells. Basic introduction to cytokines: IL-2, IL-4 and IFN-γ. Contribution of MHC, B-cell receptor (BCR) and T-cell receptor (TCR) to diversity in adaptive immune response

Unit V: Immunological principles of various reactions and techniques (05 hrs)

Basic concepts of antigen-antibody interactions (epitope-paratope), affinity and avidity, cross

reactivity, precipitation, agglutination, immunodiffusion, immune-electrophoresis, ELISA (indirect, sandwich, competitive, chemiluminescence, and ELISPOT assay), western blotting, immunofluorescence microscopy, immunohistochemistry and lateral flow assay.

Unit VI: Diet, nutrition and life style in promoting health and Immunity (09 hrs)

Importance of a well- balanced nutrition, the role of Immunity boosters and immunomodulators from kitchen shelf (Any two: turmeric, ashwagandha, tomato & giloy), vitamins and minerals in improving health and defense. Role of probiotics, gut microbiota and prebioticsin regulating health and immunity. Role of physical activity and emotional & Mental state in regulation of immunity status, holistic health and happiness. A primer on our traditional practices, yogic lifestyle and meditation in creating homeostasis in the body (balancing *Vatta, Pitta* and *Kapha*) will also be given.

Practical (30 hrs)

(Wherever wet lab experiments are not possible, the principles and concepts can be demonstrated through any other material or medium including videos/virtual labs etc.)

1. Visualization of antigen-antibody interaction by Ouchterlony method
2. To perform Immuno-diffusion by Mancini Method
3. To perform Complement fixation assay
4. To perform sandwich dot ELISA
5. To perform Widal test (Indirect/passive agglutination) for the detection of typhoid antigen and blood group determination (direct agglutination)
6. To perform SARS-CoV-2 rapid antigen test(Lateral flow Assay)
7. Project work based on historical research work in the area of immunology.
8. Case studies on hypersensitivity reactions(seafood hypersensitivity, erythroblastosis fetalis)

GENERIC ELECTIVE -06 (BIOMED-GE-06) UNDERSTANDING THE HUMAN BODY SYSTEMS

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
UNDERSTANDING THE HUMAN BODY SYSTEM BIOMED-GE-06	4	3	0	1	XII Passed	Basic knowledge of human physiology

Learning objectives

The Learning Objectives of this course are as follows:

- This is an introductory course dealing with the structure and function of the human organism and the issues facing the human in today's world.
- It is intended for students with limited science background. It would make them familiar with basic physiological concepts.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Students will have an increased understanding and appreciation for the workings of the human body. They will be familiar with the terminology and physiology of the major organ systems
- They will be able to explain the relation between form and function in biology, as expressed in molecular, cellular, and whole-organism physiology.
- Students will be able to recognize the anatomical structures and explain the physiological functions of the body systems.
- Recognize the anatomical structures and explain the physiological functions of the body systems. Develop scientific terminology to describe the parts and processes of the human body.

SYLLABUS OF BIOMED-GE- 06

Unit I: Body organization and integumentary system (05 hrs)

General anatomy of the body, introduction to various kinds of body planes, cavities and their membranes, tissues level of organization and classification (types, origin, function & repair). Structure and functions of human skin. Blood as connective tissue

Unit II: Nervous and Endocrine system (10 hrs)

Organization of the central and peripheral nervous system. Nerve physiology, motor and sensory physiology(special senses). General mechanism of hormone action, structure, function and regulation of the major gland of the body: pituitary, hypothalamus, thyroid, pancreas and adrenals. Basic concepts about hypo and hyper secretion of hormones.

Unit III: Muscular and skeletal system (05 hrs)

Functional anatomy of muscular system, types of muscles, neuromuscular junction structure, property and transmission, general characteristics of muscle contraction using skeletal muscle as example.

Unit IV: Cardiovascular and respiratory system (08 hrs)

Functional anatomy of heart, the cardiac cycle, electrocardiogram. Circulatory system: Blood vessels, hemodynamics and regulatory mechanisms. Lymphatic circulation - hemodynamics and regulation, micro-circulation, functional anatomy of the respiratory system. Mechanisms of pulmonary and alveolar, gaseous exchange, transport of gases, respiratory and nervous control and regulation of respiration.

Unit V: Gastrointestinal system and Renal physiology (11 hrs)

Anatomy and histology of the digestive tract. General principles of gut motility secretion, digestion, absorption and assimilation. Functional anatomy of kidney, histology of nephron and its physiology, process of urine formation. Urinary bladder: structure, micturition and its regulation

Unit VI: Reproductive System (06 hrs)

Structure and function of male and female reproductive organs. Basic concepts of gametogenesis (oogenesis and spermatogenesis), fertilization, implantation, menopause and contraception.

Practical (30 hrs)

(Wherever wet lab experiments are not possible, the principles and concepts can be demonstrated

through any other material or medium including videos/virtual labs etc.)

1. To prepare a blood smear and identify different types of white blood cells.
2. Estimation of hemoglobin (Sahli's method)
3. Physiological data acquisition based experiments (ECG/PFT/EMG).
4. Blood Pressure recordings in humans.
5. To study a simple reflex arc
6. To study the sensation of taste, touch and smell.
7. To study various types of contraceptives (condoms, IUDs, oral and injectable contraceptives)
8. To study different human organs and their sections through permanent histological slides T.S. of brain, spinal cord, skeletal fibers, cardiac muscles, skeletal muscles, T. S. of thyroid, liver, thymus, spleen, ovary, artery, vein, capillaries, testis, pancreas, esophagus, adrenal, kidney (cortex and medulla), urinary bladder, fallopian tubes, epididymis, lungs, trachea, heart. (minimum 8 slides covering the systems mentioned in theory).

Essential readings:

Suggestive readings:

- Ganong's Review of Medical physiology, 26th edition (2019), K. E. Barett, S. M. Barman, S. Boitano and H. Brooks; Tata McGraw Hill, ISBN 978-1-26-012240-4 (for ebook) ISBN:978-1-26-012241-1 (for print Book)

DEPARTMENT OF PHYSICS
B. SC. (HONOURS) PHYSICS

DISCIPLINE SPECIFIC CORE COURSE – DSC - 7: MATHEMATICAL PHYSICS III

Course Title & Code	Credits	Credit distribution of the course			Eligibility Criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical		
Mathematical Physics III DSC – 7	**4**	**3**	**0**	**1**	Class 12th Pass	Should have studied DSC - 1 and DSC - 4 of this program or its equivalent

LEARNING OBJECTIVES

The emphasis of course is on applications in solving problems of interest to physicists. The course will also expose students to fundamental computational physics skills enabling them to solve a wide range of physics problems. The skills developed during course will prepare them not only for doing fundamental and applied research but also for a wide variety of careers.

LEARNING OUTCOMES

After completing this course, student will be able to,

- Determine continuity, differentiability and analyticity of a complex function, find the derivative of a function and understand the properties of elementary complex functions.
- Work with multi-valued functions (logarithmic, complex power, inverse trigonometric function) and determine branches of these functions.
- Evaluate a contour integral using parameterization, fundamental theorem of calculus and Cauchy's integral formula.
- Find the Taylor series of a function and determine its radius of convergence.
- Determine the Laurent series expansion of a function in different regions, find the residues and use the residue theory to evaluate a contour integral and real integral.
- Understand the properties of Fourier transforms and use these to solve boundary value problems.
- Solve linear partial differential equations of second order with separation of variable method.
- In the laboratory course, the students will learn to,
    - create, visualize and use complex numbers
    - use Gauss quadrature methods to numerically integrate proper and improper definite integrals
    - Solve the boundary value problems numerically
    - Compute the fast Fourier transform of a given function

SYLLABUS OF DSC – 7

THEORY COMPONENT

Unit - I **(28 Hours)**

Complex Analysis: The field of complex numbers. Graphical, Cartesian and polar representation. Algebra in the complex plane. Triangle inequality. Roots of complex numbers. Regions in the complex plane – idea of open sets, closed sets, connected sets, bounded sets and domain.

(3 Hours)

The complex functions and mappings. Limits of complex functions. Extended complex plane and limits involving the point at infinity. Continuity and differentiability of a complex function, Cauchy-Riemann equations in Cartesian and polar coordinates, sufficient conditions for differentiability, harmonic functions. Analytic functions, singular points. Elementary functions. Multi-functions, branch cuts and branch points.

(10 Hours)

Integration in complex plane: contours and contour integrals, Cauchy-Goursat Theorem (No proof) for simply and multiply connected domains. Cauchy's inequality. Cauchy's integral formula. Taylor's and Laurent's theorems (statements only), types of singularities (removable poles and essential), meromorphic functions, residues and Cauchy's residue theorem, Jordan Lemma (statement only), evaluation of real integrals by contour integration (excluding integrands with branch points)

(15 Hours)

Unit – II **(9 Hours)**

Fourier Transform: Fourier Integral theorem (Statement only), Fourier Transform (FT) and Inverse FT, existence of FT, FT of single pulse, finite sine train, trigonometric, exponential, Gaussian functions, properties of FT, FT of Dirac delta function, sine and cosine function, convolution theorem. Fourier Sine Transform (FST) and Fourier Cosine Transform (FCT)

Unit – III **(8 Hours)**

Partial Differential Equations: Solutions to partial differential equations (2 or 3 independent variables) using separation of variables: Laplace's equation in problems of rectangular geometry. Solution of wave equation for vibrational modes of a stretched string. Solution of 1D heat flow equation (Wave/Heat equation not to be derived)

PRACTICAL COMPONENT

(15 Weeks with 2 hours of laboratory session per week)

The aim of this lab is not just to teach computer programming and numerical analysis but to emphasize its role in solving problems in Physics.

- The course will consist of practical sessions and lectures on the related theoretical aspects of the laboratory.
- Assessment is to be done not only on the programming but also on the basis of formulating the problem.
- The list of recommended programs is suggestive only. More programs may be done in the class with physics applications. Emphasis should be given to formulate a physics problem as mathematical one and solve it by computational methods.
- At least 6 programs must be attempted (taking at least one from each unit). The implementation can be either in Python/ C++/ Scilab. Inbuilt libraries can be used wherever applicable.

Unit 1

Handling of Complex Numbers: Syntax for creating complex numbers in Python/C++/Scilab, accessing real and imaginary parts, calculating the modulus and conjugate of a complex number, complex number arithmetic, plotting of complex numbers as ordered pairs of real numbers in a plane, conversion from Cartesian to polar representation.

Recommended List of Programs:

a) Determine the nth roots of a complex number and represent it in Cartesian and polar form.
b) Transformation of complex numbers as 2-D vectors e.g. translation, scaling, rotation, reflection.
c) Visualisation of mappings of some elementary complex functions $w = f(z)$ from z-plane to w-plane.

Unit 2

Gauss Quadrature Integration Methods: Gauss quadrature methods for integration: Gauss Legendre, Gauss Lagaurre and Gauss Hermite methods.

Recommended List of Programs:

a) Solving a definite integral by Gauss Legendre quadrature method. Application – representation of a function as a linear combination of Legendre polynomials.
b) Solving improper integrals over entire real axis or the positive real axis using Gauss Lagaurre and Gauss Hermite quadrature method. Comparison of results with the ones obtained by contour integration analytically.
c) Comparison of convergence of improper integral computed by Newton Cotes and Gauss Quadrature Methods.

Unit 3

Fast Fourier Transform: Discrete Fourier transform, Any algorithm for fast Fourier transform.

a) Computation of Discrete Fourier Transform (DFT) using complex numbers.
b) Fast Fourier Transform of given function in tabulated or mathematical form e.g function $\exp(-x^2)$.

Unit 4

Numerical Solutions of Boundary Value Problems: Two-point boundary value problems, types of boundary conditions – (Dirichlet, Neumann and Robin), importance of converting a physics problem to dimensionless form before solving numerically. Finite difference method, Shooting method with bisection/Secant/Newton method for solving non-linear equation and using RK methods for solving IVP (The programs developed in the last semester may be used here).

Algorithm for any one numerical method to solve Partial Differential Equations e.g. Finite Difference method, relaxation methods, Crank-Nicolson method

Recommended List of Programs:

(a) The equilibrium temperature of a bar of length L with insulated horizontal sides and the ends maintained at fixed temperatures.
(b) Solve for the steady state concentration profile y(x) in the reaction-diffusion problem given by $y''(x) - y(x) = 0$ with $y(0) = 1, y'(1) = 0$.
(c) Use any numerical method to solve Laplace equation/ Wave equation/ Heat equation.

DISCIPLINE SPECIFIC CORE COURSE – DSC - 8: THERMAL PHYSICS

Course Title & Code	Credits	Credit distribution of the course			Eligibility Criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical		
Thermal Physics DSC – 8	**4**	**3**	**0**	**1**	Class 12th Pass	NIL

LEARNING OBJECTIVES

This course deals with the relationship between the macroscopic and microscopic properties of physical systems in equilibrium. It reviews the concepts of thermodynamics learnt at school from a more advanced perspective and how to develop them further to build new concepts. The course gives an understanding about the fundamental laws of thermodynamics and their applications to various systems and processes. It also includes a basic idea about the kinetic theory of gases, transport phenomena involved in ideal gases, phase transitions and behaviour of real gases. The students will be able to apply these concepts to several problems on heat. The lab course deals with providing the knowledge of the concepts of thermodynamics studied in the theory paper with the help of experiments and give the students a hands-on experience on the construction and use of specific measurement instruments and experimental apparatuses used in the Thermal Physics lab, including necessary precautions.

LEARNING OUTCOMES

At the end of this course, students will be able to

- Comprehend the basic concepts of thermodynamics, the first and the second law of thermodynamics.
- Understand the concept of reversibility, irreversibility and entropy.
- Understand various thermodynamic potentials and their physical significance with respect to different thermodynamic systems and processes.
- Deduce Maxwell's thermodynamical relations and use them for solving various problems in Thermodynamics.
- Understand the concept and behaviour of ideal and real gases.
- Apply the basic concept of kinetic theory of gases in deriving Maxwell-Boltzmann distribution law and its applications.
- Understand mean free path and molecular collisions in viscosity, thermal conductivity, diffusion and Brownian motion.
- While doing the practical, the students will have an opportunity to understand and hence use the specific apparatus required to study various concepts of thermodynamics. Hence, the student will be able to comprehend the errors they can encounter while performing the experiment and how to estimate them.

SYLLABUS OF DSC - 8

THEORY COMPONENT

Unit – I - Zeroth and First Law of Thermodynamics (6 Hours)
Fundamental idea of thermodynamic equilibrium and Zeroth Law of Thermodynamics, concept of work and heat, First law of Thermodynamics and its differential form, internal energy, applications of First law: General relation between C_P and C_v, work done during various processes (all four) and related problems, adiabatic lapse rate, Compressibility and Expansion Co-efficient for various processes.

Unit – II - Second law of Thermodynamics (6 Hours)
Reversible and Irreversible processes, Carnot engine and Carnot's cycle, Refrigerator, efficiency of Carnot engine and refrigerator, Second Law of Thermodynamics: Kelvin-Planck and Clausius statements and their equivalence, Carnot's theorem, Applications of Second Law of Thermodynamics in the light of Phase Change, Thermodynamic Scale of Temperature and its equivalence to Perfect Gas Scale.

Unit – III – Entropy (6 Hours)
Concept of Entropy, Entropy changes in Reversible and Irreversible processes with examples, Clausius Theorem, Clausius inequality, Second Law of Thermodynamics in terms of Entropy. Temperature-Entropy diagrams for Carnot's cycle and related problems, Entropy of perfect and real gases, conceptual problems related to Entropy during a Phase Change, Nernst Heat Theorem: Unattainability of Absolute Zero and Third Law of Thermodynamics.

Unit – IV - Thermodynamic Potentials and Maxwell's Relations (12 Hours)
Basic concept of Thermodynamic Potentials, Internal Energy, Enthalpy, Helmholtz Free Energy, Gibb's Free Energy, Magnetic work and basic idea about cooling due to adiabatic demagnetization, Phase Transitions : First order and Second order Phase Transitions with examples, Clausius Clapeyron Equation, Ehrenfest Equations, Derivation of Maxwell's Thermodynamic Relations and their applications in Clausius Clapeyron Equation, value of $C_P - C_v$, TdS equations, Energy equations, evaluation of C_P / C_v and Ratio of Adiabatic to Isothermal elasticity.

Unit – V - Kinetic Theory of Gases and Molecular Collisions (8 Hours)
Constrained maximization using Lagrange multipliers, Maxwell-Boltzmann law of distribution of velocities in an ideal gas and its experimental verification with any one method. Mean, Root Mean Square and Most Probable Speeds, Maxwell-Boltzmann equation for distribution of Energy: Average Energy and Most Probable Energy, Mean Free Path, Collision Probability, estimation of Mean Free Path, transport phenomena in ideal gases: viscosity, thermal conductivity and diffusion with continuity equation

Unit – VI - Real Gases (7 Hours)
Behaviour of Real Gases: Deviations from the ideal gas equation, Andrew's experiments on CO_2 Gas, Virial equation, Continuity of liquid and gaseous states, Boyle temperature, Van der Waals equation of state for real gases (derivation not required), comparison with experimental curves: P-V diagrams, value of critical constants, law of corresponding states, free adiabatic expansion of a perfect gas, Joule Thomson Porous - Plug Experiment, Joule Thomson Coefficient for Ideal and Van der Waals Gases, Temperature of Inversion and Joule Thomson cooling.

5) Fundamentals of Thermal and Statistical Physics, Frederick Reif, McGraw-Hill, 1965

PRACTICAL COMPONENT

(15 Weeks with 2 hours of laboratory session per week)

At least six experiments to be done from the following:

1) To determine Mechanical Equivalent of Heat, J, by Callender and Barne's constant flow method.
2) To determine the Coefficient of Thermal Conductivity of Cu by Searle's Apparatus.
3) To determine the Coefficient of Thermal Conductivity of a bad conductor by Lee and Charlton's disc method using steam or electrical heating.
4) To determine the Temperature Coefficient of Resistance by Platinum Resistance Thermometer (PRT) using Carey Foster's Bridge.
5) To determine the Temperature Coefficient of Resistance using Platinum Resistance Thermometer (PRT) by Callender-Griffith Bridge.
6) To study the variation of thermo-e.m.f. of a thermocouple with difference of temperature of its two junctions using a null method.
7) To calibrate a thermocouple to measure temperature in a specified range by direct method and/or by using Op Amp and to determine Neutral Temperature.
8) To determine the coefficient of thermal conductivity of Copper (Cu) by Angstrom's method.

DISCIPLINE SPECIFIC CORE COURSE – DSC - 9: LIGHT AND MATTER

Course Title & Code	Credits	Credit distribution of the course			Eligibility Criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical		
Light and Matter DSC – 9	**4**	**2**	**0**	**2**	Class 12th Pass	NIL

LEARNING OBJECTIVES

The objective of this course reviews the concepts of light and matter, their properties and their dual nature. This course provides an in depth understanding of dual nature of light, interference and diffraction with emphasis on practical applications of both. It prepares the student for the modern physics and quantum mechanics courses.

LEARNING OUTCOMES

On successfully completing the requirement of this course the student will have the skill and knowledge to,

- Appreciate the dual nature of light which is part of the electromagnetic spectrum and the dual nature of matter simultaneously.
- Understand the phenomena of interference and diffraction exhibited by light and matter, their nuances and details.
- Delve in to the depth of understanding wave optics with its various kinds of interference and diffraction exhibited by light.
- Demonstrate basic concepts of diffraction: Superposition of wavelets diffracted from aperture, understand Fraunhofer and Fresnel diffraction.
- Learn about the application of matter waves in latest technological developments of electron microscope e.g. SEM and TEM used widely for characterization in several fields of physics such as material science, nanotechnology etc.
- In the laboratory course, students will gain hands-on experience of using various optical instruments, measurement of resolving power and dispersive power, and making finer measurements of wavelength of light using Newton's rings experiment. They will also find wavelength of Laser sources by single and double slit experiment, wavelength and angular spread of He-Ne Laser using plane diffraction grating.

SYLLABUS OF DSC - 9

THEORY COMPONENT

Unit – I - Duality of Light and matter **(5 Hours)**

Light an EM wave - Hertz's experiments; Particle characteristics by photoelectric effect and Compton effect (concepts only) and wave characteristics by interference and diffraction.

Wave properties of particles: de Broglie hypothesis, wavelength of matter waves; particle

wave complementarity: Velocity of de Broglie wave and need of a wave packet; Group and phase velocities and relation between them; equivalence of group and particle velocity, dispersion of wave groups.

Unit – II – Interference **(10 Hours)**

Division of amplitude and wave-front. Two-slit interference experiment with photons: Young's double slit experiment. Lloyd's mirror. Phase change on reflection: Stokes' treatment. Interference in Thin Films: parallel and wedge-shaped films. Fringes of equal inclination (Haidinger Fringes); Fringes of equal thickness (Fizeau Fringe). Newton's Rings: Measurement of wavelength and refractive index. Single photon interference. Two-slit interference experiment with electrons.

Unit – III – Diffraction **(15 Hours)**

Fraunhofer diffraction: Single slit, double slit, diffraction grating, resolving power of grating.
Fresnel diffraction: Fresnel's assumptions, Fresnel's half-period zones for plane wave, explanation of rectilinear propagation of light, theory of a zone plate: multiple foci of a zone plate, Fresnel diffraction at straight edge, a slit and a wire by Fresnel half period zones.
Diffraction of photons (e.g. X-rays, gamma rays etc.) and particles by matter, experimental study of matter waves: Davisson-Germer experiment; Electron microscope: applications SEM, TEM.

Additional Readings:

1) Principles of Optics, Max Born and Emil Wolf, 7th Edition, Pergamon Press, 1999
2) Introduction to Optics, Pedrotti Frank L. Cambridge University Press.
3) Optics, Eugene Hecht, 4th Edition, Pearson Education, 2014
4) Six Ideas that Shaped Physics: Particle Behave like Waves, T. A. Moore, McGraw Hill, 2003

5) Thirty years that shook physics: the story of quantum theory, George Gamow, Garden City, NY: Doubleday, 1966.
6) Quantum Mechanics: Theory and Applications, (Extensively revised 6th Edition), Ajoy Ghatak and S. Lokanathan, Laxmi Publications, 2019
7) Optics, Karl Dieter Moller, Learning by computing with model examples, Springer, 2007
8) Modern Physics for Scientists and Engineers, J. R. Taylor, C. D. Zafiratos, M. A. Dubson, Viva Books Pvt Ltd, 2017
9) Physics of Atom, Wehr, Richards and Adair, Narosa, 2002

PRACTICAL COMPONENT

(15 Weeks with 4 hours of laboratory session per week)

Mandatory activity:

- Sessions on the review of experimental data analysis, sources of error and their estimation in detail, writing of scientific laboratory reports including proper reporting of errors.
- Applications of the specific experiments done in the lab.
- Familiarization with Schuster's focusing; determination of angle of prism.

At least 6 experiments from the following list.

1) Determination of refractive index of material of prism using mercury (Hg) light.
2) To determine the dispersive power and Cauchy constants of the material of a prism using mercury source.
3) To determine wavelength of sodium light using Newton's Rings.
4) To determine the thickness of a thin paper by measuring the width of the interference fringes produced by a wedge-shaped Film.
5) To determine wavelength of (1) Na source and (2) spectral lines of Hg source using plane diffraction grating.
6) To determine dispersive power of a plane diffraction grating using mercury lamp.
7) To determine resolving power of a plane diffraction grating using sodium lamp.
8) To determine the wavelength of laser source using diffraction of single slit.
9) To determine the wavelength of laser source using diffraction of double slit.
10) To determine wavelength and angular spread of He-Ne laser using plane diffraction grating.

DISCIPLINE SPECIFIC ELECTIVE COURSE – DSE 1: BIOPHYSICS

Course Title & Code	Credits	Credit distribution of the course			Eligibility Criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical		
Biophysics DSE – 1	**4**	**3**	**0**	**1**	Class XII Pass	NIL

LEARNING OBJECTIVES

This course familiarizes the students with the basic facts and ideas of biology from a quantitative perspective. It shows them how ideas and methods of physics enrich our understanding of biological systems at diverse length and time scales. The course also gives them a flavour of the interface between biology, chemistry, physics and mathematics.

LEARNING OUTCOMES

After completing this course, students will

- Know basic facts about biological systems, including single cells, multicellular organisms and ecosystems from a quantitative perspective.
- Gain familiarity with various biological processes at different length and time scales, including molecular processes, organism level processes and evolution.
- Be able to apply the principles of physics from areas such as mechanics, electricity and magnetism, thermodynamics, statistical mechanics, and dynamical systems to understand certain living processes.
- Get exposure to complexity of life at i) the level of cell, ii) level of multi cellular organism and iii) at macroscopic system – ecosystem and biosphere.
- Gain a systems level perspective on organisms and appreciate how networks of interactions of many components give rise to complex behaviour.
- Perform mathematical and computational modelling of certain aspects of living systems.
- Get exposure to models of evolution.
- Be able to perform experiments demonstrating certain physical processes that occur in living systems.

SYLLABUS OF DSE – 1

THEORY COMPONENT

Unit – I **(4 Hours)**

Overview: The boundary, interior and exterior environment of living cells. Processes: exchange of matter and energy with environment, metabolism, maintenance, reproduction, evolution. Self-replication as a distinct property of biological systems. Time scales and spatial scales.

Unit - II **(12 Hours)**

Molecules of life: Metabolites, proteins and nucleic acids. Their sizes, types and roles in structures and processes. Transport, energy storage, membrane formation, catalysis, replication, transcription, translation, signaling. Typical populations of molecules of various types present in cells, their rates of production and turnover. Energy required to make a bacterial cell. Simplified mathematical models of transcription and translation.

Unit - III **(12 Hours)**

Molecular motion in cells: Random walks and applications to biology: Diffusion; models of macromolecules. Mechanical, entropic and chemical forces: Osmosis, cell assembly, molecular motors, bacterial chemotaxis.

Unit - IV **(12 Hours)**

The complexity of life: At the level of a cell: Intracellular biochemical networks. Dynamics of metabolic networks; the stoichiometric matrix. The implausibility of life based on a simplified probability estimate, and the origin of life problem. At the level of a multicellular organism: Numbers and types of cells in multicellular organisms. Cellular differentiation and development. Brain structure: neurons and neural networks. At the level of an ecosystem and the biosphere: Foodwebs. Feedback cycles and self-sustaining ecosystems. Allometric scaling laws.

Unit - V **(5 Hours)**

Evolution: The mechanism of evolution: variation at the molecular level, selection at the level of the organism. Models of evolution.

PRACTICAL COMPONENT

(15 Weeks with 2 hours of laboratory session per week)

List of experiments

1) Demonstration of diffusion, effect of medium, temperature, molecular weight and size on the rate of diffusion.
2) Demonstration of osmosis in a living system.
3) Demonstration of the relationship between viscosity and density.
4) Demonstration of how microscopic particles travel in air through aerosols.
5) Graphic visualization and demonstrations of 3D structure of biomolecules using in-silico visualization tools.
6) Estimation of serum protein using BSA as the standard. (Optional).

3) Physical Biology of the Cell (2nd Edition); Rob Phillips et al (Garland Science, Taylor & Francis Group, NY USA and Abingdon UK, 2013)
4) Evolution; M. Ridley (Blackwell Publishers, 2009, 3rd Edition).

Additional Readings:

1) Physics in Molecular Biology; Kim Sneppen and Giovanni Zocchi (Cambridge University Press, Cambridge UK, 2005)
2) Biophysics: Searching for Principles; William Bialek (Princeton University Press, Princeton USA, 2012).

DISCIPLINE SPECIFIC ELECTIVE COURSE – DSE 2: NUMERICAL ANALYSIS

Course Title & Code	Credits	Credit distribution of the course			Eligibility Criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical		
NUMERICAL ANALYSIS DSE – 2	**4**	**2**	**0**	**2**	Class 12th Pass	NIL

LEARNING OBJECTIVES

The main objective of this course is to introduce the students to the field of numerical analysis enabling them to solve a wide range of physics problems. The skills developed during the course will prepare them not only for doing fundamental and applied research but also for a wide variety of careers.

LEARNING OUTCOMES

After completing this course, student will be able to,

- Analyse a physics problem, establish the mathematical model and determine the appropriate numerical techniques to solve it.
- Derive numerical methods for various mathematical tasks such as solution of non-linear algebraic and transcendental equations, system of linear equations, interpolation, least square fitting, numerical differentiation, numerical integration, eigen value problems and solution of initial value and boundary value problems.
- Analyse and evaluate the accuracy of the numerical methods learned.
- In the laboratory course, the students will learn to implement these numerical methods in Python/C++/Scilab and develop codes to solve various physics problems and analyze the results.

SYLLABUS OF DSE – 2

THEORY COMPONENT

Unit – I **(3 Hours)**

Approximation and Errors in computing: Introduction to numerical computation, Taylor's expansion and mean value theorem. Floating Point Computation, overflow and underflow. Single and double precision arithmetic. Rounding and truncation error, absolute and relative error, error propagation.

Unit – II **(8 Hours)**

Linear Systems: Solution of linear systems by Gaussian elimination method, partial and complete pivoting, LU decomposition, norms and errors, condition numbers, Gauss-Seidel method, diagonally dominant matrix and convergence of iteration methods. Solution of Tridiagonal systems; Eigenvalue Problem: Power method, inverse power method.

Unit – III **(5 Hours)**

Interpolation: Lagrange and Newton's methods (divided difference) for polynomial interpolation, theoretical error of interpolation. Inverse Interpolation. Optimal points for interpolation and Chebyshev Polynomials. Minimax Theorem (Statement only)

Unit – IV **(7 Hours)**

Numerical Integration: Newton Cotes quadrature methods. Derivation of Trapezoidal and Simpson (1/3 and 3/8) rules from Lagrange interpolating polynomial. Error and degree of precision of a quadrature formula. Composite formulae for Trapezoidal and Simpson methods.

Gauss Quadrature methods. Legendre, Lagaurre and Hermite quadrature methods.

Unit – V **(7 Hours)**

Initial and Boundary Value Problems: Solution of initial value problems by Euler, modified Euler and Runge Kutta (RK) methods. Local and global errors, comparison of errors in the Euler and RK methods

Finite difference and shooting method for solving two-point linear boundary value problems.

2) Advanced Engineering Mathematics, Erwin Kreyszig, Wiley India, 2008
3) Introduction to Numerical Analysis, S. S. Sastry, 5th Edition, PHI Learning Pvt. Ltd, 2012
4) Elementary Numerical Analysis, K. E. Atkinson, 3rd Edition, Wiley India Edition, 2007

Additional Readings:

1) Numerical Recipes: The art of scientific computing, William H. Press, Saul A. Teukolsky and William Vetterling, Cambridge University Press; 3rd Edition, 2007
2) Numerical methods for scientific and engineering computation, M. K. Jain, S. R. K. Iyenger, New Age Publishers, 2012

PRACTICAL COMPONENT

(15 Weeks with 4 hours of laboratory session per week)

The aim of this lab is not just to teach computer programming and numerical analysis but to emphasize its role in solving problems in Physics. Assessment is to be done not only on the programming but also on the basis of formulating the problem. The list of recommended programs is suggestive only. Students should be encouraged to do more physics applications. Emphasis should be given to formulate a physics problem as mathematical one and solve by computational methods. The students should be encouraged to develop and present an independent project. At least 10 programs must be attempted (taking at least two from each unit).The implementation can be either in Python/ C++/Scilab.

Unit 1 - Linear Systems

a) Solve a system of linear equations using Gauss Elimination method with pivoting (application to electric networks).
b) Solve a system of linear equations using Gauss-Seidel method and study the convergence (application to spring mass system).
c) Determine the inverse of a square matrix using Gauss-Jordan method.
d) Solve a tri-diagonal system of linear equations.
e) Study an example of ill-conditioned systematic
f) Find the LU equivalent of a matrix.
g) Determine the largest and smallest eigenvalues using Power and inverse power methods. Consider a case where power method fails.

Unit 2 - Interpolation

a) Given a dataset (x, y) with equidistant x values, prepare the Newton's forward difference, backward difference and divided difference tables.
b) Given a dataset (x, y) corresponding to a physics problem, use Lagrange and Newton's forms of interpolating polynomials and compare. Determine the value of y at an intermediate value of x not included in the data set. This may be done with equally spaced and non-equally spaced x-values.
c) Given a tabulated data for an elementary function, approximate it by a polynomial and compare with the true function.
d) Compare the interpolating polynomial for a given dataset (following a known form e.g. exponential) with the approximation obtained by least square fitting.
e) Compare the interpolating polynomial approximating a given function in a given range obtained with uniformly spaced points and by Chebyshev points.
f) Compare the Chebyshev and Maclaurin series expansions of an exponential or sinusoidal function.

Unit 3 - Integration

a) Use integral definition of error function to compute and plot erf(x) in a given range. Use Trapezoidal, Simpson and Gauss Legendre methods and compare the results for small and large values of x.
b) Use the definition of erf(x) and numerically take the limit x going to infinity to get the value of Gaussian integral using Simpson method. Compare the result with the value obtained by Gauss Hermite and Gauss Lagaurre methods.
c) Verify the degree of precision of each quadrature rule.
d) Use Simpson methods to compute a double integral over a rectangular region.

e) Approximate the value of π by evaluating the integral $\int_0^\infty \frac{1}{x^2+1} dx$using Simpson, Gauss Hermite and Gauss Lagaurre methods.

Unit 4 - Initial Value Problems (IVP)

a) Compare the errors in Euler, RK2 and RK4 by solving a first order IVP with known solution. Reduce the step size to a point where the round off errors takes over.
b) Solve a system of n first order differential equations by Euler and RK methods. Use it to solve an nth order IVP. Solve a damped free and forced harmonic oscillator problem using this.
c) Solve a physics problem like free fall with air drag or parachte problem using RK method.
d) Solve a compound spring system (3 springs) by solving a system of differential equations using Euler and RK for a given set of i1nitial conditions.
e) Obtain the current flowing in a series LCR circuit with constant voltage for a given set of initial conditions.

Unit 5 - Boundary value problems (BVP)

a) Solve a linear BVP using shooting and finite difference method and compare the results.
b) Solve a non-linear BVP using the finite difference and shooting method and compare the results.
c) Determine the temperature distribution along a rod made of two dissimilar materials (of different thermal conductivities) welded together when temperatures at two ends are maintained at given temperatures.
d) Design a physics problem that can be modelled by a BVP and solve it by any method.

DISCIPLINE SPECIFIC CORE COURSE – PHYSICS DSC 3: HEAT AND THERMODYNAMICS

Course Title & Code	Credits	Credit distribution of the course			Eligibility Criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical		
HEAT AND THERMODYNAMICS PHYSICS DSC – 3	**4**	**2**	**0**	**2**	Passed 12th Class	NIL

LEARNING OBJECTIVES

This course will review the basic concepts of thermodynamics, kinetic theory of gases with a brief introduction to statistical mechanics. The primary goal is to make the student understand the applications of fundamental laws of thermodynamics to various systems and processes. This coursework will enable the students to understand the connection between the macroscopic observations of physical systems and microscopic behaviour of atoms and molecule through a brief knowledge of statistical mechanics. The lab course deals with providing the knowledge of the concepts of thermodynamics along with Planck's law and Stefan Boltzmann laws related to black body radiation.

LEARNING OUTCOMES

At the end of this course, students will be able to,

- gain an essence of the basic concepts of thermodynamics, the first and the second law of thermodynamics, the concept of entropy and the associated theorems, the thermodynamic potentials and their physical interpretations along with Maxwell's thermodynamic relations.
- Know the fundamentals of the kinetic theory of gases, Maxwell-Boltzmann distribution law, mean free path of molecular collisions, viscosity, thermal conductivity and diffusion.
- Learn about the black body radiations, Stefan- Boltzmann's law, Rayleigh-Jean's law and Planck's law and their significances.
- gain the basic knowledge about quantum statistics: the Bose-Einstein statistics and the Fermi-Dirac statistics.
- In the laboratory course, the students are expected to: Measure of Planck's constant using black body radiation, determine Stefan's Constant, coefficient of thermal conductivity of a bad conductor and a good conductor, determine the temperature coefficient of

resistance, study variation of thermo-e.m.f. across two junctions of a thermocouple with temperature etc.

SYLLABUS OF PHYSICS DSC – 3

THEORY COMPONENT

Unit – I - Laws of Thermodynamics (10 Hours)

Fundamental basics of Thermodynamic system and variables, Zeroth Law of Thermodynamics and temperature, First law and internal energy, various thermodynamical processes, Applications of First Law: general relation between C_P and C_V, work done during various processes, Compressibility and Expansion Coefficient, reversible and irreversible processes, Second law: Kelvin-Planck and Clausius statements, Carnot engine, Carnot cycle and theorem, basic concept of Entropy, Entropy changes in reversible and irreversible processes, Clausius inequality, Entropy-temperature diagrams.

Unit – II - Thermodynamic Potentials and Maxwell's Relations (5 Hours)

Basic concept of Thermodynamic Potentials, Internal Energy, Enthalpy, Helmholtz Free Energy, Gibb's Free Energy, derivation of Maxwell's Thermodynamic Relations and their applications in Clausius Clapeyron Equation, value of $C_P - C_v$, TdS Equations, Energy equations for ideal gases, evaluation of C_P/C_v

Unit – III - Kinetic Theory of Gases and Molecular Collisions (6 Hours)

Maxwell-Boltzmann Law of Distribution of Velocities in an ideal gas and its experimental verification, Mean, Root Mean Square and Most Probable Speeds, Mean Free Path (Zeroth order), Transport Phenomena in ideal gases: Viscosity, Thermal Conductivity and Diffusion (for vertical case)

Unit – IV - Theory of Radiation (5 Hours)

Blackbody radiation, Spectral distribution, Derivation of Planck's law, Deduction of Wien's law, Rayleigh-Jeans Law, Stefan Boltzmann Law and Wien's displacement law from Planck's law

Unit – V - Statistical Mechanics (4 Hours)

Macrostate and Microstate, phase space, Entropy and thermodynamic probability, Maxwell-Boltzmann law, qualitative description of Quantum statistics – Bose Einstein and Fermi Dirac, comparison of three statistics.

3) Heat, Thermodynamics and Statistical Physics, Brij Lal, N. Subrahmanyam and P. S. Hemne, S. Chand and Company

PRACTICAL COMPONENT

(15 Weeks with 4 hours of laboratory session per week)

At least six experiments to be done from the following:

1) To determine Mechanical Equivalent of Heat, J, by Callender and Barne's constant flow method.
2) To determine the Coefficient of Thermal Conductivity of Cu by Searle's Apparatus.
3) To determine the Coefficient of Thermal Conductivity of a bad conductor by Lee and Charlton's disc method using steam or electrical heating.
4) Measurement of Planck's constant using black body radiation.
5) To determine the temperature coefficient of resistance by Platinum Resistance Thermometer using Carey Foster's bridge.
6) To study the variation of thermo-e.m.f. across two junctions of a thermocouple with temperature.
7) To determine Stefan's Constant.
8) To determine the Temperature Coefficient of Resistance using Platinum Resistance Thermometer (PRT) by Callender-Griffith Bridge

Biophysics PHYSICS DSE 13a	**4**	**3**	**0**	**1**	Passed 12th Class	NIL

LEARNING OBJECTIVES

This course familiarizes the students with the basic facts and ideas of biology from a quantitative perspective. It shows them how ideas and methods of physics enrich our understanding of biological systems at diverse length and time scales. The course also gives them a flavour of the interface between biology, chemistry, physics and mathematics.

LEARNING OUTCOMES

After completing this course, students will

- Know basic facts about biological systems, including single cells, multicellular organisms and ecosystems from a quantitative perspective.
- Gain familiarity with various biological processes at different length and time scales, including molecular processes, organism level processes and evolution.
- Be able to apply the principles of physics from areas such as mechanics, electricity and magnetism, thermodynamics, statistical mechanics, and dynamical systems to understand certain living processes.
- Get exposure to complexity of life at i) the level of cell, ii) level of multi cellular organism and iii) at macroscopic system – ecosystem and biosphere.
- Gain a systems level perspective on organisms and appreciate how networks of interactions of many components give rise to complex behaviour.
- Perform mathematical and computational modelling of certain aspects of living systems.
- Get exposure to models of evolution.
- Be able to perform experiments demonstrating certain physical processes that occur in living systems.

SYLLABUS OF PHYSICS DSE – 13a

THEORY COMPONENT

Unit – I **(4 Hours)**

Overview: The boundary, interior and exterior environment of living cells. Processes: exchange of matter and energy with environment, metabolism, maintenance, reproduction, evolution. Self-replication as a distinct property of biological systems. Time scales and spatial scales.

Unit - II **(12 Hours)**

Molecules of life: Metabolites, proteins and nucleic acids. Their sizes, types and roles in structures and processes. Transport, energy storage, membrane formation, catalysis, replication, transcription, translation, signaling. Typical populations of molecules of various types present in cells, their rates of production and turnover. Energy required to make a bacterial cell. Simplified mathematical models of transcription and translation.

Unit - III **(12 Hours)**

Molecular motion in cells: Random walks and applications to biology: Diffusion; models of macromolecules. Mechanical, entropic and chemical forces: Osmosis, cell assembly, molecular motors, bacterial chemotaxis.

Unit - IV **(12 Hours)**

The complexity of life: At the level of a cell: Intracellular biochemical networks. Dynamics of metabolic networks; the stoichiometric matrix. The implausibility of life based on a simplified probability estimate, and the origin of life problem. At the level of a multicellular organism: Numbers and types of cells in multicellular organisms. Cellular differentiation and development. Brain structure: neurons and neural networks. At the level of an ecosystem and the biosphere: Foodwebs. Feedback cycles and self-sustaining ecosystems. Allometric scaling laws.

Unit - V **(5 Hours)**

Evolution: The mechanism of evolution: variation at the molecular level, selection at the level of the organism. Models of evolution

PRACTICAL COMPONENT

(15 Weeks with 2 hours of laboratory session per week)

List of experiments

1) Demonstration of diffusion, effect of medium, temperature, molecular weight and size on the rate of diffusion.
2) Demonstration of osmosis in a living system.
3) Demonstration of the relationship between viscosity and density.
4) Demonstration of how microscopic particles travel in air through aerosols.
5) Graphic visualization and demonstrations of 3D structure of biomolecules using in-silico visualization tools.
6) Estimation of serum protein using BSA as the standard. (Optional).

		Lecture	Tutorial	Practical		
MATHEMATICAL PHYSICS I PHYSICS DSE – 13b	**4**	**3**	**1**	**0**	Passed 12th Class	NIL

LEARNING OBJECTIVES

The emphasis of course is to equip students with the mathematical tools required in solving problem of interest to physicists. The mathematical tools might be building blocks to understand the fundamental computational physics skills and hence enable them to solve a wide range of physics problems. Overall, to help students develop critical skills and knowledge that will prepare them not only for doing fundamental and applied research but also prepare them for a wide variety of careers

LEARNING OUTCOMES

After completing this course, student will be able to,

- Learn the functions more than one variable using the concepts of calculus.
- Solve first order differential equations and apply it to physical problems.
- Represent a periodic function by a sum of harmonics using Fourier series.
- Obtain power series solution of differential equation of 2nd order with variable coefficients using Frobenius mehod.
- Learn beta and gamma functions

SYLLABUS OF PHYSICS DSE 13b

THEORY COMPONENT

Unit – I **(18 Hours)**

Calculus of functions of more than one variable: Partial derivatives, chain rule for partial derivatives, exact and inexact differentials. Integrating factor, with simple illustration. Constrained Maximization using Lagrange Multipliers.

Fourier Series: Periodic functions. Orthogonality of sine and cosine functions, Dirichlet Conditions (Statement only). Expansion of periodic functions in a series of sine and cosine functions and determination of Fourier coefficients. Even and odd functions and their Fourier expansions. Application to Summing of Infinite Series.

Unit – II **(12 Hours)**

Frobenius Method and Special Functions: Singular Points of Second Order Linear Differential Equations and their importance. Frobenius method and its applications to differential equations. Legendre Differential Equations and its solution. Properties of Legendre Polynomials: Rodrigues Formula, Orthogonality. Simple recurrence relations.

Unit – III **(15 Hours)**

Some Special Integrals: Beta and Gamma Functions and Relation between them. Expression of Integrals in terms of Gamma Functions.

Partial Differential Equations: Solutions to partial differential equations, using separation of variables: Laplace's Equation in problems of rectangular geometry. Solution of 1D wave equation.

THEORY COMPONENT

Unit – I - Laws of Thermodynamics (10 Hours)

Fundamental basics of Thermodynamic system and variables, Zeroth Law of Thermodynamics and temperature, First law and internal energy, various thermodynamical processes, Applications of First Law: general relation between C_P and C_V, work done during various processes, Compressibility and Expansion Coefficient, reversible and irreversible processes, Second law: Kelvin-Planck and Clausius statements, Carnot engine, Carnot cycle and theorem, basic concept of Entropy, Entropy changes in reversible and irreversible processes, Clausius inequality, Entropy-temperature diagrams.

Unit – II - Thermodynamic Potentials and Maxwell's Relations (5 Hours)

Basic concept of Thermodynamic Potentials, Internal Energy, Enthalpy, Helmholtz Free Energy, Gibb's Free Energy, derivation of Maxwell's Thermodynamic Relations and their applications in Clausius Clapeyron Equation, value of $C_P - C_v$, TdS Equations, Energy equations for ideal gases, evaluation of C_P/C_v

Unit – III - Kinetic Theory of Gases and Molecular Collisions (6 Hours)

Maxwell-Boltzmann Law of Distribution of Velocities in an ideal gas and its experimental verification, Mean, Root Mean Square and Most Probable Speeds, Mean Free Path (Zeroth order), Transport Phenomena in ideal gases: Viscosity, Thermal Conductivity and Diffusion (for vertical case)

Unit – IV - Theory of Radiation (5 Hours)

Blackbody radiation, Spectral distribution, Derivation of Planck's law, Deduction of Wien's law, Rayleigh-Jeans Law, Stefan Boltzmann Law and Wien's displacement law from Planck's law

Unit – V - Statistical Mechanics (4 Hours)

Macrostate and Microstate, phase space, Entropy and thermodynamic probability, Maxwell-Boltzmann law, qualitative description of Quantum statistics – Bose Einstein and Fermi Dirac, comparison of three statistics.

3) Heat, Thermodynamics and Statistical Physics, Brij Lal, N. Subrahmanyam and P. S. Hemne, S. Chand and Company

PRACTICAL COMPONENT

(15 Weeks with 4 hours of laboratory session per week)

At least six experiments to be done from the following:

1) To determine Mechanical Equivalent of Heat, J, by Callender and Barne's constant flow method.
2) To determine the Coefficient of Thermal Conductivity of Cu by Searle's Apparatus.
3) To determine the Coefficient of Thermal Conductivity of a bad conductor by Lee and Charlton's disc method using steam or electrical heating.
4) Measurement of Planck's constant using black body radiation.
5) To determine the Temperature Coefficient of Resistance by Platinum Resistance Thermometer using Carey Foster's bridge.
6) To study the variation of thermo-e.m.f across two junctions of a thermocouple with temperature.
7) To determine Stefan's Constant.
8) To determine the Temperature Coefficient of Resistance using Platinum Resistance Thermometer (PRT) by Callender-Griffith Bridge

DISCIPLINE SPECIFIC CORE COURSE – PHYSICS DSC 6: COMMUNICATION ELECTRONICS

Course Title & Code	Credits	Credit distribution of the course			Eligibility Criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical		
COMMUNICATION ELECTRONICS PHYSICS DSC – 6	**4**	**2**	**0**	**2**	Passed 12th Class	NIL

LEARNING OBJECTIVES

This paper aims to describe the concepts of electronics in communication. Communication techniques based on analog modulation, analog and digital pulse modulation including PAM, PWM, PPM, ASK, PSK, FSK are described in detail. Communication and Navigation systems such as GPS, satellite and mobile telephony systems are introduced.

LEARNING OUTCOMES

At the end of this course, students will be able to develop following learning outcomes:

- This paper aims to describe the concepts of electronics in communication. In this course, students will receive an introduction to the principle, performance and applications of communication systems.
- Students will learn the various means and modes of communication. They will gain an understanding of fundamentals of electronic communication system and electromagnetic communication spectrum with an idea of frequency allocation for radio communication system in India.
- They will gain an insight on the use of different modulation and demodulation techniques used in analog communication
- Students will be able to analyse different parameters of analog communication techniques.
- They will learn the need of sampling and different sampling techniques where they can sample analog signal
- Students will learn the generation and detection of a signal through pulse and digital modulation techniques and multiplexing.
- They will gain an in-depth understanding of different concepts used in a satellite communication system.
- This paper will essentially connect the text book knowledge with the most popular communication technology in real world.

SYLLABUS OF PHYSICS DSC 6

THEORY COMPONENT

Unit – I **(10 Hours)**

Electronic communication: Introduction to communication – means and modes. Power measurements (units of power). Need for modulation. Block diagram of an electronic communication system. Brief idea of frequency allocation for radio communication system in India (TRAI). Electromagnetic communication spectrum, band designations and usage. Channels and base-band signals.

Analog Modulation: Amplitude Modulation: Frequency spectrum of AM waves, average power, average voltage, modulation index, AM-modulator circuits (collector modulation), AM-demodulator (diode detector), single side band generation and detection.

Angle Modulation: Frequency and phase modulation, frequency spectrum of FM waves, intersystem comparisons (FM and AM), FM generation using VCO, FM detector (slope detector)

Unit – II **(5 Hours)**

Analog Pulse Modulation: Channel capacity, Sampling Theorem and Nyquist Criterion, Basic Principles – Pulse Amplitude Modulation (PAM), Pulse Width Modulation (PWM), Pulse Position Modulation (PPM), modulation and detection technique for PAM only, Multiplexing – Time Division Multiplexing (TDM) and Frequency Division Multiplexing (FDM).

Unit – III **(6 Hours)**

Digital Pulse Modulation: Need for digital transmission, Pulse Code Modulation (PCM), Digital Carrier Modulation Techniques, Sampling, Quantization and Encoding. Concept of Amplitude Shift Keying (ASK), Frequency Shift Keying (FSK) and Phase Shift Keying (PSK)

Unit – IV **(6 Hours)**

Satellite Communication: Introduction, Geosynchronous satellite orbits, geostationary satellite advantages of geostationary satellites. Transponders (C - Band), Uplink and downlink, path loss, Satellite visibility, Ground and earth stations. Simplified block diagram of the earth station.

Unit – V **(3 Hours)**

Mobile Telephony System: Basic concept of mobile communication, frequency bands used in mobile communication, the concept of cell sectoring and cell splitting, SIM number, IMEI number, GPS navigation system (qualitative idea only).

2) Communication Systems: Analog and Digital, R. P. Singh and S. D. Sapre, Tata McGraw-Hill.
3) Analog and Digital Communications, H. Hsu, Schaum's Outline Series, Tata McGraw-Hill.
4) Electronic Communications Systems: Fundamentals Through Advanced, Wayne Tomasi, Fifth Edition, Pearson.

5) Communication Systems, S. Haykin, Wiley India

Additional Readings:

1) Electronic Communication, L. Temes and M. Schultz, Schaum's Outline Series, Tata McGraw- Hill.
2) Electronic Communication Systems, G. Kennedy and B. Davis, Tata McGraw-Hill
3) Analog and Digital Communication Systems, M. J. Roden, Prentice Hall of India.

PRACTICAL COMPONENT

(15 Weeks with 4 hours of laboratory session per week)

Every student must perform at least 06 experiments.

1) To study AM – Generation and Detection circuit
2) To study FM – Generation and Detection circuit
3) To study Time Division Multiplexing (TDM)
4) To study Pulse Amplitude Modulation (PAM)
5) To study Pulse Width Modulation (PWM)
6) To study Pulse Position Modulation (PPM)
7) To study Amplitude Shift Keying (ASK)
8) To study Frequency Shift Keying (FSK)
9) To study Phase Shift Keying (PSK)

DISCIPLINE SPECIFIC ELECTIVE COURSE – PHYSICS DSE 1: BIOPHYSICS

Course Title & Code	Credits	Credit distribution of the course			Eligibility Criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical		
Biophysics PHYSICS DSE 1	**4**	**3**	**0**	**1**	Passed 12th Class	NIL

LEARNING OBJECTIVES

This course familiarizes the students with the basic facts and ideas of biology from a quantitative perspective. It shows them how ideas and methods of physics enrich our understanding of biological systems at diverse length and time scales. The course also gives them a flavour of the interface between biology, chemistry, physics and mathematics.

LEARNING OUTCOMES

After completing this course, students will

- Know basic facts about biological systems, including single cells, multicellular organisms and ecosystems from a quantitative perspective.
- Gain familiarity with various biological processes at different length and time scales, including molecular processes, organism level processes and evolution.
- Be able to apply the principles of physics from areas such as mechanics, electricity and magnetism, thermodynamics, statistical mechanics, and dynamical systems to understand certain living processes.
- Get exposure to complexity of life at i) the level of cell, ii) level of multi cellular organism and iii) at macroscopic system – ecosystem and biosphere.
- Gain a systems level perspective on organisms and appreciate how networks of interactions of many components give rise to complex behaviour.
- Perform mathematical and computational modelling of certain aspects of living systems.
- Get exposure to models of evolution.
- Be able to perform experiments demonstrating certain physical processes that occur in living systems.

SYLLABUS OF PHYSICS DSE – 1

THEORY COMPONENT

Unit – I **(4 Hours)**

Overview: The boundary, interior and exterior environment of living cells. Processes: exchange of matter and energy with environment, metabolism, maintenance, reproduction, evolution. Self-replication as a distinct property of biological systems. Time scales and spatial scales.

Unit - II **(12 Hours)**

Molecules of life: Metabolites, proteins and nucleic acids. Their sizes, types and roles in structures and processes. Transport, energy storage, membrane formation, catalysis, replication, transcription, translation, signaling. Typical populations of molecules of various types present in cells, their rates of production and turnover. Energy required to make a bacterial cell. Simplified mathematical models of transcription and translation.

Unit - III **(12 Hours)**

Molecular motion in cells: Random walks and applications to biology: Diffusion; models of macromolecules. Mechanical, entropic and chemical forces: Osmosis, cell assembly, molecular motors, bacterial chemotaxis.

Unit - IV **(12 Hours)**

The complexity of life: At the level of a cell: Intracellular biochemical networks. Dynamics of metabolic networks; the stoichiometric matrix. The implausibility of life based on a simplified probability estimate, and the origin of life problem. At the level of a multicellular organism: Numbers and types of cells in multicellular organisms. Cellular differentiation and development. Brain structure: neurons and neural networks. At the level of an ecosystem and the biosphere: Foodwebs. Feedback cycles and self-sustaining ecosystems. Allometric scaling laws.

Unit - V **(5 Hours)**

Evolution: The mechanism of evolution: variation at the molecular level, selection at the level of the organism. Models of evolution.

PRACTICAL COMPONENT

(15 Weeks with 2 hours of laboratory session per week)

List of experiments

1) Demonstration of diffusion, effect of medium, temperature, molecular weight and size on the rate of diffusion.
2) Demonstration of osmosis in a living system.
3) Demonstration of the relationship between viscosity and density.
4) Demonstration of how microscopic particles travel in air through aerosols.
5) Graphic visualization and demonstrations of 3D structure of biomolecules using in-silico visualization tools.
6) Estimation of serum protein using BSA as the standard. (Optional).

2) Biophysics: Searching for Principles, W. Bialek, Princeton University Press, Princeton USA, 2012

DISCIPLINE SPECIFIC ELECTIVE COURSE – PHYSICS DSE 2: MATHEMATICAL PHYSICS I

Course Title & Code	Credits	Credit distribution of the course			Eligibility Criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical		
MATHEMATICAL PHYSICS I Physics DSE 2	**4**	**3**	**1**	**0**	Passed 12th Class	NIL

LEARNING OBJECTIVES

The emphasis of course is to equip students with the mathematical tools required in solving problem of interest to physicists. The mathematical tools might be building blocks to understand the fundamental computational physics skills and hence enable them to solve a wide range of physics problems. Overall, to help students develop critical skills and knowledge that will prepare them not only for doing fundamental and applied research but also prepare them for a wide variety of careers

LEARNING OUTCOMES

After completing this course, student will be able to,

- Learn the functions more than one variable using the concepts of calculus.
- Solve first order differential equations and apply it to physical problems.
- Represent a periodic function by a sum of harmonics using Fourier series.
- Obtain power series solution of differential equation of 2nd order with variable coefficients using Frobenius mehod.
- Learn beta and gamma functions

SYLLABUS OF PHYSICS DSE 2

THEORY COMPONENT

Unit – I **(18 Hours)**

Calculus of functions of more than one variable: Partial derivatives, chain rule for partial derivatives, exact and inexact differentials. Integrating factor, with simple illustration. Constrained Maximization using Lagrange Multipliers.

Fourier Series: Periodic functions. Orthogonality of sine and cosine functions, Dirichlet Conditions (Statement only). Expansion of periodic functions in a series of sine and cosine functions and determination of Fourier coefficients. Even and odd functions and their Fourier expansions. Application to Summing of Infinite Series.

Unit – II **(12 Hours)**

Frobenius Method and Special Functions: Singular Points of Second Order Linear Differential Equations and their importance. Frobenius method and its applications to differential equations. Legendre Differential Equations and its solution. Properties of Legendre Polynomials: Rodrigues Formula, Orthogonality. Simple recurrence relations.

Unit – III **(15 Hours)**

Some Special Integrals: Beta and Gamma Functions and Relation between them. Expression of Integrals in terms of Gamma Functions.

Partial Differential Equations: Solutions to partial differential equations, using separation of variables: Laplace's Equation in problems of rectangular geometry. Solution of 1D wave equation.

COMMON POOL OF GENERIC ELECTIVES (GE) COURSES

GENERIC ELECTIVE (GE – 4): INTRODUCTION TO ELECTRONICS

Course Title & Code	Credits	Credit distribution of the course			Eligibility Criteria	Pre-requisites
		Lecture	Tutorial	Practical		
INTRODUCTION TO ELECTRONICS GE – 4	4	2	0	2	Passed 12th Class	NIL

LEARNING OBJECTIVES

This paper aims to introduce fundamentals of electronics to students not majoring in physics. Basics of Analog and Digital Electronics are envisioned to be introduced with emphasis on applications of diodes, transistor (BJT), operational amplifier, 555 timer, number systems, basic gates and digital circuits.

LEARNING OUTCOMES

At the end of this course, students will be able to imbibe the following learning outcomes:

- This paper aims to describe the concepts of basic electronics in real-life. In this course, students will receive an introduction to the principle, performance and applications of basic electronic components.
- The students will gain an insight on the existence of analog and digital signals and their necessity. Specifically they would know the difference between active and passive electronic components including filters.
- Students will learn about diodes and its uses in rectification (analog) and switching properties thereof (digital). They will gain an insight into working principle of Photodiodes, Solar Cells, LED and Zener Diode as Voltage Regulator.
- They will gain an understanding of construction and working principle of bipolar junction transistors (BJTs). Specifically, they would understand the fundamentals of amplification.
- Students will be able to seamlessly understand and work on different numbers systems including binary, octal, hexadecimal besides decimal.
- They will learn about the existence of digital gates besides their need in electronic decision making thus laying the foundation for basic artificial intelligence.
- Students will learn the fundamentals of operation amplifier and their regular application including those used to sum, subtract and compare two or more signals.
- They will gain an in-depth understanding of working of Cathode Ray Oscilloscope which effectively acts as an electronic stethoscope for analysis of electronic signal in any laboratory.
- This paper will essentially connect the text book knowledge with the most common electronic components available that influence design of technology in a real world.
- The project component included in the practical section is envisaged to impart much

needed hands-on skill sets to the student. Therein he/she gets an experience in correctly choosing components required to build an electronic circuit, identifying the procurement source (online/offline) besides gaining valuable experience in trouble-shooting

SYLLABUS OF GE - 4

THEORY COMPONENT

Unit – I **(4 Hours)**

Analog and digital signals, Active and passive electronic components, RC integrator and differentiator (use as low pass and high pass filter): Qualitative analysis and frequency response.

Unit – II **(6 Hours)**

I-V characteristics of a diode and it's applications as rectifier (Half and full wave rectifier configurations), Clipper and Clamper circuits (Qualitative Analysis only). Principle and working of Photodiodes, Solar Cells, LED and Zener Diode as Voltage Regulator.

Unit – III **(4 Hours)**

Input and output characteristics of a bipolar junction transistor (BJT) in CB and CE configurations, identifying active, cut-off and saturation regions. Transistor parameters alpha and beta, and relation between them. Application of BJT as a switch and an amplifier in CE configuration (Graphical Analysis)

Unit – IV **(6 Hours)**

Review of basic and Universal Logic Gates, Binary to decimal and Decimal to binary conversion, binary addition and subtraction using 2's complement, Half and Full Adder, Half and Full Subtractor using NAND Gates.

Unit – V **(6 Hours)**

Operational Amplifier (Black Box Approach): Pinout diagram of IC 741; Characteristics of Op-amp (Voltage Gain, offset voltage, slew rate, CMRR, Bandwidth, Input Impedance and Output Impedance). Open loop configuration and its application as a comparator and zero crossing detector. Closed Loop Configuration and its Applications as Inverting and Non-inverting Amplifier (Voltage gain using concept of virtual ground), Summing Amplifier and Subtractor

Unit – VI **(4 Hours)**

Block diagram of CRO, Voltage and frequency measurement. Pin-out diagram of IC 555 and its application as Astable Multivibrator

4) Electronic Principles, A. Malvino, D. J. Bates, 7th Edition, Tata Mc-Graw Hill Education, 2018

5) Electronic Devices and circuit theory, R. L. Boylestad and L. D. Nashelsky, Pearson Learning
6) Digital Principles and Applications, Donald P Leach, Albert Paul Malvino and Goutam Saha, Pearson Education, Tata Mc-Graw Hill.

Additional Readings:

1) Electronic Fundamental and Applications, John D Ryder; PHI Learning
2) Electronic Devices and Circuits, J. Millman and C. C. Halkias, Tata Mc-Graw Hill.

PRACTICAL COMPONENT

(15 Weeks with 4 hours of laboratory session per week)

Every student must perform either "04 Experiments and 01 Project" or "At least six experiments"

1) Voltage and frequency measurement using CRO
2) Study of RC circuits as an Integrator and Differentiator
3) IV characteristics for pn junction diode and Zener diode
4) Study of Zener diode as voltage regulator circuit
5) Study of transistor characteristics in CE configuration
6) Half Adder and Full Adder using NAND gates
7) Half Subtractor and Full Subtractor using NAND gates
8) Design Astable Multivibrator using IC 555
9) Study the Frequency Response of Op Amp in Inverting and Non Inverting configurations.
10) Study of zero crossing detector using Op amp IC 741
11) Addition of two dc voltages using OP Amp in inverting and non-inverting configurations.

GENERIC ELECTIVE (GE – 5): SOLID STATE PHYSICS

Course Title & Code	Credits	Credit distribution of the course			Eligibility Criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical		
SOLID STATE PHYSICS GE – 5	4	3	1	0	Passed 12th Class	NIL

LEARNING OBJECTIVES

This course introduces the basic concepts and principles required to understand the various properties exhibited by condensed matter, especially solids. It enables the students to appreciate how the interesting and wonderful properties exhibited by matter depend upon its atomic and molecular constituents. It also communicates the importance of solid state physics in modern society. Emphasis should be given on the applications and uses of solids.

LEARNING OUTCOMES

On successful completion of the module students should be able to,

- Elucidate the concept of lattice, basis and symmetry in crystals. Learn to appreciate structure and symmetry of solids.
- Understand the elementary lattice dynamics and its influence on the properties of materials.
- Describe the main features of the physics of electrons in solids: origin of energy bands.
- Introduction to dia-, para-, ferri and ferro-magnetic properties of solids and their applications.
- Introduction to dielectric properties exhibited by solids and the concept of polarizability.
- Introduction to superconductivity.

SYLLABUS OF GE - 5

THEORY COMPONENT

UNIT – I **(21 Hours)**

Review of Atomic Structure and bonding in solids: Classification of matter as solid, liquid and gas: salient features and properties, Qualitative discussion on Rutherford Model and Bohr model of atom, qualitative idea about discrete energy levels, wave-mechanical concept of the atom, forces between atoms, Ionic bonding, covalent bonding, metallic bonding, Hydrogen bonding and Van der Waals bonding, Properties of solids exhibiting different bonding.

Crystal structure: Periodicity in crystals: lattice points and space lattice, translational, rotational and reflection symmetry elements, lattice with a basis and crystal structure, unit cells and lattice parameters, Bravais lattices (in 2D and 3D) and crystal systems SC, BCC and FCC lattices, conventional and primitive unit cell, Wigner Seitz unit cell, amorphous and crystalline materials. Planes, Miller Indices, directions, density of atoms in different planes, inter-planar spacing, concept of Reciprocal Lattice, Brillouin zones (2 D lattice)

Atomic Packing and Imperfections in crystals: Packing of spheres in 2D and 3D, hexagonal close packing, packing fraction of SC, FCC, and BCC. Point defects and line defects and their consequences on the crystal properties
X-rays: Their generation and properties, Bragg's law and Laue Condition, single crystal method and powder diffraction method, simple problems related to X-Ray diffraction in SC, BCC, FCC

UNIT – II **(4 Hours)**
Elementary Lattice Dynamics: Lattice vibrations and phonons: linear monoatomic and diatomic chains, acoustic and optical phonons, qualitative description of the phonon spectrum in solids.

UNIT – III **(10 Hours)**
Electrical properties of metals: Free electron theory of metals (Drude model), its success and drawbacks, concept of relaxation time, collision time and mean free path, electrical conductivity, mobility and Ohm's law, thermal conductivity of metals, Wiedemann-Franz-Lorentz law.
Band Theory: The Kronig-Penney model (Qualitative idea), Band Gap, direct and indirect bandgap, concept of effective mass, Hall Effect (Metal and Semiconductor).
Optical properties of solids: (Qualitative) Absorption process, transmission and reflectance in solids. Discussion on photoconductivity, photoluminescence.

UNIT – IV **(3 Hours)**
Magnetic Properties of solids: Dia-, Para-, Ferri- and Ferro- magnetic Materials, definition in terms of susceptibility.Weiss's Theory of FerromagnetismandFerromagnetic Domains (qualitative treatment only),B-H curve, soft and hard material and their applications(discussion only) as cores in generators, transformers and electromagnets, energy lossin Hysteresis curve.

UNIT – V **(4 Hours)**
Dielectric Properties of solids: Dipole moment, polarization,local electric field in solids. Depolarization field, electric susceptibility, various sources of polarizability,piezo-, pyro- and ferroelectric materials and their applications(discussion only) as transducers, pickups, sensors, actuators, delay lines.

UNIT – VI **(3 Hours)**
Superconductivity: (Qualitative treatment only) Experimental Results. Critical Temperature. Critical magnetic field. Meissner effect. Type I and type II Superconductors, applications of superconductors. Discussion on applications in MRI, particle collider, power transmission, magnetic levitation etc.

GENERIC ELECTIVE (GE – 7): BIOLOGICAL PHYSICS

Course Title & Code	Credits	Credit distribution of the course			Eligibility Criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical		
BIOLOGICAL PHYSICS GE – 7	4	3	1	0	Passed 12th Class	NIL

LEARNING OBJECTIVES

This course familiarizes the students with the basic facts and ideas of biology from a quantitative perspective. It shows them how ideas and methods of physics enrich our understanding of biological systems at diverse length and time scales. The course also gives them a flavour of the interface between biology, chemistry, physics and mathematics.

LEARNING OUTCOMES

After completing this course, students will

- Know basic facts about biological systems, including single cells, multicellular organisms and ecosystems from a quantitative perspective.
- Gain familiarity with various biological processes at different length and time scales, including molecular processes, organism level processes and evolution.
- Appreciate how fundamental principles of physics can be applied to gain an understanding of biological systems.
- Get exposure to complexity of life at i) the level of cell, ii) level of multi cellular organism and iii) at macroscopic system – ecosystem and biosphere.
- Gain a systems level perspective on organisms and appreciate how networks of interactions of many components give rise to complex behaviour.
- Perform mathematical modelling of certain aspects of living systems.
- Get exposure to models of evolution.

SYLLABUS OF GE 7

THEORY COMPONENT

Unit – I **(4 Hours)**

Overview: The boundary, interior and exterior environment of living cells. Processes: exchange of matter and energy with environment, metabolism, maintenance, reproduction, evolution. Self-replication as a distinct property of biological systems. Time scales and spatial scales.

Unit - II **(12 Hours)**

Molecules of life: Metabolites, proteins and nucleic acids. Their sizes, types and roles in structures and processes. Transport, energy storage, membrane formation, catalysis, replication, transcription, translation, signaling. Typical populations of molecules of various

types present in cells, their rates of production and turnover. Energy required to make a bacterial cell. Simplified mathematical models of transcription and translation.

Unit - III **(12 Hours)**

Molecular motion in cells: Random walks and applications to biology: Diffusion; models of macromolecules. Molecular motors: Transport along microtubules. Flagellar motion: bacterial chemotaxis.

Unit - IV **(12 Hours)**

The complexity of life: At the level of a cell: Intracellular biochemical networks. Dynamics of metabolic networks; the stoichiometric matrix. The implausibility of life based on a simplified probability estimate, and the origin of life problem. At the level of a multicellular organism: Numbers and types of cells in multicellular organisms. Cellular differentiation and development. Brain structure: neurons and neural networks. At the level of an ecosystem and the biosphere: Foodwebs. Feedback cycles and self-sustaining ecosystems. Allometric scaling laws.

Unit - V **(5 Hours)**

Evolution: The mechanism of evolution: variation at the molecular level, selection at the level of the organism. Models of evolution.

2) Biophysics: Searching for Principles, W. Bialek, Princeton University Press, Princeton USA, 2012

GENERIC ELECTIVE (GE – 8):

NUMERICAL ANALYSIS AND COMPUTATIONAL PHYSICS

Course Title & Code	Credits	Credit distribution of the course			Eligibility Criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical		
NUMERICAL ANALYSIS AND COMPUTATIONAL PHYSICS GE – 8	4	2	0	2	Passed 12th Class	Differential calculus, integration and ordinary differential calculus at the class 12 level.

LEARNING OBJECTIVES

The emphasis of course is to equip students with the mathematical tools required in solving problem of interest to physicists. To expose students to fundamental computational physics skills and hence enable them to solve a wide range of physics problems.

LEARNING OUTCOMES

After completing this course, student will be able to,

- Develop numerical methods to understand errors and solution of Algebraic and Transcendental equations.
- Understand interpolation, least square fitting, Numerical differentiation, Numerical integration and solution of ordinary differential equations.

In the laboratory course, the students will learn to,

- apply appropriate numerical method to solve selected physics problems using user defined and inbuilt functions
- solve non-linear equations
- perform least square fitting of the data taken in physics lab by user defined functions
- Interpolate a data by polynomial approximations
- numerically integrate a function and
- solve first order initial value problems numerically

SYLLABUS OF GE - 8

THEORY COMPONENT

Unit – I **(8 Hours)**

Errors and iterative Methods: Truncation and Round-off Errors. Floating Point Computation, Overflow and underflow. Single and Double Precision Arithmetic, Iterative Methods. Review of Taylor's Theorem and Mean value Theorem (No proofs).

Solutions of Algebraic and Transcendental Equations: Bisection method, Secant Method, Newton Raphson method. Comparison and error estimation

Unit – II **(10 Hours)**

Interpolation: Concept of Interpolation, Lagrange Form of interpolating polynomial, Newton's Forward and Backward Differences, Newton's Forward and Backward Interpolation Formulas.

Regression: Algorithm for Least square fitting of a straight line, Fitting a Power function, and Exponential Function using conversion to linear relation by transforming the variables.

Unit – III **(7 Hours)**

Numerical Differentiation: Approximating the derivative of a function given in the form of discrete data, Numerical Computation of First and second order derivative of a function given in closed form (using Taylor's expansion) , errors in Numerical Differentiation.

Numerical Integration: Newton Cotes Quadrature methods for evaluation of definite integrals numerically, Trapezoidal Rule, Simpson's 1/3 and 3/8 Rules. Derivation of composite formulae for these methods and discussion of error estimation

Unit – IV **(5 Hours)**

Solution of Ordinary Differential Equations: First Order ODE's: solution of Initial Value problems: (1) Euler's Method and (2) Runge Kutta methods

References:

Essential Readings:

1) Elementary Numerical Analysis, K. E. Atkinson, 3rd Edition, Wiley India Edition, 2007
2) Introduction to Numerical Analysis, S. S. Sastry, 5th Edition, PHI Learning Pvt. Ltd, 2012
3) Computational Physics, Darren Walker, 1st Edition, Scientific International Pvt. Ltd, 2015
4) Applied numerical analysis, Cutis F. Gerald and P. O. Wheatley, Pearson Education, 2007

Additional Readings:

1) An Introduction to Computational Physics, T. Pang, Cambridge University Press, 2010
2) Numerical Recipes: The art of scientific computing, William H. Press, Saul A. Teukolsky and William Vetterling, Cambridge University Press, 3rd Edition, 2007
3) Computational Problems for Physics, R. H. Landau and M. J. Páez, CRC Press, 2018

PRACTICAL COMPONENT

(15 Weeks with 4 hours of laboratory session per week)

The aim of this lab is not just to teach computer programming and numerical analysis but to emphasize its role in solving problems in Physics.

- The course will consist of practical sessions and lectures on Python.
- Assessment is to be done not only on the programming but also on the basis of formulating the problem.
- The list of recommended programs is suggestive only. Students should be encouraged to do more physics applications. Emphasis should be given to formulate a physics problem as mathematical one and solve by computational methods.
- At least 6 programs must be attempted (taking at least one from each unit).

Unit I

Basic Elements of Python: The Python interpreter, the print statement, comments, Python as simple calculator, objects and expressions, variables (numeric, character and sequence types) and assignments, mathematical operators. Strings, Lists, Tuples and Dictionaries, type conversions, input statement, list methods. List mutability, formatting in the print statement

Control Structures: Conditional operations, i*f, if-else, if-elif-else, while* and *for* Loops, indentation, break and continue, List comprehension. Simple programs for practice like solving quadratic equations, temperature conversion etc.

Functions: Inbuilt functions, user-defined functions, local and global variables, passing functions, modules, importing modules, math module, making new modules. Writing functions to perform simple operations like finding largest of three numbers, listing prime numbers, etc. Generating pseudo random numbers

Recommended List of Programs

(a) Make a function that takes a number *N* as input and returns the value of factorial of *N*. Use this function to print the number of ways a set of *m* red and *n* blue balls can be arranged.
(b) Generate random numbers (integers and floats) in a given range and calculate area and volume of regular shapes with random dimensions.
(c) Generate data for coordinates of a projectile and plot the trajectory. Determine the range, maximum height and time of flight for a projectile motion.

Unit II

NumPy Fundamentals: Importing *Numpy*, Difference between List and NumPy array, Adding, removing and sorting elements, creating arrays using *ones(), zeros(), random(), arange(), linspace()*. Basic array operations (*sum, max, min, mean, variance*), 2-d arrays, matrix operations, reshaping and transposing arrays, savetxt() and loadtxt().

Plotting with Matplotlib: *matplotlib.pyplot* functions, Plotting of functions given in closed form as well as in the form of discrete data and making histograms.

Recommended List of Programs

(a) Given a function in closed form y=f(x), generate numpy arrays for x and y and plot y as a function of x with appropriate scale and legend.
(b) Generate data for coordinates of a projectile and plot the trajectory.
(c) Given the expressions in closed form, plot the displacement-time and velocity-time graph for the un-damped, under damped critically damped and over damped oscillator.

Unit III

Root Finding

a) Determine the depth up to which a spherical homogeneous object of given radius and density will sink into a fluid of given density.
b) Solve transcendental equations like $\alpha = \tan(\alpha)$.
c) To approximate nth root of a number up to a given number of significant digits.

Unit IV

Least Square fitting

Make function for least square fitting, use it for fitting given data (*x,y*) and estimate the parameters *a, b* as well as uncertainties in the parameters for the following cases:

a) Linear ($y = ax + b$)
b) Power law ($y = ax^b$)

c) Exponential ($y = ae^{bx}$)

Interpolation:

(a) Write program to determine the unique polynomial of a degree *n* that agrees with a given set of (*n*+1) data points (x_i, y_i) and use this polynomial to find the value of *y* at a value of *x* not included in the data.

(b) Generate a tabulated data containing a given number of values (x_i, $f(x_i)$) of a function f(x) and use it to interpolate at a value of x not used in table.

Unit V

Numerical Differentiation

a) Given displacement at equidistant time values, calculate velocity and acceleration and plot them.

b) Compute the left, right and central approximations for derivative of a function given in closed form. Plot both the function and derivative (forward, backward and central derivatives) on the same graph. Plot the error as a function of step size on a log-log graph, study the behaviour of the plot as step size decreases and hence discuss the effect of round off error.

Numerical Integration:

a) Given acceleration at equidistant time values, calculate position and velocity and plot them.

b) Use integral definition of ln(x) to compute and plot ln(x) in a given range. Use trapezoidal and Simpson methods and compare the results.

c) Verify the rate of convergence of the composite Trapezoidal and Simpson methods by approximating the value of a given definite integral.

GENERIC ELECTIVE (GE – 9): APPLIED DYNAMICS

Course Title & Code	Credits	Credit distribution of the course			Eligibility Criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical		
APPLIED DYNAMICS GE – 9	4	3	1	0	Passed 12th Class	NIL

LEARNING OBJECTIVES

This course introduces the main topics of low-dimensional nonlinear systems, with applications to a wide variety of disciplines, including physics, engineering, mathematics, chemistry, and biology. This course begins with the first order dynamical system and the idea of phase space, flows and trajectories and ends with the elementary fluid dynamics. The nature of the subject demands that the tutorials should include only computational problems.

LEARNING OUTCOMES

Upon successful course completion, a student will be able to:

- Demonstrate understanding of the concepts that underlay the study of dynamical systems.
- Learn various forms of dynamics and different routes to chaos.
- Understand basic Physics of fluids and its dynamics

SYLLABUS OF GE 9

THEORY COMPONENT

Unit – I **(22 Hours)**

Introduction to Dynamical systems: Definition of a continuous first order dynamical system. The idea of phase space, flows and trajectories. Concept of stability and un-stability. Simple mechanical systems as first order dynamical systems: simple and damped harmonic oscillator. Fixed points, attractors, stability of fixed points, basin of attraction, notion of qualitative analysis of dynamical systems. Examples of dynamical systems – Population models e.g. exponential growth and decay, logistic growth, predator-prey dynamics.

Unit – II **(16 Hours)**

Introduction to Chaos: Bifurcations: Saddle-Node bifurcation, Transcritical bifurcation, Pitchfork bifurcation and Hopf bifurcation. Chaos in nonlinear equations: Logistic map and Lorenz equations. Sensitivity to initial states. Parameter dependence: steady, periodic and chaotic states. Cobweb iteration. Simple examples from physics, chemistry, engineering and lifesciences.

Unit – III **(7 Hours)**

Elementary Fluid Dynamics: Basic physics of fluids: The continuum hypothesis-concept of

fluid element or fluid parcel; Definition of a fluid- shear stress; Fluid properties- viscosity, thermal conductivity, mass diffusivity and equation of state.

References:

Essential Readings:

1) Nonlinear Dynamics and Chaos, S. H. Strogatz, Westview Press, 2nd Edition, 2014
2) Understanding Nonlinear Dynamics, Daniel Kaplan and Leon Glass, Springer New York, 1995
3) Nonlinear Dynamics: Integrability, Chaos and Patterns, M. Lakshmanan and S. Rajasekar, Springer, 2003
4) An Introduction to Fluid Dynamics, G. K. Batchelor, Cambridge University Press, 2002
5) Fluid Mechanics, 2nd Edition, L. D. Landau and E. M. Lifshitz, Pergamon Press, Oxford, 1987

ANNEXURE-10

Sub: Amendment to Ordinance V

[E.C Resolution No. 60-1/ (60-1-11) dated 03.02.2023]

Following addition be made to Appendix-II-A to the Ordinance V (2-A) of the Ordinances of the University;

Add the following:

Syllabi of Semester-III of Five Year Integrated Programme in Journalism based on Undergraduate Curriculum Framework -2022 under Delhi School of Journalism implemented from the Academic Year 2022-23.

CATEGORY I

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

DISCIPLINE SPECIFIC CORE COURSE – DSC A3: PRINT JOURNALISM & PRODUCTION

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Print Journalism & Production	4	3	0	1	Class XII Pass	NIL

Learning Objectives

The course will help the students to acquire advanced print media skills like editing, design, layout and production.

Learning Outcomes

- After completing the course, students will be able to understand basic concepts around news and news production and write news, feature stories, opinion articles and editorials etc.
- Students will also be able to design and produce a newspaper/magazine.

SYLLABUS OF DSC A3 – Print Media and Production (45 Hours)

Unit 1 – Print Journalism (12 Hours)

1. Introduction to Newspapers (major international, national and regional); Magazine & Magazine types: news, special interest, general, lifestyle; Magazine Formats and unique features that have developed
2. Headlines; importance, functions of headlines, typography and style, language, types of headlines, style sheet
3. Features: writing style, different types of features, special articles, article versus features, news versus features
4. Editorial: Significance, types of editorials, edit page, op-ed, opinion column, writing editorials, caricatures and cartoons, Selection and positioning of news pictures
5. Week-end pull-outs, Supplements, Backgrounders

Unit 2 – Print Production – Basic & Advanced (10 Hours)

1. Kinds of print publications- tabloid, broadsheet
2. Principles of Layout and Design: Layout and format, Typography
3. Copy preparation, Design process (size, anatomy, grid, design)
4. Handling text matter (headlines, pictures, advertisements)
5. Page make-up (Front page, Editorial page and Supplements)

Unit 3 – Specialized Reporting (12 Hours)

1. Parliamentary
2. Court
3. Development
4. International Affairs
5. Science and Technology
6. Elections
7. Rural
8. Sports
9. Business
10. Fashion
11. Entertainment
12. Investigating
13. Emerging Beats

Unit 4 – Trends in Print Journalism (11 Hours)

1. Citizen Journalism

2. Technology Boom & Print Journalism – Various Aspects
3. Editorial policy and ethical debates in print journalism. (Advertorial trend), Paid news, Agenda setting, Pressures in the newsroom, Trial by media, Gatekeepers.

Practical Component (30 Hours)
Production of Newspaper

1. Production of a newspaper
2. Designing/Layout/production of a newspaper: Planning front and inside pages
3. Various writing techniques: headline writing, writing reviews, translating stories from English to Hindi and vice-versa.
4. Opinion/columns
5. Feature
6. Editorial
7. Conducting interviews

Suggested Readings

1. Singh, A.K. (2012). *Sirph Patrakita*. Pragun Publications.
2. Allan, S. (2005). *Journalism: Critical Issues.* Open University Press. New Delhi.
3. Kamath, M.V. (2018). *Professional Journalism*. Vikas Publishing House. New Delhi
4. Nanda, V. (2016). *Tinka Dasna*. Massco Media. Delhi.
5. Sarkar, N.N. (2013). *Art and Production*. Oxford University Press. New Delhi.
6. John, M. (2015). *Editing Today*. Media House. Delhi.
7. Mishra, A. (2017). *Hindi Ke Pramukh Samacharpatra Aur Patrikayen.* Prabhat Publications.
8. Sharma. M. (2018). *Print Media: Kal aur Aaj*. Hindi Book Centre.

DISCIPLINE SPECIFIC CORE COURSE – DSC B3: DESIGN LAYOUT AND SOFTWARE

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Design Layout & Software	4	3	0	1	Class XII Pass	NIL

Learning Objectives

The course will introduce the students to design software – Adobe Photoshop; video editing software – Adobe Premiere Pro and audio recording and editing software.

Learning Outcomes

- After completing this course, students will be able to gain understanding of basic design and lay-out, recording and editing software.
- Through the acquired skills, students will be able to create and produce programs for different media platforms.

SYLLABUS OF DSC B2 – Design Layout & Software (45 Hours)

Unit 1 – Digital Photo Editing- Using Software and Mobile Applications (12 Hours)

1. File formats
2. Image Correction
3. Cropping and Transformations
4. Colour Correction
5. Masking
6. Filters for image manipulation
7. Blending Modes
8. Creating text
9. Combining Multiple Images

Unit 2 – Video Editing- Using Software and Mobile Applications (12 Hours)

1. Importing video, audio and still – images
2. Working with stills and video formats
3. Adding Effects like video transitions, rendering, real time effects etc.

4. Colour correction
5. Exporting video to different mediums and formats

Unit 3 –Audio Editing - Using Software and Mobile Applications (11 Hours)

1. Audio editing and sound effects
2. File types and the need for the various formats
3. Changing audio levels and using audio clip mixer
4. Exporting audio to different mediums and formats

Unit 4 – Graphic Designing- Using latest Tools and Techniques (10 Hours)

1. Learning Design Skills
2. Professional Graphic Design
3. Creating Video and Animation using Graphic

Practical Component (30 Hours)

1. Practice Assignments
2. Exercises
3. Multimedia Projects
4. Tests

Suggested Readings

1. Dayley, B. & Dayley, D. (2012). *Adobe Photoshop CS6 Bible*. Wiley.
2. Jago, M. (2019). *Adobe Premiere Pro CC Classroom in a Book.* Adobe Press.
3. Canva Help Centre for Canva Software.
4. Dewis, G. (2014). *Photoshop Workbook, The: Professional Retouching and Compositing Tips, Tricks, and Techniques.* Peachpit Press.
5. Premiere Pro Tutorials - https://helpx.adobe.com/premiere-pro/tutorials.html
6. McDaniel, D.O., Shriver, R.C. & Collins, K. (2007). *Fundamentals of Audio Production.* Pearson Education.
7. Greenberg, et al. (2007) *Adobe Premiere Pro Studio Techniques (Digital Video & Audio Editing Courses)* (1st Edition). Adobe Press.
8. Frutiger, A. (1998). *Signs and Symbols: Their Design and Meaning.* Watson-Guptill.

DISCIPLINE SPECIFIC CORE COURSE – DSC C3 : INTRODUCTION TO BROADCAST MEDIA

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Introduction to Broadcast Media	**4**	**3**	**0**	**1**	**Class XII Pass**	**NIL**

Learning Objectives

The course will introduce the basics of broadcast media – Radio and Television, and broadcast news production techniques to students.

Learning Outcomes

- After completing this course, students will acquire basic hands-on training in broadcast media which will enable them to create and produce programmes in contemporary broadcast formats.

SYLLABUS OF DSC C3 – Introduction to Broadcast Media (45 Hours)

Unit 1 – Basics of Sound (11 Hours)

1. Concepts and types of Sound
2. Sound Design – its meaning in different mediums
3. Types of Microphones and Patterns
4. Acoustics
5. Podcasting

Unit 2 – Basics of Visual (10 Hours)

1. Images (Analogue & Digital) & Changing Trends
2. Image Editing
3. Basics of Visual Communication
4. Visual Grammar

Unit 3 – Radio (12 Hours)

1. Basics of Radio Programming

2. Radio Content Formats
3. Working in a Radio Studio (Radio Studio Operations and Production Control Room)
4. Radio Production & Transmission Techniques (Acoustics; Input and Output Chain; Studio Console for Recording and Mixing, Talk Back System etc.)

Unit 4 – Television (12 Hours)

1. Basics of a Camera (Lens & accessories); Camera Movements, Types of Shots etc.
2. Common terminologies used in TV media, TV News Scripts
3. Basics of Television Production - Electronic News Gathering (ENG) & Electronic field Production (EFP); Elements of a Television News Story etc.
4. Lighting – Concept of light, Three Point Lighting etc.
5. Basics of Editing for TV- Software and Techniques, 24 Hours news format, News Production cycle, etc.

Practical Component (30 Hours)

1. Radio Capsules
2. TV format style small projects
3. Lighting Techniques
4. Projects and presentations

Suggested Readings

1. Jelkhani, A. & Shah, M. (2017). *Television Karyakram Nirman Prakriya*. Prabhat Prakashan.
2. Chatterji, P.C. (1987). *Broadcasting in India*. Sage Publications.
3. Herbert, Z. (1991). *Television Production Handbook*. Wadsworth Publishing.
4. Yadav, S. (2013). *Prasaran Patrakarita*. Madhya Pradesh Hindi Granth Academy.
5. Pavarala, V. & Malik, K. (2007). *Other voices: the struggle for community radio in India*. Sage Publication. Los Angeles.
6. Barnas, F. & White, T. (2010). *Broadcast News Writing, Reporting, and Producing*. Routledge. New York.
7. Mehra, R. (2007). *Media aur Prasaran*. Takshila Prakashan.
8. Belavadi, V. (2008). *Video Production*. Oxford University Press.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVE – DSE A: MEDIA AND ECONOMICS

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Media & Economics	4	3	1	0	Class XII Pass	NIL

Learning Objectives

The course will introduce students to basic Economic Concepts and Principles, Media Economics and Media Markets.

Learning Outcomes

- After completing this course, students will be able to acquire a comprehensive understanding of the Indian and International economic scenarios which will prepare them for writing and reporting on economic issues.

SYLLABUS OF DSE A – Media & Economics (45 Hours)

Unit 1- Introduction to Economics (11 Hours)

1. Definition of Economics and Economic Systems
2. Theories, Explanations and Applications
3. Economy - Consumer's Behaviour: Demand, Supply and Consumer's Equilibrium
4. Producer's Behaviour: Production Function and Producer's Equilibrium
5. Basic concepts related to Economic Growth and Economic Development: National Income, its accounting procedures, Concept of GDP, Per Capita Income, HDI, and Sustainable Development.

Unit 2 - Indian Economy (10 Hours)

1. Understanding Indian Economy: Key Determinants
2. Taxation System In India – Discussion of GST
3. Union Budget, Economic Survey & its linkages with Civic Lives
4. Fiscal and Monetary Policy

Unit 3 - International Economics (12 Hours)

1. International Trade Agencies

2. Global Cooperations and Economic Institutions
3. Interstate Organisations and Economic Institutions
4. Forex Reserves – Exchange rates and Investments
5. Economic Conflicts, Sanctions and Resolutions

Unit 4 - Understanding Media Economics (12 Hours)

1. Media as an Economic Enterprise: Support – State, Societal and International
2. Media and Financial Independence
3. Media Industry and Change- Technology, Regulation, Globalization and Socio-Cultural Developments

Activities to be conducted under tutorial

1. Case Studies
2. Individual projects to be done on any of the topics related to Media and Economic Development.

Suggested Readings

1. Jhingan, M. L. (2014). *Principles of Economics*. (Hindi Edition). Vrinda Publications
2. Kohli-Khandekar, V. (2017). *Bharatiya Media Vyavsay*. Sage Publications.
3. Albarran, A., Mierzejewska, B., & Jung, J. (Eds.). (2018). *Handbook of Media Management and Economics.* (2nd ed.). Routledge.
4. Alexander, et al. (2003). *Media Economics: Theory and Practice*. (3rd. ed.). Routledge.
5. Case, K.E. & Fair, R.C. & Oster, S.M. (2007). *Principles of Economics*. (8th ed.) Pearson Education.
6. Kaplia, U. (2013). *Indian Economy: Performance and Policies*. (Hindi Edition). (15th ed.) Academic Foundation. New Delhi.
7. Lotz, A. & Havens, T. (2011). *Understanding Media Industries*. Oxford University Press.
8. Lal, S.N. (2020). *Antarashtriya Arthashastra*.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVE – DSE B: MEDIA & INTERNATIONAL RELATIONS

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Media & International Relations	4	3	1	0	Class XII Pass	NIL

Learning Objectives

The course will introduce students to International Relations and is focussed on providing understanding of media's role within international relations and foreign policy.

Learning Outcomes

- After completing this course, students will be able to acquire a general understanding of the crucial role that media plays in international relations and will get trained in writing, reporting and critiquing on issues related to foreign affairs.

SYLLABUS OF DSE B – Media & International Relations (45 Hours)

Unit 1 - Journalism As Soft Power In International Relations (12 Hours)

1. Introduction to International Relations – Key concepts
2. Diplomacy and International Relations – Key Influencers
3. Soft power: Origins and Concepts; Soft power and mass media
4. Media Systems – Global and Indian; Making and Breaking of Narratives

Unit 2 – Media Coverage of Issues In Contemporary Global Politics (11 Hours)

1. Key debates and problems
2. Global Politics – Country specific concerns and relationships
3. Media coverage of contemporary issues (Case Studies)
4. Bilateralism & Multilateralism
5. Culture and Diplomacy

Unit 3 – India and International Politics (11 Hours)

1. India's foreign Policy
2. India and the Sub-continent
3. India and SAARC
4. India and Disarmament: Issues in NPT, CTBT

5. India as a Global Power: Changing Direction of Foreign Policy

Unit 4 - Global Institutions and their functions (11 Hours)

1. Institutions Affecting World Order
2. Political Organisations
3. Financial/Economic Organisations
4. Strategic Organisations
5. Commercial Organisations

Activities to be conducted under tutorial

1) Report Writing
2) Inferencing Case Studies
3) Visit to International Organisations like UN, UNDP etc.
4) Projects

Suggested Readings

1. Singh, U. (2022). *Antarashtriya Sambandh: Vividh Aayam, Muddein aur Chunautiyan.* McGraw Hill.
2. Pant, P. & Pandey, J.K. (2023). *21 vi Shataabdi mei Antarashtriya Sambandh.* McGraw Hill

7. Ganguly, S. & Pardesi, Manjeet S. (2009). *Explaining Sixty Years of India's Foreign Policy*. India Review, 8:1, 4-19, DOI: 10.1080/14736480802665162
8. Saran, S. (2018.) *How India Sees the World: Kautilya to the 21st Century.* Juggernaut.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

A N NEXURE- 11

Sub: Amendment to Ordinance V

[E.C Resolution No. 14-1/ (14-1-3) dated 09.06.2023]

Following addition be made to Appendix-II-A to the Ordinance V (2-A) of the Ordinances of the University;

Add the following:

Syllabi of Semester-III of BA (Vocational Studies) under the College of Vocational Studies based on UGCF-2022 to be implemented from academic year 2022-2023

Category-I

BACHELOR OF ARTS (VS) HUMAN RESOURCE MANAGEMENT

DISCIPLINE SPECIFIC CORE COURSE – 3.1 (DSC-3.1)
Organisational Behaviour

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Organisational Behaviour (DSC- 3.1)	4	3	1	0	12th Pass	Nil

Learning Objective:

The course aims to develop an in-depth understanding of the concept of organisational behaviour and its relevance in modern organisations. It also aims to expand the knowledge about the complexities of human behaviour, competitiveness, and interpersonal group dynamics.

Learning Outcomes:

After completion of the course, learners will be able to:

1. demonstrate the understanding of the basic concepts of organisational behaviour and their applicability in contemporary organisations.
2. examine the various means of managing & motivating people at the workplace.
3. interpret the complex nature of human behaviour and group dynamics.
4. critically evaluate leadership styles and strategies.
5. summarise the ways to build supportive organisational culture.

Unit 1: Introduction **(7 Hours)**

Organisational Behaviour: Concepts and Determinants; Relationship between Management and OB; Emergence of OB; Hawthorne Study; Contributing disciplines of OB; OB models.

Unit 2: Individual Behaviour **(10 Hours)**

Foundations of Individual Behaviour; Personality- Type A/B, Big five personality types, factors influencing personality; Attitude– concept, components, job related attitudes; Learning- concept, theories and reinforcement; Perception and emotions- concept, perceptual process, factors influencing perception, perceptual errors and distortions; Beliefs and values- concept and types: terminal values and instrumental values.

Unit 3: Communication and Motivation **(10 Hours)**

Communication– Understanding Communication; Persuasive communication; Communication styles; Transactional Analysis (TA), Johari Window.

Motivation– Why people work; Intrinsic vs extrinsic motivation; Need theories (Maslow's need hierarchy, ERG Theory, McClelland's Theory); Theory X and Theory Y, Two Factors Theory; Contemporary theories of motivation (Self-Determination Theory, Goal-setting Theory, Reinforcement Theory, Self-efficacy Theory, Vroom's theory, Porter-Lawler ability model, Adam's equity theory, Expectancy theory; Theory of Intrinsic Motivation at Work by Kenneth W. Thomas).

Unit 4: Group Behaviour and Leadership **(9 Hours)**

Formation of Groups; Group Behaviour- concepts, types- group norms, group roles, and group cohesiveness; Groups Vs Teams; Group decision making– process and types; Organisational conflict– nature, sources, and resolution strategies

Leadership- Concept and theories; Styles of leadership; Leadership continuum; Trait, Behavioural and Situational approach; Leadership grid; contemporary developments in leadership- servant leadership, Transformational leadership.

Unit 5: Dynamics of Organisational Behaviour **(9 Hours)**

Organisational culture- concept and determinants; Organisational change- importance, basics of change management process; Stress- individual and organisational factors, prevention and management of stress.

Practical Exercises:

The learners are required to:

1. evaluate personality type as a group activity.
2. role play on TA and Johari Window.
3. identify the innovative ways to manage counter-productive behaviour.
4. conduct a primary survey to study leadership styles.
5. practice five different types of stress management techniques including meditation.

Suggested Readings:

DISCIPLINE SPECIFIC CORE COURSE – 3.2 (DSC-3.2)
Business Laws

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Prerequisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Business Laws **DSC: 3.2**	4	3	1	0	Pass in Class XII	NIL

Learning Objectives:

To impart basic knowledge of the important business laws relevant for the inception and conduct of general and business activities with relevant case laws.

Learning outcomes:

After completion of this course, the learners will be able to:

1. apply the basic aspects of contracts vis-à-vis agreements and subsequently enter into valid business propositions.
2. describe various modes of discharge of contract and remedies available in case of breach.
3. compare and contrast between different type of special contracts.
4. examine the rights and obligations under the Sale of Goods Act.
5. explain the procedure related to Issue of digital signature.

6. demonstrate skills to form and manage entrepreneurial ventures as LLP.

Unit 1: The Indian Contract Act, 1872 **(9 Hours)**

Contract – meaning, characteristics and kinds; Essentials of a valid contract, offer and acceptance, consideration, contractual capacity, free consent, the legality of objects; Void agreements; Quasi–contracts. Modes of discharge of contract

Unit 2: Remedies for Breach and Special Contracts **(9 Hours)**

Breach of contract; Remedies for breach of contract, Contracts of Indemnity and Guarantee; Contracts of Bailment and Pledge; Contract of Agency.

Unit 3: The Sale of Goods Act, 1930 **(9 Hours)**

Contract of sale; Meaning and the difference between a sale and agreement to sell; Conditions and Warranties; Transfer of ownership in goods including sale by non, owners; Performance of the Contract of Sale; Unpaid seller – meaning and rights of an unpaid seller against the goods.

Unit 4: The Information Technology Act 2000 **(9 Hours)**

Definitions under the Act. Digital signature. Electronic governance. Attribution, acknowledgement, and dispatch of electronic records. Regulation of certifying authorities. Digital signatures certificates. Duties of subscribers under the Act. Penalties and adjudication. Offences as per the Act.

Unit 5: The Limited Liability Partnership Act, 2008 **(9 Hours)**

Salient Features and Nature of LLP; Small LLP; Difference between LLP and Partnership, LLP and Company; LLP Agreement; Incorporation Document; Incorporation by registration; Registered office of LLP and change therein; Change and Rectification of the name of LLP; Partners and Designated Partners: Partners and their Relations; Extent and limitation of liability of LLP and partners; Whistleblowing; Conversion into LLP.

Practical Exercises:

The learners will be able to:

1. identify components of valid contracts present in the rent agreement/ sale deed/appointment letters used or seen in day-to-day life.
2. identify and enumerate types of damages in case of breach of contract under different real, life situations.
3. prepare a list of gratuitous and non, gratuitous bailment contracts entered in daily life.
4. analyse some case studies where 'caveat emptor' is applicable.
5. explore the procedure for issue of digital signature.
6. examine RUN form and FiLLip webform from notification on MCA portal and enlist the mandatory fields for LLP.

DISCIPLINE SPECIFIC CORE COURSE – 3.3 (DSC-3.3)
Indian Economic Environment

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Indian Economic Environment (DSC-3.3)	4	3	1	0	12th Pass	Nil

Learning Objectives:

The course aims to familiarise students with the basic framework of Indian economy and the recent developments. It provides understanding about the economic crisis of 1991 and the subsequent reforms that followed. It explains the role of foreign trade, Foreign Direct Investment (FDI) and foreign capital in economic development.

Learning Outcomes:

After completion of the course, learners will be able to:

1. explain the evolution of India's industrial growth experience and describe the relationship between economic growth and development, the idea of sustainability, circular economy and Sustainable Development Goals (SDGs).
2. examine the impact of policy changes in both the agriculture and the industry sector.
3. appraise the economic and social outcomes of policy initiatives in the services sector.
4. critique the role of foreign trade and foreign capital in India's development process.

Unit- 1: Indian Economy: An Overview **(12 Hours)**

A brief introduction to the current structure of the Indian economy: Evolution of Indian economic environment, import substitution to globalisation, the impact of the Covid-19 pandemic on the Indian economy;

Redefining development: changing ideas on growth and development, the idea of human development, the Human Development Index (HDI), the Gender Inequality Index (GII), the Gender Development Index (GDI), understanding the concepts and India's performance on these indicators; the idea of circular economy and Sustainable Development Goals (SDGs) 2030.

Unit 2: Transforming Agriculture - Current Trends and New Areas of Growth (11 Hours)

Role and importance of agriculture: data on poverty, inequality and growth without employment, the high proportion of population engaged in agriculture and the low agricultural productivity- broad trends and the instability in output, concerns of food security and nutritional outcomes, commitments to SDGs.

Issues in agriculture: rural credit and institutional finance, transportation and infrastructure, agricultural marketing, availability of agricultural inputs, technology and water management, soil degradation, rural entrepreneurship, crop insurance, contract farming, etc.

The need for a transformative vision in agriculture: new emerging areas and their impact on ecological management- including sustainable agriculture, alternative farming and organic farming, horticulture and floriculture, multi-layer farming etc.

Unit 3: Industrial Performance - An Appraisal (11 Hours)

Industrial development: post 1991 trends and growth, the new economic policy, public sector reforms and privatisation, the slow growth of the manufacturing sector and the issue of the 'missing middle', the challenges of finance, regulations and labour laws, the role of Micro, Small and Medium Enterprises (MSMEs) and the challenges faced by them.

Unit 4: Foreign Trade, Foreign Capital, Multi-National Corporations (MNCs) and the Services Sector (11 Hours)

Foreign trade and trade policy: post 2000 trends in trade, the concept of global value chains, importance of trading blocks and trade agreements, India's experience, growth and contribution of foreign capital and MNCs.

Growth of the services sector in India: recent trends, growth in the information and communication technology (ICT) & IT enabled services (ITES) sectors, education, health, banking and insurance, etc., impact of digitization and servicification.

Practical Exercises:

The learners are required to:

1. discuss main economic challenges faced in India (Unit1)
2. make a presentation on circular economy and the progress made towards the achievement of the 17 SDGs. (Unit 1)
3. form groups to make case studies on different aspects of India's economic performance (education, migration, employment, industrial production, exports, digital economy, e-commerce, etc.) during Covid-19. (Unit1)
4. make a group presentation on the pros and cons of the recent farm laws. (Unit 2)
5. design a questionnaire about the issues confronting small and medium enterprises for primary data collection from a industry in the vicinity and present analyses in the class. (Unit 3)
6. engage in a group project on different types of services (food delivery provided by restaurant chains/local neighbourhood eateries/home cooked tiffins, streetside fast food, etc. Other service providers such as pest control services, cleaning services, home health aide workers, parlours, gyms, cyber cafes, etc. operating in and around the student's neighbourhood. (Unit 4).

B.A. (VS) SMALL AND MEDIUM ENTERPRISE
SEMESTER III

DISCIPLINE SPECIFIC CORE COURSE - 3.1 (DSC-3.1)
Developing Entrepreneurial Skills

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Developing Entrepreneurial Skills (DSC-3.1)	4	3	1	0	12th Pass	Nil

Learning Objectives: The objectives of the paper are to:

1. understand the importance of entrepreneurship and the role it plays in economic development.
2. acquaint with the entrepreneurial innovation as well as various creative techniques.
3. know the importance of business skills and to understand how to develop a variety of entrepreneurial abilities.
4. familiarize with the various sectors and sub sectors of the economy and identify the business opportunities.
5. explore the management aspects and growth strategies of a business.

Learning Outcomes:

After completion of the course, learners will be able to:

1. describe the role played by entrepreneurs in the development of our economy.
2. apply creative techniques and innovative skills in accordance with the nature of business.
3. develop entrepreneurial skills and become more efficient in managing business.
4. explain the contribution of major sectors to the economy and explore the possibility of setting up new businesses.
5. design strategies for effective management and generate growth for small and medium enterprises.

Unit 1: Introduction **(9 Hours)**

Entrepreneur & Entrepreneurship, Entrepreneurial Culture, Common Characteristics of Entrepreneurs, Entrepreneurial Skills and Competencies, Myths and Realities, Entrepreneurial Values and Attitude, Motivation for Entrepreneurship: Internal Factors and External Factors, Individual Risk Propensity and Ability to Manage Risk, Ethics and Social Responsibilities, Entrepreneurship Development and Economic Growth

Unit 2: Creativity and Innovation Management **(9 Hours)**

Creativity: Nature, Types and Process, Developing Creative Thinking: Convergent Thinking, Divergent Thinking, Techniques of Creative Thinking, Process of Creative Problem Solving, Creative Performance,

Innovation and Entrepreneurship: Drivers of Innovation, Types of Innovations, Phases of Innovation; Risk, Uncertainty and Innovations; Creativity and Innovation difference, Developing Organizational Creativity and Innovation, Innovation Management in India.

Unit 3: Entrepreneurial Skills **(8 Hours)**

Need & Importance of Entrepreneurial Skills, Benefits to Economy & Society, Components of Entrepreneurial Skills: Leadership & Teamwork, Knowledge and Technical skills, Business Management and Personal Entrepreneurial Skills, Time Management and Organizational Skills, Branding, Marketing and Networking Skills, Financial and Analytical Skills.

Unit 4: Enterprise Formation Process **(9 Hours)**

Indian Economy: Sectors and Sub-sectors, Analyzing and Identifying Business Opportunities, Preparation of Business Plan, Start-ups and Basic Start-ups Problems, Market Demand Analysis, Project Feasibility Study, Sources of Financing, Business Start-ups; Cases of Indian Start-ups, Make in India Initiative.

Unit 5: Managerial Aspects and Growth of Business **(10 Hours)**

Managing Finance- Preparation of Operating/Cost Budget, Cash Budget; Understanding Management of Short Term and Long-term Capital; Human Resource Planning; Contract Management; Understanding Marketing Methods; Understanding of GST and Other Tax Compliances, Enterprise Life Cycle and Business Growth Strategies for Small and Medium Enterprises; Business Collaboration and Outsourcing of Resources; Network Management

Practical Exercises:

The learners are required to:

1. analyze the contribution of entrepreneurs to economic development. (Unit 1)
2. critically evaluate the various creative techniques of entrepreneurship in accordance with the nature of business. (Unit 2)
3. evaluate the different entrepreneurial skills and explain how these skills are contributing to the growth of various Indian enterprises. (Unit 3)
4. analyze the various sectors and sub sectors of the Indian economy and explore the possibility of setting up a new business. (Unit 4)
5. identify financial tools for business growth and design strategies for effective management using online simulation platform. (Unit 5)

Suggested Readings:

DISCIPLINE SPECIFIC CORE COURSE - 3.2 (DSC-3.2)
Financial Accounting for MSMEs

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Financial Accounting for MSMEs (DSC-3.2)	**4**	**2**	**1**	**1**	**12th Pass**	**Nil**

Learning objectives:

The course aims to help learners to acquire conceptual knowledge of financial accounting, to impart skills for recording various kinds of business transactions and to prepare and analyse the financial statements.

Learning Outcomes:

After completion of the course, learners will be able to:

1. examine the generally accepted accounting principles while recording transactions and preparing financial statements.
2. evaluate the impact of depreciation and inventories on business income.
3. analyse the financial statements of sole proprietor firms and partnerships
4. prepare the cash flow statement and analyse it by applying ratios.
5. demonstrate the accounting process under a computerized accounting system.

Unit 1: Introduction to Accounting **(8 Hours)**

Financial Accounting: Nature, scope and limitations. Generally Accepted Accounting Principles (GAAP). Basic Concepts and Conventions, Accounting Standards: Meaning, Significance. IFRS and IndAS. Accounting Process: From recording of transactions to preparation of final accounts. Rectification of errors.

Bank Reconciliation statement

Unit 2: Valuation of Inventory and Depreciation accounting: (9 Hours)

(a) Valuation of Inventory. Impact of inventory valuation on measurement of business income by using FIFO, LIFO, and Weighted Average Method.

(b) Depreciation Accounting: Meaning of depreciation. Causes and need for providing depreciation. Accounting treatment including provision for depreciation accounting. Straight line method and diminishing balance method of charging deprecation.

Unit 3: Financial Statements of Sole Proprietorship and Partnership firms: (9 Hours)

(a) Preparation of Financial Statements of Sole Proprietorship

(b) Admission, Retirement, Dissolution of Partnership Firms: Legal Position, Accounting for simple dissolution.

Unit 4: Managerial decision making (7 Hours)

Analysis of financial statements, Common size balance sheet, Ratio analysis, Cash Flow statement.

Unit 5: Computerized Accounting Systems: (12 hours)

Computerized Accounting Systems: Computerized Accounts by using any popular accounting software Creating a Company; Configure and Features settings; Creating Accounting Ledgers and Groups; Creating Stock Items and Groups; Vouchers Entry including GST; Generating Reports - Cash Book, Ledger Accounts, Trial Balance, Profit and Loss Account, Balance Sheet, Cash Flow Statement. Selecting and shutting a Company; Backup and Restore data of a Company.

Notes:

(1) The relevant Accounting Standards for all of the above topics should be covered.

(2) Any revision of the relevant Indian Accounting Standard/Accounting Standard would become applicable.

Practical Exercises:

The learners are required to:

1. collect and examine the balance sheets of business organisations to study how these are prepared. (Unit 1)
2. examine the inventory valuation methods of few selected companies and also examine how these selected companies have charged depreciation on various assets. (Unit 2)
3. prepare Trading and Profit & Loss Account and Balance Sheet collecting necessary data from small business firms. (Unit 3)
4. prepare the cash flow statements and analyse the accounting ratios of small business firms. (Unit 4)
5. prepare financial statements manually and using appropriate software. (Unit 5)

B.A (VS) MATERIALS MANAGEMENT

SEMESTER – III

DISCIPLINE SPECIFIC CORE COURSE – 3.1 (DSC-3.1)
Warehouse Management and Inventory Control

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE, REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Warehouse Management and Inventory Control DSC: 3.1	4	3	1	0	Pass in Class XII	NIL

Learning Objectives:
To understand the concepts of warehouse management and inventory control, students will get a basic idea about warehousing and inventory management techniques. It will help them in understanding the need for warehouse management systems and measures of Material handling systems.

Learning Outcomes:
After completion of this course, the learners will be able to:

1. recognize the need for warehousing in today's competitive environment and how supply chain trends are impacting the design and operation of warehouses.
2. identify different types of material handling equipment and their characteristics and use a material handling equipment checklist to select the most suitable equipment for a given warehouse operation.
3. develop strategies for improving receiving and issuing material operations, including the use of barcoding and RFID technologies, the use of automation, and the optimization of picking and replenishment operations.
4. identify the functions of inventory and the different types of inventories, including WIP, finished goods, and MRO.
5. evaluate the applications of barcoding technology in material handling systems, including the benefits of real-time data collection, accuracy, and efficiency.

Unit 1: Introduction to Warehousing **(10 Hours)**

Warehouse: definition, warehouseman, depositor. Warehouse functions, warehouse process, types of warehouses: public and private warehouses, warehousing corporations-central and state warehouses, role of warehousing in an economy, Supply chain trends affecting warehousing, Problems and challenges in warehousing, characteristics of ideal warehouse, warehousing for online businesses. Recent trends in warehousing: Cloud-based operations management, Technology for omnichannel logistics, Simulation to anticipate needs, Logistics decisions based on big data, Robotics and Drones in warehousing.

Unit 2: Warehouse Management Systems **(9 Hours)**

Warehouse management systems, the necessity of WMS, warehouse location, Logics of determining locations and sequences, independent demand systems, uncertainties in material management systems, dependent demand systems, distribution resource planning. The layout of the warehouse, Size and shape of the warehouse, Storage utilization and organization, Types of storage systems, fixed versus random location, Material handling equipment, Material handling equipment checklist, Improving the receiving/issuing material operations, choosing a WMS-the process implementation-cloud computing, Warehouse Layout-Data collection-space calculation-aisle width- finding additional space.

Unit3: Warehouse and Its Operations **(9 Hours)**

The principles and performance measures of material handling systems –Vehicle travel path (time) – Handling time –vehicle utilization –number of loads completed –congestion –Effective performance systems, Importance of Warehouse Information, Decision Making Using Warehouse Information, ICT Applications in a Warehouse, Fundamentals of various types of material handling systems –automated storage and retrieval systems Bar Code Scanners, Wireless LAN, Mobile Computers, Bar coding technology and applications RFID technology. Warehouse automation.

Unit4: Inventory Management in Warehouse **(9 Hours)**

Introduction to inventory management, role in the supply chain, role in competitive strategy: Role of inventory, functions of inventory, types of inventories, WIP inventory, finished goods inventory, MRO (maintenance, repair, and operations) inventories, cost of inventories, need to hold inventory. Warehousing and inventory costs, Customer service in warehousing, locating inventory, organizing inventory, Dispatching inventory, Methods of inventory control: ABC Inventory control, managing inventories by ABC, FSN, EOQ, Batch tracking, multi –echelon inventory systems Managing inventory in multi echelon networks –managing inventory in single echelon networks.

Unit 5: Material Handling and Warehouse Safety **(9 Hours)**

Material Handling and Warehouse Safety: Material handling, Product movement-concept-costs-product load activity, dispatch activity unload, activity-control device-impact of computer technology-automatic identification-issues and trends in product transport, Packaging, Pallet, Stretch wraps, Cartons, Labelling, Health.

Practical Exercises:

The learners are required to:

1. identify the issues affecting warehousing and warehousing facilities by visiting to some warehouse.
2. prepare a report on the inventory management of any given company.
3. suggest the solutions to various uncertainties in material management systems in any warehouse
4. prepare the report on the multi –echelon inventory systems of any company.
5. apply the material handling systems for any company of your choice
6. to prepare report as a warehouse manager for a retail company that sells clothing and accessories online which want to set up a new warehouse facility for the company.

DISCIPLINE SPECIFIC CORE COURSE – 3.1 (DSC-3.1)
DSC 3.2: BUSINESS LAWS

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE, REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Prerequisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
BUSINESS LAWS **DSC: 3.2**	4	3	1	0	Pass in Class XII	NIL

Learning Objectives:
To impart basic knowledge of the important business laws relevant for the inception and conduct of general and business activities with relevant case laws.

Learning outcomes:
After completion of this course, the learners will be able to:

1. apply the basic aspects of contracts vis-à-vis agreements and subsequently enter into valid business propositions.
2. describe various modes of discharge of contract and remedies available in case of breach.
3. compare and contrast between different type of special contracts.
4. examine the rights and obligations under the Sale of Goods Act.
5. explain the procedure related to Issue of digital signature.
6. demonstrate skills to form and manage entrepreneurial ventures as LLP.

Unit 1: The Indian Contract Act, 1872 **(9 Hours)**
Contract – meaning, characteristics and kinds; Essentials of a valid contract, offer and acceptance, consideration, contractual capacity, free consent, the legality of objects; Void agreements; Quasi–contracts. Modes of discharge of contract

Unit 2: Remedies for Breach and Special Contracts **(9 Hours)**
Breach of contract; Remedies for breach of contract, Contracts of Indemnity and Guarantee; Contracts of Bailment and Pledge; Contract of Agency.

Unit 3: The Sale of Goods Act, 1930 **(9 Hours)**
Contract of sale; Meaning and the difference between a sale and agreement to sell; Conditions and Warranties; Transfer of ownership in goods including sale by non, owners; Performance of the Contract of Sale; Unpaid seller – meaning and rights of an unpaid seller against the goods.

Unit 4: The Information Technology Act 2000 **(9 Hours)**

Definitions under the Act. Digital signature. Electronic governance. Attribution, acknowledgement, and dispatch of electronic records. Regulation of certifying authorities. Digital signatures certificates. Duties of subscribers under the Act. Penalties and adjudication. Offences as per the Act.

Unit 5: The Limited Liability Partnership Act, 2008 **(9 Hours)**

Salient Features and Nature of LLP; Small LLP; Difference between LLP and Partnership, LLP and Company; LLP Agreement; Incorporation Document; Incorporation by registration; Registered office of LLP and change therein; Change and Rectification of the name of LLP; Partners and Designated Partners: Partners and their Relations; Extent and limitation of liability of LLP and partners; Whistleblowing; Conversion into LLP.

Practical Exercises

After completion of this course, the learners will be able to:

1. identify components of valid contracts present in the rent agreement/ sale deed/appointment letters used or seen in day-to-day life.
2. identify and enumerate types of damages in case of breach of contract under different real, life situations.
3. prepare a list of gratuitous and non, gratuitous bailment contracts entered in daily life.
4. analyse some case studies where 'caveat emptor' is applicable.
5. explore the procedure for issue of digital signature.
6. examine RUN form and FiLLip webform from notification on MCA portal and enlist the mandatory fields for LLP.

DISCIPLINE SPECIFIC CORE COURSE – 3.1 (DSC-3.1)
Indian Economic Environment

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE, REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Prerequisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Indian Economic Environment DSC – 3.3	4	3	1	0	Pass in Class XII	NIL

Learning Objectives:

The course aims to familiarise students with the basic framework of Indian economy and the recent developments. It provides understanding about the economic crisis of 1991 and the subsequent reforms that followed. It explains the role of foreign trade, Foreign Direct Investment (FDI) and foreign capital in economic development.

Learning Outcomes:

After completion of the course, learners will be able to:

1. explain the evolution of India's industrial growth experience and describe the relationship between economic growth and development, the idea of sustainability, circular economy and Sustainable Development Goals (SDGs).
2. examine the impact of policy changes in both the agriculture and the industry sector.
3. appraise the economic and social outcomes of policy initiatives in the services sector.
4. critique the role of foreign trade and foreign capital in India's development process.

Unit- 1: Indian Economy: An Overview (12 Hours)

A brief introduction to the current structure of the Indian economy: Evolution of Indian economic environment, import substitution to globalisation, the impact of the Covid-19 pandemic on the Indian economy;

Redefining development: changing ideas on growth and development, the idea of human development, the Human Development Index (HDI), the Gender Inequality Index (GII), the Gender Development Index (GDI), understanding the concepts and India's performance on these indicators; the idea of circular economy and Sustainable Development Goals (SDGs) 2030.

Unit 2: Transforming Agriculture - Current Trends and New Areas of Growth (11 Hours)

Role and importance of agriculture: data on poverty, inequality and growth without employment, the high proportion of population engaged in agriculture and the low agricultural productivity- broad trends and the instability in output, concerns of food security and nutritional outcomes, commitments to SDGs.

Issues in agriculture: rural credit and institutional finance, transportation and infrastructure, agricultural marketing, availability of agricultural inputs, technology and water management, soil degradation, rural entrepreneurship, crop insurance, contract farming, etc.
The need for a transformative vision in agriculture: new emerging areas and their impact on ecological management- including sustainable agriculture, alternative farming and organic farming, horticulture and floriculture, multi-layer farming etc.

Unit 3: Industrial Performance - An Appraisal (11 Hours)
Industrial development: post 1991 trends and growth, the new economic policy, public sector reforms and privatisation, the slow growth of the manufacturing sector and the issue of the 'missing middle', the challenges of finance, regulations and labour laws, the role of Micro, Small and Medium Enterprises (MSMEs) and the challenges faced by them.

Unit 4: Foreign Trade, Foreign Capital, Multi-National Corporations (MNCs) and the Services Sector (11 Hours)
Foreign trade and trade policy: post 2000 trends in trade, the concept of global value chains, importance of trading blocks and trade agreements, India's experience, growth and contribution of foreign capital and MNCs.
Growth of the services sector in India: recent trends, growth in the information and communication technology (ICT) & IT enabled services (ITES) sectors, education, health, banking and insurance, etc., impact of digitization and servicification.

Practical Exercises:
The learners are required to:

1. discuss main economic challenges faced in India (Unit1)
2. make a presentation on circular economy and the progress made towards the achievement of the 17 SDGs. (Unit 1)
3. form groups to make case studies on different aspects of India's economic performance (education, migration, employment, industrial production, exports, digital economy, e-commerce, etc.) during Covid-19. (Unit1)
4. make a group presentation on the pros and cons of the recent farm laws. (Unit 2)
5. design a questionnaire about the issues confronting small and medium enterprises for primary data collection from a industry in the vicinity and present analyses in the class. (Unit 3)
6. engage in a group project on different types of services (food delivery provided by restaurant chains/local neighbourhood eateries/home cooked tiffins, streetside fast food, etc. Other service providers such as pest control services, cleaning services, home health aide workers, parlours, gyms, cyber cafes, etc. operating in and around the student's neighbourhood. (Unit 4).

BACHELOR OF ARTS (VS) MODERN OFFICE MANAGEMENT

SEMESTER- III

DISCIPLINE SPECIFIC CORE COURSE - 3.1 (DSC-3.1)
Basic Phonography -II

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Basic Phonography -II (DSC-3.1)	4	3	0	1	12th Pass	Nil

Learning Objective:
The course aims to provide advanced knowledge to students with regard to the art of taking notes quickly and accurately by applying the principles of phonography as developed by Sir Isaac Pitman. Learners would be able to take notes in shorthand and transcribe the same into English and thus carry out the office and secretarial work smoothly.

Learning Outcomes:
After completion of the course, the learners will be able to:

1. demonstrate the principles of Shorthand.
2. apply the rules of Aspirate, Upward and downward forms of Consonant 'R', 'L' & 'SH' and Compound Consonants.
3. use the basic rules of Halving and Doubling Principles.
4. interpret the distinction between half-length and double-lengths of consonants.
5. practice words and sentences of Prefixes, Suffixes, Contractions and Figures.
6. transcribe passages from Shorthand to English and vice-versa.

Unit 1: The Aspirate **(10 Hours)**
Tick 'H', Dot 'H', additional rules for upward and downward forms of Consonant 'R', upward and downward forms of consonant 'L' and upward and downward forms of Consonant 'SH'. Compound Consonants: Initial 'W' and 'WH', strokes 'L' and 'R' thickened, addition of 'P' or 'B' to stroke 'M', aspirated 'W', vowel preceding 'W', stroke 'L' after 'KW', use of 'RER' and 'LER' signs, vowel after final 'R' and hooked form of 'MP.'

Unit 2: Halving Principle **(10 Hours)**
Vocalizing of half-length forms, halving for 'T' or 'D', circles following half-length forms, half-length 'H', exceptions to the use of Halving Principle and position of half-length forms. Halving and thickening of Strokes 'M', 'N', 'L' and 'R'. The signs for 'RT' and 'LT', joining of strokes of unequal length, use of Halving Principle for past tense words, use of Halving Principle in Phraseography.

Unit 3: Doubling Principle **(12 Hours)**

The general rule for doubling, doubling of straight and curved strokes, strokes 'MP' and 'MB', alternative forms of 'MPR'/'MBR', Stroke 'NG', alternative forms of 'NG-KR' and 'NG-GR', doubling of Stroke 'L', circle 'S' and double-length strokes, exceptions to the use of Doubling Principle, position of double-length strokes and use of Doubling Principle in Phraseography.

Unit 4: Diphones **(13 Hours)**

Use of Diphones. Medial semi-circle, left semi-circle and right semi-circle. Prefixes: Initial Com or Con, medial Com., Accom or Accommo, Intro, Megna/magne, Trans, Self, Self-con or Self-com, 'In' before 'Str', 'Skr' and 'H', Negative words and use of Logograms in Prefixes. Suffixes and Terminations: Dot 'Ing', Ality etc., Logical/Logically, Ment, Mental-ly-ity, Ship, Fullness, Ward, Wart, Wort, Yard and compound words. Contractions: Omission of consonants such as 'N', 'R', 'Etc', 'Kt' before 'Ive' and 'K' before 'Shun' in forming Contractions. Figures: Numerals in Shorthand, round numbers and monetary units.

Practical Exercises:

The learners are required to:

1. the principles of shorthand and undertake repeated practice of words and sentences of Aspirate, upward and downward forms of 'R', 'L' and 'SH' and Compound Consonants.
2. the rules of Halving and Doubling Principles.
3. the rules of Diphones, Medial Semi-circle, Prefixes, Suffixes, Contractions and Figures.
4. the transcription of passages from Shorthand to English and vice-versa.

Suggested Readings:

- Pitman, Sir Isaac. (1975). *Pitman Shorthand Instructor- Old Course Book.* Indian Reprint, A. H. Wheeler Publishing Co. Ltd., New Delhi
- Ajyar, K.S. (1981.) *Reporter's Phrase Book"*, A.H. Wheeler Publications. (India)
- Bhatia, R.C. (2002). "Principles of Shorthand Theory", G. Lal & Co. (India)
- Hynes, James (2020). *The Practical Phraser,* A.H. Wheeler Publications. (India)

- Pitman, Sir Issac. (2003). *"Pitman Shorthand Instructor and Key",* Pearson Education. (India)
- Thorpe, E. & Kuthiala, O.P. (2020). *You too can write 200 wpm and above*. Pitman SS Publication. (India)

Notes:

1. **Suggested Readings will be updated and uploaded on college website from time to time.**
2. **Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.**

DISCIPLINE SPECIFIC CORE COURSE - 3.2 (DSC-3.2)
Computer Applications in Business –II

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Computer Applications in Business –II (DSC-3.2)	4	1	0	3	12th Pass	Nil

Learning Objective:
To provide the learners with the understanding about the role of computer networks, internet and database in management of information system and equip them with computational skills using spreadsheets applications.

Learning Outcomes:
After completion of the course, learners will be able to:
1. explain the different concepts related to networking, internet and communication.
2. describe the use of recent ICT developments in office/business.
3. demonstrate the use of different terms used in database management system.
4. create interactive databases using a popular software and describe its applications in a business unit/office.
5. explain and use various spreadsheet functions for making business computations.

Unit 1: Networking, Internet and Communication **(3 Hours)**
Networking-Concept, Networking terminologies: NIC, repeaters, hub, bridge, switch, gateways, and router. Wired vs Wireless networking, issues related with wireless networking, Wireless LAN. Peer-to-peer and client server networking architecture; Internet, intranet, and extranet; Internet Architecture; Managing the Internet; Internet Services; securing the networks from cyber threats.
Data Transmission Media, Guided Media: Twisted pair, Coaxial cable, Optical fibre. Unguided media: Microwave, Radio frequency propagation, Satellite, Transmission Modes, Transmission speed, Modulation and Switching, Circuit Switching and Packet Switching.
Various email app. and their features, setting up Email accounts, Composing Messages, Replying, Using Files and Folders, Setting Individual Emails, E-mail filtering, Creating E-mail rule, Managing Rules, Adding Contacts, Sending E-mail to group, Mail-Merge with Contacts, Setting Contact Options, Using the Calendar, Working with Appointments, creating tasks, Working with Assigned Tasks, Viewing Tasks.

Unit 2: Recent trends in computing **(3 Hours)**
Business collaborations: meaning, advantages and tools of business collaboration - emails, wikis, file sharing, screen sharing, web presenting, work scheduling; Cloud computing: meaning and types of cloud services: IaaS, PaaS, SaaS; Grid Computing; Virtualization; Green Computing; E-Commerce: meaning, business models, Electronic Data Interchange (EDI), Payment Gateways; Internet of Things (IoT)

Unit 3: Introduction to Database Management System **(3 Hours)**

Database: Introduction to database, Difference between Traditional File System and Database Management System, Characteristics of Database, Entity Relationship Model (ER-Model); Database Model- Relational, Network and Hierarchical, Components of Database System, Concept of Keys, Fundamental Integrity Rules; ERD to Relational Mapping, Normalization of databases up to 3 Normal Forms.

Unit 4: Creating databases using DBMS software **(3 Hours)**

DBMS Software: Environment; Tables; Forms; Queries; Reports; Modules; Applying DBMS in managing the data records of Employees, Suppliers and Customers.

SQL and Retrieval of Information: Basic Queries in SQL.

Unit 5: Spreadsheet Applications **(3 Hours)**

EMI calculation and Loan repayment schedule; Ratio Analysis; Break-even analysis; What-if-analysis- Goal seek, Data table and scenario managers; Payroll statements; Graphical representation of sales, stock price and return data; Frequency distribution and simple statistical calculations; Analysing sales performance of representatives, forecasting sales, volumes and costs. etc.

Practical Exercises:

The learners are required to:

1. practical exercise from unit 4 & 5.

Suggestive Readings:

- Silberschatz, A., Korth, H. & Sudarshan, S. (2009)". *Database system concepts"*. McGraw Hill International. (6th ed).
- Balagurusamy, E. (2009). "*Fundamentals of Computers*", Mc Graw Hill Publications, New Delhi. (1st ed.)

BACHELOR OF ARTS (VS) TOURISM MANAGEMENT

SEMESTER III

DISCIPLINE SPECIFIC CORE COURSE – 3.1 (DSC-3.1)
Tourism Marketing

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course Title & Code	credits	Components of the course			Eligibility criteria	Pre-requisites of the course
		Lecture	Tutorial	Practical		
Tourism Marketing (DSC-3.1)	4	3	1	0	Pass in class XII	Nil

Learning Objectives:

The aim of this course is to give the students a wide knowledge of the existing and emerging trends in the field of tourism marketing. The module includes the operation techniques of tourism marketing. It enables basic knowledge of marketing principles, study to suitability of alternative promotional approaches and to formulate marketing plans for tourism industry.

Learning Outcomes:

After completing this course, the learners would be able to:

1. develop the basic understanding of the concepts of marketing like needs, wants, demands, market and marketing, customer value and satisfaction. Analyze the concept of market segmentation and evaluate its bases. Examine the implications of destination life cycle in tourism management.
2. differentiate the steps involved in conducting marketing research, analyze the various research methods and designs, research problem areas, and identify the need for market research in tourism industry. Examine the unique features of tourism demand and Tourism product.
3. investigate the ingredients of marketing mix including its expanded versions. Evaluate the pricing methods - the factor influencing the pricing decision, pricing objectives and pricing policies.
4. formulate the concept of destination planning and diversification; destination marketing. Appraise the marketing in new digital age - E - Business, E-Commerce and E-Marketing

Unit 1: Core concepts in tourism marketing **(10 hours)**

Needs, Wants and Demands, Products, Customer value and satisfaction, Quality, Exchange and transactions, Markets and marketing, Segmentation of tourism market- Concept, Justification, Importance and Bases. Tourism life cycle, Future of tourism marketing – Artificial intelligence, Robots, Chatbots, Augmented reality (AR), Virtual reality (VR).

Unit 2: Market research **(10 hours)**

Market research process and methods, Research problem areas, Marketing research in the tourism industry, unique features of tourism demand and Tourism product, Tourism product promotion: Advertising, Public relations, Sales promotion and Personal selling.

Unit 3: Tourism marketing mix & pricing **(11 hours)**

Tourism marketing mix- 8 Ps, Methods of pricing, Factors influencing the pricing decisions, Pricing objectives, Pricing policies, Service characteristics of tourism, Branding and Packaging, Conditions that support branding.

Unit 4: Destination planning & marketing **(14 hours)**

Destination planning and Product diversification, Destination marketing, Strategy for destination management planning and marketing in the new digital age (E-business, E-Commerce and E-marketing) and Complementary marketing, Destination branding, Role of media in promotion of tourism, T.V. / Radio, Newspaper, Travel magazines, Documentaries, Guide books, Travel writers, Travelogues of Shri Rahul Sankrityayan.

Practical Exercises

DISCIPLINE SPECIFIC CORE COURSE – 3.2 (DSC-3.2)
Impacts of Tourism

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course Title & Code	credits	Components of the course			Eligibility criteria	Pre-requisites of the course
		Lecture	Tutorial	Practical		
Impacts of Tourism (DSC- 3.2)	4	3	1	0	Pass in class XII	NIL

Learning Objectives:
The objective is to familiarize students with each distinct impact category while emphasizing both adverse and advantageous effects. This course focuses on the negative effects that uncontrolled tourism can have on the local community. Students' knowledge of environmental preservation will grow as a result, and they will gain insight into how tourism may support the preservation of both culture and the environment.

Learning Outcomes:
After completing this course, the learners would be able to:

1. examine socio-cultural impacts of tourism. Appraise the role of tourism in preserving social values and culture.
2. evaluate the relationship between tourism and the environment. State environment impact assessment process and environmental protection act.
3. argue about the economic impacts of tourism at the local destination. Relate tourism with employment generation and value the concept of tourism multiplier effect.
4. compare positive and negative political impacts of tourism. Examine government roles in destination growth.

Unit 1: Socio-cultural impacts of tourism **(12 hours)**
The nature of socio-cultural impact of tourism, the tourism development process, the psychological basis of tourism development, the sociological basis of development of tourism, some specific socio-cultural impacts of tourism, positive and negative socio-cultural impact of tourism.

Unit 2: Environmental impacts of tourism **(12 hours)**
Environmental impact, Environmental impact assessment, environmental auditing, environment impact assessment process, Environmental protection act, Positive impacts of tourism on the environment.

Unit 3: Economic impacts of tourism **(10 hours)**
The generation of economic impact by tourist spending, Direct, indirect and induced economic effects, The multiplier concept, Types of multipliers, Calculation of multiplier effect, Balance of Payments in the tourism sector. Impact of G-20 presidency in the growth of India's tourism.

Unit 4: Political impacts of tourism **(11 hours)**
Positive and negative tourism impacts, Tourism as a political tool, impact assessment of government policies related to tourism, Role of political stability in the growth of tourism. Role of

political leadership in trade blocks like SAARC, BRICS, SCO, G20 on the growth of tourism sector.

Practical Exercises

The learners are required to:

1. conduct a case study on socio-cultural impacts of tourism on a chosen city/ historical site of Bharat.
2. evaluate the need for environmental impact assessment in the field of tourism industry with focused group discussion.
3. assess the understanding of economic impacts by objective and subjective assessment (Class test, assignments, MCQs, Fill in the blanks and quiz).
4. analyze the importance of tourism as a political tool. Group discussion on the impacts of tourism performances and government efficiency on the destination growth.
5. prepare and present a case study on the impact of Presidency of G 20 on the growth of tourism in Bharat.

DISCIPLINE SPECIFIC CORE COURSE – 3.3 (DSC-3.3)
Historical Tourism: Archaeology, Art and Architecture

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (If any)
		Lecture	Tutorial	Practical/ Practice		
Historical Tourism: Archaeology, Art and Architecture (DSC- 3.3)	**4**	**3**	**1**	**0**	**Pass in class XII**	**NIL**

Learning Objectives:
This paper aims at introducing students of Tourism Management in Vocational Studies to Archaeology, Art and Architecture from an interdisciplinary perspective. It will help the students of Tourism to understand the importance and significance of these elements for the development and promotion of Historical Tourism. It will enable them to cultivate sharp observation and problem-solving skill sets which are essential prerequisites for any profession they chose to adopt.

Learning Outcomes:
After completion of the course, learners will be able to:

1. student will understand the evolution Tourism industry through the historical approach of archaeology.
2. will learn how to understand, assess and evaluate interconnection between art and tourism.
3. learners will become aware of role architecture as a form of tangible heritage in promotion and development of tourism.
4. the student will also come to know the role of Govt. & Private institutions in heritage management and tourism industry.

Unit 1: Archaeology and its role in the development of Tourism **(11 hours)**
Archaeology and Tourism: Linkages, Shared goals and changing perspective, Discovery of historical objects and Sites: Archaeological surveying, Contextualization, Excavation, and Interpretations.
Public Archaeology and Heritage Management. Relationship between Archaeology, History and Tourism Sites and Remains: Lothal, Hampi, Rakhigarhi, Adichanallur.

Unit 2: Art and Tourism **(11 hours)**
Art, Artifacts and Ecological Facts: An overview. Rock Art: Ajanta and Ellora caves, Bhimbetka Cave paintings etc. Folk Art: Madhubani, Warli, Miniature and Rajput Paintings (Kota, Bundi, Shekhawati school) Visual Art and Tourism: Museums, Galleries and Exhibitions

Unit 3: Architecture and Tourism **(11 hours)**
Architecture: Definition and Interdisciplinary linkages. Schools of Architecture, its regional variations

Secular and Religious Architecture. Natural, Cultural and built Heritage: Forts, Palaces and Havelis.

Unit 4: Heritage Management and Promotion of Tourism (12 hours)

UNESCO World Heritage sites: Dholavira, Nalanda Mahavihara, Taj Mahal etc.
Flagship Museums of India: National Museum Delhi, Indian Museum Kolkata, Salar Jung Museum Hyderabad. Government Schemes and Initiatives: Adopt a Heritage: Apni Dharohar, Apni Pehchan; Swadesh Darshan Scheme; Pilgrimage rejuvenation and spiritual augmentation drive (PRASAD) scheme. Social and Cultural Impact on local economies and geographies.

Practical Exercises:

The learners are required to:

1. Interactive sessions through group discussions or group presentations shall be used to enable learning of tangible heritage and its management and role of govt. and private institutions in the promotion of Tourism industry.
2. Using of audio-visual aids like documentaries and power point presentations, and an appropriate field-visit will be used for gaining in-depth knowledge of deep interconnections between History and Tourism industry.
3. Assess the understanding of theory and practical by objective and subjective assessment (Class test, assignments, MCQs, Fill in the blanks and quiz)

BA(VS) INSURANCE MANAGEMENT

SEMESTER-III

DISCIPLINE SPECIFIC CORE COURSE – 3.1 (DSC-3.1)
Insurance Law & Regulation

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course Title & Code	Total Credits	Lectures	Tutorial	Practical	Eligibility criteria	Pre-requisite of the course
Insurance Law & Regulation DSC – 3.1	4	3	1	0	Class XII	Nil

Learning Objectives:
The course aims to familiarize the students with the main laws governing the insurance sector in India. The course also provides basic understanding of other laws associated with insurance such as prevention of money laundering activities.

Learning Outcomes:
After completion of the course, learners will be able to:

1. describe the salient features of the Insurance Act, 1938
2. explain the role of IRDAI as per the IRD Act, 1999
3. demonstrate knowledge of various regulations for the valuation of assets and liabilities of insurers.
4. determine the solvency margins of insurers (Life & non-life).
5. appraise the rights of policy holders and insurers with the help of important judgements covered under various Insurance Regulatory enactments and appraise the effectiveness of the regulatory enactments.
6. identify the important provisions of the Prevention of Money Laundering Act, 2002 (PMLA) and critique the role of insurance companies in preventing money laundering activities.

Unit 1: Insurance Act, 1938 **(11 Hours)**

Provisions applicable to insurers, investment, loans and management, assignment or transfer of policies and nominations, commission and appointment of agents, special provisions of law and miscellaneous; relevant case law:

1. Reliance Life Insurance Co. Ltd. vs Rekhaben Nareshbhai Rathod on 24 April, 2019.
2. Life Insurance Corporation of India v. Escorts Ltd.& Ors (1986) AIR1370
3. Life Insurance Corporation of India vs United Bank of India Ltd. and Anr on 13 March, 1970. AIR 1970 Cal 513, 1971 41 Comp Cas 603 Cal.
4. Insure Policy Plus Services vs The Life Insurance Corporation of India on 22 March, 2007.

Unit 2: Insurance Regulatory and Development Authority Act, 1999 (13 Hours)

Establishment and incorporation of the Authority. Duties, power and functions of the Authority. Powers of Central Government to supersede Authority; Protection of Policy holders Regulations 2002; IRDA Ombudsman Regulation 2017; IRDA (Insurance Advertisements and Disclosure) Regulations, 2021; relevant case law:

1. Meenakshi Popat Kumbhoje & Ors. vs Life Insurance Corporation Of on 11 March, 2015.
2. V.B. Cold Storage Private Limited vs Bajaj Allianz General Insurance on 24 September, 2021
3. United India Insurance Co. Ltd. vs Abada Khatun and Ors. on 11 February, 1998.

Unit 3: IRDA (Assets, Liabilities, and Solvency Margin of Insurers) Regulations, 2000 (11 Hours)

Valuation of assets, valuation of liabilities: life insurance. Valuation of liabilities: general insurance; Determination of solvency margins: life insurers; Determination of solvency margin: general insurers; relevant case law:

1. Insurance Regulatory and Development Authority of India (IRDAI) Order (IRDA/F&A/ORD/SOLP/200/11/2019; Section 64VA (5) on Reliance Health Insurance Co Ltd.

Unit 4: The Prevention of Money Laundering Act, 2002 (PMLA) (10 Hours)

Objectives, Salient provisions, role of insurance companies and implementation, international provisions related to money laundering (FATCA compliance)

Practical Exercises:

The learners are required to:

1. form groups providing consultation to dummy clients who wish to start a life insurance business in India regarding registration of any type of insurance as per Indian laws (Unit1).
2. make a group project by gathering information about the cases where power and function of IRDAI have been applied (Unit2).
3. make a project analysing the trends in assets and liabilities of any insurer operating in India (Unit3).
4. compute and appraise the solvency margin of any insurer operating in India (Unit3).
5. form small groups and gather data from insurers (based on case law/disputed claims along with reasons) on problems in implementing the regulatory provisions (Unit3)
6. engage in a classroom discussion about the anti-money laundering practices of different insurers operating in India (Unit4).
7. engage in classroom discussion on limitations placed by IRDAI on management of expenses of insurers (Unit4)

DISCIPLINE SPECIFIC CORE COURSE – 3.2 (DSC-3.2)
Services Marketing

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course Title & Code	Total Credits	Lectures	Tutorial	Practical	Eligibility criteria	Pre-requisite of the course
Services Marketing DSC – 3.2	4	3	1	0	Class XII	Nil

Learning Objectives:
The course aims to familiarize students with the fundamental concepts and principles of marketing. It will equip students with an understanding of recent trends in marketing and examine the emergent issues arising from them. The course will introduce the student to the marketing of services in general and marketing of insurance in particular.

Learning Outcomes:
After completion of the course, learners will be able to:
1. describe the traditional and modern concepts of marketing.
2. demonstrate the concept of market segmentation.
3. appraise the spread of digital, social and green marketing in India
4. differentiate between the marketing mix for products and services.
5. select the models applicable in insurance marketing

Unit 1: Introduction to Marketing **(10 Hours)**
Marketing: Nature, importance, scope; Evolution (Production concept, Product concept, Selling, Marketing) of Marketing, Marketing mix, Holistic marketing.
Emerging concepts: Digital Marketing, Social Marketing and Green Marketing, Network marketing.
Contemporary Issues in Marketing: Social, ethical and legal aspects of marketing.

Unit 2: Marketing Environment & Segmentation **(10 Hours)**
Macro environment: Demographic, Economic, Political, Legal, Socio cultural, Technological environment (global & Indian context), Michael Porter's Model of Competitive analysis, BCG Matrix.
Market Segmentation, Targeting and Positioning: Concept, Levels of Market Segmentation, Basis for Segmenting Consumer Markets, Targeting and Positioning concepts.

Unit 3: Services Marketing **(15 Hours)**
Marketing of services: concept, characteristics, Marketing mix (7Ps)
Product decisions: Product Classification, Concept of Product Life Cycle (PLC) and strategies.
Pricing Decisions: Determinants of Price, Pricing strategies.
Place: Types of distribution channels, factors affecting choice of a distribution channel.
Promotion– Importance, tools of promotion mix (traditional & modern)
People – concept & importance

Process - concept & importance
Physical evidence - concept & importance

Unit 4: Insurance marketing **(10 Hours)**

Nature and scope of Insurance Marketing; Bancassurance distribution model (benefits and types), Importance of promotion in Insurance marketing, Role and benefits of relationship marketing in insurance;
Application of three-stage model of service consumption in insurance, Factors determining service quality of an insurance company (Servqual Model)

Practical Exercises:
The learners are required to:

1. make a group presentation on Indian products/services that are marketed through emerging concepts like digital, social, or green marketing tools. (Unit 1)
2. engage in a group project to study the basis of market segmentation and targeting strategy followed for different types of insurance products (Unit 2)
3. prepare group presentations to showcase the product life cycle of some extinguished goods/services. (Unit 3)
4. collect data to present the marketing mix (7Ps) of various service firms, particularly insurance companies. (Unit 3)
5. form small groups and critically examine the marketing techniques used by insurance companies in India in the light of the different marketing models. (Unit 4)

DISCIPLINE SPECIFIC CORE COURSE – 3.3 (DSC-3.3)

Indian Economic Environment

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course Title & Code	Total Credits	Lectures	Tutorial	Practical	Eligibility criteria	Pre-requisite of the course
Indian Economic Environment DSC – 3.3	4	3	1	0	Class XII	Nil

Learning Objectives:

The course aims to familiarise students with the basic framework of India's economy and the recent developments. It provides understanding about the economic crisis of 1991 and the subsequent reforms that followed. It explains the role of foreign trade, Foreign Direct Investment (FDI) and foreign capital in economic development.

Learning Outcomes:

After completion of the course, learners will be able to:

1. explain the evolution of India's industrial growth experience and describe the relationship between economic growth and development, the idea of sustainability, circular economy and Sustainable Development Goals (SDGs).
2. examine the impact of policy changes in both the agriculture and the industry sector.
3. appraise the economic and social outcomes of policy initiatives in the services sector.
4. critique the role of foreign trade and foreign capital in India's development process.

Unit 1: Indian Economy: An Overview **(12 Hours)**

A brief introduction to the current structure of the Indian economy: Evolution of Indian economic environment, import substitution to globalisation, the impact of the Covid-19 pandemic on the Indian economy;

Redefining development: changing ideas on growth and development, the idea of human development, the Human Development Index (HDI), the Gender Inequality Index (GII), the Gender Development Index (GDI), understanding the concepts and India's performance on these indicators; The idea of circular economy and Sustainable Development Goals (SDGs) 2030.

Unit 2: Transforming Agriculture - Current Trends and New Areas of Growth (11 Hours)

Role and importance of agriculture: data on poverty, inequality and growth without employment, the high proportion of population engaged in agriculture and the low agricultural productivity- broad trends and the instability in output, concerns of food security and nutritional outcomes, commitments to SDGs.

Issues in agriculture: rural credit and institutional finance, transportation and infrastructure, agricultural marketing, availability of agricultural inputs, technology and water management, soil degradation, rural entrepreneurship, crop insurance, contract farming, etc.
The need for a transformative vision in agriculture: new emerging areas and their impact on ecological management- including sustainable agriculture, alternative farming and organic farming, horticulture and floriculture, Multi-layer farming etc.

Unit 3: Industrial Performance - An Appraisal (11 Hours)
Industrial development: post 1991 trends and growth, the new economic policy, public sector reforms and privatisation, the slow growth of the manufacturing sector and the issue of the 'missing middle', the challenges of finance, regulations and labour laws, the role of Micro, Small and Medium Enterprises (MSMEs) and the challenges faced by them.

Unit 4: Foreign Trade, Foreign Capital, Multi-National Corporations (MNCs) and the Services Sector (11 Hours)
Foreign trade and trade policy: post 2000 trends in trade, the concept of global value chains, importance of trading blocks and trade agreements, India's experience, growth and contribution of foreign capital and MNCs.
Growth of the services sector in India: recent trends, growth in the information and communication technology (ICT) & IT enabled services (ITES) sectors, education, health, banking and insurance, etc., impact of digitization and servicification.

Practical Exercises:
The learners are required to:
1. discuss main economic challenges faced in India (Unit1)
2. make a presentation on circular economy and the progress made towards the achievement of the 17 SDGs. (Unit 1)
3. form groups to make case studies on different aspects of India's economic performance (education, migration, employment, industrial production, exports, digital economy, e- commerce, etc.) during Covid-19. (Unit1)
4. make a group presentation on the pros and cons of the recent farm laws. (Unit 2)
5. design a questionnaire about the issues confronting small and medium enterprises for primary data collection from an industry in the vicinity and present analyses in the class. (Unit 3)
6. engage in a group project on different types of services (food delivery provided by restaurant chains/local neighbourhood eateries/home cooked tiffins, streetside fast food, etc. Other service providers such as pest control services, cleaning services, home health aide workers, parlours, gyms, cyber cafes, etc. operating in and around the student's neighbourhood. (Unit 4).

DISCIPLINE SPECIFIC CORE COURSE - 3.3 (DSC-3.3)
Indian Economic Environment

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Prerequisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Indian Economic Environment (DSC-3.3)	**4**	**3**	**1**	**0**	Pass in Class XII	NIL

Learning Objectives:

The course aims to familiarise students with the basic framework of Indian economy and the recent developments. It provides understanding about the economic crisis of 1991 and the subsequent reforms that followed. It explains the role of foreign trade, Foreign Direct Investment (FDI) and foreign capital in economic development.

Learning Outcomes:

After completion of the course, learners will be able to:

1. explain the evolution of India's industrial growth experience and describe the relationship between economic growth and development, the idea of sustainability, circular economy and Sustainable Development Goals (SDGs).
2. examine the impact of policy changes in both the agriculture and the industry sector.
3. appraise the economic and social outcomes of policy initiatives in the services sector.
4. critique the role of foreign trade and foreign capital in India's development process.

Unit 1: Indian Economy: An Overview **(12 Hours)**

A brief introduction to the current structure of the Indian economy: Evolution of Indian economic environment, import substitution to globalisation, the impact of the Covid-19 pandemic on the Indian economy;

Redefining development: changing ideas on growth and development, the idea of human development, the Human Development Index (HDI), the Gender Inequality Index (GII), the Gender Development Index (GDI), understanding the concepts and India's performance on these indicators; the idea of circular economy and Sustainable Development Goals (SDGs) 2030.

Unit 2: Transforming Agriculture - Current Trends and New Areas of Growth

(11 Hours)

Role and importance of agriculture: data on poverty, inequality and growth without employment, the high proportion of population engaged in agriculture and the low agricultural productivity- broad trends and the instability in output, concerns of food security and nutritional outcomes, commitments to SDGs.

Issues in agriculture: rural credit and institutional finance, transportation and infrastructure, agricultural marketing, availability of agricultural inputs, technology and water management, soil degradation, rural entrepreneurship, crop insurance, contract farming, etc.
The need for a transformative vision in agriculture: new emerging areas and their impact on ecological management- including sustainable agriculture, alternative farming and organic farming, horticulture and floriculture, Multi-layer farming etc.

Unit 3: Industrial Performance - An Appraisal (11 Hours)

Industrial development: post 1991 trends and growth, the new economic policy, public sector reforms and privatisation, the slow growth of the manufacturing sector and the issue of the 'missing middle', the challenges of finance, regulations and labour laws, the role of Micro, Small and Medium Enterprises (MSMEs) and the challenges faced by them.

Unit 4: Foreign Trade, Foreign Capital, Multi-National Corporations (MNCs) and the Services Sector (11 Hours)

Foreign trade and trade policy: post 2000 trends in trade, the concept of global value chains, importance of trading blocks and trade agreements, India's experience, growth and contribution of foreign capital and MNCs.
Growth of the services sector in India: recent trends, growth in the information and communication technology (ICT) & IT enabled services (ITES) sectors, education, health, banking and insurance, etc., impact of digitization and servicification.

Practical Exercises:

The learners are required to:

1. discuss main economic challenges faced in India (Unit1)
2. make a presentation on circular economy and the progress made towards the achievement of the 17 SDGs. (Unit 1)
3. form groups to make case studies on different aspects of India's economic performance (education, migration, employment, industrial production, exports, digital economy, e-commerce, etc.) during Covid-19. (Unit1)
4. make a group presentation on the pros and cons of the recent farm laws. (Unit 2)
5. design a questionnaire about the issues confronting small and medium enterprises for primary data collection from a industry in the vicinity and present analyses in the class. (Unit 3)
6. engage in a group project on different types of services (food delivery provided by restaurant chains/local neighbourhood eateries/home cooked tiffins, streetside fast food, etc. Other service providers such as pest control services, cleaning services, home health aide workers, parlours, gyms, cyber cafes, etc. operating in and around the student's neighbourhood. (Unit 4).

भारतीय साहित्य

Core Course – (DSC) Credits: 4

Course	Nature of Course	Total Credit	Component			Eligibility Criteria	Pre-requisite of the course (If any)
			Lecture	Tutorial	Practical		
भारतीय साहित्य	कोर कोर्स (DSC7)	4	3	1	0	12th Pass	Nil

पाठ्यक्रम का उद्देश्य (Course Objective):

- भारतीय साहित्य की अवधारणा से परिचिति कराना
- भारत की भौगोलिक, भाषिक और सांस्कृतिक विविधता का परिचय देना
- भारतीय सांस्कृतिक-बोध के विकास का परिचय कराना

पाठ्यक्रम अध्ययन के परिणाम (Course Learning Outcomes):

- भारतीय साहित्य के अध्ययन से सांस्कृतिक समझ विकसित होगी

- भारतीय सांस्कृतिक विविधता में निहित एकता की समझ विकसित होगी
- भारतीय साहित्यिक परंपरा के विकास की समझ विकसित होगी

इकाई – 1 **(12 घंटे)**

- भारतीय साहित्य का संक्षिप्त परिचय: वैदिक, लौकिक, संस्कृत, पालि, प्राकृत, अपभ्रंश तथा संगम साहित्य (तमिल भाषा)
- आधुनिक भारतीय भाषाओं के साहित्य का संक्षिप्त परिचय: असमिया, बांग्ला, उड़िया, गुजराती, मराठी, उर्दू, पंजाबी, कश्मीरी, सिंधी, मैथिली, तमिल, कन्नड़, तेलुगू, मलयालम

इकाई – 2 **(12 घंटे)**

- बाल्मीकि – 'सप्तपर्ण' : रामकाव्य का जन्म : पृष्ठ 115-119 में महादेवी वर्मा कृत अनुवाद
- कालिदास – 'उत्तरमेघ' : भगवतशरण उपाध्याय द्वारा संपादित 'नागार्जुन चुनी हुई रचनाएँ' पुस्तक से, पृष्ठ 345-349, छंद संख्या 22 से 27

इकाई – 3 **(12 घंटे)**

- नामदेव – (संत काव्य, सं. परशुराम चतुर्वेदी, किताब महल, इलाहाबाद, संस्करण 1952) पद सं. 11 से 14 तक
- ललद्यद – (भाषा, साहित्य और संस्कृति, विमलेशकांति वर्मा)
  मुझ पर वे चाहे हँसे.....
  गुरु ने मुझसे कहा.....
  हम ही थे.....
  पिया को खोजने.....
- सुब्रह्मण्यम भारती की कविताएँ: साहित्य अकादेमी; संस्करण 1983, 'स्वतंत्रता का गान', पृष्ठ 46-47

इकाई – 4 **(09 घंटे)**

- काबुलीवाला (कहानी) – रवींद्रनाथ ठाकुर
- रामविजय (नाटक) – शंकरदेव (असमिया)

सहायक ग्रंथों की सूची:

- आज का भारतीय साहित्य – प्रभाकरमाचवे, साहित्य अकादेमी, नई दिल्ली
- वैदिक संस्कृति का विकास – तर्कतीर्थ लक्ष्मण शास्त्री, साहित्य अकादेमी, नई दिल्ली
- भारतीय साहित्य का समेकित इतिहास – डॉ. नगेंद्र, हिंदी माध्यम कार्यान्वयन निदेशालय, दिल्ली विश्वविद्यालय
- भारतीय साहित्य कोश – डॉ. नगेंद्र, नेशनल पब्लिशिंग हाउस, नई दिल्ली

- भाषा, साहित्य और संस्कृति – (सं.) विमलेशकांति वर्मा, ऑरियन्ट ब्लैक स्वान पब्लिकेशन्स, नई दिल्ली
- बांग्ला साहित्य का इतिहास – सुकुमार सेन; अनु. निर्मला जैन, साहित्य अकादेमी, नई दिल्ली
- सुब्रह्मण्यम भारती की कविताएँ: साहित्य अकादेमी
- संत काव्य (संग्रह) – परशुराम चतुर्वेदी, किताबमहल, इलाहबाद, (प्र. सं. 1952)

हिंदी नाटक एवं एकांकी

Core Course – (DSC) Credits: 4

Course	Nature of Course	Total Credit	Component			Eligibility Criteria	Pre-requisite of the course (If any)
			Lecture	Tutorial	Practical		
हिंदी नाटक एवं एकांकी	कोर कोर्स (DSC8)	4	3	1	0	12th Pass	Nil

पाठ्यक्रम का उद्देश्य (Course Objective):

- नाटक के उद्भव और विकास का परिचय देना
- नाटक के सांस्कृतिक और सामाजिक पक्ष का परिचय देना
- नाटक की सर्वांगीण समझ विकसित करना

पाठ्यक्रम अध्ययन के परिणाम (Course Learning Outcomes):

- नाट्य परंपरा का परिचय प्राप्त होगा
- नाटक के सांस्कृतिक पक्ष और शैली के परिचय से विश्लेषण क्षमता विकसित होगी
- हिंदी के प्रमुख नाटकों के अध्ययन से हिंदी नाटक की विकास यात्रा का परिचय प्राप्त होगा

इकाई – 1 **(12 घंटे)**

- भारत-दुर्दशा – भारतेंदु हरिश्चंद्र

इकाई – 2 **(12 घंटे)**

- ध्रुवस्वामिनी – जयशंकर प्रसाद

इकाई – 3 **(12 घंटे)**

- कथा एक कंस की – दया प्रकाश सिन्हा

इकाई – 4 **(09 घंटे)**

- एकांकी – उत्सर्ग : रामकुमार वर्मा
  तौलिए: उपेन्द्रनाथ अश्क

सहायक ग्रंथों की सूची:

- नाटककार भारतेंदु की रंग-परिकल्पना – सत्येन्द्र तनेजा, राधाकृष्ण प्रकाशन, नई दिल्ली
- प्रसाद के नाटक: स्वरूप और संरचना – गोविंद चातक, तक्षशिला प्रकाशन, नई दिल्ली
- जयशंकर प्रसाद रंगदृष्टि – महेश आनंद, राष्ट्रीय नाट्य विद्यालय, नई दिल्ली
- हिंदी एकांकी की शिल्पविधि का विकास – सिद्धनाथ कुमार, राजकमल प्रकाशन, नई दिल्ली
- रंगमंच का सौन्दर्यशास्त्र – देवेन्द्रराज 'अंकुर', राजकमल प्रकाशन, नई दिल्ली
- रंगदर्शन – नेमीचंद जैन, राजकमल प्रकाशन, नई दिल्ली
- रंगकर्म – वीरेंद्र नारायण, आलेख प्रकाशन, नई दिल्ली
- स्वातंत्रयोत्तर पारम्परिक रंग प्रयोग – कुसुमलता मलिक, इंडियन पब्लिशर्स एवं डिस्ट्रीब्यूटर, कमला नगर, नई दिल्ली (2009)
- हिंदी नाटक का आत्मसंघर्ष – गिरीश रस्तोगी, लोकभारती प्रकाशन
- नाटककार दयाप्रकाश सिन्हा, समीक्षायन, रवीन्द्रनाथ बाहोरे, संजय प्रकाशन, दिल्ली

सामान्य भाषा विज्ञान

Core Course – (DSC) Credits: 4

Course	Nature of Course	Total Credit	Component			Eligibility Criteria	Pre-requisite of the course (If any)
			Lecture	Tutorial	Practical		
सामान्य भाषा विज्ञान	कोर कोर्स (DSC9)	4	3	1	0	12th Pass	Nil

पाठ्यक्रम का उद्देश्य (Course Objective):

- भाषा तथा भाषा विज्ञान की अवधारणा से परिचित कराना
- भाषा की विषेशताओं और उपांगों का विश्लेषणात्मक ज्ञान प्रदान करना

पाठ्यक्रम अध्ययन के परिणाम (Course Learning Outcomes):

- भाषा विज्ञान के सैद्धांतिक एवं तकनीकी पक्षों की समझ विकसित हो सकेगी
- भाषा और उसके विभिन्न अंगों का परिचय प्राप्त होगा

इकाई – 1 : भाषा एवं भाषा विज्ञान **(12 घंटे)**

- भाषा की परिभाषा एवं स्वरूप
- भाषा की संरचना तथा विषेशताएँ
- भाषा विज्ञान का स्वरूप एवं अध्ययन की पद्धतियाँ
- भाषा विज्ञान के अध्ययन की उपयोगिता

इकाई – 2 : ध्वनिविज्ञान एवं रूपविज्ञान **(12 घंटे)**

- स्वन, स्वनिम, संस्वन, स्वर एवं व्यंजन
- ध्वनियों का वर्गीकरण
- ध्वनि-परिवर्तन की दिशाएँ
- रूप की परिभाषा, शब्द और रूप (पद), अर्थतत्त्व, संबंध-तत्व तथा रूप-परिवर्तन की दिशाएँ

इकाई – 3 : वाक्य विज्ञान **(12 घंटे)**

- वाक्य: स्वरूप एवं आवश्यकताएँ
- वाक्य रचना के आधार और भेद
- वाक्य के प्रकार

- वाक्य के निकटस्थ अवयव

इकाई – 4 : अर्थ विज्ञान **(09 घंटे)**

- अर्थ: परिभाषा, शब्द और अर्थ का संबंध
- अर्थ-प्रतीति के साधन
- अर्थ-निर्णय के साधन
- अर्थ परिवर्तन: कारण एवं दिशाएँ

सहायक ग्रंथों की सूची:

1. सामान्य भाषा विज्ञान – बाबूराम सक्सेना, हिंदी साहित्य सम्मेलन, प्रयाग
2. भाषा विज्ञान की भूमिका – देवेंद्रनाथ शर्मा, राधाकृष्ण प्रकाशन, नई दिल्ली
3. भाषा विज्ञान – भोलानाथ तिवारी, किताब महल, नई दिल्ली
4. आधुनिक भाषा विज्ञान – राजमणि शर्मा, वाणी प्रकाशन, दिल्ली
5. हिंदी व्याकरण – कामता प्रसाद गुरु, इण्डियन प्रेस, प्रयाग
6. हिंदी शब्दानुशासन – किशोरी दास वाजपेयी, नागरी प्रचारिणी सभा, काशी
7. भाषा विज्ञान: सैद्धांतिक चिंतन – रवीन्द्रनाथ श्रीवास्तव, राधाकृष्ण प्रकाशन

हिंदी की मौखिक और लोक-साहित्य परंपरा

Discipline Specific Elective (DSE) Credits: 4

Course	Nature of Course	Total Credit	Component			Eligibility Criteria	Pre-requisite of the course (If any)
			Lecture	Tutorial	Practical		
हिंदी की मौखिक और लोक-साहित्य परंपरा	डीएसई (DSE1)	4	3	1	0	12th Pass	Nil

पाठ्यक्रम का उद्देश्य (Course Objective):

- लोक साहित्य परंपरा के माध्यम से भारतीय लोक-जीवन से परिचित कराना
- लोक साहित्य परंपरा के माध्यम से भारतीय लोक-संस्कृति के विविध पक्षों को समझाना

पाठ्यक्रम अध्ययन के परिणाम (Course Learning Outcomes):

- भारतीय जीवन की लोकधारा का परिचय प्राप्त होगा
- पर्यटन, लोक संगीत और नृत्य में रुचि विकसित होगी

इकाई – 1 : मौखिक साहित्य की परंपरा और उसके विविध रूप (12 घंटे)

- मौखिक साहित्य का विकास और लिखित साहित्य से संबंध
- साहित्य के विविध रूप : खेल, तमाशा, लोक-गीत, लोक-कथा, मुकरियाँ, पहेलियाँ, बुझौवल और मुहावरे, लोकगाथाएँ, लोकनाट्य आदि का सामान्य परिचय
- हिंदी प्रदेश की जनपदीय बोलियाँ और उनका साहित्य (संक्षिप्त परिचय)

इकाई – 2 : लोकगीत : वाचिक और मुद्रित (12 घंटे)

- सांस्कृतिक बोध और लोकगीत
- **संस्कार गीत:**
  - सोहर – अवधी (हिंदी प्रदेश के लोकगीत – कृष्ण देव उपाध्याय, साहित्य भवन, इलाहाबाद, पृष्ठ 110-111)
  - यज्ञोपवीत – भारतीय लोक-साहित्य : परंपरा और परिदृश्य – विद्या सिन्हा, पृष्ठ 88-89
  - विवाह भोजपुरी – भारतीय लोक-साहित्य परंपरा और परिदृश्य – विद्या सिन्हा, पृष्ठ 116
  - ऋतु संबंधी गीत – बारहमासा, होली, चैती, कजरी का सामान्य परिचय

- **श्रम संबंधी गीत:**
  - कटनी के गीत – अवधी (दो गीत), हिंदी प्रदेश के लोकगीत – कृष्ण देव उपाध्याय, पृष्ठ 134-135
  - जँतसर – भोजपुरी – भारतीय लोक साहित्य; परंपरा और परिदृश्य – विद्या सिन्हा, पृष्ठ 140-141

इकाई – 3 : लोककथा एवं लोकगाथा का सामान्य परिचय एवं पाठ (12 घंटे)

- प्रसिद्ध लोककथा एवं लोकगाथा – आल्हा, लोरिक, सारंगा सदावृक्ष, बिहुला का संक्षिप्त परिचय
- पाठ – (क) राजस्थानी लोककथा नं. 2, हिंदी साहित्य का वृहत इतिहास, राहुल सांकृत्यायन, पृष्ठ 10-11, सोलहवां भाग

(ख) मालवी लोक कथा नं. 2, हिंदी साहित्य का वृहत इतिहास, सोलहवां भाग, राहुल सांकृत्यायन, पृष्ठ 461-462

(ग) अवधी लोक कथा नं. 2, हिंदी साहित्य का वृहत इतिहास, सोलहवां भाग, राहुल सांकृत्यायन, पृष्ठ 187-188

इकाई – 4 : लोक नाट्य विधा का सामान्य परिचय एवं पाठ (09 घंटे)

- विविध भाषा क्षेत्रों के नाट्यरूप और शैलियाँ – रामलीला, रासलीला, नौटंकी, ख्याल आदि का संक्षिप्त परिचय
- पाठ : बिदेसिया (भिखारी ठाकुर)

सहायक ग्रंथों की सूची:

- लोक साहित्य में राष्ट्रीय चेतना, ज्ञानगंगा प्रकाशन
- भारत की लोक संस्कृति – हेमंत कुकरेती, प्रभात प्रकाशन
- हिंदी प्रदेश के लोकगीत – कृष्णदेव उपाध्याय, साहित्य भवन, इलाहाबाद
- हरियाणा प्रदेश का लोक साहित्य – शंकरलाल यादव, हिन्दुस्तानी अकादमी, इलाहाबाद
- मीट माई पीपल – देवेंद्र सत्यार्थी, नवयुग प्रकाशन
- हमारे लोकधर्मी नाट्य – श्याम परमार, लोकरंग, उदयपुर
- हिंदी साहित्य का वृहत इतिहास – राहुल सांकृत्यायन, सोलहवां भाग
- भारतीय लोक साहित्य: परंपरा और परिदृश्य – विद्या सिन्हा, प्रकाशन विभाग
- हिंदी साहित्य को हरियाणा प्रदेश की देन – हरियाणा साहित्य अकादमी का प्रकाशन
- मध्यप्रदेश लोककला अकादमी की पत्रिका – चौमासा

- भारतेंदु युग और हिंदी नवजागरण की समस्याएं – रामविलास शर्मा
- बीसवीं शताब्दी हिन्दी साहित्य: नये सन्दर्भ – लक्ष्मी सागर वार्ष्णेय

सेमेस्टर – 3

रचनात्मक लेखन

Discipline Specific Elective (DSE) Credits: 4

Course	Nature of Course	Total Credit	Component			Eligibility Criteria	Pre-requisite of the course (If any)
			Lecture	Tutorial	Practical		
रचनात्मक लेखन	डीएसई (DSE3)	4	3	1	0	12th Pass	Nil

पाठ्यक्रम का उद्देश्य (Course Objective):

- विद्यार्थियों में रचना-कौशल का विकास करना
- विद्यार्थियों को रोजगार की दृष्टि से सक्षम बनाना

पाठ्यक्रम अध्ययन के परिणाम (Course Learning Outcomes):

- रचनात्मकता का विकास हो सकेगा
- विद्यार्थी विभिन्न माध्यमों – जैसे पत्रकारिता, मीडिया, विज्ञापन, सिनेमा आदि क्षेत्रों में रोजगार प्राप्त कर सकेंगे

इकाई 1 : रचनात्मक लेखन : अवधारणा, स्वरूप एवं सिद्धांत (12 घंटे)

- भाव एवं विचार की रचना में रूपांतरण की प्रक्रिया
- विविध अभिव्यक्ति क्षेत्र : पत्रकारिता, विज्ञापन, विविध गद्य एवं काव्य-रूप
- लेखन के विविध रूप : गद्य-पद्य, कथात्मक-कथेतर, नाट्य

इकाई 2 : रचनात्मक लेखन और भाषा (09 घंटे)

- भाषा की भंगिमाएं : औपचारिक-अनौपचारिक, मौखिक-लिखित, मानक भाषा
- भाषिक संदर्भ : स्थानीय, वर्ग, व्यवसाय, तकनीक

इकाई 3 : सृजनात्मक लेखन (12 घंटे)

- कविता लेखन
- कहानी लेखन
- नाटक लेखन

इकाई 4: जनसंचार माध्यमों के लिए लेखन (12 घंटे)

- प्रिन्ट मीडिया के लिए लेखन (फीचर, पुस्तक समीक्षा)

- रेडियो के लिए लेखन (रेडियो नाटक, रेडियो वार्ता)
- टेलिविज़न के लिए लेखन (वृत्तचित्र (डॉक्यूमेंट्री), विज्ञापन)

सहायक ग्रंथों की सूची:

- रचनात्मक लेखन – (सं) रमेश गौतम, भारतीय ज्ञानपीठ, नई दिल्ली
- सृजनात्मक लेखन – हरीश अरोड़ा, यश प्रकाशन, नई दिल्ली
- कथा-पटकथा – मन्नू भण्डारी, वाणी प्रकाशन
- रेडियो लेखन – मधुकर गंगाधर, बिहार हिंदी ग्रंथ अकादमी
- दृश्य-श्रव्य माध्यम लेखन – राजेन्द्र मिश्र व ईशिता मिश्र, तक्षशिला प्रकाशन, नई दिल्ली
- फिल्मों में कथा-पटकथा लेखन – रतन प्रकाश, प्रभात प्रकाशन
- सृजनशीलता और सौन्दर्य बोध – रवीन्द्रनाथ श्रीवास्तव
- कविता रचना-प्रक्रिया – कुमार विमल, बिहार हिंदी ग्रंथ अकादेमी, पटना
- पटकथा लेखन : एक परिचय – मनोहर श्याम जोशी, राजकमल प्रकाशन, दिल्ली

COMMON POOL OF GENERIC ELECTIVES

The Pool of Generic Electives offered in Semester -I and Semester-II will also be open for Semester-III.

BA (Prog.) with Hindi as MAJOR

DSC 7 **माध्यम क़ानून और आचार संहिता**	**4**	**3**	0	**1**	12th Pass	Nil

Learning Objectives

The Learning Objectives of this course are as follows:

1. छात्रों को मीडिया संबंधी कानूनों से अवगत कराना।
2. छात्रों को संविधान में निहित सामाजिक उत्तरदायित्वों के प्रति संवेदनशील बनाना।
3. छात्रों को मीडिया नियमन और भविष्य की चुनौतियों का अवलोकन कराना।
4. छात्रों में मीडिया की आचार संहिता और आत्म नियमन की समझ विकसित करना।

Learning Outcomes

1. भारतीय मीडिया के संवैधानिक आयामों की समझ विकसित होगी।
2. मीडिया के कानूनों और नियमों से परिचित होंगे।
3. मीडिया की आचार संहिता और आत्म नियमन की समझ विकसित होगी।
4. सामाजिक उत्तरदायित्व के साथ स्वस्थ और ईमानदार पत्रकारिता हेतु दक्ष होंगे।

1. प्रेस की स्वतंत्रता और संवैधानिक प्रावधान 10 घंटे

- वाक एवं अभिव्यक्ति की स्वतंत्रता, अनुच्छेद 19(1) (a), (19) (2)
- विविध प्रेस आयोग
- श्रमजीवी पत्रकार कानून (पालेकर, बछावत, मजीठिया और मणिसाना)

2. अधिनियम और कानून 10 घंटे

- प्रेस एवं पुस्तक पंजीकरण अधिनियम 1867, बौद्धिक संपदा कानून - प्रतिलिप्याधिकार कानून 1957, पेटेंट कानून 1970
- शासकीय गोपनीयता अधिनियम 1923, सूचना का अधिकार 2005
- युवकों के लिए हानिप्रद प्रकाशन कानून 1956, महिलाओं के अशिष्ट रुपण प्रतिषेध अधिनियम 1986

3. मीडिया कानून और समाज 10 घंटे

- भारतीय दंड संहिता 1860: मानहानि, राजद्रोह
- न्यायालय अवमानना अधिनियम अनुच्छेद 1971 (अनुच्छेद 361)
- संसदीय एवं विधान मंडल विशेषाधिकार

4. इलेक्ट्रॉनिक और न्यू मीडिया कानून 15 घंटे

- सिनेमैटोग्राफी अधिनियम
- मीडिया के नए कानून 2021
- माध्यम आचार संहिता: अवधारणा और आवश्यकता, एडिटर्स गिल्ड ऑफ इंडिया की आचार संहिता, विज्ञापन संबंधी आचार संहिता

व्यावहारिक कार्य : 30 घंटे

- किसी एक न्यायिक प्रक्रिया का अवलोकन और उसकी रिपोर्ट तैयार करना।
- संसदीय प्रक्रिया का अवलोकन और उसकी रिपोर्ट तैयार करना।
- न्यायालय की तकनीकी शब्दावली तैयार करना।
- विभिन्न प्रेस कानूनों (उपरोक्त) से संबंधित केस स्टडी पर आधारित एक परियोजना कार्य।

संदर्भ पुस्तकें :

1. शासकीय गजट में प्रकाशित संबंधित अधिनियम
2. भारतीय दंड संहिता, प्रकाशन विभाग द्वारा प्रकाशित मूल अधिनियम
3. आपातकालीन पत्रकारिता की संघर्ष-गाथा, अरुण कुमार भगत, अनामिका पब्लिशर्स, नई दिल्ली
4. प्रेस विधि, नंदकिशोर त्रिखा, विश्वविद्यालय प्रकाशन, वाराणसी
5. प्रेस कानून और पत्रकारिता, संजीव भानावत, राजस्थान हिन्दी ग्रंथ अकादमी, जयपुर
6. प्रेस विधि एवं अभियुक्त स्वातंत्र्य, डॉ हरबंश दीक्षित, वाणी प्रकाशन, नई दिल्ली
7. हिंदी पत्रकारिता के विविध आयाम, वेद प्रताप वैदिक, हिन्दी बुक सेंटर, नई दिल्ली
8. जनमाध्यम कानून एवं उत्तरदायित्व, श्रीकांत सिंह, हिन्दी बुक सेंटर, नई दिल्ली
9. बौद्धिक संपदा विधियां, ज्ञानवती धाकड़, सेंट्रल लॉ प्रकाशन

Learning Objectives

The Learning Objectives of this course are as follows:

1. समाचार संपादन के महत्व, प्रक्रिया और प्रयोग से छात्रों को अवगत कराना।
2. समाचार संपादन में आवश्यक कारकों की जानकारी प्रदान करना।
3. विभिन्न माध्यमों के संपादन कार्य से परिचित कराना।
4. संपादकीय लेखन, प्रूफ संशोधन आदि का ज्ञान प्रदान करना।

Course Learning Outcomes

1. छात्र समाचार लेखन में संपादन कार्य के महत्व को समझ पायेंगे।
2. पेज मेकअप, ले आउट, डिजाइन आदि की जानकारी प्राप्त कर सकेंगे।
3. छात्र ऑनलाइन संपादन का परिचय प्राप्त कर सकेंगे।

1. संपादन **10 घंटे**

- संपादन अर्थ, उद्देश्य, प्रक्रिया और प्रमुख सिद्धान्त
- समाचार पत्र एवं पत्रिका संपादन
- रेडियो टीवी एवं ऑनलाइन समाचार संपादन

2. समाचार संपादन **10 घंटे**

- कॉपी संपादन, ऑनलाइन संपादन, पृष्ट समाचार संपादन
- ग्राफिक्स कार्टून और फ़ोटो चयन

- लेआउट, डिज़ाइन एवं पेज मेकअप

3. संपादन तकनीक 10 घंटे

- संपादकीय पृष्ठ की संरचना और संपादकीय लिखना
- संपादकीय नीति और स्टाइल पुस्तिका
- संपादकीय चिह्न और पांडुलिपि संशोधन, प्रूफ संशोधन

4. विशेष लेख और संपादन 15 घंटे

- संपादकीय विभाग का ढांचा
- संपादक एवं उपसंपादक के कार्य एवं योग्यताएं
- शीर्षक लेखन, टिप्पणी, विश्लेषण, समीक्षा, संपादन के नाम पत्र

5. व्यावहारिक कार्य : 30 घंटे

- संपादकीय पृष्ठ हेतु लेखन की प्रस्तुति
- संपादकीय पृष्ठ का डमी निर्माण
- संपादकीय पृष्ठ का तुलनात्मक अध्ययन और उसकी प्रस्तुति
- प्रकाशन हेतु कॉपी तैयार करना

सहायक पुस्तकें :

Learning Objectives

The Learning Objectives of this course are as follows:

Course Objective

1. रेडियो का व्यावहारिक परिचय कराना।
2. रेडियो कार्यक्रमों द्वारा सांस्कृतिक, सामाजिक और सांस्कृतिक मूल्यों से परिचित कराना।
3. बदलते दौर में नए वैश्विक संदर्भ और कार्यक्रम प्रविधि तकनीक से अवगत कराना।
4. रेडियो कार्यक्रम, उपकरण, लेखन, रिपोर्टिंग संबंधी पहलुओं से अवगत कराना।

Course Learning Outcomes

1. रेडियो कार्यक्रम की समझ विकसित होगी।
2. श्रव्य माध्यम का महत्व समझेंगे।
3. रेडियो का व्यावहारिक ज्ञान प्राप्त होगा।
4. वैश्विक परिदृश्य और नई तकनीक की जानकारी होगी।

1. जन श्रव्य माध्यम रेडियो - सामान्य परिचय 10 घंटे

- भारतीय परिप्रेक्ष्य में रेडियो के प्रमुख बदलाव: 90 के दशक के बाद से आज तक
- रेडियो की विशेषताएं और संभावनाएं
- रेडियो के विविध रूप : एएम, एफएम, सामुदायिक रेडियो, पॉडकास्ट

2. रेडियो कार्यक्रम लेखन 10 घंटे

- समाचार कार्यक्रमों के लिए लेखन: समाचार बुलेटिन, वार्ता, एंकरिंग
- मनोरंजन कार्यक्रम की विधाएँ : लघु नाटिका, फिल्म, ,नाटक, प्रहसन, डाक्यूमेंट्री

- विशिष्ट श्रोता वर्ग कार्यक्रम: स्त्री, बाल, युवा, बुजुर्ग, सैनिक, किसान, ग्रामीण, शहरी, आदिवासी और दिव्यांग

3. रेडियो कार्यक्रम तकनीक एवं संपादन 10 घंटे

- रेडियो केंद्र का ढांचा, संगठन और कार्यप्रणाली
- रेडियो स्टूडियो के विभिन्न उपकरण : रिकॉर्डर, हेडफोन,कंसोल, माइक्रोफोन, ऑन एयर लाइट, ऑटोमेशन सॉफ्टवेयर
- रेडियो जॉकी : भूमिका और दायित्व

4. रेडियो प्रबंधन 15 घंटे

- आकाशवाणी, एफ.एम. और सामुदायिक रेडियो का प्रबंधन
- रेडियो कार्यक्रम: विपणन और वितरण
- आकाशवाणी की रेडियो प्रसारण संबंधी आचार संहिता

व्यावहारिक कार्य 30 घंटे

- रेडियो पर प्रसारित सामाजिक, आर्थिक, राजनीतिक और सांस्कृतिक कार्यक्रमों की समीक्षा करना।
- रेडियो के लिए किसी समाचारपरक, वार्तापरक, और मनोरंजन परक कार्यक्रम की स्क्रिप्ट तैयार करना।
- रेडियो के लिए 5 मिनट का साक्षात्कार तैयार करना।
- रेडियो के लिए 5 मिनट का समाचार बुलेटिन और न्यूजरील तैयार करना।
- किसी समसामयिक मुद्दे पर 5 मिनट का पॉडकास्ट तैयार करना।

Essential/recommended readings

1. अंडरस्टैंडिंग रेडियो: एंड्रयू क्रिसेल, क्रिसेल टेलर एंड ग्रुप पब्लिकेशन
2. रेडियो और दूर-दर्शन पत्रकारिता, डॉ हरिमोहन, तक्षशिला, नई दिल्ली
3. ब्रॉडकास्टिंग इन इंडिया : जी.सी.अवस्थी, एलाइड पब्लिकेशन
4. रेडियो लेखन: मधुकर गंगाधर, बिहार हिंदी ग्रंथ अकादमी, पटना
5. रेडियो जॉकीईंग की कला, डॉ हरिमोहन, तक्षशिला, दिल्ली
6. इंडिया ब्रॉडकास्टिंग: एच.के लूथरा, प्रकाशन विभाग, भारत सरकार
7. ब्रॉडकास्टिंग एंड द पीपुल्स: मेहरा मसानी, नेशनल बुक ट्रस्ट, नई दिल्ली

क्षेत्रीय पत्रकारिता DSE 1- (4)

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Learning Objectives

The Learning Objectives of this course are as follows:

1. क्षेत्रीय पत्रकारिता के स्वरूप को समझाना।
2. संस्कृति-विकास और स्थानीय महत्त्व की दृष्टि से क्षेत्रीय पत्रकारिता की उपयोगिता से अवगत कराना।
3. लोक कला, लोक साहित्य, लोक संगीत के विकास में क्षेत्रीय पत्रकारिता की भूमिका पर विचार करना।

Course Learning Outcomes

1. समाज और संस्कृति के परिप्रेक्ष्य में क्षेत्रीय पत्रकारिता के विविध रूपों की जानकारी हासिल कर पाएंगे।
2. स्थानीय भाषाओं के महत्त्व एवं उसके योगदान से अवगत होंगे।
3. क्षेत्रीय पत्रकारिता के क्षेत्र में रोजगारपरक संभावनाओं से परिचित होंगे।

1. क्षेत्रीय पत्रकारिता : सामान्य परिचय **10 घंटे**

- क्षेत्रीय पत्रकारिता – अर्थ स्वरूप एवं प्रकृति
- स्वाधीनता संग्राम में क्षेत्रीय पत्रकारिता का योगदान
- मुख्यधारा की मीडिया और क्षेत्रीय पत्रकारिता में अंतर

2. क्षेत्रीय पत्रकारिता : सामाजिक और सांस्कृतिक प्रभाव **10 घंटे**

- क्षेत्रीय पत्रकारिता का प्रबंधन और बाज़ार, सामग्री संकलन
- सामाजिक परिवर्तन और लोक संस्कृति पर क्षेत्रीय पत्रकारिता का प्रभाव

- क्षेत्रीय पत्रकारिता की भाषा शैली

3. क्षेत्रीय पत्रकारिता की अंतर्वस्तु **10 घंटे**

- क्षेत्रीय पत्र-पत्रिकाओं में स्थानीय समाचार, जनसरोकार संबंधी मुद्दों की प्रस्तुति
- आकाशवाणी – दूरदर्शन में क्षेत्रीय कार्यक्रमों की प्रस्तुति के विविध आयाम
- ऑनलाइन क्षेत्रीय पत्रकारिता और क्षेत्रीय मुद्दे

4. क्षेत्रीय ग्रामीण पत्रकारिता **15 घंटे**

- क्षेत्रीय पत्रकारिता में ग्रामीण संदर्भ
- प्रिंट माध्यमों में जनपदीय ब्यूरो-संरचना, संकलन एवं अन्य संदर्भ
- क्षेत्रीय पत्रकार की कार्यप्रणाली और चुनौतियाँ

प्रायोगिक कार्य : 30 **घंटे**

- मुख्य-धारा एवं क्षेत्रीय समाचार-पत्र, पत्रिकाओं की विषयवस्तु का तुलनात्मक विश्लेषण
- क्षेत्रीय समाचार पत्र के लिये रिपोर्ट लेखन, फ़ीचर प्रस्तुत करना
- क्षेत्रीय पत्रकारिता की भाषा शैली की समीक्षा करना
- स्थानीय मुद्दों पर आधारित न्यूजलेटर का निर्माण करना

सहायक पुस्तकें :

Learning Objectives

The Learning Objectives of this course are as follows:

1. पर्यावरण के प्रति छात्रों में संवेदनशीलता पैदा करना।
2. पर्यावरण संरक्षण के प्रति छात्रों को जागरूक करना।
3. पर्यावरण संरक्षण के लिए छात्रों को प्रोत्साहित करना।
4. प्रकृति, राष्ट्रीय संसाधनों के प्रति प्रेम एवं सह-अस्तित्व का भाव पैदा करना।

Course Learning Outcomes

1. पर्यावरण के प्रति समझ विकसित होगी।
2. पर्यावरण समस्याओं से छात्र अवगत होंगे।
3. पर्यावरण संरक्षण में मीडिया के प्रयोग को समझ सकेंगे।
4. पर्यावरण समस्याओं को उजागर करने में मीडिया की भूमिका से अवगत होंगे।

1. पर्यावरण जागरूकता और मीडिया 10 घंटे

- पर्यावरण अध्ययन की परिभाषा, क्षेत्र और महत्व
- ग्लोबल और भारतीय मीडिया में पर्यावरण जागरूकता एवं प्रमुख पर्यावरण मुद्दे
- प्राकृतिक संसाधनों के संरक्षण में मीडिया की भूमिका

2. पर्यावरण संरक्षण एवं मीडिया 10 घंटे

- राष्ट्रीय-अंतरराष्ट्रीय पर्यावरण संरक्षण आंदोलन और मीडिया
- अंतरराष्ट्रीय पर्यावरण सम्मेलन एवं मीडिया
- वैश्विक अंतरराष्ट्रीय पर्यावरण समझौते

3. पर्यावरण एवं भारतीय मीडिया 10 घंटे

- पर्यावरण से संबंधित भारतीय मीडिया का दृष्टिकोण
- प्रिंट मीडिया में पर्यावरण प्रस्तुति
- टीवी, रेडियो एवं डिजिटल मीडिया में पर्यावरण मुद्दे

4. पर्यावरण चिंताएँ एवं मीडिया 15 घंटे

- प्रमुख पर्यावरण चुनौतियाँ और मुद्दे : जलवायु परिवर्तन, ग्लोबल वार्मिंग, प्रदूषण, ग्रीन हाउस गैस प्रभाव
- राष्ट्रीय और स्थानीय स्तरों पर जैव विविधता
- पर्यावरण संबंधी सूचना के प्रसार में मीडिया की भूमिका
- विभिन्न पर्यावरणीय समस्याओं के संदर्भ में मीडिया की भूमिका।

प्रायोगिक कार्य 30 घंटे

- विभिन्न पर्यावरणविदों से साक्षात्कार
- जल संकट, वायु प्रदूषण, पर्यावरणीय संकट पर डॉक्यूमेट्री तैयार करना
- पर्यावरणीय संकट पर फ़ीचर, स्लोगन, रिपोर्ट, परिचर्चा
- प्रयावरणीय मुद्दों पर आधारित न्यूज़ लेटर निर्माण करना

सहायक पुस्तकें :

1. भारत में जनसंचार, केवल जे कुमार, जैको पब्लिशिंग हाउस
2. पर्यावरण अध्ययन में परिप्रेक्ष्य, ए. कौशिक और पी.सी. कौशिक, दरियागंज, न्यू एज प्रकाशन, दिल्ली
3. पर्यावरण अध्ययन, डॉ दया शंकर त्रिपाठी, मोतीलाल बनारसी प्रकाशन, नई दिल्ली
4. पर्यावरण अध्ययन-संकट से इलाज तक, आर राजगोपालन, ऑक्सफ़ोर्ड यूनिवर्सिटी प्रेस, नई दिल्ली

Learning Objectives

The Learning Objectives of this course are as follows:

1. कंप्यूटर और इन्टरनेट के स्वरूप, कार्यप्रणाली और उपयोगिता से अवगत कराना।
2. मीडिया में कंप्यूटर और इंटरनेट तकनीक से अवगत कराना।
3. इंटरनेट आधारित संचार के स्वरूप को समझाना।
4. मीडिया के तकनीकी परिदृश्य से परिचित कराना।

Course Learning Outcomes

1. मीडिया में कंप्यूटर और इंटरनेट के प्रयोग को जान पाएँगे।
2. मीडिया में कंप्यूटर और इंटरनेट से परिचित होकर रोजगार की संभावनाओं से परिचित होंगे।
3. कम्प्यूटर और इंटरनेट के विभिन्न अनुप्रयोगों का उपयोग कर सकेंगे।
4. इन्टरनेट आधारित अभिव्यक्ति के नए रूपों के प्रयोग में सक्षम होंगे।

1. कंप्यूटर और इंटरनेट का सामान्य परिचय: 10 घंटे

- सूचना-स्रोत तथा कन्टेन्ट प्रसारक के रूप में मीडिया में इंटरनेट का अनुप्रयोग
- मीडिया के कामकाज में प्रयुक्त प्रमुख सॉफ़्टवेयर : एम एस वर्ड, क्वार्क एक्सप्रेस, इन डिजाइन, कोरल ड्रा, माइक्रोसॉफ़्ट पब्लिशर, फ़ोटोशॉप, केनवा
- कंप्यूटर और मल्टीमीडिया (ग्राफ़िक्स, फोटोग्राफ़, वीडियो तथा ऑडियो)

2. कंप्यूटर, इंटरनेट, तकनीक और मीडिया लेखन 10 घंटे

- सोशल मीडिया लेखन: फेसबुक, इंस्टाग्राम, ब्लॉग लेखन
- ऑडियो रिकॉर्डिंग और संपादन, पॉडकास्ट एप
- वेबसाइट कंटेंट लेखन, संपादन, ले आउट, डिजाइन

3. कंप्यूटर, इंटरनेट और मुद्रित माध्यम 10 घंटे

- मैगजीन एप और पत्रिका निर्माण, न्यूजपेपर एप
- पोस्टर और बैनर एप और निर्माण
- ब्रोशर एप और निर्माण

4. कंप्यूटर इंटरनेट आधारित संचार के नए रूप 15 घंटे

- रील्स, मीम, शार्ट वीडियो, डिजिटल विज्ञापन, वेब सीरीज, स्टीकर, इमोजी
- लाइव स्ट्रीमिंगः कार्यप्रणाली तथा उपलब्ध मंच
- भारत में सूचना प्रौद्योगिकी तथा कॉपीराइट कानून

प्रायोगिक कार्य 30 घंटे

- रील्स, मीम, शार्ट वीडियो, डिजिटल विज्ञापन निर्माण करना
- पोस्टर और बैनर
- ब्रोशर निर्माण

		Lecture	Tutorial	Practical/ Practice		
GE (क) **राजनीतिक दार्शनिक विचारक एवं मीडिया**	4	3	0	1	12th Pass	Nil

Learning Objectives

The Learning Objectives of this course are as follows:

- भारत के प्रमुख राजनीतिज्ञों के योगदान की जानकारी प्रदान करना।
- जनसंचार माध्यमों में राजनीतिक-दर्शन और घटनाओं की उपस्थिति से अवगत कराना।
- स्वतंत्रता-पूर्व और स्वातंत्र्योत्तर पत्र-पत्रिकाओं में प्रकाशित राजनीतिक-सांस्कृतिक सामग्री का मूल्यांकन करना।
- प्रमुख राजनीतिक दार्शनिकों, पत्रकारों के योगदान का परिचय देना।

Course Learning Outcomes

- भारत की सामाजिक-सांस्कृतिक गतिविधियों की समझ विकसित होगी।
- भारत-निर्माण में मीडिया की भूमिका की जानकारी प्राप्त होगी।
- समय और घटना-विशेष के संदर्भ में पत्र-पत्रिकाओं एवं पत्रकारों का योगदान रेखांकित हो सकेगा।
- भारत-बोध विकसित होगा।

1. राजनीति और मीडिया 10 घंटे

- भारत में राजनीति और मीडिया का अंतःसंबंध : मूल्य, व्यक्ति विशेष और सत्ता समीकरण के रूप में
- प्रमुख राजनीतिक दर्शन और मीडिया : संक्षिप्त परिचय (स्वाधीनता, सर्वोदय, स्वदेशी, अंत्योदय, लोकतंत्र)
- लोकतंत्र के चौथे स्तंभ के रूप में मीडिया पर प्रमुख राजनीतिक दार्शनिकों के विचार

2. स्वतंत्रता-पूर्व राजनीतिक दर्शन और मीडिया **10 घंटे**

- स्वाधीनता, स्वराज्य का विचार तथा हिंदी पत्रकारिता में उसके स्वरूप का अध्ययन (1857 का स्वाधीनता संघर्ष, बंग-भंग आंदोलन, ख़िलाफ़त आंदोलन तथा पूर्ण स्वराज्य)
- पुनर्जागरण का दर्शन और हिंदी पत्र-पत्रिकाएं (बालाबोधिनी, हिंदी प्रदीप तथा सरस्वती के विशेष संदर्भ में)
- साहित्य, पत्रकारिता तथा फिल्मों में स्वतंत्रता-पूर्व भारत बोध का स्वरूप

3. स्वातंत्र्योत्तर राजनीतिक घटनाक्रम और मीडिया **10 घंटे**

- राष्ट्र निर्माण के लक्ष्य में मीडिया की भूमिका , क्रांति चेतना और मीडिया
- स्वातंत्र्योत्तर भारत के प्रमुख घटनाक्रम और हिंदी मीडिया : साम्राज्यवाद और सर्वसत्तावाद (विशेष संदर्भ- 1962 का भारत-चीन युद्ध तथा आपातकाल)
- मीडिया पर नव-उदारवादी व्यवस्था का प्रभाव

4. प्रमुख राजनीतिक दार्शनिक **15 घंटे**

- राममोहन राय, भारतेंदु हरिश्चंद्र, महावीर प्रसाद द्विवेदी
- बाल गंगाधर तिलक, गणेश शंकर विद्यार्थी, महात्मा गांधी
- भीमराव अंबेडकर, दीनदयाल उपाध्याय, सच्चिदानंद हीरानंद वात्स्यायन 'अज्ञेय'

प्रायोगिक कार्य : **30 घंटे**

- प्रमुख राजनीतिक दार्शनिकों द्वारा मीडिया पर किए गए विचारों का संकलन और लेखन
- ऊपर वर्णित राजनीतिक दर्शनों के संदर्भ में तत्कालीन पत्र-पत्रिकाओं में छपी सामग्री पर रिपोर्ट लेखन
- प्रमुख राजनीतिक दार्शनिकों का मीडियाकर्मी के रूप में दिए गए योगदान पर परियोजना-कार्य
- भारत-बोध में मीडिया के योगदान पर समूह-चर्चा, निबंध लेखन
- प्रमुख राजनीतिक-दार्शनिकों, क्रांतिकारियों द्वारा संपादित पत्र-पत्रिकाओं की तथा उनसे जुड़े स्थानों, स्मारकों और उन पर केंद्रित फिल्मों की सूची का निर्माण

सहायक पुस्तकें :

2. हिंदी पत्रकारिता का बृहद इतिहास, डॉ. अर्जुन तिवारी, वाणी प्रकाशन, नई दिल्ली
3. हिंदी पत्रकारिता का इतिहास, जगदीश प्रसाद चतुर्वेदी, प्रभात प्रकाशन, नई दिल्ली
4. अंतर्वेद प्रवर गणेश शंकर विद्यार्थी, अमित राजपूत, लोकोदय प्रकाशन
5. राजा राममोहन राय, विजित कुमार दत्त, नेशनल बुक ट्रस्ट, इंडिया
6. भारतेन्दु हरिश्चंद्र और हिंदी नवजागरण की समस्याएं, रामविलास शर्मा, राजकमल प्रकाशन, नई दिल्ली
7. महावीर प्रसाद द्विवेदी और हिंदी नवजागरण , रामविलास शर्मा, राजकमल प्रकाशन, नई दिल्ली
8. पं. दीनदयाल उपाध्याय : कर्तृत्व एवं विचार, डॉ. महेशचंद्र शर्मा, प्रभात प्रकाशन, नई दिल्ली
9. राष्ट्र निर्माताओं की पत्रकारिता, कृपाशंकर चौबे, प्रलेक प्रकाशन, मुंबई
10. पत्रकार डॉ. भीमराव अंबेडकर, सूर्यनारायण रणसुभे, प्रभात प्रकाशन, नई दिल्ली
11. मूकनायक डॉ. अंबेडकर, संकलन एवं अनुवाद- श्यौराज सिंह बेचैन, गौतम बुक सेंटर
12. लोकमान्य बाल गंगाधर तिलक, रचना भोला 'यामिनी', प्रभात प्रकाशन

GE (ख) मीडिया प्रोडक्शन (4)

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
GE (ख) **मीडिया प्रोडक्शन**	4	3	0	1	12th Pass	Nil

Learning Objectives

The Learning Objectives of this course are as follows:

- छात्रों को रेडियो, टेलीविजन, प्रिंट के प्रोडक्शन की जानकारी देना।
- मीडिया हाउस की प्रोडक्शन प्रक्रिया से रूबरू कराना।
- रेडियो एवं टेलीविजन की प्रसारण प्रक्रिया की जानकारी देना।

Course Learning Outcomes

- छात्रों में मीडिया के विविध कार्यक्रम तैयार करने का कौशल विकसित होगा।
- रेडियो एवं टेलीविजन प्रसारण प्रक्रिया को जान पायेंगे।
- मीडिया प्रोडक्शन में तकनीकी महत्व की जानकारी प्राप्त होगी।

1. **प्रिंट प्रोडक्शन** **10 घंटे**
   - फ़ॉण्ट, कंप्यूटर टाइपिंग
   - एडिटिंग सॉफ्टवेयर : कोरल ड्रा, कंप्यूटर डिजाइनिंग, क्वॉर्क, केनवा, पेज मेकर, इनडिजाइन
   - फोटोग्राफी के सिद्धांत, फोटो चयन, कैप्शन लेखन, फ़ोटोशॉप
2. **रेडियो प्रोडक्शन** 10 **घंटे**
   - रेडियो स्टूडियो की संरचना, उपकरण एवं प्रमुख रेडियो सॉफ़्टवेयर
   - रिकॉर्डिंग और संपादन, एनालॉग ध्वनि, डिजिटल ध्वनि, डबिंग, वॉयस मॉड्यूलेशन
   - रेडियो कार्यक्रम निर्माण एवं रेडियो प्रसारण
3. **टेलीविजन एवं वीडियो प्रोडक्शन** **10 घंटे**
   - टीवी स्टूडियो संरचना, टीवी प्रसारण तकनीक, दृश्य-श्रव्य सॉफ्टवेर
   - वीडियो प्रोडक्शन प्रक्रिया : प्री प्रोडक्शन, प्रोडक्शन, पोस्ट प्रोडक्शन

- कैमरा और प्रकाश व्यवस्था, विभिन्न शॉट्स और उनका कंपोजिशन, प्रकाशीय उपकरण

4. फिल्म और वेब प्रोडक्शन 15 घंटे

- फिल्म निर्माण प्रकिया, निर्देशन, सिनेमेटोग्राफी, ध्वनि, संगीत, संपादन, कंप्यूटर एवं फ़िल्म प्रोडक्शन
- वेब प्रोडक्शन, वेब पोर्टल की संरचना, वेब पेज निर्माण
- ओ.टी.टी. प्लेटफॉर्म और वेब सीरीज

प्रायोगिक कार्य : 30 घंटे

- समाचार पत्र पृष्ठ निर्माण करना।
- रेडियो बुलेटिन और पॉडकास्ट तैयार करना।
- वेब पेज निर्माण करना।
- प्रेस रिलीज, समाचार निर्माण, पॉडकास्ट और फोटोग्राफी अभ्यास हेतु कॉलेज कार्यक्रमों की कवरेज करना।

सहायक पुस्तकें :

1. ग्राफिक डिजाइन, नरेंद्र यादव, राजस्थान हिंदी ग्रंथ अकादमी
2. ब्रॉडकास्टिंग एंड द पीपुल, मेहरा मसानी, नेशनल बुक ट्रस्ट, इंडिया
3. रेडियो लेखन, मधुकर गंगाधर, बिहार हिंदी ग्रंथ अकादमी
4. रेडियो वार्ता शिल्प, डॉ. सिद्धनाथ कुमार,राधा कृष्ण प्रकाशन
5. वीडियो प्रोडक्शन टेक्नीक, डॉनल्ड एल.डीफेन्बच एण्ड एनी ई.स्लेटन, रूटलेज,ए फोकल प्रेस बुक
6. वेब सीरीज लेखन (हिंदी संस्करण) दिनकर कुमार, किंडल बुक

ANNEXURE-13

Sub: Amendment to Ordinance V

[E.C Resolution No. 14-1/-(14-1-1/-) dated 09.06.2023]

The Common Pool of Discipline Specific Elective (DSE) courses in respect of Department of Persian for 3rd Semester is notified herewith for all the concerned:

DEPARTMENT OF PERSIAN

COMMON POOL OF DSE COURSES

DISCIPLINE SPECIFIC ELECTIVE COURSE – 1: Developing reading & writing skills

Credit distribution, Eligibility and Pre-requisites of the Course:

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Developing reading & writing skills	4	3	1	NIL	Class XII pass	NIL

Learning Objectives

The Learning Objectives of this course are as follows:

1. To make students fluent with simple Persian texts through simple text
2. To equip the students with Persian comprehension and writing skills

Learning outcomes

The Learning Outcomes of this course are as follows:

- By studying this course, the students will be able to understand simple Persian text.
- By studying this course, the students will be familiar with Persian comprehension and writing.

SYLLABUS OF DSE-1

UNIT – I (3 Weeks/9 Hours)

The following Text:

- اوّلین روز دبستان (ص5 کتاب فارسی، دوم دبستان)
(Awwaleen rooz-e-Dabistan, Page 5, Kitab-e-Farsi, Duwwum Dabistan)
- دوستان جدید (ص9 کتاب فارسی، دوم دبستان)
(Dustan-e-Jadeed, Page 9, Kitab-e-Farsi, Diwwum Dabistan)
- چراغ سبز (ص30 کتاب فارسی، دوم دبستان)
(Charagh-e-Sabz, Page 30, Kitab-e-Farsi, Duwwum Dabistan)

UNIT – II (3 Weeks/9 Hours)

The following Text:

- تصمیم کبری (ص34 کتاب فارسی، دوم دبستان)
(Tasmeem-e-Kubra, Page 34, Kitab-e-Farsi, Duwwum Dabistan)
- کوکب خانم (ص42 کتاب فارسی، دوم دبستان)
(Kaukab Khanum, Page 42, Kitab-e-Farsi, Duwwum Dabistan)
- دندان شیری (ص 45کتاب فارسی، دوم دبستان)
(Dandaan-e-Shiri, Page 45, Kitab-e-Farsi, Duwwum Dabistan)

UNIT – III (3 Weeks/9 Hours)

The following Text:

- برادر کوچک (ص48 کتاب فارسی، دوم دبستان)
(Baradar-e-Koochak, Page 48, Kitab-e-Farsi, Duwwum Dabistan)
- برگ ریزان (ص51 کتاب فارسی، دوم دبستان)
(Barg Reezan, Page 51, Kitab-e-Farsi, Duwwum Dabistan)

UNIT – IV (3 Weeks/9 Hours)

The following Text:

- دوستان ما (ص56 کتاب فارسی، دوم دبستان)
(Doostan-e-Ma, Page 57, Kitab-e-Farsi, Duwwum Dabistan)
- حسنک کجایی (ص65 کتاب فارسی، دوم دبستان)
(Hasnak Kujaii, Page 65, Kitab-e-Farsi, Duwwum Dabistan)

UNIT – V (3 Weeks/9 Hours)

- Translation and summary of the Text in English, Hindi and Urdu

Essential/recommended readings:

1. Farsi Dabistan(Diwum): Vizarate Aamuzish wa Parvarish, Sazmane kitabhaye Darsi, Tehran, Iran. 1348

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Introduction to ancient Persian Culture	4	3	1	NIL	Class XII pass	NIL

Learning Objectives:

The Learning Objectives of this course are as follows:

1. To acquaint the students with ancient Iranian Culture
2. To enable the students to know different cultural elements like festivals and some ancient stories

Learning outcomes:

The Learning Outcomes of this course are as follows:

- By learning this course, students will be familiar with ancient Iranian culture
- By learning this course, students will be able to know the different ancient Iranian festivals and stories.

SYLLABUS OF DSE- 2

UNIT – I (3 Weeks/9 Hours)

The following Text:

- جشن مهرگان (ص8، کتاب فارسی چهارم دبستان)
(Jashn-e-Mehrgaan, Page 8, Kitab-e-Farsi, Chaharum Dabistan)

- چهار شنبه سوری (ص 133، کتاب فارسی دوم دبستان)
(Chahar Shanbe Soori, Page 133, Kitab-e-Farsi, Duwwum Dabistan)

UNIT – II (3 Weeks/9 Hours)

The following Text:

- جشن سده (ص 41، کتاب فارسی برای کلاس های دیپلم)
(Jashn-e-Sade, Page 41, Kitab-e-Farsi, barai classhai Diplum)
- جشن نوروز (۱) (ص 139، کتاب فارسی دوم دبستان)
(Jashn-e-Naurooz(1), Page 139, Kitab-e-Farsi, Duwwum Dabistan)

UNIT – III (3 Weeks/9 Hours)

The following Text:

- جشن نوروز (2) (ص 143، کتاب فارسی دوم دبستان)
(Jashn-e-Naurooz (2), Page 143, Kitab-e-Farsi, Duwwum Dabistan)
- سیزده بدر (۱) (ص 149، کتاب فارسی دوم دبستان)
(Sizdeh be Dar (1), Page 149, Kitab-e-Farsi, Duwwum Dabistan)

UNIT – IV (3 Weeks/9 Hours)

The following Text:

- سیزده بدر (۲) (ص 153، کتاب فارسی دوم دبستان)
(Sizdeh be Dar (2), Page 153, Kitab-e-Farsi, Duwwum Dabistan)
- تخت جمشید (ص 100، کتاب فارسی چهارم دبستان)
(Takht-i-Jamsheed, Page 100, Kitab-e-Farsi, Chaharum Dabistan)

UNIT – V (3 Weeks/9 Hours)

The following Text:

- داستان باربد (ص 109، کتاب فارسی چهارم دبستان)
(Dastan-e-Barbud, Page 109, Kitab-e-Farsi, Chaharum Dabistan)
- رستم پهلوان بیمانند شاهنامه (۱)(ص 203، کتاب فارسی پنجم دبستان)
(Rustam Pahalwan-e-Bimaanand-e-Shahname (1), Page 203, Kitab-e-Farsi, Panjum Dabistan)

Essential/recommended readings:

1. Farsi Dabistan(Diwum,chahrum wa Panjum): Vizarate Aamuzish wa Parvarish, Sazmane kitabhaye Darsi, Tehran, Iran. 1348
2. Kitab-e-Farsi (For Diploma Classes), Department of Persian, University of Delhi, Delhi-110007

DISCIPLINE SPECIFIC ELECTIVE COURSE – 3: Development of Persian Literature in Deccan

Credit distribution, Eligibility and Pre-requisites of the Course:

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Development of Persian Literature in Deccan	4	3	1	NIL	Class XII pass	NIL

Learning Objectives:

The Learning Objectives of this course are as follows:

1. To acquaint the students with the Development of Persian Literature in Deccan
2. To enable the students to get acquainted with introductory history of Deccan

Learning outcomes:

The Learning Outcomes of this course are as follows:

- By learning this course, students will be familiar with Persian Literature produced in Deccan
- By learning this course, students will be able to know about the Persian poets and prose writers of Deccan
- By learning this course, students will be able to familiarize themselves with Indo-Iranian Architecture of Deccan

SYLLABUS OF DSE- 3

B.A. (Hons.) Music
Hindustani Music - Vocal/Instrument (Sitar/Sarod/Guitar/Violin/Santoor)

Syllabus for DSE - Khayal

SEMESTER – III, DSE – 1

DSE - Khayal

Course Title & Code	Credits	Credit distribution of the course			Eligibility Criteria	Pre-requisite of the course
		L	T	P		
DSE - Khayal (101)	4	1	0	3	• Class XII Pass	Nil

Course Objectives:

- To initiate a relative beginner into the world of Hindustani music, where he is made aware of the rich cultural heritage of India, that Indian classical music is.
- To teach him the very basics of Indian music, such as sound, notes, scales, tempo, rhythmetc, so that his foundation can be made strong.
- To discuss in detail the two notation systems of Hindustani music, that are essential forreading a composition.
- To teach the student the fundamentals of singing such as voice production, the right posture for sitting, breathing exercises to enhance lung capacity for singing etc.
- To demonstrate tonal exercises, such as *palta-s* and *alankar-s*, vital for both singing
- To initiate his training in the realm of performance, with the most basic of all ragas, likeYaman and Bhairav.

Course Outcomes:

- The student will come to know what the basic terminologies of Indian music are, which will help him in the proper understanding of not just Hindustani music, but also Indian music as a whole. Having understood the basic concepts like Laya (tempo), Tala (rhythmic cycle), Alap (tonal elaborations), the student will be on course to becoming a performing artiste in Hindustani music.
- The student will develop the ability to read and write the notations of compositions according to a well-defined notion system, which in turn, will help him in learning new compositions by various composers of Hindustani music.
- They will grasp the various theoretical aspects of the prescribed ragas, like how it arises,what are the general grammatical rules that govern the ragas in this course, etc.
- They come to understand the concept of Tala and the use of various talas in

Hindustani music.

- The student will become well-versed with the techniques of singing
- The student will be able to achieve dexterity of the voice, through regular practice of the tonal exercises at home.
- The students will know how to tune the Tanpura
- Having learnt the Notation system in the Theory, the student will able to read and learn new compositions in the prescribed ragas.
- He will grasp the various grammatical aspects of the prescribed ragas, like how they arise, what are the respective rules that govern these ragas, how do the notes move in the ragas, what are the performing times of the ragas etc.
- He will learn the art of singing especially with regard to having the Tabla asan accompanying instrument.
- He will possess a fairly good idea of how a raga is to be performed after learning the basic ragas.

Syllabus:

Theory:

Unit I (5 hours)

- Sangeet
- Nada and its properties
- Shruti
- Svara
- Saptak
- Thata
- Raga
- Vadi, Samvadi, Anuvadi, Vivadi
- Jati

Unit II (1 hour)

The concept of Alap in Khayal gayan

Unit III (2 hours)

Knowledge of the notation systems of the following musicians –

- Pt. Vishnu Narayan Bhatkhande
- Pt. Vishnu Digambar Paluskar

Unit IV (3 hours)

Study of the ragas of this semester – Bhairav, Yaman, Alhaiya Bilawal

Unit V (2 hours)

Ability to write the notation of compositions in the prescribed ragas

Unit VI (2 hours)

- Study of the following talas in detail – Teentala & Ektala
- Ability to write the notation of the talas in dugun, tigun and chaugun

Practical component:

Prescribed Ragas:

1. Bhairav
2. Yaman
3. Alhaiya Bilawal

Unit I (30 hours)

Five alankars to be presented in the prescribed ragas.

Unit II (10 hours)

One Sargam Geet each in the prescribed ragas

Unit III (10 hours)

One Lakshan Geet each in the prescribed ragas

Unit IV (15 hours)

Two Drut Khyals with elaborations in any of the prescribed ragas

Unit V (15 hours)

Knowledge and demonstration of the following talas with dugun, tigun and chaugun – Teentala & Ektala

Unit VI (10 hours)

Basic knowledge of Tanpura and its tuning

Suggestive reading:

- Vadi, Samvadi, Anuvadi, Vivadi
- Jati

Unit II (1 hour)

The concept of Razakhani gat in Sitar.

Unit III (2 hours)

Knowledge of the notation systems of the following musicians –

- Pt. Vishnu Narayan Bhatkhande
- Pt. Vishnu Digambar Paluskar

Unit IV (3 hours)

Study of the ragas of this semester – Bhairav, Yaman, Bhupali

Unit V (2 hours)

Ability to write the notation of compositions in the prescribed ragas

Unit VI (2 hours)

- Study of the following talas in detail – Teentala & Ektala
- Ability to write the notation of the talas in dugun, tigun and chaugun

Practical component:

Prescribed Ragas:

1. Bhairav
2. Yaman
3. Bhupali

Unit I (30 hours)

Five swar alankars to be presented in the prescribed ragas.

Unit II (10 hours)

Five Alankars based on mijrab bols.

Unit III (10 hours)

Knowledge of basic structure of Jhala.

Unit IV (15 hours)

Two Razakhani gats with five tans in any of the prescribed ragas.

Unit V (15 hours)

Knowledge and demonstration of the following talas with dugun, tigun and chaugun - Teentala & Ektala

Unit VI (10 hours)

Basic knowledge of Sitar and its tuning.

Suggestive reading:

SEMESTER – III

B.A. (Hons.) PERCUSSION MUSIC - TABLA/PAKHAWAJ

Syllabus for DSC Papers

DSC – 7: ANCIENT AND MEDIEVAL HISTORY OF AVANADDHA VADYAS

Course Title & Code	Credits	Credit distribution of the course			Eligibility Criteria	Pre-requisite of the course
		L	T	P		
Ancient and medieval history of avanaddha vadyas	4	4	0	0	• Class XII Pass • Must have learnt for a minimum of 4 years at an established music institute or from a reputed artiste /guru	Must have studied the following papers • General Terminology (Sem I) • Biographies & Composers of Music (Sem II) OR • Understanding of the basic concepts of Avanaddha vadyas, origin of Tabla & Pakhawaj, Importance of vadyas in music. • Knowledge of the Bhatkhande and Paluskar notation systems

Course Objectives:

- To develop the interest of the students in musicology by introducing them to the ancient texts of music
- To teach them about the evolution and development of various Indian Percussion musical instruments from the ancient to the modern times
- Brief Study of some eminent authors

Learning Outcomes:

- Students study history of Tabla & Pakhawaj
- The students study about the various kind of ancient Percussion Instruments
- Students study the texts of ancient scholars of Hindustani music
- Students learn to write the practical compositions according to the Notation system
- Students study about the theoretical aspects of Talas

Syllabus:

Unit I (8 hours)

Brief history of Avanaddha Vadyas.

Unit II (8 hours)

Avanaddha Vadyas from vedic to modern period

Unit III (12 hours)

Study of following Avanaddha vadyas :-

- Bhumi Dundubhi
- Dundubhi
- Tripuskar
- Aankik
- Urdhwak
- Alingyak
- Panava
- Dardur
- Karata
- Ghadas

Unit IV (8 hours)

History of evolution of Tabla & Pakhawaj

Unit V (8 hours)

Analytical study of different opinions about the origin of Tabla & Pakhawaj

Unit VI (8 hours)

Importance & relevance of Avanaddha vadyas in music

Unit VII (8 hours)

Brief study of the following authors: Bharat, Sharngadeva
Notation of compositions in prescribed Talas

Suggestive reading:

- Mishra, Dr. Lalmani, (2002) Bhartiye Sangeet Vadya, Bhartiye Gyanpeeth, New Delhi
- Kumar, Dr. Ajay, Pakhawaj ki Utpatti, Vikash ewam Vadan Shaileyan (2010), Kanishka Publishers, Delhi

- Shastri, Babulal Shukla, Hindi Natyashastra Bhaag IV (2009) Chokhambha Sankrit Sansthan, Varanasi,U.P
- Chaudhary, Subhadra, Sangeet Ratnakar Bhag III Sarswati Vyakhya(2006) Radha Publishers, Delhi
- Shukla Dr. Yogmaya,Tab'le Ka Udgam Vikash Evam Vadan Shailiyan(1984) Hindi Madhyam Karyanya Nirdeshalya,D.U
- Mestry Dr. Aban E, Pakhawaj Aur Tabla ke Ghare Ewam Paramprayen (1984), Swar Sadhana Samiti, Mumbai
- Kippen James, The Tabla of Lucknow (1988), Published by the Press Syndicate of University of Cambridge, N.Y, U.S.A
- Dr. Kasliwal, Suneera Classical Musical Instruments,(2001) New Delhi Rupa & Co.
- Pt.Sudhir Mainkar, Kala Aur Shastra
- Pt.Sudhir Mainkar, Tabala vadan mein nihit Soundarya
- Pt.Arvind Mulgonkar, Tabla

DSC – 8: Stage Performance (3)

Course Title & Code	Credits	Credit distribution of the course			Eligibility Criteria	Pre-requisite of the course
		L	T	P		
Stage performance (3)	4	0	0	4	• Class XII Pass • Must have learnt for a minimum of 4 years at an established music institute or from a reputed artiste /guru	Must have studied the following papers General Terminology (Sem I) OR • Understanding of the Laya, Matra, Tali, Khali, Tala . • Knowledge of the theka of Teentala, Jhaptala, Tilwada, Jhoomra, Deepchandi, Aadachautala, Pancham Sawari • Knowledge of Uthan/ Peshkar, Kayada, Rela & Tukada. • Ability to Perform in Teentala

Course Objectives:

- Advanced training in the content of basic Taal Teentala/Chautala Introduction of Tabla gats from different Gharanas.
- Introducing the tricky concept of tihaies from different matras and talas.

Learning Outcomes:

The student is able to give a detailed practical demonstration of any Tala.

Syllabus:

TABLA

Unit I (20 hours)

Prescribed Talas: Jhaptala, Tilwada, Jhoomra, Deepchandi, Aadachautala, Pancham Sawari

Unit II (30 hours)

- A complete solo performance of 10 minutes in Teentala with various compositions.

Unit III (30 hours)

- Solo recital of 10 minutes in Jhaptala with following:-Peshkar/ Uthan, Kayada, Rela, Chakradars.

Unit IV (10 hours)

- One Bedam & One Damdar Tihai in Jhaptala.

Unit V (8 hours)

- One Rela of Dhir Dhir with Paltas and Tihai in Teentala.

Unit VI (10 hours)

- One Farrukhabadi and one Banaras Gat in Teentala.

Unit VII (12 hours)

- Basic knowledge of Tabla tuning.
- Notation book to be submitted for internal assessment.

PAKHAWAJ

Unit I-A (20 hours)

- **Prescribed Talas: Chautala, Dhamar, Sooltala, Tilwada and Ektala.**

Unit II-A (30 hours)

- A complete Solo performance of 10 minutes in Chautala with various compositions.

Unit III-A (30 hours)

- Solo recital of 10 minutes in Sultala with Theke ka vistar, Paran, Rela, Chakradars and Tihai.

Unit IV-A (10 hours)

- Dhumkit ka vadan in Chautala.

Unit V-A (10 hours)

- Dhenenak-ka-Baaj, Stuti Paran & Nauhakka.

Unit VI-A (20 hours)

- Basic knowledge of Pakhawaj tuning.
- Notation book to be submitted for internal assessment.

Suggestive reading:

- Mishra, Pt. Chhote Lal (2004) Taal Prasoon, Kanishka Publishers, New Delhi
- Kumar, Dr. Ajay, Banaras Gharane Ke Pravartak Pandit Ram Sahai Ji Ki Tabla Vadan Parampra (2022) Kanshika Publishers, Delhi
- Mishra, Pt. Chhote Lal (2006) Tabla Granth, Kanishka Publishers, New Delhi
- Das, Ram Shankar Pagal (1964)Tabla Kaumudi, Ramchandra S Publishers
- Das, Ram Shankar Pagal (1976) Mridanga Tabla Prabhakar Bhag I,II, Sangeet Karyalaya, Hathras, U.P
- Mishra, Pt. Chhote Lal (2006) Taal Prabandh, Kanishka Publishers, New Delhi
- Pt.Sudhir Mainkar, Kala Aur Shastra
- Pt.Sudhir Mainkar, Tabala vadan mein nihit Soundarya
- Pt.Arvind Mulgonkar, Tabla

DSC – 9: Talas, compositions and their applications (3)

Course Title & Code	Credit	Credit distribution of the course			Eligibility Criteria	Pre-requisite of the course
		L	T	P		
Talas, compositions and their applications (3)	4	0	0	4	• Class XII Pass • Must have learnt for a minimum of 4 years at an established music institute or from a reputeted artiste/guru.	Must have studied the following paper - General Terminology (Sem I) OR • Must have an understanding of Laya, Matra, Tali, Khali, Tala . • Knowledge of the theka of Teentala, Jhaptala, Tilwada, Jhoomra, Deepchandi, Aadachautala, Pancham Sawari • Knowledge of Uthan/ Peshkar, Kayada, Rela & Tukada. • Ability to Perform in Teentala

Course Objectives:

- Skilling the students to play with padhant of different talas with layakari.
- Balanced tuning of the Instrument.

Learning Outcomes:

- Students study about the history of Indian Music
- Students studies the texts of ancient scholars of Hindustani music
- Student studies of Tala Notations System
- Student learns to write the practical compositions according to the Notation system
- Student studies about the theoretical aspects of Talas

Syllabus:

TABLA

Unit I (20 hours)

- **Prescribed Talas: Teentala, Jhaptala, Tilwada, Jhoomra, Deepchandi, Aadachautala & Pancham Sawari**

Unit II (30 hours)

- Ability to Perform 10 minutes of Teentala with various compositions.

Unit III (30 hours)

- Solo recital of 10 minutes in Jhaptala with following:-Peshkar/ Uthan, Kayada, Rela, Chakradars and Tihai.

Unit IV (8 hours)

- Playing knowledge of prescribed Theka in different laya.

Unit V (8 hours)

- Demonstration of different layakari such as Tigun & Aad i.e- 3/1, 3/2.

Unit VI (10 hours)

- Practice of padhant various compositions in Tali Khali.

Unit VII (4 hours)

- Knowledge of Tihai starting from Sum, 5^{th}Matra, 9^{th} Matra & 13^{th} Matra in different layas.

Unit VIII (10 hours)

- Basic knowledge of Tabla tuning.
- Solo performance other than in stage performance.
- Notation book to be submitted for internal assessment

PAKHAWAJ

Unit I-A (20 hours)

- **Prescribed Talas: Dhamar, Sooltala, Jhoomra, Deepchandi, Pancham Sawari & Gajajhampa**

Unit II-A (30 hours)

- Ability to perform 10 minutes in Chautala with various compositions.

Unit III-A (30 hours)

- Solo recital of 10 minutes in Sultatala with following:-Theke ka Badhat, Uthan, Rela, Chakradars, Paran and Tihai.

Unit IV-A (8 hours)

- Playing knowledge of prescribed Talas in different laya.

Unit V-A (8 hours)

- Knowledge of different layakari such as Tigun & Aad, i.e. -3/1, 3/2.

Unit VI-A (10 hours)

- Practice of padhant compositions in Taali Khali.

Unit VII-A (4 hours)

- Knowledge of Tihai starting from Sum, 5thMatra, 9th Matra & 13th Matra in different layas.

Unit VIII-A (10 hours)

- Basic knowledge of Pakhawaj tuning.
- Notation book to be submitted for internal assessment.

Note: Students of Percussion Music have to prepare according to the requirements of their respective Units.

PERCUSSION MUSIC TABLA/PAKHAWAJ

Syllabus for DSE - PAKHAWAJ

SEMESTER – III

DSE – Pakhawaj

Course Title & Code	Credits	Credit distribution of the course			Eligibility Criteria	Pre-requisite of the course
		L	T	P		
DSE – Pakhawaj	4	1	0	3	Class XII Pass	Nil

Course Objectives

The students are taught primarily the techniques and art of playing Pakhawaj in this course. Music being a primary form of Art, is a very specialized subject, which needs specialized training too, especially the Practical, i.e. Pakhawaj playing. Different Talas, finger techniques and compositions are taught in an age-old 'Oral tradition', imbibing this vital element of teaching-learning from the traditional 'Guru-Shishya Parampara', wherein both the teacher and the students sit on the carpeted floor facing each other, and the students repeat all that the teacher plays/ demonstrates practically. The students are encouraged to improvise after learning the basic techniques, be it in the slow elaborations of different Thekas, or in the fast presentation of compositions. The students are taught to keep in mind the aesthetics of both the tala, playing style, clarity of bols and the overall performance in the mind at all times. The students, thus, get trained towards becoming young budding Solo performing artistes and accompanists as well.

Learning Outcomes

- The students of this course get to know the Structure, Tuning, Syllables and playing techniques of Pakhawaj.
- The students get the knowledge of the following technical terms- Laya, Taal, Matra, Theka, Tali, Khali, Vibhag, Sam, Avartan, ,Thah, Dugun, Tigun, Chaugun, Uthaan, Rela, Paran, Tihai.
- The students learn about different talas like Chautala, Sooltala, Tevra, Ektala, Dhamar.
- Students get to learn the notation system given by V.N. Bhatkhande.
- Students develop the ability to write notations of Theka and composition in prescribed talas with Dugun, Tigun and Chaugun.

Theory Contents:

Unit 1 (2 hours)

Structure knowledge of Pakhawaj.

Unit 2 (2 hours)

Study of Syllables (Bols) of Pakhawaj.

Unit 3 (2 hours)

Playing techniques of Pakhawaj.

Unit 4 (3 hours)

Knowledge of the following terms:-

- Laya
- Taal
- Matra
- Theka
- Tali
- Khali
- Vibhag
- Sam
- Avartan

Unit 5 (3 hours)

Brief knowledge of V.N.Bhatkhande Tala Notation System.

Unit 6 (3 hours)

- Ability to write the Theka of Chautala, Sooltala, Dhamar, Keharva & Dadra in different laya.
- Notation book prepare for compositions writing.

Practical Contents:

Unit 1 (12 hours)

Prescribed Talas : Chautala, Sooltala, Dhamar, Tevra.

Unit 2 (12 hours)

Playing techniques & produce the sound of vrious syllables on Pakhawaj.

Unit 3 (14 hours)

Rela of Tirkita with four Palta and Tihai in Chautala.

Unit 4 (14 hours)

Knowledge of variations of Theka in Chautala with different laya.

Unit 5 (12 hours)

Knowledge of two Sadharan‘Paran’ two Chakradar Paran in Chautala.

Unit 6 (14 hours)

Four variations of Theka Sooltala

Unit 7 (12 hours)

Ability to play Keharwa and Dadra Tala in different laya.

Different Talas, finger techniques and compositions are taught in an age-old 'Oral tradition', imbibing this vital element of teaching-learning from the traditional 'Guru-Shishya Parampara', wherein both the teacher and the students sit on the carpeted floor facing each other, and the students repeat all that the teacher plays/ demonstrates practically. The students are encouraged to improvise after learning the basic techniques, be it in the slow elaborations of different Thekas, or in the fast presentation of compositions. The students are taught to keep in mind the aesthetics of both the tala, playing style, clarity of bols and the overall performance in the mind at all times. The students, thus, get trained towards becoming young budding Solo performing artistes and accompanists as well.

Learning Outcomes

- The students of this course get to know the Structure, Tuning, Syllables and playing techniques of Tabla.
- The students get the knowledge of the following technical terms- Laya, Taal, Matra, Theka, Tali, Khali, Vibhag, Sam, Avartan, ,Thah, Dugun, Tigun, Chaugun, Peshkaar, Uthaan, Kayada, Rela, Palta, Mukhda, Tukda, Paran, Tihai.
- The students learn about different talas like Teentala, Ektala, Choutala, Dhamar.
- Students get to learn the notation system given by Pt. V.N. Bhatkhande.
- Students develop the ability to write notations of Theka and composition in prescribed talas with Dugun, Tigun and Chaugun.

Syllabus:

Theory:

Unit 1 (1 hours)

Structure knowledge of Tabla.

Unit 2 (2 hours)

Study of Syllables (Bols) of Tabla.

Unit 3 (2 hours)

Playing techniques of Tabla.

Unit 4 (4 hours)

Knowledge of the following terms:-

- Laya
- Taal
- Matra
- Theka
- Tali
- Khali
- Vibhag
- Sam
- Avartan

Unit 5 (3 hours)

Brief knowledge of Pt. V.N.Bhatkhande Tala Notation System.

Unit 6 (3 hours)

- Ability to write the Theka of Teentala, Jhaptala, Ektala, Keharva & Dadra in different laya.
- Notation book prepare for compositions writing.

Practical Components:

Unit 1 (10 hours)

Prescribed Talas: Teentala, Jhaptala, Ektala, Chautala, Keharwa & Dadra

Unit 2 (12 hours)

Playing techniques & produce the sound of various syllables on Tabla.

Unit 3 (14 hours)

Kayada of Tete & Tirkita with four Palta and Tihai in Teentala.

Unit 4 (12 hours)

One Rela with four variations and Tihai in Teentala.

Unit 5 (12 hours)

Knowledge of two Sadharan'Tukra' two Chakradar Tukra and one Paran in Teentala.

Unit 6 (15 hours)

Four variations of Theka of Teentala, Jhaptala.

Unit 7 (15 hours)

Ability to play Keharwa and Dadra Tala in different laya.

B.A. (Hons.) II
Karnatak Music - Vocal & Instrumental (Veena/Violin)

Syllabus for DSC Papers

SEMESTER – III
DSC- 7: Historical Study of Karnatak Music

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		L	T	P		
Historical Study of Karnatak Music (301)	4	4	0	0	• Class XII Pass • Must have learnt for a minimum of 4 years at an established music institute or from a reputed guru	Must have studied the following papers • General Musicology (Sem- I) • Theory of Indian Music (Sem – II) OR • Understanding of the basic concepts such as Shruti, Swara, Raga, Tala etc and their associated components • Knowledge of the notation system

Learning Objectives:

- The main focus of this unit is to create an in-depth knowledge about the everlasting history of Indian Music, its technical terms, old texts and biographies.
- To study the notation of the compositions and imbibe the basic concepts of Indian notation system.

Learning outcomes:

- Gaining knowledge of Technical Terms of Ancient Indian Music, Classification of Ragas of different periods, Patronage of Music before the independent era.
- Accumulative knowledge of pre- post Trinity and modern composers.

SYLLABUS

UNIT – I (12 hours)

Historical Study of the following technical terms:

- Grama
- Murchana
- Jati,
- Anibaddha

- Nibaddha
- Marga
- Desi
- Gandharva

UNIT – II (8 hours)

- Raga classification through the ages: From ancient period to the Period of Matanga.

UNIT – III (10 hours)

- Patronage of Music – Kings, Chieftains, Zamindars

UNIT – IV (10 hours)

- **Biographies -Vocal**: -

- Purandara Dasa
- Bhadrachala Ramadasa
- Swati Tirunal
- Paidala Gurumurty Shastri
- Pachimirium Adiyappaiah
- Mahavaidyanatha Iyer

- **Biographies - Violin: -**

- Malikkottai Govindaswamy Pillai
- Tirukkodi Kaval Krishna Iyer and any 4 biographies from the list given for Vocal.

- **Biographies -Veena: -**

- Mysore Doraiswamy Iyengar
- S. Balachandar and any 4 biographies from the list given for Vocal

UNIT – V (8 Hours)

- Notation of Varnam in 2-degrees of speed in Adi Tala

UNIT – VI (12 Hours)

- Raga Lakshana of prescribed ragas mentioned in paper no. 302

Suggestive readings:

		L	T	P		
Stage Performance (3) **(302)**	**4**	**0**	**0**	**4**	• Class XII Pass • Must have learnt for a minimum of 4 years at an established music institute or a reputed Guru	Must have studied the following papers – •General Musicology (Sem- I) • Theory of Indian Music (Sem – II) • Ragas, Talas of Sem.-I & Sem.- II OR •Understanding of the basic concepts such as Shruti, Swara, Raga, Tala etc and their associated components • Knowledge of notation systems • Knowledge of the 10 Mela and ragas

Learning Objectives:

- The main focus of this course is to develop an aptitude towards the practical ability in singing the compositions of the prominent composers of Karnatak Music and develop an understanding about the concert pattern of it.

Learning outcomes:

- Ability to demonstrate various musical forms and creative aspects of ragas from the prescribed syllabus

SYLLABUS

Prescribed Ragas:

- Kambhoji
- Begada
- Khamas
- SuddhaDhanyasi
- Saveri
- Sriranjini
- Ritigaula
- Saranga
- Sri

UNIT – I (40 Hours)

- One advanced Swarajati

UNIT – II (20 Hours)

- One advanced varnam in Ata tala (in two degrees of speed)

Detailed contents

UNIT – III (20 hours)

- 2 kritis of Muthuswamy Dikshitar (including one Navavaranam)
- One kriti each of Syama Sastry, Subbraya Sastri, Poochi Srinivasa Iyengar, Patnam Subramanya Iyer, Swati Tirunal
- 2 Tyagarajakritis (including one Pancharathnam)

UNIT – IV (20 hours)

- One Ragamalika

UNIT – V (20 hours)

- Brief alapana of Kalyani, Kharaharapriya, Shankarabharanam, Mohanam and Kalpana Svaras in two speeds.

Suggestive readings:

- Panchapakesa Iyer, A.S. (2002), Ganamrutha Varna Malika, Chennai, Karnatic Music Book Centre
- Kriti Mani Malai - T K Govinda Rao
- Kriti Mani Malai - Ranga Ramanuja Iyenkar

B A (Hons.) II, Sem III
DISCIPLINE SPECIFIC ELECTIVE - DSE -I
KARNATAK MUSIC – VOCAL/VIOLIN/VEENA

Syllabus For DSE - Basics of Karnatak Music

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical		
Basics of Karnatak Music	4	1	0	3	Class XII Pass	Nil

Course Objective

- The main objective of the course is to establish a better understanding of the Karnatak Music to the students of other music disciplines. Therefore, the course is more practically inclined along with relevant theory for achieving better understanding. This helps the students of other disciplines to acquire theoretical and practical skills and idea about this stream from the foundation level, thus giving them a holistic approach in Karnatak Music Learning. At the end of the course, a project work helps gaining in-depth study on the chosen topic.
- The focus of the course is to establish a better understanding of basic theory of the Karnatak Music
- To study basic concept of Karnatak music notation Course
- To study the basic concept of the tala of Karnatak Music and musical forms

Course Outcome

- Students will gain knowledge of the basic terminologies of Karnatak music and its importance in the musical rendition
- Ability to demonstrate elementary concepts of mela and raga classification
- The student will understand the characteristics of selected Raga of the unit and to notate musical form Geetam
- Students will able to to demonstrate the preliminary lessons of Karnatak Music
- The student will understand the simple talas through Alankaras and Geetams.
- Ability to give a brief shade of ragas through musical forms- Swarajati and Varnam

Syllabus

Unit I: Knowledge about Swara- (2 Hours.)

- Swarasthana
- Dwadasa Swarasthanas
- Shodasa Swara

Unit II: Elementary knowledge about terms- (2 Hours.)

- Mela
- Raga classification.

Unit III: Basic elements of Tala- (2 Hours.)

- Shadangas
- Jati
- Gati
- Sapta suladi tala

Unit IV: Basic knowledge about the musical forms –(3 Hours.)

- Geetam
- Varnam
- Kriti

Unit V: Ragalakshana of Ragas prescribed in Elective-I (3 Hours.)

- Mohana
- Kalyani
- Kambhoji
- Sudha Saveri

Unit VI: Notation of Geetam –(3 Hours.)

- Notation any of the Geetam, which has been taught in Elective-I

Practical Component:

Unit 1: Varisas – (15 Hours.)

- Sarali Varisas
- Janta varisas
- Dhattu Varisas
- Madhya Sthayai Varisas
- Tara Sthayi Varisas

Unit 2: Alankaras (Sapata Tala) – (30 Hours.)

- Eka
- Roopaka
- Triputa

Unit 3: Geetams (rendered in 2 speeds in following Ragas) – (30 Hours.)

- Mohanam
- Kalyani
- Kamboji
- Suddha Saveri

Unit 4: Musical form –(15 Hours.)

- One simple Swarajati or one simple Varnam

Suggestive Reading:

• Sambamoorthy, P. Prof. (Vol 3, 1971), A dictionary of South Indian Music, Madras, Indian Music Publishing House
• Sambamoorthy, P. Prof. (Vol. 1, 1983), South Indian Music, Madras, Indian Music Publishing House

SEMESTER-3

Course : DSC 3 (A)

Paper Name: Theory of Indian Music & Contribution of musicologists.

Theory:

Component-1

Credit: 2

(Total- 30 Hours)

Learning Objectives

- The main focus of the course is to establish better understanding about the musical forms and varied elements of Raga and Tala.
- Basic knowledge of notation writing in Bhatkhande Paddhati.
- Writing notation of compositions. The visually challenged students have an option of writing essays on the given topics.
- The students study the origin and development of Vedic music and prescribed ancient treatises.
- The students learn about the contribution of various musicians and musicologists.

Learning Outcomes

- The study of the elements and forms of Indian music will open new horizons and create interest amongst the students for the subject.
- Writing of the Bhatkhande Swarlipi Paddhati will teach students the importance and value of traditional style of writing musical notations.
- Students will also learn to write Talas and compositions in notation with minute details.
- The visually challenged students are given an option of attempting either writing of notation or an essay on a general topic.
- Detailed study of the Ragas will enable students to attain proficiency in the subject.
- The study of Vedic music and Natya Shastra will give a speculative insight to the students to understand the origin and development of Indian Music.
- Life and contribution of great musicians and musicologists will be a source of constant inspiration for the students.

Contents

General discussion and study of the following:-

Unit I (5 hrs.)

- Dhrupad- Dhamar,
- Khayal-Vilambit Khayal, Drut Khayal,
- Maseetkhani Gat, Razakhani Gat.

Unit II (3 hrs.)

- Tala- Definition and its Ten Pranas.

Unit III (3 hrs.)

- Meend, Soot, Murki, Khatka, Kan, Krintan.

Unit IV (3 hrs.)

- Knowledge of Pt. Bhatkhande Swarlipi Paddhati.

Unit V (3 hrs.)

- Writing of Talas in notation with their Vibhags, Matras, Bols, Sam, Tali and Khali with Dugun and Chaugun:
- Chautala, Jhaptala, Teentala,Ektala, Dadra.

Unit VI (3 hrs.)

- Vedic Swara- Udatta, Anudatta, Swarita
- Vedic evam Laukik Scales,

Unit VII (2 hrs.)

- General study of Natyashastra

Unit VIII (2 hrs.)

- Detailed study of the following Ragas :
  Bihag, Vrindavani Sarang, Malkauns.

Unit IX (3 hrs.)

- Life & Contribution of the following musicians and musicologists:
  Pt. V. D. Paluskar,
  Sourindra Mohan Tagore,
  Mozart,
  Shyama Shastri.

Unit X (3 hrs.)

- Writing of compositions in notation of Vilambit Khayal, Drut Khayal (For Vocal students),

- Maseetkhani Gat, Razakhani Gat (For Instrumental students).

Or

Only Visually challenged students have the option of attempting either notation or an essay on the following topics:

- Bhakti evam Sangeet.
- Shastreeya Sangeet va Lok Sangeet.
- Sangeet Ke vikas mein Akashwani ka yogdan.

DSC 3 (A/B)

Practical: Component-2

Performance & Viva –Voce

Credit: 2

(Total- 60 Hours)

Learning Objectives

- The prime design of this course is to enable students to develop performance skills by learning to-
- Demonstrate various forms of music in different Ragas and Talas as a part of performance and Viva-Voce.

- To identify the Ragas and Talas.
- Sing or play one Light Dhun/Bhajan/Lokgeet based on Raga.

Learning Outcomes

- A variety of musical forms in each Raga will be taught to the students, thus building their repertoire and preparing them for stage performance.
- The students will learn the customary and traditional Gayaki of Dhrupad-Dhamaar.
- ·The students will learn to identify different Ragas and Talas while being sung and played .
- Reciting the Thekas of the Talas and playing basic Talas will enable students to get acquainted with the rhythmic patterns.
- The knowledge of playing Harmonium will aid the students in understanding the placement of fingers and swaras on the instrument.
- The practical file with details of each topic covered in the syllabus will teach the students the method of systematic documentation and presentation.

Content:

Prescribed Ragas – Bihag, Malkauns,Vrindavani Sarang.

Prescribed Talas - Chautala, Jhaptala, Teentala, Ektala, Dadra tala.

Vocal Music

- One Vilambit Khayal with Alaaps and Taans in any of the prescribed Ragas.

- Madhyalaya Khayal in any three of the prescribed Ragas.
- One Dhrupad with Dugun, Tigun and Chaugun.

Or

- One Dhamar with Dugun, Tigun and Chaugun.
- One Raga based Bhajan/Lok geet.

Instrumental Music

- Maseetkhani Gat in any one of the prescribed Ragas with Alaaps & Tanas.
- Razakhani Gat in any three of the prescribed Ragas with Taanas & Jhalas.
- Any one Dhun in a Tala other than Teentala

Vocal & Instrumental

- Identifying Ragas and Talas of the prescribed syllabus while being sung or played.
- · Ability to recite the Thekas of the following Talas along-with Tali and Khali and Dugun : Chautala, Jhaptala, Teentala, Ektala, Dadra tala.
- Practical file with details of Ragas, Notations of compositions & Talas with Dugun, Chaugun.

SEMESTER - III

DSC – 3 (C) MAJOR

THEORY OF ANCIENT INDIAN MUSIC

Course Title & Code	Credits	Credit distribution of the course			Eligibility Criteria	Pre-requisite of the course
		L	T	P		
THEORY OF ANCIENT INDIAN MUSIC **(MAJOR)**	4	2	0	2	XII PASS	Knowledge of Swara and Tala

DSC 3 (C)

Paper Name: Theory of ancient Indian Music

Theory : Component-1

Credit : 2

(Total- 30 Hours)

Learning Objectives:

- To develop the interest of the students in musicology by introducing them to the ancient texts of music.
- To explain the Raga-Ragini system of classification of ragas
- To teach them about the various musical instruments from the ancient to the modern times.

Learning Outcomes:

- Students will come to know about the Music during Vedic period. This knowledge will be useful for further study.
- Students will be able to have an understanding of the Raga-Ragini system of classifying ragas.
- Students will understand how various musical instruments of India are made, and are categorized. This will enhance their knowledge and will be beneficial in future research.

Contents:

Unit I (8 hrs.)

Detailed study of the following –

- Vedic Music-with special reference to Samavedic Music
- Gramgeya Gana –Aranya Gana
- Panchvidha Sama, Saptvidha Sam
- Sama Vikar

Unit II (3 hrs.)

- Vedic Instrument

Unit III (4 hrs.)

General study of following Granthas-

- Natya Shastra
- Brihddeshi

Unit IV (3 hrs.)

- Gram with reference to Natya Shastra

Unit V (6 h r s .)

Alapti :

- Ragalapti
- Roopakalapti

Unit VI (3 hrs.)

- Study of the following talas in detail – Dhamar & Roopak
- Ability to write the notation of the talas in dugun, tigun and chaugun

Unit VII (3 hrs.)

- Study of the ragas – Malkauns , Deshkar, Bhairav
- Ability to write the notation of compositions in prescribed ragas

Practical: Component -2
Performance & Viva-Voce
Credit -2
(Total- 60 Hours)

Learning Objectives:

- To focus more on the Stage Performance of the student
- To encourage the student to attempt to improvise while singing/playing.
- To focus on his learning of newer talas
- To focus on the Viva-Voce of the student.

Learning Outcomes:

- Students will develop the skill to perform a raga with improvisation.
- Students will be able to sing new compositions in new talas
- Students will be able to explain the grammatical rules of a raga in detail.
- Students will develop the understanding to differentiate between similar ragas.

Content:

Prescribed Ragas:

- Malkauns
- Deshkar
- Bhairav

Unit I – Vocal Music:

- A performance of Vilambit and Drut Khayal with gayaki to be presented in anyone raga.
- Drut Khayal with gayaki in all the ragas
- Dhrupad or Dhamar composition in any one of the prescribed ragas with Layakari
- Knowledge and demonstration of the following talas – Dhamar & Roopak

Unit II – Instrumental Music:

- A performance of Maseetkhani and Razakhani Gats with elaboration to be presented in any one raga
- Presentation of a dhun in a Tala other than Teentala.
- Razakhani Gat with elaboration in all the ragas
- Knowledge and demonstration of the following talas – Dhamar & Roopak

Note**:** Students of Vocal and Instrumental music will have to prepare according to the requirements of their respective Units.

HINDUSTANI MUSIC (VOCAL & INSTRUMENTAL)

GENERIC ELECTIVE

B.A. Hindustani Music Vocal/Instrumental

Course Title& Code	Credits	Credit distributions of the course			Eligibility Criteria	prerequisite of the course (if any)
		Lecture	Tutorial	Practical/practical		
Study of Hindustani Music GE-3	4	2	0	2	XII Pass	Knowledge of Swara

SEMESTER-3

GE-3

Paper Name: Study of Hindustani Music

Theory: Component -1

Credit: 2

(Total- 30 Hours)

Learning Objectives

- The purpose of this course is mainly to impart comprehensively the tenets of Hindustani Music, with a brief introduction to Western music terminologies.
- The objective is to acquire the radical information of Tanpura and Sitar, and sketching it, along with the recognition of classification of musical instruments into four categories.
- The aim is pointed towards understanding the comparative study of the two major notation systems of the Hindustani music, as well as to acquire dexterity in writing the notation of a Vilimbit/Drut Khayal/Maseetkhani/Razakhani Gat,

- And also towards imparting instruction to the students such that they gain proficiency in understanding the prescribed Talas as well as writing their notations.

Learning Outcomes

- Students go through the structural, functional and maintenance aspects of instruments by gaining the elementary knowledge and sketching.
- The students obtain knowledge about the basic elements of musicology along with the classification of musical instruments.
- Students also make comparative study of notation systems and develop an ability to write various Talas.
- They also submit a project work on any one of the forms of Hindustani Classical Music**.**

Content:

Unit 1

- **Detailed study of prescribed Ragas – Bhairav and Vrindavani sarang.**

Unit 2

- **Elementary knowledge of Tanpura/ Sitar with sketch.**

Unit 3

- **Grama,**
- **Moorchana**
- **Gamak**
- **Vibration, Pitch, Intensity & Timber.**

Unit 3

- **Classification of Musical Instruments.**

Unit 4

- **Comparative Study of notation system of Pt. V.D.Paluskar & Pt. V.N. Bhatkhande.**

Unit 5

Ability to write notation of one Vilambit Khayal / Maseetkhani Gat and one Drut Khayal / Razakhani Gat.

Unit 6

Write an essay on the following topics :

- **Global Music**
- **Folk Music**

Unit 7

- **Knowledge of following talas – Teentaal, Chautaal, Ektaal with skills to write Thaah, Dugun & Chaugun.**

Unit 8

- **Project Work on any one of the classical musical forms of the Hindustani Music.**

SEMESTER-3

GE-3

Practical: Component- 2

Performance &Viva –Voce

Credit: 2

(Total- 60 Hours)

Learning Objectives

- There are two major facets included in this semester, first to impart tuitions on voice/sound production techniques and second, to learn to self-tune an instrument Tanpura/Sitar. The end goal is to achieve self-reliance
- The other objective is to train the students for the next level in giving a short performance in Vilimbat & Drut Khayal/Maseetkhani & Razakhani compositions.
- Guided audio visuals of various genres give a larger revelation and perspective of the subject.

Learning Outcomes

- The students give a practical demonstration of prescribed Ragas and Talas, which increases their confidence in performance.
- The knowledge of voice production and techniques of playing on an opted instrument have been introduced to flourish and increase their attention.
- Basic knowledge of the Talas helps the students to sing the compositions in Talas.
- Learning the tuning of instruments i.e. Tanpura and Sitar is important part of the subject which teaches them the finesse and subtlety of sound.

Content

Unit 1

- **Prescribed ragas – Bhairav and Vrindavani sarang.**

Unit 2

- **Knowledge of voice production/ techniques of playing of any opted instrument.**

Unit 3

- **Ability to sing one Vilambit/ Drut khayal or play Maseetkhani / Razakhani gat with taans in each of the prescribed ragas with Jhala.**

Unit 4

- **Ability to keep the Theka by hand beats of Teentaala, Chautaala and Roopak with Thaah and Dugun.**

Unit 5

- **Tuning of one's own instrument i.e. Tanpura/ Sitar.**

Unit 6

- **Guided listening of khayal singing/ Thumri singing /Instrumental compositions**

- The student will come to know what the basic terminologies of Indian music are, whichwill help him in the proper understanding of not just Hindustani music, but also Indian music as a whole. Having understood the basic concepts like Laya (tempo), Tala (rhythmic cycle), Alap (tonal elaborations), the student will be on course to becoming aperforming artiste in Hindustani music.
- The student will develop the ability to read and write the notations of compositions according

toa well-defined notion system, which in turn, will help him in learning newcompositions by variouscomposers of Hindustani music.

- They will grasp the various theoretical aspects of the prescribed ragas, like how it arises,what are the general grammatical rules that govern the ragas in this course, etc.
- They come to understand the concept of Tala and the use of various talas in Hindustanimusic, especially ragas.

Contents:

Unit I (10 hrs.)

- Sangeet
- Nada and its properties
- Shruti
- Svara
- Saptak
- Thata
- Raga
- Vadi, Samvadi, Anuvadi, Vivadi
- Jati

Unit II (4 hrs.)

The concept of Alap in Khyal gayan

Unit III (4 hrs.)

Knowledge of the notation systems of the following musicians –

- Pt. Vishnu Narayan Bhatkhande
- Pt. Vishnu Digambar Paluskar

Unit IV (4 hrs.)

Study of the ragas of this semester (mentioned in the Practical section)

Unit V (4 hrs.)

Ability to write the notation of compositions in the prescribed ragas

Unit VI (4 hrs.)

- Study of the following talas in detail – Teentala & Ektala
- Ability to write the notation of the talas in dugun, tigun and chaugun

Reference Books:

DSE -1
Practical: Component -2
Performance & Viva-Voce
Credit: 2
(Total-60 Hours)

Course Objectives:

- To teach the student the fundamentals of singing and playing, such as voice production,holding ofthe Sitar and the correct placement of the hands on the instrument, the right posture for sitting, breathing exercises to enhance lung capacity for singing etc.
- To demonstrate tonal exercises, such as *palta-s* and *alankar-s*, vital for both singing andplaying.
- To initiate his training in the realm of performance, with the most basic of all ragas, likeYaman and Bhairav.

Learning Outcomes:

- The student will become well-versed with the techniques of singing or playing, as thecase may be.
- The student will be able to achieve dexterity of the voice (singing) and hand (playing), through regular practice of the tonal exercises at home.
- The students will know how to tune their respective instruments – Tanpura for vocal students, andSitar, Sarod etc. for instrumental students.
- Having learnt the Notation system in the Theory, the student will able to read and learn new compositions in the prescribed ragas.
- He will grasp the various grammatical aspects of the prescribed ragas, like how they arise, what are the respective rules that govern these ragas, how do the notes move in theragas, what are the performing times of the ragas etc.
- He will learn the art of singing or playing, especially with regard to having the Tabla asan accompanying instrument.
- He will possess a fairly good idea of how a raga is to be performed after learning thebasic ragas.

Contents:

Prescribed Ragas:

1. Bhairav
2. Yaman
3. Alhaiya Bilawal

Unit I

Five alankars to be presented in the prescribed ragas.

Unit II

One Sargam Geet each in the prescribed ragas

Unit III

One Lakshan Geet each in the prescribed Ragas.

Unit IV

Two Drut Khyals with elaborations in any of the prescribed ragas

Unit V

Knowledge and demonstration of the following talas with dugun, tigun and chaugun - Teentala &Ektala

Unit VI

Basic knowledge of Tanpura and its tuning

ANNEXURE-15

N O T I F I C A T I O N

Sub: Amendment to Ordinance V

[E.C Resolution No. 60-1/(60-1-1) dated 03.02.2023]

Following addition be made to Appendix-II-A to the Ordinance V (2-A) of the Ordinances of the University;

Add the following:

Syllabi of Semester-III of the following departments under Faculty of Arts based on Under Graduate Curriculum Framework -2022 implemented from the Academic Year 2022-23.

FACULTY OF ARTS

DEPARTMENT OF ARABIC

BA (Hons.) Arabic

DISCIPLINE SPECIFIC CORE COURSE – 7

INTERMEDIATE ARABIC: MODERN ARABIC PROSE & POETRY-1

SEMESTER-3

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Intermediate Arabic: MODERN ARABIC PROSE & POETRY-1	4	3	1	0	Class XII Pass	NIL

Learning Objectives

The Learning Objectives of this course are as follows:

1. To make students aware of Modern Arabic Prose & Poetry.
2. To introduce briefly to prominent & distinguished Poets and Prose Writers of Arabic.

Learning outcomes

The Learning Outcomes of this course are as follows:

After completing this course the learner will be able to:

1. Use day-to-day vocabulary.
2. Learn sentence formation.
3. Learn a few couplets in order to begin comprehending Arabic Poetry.

SYLLABUS OF DSC-7

Unit 1 (15 hours)

The following lessons from the prescribed book:

- كيف أقضي يومي (1)
- في السوق (4)
- النملة (4)

Unit 2 (15 hours)

The following lessons from the prescribed book:

- الأمانة (13)
- فضيلة الشغل (17)
- الطائر(6)

Unit 3 (15 hours)

The following lessons from the prescribed book:

- قريتي (20)
- يوم مطير(26)
- ترنيمة الولد في الصباح (19)
- شر وخير(26)

Practical component (if any) - NIL

Prescribed Book:

- Al Shaikh Abul Hasan Ali Al Hasani Al Nadwi: Al Qira'at Al Rashida (Part-1), Delhi.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE – 8
INTERMEDIATE ARABIC GRAMMAR

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Intermediate Arabic Grammar	4	3	1	0	Class XII Pass	NIL

Learning Objectives

The Learning Objectives of this course are as follows:

1. To make learners well versed in Syntax and Morphology.
2. To enable them to translate the text of Intermediate level.
3. To develop speaking, reading and writing skills.

Learning outcomes

The Learning Outcomes of this course are as follows:

After completing this course the learner will be able to:

1. Easily derive perfect, imperfect, imperative, prohibitive verbs and active/passive participles from any infinitive of the following irregular patterns.

2. Conjugate 14 or 6 moods of the following verbs and adverbs and use them as per their requirement.
3. Use them in their writings and speaking as per the need.
4. Learn advanced grammar of the Arabic syntax.

SYLLABUS OF DSC-8

Unit 1 (15 hours)

Morphology & Syntax

Conjugation of the following irregular verb patterns in detail i.e. 14-mood conjugations of Perfect, Imperfect (active & passive), 6-mood conjugation of Imperative, Prohibitive, Active Participle and Passive Participle each:

وقى/يقي	وجد /يجد	وضع/يضع	باع/يبيع	قال/يقول

• Relative Pronoun • Intransitive & Transitive Verbs • Active & Passive Verbs • Declinable (Mu'rab) & Indeclinable (Mabni)	• الاسم الموصول (الذي، من ، ما ، أي ، أية) • الفعل اللازم والفعل المتعدي • الفعل المعلوم و الفعل المجهول • المعرب والمبني

Unit 2 (15 hours)

Morphology & Syntax

Conjugation of the following irregular verb patterns in detail i.e. 14-mood conjugations of Perfect, Imperfect (active & passive), 6-mood conjugation of Imperative, Prohibitive, Active Participle and Passive Participle each:

رمى/يرمي	لقي/يلقى	أخذ/يأخذ	رأى/يرى	شاء/يشاء

• نواصب المضارع: أن، لن، كي، لكي، إذن، حتى، لأن، لِ • جوازم المضارع: لم ، لما ، لام الأمر، لاء النهي، أدوات الشرط الجازمة • بدل ومبدل منه	• Particles of Nasab: An, Lan, Kai, Likai, Izan, Hatta, Lian, Li. • Particles of Jazm: Lam, Lamma, Laamul Amr, Laa'un Nahyi, Particles of Conditions that give Jazm • Substitute

Unit 3 (15 hours)

Morphology & Syntax

Conjugation of the following irregular verb patterns in detail i.e. 14-mood conjugations of Perfect, Imperfect (active & passive), 6-mood conjugation of Imperative, Prohibitive, Active Participle and Passive Participle each:

دعا/يدعو	مدّ/يمدّ	فرّ/يفرّ	مسّ/يمسّ

• ظرف الزمان و ظرف المكان • المفعول له • المفعول المطلق	• Adverb of Time & Place • Reasoning Object • Absolute Object

Practical component (if any) - NIL

Essential/recommended readings

1. Dr. W. A. Nadwi: A Practical Approach to the Arabic Language Vol.1 & 2, New Delhi.
2. J. A. Haywood & H. M. : A New Arabic Grammar, New Delhi.
3. S.A. Rahman: Teach Yourself Arabic, New Delhi.
4. Maulana Abdur rahman Amritsari, Kitab Al Sarf, Panipat.
5. Maulana Abdur rahman Amritsari, Kitab Al Nahw, Panipat.
6. Abdus Sattar Khan: Arabi Ka Muallim, Delhi
7. Ali Jarim Wa Mustafa Amin, Al Nahw Al Wazih Fi Qawaid Al Lugha Al Arabiyya, Delhi.
8. Antuwan Dahdah, Mu'jam Tasrif Al Af'aal Al Arabiyya, Delhi.

Suggestive readings

1. J. A. Haywood & H. M. : A New Arabic Grammar,New Delhi.
2. Maulana Sajid: Tayseer Al-Insha, Delhi
3. Muhammad Rabi Al Hasani Al Nadwi, Muallim Al Insha, Lucknow.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE – 9
INTERMEDIATE ARABIC TRANSLATION & CONVERSATION

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Intermediate Arabic Translation & Conversation	4	3	0	1	Class XII Pass	NIL

Learning Objectives

The Learning Objectives of this course are as follows:

1. To enable students to translate simple sentences from English-Arabic-Hindi and vice versa.
2. To develop conversation abilities among students.

Learning Outcomes

The Learning Outcomes of this course are as follows:

After completing this course the learner will be able to:

1. Acquire skills in simple sentences translation from English into Arabic & Hindi.
2. Acquire skills in simple sentences translation from Arabic into English & Hindi.
3. Acquire skills in conversation and short speeches on simple topics.

SYLLABUS OF DSC-9

Unit 1 (15 hours)

Translation from English into Arabic & Hindi:

- Simple Sentences

Unit 2 (15 hours)

Translation from Arabic into English & Hindi:

- Simple Sentences

Unit 3 (15 hours)

Conversation:

- Short Speech in Arabic on simple topics
- Conversational Sentences

Practical component (if any) – Yes (30 hours)

The practical will be based upon the following:

- Simultaneous Translation
- Interpretation
- Viva-Voce (Examination)

Essential/recommended readings

1. Dr. W. A. Nadwi: A Practical Approach to the Arabic Language Vol.2, New Delhi.
2. J. A. Haywood & H. M. Nahmad : A New Arabic Grammar ,New Delhi.
3. Abdur Sattar Khan: Arabi Ka Muallim 1-4, Delhi.
4. Dr. Manzoor Khan: Nahwal Insha Wa Al Tarjama, Srinagar, Kashmir.

Suggestive readings

1. Dr. Sayed Muhammad Ijtiba Nadwi: Al Tabeer Wal Muhadatha, Delhi.
2. S.A Rahman: Let Us Speak Arabic, New Delhi.
3. A Group of Scholars, Allugha Al Wazifiyya, NCPUL, New Delhi.
4. Md. Quamruddin: Translation Made Easy, U.P.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Learning Objectives

The Learning Objectives of this course are as follows:

1. To make the learners familiar with the Arabic language skills.
2. To make them familiar with grammar rules required at the second stage of learning Arabic.
3. To enhance their vocabulary & translation skills through the given text and understand the different structures of sentences.

Learning outcomes

The Learning Outcomes of this course are as follows:

After completing this course, the learner will be able to:

1. Read the Arabic text.
2. Understand and solve grammar based exercises.
3. Translate sentences based on learnt grammar.

SYLLABUS OF DSC-6 (CATEGORY-II)

Unit 1 (15 hours)

Arabic Text

Lessons: 1-6

Prescribed Book:

Duroosul Lugha Al-Arabiyya Li Ghairin Naatiqeen Biha (English) Vol.-2

Dr. V. Abdur Rahim

Unit 2 (15 hours)

Grammar:

- Active & Passive Verb
- Active Participle
- Passive Participle
- *Inna* & Its Sisters
- *Kaana* & Its Sisters
- Adverbial Accusative of the State/Condition
- Exception by *Illa*
- Sound and Weak Verb
- Ordinal Number (1 to 10)

Unit 3 (15 hours)

Translation:

Translation English-Arabic-Hindi based upon the grammar topics learnt.

Practical component (if any) – NIL

Essential/recommended readings

1. R.I. Faynan: Essential Arabic, New Delhi.
2. S.A. Rahman: Teach Yourself Arabic, New Delhi.
3. Dr. W. A.Nadwi: A Practical Approach to the Arabic Language, New Delhi.

Suggestive readings

1. J.A. Haywood & H.M. Nahmad: A New Arabic Grammar
2. Syed Ali: Arabic For Beginners
3. Amir Jamal: Arabic Learn the Easy Way, New Delhi.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Arabic Text Comprehension	4	3	1	0	Class XII Pass	NIL

Learning Objectives

The Learning Objectives of this course are as follows:

1. To make students acquainted with Arabic text.
2. To enable them to comprehend the Arabic text.

Learning Outcomes

The Learning Outcomes of this course are as follows:

After completing this course the learner will be able to:

1. Read and comprehend the Arabic text.
2. Translate the given text into English or Hindi or Urdu.

3. Make sentences on the patterns of sentences given in the text.

SYLLABUS OF DSE-2

Unit 1 (15 hours)

- The following lessons from the prescribed book:
  Lessons 1-5

Unit 2 (15 hours)

- The following lessons from the prescribed book:
  Lessons 6-10

Unit 3 (15 hours)

- The following lessons from the prescribed book:
  Lessons 11-15

Practical component (if any) - Nil

Prescribed Book:

- Al Jadid Fil Lugha Al Arabiyya, S.A. Rahman, New Delhi

Suggestive readings:

1. Dr. W. A. Nadwi: A Practical Approach to the Arabic Language Vol.1 & 2, New Delhi.
2. J. A. Haywood & H. M. : A New Arabic Grammar, New Delhi.
3. S.A. Rahman: Teach Yourself Arabic, New Delhi.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

COMMON POOL OF GENERIC ELECTIVES (GE) COURSES

SEMESTER-3

GENERIC ELECTIVES (GE-7): SPOKEN ARABIC-2

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)	Department offering the course
		Lecture	Tutorial	Practical/ Practice			
Spoken Arabic-2	4	3	1	0	Class XII Pass	NIL	Arabic

Learning Objectives

The Learning Objectives of this course are as follows:

1. To teach learners how to speak, read and write the language efficiently.
2. To polish the language of learners.
3. To help them improve fluency in Arabic speaking.

Learning outcomes

The Learning Outcomes of this course are as follows:

By studying this course the student will be able to:

1. Learn the day-to-day vocabulary useful in conversation.
2. Learn the formal and informal greetings and expressions.
3. Learn the language to speak on different occasions.

SYLLABUS OF G.E.-7

Unit 1 (15 hours)

Lessons on Speaking from the Prescribed Book:

Lesson: 1-5

Unit 2 (15 hours)

Lessons on Speaking from the Prescribed Book:
Lesson: 6 to 10

Unit 3 (15 hours)

Conversational Sentences of following occasions:

- At the Airport
- In the Hotel
- In the Restaurant

Practical component (if any) - NIL
Prescribed Book:

- Prof. S.A. Rahman: Let Us Speak Arabic, New Delhi.

Suggestive readings

1. Makhdoom Sabri: English Urdu And Arabic Guide, Delhi
2. Rapidex (Arabic Version), New Delhi
3. Mohd. Haroon Rashid & Khalid Parwez: Arabic Conversation Book, New Delhi.
4. Badruz Zaman Qasmi Kairanwi: Learn to Speak Arabic & English, Delhi

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

GENERIC ELECTIVES (GE-8): SIMPLE ARABIC TEXT-1

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Simple Arabic Text-1	4	3	1	0	Class XII Pass	NIL

Learning Objectives

The Learning Objectives of this course are as follows:

1. To enable them to comprehend the Arabic text.
2. To teach elementary Arabic grammar.
3. To make them familiar with Arabic structures based upon elementary grammar.
4. To enable them to translate simple sentences.

Learning outcomes

The Learning Outcomes of this course are as follows:

By studying this course the student will be able to:

1. Read simple sentences correctly.
2. Learn to translate simple sentences based on the prescribed grammatical rules.
3. Read and comprehend the Arabic text.
4. Translate the given text into English or Hindi or Urdu.
5. Make sentences on the patterns of sentences given in the text.

SYLLABUS OF G.E.-8

Unit 1 (15 hours)

- The following lessons from the prescribed book:
  Lessons 1-7

Unit 2 (15 hours)

- The following lessons from the prescribed book:

Lessons 8-15

Unit 3 (15 hours)

- The following lessons from the prescribed book:
  Lessons 16-23

Practical component (if any) – NIL

Prescribed Book:

- Minhajul Arabiyya Vol. I, Syed Nabi Hydrabadi, New Delhi.

Suggestive readings

1. Dr. W. A. Nadwi: A Practical Approach to the Arabic Language Vol.1 & 2, New Delhi.
2. J. A. Haywood & H. M. : A New Arabic Grammar, New Delhi.
3. S.A. Rahman: Teach Yourself Arabic, New Delhi.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

FOR VISUALLY IMPAIRED STUDENTS:

3. Film script of *Modern Times*:

http://chaplin.bfi.org.uk/resources/bfi/filmog/film_thumb.php?fid=59441&resource=Script

UNIT – II (15 weeks-1 hour/week)

UNIT II: Cinematic adaptations of literary texts

- theory of adaptation
- the relationship between literature and films
- film as an adapted text

4. William Shakespeare: *Macbeth* (1623)

5. *Maqbool*, dir. Vishal Bhardwaj, 2003.

6. *Throne of Blood*, dir. Akira Kurosawa, 1957.

FOR VISUALLY IMPAIRED STUDENTS:

5. Film Script of *Maqbool*:

https://www.filmcompanion.in/download-the-script-ofmaqbool/amp/

6. Film script of *Throne of Blood*:

https://transcripts.thedealr.net/script.php/throne-of-blood-1957-DAL

UNIT – III (15 weeks-1 hour/week)

UNIT III: Gender and sexuality

- connection with literature
- the difference between sexuality in films and literary texts
- the gaze
- the body
- cinematography

7. Mulvey, Laura. 'Visual Pleasure and Narrative Cinema', *Film Theory and Criticism: Introductory Readings*. eds. Leo Braudy and Marshall Cohen, New York: Oxford UP 1999. pp 833-44

8. *Thelma and Louise*, dir. Ridley Scott, 1991.

9. *Margarita with a Straw*, dir. Shonali Bose, 2014.

FOR VISUALLY IMPAIRED STUDENTS:

8. Film Script for *Thelma and Louise*:

https://www.imsdb.com/scripts/Thelma-&-Louise.html

9. Film Script for *Margarita with a Straw*:

https://www.scripts.com/script/margarita%2C_with_a_straw_13368

NOTE: For visually impaired students to be able to take this paper, a number of supplementary readings are offered for Units 2 and 3. The cinematic texts in these units are to be supplemented by close reading of the respective film scripts.

For purposes of assessment/evaluation, a general advisory may be made to assist visually impaired students filter out areas they may not be able to address due to the nature of their disability and to focus on using supplementary texts to instead create other perspectives/forms of knowledge on the same texts.

Practical component (if any) - NIL

Essential/recommended readings- as listed in the units

Suggestive readings:

1. Berger, John, et al. Chaps. 2 & 3, *Ways of Seeing*. United Kingdom: British Broadcasting Corporation and Penguin Books, 1972. pp 35-64

2. Bordwell, David. *Film Art: An Introduction*. New York: McGraw Hill, 1998.

3. Cartmell, Deborah(ed). *A Companion to Literature, Film and Adaptation*. Oxford: Wiley-Blackwell, 2012.

4. Costello, Tom. *International Guide to Literature on Film*. London: Bowker-Saur, 1994. Print.

5. Nichols, Bill(ed). *Movies and Methods: Vol. I: An Anthology*. Calcutta: Seagull Books, 1985.

GENERIC ELECTIVES (GE-5) Readings on Indian Diversities and Literary Movements

No. of hours- 60(Theory- 45 hrs.+Tutorials-15 hrs.)

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
GE-5 Readings on Indian Diversities and Literary Movements	4	3	1	0	Passed Class XII	NIL

Learning Objectives

The Learning Objectives of this course are as follows:

- To introduce the social and cultural history of India which were conducive to the development of art and literature
- To inculcate new ways to interpret, understand and read representations of diversity.

Learning outcomes

The Learning Outcomes of this course are as follows:

- By studying this course, students will be able to read non-verbal social and cultural history.
- Students will be encouraged to be open to the diverse modes of thought.

SYLLABUS OF GE-5

UNIT – I (15 weeks-1 hour/week)

1. Overview
2. Linguistic Plurality within Sufi and Bhatia Tradition

UNIT – II (15 weeks-1 hour/week)

1. Language Politics: Hindi and Urdu
2. Tribal Verse
3. Dalit Voices

UNIT – III (15 weeks-1 hour/week)

1. Writing in English
2. Woman Speak: Examples from Kannada and Bangla
3. Literary Cultures: Gujarati and Sindhi

Practical component (if any) - NIL

Essential/recommended readings:

1. Kumar, Sukrita Paul et al. (eds.). *Cultural Diversity, Linguistic Plurality, and Literary Traditions in India*. New Delhi: Macmillan, 2005.

Suggestive readings- NIL

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

GENERIC ELECTIVES (GE-6) Indian English Literatures

No. of hours- 60(Theory- 45 hrs.+Tutorials-15 hrs.)

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
GE-6 Indian English Literatures	**4**	**3**	**1**	**0**	Passed Class XII	**NIL**

Learning Objectives

The Learning Objectives of this course are as follows:

- To introduce literary texts from a range of regional, cultural, social, and political locations within India.
- To inculcate an in-depth understanding of some of the major issues shaping this literary production.

Learning outcomes

The Learning Outcomes of this course are as follows:

- By studying this course, students will be able to comprehend regional differences in the issues discussed and in socio-cultural contexts.
- Students will be able to analyze the use of the English language by non-native speakers and writers.

SYLLABUS OF GE-6

UNIT – I (15 weeks-1 hour/week)

1. Vikram Seth: *A Suitable Boy*

UNIT – II (15 weeks-1 hour/week)

1. Shashi Deshpande: 'The Intrusion'
2. Salman Rushdie: 'The Courter'
3. Rohinton Mistry: 'Swimming Lessons'
4. Vikram Chandra: 'Dharma'

UNIT – III (15 weeks-1 hour/week)

1. Kamala Das: (i) 'An Introduction' (ii) 'My Grandmother's House'

2. Nissim Ezekiel: (i) ‘Night of the Scorpion’ (ii) ‘Goodbye Party for Miss Pushpa TS’
3. Arun Kolatkar: (i) ‘The Bus’
4. Mamang Dai, ‘The Sorrow of Women’

Practical component (if any) - NIL

Essential/recommended readings- as listed in the units

Suggestive readings:

1. Burton, Antoinette. *Dwelling in the Archive: Women Writing House, Home, and History in Late Colonial India*. Oxford UP, 2003.
2. Zecchini, Laetitia. *Arun Kolatkar & Literary Modernism in India: Moving Lines*. USA: Bloomsbury Academic, 2014.
3. Nerlekar, Anjali. *Bombay Modern: Arun Kolatkar and Bilingual Literary Culture*. Speaking Tiger, 2017.
4. Anjaria, Ulka. *Realism in the Twentieth-Century Indian Novel: Colonial Difference and Literary Form*. Cambridge UP, 2012.
5. Parashkevova, Vassilena. *Salman Rushdie's Cities: Reconfigurational Politics and the Contemporary Urban Imagination*. Bloomsbury, 2012.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

COMMON POOL OF GENERIC ELECTIVE (GE) LANGUAGE COURSES

GENERIC ELECTIVES LANGUAGE-5 (GE Language 5) English Language through Literature-II

No. of hours- 60(Theory- 45 hrs.+Tutorials-15 hrs.)

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
GE Language 5- English Language Through Literature-II	**4**	**3**	**1**	**0**	Passed Class XII	**NIL**

Learning Objectives

The Learning Objectives of this course are as follows:

- To develop in students the ability and confidence to process, understand and examine different kinds of texts-verbal and written-that they encounter in everyday life.
- To enable students to identify and understand social contexts and ethical frameworks in the texts they encounter.
- To encourage suitable research–to recognize sources; to distinguish fact from opinion/editorialization; produce objective versus subjective pieces
- To learn skilled comprehension; listening/reading; skimming; summarizing; précis writing; paraphrasing; note making
- To identify key topics/arguments/ideas
- To accomplish writing goals: creating an essay; writing a thesis statement; producing topic sentences; developing organised paragraphs; evolving the skill of producing suitable transitions between paragraphs

- To enable students to write in expository argumentative and descriptive modes
- To help students identify and use the characteristic features of various writing forms: letters; programmes reports/press-releases; newspaper; feature articles; fiction and nonfiction
- To enable students to choose between expository, argumentative, descriptive and narrative writing styles to assemble their own writing

Learning outcomes

The Learning Outcomes of this course are as follows:

- By studying this course, students will be able to inculcate confident expression.
- Students will be able to articulate their own views confidently as their language skills sufficiently empower them to converse, research and collate information from various textual sources—verbal or written.

SYLLABUS OF GE LANGUAGE 5-

UNIT – I (15 weeks-1 hour/week)

UNIT 1: Understanding Fiction

1. Kumar E., Santhosh. 'Three Blind Men describe an Elephant', *Indian Review*.

Practical component (if any) - NIL

Essential/recommended readings- as listed in the units

Suggestive readings- NIL

GENERIC ELECTIVES LANGUAGE-6 (GE Language 6) Digital Communication-II

No. of hours- 60(Theory- 45 hrs.+Tutorials-15 hrs.)

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
GE Language 6- Digital Communication-II	**4**	**3**	**1**	**0**	Passed Class XII	**NIL**

Learning Objectives

The Learning Objectives of this course are as follows:

- To hone skills for online communication and provide interpersonal skills required in the digital world.
- To effectively present themselves in personal and professional capacities using online mediums.

Learning outcomes

The Learning Outcomes of this course are as follows:

- By studying this course, students will be able to understand and learn globally emerging forms of digital communication in English and effectively communicate in their everyday contexts be it in social or professional situations.

SYLLABUS OF GE LANGUAGE 6-

UNIT – I (15 weeks-1 hour/week)

UNIT I: Curating Persona

1. Maintaining profiles (continuity: coherence, cohesion)

2. Innovating content (introducing new ideas, opinions, and facts: style and correctness)

3. Content writing (briefs, press releases, podcast scripts: concise, cohesion, coherence, clarity)

UNIT – II (15 weeks-1 hour/week)

UNIT II: Making Institutional Profiles and networks

1. Writing about the institution (describing and assessing)

2. Building networks (compare, contrast, synthesize)

3. Updating Blogs and Vlogs (discourse markers)

UNIT – III (15 weeks-1 hour/week)

UNIT III: Online Interactions and Diversity

1. Etiquettes for online interactions (chats, meetings, video conferences).

2. Ethics towards inclusive and integrated participation (addressing gender, ethnicity, special abilities)

3. Drawing boundaries in communication (obscenities, hostility, addressing disrespectful comments and feedback: changing register and tone of communication)

Practical component (if any) - NIL

Essential/recommended readings- as listed in the units

Suggestive readings- NIL

GENERIC ELECTIVES LANGUAGE-7 (GE Language 7) English Fluency-II

No. of hours- 60(Theory- 45 hrs.+Tutorials-15 hrs.)

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
GE Language 7- English Fluency-II	**4**	**3**	**1**	**0**	Passed Class XII	**NIL**

Learning Objectives

The Learning Objectives of this course are as follows:

- To describe or express their opinions on topics of personal interest such as their experiences of events, their hopes and ambitions.
- To read and understand information on topical matters and explain the advantages and disadvantages of a situation.
- To write formal letters, personal notes, blogs, reports and texts on familiar matters.
- To comprehend and analyse texts in English.
- To organise and write paragraphs and short essays in a variety of rhetorical styles.

Learning outcomes

The Learning Outcomes of this course are as follows:

- By studying this course, students will be able to effectively communicate in their everyday contexts.
- Students will be equipped with skills that will help them interact with people around their personal, institutional and social spaces.

SYLLABUS OF GE LANGUAGE 7-

UNIT – I (15 weeks-1 hour/week)

Unit 1: In the State

- Research -- Filing an FIR, making an RTI request, submitting a consumer complaint
- Active & Passive voice; idioms

A. Find out what the procedure is for making a complaint about trees being cut in your neighbourhood.

B. Draft a formal letter requesting information about the disbursal of funds collected by a residents' welfare association

GENERIC ELECTIVES LANGUAGE-8 (GE Language 8) Developing English Language Skills-II

No. of hours- 60(Theory- 45 hrs.+Tutorials-15 hrs.)

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
GE Language 8- Developing English Language Skills-II	**4**	**3**	**1**	**0**	Passed Class XII	**NIL**

Learning Objectives

The Learning Objectives of this course are as follows:

- To enhance comprehension skills and enrich vocabulary through the reading of short and simple passages with suitable tasks built around these.
- To introduce simple syntactical structures and basic grammar to students through contextualized settings and ample practice exercises so that they can engage in short independent compositions.
- To introduce the sounds of the language and the essentials of English pronunciation to students in order to remove the inhibitions experienced by them while speaking English.
- To acquaint students with social formulae used to perform various everyday functions so that they can converse in English in simple situations.

Learning outcomes

The Learning Outcomes of this course are as follows:

- By studying this course, students will be able to read and write in English with confidence.
- The course will help in increasing their proficiency in English, increase their vocabulary and improve their comprehension of syntactical structures

SYLLABUS OF GE LANGUAGE 8-

UNIT – I (15 weeks-1 hour/week)

UNIT 1: Reading & Vocabulary–II

- Ways of expanding vocabulary;
- learning how to use a dictionary;
- understanding more text types such as argumentative and descriptive passages, poetry, character sketches, etc. through suitable activities based on selected texts

Readings:

1. *A Foundation English Course for Undergraduates*: Book III. Delhi: University of Delhi, 1993. pp 5–10, 27–29, 40–44, 81–83

2. *Developing Language Skills 2*. Delhi: Doaba House, 1995. pp 43–51

3. *Everyday English*. Delhi: Pearson, 2005. pp 36–43

4. *English at the Workplace II*. Delhi: Oxford University Press, 2007. pp 32–37, 46–48

UNIT – II (15 weeks-1 hour/week)

UNIT 2: Writing & Grammar–II

- Understanding what constitutes a piece of good writing;
- learning to describe objects and processes, narrate incidents and stories, and argue a point of view.
- framing of questions and negative sentences;
- modals and their uses.

Readings:

5. *A Foundation English Course for Undergraduates*: Book II. Delhi: University of Delhi, 1992. pp 115–130

6. *A Foundation English Course for Undergraduates*: Book III. Delhi: University of Delhi, 1993. pp 126–136

7. *Developing Language Skills I*. Delhi: Manohar, 1997. pp 183–186, 206–209

8. *Developing Language Skills 2*. Delhi: Doaba House, 1995. pp 112–116

9. *English at the Workplace II* (Delhi: Oxford University Press, 2007) pp 49 – 52.

UNIT – III (15 weeks-1 hour/week)

UNIT 3: Speaking & Listening–II

- Understanding the essentials of English pronunciation: word stress and rhythm in connected speech; speaking on the telephone;
- becoming a better listener;
- expressions used for getting and giving permission, agreeing and disagreeing, warning and persuading, inviting, suggesting, accepting and refusing, expressing likes and dislikes, regulating speech and ending a conversation.

Readings:

10. *Developing Language Skills I*. Delhi: Manohar, 1997. pp 26–45

11. *English at the Workplace*. Delhi: Macmillan, 2006. pp 52–57

12. *English at the Workplace II*. Delhi: Oxford University Press, 2007. pp 10–13, 20–24, 38–45

BA(Hons.) Journalism

Bachelor in Journalism (Honours) degree

No. of hours- 60(Theory- 45 hrs.+Tutorials/Practicals-15 hrs.)

DISCIPLINE SPECIFIC CORE COURSE-7 (DSC-7): Media and Cultural Studies

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSC-7 Media and Cultural Studies	**4**	**3**	**0**	**1**	Passed Class XII with English	NIL

Learning Objectives

The Learning Objectives of this course are as follows:

- To engage with contemporary media forms actively and critically in its diversity of music, films, graffiti, new media and folk media.
- To contextualize the developments of the media and its role though political and economic changes across the world.

Learning outcomes

The Learning Outcomes of this course are as follows:

- By studying this course, students will be able to attain familiarity with the historical evolution of the media.

SYLLABUS OF DSC-7

UNIT – I (15 weeks-1 hour/week)

UNIT I: Understanding Culture

- Mass Culture, Popular Culture, Folk Culture
- Frankfurt School, Media as Cultural Industries
- Political Economy, Ideology and Hegemony
- Technological Determinism

UNIT – II (15 weeks-1 hour/week)

UNIT II: Representation

- Media as Texts
- Signs and Codes in Media
- Uses and gratification approach
- Reception studies
- Representation of nation, class, caste and gender issues in media

UNIT – III (15 weeks-1 hour/week)

UNIT III: Audiences

- Active audiences
- Women as audiences
- Sub Cultures; music and the popular
- Fandom

Practical component (if any)- Assignments can take rather creative forms like group blogging, journal entries, short films and posters. Students can be encouraged to do projects on analysis of TV shows, cultural symbols, folk performances, and music shows. They can also take up challenging themes like the representation of caste, gender, and nation in contemporary media.

Essential/recommended readings-

1. AS Media Studies: An Essential Introduction Edited by Philip Rayner, Peter Wall and Stephen Kruger, Routledge (Covers Unit II, III, IV and V), 2019

2. John Fiske, Introduction to Communication Studies, Routledge (Covers Unit II, Ideology and Meanings and Unit III signs and codes), 1982

3. Dennis McQuail, (fourth Edition) Mass Communication Theory, London, Sage (Covers Unit IV, Media Technologies), 2000

4. Baran and Davis, Mass Communication Theory (covers Unit II, III and IV), 1994

5. John Storey. Cultural Theory and Popular Culture: An Introduction. London: Pearson Longman. (Covers Unit 1 and II and IV), 2009

6. Kevin Williams, Understanding Media Theory (Covers Unit II, III and IV), 2003

Suggestive readings-

1. Media Cultures by Nick Stevenson, 2002, Second Edition, SAGE.

2. Short Extracts from writings by Adorno and Horkheimer, Radway, Roland Barthes, McLuhan

3. Parmar S. Traditional Folk Media in India, 1975, New Delhi, Geka Books

4. Chatterji, Roma. "Folklore and the construction of national tradition." Indian Folklife 19 (2005).

5. Rege, Sharmila. "Conceptualising Popular Culture:'Lavani' and 'Powada' in Maharashtra." Economic and political weekly (2002): 1038-1047.

6. Uberoi, Patricia. "Feminine identity and national ethos in Indian calendar art." Economic and Political Weekly (1990): WS41-WS48.

7. Punathambekar, Aswin. "Reality television and the making of mobile publics: The case of Indian Idol." in The Politics of Reality Television, pp. 154-174.Routledge, 2010.

8. Ranganathan, Maya. “The archetypes of Sita, Kaikeyi and Surpanakha stride the small screen.” In Rodrigues, Usha M., and Maya Ranganathan. Indian news media: From observer to participant. SAGE Publications India, 2014.

DISCIPLINE SPECIFIC CORE COURSE-8 (DSC-8): Introduction to New Media

No. of hours- 60(Theory- 45 hrs.+Tutorials/Practicals-15 hrs.)

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSC-8 Introduction to New Media	**4**	**3**	**0**	**1**	Passed Class XII with English from List A in CUET	NIL

Learning Objectives

The Learning Objectives of this course are as follows:

- To study new media theories from a critical lens.

Learning outcomes

The Learning Outcomes of this course are as follows:

- By studying this course, students will be able to critically assess and synthesize new media theories, analytical approaches, and practices, connect disparate theories and understand their development and contribution to the field of new media studies; critique and contribute to debates about digital media ownership, economics, intellectual property, regulation, privacy, identity, sociality, infrastructure, and equity; understand user behaviour and participatory cultures online, audience analysis for production of content for websites and blogs, integration of social media and journalism and get employment as new media professional.

SYLLABUS OF DSC- 8

UNIT – I (15 weeks-1 hour/week)

UNIT I: Key Concepts

- Defining new media and digital media,
- terminologies and their meaning,
- advocacy journalism,
- multiplier effect,
- technological determinism,
- mobile-mediated-communication (MMC),
- networked society,
- Participatory culture- Blogs, Vlogs, Social Media Trends

UNIT – II (15 weeks-1 hour/week)

UNIT II: Digitization of Content: Debates & Concerns

- Piracy, copyright, copy-left and open source
- Digital archives
- How are new media monetized?
- New media and ethics

UNIT – III (15 weeks-1 hour/week)

UNIT III: Web Writing and Website Design

- Online reporting, linking, multimedia, building narratives with multimedia
- Website planning and visual design
- Content strategy and audience analysis

Practical component (if any)- Create a news website to understand the use of digital media for activism and journalism. Teacher and students will function as an Editor and Reporters, gathering multi-media content for the class website. The website will reflect unique multimedia productions from each student produced during the course of the semester. These productions will include shooting and editing videos, audios and pictures for the web, packaging text and content for an online audience.

Essential/recommended readings-

1. Vincent Miller. *Understanding Digital culture*. Sage Publications, 2011

2. Lev Manovich. "What is New Media?" in *The Language of New Media.* Cambridge: MIT Press. pp. 19-48, 2001

3. Siapera, Eugenia., *Understanding New Media.* Sage, 2011

DSC-9 Introduction to Photography	**4**	**3**	**0**	**1**	Passed Class XII with English from List A in CUET	NIL

Learning Objectives

The Learning Objectives of this course are as follows:

- To utilize the technology and the tools of the photography in the production of photographic images, to include the operation of the camera, exposure, lenses etc.

Learning outcomes

The Learning Outcomes of this course are as follows:

- By studying this course, students will be able to work as a photojournalist, professional photographer with any organization/political party and capture pictures for any event in the personal or professional capacities of customers.

SYLLABUS OF DSC-

UNIT – I (15 weeks-1 hour/week)

UNIT I: Beginning & Types of Photography

- The birth of Camera and its evolution
- Invention of Digital Photography
- Photojournalism: News Photography, Sports Photography, Nature photography, Portrait photography, Travel photography, Fashion photography and advertisement photography

UNIT – II (15 weeks-1 hour/week)

UNIT II: Camera Equipment & Lighting

- Camera Lenses, aperture, shutter
- Digital storage
- Different types of lighting-Natural lighting–and Artificial Lighting
- Three-point lighting

UNIT – III (15 weeks-1 hour/week)

UNIT III: Photo editing software

- Microsoft Office Picture manager,
- CorelDraw,
- Adobe Photoshop Elements,
- Photoshop CC (Creative Cloud) Correcting imperfect images: Picture orientation,
- Cropping,
- Levels,
- Altering brightness and contrast,
- red eye

Practical component (if any)- Students will make a photo feature on selected topics. Other methods will include lectures, class exercises of following photographs used by various social media and new paper and class discussions on mobile photography trends, as well as other significant debates on topical issues.

Essential/recommended readings-

1. *The Photography Book* by Editors of Phaidon Press, 30 April 2000.

2. *Communication Technology for Development*, Pannu P, Tomar A Yuki, IK international publishing House, 2011.

3. *All about Photography* by Ashok Dilwali, National Book Trust, Year of Publication: 2010 New Delhi.0

4. *Practical photography* by O.P. SHARMA HPB/FC (14 March 2003)

5. *The Photographer's Guide to Light* by Freeman John Collins & Brown, 2005.

6. *Lonely Planet's Best Ever Photography Tips* by Richard I' Anson published by Lonely Planet, 2013

Suggestive readings- NIL

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Engaging with Literary Texts (1)

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Engaging with Literary Texts (1)	**4**	**3**	**1**	**0**	**12th Pass**	**NIL**

Learning Objectives

Enable students to read, understand and analyse short literary texts (prose, poetry, films, songs etc.) adapted for students of level A2 and to answer questions on the same.

Learning outcomes

SYLLABUS OF DSC-9

UNIT – I (9 hours)

The students will read short stories of level A2, and learn to summarise the content as well as answer basic comprehension questions on it.

UNIT – II (9 hours)

The students will get familiar with various components of literary analysis like narrator, character, tone etc. as well as with various forms of short prose. The students will learn to answer more analytical questions.

UNIT – III (9 hours)

The students will learn to read and analyse poetry while gaining knowledge about various poetic devices.

UNIT – IV (9 hours)

The students will learn to listen to and analyse various German songs and try to apply knowledge of poetic devices on the song texts, while also learning more about intonation, melody, rhythm etc.

UNIT – V (9 hours)

The students will learn to comprehend and do a basic analysis of short visual texts like shorts films, advertisements, skits etc.

Practical component (if any) - NIL

Additional material will be provided by the Department

Teaching Learning Process

- Interactive teaching with lectures, presentations, discussions and debates with the help of audio-visual teaching aids.
- The learners are encouraged to collaborate with their peers to complete specific projects, assignments, term papers assigned to them.
- By using latest tools of Information technology the learners will be expected to explore and investigate about the topics introduced in the class in order to develop a critical perspective on the issues concerned

Assessment Methods

- 25% weightage on Formative Internal assessment through closed-book/open-book tests, tasks, projects, presentations, review-assignments using the target language
- 75% weightage on End Semester Written Examination

Keywords

Spain, Latin America, Democracy, Dictatorship, Freedom Movement, Immigration, History

Life in Spanish speaking Countries

Learning Objectives:

To introduce the learner to various aspects of contemporary culture (films, art, education system, etc.) in Spain and Latin America.

Learning Outcomes:

- To initiate learners to the culture and civilization of Spain and Latin American countries
- To provide knowledge about education systems, home, family, leisure activities, festivals, politics, tourism, physical geography of Spain and Latin American countries.
- To introduce the students to the great thinkers of Spain and Latin America in the areas of literature, cinema, art, etc.
- To Enable students to understand and analyse cultural aspects of Spain and Latin American Countries and develop an intercultural competence among students

Unit 1

The 19th century phenomenon of the caudillo and cacique in Spain and Latin America. 20th century dictatorships (Franco - Spain, Trujillo - Dominican Republic, Pinochet - Chile, etc.) Banana republics. Guerrilla warfare. Revolutions (Mexico, Cuba).

Unit 2

Transition to Democracy in Spain and Latin America. Spain and the European Union. NAFTA.

Unit 3

Separatism, terrorism and regional nationalism in Spain. Grassroots people's movements in Latin America.

Unit 4

Distant Neighbours: Latin America and the United States. Monroe Doctrine. Good Neighbour Policy.

Operation Condor. Spain: Multiculturalism and Immigration.

Unit 5

Cultural forms and National Identity: Flamenco (Spain) Merengue (Dominican Republic) Tango (Argentina)

Cultures of resistance: La movida madrilena, New Song Movement, Narcocorridos.

COMMON POOL OF GENERIC ELECTIVES (GE) COURSES OFFERED BY THE DEPARTMENTS

GENERIC ELECTIVES (GE-3)

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Basic Communicative French (3)	**4**	**3**	**1**	**0**	**12th Pass**	**NIL**

Learning Objectives

The course focuses on developing communicative competence building on the language skills acquired by students in the previous two semesters and will teach intermediate level of communicative transactions such as to give small instructions and simple opinions, to make plans and programs, build adequate lexicon on various topics, carry out small meaningful conversations, etc., among other things. By the end of this semester the students will partially attain A2.1 level of CEF.

Learning Outcomes

- Enable students to partially attain A2.1 Level of reading and writing skills in the concerned language

- Enable students to partially attain A2.1 Level of listening and speaking skills in the concerned language
- Equip students to read and write about opinions, plans, instructions related to one's immediate environment.
- Prepare learners to carry out small meaningful conversations to fulfil the needs of everyday life.

Unit 1: Listening

Identifying the main points in short, clear, simple messages and announcements.

Unit 2: Reading

Reading: Reading very short, simple texts to find specific, predictable information in simple everyday material such as advertisements, prospectuses, menus, timetables, classified advertisements, Internet forums etc.

Unit 3: Speaking

- Monologue: Can describe in simple terms aspects of his/her background/relevant environment and matters in areas of immediate need such as narrating past, present and future events, plans, programs.
- Dialogue: Communicating in simple and routine tasks requiring a simple, short and direct exchange of information on familiar and routine matters such as asking for and giving instructions, discussing what to do in the evening/at the weekend etc.

Unit 4: Writing

Describing past, present and future events, writing short, simple notes and messages relating to matters in areas of immediate need.

- Alvarez Martinez, María Angeles. Canales, Ana Blanco. et al. (2017). *Sueña 2 Libro de alumno*. Salamanca. Salamanca: Grupo Anaya.

Teaching Learning Process

- Task Based Learning modules that integrate real life situations within the context of the classroom. Learner; are expected to perform certain tasks in day to day life situations in groups.
- The learners are encouraged to collaborate with their peers to complete specific projects assigned to them based on specific linguistic, communicative, analytical, enquiry based, co-cultural, problem-solving and other skills that they need to acquire.
- The learners will be encouraged to evaluate their own learning process through regular self-assessment sheets.
- By using latest tools of Information technology and social media, the learners will be given an opportunity to put in practice reading and writing skills in real life environment while communicating with their peers beyond classrooms.

Keywords

Relevant environment, areas of immediate need, communicating in routine tasks

DISCIPLINE SPECIFIC CORE COURSE (DSC-3): Spanish in Context: Intermediate Level – 1

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Spanish in Context: Intermediate Level – 1	**4**	**3**	**1**	**nil**	**Pass in B.A. (Prog.) Sem. II**	**none**

Learning Objectives

The Learning Objectives of this course are as follows:
At the end of Semester 3, a student will be able to:

- Read texts on various social topics and answer questions on them.
- Write short texts on subjects pertaining to his/her environment.
- Attain Level A2.1 of the Common European Framework (CEF)

Learning Outcomes

The Learning Outcomes of this course are as follows:

- Enable students to partially attain A2 Level of listening, speaking, reading and writing skills in the concerned language.
- Reading texts and answering questions on them.
- Equip students to write about subjects pertaining to his/her environment.

SYLLABUS OF DSC – 3

Content

Listening: Listen to and understand texts on various topics like fashion, professions, health, means of communication, environment, etc.

Speaking, which includes:
Monologue: Present orally one's views on various topics like health, professions, fashion, social media, etc.
Dialogue: Engage in conversations on various topics like clothes, health, professions, social media, etc.

Reading: Read and understand texts, emails, blogs on various topics like fashion, social media, professions, etc.

Writing: Guided writing activities. Writing a short text, an email, a formal and an informal letter, one's curriculum, etc.

Morphosyntax and Vocabulary: Grammatical structures and vocabulary used to talk and write on various topics like social media, fashion, health, professions, etc.

Intercultural and co-cultural: Introduction to Spanish-speaking regions/countries, celebrities from Spanish speaking countries, fashion, cinema, comic strips, etc.

Unit 1 **3 weeks**

Talking about fashion, clothes and related issues. Reading, comprehending and discussing blogs on fashion. Vocabulary related to purchase of clothes – "rebajas, gastar mucho/poco dinero, probarse/ponerse/llevar una prenda." Clothes, shoes and accesories for different occasions. Reacting to different opinions using "de acuerdo", "yo también", "yo tampoco" "yo sí", "yo no", etc. Material and style of clothes, measurements, prices, places where one can buy clothes, shoes, etc. Use of "qué, cuál, cuáles" while selecting and purchasing clothes, shoes and accessories. Discussing what we can do with clothes we don't need. Learning and using the "pronombres de objeto indirecto" and combining them with "pronombres objeto directo". Using "pronombres posesivos – mío,mía, etc.".

Unit 2 **3 weeks**

Different professions and the work involved in them. Expressing positive and negative aspects at work. Vocabulary involved when talking about the workplace and work. The verb "soler". Learning and using "el pretérito indefinido" of regular and irregular verbs. Learning time markers when speaking of the past like "ayer, el año pasado, hace tres años, etc.". Talking of past actions and of special moments of life in the past. Forming a curriculum. Discussing the importance of work in one's life and other aspects like salary, free time, motivation, etc. Reading and discussing the process of selection for a job. Talking of skills and capabilities. Discussing the preferred profession of the students.

Unit 3 **3 weeks**

Talking of health. Knowing the human body. Discussing about the daily habits which lead to a healthy life. Talking about health problems using "doler, tener + fiebre, estar + enfermo/cansado, etc.". Giving advice in order to maintain good health using "es necesario/importante, etc.". Relating to others in a formal and informal way using "tú" and "usted". Discussing one's food habits and exercise routine. Talking about the different states of mind. Discussing remedies if in bad health. Interview with a nutritionist. Discussion on naturopathic medicine. Connectors which connect parts of a sentence – "…y es que", "ya que", "porque", "en primer lugar", etc. Expressing actions one should or should not do using "hay que/no hay que + infinitivo, deber + infinitivo, tengo que + infinitivo".

Unit **3 weeks**

Talking about the different means of communication – the newspaper, the radio, the television, the social network. Pointing out the differences in paper press and digital press. Talking about the various sections of a newspaper – sports, culture, etc. Forming News Headlines. Discussing the structure of a news item – the headline, the introduction and the body with all the details. The contrast between the "Pretérito Perfecto" and "Pretérito Indefinido". Use of "ya", "todavía no". Reacting to news using "qué + adjetivo", "qué + adverbio", "qué + sustantivo", "qué + sustantivo + tan/más + adjetivo". Discussing the different social networking sites. Writing a formal letter and email and an informal letter and email.

Unit 5 **3 weeks**

Talking about environment and ecology. Discussing various issues related to environment like global warming, climatic change, natural resources, animals in danger of extinction. Expressing the cause of something using "porque", "a causa de (que)". Expressing the purpose for which something is done using "para + infinitivo". Expressing opposition using "pero", "sino (que)", "sin embargo". Expressing consequence using "por eso". Using some nouns which are derived from verbs like "elevar…la elevación, cambiar…el cambio, etc.". Expressing agreement/disagreement using "estar de acuerdo/en desacuerdo, etc.". Expressing certainty using "estar seguro, etc.". Structure of a conference. Expressions used in a debate.

Introduction to the History of Italy (1)	**4**	**3**	**1**	**0**	**Passed Class XII**	**Nil**

Introduction to the History of Italy (1)	
Learning Objectives: • To introduce students to major social, political and cultural events in Italy and Italophone countries. • To study the impact of these social, political and cultural events in the Italophone world and in Europe.	
Learning Outcomes: • Familiarize students with the major social, political and cultural events from the medieval to contemporary period. • Provide a good understanding of Contemporary Italy and its relations with the Italian speaking world including its policy towards immigration.	
Syllabus:	
UNIT I	**(15 hours)**
• The Gauls and the Franks. • The making of the Kingdom of Italy (987-1453) and Consolidation of the Italian Monarchy.	
UNIT II	**(15 hours)**
• Italian Revolution and the Napoleonic era. • Rise of Republican thought in the 19th century and the Third Republic with special emphasis on its policy towards education. • Italy and its colonies.	
UNIT III	**(15 hours)**
• Contemporary Italy and its relations with the Italian speaking world / European Union, including its policy towards immigration.	
Learning/Teaching Material: Any of the textbooks given below may be prescribed: • Cantarella, Eva. Guidorizzi, Giulio. (2010). *Dall'impero romano alla crisi del Trecento*. Milano: Einaudi Scuola.	

- Del Boca, Angelo. (1992). *L'Africa nella coscienza degli Italiani*. Roma-Bari: Laterza.
- Pallotti, Gabriele. Cavadi, Giorgio. (2014). *Che Storia: la storia italiana raccontata in modo semplice*. Roma: Bonacci.

Life in Italy	**4**	**3**	**1**	**0**	**Passed Class XII**	**Nil**

Life in Italy	
Learning Objectives: • To introduce the learner to various aspects of contemporary culture (films, art, education system...) in Italy and Italophone countries.	
Learning Outcomes: • Initiate learners to the culture and civilization of Italy and Italian speaking countries. • Provide knowledge about education systems, home, family, leisure activities, festivals, politics, tourism, physical geography of Italy and the Italophone countries. • Introduce the students to the great thinkers of Italy and other Italophone countries in the areas of literature, cinema, art, etc. • Enable students to understand and analyse cultural aspects of the Italian and Italophone Countries and develops intercultural competence amongst students	
Syllabus:	
UNIT I	**(15 hours)**
• Basic knowledge of various cultural and civilisational aspects of Italy and Italophone countries, such as, daily lives and routines of an average person, education systems, home, family, leisure activities, festivals, politics, tourism, physical geography etc. in the areas of literature, cinema, art, etc.	
UNIT II	**(15 hours)**
• Great thinkers of Italy and other Italophone countries	
UNIT III	**(15 hours)**
• Introduction to literature, cinema, art of Italy and other Italophone countries	
Learning/Teaching Material: Any of the textbooks given below may be prescribed: • Caprara, Mario. Semprini, Gianluca. (2012). *Neri! La storia mai raccontata della destra radicale, eversiva e terrorista*. Rome: Newton Compton Editori.

		Lecture	Tutorial	Practical/ Practice		
Different Text Types	**4**	**3**	**1**	**0**	**Passed Class XII**	**Nil**

Different Text Types

Learning Objectives:

- To introduce and familiarize the learner to different types of literary and non-literary texts.
- To identify the linguistic, discursive and formal specificity of literary and non-literary texts
- To analyze the form and content of literary and non-literary texts

Learning Outcomes:

- Develop skills to study different text types in order to familiarize oneself with different kinds of language usages in literary and non literary texts.
- Enable learners to develop relevant analytical skills to critically evaluate the form and content of these texts.
- Help learners to identify different language registers, rhetoric and other compositional specificities of the texts.

Syllabus:

UNIT I	**(15 hours)**
Prose	
Introduction and analytical study of both form and content of a variety of texts written in simple prose form such as shorter and longer Narrative genres:	

short story fable chronicle myth novella tales anecdote autobiography biography novel play	
UNIT II	**(15 hours)**
Poetry	
Introduction and analytical study of both form and content of various types of poetic texts, songs, slams etc., written in a simple and accessible language.	
UNIT III	**(15 hours)**
Intermediate and Semi-Literary Texts	
Introduction and analytical study of both form and content of comic strips, graphic novels, or semi literary forms such as essay, commentary, informative/descriptive texts on history, geography, economy, culture that are not too complex.	

Learning/Teaching Material: Any of the textbooks given below may be prescribed:

- Biagi, Enzo. (2004). *La nuova storia d'Italia a fumetti: dall'impero romano ai giorni nostri*. Milano: Mondadori.
- De Giuli, Alessandra. Guastalla, Carlo. Naddeo, Ciro Massimo. (2011). *Nuovo Magari*. Firenze: Alma Edizioni.
- Guastalla, Carlo. Naddeo, Ciro Massimo. (2011)*Domani 3.* Firenze: Alma Edizioni.
- Guastella, Carlo. (2002). *Giocare con la letteratura.* Firenze: Alma Edizioni.
- Mengaldo, Pier Vincenzo. (2008). *Attraverso la poesia Italiana: analisi di testi esemplari.* Roma: Carocci editore.
- Mengaldo, Pier Vincenzo. (2008). *Attraverso la prosa Italiana: analisi di testi esemplari.* Roma: Carocci editore.
- Menzel, Rosangela Verri. (1989). *La bottega dell'italiano: antologia di scrittori italiani del Novecento.* Roma: Bonacci Editore.
- Pichiassi, Mauro. Zagnanelli, Giovanna. (2003) *Contesti italiani*. Perugia: Guerra Edizioni.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Debating and Presentation Techniques	**4**	**3**	**1**	**0**	**Passed Class XII**	**Nil**

Debating and Presentation Techniques	
Learning Objectives: • The course focuses on developing communicative competence building on the language skills acquired by students in the previous two semesters and will teach intermediate level of communicative transactions such as to give small instructions and simple opinions, to make plans and programs, build adequate lexicon on various topics, carry out small meaningful conversations, etc., among other things. By the end of this semester the students will partially attain A2.1 level of CEF.	
Learning Outcomes: • Enable students to partially attain A2.1 Level of reading and writing skills in the concerned language • Enable students to partially attain A2.1 Level of listening and speaking skills in the concerned language • Equip students to read and write about opinions, plans, instructions related to one's immediate environment. • Prepare learners to carry out small meaningful conversations to fulfil the needs of everyday life.	
Syllabus:	
UNIT I	**(9 hours)**
Listening	
Identifying the main points in short, clear, simple messages and announcements.	
UNIT II	**(12 hours)**
Reading	
Reading: Reading very short, simple texts to find specific, predictable information in simple everyday material such as advertisements, prospectuses, menus, timetables, classified advertisements, Internet forums etc.	
UNIT III	**(15 hours)**
Speaking	
• Monologue: Can describe in simple terms aspects of his/her background/relevant environment and matters in areas of immediate need such as narrating past, present and future events, plans, programs. • Dialogue: Communicating in simple and routine tasks requiring a simple, short and direct exchange of information on familiar and routine matters such as asking for and giving instructions, discussing what to do in the evening/at the weekend etc.	
UNIT IV	**(9 hours)**
Writing	

Describing past, present and future events, writing short, simple notes and messages relating to matters in areas of immediate need.	

Learning/Teaching Material: Any of the textbooks given below may be prescribed:

- Bailini, Sonia. Consonno, Silvia. (2002). *Ricette per parlare*. Firenze: Alma edizioni.
- Carlo Guastalla, Ciro Massimo Naddeo, *Domani 1*, Alma Edizioni, Firenze (2010).
- Frattegiani, M. Teresa. Gigliarelli, Valentina. (2011). *Vivere in Italia: Corso di lingua italiana per studenti stranieri di livello B1*. Perugia: Guerra Edizioni.
- Guastalla, Carlo, Naddeo. Ciro Massimo. (2011). *Domani 2*. Firenze: Alma Edizioni.
- Luciana Ziglio, Giovanna Rizzo, *Espresso 1*, Alma Edizioni, Firenze and Goyal Publishers and Distributors Pvt. Ltd., Delhi, 2012.
- Mariateresa Serafini, *Nuovo l'italiano: grammatica e scrittura*, Fabbri, Milano, 2009.
- Susanna Nocchi, *Grammatica pratica della lingua italiana*, Alma edizioni, Firenze.
- Tettamanti, Vittoria. Talini, Stefania. (2003). *Foto parlanti.* Roma: Bonacci editore.

Additional material may be provided by the Department.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DEPARTMENT OF LINGUISTICS

B.A. (PROG.) WITH LINGUISTICS AS MAJOR

DSC - 5: MORPHOSYNTACTIC PROCESSES

Total Credits: 04 (Credits: Theory-03, Tutorial-1)

Total Lectures: Theory-45, Tutorial-15, Practical-Nil

Duration: 15 weeks

Course title & Code	Credits (Hours)	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Morphosyntactic Processes (DSC-5)	4	3	1	0	Class XII	NIL

Learning Objectives

The Learning Objectives of this course are as follows:

- To make learners aware about the structure word as a unit
- To make learner understand the word formation processes in languages
- To teach the fundamentals of syntactic structures of languages

Learning Outcomes

By participating in this course, the student will develop:

- an appreciation of the difference between sounds, words and sentences;
- skills to analyse structure of words and sentences from a linguistic perspective;
- experience of handling of language data at the word and sentence levels.

Unit 1: Structure of words

(9 hours)

Segmenting and Labeling constituents of words

- Morpho-phonological processes in languages
- Productivity

Unit I1: Processes of word formation

(12 hours)

- Inflectional processes
- derivational processes
- Morphological Typology
- Morphological typology of languages

Unit III: Structure of simple sentences **(12 hours)**

- Major parts of speech of languages.
- Structure, Constituency, & Word order.
- Structure of Noun phrase, Verb phrase, Adjectival phrase, Prepositional phrase.
- Structure of simple sentences in languages.

Unit IV: Structure of Complex sentences **(12 hours)**

- Structure of embedded clauses, complex sentences.
- Types of embeddings.
- Embedding and the role of complementizers.
- Finiteness/ Non-finiteness.

Readings

1. Bauer Laurie (1988). *Introducing Linguistic Morphology.* Edinburgh: Edinburgh University Press.
2. Carnie, Andrew. 1999. *Sentence Structure: A Generative Introduction*. OUP
3. Haegeman, Liliane. 1991. *Introduction to GB Theory* (2nd Edition). Blackwell.
4. Yule, George (2010). *The study of language.* Cambridge: Cambridge University Press.

DSC - 6: MORPHOSYNTACTIC PROCESSES IN INDIAN LANGUAGES

Total Credits: 04 (Credits: Theory-03, Tutorial-1)

Duration: 15 weeks

Course title & Code	Credits (Hours)	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course	Department offering the course
		Lecture	Tutorial	Practical/ Practice			
Morphosyntactic Processes in Indian languages (DSC-6)	4 (60 hours)	3 (45 hours)	1 (15 hours)	0	Class XII	NIL	Linguistics

Learning Objectives

The Learning Objectives of this course are as follows:

• To make learners aware about word as a unit in Indian languages

• To make learner understand the word formation processes of Indian language

• To teach the fundamentals of syntactic structures of Indian languages

Learning Outcomes

By participating in this course, the student will develop:

• an appreciation of the difference between sounds, words and sentences in the context of Indian languages;

• skills to analyse structure of words and sentences in Indian languages from a linguistic perspective;

• experience of handling of Indian language data at the word and sentence levels;

Unit 1: Structure of words of Indian languages **(9 hours)**

- Word segmentation of Indian languages.
- Labeling of word-level constituents of any Indian language.
- Word formation processes and Indian languages.

Unit I1: Processes of word formation and Indian languages **(12 hours)**

- Inflectional processes of any Indian language.

- Derivational processes of any Indian language.
- Language Typology and Indian languages.

Unit III: Structure of simple sentences in Indian languages **(12 hours)**

- Parts of speech of any Indian language.
- Word order and the major language families of India.
- Structure of Noun phrase, Verb phrase, Adjectival phrase, Prepositional phrase and Indian languages.
- Structure of simple sentences in any one Indian language.

Unit IV: Structure of Complex sentences in Indian languages **(12 hours)**

- Sentence structure of embedded clauses in Indian languages.
- Types of embeddings and Indian languages.
- India as a linguistic area on the basis of complex sentence structures.
- The role of finiteness and complementizers.

Readings

COMMON POOL OF GENERIC ELECTIVES (GE) COURSES

GENERIC ELECTIVES (GE-3): LANGUAGE AND MIND

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits (Hours)	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Language and Mind (GE-3)	4 (60 hours)	3 (45 hours)	1 (15 hours)	0	Class XII	NIL

Learning Objectives

The Learning Objectives of this course are as follows:

- To develop students' understanding of the connection between linguistic and cognitive concepts
- To develop students' understanding of how individuals produce and comprehend language
- To teach the fundamental characteristics of language acquisition as well as language disorders
- To make students appreciate the complexity of the processes underlying language use

Learning outcomes

By participating in this course, the student will develop:

- an appreciation of linguistic structures and mental architectures underlying language use;
- skills to analyse spoken and written language using linguistic tools in the contexts of language acquisition, language production, language comprehension and language disorders
- experience of handling complex data from different populations of language users and an understanding of the issues involved in collecting or analysing such data;

SYLLABUS OF GE-3

UNIT – I (9 hours) : Language in the mind

- Behaviourism
- Cognitive Revolution
- Competence and Performance

UNIT – II (12hours) : Language Acquisition

- Critical Period
- Phonetic & Phonological features
- Morphological features
- Syntactic features

UNIT – III (12 hours): Language Use

- Nature of Linguistic Structures
- Production
- Comprehension

UNIT – IV (12 hours): Language disorders

- Development language disorder
- Aphasia
- Dyslexia

Practical component (if any) – NIL

DEPARTMENT OF PHILOSOPHY

BA (HONS.) PHILOSOPHY

DISCIPLINE SPECIFIC CORE COURSE -7 (DSC-7) – Western Philosophy: Descartes to Kant

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title& Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Western Philosophy: Descartes to Kant DSC 7	**4**	**3**	**1**	**0**	12th Pass	**Sem 1 and II, UG, BA Hons, Philosophy**

Learning Objectives

The Learning Objectives of this course are as follows:

- The paper introduces the seminal ideas of the western philosophers from the time of Descartes (1592-1650) onwards till David Hume (1711-1776)
- The readings will enhance the study of six philosophers grouped under two traditions of thought: Rationalism and Empiricism
- The course will aim at analysing the main arguments surrounding the reasons for accepting rationalism vs empiricism
- The course will increase an understanding of the genesis of modern debates in philosophy and allied disciplines like cognitive science, artificial intelligence.

Learning outcomes

The Learning Outcomes of this course are as follows:

- It will enable students to understand the debates between rationalism and empiricism through the reading of original texts
- Students will be able to critically analyse the arguments on each side of the rationalist-empiricist debate
- Students will be able to evaluate the modern significance of the historical debates that are still reverberating in contemporary research

UNIT 1: Introduction (9 hours)

1. Rationalism
2. Empiricism
3. The main aspects of the debate

Essential Readings

Rationalism vs. Empiricism- Markie, Peter, *The Stanford Encyclopaedia ofPhilosophy*, 2017 ed. Zalta.N. Edward.

UNIT 2: Rationalism (12 hours)

1. Descartes: Method of Doubt
2. Spinoza : Concept of God
3. Leibniz : The concept of Monads

Essential Readings

Rene Descartes- Meditations on First Philosophy, London: Penguin Classics, 1998.(Ch. 1 and 2)
Spinoza- Ethics, London, Penguin Classics, 2005 (Book-1)
G W Leibniz- Refer to any secondary source for the concept of Monads.

UNIT 3: Empiricism (12 hours)

1. Locke: Critique of Innate Ideas
2. Berkeley: Immaterialism(denial of matter)
3. Hume : Ideas and Impressions (brief description) and Causation

Essential Readings-

Locke, John: An Essay Concerning Human Understanding, London, Penguin Classics, 1997 **(Book-1)**
Berkeley, George- Three Dialogues between Hylas and Philonous, London, Penguin Classics, 1988. **(First Dialogue only**)
Hume, David : An Enquiry Concerning Human Understanding, Oxford : Clarendon Press, 1975 **(Part 1- section 2 &3 and Part 2- section 7)**

UNIT 4: Critical Philosophy (12 hours)

1. Classification of Propositions
2. Analytic, Synthetic,
3. Synthetic a priori

Essential Reading

Kant, Immanuel, Critique of Pure Reason, Cambridge Ed. of the works of Immanuel Kant, Guyer, Paul and Wood, Allen, 1999, **(Introduction- pp-127-152)**

Suggestive Readings

1. Copleston, F.J. History of Philosophy, USA, Image Books, 1993
2. Falkenberg, R. History of Modern Philosophy, USA, Jefferson Publications, 2015
3. Moore, Bruder, Philosophy: The Power of Ideas, New Delhi, Tata McGraw Hill,2011
4. O'Connor, D.J. A Critical History of western Philosophy, USA, MacMillan, 1964

DISCIPLINE SPECIFIC CORE COURSE -8 (DSC-8) – Social and Political Philosophy

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisiteof the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Social and Political Philosophy DSC-8	**4**	**3**	**1**	**Nil**	12th Pass	**Sem I and Sem II UG Philosophy Hons**

Course Objective

- This course aims at introducing the students to fundamental issues, and concepts in modern social and political philosophy.
- This course will enhance the understanding of social and political structures that govern our world, and understand the underlying theoretical frameworks.
- This course will discuss concept like liberty, justice, democracy, dignity, civilisation, and nationalism, inter alia.

Course Learning Outcomes

- The student will learn to analyze political concepts and understand their critical role in our intellectual and practical lives
- The course will enable to the student to reflect on the theoretical presuppositions of our social and political structures
- The student will understand the philosophical origin, and nature of some of the fundamental concepts used in contemporary political discourse.

UNIT-I: INTRODUCTION (9 hours)

1. Understanding Political Philosophy.
2. Basic Concepts

Essential/Recommended Readings:

Strauss, L. (1957). What is Political Philosophy? *The Journal of Politics*, *19*(3), 343–368. https://doi.org/10.2307/2126765

UNIT-II: MODERN LIBERAL THOUGHT (12 hours)

1. Fundamentals of Modern Western Liberal Thought.
2. Enlightenment, State of Nature, Slavery
3. The Beginning of Political Societies

Essential/Recommended Readings:

Kant, I. (2006). An Answer to the Question: What is Enlightenment? In Kleingeld, P., & Colclasure, D. L. *Toward Perpetual Peace and Other Writings on Politics, Peace, and History (Rethinking the Western Tradition)*. (pp. 17–23). Yale University Press.

Locke, J. (1960). Of the State of Nature. In Laslett, P. *Two Treatises of Government*. (sections. 4-15) Cambridge University Press.

Locke, J. (1960). Of Slavery. In Laslett, P. *Two Treatises of Government*. (sections 22- 24) Cambridge University Press.

Locke, J. (1960). Of the Beginning of Political Societies. In Laslett, P. *Two Treatises of Government*. (sections 95-104) Cambridge University Press.
Rawls, J (2001). Fundamental Ideas. In Kelly, E. (Ed.). *Justice as Fairness: A Restatement*. (pp. 1-38). Harvard University Press.

UNIT- III: LIMITS OF MODERN WESTERN POLITICAL THOUGHT (12 hours)

1) Social structures
2) The Possibility of a classless society

Essential/Recommended Readings:

Arendt, H. (1976). A Classless Society. In *The Origins of Totalitarianism*. (pp. 305-340). Harvest Book.

UNIT-IV: INDIAN POLITICAL THOUGHT (12 hours)

1) Critique of Nationalism.
2) Critique of Modern Western Civilisation.
3) Democracy and Annihilation of Caste.
4) Radical Humanism.

Tagore, R. (2005). Nationalism in the West. In *Nationalism*. (Chapter 1) Rupa & Co. Gandhi, M. K. (1997). Hind Swaraj. In Parel, A. (Ed.). (Chapter 6-13). Cambridge University Press.
Ambedkar, B.R. (2002). Caste, Class and Democracy. In Rodrigues, V. (Ed.). *The Essential Writings of B.R. Ambedkar*. (pp. 132-148). Oxford University Press.

AppliedEthics DSC 9	**4**	**3**	**1**	**Nil**	12th Pass	**Sem I and II UG Philosophy Hons**

Learning Objectives

- This course is about an evolving interdisciplinary domain dealing with ethical issues in diverse areas
- This incorporates social, political, normative, business, computer, medical, bioethics, and environmental ethics.
- The course will inculcate a sense of inquiry into new areas that students feel interested in but don't know how to inquire into systematically.

Course Learning Outcomes

- This course will develop skills of comprehension of real life ethical situations
- This course will equip students with the intellectual ability to deal with dilemmas and problems faced in actual situations of ethical import
- This course will enhance the student's capacity to handle complex situations involving many variables of decision making in an ethical manner
- This course will create a better understanding of the complex world of decision making faced in professional life

Unit 1 An Introduction to Applied Ethics (9 hours)

1. Introduction
2. Basic concepts
3. Dilemmas and problems

Essential/Recommended Readings

Singer Peter, Applied Ethics, Oxford University Press, 1986

Unit 2 Value of Human Life (12 hours)

1. Human Rights
2. Punishment

Essential/Recommended Readings:

Benn, S. I. (1958). An Approach to the Problems of Punishment. *Philosophy* 33 (127):325 - 341.

Ewing, Alfred C. (1929). *The Morality of Punishment : With Some Suggestions for a General Theory of Ethics*. Routledge.

Flew, Antony (1954). The Justification of Punishment. *Philosophy* 29 (111):291 - 307.

Unit 3 Environmental Ethics (12 hours)

1. Nature as Means or End.
2. Respect for animals and ecology.

Essential/Recommended Readings:

Singer, Peter (2009). *Animal Liberation: The Definitive Classic of the Animal Movement*. Ecco Book/Harper Perennial.

Vibha Chaturvedi, Pragati Sahni (2019, Understanding ethics, Motilal Banarsidass Publishers, Private Limited, Delhi.

Unit 4 Professional Ethics and Public Policy (12 hours)

1. Medical Ethics - Surrogacy, Euthanasia and Doctor-Patient Relationship
2. Privacy: The Public Interest and a Prurient Public in Media Ethics.

Essential/Recommended readings

Campbell, Alastair V. (2013). Clinical Ethics. In *Bioethics: The Basics*. New York: Routledge, pp. 79-114

Tong, R. (2005). Surrogate Motherhood. In A Companion to Applied Ethics (eds R.G. Frey and C. Heath Wellman). https://doi.org/10.1002/9780470996621.ch27

Archard, David (1998), Privacy, The Public Interest and a Prurient Public in Media Ethics, Ed. Kieran Mathew, Routledge, pp. 82-94

Suggestive Readings

DISCIPLINE SPECIFIC ELECTIVE -1 (DSE-1) – Jainism

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title& Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSE 1 Jainism	**4**	**3**	**1**	**Nil**	12th Pass	

Learning Objectives.

- This course aims at providing students with a comprehensive understanding of Jain Philosophy.
- This course will bring out the various aspects of Jainism such as the origin of Jainism, their metaphysics, Epistemology and ethics. It will also discuss the doctrine of Ahimsha and aspects of Karma theory.
- This course will also have contain some glimpses into ecology as influenced by Jain thinking

Course Learning Outcomes

1. Students will learn a basic set of concepts and ideas relating to Jainism both from the perspectives of a lay man and monastic.
2. At the end of the course, a student should be able to demonstrate a clear understanding of the Jain philosophy.

3. Students will develop a sound understanding of Jain epistemology, metaphysics, ethics, its practical relevance in today's contemporary scenario and shall be able to go for further research in the subject.

Unit1 Jainism: An overview (9 hours)

1. Introduction to Jainism & Jain Studies (Film: Frontiers of Peace)
2. Symbols in Jainism and their implications

Essential/ Recommended Readings:

- Jain,J.P.(2005),FundamentalsofJainism,RadiantPublishers,NewDelhi,Chapter-1, pp,1-19.
- Chatterjee,S.&Datta.D.M.(1984),AnIntroductiontoIndianPhilosophy,8th ed., University of Calcutta, Calcutta, Chapter-3, pp,68-70.
- Dasgupta,S.N.(2004),AHistoryofIndianPhilosophy,Vol.1,MotilalBanarasiDass Publishers, Delhi, Chapter-4, pp,169-175

Unit 2: Jain Epistemology (12 hours)

1. Pramana and Naya
2. Syādvāda

Essential/ Recommended Readings:

- Jain, Veersagar, (2013). BharatiyeChintaneSyadavada (Syadavada in IndianThought), SHRI LAL BAHADUR SHASTRI RASHTRIYA SANSKRIT VIDYAPEETHA, New Delhi.
- Chatterjee,S.&Datta.D.M.(1984),AnIntroductiontoIndianPhilosophy,8th ed., University of Calcutta, Calcutta, Chapter-3, pp,70-77.
- Dasgupta,S.N.(2004),AHistoryofIndianPhilosophy,vol.1,MotilalBanarasiDass Publishers, Delhi, Chapter-4, pp,175-186.

Unit 3 Jain Metaphysics (12 hours)

1. Ahimsha and Anekāntavāda
2. Concept of Substance
3. Karma and rebirth

Essential/ Recommended Readings:

- Jaini, Padmanabh (2000). Collected Papers on Jaina Studies. Delhi: Motilal Banarsidass Publ. ISBN 81-208-1691-9.
- Chatterjee,S.&Datta.D.M.(1984),AnIntroductiontoIndianPhilosophy,8th ed., University

of Calcutta, Calcutta, Chapter-3, pp,81-93.

DISCIPLINE SPECIFIC ELECTIVE -2 (DSE-2) – Information Ethics

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSE 2 Information Ethics	4	3	1	Nil	12th Pass	

Learning Objectives

- The course aims to give students a thorough understanding of the primary philosophical concepts and arguments of information ethics.
- Information Ethics deals with the ethical, legal, and social aspects of the use of information and information and communication technology.
- Students will learn the key ethical theories and frameworks that have shaped the field of information ethics. In addition to learning about a variety of ethical theories, students will have the opportunity to explore significant information ethics concerns linked to social justice, surveillance, the digital divide, privacy, and access to information.

Course Learning Outcomes

- This course will enable the students to have a comprehensive understanding of major ethical theories and frameworks that have shaped the field of information ethics.
- Students will get to explore ethical issues related to the design and use of information technology, thereby enabling them to acquire the requisite knowledge, skill, and attitude required for making informed ethical decisions about information production, management, and use.
- Students will also be able to explore and apply a wide range of ethical theories to examine critical ethical issues raised by recent information and communication technology advances.

UNIT 1: Introduction to Information Ethics (9 hours)

1. Historical root of Information Ethics
2. What is Information Ethics?
3. Nature and scope of information ethics
4. Ethical issues of Indormation Age

Essential/Recommended Readings

Bynum, T. W. (2010). The Historical Roots of Information and Computer Ethics. In Cambridge *Handbook of Information and Computer Ethics* edited by Luciano Floridi, pp. 20 – 38. New York: Cambridge University Press.
Froehlich, T. (2005). A Brief History of Information Ethics. *National Conference on IT for Silk Industry,* Vol. 28, Issue 12, 11 – 13.
Floridi, L. (2006). Information ethics, its nature and scope. *Acm Sigcas Computers and Society, 36(3), 21-36.*
Mason, R. O. (2017). Four ethical issues of the information age. In *Computer ethics* (pp. 41-48). Routledge.

UNIT 2: Privacy, Accountability, and Surveillance Capitalism (12 hours)

1. Privacy, Security and Information Ethics
2. Transparency and Information Ethics
3. Surveillance Capitalism

Essential/Recommended Readings

Brey, P. (2007). Ethical Aspects of Information Security and Privacy. *Security, Privacy, and Trust in Modern Data Management,* 21-36
Turilli, M., & Floridi, L. (2009). The Ethics of Information Transparency. *Ethics and Information Technology*, 11(2), 105-112.
Fuchs, Christian. (2016). Information Ethics in the Age of Digital Labour and the Surveillance-Industrial Complex. *In Information Cultures in the Digital Age: A Festschrift in Honor of Rafael Capurro* edited by Matthew Kelly & Jared Bielby, pp. 173 - 190. Springer

UNIT 3: Data, Digital Divide, and Information Ethics (12 hours)

1. Access to Information
2. Social justice
3. Digital divide

Essential/Recommended Readings

Hongladarom, S. (2005). The digital divide, epistemology and global justice. In *National Conference on IT for Silk Industry*, Vol. 28, Issue 12, 5-6.
Johnson, J. A. (2014). From open data to information justice. *Ethics and Information Technology,* 16(4), 263-274.
Tavani, H. T. (2003). Ethical reflections on the digital divide. *Journal of Information, Communication and Ethics in Society.*MCB UP Ltd, pg 99-108

DISCIPLINE SPECIFIC ELECTIVE (DSC-3): Indian Materialism

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title& Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSE 3 Indian Materialism	**4**	**3**	**1**	**Nil**	12th Pass	

Learning Objectives

- The primary objective of this course is to familiarize the students with the nature, significance and import of Materialism as a strong philosophical motif present in the Indian philosophical knowledge systems
- This course will also critically evaluate the theoretical framework in the activity of philosophizing in Indian materialism
- This course will bring out the contemporary relevance of Indian materialism and throw fresh light on its historical role in Indian Philosophy and knowledge systems.

Course Learning Outcomes

- The student after having done this course is expected to have a fair understanding of the **t**heoretical construct as well as the argumentative force of Materialism as a philosophical theory in the Indian context.
- The students will have understood a vital element in the Indian knowledge systems
- The student will be able to appreciate the plurality and diversity of Indian knowledge systems.

Unit 1: Introduction (9 hours)

1. Ancient Indian Materialism and Its sourses.
2. Characteristic features of Carvaka/Lokayata: Metaphysics, Epistemology and Ethics

Essential/ Recommended Readings:

Dasgupta, S.N. (2004), A History of Indian Philosophy, Vol.1, MotilalBanarasi Dass Publications, Delhi.

Bhattacha**r**ya, R. (2013), Development of Materialism in India", EserciziFilosofici 8, pp. 1-12.

MadhavaAcarya(1904), "Sarvadarsana-samgraha: Section on 'Carvaka'", trans. E.B.Cowell& A.E. Gough, London, Kegan Paul, Trubner& co. ltd, pp. 2-11.

Unit 2: Shades of Materialism (12 hours)

1. The Materialistic view: Rational, Realistic
2. Naturalistic, Anti-dogmatic and Anti-ritualistic.

Essential/Recommended Readings:

1. Franco, Eli (2011), "Lokayata" in Brill's Encyclopedia of Hinduism, Vol. III, ed. Knut A. Jacobsen, Lieden/Boston, Brill, pp. 629-642.
2. Dale, M Reipe (1961), "Naturalistic Traditions in Indian Thought.
3. Mills, Ethan (2015), "Jayarasi's Delightful destruction of Epistemology", Philosophy East & West, Vol. 65, pp. 498-54.

Unit 3: Influence on Contemporary Times (12 hours)

1. Indian Materialism and Its Influence in Contemporary Social Movements:
2. Marxist, Atheist, Rationalist

Essential/Recommended Readings:

Quack, Jihannes (2012), "Disenchanting India- Organized Rationalism and Criticism of Religion in India, Oxford University Press, Delhi, pp. 3-21.

Unit 4: Contemporary Indian Materialists (12 hours)

1. Contemporary Thinkers of Indian Materialism: M.N.Roy, Periyar,
    a. D.P. Chattopadhyaya.

Essential/Recommended Readings:

Roy, M.N. (1987), "Materialism", Ajanta Publications, Delhi.

Chattopadhyaya, Debiprasad (2008), "Lokayata- Study in Ancient Materialism", Peoples Publishing house, Bombay.

Suggestive Readings

Chattopadhyaya, D.P., (1964), Indian Philosophy: A Popular Introduction, People's Publishing House, New Delhi.

Ewing, A.C. (1951), Fundamental Questions of Philosophy, Routledge & Kegan Paul ltd., London.

Raju, P.T. (1985), Structural Depths of Indian Thought, Asian Publishers, New Delhi.

Gokhale, P.P. (1993), "Carvaka's Theory of Pramanas: A Restatement", Philosophy East & West, Vol. 43, pp. 675-682.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Ba (Prog) with Philosophy as Major

Category II

(Courses for Undergraduate Programme of study with Philosophy discipline as one of the Core Disciplines)

DISCIPLINE SPECIFIC CORE COURSE (DSC-5): Ethics

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSC 5 Ethics	4	3	1	Nil	Class XII	NIL

Learning Objectives

- The course is designed to grasp the traditional ethical (Western and Indian) theories
- This course will also ensure that students will be able to apply ethics on the practical front.
- It is a curriculum which enables students to develop ability for moral reasoning and act with ethical deliberations.

Course Learning Outcomes

- The student will be able to understand and analyse ethical theories
- The student will appreciate the role of reasoning in ethics
- The student will be able to evaluate different theories of ethics
- The student will be able to apply ethical theories in practical situations

UNIT 1: Introduction to Ethics **(9 hours)**

1. Domain of Ethics
2. Conventional and Reflective Morality

Essential/Recommended Readings:

1) Mackenzie,J.S., (1977), A Manual of Ethics, Oxford University Press Bombay, Chapter-1, "Scope of Ethics",pp,1-14.
2) Sinha, Jadunath, (2004), A Manual of Ethics, New Central Book Agency, Chapter-1, pp.1-13,

UNIT 2: Theories of Ethics **(12 hours)**

1. Virtue Ethics with especial reference to Aristotle's Eudemonia
2. Teleological Ethics with especial reference to Mill's Utilitarianism
3. Deontological Ethics with especial reference to Kant's Categorical Imperatives

Essential/Recommended Readings

1. Aristotle, (1926) Nicomachean Ethics, Harvard University Press.
2. Mill, J.S. (1863): Utilitarianism, London, in Mary Warnock. Ed.1962.
3. Kant, Immanuel: Groundwork of the Metaphysics of Morals, Trans. H J Paton, as The Moral Law. London

UNIT 3 : Ethical Issues **(12 hours)**

1. l) Nature of Free-willand Responsibility
2. ll) Deterrent and Retributive Punishment

Essential/Recommended Readings

1. Thiroux, J. ETHICS: Theory and Practice, Chapter6 pp.131-142
2. Thiroux,J. ETHICS: Theory and Practice, Chapter 5,pp.101-114

UNIT 4 : INDIAN ETHICS **(12 hours)**

1. Ethics of Gita
2. Buddhist Ethics

Recommended Readings

1. Sharma, I.C.(1965) Ethical Philosophies of India, George Allen & Unwin LTD. Chapter XII, and Chapter VII'
2. Keown, D. (2005). Buddhist Ethics: A very short introduction, OUP, Chapter 1 (Buddhist Morality)

Suggestive Readings

3. Mackenzie,J.S., (1977), A Manual of Ethics, Oxford University Press.
4. Lillie, W. [1948), An Introduction to Ethics, Methuen & Co. Ltd. London.
5. Nuttall Jon, Moral Questions: An Introduction to Ethics, Polity Press, 1993
6. Sharma, Bhanu (2019) The Conceptual Analysis of Karma, Kohenoor Publications, Chapter 7,pp.223-248.

COMMON POOL OF GENERIC ELECTIVES (GE) COURSES

GENERIC ELECTIVES (GE-9): Formal Logic

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course	Department offering the course
		Lecture	Tutorial	Practical/ Practice			
Formal Logic GE 9	4	3	1	Nil	UG 1st year	None	Philosophy

Learning Objectives

- This course is designed as an introductory course in logic which will bring out the standard forms of Formal reasoning.
- It introduces the basic logical concepts and provides a clear understanding of the structure of arguments and the nature of inferential reasoning.
- It equips students with the logical skills and techniques for formal testing of syllogistic arguments.

Course Learning Outcomes

- The student's reasoning skill will be enhanced. The student will learnways for testing and recognizing strong arguments.
- After this course, the student will be able to construct good arguments and helps them develop skills with which they can discern the distinction between the valid and the invalid argumentation through several differentmethods.

UNIT I: BASIC LOGICAL CONCEPTS (9 hours)

1. Sentence and Proposition
2. Classification of Categorical Propositions
3. Quality, Quantity and Distribution of Terms
4. Truthand Validity

Essential/Recommended Readings

Topic 1. Copi, Irving M., Cohen, Carl, and McMahon, Kenneth. Introduction toLogic. 14th ed. Pearson New International Edition, 2014. Ch 1, pp 2-5.
Topic 2. Copi, Irving M., Cohen, Carl, and McMahon, Kenneth. Introduction toLogic. 14th ed. Pearson New International Edition, 2014. Ch 5, pp 170-173.
Topic 3. Copi, Irving M., Cohen, Carl, and McMahon, Kenneth. Introduction toLogic. 14th ed. Pearson New International Edition, 2014. Ch 5, pp 174-177.
Topic 4. Copi, Irving M., Cohen, Carl, and McMahon, Kenneth. Introduction toLogic. 14th ed. Pearson New International Edition, 2014. Ch 1, pp 27-31.

UNIT II: - ARISTOTELIAN LOGIC (12 hours)

1. Translating ordinary sentences into Standard Form Categorical Propositions
2. Traditional Square of Opposition
3. Immediate Inference (Conversion, Obversion and Contraposition)
4. Mediate Inference: Standard Form Categorical Syllogism -Mood and Figure
5. Testing Validity/Invalidity of Syllogism by Syllogistic Rules

Essential/Recommended Readings:
Topic 1. Copi, Irving M., Cohen, Carl, and McMahon, Kenneth. Introduction toLogic. 14th ed. Pearson New International Edition, 2014. Ch 7, pp 259-268.
Topic 2. Copi, Irving M., Cohen, Carl, and McMahon, Kenneth. Introduction toLogic. 14th ed. Pearson New International Edition, 2014. Ch 5, pp 180-184.
Topic 3. Copi, Irving M., Cohen, Carl, and McMahon, Kenneth. Introduction toLogic. 14th ed. Pearson New International Edition, 2014. Ch 5, pp 184-192.
Topic 4. Copi, Irving M., Cohen, Carl, and McMahon, Kenneth. Introduction toLogic. 14th ed. Pearson New International Edition, 2014.Ch 6, pp 211-216.

Topic 5. Copi, Irving M., Cohen, Carl, and McMahon, Kenneth. Introduction to Logic. 14th ed. Pearson New International Edition, 2014. Ch 6, pp 230-240.

UNIT III: BOOLEAN LOGIC AND VENN DIAGRAM (12 hours)

1. Existential Import and the Boolean Interpretation of Categorical Propositions
2. Boolean Square of Opposition
3. Symbolic Representation of Categorical Propositions
4. Testing Validity/Invalidity of Categorical Syllogism by Venn Diagram

Essential/ Recommended Readings

Topic 1. Copi, Irving M., Cohen, Carl, and McMahon, Kenneth. Introduction to Logic. 14th ed. Pearson New International Edition, 2014. Ch 5, pp. 193-199.
Topic 2Copi, Irving M., Cohen, Carl, and McMahon, Kenneth. Introduction to Logic. 14th ed. Pearson New International Edition, 2014. Ch 5, pp 201-202.
Topic 3. Copi, Irving M., Cohen, Carl, and McMahon, Kenneth. Introduction to Logic. 14th ed. Pearson New International Edition, 2014. Ch 5, pp 203-206.
Topic 4. Copi, Irving M., Cohen, Carl, and McMahon, Kenneth. Introduction to Logic. 14th ed. Pearson New International Edition, 2014. Ch 6, pp 219-230.

UNIT IV: PROPOSITIONAL LOGIC (12 hours)

1. Importance of Symbolic logic
2. Logical constants, Variables and basic truth functions (Negation, Conjunction, Disjunction (Alternation), Conditional (Material Implication), Bi-conditional (Material Equivalence)
3. Symbolization of statements
4. Logical Status of Statements: Tautologous, Contingent, Contradictory
5. Proving Validity/Invalidity: Truth Table Method & Reductio ad absurdum

Essential/ Recommended Readings

Topic 1. Copi, Irving M., Cohen, Carl, and McMahon, Kenneth. Introduction to Logic. 14th ed. Pearson New International Edition, 2014. Ch 8, pp. 305-306.
Topics2 and 3.Copi, Irving M., Cohen, Carl, and McMahon, Kenneth. Introduction to Logic. 14th ed. Pearson New International Edition, 2014. Ch 8, pp. 306-327; pp. 344-345.
Topic 4. Copi, Irving M., Cohen, Carl, and McMahon, Kenneth. Introduction to Logic. 14th ed. Pearson New International Edition, 2014. Ch 8, pp. 343-344.
Topic 5. Copi, Irving M., Cohen, Carl, and McMahon, Kenneth. Introduction to Logic. 14th ed. Pearson New International Edition, 2014. Ch 8, pp. 332-334.

Suggestive Readings

2. Cavendish, A. P., and O'Connor, D. J., Introduction to symbolic logic. London: University Tutorial Press, 1959. Additional Resources: Jain, Krishna. A Textbook of Logic. New Delhi: D.K. Printworld, 2018.

GENERIC ELECTIVES (GE-10):

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course	Department offering the course
		Lecture	Tutorial	Practical/ Practice			
Readings in Western Philosophy GE 10	4	3	1	Nil	UG 1st year	None	Philosophy

Learning Objectives

- This course will critically examine the basic text of some philosophers.
- This course will introduce students to selected themes in philosophy like existentialism, the value of philosophy, love, self, etc.
- The course will develop the student's curiosity to explore philosophy further in a more fruitful manner

Course Learning Outcomes

- After completing this course, the student will understand the central themes on which great philosophers have written
- The student will appreciate the genesis of the enlightenment and its reliance on reason
- The student will be able to connect ancient themes in philosophy with contemporary themes in a seamless way

Unit 1: Greek Philosophy **(9 hours)**

1. Love
2. Madness

Essential/Recommended Reading

"On Love and madness: *Phaedrus"* 227a-258 (in Plato's Phaedrus translated by Walter Hamilton, Penguine Books, Harmondsworth 1973)

Unit 2: Modern Philosophy (9 hours)

1. The Enlightenment
2. Private and Public Reason

Essential/Recommended Reading

"On Enlightenment" (in Immanuel Kant, *Perpetual Peace and Other Essays*,Hackett, 1983)

Unit 3: Post Kantian Theme (9 hours)

1. Thinking
2. Self and world

Recommended Reading:

"On Thinking for Oneself" (in Schopenhauer, *Parega and Paralipomena: Short Philosophical Essays*, Vol.2, trans. E.F.J. Payne, Oxford: Clarendon Press, 1974)

Unit 4: Contemporary Philosophy (18 hours)

1. Jean-Paul Sartre
2. Bertrand Russell

Essentiakl/Recommended Readings

1. "Existentialism is a Humanism"**(in**Walter Kaufmann**,** *Existentialism from Dostoevsky to Sartre,* Penguin USA, 1975)
2. "The Value of Philosophy" (in Russell, *The Problems of Philosophy*, 2nd edition, Oxford University Press, 1997)

GENERIC ELECTIVES (GE-11): Philosophuical Debates: Western

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course	Department offering the course
		Lecture	Tutorial	Practical/ Practice			
Philosophical Debates: Western GE 11	4	3	1	Nil	12th Pass	None	Philosophy

Learning Objectives

Course Objective

- The paper is designed to appreciate the profound ideas that sprung from the minds of the great philosophers of the Greek world, as well as modern western and contemporary philosophy.
- It allows students to learn the main issues, arguments and counter-arguments in the entire spectrum of western philosophical debates.
- The syllabus comprises of philosophers grouped under several traditions of thought. It begins with Descartes' seminal views on epistemology and metaphysics and traces the emergence of ideas in a kind of chronological order which demonstrates methodical development of philosophical thought.

Course Learning Outcomes

- It will develop skills of critical evaluation of key arguments of philosophers
- It will enable students to have a better understanding of how a philosopher develops and defends a theme
- It will create an understanding of philosophical themes and debates

Unit 1 Epistemology **(9 hours)**

1) Knowledge and opinion/belief
2) Episteme and doxa

Essential/recommended readings

Plato, *Republic*, Translated by Lee (Penguin), Book VI & VII, pp. 502-521.

Unit 2 Metaphysics **(12 hours)**

1) Descartes' Mind-Body dualism.
2) Gilbert Ryle on Descartes Myth.

Essential/Recommended Readings

Rene Descartes, Meditations Concerning First Philosophy, Meditation II, in J J Blom (Ed), *Descartes; Essential Writings* (Harper Torch Books, 1977).

Gilbert Ryle, *The Concept of Mind* (Hutchinson, 1949), Chapter I.

Unit 3 Empiricism about substance (3 weeks)

1) John Locke's theory of material substance.
2) Berkeley's critique of Locke's material substance.

Essential/Recommended readings

John Locke, *An Essay Concerning Human Understanding* (London, 1706), Chapter XXIII.

George Berkeley, The Principles of Human Knowledge in G J Warnocke (Ed), (Fontana Press, 1985), Part I, Section 1-24.

Unit 4 Humanism; Emotion & God (4 weeks)

1) Jean Paul Sartre' s theory of emotion.
2) Russell and Copleston debate on the existence of God.

Essential/Recommended readings

- Jean Paul Sartre, *Sketch for a Theory of the Emotions* (London: Routledge).
- Bertrand Russel, *Why I am not a Christian?*(London: George Allen and Unwin), including the BBC debate between Russel and Copleston Broadcast in 1948.

Suggestive readings

- T Z Lavine, *From Socrates to Sartre: The Philosophic Quest* (New York: Bantam Books, 1984).
- F C Copleston, *History of Philosophy* (Image Books, 1993).
- R Falkenberg, *History of Modern Philosophy* (Jefferson Publications, 2015).
- Bruder Moore, *Philosophy: The Power of Ideas* (New Delhi: Tata McGraw Hill, 2011).
- D J O'Connor, *A Critical History of Western Philosophy* (Macmillan, 1964).
- W Stegmuller, *Main Currents in Contemporary German, British and American Philosophy* (Riedel Publishing, 1959).
- Thomson Garett, *An Introduction to Modern Philosophy* (California: Wadswordth Publishing, 1993).
- Y Masih, *A Critical History of Western Philosophy* (New Delhi: Motilal Banarsidas, 2016)

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DEPARTMENT OF PSYCHOLOGY

Category I

B.A. (HONS.) PSYCHOLOGY

(B.A. Honours in Psychology in three years)

DISCIPLINE SPECIFIC CORE (DSC) COURSES

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE DSC-7 COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSC-7 Development of Psychological Thought	**4**	**3**	**1**	**0**	**Class XII Pass**	**Nil**

Learning Objectives

The Learning Objectives of this course are:

- To understand and evaluate the historical events and key philosophical, pre-scientific and scientific developmental milestones that has shaped the discipline of contemporary psychology.
- To appreciate the polycentric history and diversity of interests and foci within psychology.
- To describe the perspectives and significant contributions of luminaries in the history of psychology.
- To understand the development of psychological thought from both the Indian and Western perspectives.

Learning outcomes

By studying the course students will be able to:

- Understand the historical events and key philosophical, pre- scientific and scientific developmental milestones that have shaped the discipline of contemporary psychology.
- Identify and appreciate the perspectives and significant contributions of luminaries in the history of psychology.
- Recognize the relevance of diversity of contexts and the pluralistic origin of significant ideas, concepts and theories which shaped the history of psychology.
- Compare and contrast the development of psychological thought from both the Indian and Western perspectives.

- Use critical thinking to question, debate and evaluate the guiding assumptions of psychological theories, concepts and principles and to apply these effectively, both at an individual level and in diverse settings.

SYLLABUS OF DSC-7

UNIT – I: (11 Hours)

Polycentric History of Psychology- Psychology of Consciousness: Eastern (Yoga and Vedant); and Western views (Wundt, James, Phenomenology) on Consciousness; applications of Yoga & Vedant.

UNIT – II: (11 Hours)

Psychology of Behaviour and Mind: Rise of Behaviourism (Watson), Shift from Behaviourism to neo-behaviourism (Tolman, Skinner); Transition from Behaviourism to Cognitive Psychology (Paradigms and Themes); Applications of Behaviourism and Cognitive psychology.

UNIT – III: (14 Hours)

Psychology of the Unconscious: Classical Psychoanalysis (Freud), Sociological Shift in Psychoanalysis (Horney, Erikson), Object Relations Perspective (Key Concepts); Existentialist & Humanist Perspective (Tenets and Concepts).

UNIT – IV: (9 Hours)

Psychology of Subjective Experience: Humanist Psychology (Tenets), Rogerian Self Psychology; Existential Psychology (Tenets), Transpersonal Psychology (Themes & Contributions).

Tutorial Component – 15 Hrs.

Suggestive Tutorial Activities:

- Literature Review to trace polycentric history of Psychology
- Class debates to develop critical thinking e.g. Skinner-Chomsky debate
- Working timeline on the History of Psychology including History of Psychology in India
- Mapping a timeline of Psychology with popular culture movements to see convergences between the two.
- Role plays to demonstrate concepts e.g. operation of defense mechanisms.
- Discussions on topics of contemporary relevance e.g. artificial intelligence.
- Essays on philosophical debates
- Movie screenings and discussions e.g. Wild Strawberries

This is a suggestive and not an exhaustive list of tutorial activities.

Practical Component – NIL

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSC-8 Paradigmatic Foundations of Psychological Inquiry	**4**	**3**	**0**	**1**	**Class XII Pass**	**NIL**

Learning Objectives

The Learning Objectives of this course are as follows:

- To acquaint students with the concept of of paradigms as a basis for psychological inquiry
- To introduce the basic assumptions of the key paradigms that inform knowledge generation in psychology
- To give an overview of the quantitative and qualitative traditions of inquiry
- To acquaint students with the different methods of data collection for psychological inquiry
- To present the essential considerations of design, rigour and ethics of knowledge generation through psychological inquiry

Learning outcomes

After doing this course, the students will be able to

- Appreciate and critically analyse the paradigmatic foundations and assumptions of different theories in Psychology
- Appreciate and use the different traditions of psychological inquiry
- Identify and use the suitable methods of data generation for different psychological inquiries

SYLLABUS

UNIT – I Paradigmatic Assumptions of Psychological Inquiry (12 hours)

- Paradigms of Inquiry: Positivist, Post-positivist, Critical, Constructivist and Participatory

UNIT – II Traditions of Inquiry (18 hours)

- Quantitative and qualitative approaches- overview, differences and convergences in mixed methods
- Issues and techniques of sampling in quantitative and qualitative approaches
- Issues of quality and ethics in quantitative and qualitative approaches
- Role of reflexivity in knowledge generation

UNIT – III Techniques of data generation (15 hours)

- Survey
- Interview
- Observation
- Focus Group Discussion
- Case study
- Use of secondary data sources

Suggestive Practicals– (30 hours)

- Students may be given different research works each rooted in one paradigm and may be asked to identify and illustrate the basic assumptions of these paradigms.
- Students may be asked to design a study with an interview (structured, semi-structured, unstructured, life-history etc.)/ observation (participant or non-participant)/ focus group discussion (online or in-person)/ case-study (single/multiple) as a method of data collection. The data obtained may be analysed using a suitable method of data analysis.
- Students may be asked to design a survey based study which may involve designing a questionnaire, collecting and analysing the data.
- Students can design a study using secondary data sources such as archives, blogs, life-history documents, biographies, movies, documentaries, short stories, advertisements, newspaper articles, policy documents, speeches etc. They can then analyse the secondary data with suitable method/s.

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSC-9 Social Psychology in Applied Contexts	4	3	0	1	Class XII Pass	NIL

Learning Objectives

The Learning Objectives of this course are as follows:

- To understand the importance of applied social psychology in various domains.
- To appreciate the applications of the field in various contexts of life.

Learning outcomes

The student at the end of this course should be able to:

- Understand the key issues and concepts related to social inequalities and environmental concerns, especially in the Indian context.
- Understand the importance of interventions in dealing with social problems.
- Design and execute a study based on any relevant intervention/participatory method.

UNIT – I (15 Hours)

Introduction

Nature of Applied Social Psychology, Overview of Participatory Research Methods, Process of Intervention, Applying Social Psychological Principles in the Indian Context - Case Studies.

UNIT – II (15 Hours)

Social Diversity and its Challenges

Economic, Religious, Gender, Linguistic, Caste based Diversity

Challenges (discrimination, stereotypes and prejudice)

UNIT – III (15 Hours)

Applying Social Psychology to the Environment

Resource dilemmas, Natural Disasters, Culture and Environment, Pro-environmental Behaviour and Dealing with Natural Disasters

Practical component- (30 Hours)

- Case Studies in the Indian context related to the topics in unit 2 and 3.
- Focus Group discussions based on relevant social issues (diversity, discrimination, environment etc.)
- Analysis of Designing interventions for relevant social issues (diversity, discrimination, environment etc.)
- Analysis of films, other media and other secondary data sources (e.g relevant social policies)
- Interview based /observational inquiry in relevant social settings (e.g NGOs, rural settings etc.)
- Questionnaire based surveys on relevant topics in unit 2 and 3

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE DSE-2 COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSE-1 Social Behaviour and Group Interactions	**4**	**3**	**1**	**0**	**Class XII Pass**	**Nil**

Learning Objectives

The Learning Objectives of this course are as follows:

- To develop an understanding of verbal and nonverbal communication in the social context and appreciate the role of culture in social behavior.
- To develop conceptual knowledge of interpersonal relationships and prejudiced attitudes.
- To understand how social influences affect the behavior of individuals,
- To introduce the concept of group behavior and group decision making.

Learning outcomes

The Learning Outcomes of this course are as follows:
After completing the course, the students will be able to:

- Understand the importance of verbal and nonverbal communication.
- Develop an awareness about underlying factors for interpersonal attraction and targets and effects of prejudice.
- Understand the effect of social influences on individuals' behaviour.
- Locate social thought and behaviour in the cultural context.
- Acquire knowledge about the concept of group, as well as interaction and decision making in groups.

SYLLABUS OF DSE-1

UNIT – I (4 Weeks)
Communication: language and nonverbal communication; Culture: locating culture in social psychology, culture and history, culture, thought, and behavior, contact between cultures.

UNIT – II (5 Weeks)
Interpersonal Relationship: evolution and attraction, what increases liking, attraction, and rewards; Prejudice: Nature and dimensions, prejudiced attitudes, targets of prejudice, effects of prejudice.

UNIT – III (3 Weeks)
Social Influence Processes: obedience, compliance, and conformity

UNIT – IV (3 Weeks)

Group Processes and Decision Making: basic features of groups (status, norms, roles, cohesiveness), group interaction (facilitation, loafing); group decision making: rules governing group decisions, brainstorming, group memory, groupthink, group polarization.

Tutorial Component – 15 Hrs.

Suggestive Tutorial Activities

- Group Discussions
- Presentations of latest research reviews related to the topics covered in the syllabus.
- Role play
- Study of social behaviour and group interactions through observation, interviews, surveys etc.
- Examination of social phenomena in real life through case study analyses
- Understanding of social behaviour and group processes through media analyses, such as, movies, advertisements, cartoons, serials, songs, etc.
- Problem solving exercises for the existing social issues.
- Quizzes and creative writing.

The above list is a suggested one and not an exhaustive list of Tutorial Activities.

Practical component (if any) - NIL

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE DSE-2 COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSE-2 Development of Indian Psychological Thought	**4**	**3**	**1**	**0**	**Class XII Pass**	**Nil**

Learning Objectives

The Learning Objectives of this course are as follows:

- To develop an understanding of the concepts of Indian psychological thought.
- To understand the process of self and personality from a developmental perspective and its involvement in health and healing.
- To facilitate an understanding into mapping selfhood in the context of relationships, motivation, action and agency.

Learning outcomes

The Learning Outcomes of this course are as follows:

- To formulate strategies to address issues in therapeutic, educational and organizational settings from the indigenous Indian perspective.

SYLLABUS OF DSE-2

UNIT – I **(12 Hours)**
Introduction: Core Components of Indian Psychological Thought, Consciousness, Self in Indian Psychology: *Upanishadic* view.

UNIT – II **(15 Hours)**
Self Development: Evolution of self. Emotions and their transformation in Indian Psychology, Meaning in Life: Indian perspective.

UNIT – III **(9 Hours)**
Karma Theory: Concept of Karma Yoga in the *Bhagvad Gita* in relation to *Jnana* and *Bhakti Yoga.*

UNIT – IV **(9 Hours)**
Applications of Indian Psychology: Counselling, education, health & organizations.

Tutorial Component – 15 Hrs.

Suggestive Tutorial Activities

- Literature review

- Yoga and meditative exercises
- Using secondary data sources

The above list is a suggested one and not an exhaustive list of Tutorial Activities.

Practical component (if any) - NIL

COMMON POOL OF GENERIC ELECTIVES (GE) COURSES
Offered by Department of Psychology

GENERIC ELECTIVE (GE) COURSES

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE GE-9 COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisiteof the course (if any)
		Lecture	Tutorial	Practical/ Practice		
GE-9 Basics of Social Psychology	**4**	**3**	**1**	**0**	**Class XII Pass**	**Nil**

Learning Objectives

- To define social psychology and describe its origins as a separate discipline withinpsychology.
- To develop an understanding of cognitions, and actions of oneself and others in thesocial and cultural context.
- To discuss the relationship between the person and the situation and its influence onattitudes, and social influence processes.

Learning outcomes

- Define social psychology and related terminology.
- Identify and evaluate the current and historical research, and research methods of social psychology, including ethical considerations.
- Apply social psychological principles to real-world issues

SYLLABUS OF GE-9

Unit I **(11 Hours)**

Introduction to Social Psychology: Nature, Scope, History, Methods of research, Social Psychology in India, and Current Trends.

Unit II **(11 Hours)**

Person Perception & Social Cognition: Social Schemas, Heuristics, Attribution: Types and theories.

Unit III **(11 Hours)**

Attitudes: Structure, Characteristics, Formation, Attitude-Behaviour Link, Attitude change

Unit IV **(12 Hours)**

Social Influence Processes: Compliance: principles and tactics; Conformity: Classic studies and recent trends; Obedience: factors affecting obedience.

Tutorial Component – 15 Hrs.

- Group Discussions
- Book Review
- Class Presentations
- Group Projects
- Media Analysis (Movies, documentaries, serials, songs, advertisements, social media
- posts)
- Any creative production (group activity)

The above list is a suggested one and not an exhaustive list of Tutorial Activities.

Practical Component – NIL

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE GE-10 COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
GE-10 Youth and Mental Health	**4**	**3**	**1**	**0**	**Class XII Pass**	**Nil**

Learning Objectives

The Learning Objectives of this course are as follows:

- To develop understanding of common risk factors affecting mental health of young persons
- To develop knowledge of signs and symptoms of various disorders that are prevalent amongst youth
- To help students appreciate the competencies and strategies to build the competencies for positive youth development

Learning outcomes

The Learning Outcomes of this course are as follows:

- By studying this course, the student will be able to understand the ecological perspective on the risk and protective factors affecting mental health amongst young people.
- By studying this course, students will be able to identify and distinguish amongst widely prevalent disorders afflicting youth.

SYLLABUS OF GE-10

UNIT – I **(12 Hours)**
Mental Health Determiners in Youth – Ecological Model of Human Development; Risk Factors: Familial Dysfunction; Peer Pressure and Unpopularity; Academic and Career Related Stress; Bullying and Sexual Violence; Poverty and Discrimination; Media Saturation

UNIT – II **(12 Hours)**
Internalizing Problems amongst Youth – Signs and symptoms of Anxiety, Depression and Suicide, Eating Disorders (Anorexia Nervosa, Bulimia Nervosa), Gender Dysphoria, Self harm behaviours

UNIT – III **(11 Hours)**
Externalizing Problems amongst Youth – Crime and Delinquency, Signs and symptoms of Substance use disorder, Internet and Social Media addiction

UNIT – IV **(10 Hours)**
Positive Youth Development –5 C's model of Positive Youth Development, Strategies of promoting Positive Youth Development

Tutorial Component – 15 Hrs.

- Presentation of research review to understand the bio-psychosocial etiology of disorders
- Watching documentaries/films to understand the lived experience of psychological problems
- Group discussions on selected texts (fiction/non fiction) to understand mental health problems
- Self exploration and self enhancement exercises

The above list is a suggested one and not an exhaustive list of Tutorial Activities.

Practical Component – NIL

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE GE-11

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
GE-11 Foundations of Inquiry in Psychology	4	3	0	1	Class XII Pass	Nil

Learning Objectives

The Learning Objectives of this course are as follows:

- To introduce students to the paradigmatic foundations of psychological inquiry
- To present the essential considerations of design, rigour and ethics of knowledge generation through psychological inquiry
- To acquaint students of the quantitative and qualitative approaches of inquiry
- To give an overview of the different methods of data generation for psychological inquiry

Learning outcomes

After doing this course, the students will be able to

- Critically analyse and compare paradigmatic frameworks and their underlying assumptions and contributions to the field of psychology
- Understand the ways in which the issues of ethics and rigour are addressed while engaging in psychological inquiries
- Appreciate the nuances of the quantitative and qualitative approaches of psychological inquiry
- Select and use the suitable methods of data generation for psychological inquiries

Unit – I : Foundational Assumptions of Psychological Inquiry (18 Hours)

- Positivist & Post-positivist, Interpretivist, and Critical Paradigm
- Quantitative & Qualitative approaches to inquiry
- Integrating paradigms to advance interdisciplinarity

UNIT – II: Fundamentals of Design in Inquiry (12 Hours)

- Types of designs in psychological inquiry-experimental, correlational, cross-sectional, longitudinal, observational
- Ethics- Balancing scientific rigour with ethical considerations, Guidelines for ethical inquiry

UNIT – III: Data Gathering Techniques (15 Hours)

- Field Experiments
- Survey
- Interview
- Case Study

- Using secondary data and documents

Suggestive Practicals **(30 hours)**

- Students may be given different research works each rooted in one paradigm and may be asked to identify and illustrate the basic assumptions of these paradigms.
- Students may be asked to design a study with field experiment/interview/ case study as a method of data collection. The data obtained could be analysed using a suitable technique of data analysis.
- Students may be asked to design a survey based study which may involve designing a questionnaire, collecting and analysing the data.
- Students can design a study using secondary data sources such as archives, blogs, life-history documents, biographies, movies, documentaries, short stories, advertisements, newspaper articles, policy documents, speeches etc. They can then analyse the secondary data with a suitable method of data analysis.

B.A. (HONS.) APPLIED PSYCHOLOGY

Category I

(B.A. Honours in Applied Psychology in three years)

DISCIPLINE SPECIFIC CORE COURSE 07: Psychology Of Positive Living

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE – REQUISITES OF THE COURSE

Course title & Code	Credits	Credit Distribution of the Course			Eligibility Criteria	Pre – requisite of the Course (if Any)
		Lecture	Tutorial	Practical/Practice		
DSC- 07 PSYCHOLOGY OF POSITIVE LIVING	4	3	0	1	Class 12 Pass	Nil

Learning Objectives

The Learning Objectives of this course are as follows:

- Understanding the meaning and emergence of the field of positive psychology in the west and in the east.
- Learning the various pathways through which cognitive states and processes like optimism, Hope and mindfulness influence well-being.
- Understanding the applications of positive psychology in various context.

Learning Outcomes

The learning outcomes of this course are as follows:

- After the completion of the course the students will be able to:
- Gain deeper insights into the emergence of the field of Positive Psychology and its progression in the west and east, particularly in India.
- Have a better understanding of cognitive states like Optimism, Hope and Mindfulness in
- Positive Psychology.
- Comprehend, appreciate and implement the positive psychological concepts in real world.

SYLLABUS OF DSC- 07

UNIT-I **(15 Hours)**

Introduction: Meaning and goals of Positive Psychology; Historical development and culturally embedded understanding of the field [An overview of Hinduism, Buddhism and Sufism].

UNIT– II **(15 Hours)**

Positive Cognitive States and Processes: Optimism [Seligman theory and Scheier and Carver's perspective; scales of measurement and outcomes] and Hope[Snyder theory, scales for measurement and outcomes], Mindfulness [Jon Kabat-Zinn perspective and Vipassana meditation].

UNIT- III **(15 Hours)**

Applying Positive Psychology in real life: Positive psychology in education (components, care, trust & respect

for diversity), Positive psychology at workplace (gainful employment), Community (Me/We balance).

Practical component – **30 Hrs.**

1. One practicum based upon Experiential exercise/s on any of the units given above
2. One practicum based on field study or Lab study/experiment from any of the units given Above

Tutorial component – NIL

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSC-9 **Basic Statistics in Psychology**	**4**	**3**	**0**	**1**	**12th Pass**	**NIL**

Learning Objectives

The Learning Objectives of this course are as follows:

- The basic level course will assist the students in grasping the fundamental research and techniques of descriptive statistics used in social sciences. Additionally, it will aid them in developing the conceptual foundations of correlation, normal probability curve and acquiring appropriate computation skills.
- Calculate measures of central tendency, variability, and score transformations.
- Define and calculate correlation coefficients and understand the concepts of prediction and regression.
- Describe the normal curve and use the curve to solve various problems including probability.

Learning outcomes

By studying this course, students will be able to:

- Understand fundamental research, statistical techniques and analyse simple data.
- Calculate the statistics necessary to solve problems using measures of central tendency, correlation coefficients and simple regression.
- Communicate the meaning of statistical analyses in everyday language and professional formats (e.g., graphs and tables).

SYLLABUS OF DSC 06

UNIT – I **(15 Hours)**

Introduction to Descriptive Statistics: Level of measurement; Measures of central tendency: mean, median and mode (characteristics and computation); Measures of variability: range, semi-interquartile range, standard deviation, variance (characteristics and computation)

UNIT – II **(15 Hours)**

Score transformations: standard scores and percentile ranks (characteristics and computation); Normal probability curve: Characteristics and application of normal probability curve.

UNIT – III **(15 Hours)**

Analysis of relationships: Meaning, direction and degree of correlation; Factors affecting Pearson's correlation; Computation of correlation: Pearson's coefficient correlation and Spearman's rank order correlation; Prediction and Simple Regression (Concept and calculation)

Practical component (if any) - (30 Hours)

Total of two practicums based on statistical analysis of data:

- One practicum from Unit I based on any one of the statistics: measures of central Measures of central tendency: mean, median and mode; Measures of variability: range, semi-interquartile range, standard deviation, variance (characteristics and computation)
- One practicum from Unit III based on analysis of relationship (correlation or prediction)

Data sets available online or those from other sources can be used for this purpose. The Practicum should focus on conceptual understanding of the statistical techniques used.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVE (DSE) COURSES

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE DSE-1COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSE-1 Youth Psychology	4	3	0	1	12th Pass	Nil

Learning Objectives

The Learning Objectives of this course are as follows:

- To define youth psychology and emphasize upon studying the relevance and concerns of the youth in the contemporary world.
- To gain a deeper understanding for the various issues and challenges faced by the youth.
- To discuss the positive aspects of youth development.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Appreciate the term 'youth', 'youth psychology' in the light of various socio-cultural influences; about the phases in the development of youth identity; and the need for study in the present day world.
- Develop an understanding for the risk behaviors youth engage in, the challenges they face related to employment, education; health, body image and being in transition.
- Understand about the positive aspects of youth development and its related constructs of Responsibility, social capital, Citizenship and political engagement.

SYLLABUS OF DSE-1

UNIT – I **(15 Hours)**

Introduction: Defining youth; Youth across cultures; Formulation of youth identity; Concerns and relevance of youth psychology.

UNIT – II **(15 Hours)**

Issues and challenges: Youth and risk behaviors (Drug abuse, delinquency, sexuality & suicide risk); Employment, education; Health and Body image Youth in transition.

UNIT – III **(15 Hours)**

Youth and sustainable social well-being: Positive youth development: Responsibility, social capital, Citizenship and political engagement.

Practical component **(30 Hours)**

Any Two Practicum based on above mention topics.

Tutorial Component- NIL

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE DSE-2COURSE

Course title& Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSE-2 Introduction to Indian Psychology	**4**	**3**	**1**	**0**	**12th Pass**	**Nil**

Learning Objectives

The Learning Objectives of this course are as follows:

- To acquaint the student with the nature and scope of Indian Psychology.
- To acquaint the student with significant schools of Indian Psychology and its applications.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Students will be able to apply the knowledge of Indian Psychology in making sense of lived experience in India, and understand the deeper psycho-spiritual significance of the deeper meaning of various customs and rituals.

- Students will be able to benefit personally from specific practices which are essential to Indian Psychology, such as meditation.

- Students will be able to apply principles of Indian Psychology in various fields such as Counseling, Organizational Behaviour, and Education.

SYLLABUS OF DSE-2

UNIT – I **(15 Hours)**

Definition, nature and scope of Indian Psychology, Historical foundations and growth of the discipline.

UNIT – II **(15 Hours)**

An overview to Three major schools of Indian Psychology: Yoga as a path to self transformation, Buddhism as a way out of suffering, and Sufism as a path of love and self transformation.

UNIT – III **(15 Hours)**

Indian Psychology in the folk tradition: Sant Kabir Das - Social critique, inclusiveness: equality & justice. *Bhakti*: love & healing.

UNIT – IV **(15 Hours)**

Some applications of Indian Psychology –Psychotherapy (mainstream as well as folk traditions, Organizational Behaviour, and Education

Tutorial Component - 15 Hrs.

- Psychological insight from alternative sources: text, songs, documentary, experiential, ancient sources
- Introducing Sufism through Music; Guided Meditation:
- Documentary by Shabnam Virmani- Had Anhad: Journeys of Ram and Kabir
- Discussion on cultural healing technique; Screening of Movie Crazy Wise showing Alternative ways of healing; Discussion on limitation of traditional teaching and move towards Integral Education

Practical component - Nil

		Lecture	Tutorial	Practical/ Practice		
GE-10 Youth and Mental Health	**4**	**3**	**1**	**0**	**Class XII Pass**	**Nil**

Learning Objectives

The Learning Objectives of this course are as follows:

- To develop understanding of common risk factors affecting mental health of young persons
- To develop knowledge of signs and symptoms of various disorders that are prevalent amongst youth
- To help students appreciate the competencies and strategies to build the competencies for positive youth development

Learning outcomes

The Learning Outcomes of this course are as follows:

- By studying this course, the student will be able to understand the ecological perspective on the risk and protective factors affecting mental health amongst young people.
- By studying this course, students will be able to identify and distinguish amongst widely prevalent disorders afflicting youth.

SYLLABUS OF GE-10

UNIT – I **(12 Hours)**
Mental Health Determiners in Youth – Ecological Model of Human Development; Risk Factors: Familial Dysfunction; Peer Pressure and Unpopularity; Academic and Career Related Stress; Bullying and Sexual Violence; Poverty and Discrimination; Media Saturation

UNIT – II **(12 Hours)**
Internalizing Problems amongst Youth – Signs and symptoms of Anxiety, Depression and Suicide, Eating Disorders (Anorexia Nervosa, Bulimia Nervosa), Gender Dysphoria, Self harm behaviours

UNIT – III **(11 Hours)**
Externalizing Problems amongst Youth – Crime and Delinquency, Signs and symptoms of Substance use disorder, Internet and Social Media addiction

UNIT – IV **(10 Hours)**
Positive Youth Development –5 C's model of Positive Youth Development, Strategies of promoting Positive Youth Development

Tutorial Component – 15 Hrs.

- Presentation of research review to understand the bio-psychosocial etiology of disorders
- Watching documentaries/films to understand the lived experience of psychological problems
- Group discussions on selected texts (fiction/non fiction) to understand mental health problems
- Self exploration and self enhancement exercises

The above list is a suggested one and not an exhaustive list of Tutorial Activities.

Practical Component – NIL

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE GE-11

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
GE-11 Foundations of Inquiry in Psychology	**4**	**3**	**0**	**1**	**Class XII Pass**	**Nil**

Learning Objectives

The Learning Objectives of this course are as follows:

- To introduce students to the paradigmatic foundations of psychological inquiry
- To present the essential considerations of design, rigour and ethics of knowledge generation through psychological inquiry
- To acquaint students of the quantitative and qualitative approaches of inquiry
- To give an overview of the different methods of data generation for psychological inquiry

Learning outcomes

After doing this course, the students will be able to

- Critically analyse and compare paradigmatic frameworks and their underlying assumptions and contributions to the field of psychology
- Understand the ways in which the issues of ethics and rigour are addressed while engaging in psychological inquiries
- Appreciate the nuances of the quantitative and qualitative approaches of psychological inquiry
- Select and use the suitable methods of data generation for psychological inquiries

Unit – I : Foundational Assumptions of Psychological Inquiry (18 Hours)

- Positivist & Post-positivist, Interpretivist, and Critical Paradigm
- Quantitative & Qualitative approaches to inquiry
- Integrating paradigms to advance interdisciplinarity

UNIT – II: Fundamentals of Design in Inquiry (12 Hours)

- Types of designs in psychological inquiry-experimental, correlational, cross-sectional, longitudinal, observational
- Ethics- Balancing scientific rigour with ethical considerations, Guidelines for ethical inquiry

UNIT – III: Data Gathering Techniques (15 Hours)

- Field Experiments
- Survey
- Interview
- Case Study
- Using secondary data and documents

Suggestive Practicals **(30 hours)**

- Students may be given different research works each rooted in one paradigm and may be asked to identify and illustrate the basic assumptions of these paradigms.
- Students may be asked to design a study with field experiment/interview/ case study as a method of data collection. The data obtained could be analysed using a suitable technique of data analysis.
- Students may be asked to design a survey based study which may involve designing a questionnaire, collecting and analysing the data.
- Students can design a study using secondary data sources such as archives, blogs, life-history documents, biographies, movies, documentaries, short stories, advertisements, newspaper articles, policy documents, speeches etc. They can then analyse the secondary data with a suitable method of data analysis.

DISCIPLINE SPECIFIC CORE COURSE DSC-05 UNDERSTANDING MENTAL DISORDERS

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSC - 05 Understanding Mental Disorders	4	3	0	1	Passed Class 12th	Nil

Learning Objectives

The Learning Objectives of this course are:

- To introduce the field of abnormal/clinical psychology.
- To provide an overview of the clinical picture and etiology of the various psychological disorders.
- To orient the learners to the diagnostic criteria and the related vocabulary of major psychological disorders.

Learning Outcomes

By studying this course, students will be able to:

- Distinguish between normal and abnormal behavior and learn the criteria of determining abnormality.
- Categorize and diagnose disorders according to the current diagnostic systems (current editions of the Diagnostic and Statistical Manual of Mental Disorders and International Classification of Diseases- Mental Disorders section).
- Discriminate between the various anxiety disorders and different mood disorders.

SYLLABUS OF DSC-05

UNIT – I **(15 Hours)**

Introduction: Criteria of Abnormality, Causal Factors, Classification, Clinical Assessment.

UNIT – II **(15 Hours)**

Anxiety Disorders and Obsessive-Compulsive Disorder (Clinical Picture and Dynamics): Generalized Anxiety Disorder, Social anxiety disorder, Specific phobias, Agoraphobia; Obsessive-Compulsive Disorder.

UNIT – III **(15 Hours)**

Depressive Disorder and Bipolar Disorders (Clinical Picture and Dynamics): Major Depressive disorder, Persistent Depressive disorder, Bipolar I, Bipolar II and Cyclothymia.

PRACTICUM **(30 Hours)**

Practical Component:

Suggestive list of practicals:

1. Visual Media and/or text analysis as an approach to understanding mental disorders.
2. Using the case study approach to understanding clinical picture of mental disorders.
3. Assessment of anxiety using any psychometric test.
4. Using Review of literature to understand anxiety disorders/depression/bipolar disorders.
5. Assessment of depression using any psychometric test.

Tutorial component: NIL

DEPARTMENT OF PUNJABI

Category I

Discipline Specific Courses offered by Department of Punjabi for the UG Programme with Punjabi as the Single Core Discipline

[UG Programme for Bachelor in **Punjabi (Honours)** degree in three years]

DISCIPLINE SPECIFIC CORE COURSE -7 (DSC-7)

SAHIT DE ROOP

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Sahit de Roop (DSC-7)	4	3	1	0	Class 12th pass in any subject	**Studied Punjabi up to 10th Standard** **or** ***Basic knowledge of Punjabi language***

LEARNING OBJECTIVES:

- The course is designed to analyse various genres of literature and understand their significance to culture.
- The course will develop a critical attribute of each genre to appreciate the artistry of the writer.
- It will encourage the students to appreciate the significance of stylistic and rhetorical features of the text.
- It will help them to explain and discuss the importance of different types of literary genres.

LEARNING OUTCOMES:

- The students will able to compose various types of essays and narratives dependent on reader, purpose, and message.
- They will be able to recognize formal characteristics of various literary genres.
- They will perceive and appreciate the significance of the historical and cultural context of various genres.

Unit- I ਸਾਹਿਤ ਬਾਰੇ ਬੁਨਿਆਦੀ ਸਮਝ (Sahit bare Buniadi Samajh) (12 Hours)

- ਸਾਹਿਤ: ਪ੍ਰਕਿਰਤੀ ਅਤੇ ਪ੍ਰਯੋਜਨ

  Sahit: Parkirti ate Paryojan
- ਸਾਹਿਤ ਦੇ ਤੱਤ

  Sahit de Tatt
- ਸਾਹਿਤ ਅਤੇ ਭਾਸ਼ਾ: ਅੰਤਰ ਸੰਬੰਧ

  Sahit ate Bhasha: Antar Sambandh
- ਸਾਹਿਤ ਅਤੇ ਸਮਾਜ: ਅੰਤਰ ਸੰਬੰਧ

  Sahit ate Samaj: Antar Sambandh

Unit-II ਕਾਵਿ ਰੂਪਾਕਾਰ (Kaav Roopakar) (11 Hours)

- ਕਵਿਤਾ: ਪਰਿਭਾਸ਼ਾ ਅਤੇ ਤੱਤ

  Kavita: Paribhasha ate Tatt
- ਨਜ਼ਮ, ਗੀਤ

  Nazam, Geet
- ਰੁਬਾਈ, ਗ਼ਜ਼ਲ

  Rubai, Ghazal
- ਖੁੱਲ੍ਹੀ ਕਵਿਤਾ

  Khuli Kavita

Unit-III ਆਧੁਨਿਕ ਗਲਪ ਤੇ ਨਾਟ ਰੂਪਾਕਾਰ (Adhunik Galap te Naat Roopakar) (11 Hours)

- ਨਾਵਲ: ਪਰਿਭਾਸ਼ਾ ਅਤੇ ਤੱਤ

  Novel: Paribhasha ate Tatt
- ਨਿੱਕੀ ਕਹਾਣੀ: ਪਰਿਭਾਸ਼ਾ ਅਤੇ ਤੱਤ

  Nikki Kahani: Paribhasha ate Tatt
- ਨਾਟਕ: ਪਰਿਭਾਸ਼ਾ ਅਤੇ ਤੱਤ

  Natak: Paribhasha ate Tatt
- ਇਕਾਂਗੀ: ਪਰਿਭਾਸ਼ਾ ਅਤੇ ਤੱਤ

  Ikangi: Paribhasha ate Tatt

Unit- IV ਵਾਰਤਕ ਰੂਪਾਕਾਰ (Vartak Roopakar) (11 Hours)

- ਨਿਬੰਧ: ਪਰਿਭਾਸ਼ਾ ਅਤੇ ਤੱਤ

  Nibandh: Paribhasha ate Tatt
- ਸਵੈ-ਜੀਵਨੀ: ਪਰਿਭਾਸ਼ਾ ਅਤੇ ਤੱਤ

  Swai-Jeevni: Paribhasha ate Tatt
- ਸਫ਼ਰਨਾਮਾ: ਪਰਿਭਾਸ਼ਾ ਅਤੇ ਤੱਤ

  Safarnama: Paribhasha ate Tatt
- ਰੇਖਾ-ਚਿੱਤਰ: ਪਰਿਭਾਸ਼ਾ ਅਤੇ ਤੱਤ

  Rekha-Chittar: Paribhasha ate Tatt

ESSENTIAL READINGS:

- Brahamjagdish Singh (2011) **Samalochna Shastar**, Waris Shah Foundation, Amritsar.

Pool of Discipline Specific Electives

DSE-1: Indian System of Logic and Debate

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the Course			Eligibility criteria	Prerequisite of the course
		Lecture	Tutorial	Practical/ Practice		
Indian System of Logic and Debate	**04**	**3**	**1**	**0**	**Semester II Passed**	**Working Knowledge of Sanskrit**

Learning Objectives

This course aims at getting the students acquainted with the fundamental Indian principles of debate and its applications, not just in the philosophical discourse, but also in every area of knowledge. The course intends to bring the indigenous science of argumentation to the fore.It also intends to help the students develop logical faculty of discourse mind and to perceive the world in a more rational way in their day-to-day life situations.

Learning outcomes

At the end of this course, the learners will be able to form a comprehensive idea about different levels, layers and components of Indian science of debate .

Detailed Syllabus

Unit I **12Hrs**

Fundamentals of the Science of Debate

Science of inquiry (Anvīkṣikī) & its importance, Growth of Anvīkṣikī into the art of Debate, The council of debate (Pariṣad) & its types, Discussant (Vādī), Opponent (Prativādī), Madhyastha (Judge) and Prāśnika.

Note: The definitions and concepts are to be taken from *Nyāyasūtra*, *Nyāyakośa* of Bhimacharya Jhalkikar and *A History of Indian Logic* by S. C. Vidyabhushan, Chapter III of Section I.

Unit II **12Hrs**

Syllogistic Logic

Inference (Anumāna) & its key terms, viz. major term or probandum (Sādhya), middle term or probans (Hetu), minor term (Pakṣa), illustration (Sapakṣa), contrary-illustration (Vipakṣa), basic understanding of invariable concomitance (Vyāpti) & its types, establishing Vyāpti through inductive method, demonstration of pervasion- Upādhi and Tarka, nature and variety of Tarka, Pañcāvayava-vākya.

Note: The definitions and concepts are to be taken from the Tarkasaṁgraha, Tarkabhāṣā and the Nyāya Theory of Knowledge by S. C. Chatterjee, Chapters XI-XIV.

Unit III **09Hrs**

Theory of Debate

Basic understanding of the following terms: Example (Dṛṣṭānta), Tenet (Siddhānta), Ascertainment (Nirṇaya), Dialogue (Kathā) and its kinds, Discussion (Vāda), Wrangling (Jalpa), Cavil (Vitaṇḍā).

Unit IV **12Hrs**

Quibble (Chala) & its kinds; Analogue (Jāti), Point of defeat (Nigrahasthāna) & its kinds- Hurting the proposition (Pratijñāhāni), Shifting of proposition (Pratijñāntara), Opposing the proposition Pratijñāvirodha), Renouncing the Proposition (Pratijñāsannyāsa), Admission of an opinion (Matānujñā).

Note: The definitions and concepts are to be taken from the Nyāyasūtra, Nyāyakośa by Bhimacharya Jhalkikar and A History of Indian Logic by S. C. Vidyabhushan, Chapter II of Section II.

Essential/recommended readings

1. Vidyabhushan, Satish Chandra, A History of Indian Logic, MLBD, Delhi, 1962. (Chapter III of Section I & Chapter II of Section II only)
2. Potter, Karl H., Encyclopaedia of Indian Philosophies, Vol. II, Motilal Banarsidass, Delhi, 1977.
3. Jhalkikar, Bhimacharya, Nyāyakośaḥ, Bhandarkar Oriental Research Institute, Poona, 1997 (reprint of fourth edition)
4. Athalye & Bodas, Tarkasaṅgraha, Mumbai, 1920. (only introduction & exposition of anumāna)
5. Shastri , Kuppuswami, A Primer of Indian Logic, Madras, 1951 (only introduction & exposition of anumāna).
6. Tarkasaṁgraha of Annaṁbhaṭṭa (with Dipika), (Ed. & Tr. in Hindi), Kanshiram & Sandhya Rathore, MLBD, Delhi 2007.
7. Bagchi, S. S. – Inductive Logic : A Critical Study of Tarka & Its Role in Indian Logic, Darbhanga, 1951.
8. Chatterjee, S. C. & D. M. Datta - Introduction to Indian Philosophy, Calcutta University, Calcutta, 1968 (Hindi Translation also)
9. Chatterjee, S. C. – The Nyāya Theory of Knowledge, Calcutta, 1968.
10. Hiriyanna, M. - Outline of Indian Philosophy, London, 1956 (also Hindi Translation).
11. Jha, Harimohan – Bhāratīya Darśana Paricaya, Vol. I (Nyāya Darśana), Darbhanga.
12. Matilal, B. K. – The Character of Logic in India, Oxford, 1998.

DSE-2: Fundamentals of Ayurveda

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility Criteria	Prerequisite of the course
		Lecture	Tutorial	Practical/ Practice		
Fundamentals of Ayurveda	04	3	1	0	Semester II Passed	Working Knowledge of Sanskrit

Learning Objectives

Āyurveda is the most ancient but still a living healthcare system of India. This course will introduce students to the basic concepts of the Science of Āyurveda. The major objective of the course is to make the learners understand the basic principles and concepts of preventative and curative medicines, health maintenance, diet and nutrition, usage of commonly used spices and herbs and therapeutic procedures in Āyurveda

Learning outcomes

Graduates who read this course should be able to know the ancient tradition of Indian Medicine system, which talks about not only to the physical health but also a healthy lifestyle. After reading this paper students will know the history of Āyurveda through original sources of ancient medicine system as enshrined in the Sanskrit texts like Charaka Saṁhitā, Śuśruta Saṁhitā, Aṣtānṅga Hridaya etc. and they will also get the basic knowledge of eight departments of Āyurveda. Second section of this paper is related to ancient physiology.

Detailed Syllabus

Unit I **15Hrs**

Introduction to Āyurveda

History of Āyurveda in the pre-Charaka period, the two schools of Āyurveda: Dhanvantari and Punarvasu.

Ācāryas of Āyurveda: Charaka, Sushruta, Vagbhata, Madhava, Sharngadhara and Bhavamishra

Basic Principles of Āyurveda

1. The Pancamahābhūtas: Ākāśa (Space), Vāyu (Air), Tejas or Agni (Fire), Jala (Water) and Prithivī (Earth).

2. The Triguṇas: Sattva, Rajas and Tamas.

3. The Tridoṣas: Vāta, Pitta and Kapha.

4. The Saptadhātus: Rasa (fluid), Rakta (blood), Māṁsa, Meda (fat) Asthi, Majjā and Śukra.

5. The Trayodaśāgnis: Jatharāgni (gastric fire), Saptadhātvagni and Pancabhūtāgni.

6. The Trimalas: Purīṣā (faeces), Mūtra (urine) and Sveda (sweat).

Unit II **10Hrs**

Eight branches of Āyurveda (Aṣṭāṅga Āyurveda):

1. Kāycikitsā (General Medicine)
2. Kaumārabhṛtya (Pediatrics)
3. śalyatantra (Surgery)
4. Śālākya-Tantra (Ent. and Ophthalmology)
5. Bhūta Vidyā (Psychiatry Medicine).
6. Viṣa Vijñāna (Toxicology).
7. Rasāyana (Rejuvenates).
8. Vājīkaraṇa (Aphrodisiac).

Unit III **10Hrs**

Lifestyle and Preventive Medicine:

1. Understanding Health and Disease in Āyurveda
2. Ayurvedic SvasthaVṛtta (Preventive Medicine): Seasonal regimen & Social Conduct and its effect on health.

3. Carakasaṁhitā – Sūtra-sthānam (Tasyāśitīyādhyāya)

Regimen of Six Seasons (Ṛtucharyā) : Hemanta (Early Winter), Śiśira (Winter),Vasanta (Spring), Grīṣma (Summer), Varṣā (Rainy) and Śarada (Autumn).

Unit IV **10Hrs**

Diagnosis of illness (Roga-Parīkṣaṇa)

Eight ways of diagnosing illness-

Nāḍī (Pulse Examination), Mūtra (Urine Examination), Mala (Stool Examination), Jihvā (Tongue Examination), Śabda (Speech Examination), Sparśa (Touch Examination), Dṛk (Vision Examination), and Ākriti (Appearance).

Pancha kosha

The holistic concept of body in Indian Medicine Based on Taittirīyopaniṣad - Bhriguvalli, Anuvāka- (1-6)

Essential/recommended readings

1. आयुर्वेद का साहित्यिक इतिहास, हिन्दी साहित्य सम्मेलन, इलाहाबाद.
2. Singh R.H., Body, Mind, Spirit – Integrative Medicine in Ayurveda, Yoga and Nature Cure - Chowkhamba Surbharti Pratishthanam, Varanasi, I 2009

DSE-3: Computational Linguistics for Sanskrit

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Prerequisite of the course
		Lecture	Tutorial	Practical/ Practice		
Computational Linguistics for Sanskrit	04	3	1	0	Semester II Passed	Basic knowledge of Computer and Sanskrit

Learning Objectives

This course is supposed to familiarise the students with modern technology in the field of Computational linguistics and language technology and prepare the students for next level of Computational understanding in Sanskrit. After covering these topics in Computational Linguistics (CL), the students will learn the tools and techniques of CL and also do the detailed survey and learn various methodologies used in the field.

Learning outcomes

The course-level learning outcomes that a student of this course is required to demonstrate are indicated below:

- Learn the basics of Theoretical Concepts of Computational Linguistics.
- Learn the basic concepts of the various Applied Areas of Computational Linguistics e.g. Morphological Analyzer/Speech/Speaker Recognition, Speech Synthesis, Text to Speech, Language Analysis, Understanding, Generation, Natural Language Interface, Text Processing and Machine Translation etc.
- Learn the basic concept of databases for data Storage.
- Students will learn the Survey of Computational Linguistics.

Detailed Syllabus

Unit I **12Hrs**

Theoretical Concepts of Computational Linguistics:

Language and Communication, Levels of Language, Phonemes, Morphemes, POS, Lexicon, Syntax, Semantics, Discourse, Natural Language vs Artificial Language, Speech and Language, Grammars. Computer Intelligent Interaction (HCII), Human Processing of Languages vs Computer Processing of Natural Languages, Rule based vs Statistical Processing, Machine Learning, Annotation of Language, Standards, Unicode, and Language Resources.

Unit II **09Hrs**

Survey of the Sanskrit Computational Linguistics

Unit III **12Hrs**

Applied Areas of Sanskrit Computational Linguistics

Morphological Analyzer
Speech/Speaker Recognition
Speech Synthesis,
Text to Speech
Language Analysis
Language Understanding
Language Generation
Natural Language Interface
Text Processing
Machine Translation

Unit IV **12Hrs**

Data Storage:

An Introduction to Databases
Databases and Database Systems,
Architecture of Database Systems
Historical Perspective of Database Systems.
Basics of MS SQL Database

Essential/recommended readings

Web Application Development for Sanskrit	**04**	**3**	**1**	**0**	**Semester II Passed**	**Basic knowledge of Computer and Sanskrit**

Learning Objectives

This course is intended to familiaries the students with the modern technology of web publishing, web page development in Sanskrit and other Indian languages.

Learning outcomes

The course-level learning outcomes that a student of this course is required to demonstrate are indicated below:

- Learn the basic concepts of web page development.
- Learn the basic concepts about HTML, CSS and Java Scripts.
- Learn the basic concepts of Typing tools in Devanagari Unicode.

Detailed Syllabus

Unit I **12Hrs**

Brief Introduction to Web Applications for Sanskrit

Front End
Web Server
Back End

Unit II **12Hrs**

Front End and Back End development in Sanskrit

Basics of Hyper Text Markup Language (HTML)
Basics of Cascading Style Sheets (CSS)
Basics of Data storage (files)
Basics of Data Bases

Unit III **09Hrs**

Web Servers

Basics Java-Scripts (JS)
Basics of Python

Unit IV **12Hrs**

Typing Tools for Unicode Devanagari (Sanskrit)

Computer program for typing
Online typing tools
Voice typing tools
Mobile Typing

DSE-5: Environmental Awareness in Sanskrit Literature

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Prerequisite of the course
		Lecture	Tutorial	Practical/ Practice		
Environmental Awareness in Sanskrit Literature	04	3	1	0	Semester II Passed	Working Knowledge of Sanskrit

Learning Objectives

The main objective of this course is to make the students acquainted with the basic concepts of Indian Environmental Science and salient features of environmental awareness as reflected in Vedic and Classical Sanskrit literature. The National culture of every country depends on its environmental and climatic conditions and human behaviour towards natural resources. Nature- friendly thoughts reflected in Sanskrit Literature have benefited the human race for long. Many religious practices were framed by ancient thinkers as a tool to protect nature and natural resources.

Learning outcomes

After completing this course, students will realize themselves to be a part of Nature and Nature, intern, belongs to all creatures. They will learn to be a more careful about the utilization and preservation of natural resources. This will make them better citizens of the world.

Detailed Syllabus

Unit I **12Hrs**

Science of Environment: Definition, Scope and Modern Crises:

Modern Challenges and Crises of Environment: Global warming, Climate change, Ozone depletion, explosively increase in Pollution, Decrease in underground water label, River pollution, Deforestation in large scale. Natural calamities such as flood, draft and earthquakes.

Environmental Consciousness in Sanskrit Literature:

Concept of 'Mother Earth' and worship of Rivers in Vedic literature; Brief survey of environmental issues such as protection and preservation of mother nature, planting trees, and water preservation techniques as propounded in the Sanskrit Literature. Buddhist and Jain concepts of ecology, protection of trees, love for animals and birds.

Unit II **12Hrs**

Environment Awareness in Vedic Literature:

Environmental Issues and Eco-system in Vedic Literature

Divinity to Nature, Co-ordination between all natural powers of universe; Equivalent words **for Environment in** *Atharvaveda*: '*Vṛtavṛta*' *(12.1.52)*, '*Abhivarah*,' *(1.32.4.)*, '*Avṛtaḥ*' *(10.1.30)*, '*Parivrita*' *(10.8.31);* **five basic elements of universe covered by environment : Earth, Water, Light, Air, and Ether. (***Aitareya Upaniṣad 3.3)*

Three constituent elements of environment: Jala (water), *Vāyu* (air), and *Oṣadhi* (plants) (*Atharvaveda*, 18.1.17).
Natural sources of water in five forms: *rain water (Divyah),natural spring(Sravanti), wells and canals (Khanitrimah), lakes (Svayamjah) and rivers(Samudrarthah)* *ṛgveda*, 7.49.2*).*

Environment Preservation in Vedic Literature:
Five elementary sources of environment preservation: *Parvat* (mountain),
***Soma* (water),*Vayu* (air), *Parjanya* (rain) and *Agni* (fire) (*Atharvaveda*, 3.21.10);** Environment **Protection from Sun** (*Rgveda*,1.191.1-16, ***Atharvaveda*,2.32.1-6, *Yajurveda*,4.4,10.6); Congenial atmosphere for the life created by the Union of herbs and plants with sun rays (*Atharvaveda*,5.28.5); Vedic concept of Ozone-layer *Mahat ulb'*(*ṛgveda*,10.51.1; *Atharvaveda*,4.2.8);** Importance of plants and animals for preservation of global ecosystem; **(*Yajurveda* ,13.37);** Eco friendly **environmental organism in Upaniṣads (*Bṛhadāraṇyaka Upaniṣad*, 3.9.28, *Taittiriya Upaniṣad*,5.101)**

Unit III **12Hrs**

Environment Awareness in Puranas and Classical Sanskrit Literature:

Environmental Awareness and Tree plantation **:**
Planting of Trees in *Purāṇas* as a pious activity **(** *Matsya* ***Purāṇa***, 59.159;153.512 ; *Varāha* ***Purāṇa*** 172. 39), **Various medinal trees to be planted in forest by** king **(*śukranīti*,4.58-62)** Plantation of new trees and preservation of old trees as royal duty of king **(*Arthaśāstra*, 2.1.20); Punishments for destroying trees and plants (*Arthaśāstra*,3.19),** Plantation of trees for recharging under ground water(***Bṛhatsaṁhitā*, 54.119)**
Environmental Awareness and Water management **:**
Various types of water canels *'Kulyā'* for irigation : canal originated from river '*Nādimatṛ mukha kulyā',* canal originated from near by mountain *'Parvataparsva vartini kulyā',* canal originated from pond*,'Hrdasrta kulyā,* **Preservation of water resources** '*Vāpi –kūpa –taḍāga*' **(*Agnipuraṇas*,209-2;*V.Ramayana*,2.80.10-11); Water Harvesting system in *Arthaśāstra* (2.1.20-21); Underground Water Hydrology in Bṛhatsaṁhitā (Dakāgalādhyāya, chapter-54);**

Unit IV **09Hrs**

Universal Environmental Issues in the Literature of Kalidasa:

Eight elements of **Environment and concept of '*Aṣṭamūrti*' Siva (*Abhijñānaśākuntalam*); Preservation of forest,water resources, natural resources; protection of animals, birds and plant in Kalidasa's works, Environmental** awareness **in *Abhijñānaśākuntalam* Drama, Eco- system of indian monsoon in *Meghdūt*, Seasonal weather conditions of Indian sub continent in *ṛtusamhara,* Himalayan ecology *in Kumārasaṁbhava,* Oceanography in *Raghuvaṁśa* (canto-13).**

GE-7: Fundamentals of Indian Philosophy

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the Course			Eligibility criteria	Prerequisite of the course
		Lecture	Tutorial	Practical/ Practice		
Fundamentals of Indian Philosophy	04	3	1	0	Semester II Passed	Working Knowledge of Sanskrit

Learning Objectives

The primary objective of this course is to familiaries the students with the basic issues in Indian Philosophy. The course will give a hand on knowledge of various Fundamental concepts and Theories to enable them to learn the higher concepts and Theories of different Philosophical schools of Indian Philosophy

Learning outcomes

Indian Philosophy teaches critical thinking, close reading, clear writing, and logical analysis. It develops the tools of logic and reason to analyse the ways in which the individual experiences the Universe. It guides the student to understand the language we use to describe the world, and our place within it. Different areas of philosophy are distinguished by the questions they ask. The most important reason to study philosophy is that it is of enormous and enduring interest. Philosophy is important, but it is also enormously enjoyable in which students are provided with the tools and the opportunity to develop and express their own philosophical views.

Detailed Syllabus

Unit I: Fundamentals of Philosophy 10Hrs

Darśana - concept and aims, Classification of Indian Philosophical schools, Fundamental issues in Indian Philosophy- Epistemology: Pramanas

Generic Elective
(GE-B)

Intermediate Telugu

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Intermediate Telugu	4	03	01	0	Students who are class XII Pass & have studied Pre-Intermediate Telugu	NIL

Learning Objectives

This Course aspires to develop the students' language skills through Telugu popular texts thus enabling them to gain a firm grip over its nuances and helping them to extend their vocabulary. Along with teaching higher leaving reading, writing and conversational skills the course will demonstrate the essentials of translating complex sentences. Through prescribed texts and additional readings, the course also aims to make the students aware to the distinction between contemporary standard usage and its historical variant prevalent in nineteenth and early twentieth century known as*Sishta Bhasha*.

Learning outcomes

The course will enable the students to deal with the complexities of Telugu language. Along with an advanced reading, writing and conversational competence it will equip them as better translators as well.

SYLLABUS OF GE

Unit I **12**Hours

Reading Practice

Text: Select lessons from Telugu Vachakam 4th Class published by Telugu Akademi

Unit II **12** Hours

Difference between *Shishta Bhasha and Vyavaharika Bhasha*

Unit III **12** Hours

Complex Sentences Translation (Telugu-English-Telugu)

Unit IV **9** Hours

Paragraph writing (minimum 20 sentences)

Conversation Practice

Essential/recommended readings

1. Arden, A H., *A progressive grammar of the Telugu language.* 2nd ed. Madras: Society for promoting Christian knowledge, 1905.
2. Krishnamurti, B. and Gwynn, J. P. L. *A Grammar of Modern Telugu.* USA:Oxford University Press, 1986.
3. Parandhama Reddy, M. and Venkateswara Shastri,J. *Telugu Velugu- I.* . Mysore: Central Institute of Indian Languages, 1997.

Oitihasik Bhasabigyan	4	3	1	NIL	Class 12th pass in any subject	Studied Bengali Up to 10th & Above

Oitihasik Bhasabigyan

ঐতিহাসিক ভাষাবিজ্ঞান

Learning Objectives: Bengali language, in Indian literature, can be traced back in the 8th–10th century AD. Charyapada, which is a collection of a bunch of mystical poems written by some Buddhist monks of Mahayana Buddhism, where Bengali can be traced with some other languages (Purvi-Magdhi group) in that period. There are other instances of Bengali too during this period. Starting a thousand of years ago, Bengali has been grown into a modern Indian language of today. A student of Bengali must know that the language has changed time to time to become today's Bangla.

Learning Outcomes: After studying this paper students will know the historical development of the Indo-European Group of Languages. Students will be able to understand the development of Bengali language through various phases, development of Bengali script, and the dialects of Bengali.

UNIT I

ইন্দো-ইউরোপীয় ভাষাগোষ্ঠী থেকে বাংলা ভাষার উদ্ভবের সংক্ষিপ্ত ইতিহাস

সুকুমার সেন, ১৯৯৮, *বাঙ্গালা সাহিত্যে গদ্য,* আনন্দ পাবলিশার্স, কলকাতা

সুকুমার সেন, ১৪১৬ বঙ্গাব্দ, *বাঙ্গালা সাহিত্যের ইতিহাস,* তৃতীয় খণ্ড, আনন্দ, কলকাতা

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE – 9 (DSC-9): Rabindrasahitya-1

Credit distribution, Eligibility and Prerequisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Rabindrasahitya-1	4	3	1	NIL	Class 12th pass in any subject	Studied Bengali Up to 10th & Above

Rabindrasahitya-1

রবীন্দ্রসাহিত্য-১

Learning Objective: Rabindranath Tagore, the first Nobel-laureate in Literature (1913) from Asia, has contributed innumerable literary works in Bangla. No branch of literature exists where we do not get his works. His importance in Bangla Sahitya is beyond question. So, a full paper containing his literature has been added in this syllabus.

Learning Outcomes: Students will get the scope to know Rabindra-sahitya-1 (along with his life) better as earlier they have studied only one or two of his short poems or stories in the school syllabus. Here they will be working upon his Poems, Novels and see his overflowing philosophy through all these works.

UNIT I

কবিতা

নির্ঝরের স্বপ্নভঙ্গ, বধূ, পুরাতন ভৃত্য, অপমানিত, সবুজের অভিযান, ছেলেটা, ওরা কাজ করে

UNIT II

উপন্যাস

ঘরে-বাইরে

Essential/Recommended readings:

রবীন্দ্রনাথ ঠাকুর, ১৩৪৮ বঙ্গাব্দ, *রবীন্দ্র-রচনাবলী*, অষ্টম খণ্ড, ঘরে-বাইরে, বিশ্বভারতী, কলিকাতা

রবীন্দ্রনাথ ঠাকুর, ১৪১৬ বঙ্গাব্দ, *সঞ্চয়িতা*, বিশ্বভারতী গ্রন্থনবিভাগ, কলকাতা

Suggestive readings:

অমরেশ দাশ, ২০০২, রবীন্দ্রনাথের উপন্যাস : নবমূল্যায়ন, পুস্তক বিপণি, কলকাতা

অরুণকুমার মুখোপাধ্যায়, ১৩৬৮ বঙ্গাব্দ, *রবীন্দ্রবিতান*, এ. মুখার্জী, কলিকাতা

উজ্জ্বলকুমার মজুমদার, ১৪০০ বঙ্গাব্দ, *রবীন্দ্রনাথ : সৃষ্টির উজ্জ্বল স্রোতে*, আনন্দ পাবলিশার্স, কলকাতা

উপেন্দ্রনাথ ভট্টাচার্য, ১৪১৪ বঙ্গাব্দ, *রবীন্দ্র-কাব্য-পরিক্রমা*, ওরিয়েন্ট বুক কোম্পানি, কলকাতা

8. Fiction ke Fankar: Premchand – Shakeelur Rahman
9. Premchand aur unki Afsana Nigari – Mohd Akbaruddin Siddiqi

ANNEXURE-16

Sub: Amendment to Ordinance V

[E.C Resolution No. 27-12/ dated 25.08.2023]

The guidelines for Internship Apprenticeship and Community Outreach applicable for the students of Semester 3 to Semester 6 based on Under Graduate Curriculum Framework 2022, is notified, for all the concerned as under:

GUIDELINES FOR INTERNSHIP, APPRENTICESHIP AND COMMUNITY OUTREACH (IAC)

Projects, Internships, Apprenticeship and Community Outreach are integral components of holistic undergraduate education. They provide students with valuable opportunities to apply knowledge, develop skills, foster personal growth, and contribute to society. These experiences enrich their educational journey, enhance their employability, and cultivate well-rounded individuals capable of making a positive difference in the world.

In the UGCF 2022, from second semester onwards, Internship, Apprenticeship, Projects, or Community Outreach (IAPC) figures as an alternative to the Skill Enhancement Courses. Students can opt for either Internship or Apprenticeship or Projects or Community Outreach or SEC from semester 3 to 6. The first batch of students who were admitted under UGCF 2022 in the academic session 2022-23, shall be in the third semester in the academic session commencing on 16th August 2023. The University is rolling out for these students Internship, Apprenticeship and Community Outreach in addition or as an alternative to the Skill Enhancement Courses. 'Projects' shall be rolled out later under this category after formulation of modalities for its implementation.

INTERNSHIP/APPRENTICESHIP

It is a course requiring students to participate in a professional activity or work experience, or cooperative education activity with an entity external to the education institution, normally under the supervision of an expert of the given external entity. A key aspect of the internship/ apprenticeship is induction into actual work situations. It involves working with local industry, government or private organizations, business

organizations, artists, crafts persons, and similar entities to provide opportunities for students to actively engage in on-site experiential learning. It will allow students to actively engage in the learning processes beyond traditional classroom lectures and gain practical experience, develop a deeper understanding of subjects, and build self-confidence. These will offer opportunities to gain industry-specific knowledge, build professional networks, and understand workplace dynamics. This exposure prepares them for future careers and enhances their employability.

EXPECTED OUTCOMES

- Demonstrate working knowledge and skill of the domain specific learning outcome or that of a specific branch/section/tasks in an industry/ organizational set up.
- Achieve/complete assigned target(s)/ task(s) given by the person to whom the intern or apprentice is reporting (Supervisor).

COMMUNITY OUTREACH

Community outreach will promote social responsibility and civic engagement among students. Through it, students will develop an understanding of social issues, contribute to the welfare of communities, and develop a sense of empathy and compassion.

EXPECTED OUTCOMES:

- Demonstrate understanding of different approaches to working with communities and develop sense of empathy and compassion.
- Being able to identify social issues faced by the community he/she is working with.
- Contribute to the solving of social problem or to the welfare of the community or raising awareness and enabling

GUIDELINES FOR IMPLEMENTING IAC

- Internship, Apprenticeship, or Community Outreach (IAC) will be offered as an alternative to SECs to the batch of students who were admitted under UGCF 2022 in the academic session 2022-23.
- It is expected that students shall be engaged in an industry, company or organization or NGO for the purpose of internship/apprenticeship/ community outreach (IAC).
- College offering should have a prior MoU with discipline specific commercial and non-commercial organizations or enterprises, and industry before introducing the apprenticeship/internship.

- It is advisable that students who are desirous of exiting after second year of the programme choose internship/apprenticeship/community outreach in the relevant field, as far as possible, so that their employability increases.
- The College may fix the number of seats for apprenticeship/internship training as per the facility and infrastructure available.
- As in SECs, any student from any department/program can opt for any IACs offered.
- Each category of IACs will be equivalent to 02 credits, like SECs.
- The spells of apprenticeship/internship shall be scheduled either continuously or at intervals depending upon the requirement and practicality of the discipline concerned.
- The total duration of the IACs shall be of 60 hours in a semester, if done during the semester.
- In case of IACs done during summer/winter vacation for a period of 8 weeks, where a student invests 480 hours, he/she shall be awarded 8 credits, if he/she successfully completes it through the assessments provided below.
- Students are provided the flexibility to choose the working days of IAC in consultation with the organization engaging them. The same should be communicated to the teacher who monitors them. Teacher can check up the work of any student involved in IAC.

NO. OF STUDENTS AND WORKLOAD

- A department can offer any one or more of the IACs category for all the programmes that it runs put together.
- If a programme is run by more than one department (for e.g. B.Sc. Life Science), each department may offer one. For example in B.Sc. Life Science programme, Botany may offer Internship, Chemistry may offer Apprenticeship and Zoology may offer community outreach in a semester. These departments may rotate among themselves semester wise.
- The workload of a teacher monitoring students who goes for IAC shall be two hours per week for a section size of 40 students.
- In case the number of students ranges from 05 to 19, a teacher shall be allotted workload of one hour per week.
- A teacher shall be allotted a maximum of two hours per week for monitoring students pursuing IAC.
- The workload of such teacher shall be part of the teacher's timetable.

MONITORING AND ASSESSMENT OF INTERNSHIP/ APPRENTICESHIP

- Monitoring by the teacher regarding the regularity of the intern at his/her workplace.
- Teacher shall regularly keep a tap of the Activity logbook which is to be maintained by every student.

- Teacher shall interact and assess the progress of every student once in 15 days. Therefore, if 40 students are allotted to a teacher 20 students can be interacted and assessed in one week and the other half in the next week.
- Students should preferably inform the monitoring teacher and the Internship Supervisor at least one day prior to availing leave except emergency.
- Monitoring of the intern/apprentice shall also be done by the Internship/Apprenticeship/outreach Supervisor at his/her workplace.
- Observations of the Internship/Apprenticeship/outreach Supervisor should be taken by the teacher concerned regarding the student(s) associated with the Internship/Apprenticeship Supervisor.
- Continuous assessment of the student shall be done in consultation by the monitoring teacher and the Supervisor at the work place which shall be co-related with the activities recorded in the Activity Logbook.

FINAL ASSESSMENT

The assessment of the students will be similar to those 2 credit courses having 002 LTP and shall be carried out at following stages:

The student will be evaluated through a seminar presentation/viva-voce on his work, by a duly constituted expert committee, on the following suggestive aspects.

The expert committee shall consists of the Monitoring Teacher, Internship/Apprenticeship/ outreach Supervisor and an External Expert, who shall be appointed by the Head of the Institution/Head of the Department (in case of the University)/ Director of Centre/Institute/ Principal of College.

The evaluation and assessment shall be done on the basis of the following:

1. Activity logbook and evaluation report of Internship Supervisor
2. Format of presentation and the quality of intern's report
3. Acquisition of skill sets by the student (in view of the expected output)
4. Originality and any innovative contribution (or problem solving etc.)
5. Significance of outcomes (in view of the expected output)

ANNEXURE-17

Sub: Amendment to Ordinance V

[E.C Resolution No. 27-1/ (27-1-6/-) dated 25.08.2023]

Following addition be made to Appendix-II-A to the Ordinance V (2-A) of the Ordinances of the University;

Add the following:

Under UGCF – 2022 in the line of NEP – 2020

Semester: III/ IV
ASSAMESE
AEC (B)-II

AEC (B)-II: Intermediate Assamese

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course	Department Offering the Course
		Lecture	Tutorial	Practical/ Practice			
Intermediate Assamese	**02**	**2**	**0**	**0**	**(for students who have not studied the language)**	students who have already opted AEC (B)-I in Assamese in either Semester I or II (alternative semester)	**MIL&LS**

Learning Objectives : The students who have acquired a basic idea about Assamese language in the previous semester will be taught about Assamese language grammar and technicalities through course in this semester. Students will be introduced to verbs and various kinds of it, tenses, concepts of persons, genders, grammatical numbers etc. in Assamese language and in the semester, they will learn about the rules to frame compound and complex sentences in Assamese keeping in mind that they have already learnt about the formation of simple sentences in the previous semester. During the course of learning it will be emphasised to teach the students about the grammatical rules in Assamese which are essential to frame various kinds of sentences such as affirmative, negative, interrogative sentences, exclamatory sentences etc.

Learning outcomes: After completing the course the students are expected to have working knowledge about Assamese language and its grammar, which will eventually lead them to produce oral and written contents in Assamese language correctly. This will help them in their professional and technical careers provided those careers are related to Assam and Assamese language in someway such as a job in Assam or a job in translation area etc.

Allotted classes: 30 hours

Unit -I **10 hours**

Intermediate Gujarati	**02**	**2**	**0**	**0**	(for students who have not studied the language)	students who have already opted AEC (B)-I in Gujarati in either Semester I or II (alternative semester)	**MIL&LS**

Course Learning Objectives : This course has been designed for students who have the primary knowledge of the Gujarati language and can make as well as to figure out simple sentences. The course enables students to construct compound and complex sentences in Gujarati. Furthermore, the course empowers the students to acquire skills to comprehend small passages, writing short paragraphs, and having better conversational skills and teach them the basic rules of translation as well. The course offers a wide range of exercises from the book and challenging activities can be given to students i.e. vocabulary-based activity or a grammar drill, a language manipulation exercise or an up-to-date reading comprehension. A unit focuses

on particular topic and also to those students who want to practice the language through additional independent study and open-ended exercises will be included to encourage learners to communicate more spontaneously and to allow some autonomy and encourage creativity. Additional materials and support will be given to the students.

Course Learning Outcome: The course will enable students to understand the distinctions of the language by empowering them with better reading, writing and conversational skills. Students will try to capture radio and TV advertisements, news, advertisements and other programs broadcast. They will read short paragraphs in a language related to books, newspapers, magazines, notice boards, posters, personal and other types of letters, etc., as well as the use of dictionaries and reference texts. They will also try to write a short portion on select topics and write personal and other types of letters, directly on familiar and simple topics, and write independent articles. Students will be able to translate any prose words from Gujarati to English and vice versa with the help of a dictionary or through online sources.

Allotted classes: 30 hours

Unit -I **10 hours**

Compound verbs

Transitive and intransitive verbs

Making compound sentences in Gujarati using conjunction

Making complex sentences in Gujarati

Unit II **10 hours**

Reading comprehension

Paragraph and letter Writing

Conversation writing

Unit III **10 hours**

Intermediate Telugu	**02**	**2**	**0**	**0**	**(For students who have not studied the language)**	students who have already opted AEC (B)-I in Telugu in either Semester I or II (alternative semester)	**MIL&LS**

Learning Objectives :

This course has been designed for students with primary knowledge of the Telugu language who can make and figure out simple sentences. The course enables students to construct compound and complex sentences in Telugu. Furthermore, the course empowers the students to acquire skills to comprehend small passages, write short paragraphs, have better conversational skills and teach them the basic rules of translation. The course offers a wide range of exercises from the book, and challenging activities can be given to students, i.e. vocabulary-based activity or a grammar drill, a language manipulation exercise or ap-to-date reading comprehension. A unit that focuses s on particular topics and students who want to practice the language through additional independent study, and open-ended exercises will be included to encourage learners to communicate more spontaneously and to allow some autonomy and creativity. Additional materials and support will be given to the students.

Course Learning Outcome: The course will enable students to understand the distinctions of the language by empowering them with better reading, writing and conversational skills. Students will try to capture radio and TV advertisements, news advertisements and other broadcast programs. They will read short paragraphs in a language related to books, newspapers, magazines, notice boards, posters, personal and other types of letters, etc., and use dictionaries and reference texts. They will also try to write a short portion on select topics, write personal and other types of letters directly on familiar and simple topics, and write independent articles. Students will be able to translate any prose words from Telugu to English and vice versa with the help of a dictionary or through online sources.

Allotted classes: 30 hours

Unit -I

12 hours

Compound verbs

Transitive and intransitive verbs

Making compound sentences in Telugu using conjunction

Making complex sentences in Telugu

Unit II ```

10 hours

Reading comprehension

Paragraph and letter Writing

Conversation writing

Unit III

8 hours

Translation from English to Telugu

Translation from Telugu to English

AEC 1: Sanskrit C: Introductory Introduction to Sanskrit Language

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course	Department Offering the Course
		Lecture	Tutorial	Practical/ Practice			
	02	02	00	NA	12th Pass	Nil	Sanskrit

Learning Objectives

This course aims at making the students acquainted with general outline of Sanskrit Grammar and Composition. This course will enhance their skills of chaste Sanskrit pronunciation as well as competence and performance of the language.

Learning outcomes

- The students will learn the basic Sanskrit language.
- They will learn to create and understand this Language independently.
- This course will enhance the ability to understand classical Sanskrit texts.
- Through the practice of this prescribed syllabus, students will be able to enhance their knowledge of structural patterns of Sanskrit.

SYLLABUS OF AEC-1 (Intermediate)

Unit: II **Credits: 01**

Basic Sanskrit Sentence Formation (Active Voice) using the following:

कारक एवं विभक्ति: कर्त्ता, कर्म एवं करण

वचन एवं लिङ्ग:

शब्दरूप: राम, बालक, लता, अस्मद्, युष्मद्, तत्, इदम्, किम्, सर्व, हरि, मति, जल, फल, पुष्प, ज्ञान, भोजन, धन, गुरु

क्रियारूप: निम्नलिखित धातुओं का केवल लट्, लृट् एवं लङ् लकार में रूप:

भू, पठ्, लिख्, खाद्, चल्, गम् (गच्छ्), हस्, वद्, पा (पिब्), अस्, गै (गाय), भ्रम्,

स्था (तिष्ठ्), दृश् (पश्य्), पच्, वर्ष्, दा (यच्छ्)

शब्दकोश: संस्कृत सामान्य शब्दों के लिए शब्दकोश

यत्र, तत्र, कुत्र, श्व, अद्य, कथम्, यथा, तथा, च, अथवा

Unit: II **Credits: 01**

व्यावहारिक वाक्य संरचना

Essential/recommended readings

- पाण्डेय, राधामोहन: संस्कृत सहचर, स्टूडेंट्स फ्रेंड्स पटना, बिहार
- नौटियाल, चक्रधर: बृहद् अनुवाद चन्द्रिका, मोतीलाल बनारसीदास, दिल्ली
- रूपचन्द्रिका, डॉ० ब्रह्मानन्द त्रिपाठी , चौखम्बा सुरभारती प्रकाशन, वाराणसी

Suggested readings

Examination scheme and mode: Subject to directions from the Examination Branch/University of Delhi from time to time

Basic Structure of Question Paper & Division of Marks	**75**
Long Answer from each unit (2+2= 4)	04 x 12 = 48
Short Answer (from each unit (2+2=4)	05x 04 = 20
Short Notes 2	02x3.5 = 07
Internal Assessment (Project/Discussion/Assignment/ paper presentation/ Periodic tests etc.)	**25**
Total Marks: (I+II)	**(75+25) = 100**

AEC 2: Course A: Advance Ancient Indian Economy

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course	Department Offering the Course
		Lecture	Tutorial	Practical/ Practice			
	02	02	00		12th Pass	Nil	Sanskrit

Learning Objectives

The aim of this course is to make the students acquainted with various aspects of economic thought and Indian economy as propounded in the ancient Sanskrit texts from Vedic Saṁhita to later texts in the Dharamśāstra and Arthaśāstra traditions.

Learning outcomes

This course will enable the students to appreciate the fundamental concepts of Indian economic thoughts discussed in ancient Sanskrit texts such as Vedic Saṁhita, Kauṭilya's Arthaśāstra, Manusmṛiti etc. This session deals with the economic model of ancient India and financial growth of the state's thought through Sanskrit literature. Students will be able to understand various aspects of the taxation model in ancient India and they should be able to compare ancient and contemporary models.

SYLLABUS OF AEC-2 Course A

Unit: 1
Introduction to Ancient Indian Economy **Credit: 1**

Early and Later Vedic Period
Buddhist Period
Centralized Economy of Mauryan Period
Post Mauryan Period
Gupta and Post Gupta Period

Unit: 2 **Credit: 1**
Readings in Indian Economy:

Manusmṛiti- Chapter 7, Verse No- 123-138, Arthaśāstra- Second Adhikaraṇa, Sannidhātṛnicayakarma and Samāhrtṛsamudayaprasthāpanam

Essential/recommended readings

1. R.P Kangle (ed.) Arthaśāstra of Kauṭilya, Motilal Banarsidas, Delhi, 1965
2. P. Olivelle (ed. & trans), Manu code of law: A Critical Edition & translation of the Manava- Dharmasastra, UUP, New Delhi, 2006
3. R. S. Sharma, Aspects of Political Ideas & Institutions in Ancient India, Delhi, 1996
4. A. S. Altekar, State and Government in Ancient India, Motilal Banarsidas, Delhi, 2011
5. कपिलदेव द्विवेदी, वैदिक साहित्य एवं संस्कृति, वाराणसी, विश्वविद्यालय प्रकाशन, षष्ठ संस्करण, 2015
6. शर्मा, उमाशंकर ऋषि, संस्कृत साहित्य का इतिहास, चौखम्भा भारती अकादमी, वाराणसी

Suggested readings

1. कैलाशचन्द्र जैन, प्राचीन भारतीय समाजिक और आर्थिक संस्थाएं, मध्यप्रदेश हिन्दी ग्रन्थ अकादमी, भोपाल, 1976
2. शशि तिवारी, संस्कृत साहित्य में राष्ट्रवाद एवं भारतीय राजशास्त्र, विद्यानिधि प्रकाशन, दिल्ली, 2013
3. सहाय, शिवस्वरूप, प्राचीन भारत का सामाजिक एवं आर्थिक इतिहास, मोतीलाल बनारसीदास, दिल्ली, 2012

Examination scheme and mode: Subject to directions from the Examination Branch/University of Delhi from time to time

Basic Structure of Question Paper & Division of Marks	
Questions - 03 (from Unit 1)	03 x 15 = 45
Explanations 03 (from unit-2)	03 x 08 = 24
Short Notes 02	02x3 = 06
Total Marks: (I+II)	**75**

AEC 2: Course B: Intermediate Administrative Structure in Kauṭilya's Arthaśāstra

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course	Department Offering the Course
		Lecture	Tutorial	Practical/ Practice			
	02	02	00	NA	12th Pass	Nil	Sanskrit

Learning Objectives

The government policies mentioned in Arthaśāstra indicate that the ruler of the kingdom or the country should follow the duties assigned to him for the welfare of the people. The aim of this course is to make the students acquainted with various aspects of Administrative parts and his responsibilities mentioned in Kauṭilya's Arthaśāstra.

Learning outcomes

After going through this course, students will know the most important aspect of Arthaśāstra was public welfare even in an autocratic agrarian state. In addition, they will know King was the head and the main function of him was military judicial legislative and executive which in the present is the function of the president.

SYLLABUS OF AEC-1

Unit: 1 **Credit: 1**

Introduction to Kauṭilya's Arthaśāstra: Author, Structure of the Text, Editions and Translations, Introduction to all Adhikaraṇas.

Unit: 2 **Credit: 1**

Saptānga Theory

Concept of Welfare State

Samāharta

Sannidhātā

Dharmasthīya

Kaṇṭakaśodhana

Sitādhyakṣa

Essential/recommended readings

1. R.P Kangle (ed.) Arthaśāstra of Kauṭilya, Motilal Banarsidas, Delhi, 1965
2. उदयवीर शास्त्री (अनुवाद) कौटिल्य अर्थशास्त्र, मेहरचंद्र लक्ष्मणदास, दिल्ली, 1968
3. कैलाशचन्द्र जैन, प्राचीन भारतीय समाजिक और आर्थिक संस्थाएं, मध्यप्रदेश हिन्दी ग्रन्थ अकादमी, भोपाल, 1976
4. A. S. Altekar, State and Government in Ancient India, Motilal Banarsidas, Delhi, 2011
5. वाचस्पति गैरोला, कौटिलीयम् अर्थशास्त्रम् (हिन्दीव्याख्योपेतम्), वारणसी, चौखम्भा विद्याभवन, संस्करण 2015

Suggested readings

1. Kautilya Arthshastra, translated by R Shyamshastri, Delhi, Choukhamba Sanskrit Pratisthan.
2. R. S. Sharma, Aspects of Political Ideas & Institutions in Ancient India, Delhi, 1996
3. शशि तिवारी, संस्कृत साहित्य में राष्ट्रवाद एवं भारतीय राजशास्त्र, विद्यानिधि प्रकाशन, दिल्ली, 2013
4. U.N. Ghosal, A History of Indian Political Ideas, Bombay, 1956.

Examination scheme and mode: Subject to directions from the Examination Branch/University of Delhi from time to time

Basic Structure of Question Paper & Division of Marks	**75**
Questions 03 (from Unit 1)	03 x 10 = 30
Questions 02 (from Unit 2)	03 x 10 = 30
Short Notes (from Unit 2)	03 x 05 = 15
Total Marks: (I+II)	**75**

AEC 2: Course C: (Introductory) **Culture and Society** संस्कृतिः समाजश्च

AEC 1: Environmental Science: Theory into Practice –II

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course	Department Offering the Course
		Lecture	Tutorial	Practical/ Practice			
AEC 1: Environmental Science: Theory into Practice – II	02	01	–	01	All UG Courses	All UG Courses	Department of Environmental Studies/Sciences

Learning Objectives

The Ability Enhancement Course on Environmental Science: Theory into Practice (I & II) at Undergraduate level (AEC- I) aims to train students to cater to the need for ecological citizenship through development of a strong foundation on the critical linkages between ecology-society-economy.

The Learning Objectives of this course are as follows:

- **Disciplinary knowledge**
  Enable students to develop a comprehensive understanding of various facets of life forms, ecological processes, and the impacts on them by humans during the Anthropocene era.

- **Critical thinking**
  Build capabilities to identify relevant environmental issues, analyse the various underlying causes, evaluate the practices and policies, and develop framework to make informed decisions.
- **Moral and ethical awareness/reasoning**
  Develop empathy for all life forms, appreciation for the various ecological linkages within the web of life, awareness and responsibility towards environmental protection and nature preservation.

Learning outcomes

The Learning Outcomes of this course are as follows.

After the course the students will be empowered and able to:

- Analyse natural processes and resources that sustain life and govern economy.
- Predict the consequences of human actions on the web of life, global economy, and quality of human life.
- Think critically and develop appropriate strategies (scientific, social, economic, administrative, and legal) for environmental protection, conservation of biodiversity, environmental equity, and sustainable development.
- Demonstrate values and show compassionate attitudes towards complex environmental-economic-social challenges, and participate at national and international levels in solving current environmental problems and preventing the future ones.
- Adopt sustainability as a practice in life, society, and industry.

Teaching Learning process

The teaching–learning methodologies are designed to provide the undergraduate students a comprehensive understanding of the subject in a simplistic manner as well as evoke critical reasoning and analytical thinking among them. Some of the theoretical concepts related to practicals/outreach activities, etc. should be covered during practical sessions. The various approaches to teaching–learning process include classroom lectures, video presentations, and ICT enabled teaching tools. For enhancing practical understanding, field visits are encouraged to relevant places in Delhi like Biodiversity Parks, Protected areas, Wetlands, Sewage treatment plants, etc.

SYLLABUS OF AEC-1: Environmental Science: Theory into Practice – II (Year 2)

Unit V

Global Environmental Issues and Policies (5 lectures 8 practical/ outreach activities)

- Causes of Climate change, Global warming, Ozone layer depletion, and Acid rain; Impacts on human communities, biodiversity, global economy, and agriculture
- International agreements and programmes: Earth Summit, UNFCCC, Montreal and Kyoto protocols, Convention on Biological Diversity (CBD), Ramsar convention, The Chemical Weapons Convention (CWC), UNEP, CITES, etc.
- Sustainable Development Goals: India's National Action Plan on Climate Change and its major missions
- Environment legislation in India: Wildlife Protection Act, 1972; Water (Prevention and Control of Pollution) Act, 1974; Forest (Conservation) Act 1980; Air (Prevention & Control of Pollution) Act, 1981; Environment Protection Act, 1986; Scheduled Tribes and other Traditional Forest Dwellers (Recognition of Forest Rights) Act, 2006

Unit VI

Biodiversity and Conservation (6 lectures and 7 practical/ outreach activities)

- Definition of Biodiversity; Levels of biological diversity: genetic, species and ecosystem diversity
- India as a mega-biodiversity nation; Biogeographic zones of India; Biodiversity hotspots; Endemic and endangered species of India; IUCN Red list criteria and categories
- Value of biodiversity: Ecological, economic, social, ethical, aesthetic, and informational values of biodiversity with examples; sacred groves and their importance with examples
- Threats to biodiversity: Habitat loss, degradation, and fragmentation; Poaching of wildlife; Man-wildlife conflicts; Biological invasion with emphasis on Indian biodiversity; Current mass extinction crisis
- Biodiversity conservation strategies: in-situ and ex-situ methods of conservation; National Parks, Wildlife Sanctuaries, and Biosphere reserves; Keystone, Flagship, Umbrella, and Indicator species; Species reintroduction and translocation
- *Case studies*: Contemporary Indian wildlife and biodiversity issues, movements, and projects (e.g., Project Tiger, Project Elephant, Vulture breeding program, Project GreatIndian Bustard, Crocodile conservation project, Silent Valley movement, Save Western Ghats movement, etc)

Unit VII

Human Communities and the Environment (4 lectures and 5 practical/ outreach activities)

- Human population growth: Impacts on environment, human health, and welfare; Carbon foot-print
- Resettlement and rehabilitation of developmental project affected persons and communities; relevant case studies
- Environmental movements: Chipko movement, Appiko movement, Silent valley movement, Bishnois of Rajasthan, Narmada Bachao Andolan, etc
- Environmental justice: National Green Tribunal and its importance
- Environmental philosophy: Environmental ethics; Role of various religions and cultural practices in environmental conservation
- Environmental communication and public awareness: case studies (e.g., CNG vehicles in Delhi, Swachh Bharat Abhiyan, National Environment Awareness Campaign (NEAC), National Green Corps (NGC) “Eco-club” programme, etc)

(The total number of weeks should add up to 15 only)

Practical component– (15 Weeks)

Unit V

Global Environmental Issues and Policies (8 practical/ outreach activities)

Practical/Exercises/Experiential activities/Outreach activities

(*College may choose as per requirement*)

- Depict temperature/precipitation trend of a given study area using online data
- Formulate questionnaire/online surveys for assessment of the impact of climate change on people
- Assess Nationally Determined Contributions (NDCs) of developed and developing countries
- Development and simulation of Model UNFCCC for inoculating negotiation skills at climate change summits
- Development and simulation of Moot Court for Mock Trials in Negotiation Green Tribunal
- Identify carbon footprint of your college/home/locality (refer wwf@envis.nic.in).
- Analyze the status of at least 3 sustainable development goals in your neighbourhood and write a proposal to help achieve them at global standard (identify environmental problems and its social and economic impact, define objectives, explain methodology, budgetary requirements, and suggest the expected outcomes). A PowerPoint presentation to be made based on the project proposal.

Unit VI

Biodiversity and Conservation (7 practical/ outreach activities)

Practical/Exercises/Experiential activities/Outreach activities

(*College may choose as per requirement*)

- Acquaintance with open-source databases of biodiversity
- Determine species location in a given study area
- Depict distribution of biodiversity across latitude and altitude
- Show species distribution across space and time
- Quantify species loss across different time periods
- Sampling of plant and animal biodiversity of the College campus
- Identification of the floral diversity of Delhi and other states.
    - Documentation of the plants by clicking pictures, finding out the scientific names/ local names through literature or mobile applications, identification of their conservation status (IUCN red book list), medicinal properties, water consumption status, and socio-economic-environmental importance. A short report to be submitted)
- Exercise to understand the socio-economic-environmental impact of wildlife conservation.

  (Students can choose any global animal species and identify the relevance of the species for the ecosystem/ society/ culture/ local economy, historic or present range of the species, emerging threats due to human activities, identification of documented events of natural disasters/ conflicts/ poaching of the species in the present range, conservation status (IUCN red book list), identification of protected areas/ programs of the government/ international organisation, and their opinion to further improve the conservations of the species. A short report to be submitted.

Unit 7

Human Communities and the Environment (5 practical/ outreach activities)

Practical/Exercises/Experiential activities/Outreach activities

(*College may choose as per requirement*)

- Assessment of carbon foot-print of different countries using online databases and mathematical tools
- Visit to marginalized localities and students for environmental education and environmental awareness
- Formulation of questionnaire/online surveys for assessment of the impact of environmental education
- Visit to any developmental project affected locality for assessing the impacts of economic development on human lives
- Correlation analysis of human population growth and impacts on the environment and human health

Essential/recommended readings

Unit V

Global Environmental Issues and Policies (5 lectures 8 practical/ outreach activities)

1. Divan, S. and Rosencranz, A. (2002). *Environmental Law and Policy in India: Cases, Material &Statutes*, 2nd Edition. Oxford University Press, India. **Chapter 2** (Pages: **23-39**); **Chapter 3** (Pages: **41-86**).
2. Raven, P.H, Hassenzahl, D.M., Hager, M.C, Gift, N.Y. and Berg, L.R. (2015). *Environment*, 9thEdition. Wiley Publishing, USA. **Chapter 19** (Pages: **370-376**); **Chapter 20** (Pages: **385-399**).
3. Singh, J.S., Singh, S.P. and Gupta, S.R. (2017). *Ecology, Environmental Science and Conservation*. S. Chand Publishing, New Delhi. **Chapter 23** (Pages: **555-598**); **Chapter 30** (Pages: **801-807**).

Unit VI

Biodiversity and Conservation (6 lectures and 7 practical/ outreach activities)

1. Primack, R.B. (2014). *Essentials of Conservation Biology*, Oxford University Press, USA. Page.1-536.
2. Raven, P.H, Hassenzahl, D.M., Hager, M.C, Gift, N.Y. and Berg, L.R. (2015). *Environment*, 9thEdition. Wiley Publishing, USA. **Chapter 5** (Pages: 97-99); **Chapter 16** (Pages: **299-318**).
3. Singh, J.S., Singh, S.P. and Gupta, S.R. (2017). *Ecology, Environmental Science and Conservation*. S. Chand Publishing, New Delhi. **Chapters 24** (Pages: **599-690**); **Chapter 26** (Pages: **664-714**).

Unit VII

Human Communities and the Environment (4 lectures and 5 practical/ outreach activities)

Suggested Readings

1. Divan, S. and Rosencranz, A. (2002). Environmental Law and Policy in India: Cases, Material & Statutes, 2nd Edition. Oxford University Press, India. **Chapter 10** (Pages: **416-473**).
2. Raven, P.H, Hassenzahl, D.M., Hager, M.C, Gift, N.Y. and Berg, L.R. (2015). Environment, 9thEdition. Wiley Publishing, USA. **Chapter 2** (Pages: **33-36**); **Chapter 8** (Pages: **148-162**).
3. Singh, J.S., Singh, S.P. and Gupta, S.R. (2017). Ecology, Environmental Science and Conservation. S. Chand Publishing, New Delhi. **Chapter 1** (Pages: **23-26**); **Chapter 31** (Pages:**826-842**).

Suggested readings

1. Brusseau, M.L., Pepper, I.L. and Gerba, C.P. (2019). *Environmental and Pollution Science*, 3rdEdition. Academic Press, USA.
2. Carson, R. (2002). Silent Spring. Houghton Mifflin Harcourt, USA.
3. Raven, P.H, Hassenzahl, D.M., Hager, M.C, Gift, N.Y. and Berg, L.R. (2015). Environment, 9thEdition. Wiley Publishing, USA.
4. van Wormer, K. and Besthorn, F. (2017). Human Behavior and the Social Environment, Macro Level Groups, Communities, and Organizations, Third Edition, Oxford University Press.

Examination scheme and mode: Subject to directions from the Examination Branch/University of Delhi from time to time

Assessment methods

1. Written examinations (Semester exams) [(**Year 1:** 01 credit (1 hour); **Year 2:** 01 credit (1 hour)]
2. Project work and reports related to field visits, outreach activities, case study, project formulation, assignments, presentations and practical learning (Internal practical assessment) [(**Year 1:** 01 credit (2 hour); **Year 2:** 01 credit (2 hour)]

Year 1 (Sem-I/Sem-II): 01 Credit Theory+ 01 Credit practical exercises, etc.
= **Total 02 Credits (03 hours)**

Year 2 (Sem-I/Sem-II): 01 Credit Theory+ 01 Credit practical exercises, etc.
= **Total 02 Credits (03 hours)**

ANNEXURE-18

Sub: Amendment to Ordinance V

[E.C Resolution No. 27-1/ (27-1-11) dated 25.08.2023]

Following addition be made to Appendix-II-A to the Ordinance V (2-A) of the Ordinances of the University;

Add the following:

Syllabi of Semester-III, IV, V and VI of the following B.Voc courses based on Undergraduate Curriculum Framework -2022 to be implemented from the Academic Year 2022-23.

1. B.Voc Healthcare Management (Jesus & Mary College)
2. B.Voc Retails Management and IT (Jesus & Mary College)
3. B.Voc Software Development (Ramanujan College)
4. B.Voc (Banking & Financial Services & Insurance (Ramanujan College)
5. B.Voc Web Designing (Kalindi College) – IIIrd Semester only
6. BA (Hons.) Multimedia and Mass Communication

SEMESTER-3
Bachelor of Vocation – Healthcare Management

DISCIPLINE SPECIFIC CORE COURSE – 7 Communication in Healthcare

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Communication in Healthcare	4	3	1	0	Class XII Pass	NA

Learning Objectives

By the end of the term students should be able to demonstrate the use of critical thinking, decisions making and problem-solving skills though effective written and oral business communication.

Learning outcomes

- Student will be able to get an understanding of principles & objectives of Communication.
- Student will be able to understand the importance of Communication in an organization.
- Student will be able to identify barriers of communication and the best methods to communicate effectively.
- Students will be able to effectively use different styles of communication

SYLLABUS OF DSC-7

Unit 1-Communication – Origin, Meaning and Definition (6 Hours)

- Principles of Communication
- Objectives of communication
- Styles of Human Communication

Unit 2-Communication as a process (5 Hours)

- Oral Communication
- Written Communication

- Filtering and distortion of Message
- Common causes that weaken Effective Communication

Unit 3-Interpersonal Communication (12 hours)

- Perception in Interpersonal communication
- Transactional Analysis
- Structure of Transaction
- Principles to initiate communication
- Communication in Organization Setting
- Communication Skills in Interview Setting
- Essential of Effective Communication
- Models of Understanding Interpersonal Relationship

Unit 4-Barriers to Communication (11 hours)

- Organizational Barriers
- Semantic Barriers
- Personal Barriers
- Barriers in Subordinates
- Psychological Barriers
- Other Barriers
- Overcoming Barriers in Communication

Unit 5-Flow of Communication in an Organization (11 hours)

- Downward Communication
- Upward Communication
- Horizontal Communication
- Problems in Downward Communication
- Problems in Upward Communication
- Problems in Horizontal Communication

Practical component (if any) -

N/A

Essential/recommended readings

1. M. Jones, Phil (2017), Exactly what to Say, Box Of Tricks Publishing
2. Kumar, Sanjay; Lata, Pushp (2015), Communication Skills, Oxford University Press.
3. Schiavo, Renata (2013), Healthcare Communication-From Theory to Practice, Jossey-Bass.
4. Garg, Kumar, Dr.Manoj (2020),English Communication-Theory & Practice, Abcibook.
5. Tuhovsky, Ian (2017), The Science of Effective Communication, Rupa & Co.

DISCIPLINE SPECIFIC CORE COURSE – 8: Medical Terminology-3

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Medical Terminology-3	4	3	1	0	Class XII pass	Medical Terminology-2

Learning Objectives

Includes structure, recognition, analysis, definition, spelling, pronunciation, and combination of medical terms from prefixes, suffixes, roots, and combining forms.

Learning outcomes

- Student will be able to get an understanding of Diseases and disorders of the system as mentioned in the medical terms.
- Student will be able to guide the patients about the treatment options and diagnostic procedures as advised by the physician.
- This subject will enhance the medical terminology vocabulary of different conditions and treatment methods of organ system which is required at Front office and radiology department to guide the patients.
- Students will get an understanding of general Terminology (procedures, diseases, treatment) related to different body system

SYLLABUS OF DSC-8

Unit-1 (10 hours)

Nervous System-

- Basic Anatomy & Physiology of Nervous System
- Common Terms in Nervous System
- Common Diseases
- Diagnostic Tests and Procedures
- Treatment
- Basic Knowledge of Hospital Care / Infrastructure / Facilities/ Intensive Care / Neuro ICU / Stroke ICU/ and other specialized needs for patient
- Importance of Rehabilitation Services for Neuro patients
- Basic understanding of Stroke management

Unit-2 (10 hours)

Musculoskeletal System- procedures, diseases, treatment

- Basic Anatomy & Physiology of Musculoskeletal System
- Common Terms
- Diagnostic Tests and Procedures
- Basic understanding of Pain Management
- Treatment

Unit-3 (10 hours)

Oncology -Types of Cancers

- Diagnostics & Procedures
- Basic Understanding of Medical Oncology, Surgical Oncology, Chemotherapy, Immunotherapy & Radiotherapy
- Treatment
- Psychological aspects of cancer care
- Importance of Cancer Awareness Program

Transplant Medicine

- Introduction to transplantation of Human Organs & tissues
- Different types of transplants
- Care after Transplant

Unit-4 (5 hours)

Cardiovascular System-

- Brief Introduction-Heart
- procedures, diseases, treatment
- Preventive Aspects.

Unit-5 (10 hours)

ENT & Ophthalmology-

- Introduction –Ear, Nose, Throat & Eyes
- Understanding of ENT & Ophthalmology procedures
- Day care Procedures
- Common diseases
- Treatment

Practical component (if any) –N/A

Essential/recommended readings-

1. Stedman, (2005), STEDMAN'S Medical Dictionary, Wolters Kluwer.
2. A. Gylys, Barbara; Wedding, Mary Ellen (2017), Medical Terminology Systems, F.A. Davis Company.

DISCIPLINE SPECIFIC CORE COURSE – 9: Medical Software Applications-2

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Medical Software Applications-2	4	3	1	0	Class XII pass	Medical Software Applications-1

Learning Objectives

- Basic Understanding of functioning of computers & its application in healthcare with a perspective on Hospital operations
- Create basic awareness on healthcare record systems and infrastructure.

Learning outcomes

- Student will get the basic understanding and awareness about the software being used in hospital.
- Awareness of modules being used in different departments will help the student to work efficiently on the Systems.

SYLLABUS OF DSC-9

Unit-1(9 hours)

- Review of FO module
- Describe various modalities for Patient Registration in HIS
- Describe Important Information and Credentials to be captured in HIS
- Physician Schedules, Appointment entry and rescheduling appointment
- Describe Escalation Matrix in case of Non-Compliance
- Assess the working status of HIS as and when required
- Admission Module-IP Number Generation, Wrist band for tracking of patients, Bed allotment, Requisition of drugs and consumables from the pharmacy, Discharge Summary.

Unit-2-(13 hours)

- Management Information System – Business Intelligence, MIS as a tool to managerial control

- Core Functions of HIS – Patient Management, Clinical Management-Clinical Decision, Medical Forms, Doctors Notes; Revenue Management; Inventory Management – Procures stocks, Medicines and Consumables for day-to-day consumption of hospital needs. This module helps in maintaining the stocks, reordering, financial planning, Inventory Management & Stock
- Maintenance of patient's Database in HIS

Unit-3-(10 hours)

- Introduction to CRM tool
- Describe the Importance of Electronic Health Records / Medical Records/ Computerized patient record system.
    - Software for Pharmacy
    - Lab
    - Radiology
    - Allergy Tracking
    - Consults
    - Dietetics
    - Progress Notes

Unit 4(13 hours)

Modules used in HIS

- Emergency Module –Sends alert to the corresponding departments, Consulting Details, Clinical Follow up, lab Test Reports, Service orders and bookings, Pharmacy/ Surgical Details, Statutory forms
- Basics of HR Module –Recruitment, Training & Development, Compensation Management, Employee Tracking , Work Flows and Benefits
- Basics of Store Module

Practical component (if any) –

N/A

Essential/recommended readings-

1. Kelkar, S.A. (2010), Hospital Informations Systems, PHI.

Discipline Specific Elective 1: Healthcare Organization Operations

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Healthcare Organization Operations	4	3	1	0	Class XII pass	NA

Learning Objectives

- To enable the students to understand the fundamental concepts of operations management
- To provide awareness on the roles and responsibilities of operations managers in different organizational contexts

Learning outcomes

1. Understand the key functions and roles within a healthcare organization.
2. Analyze the impact of healthcare policies and regulations on operations.
3. Identify strategies to improve operational efficiency and patient safety.
4. Evaluate the quality of healthcare services within an organization.
5. Apply management principles to healthcare operations.
6. Demonstrate an understanding of healthcare information systems and technology.
7. Discuss the importance of patient-centered care and its impact on organizational operations.

SYLLABUS OF DSE-1

Unit 1(10 hours)

Introduction to Healthcare Operations Management

- Overview of healthcare operations management
- Importance and challenges of managing healthcare operations
- Role of operations management in healthcare quality and patient safety
- Healthcare regulatory environment and compliance considerations

Unit 2(10 hours)

Healthcare Processes & Policies

- Hospital Policies
- Process mapping and flowcharting in healthcare
- Lean principles in healthcare operations

Unit 3(15 hours)

Healthcare Capacity Planning and Resource Management

- Managing healthcare capacity and demand
- Resource allocation and optimization in healthcare
- Scheduling and appointment systems
- Managing healthcare workforce and staffing challenges

Unit 4(10 hours)

Emerging Trends in Healthcare Operations

- Innovations in healthcare technology and management
- Telehealth and its impact on healthcare operations
- Population health management and preventive care
- Global healthcare operations and challenges

Practical component (if any) –
N/A

Essential/recommended readings
N/A

Suggestive readings

1. "Operations Management for Healthcare Organizations: Applying Lean Concepts to Improve Patient Safety and Outcomes" by Lisa M. Anderson and Lisa S. Anderson**.**
2. "Healthcare Operations Management" by Daniel B. McLaughlin, Julie M. Hays, and Eugene Schneller.
3. "Lean Hospitals: Improving Quality, Patient Safety, and Employee Engagement" by Mark Graban.

Discipline Specific Elective 1: Healthcare Economics & Policy

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Healthcare Economics & Policy	4	3	1	0	Class XII pass	NA

Learning Objectives

This course aims to provide students with an understanding of the key principles and concepts of healthcare economics and the role of policy in shaping healthcare systems. Students will examine the economic factors that influence healthcare decision-making, analyze healthcare policies and their impact on access, cost, and quality of care, and explore the challenges and opportunities in healthcare markets.

Learning outcomes

Upon successful completion of the course, students will be able to:

1. Explain the key economic concepts relevant to healthcare, such as scarcity, opportunity cost, and efficiency.
2. Analyze the factors influencing the demand and supply of healthcare services and their implications on healthcare delivery.
3. Evaluate the effectiveness of different healthcare financing and reimbursement models.
4. Critically assess the impact of healthcare policies on vulnerable populations and healthcare disparities.

SYLLABUS OF DSE-1

Unit 1(10 hours)

Introduction to Healthcare Economics

- Definition of Economics
- Circular flow of economic activity
- Relation between Economics and Health Economics
- Importance of Health Economics
- Theory of Utility
- Theory of Demand-Determinants of healthcare demand, Elasticity of healthcare demand

Unit 2(10 hours)

- Theory of Production: Concept, factors and its implications. Production function- short and long run. Laws of diminishing marginal returns and variable proportions.
- Theory of cost: short and long run cost function. Fixed and Variable costs- Opportunity Cost- Average and marginal cost
- Market- its concept in economics, Perfect competition- nature, short and long run equilibrium, concept of break even and shut down point

Unit 3(10 hours)

Healthcare Financing

- Overview of healthcare financing models
- Health insurance systems in India
- Public vs. private healthcare financing in India
- Pricing strategies in healthcare
- Cost-benefit and cost-effectiveness analysis in healthcare

Unit 4(15 hours)

Health Economics

- Indian scenario
- Effect of globalization and privatization
- Importance of PPP Model
- Problem faced by health industry
- Changing scenario of health industry
- Public initiative to eradicate difficulties
- Alternative Models of Hospital Behavior-Utility Maximizing Model, Physician Control Models, The Trend towards Multi Hospital Systems.

Practical component (if any) –
N/A

Essential/recommended readings
N/A

Suggestive readings

1. Indian Healthcare Economic & Policy by Rajeev Ahuja and Roger Jeffery
2. Healthcare Economics Made Easyby Satish Dinkar
3. Healthcare in India: A Comprehensive Analysis by Subrata Kumar Mitra and Vijay Govindarajan
4. Health Economics and Policy by James W. Henderson
5. Health Economics for Hospital Management- Shuvendu Bikash Dutta- Jaypee Brothers Publication

GENERAL ELECTIVE – 3: Patient Behavior & Psychology

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Patient Behaviour & Psychology	4	3	1	0	Class XII pass	Organization & Planning of Hospital Departments

Learning Objectives

It is aimed at helping the students to acquire knowledge & understanding of patient behavior and acquire the skills in managing them effectively in hospital settings.

Learning outcomes

1. Demonstrate an understanding of psychological theories and concepts relevant to patient behavior.
2. Analyze and interpret patient behavior in healthcare contexts using psychological frameworks.
3. Apply effective communication techniques to establish rapport and trust with patients.
4. Demonstrate cultural sensitivity in healthcare interactions and decision-making.
5. Develop strategies to address patient anxiety and improve coping mechanisms.
6. Devise patient-centered approaches to enhance treatment adherence and compliance.

SYLLABUS OF GE-3

Unit 1(10 hours)

Introduction:

- History and origin of science of psychology
- Definitions & Scope of Psychology
- Relevance to Healthcare Managers
- Methods of Psychology

Unit 2(10 hours)

Biology of behavior

- Body mind relationship modulation process in health and illness
- Genetics and behavior: Heredity and environment

- Brain and behavior: Nervous system, Neurons and synapse, Association Cortex, Rt and Lt Hemispheres
- Psychology of Sensations
- Muscular and glandular controls of behavior
- Nature of behavior of an organism/Integrated responses

Unit 3(15 hours)

Motivation and Emotional Processes

- Motivation: Meaning, Concepts, Types, Theories, Motives and behavior, Conflict resolution
- Emotions & stress
- Emotion: Definition components, Changes in emotions, theories, emotional adjustments, emotions in health and illness
- Stress: stressors, cycle, effect, adaptation & coping

Communication and Patient-Provider Relationship

- Verbal and non-verbal communication skills
- Active listening and empathy
- Building trust and rapport with patients

Unit 4(10 hours)

Developmental Psychology

- Psychology of people at different ages from infancy to old age
- Psychology of vulnerable individuals- challenged, women, sick, etc
- Psychology of groups

Practical component (if any) –
N/A

Essential/recommended readings
N/A

Suggestive readings

1. Introduction to Psychology by Clifford T.Norgan, Richard A.King
2. Psychology 5th Edition by Robert A.Baron/Girishwar Misra
3. Empathy: A History" by Susan Lanzoni
4. "The Compassionate Connection: The Healing Power of Empathy and Mindful Listening" by David Rakel

SEMESTER - IV

Bachelor of Vocation – Healthcare Management

DISCIPLINE SPECIFIC CORE COURSE – 10: Quality in Healthcare-Service & Medical Quality

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Quality in Healthcare-Service & Medical Quality	4	3	1	0	Class XII pass	NA

Learning Objectives

Create basic awareness on quality in healthcare and its applicability

Learning outcomes

- Student will get the basic understanding and awareness about the quality and the quality standards applicable to different departments of the hospital.
- Students will also understand the importance of Accreditation and International Patient Safety Goals
- Awareness of Quality will enhance patient safety and satisfaction in the hospital and students will be able to effectively implement the organization policies.

SYLLABUS OF DSC-10

Unit-1(12 hours)

Quality – An Overview

- Dimensions of Quality-
- Scope and Importance in Healthcare
- Quality Concept, Quality Assurance,
- Total Quality Management, Quality Circle,
- Medical Quality
- NABH, JACHO, ISO

Unit-2(12 hours)

- Medical Documentation Audits
- Introduction
- Definition of Medical Audit
- Need and Purpose of Medical Audit
- Types of Medical Audit
- Medical Audit Committee
- Medical Documentation Audits
    - Physician Documents
    - Nursing Documents

Organization Policies

- Emergency Codes
- Hospital Waste Management
- Hospital Infection Control

Unit 3(12 hours)

Quality Standards applicable to the Front Office

- Customer Service Excellence and Patient Satisfaction
- Patient Satisfaction Metrics- Quantitative Measures and Qualitative Measures
- Call Centre Experience –Service Enquiry, Appointment Fixing, Complaints
- OPD Services - Establishing Eye Contact, Greetings, End conversation with a standard closing statement as per the Hospital protocol
- In-Patient Experience
- Measure Patient Satisfaction
- Importance of Feedback & Closure

Unit 4(9 hours)

- What Defines Quality in Healthcare
- Quality Initiatives in ensuring Patient Safety-International Patient Safety Goals
- Quality Indicators in Healthcare
- Concept of Lean & Six Sigma

1. Introduction
2. Objectives
3. Importance of Lean & Six Sigma in Health Care Management

- Importance of Quality Improvement Projects

Practical component (if any) –

N/A

Essential/recommended readings-

1. Joshi, S.K. (2013), Quality Management in Hospitals, Jaypee Brothers Medical Publishers

DISCIPLINE SPECIFIC CORE COURSE – 11: Insurance Management (TPA Operations)

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Insurance Management (TPA Operations)	4	3	1	0	Class XII pass	NA

Learning Objectives

After completion of this module student should be able to describe the concept of health Insurance and Insurance management process in healthcare

Learning outcomes

- Student will get the basic understanding and awareness about the health insurance and different types of policies available to the insurer.
- Students will also understand the TPA's and the role of the same as a mediator between Health Insurance Organizations and Insurers.
- Awareness of TPA & Insurance policies will help students to effectively manage & handle the payment queries of the patients visiting the hospital

SYLLABUS OF DSC-11

Unit-1(12 hours)

Introduction to Health Insurance

- Concept of Health Insurance
- Definition, History & Scope of Health Insurance
- Types of Health Insurance
- Health Insurance in Private Health Sector (CGHS, ECHS, TPA, ESI.)
- Health Insurance in developing and developed countries
- Underwriting of Health Insurance

Unit 2(12 hours)

- Different Health Insurance Policies
- Analysis and Management
- GOI & State Govt. Policy in implementation of Health insurance

- Government Medical Services and Health Insurance Schemes
- IRDA Guidelines
- Hospital Empanelment: Criteria & Procedure
- Various Definitions under Mediclaim – Health Insurance Policies
- Standard Exclusions

Unit-3(9 hours)

- Concept of combined Life Insurance and Health Insurance
- Portability of Health Insurance
- Pre-Existing Diseases

Unit 4(12 hours)

- Hospitals / TPA / Insurance Company / Relationship and Problems.
- Cashless Mediclaim Processing & TPA
- Planned Hospitalization
- Emergency Hospitalization
- Claim Processing of Health Insurance

Practical component (if any) –
N/A

Essential/recommended readings-

1. Gupta, Dr. L.P., (2014), Health Insurance for Rich & Poor in India, Dr. L.P.GUPTA
2. Patukale, Prof.Kshitij, Mediclaim and Health Insurance, Prabhat Prakashan.
3. Dayal, Dr. Hargovind (2017), Fundamentals of Insurance, Notion Press.
4. Alexander, Sally, Risk and Insurance Management Manual for Libraries, Updated (ALCTS Monograph), ALA Editions.
5. IRDA Guidelines on Health Insurance - Govt. of India- https://www.financialservices.gov.in

DISCIPLINE SPECIFIC CORE COURSE – 12: Hospital Policies

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Hospital Policies	**4**	**3**	**1**	**0**	**Class XII pass**	**NA**

Learning Objectives

On completion of this module the students should be familiar with the various hospital policies of relevance

Learning outcomes

- Student will get the basic understanding and awareness about the different Hospital Policies with respect to NABH Accreditation standards.
- Students will also understand the importance & methodology of Incidence Reporting Systems and different incidents which needs to be documented
- Awareness of Patient & Staff Policies will give the students confidence of making hospitals safe place for patients/visitors/staff.

SYLLABUS OF DSC-12

Unit-1(10 hours)

Introduction to Hospital Policies

- Definition and Importance of SOP's, Policies, Manuals & Procedures.
- **AAC –** Registration Policy, Admission Policy, Bed Management Policy, Discharge Policy, Transport Policy, Admission to ICU Policy, Initial assessment Policy, Reassessment Policy, LAMA Policy.

Unit-2(10 hours)

- **COP –** Emergency Services, Ambulance Services, unique needs of End-of-Life Care, Care of Pediatric Patients, High Risk Obstetrical Pts., Rehabilitative Services, Patient Restraint Policy,
- **PRE –** Patient & Family Rights & Responsibilities, Patient and Family Education, Patient Confidentiality and Privacy, Patient Feedback (How to voice Complaint), Service Recovery, Policy on Informed Consent**,** Complaint Management process.

Unit-3(15 hours)

Patient & Staff Safety Policies

- Policy on Emergency Codes
- Hospital disaster Management
- Adverse Events
- Patient Identification
- Other Safety Codes
- Safety – Clinical Storage Guidelines, Electrical Equipment, Hazardous Material Spill, Handling of Cytotoxic Drugs
- Possession of Weapons by Patient and Visitors
- House Keeping Services Safety.

Unit 4(10 hours)

Incidence Reporting

- Incidence Investigation and Analysis
- Incidence Review
- Incident Report Form
- Benefits of doing Investigation
- How to Conduct an Investigative Interview
- Who should conduct the Investigation
- Root Cause Analysis
- Corrective & Preventive Actions
- Safety Orientation & Training

Practical component (if any) –

N/A

Essential/recommended readings-

1. Agarwal, Dr. Arun K. (2019), Standard Operating Procedures (SOP) for Hospitals in India, Notion Press.
2. NABH Accreditation Standards For Hospital- https://www.nabh.co>standard
3. References- Measures of Patient Safety Based on Hospitals- https://www.ncbi.nlm.gov
4. Accreditation Standards for Hospitals- https://www.babh.co

Discipline Specific Elective 2 :HRM in Healthcare

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
HRM in Healthcare	4	3	1	0	Class XII pass	NA

Learning Objectives

By the end of this course, students should be able to:

- Understand the unique challenges and dynamics of Human Resource Management (HRM) in the healthcare industry.
- Explore the role of HRM in promoting a positive organizational culture and employee engagement within healthcare settings.
- Develop skills in talent acquisition, recruitment, and retention strategies specific to healthcare professionals.
- Analyze the importance of training and development programs for healthcare staff to enhance their skills and knowledge.
- Gain insights into effective performance management and evaluation methods in healthcare organizations.
- Examine the legal and ethical considerations related to HRM in the healthcare sector.
- Learn about effective communication and conflict resolution techniques in healthcare teams.
- Understand the impact of healthcare policies and regulations on HRM practices.

Learning outcomes

Upon successful completion of this course, students will:

- Explain the key HRM challenges faced by healthcare organizations and propose strategies to address them effectively.
- Assess the role of HRM in fostering a positive and inclusive work environment in healthcare settings.
- Formulate talent acquisition and retention plans tailored to the specific needs of the healthcare industry.
- Design and implement training programs that enhance the skills and knowledge of healthcare professionals.

- Apply performance management techniques to evaluate healthcare staff and promote continuous improvement.
- Demonstrate an understanding of the legal and ethical considerations in HRM practices within healthcare organizations.
- Employ effective communication and conflict resolution skills to resolve HR-related issues in healthcare teams.
- Analyze the impact of healthcare policies and regulations on HRM decisions and compliance.

SYLLABUS OF DSE-2

Unit 1(5 hours)

Introduction to HRM in Healthcare

- Overview of HRM and its significance in the healthcare sector.
- Key challenges and opportunities in HRM specific to healthcare organizations.
- Understanding the healthcare industry's unique workforce requirements.

Unit 2(10 hours)

Organizational Culture and Talent Acquisition

- The role of HRM in shaping the organizational culture within healthcare settings.
- Strategies to promote employee engagement and job satisfaction in healthcare teams.
- Employee motivation and its impact on patient care.
- Recruitment strategies for attracting and selecting skilled healthcare professionals.
- Effective interviewing techniques and assessment methods for healthcare candidates.
- Diversity and inclusion in healthcare hiring.

Unit 3(5 hours)

Training and Development in Healthcare

- Identifying training needs and designing relevant programs for healthcare staff.
- Implementing continuous learning initiatives to enhance healthcare professionals' skills.
- Evaluating the effectiveness of training programs in healthcare settings.

Unit 4(5 hours)

Performance Management in Healthcare

- Establishing performance management systems for healthcare employees.
- Performance appraisal methods and feedback mechanisms in healthcare organizations.
- Addressing performance issues and fostering improvement.

Unit 5(10 hours)

Legal and Ethical Considerations in HRM

- Understanding healthcare-related employment laws and regulations.
- Ethics in HRM decisions, especially concerning patient privacy and confidentiality.
- Managing conflicts between ethical principles and organizational objectives.

Unit 6(10 hours)

Communication and Conflict Resolution in Healthcare Teams

- Effective communication strategies in healthcare settings.
- Handling conflicts and promoting teamwork among healthcare professionals.
- Building effective working relationships in a diverse healthcare workforce.

Practical component (if any) –
N/A

Essential/recommended readings

1. Human Resource Management in Healthcare: Principles and Practice, Author: Diane Huber
2. Strategic Human Resources Management in Health Services Organizations, Author: S. Robert Hernandez
3. Healthcare Human Resource Management, Author: Walter J. Flynn, Robert L. Mathis, John H. Jackson
4. The Healthcare Quality Book: Vision, Strategy, and Tools, Third Edition, Author: Maulik Joshi, Elizabeth R. Ransom, David B. Nash, Scott B. Ransom

Discipline Specific Elective 2 :Financial Management in Healthcare

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Financial Management in Healthcare	4	3	1	0	Class XII pass	NA

Learning Objectives

By the end of this course, students will be able to:

1. Understand the unique financial challenges faced by healthcare organizations.
2. Apply financial management techniques to improve the financial performance of healthcare institutions.
3. Analyze and interpret financial statements of healthcare organizations.
4. Develop effective budgeting and cost control strategies for healthcare settings.
5. Evaluate the financial implications of healthcare policies and regulations.
6. Make informed financial decisions to address healthcare industry-specific challenges.

Learning outcomes

Upon successful completion of this course, students will be able to:

1. Analyze the financial structure of healthcare organizations and propose improvements for enhanced financial performance.
2. Develop and implement budgeting and cost control strategies to optimize resource allocation.
3. Identify the financial impact of different healthcare policies and regulations on organizations.
4. Formulate financial plans and recommendations for healthcare organizations' sustainable growth.
5. Apply financial analysis techniques to assess investment opportunities and risk management in the healthcare sector.

SYLLABUS OF DSE-2

Unit 1(5 hours)

Introduction to Financial Management in Healthcare

- Overview of financial management concepts- Nature, scope, functions, goals, sources of finance
- Unique financial challenges in the healthcare industry

- Role of financial management in healthcare decision-making

Unit 2(15 hours)

Budgeting and Cost Control in Healthcare

- Budgeting process and techniques
- Cost behavior analysis in healthcare organizations
- Cost control strategies and cost reduction measures
- Capital Budgeting – Nature of Investment Decisions – Investment Evaluation criteria – Net Present Value (NPV), Internal Rate of Return (IRR), Profitability Index (PI), Payback Period, Accounting Rate of Return (ARR)

Working Capital Management including cash Management, Receivables Management, Inventory Management, Types & Determinants of working capital, credit management

Unit 3(10 hours)

Healthcare Reimbursement Systems

- Fee-for-service vs. value-based reimbursement
- Government and private payer systems
- Impact of reimbursement systems on financial management

Financial Planning and Decision-Making in Healthcare

- Capital budgeting and investment decisions
- Funding sources for healthcare projects
- Financial risk assessment and management

Unit 4(10 hours)

Healthcare Policy and Financial Implications

- Regulatory environment in healthcare
- Health insurance policies and their financial impact
- Healthcare reform and its financial consequences
- Concept of business plan, project plan
- Merger & Acquisition

Healthcare Revenue Cycle Management

- Patient billing and collections
- Revenue cycle optimization
- Managing accounts receivable and bad debts

Practical component (if any) –
N/A

Essential/recommended readings

1. Financial Management in Health Services by Finkler, S.A., Ward, D.M., & Calabrese, T.D.
2. Healthcare Finance: An Introduction to Accounting and Financial Managementby Louis C. Gapenski
3. Financial Management of Health Care Organizations: An Introduction to Fundamental Tools, Concepts, and Applications by William N. Zelman, Michael J. McCue, and Noah D. Glick
4. Financial Management, P. Chandra-TMH Publications

GENERAL ELECTIVE – 4:Patient Safety & Benchmarking in Healthcare

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Patient Safety & Benchmarking in Healthcare	4	3	1	0	Class XII pass	Patient Behavior& Psychology

Learning Objectives

By the end of this course, students should be able to:

- Explain the significance of patient safety in healthcare and its impact on patient outcomes.
- Identify potential risks, errors, and adverse events in healthcare processes.
- Apply patient safety principles and best practices to enhance the quality of care.
- Understand the concept of benchmarking in healthcare and its role in improving performance.
- Analyze healthcare data and implement benchmarking techniques to evaluate and compare healthcare outcomes.
- Develop strategies for continuous improvement and patient safety culture in healthcare organizations.

Learning outcomes

Upon successful completion of this course, students will:

- Demonstrate a comprehensive understanding of patient safety concepts and their importance in healthcare.
- Recognize and assess potential risks and errors in various healthcare scenarios.
- Apply patient safety strategies effectively to reduce adverse events and improve patient outcomes.
- Demonstrate proficiency in benchmarking methodologies and their application to healthcare performance analysis.
- Evaluate and interpret healthcare data to identify areas for improvement and measure progress.
- Formulate actionable plans to enhance patient safety and quality of care in healthcare organizations.

SYLLABUS OF GE-4

Unit 1(5 hours)

Introduction to Patient Safety

- Importance of patient safety in healthcare

- Patient safety culture and its impact
- Common patient safety challenges and errors

Unit 2(10 hours)

Understanding Adverse Events

- Types of adverse events and their causes
- Root cause analysis and error investigation
- Strategies to prevent adverse events
- Sentinel events and near miss events
- Incident Reporting System

Unit 3(10 hours)

Patient Safety Best Practices

- International Patient Safety Goals
- Medication safety and medication reconciliation
- Infection control measures
- Surgical safety and surgical checklist implementation

Unit 4(10 hours)

Benchmarking in Healthcare

- Definition and objectives of benchmarking
- Types of benchmarking in healthcare
- Data sources and metrics for benchmarking
- Developing improvement plans based on benchmarking results

Unit 5(10 hours)

Patient Safety Culture

- Creating a culture of safety in healthcare organizations
- Teamwork and communication in patient safety
- Human factors and their impact on patient safety
- Performance indicators for patient safety
- Continual monitoring and improvement strategies
- Patient engagement and its role in sustaining safety efforts

Practical component (if any) –

N/A

Essential/recommended readings

- Reason, J. (2000). Human error: Models and management. BMJ Books.
- Institute of Medicine (US) Committee on Quality of Health Care in America. (2001). Crossing the quality chasm: A new health system for the 21st century. National Academies Press.

Suggestive readings

- Leape, L. L. (2014). Patient safety: A human factors approach. CRC Press.
- Vincent, C. (Ed.). (2016). Patient safety. John Wiley & Sons.

SEMESTER-5

Bachelor of Vocation – Healthcare Management
Undergraduate Curriculum Framework 2022(UGCF)

DISCIPLINE SPECIFIC CORE COURSE – 13: Bio Medical Waste Management & Radiation Safety

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Bio Medical Waste Management & Radiation Safety	4	3	1	0	Class XII pass	NA

Learning Objectives

- To understand the significance of nosocomial infections, biomedical waste and its proper disposal
- To understand the harmful effects of Radiation and measures taken to ensure radiation safety

Learning outcomes

- Student will get the basic understanding and awareness about the different types of biomedical waste generated in the hospital
- Students will also understand the importance of segregation of BMW and different methods to treat different wastes.
- Awareness of Radiation Hazards in hospital will give students the methods of monitoring & reporting hazards.

SYLLABUS OF DSC-13

Unit 1- (12hours)

Introduction to Biomedical Waste

- Definition
- Classification of Bio- Medical waste
- Sources of Bio-Medical Waste

- Effects- Air, Water &Land Pollution
- Process of BMW Management – Segregation, collection, transportation, disposal

Unit -2(9 hours)

Types of BMW

- Liquid BMW, Radioactive waste, Metals / Chemicals /Drug waste
- Importance
- BMW Management & methods of disinfection

Unit 3(12 hours)

- Modern technology for handling BMW
- Monitoring & controlling of cross infection (Protective devices),
- Potential Health Risk -Needle Stick Injury, Exposure to Cytotoxic drugs, Chemical burns, Air Pollution,

Unit-4(12 hours)

- Radiation Hazards in a hospital,
- Safe use of Radioactive Drugs,
- Radioactive Waste Safe Disposal Guidelines
- Monitoring & Reporting
- Radiation safety -Training

Practical component (if any) –

N/A

Essential/recommended readings-

1. Gupta, Suharshi (2021), Biomedical Waste Management, LAP Lambert Academic Publishing.
2. Bio-Medical Waste Act & Rules Govt. of India- https://health.delhigovt.nic.in
3. Guidelines for Management of Healthcare waste as per Biomedical Waste Management Rules, 2016- https://cpcb.nic.in
4. Challenges in Biomedical Waste Management in Cities- https://www.hilarispublisher.com>open-acess

DISCIPLINE SPECIFIC CORE COURSE – 14: General Safety Codes, Fire Safety & Disaster Management in Hospitals

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
General Safety Codes, Fire Safety & Disaster Management in Hospitals	4	3	1	0	Class XII pass	NA

Learning Objectives

On completion of this module the students should be familiar with the General Safety Codes, Fire Safety & Disaster Management in Hospitals

Learning outcomes

- Students will get the basic understanding and awareness about the General Safety codes being followed in hospital for different kinds of emergencies.
- Students will be able to identify different risks and hazards in the hospital
- Students will be able to identify difference between emergency, accident and disasters and how to be prepared for different types of disasters.
- As the hospital work and surge of admissions increase during disasters, students will be able to work on proper planning and implementation of successfully managing the situation in various disasters.

SYLLABUS OF DSC-14

Unit 1(12 hours)

General Safety Codes in a hospital – Bomb Threat, Violent Patient, Cardiac arrest, Child abduction, Fire, Disaster, Clinical Storage Guidelines, Compressed gas Safety Precautions Hazardous Material Spill, Handling of Cytotoxic Drugs, Laser maintenance

Unit 2(12 hours)

Assessment of Risks and Hazards in Hospital-

- Disruption of Services – Electric, Failure of Elevators, Failure of Operating Theatre Air Conditioning System, Disruption of Services-Water
- Management – Accident Investigation and Analysis
- Safety Orientation Training
- Annual Evaluation of The Effectiveness of Safety Management Program

Unit 3(9 hours)

Fire Safety

- Minor Fire
- Major Fire (without Evacuation)
- Major fire (With Partial/full evacuation)
- Composition of firefighting team
- Duties of staff involved in fire
- Mock Drill
- Emergency Exit Plan

Unit 4(12 hours)

Hospital Disaster Management

- Basics of disaster management and Mass casualties
- Components of disaster plan : pre-hospital and hospital
- Disaster alertness in Hospital
- Disaster management planning and implementation
- Severity of illness amongst disaster victims and risk assessment
- Mock exercise on disaster management in Hospital

Practical component (if any) – N/A

Essential/recommended readings

1. National Disaster Management Guidelines- https://ndma.gov.in
2. Hospital Disaster Management Guidelines- https://nidm.gov.in
3. Muller, Robert J., (2017), Hospital Emergency Management: A Bible for Hospital Emergency Managers, CreateSpace Independent Publishing Platform.

DISCIPLINE SPECIFIC CORE COURSE – 15: Hospital Infection Control

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Hospital Infection Control	4	3	1	0	Class XII pass	NA

Learning Objectives

On completion of this module the students should be familiar with the hazards of Infections and Infection control practices in Hospitals

Learning outcomes

- Students will understand different types of hospital acquired infections and the ways infections are transmitted
- Students will understand the infection control and prevention measures to be implemented in the hospital to make it a safe place.
- Knowledge of Disinfection & Sterilization policies to be followed in the hospital will make students equipped about the practices to be followed in patient care areas.

SYLLABUS OF DSC-15

Unit 1(12 hours)

Epidemiology of communicable diseases, disease transmission

- Host defence immunizing agents, cold chain, immunization, disease monitoring and surveillance.
- Screening and surveys
- Notifiable diseases

Unit 2(12 hours)

Infection Control & Prevention-

- Hazards of infection
- Hospital Acquired Infection(HAI)
- Types of HAI
- Surveillance of HAI
- Risk Factors,
- Hospital Infection Control Measures- Universal Precautions, Hand Hygiene Protocols

- Investigation of an epidemic and role of hospital in its control.
- Hospital Infection Control committee

Unit 3(12 hours)

General Cleaning Disinfection and Sterilization-

- Cleaning and Disinfecting of Environmental Surfaces in Patient-Care Areas
- Antiseptics and disinfectants
- Methods of sterilization and disinfection

Unit 4(9 hours)

Spill Management-

- Types of Spillages
- Policy on Spill Management
- General Precautions

Practical component (if any) –
N/A

Essential/recommended readings

- S. Sastry, Apurba; R., Deepashree (2019), Essentials of Hospital Infection Control, Jaypee Brothers Medical Publishers.
- Singh, Sanjeev; Gupta, Shakti Kumar; Kant, Sunil (2012), Hospital Infection Control Guidelines, Jaypee Brothers Medical Publishers.

Discipline Specific Elective 3 :Material Management in Healthcare

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Material Management in Healthcare	4	3	1	0	Class XII pass	NA

Learning Objectives

This course provides an overview of material management principles and practices in the healthcare industry. It focuses on the effective management of medical supplies, equipment, and other materials to ensure their timely availability, cost-effectiveness, and quality in healthcare settings. Students will explore various aspects of material procurement, inventory control, distribution, and vendor management specific to healthcare organizations.

Learning outcomes

Upon successful completion of this course, students will be able to:

1. Understand the importance of material management in healthcare and its impact on patient care, safety, and operational efficiency.
2. Identify and apply various material management techniques and best practices in healthcare settings.
3. Analyze and optimize the inventory management process to reduce costs while maintaining adequate stock levels.
4. Evaluate the selection criteria for healthcare suppliers and establish effective vendor relationships.
5. Utilize technology and software tools to enhance material management processes in healthcare organizations.

SYLLABUS OF DSE-3

Unit 1(5 hours)

Introduction to Material Management in Healthcare

- Definition, scope and importance of materials management
- Aims, objectives & principles of materials management;
- Material Cycle
- Importance of material management in healthcare
- Material management challenges in healthcare settings

- Integrated Approach to Material planning & control

Unit 2(10 hours)

Inventory Control

- Definition & objectives of inventory control
- Types of inventory cost
- Pareto' law
- ABC/VED/SDE analysis
- Basic inventory management techniques
- Economic Order Quantity (EOQ) and Reorder Point (ROP) analysis
- Stock rotation and expiry management in healthcare

Unit 3(10 hours)

Material Procurement in Healthcare

- Purchasing process -Meaning of purchasing, Objectives of purchasing, 5 R‟s of purchasing, Centralized & Decentralized purchasing, General principles of procurement of medicine
- Identifying healthcare material needs and requirements
- Request for Proposal (RFP) and Request for Quotation (RFQ) processes
- Supplier selection and evaluation criteria
- Vendor Management

Unit 4(5 hours)

Stores Management

- Responsibilities and functioning of stores
- Types of Medical Stores, planning of hospital stores
- Location, lay-out planning and design of hospital stores
- Preservation of stores, documentation & evaluation of stores

Unit 5(10 hours)

Equipment Management

- Classification of Hospital equipment
- Planning and selection of equipment
- Factors affecting utilization of equipment
- Equipment failure, documentation, equipment maintenance and its types and Equipment audit.

Unit 6(5 hours)

Future Trends/Sustainability in Material Management

- Emerging technologies and innovations in healthcare material management
- Predictive analytics and artificial intelligence applications in material management
- Green procurement and eco-friendly materials
- Waste management and disposal considerations in healthcare
- Sustainable practices in material management

Practical component (if any) –

N/A

Essential/recommended readings

1. Production (Operation) Management, L.C Jhamp-Everest

2. Production and materials management, K. Sridhara Bhatt-Himalaya
3. Hospital stores management an integral approach, Shakti Gupta-JAYPEE
4. Hospital Stores Management, Shakti Gupta, Sunilkanth – Jaypee Brothers
5. Materials Management, Gopalakrishna, P., Prentice Hall, New Delhi, 1997.
6. Hospital Stores Management- An Integrated Approach, by Dr. Gupta Shakti, JaypeeBrothers.
7. Material Management by Dr. PawanArora, Global India Publication Pvt Ltd
8. Procurement and Materials management for Hospitals, Rex H Gregor, Harold C. Mickey
9. Institute of Supply Chain Management. (Website: https://www.iscm.co.in/)

Discipline Specific Elective 3 :Trends & Innovations in Healthcare

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Trends & Innovations in Healthcare	4	3	1	0	Class XII pass	NA

Learning Objectives

By the end of this course, students should be able to:

1. To understand the latest trends and innovations in the healthcare industry.
2. To explore the impact of technology on healthcare delivery and patient outcomes.
3. To analyze the challenges and opportunities presented by healthcare innovations.
4. To evaluate the ethical and regulatory considerations related to healthcare advancements.
5. To develop critical thinking skills for assessing the potential of emerging healthcare trends.

Learning outcomes

Upon successful completion of this course, students will:

1. Identify and discuss the major trends and innovations in healthcare.
2. Explain the role of technology in healthcare and its impact on patient care.
3. Assess the advantages and disadvantages of various healthcare innovations.
4. Analyze the ethical implications and regulatory aspects of implementing new healthcare technologies.
5. Critically evaluate the potential of emerging trends in improving healthcare outcomes.

SYLLABUS OF DSE-3

Unit 1(5 hours)

Introduction to Healthcare Trends and Innovations

- Overview of healthcare industry advancements

- Importance of staying updated with the latest trends
- Impact of innovations on patient care and outcomes

Unit 2(15 hours)

Technology in Healthcare

- Telemedicine and remote patient monitoring
- Electronic health records (EHR) and interoperability
- Artificial intelligence and machine learning applications in healthcare

Precision Medicine

- Personalized treatment approaches
- Genomics and genetic testing in healthcare
- Challenges and opportunities in precision medicine

Unit 3(20 hours)

Internet of Medical Things (IoMT)

- Connected medical devices and wearables
- Data security and privacy concerns in IoMT
- Enhancing patient engagement through IoMT

Virtual Reality (VR) and Augmented Reality (AR) in healthcare

- Applications of VR/AR in medical training and education
- VR/AR in pain management and therapeutic interventions
- Future possibilities and limitations of VR/AR in healthcare

Robotics and Automation in Healthcare

- Surgical robots and robotic-assisted procedures
- Automation in pharmaceutical manufacturing and drug delivery
- Ethical considerations in the use of healthcare robots

Unit 4(5 hours)

Future of Healthcare Innovations

- Predicting upcoming trends in the healthcare industry
- Potential disruptions and transformative innovations
- Preparing for a career in the evolving healthcare landscape

Practical component (if any) –

N/A

Essential/recommended readings

1. Article: "The Impact of Technology on Healthcare Delivery" - Journal of Healthcare Management
2. Report: "Trends and Innovations in Precision Medicine" - World Health Organization
3. Whitepaper: "Internet of Medical Things: Transforming Healthcare" - Deloitte
4. Book: "Healthcare Robotics: Technologies and Applications" - Richard G. Marklin
5. Article: "Blockchain in Healthcare: Opportunities and Challenges" - Health Information Science and Systems Journal
6. Deep Medicine: How Artificial Intelligence Can Make Healthcare Human Again - Eric Topol
7. The Creative Destruction of Medicine: How the Digital Revolution Will Create Better Healthcare- Eric Topol
8. The Fourth Industrial Revolution - Klaus Schwab

GENERAL ELECTIVE – 5:E-Skills & Software used in healthcare

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
E-Skills & Software used in healthcare	4	3	1	0	Class XII pass	Patient Safety & Benchmarking in Healthcare

Learning Objectives

This course provides an introduction to the essential E-Skills and Software used in the healthcare industry. Students will explore various technologies and software applications that play a crucial role in modern healthcare settings, including electronic health records, telemedicine, healthcare analytics, and patient management systems. Through hands-on exercises and case studies, students will gain practical knowledge to leverage technology effectively in healthcare delivery.

Learning outcomes

Upon successful completion of this course, students will be able to:

1. Understand the significance of E-Skills and Software in healthcare and its impact on patient care and overall healthcare efficiency.
2. Identify and use various healthcare software applications for tasks like patient record management, medical billing, and telemedicine consultations.
3. Analyze healthcare data using software tools and techniques to derive meaningful insights and improve decision-making processes.
4. Demonstrate competence in navigating electronic health records and other health information systems.
5. Evaluate the potential benefits and risks of using E-Skills and Software in healthcare contexts.

SYLLABUS OF GE-5

Unit 1(5 hours)

Introduction to E-Skills in Healthcare

- Overview of E-Skills in the context of healthcare
- Importance of technology in improving patient care and outcomes
- Ethical and legal considerations related to technology use in healthcare

Unit 2(10 hours)

Introduction to Healthcare Information System

- Definition, Meaning, Scope, Importance & Challenges of HIS
- Introduction to E-Prescription, CPRS, Electronic Health Records
- Important Modules of Hospital Management System

Unit 3(15 hours)

Application of HIS in Hospitals

- Back office & Front Office
- IPD & OPD
- Patient Registration & Appointment Scheduling
- Admission Discharge Transfer (ADT)
- Computerized Physician Order Entry (CPOE)
- Roster Management
- Laboratory Information System
- Radiology Information System
- CSSD
- Pharmacy
- Operation Theatre
- Inventory Management

Unit 4(10 hours)

- Knowledge Management System
- Management Information System
- Clinical Decision Support System
- Executive Support System
- Introduction to Marketing Information System
- Telemedicine & its application
- Overview of mHealth apps and their diverse uses

Unit 5(5 hours)

Emerging Technologies in Healthcare

- Exploring AI, IoT, and other cutting-edge technologies in healthcare
- Potential applications and challenges of emerging technologies
- Discussing the future of technology in healthcare

Practical component (if any) –

N/A

Essential/recommended readings

1. Healthcare Information Technology Exam Guideby Kathleen McCormick
2. Healthcare Analytics for Quality and Performance Improvementby Trevor L. Strome
3. Telemedicine Technologies: Information Technologies in Medicine and Telehealth by Bernard Fong, et al.
4. Mobile Health: A Technology Road Mapby Robert Istepanian, et al.
5. Artificial Intelligence in Healthcareedited by Adam Bohr and Rick Lawrence
6. Hospital Information Systems by S.A Kelkar, PHI
7. Management Information System by Ashok Arora & Akshaya Bhatia, Excel Book.

SEMESTER-6
Bachelor of Vocation – Healthcare Management
Undergraduate Curriculum Framework 2022(UGCF)

DISCIPLINE SPECIFIC CORE COURSE – 16: Health Services Legal & Ethical Issues

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Health Services Legal & Ethical Issues	4	3	1	0	Class XII pass	NA

Learning Objectives

After completion of the module student should be able to describe the important Legal & Ethical Issues associated with Healthcare

Learning outcomes

- Students will understand different laws, acts, rules and regulations which the hospital have to comply to.
- Students will understand the acts pertaining to different departments in the hospital and their importance for the smooth functioning of hospital as per the legislature of the country
- Knowledge of Medical Negligence, Consent and contracts will help the students in understanding the importance of legalities with respect to the health of the patients.

SYLLABUS OF DSC-16

Unit 1(12 hours)

Introduction to Act, Law, Rules and Regulations

Medical Ethics

- Medical Ethics as per MCI-Duties of Doctors
- Ethical Dilemmas in Healthcare Industry

Unit 2(12 hours)

Laws applicable to Hospital

- Law of Contracts, Specific Performance
- Medical jurisprudence and functioning of hospitals
- Consent & its Importance

Unit 3(12 hours)

Important Acts

- Consumer Protection Act and Hospitals
- I.D. Act, W.C. Act
- West Bengal Clinical Establishment Act and Rules
- ESI Act, Trade Union Act
- Organ transplantation Act
- Pc PNDT Act
- MTP Act
- ART & Surrogacy Act

Unit 4(9 hours)

- Medico-Legal Cases
- Medico- Legal Problems in relation to health administration
- Medical Negligence and Types

Practical component (if any) –
N/A

Essential/recommended readings

1. Bhat, Sandeep (2023), Reflection on Medical Law and Ethics in India, Eastern Law House.

DISCIPLINE SPECIFIC CORE COURSE – 17: Management of Non-Clinical Departments - Support and Utility Services

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Management of Non-Clinical Departments - Support and Utility Services	**4**	**3**	**1**	**0**	**Class XII pass**	**NA**

Learning Objectives

On completion of this module the students should be familiar with the various aspects of planning, operating and evaluation of different support and utility services in hospitals

Learning outcomes

- Students will understand planning, organization, structure, location, functions, policies and quality parameters of different departments of support & utility services.
- Knowledge of functioning of all these departments will help the students to implement and manage the operations of these departments.

SYLLABUS OF DSC-17

Unit 1(9 hours)

Introduction- Support Services Departments; Planning, Organization Structure, Location and Function of support service departments.

Unit 2(14 hours)

Policies and Quality Parameters

- Methods of Sterilization CSSD- Methods of Sterilization
- Pharmacy Department
- Radiology Department
- Nuclear Medicine
- Laboratory Services
- Medical Record Department

Unit 3(9 hours)

Introduction to Utility Services Departments-Planning, Organization Structure, Location, Functions, Policies and Quality Parameters

Unit 4(13 hours)

Understanding of different utility service departments-

- Laundry services
- Security Services
- Transportation Services (External & Internal)-Ambulance Services
- Hospital Stores
- Mortuary (Preservation, transportation & religious formalities)
- Kitchen services
- House Keeping Department
- Engineering & Maintenance Department

Practical component (if any) –
N/A

Essential/recommended readings-

1. Das, Joydeep (2015), Hospital Administration and Management, Jaypee Brothers Medical Publisher.
2. Goel, Dr. Sonu (2013), Hospital Administration, Elsevier India.

DISCIPLINE SPECIFIC CORE COURSE – 18: Hospital Engineering & Bio-Medical Engineering

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Hospital Engineering & Bio-Medical Engineering	4	3	1	0	Class XII pass	NA

Learning Objectives

On completion of this module the students should be familiar with the equipment management process and its various components and their roles in hospital system

Learning outcomes

- Students will understand the different medical equipment used in hospital, they will understand in detail the requirement, procurement and functioning of all the equipment.
- Students will also get an understanding of different types of maintenance contracts required for all the biomedical equipment

SYLLABUS OF DSC-18

Unit 1(10 hours)

Introduction

List of common Medical Equipment used in Hospital

- General Requirements
- Local, National and International availability of Medical Equipment

Unit 2-(15 hours)

Purchase / Installation / Commissioning of Medical Equipment

- Equipment selection guideline, Estimation of cost and Q.C. Planning
- Justification of purchase proposal, Hospital Need Assessment
- Equipment selection guideline, Estimation of cost and Q.C. Planning

Unit -3(10 hours)

Budgeting of Biomedical Equipment

- Replacement of old equipment and Buyback Policy
- Estimation of Breakeven point and Profit – Projection in hospital budget

Unit 4(10 hours)

Medical Equipment Maintenance

- In-house, AMC and CMC
- Preventive Maintenance
- Calibration of Equipment

Practical component (if any) –
N/A

Essential/recommended readings-

1. Willson, Keith; Ison, Keith; Tabakov, Slavik (2013), Medical Equipment Management, CRC Press.

Discipline Specific Elective 4 : Healthcare Marketing

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Healthcare Marketing	4	3	1	0	Class XII pass	NA

Learning Objectives

By the end of this course, students should be able to:

1. Understand the unique challenges and opportunities in the healthcare industry regarding marketing and promotion.
2. Analyze the target audience and consumer behavior in healthcare settings.
3. Develop effective marketing strategies to promote healthcare products and services.
4. Explore ethical considerations and regulatory frameworks in healthcare marketing.
5. Utilize digital marketing techniques and technologies to enhance healthcare campaigns.
6. Measure and evaluate the success of healthcare marketing initiatives.

Learning outcomes

Upon successful completion of this course, students will:

1. Describe the key concepts and principles of healthcare marketing.
2. Conduct market research to identify healthcare consumer needs and preferences.
3. Design and implement healthcare marketing strategies that align with industry best practices.
4. Evaluate the ethical implications of various marketing tactics in the healthcare sector.
5. Apply digital marketing tools and platforms to create targeted healthcare campaigns.
6. Measure the effectiveness of healthcare marketing efforts using relevant metrics.

SYLLABUS OF DSE-4

Unit 1(10 hours)

Introduction to Healthcare Marketing

- Meaning and importance of marketing
- Role of marketing in modern organizations
- Basic concepts of marketing
- Evolution of marketing
- Scanning the marketing environment
- Marketing Mix

- Understanding Consumer Behavior-Analyzing patient decision-making processes, Factors influencing healthcare consumer choices

Unit 2(15 hours)

Marketing Research & Strategies

- Techniques for gathering healthcare market data
- Analyzing market trends and opportunities
- Competitive analysis in the healthcare sector
- Product and service positioning in healthcare
- Creating value propositions for healthcare offerings
- Developing a healthcare marketing mix

Unit 3(10 hours)

Promotion of Business in Hospitals

- Service Marketing – Patient care and communication
- Advertisement and Branding
- Marketing promotional activities
- Corporate marketing
- Marketing and medical ethics
- Ethical guidelines for healthcare marketers
- Building a strong healthcare brand identity

Unit 4(10 hours)

Digital Marketing in Healthcare

- Leveraging social media for healthcare marketing
- Search engine optimization (SEO) for healthcare websites
- Email marketing and online advertising in the healthcare industry

Practical component (if any) –

N/A

Essential/recommended readings

1. Marketing for Healthcare Organizations, Kotler, P., & Bucher, T. (2020). Pearson.
2. Stevens, R. (2018). Healthcare Marketing: A Case Study Approach, Stevens, R. (2018). CRC Press.
3. Healthcare Marketing: A Comprehensive Guide for Medical Practice, Hollander, S. C., & Pulos, E. (2015). Jones & Bartlett Learning
4. Essentials of Health Care Marketing**,** Berkowitz, E. N. (2017). Jones & Bartlett Learning
5. Marketing Management by Philip Kotler, Pearson publishers, 2003
6. Marketing Management by Rajan Saxena, TMH, 2005.
7. Marketing-the best practices by K.Douglar, Hoffman&Czinkota, Thomson, 2004
8. Basic Marketing by William D. Rerreult&Mc Carthy, TMH,2005
9. Marketing Management by V.S.Ramaswamy, Namakumari, Macmillan, 2006

Discipline Specific Elective 4: Developing Strategy in Healthcare

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Developing Strategy in Healthcare	4	3	1	0	Class XII pass	NA

Learning Objectives

1. Understand the fundamental concepts and theories of strategic management to devise short & long-term goals for healthcare
2. Analyze the external and internal factors influencing an organization's strategic decisions.
3. Develop skills in formulating and implementing effective business strategies.
4. Evaluate the role of innovation, sustainability, and ethics in strategic decision-making.
5. Assess the impact of globalization on strategic management practices.
6. Apply strategic management frameworks to real-world healthcare business scenarios.

Learning outcomes

By the end of this course, students will be able to:

1. Identify and explain the key principles and theories of strategic management.
2. Conduct a comprehensive strategic analysis of a given organization.
3. Formulate actionable business strategies that align with the organization's goals.
4. Evaluate and recommend strategic alternatives for healthcare growth and sustainability.
5. Demonstrate an understanding of the ethical and social implications of strategic decisions.
6. Communicate strategic recommendations effectively to stakeholders.

SYLLABUS OF DSE-4

Unit 1(5 hours)

Introduction to Strategic management

- Importance of Strategic management
- Strategic management process: strategy and tactics
- Strategic vision and mission, strategists in Strategic Management
- Levels of strategy: Corporate, business, and functional
- Porter’s value chain: concept and applications

Unit 2(15 hours)

Strategic analysis in Healthcare Organizations

- Introduction & need for strategic analysis

- Internal Analysis and External Environmental Analysis
- SWOT Analysis
- PESTEL Analysis
- Competitor Analysis
- Value chain analysis
- Core competencies and capabilities

Unit 3(10 hours)

Level of strategy

- Corporate Level Strategy: Grand Strategy
- Portfolio analysis: BCG Matrix
- Business level Strategy: Generic Business Strategy
- Functional strategy analysis: Plans and policies: Financial, Marketing, Operational, Personnel
- Globalization and its impact on business strategy
- Multinational and global strategies

Unit 4(15 hours)

Corporate Governance and Ethics

- Corporate governance principles and practices
- Role of the board of directors
- Ethical considerations in strategic decision-making
- Corporate social responsibility (CSR) and sustainability

Strategy Implementation

- Organizational structure and design
- Strategic control and performance measurement
- Strategy execution and managing change
- Strategic leadership and culture

Strategic Evaluation and Control

- Criteria for evaluating strategies
- Balanced Scorecard approach
- Learning from strategic failures and successes
- Making strategic adjustments

Practical component (if any) –

N/A

Essential/recommended readings

1. Kazmi, A: Business policy and Strategic management, Tata McGraw Hill.
2. Dess and Miller, Strategic Management,Tata McGraw Hill.
3. Cherunilam, F: Strategic Management, Himalaya Publishing House.
4. Budhiraja, S.B. and Athreya, M.B: Cases in Strategic Management, Tata McGraw Hill.
5. Thomson and Strickland: Strategic Management, McGraw Hill.
6. Hill, C. W., Jones, G. R., & Schilling, M. A. (or latest edition), Strategic Management: Theory & Cases: An Integrated Approach.
7. Peter. M. Ginter, Strategic Management of Healthcare Organizations

GENERAL ELECTIVE – 6: Legal System of Healthcare Industry

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Legal System of Healthcare Industry	4	3	1	0	Class XII pass	E-Skills & Software used in healthcare

Learning Objectives

This course provides an in-depth understanding of the laws and regulations that govern the healthcare industry in India. Students will explore various legal aspects related to healthcare, including licensing, medical practice, patient rights, medical malpractice, and more. The course aims to equip learners with the knowledge and skills to navigate legal challenges and ensure compliance in the healthcare sector.

Learning outcomes

Upon successful completion of this course, students will be able to:

1. Explain the key laws and regulations governing the Indian healthcare industry and their implications.
2. Apply legal principles to real-world scenarios in the healthcare sector.
3. Evaluate the legal risks and compliance requirements for healthcare organizations.
4. Analyze the legal and ethical aspects of patient care and decision-making.
5. Demonstrate proficiency in identifying and addressing legal issues in healthcare practices.

SYLLABUS OF GE-6

Unit 1(5 hours)

Introduction to Indian Healthcare Laws

- Laws pertaining to establishment of hospitals
- Legal requirements under Medical Council Acts
- West Bengal Clinical Establishment Act and rules

Unit 2(15 hours)

Acts pertaining to Hospitals

- Legal aspects relating to Organ transplantation

- MTP Act 1971
- Basics of Drugs and Cosmetic Acts
- Euthanasia
- ESI Act
- PNDT Act
- Human experimentation, Clinical trials
- Industrial dispute Act
- Central Births & Death Registration Act
- Consumer Protection Act

Unit 3(10 hours)

Legal liability of hospitals

- Criminal, civil and tortuous
- Liability for negligence
- Absolute liability and vicarious liability
- Legal remedies available to patients

Unit 4(15 hours)

Medical ethics

- Ethical Principles & rules
- Core concepts of medical ethics
- Law & ethics-a comparison
- Elements of medical malpractice
- Medical negligence and liability
- Confidentiality
- Autonomy & Informed Consent

Practical component (if any) –
N/A

Essential/recommended readings

1. Healthcare Laws in Indiaby Shailaja Chandra
2. Law and the Practice of Medicine in India by Anant Bhan and Amar Jesani
3. Medical Law and Ethics by Amitava Sengupta
4. Indian Medical Law: A Treatise on Crimes against Medical Profession by Sandeep Joshi
5. Medical negligence and legal remedies, 3rd edition, universal law Publisher, Anoop Kaushal K, New Delhi, 2004.
6. Medico-legal Aspects of Patient Care, 3rd Edition, R. C. Sharma, Peepee Publishers & Distributers2008

SEMESTER-3

Bachelor of Vocation - Retail Management & IT course

Undergraduate Curriculum Framework 2022(UGCF)

DISCIPLINE SPECIFIC CORE COURSE – DSC-7 E-Commerce

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course(if any)
		Lecture	Tutorial	Practical/ Practice		
DSC-7 E-commerce	**4**	**3**	**1**	**0**	**Class XII**	**Nil**

Learning Objectives

The course aims to enhance skills for effective and contemporary applications of E-Commerce.

Learning outcomes

By studying this course, students will be able to:

- Describe the challenging needs of the society in the field of E-Commerce.
- Identify various applications in the context of online transactions.
- Explain the steps in designing of website.
- Describe various e-payment systems.
- Analyse security and operational issues in E-Commerce.

SYLLABUS OF DSC-7

UNIT – I (12 Hours)

Introduction to E-commerce: Meaning, nature, concepts , advantages, disadvantages and reasons for online transactions online, Electronic commerce, Types of Electronic commerce, Electronic commerce models, Challenges and barriers to E-commerce environment; E-commerce in India: Transition to E-commerce in India, Indian readiness for E-commerce, E-transition challenges for Indian corporate.

UNIT – II (12 Hours)

Electronic Payment system: Digital payment requirements, Electronic payment system, Types of Electronic payment systems, Concept of e-money, infrastructure issues and risks in EPS, Electronic fund transfer.

UNIT – III (12 Hours)

E-commerce Application: E-commerce applications in retail and other industries, Emerging trends in E-commerce, Mobile commerce; Technological and social considerations, Regulatory and ethical considerations in E-commerce

UNIT – IV (9 Hours)

E-Commerce security: Meaning, need and concepts; Electronic commerce security environment, security threats in E-commerce environment, Basics of encryption and decryption.

Essential/recommended readings

1. Arora Shivani, e-Commerce (Taxmann: New Delhi).
2. Awad, Elias M., Electronic Commerce: From Vision To Fulfillment (PHI Learning: New Delhi).

Suggestive readings

1. Bharat Bhaskar, Electronic Commerce- Framework, Technologies and Applicatonc,(Tata McGraw Hill).
2. Chhabra, T.N., Jain, H. C., and Aruna Jain, An Introduction to HTML (Dhanpat Rai & Co.: New Delhi).
3. Gupta, Pralok, ed., E-COMMERCE In India: Economic And Legal Perspectives (Sage Publications: New Delhi). Kenneth C. Laudon, Carol Guercio Traver, E-commerce, Global Edition (Pearson Education).

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE – DSC-8 Sales and Distribution Management

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course(if any)
		Lecture	Tutorial	Practical/ Practice		
DSC-8 Sales and Distribution Management	**4**	**3**	**1**	**0**	**Class XII**	**Nil**

Learning Objectives

The course aims to enhance an in-depth understanding of sales management and personal selling.

Learning outcomes

By studying this course, students will be able to:

- Understand the compensation and supervision of salesmen besides setting sales territories and targets.
- Develop proficiency in evaluation of sales performance and sales cost analysis.
- Understand the different marketing channels.
- Develop basic understanding of distribution management and evaluation of channel performance.

SYLLABUS OF DSC-8

UNIT – I (12 Hours)

Sales Management; Objectives and Functions; Setting and Formulating Personal Selling Objectives; Recruiting and selecting Sales Personnel; Developing and conducting Sales Training Programmes. Sales organization, Sales function & policies, Personal selling - nature, scope & objectives, Formulating Personal selling strategy.

UNIT – II (12 Hours)

Designing and Administering Compensation Plans; Supervision of Salesmen; Standards and Performance; Motivating Sales Personnel; Sales Meetings and Sales contests. Planning the Sales Effort - Sales planning and Budgeting, Estimating Market Potential and Sales forecasting, Setting the sales territory & quotas, Sales and cost Analysis

UNIT – III (11 Hours)

Marketing Channels, their Structure; Channel Intermediaries-Role and Types; Wholesaling and Retailing; Logistics of Distribution; Channel Planning, Organizational Patterns in Marketing Channels: Assessing Performance of Marketing Channels; International Marketing Channels.

UNIT – IV (10 Hours)

Distribution Management - Managing marketing logistics & channels, Channel Integration - VMS, HMS, Channel Management, and Marketing channel Policies & legal issue. Channel Institutions & control, Wholesaling &- Retailing, Channel Information systems, Managing & Evaluating Channel Performance Case & future trends in sales & distribution management.

Essential/recommended readings

1. Gupta, S.L (2005) Sales and Distribution Management: Text and Cases – An Indian Perspective, Excel Books.
2. Havaldar, K. K.& Cavale, V. M. (2007) Sales and Distribution Management: Text & Cases, Tata McGraw-Hill.

Suggestive readings

1. Still, R. R., Cundiff, E. W. & Govoni, N. A. P(1998) Sales Management: Decision Strategies and Cases, Dorling Kindersley.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE – DSC-9 Customer Experience Management

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course(if any)
		Lecture	Tutorial	Practical/ Practice		
DSC-9 Customer Experience Management	**4**	**3**	**1**	**0**	**Class XII**	**Nil**

Learning Objectives

This course aims to familiarize the students with the concept and importance of the relationship with customers and techniques to enhance customer experience.

Learning outcomes

By studying this course, students will be able to:

- Demonstrate the management of customer life-cycle, importance of trust, value and commitment in building relationship.
- Analyse the CEM techniques and strategies..
- Describe the applications of CEM tools in the retail sector.

SYLLABUS OF DSC-9

UNIT – I (12 Hours)

Introduction to the strategy of CEM and CRM and the interdisciplinary relationship, Customer Experience Innovation, Communicate effectively with stake-holders Develop individual retail service opportunities

UNIT – II (12 Hours)

Business Models and its impact on customer experience: Offline, online, B2C and B2B – social media, platforms and merging offline and online experiences

UNIT – III (12 Hours)

Mapping the customer journey: Process of interaction with a supplier – methods and tools to analyze what's right and what's wrong, Design step-by-step experiences, which enchant customers and at the same time create new opportunities and lead to sustainable competitive advantage

UNIT – IV (9 Hours)

Establish and satisfy customer needs, Monitor and solve customer service problems, Effective Stakeholder communication, Effective after sales service**,** Customer feedback Management

Essential/recommended readings

1. Sheth, J. N., & Parvatiyar, A. (2013). Handbook of Relationship Marketing. London, UK: Sage Publications Ltd.
2. S. Shanmugasundaram (2008) Customer relationship management, Prentice Hall of India Private Limted, New Delhi

Suggestive readings

1. Sheth, J. N., Parvatiyar, A., & Shainesh, G. (2017). Customer Relationship Management: Emerging Concept, Tools and Applications. India: McGraw Hill.
2. Stone, M., & Woodrock, N. (1995). Relationship Marketing. London: Kogan Page.
3. Rai Kumar Alok (2011) Customer relationship management- Concept and Cases, Prentice Hall of India Private Limted, New Delhi. 2011

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Discipline Specific Course

Bachelor of Vocation - Retail Management & IT course

DISCIPLINE SPECIFIC ELECTIVE –DSE- 1 Retail Team organization and Dynamics

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course(if any)
		Lecture	Tutorial	Practical/ Practice		
DSE-1 Retail Team organization and Dynamics	**4**	**3**	**1**	**0**	Class XII Pass	**NA**

Learning Objectives

Upon completion of this course, students will be able to understand the importance of effective team organization in the retail industry.Analyze the dynamics of retail teams and their impact on overall performance.

Learning outcomes

By studying this course, students will be able to:

1. Assess the effectiveness of retail team organization and propose improvements for enhanced performance.
2. Implement leadership and communication strategies to foster teamwork and collaboration.
3. Develop recruitment and training processes that align with the needs of the retail organization.
4. Design performance management systems to motivate and support retail team members.
5. Apply conflict resolution techniques to maintain a positive work environment and resolve issues.
6. Evaluate the impact of diversity and inclusion on retail team dynamics and propose inclusive practices.

SYLLABUS

UNIT – I (9 Hours)

Introduction to Retail Team Organization: Importance of effective team organization in retail, Team dynamics and their impact on retail performance, Types of retail teams (sales, customer service, merchandising, etc.); Leadership and Communication in Retail Teams: Qualities of effective retail leaders, Communication strategies for team cohesion, Team meetings and feedback mechanisms.

UNIT – II (10 Hours)

Recruitment and Training in Retail Teams: Recruitment strategies for attracting top talent, On boarding and orientation for new team members, Continuous training and skill development; Performance Management in Retail Teams, Setting performance goals and expectations, Performance evaluation and feedback, Employee recognition and incentive programs.

UNIT – III (14 Hours)

Conflict Resolution in Retail Teams: Identifying sources of conflict in retail settings, Techniques for resolving conflicts and fostering collaboration, dealing with difficult team dynamics and personalities,; Problem-Solving in Retail Teams, Analyzing retail challenges and finding solutions as a team, Decision-making processes in retail team settings, Creative problem-solving techniques; Diversity and Inclusion in Retail Team Organization, Benefits of diverse and inclusive retail teams, Promoting diversity in recruitment and hiring practices, Creating an inclusive work environment.

UNIT – IV (12 Hours)

Building Team Culture and Morale: Cultivating a positive team culture in retail settings, Employee engagement and morale-boosting activities, Team-building exercises and workshops; Managing Remote and Hybrid Retail Teams, Strategies for effectively managing remote and hybrid teams, Communication and collaboration tools for dispersed teams, Overcoming challenges of remote work in retail; Real-World Retail Case Studies.

Essential/recommended readings

1. "The 5 Dysfunctions of a Team: A Leadership Fable" by Patrick Lencioni.
2. "Crucial Conversations: Tools for Talking When Stakes Are High" by Al Switzler, Joseph Grenny, and Ron McMillan.
3. "The Retail Revival: Reimagining Business for the New Age of Consumerism" by Doug Stephens.

Suggestive readings

1. "Good to Great: Why Some Companies Make the Leap...And Others Don't" by Jim Collins.

4. "Team of Teams: New Rules of Engagement for a Complex World" by General Stanley McChrystal.
5. "The Five Most Important Questions You Will Ever Ask About Your Organization" by Peter F. Drucker.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVE –DSE-1 Merchandise Planning

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course(if any)
		Lecture	Tutorial	Practical/ Practice		
DSE-1 Merchandise Planning	**4**	**3**	**1**	**0**	Class XII Pass	**NA**

Learning Objectives

Upon completion of this course, students will be able to understand the concept of merchandise planning and its significance in retail operations. Analyze market trends, consumer behavior, and external factors influencing merchandise planning decisions. Develop skills in assortment planning and product selection to meet customer demands.

Learning outcomes

By studying this course, students will be able to:

1. Demonstrate a comprehensive understanding of merchandise planning principles and their application in retail settings.
2. Analyze and interpret market data, customer insights, and external factors to make informed merchandise planning decisions.
3. Create effective merchandise assortment plans based on market demands, seasonality, and target audience preferences.
4. Implement inventory management techniques to minimize stockouts and overstock situations while optimizing cash flow.

SYLLABUS

UNIT – I (12 Hours)

Introduction to Merchandise Planning, Definition and importance of merchandise planning in retail, Merchandise planning process and its components, Market Analysis and Consumer Behavior, Analyzing market trends and competitors, Understanding consumer behavior and preferences, Identifying factors influencing buying decisions.

UNIT – II (9 Hours)

Assortment Planning and Product Selection, Creating merchandise categories and subcategories, Product lifecycle management, Assortment optimization techniques

UNIT – III (12 Hours)

Inventory control methods (ABC analysis, EOQ, safety stock), Inventory forecasting and demand planning, Pricing Strategies and Promotional Planning, Pricing tactics (cost-based, value-based, and competitive-based), Promotions and discounts in merchandise planning, Seasonal and event-based promotions.

UNIT – IV (12 Hours)

Utilizing data for merchandise decision-making, Introduction to merchandise planning software and tools, Demand forecasting techniques, Performance Evaluation and Adjustment, Key performance indicators (KPIs) for merchandise planning, Evaluating merchandise plan effectiveness.

Essential/recommended readings

1. "Retail Management: A Strategic Approach" by B. Pattnaik and P. R. Kumar
2. "Merchandising Mathematics for Retailing" by Cynthia R. Easterling and Ellen L. Flottman
3. "Retailing Management: Text and Cases" by Swapna Pradhan

Suggestive readings

1. "Merchandising Mathematics for Retailing" by Cynthia R. Easterling and Ellen L. Flottman
2. "Fashion Buying: From Trend Forecasting to Shop Floor" by Dimitri Koumbis
3. "The New Rules of Retail: Competing in the World's Toughest Marketplace" by Robin Lewis and Michael Dart

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

SEMESTER-4

Bachelor of Vocation - Retail Management & IT course

DISCIPLINE SPECIFIC CORE COURSE – DSC-10 Material Planning and Control

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSC-10 Material Planning and Control	4	3	1	0	Class XII	Nil

Learning Objectives

The course aims to enhance the understanding of the basic concept of material planning and evaluating various costs in material management.

Learning outcomes

By studying this course, the students will be able to:

- Have basic understanding of costing for decision making.
- Have knowledge of standard costing.
- Develop in-depth understanding of budgeting and budgetary control.
- Understand the usage of computers in materials management.
- Develop skill to evaluate the Material Management Function

SYLLABUS OF DSC-10

UNIT–I: (15 Hours)

Costing for Decision making: Marginal Cost, Fixed and Variable Costs (Period and Product Costs), Marginal Costing System, Marginal Cost Equation, Profit -Volume Ratio, Break Even Analysis, Margin of Safety, Cost-Volume Profit Analysis and its Uses, Concept of Relevant Costs in Decision Making.

UNIT – II: (15 Hours)

Budgeting &Budgetary Control: Meaning of Budget, Types of Budgets, Budgetary Control System, Material Requirement Planning, Principal Budget Factor, Budget Manual, Preparation of Different Types of Budgets Like Sales, Production, Material Consumption, Purchase Budget etc. Fixed and Flexible Budget.

UNIT – III: (9 Hours)

Standard Costing: Meaning of standard cost, Standard Costing System, Material Cost Variance Analysis.

UNIT – IV: (6 Hours)

Evaluation of Material Management Function: Meaning and Procedure. Evaluation Tools and Techniques.

Essential/recommended readings

1. Dutta A.K. (1998) Materials Management: Procedures, Text and cases 2nd edition, Prentice Hall of India Pvt. Ltd., New Delhi.
2. Gopalakrishnan, P. and Sundarson, M. (2007) Materials Management: An Integrated Approach, Prentice Hall of India Pvt. Ltd., New Delhi.

Suggestive readings

1. Maheshwari• & Mittal (2010) Management Accounting 3rd edition, Shree Mahavir Book, Depot, New Delhi.
2. Saxena, V.K. and Vashist CD (2015) Cost and Management Accounting, 7th edition• Sultan Chand and Sons, New Delhi.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE – DSC-11 Retail Branding and Strategy

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course(if any)
		Lecture	Tutorial	Practical/ Practice

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course(if any)
		Lecture	Tutorial	Practical/ Practice		
DSE-2 Warehouse Management in Retail	**4**	**3**	**1**	**0**	Class XII Pass	**NA**

Learning Objectives

Upon completion of this course, students will be able to understand the role and significance of efficient warehouse management in the retail supply chain.Analyze the key components and processes involved in warehouse operations. Comprehend the principles of inventory management and control in a retail warehouse setting.

Learning outcomes

By studying this course, students will be able to:

1. Assess the efficiency of retail warehouse management practices and propose enhancements.
2. Implement inventory management techniques to ensure accurate stock levels and minimize stockouts.
3. Optimize warehouse layout and space utilization for improved productivity.
4. Design and execute effective order picking and packing processes to meet customer demands.
5. Utilize technology-driven warehouse management solutions for enhanced efficiency and accuracy.
6. Implement safety protocols and compliance measures to create a secure warehouse environment.

SYLLABUS

UNIT – I (12 Hours)

Introduction to Warehouse Management in Retail: Importance of efficient warehouse management in retail operations, Role of the warehouse in the retail supply chain, Warehouse management challenges and trends: Key Components of Warehouse Operations, Receiving and checking inbound shipments, Storage and shelving systems in retail warehouses, Order processing and outbound logistics: Inventory Management and Control, Inventory tracking and stock rotation methods, Demand forecasting and replenishment strategies, Minimizing stock outs and excess inventory.

UNIT – II (12 Hours)

Warehouse Layout and Space Utilization: Principles of efficient warehouse layout design, Racking systems and material handling equipment, Maximizing space utilization in a retail warehouse, Order Picking and Packing Strategies, Order picking methods (batch picking, zone picking, etc.), Packing techniques for different types of products, Order verification and accuracy checks.

UNIT – III (9 Hours)

Technology Applications in Warehouse Management: Warehouse management systems (WMS) and their features, Barcode scanning and RFID technology in retail warehouses, Automation and robotics in warehouse operations, Safety and Compliance in Retail Warehouses, Warehouse safety guidelines and best practices, Occupational health and safety considerations.

UNIT – IV (12 Hours)

Returns Management and Reverse Logistics: Handling customer returns and reverse logistics processes, Reworking and restocking returned products, Managing the environmental impact of returns; Warehouse Performance Metrics and Analysis, Key performance indicators (KPIs) for retail warehouse management, Data analytics for warehouse performance evaluation, Continuous improvement in warehouse operations.

Essential/recommended readings

1. "Warehouse Management: A Complete Guide to Improving Efficiency and Minimizing Costs in the Modern Warehouse" by Gwynne Richards.
2. "Essentials of Inventory Management" by Max Muller.
3. "Warehouse Management and Inventory Control" by G. Don Taylor.

Suggestive readings

		Lecture	Tutorial	Practical/ Practice		
DSE-2 Retail Technology and Innovation	**4**	**3**	**1**	**0**	Class XII Pass	**NA**

Learning Objectives

Upon completion of this course, students will be able to understand the significance of retail technology and innovation in modern business environments. Analyze the impact of retail technology on consumer shopping behavior. Evaluate the various technologies and tools used in retail. Explore the challenges and opportunities of implementing retail technology in different retail formats.

Learning outcomes

By studying this course, students will be able to:

1. Articulate the role of technology and innovation in shaping the retail industry.
2. Critically analyze the influence of retail technology on consumer behavior and preferences.
3. Identify and apply appropriate retail technologies for specific retail formats and business models.
4. Evaluate the impact of digitalization on the supply chain and inventory management in retail.
5. Develop effective strategies to address ethical and privacy challenges associated with retail technology.

SYLLABUS

UNIT – I (12 Hours)

Introduction to Retail Technology and Innovation: Definition and scope of retail technology, The role of innovation in the retail industry, Historical overview of retail technology adoption, Online shopping trends and preferences, The psychology of online buying decisions, Impact of mobile technology on consumer behavior.

UNIT – II (10 Hours)

Key Technologies Shaping Retail: Artificial Intelligence and machine learning applications in retail, Internet of Things (IoT) and smart retail solutions, Augmented Reality (AR) and Virtual Reality (VR) in retail.

UNIT – III (11 Hours)

RFID and inventory tracking systems, Demand forecasting and supply chain optimization, Automation in warehousing and fulfilment centres, Retail Data Analytics and Personalization: Customer data collection and privacy concerns, Utilizing data analytics for personalized marketing, Customer segmentation and targeting strategies.

UNIT – IV (12 Hours)

Ethical Considerations in Retail Technology: Data privacy and security issues, The impact of technology on employment in the retail sector, Sustainable and responsible retail practices, Integrating Technology for Enhanced Customer Experience, Mobile apps and in-store technology, Virtual shopping experiences and interactive displays, Loyalty programs.

Essential/recommended readings

1. "The Tech Whisperer: On Technology and Retail" by Alok Bardiya
2. "Digital Retailing in India: Evolution or Revolution" by Abhay Kumar

Suggestive readings

1. "The Retail Revival: Reimagining Business for the New Age of Consumerism" by Doug Stephens
2. "The Everything Store: Jeff Bezos and the Age of Amazon" by Brad Stone

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

GENERAL ELECTIVE –GE-4 Visual Merchandising and Space Planning

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course(if any)
		Lecture	Tutorial	Practical/ Practice		
GE-4 Visual Merchandising and Space Planning	**4**	**3**	**1**	**0**	Class XII Pass	**Should have studied GE -3 B.Voc-RM&IT**

Learning Objectives

Upon completion of this course, students will be able to understand the principles and importance of visual merchandising in retail environments. Analyze the elements of effective visual merchandising and their impact on consumer behavior.

Learning outcomes

By studying this course, students will be able to:

1. Apply the principles of visual merchandising to create captivating and engaging retail displays.
2. Design and execute effective window displays that attract customers and communicate brand messages.
3. Utilize space planning techniques to optimize the use of retail floor space and enhance the shopping journey.
4. Analyze consumer behavior in the context of visual merchandising and space planning.
5. Implement technology-driven visual merchandising solutions to enhance customer engagement.
6. Assess store layout designs and propose improvements to maximize sales and foot traffic.

SYLLABUS

UNIT – I (9 Hours)

Introduction to Visual Merchandising and Space Planning: Definition and importance of visual merchandising, Role of space planning in retail environments, Relationship between visual merchandising and store layout; Elements of Effective Visual Merchandising: Colour, lighting, and visual composition, Merchandise presentation and styling, Signage and branding in visual displays, Window Displays and Storefronts.

UNIT – II (12 Hours)

Psychology of Visual Merchandising: Understanding consumer behavior in retail settings, Visual merchandising and buying impulses, creating emotional connections through displays, Space Planning and Store Layout, Store layout design principles, Traffic flow management and customer navigation, Maximizing retail floor space for optimal product placement.

UNIT – III (12 Hours)

Technology in Visual Merchandising: Augmented reality (AR) and virtual reality (VR) applications, Digital signage and interactive displays, Incorporating technology into visual displays, Visual Merchandising for Different Retail Formats, Visual merchandising in department stores, Visual presentation in boutique and specialty stores, Visual strategies for pop-up shops and temporary spaces.

UNIT – IV (12 Hours)

Retail Fixture and Display Design: Selecting and arranging retail fixtures, Creating flexible and adaptable display systems, Sustainability and eco-friendly fixture design, Promotional Visual Merchandising, Promotional strategies and seasonal displays, Visual merchandising for sales and special events, Coordinating promotional campaigns with visual displays; Real-World Retail Case Studies: Analyzing successful visual merchandising and space planning examples, Identifying challenges and proposing innovative solutions.

Essential/recommended readings

1. "The Art of Visual Merchandising: Display and Decoration in the Retail Store" by Martin M. Pegler.
2. "Visual Merchandising: Display and Design of Retail Stores" by Tony Morgan.
3. "New Retail Space" by Raul A. Barreneche.

Suggestive readings

1. Space Planning for Commercial and Residential Interiors" by Sam Kubba.
2. "Window and Interior Display: The Principles of Visual Merchandising" by Tony Morgan.
3. "Visual Merchandising and Display" by Martin M. Pegler.
4. "Store Design and Visual Merchandising: Creating Store Space That Encourages Buying" by Claus Ebster and Marion Garaus.
5. "Retail Design: Theoretical Perspectives" edited by Lynne C. Lancaster and David G. Duman.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

(Semester-5)

Bachelor of Vocation - Retail Management & IT course

DISCIPLINE SPECIFIC CORE COURSE – DSC-13 Introduction to Logistic Management

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course(if any)
		Lecture	Tutorial	Practical/ Practice		
DSC-13 Introduction to Logistic Management	**4**	**3**	**1**	**0**	**Class XII**	**Nil**

Learning Objectives

The course aims to provide an understanding Integrated Logistics & Quality Customer Service.

Learning outcomes

By studying this course, students will be able to:

- Have basic understanding of the concept of logistics
- Understand the logistics management
- Develop proficiency in understanding logistics strategies
- Develop the skill of effectively outsourcing logistics

SYLLABUS OF DSC-13

UNIT – I (10 Hours)

Logistics Framework: Concept, Objective and Scope, Transportation, Warehousing, Inventory Management, Packing and Unitization, Control and Communication.

UNIT – II (10 Hours)

Role of Information Technology in Logistics, Logistics Service Firms and Third Party Logistics outsourcing- challenges and future directions.

UNIT – III (14 Hours)

Retail Logistics Network Design for Global Operations: Global Logistics Network Configuration, Orienting International Facilities, Considerations and Framework, Trade-offs Associated with each Approach, Mapping the Different Approaches, Capacity Expansion Issues, Information Management for Global Logistics

UNIT – IV (11 Hours)

Role and importance, Factors influencing transportation and warehousing decision, Importance of Multimodal Transport and containerization, Cost effectiveness of various modes of transport and types of warehouses.

Essential/recommended readings

1. Chopra, S. & Meindl, P. (2007). Supply Chain Management: Strategy, Planning and Operation, Pearson Education.
2. David J Bloomberg, Stephen Lemay, (2015) Logistics 8th edition, Pearson Education.
3. Hult, M. G., Closs, D., Frayer, D. Global (2014). Supply Chain Management: Leveraging Processes, Measurements, and Tools for Strategic Corporate Advantage. Mc Graw Hill Ltd.

Suggestive readings

4. Shapiro, J.F. (2007). Modelling the Supply Chain, Cengage Learning.
5. Simchi-Levi, D., Kaminsky, P., Simchi-Levi, E. & Ravi, Shankar (2008). Designing and Managing the Supply

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE –DSC-14 Supply Chain Management

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course(if any)
		Lecture	Tutorial	Practical/ Practice		
DSC- 14 Supply Chain Management	**4**	**3**	**1**	**0**	**Class XII**	**Nil**

Learning Objectives

The course aims to provide basic understanding of supply chain management.

Learning outcomes

By studying this course, students will be able to:

- Have knowledge of supply management systems
- Have in-depth understanding of cross functional teams and supply management, information sharing
- Develop proficiency in quality management concepts
- Understand the importance of supply chain in retail.

SYLLABUS OF DSC-14

UNIT – I (14 Hours)

Introduction to supply chain management; global optimization; future trends in supply chain management; increasing supply chain responsiveness, Procurement Process and sourcing decision; procurement process perspective, strategies & trends in procurement, The sourcing decision and strategies, E- Procurement, risk and benefits of outsourcing.

UNIT – II (12 Hours)

Supply management systems: B2B, Strategic Supply Management. Enabling Concepts in Supply: Buyer-supplier relationship: Developing and Managing collaboration and Alliance relationship, Social issues & Relationship development in S.C.M.

UNIT – III (10 Hours)

Cross-functional teams and supply-Management Activities. Challenges and problems with cross functional approach, ERP Systems, Negotiations and Bidding, Information sharing.

UNIT – IV (9 Hours)

Quality Management Concepts: ISO Certification. Methods of Control: Product, Process, Risk, Evolution, Management Approaches, Quality Management Support System.

Essential/recommended readings

1. Chopra S, Meinde P & Kalra D.V. (2009) SCM-Strategy Planning & Operation, 3rd Edition, Pearson Education.
2. Fawcelt, Ellram & Ogden (2007) Supply Chain Management, From Vision to Implementation, Pearson education.

Suggestive readings

1. Render Barry, Stair, Hanna & Badri (2008) Quantative Analysis for Management, 10th Edition, Prentice Hall.
2. Saxena Anurag & Kaushik Sircar (2008) Logistics and SCM, Jaico Publishing House, 2008
3. Vohra N.D. (2006) Quantitative Techniques in Management, 3rd edition, McGraw Hill 2006

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE –DSC-15 Packing and Packaging Management

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course(if any)
		Lecture	Tutorial	Practical/ Practice		
DSC-15 Packing and Packaging Management	**4**	**3**	**1**	**0**	**Class XII**	**Nil**

Learning Objectives

The course aims to provide knowledge to differentiate packaging and packing.

Learning outcomes

By studying this course, students will be able to:

- Get an overview of types of packaging
- Develop basic understanding of packing considerations
- Have an understanding of different materials used for packing
- Develop proficiency in managing the economics of packaging

SYLLABUS OF DSC-15

UNIT – I (12 Hours)

Packing and Packaging: Meaning, Functions and Essentials of Packing and Packaging. Difference, Types of packing: for Storage, Overseas Shipment, Inland Transportation, Packaging for Product content Protection, Test of packaging: Mechanical, Climatic & Lab test, International Care labeling code, Packaging cost.

UNIT – II (12 Hours)

Packaging Types, Requirements of Consumer Packaging, Channel Member Packaging and Transport Packaging, Shrink packaging, Identification codes, bar codes, and electronic data interchange (EDI), Universal Product Code, GSI Standards.

UNIT – III (12 Hours)

Packaging/Packing Materials & Components: Various Materials/Metals, Packaging Demands of Consumer goods Industry, Packaging Demands of Industrial Users, Technology Trends in Packaging Industry, Aseptic processing, Authentication, Automatic identification and data capture.

UNIT – IV (9 Hours)

Packaging Economics: Packaging Cost Vs Product cost, Cost Reduction in Packaging, Packing for Inventory Control, Value Analysis, Packing and Value Engineering, Standardization in Packaging, Quality assurance, Radio- frequency identification, Track and trace.

Essential/recommended readings

1. Calver, G. (2003) 'What Is Packaging Design', Rot vision.
2. Dean, D. A. (2000) 'Pharmaceutical Packaging Technology' Taylor & Francis.
3. McKinley, A. H. (2004) 'Transport Packaging', IoPP.

Suggestive readings

1. Scott Boylston (2009) Designing Sustainable Packaging, Lawrence King.
2. Soroka, W (1995) 'Fundamentals of Packaging Technology', IPP.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVE –DSE-3 Retail Store Operations

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course(if any)
		Lecture	Tutorial	Practical/ Practice		
DSE-3 Retail Store Operations	**4**	**3**	**1**	**0**	Class XII Pass	**NA**

Learning Objectives

By the end of this course, students will be able to understand the fundamental concepts and theories related to retail store operations management.Evaluate and design an effective retail store layout to enhance the overall shopping experience. Implement inventory management techniques to optimize stock levels and minimize carrying costs. Develop strategies to improve customer service and handle customer complaints and inquiries.

Learning outcomes

By studying this course, students will be able to:

1. Demonstrate a comprehensive understanding of retail store operations management principles.
2. Compare and contrast different retail formats and their respective advantages and limitations.
3. Create and justify a well-designed retail store layout to enhance customer engagement and sales.
4. Propose an efficient inventory management plan based on demand forecasting and stock analysis.

SYLLABUS

UNIT – I (12 Hours)

Overview of Retail Industry and its significance, Retail Management Process and Functions, Retail Store Formats and Types, Retail Store Operations, Store Planning and Design, Inventory Management and Control, Supply Chain and Logistics Management in Retail.

UNIT – II (12 Hours)

Visual Merchandising Strategies and Techniques, Store Layout and Space Management, Customer Experience and Service Management, Understanding Customer Behavior and Preferences, Building Customer Loyalty and Retention, Customer Feedback and Satisfaction Measurement.

UNIT – III (12 Hours)

Retail Analytics and Data-Driven Decision Making, Importance of Retail Analytics, Collecting and Analyzing Retail Data, Using Data for Business Decision Making; Leadership and Team Management in Retail, Retail Store Team Structure and Roles, Effective Leadership and Communication Skills, Motivating and Managing Retail Store Teams.

UNIT – IV (9 Hours)

Compliance, Ethics, and Sustainability in Retail, Legal and Regulatory Compliance in Retail, Ethical Practices in Retail Operations, Sustainable Retailing and Corporate Social Responsibility.

Essential/recommended readings

1. "Retail Management: A Strategic Approach" by B. Rajagopal.
2. "Indian Retail: Evolving Growth Strategies and Future Prospects" by Shoppers' Stop and R. Srinivasan.

Suggestive readings

1. "Retailing Management" by Swapna Pradhan.
2. "Retail Marketing Management" by Nisha and Swapna Pradhan.
3. "Strategic Retail Management: Text and International Cases" by Amitabh Mishra and Piyush Kumar Sinha.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVE –DSE-3 Multichannel Retail Marketing

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course(if any)
		Lecture	Tutorial	Practical/ Practice		
DSE-3 Multichannel Retail Marketing	**4**	**3**	**1**	**0**	Class XII Pass	**NA**

Learning Objectives

Upon completion of this course, students will be able to understand the concept of multichannel retail marketing and its importance in the modern business landscape. Analyze and compare different multichannel retail strategies used by Indian and international retailers. Identify the key challenges and opportunities in multichannel retail marketing.

Learning outcomes

By studying this course, students will be able to:

1. Explain the concept and significance of multichannel retail marketing and its role in enhancing customer experience and loyalty.
2. Critically evaluate and compare various multichannel retail strategies used by both Indian and international retailers.
3. Identify and analyze the challenges and opportunities specific to multichannel retail marketing.
4. Apply multichannel marketing techniques to address the needs and preferences of target customers effectively.

SYLLABUS

UNIT – I (12 Hours)

Introduction to Multichannel Retail Marketing: Definition and evolution of multichannel retailing, Advantages and disadvantages of multichannel retail strategies, The impact of customer behavior on multichannel marketing, Multichannel Retailing Strategies, Offline vs. online vs. hybrid retail models, The role of mobile commerce and apps in multichannel retailing.

UNIT – II (10 Hours)

Digital Marketing in Multichannel Retailing: Search engine optimization (SEO) and search engine marketing (SEM), Social media marketing and influencer strategies, Email marketing and personalized communications.

UNIT – III (12 Hours)

Importance of data analytics in multichannel retailing, Key metrics and KPIs for evaluating multichannel marketing effectiveness, Data privacy and ethical considerations in data collection and analysis Integrating Offline and Online Channels; Creating seamless customer experiences across channels, Click-and-collect and ship-from-store strategies, Show rooming and web rooming in multichannel retailing.

UNIT – IV (11 Hours)

Building customer loyalty through rewards and incentives, Strategies to reduce churn and increase customer lifetime value, Voice commerce and conversational AI in retail, Sustainability and ethical considerations in multichannel marketing.

Essential/recommended readings

1. "The New Rules of Retail: Competing in the World's Toughest Marketplace" by Robin Lewis and Michael Dart
2. "Omnichannel Retail: How to Build Winning Stores in a Digital World" by Tim Mason
3. "Retail Marketing Management: Principles and Practice" by Chetan Bajaj and Rajnish Tuli

Suggestive readings

1. Customer Centricity: Focus on the Right Customers for Strategic Advantage" by Peter Fader
2. "The Long Tail: Why the Future of Business is Selling Less of More" by Chris Anderson
3. "Data Science for Business: What You Need to Know about Data Mining and Data-Analytic Thinking" by Foster Provost and Tom Fawcett
4. "Retailing Management" by Michael Levy and Barton A. Weitz

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

GENERAL ELECTIVE –GE-5 Sourcing and Vendor Management

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course(if any)
		Lecture	Tutorial	Practical/ Practice		
GE-5 Sourcing and Vendor Management	**4**	**3**	**1**	**0**	Class XII Pass	**Should have studied GE-4B.Voc-RM&IT**

Learning Objectives

Upon completion of this course, students will be able tounderstand the importance of sourcing and vendor management in the retail industry.Analyze the sourcing needs and requirements of a retail business.Evaluate and select appropriate vendors to meet the retail business's needs.Develop effective vendor management strategies to enhance collaboration and performance.

Learning outcomes

By studying this course, students will be able to:

1. Assess the sourcing and vendor management practices of a retail business and recommend improvements.
2. Formulate effective sourcing strategies tailored to the specific needs of a retail organization.
3. Develop a vendor selection process and criteria to align with the retail business's objectives.
4. Design a vendor management framework to foster better collaboration and mutual success.
5. Analyze and negotiate contractual agreements with vendors to maximize value and minimize risk.
6. Implement risk management techniques to mitigate potential disruptions in the supply chain.

SYLLABUS

UNIT – I (12 Hours)

Introduction to Sourcing and Vendor Management in Retail, Overview of sourcing and vendor management concepts in the retail industry, Importance of effective sourcing strategies for retail businesses; Sourcing Needs Analysis: Identifying and understanding the sourcing needs of a retail business, Conducting market research and supplier assessment.

UNIT – II (9 Hours)

Vendor Selection and Evaluation, Vendor selection criteria and processes in retail, Performance evaluation and supplier scorecards;Vendor Management Strategies: Building strong vendor relationships and effective communication, Collaborative planning, forecasting, and replenishment (CPFR).

UNIT – III (12 Hours)

Contract Negotiation and Management, Contracting methods and negotiation techniques in retail sourcing, Key contract clauses and legal considerations; Risk Management in Vendor Relationships: Identifying and assessing risks in the retail supply chain, Developing risk mitigation strategies and contingency plans.

UNIT – IV (12 Hours)

Sourcing and Vendor Management's Impact on the Bottom Line, Financial analysis and cost optimization in sourcing decisions, Measuring vendor performance and its effect on profitability; Ethical and Sustainable Sourcing in Retail: Ethical considerations in sourcing decisions, Implementing sustainability initiatives in the supply chain.

Essential/recommended readings

1. "Strategic Sourcing in the Retail Industry" by Michael Hugo and Judith Lynch
2. "Vendor Management Best Practices: Optimizing Supply Chain Collaboration" by Eric Evans
3. "The Procurement Game Plan: Winning Strategies and Techniques for Supply Management Professionals" by Charles Dominick and Soheila R. Lunney

Suggestive readings

1. Supplier Relationship Management: How to Maximize Vendor Value and Opportunity" by Christian Schuh, Michael F. Strohmer, and Stephen Easton
2. "The Sustainable Supply Chain: How to Create a Green Infrastructure with a Competitive Advantage" by Robert Sroufe and Steven Melnyk
3. "Negotiation Genius: How to Overcome Obstacles and Achieve Brilliant Results at the Bargaining Table and Beyond" by Deepak Malhotra and Max Bazerman
4. "Supply Chain Risk Management: An Emerging Discipline" by Gregory L. Schlegel and Robert J. Trent

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

SEMESTER-6

Bachelor of Vocation - Retail Management & IT course

DISCIPLINE SPECIFIC CORE COURSE –DSC-16 Retail Planning and Legal Framework

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course(if any)
		Lecture	Tutorial	Practical/ Practice		
DSC-16 Retail Planning and Legal Framework	**4**	**3**	**1**	**0**	**Class XII**	**Nil**

Learning Objectives

The course aims to provide fundamental understanding of strategic management of retail in India.

Learning outcomes

By studying this course, students will be able to:

1. Get holistic knowledge of retail operations.
2. Develop ability to manage the various aspects of human resources involved in retailing.
3. Develop proficiency in legal framework documentation involved in retailing.
4. Have comprehensive knowledge of mall management.

SYLLABUS OF DSC-16

UNIT – I (10 Hours)

Introduction to Strategic Management : Retailing, Role, Relevance & Trends, Retail Customer, Retail Market Segmentation & franchising, Relationship marketing in Retailing.

UNIT – II (10 Hours)

Social Marketing in Retail Management Strategic Management, Retail in India, Services Marketing and Management, Brand Management, International / Strategies, Pricing, Advertising & sales promotion.

UNIT – III (12 Hours)

Operations in Retailing: Retails location strategy, Product and Merchandise Management, TQM, EDP / MIS Logistics & SCM Security Measures, Footfalls / computerized methods non-computerized methods, Visual / Display methods, Merchandising & Management.

UNIT – IV (13Hours)

Legal framework for Retailing: License, Contracts & Recovery, Legal Process, PF/ESIC & Exemptions, PPF, IR Law: Shops & establishments, IPR Patents, Copy right & Trademarks, Procedural Compliance for Establishing an Retail Store, Customer Rights, Consumer Protection Acts, Unfair Trade Practices, Holding of Contests and Schemes, The Standards of Weights and Measures Act, Procedures applicable for a Retail Store.

Essential/recommended readings

1. Mathur U.C. (2010) Retail Management, I.K. International Publishing House Pvt. Ltd. New Delhi.
2. Nair Suja (2006) Retail Management, Himalya Publishing House, New Delhi.
3. Pradhan Swapna (2009) Retailing Management, Tata McGraw-Hill, New Delhi.

Suggestive readings

1. Varley Rosemary (2001) Retail Product Management, Routledge, New York.

V.S.Ramaswamy and S.Namakumari (2017) Marketing Management, Macmillan• Publishers India Ltd. New Delhi.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE –DSC-17 Enterprise Resource Planning

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course(if any)
		Lecture	Tutorial	Practical/ Practice		
DSC-17 Enterprise Resource Planning	**4**	**3**	**1**	**0**	**Class XII**	**Nil**

Learning Objectives

The course aims to provide an overview of enterprise resource planning (ERP).

Learning outcomes

By studying this course, students will be able to:

1. Get the knowledge of selection and implementation of ERP and business process re-engineering
2. Develop basic understanding of ERP packages and framework
3. Develop the knowledge of technical architecture of ERP systems
4. Get understanding of ERP, supply chain management and SAP

SYLLABUS OF DSC-17

UNIT – I (12 Hours)

Enterprise Resource Planning: Evolution of ERP, difference between integrated and traditional information systems, early and new ERP packages, overview of ERP packages, ERP products and markets, players and characteristics, benefits of ERP implementations, critical success factors, pitfalls.

.

UNIT – II (12 Hours)

Opportunities and problems in ERP selection and implementation, ERP implementation, identifying ERP benefits, team formation-consultant intervention, Business Process

Reengineering (BPR) concepts: emergence of reengineering, business process, rethinking of processes, identification of reengineering

UNIT – III (12 Hours)

Retailing organizations, Formulation and evaluation of strategic options within retailing organizations, Mergers, Acquisition and strategic alliances involving retailers, Analysis of organization structure and design among retail organizations.

UNIT – IV (9 Hours)

Technical Architecture of ERP Systems: Communication and networking facilities, distributed computing, client server systems, concepts of business objects, distributed object, computing architecture, support for data mining and warehousing, EDI, internet and related technologies, Net technologies.

Essential/recommended readings

1. Jyothindra Zaveri (2012) Enterprise Resource Planning Himalaya Publishing House Pvt. Ltd.
2. Motiwalla F. Luvai (2011) Enterprise Systems for Management 2 edition, Pearson.

Suggestive readings

1. Ptak, Carol A. & Eli Schragenheim (2000) Enterprise Systems for Management, St. Lucie Press NY.
2. D.P. Goyal, Enterprise Resource Planning.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE –DSC-18 Crisis Management in Retail

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course(if any)
		Lecture	Tutorial	Practical/ Practice		
DSC-18 Crisis Management in Retail	**4**	**3**	**1**	**0**	**Class XII**	**Nil**

Learning Objectives

To provide students with the ability to understand the principles, strategies and techniques for incident response and crisis management.

Learning outcomes

By studying this course, students will be able to:

1. Develop the knowledge and skills necessary for implementing an effective structure and processes for responding to and managing incidents and crises.
2. Get the knowledge of different types of crisis in retail.
3. Get the understanding of disaster management in retail.
4. Develop proficiency in designing crisis management strategies.

SYLLABUS OF DSC-18

UNIT – I (10 Hours)

Introduction to Crisis Management and Incident Management- Different Types of Crisis in retail, Crisis Leadership and Team Building, Crisis Management Centres - design and operation

.

UNIT – II (10 Hours)

Information Management - situational awareness & decision making under pressure, Media and Crisis Communications, Media Interview Training, Using Social Media in a Crisis

UNIT – III (12 Hours)

Exercise Excellence - design, delivery, review, Preparing for Epidemics, Pandemics and Disasters in the Workplace, Supporting People after Traumatic Incidents.

UNIT – IV (13 Hours)

Disaster Management **-** Basics of disaster management and Mass casualties**,** Components of disaster plan- pre and post, Disaster alertness, Disaster management planning and implementation, Severity of illness amongst disaster victims and risk assessment **,** Mock exercise on disaster management in Retail.

Essential/recommended readings

1. Marchesani Ph D V J, "The Fundamental of Crisis Management", Page Publishing, Inc.
2. Yunus D Saleh, "Crisis Management", Mill City Press Inc**.**

Suggestive readings

1. Bernstein Jonathan, "Manager's Guide to Crisis Management", Briefcase Books Series.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVE –DSE-4 Personnel Management in Retail

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course(if any)
		Lecture	Tutorial	Practical/ Practice		
DSE-4 Personnel Management in Retail	**4**	**3**	**1**	**0**	Class XII Pass	**NA**

Learning Objectives

By the end of this course, students will be able to understand the importance of personnel management in the retail industry and its impact on organizational success.Identify the key functions and responsibilities of personnel managers in a retail setting. Apply effective recruitment and selection techniques to hire the right talent for retail positions. Develop strategies for employee training, development, and performance improvement in a retail environment.

Learning outcomes

By studying this course, students will be able to:

1. Demonstrate a comprehensive understanding of personnel management principles and their applications in the retail sector.
2. Apply various recruitment and selection techniques to attract and hire suitable candidates for retail positions.
3. Design and implement effective employee training programs to enhance their skills and knowledge in a retail environment.
4. Asses and manage employee performance, providing constructive feedback and support for improvement.
5. Formulate employee engagement strategies to boost morale and reduce turnover in a retail setting.

SYLLABUS

UNIT – I (12 Hours)

Introduction to Retail Personnel Management: Definition and significance of personnel management in the retail sector, Evolution of personnel management practices in retail, Role of personnel managers in retail organizations; Recruitment and Selection in Retail: Job analysis and job descriptions for retail

positions, Effective recruitment strategies: internal and external sources, Selection techniques and conducting interviews for retail positions.

UNIT – II (12 Hours)

Training and Development in Retail, Identifying training needs in the retail workforce, Designing and implementing retail-specific training programs, Evaluating the effectiveness of training initiatives, Performance Management in Retail, Setting performance standards and expectations in retail jobs, Performance appraisal methods and their relevance in retail, Providing feedback and coaching for improved performance.

UNIT – III (12 Hours)

Employee Engagement in Retail: Understanding employee motivation and engagement in the retail context, Designing employee recognition and reward programs in retail, Promoting work-life balance and employee well-being, Employee Relations and Conflict Management, Addressing employee grievances and resolving conflicts in retail, Implementing disciplinary actions and maintaining a positive work environment, Dealing with employee turnover and retention strategies.

UNIT – IV (9 Hours)

Ensuring fairness, diversity, and inclusivity in retail HR practices, Ethical challenges and best practices in retail HR management, Emerging Trends in Retail Personnel Management, Technology's impact on HR practices in the retail industry, Adapting to remote work and virtual teams in retail, Sustainable HR practices in the retail sector.

Essential/recommended readings

1. "Retail Management: A Strategic Approach" by Swapna Pradhan
2. "Human Resource Management in Retail" by S. Venkata Subbaiah
3. "Retail Marketing Management: Principles and Practice" by Chetan Bajaj and Ricky W. Griffin

Suggestive readings

1. "Retail Human Resource Management: Contemporary Issues and Cases" by Barry J. Babin and Brian D. Tietje
2. "Strategic Human Resource Management in Retailing" by Janet H. Marler and Shad S. Morris
3. "Human Resource Management in Retail: A Research Agenda" by Mike Noon and Stephen Bach

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVE –DSE-4 Retailing in India- Growth & Challenges

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course(if any)
		Lecture	Tutorial	Practical/ Practice		
DSE-4 Retailing in India- Growth & Challenges	**4**	**3**	**1**	**0**	Class XII Pass	**NA**

Learning Objectives

Upon completion of this course, students will be able to understand the evolution and current status of the retail sector in India. Identify the factors contributing to the growth of the Indian retail industry. Analyze the challenges faced by retailers and the broader retail ecosystem. Evaluate the impact of technology and digitalization on retailing in India.

Learning outcomes

By studying this course, students will be able to:

1. Describe the historical development and transformation of the retail industry in India.
2. Analyze the key drivers that have led to the growth of organized and unorganized retail in the country.
3. Identify the major challenges faced by retailers, including supply chain issues, competition, and changing consumer behavior.
4. Discuss the impact of e-commerce and digital disruption on traditional retail models.

SYLLABUS

UNIT – I (10 Hours)

Growth Drivers of Indian Retail, Rise of the middle class and increasing disposable income, Urbanization and changing consumer lifestyles, Demographic dividend and youth population, Technological advancements and digitalization.

UNIT – II (11 Hours)

E-commerce and its impact on traditional retail, Challenges Faced by Indian Retailers, Supply chain and logistics issues, Intense competition and pricing pressures, Regulatory hurdles and licensing requirements, Consumer preferences and brand loyalty.

UNIT – III (12 Hours)

Role of Government Policies in Retail Growth, FDI regulations and its impact on the sector, Goods and Services Tax (GST) and its implications, Retail trade reforms and liberalization, Technology and Digital Transformation in Retail, Data analytics and personalized marketing, Inventory management and AI-driven solutions.

UNIT – IV (12 Hours)

Future Trends and Opportunities, Emerging retail trends in India and globally, Opportunities in niche markets and regional retailing, Sustainable and socially responsible retail practices, Social and Economic Impact of Retail Growth, Employment generation, Impact on traditional mom-and-pop stores, Effects on local economies and small-scale industries.

Essential/recommended readings

1. "The Retail Revolution in India" by Rajiv Lal and Arar Han
2. "Indian Retail Industry: Past, Present & Future" by Dr. C.S. Mukundan
3. "The New Rules of Retail: Competing in the World's Toughest Marketplace" by Robin Lewis and Michael Dart

Suggestive readings

1. "Retail Management: A Strategic Approach" by Barry Berman and Joel R. Evans
2. "Retail Marketing Management" by David Gilbert
3. Retailing Management" by Michael Levy and Barton A. Weitz

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

GENERAL ELECTIVE –GE-6 Sales and Service excellence

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course(if any)
		Lecture	Tutorial	Practical/ Practice		
GE-6 Sales and Service excellence	**4**	**3**	**1**	**0**	Class XII Pass	**Should have studied GE - 5B.Voc-RM&IT**

Learning Objectives

By the end of this course, students should be able to understand the fundamental concepts of sales and service excellence.Identify and analyze customer needs to tailor sales strategies accordingly. Develop effective sales communication and negotiation skills. Implement relationship-building techniques to foster long-term customer loyalty.

Learning outcomes

By studying this course, students will be able to:

1. Demonstrate an understanding of the key principles and theories related to sales and service excellence.
2. Evaluate customer needs and preferences to design customized sales approaches.
3. Employ effective communication and persuasion techniques to close sales successfully.
4. Apply relationship-building strategies to retain existing customers and attract new ones.
5. Address customer complaints and conflicts with empathy and professionalism.
6. Utilize data-driven insights to optimize sales strategies and performance.
7. Exhibit ethical behavior and integrity in all sales and service interactions.

SYLLABUS

UNIT – I (12 Hours)

Introduction to Sales and Service Excellence: Definition and importance of sales and service excellence, Historical perspectives and current trends in sales and customer service, Understanding Customer Behavior, Customer psychology and decision-making processes, Customer segmentation and targeting strategies.

UNIT – II (9 Hours)

Sales Communication and Negotiation Skills: Effective communication techniques in sales, Negotiation strategies to reach win-win outcomes, Customer Relationship Management (CRM), Building and maintaining customer relationships, CRM tools and technology.

UNIT – III (12 Hours)

Handling Customer Complaints and Challenging Situations: Dealing with difficult customers, Conflict resolution and problem-solving techniques, Data Analytics in Sales and Service, Utilizing data to make informed sales decisions, Customer analytics and predictive modelling.

UNIT – IV (12 Hours)

Upselling and Cross-selling Strategies: Identifying upselling and cross-selling opportunities, Techniques for suggestive selling, Ethics and Integrity in Sales and Service, Importance of ethical behavior in sales and customer service, Ethical dilemmas and their resolutions.

Essential/recommended readings

1. "The Psychology of Selling" by Brian Tracy
2. "Customer Satisfaction Is Worthless, Customer Loyalty Is Priceless" by Jeffrey Gitomer
3. "To Sell Is Human: The Surprising Truth About Moving Others" by Daniel H. Pink

Suggestive readings

1. "The Challenger Sale: Taking Control of the Customer Conversation" by Matthew Dixon and Brent Adamson
2. "Customer Success: How Innovative Companies Are Reducing Churn and Growing Recurring Revenue" by Nick Mehta, Dan Steinman, and Lincoln Murphy
3. "Customer Relationship Management: Concept, Strategy, and Tools" by V. Kumar and Werner Reinartz
4. "Predictive Analytics: The Power to Predict Who Will Click, Buy, Lie, or Die" by Eric Siegel

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

SEMESTER-III
B.Voc Software Development
Ramanujan College
Detailed Syllabus – Discipline Specific Core

DISCIPLINE SPECIFIC CORE COURSE – DSC-07: DATA STRUCTURES

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Data Structures	4	3	0	1	Class XII pass with Mathematics	DSC-01

Learning Objectives:

1. *To introduce the fundamentals of data structures*
2. *To get familiar with programming*

Learning Outcomes:

1. *Develop the ability to use basic data structures like array, stacks, queues, lists, trees and hash tables to solve problems.*
2. *Use well-organized data structures in solving various problems.*
3. *Differentiate the usage of various structures in problem solutions.*
4. *Implement algorithms to solve problems using appropriate data structures.*

Unit I **(5 hours)**

Arrays: Single and multi-dimensional arrays, analysis of insert, delete and search operations in arrays (both linear search and binary search), implementing sparse matrices, applications of arrays to sorting: selection sort, insertion sort, bubble sort, comparison of sorting techniques via empirical studies.

Unit II **(5 hours)**

Linked Lists: Singly- linked, doubly-linked and circular lists, analysis of insert, delete and search operations in all the three types, implementing sparse matrices.

Unit III **(10 hours)**

Queues: Array and linked representation of queue, de-queue, comparison of the operations on queues in the two representations. Applications of queues.

Unit IV **(15 hours)**

Stacks: Array and linked representation of stacks, comparison of the operations on stacks in the two representations, implementing multiple stacks in an array; applications of stacks: prefix, infix and postfix expressions, utility and conversion of these expressions from one to another;

applications of stacks to recursion: developing recursive solutions to simple problems, advantages and limitations of recursion.

Unit V **(10 hours)**

Trees and Heaps: Introduction to tree as a data structure; binary trees, binary search trees, analysis of insert, delete, search operations, recursive and iterative traversals in binary search trees. Height-balanced trees (AVL), B trees, analysis of insert, delete, search operations on AVL and B trees. Introduction to heap as a data structure. Analysis of insert, extract-min/max and delete-min/ max operations, applications to priority queues.

Hash Tables: Introduction to hashing, hash tables and hashing functions -insertion, resolving collision by open addressing, deletion, searching and their analysis, properties of a goodhash function.

References

2. *Rance D. Necaise, Data Structures and Algorithms Using Python, John Wiley & Sons, Inc.*
3. *Introduction to Algorithms, by Cormen, Leiserson, Rivest, and Stein, MIT Press, Third Edition, 2009.*

List of Practical **(30 hours)**

A practical implementation of various data structure such as Array, Queues, Stacks, Linked List and Trees.

DISCIPLINE SPECIFIC CORE COURSE – DSC-08: Web Design and Development

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Web design and development	**4**	**3**	**0**	**1**	**Class XII**	**NIL**

***Learning objectives*:**

1. To introduce the fundamentals of Internet, and the principles of web design.
2. To construct basic websites using HTML and Cascading Style Sheets.
3. To build dynamic web pages with validation using Java Script objects and by applying different event handling mechanisms.
4. To develop modern interactive web applications using PHP, XML and MySQL

Learning Outcomes:

1. *Structure and implement HTML/CSS.*
2. *Implement basic JavaScript.*
3. *Learn server side scripting language PHP and integration with database using MYSQL.*

UNIT-I **(5 Hours)**

Introduction to HTML & CSS:

HTML Basics, HTML Responsive, HTML Entities, HTML Forms, HTML5 Canvas, HTML5 SVG, HTML5 Data Storage, HTML5 Audio and Video , CSS Introduction, CSS Syntax, CSS Text, CSS Backgrounds, CSS Fonts, CSS Links, CSS Lists, CSS Tables, CSS Box Model, CSS Margins, Dimensions, Display, CSS Navigation Bar, CSS Attribute Selectors, CSS Rounded Corners, CSS Border Images, CSS Backgrounds, CSS Colors, CSS Animations.

UNIT-II **(10 Hours)**

Introduction to JavaScript:

JavaScript Introduction, JavaScript Output, JavaScript Variables, JavaScript Operators, JavaScript Arithmetic, JavaScript Data Types, JavaScript Assignment, JavaScript Functions, JavaScript Objects, JavaScript Scope, JavaScript Events, JavaScript Strings and String Methods, JavaScript Numbers and Number Methods, JavaScript Math, JavaScript Dates: Formats and Methods, JavaScript Booleans , JavaScript Comparisons, JavaScript Conditions, JavaScript Switch, JavaScript Loops, JavaScript Break, JavaScript Type, JavaScript Forms (API and Validation), JavaScript Objects, JavaScript Functions, JavaScript DOM, JavaScript Browser BOM, JavaScript Frameworks

UNIT-III **(15 Hours)**

Introduction to Bootstrap: Bootstrap Introduction, Bootstrap Components, Bootstrap Plugins, Bootstrap Grids, Bootstrap JS , PHP Introduction-Installing PHP, PHP Syntax, PHP Variables, PHP Data Types, PHP Strings, PHP Constants, PHP Operators, PHP Programming Loops, PHP Functions, PHP Arrays, PHP Super-global, PHP Forms and XML- PHP Form Handling, PHP Form Validation (Server side).

UNIT-IV **(15 Hours)**

PHP with MySQL: PHP MySQL Database, PHP Connecting to Database, PHP Creating Records, PHP Selecting Records, PHP Deleting Records, PHP Updating Records, PHP Limit Data, PHP Insert Multiple.

References

1. Learning PHP, MySQL & JavaScript: With JQuery, CSS & HTML5 by Robin Nixon , O'Reilly Media, Inc.

2. PHP and MySQL for Dynamic Web Sites: Visual QuickPro Guide by Larry Ullman , Fifth Edition.

List of Practicals (30 hours)

1. Design a home page which displays information about your college department using headings, HTML entities and paragraphs.
2. Implement different types of list tags, hyperlinks, marquee tag and HTML formatting tags in the college department homepage.
3. Create a web page having two frames, Frame 1 containing links and another with contents of the link. When a link is clicked appropriate contents should be displayed on Frame 2. Also, insert an iframe in the same page.
4. Design your course timetable and display it in tabular format.
5. Design an admission form for any course in your college with text, password fields, drop-down list, check-boxes, and radio buttons, submit and reset button etc. with proper CSS formatting.
6. Create a website for online book stores with Home, Login, Catalogue, Registration page with links to all these pages in a menu on top of every page. Embed heading, paragraph, images, video, .iframe, form controls, table, and list in this website. Use both Internal and external CSS in this.
7. Write a JavaScript program to display the current day and time.
8. Write a JavaScript program to
   a) Remove a character at the specified position of a given string and return the new string.
   b) Change the case of a string. (I.e. upper case to lower case and vice-versa).
9. Write a JavaScript program to compute the sum of elements of a given array of integers.
10. Develop and demonstrate a HTML file that includes JavaScript script for taking full name in a text field and display first, middle, last name *in 3 different labels. Middle and last name may be optional, thus messages like "NA" should be displayed in corresponding labels. If input contains 2 words, then they should be considered as first and last names.
11. Design HTML form for keeping student record, apply JavaScript validation for restriction of mandatory fields, numeric field, email-address field, specific value in a field etc.
12. Write a JavaScript code that displays text "Bigger Text" with increasing font size in the interval of 10ms in red color, when the font size reaches 50 pt. it displays "Smaller Text" in green color. Then the font size should decrease to 5pt and then stop.
13. Write a PHP script that removes the whitespaces from a string.
14. Create a login page having user name and password. On clicking submit, a welcome message should be displayed if the user is already registered (i.e.name is present in the database) otherwise error message should be displayed.
15. Create a simple 'birthday countdown' script, the script will count the number of days between current day and birth day.

DISCIPLINE SPECIFIC CORE COURSE – DSC-09: Operating Systems

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Operating Systems	**4**	**3**	**0**	**1**	**Class XII**	**NIL**

***Learning objectives*:**

1. *Learn fundamental operating system abstractions such as processes, threads, files, semaphores, IPC abstractions, shared memory regions, etc.,*
2. *Learn how the operating system abstractions can be used in the development of application programs, or to build higher level abstractions,*
3. *Learn how the operating system abstractions can be implemented,*
4. *Learn the principles of concurrency and synchronization, and apply them to write correct concurrent programs/software,*
5. *Learn basic resource management techniques (scheduling, time management, space management) and principles and how they can be implemented. These also include issues of performance and fairness objectives, avoiding deadlocks, as well as security and protection.*

Learning Outcomes:

1. *Understand the need of an Operating System & Define Multiprogramming and multithreading concepts.*
2. *Implement Process Synchronization service (Critical Section, Semaphores), CPU scheduling service with various algorithms.*
3. *Learn Main memory Management (Paging, Segmentation) algorithms, Handling of Deadlocks*
4. *Identify and appreciate the File systems Services, Disk Scheduling service*

UNIT - I **(5 hours)**

Introduction: Operating Systems (OS) definition and its purpose, Multi-programmed and Time Sharing Systems, OS Structure, OS Operations: Dual and Multi-mode, OS as resource manager.

UNIT – II **(5 hours)**

Operating System Structures: OS Services, System Calls: Process Control, File Management, Device Management, and Information Maintenance, Inter-process Communication, and Protection, System programs, OS structure- Simple, Layered, Microkernel, and Modular.

UNIT - III **(10 hours)**

Process Management : Process Concept, States, Process Control Block, Process Scheduling, Schedulers, Context Switch, Operation on processes, Threads, Multicore Programming, Multithreading Models, Threads, Process Scheduling Algorithms: First Come First Served, Shortest-Job-First, Priority & Round-Robin, Process Synchronization: The critical-section problem and Peterson's Solution, Deadlock characterization, Deadlock handling.

UNIT – IV **(10 hours)**

Memory Management: Physical and Logical address space, Swapping, Contiguous memory allocation strategies - fixed and variable partitions, Segmentation, Paging.

Virtual Memory Management: Demand Paging and Page Replacement algorithms: FIFO Page Replacement, Optimal Page replacement, and LRU page replacement.

UNIT – V **(15 hours)**

File System: File Concepts, File Attributes, File Access Methods, Directory Structure: Single-Level, Two-Level, Tree-Structured, and Acyclic-Graph Directories.

Mass Storage Structure: Magnetic Disks, Solid-State Disks, And Magnetic Tapes, Disk Scheduling algorithms: FCFS, SSTF, SCAN, C-SCAN, LOOK, and C-Look Scheduling.

5. *Tanenbaum, A. S. Modern Operating Systems. 3rd edition, Pearson Education, 2007*

List of Practicals :(30 hours)

1. Write a program (using fork() and/or exec() commands) where parent and child execute:
   a) Same program, same code.
   b) Same program, different code.
   c) Before terminating, the parent waits for the child to finish its task.
2. Write a program to report behavior of Linux kernel including kernel version, CPU type and model. (CPU information)
3. Write a program to report behavior of Linux kernel including information on configured memory, amount of free and used memory. (Memory information)
4. Write a program to print file details including owner access permissions, file access time, where file name is given as argument.
5. Write a program to copy files using system calls.
6. Write a program to implement FCFS scheduling algorithm.
7. Write a program to implement Optimal scheduling algorithm.
8. Write a program to implement the SJF scheduling algorithm.
9. Write a program to implement a non-preemptive priority based scheduling algorithm.
10. Write a program to implement SRJF scheduling algorithm.
11. Write a program to calculate sum of n numbers using thread library.
12. Write a program to implement first-fit, best-fit and worst-fit allocation strategies.

DSE-01(a): Programming Using R

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Programming using R	4	2	0	2	Class XII with Mathematics	NIL

***Learning objectives*:**

1. *Master the use of the R and RStudio interactive environment.*
2. *Expand R by installing R packages.*
3. *Explore and understand how to use the R documentation.*
4. *Read Structured Data into R from various sources.*
5. *Understand the different data types in R.*
6. *Understand the different data structures in R.*

Learning Outcomes:

1. *Develop an R script and execute it*
2. *Install, load and deploy the required packages, and build new packages for sharing and reusability*
3. *Extract data from different sources using API and use it for data analysis*
4. *Visualize and summarize the data*
5. *Design application with database connectivity for data analysis*

UNIT-I **(5 hours)**

Introduction: R interpreter, Introduction to major R data structures like vectors, matrices, arrays, list and data frames, Control Structures, vectorized if and multiple selection, functions.

UNIT-II **(10 hours)**

Installing, loading and using packages: Read/write data from/in files, extracting data from web-sites, Clean data, Transform data by sorting, adding/removing new/existing columns, centering, scaling and normalizing the data values, converting types of values, using string in-built functions, Statistical analysis of data for summarizing and understanding data, Visualizing data using scatter plot, line plot, bar chart, histogram and box plot

UNIT-III **(10 hours)**

Designing GUI: Building interactive application and connecting it with database.

UNIT-IV **(5 hours)**

Building Packages.

References:

1. Cotton, R., Learning R: a step by step function guide to data analysis. 1st edition. O'reilly Media Inc.
2. Gardener, M.(2017). Beginning R: The statistical programming language, WILEY.
3. Lawrence, M., & Verzani, J. (2016). Programming Graphical User Interfaces in R. CRC press. (ebook)

List of Practical :(60 hours)

Q1. Write an R script to do the following:

a) Simulate a sample of 100 random data points from a normal distribution with mean 100 and standard deviation 5 and store the result in a vector.
b) Visualize the vector created above using different plots.
c) Test the hypothesis that the mean equals 100.
d) Use Wilcox test to test the hypothesis that mean equals 90.

Q2. Using the Algae data set from package DMwR to complete the following tasks.

a) Create a graph that you find adequate to show the distribution of the values of algae a6.
b) Show the distribution of the values of size 3.
c) Check visually if oPO4 follows a normal distribution.
d) Produce a graph that allows you to understand how the values of NO3 are distributed across the sizes of river.
e) Using a graph check if the distribution of algae a1 varies with the speed of the river.
f) Visualize the relationship between the frequencies of algae a1 and a6. Give the appropriate graph title, x-axis and y-axis title.

Q3. Read the file Coweeta.CSV and write an R script to do the following:

a) Count the number of observations per species.
b) Take a subset of the data including only those species with at least 10 observations.
c) Make a scatter plot of biomass versus height, with the symbol color varying by species, and use filled squares for the symbols. Also add a title to the plot, in italics.
d) Log-transform biomass, and redraw the plot.

Q4. The built-in data set mammals contain data on body weight versus brain weight. Write R commands to:

a) Find the Pearson and Spearman correlation coefficients. Are they similar?
b) Plot the data using the plot command.
c) Plot the logarithm (log) of each variable and see if that makes a difference.

Q5. In the library MASS is a dataset UScereal which contains information about popular breakfast cereals. Attach the data set and use different kinds of plots to investigate the following relationships:

a) relationship between manufacturer and shelf
b) relationship between fat and vitamins
c) relationship between fat and shelf
d) relationship between carbohydrates and sugars
e) relationship between fiber and manufacturer
f) relationship between sodium and sugars

Q6. Write R script to:

Do two simulations of a binomial number with n = 100 and p = .5. Do you get the same results each time? What is different? What is similar?

Do a simulation of the normal two times. Once with n = 10, $\mu = 10$ and $\sigma = 10$, the other with n = 10, $\mu = 100$ and $\sigma = 100$. How are they different? How are they similar? Are both approximately normal?

Q.7 Create a database medicines that contains the details about medicines such as {manufacturer, composition, price}. Create an interactive application using which the user can find an alternative to a given medicine with the same composition.
Q.8 Create a database songs that contains the fields {song_name, mood, online_link_play_song}. Create an application where the mood of the user is given as input and the list of songs corresponding to that mood appears as the output. The user can listen to any song form the list via the online link given
Q.9 Create a package in R to perform certain basic statistics functions.

DSE-01 (b): Discrete Structures

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Discrete Structures	4	3	0	1	Class XII with Mathematics	NIL

***Learning objectives*:**

1. To teach students how to think logically and mathematically.
2. To stress on mathematical reasoning and describe different ways in which mathematical problems could be solved.
3. To cover four thematic areas: mathematical reasoning, combinatorial analysis, discrete structures, and mathematical modelling.
4. To touch upon topics like logic, proofs, set theory, counting, probability theory (the discrete part of the subject), graph theory, trees, Boolean algebra, and modelling computation.

Learning Outcomes:

1. *Relate mathematical concepts and terminology to examples in the domain of Computer Science.*
2. *Model real world problems using various mathematical constructs.*
3. *Use different proofing techniques; construct simple mathematical proofs using logical arguments.*
4. *Divide a problem or a proof into smaller cases.*
5. *Formulate mathematical claims and construct counterexamples.*

UNIT-I **(7 hours)**

Sets, Functions, Sequences and Summations, Relations. Sets: Set Operations, Computer Representation of Sets, Countable and Uncountable Set, Principle of Inclusion and Exclusion, Multi-sets; Functions: One-to-one and Onto Functions, Inverse Functions and Compositions of Functions, Graphs of Functions Sequences and Summations: Sequences, Special Integer Sequences, Summations; Relations: Properties of Binary Relations, Equivalence relations and Partitions, Partial Ordering Relations and Lattices.

UNIT-II **(8 hours)**

Logic and Proofs. Propositional Logic, Propositional Equivalences, Use of first-order logic to express natural language predicates, Quantifiers, Nested Quantifiers, Rules of Inference, Introduction to Proofs, Proof Methods and Strategies, Mathematical Induction.

UNIT-III **(7 hours)**

Number Theory. Division and Integers, Primes and Greatest Common Divisors, Representation of Integers, Algorithms for Integer Operations, Modular Exponentiation, Applications of Number

Theory.

UNIT-IV **(8 hours)**

Combinatorics/Counting. The Pigeonhole Principle, Permutations and Combinations, Binomial Coefficients, Generalized Permutations and Combinations, Generating Permutations and Combinations.

UNIT-V **(10 hours)**

Graphs and Trees. Graphs: Basic Terminology, Multigraphs and Weighted Graphs, Paths and Circuits, Eulerian Paths and Circuits, Hamiltonian paths and Circuits, Shortest Paths, Spanning Trees, Graph Isomorphism, Planar Graphs; Trees: Trees, Rooted Trees, Path Lengths in Rooted Trees.

UNIT-VI **(5 hours)**

Recurrence. Recurrence Relations, Generating Functions, Linear Recurrence Relations with Constant Coefficients and their solution.

References

1. *C.L. Liu & Mahopatra, Elements of Discrete mathematics. 3rd edition. Tata McGraw Hill. 2008.*
2. *Kenneth R., Discrete Mathematics and Its Applications. 6th edition. Mc Graw Hill. 2006.*

List of practicals (30 Hours)

1. Write a Program to create a SET A and determine the cardinality of SET for an input array of elements (repetition allowed) and perform the following operations on the SET:
a) ismember (a, A): check whether an element belongs to set or not and return value as true/false.
b) powerset(A): list all the elements of power set of A.

2. Create a class SET and take two sets as input from user to perform following SET Operations:
a) Subset: Check whether one set is a subset of other or not.
b) Union and Intersection of two Sets.
c) Complement: Assume Universal Set as per the input elements from the user.
d) Set Difference and Symmetric Difference between two SETS
e) Cartesian Product of Sets.

3. Create a class RELATION, use Matrix notation to represent a relation. Include functions to check if the relation is Reflexive, Symmetric, Anti-symmetric and Transitive. Write a Program to use this class.

4. Use the functions defined in Ques 3 to check whether the given relation is:
a) Equivalent, or
b) Partial Order relation, or
c) None

5. Write a Program to implement Bubble Sort. Find the number of comparisons during each pass and display the intermediate result. Use the observed values to plot a graph to analyse the complexity of algorithm.

6. Write a Program to implement Insertion Sort. Find the number of comparisons during each pass and display the intermediate result. Use the observed values to plot a graph to analyse the complexity of algorithm.

7. Write a Program that generates all the permutations of a given set of digits, with or without repetition. (For example, if the given set is {1,2}, the permutations are 12 and 21). (One method is given in Liu)

8. Write a Program to accept the truth values of variables x and y, and print the truth table of the following logical operations:
a) Conjunction f) Exclusive NOR
b) Disjunction g) Negation
c) Exclusive OR h) NAND
d) Conditional i) NOR
e) Bi-conditional

9. Write a Program to store a function (polynomial/exponential), and then evaluate the polynomial. (For example store f(x) = 4n3 + 2n + 9 in an array and for a given value of n, say n = 5, evaluate (i.e. compute the value of f(5)).

10. Write a Program to represent Graphs using the Adjacency Matrices and check if it is a complete graph.

11. Write a Program to accept a directed graph G and compute the in-degree and out-degree of each vertex.

DSE-01 (c): Digital Image Processing

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Digital Image Processing	**4**	**3**	**0**	**1**	**Class XII with Mathematics**	**NIL**

***Learning objectives*:**

1. *To understand the sensing, acquisition and storage of digital images.*
2. *To study the image fundamentals and mathematical transforms necessary for image processing.*
3. *To understand the digital processing systems and corresponding terminology.*
4. *To understand the base image transformation domains and methods.*

Learning Outcomes:

1. *Understand the fundamentals of Image Processing and its role and importance in avariety of applications.*
2. *Write programs to read/write and manipulate images for the purpose of enhancement.*
3. *Understand the need for image transforms and their properties.*
4. *Understand different causes for image degradation and use various techniques to restore images.*

UNIT-I **(8 hours)**

Introduction: Digital Image Fundamentals, Brightness, Adaptation and Discrimination, Light and Electromagnetic Spectrum, Image Sampling and Quantization, Some Basic Relationships between Pixels Types of images.

UNIT-II **(7 hours)**

Spatial Domain Filtering: Some Basic Intensity Transformation Functions, Histogram Equalization, Spatial Correlation and Convolution, Smoothening Spatial Filters-Low pass filters, Order Statistics filters; Sharpening Spatial Filters- Laplacian filter.

UNIT-III **(8 hours)**

Filtering in Frequency Domain: The Discrete Fourier Transformation (DFT), Frequency Domain Filtering:-Ideal and Butterworth Low pass and high pass filters

UNIT-IV **(7 hours)**

Image Degradation and Compression: Noise models, Noise Restoration Filters, Fundamentals of Image Compression, Huffman Coding, Run Length Coding

UNIT-V **(10 hours)**

Morphological Image Processing: Erosion, Dilation, Opening, Closing, Hit-or-Miss Transformation, Basic Morphological Algorithms.

UNIT VI **(5 hours)**

Image Segmentation: Point, Line and Edge Detection, Thresholding.

4. *Jain, A. K. Fundamentals of Digital Image Processing. 1st edition Prentice Hall of India, 1988.*

List of practicals (30 Hours)

1. Write program to read and display digital image using MATLAB or SCILAB
a. Become familiar with SCILAB/MATLAB Basic commands
b. Read and display image in SCILAB/MATLAB
c. Resize given image
d. Convert given color image into gray-scale image
e. Convert given color/gray-scale image into black & white image
f. Draw image profile
g. Separate color image in three R G & B planes
h. Create color image using R, G and B three separate planes
i. Flow control and LOOP in SCILA
j. Write given 2-D data in image file

2. To write and execute image processing programs using point processing method
a. Obtain Negative image
b. Obtain Flip image
c. Thresholding
d. Contrast stretching

3. To write and execute programs for image arithmetic operations
a. Addition of two images
b. Subtract one image from other image
c. Calculate mean value of image
d. Different Brightness by changing mean value

4. To write and execute programs for image logical operations
a. AND operation between two images
b. OR operation between two images
c. Calculate intersection of two images
d. Water Marking using EX-OR operation
e. NOT operation (Negative image)

5. To write a program for histogram calculation and equalization using
a. Standard MATLAB function
b. Program without using standard MATLAB functions
c. C Program

6. To write and execute program for geometric transformation of image
a. Translation
b. Scaling
c. Rotation
d. Shrinking
e. Zooming

7. To understand various image noise models and to write programs for
a. image restoration
b. Remove Salt and Pepper Noise
c. Minimize Gaussian noise
d. Median filter and Weiner filter

8. Write and execute programs to remove noise using spatial filters
a. Understand 1-D and 2-D convolution process
b. Use 3x3 Mask for low pass filter and high pass filter

9. Write and execute programs for image frequency domain filtering
a. Apply FFT on given image
b. Perform low pass and high pass filtering in frequency domain
c. Apply IFFT to reconstruct image

10. Write a program in C and MATLAB/SCILAB for edge detection using different edge detection mask

11. Write and execute program for image morphological operations erosion and dilation.

SEMESTER-4
B.Voc - Software Development

DISCIPLINE SPECIFIC CORE COURSE – DSC-10: Software Modelling

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Software Modelling	4	3	0	1	Class XII	NIL

***Learning objectives*:**

1. *Design and develop software systems (including analysis, design, construction, maintenance, quality assurance and project management) using the appropriate theory, principles, tools and processes.*
2. *Use appropriate computer science and mathematics principles in the development of software systems.*
3. *Solve problems in a team environment through effective using various tools, techniques and processes.*
4. *Introduce the current issues presently involved in effectively performing duties as a software practitioner in an ethical and professional manner for the benefit of society.*
5. *Practice the lifelong learning needed in order to keep current as well as new challenging issues in real life scenario.*
6. *Develop software in at least one application domains like Healthcare, safety, Society, Legal, Environment, Communication etc.*

Learning Outcomes:

1. *Illustrate the strengths and weaknesses of certain models and logics including state machines, algebraic and process models, and temporal logic;*
2. *Describe appropriate abstract formal models for certain classes of systems, describe abstraction relations between different levels of description, and reason about the correctness of refinements;*
3. *Prove elementary properties about systems described by the models introduced in the course.*

Unit-I **(10 hours)**

Introduction: The Evolving Role of Software, Software Characteristics, Changing Nature of Software, Software Engineering as a Layered Technology, Software Process Framework, Framework and Umbrella activities, process models, Capability Maturity Model Integration (CMMI). Software Requirement Analysis, Initiating Requirement Engineering Process, Requirement Analysis and Modeling Techniques, Flow Oriented Modeling, Need for SRS, Characteristics and Components of SRS.

Unit-II **(7 hours)**

Software Project Management: Estimation in Project Planning Process, Project Scheduling. Software Risks, Risk Identification, Risk Projection and Risk Refinement, RMMM Plan.

Unit-III **(8 hours)**

Quality Management Quality Concepts, Software Quality Assurance, Software Reviews, Metrics for Process and Projects.

Unit-IV **(10 hours)**

Design Engineering Design Concepts, Architectural Design Elements, Software Architecture, Data Design at the Architectural Level and Component Level, Mapping of Data Flow into Software Architecture, Modeling Component Level Design.

Unit-V **(10 hours)**

Testing Strategies & Tactics: Software Testing Fundamentals, Strategic Approach to Software Testing, Test Strategies for Conventional Software, Validation Testing, System Testing, Black-Box Testing, White-Box Testing and their type, Basis Path Testing.

***Referenced Books**:*

1. R.S. Pressman, Software Engineering: A Practitioner's Approach (7th Edition), McGraw-Hill, 2009.

2. P. Jalote, An Integrated Approach to Software Engineering (2nd Edition), Narosa Publishing House, 2003.

3. K.K. Aggarwal and Y. Singh, Software engineering (revised 2nd Edition), New Age International Publishers, 2008.

4. R. Mall, Fundamentals of Software Engineering (2nd Edition), Prentice-Hall of India, 2004.

List of Practicals :(30 hours)

A project report needs to be submitted which includes the following:

1. Problem Statement and Process Model
2. Requirement Analysis:
    a. Creating a Data Flow
    b. Data Dictionary, Use Cases
3. Project Management:
    a. Computing FP
    b. Effort
    c. Schedule, Risk Table, Timeline chart
4. Design Engineering:
    a. Architectural Design
    b. Data Design, Component Level Design

DISCIPLINE SPECIFIC CORE COURSE – DSC-11:
FULL STACK WEB DEVELOPMENT -1

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
FULL STACK WEB DEVELOPMENT -1	4	3	0	1	Class XII	DSC-08

***Learning objectives*:**

1. To introduce the fundamentals of Internet, and the principles of web design.
2. To construct basic websites using JQuery and AJAX.

Learning Outcomes:

1. *Assimilate and master latest framework like frameworks like js, Node.js, and Mongo DB.*
2. *Build Responsive Web application using Angular Typescript*
3. *Learn Angular Binding and events with templates*
4. *Use Mongo DB queries, tools and apply CRUD operations.*

UNIT I **(10 hours)**

Introduction to JQuery: JQuery Introduction, JQuery Syntax, JQuery Selectors, JQuery Events, JQuery Effects- JQuery Hide/Show, JQuery Fade, JQuery Slide(), JQuery Animate, JQuery Stop(), JQuery Callback, JQuery Chaining, JQuery AJAX- JQuery AJAX Introduction, JQuery Load, JQuery Get/Post, JQuery HTML, JQuery Get, JQuery Set, JQuery Add, JQuery Remove, JQuery CSS Classes, JQuery CSS(), JQuery forms.

UNIT II **(5 hours)**

Introduction to Angular JS: Angular Architecture, Building blocks of Angular, Angular CLI and commands, Angular Modules, Understanding files in Angular, Angular forms.

UNIT III **(10 hours)**

Working of Angular Applications: Angular App Bootstrapping ,Angular Components, Creating A Component Through Angular CLI , Ways to specify selectors , Template and styles , Installing bootstrap to design application , Data Binding , Types of Data Binding , Component Interaction using @Input and @Output decorator , Angular Animations , Component Life-cycle Hooks , Angular Directives.

UNIT IV **(10 hours)**

Introduction of Mongo DB: Overview , Design Goals for Mongo DB Server and Database, Mongo DB Tools , How to modularize code by separating routes , Usage of various Mongo DB Tools available with Mongo DB Package , Mongo DB Development Architecture.

UNIT V **(10 hours)**

Crud Operations : Mongo DB CRUD Introduction, Mongo DB Datatypes , Analogy between RDBMS & Mongo DB Data Model, Mongo DB Data Model (Embedding & Linking), Challenges for Data Modelling in Mongo DB.

References

1. Node.js, Mongo DB and Angular Web Development: The definitive guide to using the MEAN stack to build web applications (Developer's Library) - by Brad Dayley , Addison-Wesley; 2nd edition

2. JQuery Cookbook by Cody Lindley, O'Reilly Media, Inc.

List of Practicals: (30 hours)

A web development project implementing following technologies:

- JQuery
- JavaScript
- Angular JS
- Mongo DB

DISCIPLINE SPECIFIC CORE COURSE – DSC-12:
Data communication and Networks

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Data Communication and Networks	4	3	0	1	Class XII	NIL

***Learning objectives*:**

1. *The objective of the course is to equip the students with a general overview of the concepts and fundamentals of computer networks.*
2. *Familiarize the students with the standard models for the layered approach to communication between machines in a network and the protocols of the various layers*

Learning Outcomes:

1. *Understand the basics of data communication, networking, internet and their importance*
2. *Analyze the services and features of various protocol layers in data networks.*
3. *Differentiate wired and wireless computer networks*
4. *Analyze TCP/IP and their protocols.*
5. *Recognize the different internet devices and their functions.*
6. *Identify the basic security threats of a network.*

UNIT-I **(8 hours)**

Basics of Networking: Network Concept, Benefits of Network, Network classification (PAN, LAN, MAN, WAN), Peer to Peer, Client Server architecture,

Transmission media: Guided & Unguided, Network Topologies.

Networking terms: DNS, URL, client server architecture, TCP/IP, FTP, HTTP, HTTPS, SMTP, Telnet

OSI and TCP/IP Models: Layers and their basic functions and Protocols, Comparison of OSI and TCP/IP. Networking Devices: Hubs, Switches, Routers, Bridges, Repeaters, Gateways and Modems, ADSL.

UNIT-II **(7 hours)**

Ethernet Networking: Half and Full-Duplex Ethernet, Ethernet at the Data Link Layer, Ethernet at the Physical Layer.

Switching Technologies: layer-2 switching, address learning in layer-2 switches, network loop problems in layer-2 switched networks, Spanning-Tree Protocol, LAN switch types and working with layer-2 switches, Wireless LAN

UNIT- III **(15 hours)**

Internet layer Protocol: Internet Protocol, ICMP, ARP, RARP.

IP Addressing: Different classes of IP addresses, Sub-netting for an internet work, Classless Addressing. Comparative study of IPv4 & IPv6.

Introduction to Router Configuration. Introduction to Virtual LAN.

UNIT- IV **(15 hours)**

Transport Layer: Functions of transport layer, Difference between working of TCP and UDP.
Application Layer: Domain Name System (DNS), Remote logging, Telnet, FTP, HTTP, HTTPS.

References:

1. *Tananbaum A.S, "Computer Networks" 3rd Ed. PHI, 1999*
2. *Dr. Sanjay Sharma, "A Course in Computer Network" S. K. Kataria & Sons*
3. *Todd Lammle, "CCNA Cisco Certified Network Associate Study Guide", SYBEX.*
4. *A Forouzan, "Data Communications & Networking",4th Ed, Tata McGraw Hill, 2007*

List of Practicals: (30 hours)

Introduce students to any network simulator tool and do the following:

1. To Study basic network command and Network configuration commands.
2. To study and perform PC to PC communication.
3. Create a Network Using Bluetooth-(Piconet/Scatternet)
3. To create Star topology using Hub and Switch.
4. To create Bus, Ring, Tree, Hybrid, Mesh topologies.
5. Perform an initial Switch configuration.
6. Perform an initial Router configuration.
7. To implement Client Server Network.
8. To implement connection between devices using router.
9. To perform remote desktop sharing within LAN connection.

DSE-02 (a): Big Data

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Big Data	4	2	0	2	Class XII	DSC-04

***Learning objectives*:**

This course gives an overview of Big Data, i.e. storage, retrieval and processing of big data. In addition, it also focuses on the "technologies", i.e., the tools/algorithms that are available for storage, processing of Big Data. It also helps a student to perform a variety of "analytics" on different data sets and to arrive at positive conclusions.

Learning Outcomes:

1. *Perform data gathering of large data from a range of data sources.*
2. *Critically analyze existing Big Data datasets and implementations, taking practicality, and usefulness metrics into consideration.*
3. *Understand and demonstrate the role of statistics in the analysis of large of datasets*
4. *Select and apply suitable statistical measures and analyses techniques for data of various structure and content and present summary statistics*
5. *Understand and demonstrate advanced knowledge of statistical data analytics as applied to large data sets*
6. *Employ advanced statistical analytical skills to test assumptions, and to generate and present new information and insights from large datasets*

Unit-I **(5 hours)**

Introduction to big data: Introduction to Big Data Platform – Challenges of Conventional Systems - Intelligent data analysis – Nature of Data - Analytic Processes and Tools - Analysis vs. Reporting.

Unit-II **(5 hours)**

Mining data streams: Introduction to Streams Concepts – Stream Data Model and Architecture - Stream Computing - Sampling Data in a Stream – Filtering Streams – Counting Distinct Elements in a Stream – Estimating Moments – Counting Oneness in a Window – Decaying Window - Real time Analytics Platform (RTAP) Applications - Case Studies – Real Time Sentiment Analysis- Stock Market Predictions.

Unit-III **(5 hours)**

Hadoop: History of Hadoop- the Hadoop Distributed File System – Components of Hadoop

Analyzing the Data with Hadoop - Scaling Out- Hadoop Streaming- Design of HDFS- Java interfaces to HDFS Basics- Developing a Map Reduce Application-How Map Reduce Works-Anatomy of a Map Reduce Job Run-Failures-Job Scheduling-Shuffle and Sort – Task execution - Map Reduce Types and Formats- Map Reduce Features Hadoop environment.

Unit-IV **(5 hours)**

Frameworks: Applications on Big Data Using Pig and Hive – Data processing operators in Pig – Hive services – HiveQL – Querying Data in Hive - fundamentals of HBase and Zoo Keeper - IBM Info Sphere Big Insights and Streams.

Unit-V **(10 hours)**

Predictive Analytics: Simple linear regression- Multiple linear regression- Interpretation of regression coefficients. Visualizations - Visual data analysis techniques- interaction techniques - Systems and applications.

References:

1. Michael Berthold, David J. Hand, "Intelligent Data Analysis", Springer, 2007.
2. Tom White "Hadoop: The Definitive Guide" Third Edition, O'reilly Media, 2012.

5. Bill Franks, "Taming the Big Data Tidal Wave: Finding Opportunities in Huge Data Streams with Advanced Analytics", John Wiley& sons, 2012.

***List of Practicals*:** **(60 hours)**

1. (i) Perform setting up and Installing Hadoop in its two operating modes:
a) Pseudo distributed,
b) Fully distributed.
(ii) Use web-based tools to monitor your Hadoop setup.
2. (i) Implement the following file management tasks in Hadoop:
a) Adding files and directories
b) Retrieving files
c) Deleting files
3. Run a basic Word Count Map Reduce program to understand Map Reduce Paradigm.
a) Find the number of occurrences of each word appearing in the input file(s).
b) Performing a Map Reduce Job for word search count (look for specific keywords in a file).
4. Install and Run Pig then write Pig Latin scripts to sort, group, join, project, and filter your data.
5. Write a Pig Latin script for finding TF-IDF value for book dataset (A corpus of eBooks available at: Project Gutenberg).
6. Install and Run Hive then use Hive to create, alter, and drop databases, tables, views, functions.

DSE-02 (b): Advance DBMS

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Advance DBMS	**4**	**2**	**0**	**2**	**Class XII**	**DSC-04**

***Learning objectives*:**

1. *Explain and evaluate the fundamental theories for advanced database architectures and query operators.*
2. *Design and implement parallel database systems with evaluating different methods of storing, managing of parallel database.*
3. *Assess and apply database functions of distributed database.*

Learning Outcomes:

1. *Identify advance database concepts and database models.*
2. *Apply and analyze various terms related to transaction management in centralized and distributed database.*
3. *Learn concept of transactional processing and its commands.*
4. *Improve the database design by normalization.*
5. *Administer and analyze database with query optimization technique*

UNIT-I **(5 hours)**

Introduction: Formal review of relational database and FDs Implication, Closure, its correctness.

UNIT-II **(5 hours)**

Normalization: 3NF and BCNF, Decomposition and synthesis approaches, Review of SQL Queries, Basics of query processing, Query optimization, external sorting, file scans.

UNIT-III **(5 hours)**

Transactional Control: Commit, Save point, Rollback, DCL Commands: Grant and Revoke, Types of locks: Row level locks, Table level locks, Shared lock, Exclusive lock, Deadlock.

UNIT-IV **(5 hours)**

Creating and altering Views: Fundamentals of Database Triggers, Creating Triggers, Types of Triggers: Before, after for each row, for each statement, Basics of PL/SQL.

UNIT-V **(10 hours)**

T/O based techniques: Multiversion approaches, Comparison of CC methods, dynamic databases, Failure classification, recovery algorithm, XML and relational databases.

***References*:**

1. R. Ramakrishnan, J. Gehrke, Database Management Systems, McGraw Hill, 2004
2. A. Silberschatz, H. Korth, S. Sudarshan, Database system concepts, 5/e, McGraw Hill, 2008.
3. R. Elmasri, S.B. Navathe Database Systems Models, Languages, Design and application Programming, 6th Edition, Pearson Education, 2013.

***List of Practicals :*(60 hours)**

1. Perform queries for DCL Commands and Locks.
2. Implement authorization, authentication, and privileges on database.
3. Perform queries to Create synonyms, sequence and index.
4. Perform queries to Create, alter and update views.
5. Implement PL/SQL programmes using control structures.
6. Implement PL/SQL programmes using Cursors.
7. Implement PL/SQL programmes using exception handling.
8. Implement user defined procedures and functions using PL/SQL blocks.
9. Perform various operations on packages.
10. Implement various triggers.
11. Practice on functional dependencies
12. Practice on Normalization – using any database perform various normal forms.
13. Practice on transaction processing.

DSE-02 (c): Android Programming

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Android Programming	**4**	**2**	**0**	**2**	**Class XII**	**DSC-05**

***Learning objectives*:**

1. *Creating robust mobile applications and learn how to integrate them with other services.*

Learning Outcomes:

1. *Describe characteristics of Android operating system.*
2. *Describe components of an android applications.*
3. *Design user interfaces using various widgets, dialog boxes, menus.*
4. *Define interaction among various activities/applications using intents, broadcasting, and service.*
5. *Develop Android applications that require database handling.*

UNIT-I **(10 hours)**

Introduction: Review to JAVA & OOPS Concepts, History of Android, Introduction to Android Operating Systems, Android Development Tools, and Android Architecture, Android components including activities, view and view group, services, content providers, broadcast receivers, intents, parcels, instance state.

UNIT-II **(12 hours)**

User Interface Architecture: Application context, intents: explicit intents, returning results from activities, implicit intents, intent filter and intent resolution, and applications of implicit intents, activity life cycle, activity stack, application's priority and its process' states, fragments and its life cycle.

UNIT-III **(12 hours)**

User Interface Design: Layouts, optimizing layout hierarchies, form widgets, text fields, button control, toggle buttons, spinners, images, menu, dialog.

UNIT-IV **(11 hours)**

Broadcast receivers and Database: Broadcast sender, receiver, broadcasting events with intents, notifications and services.

SQLite, Content Values and Cursors, creating SQLite databases, querying a database.

References

1. *Griffiths, D., & Griffiths, D., (2015). Head First Android Development, O'reilly Media.*
2. *Meier, R., (2012). Professional Android™ 4 Application Development. John Wiley & Sons, Inc.*

List of Practicals: **(60 hours)**

1. Create "Hello World" application. That will display "Hello World" in the middle of the screen in the emulator. Also display "Hello World" in the middle of the screen in the Android Phone.
2. Create an application with three buttons (increment, decrement and reset) and a textView aligned vertically. On clicking, increment/decrement button, the value of the textview should increment/decrement by 1while selecting reset button, the value of textview should become zero.
3. Create an application with login module. (Check username and password).
4. Create spinner with strings taken from resource folder (res >> value folder) and on changing the spinner value, Image will change.
5. Create a menu with 5 options and selected option should appear in text box.
6. Create a list of all courses in your college and on selecting a particular course teacher-incharge of that course should appear at the bottom of the screen.
7. Create an application with three option buttons, on selecting a button colour of the screen will change.
8. Create an application to display various activity life cycle and fragment life cycle methods.
9. Create an application with 2 fragments, one to set the background and other to set the fore-color of the text.
10. Create an application with an activity having EditText and a button (with name "Send"). On clicking Send button, make use of implicit intent that uses a Send Action and let user select app from app chooser and navigate to that application.
11. Create a Login application. On successful login, use explicit intent to second activity displaying welcome message (Welcome Username) to the user and a logout button. When user presses logout button, a dialog box with a message ("Are you sure you want to exit?") and two buttons ("Yes" and "No") should appear to confirm logout. On "Yes" button click, go to login activity and on "No", stay on the same activity.
12. Create an application for Broadcast sender and receivers.
13. Create an application to create notification having icon, text and title.
14. Create an application to create services.
15. Create an application to Create, Insert, update, Delete and retrieve operation on database

SEMESTER-V
B.Voc Software Development

DISCIPLINE SPECIFIC CORE COURSE – DSC-13: Machine Learning

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Machine Learning	4	3	0	1	Class XII	DSC-01

Learning Objectives:

1. *To understand the basic theory underlying machine learning.*
2. *To be able to formulate machine learning problems corresponding to different applications.*
3. *To understand a range of machine learning algorithms along with their strengths and weaknesses.*
4. *To be able to apply machine learning algorithms to solve problems of moderate complexity.*
5. *To apply the algorithms to a real-world problem, optimize the models learned and report on the expected accuracy that can be achieved by applying the models.*

Learning Outcomes:

1. *Differentiate between supervised and unsupervised learning tasks.*
2. *Appreciate the need of preprocessing, feature scaling and feature selection.*
3. *Understand the fundamentals of classification, regression and clustering*
4. *Implement various machine learning algorithms learnt in the course.*

Unit I **(9 Hours)**

Introduction: Basic definitions and concepts, key elements, supervised and unsupervised learning, introduction to reinforcement learning, applications of ML.

Unit II **(9 Hours)**

Preprocessing: Feature scaling, feature selection methods. Dimensionality reduction (Principal Component Analysis).

Unit III **(9 Hours)**

Regression: Linear regression with one variable, linear regression with multiple variables,gradient descent, over-fitting, regularization. Regression evaluation metrics.

Unit IV **(9 Hours)**

Classification: Decision trees, Naive Bayes classifier, logistic regression, k-nearest neighbor classifier, perceptron, multilayer perceptron, neural networks, back-propagation algorithm, Support Vector Machine (SVM). Classification evaluation metrics.

Unit V **(9 Hours)**

Clustering: Approaches for clustering, distance metrics, K-means clustering, hierarchical clustering.

References

2. James, G., Witten. D., Hastie. T., Tibshirani., R. An Introduction to Statistical Learning with Applications in R, Springer, 2014.
3. Alpaydin, E. Introduction to Machine Learning, MIT press, 2009.

Practical List: (30 Hours)

Use Python for practical labs for Machine Learning. Utilize publically available datasets from online repositories like https://data.gov.in/ and
https://archive.ics.uci.edu/ml/datasets.php
For evaluation of the regression/classification models, perform experiments as follows:

- Scale/Normalize the data
- Reduce dimension of the data with different feature selection techniques
- Split datasets into training and test sets and evaluate the decision models
- Perform k-cross-validation on datasets for evaluation

Report the efficacy of the machine learning models as follows:

- MSE and R2 score for regression models
- Accuracy, TP, TN, FP, TN, error, Recall, Specificity, F1-score, AUC for classification models.

DISCIPLINE SPECIFIC CORE COURSE – DSC 14: FULL STACK WEB DEVELOPMENT -2

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
FULL STACK WEB DEVELOPMENT -2	4	3	0	1	Class XII	DSC-11

***Learning objectives*:**

1. *Assimilate and master latest framework like frameworks like js, Node.js, and Mongo DB.*

***Learning outcomes*:**

1. *Able to use basic to advanced Node js.*
2. *Integrate Node js with mongo database*
3. *Install and use different tools like Github, Maven and Jenkins.*
4. *Develop a fully functioning website and deploy on a web server.*

UNIT I **(5 hours)**

Introduction to Node JS: What is Node.js, Why Node.js, Node in-built packages (buffer, fs, http, os, path, util, url), Node.js Modules, Import your own Package, Node Package Manager (NPM), Local and Global Packages, File System: Get Input from Users, Pass Multiple Arguments with Yargs, File System Module.

UNIT II **(10 hours)**

Advanced Node JS : Express Framework, Run a Web Server using Express Framework, Routes, Deploy application using PM2 and Nginx, Asynchronous Programming- Call Stack, Callbacks, Callback Queue and Event Loop , Callback Abstraction , Callback Chaining

UNIT III **(10 hours)**

Integration of Node.js with Mongo DB: Inserting Documents, Querying, Updating and Deleting Documents, Connect Mongo DB and Node.js Application, REST API

UNIT IV **(10 hours)**

Overview of Git, Jenkins and Maven: Git- Understand the differences between Git, Github and Gitlab, Install and configure Git for use, Use Git to manage files using CLI commands, Create, Clone and manage repositories.

Jenkins- Jenkins and its architecture, Jenkins tools management, user management in Jenkins

Maven - Maven project structure, maven plugins, Project object model (POM), maven build lifecycle, adding external dependencies to maven pom.xml, maven build and test project

UNIT V **(10 hours)**

Introduction to Docker: Comparing VM and Docker, Docker- an Architectural overview, The Docker Hub A brief Introduction, Preparing docker - machine- Installation and configuration, Start containerizing, Play with docker images, Customizing container on your own, Running Container with Docker - commands, Port forwarding with docker container.

2. DevOps. Building CI/CD Pipelines with Jenkins, Docker Container, AWS ECS, JDK 11, Git and Maven by John Edward Cooper Berg , Kindle Edition

List of Practicals **(30 hours)**

A web development project implementing technologies such as Node JS, Mongo DB, Angular JS, JQuery, JavaScript, Git, Jenkins and Maven.

DISCIPLINE SPECIFIC CORE COURSE – DSC 15: Minor Project-1

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Minor Project-1	4	0	0	4	Class XII	NIL

Learning Objectives:

The students will undergo one semester of project work based on the concepts studied in a subject of their choice. The objective is to train the students for the industry by exposing them to prototype development of real life software.

Learning Outcomes:

On successful completion of this course, a student will be able to:

1. *Develop a project plan based on informal description of the project.*
2. *Implement the project as a team.*
3. *Write a report on the project work carried out by the team and defend the work done by the team collectively.*
4. *Present the work done by the team to the evaluation committee.*

Each student shall carry out a minor project in the fifth semester. The students will work on any project based on the concepts studied in core/elective/ skill based elective courses. Specifically, the project could be a research study, or a software development project.

In case the student is opting for research project, students are required to select a relevant topic, carryout a detailed literature review followed by a critical analysis or implementation. The conclusions drawn from the analysis/ implementation must also be brought out in the form of a research paper.

PROJECT GROUP ORGANIZATION/PLAN

- Students will initially prepare a synopsis (500 words) and submit it to their respective department/supervisor. Only after obtaining the approval of supervisor the student can initiate the Project work.
- For a given project, the group size could be a maximum of four (04) students.
- Each group will be assigned a teacher as a supervisor who will be responsible for their lab classes.
- A maximum of four (04) projects would be assigned to one teacher.

PROJECT EVALUATION

The project will be evaluated as follows:

(a) Mid-semester evaluation 25% weightage

(b) End-semester evaluation

(i) External Examination 50% weightage

Thesis/Project report - 25% of total marks.

Software Coding

i) Documentation - 10% of total marks.

ii) Software - 15% of total marks.

(ii) Viva-voce **25% weightage**

- Practical/discussion sessions based on the area of the project. Work carried out in each lab session will be assessed out of five marks (zero for being absent). Finally, the marks obtained will be scaled out of a maximum marks of mid-semester evaluation (i.e. 25% of total marks).
- The end-**semester evaluation marks** to be awarded jointly by the examiner and supervisor / mentor.
- The **Mid-semester evaluation** to be awarded by the supervisor/mentor. Work carried out in each lab session will be assessed.
- The students will submit both the soft copy and the hard copy of the report.
- The reports may be retained by the examiners.

PROJECT REPORT

Two copies of the Project Report certified by the supervisor shall be submitted to the Department. The format of report can be downloaded from the website/guide/ coordinator.

DSE-03 (a): Distributed Systems

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Distributed Systems	4	4	0	0	Class XII	DSC-09

***Learning objectives*:**

1. *To provide hardware and software issues in modern distributed systems.*
2. *To get knowledge in distributed architecture, naming, synchronization, consistency and replication, fault tolerance, security, and distributed file systems.*
3. *To analyze the current popular distributed systems such as peer-to-peer (P2P) systems will also be analyze*

Learning Outcomes:

1. *To understand the foundations of distributed systems.*
2. *To learn issues related to clock Synchronization and the need for global state in distributed systems.*
3. *To learn distributed mutual exclusion and deadlock detection algorithms.*

UNIT-I **(15 hours)**

Characterization of Distributed Systems: Introduction, Examples of distributed Systems, Resource sharing and the Web Challenges. Architectural models, Fundamental Models. Theoretical Foundation for Distributed System: Limitation of Distributed system, absence of global clock, shared memory, Logical clocks, Lamport's & vectors logical clocks. Concepts in Message Passing Systems: causal order, total order, total causal order, Techniques for Message Ordering, Causal ordering of messages, global state, and termination detection.

UNIT-II **(15 hours)**

Distributed Mutual Exclusion: Classification of distributed mutual exclusion, requirement of mutual exclusion theorem, Token based and non-token based algorithms, performance metric for distributed mutual exclusion algorithms. Distributed Deadlock Detection: system model, resource Vs communication deadlocks, deadlock prevention, avoidance, detection & resolution, centralized dead lock detection, distributed dead lock detection, path pushing algorithms, edge chasing algorithms.

UNIT -III **(15 hours)**

Agreement Protocols: Introduction, System models, classification of Agreement Problem, Byzantine agreement problem, Consensus problem, Interactive consistency Problem, Solution to Byzantine Agreement problem, Application of Agreement problem, Atomic Commit in Distributed Database system. Distributed Resource Management: Issues in distributed File Systems, Mechanism for building distributed file systems, Design issues in Distributed Shared Memory, Algorithm for Implementation of Distributed Shared Memory.

UNIT-IV **(15 hours)**

Failure Recovery in Distributed Systems: Concepts in Backward and Forward recovery, Recovery in Concurrent systems, obtaining consistent Checkpoints, Recovery in Distributed Database Systems. Fault Tolerance: Issues in Fault Tolerance, Commit Protocols, Voting protocols, Dynamic voting protocols

DSE-03 (b): Artificial Intelligence

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Artificial Intelligence	4	3	0	1	Class XII	DSC-03 DSC-06

Learning Objectives:

1. Study the concepts of Artificial Intelligence.
2. Learn the methods of solving problems using Artificial Intelligence.
3. Learn the knowledge representation techniques, reasoning techniques and planning
4. Introduce the concepts of Expert Systems and machine learning.

Learning Outcomes:

1. Identify problems that are amenable to solutions by specific AI methods.
2. Appreciate the utility of different types of AI agents.
3. Apply different informed search techniques for solving real world problems.
4. Use knowledge representation techniques for AI systems..
5. Understand human level, data driven and end to end approaches to AI.

UNIT-I **(10 Hours)**

Introduction to Artificial Intelligence: background and applications, Turing test, Weak AI, Strong AI, Narrow AI, Artificial General Intelligence, Super AI, rational agent approaches to AI, introduction to intelligent agents, their structure, behavior and task environment , the Present and the Future of AI.

UNIT-II **(12 Hours)**

Problem Solving and Searching Techniques: Problem characteristics, production systems, control strategies, breadth-first search, depth-first search, hill climbing and its variations, heuristics search techniques: best-first search, A* algorithm, constraint satisfaction problem, means-end analysis, introduction to game playing, min-max and alpha-beta pruning algorithms.

UNIT-III **(12 Hours)**

Knowledge Representation: Propositional logic, First-Order Predicate logic, resolution principle, unification, semantic nets, conceptual dependencies, frames, and scripts, production rules, Introduction to Programming in Logic (PROLOG).

UNIT-IV **(11 Hours)**

Understanding Natural Languages: Components and steps of communication, the contrast between formal and natural languages in the context of grammar, Chomsky hierarchy of grammars, parsing, and semantics, Parsing Techniques, Context-Free and Transformational

Grammars, Recursive and Augmented transition nets.

2. Elaine Rich and Kelvin Knight, Artificial Intelligence, 3 rd edition, Tata McGraw Hill, 2010.
3. Ivan Bratko, Prolog Programming for Artificial Intelligence, Addison-Wesley, Pearson Education, 4th edition, 2012.

List of Practicals: (30 hours)

1. Write a prolog program to calculate the sum of two numbers.
2. Write a Prolog program to implement max(X, Y, M) so that M is the maximum of two numbers X and Y.
3. Write a program in PROLOG to implement factorial (N, F) where F represents the factorial of a number N. 60
4. Write a program in PROLOG to implement generate_fib(N,T) where T represents the Nth term of the fibonacci series.
5. Write a Prolog program to implement GCD of two numbers.
6. Write a Prolog program to implement power (Num,Pow, Ans) : where Num is raised to the power Pow to get Ans.
7. Prolog program to implement multi (N1, N2, R) : where N1 and N2 denotes the numbers to be multiplied and R represents the result.
8. Write a Prolog program to implement memb(X, L): to check whether X is a member of L or not.
9. Write a Prolog program to implement conc (L1, L2, L3) where L2 is the list to be appended with L1 to get the resulted list L3.
10. Write a Prolog program to implement reverse (L, R) where List L is original and List R is reversed list.
11. Write a program in PROLOG to implement palindrome (L) which checks whether a list L is a palindrome or not.
12. Write a Prolog program to implement sumlist(L, S) so that S is the sum of a given list L.
13. Write a Prolog program to implement two predicates evenlength(List) and oddlength(List) so that they are true if their argument is a list of even or odd length respectively.
14. Write a Prolog program to implement nth_element (N, L, X) where N is the desired position, L is a list and X represents the Nth element of L.
15. Write a Prolog program to implement maxlist(L, M) so that M is the maximum number in the list.
16. Write a prolog program to implement insert_nth (I, N, L, R) that inserts an item I into Nth position of list L to generate a list R.
17. Write a Prolog program to implement delete_nth (N, L, R) that removes the element on Nth position from a list L to generate a list R.
18. Write a program in PROLOG to implement merge (L1, L2, L3) where L1 is first ordered list and L2 is second ordered list and L3 represents the merged list.

DSE-03 (c): Design and Analysis of Algorithms

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Design and Analysis of Algorithms	**4**	**3**	**0**	**1**	**Class XII**	**DSE-07**

***Learning objectives*:**

1. *Introduces the recurrence relations for analyzing the algorithms.*
2. *Introduces the graphs and their traversals.*
3. *Describes major algorithmic techniques (divide-and-conquer, greedy, dynamic programming, Brute Force, Transform and Conquer approaches) and mention problems for which each technique is appropriate.*
4. *Describes how to evaluate and compare different algorithms using worst-case, average-case and best-case analysis.*

Learning Outcomes:

1. *Compute the asymptotic time complexity of algorithms*
2. *Prove correctness of algorithms*
3. *Use appropriate algorithm design technique(s) for solving a given problem*
4. *Appreciate the difference between tractable and intractable problems*

UNIT-1 **(10 hours)**

Sorting: Selection. Insertion Sort, Selection Sort, Bubble Sort, Heap sort, Linear Time Sorting, Selection Problem, running time analysis and correctness.

UNIT-II **(10 hours)**

Graphs: Review of graph traversals, graph connectivity, testing bi-partiteness, Directed Acyclic Graphs and Topological Ordering.

UNIT-III **(13 hours)**

Divide and Conquer. Introduction to divide and conquer technique, Merge Sort, Quicksort, Maximum-subarray problem.

Intractability: Decision vs optimization problems, NP as a class of problems, NP-hardness, NP-completeness with examples.

UNIT-IV **(12 hours)**

Greedy and dynamic Algorithms: Introduction to the Greedy algorithm design approach, application to minimum spanning trees, fractional knapsack problem.

Introduction to the Dynamic Programming approach, application to subset sum, integer knapsack problem.

2. Kleinberg, J., Tardos, E. Algorithm Design. 1st edition. Pearson. 2013.

List of Practicals **(30 hours)**

A practical implementation of various algorithmic techniques such as sorting, graphs,greedy and dynamic programming.

SEMESTER-VI
B.Voc - Software Development

DISCIPLINE SPECIFIC CORE COURSE – 16: Cloud Computing

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Cloud Computing	**4**	**3**	**0**	**1**	**Class XII pass with Mathematics**	**NIL**

Learning Objectives:

1. *To provide the students basic understanding about cloud and virtualization along with it how one can migrate over it.*
2. *To provide students concepts of security and privacy in a cloud.*

Learning Outcome:

1. *The fundamental ideas behind Cloud Computing, the evolution of the paradigm, its applicability; benefits, as well as current and future challenges;*
2. *The basic ideas and principles in data center design; cloud management techniques and cloud software deployment considerations;*
3. *Different CPU, memory and I/O virtualization techniques that serve in offering software, computation and storage services on the cloud; Software Defined Networks (SDN) and Software Defined Storage (SDS);*
4. *Could storage technologies and relevant distributed file systems, NoSQL databases and object storage;*
5. *The variety of programming models and develop working experience in several of them.*

Unit I **(7 Hours)**

Evolution of Cloud Computing: Trends of computing, Introduction to distributed computing, cloud computing, Cloud Based Application Development Approach Vs. Traditional Application Development Approach, What's cloud computing, Properties & Characteristics, Service models, Deployment models, SLA(Service Level Agreements), SLA at various levels, SOA(Service oriented Architecture), SOA characteristics

Unit II **(8 Hours)**

Cloud Computing Architectural Framework: Infrastructure as a Service (IAAS), Platform as a Service (PAAS), Software as a Service (SAAS), cloud computing vendors, Cloud Computing threats, Cloud Reference Model, The Cloud Cube Model, issues in Cloud Computing ,Managing and administrating the cloud services and cloud resources, Virtualization -Hypervisor Architecture, Hardware Virtualization, Software Virtualization, Memory Virtualization, Storage Virtualization, Data Virtualization, Network Virtualization,
Virtualization Security Recommendations

Unit III **(8 Hours)**

Security in Cloud: Infrastructure security: Network Level, Host Level and Application Level

Security and Storage: Aspects of Data Security, Data control, Network Security, Host Security, Data Security Mitigation, Encryption, storage- confidentiality, integrity, and availability.
Security Management in the Cloud: Security Management Standards, Availability Management- PAAS, SAAS, IAAS, Access Control, Security Vulnerability, Patch and Configuration Management.

Unit IV **(7 Hours)**

Privacy in Cloud: Data Life-Cycle, Key Privacy Concerns in the Cloud, Responsibility for protecting Privacy, Risk Management and Compliance in relation to Cloud Computing, Legal and Regulatory Implications. Disaster Recovery: Disaster recovery planning, Disaster in Cloud, Disaster Management

Unit V **(15 Hours)**

Case study: Hadoop- architecture, Hadoop Distributed file system, map- reduce model, getting started with the Hadoop, Amazon EC2 / S3 and EC2 Commands. Introduction of MS Windows Azure, Google Apps / Google Docs.

Reference Books:

1. Tim Mather, Subra Kumaraswamy, Shahed Latif, "Cloud Security and Privacy," O Reilly
2. George Reese, "Cloud Application Architectures," O Reilly
3. David S. Linthicum, "Cloud Computing and SOA Convergence in your Enterprise, A Step by Step Guide, "Pearson
4. Dr. Gautam Shroff,"Enterprise Cloud Computing Technology, Architecture, Applications", Cambridge University Press.

List of practicals (30 Hours)

1. What are the fundamental differences between centralized and distributed computing?
2. How do elasticity and scalability differ in the context of cloud computing?
3. How to set up an Amazon EC2 instance?
4. Design a basic service-oriented architecture for a simple e-commerce website?
5. Explain the role of firewalls in cloud network security.
6. Launch a Linux Virtual Machine
7. Host a Static Website
8. Create an Amazon Elastic Kubernetes Service (EKS) and S3 Bucket
9. Writing IAM Policies: How to Grant Access to an Amazon S3 Bucket

DISCIPLINE SPECIFIC CORE COURSE – 17: Information Security

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Information Security	**4**	**3**	**0**	**1**	**Class XII pass with Mathematics**	DSC-12

Learning Objectives:

1. *To make a student learn basic principles of information security.*
2. *To familiarize students with cryptography, authentication and access control methods along with software security.*
3. *To touch upon the implications of security in cloud and Internet of Things (IoT).*
4. *To discuss potential security threats and vulnerabilities of systems along with their impacts and countermeasures.*

Learning Outcome:

1. *Identify the major types of threats to information security*
2. *Describe the role of cryptography in security*
3. *Discover the strengths and weaknesses of private and public key cryptosystems*
4. *Identify and apply various access control and authentication mechanisms*
5. *Discuss data and software security and, related issues*
6. *Explain network security threats and attacks*

Unit I **(5 Hours)**

Overview Computer Security Concepts, Threats, Attacks, Security Functional Requirements,Fundamental Security Design Principles, Attack Surfaces and Attack Trees.

Unit II **(10 Hours)**

Cryptographic tools Confidentiality with Symmetric Encryption, Message Authentication and Hash Functions, Public-Key Encryption, Digital Signatures and Key Management, Random and Pseudorandom Numbers, DES (Data Encryption Standard), RSA , Diffie-Hellman key exchange, Post quantum cryptography.

Unit III **(5 Hours)**

Data Security User authentication and Access Control, Database and Data Center Security

Unit IV **(12 Hours)**

Software Security Types of Malicious Software, Threats, Viruses, Worms, SPAM E-Mail, Trojans, Payload, System Corruption, Payload, Attack Agent, Zombie, Bots, Payload, Information Theft, Key-loggers, Phishing, Spyware, Payload Stealthing Backdoors, Rootkits, Countermeasures. Overflow Attacks - Stack Overflows, Buffer Overflows. Handling Program Input, Writing Safe Program Code, Interacting with the Operating System and Other Programs.

Unit V **(13 Hours)**

Network Security Denial-of-Service Attacks, Flooding Attacks, Distributed Denial-of-Service Attacks, Overview of Intrusion Detection, Honeypots, Firewalls, Secure Email and S/MIME, Secure Sockets Layer (SSL) and Transport Layer Security (TLS), HTTPS, IPv4 and IPv6 Security, Public-Key Infrastructure.

References:

1. Stallings, W. and Brown L. (2018) Computer Security: Principles and Practice, Fourth edition, Pearson Education.

3. Lin, S. & Costello, D. J. (2004). Error Control Coding: Fundamentals and applications. 2nd edition. Pearson Education

List of Practicals **(30 hours)**

1. Demonstrate the use of Network tools: ping, ipconfig, ifconfig, tracert, arp, netstat,whois
2. Use of Password cracking tools : John the Ripper, Ophcrack. Verify the strength of passwords using these tools.
3. Use nmap/zenmap to analyse a remote machine.
4. Use Burp proxy to capture and modify the message.
5. Demonstrate sending of a protected word document.
6. Demonstrate sending of a digitally signed document.
7. Demonstrate sending of a protected worksheet.
8. Demonstrate use of gpg utility for signing and encrypting purposes.

DISCIPLINE SPECIFIC CORE COURSE – 18: MINOR PROJECT-2

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
MINOR PROJECT-2	**4**	**0**	**0**	**4**	**Class XII pass with Mathematics**	**DSC-15**

Learning Objectives:

The students will undergo one semester of project work based on the concepts studied in a subject of their choice. The objective is to train the students for the industry by exposing them to prototype development of real life software.

Learning Outcomes:

On successful completion of this course, a student will be able to:

1. *Develop a project plan based on informal description of the project.*
2. *Implement the project as a team.*
3. *Write a report on the project work carried out by the team and defend the work done by the team collectively.*
4. *Present the work done by the team to the evaluation committee.*

Each student shall carry out a minor project in the sixth semester that can be a continuation of advancement in Minor Project-1 or can be done from scratch. The students will work on any project based on the concepts studied in core/elective/ skill based elective courses. Specifically, the project could be a research study, or a software development project.

In case the student is opting for research project, students are required to select a relevant topic, carryout a detailed literature review followed by a critical analysis or implementation. The conclusions drawn from the analysis/ implementation must also be brought out in the form of a research paper.

PROJECT GROUP ORGANIZATION/PLAN

- Students will initially prepare a synopsis (500 words) and submit it to their respective department/supervisor. Only after obtaining the approval of supervisor the student can initiate the Project work.
- For a given project, the group size could be a maximum of four (04) students.
- Each group will be assigned a teacher as a supervisor who will be responsible for their lab classes.
- A maximum of four (04) projects would be assigned to one teacher.

PROJECT EVALUATION

The project will be evaluated as follows:

(a) Mid-semester evaluation 25% weightage

(b) End-semester evaluation

(i) External Examination 50% weightage

Thesis/Project report - 25% of total marks.

Software Coding

i) Documentation - 10% of total marks.

ii) Software - 15% of total marks.

(ii) Viva-voce **25% weightage**

- Practical/discussion sessions based on the area of the project. Work carried out in each lab session will be assessed out of five marks (zero for being absent). Finally, the marks obtained will be scaled out of a maximum marks of mid-semester evaluation (i.e. 25% of total marks).
- The end-**semester evaluation marks** to be awarded jointly by the examiner and supervisor / mentor.
- The **Mid-semester evaluation** to be awarded by the supervisor/mentor. Work carried out in each lab session will be assessed.
- The students will submit both the soft copy and the hard copy of the report.
- The reports may be retained by the examiners.

PROJECT REPORT

Two copies of the Project Report certified by the supervisor shall be submitted to the Department. The format of report can be downloaded from the website/guide/ coordinator.

DSE – 04 (a): Deep Learning

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Deep Learning	**4**	**2**	**0**	**2**	**Class XII pass**	DSC-03 DSC-13

Learning Objectives:

To introduce students to deep learning algorithms and their applications in order to solve real problems.

Learning Outcomes:

1. *Describe the feed-forward and deep networks.*
2. *Design single and multi-layer feed-forward deep networks and tune various hyper parameters.*
3. *Implement deep neural networks to solve a problem*
4. *Analyze performance of deep networks.*
5. *Use pre-trained models to solve a problem*

UNIT-I **(6 hours)**

Introduction to neural networks: Artificial neurons, perceptron, computational models of neurons, Structure of neural networks, Multilayer feed-forward neural networks (MLFFNN), Back-propagation learning, Empirical risk minimization, bias-variance tradeoff, Regularization, output units: linear, softmax , hidden units:tanh, RELU

UNIT-II **(6 hours)**

Deep neural networks: Difficulty of training DNNs, Greedy layerwise training, Optimization for training DNN's, Newer optimization methods for neural networks (AdaGrad, RMSProp, Adam), Regularization methods (dropout, drop connect, batch normalization).

UNIT-III **(6 hours)**

Convolution neural networks (CNNs): Introduction to CNN - convolution, pooling, Deep CNNs - LeNet, AlexNet. Training CNNs, weights initialization, batch normalization, hyper parameter optimization, Understanding and visualizing CNNs, Using a pre trained convnet

UNIT-IV **(6 hours)**

Recurrent neural networks (RNNs): Sequence modeling using RNNs, Back propagation through time, Longshot Term Memory (LSTM), Bidirectional RNN, Bidirectional LSTM

UNIT-V **(6 hours)**

Unsupervised deep learning: Auto-encoders, Generative Adversarial Networks. Applications of Deep learning - Computer vision, Speech recognition and NLP.

References:

3. *Bunduma, N. (2017). Fundamentals of Deep Learning. O'reilly Books.*
4. *Heaton, J. (2015). Deep Learning and Neural Networks, Heaton Research Inc.*

***List of Practicals*: (60 Hours)**

1. Implement a feed-forward neural networks for classifying movie reviews as positive or negative(using IMDB dataset)
2. Implement a deep-neural feed-forward network for estimating the price of house, given real-estate data(Boston Housing Price)
3. Implement a deep-neural network for classifying news wires by topic (Reuter's dataset).
4. Implement CNN for classifying MNIST dataset
5. Create a model for time-series forecasting using RNN/LSTM
6. Implement an auto-encoder

DSE – 04 (b): Internet of Things (IoT)

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Internet of Things(IoT)	**4**	**2**	**0**	**2**	**Class XII pass**	**DSC-01**

Learning Objectives

1. *To make students understand what IoT is and how it works today*
2. *To make students aware of different applications of IoT.*
3. *To introduce students to technologies and smart systems under IoT*

Learning Outcomes:

1. *Able to understand the application areas of IOT ·*
2. *Able to realize the revolution of Internet in Mobile Devices, Cloud & Sensor Networks*
3. *Able to understand building blocks of Internet of Things and characteristics.*

UNIT-I **(5 Hours)**

Introduction to IoT: Definition and Characteristics, Physical Design Things- Protocols, Logical Design- Functional Blocks, Communication Models- Communication APIs- Introduction to measure the physical quantities.

UNIT-II **(5 Hours)**

IoT Enabling Technologies - Wireless Sensor Networks, Cloud Computing Big Data Analytics, Communication Protocols- Embedded System- IoT Levels and Deployment Templates.

UNIT-III **(10 Hours)**

Introduction to Smart Systems using IoT: IoT Design Methodology- IoT Boards (Raspberry Pi, Arduino) and IDE - Case Study: Weather Monitoring- Logical Design using Python, Data types & Data Structures- Control Flow, Functions- Modules- Packages, File Handling - Date/Time Operations, Classes- Python Packages of Interest for IoT.

UNIT-IV **(5 Hours)**

Sensing and Sensors: Wireless Sensor Networks, Challenges and Constraints, Introduction – Fundamentals of MAC Protocols – MAC protocols for WSN – Sensor MAC Case Study.

UNIT-V **(5 Hours)**

Applications: Home Automation, Smart Cities, Environment, Energy, Retail, Logistics, Agriculture, Industry, Health and Lifestyle, IoT and M2M

References:

1. Michael Miller, The Internet of Things, Pearson Education, 2015.
2. Arshdeep Bahga and Vijay Madisetti, Internet of Things: Hands-on Approach, Hyderabad University Press, 2015.
3. Greengard, Samuel. The internet of things. MIT press, 2015.

List of Practicals: (60 Hours)

1. Familiarization with Arduino/Raspberry Pi and perform necessary software installation.
2. To interface LED/Buzzer with Arduino/Raspberry Pi and write a program to turn ON LED for 1 sec after every 2 seconds.
3. To interface Push button/Digital sensor (IR/LDR) with Arduino/Raspberry Pi and write a program to turn ON LED when push button is pressed or at sensor detection.
4. To interface DHT11 sensor with Arduino/Raspberry Pi and write a program to print temperature and humidity readings.
5. To interface motor using relay with Arduino/Raspberry Pi and write a program to turn ON motor when push button is pressed.
6. To interface OLED with Arduino/Raspberry Pi and write a program to print temperature and humidity readings on it.
7. To interface Bluetooth with Arduino/Raspberry Pi and write a program to send sensor data to smartphone using Bluetooth.
8. To interface Bluetooth with Arduino/Raspberry Pi and write a program to turn LED ON/OFF when '1'/'0' is received from smartphone using Bluetooth.
9. Write a program on Arduino/Raspberry Pi to upload temperature and humidity data to thingspeak cloud.
10. Write a program on Arduino/Raspberry Pi to retrieve temperature and humidity data from thing speak cloud.
11. To install MySQL database on Raspberry Pi and perform basic SQL queries.
12. Write a program on Arduino/Raspberry Pi to publish temperature data to MQTT broker.
13. Write a program on Arduino/Raspberry Pi to subscribe to MQTT broker for temperature data and print it.
14. Write a program to create TCP server on Arduino/Raspberry Pi and respond with humidity data to TCP client when requested.
15. Write a program to create UDP server on Arduino/Raspberry Pi and respond with humidity data to UDP client when requested.

DSE – 04 (c): SOFTWARE TESTING

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Software Testing	**4**	**3**	**0**	**1**	**Class XII pass**	**NIL**

Learning Objectives

1. To study fundamental concepts in software testing
2. To discuss various software testing issues and solutions in software unit test, integration and system testing.
3. To expose the advanced software testing topics, such as object-oriented software testing methods.

Learning Outcomes:

1. List a range of different software testing techniques and strategies and be able to apply.
2. Distinguish characteristics of structural testing methods.
3. Demonstrate the integration testing which aims to uncover interaction and compatibility problems as early as possible.
4. Discuss about the functional and system testing methods.
5. Demonstrate various issues for object oriented testing.

UNIT-I **(12 Hours)**

Review of Software Engineering: Overview of Software Evolution, SDLC, Testing Process, Terminologies in Testing: Error, Fault, Failure, Verification, Validation, Difference between Verification and Validation, Test Cases, Testing Suite, Test, Oracles, Impracticality of Testing All Data; Impracticality of Testing All Paths. Verification: Verification Methods, SRS Verification, Source Code Reviews, User Documentation Verification, Software, Project Audit, Tailoring Software Quality Assurance Program by Reviews, Walkthrough, Inspection and Configuration Audits.

UNIT-II **(13 Hours)**

Functional Testing: Boundary Value Analysis, Equivalence Class Testing, Decision Table Based Testing, Cause Effect Graphing Technique. Structural Testing: Control Flow Testing, Path Testing, Independent Paths, Generation of Graph from Program, Identification of Independent Paths, Cyclomatic Complexity, Data Flow Testing, Mutation Testing.

UNIT-III **(8 Hours)**

Regression Testing: What is Regression Testing? Regression Test cases selection, reducing the number of test cases, Code coverage prioritization technique. Reducing the number of test cases: Prioritization guidelines, Priority category, Scheme, Risk Analysis.

UNIT-IV **(7 Hours)**

Software Testing Activities: Levels of Testing, Debugging, Testing techniques and their applicability, Exploratory Testing Automated Test Data Generation: Test Data, Approaches to test data generation, test data generation using genetic algorithm, Test Data Generation Tools, Software Testing Tools, and Software test Plan

UNIT-V **(5 Hours)**

Object Oriented Testing: Definition, Issues, Class Testing, Object Oriented Integration and System Testing. Testing Web Applications: Web Testing, User Interface Testing, Usability Testing, Security Testing, Performance Testing, Database testing, Post Deployment Testing.

Practicals (30 Hours)

Practicals related to basic path testing and other testing techniques.

SEMESTER- III
B.Voc. - Banking, Financial Services & Insurance

DISCIPLINE SPECIFIC CORE COURSE – 7
FINANCIAL SERVICES

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
FINANCIAL SERVICES	4	3	1	0	Class XII	Nil

Learning Objective:

This paper equips students with the basic structure of the Financial Services Sector and enables them to make a career in the financial services sector.

Learning Outcomes:

After completion of the course, learners will be able to:

1. Analyse the development in housing finance
2. Understand the regulatory framework in financial services.
3. Understand the concepts of Leasing and Hire Purchase system.
4. Develop understanding of Venture Capital, Insurance and Credit Ratings.
5. Learn about the recent developments in Retail Financing.

UNIT—I: Introduction to Housing finance (12 hours)

Concept of financial services, difference between financial and non-financial services, financial service providers in India, latest development in financial services, Regulatory frameworks related to different financial services like leasing, HP, NBFCs, Insurance Cos, HFCs. Significance of housing finance in economic development, NHB- as a regulator and refinancer, modus operandi of HFCs; Securitization - concept, types, process of securitization, securitization in India.

Unit—II: Leasing and Hire Purchase (12 Hours)

Concepts of leasing, types of leasing - financial & operating lease, direct lease and sales & lease back, single investor lease and leveraged lease, Domestic lease and International lease,

advantages and limitations of leasing, legal aspects of leasing, determination of lease rental; lease evaluation- the lessee's angle, determination of breakeven lease rental. Hire-Purchase: concept, mathematics of HP, legal aspects of HP, financial evaluation the hirer's view.

Unit—III: Venture Capital, Insurance and Credit Ratings (12 Hours)

Concept, history and evolution of VC, the venture investment process, various steps in venture financing, incubation financing. Concept, classification, principles of insurance, IRDA and different regulatory norms, operation of General Insurance. Health Insurance, Life Insurance. Introduction, types of credit rating, advantages and disadvantages of credit ratings, Credit rating agencies and their methodology, International credit rating practices.

Unit—IV: Retail Finance (9 Hours)

Introduction to retail finance, benefits and objective, different models/channels of retail finance, methods of determining profit for retail financer, opportunities and challenges of retail finance, Global retail finance scenario, overview of retail finance in India, customer perception and expectation about retail finance.

Essential/recommended readings

DISCIPLINE SPECIFIC CORE COURSE – 8
BUSINESS STATISTICS AND FINANCIAL MATHEMATICS

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Business Statistics and Financial Mathematics	**4**	**2**	**0**	**2**	Class XII Pass	NIL

Learning Objectives:

To familiarize students with various statistical and mathematical data analysis tools that can be used for effective decision making. Emphasis will be on the application of the concepts learned to be employed in various financial and managerial situations.

Learning Outcomes:

After the end of the course, students should be able to:

1. Summarize data sets using descriptive statistics.
2. Explain mathematical formulation and solution to problems related to finance including different methods of interest calculation, future, and present value of money.
3. Analyse the relationship between two variables of various managerial situations.
4. Geometrically interpret Correlation and Regression.
5. Develop managerial decision problems using Probability Density Functions and Cumulative Density Functions.

Unit1: Descriptive Analysis and Mathematics of Finance (9 Hours)

a. Descriptive Analysis

Measures of Central Value - Mean, Median, Mode; Measures of Dispersion - Absolute and Relative: Range, Quartile Deviation, Mean Deviation, Standard Deviation, Coefficient of Variance.

b. Mathematics of Finance

Rates of interest - nominal, effective and their inter-relationships in different compounding situations, compounding a sum using different types of rates, Types of annuities: ordinary, due

and deferred - Discrete and continuous, Perpetuity, Determination of future and present values using different types of rates of interest, Applications relating to a loan, mortgage, sinking fund etc.

Unit2: Correlation and Regression Analysis (8 Hours)

Correlation Analysis - Meaning and significance; Correlation and Causation, Types of Correlation, Methods of studying simple correlation: Scatter diagram, Karl Pearson's coefficient of correlation, Spearman's Rank correlation coefficient.
Regression Analysis - Meaning and significance, Regression vs. Correlation, Simple Regression model: Linear Regression, R-square and MSE in Regression, Geometric interpretation of Regression.

Unit3: Random Variable Analysis (7 Hours)

Probability - Meaning and need, Conditional probability, Bayes' theorem, Random Variable: discrete and continuous; Probability Distribution: Meaning, characteristics (Expectation and variance) of Binomial, Poisson, Exponential and Normal distribution, z-score, Chebyshev and empirical rule, Central limit theorem.

Unit4: Introduction to Estimation and Hypothesis Testing (6 Hours)

Estimation - Point and Interval estimation of population mean, Confidence intervals for the parameters of a normal distribution (one sample only), Hypothesis Testing: Null and Alternate Hypothesis, One Tail and Two tail tests, Level of Significance, Type I and Type II error, Test of hypothesis concerning Mean: z-test & t-test.

Practical component (60 Hours)

Students will perform practical problems based upon the concepts such as descriptive statistics, financial functions, correlation, regression analysis, finding z-score, t-test and z-test on excel & relevant software.

Also a detailed case study showcasing the use of Business statistics in the operations of the company, some practical application of use of statistics in demand estimation in real life business.

Essential Readings:

1. 1.Keller, G. (2022). *Statistics for management and economics*. Cengage Learning.
2. 2.Levin, R. I., & Rubin, D. S. (2021). *Statistics for management*.
3. 3.Stine, R., & Foster, D. (2017). *Statistics for Business: Decision Making and Analysis* (3rd ed.). Pearson.
4. Gupta, S. P. (2012). *Statistical Methods.* Sultan Chand & Sons .

Additional Readings:

1. Vohra, N. D. (latest edition). *Business Statistics.* McGraw Hill Education.
2. Thukral, J. K. (latest edition). *Fundamentals of Business Statistics.* Taxmann.

Note: Latest edition of the readings may be used.

DISCIPLINE SPECIFIC CORE COURSE – 9
FUNDAMENTALS OF INSURANCE

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Fundamentals of Insurance	**4**	**3**	**1**		Class XII Pass	NIL

Learning Objectives:

The objective of the course is to make learners understand the concepts of Insurance, basic operations and technical components involved.

Learning Outcomes:

1. Identify the concept and components involved in Insurance.
2. Make learners familiar with practical usage of Insurance and its implications at the time of adversities.

3. Make them understand how digitisation has changed the face of Insurance.

Unit I: Insurance and its function (9 hours)

Introduction to Insurance - Growth, Origin and History of Insurance, Purpose and Need, Meaning and Definition of Insurance, Characteristics of Insurance, nature, Benefits of insurance, Functions of Insurance, Societal perspective of Insurance, Economic development and Insurance. Insurance as a social security tool.

Unit II: Principle of Insurance (12 hours)

Principles of Insurance, Principle of Utmost good faith (Uberrimae Fidei), Principal of Indemnity, Principle of Contribution, Principle of Mitigation of Loss, Principle of Subrogation, Principle of Proximate Cause, Principle of Insurable Interest. Premium- basic definition and concept of Premium.

Unit III: Risk and Management (12 hours)

Risk and Uncertainty- Concepts, causes, degree, classification of risks, and cost, Insurable risk. Psychology and attitude towards risk. Managing risk and uncertainty. Cash flow at risk, risk assessment, risk transfer & mitigation method. Risk management-concept, evolution, purpose, scope, importance and its future. Role of risk management in economic growth. Risk management function. Managerial Aspects- goals, identification, evaluation, risk response, and plan administration.

Unit IV: Insurance contract and its regulatory bodies (12 hours)

Insurance Documents and policy terms and conditions, Insurance policy Contract-nature-subject- matter of insurance and subject-matter of contract of insurance, features-as per Contract Act, special features, evidence and documents. Types of insurance contract – Personal, Property, Liability, and Guarantee Insurance, Insurance contract vs. Wagering agreement, Assurance vs. Insurance, Gambling vs. Insurance. Payment of premium. E-insurance policy and Insurance Repositories. KYC norms and anti-money laundering guidelines for insurers. Reinsurance Contract- meaning and purpose. IRDA guidelines related to detection and monitoring of Insurance Frauds.

DISCIPLINE SPECIFIC ELECTIVE COURSE – 1
FUNDAMENTALS OF MANAGEMENT & ORGANIZATIONAL BEHAVIOUR

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course(if any)
		Lecture	Tutorial	Practical/ Practice		
Fundamentals of Management and Organizational Behaviour	**4**	**3**	**1**	**0**	Class XII Pass	NIL

Learning Objectives:
To acquaint the students with the fundamentals of managing business and to understand Individual and group behavior at work place so as to improve the effectiveness of an Organization. The course will use and focus on Indian experiences, approaches and cases.

Learning Outcomes:

At the end of the course, students should be able to:
i. Understand the nature of management and describe the functions of management.
ii. Develop understanding of different approaches to designing organizational structures.
iii. Understand the role of personality, learning and emotions at work.
iv. Discover and understand the concept of motivation, leadership, power and conflict.
v. Understand the foundations of group behavior and the framework for organizational change and development.

Unit I **(10 Hours)**

Introduction to management; Evolution of management thought: Scientific, Administrative, Human Relations and Systems approach to management; Management functions and Managerial roles.

References:
Stephen P. Robbins & Mary Coulter, Management. 13th Ed. Pearson[Chapter 1]
Kaul Vijay Kumar, Business Organization & Management - Text and Cases, Pearson[Chapter 23]

Unit II **(10 Hours)**

Planning: Importance and types of plans, planning process, MBO; Decision making: process, types, concept of bounded rationality; Control: process and types; Principles of organizing: common organizational structures, Departmentalization: types of departmentalization,

Delegation & Decentralization: Factors affecting the extent of decentralization, Process and Principles of delegation.

References:
Stephen P. Robbins & Mary Coulter, Management. 13th Ed. Pearson[Chapter 2,8,10,18]

Unit III **(10 Hours)**

Meaning & concept of organizational behaviour; Personality: meaning, factors affecting personality, Big five model of personality; Learning: concept and theories of learning (Classical conditioning, operant conditioning and social learning theory), concept of reinforcement; Perception: concept, factors affecting perception, process of perception, perceptual errors. Motivation: Concept, importance, Content theories (Maslow's need theory, Alderfers' ERG theory, Mc Cllelands' theory of needs, Herzberg's two factor theory) & Process theories (Adams equity theory, Vrooms expectancy theory).

References:
Robbins Stephen P and Judge T.A., Vohra, Organisational Behaviour, 16th Ed. Pearson.[Chapter 5,6,7]
Kaul Vijay Kumar, Business Organization & Management - Text and Cases, Pearson[Chapter 28]

Unit IV **(15 Hours)**

Leadership: Concept, Theories (Trait, Behavioural, Contingency, Charismatic, Transactional and Transformational Leadership; Emotional Intelligence: Concept, Importance, Dimensions. Groups: Definition, Stages of Group Development, Group Cohesiveness; Analysis of Interpersonal Relationship: Transactional Analysis, Johari Window; Conflict: Concept, Sources, Types, Stages of Conflict, Management of Conflict; Organisational Power: Sources of Power and Dysfunctional uses of Power; Organizational Change: Concept, Resistance to change, Managing resistance to change, Kurt Lewin , Theory of Change; Organizational Development(OD): Meaning and types of OD Interventions.

References:
Robbins Stephen P and Judge T.A., Vohra, Organisational Behaviour, 16th Ed. Pearson.[Chapter 9,12,13,14,17]

Essential Readings:
1. Robbins Stephen P and Judge T.A. (2017) Organisational Behaviour, 17th Ed. Pearson.
2. Stephen P. Robbins & Mary Coulter (2017) Management. 13th Ed. Pearson.
3. Kaul Vijay Kumar (2012). Business Organization & Management - Text and Cases, Pearson.

Additional Readings:
1. Kavita Singh: Organisational Behaviour 3rd Ed. Vikas Publication.

2. Koontz & Heinz Weihrich, Essential of Management, McGraw Hill.
3. Kumar, P. Sachdeva A. (2012). Fundamentals of Management. S. Chand. 1ed.

DISCIPLINE SPECIFIC ELECTIVE COURSE – 2
COMMERCIAL BANKING FOR BUSINESS

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course(if any)
		Lecture	Tutorial	Practical/ Practice		
Commercial Banking for Business	**4**	**3**	**1**	**0**	Class XII Pass	NIL

Learning Objectives:

The course aims to provide the students with a theoretical and structural understanding of the commercial banking system and its working. It also focuses upon the developments in commercial banking market.

Learning Outcomes:

After completing the course, the student shall be able to:

1. Understand the evolution and growth of Commercial Banking in India.
2. Learn about commercial banking structure in India.
3. Understand the basic functions of banks with respect to business.
4. Analyze the recent developments in banking system.

Unit I: Commercial banking and its structure (12 hours)

Evolution of banking in India, Functions of Banks – Traditional and Modern. Role & contribution of banks in India. Overview of banking sector reforms.

Commercial banking – concept, Structure and Composition of Commercial Banks; Types of Banks – Public, Private, Cooperative, Regional Rural Banks (RRBs), Foreign, National Housing Bank, Small Industries Development Bank of India (SIDBI), Export-Import Bank of India (EXIM); Comparison between public and private banks; comparison between

Cooperative and Regional Rural Banks. Role of commercial banks in economy; asset liability management; financial inclusion.

Unit 2: Loans, Advances and Commercial Banks operations for business (12 hours)

Principles of sound lending; Methods of granting advances; Priority Sector Lending; Introduction to the Balance Sheet of a Commercial Bank, Concept of Non-Performing Assets (NPAs)-Reasons for Non-Performing Assets and Measures to check Non-Performing Assets. Anti-Money Laundering (AML), CIBIL.

Commercial bank services: Cash Management System, Debt Management, Factoring and Forfaiting, Trusteeship, Custodial services, Business advisory, Salary and pension, Off shore services, Trade services, Forex Management, Corporate Deposits; Corporate Finance: Seed capital, working capital, Import-Export funding. Corporate Debt Restructuring.

Unit 3: Role of Artificial Intelligence in Banking Industry (12 hours)

Artificial Intelligence: Concept, benefits, and scope. Differences between AI, Machine Learning (ML) and Deep Learning (DL). AI strategy for business enterprise - Considerations for an AI strategy. Introduction to mobile computing and Cloud computing. Redefined banking industry – the adoption of Analytics, AI-powered financial services, Fraud mitigation in banks with AI, Reorienting customer retention, Risk management with AI, AI-driven transformation in Insurance, Digital-based insurance model.

Unit 4: Regulation and developments in banking industry (9 hours)

Reserve Bank- Introduction. Emerging role of Reserve Bank of India in Indian Banking System, Banking Sector Reforms – Narasimhan Committee -I, Narasimhan Committee- II; Securitization of Standard Assets and its computation; Basel Accord: merits and weaknesses of the Basel II, Basel III and Basel IV. Introduction to various forms of Banking – Corporate Banking, Retail Banking, International Banking, Investment Banking, Development Banking, Virtual Banking, Non-Banking Financial Intermediaries.

Suggested Readings:

1. Singh, K & Dutta V., Commercial Bank Management.

2. Khan M.Y.: Indian Financial System; Tata McGraw Hill; 10th edition; 2018
3. Paul, R.R. & Mansuri, B.B. Banking and Financial Systems, Kalyani Publications, New Delhi.
4. Sethi, Jyotsna & Bhatia, Nishwan, Elements of Banking and Insurance, PHI Learning Pvt. Ltd., New Delhi.

6. Akerkar, R. (2018). Artificial Intelligence for Business. Basingstoke: Springer Nature.
7. Dhanrajani, S. (2018). AI & Analytics: Accelerating Business Decisions. New Jersey: Wiley.

Additional Readings:

1. Sethi, Jyotsna & Bhatia, Nishwan, Elements of Banking and Insurance, PHI Learning Pvt. Ltd., New Delhi.
2. Pathak, Bharti V., – Indian Financial System: Markets, Institutions and Services, Pearson Education, New Delhi; 5th edition 2018.
3. Russell, S. J., & Norvig, P. (2019). Artificial Intelligence: A Modern Approach, 3rd Edition. New Jersey: Prentice Hall
4. Tandon, Deepak & Tandon, Neelam, Management of Banks- Text and Cases, Taxmann Publications Pvt Ltd, New Delhi.

Note: Latest edition of readings may be used

SEMESTER-IV

Bachelor of Vocation
Banking, Financial Services & Insurance

DISCIPLINE SPECIFIC CORE COURSE – 10
FINANCIAL MARKETS AND INSTITUTIONS

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course(if any)
		Lecture	Tutorial	Practical/ Practice		
Financial Markets and Institutions	**4**	**3**	**1**	**0**	**Class XII**	**Nil**

Learning Objectives:

The objective of this paper is to introduce students to the different aspects and components of financial Institutions and financial markets. This will enable them to take the rational decision in financial environment.

Learning outcomes:

After completion of the course, learners will be able to:

1. Understand the financial architecture of an economy and its key players.
2. Learn about the crucial aspects related to financial and banking structure in India.
3. Understand the concepts related to securities market and trading in secondary market.

4. Analyse the functions of different players in the financial market including Regulators like RBI and SEBI.

UNIT–I: Introduction to Financial and Banking System in India (12 Hours)

Structure of Indian Financial System: An overview of the Indian financial system, financial sector reforms: context, need and objectives, major reforms in the last decade; competition; deregulation; capital requirements; issues in financial reforms and restructuring: future agenda of reforms; Regulation of Banks, NBFCs & FIs: Salient provisions of banking regulation act and RBI Act; Role of RBI as a central banker; Products offered by Banks and FIs: Retail banking and corporate banking products. Universal Banking: need, importance, trends and RBI guidelines, Core banking solution (CBS); RTGS and internet banking, NBFCs and its types, comparison between Banks and NBFCs

Unit—II: Financial Market in India (12 Hours)

Introduction to Financial Markets in India: Role and Importance of Financial Markets, Financial Markets: Money Market; Capital Market; Factors affecting Financial Markets, Linkages Between Economy and Financial Markets, Integration of Indian Financial Markets with Global Financial Markets, Primary & secondary market, Currency Market, Debt Market-role and functions of these markets. Primary Market for Corporate Securities in India: Issue of Corporate Securities: Public Issue through Prospectus, Green shoe option, Offer for sale, Private Placement, Rights Issue, Online IPO, Book Building of Shares, Disinvestment of PSU, Employees Stock Options, Preferential Issue of Shares, Venture Capital, Private Equity, Performance of Primary Market in India, Corporate Listings Listing and Delisting of Corporate Stocks.

Unit—III: International Financial Market and Trading (12 Hours)

Secondary Market in India: Introduction to Stock Markets, Regional and Modern Stock Exchanges, International Stock Exchanges, Demutualization of exchanges, Comparison between NSE and BSE, Raising of funds in International Markets: ADRs and GDRS, FCCB and Euro Issues, Indian Stock Indices and their construction, maintenance, adjustment for corporate actions (rights, bonus and stock split;) on index with numerical, free float vs. full float methodology, Classification of Securities to be included in the Index, Bulls and Bears in Stock Markets, Factors influencing the movement of stock markets, indicators of maturity of stock markets, Major Instruments traded in stock markets: Equity Shares, Debentures, Myths

attached to Investing in Stock Markets Trading of securities on a stock exchange; Selection of broker, capital and margin requirements of a broker.

Unit—IV: Financial Market Institutions (9 Hours)

Functions and workings of Regional Rural Banks (RRBs) and National Bank for Agriculture and Rural Development (NABARD).The Objectives, Functions and Working of Small Industries Development Bank of India (SIDBI), State Financial Corporations (SFCs), State Industrial Development Corporations (SIDCs)/State Industrial Investment Corporations (SIICs), Industrial Finance Corporation of India (IFCI), Industrial Development Bank of India (IDBI), Industrial Credit & Investment Corporation of India (ICICI). International Monetary Institutions: International Monetary Fund (IMF), International Bank for Reconstruction and Development (IBRD), International Development Association (IDA) and International Finance Corporation (IFC)

Essential/recommended readings

1. Saunders, A. & Cornett, M. M. (2007). *Financial Markets and Institutions (3rd ed.)*. Tata McGraw Hill
2. Madura, J. (2008). *Financial Institutions and Markets*. Cengage Learning.
3. Kohn, M. (2004). *Financial Institutions and Markets.* Oxford University Press.

Suggestive readings

1. Pathak, B. (2018). *Indian Financial System (5th ed.)*. Pearson Publication.
2. Bhole, L. M. & Mahakund, J. (2017). *Financial Institutions and Markets (6th ed.)*. McGraw Hill Publishing
3. Kataria, K., & Rajni. (2017). *Financial Markets, Institutions and Financial Services*. Galgotia Publishing Company.
4. Khan, M. Y. (2015). *Financial Services (8th ed.).* Tata Mc Graw Hill Education Private Limited.

Note: Latest edition of the readings may be used.

DISCIPLINE SPECIFIC CORE COURSE – 11
TECHNOLOGY IN BANKING AND INSURANCE SECTOR

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Technology in Banking and Insurance Sector	**4**	**3**	**0**	**1**	**Class XII**	**Nil**

Learning Objectives:

The course aims to make the students conversant with different aspects of technology used in banking and insurance, and various issues related to security and controls with reference to India.

Learning Outcomes:

After completion of the course, learners will be able to:

1. Describe the basic concepts related to electronic banking and Insurance
2. Analyze the different electronic payment systems available.
3. Summarize the Electronic Fund Transfer System.
4. Discuss different types of security threats in Indian Banking.
5. Interpret the E-Banking and insurance Regulations and Cloud Computing.

UNIT–I: E-Banking & E-Insurance (9 Hours)

E-Banking and E-Insurance: Definition, need, types and services offered; e-banking and e-insurance versus traditional banking and insurance.

Unit—II: Electronic Payment System (12 Hours)

Overview of Electronic Payment System: Automated Teller Machine (ATM), Mobile Banking, Unified Payments Interface (UPI), GPay, Paytm, PhonePe, Amazon Pay, MobiKwik, Bharat

Interface for Money (BHIM). Payment Gateways: PayPal, PayUMoney, CCAvenue, etc. Card Technologies, MICR electronic clearing. Electronic Credit and Debit Clearing: NEFT, RTGS, DNS, ECS (Credit/Debit), IMPS, VSAT, SWIFT Code. E-money, Electronic purse, Digital Cash.

Unit—III: Security Threats (12 Hours)

Security Threats in online Environment: Viruses, Worms, Malware, Software Bombs, Phishing, Spoofing, Spamming, Denial of Service Attacks, Application-based Digital Frauds. Technology Solutions: Digital Signature, Encryption, Protection, Multiple Step Verification.

Unit—IV: E-Banking & E-Insurance Regulations and Cloud Computing (12 Hours)

Legal and regulatory issues of e-banking and e-insurance in India. Definition of Cloud Computing. Significance and Challenges of Cloud Computing.

Practical component (30 Hours)

Students will be made familiar to using all the major payment interface. Basic practical knowledge of KYC and data privacy steps will also be given.

Essential/recommended readings

1. Agarwal, O.P. (2017). *Banking & Insurance*. Himalaya Publishing House.
2. Kaptan S.S., & Choubey N.S. (2003). *Indian Banking in Electronic Era.* Sarup & Sons.

5. Uppal, R.K. (2020). *Banking with Technology*. New Century Publications, New Delhi.

Suggestive readings

1. Khan, M.Y. (2009). *Indian Financial System*. Tata McGraw Hill Publishing Company Ltd., New Delhi.
2. Desai, V. (2017). *Banks and Institutional Management.* Himalaya Publishing House, Mumbai.

DISCIPLINE SPECIFIC CORE COURSE – 12
CORPORATE & SECURITIES LAW

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Corporate and Securities Law	4	3	1	0	Class XII Pass	NIL

Learning Objectives:

In view of increasing emphasis on adherence to norms of good corporate governance, Corporate and Securities Law assumes an added importance in the corporate legislative. It deals with structure, management, administration and conduct of affairs of various laws and to understand the application of corporate laws to practical commercial situations.

Learning outcomes:

By studying this course, the students will be able to:

1. To acquire theoretical and practical perspective on many aspects of various legal acts.
2. To understand the detailed procedure and applicability of SEBI Act, Depositories Act, Competition Act, FEMA Act, NCLT and NBFCs.
3. To develop critical thinking through the use of corporate law cases.

UNIT-I: INTRODUCTION **(12 hours)**

Characteristics of a company; lifting of corporate veil; types of companies including one person company, small company and producer company; association not for profit; illegal association; formation of company –promoters, their legal position, pre-incorporation contract and provisional contracts; online registration of a company. Memorandum of association, articles of association, doctrine of constructive notice and indoor management, prospectus-shelf and red herring prospectus, misstatement in prospectus; GDR; book building; issue, allotment and forfeiture of share, transmission of shares, buyback and provisions regarding buyback; issue of bonus shares.

UNIT-II: Depositories Act, 1996 (9 hours)

Definition of Depository Board and Beneficial Owner, Certificate of Commencement of Business; Rights and obligations of Depositories, Participants, Issuers and Beneficial Owners.

Competition Act, 2002- Applicability of the Act – Definitions, Prohibition of certain agreements, abuse of Dominant position and Regulation of combinations, Competition Commission of India- Powers, Functions, Power of Central Government to supersede Commission, Penalties, Appeals, Competition Advocacy.

National Company Law Tribunal (NCLT)- Powers and Jurisdiction, Position under the Finance Act, 2021.

UNIT-III: Management (12 hours)

Directors, Classification of directors, women directors, independent director, small shareholder's director; disqualifications, director identity number (DIN); appointment; legal positions, powers and duties; removal of directors; key managerial personnel, managing director, manager; meetings of shareholders and board; types of meeting, convening and conduct of meetings, postal ballot, meeting through video conferencing, e-voting. Books of accounts, registers; online filing of documents; dividend provisions; auditor's appointment; rotation of auditors; auditor's report; secretarial audit; concept and modes of winding up.

UNIT-IV: Non-banking Financial Companies (NBFCs) (12 hours)

Formation and regulation of NBFC's-Consumer Protection Act, 1986 - Salient Features - Definitions of complainant, Consumer, Manufacturer, Consumer Dispute, Service, Goods, Unfair Trade Practices, Liability of Companies to consumers, Basic Features of the GST Act,2021. Corporate Governance- International dimensions of Company Law.

Essential/recommended readings

1. Avtar Singh (2018) "Company Law", Eastern Book Company.
2. H.K. Saharay (2012) "Principles and Practice of Company Law in India, Prentice Hall of India Private Limited", New Delhi.
3. S.M. Shah: Lectures on Company Law, N.M. Tripathi Private Ltd.
4. Chalesworth & Cain: Company Law, Geoffrey Morse, Steven and Sons, London.

Suggestive readings

1. L.C.B. Grover “The Principles of Modern Company Law”, Steven and Sons, London.
2. Pennigton “Company Law, Butterworths, London”, Taxmann’s.
3. B.K Pahwa Law relating to Non-Banking Financial Companies

DISCIPLINE SPECIFIC ELECTIVE COURSE – 3
EMERGING BANKING AND FINANCIAL SERVICES

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Emerging Banking and Financial Services	4	3	1	0	Class XII	NIL

UNIT–I: Indian Banking System and Other Banking Reforms (12 Hours)

An overview of the Indian Banking system; Major Banking Reforms in the last decade: Payment banks, Monetary Policy Committee, MCLR Based Lending. Innovative Remittance Services, Issues in financial reforms and restructuring. Future agenda of reforms: Assessing Non-Performing Assets in Indian Banking, Previous methodologies for recovery, Impact of Gross NPAS on a bank's bottom line-burning need for bad banks, Functioning of Bad Banks, Government backing for bad banks - National Asset Reconstruction Company Ltd. (NARCL).

Unit—II: Neo- Banking, Merger and Acquisition (9 Hours)

Introduction to neo-banks, Functions of neo-banks, Operating Model of neo-banks, Regulatory requirements for setting up and running neo-banks, emerging need for neo-banks, neo-banks vs. traditional banks. Merger & Acquisition: Introduction, Benefits of mergers, Synergies accruing out of mergers, Regulatory mechanisms surrounding M&A in banking, Case-studies of recent banking mergers and related outcomes.

Unit—III: Banking Services, Cross Sell Products Investments and Loans (12 Hours)

Service channels – Branch, ATM, internet, mobile banking, Payment and collection services – cheques, electronic funds transfers, cash management, cheque clearing, Ancillary services – locker and safe custody, payment of taxes and bills, Financial services – Sale of insurance mutual

funds, gold coins, Government bonds, Depository services – DEMAT and web trade, Wealth management, Foreign exchange, Principles of lending, concepts, regulations, Retail lending – secured and unsecured, Home loan, car loan, loan against securities, Credit cards, personal loan educational loan, Business credit – working capital and term loan. Over draft cash credit, term loans, fund based and non-fund based, Priority sector lending – Agriculture credit, MSME.

Unit—IV: KYC, AML and Account Opening Process (12 Hours)

Importance of KYC and AML- Why RBI insists on KYC procedures. The role of Banks in implementing KYC, penalties for non-adherence, Different stages of money laundering, Understand the importance of AML at the time of account opening, Customer acceptance policy – low, medium and high risk customers, Customer verification procedure – KYC documents required for account opening, verification process, Account opening formalities, forms, documents, procedures, Risk management – KYC, AML – monitoring transactions and reporting of suspicious transactions.

Essential/recommended readings

1. Pathak, B. (2018). *Indian Financial System (5th ed.)*. Pearson Publication.
2. Agarwal, O. P. (2014). *International Banking and Finance (1st ed.)*. Himalaya, Publishing House.
3. IIBF. (2019). *Principles & practices of Banking*. Macmillan India Limited.

Suggestive readings

2. Khan, M. Y. (2015). *Financial Services (8th ed.)*. Tata Mc Graw Hill Education Private Limited.
3. RBI Guidelines on Payment Banks, Monetary Policy Committee, Universal Banking, Bad bank in India and MCLR based lending.

DISCIPLINE SPECIFIC ELECTIVE COURSE – 4
CORPORATE FINANCE

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course(if any)
		Lecture	Tutorial	Practical/ Practice		
Corporate Finance	**4**	**3**	**1**	**0**	Class XII Pass	NIL

Learning Objectives:

To provide an understanding of the essential elements of the financial environment where the businesses operate. To acquaint students with the techniques of financial management and its applications for business decision making. It aims to provide and develop an understanding among students about various perspectives that the CFO (Chief Executive Officer) of a firm may hold. Additionally, it will help to develop relevant skills required for diverse strategic finance roles in modern business entities. A CFO's job is to maximize firm value through majorly four types of decisions: which projects to invest in, how to finance the selected projects by using a mix of various financing sources, how to use the surplus generated and how to manage the cash flows of the firm.

Learning Outcomes:

1. Equipped with the basic concepts of financial management.
2. Understand how to coordinate various decisions to maximize the wealth of an organization in today`s financial environment.
3. Arrive at strategic corporate finance decisions with the required accuracy aided by various excel functions.

Unit 1 **(9 Hours)**

Introduction: Nature of Financial Management: Finance and related disciplines; Scope of Financial Management; Profit Maximization, Wealth Maximization. Functions of Finance –

Finance Decision, Investment Decision, Dividend Decision; Risk-Return Trade-off in Finance Functions, Organization of Finance Function.

Time value of money: Concept of Time Value of Money – present value, future value, annuity, growing annuity, perpetuity, growing perpetuity, excel functions of time value of money.

Unit 2: Strategic Investment Decisions: (12 Hours)

Capital Budgeting: Nature and Meaning of Capital Budgeting; Principles and Process; Estimation of relevant Cash Flows and Terminal Value; Evaluation techniques– Payback Period, Accounting Rate of Return, Net Present Value, Internal Rate of Return & MIRR, NPV vs. IRR, Net Terminal Value, Profitably Index Method, Risk analysis in Capital Budgeting - Sensitivity and Scenario analysis, Certainty Equivalent Approach, RADR, Real Options, Excel functions of Capital Budgeting techniques.

Cost of Capital: Meaning and Concept, Measurement of Cost of Capital-Cost of Debt; Cost of Equity Share; Cost of Preference Share; Cost of Retained Earning; Computation of over-all Cost of Capital based on Historical and Market weights (WACC); Adjusting Cost of Capital for Risk.

Unit 3: (12 Hours)

Strategic Financing Decisions: Capital Structure, Theories and Value of the firm – Net Income Approach, Net Operating Income Approach, Traditional Approach, Modigliani Miller (MM) model, HAMADA model; Determining the Optimal Capital Structure, Checklist for Capital Structure decisions, Costs of Bankruptcy and Financial Distress, Trade off models, Pecking Order Theory.

Leverage Analysis and EBIT - EPS Analysis: Concept of leverage, Types of leverage -Operating leverage, financial leverage, combined leverage; EBIT-EPS Analysis, Guidelines for Capital Structure Planning, Link between Capital Structure and Capital Budgeting.

Dividend Decisions: Factors determining Dividend Policy, Theories of Dividend – Gordon Model, Walter Model, MM Hypothesis, Signaling Theory, Forms of Dividend – Cash Dividend, Bonus Shares, Stock Split, Dividend Policies in Practice, Patterns Observed in Payout Policies worldwide.

Unit 4: Working Capital Management (12 Hours)

Working Capital Management: Determination of Working Capital, Determining Financing mix of Working Capital, Receivables Management – Objectives; Credit Policy, Cash Discount, Debtors Outstanding and Ageing Analysis; Costs – Collection Cost, Capital Cost, Default Cost, Delinquency Cost, Management of Cash (Theory only) – Need for Cash, Cash Management

Techniques (Lock box, Concentration Banking), Inventory Management (Theory only) – ABC Analysis; Minimum Level; Maximum Level; Reorder Level; Safety Stock; EOQ (Basic Model).

Essential Readings:

1. Berk, J. B., & DeMarzo, P. M. (2007). *Corporate finance*. Pearson Education.
2. Van Horne, J. C., & Wachowicz, J. M. (2005). *Fundamentals of financial management*. Pearson Education.
3. Pandey, I. M. (2021). *Financial Management.* Pearson.

Additional Readings:

1. Gupta, K. (2011). Khan, MY and Jain, PK, Financial Management: Text, Problems and Case. *Journal of Services Research*, *11*(2).
2. Brealey, R., Myers, S., Allen, F., & Mohanty, P. (2017). *Principles of Corporate Finance* (11ed.). McGraw Hill Education.

Note: Latest edition of the readings may be used.

DISCIPLINE SPECIFIC CORE COURSE – 13
Management Information Systems

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Management Information Systems	**4**	**3**	**1**	**0**	Class XII Pass	NIL

Learning Objectives:

To provide the understanding and use of management information systems in an office and organization.

Learning Outcomes:

After completing this course, students shall be able to:

1. Relate the basic concepts and technologies used in the field of management information systems.
2. Compare the processes of developing and implementing information systems.
3. Outline the role of the ethical, social, and security issues of information systems.

Unit I: Conceptual Foundations **(10 Hours)**

Management Information Systems - Need, Purpose and Objectives - Contemporary Approaches to MIS - Information as a strategic resource - Use of information for Competitive advantage - MIS as an instrument for the organizational change. Nature and scope of MIS- Structure of MIS- Types of MIS- -Definition of system-system related concepts Information, Management and Decision Making - Models of Decision Making Classical, Administrative and Herbert Simon's Models - Types of information-Porters Five Forces Model.

Unit II: Information Technologies **(10 Hours)**

Information Technology - Definition, IT Capabilities and their organizational impact - Telecommunication and Networks - Types and Topologies of Networks - IT enabled services such as Call Centers, Geographical Information Systems etc.

Data Base Management Systems - Data Warehousing and Data Mining, Systems Analysis and Design - Systems Development Life Cycle - Prototyping -Application of DBMS using MS ACCESS.

Unit III: Business Applications of IS **(10 Hours)**

e-Commerce , e-Business and e- Governance .e-Commerce infrastructure. e-Commerce Applications and payment systems.e-Business and e-Governance. Customer Relationship Management system(CRM) System. Supply chain Management (SCM) System.

Tools - Object Oriented Systems (Only introduction to these tools & techniques), Decision Support Systems - Group Decision Support Systems - Executive Information Systems - Executive Support Systems - Expert Systems and Knowledge Based Expert Systems - Artificial Intelligence.

Unit IV: Management of IS **(10 Hours)**

Information system planning-creating an IS plan. IS development and project Management. System development life cycle- system development Models.
IS Implementation and change management

Unit V: IS Security and control and ethical and social issues of ISs **(5 Hours)**

IS Security threats -protecting information system - IS security technology- IS security level.Ethical responsibility of business professionals. Social issues of IS.

Suggested Readings:

1. Management Information Systems, Laudon and Laudon, 7th Edition, Pearson Education Asia
2. Management Information Systems, Jawadekar, Tata McGraw Hill
3. Management Information Systems, Davis and Olson, Tata McGraw Hill
4. Analysis and Design of Information Systems, Rajaraman, Prentice Hall
5. Decision Support Systems and Intelligent Systems, Turban and Aronson, Pearson Education Asia

DISCIPLINE SPECIFIC CORE COURSE – 14
CORPORATE ACCOUNTING

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Corporate Accounting	**4**	**3**	**1**	**0**	Class XII Pass	NIL

Learning Objectives:

To enable students to conceptualize the knowledge in the area of corporate accounting and understanding the techniques employed in the preparation of financial statements of the companies.

Learning Outcomes:

After completing this course, students shall be able to:

1. Understand and prepare the final accounts according to revised schedule.
2. Comprehend the concepts as well as standards intrinsic to the accounting systems utilised for measuring the performance of the businesses.

Unit 1 Final Accounts **(12 Hours)**

Preparing the statement of profit and loss account and balance sheet as per Schedule III of Companies Act 2013.

Unit 2 Banking Companies **(9 Hours)**

Differentiation between the balance sheet of banking and non-banking companies; Prudential norms; Asset structure of banks; Concept of Capital Adequacy Norms; Provisioning of NPAs (Nonperforming assets).

Unit 3 Analysis of Financial Statements of Companies **(12 Hours)**

Preparation of Cash Flow Statements (CFS) as per AS 3 (Revised): Indirect Method & AS 7 (theory only); Ratio Analysis – Profitability Ratio, Liquidity Ratio, Capital Structure Ratio, Activity Ratio, Stock Valuation.

Unit 4 Contemporary Trends in Accounting **(12 Hours)**

Forensic Accounting – Concept, History, Types of fraud, Techniques of forensic accounting; Introduction to provisions of Insolvency and Bankruptcy Code; Internal Reconstruction (practical questions).

Essential Readings:

1. Monga, J. R. (2012). *Fundamentals of Corporate Accounting.* Mayur Paper Backs.
2. Goyal, B. K. (2020). *Corporate Accounting* (7th ed.). Taxmann.
3. Agarwal, O. P. (2013). *International Banking and Finance.* Himalaya Publishing House.
4. Tulsian, P. C., & Bharat, T. (2016). *Corporate Accounting*. S. Chand Publishing.

Additional Readings:

1. Gupta, R. K. (2011). *Banking Law and Practice (3 VOLS SET).* Research publication .
2. Chadha, R., & Sumant, C. (2017). *Corporate Laws*. Scholar Tech Press.

Note: Latest edition of the readings may be used.

DISCIPLINE SPECIFIC CORE COURSE – 15
LIFE INSURANCE

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Life Insurance	**4**	**3**	**1**	**0**	Class XII Pass	-

Learning Objectives:

The objective of the course is to make learners understand the concepts of Insurance, basic operations and technical components involved.

Learning Outcomes:

1. Identify the concept and components involved in Insurance.
2. Make learners familiar with Life Insurance and its practical usage.
3. Make them understand how digitisation has changed the face of Insurance.

Unit 1: Foundation and Principles **(9 hours)**

Life Insurance- Basic definition and Concept, Purpose and Need of Life Insurance, Important Terminologies: Premium, Sum Assured Insured, Proposer, Nominee, Survivor, Assignee, Assignment, Riders etc., Essential features of Life Assurance , Principles of Life Insurance, Importance of Life Insurance.

Unit 2: Life Insurance Products **(12 hours)**

Whole-life Plans, Endowment Insurance Plans, Term Insurance Plans, Whole-life and Endowment Plans: Comparison, Couple Life Insurance Policy, Female Insurance Plans, Children Plans, Plans for Handicapped Dependents, Plans for High Worth Individuals, Money Back Plans, Micro Insurance Plans, Group Insurance Schemes, Social Security Schemes, Pension/ Annuity Plans, Unit Plans.

ULIP, health insurance plans, Property insurance policies. Post office life insurance schemes: postal life insurance and rural postal life insurance.

Unit 3: Insurance Pricing and Underwriting **(12 hours)**

Pricing Objectives, Life Insurance Pricing Elements, Insurance Rating Methods, Calculation of Premium, Payment of Premium, Classification of Expenses, Surrender Value, Sum Assured Value and Paid up Value.

Appointment, Qualification and Disqualification of Life Insurance Agents, Authority of an Agent, Procedure for Becoming an Agent as a Profession, Functions of Agent, Remuneration of Agent, Code of Conduct for Agent under IRDA Act, 1999, Agent's Liability for Protection of Interest of Life Insurance Policyholders, Insurance Ombudsman Scheme, 2006.

Unit 4: Insurance Products and Digitization **(12 hours)**

Digitization in the field of Insurance. Benefits of digitization in field of Insurance.

Regulatory Framework of Insurance in India (briefly) – Insurance Legislation and IRDA. Control of Malpractices, Negligence, Loss Assessment and Loss Control, Exclusion of perils, Regulatory Framework of Insurance: Role, Power, and Functions of IRDA, Composition of IRDA, IRDA Act 1999.

Traditional Life Insurance Products- Products of LIC, Establishment and Incorporation of Life Insurance Corporation of India, Constitution and Functions of LIC, Constitution of Tribunal, Management of LIC.

Non-Traditional Life Insurance Products (SBI and ICICI- their Introduction, Forms and Procedures), Difference between traditional and non-traditional products in Insurance.

Essential Readings

DISCIPLINE SPECIFIC ELECTIVE COURSE – 8
MARKETING & PERSONAL SELLING

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
MARKETING & PERSONAL SELLING	4	3	1	0	Class XII Pass	NIL

Learning Objectives:

The objective of this course is to provide basic knowledge of concepts, principles, tools and techniques of marketing and to familiarize the students with the fundamentals of personal selling and the selling process.

Learning outcomes:

By studying this course, the students will be able to:

1. Understand the concept of marketing and related disciplines.
2. An in-depth understanding of various elements of marketing mix for effective functioning of an organization.
3. Learning some of the tools and techniques of marketing with focus on Indian experiences, approaches and cases.

Unit 1: Introduction (12 hours)

Marketing: Definition, nature, scope & importance, Evolution of Marketing Concept, Marketing Mix, Marketing Environment: Internal, External (Micro & Macro Environment), Understanding of Consumer Behavior, Purchase decision Process and influences, Marketing management process- a strategic perspective, Market Segmentation, Targeting and Positioning (STP): Segmentation Concept, Importance and Bases, Targeting Concept, Importance and Bases; Market Selection, Brand Positioning concept, importance and bases; Repositioning Concept.

Unit 2: Marketing Mix: Price & Product (9 hours)

Product: Meaning, Importance, Product Mix, Product Classification, New Product development, Levels of Product, Product Life Cycle (PLC), Branding, Packaging and Labelling, After Sales Services.

Price: Significance, Importance, Factors affecting price of a product; Methods of Pricing, Pricing Policies and Strategies.

Unit 3: Marketing Mix: Promotion & Distribution Channels (12 hours)

Distribution: Concept, Importance, Different types of distribution channels etc., Wholesaling and retailing: Factors affecting choice of distribution channel, Distribution logistics and major logistics decisions.

Promotion: Nature and importance of promotion; Promotion Tools: Advertising, Personal Selling, Public Relations & Sales Promotion, Promotion tools and their effectiveness, determining optimal promotion mix.

Unit 4: Personal Selling (12 hours)

Introduction to Personal Selling: Nature and importance of personal selling. Difference between Personal Selling Salesmanship and Sales Management, Myths of selling, Relationship Marketing and Role of Personal Selling. Characteristics of a good salesman. Types of selling situations. Types of salespersons; Career opportunities in selling, Measures for making selling an attractive career.

Theories of Selling: Traditional and Modern, AIDAS Model of Selling Problem Solving Approach, Right Set of Circumstances Theory and Modern Sales Approaches.

Selling Process: Prospecting and qualifying, Pre-approach, Presentation and demonstration, handling of objections and complaints; Closing the sales; Customer Relations, Follow-up and Dealing customer concerns and complaints.

Essential/recommended readings:

1. Kotler, Philip; Keller, Kevin Lane; Koshy, Abraham, and Mithileshwar Jha (2019) "*Marketing Management: A South Asian Perspective"*, Pearson Education.
2. Chhabra, T.N., (2021) *Principles of Marketing*, Sun India Publication.

Suggestive readings:

1. Armstrong, Gary, and Kotler, Philip (2017) *The Essentials of Marketing*, Pearson Education, New Delhi.
2. McCarthy, E. Jerome., and William D. Perreault, *Basic Marketing*, Richard D. Irwin.

KALINDI COLLEGE

SEMESTER – III

Bachelor of Vocation- Web Designing

DISCIPLINE SPECIFIC CORE COURSE 07–Data Structures

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Data Structures	4	3	0	1	Class XII Pass	NA

Learning Objectives:

1. To introduce the fundamentals of data structures
2. To get familiar with programming

Learning Outcomes:

1. Develop the ability to use basic data structures like array, stacks, queues, lists, trees andhash tables to solve problems.
2. Use well-organized data structures in solving various problems.
3. Differentiate the usage of various structures in problem solutions.
4. Implement algorithms to solve problems using appropriate data structures.

Unit I **(5 hours)**

Arrays: Single and multi-dimensional arrays, analysis of insert, delete and search operations in arrays (both linear search and binary search), implementing sparse matrices, applicationsof arrays

to sorting: selection sort, insertion sort, bubble sort, comparison of sorting techniques via empirical studies.

Unit II **(5 hours)**

Linked Lists: Singly- linked, doubly-linked and circular lists, analysis of insert, delete and search operations in all the three types, implementing sparse matrices.

Unit III **(10 hours)**

Queues: Array and linked representation of queue, de-queue, comparison of the operations on queues in the two representations. Applications of queues.

Unit IV **(15 hours)**

Stacks: Array and linked representation of stacks, comparison of the operations on stacks in the two representations, implementing multiple stacks in an array; applications of stacks: prefix, infix and postfix expressions, utility and conversion of these expressions from one to another; applications of stacks to recursion: developing recursive solutions to simple problems, advantages and limitations of recursion.

Unit V **(10 hours)**

Trees and Heaps: Introduction to tree as a data structure; binary trees, binary search trees, analysis of insert, delete, search operations, recursive and iterative traversals in binary search trees. Height-balanced trees (AVL), B trees, analysis of insert, delete, search operations on AVL and Btrees. Introduction to heap as a data structure. Analysis of insert, extract-min/max and delete-min/ max operations, applications to priority queues.

Hash Tables: Introduction to hashing, hash tables and hashing functions -insertion, resolving collision by open addressing, deletion, searching and their analysis, properties of a goodhash function.

3. Introduction to Algorithms, by Cormen, Leiserson, Rivest, and Stein, MIT Press, Third Edition, 2009.

List of Practical (30 hours)

A practical implementation of various data structure such as Array, Queues, Stacks, Linked List and Trees.

DISCIPLINE SPECIFIC CORE COURSE 08– Programming with Java

Course title &Code	Credits	Credit distribution of the course			Eligibility criteria	Pre- requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Programming with Java	4	3	0	1	Class XII Pass	NA

Learning Objectives

This course is designed to develop understanding of object-oriented programming concepts like Classes, Objects, Inheritance and Polymorphism using Java. The course provides understanding of multithreading and exception handling in Java. It also introduces how to create Java applications with graphical user interface (GUI).

Learning Outcomes

On successful completion of the course, students will be able to:

1. Understand the object-oriented concepts – Classes, Objects, Inheritance, Polymorphism– for problem solving.
2. Create and handle multithreading.
3. Handle program exceptions.
4. Handle input/output through files.
5. Create Java applications with graphical user interface (GUI).

SYLLABUS OF DSC-08

Unit 1 Introductory Concepts: (2 weeks)

Program, identifiers, variables, constants, primitive data types, expressions, Naming Conventions, Type casting, operators, control statements, structured data types, arrays, functions.

Unit 2 Object Oriented Concepts: (4 weeks)

Abstraction, encapsulation, objects, classes, methods, constructors, inheritance, polymorphism, static and dynamic binding, Anonymous block, Static Data members, overloading and overriding, Usage of super and this keyword, Abstract classes, Interfaces and Packages, Access modifiers, Object class

Unit 3 Multithreading: (4 weeks)

Creating Threads, Thread Priority, Blocked States, Extending Thread Class, Runnable Interface, Starting Threads, Thread Synchronization, Sync Code Block, Overriding Synced Methods, Thread Communication, wait, notify and notify all.

Unit 4 Introduction to Exception handling: (3 weeks)

Exception and Error, Throw, try and catch Blocks, Exception handlers, java. Lang Exceptions, Built-In Exceptions.

Unit 5 Introduction to File Handling: (2 weeks)

Byte Stream, Character Stream, File I/O Basics, File Operations, Serialization.

Practical component

Programming exercises using Java.

Essential Readings

1. James Gosling, Bill Joy, Guy L. Steele Jr, Gilad Bracha, Alex Buckley, The Java Language Specification, Java SE 7 th edition, Addison-Wesley, 2013.
2. Herbert Schildt, Java: The Complete Reference, 10th edition, McGraw-Hill Education, 2018.
3. Cay S. Horstmann, Core Java - Vol. I – Fundamentals, 10th edition, Pearson, 2017.
4. Richard Johnson, An Introduction to Java Programming and Object-Oriented Application Development, Thomson Learning, 2006.
5. Kathy Sierra and Bert Bates, Head First Java, 3 rd edition, O'Reilly, 2022

DISCIPLINE SPECIFIC CORE COURSE 07– Data Analysis using Python

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Data Analysis using Python	4	3	0	1	Class XII Pass	NA

Learning Objectives

This course is designed to introduce the students to real-world data analysis problems, use of statistics to get a deterministic view of data and interpret results in the field of exploratory data science using Python. This course is the first in the "Data Science" pathway and builds the foundation of three subsequent courses in the pathway

Learning Outcomes

On successful completion of the course, students will be able to:

1. Apply descriptive statistics to obtain a deterministic view of data.
2. Perform data handling using Numpy arrays.
3. Load, clean, transform, merge and reshape data using Pandas.
4. Visualize data using Pandas and matplot libraries.
5. Solve real world data analysis problems

SYLLABUS OF DSC-09

Unit 1 Introduction to basic statistics and analysis: (4 weeks)

Fundamentals of Data Analysis, Statistical foundations for Data Analysis, Types of data, Descriptive Statistics, Correlation and covariance, Linear Regression, Statistical Hypothesis Generation and Testing, Python Libraries: NumPy, Pandas, Matplotlib

Unit 2 Array manipulation using NumPy: (2 weeks)

NumPy array: Creating NumPy arrays; various data types of NumPy arrays, indexing and slicing, swapping axes, transposing arrays, data processing using NumPy arrays

Unit 3 Data Manipulation using Pandas: (4 weeks)

Data Structures in Pandas: Series, Data Frame, Index objects, loading data into Pandas data frame, Working with Data Frames: Arithmetic, Statistics, Binning, Indexing, Reindexing, Filtering, Handling missing data, Hierarchical indexing, Data wrangling: Data cleaning, transforming, merging and reshaping

Unit 4 Plotting: (3 weeks)

Using Matplotlib to plot data: figures, subplots, markings, color and line styles, labels and legends, Plotting functions in Pandas: Line, bar, Scatter plots, histograms, stacked bars, Heatmap

Unit 5 Data Aggregation and Group operations: (2 weeks)

Group by Mechanics, Data aggregation, General split-apply-combine, Pivot tables and cross tabulation

Practical component

Programming exercises using Python.

Essential Readings:

1. McKinney W. Python for Data Analysis: Data Wrangling with Pandas, NumPy and IPython, 2nd edition, O'Reilly Media, 2018.
2. Molin S. Hands-On Data Analysis with Pandas, Packt Publishing, 2019.
3. Gupta S.C., Kapoor V.K. Fundamentals of Mathematical Statistics,12th edition, Sultan Chand & Sons, 2020

Suggested Readings:

(i) Chen D. Y. Pandas for Everyone: Python Data Analysis, 1 st edition, Pearson Education, 2018.

(ii) Miller J.D. Statistics for Data Science, Packt Publishing Limited, 2017.

DISCIPLINE SPECIFIC ELECTIVE 1– Cryptography

Course title &Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Cryptography	4	3	0	1	Class XII	NA

Learning Objectives

The course objectives of this paper are: to understand basics of Cryptography and Network Security, to be able to secure a message over insecure channel by various means, to learn about how to maintain the Confidentiality, Integrity and Availability of a data, to understand various protocols for network security to protect against the threats in the networks.

Learning Outcomes

On successful completion of the course, students will be able to:

1. Comprehend the fundamentals of Cryptography and Network Security
2. To be able to secure a message over an unsecured channel using a variety of methods.
3. To gain knowledge on how to preserve the Confidentiality, Integrity, and Availability of data
4. To comprehend various network security protocols for protection against network threats

SYLLABUS OF DSE 1

Unit 1 Overview of Security: (2 weeks)

Protection versus security; aspects of security–data integrity, data availability, privacy; security problems, user authentication, Orange Book.

Unit 2 Security Threats: (3 weeks)

Program threats, worms, viruses, Trojan horse, trap door, stack and buffer overflow; system threats-intruders; communication threats- tapping and piracy.

Unit 3 Cryptography: (4 weeks)

Substitution, transposition ciphers, symmetric-key algorithms-Data Encryption Standard, advanced encryption standards, public key encryption - RSA; Diffie-Hellman key exchange, ECC cryptography, Message Authentication- MAC, hash functions.

Unit 4 Public key cryptography and Authentication requirements: **(4 weeks)**

Principles of public key crypto systems - RSA algorithm - security of RSA - key management – Diffle-Hellman key exchange algorithm - introductory idea of Elliptic curve cryptography – Elgamel encryption - Message Authentication and Hash Function: Authentication requirements - authentication functions - message authentication code - hash functions - birthday attacks – security of hash functions and MACS.

Unit 5 Digital signatures: (2 weeks)

Symmetric key signatures, public key signatures, message digests, public key infrastructures.

Essential Readings

1. W. Stalling, Cryptography and Network Security Principles and Practices (4th ed.), Prentice-Hall of India, 2006
2. C. Pfleeger and SL Pfleeger, Security in Computing (3rd ed.), Prentice-Hall of India, 2007
3. D. Gollmann, Computer Security, John Wiley and Sons, NY, 2002
4. J. Piwprzyk, T. Hardjono and J. Seberry, Fundamentals of Computer Security, Springer-Verlag Berlin, 2003

Suggested Readings

(i) W. Mao, "Modern Cryptography – Theory and Practice", Pearson Education.

(ii) Charles P. Pfleeger, Shari Lawrence Pfleeger – Security in computing – Prentice Hall of India.

(iii) J.M. Kizza, Computer Network Security, Springer, 2007

(iv) M. Merkow and J. Breithaupt, Information Security: Principles and Practices, Pearson Education, 2006.

DISCIPLINE SPECIFIC ELECTIVE 2– Digital Image Processing

Course title &Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Digital Image Processing	4	3	0	1	Class XII	NA

Learning objectives:

1. To understand the sensing, acquisition and storage of digital images.
2. To study the image fundamentals and mathematical transforms necessary for image processing.
3. To understand the digital processing systems and corresponding terminology.
4. To understand the base image transformation domains and methods.

Learning Outcomes:

1. Understand the fundamentals of Image Processing and its role and importance in a variety of applications.
2. Write programs to read/write and manipulate images for the purpose of enhancement.
3. Understand the need for image transforms and their properties.
4. Understand different causes for image degradation and use various techniques to restore images.

UNIT-I **(8 hours)**

Introduction: Digital Image Fundamentals, Brightness, Adaptation and Discrimination, Light and Electromagnetic Spectrum, Image Sampling and Quantization, Some Basic Relationships between Pixels Types of images.

UNIT-II **(7 hours)**

Spatial Domain Filtering: Some Basic Intensity Transformation Functions, Histogram Equalization, Spatial Correlation and Convolution, Smoothening Spatial Filters-Low pass filters, Order Statistics

filters; Sharpening Spatial Filters- Laplacian filter.

UNIT-III **(8 hours)**

Filtering in Frequency Domain: The Discrete Fourier Transformation (DFT), Frequency Domain Filtering:-Ideal and Butterworth Low pass and high pass filters

UNIT-IV **(7 hours)**

Image Degradation and Compression: Noise models, Noise Restoration Filters, Fundamentals of Image Compression, Huffman Coding, Run Length Coding

UNIT-V **(10 hours)**

Morphological Image Processing: Erosion, Dilation, Opening, Closing, Hit-or-Miss Transformation, Basic Morphological Algorithms.

UNIT VI **(5 hours)**

Image Segmentation: Point, Line and Edge Detection, Thresholding.

SEMESTER-III
(B.A. Honours in Multi Media and Mass Communication)

DISCIPLINE SPECIFIC CORE COURSE – 7: GRAPHIC DESIGN: TECHNOLOGY AND SOFTWARE

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSC-7 GRAPHIC DESIGN: TECHNOLOGY AND SOFTWARE	4	2	0	2	Class XII	Nil

Syllabus of DSC-7

Course Objectives

1. To train students to produce graphics using software for various visual mediums.
2. To develop skills to use graphics for communication.
3. To understand the function of motion graphics and significance of visualisation techniques in design.
4. To acquire comprehensive skills in designing and creating layouts using visual design software and digital platforms.

Course Learning Outcomes

1. Understanding of designing software for communication.
2. Design and graphics as communication.
3. Acquiring comprehensive skills in designing, creating layouts, photo montage, digital collage etc. using visual design software and digital platforms.
4. Capacity to use acquired skills and knowledge to produce a Photo Montage using Motion Graphics

SYLLABUS OF DSC-7

Unit 1
Software for Graphic Design **(10 Hours)**

- Adobe Photoshop
- CorelDRAW
- Adobe After Effects
- Adobe Illustrator

Unit 2 **(12 Hours)**

Visualization

- Motion Graphics
- Skills and Role of a Production Team
- The Digital Platforms and Open Sources
- Audience Identification and Needs

Unit 3

Digital Design **(10 Hours)**

- Photo Montage
- Assemblage
- Digital Collage and E-Collage
- Designing a Portfolio

Practical:

Production of a Photo Montage using Motion Graphics

DISCIPLINE SPECIFIC CORE COURSE – DSC-8 MEDIA LAWS AND ETHICS

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course(if any)
		Lecture	Tutorial	Practical/ Practice		
DSC-8 Media Laws and Ethics	**4**	**3**	**1**	**0**	**Class XII**	**Nil**

Syllabus of DSC-8

Course Objectives

1. To train students to critically analyse legal and ethical issues related to different forms of media with appropriate case-studies.
2. To enhance the student's awareness of the paradigms regarding ethical responsibilities of the mass communications professional.
3. Examine the social, political, economic, legal and ethical dilemmas confronted by contemporary media practitioners in new, digital settings.

Course Learning Outcomes

1. Understanding the key legal and ethical frameworks faced by media practitioners while reporting journalistically.
2. Learning to understand and resolve ethical and media issues originating in digital technology.
3. Learning to formulate communication strategies in view of existing media law and ethical codes.

Unit 1

Freedom and The Fourth Estate **(15 Hours)**

- Historical Perspective on Mass Media Laws: Colonial Period
- Democracies and Freedom of the Press
- Provision of the Indian Constitution: Article 19
- The Emergency in India: Case Study (The Indian Express, The Statesman, Samachar etc.)

Unit 2

Media Regulations in India **(15 Hours)**

- Press Council Act 1978
- Intellectual Property Rights

- Central Board of Film Certification
- Advertising Standards Council of India
- Information Technology Act, 2000

Unit 3

Information Technology and Ethics (18 Hours)

- The Public and the Private: Definitions, Limitations, Conflation
- Cyber Security, Cyber Warfare and Cyber Citizenship
- Informational Disorder: Computational Propaganda, Trolling, Sock Puppet Networks, Spoofers
- Paid News, Fake News, Deep Fakes, Private Treaties, Post Truth

DISCIPLINE SPECIFIC CORE COURSE – DSC-9: RADIO PRODUCTION

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSC-9:Radio Production	**4**	**2**	**0**	**2**	**Class XII**	**Nil**

Syllabus of DSC-9

Course Objectives

1. To familiarise students with Radio as means of communication.
2. To understand the growth and evolution of Radio as a medium of communication.
3. To learn specific skills relating to reporting and anchoring for Radio.
4. To understand the requirements for programming for Radio.
5. To produce a programme for Radio.

Course Learning Outcomes

1. Using knowledge gained in previous courses of the programme me, to specifically report for radio.
2. Understanding radio as a medium and technology.
3. Knowledge of the grammar and aesthetics of radio programming.
4. Familiarity with Radio programme formats.

Unit 1

Introduction to Radio **(10 Hours)**

- Evolution of Radio in India: Pre and Post-Independence
- Organizational Structure of the Radio Station: State-owned, Privately-owned
- Types of Radio Transmission: AM, FM, Digital Radio, Satellite Radio, Community, HAM, Amateur, FM Radio
- Radio Programme Formats: News, Talk, Feature, Drama, Live Broadcast, documentaries, Podcast

Unit 2 **(10 Hours)**

The Grammar and Aesthetics of Radio

- Writing for Radio: Idiom of the Spoken Word, Journey of Sound-Analogue and Digital.
- Sound: Properties, Recording Techniques and Microphones
- Use of Voice: Tone, Timbre, Pitch, Range, Intonation, Inflection, Fluency, Modulation
- Role of Anchor as RJ

Unit 3
Production for Radio **(12 Hours)**

- Pre-production: Idea, Research, Radio Script, Storyboard, Proposal Writing, Budget, Pilot
- Production: Creative use of Sound; Listening, Recording, Using Archived Sounds
- Post-production: Creative use of Sound Editing and Special Effects
- Software for Audio Recording: Logic Pro, Adobe Audition, Audacity

Practical:
Production of a Radio Programme

DISCIPLINE SPECIFIC ELECTIVE COURSE – DSE-1: DIGITAL JOURNALISM AND SOCIAL MEDIA

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSE 1- Digital Journalism and Social Media	4	2	0	2	Class XII	Nil

Syllabus of DSE 1

Course Objectives

1. To understand the types of online communication and how they have revolutionized the way we interact.
2. To comprehend how digital media & ICT make it possible for anyone to create, modify and share content, using relatively simple tools that are often free or inexpensive.
3. To demonstrate how online media provides a platform for amalgamation of various mediums like text, audio, video, graphics and animation.
4. To enable the use of various writing formats for web.

Course Learning Outcomes

i. Understand the impact of new media technologies and platforms to change the nature of communication.
ii. Ability to redefine the private and the public sphere.
iii. Learn to critically evaluate new media technologies to raise ethical concerns.
iv. Utilize knowledge gained to design and manage a website as a part of practicum.

Unit 1 **(10 Hours)**

Content Creation for Digital Media

- Introduction to Digital Journalism
- Blogging, Microblogging and Live Blogging
- Publishing Articles, White Papers and E-Books
- Producing a Multimedia Story

Unit 2 **(12 Hours)**

Basics of Social Media

- Social Media: Definition, Characteristics and Scope
- Emerging Trends in Social Media Platforms: Facebook, Instagram, Twitter, Pinterest, LinkedIn and others
- Webcasting, Podcasting and Video Conferencing
- Ethical Concerns in Digital Media

Unit 3 **(10 Hours)**

Digital Media Management

- Search Engine Results Pages (SERP)
- Search Engine Optimization (SEO) and Social Media Optimization (SMO)
- Website Audience Measurement (WAM)
- Digital Marketing Tools: MeetEdgar and Biteable

Practical:

Creating and Managing a Website

SEMESTER-IV
(B.A. Honours in Multi Media and Mass Communication)

DISCIPLINE SPECIFIC CORE COURSE – DSC – 10 PUBLIC SERVICE BROADCASTING

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSC - 10 Public Service Broadcasting	4	3	1	0	Class XII	Nil

Syllabus of DSC - 10

Course Objectives

1. To know about the global overview of Public Service Broadcasting.
2. To understand the functioning and role of various government agencies like Prasar Bharati, AIR, Doordarshan, Films Division etc.
3. To know about the latest technology adopted in various Public Service Broadcasting agencies.
4. To have an understanding about the global revenue models of Public Service Broadcasting.

Course Learning Outcomes

1. Understanding the concept of Public Service Broadcasting
2. Critical evaluation of global revenue models in Public Service Broadcasting
3. Understanding of role and functions of Prasar Bharati and other agencies

Unit 1 **(15 hours)**

Introduction to Public Service Broadcasting

- Global Overview of Public Service Broadcasting
- Model Public Service Broadcasting Law, UNESCO
- Public Service Model in India: An Overview
- Early Public Service Broadcasting in India: Prasar Bharati, All India Radio, Doordarshan, Films Division

Unit 2 **(18 hours)**

Revenue Models of PSB

- Government Grants Model
- License Fee Model
- Hybrid Model

- Advertising Model

Unit 3 **(15 hours)**
Public Service Broadcasting in the Digital Age

- Radio and the Digital Age
- PSB Television and Webcasting
- Direct to Home Public Service Broadcasting
- Curriculum Broadcasting in the Digital Age: E-pathshalas

Assessment Method

- Evaluation scheme and mode will be as per the guidelines notified by University of Delhi.

DISCIPLINE SPECIFIC CORE COURSE – DSC-12: TELEVISION JOURNALISM

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSC-12: Television Journalism	4	2	0	2	Class XII	Nil

Syllabus of DSC-12

Course Objectives

1. To familiarize students with the television as a medium of journalism and mass communication.
2. To train them with skills required for news gathering process.
3. To develop understanding of on-screen presentation of content for audio-visual medium.
4. To develop understanding of on-field/ live reporting techniques.

Course Learning Outcomes

1. Understanding television as an audio-visual medium.
2. Extrapolate theories of political economy and ownership patterns acquired in previous courses on journalism, onto television.
3. Knowledge and skills involved in diverse news gathering and reporting.
4. Develop skills in the use of camera as a tool of news gathering and editing techniques.

Unit 1 **(10 hours)**

Understanding Television as a Journalism Format

- Political Economy of Television, Ownership Patterns, Revenue Models, Hierarchy and Editorial Policies
- Ethical issues in TV Journalism
- The Audio-visual Grammar: Camera, Sound, Light
- Camera movements, Camera positioning– shots, aspect ratio, resolution

Unit 2 **(10 hours)**

Television News Gathering

- Finding the Story and Sources, Packaging
- News-gathering Techniques: Electronic News Gathering (ENG) and Electronic Field Production (EFP)
- Techniques of Television Interview, Vox Pop, Piece to Camera
- Formats: TV News, Debates, Discussions, Talk Shows

Unit 3 **(12 hours)**

Presenting on the Screen

- Reporting from the Field
- Presenting a TV Report
- Skill Sets for Anchors
- Audience Segmentation: Prime Time Slots, TRPs, Research and Surveys

Practical:

Production of a News Package

DISCIPLINE SPECIFIC CORE COURSE – DSC-15: Videography and Editing

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSC-15: Videography and Editing	4	0	0	4	Class XII	Nil

Syllabus of DSC-15

Course Objectives

1. To train students with hands-on skills using a video camera.
2. To help student understand different techniques of on-field production.
3. To familiarize student with techniques of video editing.
4. To give hands on training for lighting and other production equipment.
5. To help develop a visual narrative for video production.

Course Learning Outcomes

1. Familiarity with the elements of a video camera and techniques of their usage.
2. Hands-on training with production equipment.
3. Skill acquisition of lighting and editing for video production.
4. Production of a Video Clip.

Unit 1 **(20 Hours)**

Video Camera

- Video Camera, Working, Types and Operating Techniques
- Types of Lenses, Focus and Resolution
- Cinematography: Camera Perspective, Angle, Composition, Continuity, Cutting and Close-Up, Shots and Movements
- Ethical Issues and Privacy Concerns

Unit 2 **(24 Hours)**

Production Techniques and Lighting

- Video Recording Formats: Analog and Digital, Broadcast Standards
- Single Camera Production: Filming Techniques, Dubbing
- Fundamental Lighting Concepts, Types of Lights
- Lighting Procedures, Lighting Objectives

Unit 3 **(20 Hours)**

Post Production

- Video Editing: Concept and Process
- Types of Video Editing: Linear, Non-Linear and Online, Offline
- Techniques of Video Editing: Continuity and Montage, Kuleshov Experiment,
- Use of Graphics, Filters and Effects

Practical:

Production of a Video Clip

DISCIPLINE SPECIFIC ELECTIVE COURSE – DSE 3- GENDER AND MEDIA

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSE 3- Gender and Media	**4**	**3**	**1**	**0**	**Class XII**	**Nil**

Syllabus of DSE 3

Course Objectives

1. Acquainting students with the key concepts and debates within the paradigm of media, gender and patriarchy.
2. Understanding of the intersectional impact of sex, gender, race, class, sexuality, age, ethnicity, ability, and other complex aspects of identities and how they influence social structures and women's empowerment.
3. Understanding of the role and impact of gender on media organisations, occupational segregation, hierarchy and labour.

Course Learning Outcomes

1. Critically exploring debates around gendered-identities and intersectionality on contemporary media and digital culture.
2. Ability to examine a range of media texts, including film, TV programmes and magazines as well as digital media within the gendered performances.
3. Ability to analyse the portrayal and normalising of gender roles in popular Hindi Film Clips.

Unit 1 **(15 Hours)**

Media Organisations and Gender

- Profile of Media Organisations
- Occupational Segregation
- Gender Debate: Hierarchy, Equity, Labour, Visibility, Techno-cultures
- Sexual Harassment and Organisational Grievance Redressal

Unit 2 **(15 Hours)**

Intersectionalities

- Patriarchy, Gender and Sexuality
- Representations of women
- Representations of Masculinities
- Representations of LGBTQ+

Unit 3 **(18 Hours)**

Clips from Popular Hindi Cinema: Some Case Studies

- Dilwale Dulhania Le Jayenge
- Kuch Kuch Hota Hai
- Aligarh
- Chennai Express
- Chandigarh Kare Aashiqui

DISCIPLINE SPECIFIC CORE COURSE – DSC-18 STUDIO PRODUCTION

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSC-18: Studio Production	4	0	0	4	Class XII	Nil

Syllabus of DSC-18

Course Objectives

1. To train students with hands-on skills using a video camera.
2. To help student understand different techniques of on-field production.
3. To familiarize student with techniques of video editing.
4. To give hands on training for lighting and other production equipment.
5. To help develop a visual narrative for video production.

Course Learning Outcomes

1. Familiarity with the elements of a video camera and techniques of their usage.
2. Hands-on training with production equipment.
3. Skill acquisition of lighting and editing for video production.
4. Production of a Video Clip.

Unit 1

Video Camera **(20 hours)**

- Video Camera, Working, Types and Operating Techniques
- Types of Lenses, Focus and Resolution
- Cinematography: Camera Perspective, Angle, Composition, Continuity, Cutting and Close-Up, Shots and Movements
- Ethical Issues and Privacy Concerns

Unit 2

Production Techniques and Lighting **(24 hours)**

- Video Recording Formats: Analog and Digital, Broadcast Standards
- Single Camera Production: Filming Techniques, Dubbing
- Fundamental Lighting Concepts, Types of Lights
- Lighting Procedures, Lighting Objectives

Unit 3 **(20 hours)**

Post Production

- Video Editing: Concept and Process
- Types of Video Editing: Linear, Non-Linear and Online, Offline
- Techniques of Video Editing: Continuity and Montage, Kuleshov Experiment,
- Use of Graphics, Filters and Effects

Practical:

Production of a Video Clip

DISCIPLINE SPECIFIC ELECTIVE COURSE – DSE 4- MEDIA MOMENTS IN HISTORY

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSE 4- Media Moments in History	4	3	1	0	Class XII	Nil

Syllabus of DSE 4

Course Objectives

1. The understanding of how media creates, filters and juxtaposes political reality of historic events is necessary to sharpen the intellectual acumen of students.
2. Enabling the students to understand critique and debate about the historic media moments. It will help them to understand the subtle yet significant relationship between media and gender/caste/rural societal discourses prevalent in the current era.
3. Ability to research on a particular historic media moment, analyse its impact and reach, while debating about the various ways in which it changed the fluid political discourse.

Course Learning Outcomes

1. Understanding the significance of a historic media moment in its political and socio-cultural context.
2. Critical evaluation of the role played by media in creating, filtering and manufacturing the prevalent political reality.
3. Analysis of the role played by media in rural/urban divide along with gender and caste based hierarchy that functions within the system.
4. Understanding the relationship between historical moments, societal hegemonic trends and media impact.

Unit 1

Historical Perspectives **(15 Hours)**

- Technology and Mass Media Transmissions
- The Printing Press
- Radio
- Camera: Photograph, Film

Unit 2 **(15 Hours)**

Defining Moments- India

- Dandi March
- Partition
- ‘Tryst with Destiny'
- 83 World Cup
- 26/11 Mumbai Attacks

Unit 3
Defining Moments- Global **(18 Hours)**

- Fall of Berlin Wall
- Hiroshima and Nagasaki: The Mushroom Cloud
- The Apollo 11 Lunar Landing
- 9/11 Twin Tower Attacks
- HAM Radio World War II
- Churchill's Speech
- Bombing of Baghdad

Unit 1 **(15 hours)**

Theatre and the Public

- Orality and Performance: Speech, Song, Dance, Visual Effects
- Entertainment and Information: Jatra, Bahrupiya, Nautanki
- Theatre as Subversion: Colonial Rule and the Dramatic Performances Act of 1876
- Theatre as Resistance: Devising and Writing a script

Unit 2 **(15 hours)**

Locales and Spectators

- The Theatre and its Architectonics: Classical Greek, Modern
- The Making of the Stage: Theatre of the Marketplace to the Proscenium stage
- The People's Stage: Commedia dell'Arte
- The Street Corner: Nukkad Natak
- Designing a Set

Unit 3 **(18 hours)**

Theatrical Techniques as Communication

- Brecht's Alienation Effect
- Dario Fo's Act III
- The Mask in Classical Greek Drama
- Bibek in the Jatra of Bengal
- The Chorus
- The Sutradhar
- The Vidushak and Shakespeare's Clown
- Performing a Scene

Assessment Method

- Evaluation scheme and mode will be as per the guidelines notified by University of Delhi.

ANNEXURE-19

Sub: Amendment to Ordinance V

[E.C Resolution No. 27-1-1/(8) dated 25.08.2023]

In accordance with EC resolution No. 27-1-1 (8) dated 25.08.2023, paper titled "Electronic Instrumentation" is offered as Discipline Specific Elective in the Syllabi of 3rd Semester of Department of Physics for BSc Physical Science with Electronics as one of the Core Discipline. The course content and credit structure of the paper is at ***Annexure – 1.***

COURSE TITLE – ELECTRONIC INSTRUMENTATION

Total Credits: 04 (Credits: Theory: 02, Practical: 02)

Total Hours: Theory: 30, Practical: 60

Course Objective

• This course aims to provide an exposure on basics of measurement and instrumentation and its various aspects and their usage through hands-on mode.

• It also aims to provide exposure of various measurement instruments such as power supply, oscilloscope, multivibrators, signal generators are discussed in detail.

• It also aims to develop an understanding of virtual instrumentation and transducers.

Course Learning Outcomes

At the end of this course, students will have understanding of:

• basic principles of the measurement and errors in measurement, specifications of basic Measurement instruments and their significance with hands on mode.

• principles of voltage measurement, advantages of electronic voltmeter over conventional multimeter in terms of sensitivity etc.

• measurement of impedance using bridges, Power supply, Filters, IC regulators and Load and line regulation.

• Specifications of CRO and their significance, the use of CRO and DSO for the measurement of voltage (dc and ac), frequency and time period.

• Multivibrators, working circuits of Astable and monostable multivibrators.

• Phase Locked Loop (PLL), Voltage controlled oscillators and lock-In amplifier.

• explanation and specifications of Signal and pulse Generators

• the Interfacing techniques, Audrino microcontroller & interfacing software, Understanding and usage of Transducers.

Unit 1

Measurements: Shielding and grounding. Electromagnetic Interference.

Basic Measurement Instruments: DC measurement-ammeter, voltmeter, ohm meter, AC measurement, Digital voltmeter systems (integrating and non-integrating). Digital Multimeter; Block diagram principle of measurement of I, V, C. Measurement of Impedance- A.C. bridges, Measurement of Self Inductance (Anderson's bridge), Measurement of Capacitance (De-Sauty’s bridge), Measurement of frequency (Wien's bridge).

(12 Lectures)

Unit 2

Power supply: Using IC Regulators (78XX and 79XX), Line and load regulation, Short circuit protection. Idea of switched mode power supply (SMPS) & uninterrupted power supply (UPS).
Oscilloscope: Block Diagram, CRT, Deflection (Qualitative). Screens for CRT, Oscilloscope probes, measurement of voltage, frequency, and phase by Oscilloscope. Digital Storage Oscilloscope. **(6 Lectures)**

Unit 3

Multivibrators (IC 555): Block diagram, Astable & Monostable multivibrator circuits.
Signal Generators: Function generator (Black Box Approach)

(4 Lectures)

Unit 4

Virtual Instrumentation: Introduction, Interfacing techniques (RS 232, GPIB, USB). Idea about Audrino microcontroller & interfacing software like lab View).
Transducers: Classification of transducers. Measurement of temperature (RTD, semiconductor IC sensors), Light transducers (photo resistors & photovoltaic cells).

(8 Lectures)

PRACTICALS-LAB: ELECTRONIC INSTRUMENTATION LAB

"Sessions on the construction and use of specific measurement instruments and experimental apparatuses used in the lab, including necessary precautions.
Sessions on the review of experimental data analysis, sources of error and their estimation in detail, writing of scientific laboratory reports including proper reporting of errors. Application to the specific experiments done in the lab."

At least 08 experiments from the following

1. Measurement of resistance by Wheatstone bridge and measurement of bridge sensitivity.
2. Measurement of Capacitance by De Sauty's bridge.
3. Design a regulated power supply of given rating (5 V or 9V).
4. To determine the Characteristics of LVDT.
5. To determine the Characteristics of Thermistors and RTD.
6. Measurement of temperature by Thermocouples.
7. To design an Astable Multivibrator of given specification using IC 555 Timer.
8. To design a Monostable Multivibrator of given specification using IC 555 Timer.
9. To design and study the Sample and Hold Circuit.
10. To plot the frequency response of a microphone.
11. Glow an LED via USB port of PC.
12. Sense the input voltage at a pin of USB port and subsequently glow the LED connected with another pin of USB port.

References for Theory

Essential Readings

1. Electronic Instrumentation and Measurement Techniques, W.D. Cooper and A. D. Helfrick, Prentice Hall (2005).
2. Measurement Systems: Application and Design, E.O.Doebelin, McGraw Hill Book - fifth Edition (2003).
3. Electronic Devices and Circuits, David A. Bell, Oxford University Press (2015).

Additional Readings

1. Instrumentation Devices and Systems, S. Rangan, G. R. Sarma and V. S. Mani, Tata McGraw Hill(1998).

References for Laboratory

1. “Measurement and Instrumentation Principles”, Alan S. Morris, Elsevier (Butterworth Heinmann-2008).
2. Basic Electronics: A text lab manual, P.B.Zbar, A.P.Malvino, M.A.Miller, 1990, Mc-Graw Hill.

ANNEXURE- 20

Sub: Amendment to Ordinance V

[E.C Resolution No. 27-1-6/-(7) dated 25.08.2023 dated 25.08.2023]

In accordance with the Executive Council Resolution No. 27-1-6/-(7) dated 25.08.2023, the Syllabi of Compulsory Language Pool of Generic Elective (GEs) in Semester-I, II, III and IV offered by department of MIL&LS under Faculty of Arts based on Under Graduate Curriculum Framework -2022 implemented from the Academic Year 2022-23, is notified herewith for all the concerned. The course content and credit structure of Compulsory Language Pool of Generic Electives (GEs) may be seen at ***Annexure -1.***

Annexure-I

	Compulsory language Pool of Generic Electives (GE (B)) 1. Introductory Assamese 2. Introductory Gujrati 3. Elementary Kannada 4. Introductory Malayalam 5. Introductory Manipuri 6. Introductory Marathi 7. Intermediatory Assamese 8. Intermediatory Gujarati 9. Intermediatory Kannada	**01-24**

	10. Intermediatory Malayalam 11. Intermediatory Manipuri 12. Intermediatory Marathi **Compulsory language Pool of Generic Electives (GE-3)** 1. History and Methods of Comparative Literature 2. Introduction to Indian Poetics 3. Translation in Indian Languages and Literature	**25-30**

DEPARTMENT OF MODERN INDIAN LANGUAGES AND LITERARY STUDIES
UNIVERSITY OF DELHI, DELHI – 110007

COMPULSORY LANGUAGE POOL OF GENERIC ELECTIVES (GE) COURSES

Under UGCF – 2022 in the line of NEP – 2020
Semester: I/ II

GENERIC ELECTIVES (GE (A) -1): Origin and Development of Assamese Language and Literature

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course	Department offering the course
		Lecture	Tutorial	Practical/ Practice			
Origin and Development of Assamese Language and Literature	4	3	1	Nil	Passed Class XII and studied Assamese upto Class VIII and above	None, as this is the first course to opt for GE (A) Assamese Semester I or II (alternative semester)	**MIL&LS**

Learning Objectives:

As the title of the course suggests, this course will deal with the origin and development of the Assamese language and literature. But, since the area of study is too vast, the prime aim of this course is to give just an overall idea of it in a nutshell. All the Units will cover only a selective part of the history. The most significant literary milestones of Assamese literature will be discussed in this course.

Learning Outcome:
After completing the course, the students will have the knowledge of how the Assamese language was derived from the Indo-Aryan languages. The students will also be able to know about the brief outline of Assamese literature from the beginning to the modern era.

Allotted class: 60 hours **Credits: 04**

Unit – I (5 hours)

Development of Assamese language from Indo-Aryan languages

Unit – II (15 hours)
Emergence of Assamese literature
(i) Oral tradition
(ii) Charyapada

Unit – III (20 hours)
Medieval Assamese Literature
(i) Pre-Shankarite era
(ii) Literature of the Vaishnavite era
(iii) The *charit*s and *buranji*s

Unit-IV (20 hours)

Modern Assamese Literature
(i) Contribution of the Missionaries in Modern Assamese literature
(ii) The emergence of new genres in Assamese literature
(iii) Role of literary magazines

Essential/recommended readings:
Goswami, Upendranath. *Asamiya bhasar udbhav, samriddhi aru bikash*. Guwahati: Baruah Agency, 1991. (Selected articles only)
Sarma, Hemanta Kumar. *Asamiya sahityat drishtipat*. Guwahati: Bina Library. 1997. (Selected articles only)

Suggested readings:
Sarma, Satyendranath. *Asamiya sahityar samikshatmak itibritta*. 9th ed. Guwahati, 2000.
Neog, Maheswar. *Asamiya sahityar ruprekha*. 9th ed. Guwahati: Chandra Prakash, 2000.
Pathak, Ramesh. *Asomiya bhasar itihas*. Guwahati: Ashok Book Stall, 2008.

Examination scheme and mode: Subject to directions from the Examination Branch/University of Delhi from time to time

GENERIC ELECTIVES (GE (A) -1): Origin and Development of Gujarati Language and Literature

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course	Department offering the course
		Lecture	Tutorial	Practical/ Practice			
Origin and Development of Gujarati Language and Literature	4	3	1	Nil	Passed Class XII and studied Gujarati upto Class VIII and above	None, as this is the first course to opt for GE (A) Gujarati Semester I or II (alternative semester)	**MIL&LS**

Learning Objectives:

The aim of the course is to teach the history and development of language and Gujarati script. Gujarati Language is a part of the Indo-Aryan family which is a branch of the Indo-European languages. It also comes under one of the 22official languages recognized by the Government of India. Apart from Gujarat this language is also spoken in adjacent union territories of Daman and Diu and Dadra and Nagar Haveli. Gujarati language stands at the 26th position among the most spoken native language in the world and nearly46.1 million people speak Gujarati throughout the world. Students will be taught the importance of Gujarati Language.

Learning Outcome:

This course aims at introducing the history of Gujarati language beginning from the origin of the Gujarati script. The latter texts of grammatical treatises, epics, and commentaries etc., the students will learn how the phonological, morphological, semantic, and syntactic changes taken place in Gujarati language. This course also explains the place of Gujarati in the indo Aryan languages, various dialects of Gujarati and the impact of Sanskrit and other languages on Gujarati.

Allotted class: 60 hours **Credits: 04**

Unit – I (5 hours)

Development of Gujarati language from Indo-Aryan languages

Unit – II (15 hours)

1. Indo Aryan school of Languages and Gujarati
2. History of Gujarati Script.
3. Sources of Gujarati Language

Unit -II (20 hours)

1. Dialects of Gujarati: brief introduction
2. Development of the vocabulary of Gujarati

Important characteristics of Gujarati Language

Unit -III (20 hours)

1. Evolution of Gujarati writings
2. Development of print and publication in Gujarati Language
3. Gujarati literature: Brief introduction –evolution of various genres

Essential reading

1. Jhaveri,Mansukhlal, *History of Gujarati Literature*, Delhi, Sahitya Akademi, ,2008

2. Malabari, Behramji M, *Gujarat and the Gujaratis*,Gyan,Delhi, Publishing House, 2019.

3. Thakar, Dhitubhai, *Glimpses of Gujarati Literature.* Gandhinagar, Gujarat Sahitya Academy, 1999

Examination scheme and mode: Subject to directions from the Examination Branch/University of Delhi from time to time.

GENERIC ELECTIVES (GE (A) -1): Origin and Development of Kannada Language and Literature

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course	Department offering the course
		Lecture	Tutorial	Practical/ Practice			
Origin Development of Kannada language and literature	4	3	1	Nil	Passed Class XII and studied Kannada upto Class VIII and above	None, as this is the first course to opt for GE (A) Kannada Semester I or II (alternative semester)	**MIL&LS**

Learning Objectives:

This course will help students understand the history of Kannada literature. It will introduce them to the rich literary tradition of Kannada language. Purely focused on Kannada literature. The course will provide a brief overview of the eminent personalities and literary works, as well as their contributions to Kannada literature. It will also explore the changes that occurred in literature after the arrival of the British. Through translation, printing technology, and educational dissemination, students will become familiar with the changes that have taken place in Kannada literature. Additionally, the course will cover the recent emergence of rural, Dalit, tribal, and feminist literary movements in the post-independence era.

Course Learning Outcome:

This course will help students understand the development process of the Kannada language and literature. It will provide an insight into the social, cultural, and political development of society as reflected in its literature. By studying the Kannada society as a significant linguistic group and its literature, students will gain an understanding of how it has been portrayed. Additionally, it aims to attract students to study literature that has been written in other regional languages of India and foster their interest in comparative studies.

Allotted class: 60 hours **Credits: 04**

UNIT – I (15 hours)

Introduction to Kannada Language

Oral Tradition and Kannada Literature

UNIT – II (15 hours)
Ancient Kannada Literature

(i) Pre-Pampa era
(ii) Pampa era

UNIT – III (15 hours)

Medieval Kannada Literature

(i) Vachana sahitya era
(ii) Dasa sahity era
(iii) Kumara Vyasa era

UNIT – IV (15 hours)
Modern Kannada Literature

(i) Navodaya Sahitya
(ii) Navya Sahitya
(iii) Pragatishila Sahitya
(iv) Dalita Bandhaya Sahitya
(v) Mahila Sahitya

Essential/recommended readings:

(i) Ta.su.Shamaraya, Kannada Sahitya Charitre: indu Samiksha, Mysore, Ta.vem.Smaraka Grantamale,
(ii) K.V.Puttappa, Kannada Kaipidi, Mysore, Prasaranga, 1987.
(iii) C.N Krishna Moorty, Kannada Kavya Parampare, Bangalore, IBH Publication, 2015
(iv) Ambalike Hiriyanna, Jaanapada Kaipidi
(v) Devayya Harabe, Dalitha Sahitya mattu itara lekanagalu, Mysore, Rashmi Udyama Kendra, Jayalakshmi puram, 1982
(vi) M. Chidananda moorthy, Vachana Sahitya, Bangalore, University of Bangalore, 1975

(vii) G.S. Siddalingayya,M.H. Krishnayya, SaluDeepagalu, Bangalore, Karnataka Sahitya Academy, 1990

Examination scheme and mode: Subject to directions from the Examination Branch/University of Delhi from time to time.

GENERIC ELECTIVES (GE (A) -1): Origin and Development of Malayalam Language and Literature

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course	Department offering the course
		Lecture	Tutorial	Practical/ Practice			
Origin and Development of Malayalam Language and Literature	4	3	1	Nil	Passed Class XII and studied Malayalam upto Class VIII and above	None, as this is the first course to opt for GE (A) Malayalam Semester I or II (alternative semester)	**MIL&LS**

Learning Objectives:

This course will help students understand the Malayalam language. It will introduce them to the rich literary tradition of Malayalam literature and focus on the development of Malayalam literature. The course will provide a brief overview of the great personalities and traditions of the Mahakavi Thunchath Ramanujan Ezhuthachan and Mahakavi Kumaranasan as well as their contributions to Malayalam literature. It will also explore the changes that occurred in Malayalam literature after the arrival of the British. Through translation, printing technology, and educational dissemination, students will become familiar with the changes that have taken place in Malayalam literature. Additionally, the course will cover the recent emergence of Romantic, Realistic, Modern and Post Modern literary movements in the post-independence era.

Course Learning Outcome:

This course will help students understand the development process of the Malayalam language and Malayalam literature. It will provide an insight into the social, cultural, and political development of Kerala society as reflected in its literature. By studying the Kerala society as a significant linguistic group and its literature, students will gain an understanding of how it has been portrayed. Additionally, it aims to attract students to study literature that has been written in other regional languages of India and foster their interest in comparative studies.

Allotted class: 60 hours **Credits: 04**

UNIT – I (15 Hours)

Introduction to Malayalam Language

Ancient tradition of Malayalam Literature

The Traditions and Literature of Cheeraman

UNIT – II (15 Hours)
Medieval Literature

The Traditions and Literature of Cherusseri
The Traditions and Literature of Thunchath Ramanujan Ezhuthachan
The Traditions and Literature of Kunchan Nambiar

UNIT – III (15 Hours)
Pre-Independence Malayalam Literature

Literature of Kumaranasan
Literature of Ullur
Literature of Vallathol
Short Stories, Novels, Plays

UNIT – IV
Section: 4 Malayalam Literature in the Post-Independence Era

Romantic Trend
Realistic Trend
Modern Trend
Post Modern Trend

Essential/recommended readings:

Aapye, V. G. *Marathi Shabdratnakar*, Mumbai, Keshav Bhikaji Dhavle, 2013.

Examination scheme and mode: Subject to directions from the Examination Branch/University of Delhi from time to time

GENERIC ELECTIVES (GE (A) -1): Origin and Development of Manipuri Language and Literature

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course	Department offering the course
		Lecture	Tutorial	Practical/ Practice			
Origin and Development of Manipuri Language and Literature	4	3	1	Nil	Passed Class XII and studied Manipuri upto Class VIII and above	None, as this is the first course to opt for GE (A) Manipuri Semester I or II (alternative semester)	**MIL&LS**

Learning Objectives:

The course is intended to introduce the origin and development of the Manipuri language and literature. But, since the area of study is too vast, the prime aim of this course is to give just an overall idea of it in a nutshell. All the Units will cover only a selective part of the history. The most significant literary milestones of Assamese literature will be discussed in this course.

Learning Outcome:

After completing the course, the students will have the knowledge of the origin and history of Manipuri language. The students will also be able to know about the brief outline of the history of Manipuri literature.

Allotted class: 60 hours **Credits: 04**

Unit – I (10 hours)

Development and Aspects of Manipuri language and Script

Unit – II (10 hours)

Periodization and Classification of Manipuri Literature

Unit – III (20 hours)
Features of Ancient/Old Manipuri Literature

Unit-IV (20 hours)
Background of Medieval Manipuri Literature

Essential/recommended readings:

Jhalajit, RK. *A History of Manipuri Literature*. Imphal: OK Store. 1976

Manihar, Ch. *A History of Manipuri Literature.* New Delhi: Sahitya Akademi. 2003

Shastri, Kalachand. *Asamba Manipuri Sahitya Itihas*. Imphal: 1997

Singh, N. Khelchandra, *Ariba Manipuri Sahityagi Itihas*. Imphal. 1967

Suggested readings:

Kumar, Laiphrakpam Ashok. *Ariba Manipuri Sahityagi (Seirol) Paring*, G.M. Publications, Imphal. 2016

Singh, N. Tombi & Thokchom Ibohanbi Singh, ed., *Manipuri Sahityagi Itihas*, Manipuri, Sahitya Parishad, Imphal. 2001

Examination scheme and mode: Subject to directions from the Examination Branch/University of Delhi from time to time.

GENERIC ELECTIVES (GE (A) -1): Origin and Development of Marathi Language and Literature

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course	Department offering the course
		Lecture	Tutorial	Practical/ Practice			
Origin and Development of Marathi Language and Literature	4	3	1	Nil	Passed Class XII and studied Marathi upto Class VIII and above	None, as this is the first course to opt for GE (A) Marathi Semester I or II (alternative semester)	**MIL&LS**

Learning Objectives:

This course will help students understand the Marathi language. It will introduce them to the rich literary tradition of Marathi literature and focus on the development of Marathi literature. The course will provide a brief overview of the great personalities and traditions of the Mahanubhav and Warkari sects, as well as their contributions to Marathi literature. It will also explore the changes that occurred in Marathi literature after the arrival of the British. Through translation, printing technology, and educational dissemination, students will become familiar with the changes that have taken place in Marathi literature. Additionally, the course will cover the recent emergence of rural, Dalit, tribal, and feminist literary movements in the post-independence era.

Course Learning Outcome:

This course will help students understand the development process of the Marathi language and Marathi literature. It will provide an insight into the social, cultural, and political development of Marathi society as reflected in its literature. By studying the Marathi society as a significant

linguistic group and its literature, students will gain an understanding of how it has been portrayed. Additionally, it aims to attract students to study literature that has been written in other regional languages of India and foster their interest in comparative studies.

Allotted class: 60 hours **Credits: 04**

UNIT – I (15 Hours)

Introduction to Marathi Language

Oral Tradition and Marathi Literature

UNIT – II (15 Hours)
Medieval Saint Literature

The Traditions and Literature of Mahanubhav
The Tradition and Literature of Varkari
Panditi and Shahiri Literature

UNIT – III (15 Hours)
Pre-Independence Marathi Literature

Translated Literature
Intellectual Writing
Short Stories, Novels, Poems, Plays

UNIT – IV (15 Hours)
Section: 4 Marathi Literature in the Post-Independence Era

Rural Literature
Dalit Literature
Tribal Literature
Feminist literary
Urban Literature

Essential/recommended readings:

Joglekar, G. N. *Marathi bhashecha Itihas*, Pune, Shreevidya Prakashan, 2022.

Kulkarni, Aniluddha. *Pradakshina Khand 1 & 2,* Pune, Continental Prakashan, 2013.

Kulkarni K. P. *Marathi Bhasha Udgam v Vikas,* Pune, Mehta Publication, 2000.

Nasirabadkmar L. R. Madhayugeen Marathi vangmayacha itihas, Kolhapur, bhashavikas sanshodhan sanstha, 2023.

Tulpule, S. G. *Yadavkalin Marathi Bhasha,* Pune, Venus Prakashan, 1973.

Examination scheme and mode: Subject to directions from the Examination Branch/University of Delhi from time to time.

COMPULSORY LANGUAGE POOL OF GENERIC ELECTIVES (GE) COURSES

Under UGCF – 2022 in the line of NEP – 2020
Semester: III/ IV

GENERIC ELECTIVES (GE (A) -2): Study of a Genre: Assamese Short story

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course	Department offering the course
		Lecture	Tutorial	Practical/ Practice			
Study of a Genre: Assamese Short story	4	3	1	Nil	Passed Class XII and studied Assamese upto Class VIII and above	Students who have already opted GE (A)-I in Assamese in either Semester I or II (alternative semester)	**MIL&LS**

Learning Objectives:

This course will introduce students to the modern and widely popular genre of literature called the short story. The students will be introduced to the origin of short stories in Assamese literature and the various trends in the development of short stories in Assamese literature will also be discussed. In addition, the contribution of various journals to the development of short stories will also be discussed in this course. There are many storytellers who have achieved a special place in Assamese literature with their story writing techniques and style. Stories by some of the storytellers will also be included for study.

Course Learning Outcome:

This course will help students understand the general characteristics of short stories and the artistic achievements of Assamese writers in this genre. It will encourage them to study extensively the social, cultural, political, psychological, human perspectives etc. reflected in creative prose literature. This course may also attract students to study short stories written in other regional languages of India in the future and make them interested to do comparative studies.

Allotted class: 60 hours **Credits: 04**

UNIT – I (20 Hours)

Short story and Assamese Short story

(i) Definition of short story

(ii) Special features of short story

(iii) Development of Assamese short story

UNIT – II (20 Hours)

Study of select short stories

(i) '*Patmugi*' by Lakshminath Bezbarua
(ii) '*Abuj Maya*' by Rama Dash
(iii) '*Siraj*' by Lakshmidhar Sarma
(iv) '*Prithivir Asukh*' by Jogesh Das

UNIT – III (20 Hours)

Study of select Short stories

(i) '*Ekhan Nadir Mrityu*' by Mahim Bora
(ii) '*Gahbbar*' by Bhabendranath Saikia
(iii) '*Golam*' by Saurabh Kumar Chaliha
(iv) '*Samskar*' by Mamani Raisom Goswami

Essential/recommended readings:

Barua, Prahlad Kumar. *Asamiya Sutigalpar Adhyan*. Dibrugarh: Banalata Prakashan, 1995.
Bargohain, Homen (Ed.) *Asomiya Galpa Samkalan* (Part-1). 3rd ed. Guwahati: Publication Board Assam, 2004.
_____. *Asomiya Galpa Samkalan* (Part-2). Guwahati: Publication Board Assam, 2004.
_____. *Asomiya Galpa Samkalan* (Part-3). Guwahati: Publication Board Assam, 2007.

Bhattacharya, Basanta Kumar. *Asamiya Sutigalpar Subash*. Nalbari: Jarnal Emporium, 2012
Sarma, Hemanta Kumar. *Asamiya Sahityat Drishtipat*. Guwahati: Bina Library, 1997.
Sarma, Satyendranath. *Asamiya Sahityar Samikshatmak Itibritta*. 9th ed. Guwahati: Saumar Prakash, 2000.

Examination scheme and mode: Subject to directions from the Examination Branch/University of Delhi from time to time.

GENERIC ELECTIVES (GE (A) -2): Study of a Genre: Gujarati Short story

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course	Department offering the course
		Lecture	Tutorial	Practical/ Practice			
Study of a Genre: Gujarati Short story	4	3	1	Nil	Passed Class XII and studied Gujarati upto Class VIII and above	Students who have already opted GE (A)-I in Gujarati in either Semester I or II (alternative semester)	**MIL&LS**

Learning Objectives:

This course will introduce students to the modern and widely popular genre of literature called the short story. The students will be introduced to the origin of short stories in Gujarati literature and the various trends in the development of short stories in Gujarati literature will also be discussed. In addition, the contribution of various journals to the development of short stories will also be discussed in this course. Interestingly, the Frist Gujarati Short story 'Govalani' (the lady milk seller) was first published in 1913, this year is the 110th year of the emergence of the genre of short story in Gujarati Language.

Course Learning Outcome:

This course will help students understand the general characteristics of short stories and the artistic achievements of Gujarati writers in these genres. It will encourage them to study extensively the social, cultural, political, psychological, human perspectives etc. reflected in creative prose literature. This course may also attract students to study short stories written in other regional languages of India in the future and make them interested to do comparative studies.

Allotted class: 60 hours **Credits: 04**

UNIT – I (20 Hours)

Short story and Gujarati Short Story

(iv) Definition of short story

(v) Special features of short story

COMPULSORY LANGUAGE POOL OF GENERIC ELECTIVES (GE) COURSES

Under UGCF – 2022 in the line of NEP – 2020
Semester: III/ IV

GENERIC ELECTIVES (GE (B) -2): Intermediatory Assamese

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course	Department offering the course
		Lecture	Tutorial	Practical/ Practice			
Intermediatory Assamese	4	3	1	Nil	Passed Class XII without studying Assamese at any level of formal education	Students who have already opted GE (B)-I in Assamese in either Semester I or II (alternative semester)	**MIL&LS**

Learning Objectives:

This course is designed for the students who have gained basic knowledge of Assamese language in the previous semester. Students will have the opportunity to study some aspects of the Assamese language in detail through this course. This course will cover higher level grammar than the previous semester and will give special emphasis on Assamese vocabulary and syntax.

The study of this course will not only make students proficient in the conversations of everyday life but also develop an interest in translation between two or more languages.

Course Learning Outcome:

After studying this course, students are expected to be able to provide oral and written information accurately in Assamese. After studying this course, students can also play the role of a translator and interpreter between two or more languages.

In the future, if a student wishes to pursue research on any subject related to Assam, he/she will not have to depend on other language to communicate during written or oral data collection – this is also a promising aspect of this course.

Allotted class: 60 hours **Credits: 04**

UNIT – I (15 Hours)

Grammar

1. Number
2. Gender
3. Person
4. Narration
5. Voice

UNIT – II (15 Hours)

GENERIC ELECTIVES (GE (B) -1): Intermediatory Gujarati

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course	Department offering the course
		Lecture	Tutorial	Practical/ Practice			
Intermediatory Gujarati	4	3	1	Nil	Passed Class XII	Students who have already	**MIL&LS**

					without studying Gujarati at any level of formal education	opted GE (B)-I in Gujarati in either Semester I or II (alternative semester)	

Learning Objectives:

This course is designed for the students who have gained basic knowledge of Gujarati language in the previous semester. Students will have the opportunity to study some aspects of the Gujarati language in detail through this course. This course will cover higher level grammar than the previous semester and will give special emphasis on Gujarati vocabulary and syntax and sentences. The study of this course will not only make students proficient in the conversations of everyday life but also develop the interest in translations between two or more languages.

Course Learning Outcome:

After studying this course, students are expected to be able to provide oral and written information accurately in Gujarati language. Students can also play the role of a translator and interpreter between two or more languages.

In the future, if a student wishes to pursue research on any subject related to Gujarat , he/she will not have to depend on other language to communicate during written or oral data collection – this is also a promising aspect of this course.

Allotted class: 60 hours **Credits: 04**

UNIT – I (15 Hours)

Grammar

6. Number
7. Gender
8. Person
9. Narration
10. Voice

UNIT – II (15 Hours)

Vocabulary

5. The structure and the nature of the vocabulary of the Gujarati language
6. Use of Homophones and Homonyms
7. Use of Synonyms and Antonyms
8. Introduction to Gujarati colloquial and local(Deśya) words

UNIT – III (15 Hours)

Sentence

5. Structure of Sentence formation in Gujarati language
6. Framing different types of sentence (Simple, Compound, Complex)
7. Idiomatic uses of Gujarati words in sentence
8. Phrases and proverbs

UNIT- IV (15 Hours)

Reading and Writing

4. Conversation in Gujarati
5. Translation between two or more than two languages
6. Short Paragraph writing

Essential/recommended readings:

1.Gandhi,Chintan, *ABCs of Gujarati Workbook: Learn to read and write the Gujarati Alphabet (Learning Reading and Writing.* Ahmedabad, CDSNG Consulting,2020

2.Kothari,Jayant, *Bhashaparichay Ane Gujarati Bhashanu Swaroop* Ahmedabad,GSUBP board,2013

3.Pandit ,Prabodh, *Vyakaan Arth Ane Aakar.*Ahmedabad,GSUBP board,2019

4.Sarth Jodni Kosh,Ahmedabad,Navjivan Publication,2020

5. Suthar,Babu, *Gujarati –English learner's dictionary*, Philadelphia,2019

Examination scheme and mode: Subject to directions from the Examination Branch/University of Delhi from time to time.

GENERIC ELECTIVES (GE (B) -2): Intermediatory Kannada

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course	Department offering the course
		Lecture	Tutorial	Practical/ Practice			
Elementary course	4	3	1	Nil	Passed Class XII without studying Kannada at any level of formal education	students who have already opted GE (A)-I in Kannada in either Semester I or II (alternative semester)	**MIL&LS**

Learning objectives

The course will enable the non kannadiga student to understand, speak, read and write kannada language and communicate (converse) in Kannada language in their daily life with kannada speakers. Course will help to enhance the ability of the students to know the kannada language.

Course Learning Outcome:

The student will be able to read, write, speak and understand the kannada language. Students will also able to learn basic kannada word and sentence formation in practical. Students will improve their speaking ability in Kannada. Read and write and also do the comparative study with another language.

Allotted class: 60 hours **Credits: 04**

UNIT – I (20 Hours)

Lesson to learn simple kannada words

UNIT – II (20 Hours)

Kannada Language script reading

UNIT – III (20 Hours)

Kannada vacabulary list and usage of words in a sentence

Essential/recommended readings

Thimmayya. L, balake kannada, Belagavi, Jnana sangama 2017

Examination scheme and mode: Subject to directions from the Examination Branch/University of Delhi from time to time.

GENERIC ELECTIVES (GE (B) -1): Intermediatory Malayalam

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course	Department offering the course
		Lecture	Tutorial	Practical/ Practice			
Intermediatory Malayalam	4	3	1	Nil	Passed Class XII without studying Malayalam at any level of formal education	Students who have already opted GE (B)-I in Malayalam in either Semester I or II (alternative semester)	**MIL&LS**

Learning objectives

This course will be helpful for students who are not familiar with the Malayalam language to understand, speak, read, and write in Marathi. It will enable students to communicate with Malayalam speakers in their daily lives. Additionally, this course will help enhance students' ability to learn and understand the Malayalam language.

Learning Outcome:

Students will understand the linguistic diversity of the country. It is important to be multilingual. Students will be able to read, write, speak, and understand the Malayalam language. Using Malayalam in everyday communication will make students competent. The ability to speak in Malayalam will improve among students. Moreover, they will be able to comprehend Malayalam language, literature, and culture.

Allotted class: 60 hours **Credits: 04**

UNIT – I Sentence (15 Hours)

Framing different types of sentence

(Simple sentences, Compound sentences, Complex sentence, Affirmative Sentence, Negative sentences, Interrogative sentences, Exclamatory sentences etc.)

Phrases and proverbs

UNIT – II Basic Conversations (15 Hours)

Dialogue practice for common scenarios (greetings, ordering food, asking for directions, etc.)

UNIT – II Speaking and translating

Speaking with correct pronunciation

Translating Small Sentences from Malayalam into English/Hind vice versa

UNIT – IV Unicode Typing and its application (15 Hours)

Understanding Unicode Typing and its application

Email, messaging, chatting etc.

Essential/recommended readings

DEPARTMENT OF MODERN INDIAN LANGUAGES AND LITERARY STUDIES
UNIVERSITY OF DELHI, DELHI – 110007

COMPULSORY LANGUAGE POOL OF GENERIC ELECTIVES (GE) COURSES

Under UGCF – 2022 in the line of NEP – 2020

COMPARATIVE INDIAN LITERATURE

GENERIC ELECTIVES (GE-3): History and Methods of Comparative Literature

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course	Department offering the course
		Lecture	Tutorial	Practical/ Practice			
History and Methods of Comparative Literature	04	03	01	NIL	Class 12th passed in any subject	None	Modern Indian Languages and Literary Studies

Learning Objectives:

The course aims at giving an overview of the history, schools and methods in comparative literary studies. It is intended to familiarize the students with concepts of Comparative Literature and its basic methods and approaches while introducing it as an academic discipline. The course also touches upon the new directions and contemporary perspectives of Comparative Literature.

Learning Outcomes:

The course is expected to orient the students towards 'comparison' as a method of literary and cultural studies within the frame of Comparative Literature. After completing the course, the students will be able to develop basic understanding of Comparative Literature as an academic discipline and the process of literary study within comparative framework.

Allotted class: 60 hours **Credits: 04**

Unit I (15 hours)

History of Comparative Literature as an Academic Discipline

Unit II (15 hours)

Major Schools of Comparative Literature

Unit III (20 hours)

Concepts and tools of Comparative Literature - influence, reception, interdisciplinarity, genology, thematology, literary historiography

Unit IV (10 hours)

New Directions and Perspectives of Comparative Literature

Essential/recommended readings:

Bassnett, S. *Comparative Literature: A Critical Introduction*. Oxford: Blackwell. 1993. (Select Chapters)

GENERIC ELECTIVES (GE -4): Introduction to Indian Poetics

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course	Department offering the course
		Lecture	Tutorial	Practical/ Practice			
Introduction to Indian Poetics	04	03	01	Nil	Class 12th passed in any subject	None	Modern Indian Languages and Literary Studies

Learning Objectives:

In order to understand literature, readers need to know the characteristics of writing and its various styles. There are texts in Indian literature that describe the characteristics of literature. Different theories and texts were written by several Indian theoreticians under the category of poetics or *kavyashastra* or *Alankara granthas* or *cheyyul uruppukal*. In those texts, the theoreticians proposed different theories and qualities necessary for studying poetic literature. In this course, students will study briefly the important characteristics and theories of Indian poetics and its devices.

Course Learning Outcome:

After completing this course, the students will get a basic introduction to some of the important literary features and doctrines that have existed in India since ancient times such as Rasa, Dhvani, Vakrukti, Alankara, Ullurai and Irraci etc.

Allotted class: 60 hours **Credits: 04**

Unit I (15 hours)

The Definition of Poetry, The Aim and Purpose of Poetry, Development of Poetic sensibility

Unit II (15 hours)

Various Sanskrit poetic devices such as Rasa, Alankara, Dhvani, Vakrokti

Unit III (15 hours)

A brief introduction to Tamil Poetic form and devices- Akam, Puram, Thinai concepts and Ullurai and Irraci etc

Unit IV (15 hours)

A brief introduction to Modern Poetic Devices and various types used in different literary genres.

Essential/recommended readings:

Choudhary, Satya Dev. *Glimpses of Indian Poetics: A Survey of Sanskrit Poetics*. New Delhi: Sahitya Akademi, 2002.

Deshpande, G.T. *Indian Poetics*. Mumbai: Popular Prakashan, 2009.

Marudhanayagam, P. *Ancient Tamil Poetry and Poetics: New Perspectives*. Chennai: Central Institute of Classical Tamil, 2020. (Pages 1—30)

Nirmal Selvamony, *Tinai Poetics and Tamil Poetry*, Amirthamani Publications, 2011.

Suggested readings:

De, S.K. *History of Sanskrit Poetics.* Calcutta: Firma K.L. Mukhopadhaya, 1960.

Kane, P.V. *History of Sanskrit Poetics.* New Delhi: Motilal Banarasidas, 1961.

Meenakshi, K. *Literary Criticism in Tamil and Sanskrit*. Chennai: International Institute of Tamil Studies, 1999.

Pandey, Kanti Chandra. *Indian Aesthetics.* Varanasi: Chowkhamba, 1959.

Examination scheme and mode: Subject to directions from the Examination Branch/University of Delhi from time to time.

GENERIC ELECTIVES (GE -5): Translation in Indian Languages and Literature

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course	Department offering the course
		Lecture	Tutorial	Practical/ Practice			
Translation in Indian Languages and Literature	04	03	01	Nil	Class 12th passed in any subject	None	Modern Indian Languages and Literary Studies

Learning Objectives:

In a multilingual and multicultural country like India, translation is the best way to know about Indian literature produced in various Indian languages. The present course primarily aims at introducing the students to the vast arena of translation studies and the translation of literature in different Indian languages. One of the objectives of the course is also to enable the students to apply their knowledge in translation studies.

Course Learning Outcome:

On completing the course, the students will have a clear idea about translation studies in general and translation studies in India in particular. Most importantly, this course will generate interest among the students to study and work on translation in future.

Allotted class: 60 hours **Credits: 04**

Unit I (15 hours)

Introduction to Translation Studies

Unit II (15 hours)

Translations in Indian Languages and the Role of English

Unit III (15 hours)

Cultural Translation in the Indian Context

Unit IV (15 hours)

Translation in Indian Languages and Literature: Problems and Perspectives

Essential/recommended readings:

Bassnett-McGuire, Susan. *Translation Studies*. London: Routledge, 1991. Print.

Das, *A Handbook of Translation Studies*. (Reprint) Atlantic Publishers: New Delhi. 2022. Print.

Mukherjee, Sujit. *Translation as Discovery and Other Essays on Indian Literature in English Translation*. New Delhi: Allied Publishers Private Ltd. 1981. Print.

_____ *Translation as Recovery*. Ed. Meenakshi Mukherje. Delhi: Penchant International, 2009. Print.

Ray, Mohit K. Ed. *Studies in Translation*. New Delhi: Atlantic Publishers, 2002. Print.

Examination scheme and mode: Subject to directions from the Examination Branch/University of Delhi from time to time.

ANNEXURE-21

Sub: Amendment to Ordinance V

[E.C Resolution No. 14-1/-(14-1-1/-) dated 09.06.2023 and 27-1-6/- dated 25.08.2023]

Following addition be made to Appendix-II-A to the Ordinance V (2-A) of the Ordinances of the University;

Add the following:

Syllabi of Semester-IV, V and VI of the following departments under Faculty of Arts based on Under Graduate Curriculum Framework -2022 implemented from the Academic Year 2022-23 :

(i) Linguistics
(ii) Philosophy
(iii) Sanskrit
(iv) Psychology
(v) Applied Psychology

DEPARTMENT OF LINGUISTICS

DISCIPLINE SPECIFIC CORE (DSC-7) COURSES

SEMESTER-IV [MAJOR/ NON-MAJOR]

DSC - 7: LANGUAGE IMPAIRMENT

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Language Impairment	4	3	1	0	Class XII	NIL

Learning Objectives:

The Learning Objectives of this course are as follows:

- To make learners become aware of different categories of language disorders arising from specific developments affecting the brain
- To make learners become aware of language disorders across distinct populations including: monolinguals vs. multilinguals; adults vs. children; spoken language vs sign language users

Learning Outcomes: The learning outcomes include:

- Learners will have broad knowledge regarding language in the brain
- Learners will be able to identify various language disorders based on their characteristics
- Learners will be equipped to analyse the nature of language impairment in novel data

SYLLABUS OF DSC-7 (SEMESTER-IV)

UNIT 1: **Language and Brain** **12 Hours (4 Weeks)**

- Acquisition of a First Language: Critical Period Hypothesis and Early/Late Language Acquisition
- Acquisition of a Second Language: Age of Acquisition, Bilingualism, Multilingualism
- Experimental evidence for brain organization for language

UNIT 2: **Various kinds of language disorders** **18 Hours (6 Weeks)**

- Children: Developmental Language Disorder, Specific Language Impairment, Dyslexia
- Adults: Wernicke's Aphasia, Broca's Aphasia, Global Aphasia

UNIT 3: **Analysis of impaired speech** **15 Hours (5 Weeks)**

- Analyzing Form, Syntax and Meaning
- Comparison of impairments in spoken languages and sign languages
- Case studies of speech impairments: from Indian and foreign languages

Essential/recommended readings

1. Traxler, Matthew J. (2012). *Introduction to Psycholinguistics: Understanding language science.* Wiley-Blackwell. Bickerton,
2. Carroll, David W. (1994). *Psychology of language*. California: Brooks/Cole Publishing Company.
3. Caplan, David (1987). *Neurolinguistics and linguistic aphasiology*. Cambridge: Cambridge University Press.
4. Caplan, David, Lecours, Andre Roch, & Smith, Alan (Eds.). (1984). *Biological perspectives on language.* Cambridge, Massachusetts: MIT Press.
5. Friederici, A. D. (2017). *Language in Our Brain: The Origins of a Uniquely Human Capacity*. United States: MIT Press.
6. Bose, Arpita; Lori Buchanan. (2007). A cognitive and psycholinguistic investigation of neologisms, *Aphasiology*, 21:6-8, 726-738, DOI: 10.1080/02687030701192315
7. Bishop, Dorothy V.M. (2017). Why is it so hard to reach agreement on terminology? The case of developmental language disorder (DLD). *International Journal of Language & Communication Disorders,* 52: 671-680. https://doi.org/10.1111/1460-6984.12335

KEYWORDS: Brain, Bilingualism, Language disorders, Dyslexia, Aphasia

DSC - 8: SIGN LINGUISTICS

Total Credits: 04 (Credits: Theory-03, Tutorial-1)

Total Lectures: Theory-45, Tutorial-15, Practical-Nil

Duration: 15 weeks

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Sign Linguistics	4	3	1	0	Class XII	NIL

Learning Objectives:

- To make students appreciate that Sign Languages are natural languages like spoken languages.
- To make students become aware of the history of sign languages of the world.
- To make students become familiar with Deaf rights.
- To make students familiarise themselves with the basic features of signs of Indian Sign Language.

Learning Outcomes:

After participating in the course, the students will be able:

- to appreciate the similarities and differences between spoken and signed languages.
- to recognise parts of speech of Indian Sign Language (ISL).
- to analyse the basic features of signs of ISL.

SYLLABUS OF DSC-8 (SEMESTER-IV)

UNIT 1: **Status of sign languages** **12 Hours (4 Weeks)**

- Status of sign language as a language
- Signed and Spoken languages from a linguistic perspective
- History of sign languages of the world
- Linguistic studies of sign language

UNIT 2: **Indian Sign Language (ISL): Past and Present**

12 Hours (4 Weeks)

- Pre-19th century history of sign language in India
- 19th century history of sign language in India
- Deaf schools and the status of sign language in India

UNIT 3: **Parts of Speech in Spoken and Indian Sign language**

9 Hours (3 Weeks)

- Word classes
- Word classes in ISL

UNIT 4: **Basic features of Signs** **12 Hours (4 Weeks)**

- Parts of a sign
- Iconicity
- Minimal pairs and phonemes

Essential/recommended readings

DSC - 9: LANGUAGE, HISTORY AND CHANGE

Total Credits: 04 (Credits: Theory-03, Tutorial-1)

Total Lectures: Theory-45, Tutorial-15, Practical-Nil

Duration: 15 weeks

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Language, History and Change	4	3	1	0	Class XII	NIL

Learning Objectives:

Learning objectives of this course are as follows:

- to introduce students to the idea that languages evolve over time
- to be aware that languages undergo various changes
- to teach the fundamentals of how to study language change with the help of earlier written records using the Comparative Method

Learning outcomes:

By participating in this course, the student will develop:

- the ability to identify cases of language change
- to recognise the influence if one language (or group) over another
- the skill to analyse language contact and mixed forms

SYLLABUS OF DSC-9 (SEMESTER-V)

UNIT 1: **Origin of Language** **9 Hours (3 weeks)**

- Writing and history
- Language evolution
- Language change
- Reasons and manners of languages change

UNIT 2: **How are languages of the world related?** **12 Hours (4 weeks)**

- World's language families

- Language families in India
- Language isolates

UNIT 3: **Evidence for genetic similarities through lexical comparisons**
12 Hours (4 weeks)

- The Indo-European language family
- Language families in India
- Types of language change

UNIT 4: **Language contact and borrowings** **12 Hours (4 weeks)**

- Sanskrit words in Indian languages and semantic shifts
- Munda/ Dravidian words in Sanskrit
- Words borrowed across continents
- Non-Indo Aryan words in Indo-Aryan languages
- Pidgins and Creoles

Essential/ Recommended Readings

1. Campbell, Lyle (1999). Historical linguistics: An introduction. Cambridge, Massachusetts: MIT Press.
2. Cardona, George, & Jain, Dhanesh (2003). General introduction. In George Cardona & Dhanesh Jain, (Eds.), The Indo Aryan languages. New York: Routledge.
3. Crowley, Terry, & Bowern, Claire (2010). An introduction to historical linguistics. New York: Oxford University Press.

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Linguistic tradition and Historical Linguistics	4	3	1	0	Class XII	NIL

Learning Objectives:

Learning objectives of this course are as follows:

- to make students learn the concept of genetic relationship among languages, the idea of language family, similarities due to contact
- to understand language change
- to make use of comparative method to construct the past

Learning outcomes:

After participating the course, the students are:

- able to recognise languages of different families in India
- able to reconstruct proto-forms by using different methods
- able to use the grammatical rules given by Indian grammarians

SYLLABUS OF DSC-10 (SEMESTER-V)

UNIT 1: Western encounters with Sanskrit **12 Hours (4 weeks)**

- 18th century pioneers
- Indology in British India
- Books, dictionaries and annotations

UNIT 2: Language families of India **12 Hours (4 weeks)**

- 4 major language families of India
- Language families during Middle Indo-Aryan period
- Andamanese and Tai-Kadai as other two families

UNIT 3: Historical linguistics **12 Hours (4 weeks)**

- Language change and types

- Grimm's Law

UNIT 4: Historical Linguistics Methods **9 Hours (3 weeks)**

- Comparative method
- Internal reconstruction method

Essential/ Recommended Readings

1. Aitchison, Jean (1981/2001). *Language Change: Progress or Decay*? Cambridge: Cambridge University Press.
2. Bynon, Theodora (1977/2012). *Historical Linguistics*. Cambridge: Cambridge University Press.
3. Trask, R. L., and Robert McColl Millar (2013). *Trask's Historical Linguistics*, revised edition. New York: Routledge.

KEYWORDS: Indology, Middle Indo-Aryan, Andamanese, Tai-Kadai, Grimm's Law, Reconstruction

DISCIPLINE SPECIFIC ELECTIVE (DSE-1) COURSES

SEMESTER-V [MAJOR/ NON-MAJOR]

DSE - 1: INTRODUCTION TO INDIAN GRAMMATICAL TRADITIONS

Total Credits: 04 (Credits: Theory-03, Tutorial-1)

Total Lectures: Theory-45, Tutorial-15, Practical-Nil

Duration: 15 weeks

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Introduction to Indian Grammatical Tradition	4	3	1	0	Class XII	NIL

Learning Objectives:

The learning objectives of the course are as follows:

- to introduce students to the linguistic tradition of India
- to make students become aware of the different parts of languages that were studied in ancient India
- to make students become aware of the Karaka theory

Learning outcomes:

After participating in the course, the students are able to:

- appreciate the Indian grammatical tradition
- use grammatical rules to analyse parts of Sanskrit texts
- make correct use of different grammatical rules of Sanskrit

SYLLABUS OF DSE-1 (SEMESTER-V)

UNIT 1: **Language & Linguistics** **9 Hours (3 Weeks)**

- The importance of grammar in India
- Grammatical study before Pa:nini
- Pa:nini, Ka:tyayana, Patanjali and Bhartrihari

UNIT 2: **Phonetics & Phonology** **12 Hours (4 Weeks)**

- Siva Sutras (Pratya:ha:ra)

- Sthana (place of articulation)
- Karana (articulator)
- Prayatna (manner of articulation)

UNIT 3: **Morphology** **12 Hours (4 Weeks)**

- Padam (word)
- Subantam (noun) and tiṇantam(verb)
- Yaska's classification of Words

UNIT 4: **Case theory** **12 Hours (4 Weeks)**

- Ka:raka: and Vibhakti
- Six ka:rakas - Apa:da:nam, Samprada:nam, Karanam, Adhikaranan, Karma, Karta.

Essential/ Recommended Readings

1. Namboodri, E.V.N. 2016. *Origin and Development of Modern Linguistics*. Crescent Publishing Corporation.
2. Prakasam,V.(ed,). 2008. *Encyclopaedia of Linguistic Sciences*. Allied Publishers. (Ch:V).
3. Sharma, Ramesh Chand (ed.). 1995. *Indian Theory of Knowledge and Language*. Bahri Publication, Delhi.
4. Subrahmanyam, Korada. 2008. *Theories of Language: Oriental and Occidental*. D.K. Publishers, Delhi.
5. Subrahmanyam, P.S. 2011. *Pa:ninian Linguistics*. Rashtriya Sanskrit Vidyapeetha, Tirupathi. (ch. 1,3,8.)

KEYWORDS: Panini, Bhratrihari, Siva Sutras, Yaska, Karaka

DISCIPLINE SPECIFIC ELECTIVE (DSE-2) COURSES

SEMESTER-V [MAJOR/ NON-MAJOR]

DSE - 2: INTRODUCTION TO INDIAN SIGN LANGUAGE

Total Credits: 04 (Credits: Theory-03, Tutorial-1)

Total Lectures: Theory-45, Tutorial-15, Practical-Nil

Duration: 15 weeks

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Introduction to Indian Sign language	4	3	1	0	Class XII	NIL

Learning Objectives

- To make students appreciate that Sign Language as a visual medium.
- To make students become aware of basic communication skills in a sign language.
- To make students familiarise themselves with the basic signs of Indian Sign Language.

Learning outcomes

After participating in the course, the students will be able:

- to engage in basic communication through sign language.
- to make basic signs of Indian Sign Language (ISL).

SYLLABUS OF DSE-2 (SEMESTER-V)

UNIT I: **Sign language** **15 Hours (5 weeks)**

- Sign language as a visual language
- Common stereotypes of sign language
- Basic components of sign language

UNIT 2: **Basic Communication skills in Sign Language** **15 Hours (5 weeks)**

- Introduction
- Emotions, feelings, colours and shapes
- Dialogues

UNIT 3: **Basic signs in ISL** **15 Hours (5 weeks)**

- Greetings
- Non-manual marking and facial expressions
- Use of space
- Finger spelling

Essential/recommended readings

1. Zeeshan, Ulrike and AYJNIHH. 2001, 2002. *Basic and Advanced Course in Indian Sign Language* (Video). AYJNIHH: Delhi.
2. Zeeshan, Ulrike and AYJNIHH. 2001, 2002. *Workbooks for Basic and Advanced Course in Indian Sign Language*. AYJNIHH: Delhi.
3. Ramakrishna Mission Vidyalaya. 2001. *Indian Sign Language Dictionary*. Coimbatore: Sri Ramakrishna Mission Vidyalaya Printing Press.

KEYWORDS: Signs, Stereotypes, Dialogues, Space, Finger Spelling

DISCIPLINE SPECIFIC ELECTIVE (DSE-3) COURSES

SEMESTER-V [MAJOR/ NON-MAJOR]

DSE - 3: GENDER AND LANGUAGE

Total Credits: 04 (Credits: Theory-03, Tutorial-1)

Total Lectures: Theory-45, Tutorial-15, Practical-Nil

Duration: 15 weeks

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Language and Gender	4	3	1	0	Class XII	NIL

Learning Objectives

Learning Objectives of the course are as follows:

- to make students become aware of the connection between gender, language and power
- to make students understand women's and men's languages (genderlects)
- to make students sensitive towards gender imbalance in media discourse
- to make students understand the connection between gender and linguistics

Learning Outcomes

By participating in this course, the student will develop:

- the ability to see the connection between gender and language
- the ability to recognise women's and men's talks
- sensitivity towards evaluating gender imbalances in media discourse
- the skill to analyse the linguistic aspects of gender

SYLLABUS OF DSE-3 (SEMESTER-V)

UNIT 1: **Gender and Language connection** **12 Hours (4 weeks)**

- Language, gender and power
- Social inequality
- Feminist discourse

UNIT 2: **Gender in Linguistic forms** **12 Hours (4 weeks)**

- Genderlects
- Cross-cultural differences
- Pronunciation, vocabulary and Syntax

UNIT 3: **Gender and Media** **9 Hours (3 weeks)**

- Gender, language and media
- Discourse structure and gender

UNIT 4: **Gender and Linguistics** **12 Hours (4 weeks)**

- Sociolinguistic studies of gender
- Linguistic studies of gender
- Psycholinguistic studies of gender

Essential/ Recommended Readings

1. Tannen, Deborah (1990). *You just don't understand: Women and men in conversation.* New York: Harper Collins.
2. Tannen, Deborah (1996). *Gender And Discourse*. Oxford, England: Oxford University Press.
3. Coates, Jennifer (1993). *Women, Men and language*. London: Longman.

KEYWORDS: Feminist discourse, Genderlects, Gender bias, Discourse structure.

DEPARTMENT OF LINGUISTICS

DISCIPLINE SPECIFIC CORE COURSES

SEMESTER-VI [MAJOR/ NON-MAJOR]

DSC - 11: LANGUAGE IN SOCIETY

Total Credits: 04 (Credits: Theory-03, Tutorial-1)

Total Lectures: Theory-45, Tutorial-15, Practical-Nil

Duration: 15 weeks

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Language in Society	4	3	1	0	Class XII	NIL

Learning Objectives:

The learning objectives of the course are as follows:

- to make students understand language in its social context.
- to familiarizes students with the basic notions and concepts relating to social perspectives on language.
- to make them appreciate the evolving nature of language.
- to make them appreciate linguistic diversity.

Learning Outcomes:

After attending this course, the student is expected to:

- recognize language/ dialect/ register distinctions in any speech variety
- develop skills to identify social influences on language
- gain experience in observing language at work and analyse the same.

SYLLABUS OF DSC-11 (SEMESTER-VI)

UNIT 1: **Language, communication, gossip and socialization**

9 Hours (3 Weeks)

- Social origins of language
- Language and social interaction
- Cross-cultural and cross-linguistic communication

- Language indexing social identity

UNIT 2: **Linguistic diversity** **12 Hours (4 Weeks)**

- Language-dialect-register.
- Standard languages and vernaculars
- Language as a speech variety
- Attitudes towards language and their speakers; prestige and stigma associated with different ways of speaking
- Plurality of language

UNIT 3: **Methodology for studying language in social context**

12 Hours (4 Weeks)

- Observing language use; the Observer's Paradox
- How speakers use language to construct styles and adapt their language to different audiences and social contexts
- Accommodation and influence: People mutually influence each other's speech

UNIT 4: **Social differentiation of speech** **12 Hours (4 Weeks)**

- How language and society affect each other
- Language and social class, ethnicity, and gender
- Differentiation in individual, group and family

Essential/ Recommended Readings

1. Chambers, J. K., Trudgill, Peter, & Schilling-Estes, Natalie (2004). *The handbook of language variation and change*. Oxford: Blackwell Publishing.
2. Holmes, Janet, & Wilson, Nick (2017). *An introduction to sociolinguistics*. Oxon: Routledge.
3. Labov, William (1972). *Sociolinguistic patterns*. Philadelphia: University of Pennsylvania Press.
4. Meyerhoff, Miriam (2011). *Introducing sociolinguistics*. Oxon: Routledge.
5. Montgomery, Martin (2008). *Introduction to language and society*. Oxon: Routledge.
6. Romaine, Suzanne (2000). *Language in society: An introduction to sociolinguistics*. Oxford: Oxford University Press.
7. Tagliamonte, Sali A. (2012). *Variationist sociolinguistics: Change, observation, interpretation*. Oxford: Wiley-Blackwell.
8. Trudgill, Peter (2000). *Sociolinguistics: An introduction to language and society*. London: Penguin Books.
9. Wardhaugh, Ronald (2010). *An introduction to sociolinguistics*. Oxford: Wiley-Blackwell.

KEYWORDS: Dialect, Register, Observer's Paradox, Ethnicity.

DISCIPLINE SPECIFIC CORE COURSES

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Language in Indian Society	4	3	1	0	Class XII	NIL

Learning Objectives:

The learning objectives of the course are as follows:

- to make students understand Indian language in their social contexts.
- to familiarizes students with the basic notions and concepts relating to social perspectives on especially Indian language.
- to make them appreciate the evolving nature of language.
- to make them appreciate linguistic diversity in India.

Learning Outcomes:

After attending this course, the student is expected to:

- recognize language/ dialect/ register distinctions in any Indian speech variety
- develop skills to identify social influences on Indian language
- gain experience in observing Indian languages at work and analyse the same.

SYLLABUS OF DSC-12 (SEMESTER-VI)

UNIT 1: **Language, communication, gossip and socialization in Indian Society**

12 Hours (4 Weeks)

- Indian Social origins of language
- Language and social interaction in India
- Cross-cultural and cross-linguistic communication in India
- Language indexes and social identity in India

UNIT 2: **Linguistic diversity in India** **12 Hours (4 Weeks)**

- Language-dialect-register in India
- Standard languages and vernaculars of India

- Language as a speech variety in India
- Attitudes toward language and the Indian speakers; prestige and stigma associated with different ways of speaking
- Plurality of Indian languages

UNIT 3: **Methodology for studying Indian language in social context**

12 Hours (4 Weeks)

- Observing language use; the Observer's Paradox
- How speakers use language to construct styles and adapt their language to different audiences and social contexts.
- Accommodation and influence: People mutually influence each other's speech.

UNIT 4: **Social differentiation of speech in India** **9 Hours (3 Weeks)**

- How language and society affect each other
- Language and social class, ethnicity, and gender.
- Differentiation in individual, group and family.

Essential/ Recommended Readings

1. Agnihotri, R.K. 2002. Sociolinguistic Theory and Practice: The Indian Counterpoint. In Rajendra Singh (Ed.), *The Yearbook of South Asian Languages and Linguistics.*
2. Annamalai, E. 1997. Development of sociolinguistics in India. In Christina Bratt Paulston and G. Richard Tucker (eds.), *The early days of sociolinguistics: memories and reflections.* SIL International Publications; pp. 35–41.

5. Shapiro, Michel C.; Harold F. (1981). *Language and Society in South Asia.* Delhi: Motilal Banarsidass.

KEYWORDS: Linguistic diversity, Dialect/ Register, Standard Vs Vernacular, Attitude, Plurality.

DISCIPLINE SPECIFIC ELECTIVE COURSES

SEMESTER-VI

DSE - 2: STRUCTURE OF INDIAN LANGUAGES

Total Credits: 04 (Credits: Theory-03, Tutorial-1)

Total Lectures: Theory-45, Tutorial-15, Practical-Nil

Duration: 15 weeks

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Structure of Indian Languages	4	3	1	0	Class XII	NIL

Learning Objectives:

The Learning Objectives of this course are as follows:

- to understand the place of his/her language in the context of south Asian languages in terms of geographical and genetic relations among languages
- to become familiar with looking at languages from a linguistic perspective
- to be aware of the issues of convergence and contact among languages, and to be able to therefore appreciate the inter-relations among languages

Learning Outcomes:

By participating in this course, the student will:

- be able to demonstrate understanding of the major characteristics of grammar of Indian languages
- be able to apply correct terminology and techniques of phonetics/phonology to transcription and data analysis, analyse the structure words, phrases, and clauses of Indian languages
- be able to recognise the influence of one language on another

SYLLABUS OF DSE-2 (SEMESTER-VI)

UNIT 1: **Introduction to South Asian Languages** **12 Hours (4 Weeks)**

- Language families of South Asia
- Language families of India: Core and periphery

- Genetic and areal distribution of languages

UNIT 2: **Linguistic Features of Indian Languages** **12 Hours (4 Weeks)**

- Types of linguistic features
- Pan Indic linguistic features
- Linguistics features of the 4 core families

UNIT 3: **Formal features for analysis** **12 Hours (4 Weeks)**

- Phonetic and Phonological features
- Morphological features
- Syntactic and Semantic features

UNIT 4: **Contact and convergence** **9 Hours (3 Weeks)**

- Super-stratum and sub-stratum languages
- Dakhini as a case of convergence
- Pidgins and Creoles
- Sadri and Nagamese as Lingua Franca

Essential/ Recommended Readings

1. Bhaskararao, P. and Subbarao K.V. (eds.). (2004). *Non-nominative Subjects* (Vol 1 and 2). Amsterdam: John Benjamins.
2. Emeneau, M.B. 1956. India as a linguistic area. *Language*, 32.3, 3-16.
3. Krishnamurti Bh., Masica Colin P., Sinha A.K. (eds.). 1986. *South Asian Languages: Structure, Convergence and Diglossia*. Delhi: Motilal Banarsidass.
4. Masica, C.P. 1976. *Defining a linguistic area: South Asia*. University of Chicago Press, Chicago.
5. Subbarao, K.V. 2012. *South Asian Languages: A Syntactic Typology*. Cambridge, University Press, Cambridge. (Chapters 2-6).
6. Subbarao K. V., Arora, H. (1988/1990). On Extreme Convergence: The Case of Dakkhini Hindi-Urdu. *Indian Linguistics* 49, 92-107.

KEYWORDS: Genetic and Areal, Phonological, Morphological, Syntactic, Dakhini, Sadri, Nagamese

COMMON POOL OF GENERIC ELECTIVES (GE) COURSES OFFERED BY DEPARTMENT OF LINGUISTICS

GENERIC ELECTIVES (GE-6): MULTILINGUALISM

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Multilingualism	4	3	1	0	Class XII	NIL

Learning Objectives:

- To make students understand how language policy influences multilingual contexts
- To make students appreciate the relationship between multilingualism and migration in the context of globalisation
- To make them aware of how multilingualism helps construct/articulate cultural identities
- To make them appreciate the role of family, education and work place in maintaining multilingualism

Learning outcomes:

After completing this course, the students will be able:

- to apply critical thinking and problem-solving techniques to address new issues and data
- to appreciate and engage with important concepts in multilingualism
- to critically assess key issues and approaches to the study of multilingualism

SYLLABUS OF GE-6 (SEMESTER-VI)

UNIT 1: Bilingualism and multilingualism **9 Hours (3 weeks)**

- Child and adult bilingualism
- Language contact and bilingualism
- Sociolinguistics of multilingualism

UNIT 2: Perspectives on Multilingualism **12 Hours (4 weeks)**

- Linguistic
- Sociolinguistic

- Psycholinguistic

UNIT 3: Language Contact **12 Hours (4 weeks)**

- Definitions and types
- Code-switching
- Code-mixing

UNIT 4: Multilingualism and education **12 Hours (4 weeks)**

- Educational Policy and multilingualism
- Language acquisition in a multilingual setting
- Language development in a multilingual setting
- The cognitive effects of multilingualism

Essential/ Recommended Readings

1. Agnihotri, Rama Kant. 2009. Multilinguality and a new world order. In A. K. Mohanty, M. Panda, R. Phillipson, & T. Skutnabb-Kangas (Eds.), *Multilingual education for social justice: Globalizing the local.* New Delhi: Orient BlackSwan; 268–277.
2. Auer, Peter, & Wei, Li (Eds.). (2007). *Handbook of multilingualism and multilingual communication* New York: Mouton De Gruyter.Chapters: 1, 2, 4, 5
3. Hoffmann, Charlotte (2014). *Introduction to bilingualism*. New York: Routledge. Chapters: 1, 2, 3, 5
4. Marilyn Martin-Jones, Adrian Blackledge, Angela Creese (2012). *The Routledge Handbook of Multilingualism*. Taylor& Francis.

KEYWORDS: Bilingualism, Multilingualism, Code-switching, Code-mixing, Cognitive effect

DEPARTMENT OF PHILOSOPHY
SEMESTER - IV
Category 1

(B.A. Honours in Philosophy in three years)

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

DISCIPLINE SPECIFIC CORE COURSE -10 (DSC - 10) – Texts of Indian Philosophy

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Textual study of Indian Philosophy DSC 10	4	3	1	Nil	12th Passed	"Indian Philosophy" Sem 1

Learning Objectives

The Learning Objectives of this course are as follows:

- The paper introduces the seminal ideas regarding epistemology in the Indian tradition
- The readings will enhance the study of the diverse streams of thought in Indian epistemology
- The course will aim at analysing the main arguments surrounding the reasons for accepting one means of knowledge or another in Indian philosophical schools of thought

Learning outcomes

The Learning Outcomes of this course are as follows:

- It will enable students to gain knowledge about perception and inference in Indian philosophy in the Buddhist and Nyaya tradition
- Students will be able to critically analyse the arguments on each side of the debate regarding the key schools of Indian philosophy
- Students will be able to evaluate the modern significance of these debates
- Students will be able to apply their knowledge to current debates in perception and inference.

Unit I Introduction **(9 hours, 3 weeks)**

1. Subject matter and Purpose of the Text (SamyagjñānpūrvikāPurūṣārthsidhhi)
2. Definition of Right knowledge (AvisaṁvādakjñānamAnadhigatjñānam)
3. Kind of Sources of Knowledge (DwividhamSamyagjñānam)

Essential/Recommended Readings

Nyāyabindu of Dharmakīrti with Dharmottara'sṬīkā chapter I :Perception (Pratyakṣa)
Th. Stcherbatsky, *Buddhist Logic, Volume II*, Delhi: Motilal Banarsidass Publishers Private Limited, Indian edition, 2008 (1993), pp. 1-25. Hindi translation and annotation by Srinivasa Shastri: *Nyāyabindu-ṭīkā of Dharmottara with Nyāyabindu of Dharmakīrti*, Meerut: SahityaBhandar, 1975.

Unit II Perception and Knowledge **(12 Hours, 4 Weeks)**

1. Definition of Perception (KalpanāpoḍhamabhrāntamPratyakṣam)
2. Varieties of Direct Knowledge (Indriya-jñānam, Mānas-pratyakṣa, Sva-saṁvedanam, Yogi-jñānam)
3. Object of Direct Knowledge (Svalakṣanam, Arthkriyākāritvam)

Essential/Recommended Reading
Nyāyabindu of Dharmakīrti with Dharmottara'sṬīkā chapter I :Perception (Pratyakṣa)
Th. Stcherbatsky, *Buddhist Logic, Volume II*, Delhi: Motilal Banarsidass Publishers Private Limited, Indian edition, 2008 (1993), pp. 25-46. Hindi translation and annotation by Srinivasa Shastri: *Nyāyabindu-ṭīkā of Dharmottara with Nyāyabindu of Dharmakīrti*, Meerut: SahityaBhandar, 1975.

Unit III Inference **(12 Hours, 4 Weeks)**

1. Definition of Inference (Tat-pūrvakamAnumānam)
2. Criticism by Cārvāka
3. Criticism by Bauddha

Essential/Recommended readings

NyāyaMañjarī, Ahnika II, Section on 'Inference" *Jayant Bhatta's Nyaya-Manjari,* trans. Janaki Vallabha Bhattacharyya. Delhi: Motilal Banarsidass, 1978, pp. 226- 246.

Unit IV Types of Inference **(12 Hours, 4 Weeks)**

1. Types of Inference (Pūrvavat, Śeṣvat and Samānyatodṛst)
2. Distinction between the Śeṣvattype and Samānyatodṛṣtatype

Essential/Recommended readings.

NyāyaMañjarī, Ahnika II, Section on 'Inference" *Jayant Bhatta's Nyaya-Manjari,* trans. Janaki Vallabha Bhattacharyya. Delhi: Motilal Banarsidass, 1978, pp. 265-284.

Suggestive Readings

DISCIPLINE SPECIFIC CORE COURSE -11 (DSC - 11) – Texts of Western Philosophy

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Textual study of Western Philosophy DSC 11	4	3	1	Nil	12th Passed	"Western Philosophy: Descartes to Kant": Sem III

Learning Objectives

- This course aims at introducing the students to fundamental issues that have been raised in contemporary western philosophy
- This course will provide a historical framework to the student through the study of key texts from the field of western philosophy
- This course will discuss philosophers like Kant, Heidegger, Nagel etc keeping in mind debates related to knowledge, being, ethics, etc, hence, providing rounded knowledge to the student

Learning Outcomes

- The student will learn to analyze philosophical debates by location them in their right historical framework
- The student will acquire the necessary knowledge to progress responsibly in the study of western philosophy
- The student will understand the philosophical origin of many of the concepts that are in current debate in the area of expertise concerned.

Unit1: Key Themes **(12 Hours, 4 Weeks)**

1. Kant's introduction and its themes
2. The Framework of Kant
3. Nietzsche's critique

Essential/recommended reading

Immanuel Kant's Critique of Pure Reason's **Introduction** (Translated by Norman Kemp Smith, London : The Macmillan Press, 1978), pp.41-62.
Friedrich Nietzsche's *BeyondGoodandEvil* (London:Penguin Classics,1975), Chapterl, pp.5-33.

Unit 2: The Nature of Thinking **(9 hours, 3 weeks)**

1. The Nature of thought
2. Thought and the world
3. Heidegger's take on the nature of thought

Essential/recommended reading

1. Heidegger, Martin. *What is Called Thinking*? (New York : Harper & Row Publishers; 1968), PartI: Lecture1, pp. 3-18.

Unit3: Thinking without Mirroring **(12 Hours, 4 Weeks)**

1. Grasping the world
2. The Mind as Mirror
3. Knowing without Mirroring

Rorty, Richard. *Philosophy and the Mirror of Nature (*Princeton: Princeton UniversityPress; 2017*),*Introduction and Chapter8.

Unit4:The Defence of Reason **(12 Hours, 4 Weeks)**

1. Reason in Philosophy
2. Reasons against reason
3. The stand of reason

Essential/recommended reading

Thomas Nagel, *The Last Word* (Oxford: Oxford University Press, 1997), Introduction, pp.1-11.

Suggestive Reading

Kant's, Immanuel. Critique of Pure Reason's (Translated by Norman Kemp Smith, London, The Macmillan Press, 1978).
Nietzsche, F. *Beyond Good and Evil*(London: Penguin Classics, 1975).
Heidegger, Martin. *What is Called Thinking*? (New York : Harper & Row Publishers, 1968).
Rorty, R. *Philosophy and the Mirror of the Nature* (Princeton: Princeton UniversityPress,1979).
Thomas, Nagel. *The Last Word*(Oxford: OxfordUniversityPress,1997).

DISCIPLINE SPECIFIC CORE COURSE – 12 (DSC-12): Truth Functional Logic

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Truth-Functional Logic DSC 12	4	3	1	Nil	12th Passed	None

Learning Objectives

- This paper aims to equip the students with an understanding of basic logical concepts in modern logical theory
- This paper helps to enhance the student's reasoning capacity and problem-solving skills.
- In this paper students will learn to appreciate disciplined and rigorous thinking as applied to arguments in natural language
- The paper is designed to help students understand the power of a deductive theory and also the importance of the notion of deduction

Learning Outcomes

After completing this course:

1. Students will be able to evaluate arguments symbolized in truth functional notation.
2. Students will learn to use proof system for both sentential logic and predicate logic to construct derivations for valid arguments.

3. Students will be able to formulate counterexamples for invalid arguments symbolized in the notations of predicate logic.
4. Students will develop critical thinking and problem-solving skills.

UNIT 1: LOGIC OF COMPOUND PROPOSITIONS (Sentential) (12 Hours, 4 Weeks)

1. Logical Connectives: Conjunction, Negation and Disjunction; Interdefinability Stroke function
2. Truth Tables for Logical Connectives
3. Symbolisation and Translation; Arguments and Argument forms
4. Truth table Method; Shorter Truth Table method (Reductio ad absurdum)

UNIT II: PROVING VALIDITY (PROOF PROCEDURES) (12 Hours, 4 Weeks)

1. Derivation Rules: Rules of Inference and Rules of Replacement
2. Formal Proof of Validity
3. Indirect Proof of Validity
4. Conditional Proof of Validity (strengthened rule)

UNIT III: LOGIC OF SINGULAR/ UNIVERSAL PROPOSITIONS(12 Hours, 4 Weeks)

1. Symbolization of Categorical Propositions
2. The Four Rules of Inference (Quantification Rules)
3. Restrictions on Quantifier Rules:
(a) Special Restriction on UG (b) Special Restriction on EI
4. Proving Validity

UNIT- IV Quantification Theory (9 Hours, 3 Weeks)

Proving Invalidity

Essential Recommended Reading:
Copi, I.M. Introduction to Logic, 14th and 15th Edition. India: Pearson, 2013, 2019.

Suggestive Readings:

DISCIPLINE SPECIFIC ELECTIVE -4 (DSE-4) – Philosophy of Science

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Philosophy of Science DSE 4	4	3	1	Nil	12th Passed	None

Learning Objectives.

- The course will introduce students to the methods, assumptions, epistemological leanings and metaphysical implications of the domain of modern science
- The course offers some significant philosophical positions on: What is the nature of explanation in science? What are the laws of nature and how are they employed as a tool of explanation? What are the implications of the problem of induction for the scientific explanation?
- The course will introduce students to the problems raised by Hume, Popper, Lakatos, Feyerabend and other philosophers

Learning Outcomes

1. Students will learn to ask questions about science in a rational spirit of inquiry
2. The student will be enabled to discuss questions regarding the methods and assumptions of science
3. Students will develop a good understanding of the debates surrounding the growth, progress and achievements of science
4. The students will learn to appreciate the difference between science and other subjects

UNIT I: THE PROBLEM OF INDUCTION (9 Hours, 3 Weeks)

1. Hume: The Traditional Problem of Induction
2. The Uniformity of Nature
3. The Problem of Circularity

Essential/Recommended Readings:

- Hume, D. (2002). David Hume, An Enquiry Concerning Human Understanding (Section IV- parts 1 & 2). In M. Huemer (Ed.), *Epistemology: Contemporary readings* (pp. 298–306). Routledge. (Originally published in 1748).
- Salmon, Wesley C. (1953). The uniformity of nature. *Philosophy and Phenomenological Research* 14 (1):39-48.

UNIT II: OBSERVATION, LAWS OF NATURE AND SCIENTIFIC EXPLANATION (12 Hours, 4 Weeks)

1. Theory Ladenness of Observation
2. Two Models of Scientific Explanation
3. Laws and Regularities

Essential/Recommended Readings:

- Hanson, N. R. (1958). Observation. In *Patterns of discovery: An inquiry into the conceptual foundations of Science* (pp. 4–30). C.U.P.
- Hempel, C. G. (2007). Two models of scientific explanation. In Y. Balashov& A. Rosenberg (Eds.), *Philosophy of science: Contemporary readings* (pp. 45–55). essay, Routledge.
- Hildebrand, Tyler (2023). *Laws of Nature*. Cambridge: Cambridge University Press (Introduction, pp. 1-5)

UNIT III: THE METHODOLOGY OF SCIENCE-I (12 Hours, 4 Weeks)

1. The Problem of Demarcation
2. Karl Popper's Theory of Falsification
3. Lakatos: Scientific Research Programmes

Essential Readings:

- Popper, K. (1963). *Conjectures and Refutations*, 2nd ed., pp.33-46. Routledge.
- Popper, K. (1959).*The Logic of Scientific Discovery*, pp. 10-20, 57-73. Routledge.
- Lakatos, I. (1978). A Methodology of Scientific Research Programmes. In J. Worrall & G. Currie (Eds.), *The methodology of scientific research programmes: Philosophical papers (Vol. 1*, pp. 47–67). Cambridge University Press.

UNIT IV: THE METHODOLOGY OF SCIENCE-II (12 Hours, 4 Weeks)

1. Kuhn: Paradigm and Paradigm Shift
2. Feyerabend: Epistemological Anarchism

Essential/Recommended Readings

- Kuhn, T. (1962). *The Structure of Scientific Revolutions*. Chicago University Press, chapters 1-2, 11- 12.
- Feyerabend, P. (1981). In I. Hacking (Ed.),How to Defend Society Against Science. In *Scientific revolutions* (pp. 156–167). Oxford University Press.

Suggestive Readings

- Boyd, R., Gasper, P., & Trout, J. D. (1999). *The Philosophy of Science*. MIT Press.
- Curd, M., Cover, J. A., &Pincock, C. (Eds.). (2013). *Philosophy of science: The central issues*. W.W. Norton & Company.

- Humphreys, P. (Ed.). (2016). *The Oxford Handbook of Philosophy of Science*. Oxford University Press.
- Ladyman, J. (2002). *Understanding philosophy of science*. Routledge.
- Machamer, P., & Silberstein, M. J. (2008). *The Blackwell Guide to the Philosophy of Science*. Blackwell Publishers.
- Okasha, S. (2016). What is Science? In *Philosophy of science: A very short introduction* (2nd ed., pp. 1–15). Oxford University Press.
- Papineau, D. (1996). *The Philosophy of Science*. Oxford University Press.

DISCIPLINE SPECIFIC ELECTIVE -5 (DSE-5) – Contemporary Indian Philosophy

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Contemporary Indian Philosophy DSE 5	4	3	1	Nil	12th Passed	None

Learning Objectives

- The objective of this course is to make students familiar with Contemporary Indian Philosophers and their philosophical thinking.
- Philosophers like Swami Vivekananda, Aurobindo, Gandhi, B R Ambedkar, JyotibaPhule, M N Roy, amongst others will be covered.
- In this course, various issues of contemporary relevance such as freedom, self-respect, Integral Yoga, Universalism etc. will be discussed

Learning outcomes

On completion of this course, the student can be expected to

- Have a comprehensive understanding of the conceptual roots of the Contemporary Indian Philosophy
- Understand how various social and contemporary issues have been addressed in this discipline
- Understand how one can have multiple perspectives to address various social issues like Caste, Religion, Yoga etc.
- An in-depth understating of various approaches to the study of Contemporary Philosophy in a comparative framework.

Unit- 1: Swami Vivekananda and Sri Aurobindo **(9 Hours, 3 Weeks)**

1. Swami Vivekananda: Universal Religion and Neo Vedanta
2. Sri Aurobindo: Integral Yoga

Essential/recommended readings

Swami Vivekananda , 'The way of realisation of a Universal Religion', The ideal of a Universal Religion *The Complete Works of Swami Vivekananda Vol.II*, Kolkata: Advaita Ashrama,pp.359-396

Integral Yoga: Sri Aurobindo's Teaching & Method of Practice , Compiled by Sri Aurobindo Ashram, Archives and Research Library, Lotus Press, USA

Unit- 2: Jyotiba Phule, B R Ambedkar and E V Ramaswamy Periyar (12 Hours, 4 Weeks)

1. JyotibaoPhule: Critical understanding of the slavery and Caste system
2. B.R.Ambedkar:Annihilation of Caste
3. E V RamaswamyPeriyar: Self Respect

Essential/Recommended Readings

Ambedkar, B R. (1946) *Who were the Shudras, Writings and Speeches, Vol. 7*, Preface, pp.9-20

G.P. Deshpande (Ed.) 'Excerpts from Gulamgiri', *Selected Writings of JotiraoPhule*New Delhi: Leftword, 2002, PP.36-63

G.Aloysious, Periyar and Modernity, New Delhi: Critical Quest, 2019, pp.22-51

Unit- 3: K.C.Bhattacharya and M K Gandhi (12 Hours, 4 Weeks)

1. K.C.Bhattacharyya-Swaraj in Ideas
2. M.K. Gandhi: Civilization and Swaraj

Essential/recommended readings

K.C. Bhattacharyya, 'Swaraj in Ideas', *Indian Philosophical Quarterly11:1984, pp385-393*

'What is Swaraj? 'Pp26-28, 'Civilization,'pp 34-38, 'What is true civilization?', pp.66-71) extracts fromAnthony J Parel .*Gandhi: Hind swaraj and other Essays* , Cambridge: Cambridge University Press,2009

Unit 4: M.N.Roy and J.Krishnamurti (12 Hours, 4 Weeks)

1. M.N. Roy: Radical Humanism
2. J.Krishnamurti: Knowledge and Freedom
3. D D Upadhyaya: Integral Humanism

Essential/Recommended Readings

M.N. Roy: Radical Humanist: Selected Writings, by M.N.Roy, 2004

Radical Democracy pp.38-51, Principles of Radical Democracy 22 Theses, p.5262, M.N.Roy New Humanism- A Manifesto,New Delhi: Ajanta Publications, 1981

J.Krishnamurti, 'Freedom from the Known,'*Total Freedom-The Essential Krishnamurti,* Chennai:

KFI, 2018, pp.109-132

Upadhyaya, D. D (2020) Lecture II: *Western vs. Bharatiya View*, in *Integral Humanism*, Prabhhat Prakasan Pvt Ltd.

Suggestive Readings

DISCIPLINE SPECIFIC ELECTIVE (DSC-6): Sufism

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Bhakti and Sufism DSE 6	4	3	1	Nil	12th Passed	None

Learning Objectives

- The main objective of this course is to make students familiar with leading Sufis of India and world at large and explore their tradition and thought.
- The students will be introduced to the main currents of thought in Sufism. Sufism as a system of values is non-ritualistic and liberal. It fosters such virtues as kindness, compassion inter-cultural bonding, and inter-religious fraternity opposed to differences and discrimination
- This course will also introduce students to Islamic Mysticism, Islamic Philosophy and comparative mysticism,

Learning Outcomes

- Makes students gain familiarity with the various traditions of Sufis.
- Make students gain familiarity with the values and teachings of major Sufis in India and world at large.
- Make students learn about the bhakti movement emerging in India and its key figures.
- Since Sufi tradition presents a very positive and optimistic vision of coexistence in the theologically polarised global conditions, as a therapeutic learning the course would enables students to learn the pluralistic vision of Sufis against the quest for theological objectivism and orthodoxy.

- The course will enable students to learn the Sufi values of standing for tolerance, universalism, as it aligns with contemporary multi-cultural, multi-ideological and multi religious worldview.

UNIT 1- Bhakti and Sufism (9 Hours, 3 weeks)

1. Bhakti Movement and Emergence of Sufism
2. Concept of Love: Rumi
3. Nature of Mystic Experience

Essential/Recommended Readings

Govinda Pillai. P. (2022). "Bhakti and Sufism" In *Bhakti Movement: Renaissance or Revivalism,* Aakar Publication, New Delhi, pp. 156-164.
John A. Subhan (1938): *Sufism: Its Saints and Shrines*, Lucknow publishing home, Lucknow (selections: introduction p.6-16,Ch X p.174-192)
M.M. Sharif (1963): *A History of Muslim Philosophy Vol 1,(*selection: early sufisp.335-348)
M.M. Sharif-(1966): *A History of Muslim Philosophy, Vol 2*, Ottoharrassowitz Wiesbaden, New Jersey and PPC publication (p. 62-69) and Prof. Ghadir Golkarian- *Divine love in Rumi Lore and Mysticism,* Prof. L.S. Kazmi
Sir M. Iqbal (2022) *Reconstruction of Religious thought in Islam,* Kitab Bhawan , New Delhi(selection: p.124-130, chapter :The spirit of Muslim Culture)

UNIT II Bhakti: Integration and Influence (12 Hours, 4 Weeks)

1. Bhakti: Nanak, Kabeer
2. Darashikoh: Confluence of two oceans

Essential/Recommended Readings

Mani, Braj Ranjan (2009) *Bhakti Radicalism,* Critical Quest, New Delhi
Dr. Tara Chand(1963)- *Influence of Islam on Indian Culture*, LG Publishers, Delhi (p.143-163,166-177)
Athar Abbas Rizvi (1978): *History of Sufism in India*, MunshiramManoharlal Publishers Pvt. Ltd., Delhi.(selections:Chapter on Interaction between medieval Hindu Mystics and Sufis, p.322)
Darashikoh (1929) :*Confluence of Two Oceans*or *Majmaul Bahrain*, Mahfuzul Haq (tr.) (p.38-75)

UNIT III: Sufism: Principles and Methods (12 Hours, 4 Weeks)

1. Wahdat-al-Wujud- Ibn-e-Arbi
2. Wahdat-al-Shuhud-Shekh Ahmad Sirhindi
3. Reconcilliation - Shahwaliullah

Essential/Recommended Readings

M.M. Sharif-(1966):*A History of Muslim Philosophy, Vol 2,*Ottoharrassowitz Wiesbaden,New Jersey and Pakistan Philosophical Congress publication. (selection:p.798-810)
M. Abdul Haq Ansari (1997ed.): *Sufism and Sharah,* (selections on Ibn Arabi, Shaikh Ahmad Sirhindi, Shah Waliallah reconciliation)

UNIT IV: Characteristic of a Sufi: Moinuddin Chishti (12 Hours, 4 Weeks)

1. Love of God- NizamuddinAulia
2. Amir Khusru: Universal Love

Essential/Recommended Reading

M.M. Sharif- A History of Muslim Philosophy, Volume 1 and 2(see above)
Mir Valiuddin (1959): *The Quranic Sufism,* Motilal Banarsi Das, Delhi. (selections: Chishtiya Order p.105-108,Naqshbandiya Order p.109)

Suggestive Readings

Note: **Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.**

Category II

BA (Prog.) with Philosophy as Major

(Courses for Undergraduate Programme of study with Philosophy discipline as one of the Core Disciplines)

DISCIPLINE SPECIFIC CORE COURSE (DSC-7): Truth Functional Logic

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Truth-Functional Logic DSC 7	4	3	1	Nil	12th Passed	None

Learning Objective

- This paper aims to equip the students with an understanding of basic logical concepts in modern logical theory
- This paper helps to enhance the student's reasoning capacity and problem-solving skills.
- In this paper students will learn to appreciate disciplined and rigorous thinking as applied to arguments in natural language
- The paper is designed to help students understand the power of a deductive theory and also the importance of the notion of deduction

Learning Outcomes

After completing this course:

- Students will be able to evaluate arguments symbolized in truth functional notation.
- Students will learn to use proof system for both sentential logic and predicate logic to construct derivations for valid arguments.
- Students will be able to formulate counterexamples for invalid arguments symbolized in the notations of predicate logic.
- Students will develop critical thinking and problem-solving skills.

UNIT 1: LOGIC OF SIMPLE ANDCOMPOUND PROPOSITIONS (Sentential) (12 Hours, 4 Weeks)

1. Sentence, Proposition and Argument.

2. Logical Connectives: Conjunction, Negation and Disjunction; Interdefinability
3. Truth Tables; Material Implication and Equivalence

UNIT II: SYMBOLISATION(12 Hours, 4Weeks)

1. Symbolisation and Translation
2. Truth table Method
3. Shorter Truth Table method (Reductio ad absurdum)

UNIT III: PROVING VALIDITY (PROOF PROCEDURES) (9 Hours, 3 Weeks)

1. Derivation Rules: Rules of Inference
2. Rules of Replacement
3. Formal Proof of Validity

UNIT IV: LOGIC OF SINGULAR/ UNIVERSAL PROPOSITIONS (12 Hours, 4 Weeks)

1. Symbolization of Categorical Propositions
2. The Four Rules of Inference (Quantification Rules); Restrictions on UG and EI
4. Proving Validity

Essential Recommended Reading:
Copi, I.M. Introduction to Logic, 14th and 15th Edition. India: Pearson, 2013, 2019.

Suggestive Readings:

- Hurley, Patrick. Introduction to Logic. Delhi :Wordsworth, 2007.
- Quine, W.V.O. Methods of Logic. London: Routledge, 1965.
- Sen, Madhucchanda. Logic. Delhi: Pearson, 2008.
- Copi, I.M. Symbolic Logic, 5th edition. India: Pearson, 2008.

DISCIPLINE SPECIFIC CORE COURSE (DSC-8): Greek Thought

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSC 8 Greek Thought	4	3	1	Nil	12th Passed	None

Learning Objectives

- The course is intended for giving a comprehensive account of early Greco-Roman Philosophy, popularly known as early 'Greek Thought'
- The content covered in the course will be the fundamental aspects of being, knowledge and virtue
- The thinkers covered in the course will be from the Pre-Socratics to the Stoics

Learning Outcomes

- The student will comprehend major trends of thought in Greek Philosophy
- The student will understand the most fundamental aspects of philosophy that remain with us today and ideas that still form the frame of the subject
- The student will be able to critically assess a significant aspect of western intellectual history

Unit -I: Cosmos **(12 Hours, 4 Weeks)**

1. The spirit of Naturalism
2. The concept of *Arche*

Essential/Recommended Readings:

J. Barnes. Early Greek Philosophy. Harmondsworth: Penguin Books,1981. p.xi-xxv.

Curd, Patricia. A Presocratic Reader: Selected Fragments and Testimonia Second Edition Edited, with Introduction. Translations by Richard D Mc Kirahan and Patricia Curd (Hackett Publishing Company, Inc, 2011) p.13-19.

Kirk, G.S and Raven, J.E, The Presocratic Philosophers: A Critical History with Selection of Texts (Cambridge; At The University Press, 1957) pp74-99

Vijay Tankha. Ancient Greek Philosophy. (Pearson: Delhi, 2014). Chapter-1

Unit-II: Metaphysics **(12 Hours, 4 Weeks)**

1. Doctrine of Flux
2. Theory of Number
3. Notion of Being

Essential/Recommended Readings:

Curd, Patricia. A Presocratic Reader: Selected Fragments and Testimonia Second Edition Edited, with Introduction. Translations by RichardDMckirahan and Patricia Curd (Hackett Publishing Company, Inc,2011) ,p.39-65,

G.S Kirk and J.E. Raven, The Pre-Socratic Philosophers, Chapters vi and x

Vijay Tankha. Ancient Greek Philosophy. (Pearson: Delhi, 2014). Chapters 2, 3 and 5

Unit-III: Epistemology and Ethics **(9 Hours, 3 Weeks)**

1. The concept of Knowledge in Greek Thought
2. The concept of Virtue in Greek Thought

Essential/Recommended Readings:

Christopher Shields (edited)The Blackwell Guide to Ancient Philosophy. (Blackwell Publishing, 2003), Chapter-2, Parts I and II

Mary Louise Gill and Pierre Pellegrin (eds). A Companion to Ancient Philosophy, (Blackwell, 2006.) Relevant chapters

Vijay Tankha. Ancient Greek Philosophy. (Pearson: Delhi,2014)

Chapter-9 (p.316-324) and chapter-10

Unit-IV: The Best Life **(12 Hours, 4 Weeks)**

1. Pleasure and happiness
2. Living according to nature

Essential/Recommended Readings:

Christopher Shields(edited). The Blackwell Guide to Ancient Philosophy (Blackwell Publishing, 2003, chapters 12 and 13

Reference Reading for all units:

Warren, James & Frisbee Sheffield (eds.). The Routledge Companion to Ancient Philosophy. Routledge: London and New York, 2014. Part-1., 94-124 and chapters 27 and 30.

COMMON POOL OF GENERIC ELECTIVES (GE) COURSES

GENERIC ELECTIVES (GE-12): Bioethics

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Bioethics GE 12	4	3	1	Nil	12th Passed	None

Learning Objectives

- The course aims at ethical analysis of the topics within the realm of bio-medical sciences and legal studies.
- It is a career-oriented curriculum which enables students to develop competence in policy making and participation in ethics committee of various medical and care institutes.
- It sensitizes the minds towards the ongoing ethical dilemmas

Course Learning Outcomes

- The learning outcomes of this course are multidimensional. It forms a strong base in the field of research of ethics and medicine care.
- It would also increase the student's ability to identify their role in capacity building
- It directly enforces student's role in social responsibility.

UNIT 1- INTRODUCING BIOETHICS **(9 Hours, 3 Weeks)**

1. Historical Survey of Bioethics
2. Main Themes of Bioethics

Essential/ Recommended Readings

Khuse, H and P. Singer. "What is Bioethics? A Historical Introduction." In *A Companion to Bioethics* 2nd ed., Edited by H. Kuhse and P. Singer, 3-11. UK: Wiley Blackwell, 2009

UNIT 2- CORE CONCEPTS **(12 Hours, 4 Weeks)**

1. Issues regarding Informed Consent
2. The Concept of Confidentiality

Essential/Recommended Readings

Beauchamp, Tom L. "Informed consent: Its Historical Meaning and Present Challenges" In *Bioethics: An Anthology* 3rd ed. Edited by Helga Kuhse, Udo Schuklenk and Peter Singer, 635-641. UK: Wiley Blackwell, 2015.

Slowther, Anne and Irwin Kleinman. "Confidentiality" In *Cambridge Textbook of Bioethics*, Edited byP. Singer and A. M. Viens, 43-48. Cambridge: Cambridge University Press, 2008.

UNIT-3 ETHICAL DILEMMAS **(12 Hours, 4 Weeks)**

1. Women's Rights to her Body
2. Mother: Biological and Stand-In Mothers

Essential/Recommended Readings

Warren, Mary Anne. "Abortion." In *A Companion to Bioethics* 2nd Ed. Edited by Helga Kuhse and Peter Singer, 140-148. UK: Wiley Blackwell, 2009.

Steinbock, Bonnie. "The Surrogate Motherhood as Prenatal Adoption." In *Law, Medicine and Healthcare* 6, no. 1 (1988): 44-50.

UNIT 4- PERSONS AND LIVES **(12 Hours, 4 Weeks)**

1. Life on the scale of Values
2. Philosophical Issues of Assisted Reproduction

Essential/Recommended Readings

Harris, John. "Value of Life". In *Bioethics: An Anthology* 3rd ed. Edited by Helga Kuhse, Udo Schuklenk and Peter Singer, 397-405. UK: Wiley Blackwell, 2015.

Purdy, Laura M. "Assisted Reproduction, Prenatal Testing and Sex Selection." In A Companion to Bioethics 2nd Ed. Edited by Helga Kuhse and Peter Singer, 178-192 . UK: Wiley Blackwell, 2009.

Suggestive Readings

Jecker, Nancy S., Albert R. Johnson, and Robert A. Pearlman, eds. *Bioethics : An Introduction to the history, method and practice*. New Delhi: Jones and Barlett, 2010.
Arthur L.Caplan and Robert Arp, eds. *Contemporary debates in Bioethics*. UK: Blackwell Publishing Ltd, 2014.

GENERIC ELECTIVES (GE-13): Symbolic Logic

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Symbolic Logic GE 13	4	3	1	Nil	12th Passed	None

Learning Objectives

- This course is designed for students who are comfortable with elementary mathematical and algebraic techniques.
- It will cover both truth functional logic and methods of deductive proof, quantification and predicate logic along with the logic of relations.

Learning Outcomes

After completing this course students are expected to be able to do the following:

1. The student will be enabled to understand advanced methods in logic
2. The student will understand the importance of formal methods in philosophy
3. The student will be able to construct symbolic form of both sentential as well as predicate logic and finally examining more complex arguments for deriving a clear rational conclusion.
4. The student will develop competence in formulating counterexamples for invalid arguments symbolized in the notations of predicate logic.

Unit 1: Basic Logical Concepts & Connectives **(9 Hours, 3 Weeks)**

1. Truth and Validity
2. Relevance of Symbolic Logic
3. Uses of Symbols and Symbolization
4. Truth Tables: Statements & Argument

Unit 2: The Method of Deduction **(12 Hours, 4 Weeks)**

1. Formal proof of validity: Rules of Inference and Rules of Replacement
2. Techniques for proving validity/invalidity: Indirect Proof, Conditional Proof
3. Proofs of Tautologies

Unit 3: Quantification Theory **(12 Hours, 4 Weeks)**

1. Symbolization of Singular, General and Multiply-general propositions

2. Restrictions on Quantifier Rules:
   (a) Special Restriction on UG (b) Special Restriction on EI
3. Proving validity and Proving invalidity

Unit 4: The Logic of Relations **(12 Hours, 4 Weeks)**

1. Symbolization: Relation
2. Some attributes of relations
3. Predicate Variables and Attributes of Attributes.

Essential Recommended Readings: -

1. Copi, I.M. Symbolic Logic, 5th edition. India: Pearson, 2008.Ch1- 5
2. Copi, Irving M. *Introduction to logic*. 6th Ed. New York London: Macmillan Collier Macmillan, 1982. Ch1.

Suggested Readings:

- Hurley, Patrick J. *A concise introduction to logic*. Boston, MA: Wadsworth Cengage Learning, 2012.
- Sen, Madhucchanda. Logic. Delhi: Pearson, 2008.
- Jetli & Prabhakar. Logic. India: Pearson, 2012

Note: **Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.**

DEPARTMENT OF PHILOSOPHY

Semester V

Category I

(B.A. Honours in Philosophy in three years)

DISCIPLINE SPECIFIC CORE COURSE -13 (DSC-13) – Analytic Philosophy

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Analytic Philosophy DSC 13	**4**	**3**	**1**	**None**	**12th Passed**	"Fundamentals of Philosophy" Sem II

Learning Objective

- Analytic Philosophy is considered as a dominant philosophical tradition in Anglo-American philosophy from the early 20th century.
- The objective of this course is to make the studentsconversant with an important school of Western Philosophy in the 20thcentury that led to arevolutionary re-conceptualization of the subject matter and methodology of philosophy interms of linguistic analysis, logic and mathematics.
- This course will study some of these major thinkers of the analytic tradition like Gottlob Frege in Germany, Bertrand Russell and G. E. Moore in Britain and Ludwig Wittgenstein

Learning Outcomes

After completing this course in Analytic Philosophy students will have:

1. A strong logical foundation to analyse complex set of interconnected concepts.
2. A critical and reflective insight into complex philosophical issues.
3. Ability to directly address ordinary questions in a constructive manner.
4. Analytical skill to progress by intensively investigating a limited range of philosophical issues that lead to the answers to broader questions.

UNIT 1: Frege on Meaning **(9 hours, 3 weeks)**

- Frege: Philosophy of Language
- Sense and Reference

- Truth

Essential/Recommended Reading

:

Frege, G. "The Thought: A Logical Inquiry", *Mind*, Vol. 65, No. 259 (Jul. 1956), Oxford University Press, pp. 289-311.

UNIT II: Russell on Knowledge (12 Hours, 4 weeks)

- Bertrand Russell: Epistemology
- Two types of knowledge
- Knowledge by Acquaintance and Knowledge by Description

Essential/Recommended Reading:

"Knowledge by Acquaintance & Knowledge by Description"
Russell, B. *The Problems of Philosophy.* London: Oxford University Press, 1959, (Chapter 5).

UNIT III: Logical Atomism and Logical Positivism (12 Hours, 4 weeks)

- Language and Reality
- Propositions and Truth
- The status of Facts

Essential/Recommended Reading:

Russell, B. *The Philosophy of Logical Atomism.* London: Routledge, 2010, (lecture 1 and 2).
Passmore, John Arthur (1967). Logical Positivism. In P. Edwards (ed.), *The Encyclopedia of Philosophy.* Macmillan. pp. 52--57.

UNIT IV: Wittgenstein on Meaning (12 hours, 4 weeks)

1. Ludwig Wittgenstein: Language and Reality
2. Facts
3. Picture theory

Essential/Recommended Reading:

Wittgenstein, L. *Tractatus Logico Philosophicus*, London: KeganPaul, 1922, (Propositions:1, 2 & 3)

Suggestive Readings:

- Dummett, M. *Frege: Philosophy of Language.* Harvard University Press, 1981.
- Russell, B. *The Problems of Philosophy.*London: OxfordUniversity Press, 1959.
- Russell, B.*The Philosophy of Logical Atomism.*London: Routledge, 2010.
- Russell, B., "On Denoting", *Mind*, 1905, pp. 479-493.

- Ayer, A. J. *Language, Truth and Logic*. London: Victor Gollancz, 1938.
- Wittgenstein, L. *TractatusLogicoPhilosophicus*, London: Kegan Paul, 1922.
- Wittgenstein, Ludwig. *Philosophical Investigations: PhilosophischeUntersuchungen.* Oxford: Blackwell, 1968. (Selected Sections -1, 11,12,23,43,65,66,67,69,83,84 & 91)

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Continental Philosophy DSC 14	**4**	**3**	**1**	**NIL**	**12th Passed**	"Texts of Western Philosophy" Sem IV

The main objective of this course is to make students familiar with the leading figures of 19th and 20th century Continental philosophy.

Learning Objectives

- This course will familiarize students with the stream of philosophy called Continental Philosophy
- Key thinkers like Hegel, Husserl, Sartre, Heidegger and Foucault will be discussed in this book
- Key themes like method of dialectics, phenomenology, Sartre's concept of Look, Heidegger on technology and Foucault's main ideas will be analysed at length

Learning Outcomes

- Students will understand the basics of Continental Philosophy and also be acquainted with major currents of thought in this tradition
- Students will learn to analyze the various ideas of the thinkers in the course, especially those of Hegel and Husserl's key contributions

- Students will develop the ability to understand original writings of philosophers
- Students will understand the general relevance of continental philosophy and its contemporary reach and influence

UNIT 1: Introducing Continental Philosophy **(12 Hours, 4 Weeks)**

1. Critical Philosophy of Immanuel Kant
2. From Modernity to Enlightenment
3. Critics of the Enlightenment

Essential/Recommended Readings

West, David (1996). *An Introduction to Continental Philosophy*. Polity, pp. 1 – 33 (Introduction to Continental Critics of Enlightenment)

UNIT II : Hegel (9 Hours, 3 weeks)

1. Phenomenology of Spirit
2. Dialectic

Essential/Recommended Reading

1. AlexandreKojeve.1980.*IntroductiontotheReadingofHegel:LecturesonThe Phenomenology of the Spirit,* pp. 3-30. Ithaca & London: Cornell University Press.

UNITIII: Husserl and Sartre (12 Hours, 4 Weeks)

- Phenomenological Method
- Intentionality
- Consciousness
- Concept of Look

Essential/Recommended Readings

EdmundHusserl.2003."PhenomenologicalMethodandIntentionalityofConsciousness. " In *Husserl's Phenomenology*, pp.13-21 & pp. 39-43.Ed. Dan Zahavi. California: Stanford University Press.

Jean-PaulSartre,1984."TheConcept of Look"in*BeingandNothingness*,pp.252-270. Trans. Hazel E. Barnes. New York: Washington Square Press.

UNITIV: Heidegger and Foucault **(12 Hours, 4 Weeks)**

- Man and Technology
- Essence of Technology
- PerspectivesofFoucaultandHeidegger

Essential/Recommended Readings

MartinHeidegger.1977.TheQuestionConcerningTechnologyandOtherEssays,PartI-" *The Question Concerning Technology"*, pp. 3-35. Translated and with an Introduction by William Levitt. New York & London: Garland Publishing, INC.

Michel Foucault.1984. The Foucault Reader. Part II-Docile Bodies, pp.179-187.edited byPaul,Rabinow. New York: Pantheon Books.

Suggesive Readings

Cutrofello, Andrew (2004). *Continental Philosophy: A Contemporary Introduction*. Routledge.

Kearney, Richard & Rainwater, Mara (eds.) (1995). *The Continental Philosophy Reader*. Routledge.

DISCIPLINE SPECIFIC CORE COURSE – 6 (DSC-6): Approaches to Indian Philosophy

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Approaches to Indian Philosophy DSC 15	**4**	**3**	**1**	**NIL**	**12th Passed**	**None**

Learning Objectives

- This course will introduce students to various ways of reading Indian philosophy-from teh spiritual to the material.
- This course will give a corrective picture of Indian philosophy, paving the way for a better and more nuanced reading of the subject
- This course will provide a better base to the student to do more serious research in the subject that is both relevant and contemporary

Learning Outcomes

- Upon taking this course, the students will have a proper historical understanding of Indian philosophy
- The student will be able to analyse the structure, dogmas, and myths of Indian philosophy
- The student will develop critical faculties to understand the historical trajectory of Indian philosophy.

Unit I Indian Philosophy: Tradition and Significance (9 Hours, 3 Weeks)

1. Traditional Approach
2. Concept of Philosophy in India

Essential/Recommended Readings

S.Radhakrishnan and Charles A Moore. 'History of Indian Thought', Source Book in Indian Philosophy, Princeton: Princeton University Press,1957, Pp.XV-XXIX

Bimal K Matilal, 'On the concept of Philosophy in India', Jonardon, Ganeri (Ed.) *Indian Philosophy: A Reader* London: Routledge,2020,pp.7-16

Unit II Dogmas and Debates (12 Hours, 4 Weeks

1. Discourse and Debates
2. Dogmas and Myths

Essential/Recommended readings

Raghramaraju, 'The Discourse of Debates in Indian Philosophy: Classical, Colonial, and Contemporary',*Debates in Indian Philosophy-Classical, Colonial and Contemporary*, New Delhi: Oxford University Press, 2007, pp 1-27

Dasgupta, S.N.(1982). 'Dogmas of Indian Philosophy,'*Philosophical Essays*, New Delhi: MotilalBanarsidasPublications.

Dayakrishna, (1991).Three Myths about Indian Philosophy, *Indian Philosophy: A Counter Perspective* Delhi: Oxford University Press.

Unit III Materialistic Approach to Indian Philosophy (12 Hours, 4 Weeks)

1. Deviating from the "tradition"
2. A different reading of Indian philosophy
3. Naturalism in Indian Philosophy

Essential/recommended readings

Dale Riepe-'Introduction', *Naturalistic Tradition of Indian Philosophy, Delhi:* MotilalBanarsidass, 1964,pp.3-14,

DISCIPLINE SPECIFIC ELECTIVE - (DSE-7) – Philosophy of Mind

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Philosophy of Mind DSE 7	4	3	1	Nil	12th Passed	None

Learning Objective

The philosophy of mind is one of the most exciting areas within philosophy. This course is an introduction to the Philosophy of Mind.

- The course will introduce students to the basic problems of philosophy of mind
- The course will discuss the mind body problem and various solutions to it in depth
- The course will provide a firm basis for the development of their philosophical knowledge and understanding to analyse and evaluate the key theories about the nature of mind and itsrelation to the world.

Learning Outcomes

The student at the end of the course:

- The student will grasp the mind body problem from various angles
- The student will develop insight into the issues that are common challenges like the question of subjective experience relative to a person's material properties and processes.
- 3.The student will be able to critically analyse the fundamental problems in philosophy and appreciate some of the solutions and problems with the solutions
- The student will develop an interest in modern cognitive science

UNIT I The Mind/Body Problem (12 Hours, 4 Weeks)

1. Thinking and Being
2. Dualism
3. Mind Body Interaction

Essential Recommended Readings:

1. Descartes, R. "Meditations II and VI". *Philosophy of Mind: Classical and Contemporary Readings*, edited by David Chalmers, Oxford: Oxford University Press, 2002, pp. 10-21.
2. Ryle, G. "Descartes' Myth," *Philosophy of Mind: Classical and Contemporary Readings*, edited by David Chalmers, Oxford: Oxford University Press, 2002, pp. 32-38.

UNIT-II: Identity Theory and Functionalism (12 Hours, 4 Weeks)

1. The Material Mind
2. Identity theory
3. Functionalism

Essential Recommended Readings:

1. Smart, J.J.C. "Sensations and Brain Processes". *Philosophy of Mind: Classical and Contemporary Readings*, edited by David J. Chalmers, Oxford: Oxford University Press, 2002, pp. 60-68.
2. Putnam, H. "The Nature of Mental States".*Philosophy of Mind: Classical and Contemporary Readings*, edited by David J. Chalmers, Oxford: Oxford University Press, 2002, pp. 73-79.

UNIT III Subjective Experience (12 Hours, 4 Weeks)

1. Subjective and Objective
2. The Problem of Qualia

Essential Recommended Readings:
1. Nagel, T. "What is it Like to Be a Bat?".*Philosophy of Mind: Classical and Contemporary Readings*, edited by David J. Chalmers, Oxford: Oxford University Press, 2002, pp. 219-225.
2. Jackson, F. "Epiphenomenal Qualia".*Philosophy of Mind: Classical and Contemporary Readings*, edited by David J. Chalmers, Oxford: Oxford University Press, 2002, pp. 273-280.

UNIT-IV Problem of Consciousness (9 Hours, 3 Weeks)

- The Mysterious Flame
- Consciousness and Material Reality

Essential Recommended Readings:

1. Chalmers, D."Facing up to the Problem of Consciousness." *Journal of Consciousness Studies*, 2, No.3, 1995, pp. 200-219.

Suggestive Readings:

- Chalmers, David. "Naturalistic Dualism". *The Blackwell Companion to Consciousness*,
  edited by Susan Schneider and Max Velmans, Oxford: Wiley Blackwell, 2017, pp. 263-273.
- Crane, T. *The Mechanical Mind: A Philosophical Introduction to Minds, Machines and*
  Mental Representation,(2nd edition). New York: Routledge, 2003.
- Levin, Janet. "Functionalism".*The Stanford Encyclopedia of Philosophy* (Fall 2018 Edition), edited by Edward N. Zalta, 20 Jul, 2018:https://plato.stanford.edu/archives/win2021/entries/functionalism/
- Searle, John. "Biological Naturalism". *The Blackwell Companion toConsciousness*, edited by Susan Schneider and Max Velmans, Oxford:Wiley Blackwell, 2017, pp. 327-336.
- Banks, WilliamP. *EncyclopediaOf Consciousness*. Oxford: Elsevier Academic Press, 2009.
- Churchland, Patricia. *Matter and Consciousness: A Contemporary Introduction to the Philosophy of Mind*. Cambridge (MA): MIT Press, 1988.
- Chalmers, David, J. *Philosophy of Mind: Classical and Contemporary Readings. Oxford: Oxford University Press*. 2002.
- Heil, John. *Philosophy of Mind: A Contemporary Introduction (3rd edition)*. London: Routledge, 2013.
- Kim, Jaegwon. *Philosophy of Mind, (3rd edition)*. Oxford: Westview Press, 2010.
- Churchland, Patricia. *Matter and Consciousness: A Contemporary Introduction to the Philosophy of Mind*. Cambridge (MA): MIT Press, 1988.

DISCIPLINE SPECIFIC ELECTIVE - (DSE-8) – Philosophy of Law

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSE 8 Philosophy of Law	4	3	1	Nil	12th Passed	None

Learning Objectives

The course in Philosophy of Law, seeks to:

- Familiarize students with the nature and purpose of law by examining questions such as "What is (the nature of) law?", "How, if at all, is law connected with morality?" and "What is justice?", and to instruct students about possible answers and arguments provided in legal philosophy and theory.
- Introduce students to philosophical schools such as Legal Positivism and Natural Law.
- Help students critically examine the institution of legal punishment that pertains to the coercive impact of law.

Learning Outcomes

- The ideal outcome of this course is to make students understand the concept of law, its place in our lives, its formal structure, rules and modalities.
- Students should be able to discuss and argue on crucial legal questions that impact the life of common citizens with sensitivity, acumen, precision and insight.

UNIT 1 **(12 Hours, 4 Weeks)**

Law: Concept, Meaning and Definition

1. Theories of Law: Aquinas and Austin
2. The Concept of *Nyaya*: Agreement and Disputes - Kautilya

Essential/Recommended Reading:

- Topics 1 from Altman, Andrew; *Arguing About Law: An Introduction to Legal Philosophy*, Australia: Wadsworth, 2001, pp 32-58
- Topic 5 from Shamasastry, R. (Tr.), Kautilya'sArthashastra, Book III – Concerning Law Chapter I. Determination of Forms of Agreement; Determination of Legal Disputes, https://csboa.in/eBooks/Arthashastra_of_Chanakya_-_English.pdf; pp 213-218

UNIT 2 Legal Obligation: Reason and Scope (12 Hours, 4 Weeks)

1. Why Should We Obey the Law
2. The Ambit of Legal Obligation
3. The Rule of Law

Essential/Recommended Readings

- Topic 1 from Mackie, J. L.; The Obligation to Obey the Law, Virginia Law Review, Vol. 67, No. 1, The Symposium in Honor of A. D. Woozley and Obedience (Feb 1981), pp. 143-158
- Topic 2 from Fuller, Lon; The Case of the Speluncean Explorers, Harvard Law Review, Vol. 62, No. 4, February 1949, pp 616-645
- Topic 3 from Marmor, Andrei; The Ideal of the Rule of Law, A Companion to Philosophy of Law and Legal Theory (Second Edition), Dennis Patterson (Ed.), Blackwell Publishing Ltd., pp 666-674

UNIT 3 Legal Issues in India (9 hours, 3 weeks)

1. Basic Structure of the Constitution
2. Judicial Review

Essential/Recommended Readings

- Topic1 from Abridged Judgement of KesavanandBharati Vs. State of Kerala; AIR 1973 SC 1461
- Topic2 from Baxi, Upendra; Who Bothers about the Supreme Court? The Problem of Impact of Judicial Decisions, Journal of the Indian Law Institute, Vol. 24, No. 4 (October-December 1982), pp. 848-862

UNIT 4 Fundamentals of Law (12 Hours, 4 Weeks)

1. Codification
2. *Mens Rea/Actus Reus*
3. Crime and Punishment

Essential/Recommended Readings

- Topic 1 from Alfange, Dean; Jeremy Bentham and Codification of Law, Cornell Law Review, Vol. 55, Issue 1, November 1969, pp 58-75
- Topic 2 from Tebbit, Mark; *Philosophy of Law: An Introduction*, (3rd Edition), Routeledge 2017, pp 193-212
- Topic 3 from from Tebbit, Mark; *Philosophy of Law: An Introduction*, (3rd Edition), Routeledge 2017, pp 242-253

Additional Resources:

- Marmor, Andrei, *Philosophy of Law*, New Jersey: Princeton University Press, 2011

DISCIPLINE SPECIFIC ELECTIVE - (DSE-9) – Medical Ethics: From Principles to Practice

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSE 9 Medical Ethics - From Principles to Practice	**4**	**3**	**1**	**Nil**	**12th Passed**	**None**

The course aims at ethical analysis of the topics within the realm of bio-medical sciences and legal studies.

Learning Objectives

- The course aims at ethical analysis of the topics within the realm of bio-medical sciences and legal studies.
- It is a career-oriented curriculum which enables students to develop competence in policy making and participation in ethics committee of various medical and care institutes.
- It sensitizes the minds towards the ongoing ethical dilemmas.

Learning Outcomes

The learning outcomes of this course are multidimensional.

- It forms a strong base in the field of research of medical ethics
- It would also increase the student's ability to identify serious concerns regarding the expanding field of medicine and appreciate ethical concerns in new areas of medical research
- It increases the student's general awareness about public health ethics

UNIT 1- Introducing Medical Ethics **(9 Hours, 3 Weeks)**

1. Tracing the past of medical ethics
2. Scope of Medical ethics

Essential/Recommended Readings

A.F.Cascais (1997), "Bioethics: History, Scope, Object," In *Global Bioethics,* 10:1-4, 9-24. Retrieved on 13 July 2022. https://doi.org/10.1080/11287462.1997.10800712.

UNIT 2- CORE CONCEPTS **(12 Hours, 4 Weeks)**

1. Philosophical Issues of Informed Consent
2. The concept of Confidentiality

Essential/Recommended Readings

Williams, J. R. "Consent". In *Cambridge Textbook of Bioethics*, Edited by P. Singer and A. M. Viens, 11-16. Cambridge: Cambridge University Press, 2008.
Beauchamp, Tom L. "Informed consent: Its Historical Meaning and Present Challenges" In *Bioethics: An Anthology* 3rd ed. Edited by Helga Kuhse, UdoSchuklenk and Peter Singer, 635-641. UK: Wiley Blackwell, 2015.
_Slowther, Anne and Irwin Kleinman. "Confidentiality" In *Cambridge Textbook of Bioethics*, Edited byP. Singer and A. M. Viens, 43-48. Cambridge: Cambridge University Press, 2008.

UNIT-3 ETHICAL DILEMMAS

(12 Hours, 4 Weeks)

1. Mothers: Biological and Other
2. Moral Status of Animals

Essential/Recommended Readings

Steinbock, Bonnie. "The Surrogate Motherhood as Prenatal Adoption." In*Law, Medicine and Healthcare* 6, no. 1 (1988): 44-50.
_Darr, Judith. "The Reproductive Revolution". In *The New Eugenics: Selective Breeding in an Era of Reproductive Technologies*, 1-27. USA: Yale University Press, 2017.
Use of animals in medical experimentation and research
Bernard. E. Rolling. "The Moral status of Animals and their use as Experimental Subjects." In *A Companion to Bioethics* 2nd Ed. Edited by Helga Kuhse and Peter Singer, 495-509. UK: Wiley Blackwell, 2009.

UNIT 4 Medical ethics: Death and Dying **(12 Hours, 4 Weeks)**

1. Death and Dying
2. Jain Fasting to Death (*santhara*)

Essential/Recommended Readings

Donaldson, B., & Bajželj, A. (2021). Calculations of Death. In *Insistent Life: Principles for Bioethics in the Jain Tradition* (1st ed., pp. 182–212). University of California Press. http://www.jstor.org/stable/j.ctv2rb75qt.11.

DISCIPLINE SPECIFIC CORE COURSE (DSC 9): Modern Western Philosophy

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSC 9 Modern Western Philosophy	4	3	1	NIL	12th Passed	"Introduction to Western Philosophy" DSC 4

Learning Objectives

- This course aims at introducing the students to fundamental issues that have been raised in modern western philosophy.
- This course will provide an overview of the problems which led to the development of empiricist and rationalist philosophical views in the field of modern western philosophy.
- This course will also discuss a wide range of philosophical theories such as metaphysical monism, pluralism, dualism, immaterialism, and transcendentalism.

Learning Outcomes

- The student will learn about the philosophical origins of many current debated concepts.
- The students will acquire the ability to think outside of the box in terms of prevalent philosophical orthodoxies.
- The students will learn how to think differently about philosophy's fundamental problems in alternative ways.

Unit 1: Introduction to Modern Western Philosophy (12 Hours, 4 Weeks)

1. Key Themes of Rationalism
2. Key Themes of Empiricism

Essential/recommended reading

Scruton, Roger, From Descartes to Wittgenstein- A Short History of Modern Philosophy, London, Routledge & Kegan Paul, 1981, Ch.1&2

Unit 2: Rationalism **(12 Hours, 4 Weeks)**

1. Descartes- Methodic Doubt, Cogito Ergo Sum
2. Spinoza- Concept of Substance
3. Leibnitz- Theory of Monads

Essential/recommended reading

Descartes, R.(1647), Meditations on the First Philosophy, Harper Perennial Classics, 2013, Meditation 1&2

Spinoza, B. (1677), Ethics, Penguin classics, 1996, BK-1

Leibniz, G.W. (1714), Monadology: An Edition for Students, University of Pittsburgh Press; 1st edition (1991)

Unit 3: Empiricism **(12 Hours, 4 Weeks)**

1. Locke- Critique of Innate Ideas
2. Berkeley- Critique of Locke's Theory of Material Substance
3. Hume- Theory of Causation

Essential/recommended reading

Locke, J. (1690) *An Essay Concerning Human Understanding*, Penguin Classics, 1996, BK-1

Berkeley, G. (1710) *The Principles of Human Knowledge*, Warnock, G.J. ed. UK, Fontana Press,1985, Part 1- section 1-24.

Hume, David. (1748), *An Enquiry Concerning Human Understanding*, Oxford World Classics, ed. Peter Millican, 2008, Part II- Section VII

Unit 4: Critical Philosophy **(9 Hours, 3 Weeks)**

1. Kant's- Classification of propositions- Analytic, Synthetic, Synthetic a priori

Essential/recommended reading

Kant, Immanuel, *Critique of Pure Reason*, (Cambridge Edition of The Works ofImmanuel Kant) : ed. Guyer, Paul and Wood, Allen 1999. Introduction, pp. 127-152.

Suggestive Readings

DISCIPLINE SPECIFIC CORE COURSE – 10 (DSC-10): Contemporary Indian Philosophy

Credit distribution, Eligibility and Prerequisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Contemporary Indian Philosophy DSC 10	**4**	**3**	**1**	**NIL**	**12th Passed**	"Introduction to Indian Philosophy" DSC 3

Learning Objectives

- The objective of this course is to make students familiar with Contemporary Indian Philosophers and their philosophical thinking.
- Philosophers like Swami Vivekananda, Aurobindo, Gandhi, B R Ambedkar, JyotibaPhule, M N Roy, amongst others will be covered.
- In this course, various issues of contemporary relevance such as freedom, self-respect, Integral Yoga, Universalism etc. Will be discussed

Learning outcomes

On completion of this course, the student can be expected to

- Have a comprehensive understanding of the conceptual roots of the Contemporary Indian Philosophy
- Understand how various social and contemporary issues have been addressed in this discipline
- Understand how one can have multiple perspectives to address various social issues like Caste, Religion, Yoga etc.

- An in-depth understating of various approaches to the study of Contemporary Philosophy in a comparative framework.

Unit- 1: Swami Vivekananda and Sri Aurobindo (9 Hours, 3 Weeks)

1. Swami Vivekananda: Universal Religion and Neo Vedanta
2. Sri Aurobindo: Integral Yoga

Essential/recommended readings

Swami Vivekananda , 'The way of realisation of a Universal Religion', The ideal of a Universal Religion *The Complete Works of Swami Vivekananda Vol.II*, Kolkata: Advaita Ashrama,pp.359-396

Integral Yoga: Sri Aurobindo's Teaching & Method of Practice , Compiled by Sri Aurobindo Ashram, Archives and Research Library, Lotus Press, USA

Unit- 2: Jyotiba Phule, B R Ambedkar and E V Ramaswamy Periyar (12 Hours, 4 Weeks)

1. JyotibaoPhule: Critical understanding of the slavery and Caste system
2. B.R.Ambedkar:Annihilation of Caste
3. E V RamaswamyPeriyar: Self Respect

Essential/Recommended Readings

G.P. Deshpande (Ed.) 'Excerpts from Gulamgiri', *Selected Writings of JotiraoPhule*New Delhi: Leftword, 2002, PP.36-63

G.Aloysious, Periyar and Modernity, New Delhi: Critical Quest, 2019, pp.22-51

Unit- 3: K.C.Bhattacharya and M K Gandhi (12 Hours, 4 Weeks)

1. K.C.Bhattacharyya-Swaraj in Ideas
2. M.K. Gandhi: Civilization and Swaraj

Essential/recommended readings

K.C. Bhattacharyya, 'Swaraj in Ideas', *Indian Philosophical Quarterly11:1984, pp385-393*

'What is Swaraj? 'Pp26-28, 'Civilization,'pp 34-38, 'What is true civilization?', pp.66-71) extracts fromAnthony J Parel .*Gandhi: Hind swaraj and other Essays* , Cambridge: Cambridge University Press,2009

Unit 4: M.N.Roy and J.Krishnamurti (12 Hours, 4 Weeks)

1. M.N. Roy: Radical Humanism
2. J.Krishnamurti: Knowledge and Freedom
3. D D Upadhyaya: Integral Humanism

Essential/Recommended Readings

M.N. Roy: Radical Humanist: Selected Writings, by M.N.Roy, 2004

Radical Democracy pp.38-51, Principles of Radical Democracy 22 Theses, p.5262, M.N.Roy New Humanism- A Manifesto,New Delhi: Ajanta Publications, 1981

DISCIPLINE SPECIFIC ELECTIVE – (DSE-1) – Understanding Dimensions of Gender

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSE 1 Understanding Dimensions of Gender	4	3	1	Nil	12th Passed	None

Learning Objective

- This course aims to orient students to gender and feminism to study society, social roles, and the diversity of subjects in society.
- The course seeks to create gender sensitization and develops a holistic approach toward education.
- This course addresses the concerns of women in terms of debates on consciousness and soul, analyses their connect with nature and culture, and explains the development of feminist ideologies.

Learning Outcome:

- Study of feminism equips the student with analytical skills to develop valid arguments to counter gender discrimination, sexism and patriarchal dominance.
- Feminist theory seeks to initiate transformation in social structures, customs and practices.
- A course in feminism will empower the students to understand gender oppression and to learn how to discuss it in a responsible manner and learn to avoid the same in their lives.

UNIT 1 –Introduction **(9 Hours, 3 Weeks)**

1. Gender: Concept and significance
2. Understanding and Analyzing Patriarchy

Essential/Recommended Readings:

Nicholson, Linda, "Gender". In *Companion to Feminist Philosophy: Blackwell Companion to Philosophy*, Edited by Alison M. Jaggar and Iris M. Young, 289-297. Oxford: Blackwell Publishers, 1998.

Bhasin, Kamla. *What is Patriarchy*. New Delhi: Kali for Women, 1993.

UNIT 2: Women and Social Construction (12 Hours, 4 Weeks)

1. The Study of relationship
2. Female body and its situatedness

Essential/Recommended Readings:

Goldman, Emma, "Marriage and Love". In *Anarchism and Other Essays*, 233-242. New York: Gordon Press Publishers, 1914.

Thapan, Meenakshi. "Femininity and its Discontents: Woman's Body in Intimate Relationships". In *Embodiment Essays on Gender and Identity*, edited by Meenakshi Thapan. New Delhi: Oxford University Press, 1997.

UNIT 3 – Embodiment (12 Hours, 4 Weeks)

1. Stereotypes and myths about beauty
2. The Norms of Sexuality

Essential/Recommended Readings:

Naomi Wolf, "The Beauty Myth". In *The Beauty Myth*, 9-19. New York, Harper Collins, 1991.

Rich, Adrienne, "Compulsory Heterosexuality and Lesbian Existence". In *Journal of Women's History* 15-3 (Autumn 2003), 11-48.

UNIT 4 – Gender Politics (12 Hours, 4 Weeks)

1. Defining Body Politics
2. Is Feminism Monolithic?: Studying Third World Feminism

Essential/Recommended Readings:

Sandra Lee Bartky, "Body Politics". In Alison M. Jaggar and Iris Marion Young, *A Companion to Feminist Philosophy*, Blackwell Companion to Philosophy. Oxford: Blackwell Publishers, 1998.

Narayan, Uma, "Westernization, Respect for Cultures, and Third-World Feminists". In Linda J. Nicholson (Ed.), *The Second Wave: A Reader in Feminist Theory*. Routledge, 1997, 396-414.

DISCIPLINE SPECIFIC ELECTIVE - (DSE-2) – Philosophy of B R Ambedkar

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSE 2 Philosophy of B R Ambedkar	4	3	1	Nil	12th Passed	None

Learning Objectives

- The aim of this course is to introduce the alternative approaches of contemporary Indian philosophical thought with special focus on Philosophy of B R Ambedkar.
- This course is an exploration of democratic and normative philosophical thought in reconstruction Indian society.
- This course introduces the essential philosophical writings of contemporary Indian thinker B R Ambedkar by discussing the Philosophical method in general and Social-Political philosophy and philosophy of religion of Ambedkar in particular.

Course Learning Outcomes

- Learn Ambedkar's alternative reading of Indian philosophy by interrogating dominant philosophical systems and its texts.
- Critical engagement with social reality conditioned by the caste system.
- Learn the liberative and democratic potential of philosophy of Ambedkar in reconstructing Indian nation.
- To make good citizen by understudying the indigenous democratic philosophical thought.

Unit 1 Life world of B R Ambedkar **(9 Hours, 3 Weeks)**

1. Life and Essential Writings of Ambedkar
2. Concepts and methodology of B.R.Ambedkar

Essential/Recommended readings

Rodrigues, Valerian (ed). 'Introduction', *The Essential Writings of B.R. Ambedkar*. New Delhi: Oxford Press, 2002, p.1- 20.

DISCIPLINE SPECIFIC ELECTIVE – DSE 3: Philosophy of Mind

ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Philosophy of Mind DSE 3	4	3	1	Nil	12th Passed	None

Learning Objective

The philosophy of mind is one of the most exciting areas within philosophy. This course is an introduction to the Philosophy of Mind.

- The course will introduce students to the basic problems of philosophy of mind
- The course will discuss the mind body problem and various solutions to it in depth
- The course will provide a firm basis for the development of their philosophical knowledge and understanding to analyse and evaluate the key theories about the nature of mind and itsrelation to the world.

Learning Outcomes

The student at the end of the course:

- The student will grasp the mind body problem from various angles
- The student will develop insight into the issues that are common challenges like the question of subjective experience relative to a person's material properties and processes.
- 3.The student will be able to critically analyse the fundamental problems in philosophy and appreciate some of the solutions and problems with the solutions
- The student will develop an interest in modern cognitive science

UNIT I The Mind/Body Problem (12 Hours, 4 Weeks)

4. Thinking and Being
5. Dualism
6. Mind Body Interaction

Essential Recommended Readings:

1. Descartes, R. "Meditations II and VI". *Philosophy of Mind: Classical and Contemporary Readings*, edited by David Chalmers, Oxford: Oxford University Press,

2002, pp. 10-21.
2. Ryle, G. "Descartes' Myth," *Philosophy of Mind: Classical and Contemporary Readings*, edited by David Chalmers, Oxford: Oxford University Press, 2002, pp. 32-38.

UNIT-II: Identity Theory and Functionalism (12 Hours, 4 Weeks)

4. The Material Mind
5. Identity theory
6. Functionalism

Essential Recommended Readings:

1. Smart, J.J.C. "Sensations and Brain Processes". *Philosophy of Mind: Classical and Contemporary Readings*, edited by David J. Chalmers, Oxford: Oxford University Press, 2002, pp. 60-68.
2. Putnam, H. "The Nature of Mental States".*Philosophy of Mind: Classical and Contemporary Readings*, edited by David J. Chalmers, Oxford: Oxford University Press, 2002, pp. 73-79.

UNIT III Subjective Experience (12 Hours, 4 Weeks)

3. Subjective and Objective
4. The Problem of Qualia

Essential Recommended Readings:
1. Nagel, T. "What is it Like to Be a Bat?".*Philosophy of Mind: Classical and Contemporary Readings*, edited by David J. Chalmers, Oxford: Oxford University Press, 2002, pp. 219-225.
2. Jackson, F. "Epiphenomenal Qualia".*Philosophy of Mind: Classical and Contemporary Readings*, edited by David J. Chalmers, Oxford: Oxford University Press, 2002, pp. 273-280.

UNIT-IV Problem of Consciousness (9 Hours, 3 Weeks)

- The Mysterious Flame
- Consciousness and Material Reality

Essential Recommended Readings:

1. Chalmers, D."Facing up to the Problem of Consciousness." *Journal of Consciousness Studies*, 2, No.3, 1995, pp. 200-219.

Suggestive Readings:

- Chalmers, David. "Naturalistic Dualism". *The Blackwell Companion to Consciousness*,
  edited by Susan Schneider and Max Velmans, Oxford: Wiley Blackwell, 2017, pp. 263-273.

DISCIPLINE SPECIFIC ELECTIVE - (DSE 4) – Medical Ethics: From Principles to Practice

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSE 4 Medical Ethics – From Principles to Practice	**4**	**3**	**1**	**Nil**	**12th Passed**	**Basic knowledge of ethical theories**

The course aims at ethical analysis of the topics within the realm of bio-medical sciences and legal studies.

Learning Objectives

- The course aims at ethical analysis of the topics within the realm of bio-medical sciences and legal studies.

- It is a career-oriented curriculum which enables students to develop competence in policy making and participation in ethics committee of various medical and care institutes.
- It sensitizes the minds towards the ongoing ethical dilemmas.

Learning Outcomes

The learning outcomes of this course are multidimensional.

- It forms a strong base in the field of research of medical ethics
- It would also increase the student's ability to identify serious concerns regarding the expanding field of medicine and appreciate ethical concerns in new areas of medical research
- It increases the student's general awareness about public health ethics

UNIT 1- DEFINING BIOETHICS **(9 Hours, 3 Weeks)**

1. Tracing the past of medical ethics
2. Scope of Medical ethics

UNIT 1- Introducing Medical Ethics **(9 Hours, 3 Weeks)**

3. Tracing the past of medical ethics
4. Scope of Medical ethics

Essential/Recommended Readings

A.F.Cascais (1997), "Bioethics: History, Scope, Object," In *Global Bioethics*, 10:1-4, 9-24. Retrieved on 13 July 2022. https://doi.org/10.1080/11287462.1997.10800712.

UNIT 2- CORE CONCEPTS **(12 Hours, 4 Weeks)**

3. Philosophical Issues of Informed Consent
4. The concept of Confidentiality

Essential/Recommended Readings

Williams, J. R. "Consent". In *Cambridge Textbook of Bioethics*, Edited by P. Singer and A. M. Viens, 11-16. Cambridge: Cambridge University Press, 2008.
Beauchamp, Tom L. "Informed consent: Its Historical Meaning and Present Challenges" In *Bioethics: An Anthology* 3rd ed. Edited by Helga Kuhse, UdoSchuklenk and Peter Singer, 635-641. UK: Wiley Blackwell, 2015.
Slowther, Anne and Irwin Kleinman. "Confidentiality" In *Cambridge Textbook of Bioethics*, Edited byP. Singer and A. M. Viens, 43-48. Cambridge: Cambridge University Press, 2008.

UNIT-3 ETHICAL DILEMMAS

(12 Hours, 4 Weeks)

3. Mothers: Biological and Other
4. Moral Status of Animals

Essential/Recommended Readings

Steinbock, Bonnie. "The Surrogate Motherhood as Prenatal Adoption." In*Law, Medicine and Healthcare* 6, no. 1 (1988): 44-50.

DISCIPLINE SPECIFIC CORE COURSE (DSC 2): Contemporary Indian Philosophy

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Contemporary Indian Philosophy DSC 5	**4**	**3**	**1**	**NIL**	**12th Passed**	Basic knowledge of classical Indian philosophy

Learning Objectives

- The objective of this course is to make students familiar with Contemporary Indian Philosophers and their philosophical thinking.
- Philosophers like Swami Vivekananda, Aurobindo, Gandhi, B R Ambedkar, JyotibaPhule, M N Roy, amongst others will be covered.
- In this course, various issues of contemporary relevance such as freedom, self-respect, Integral Yoga, Universalism etc. Will be discussed

Learning outcomes

On completion of this course, the student can be expected to

- Have a comprehensive understanding of the conceptual roots of the Contemporary Indian Philosophy
- Understand how various social and contemporary issues have been addressed in this discipline
- Understand how one can have multiple perspectives to address various social issues like Caste, Religion, Yoga etc.
- An in-depth understating of various approaches to the study of Contemporary Philosophy in a comparative framework.

Unit- 1: Swami Vivekananda and Sri Aurobindo (9 Hours, 3 Weeks)

1. Swami Vivekananda: Universal Religion and Neo Vedanta
2. Sri Aurobindo: Integral Yoga

Essential/recommended readings

Swami Vivekananda , 'The way of realisation of a Universal Religion', The ideal of a Universal Religion *The Complete Works of Swami Vivekananda Vol.II*, Kolkata: Advaita Ashrama,pp.359-396

Integral Yoga: Sri Aurobindo's Teaching & Method of Practice , Compiled by Sri Aurobindo Ashram, Archives and Research Library, Lotus Press, USA

Unit- 2: Jyotiba Phule, B R Ambedkar and E V Ramaswamy Periyar (12 Hours, 4 Weeks)

1. JyotibaoPhule: Critical understanding of the slavery and Caste system
2. B.R.Ambedkar:Annihilation of Caste
3. E V RamaswamyPeriyar: Self Respect

Essential/Recommended Readings

G.P. Deshpande (Ed.) 'Excerpts from Gulamgiri', *Selected Writings of JotiraoPhule*New Delhi: Leftword, 2002, PP.36-63

G.Aloysious, Periyar and Modernity, New Delhi: Critical Quest, 2019, pp.22-51

Unit- 3: K.C.Bhattacharya and M K Gandhi (12 Hours, 4 Weeks)

1. K.C.Bhattacharyya-Swaraj in Ideas
2. M.K. Gandhi: Civilization and Swaraj

Essential/recommended readings

K.C. Bhattacharyya, 'Swaraj in Ideas', *Indian Philosophical Quarterly11:1984, pp385-393*

'What is Swaraj? 'Pp26-28, 'Civilization,'pp 34-38, 'What is true civilization?', pp.66-71) extracts fromAnthony J Parel .*Gandhi: Hind swaraj and other Essays* , Cambridge: Cambridge University Press,2009

Unit 4: M.N.Roy and J.Krishnamurti (12 Hours, 4 Weeks)

1. M.N. Roy: Radical Humanism
2. J.Krishnamurti: Knowledge and Freedom
3. D D Upadhyaya: Integral Humanism

Essential/Recommended Readings

M.N. Roy: Radical Humanist: Selected Writings, by M.N.Roy, 2004

Radical Democracy pp.38-51, Principles of Radical Democracy 22 Theses, p.5262, M.N.Roy New Humanism- A Manifesto,New Delhi: Ajanta Publications, 1981

COMMON POOL OF GENERIC ELECTIVES (GE) COURSES
For BA Hons/Major

GENERIC ELECTIVES (GE-14): Philosophy of Feminism

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Philosophy of Feminism GE 14	4	3	1	Nil	12th Passed	None

Course Objectives:

- A course in Feminism is needed to sensitise students to a perspective of thought that acts as a filter—a lens through which all subjects must be studied.
- It seeks to create gender sensitization and develops a holistic approach towards education.
- This course addresses the concerns of women in terms of debates on consciousness and soul, analyses their connect with nature and culture; and explains the development of feminist ideologies.

Learning Outcomes:

- Study of Feminism arms the student with analytical skills to develop valid arguments to counter gender discrimination, sexism and patriarchal dominance.
- Feminist theory has a social agenda i.e. to initiate transformation in social structures, customs and practices.
- The study of Feminism is not only an empowering tool against gender oppression but also against other systems of oppression such as race, class and colour.

Unit I Patriarchy and the Origin of Feminism **(9 Hours, 3 Weeks)**

1. The Origins of Patriarchy

2. Aspects of Domination and Subordination

Essential/Recommended readings:

Lerner, Gerda. "The Creation of Patriarchy." In *The Creation of Patriarchy*, 212-229. New York: OUP, 1986.
Hooks, Bell. "Feminism: A Movement to End Sexist Oppression." In *Feminisms* edited by Sandra Kemp and Judith Squires, 22-27. New York: OUP, 2009.

Unit II Feminism and Intersectionality **(12 Hours, 4 Weeks)**

1. Perceptions and Perspectives
3. Women and Caste: Voices of the Dalit women

Essential/Recommended readings

Adichie, Chimamanda Ngozi. *We Should All Be Feminists*. London: Fourth Estate, 2014.
Badron, Margot. "Islamic Feminism on the Move". In *Feminism in Islam*, 323-338. Oxford: One World, 2009.
Rege, Sharmila. "Dalit Women Talk Differently: A Critique of 'Difference' and towards a Dalit Feminist Standpoint Position". *Economic and Political Weekly*, (October 31, 1998): WS 39-46.

Unit III Body and Gender **(12 Hours, 4 Weeks)**

1. Women as Objects
2. Self and Gender

Essential/Recommended readings

Nussbaum, Martha C. "Objectification". Philosophy & Public Affairs, 24, no.4 (Autumn 1995): 249-291.
Vanita, Ruth. "The Self is Not Gendered: Sulabha's Debate with King Janaka." *NWSA Journal*, 15(2003): 76-93

Unit IV Women and Environment **(12 Hours, 4 Weeks)**

1. Discussion on Ecofeminism
2. Indian perspective on gender and environment

Essential/recommended readings

Mies Maria and Shiva Vandana. "Ecofeminism." In *Feminisms* edited by Sandra Kemp and Judith Squires, 497-502. New York: OUP, 2009.
Aggarwal, Bina. "The Gender and the Environmental Debate Lessons from India." *Feminist Studies*, 18, no.1(1992):119-158.

Suggestive readings

Jagger, Alison M. and Iris Marion Young (eds). *Companion to Feminist Philosophy: Blackwell Companion to Philosophy*. Oxford: Blackwell Publishers, 1998.
Kemp, Sandra and Judith Squires, eds. *Feminisms*. New York: OUP, 2009.

GENERIC ELECTIVES (GE-15): Philosophical Debates (Indian)

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Philosophical Debates (Indian) GE 15	4	3	1	Nil	12th Passed	None

Learning Objective

- The primary objective of this course is to know Indian Philosophy through some engaging debates. .
- Various debates in Indian Philosophy will be highlighted in this course.
- The course will cover material from a wide range of perspectives in Indian philosophy, from Jainism to Vedanta and from materialism to Buddhism.
- The debates will highlight the key differences between Indian philosophical schools

Learning Outcome

- At the end of the course, a student should be able to demonstrate a clear understanding of the background the philosophical debates
- The students will acquire a good understanding of the key concepts of Indian schools through critical analysis.
- The students will have the sound understanding of epistemological, metaphysical, ontological and so many other critical issues and shall be able to go for further studies in the subject.

Unit 1 Introduction and Materialism vs Realism (9 Hours, 3 Weeks)

1. Definition and Scope of a Debate
2. Carvaka's rejection of Consciousness- Refutation by Samkhya

Essential/Recommended Readings:

Mohanty, Aditya Kumar (2009), PHILOSOPHY: Why? What? How?, Centre of Advanced Study in Philosophy, Bhubaneswar.
SamkhyaPravacana Sutra: III-21-22.

Raju, P.T. (1985), Structural Depths of Indian Thought, State University of New York Press, NY Albany.

Unit 2: Pluralism vs Monism **(12 Hours, 4 Weeks)**

1. Jaina Anekanta-vada- refutation by Samkara
2. Jaina Syadvada- refutation by Buddhism

Essential/Recommended Readings:

Sinha, J.N. (1985), Outlines of Indian Philosophy, New Central Book Agency (p) ltd., London.

Dasgupta, S.N. (2004), A History of Indian Philosophy, Vol.1, MotilalBanarasi Das Publications, Delhi.

Unit 3.Dvaita, Advaita and Visistadvaita **(12 Hours, 4 Weeks)**

1. Samkhya Dualism- refutation by Samkara
2. Samkaras concept of Brahman and Maya- refutation by Ramanuja

Essential/Recommended Readings:

S.B.S. 2, ii 32-34
Ramanuja Brahma Sutra 1 i. 1 and 2 i. 1
Brahma Sutra SamkaraBhasya, (SBS) 3. I. 54.
Sinha, J.N. (1985), Outlines of Indian Philosophy, New Central Book Agency (p) ltd., London.

Unit 4. Metaphysics vs Ontology **(12 Hours, 4 Weeks)**

1. Buddhist Theory of Ksanika-vada- refutation by Nyaya system
2. Nyaya proofs for the existence of God- refutation of Mimamsa system

Essential/Recommended Readings:

Nyayamanjari, MotilalBanarasidass, Delhi, pp. 358-456.
Syadvadamanjari, Ch. On Isvara, 29-36.
KumarillaSlokavartika, GanganathJha (tr.), Ch. 16, 47-51.
Sinha, J.N. (1985), Outlines of Indian Philosophy, New Central Book Agency (p) ltd., London.

Suggestive Readings:

Radhakrishnan, S. Moore (1967), A Source book of Indian Philosophy, Princeton, CA.

Strawson, Peter (1992), Analysis and Metaphysics: An Introduction to Philosophy, Oxford University Press.

Mahathera, Narada. (2006), The Buddha and His Teachings, Jaico Publishing House, Mumbai.

Chatterjee, S.C. &Datta, D.M. (1984), An Introduction to Indian Philosophy, reprint, University of Calcutta, Calcutta.

GENERIC ELECTIVES (GE-16): Sikhism

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Sikhism GE 16	4	3	1	Nil	12th Passed	None

Learning objectives

- The objective of this course is to make students familiar with Sikhism and the underlying philosophy of its major concepts. The course consists of Introduction to Sikhism, Metaphysical doctrine, Ethical views and Guru-Bani.
- This course will help the students to understand the basic tents of Sikhism and to highlight the philosophical implications in Sikh tradition. This will help the students to understand the significance of Sikhism by giving exposure to Guru Bani.

Learning Outcomes

- At the end of this course, a student will acquire a clear understanding of origin and key doctrines of Sikh Philosophy.
- This paper will prepare a student for taking up further studies in Sikhism and comparative religions.

Unit 1: Introduction (9 Hours, 3 Weeks)

1. Sikh, Sikhi, Sikhism

2. Basic tenets of Sri Guru Granth Sahib

Essential/Recommended Reading;

W.H. McLeod, The A to Z of Sikhism, The Scarecrow Press, 2009. P. xviii-xxxii.

Pashaura Singh, *The Guru Granth Sahib*, The Oxford Handbook of Sikh Studies, Oxford University Press, 2014. P. 125-134.

Unit -2 Philosophical Aspects of Sikhism (12 Hours, 4 Weeks)

1. Mool mantar and Aarti
2. Five Khands of Japji

Essential/Recommended Reading;

Avtar Singh, Ethics of the Sikhs, Publication EUREAU, Punjabi University, Patiala, 1983. P. 202-254 (For Five Khand)

Wazir Singh, The Sikh Vision; Problem of philosophy and faith, EssEss Publication, Delhi, 1992. P. 34-43. (For Hukum)

Unit 3: Metaphysical Aspects of Sikhism (12 Hours, 4 Weeks)

- Brahm, Jagat, JIva, Mukti, Maya
- Nama, Guru and Sat-Sangat

Essential/Recommended Readings

Dr. Gopal Singh (Tr.), Sri Guru Granth Sahib (English Translation), Allied Publishers Pvt. Limited, 2005. Stanza 1, p.1.

Unit IV: Art, Morality and Culture **(9 Hours, 3 Weeks)**

1. What is Art and Morality?
2. What is Culture?

Essential/ Recommended Readings:

1. Tolstoy, Leo. What is Art? Translated from the Original MS, with an Introduction by Aylmer Maude Chapters 1 and 2
2. Gupta, Shyamala. *Art, Beauty and Creativity*, (New Delhi: DK Printworld, 1999) Chapters 13 and 18.
3. Hiriyanna, *M. Art Experience*, (Delhi: Indira Gandhi National Centre for the Arts, Manohar, 1997) Chapter 7

Note: **Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.**

SEMESTER - VI

DEPARTMENT OF PHILOSOPHY

Category I

(B.A. Honours in Philosophy in three years)

DISCIPLINE SPECIFIC CORE COURSE 16 (DSC 16) – Philosophy of Religion

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Philosophy of Religion DSC 16	4	3	1	None	12th Passed	None

Learning Objective

- The course familiarizes the students with basic arguments regarding religion that philosophers have presented
- The course cover topics like the language of religion, cognitive and non-cognitivist theories, key proofs for the existence of God and the ethics of belief
- The course will give students a very important orientation regarding the manner of assessment of arguments and claims made by religion.

Learning Outcomes

- The students will be able to analyze arguments presented in religion
- The students will learn to pay attention to the nuances of the language of religion
- The students will comprehend the complications involved in choosing between faith and reason and will come to have a better appreciation of the religious life.

Unit 1 Introduction **(9 Hours, 3 Weeks)**

1. Nature of Religion and its relation to Philosophy of Religion
2. Religious language.

Essential/Recommended Readings

John H.Hick, *Philosophy of Religion*, New Jersey Prentice Hall, Englewood Cliffs,1990.

Brody, Baruch A, *Readings in Philosophy of Religion*, Ed. Vol 1,NewJersey,PHI, 1974.

DISCIPLINE SPECIFIC CORE COURSE -17 (DSC 17) – Philosophy of Language

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Philosophy of Language DSC 17	4	3	1	NIL	12th Passed	None

Learning Objective

- This course is an introduction to the philosophy of Language. Philosophy of Language concerns quite a large no. of topics including meaning, truth, content, reference, the syntax and semantics of various linguistic constructions, etc.
- The objective of this course is to focus on some central topics which have far reaching consequences in other topics of philosophy of language in particular and other areas of philosophy in general.
- On the one hand, students will be exposed to some of the central theories of meaning proposed by a couple of philosophers of Language from the West, and on the other hand, to the epistemology of language understanding from a perspective of an Indian school of thought.

Learning Outcomes

After completing this course students will

1. Develop an understanding of classical philosophical theories of meaning and reference.
2. Acquire the ability to provide reasons for and against various positions in the philosophical debates over language and semantics.
3. Develop a rational insight into the intrinsic relation between language, language users and the world.

UNIT I: Theories of Meaning: Frege &Russell (12 Hours, 4 Weeks)

1. Sinn und Bedeutung
2. Denotation
3. Descriptions and Names

Essential/Recommended Reading:

Frege, G., "On Sense and Reference", tr. by M. Black in Translations from the *Philosophical Writings of Gottlob Frege,* P. Geach and M. Black (eds. and trans.), Oxford, Blackwell, 3rd edition, 1980, pp. 1-11.

Russell, B., "On Denoting", *Mind*, 1905, pp. 479-493.

UNIT II: Critique of the Theories of Meaning: Strawson (9 Hours, 3 weeks)

1. Use
2. Presupposition and Entailment
3. Sentence, Statement, Utterance

Essential/Recommended Readings

Strawson, P. F., "On Referring", *Mind*, 1950, pp. 320-344.

UNIT III: Language and the World: Indian Perspective (12 Hours, 4 Weeks)

1. Word and the world
2. The relation of language to reality

Essential/Recommended Readings:

Matilal, B.K. *The Word and the World: India's contribution to the Study of Language.* Delhi; Oxford University Press, 1990, pp. 3-7; 18-30,(Introduction, Words and their Meanings)

UNIT IV: Nature and causes of Word generated Knowledge (12 Hours, 4 Weeks)

1. Nyaya Philosophy of Language

Essential/Recommended Readings:

NyayasiddhantaMuktavali*, Shabdakhandam, Karikavalli,** Verse 81, 83, 84abc, 84cd (Sanskrit Text along with English Translation in John Vattanky SJ, ***Nyaya Philosophy of Language, [Sri Satguru Publications, Delhi, 1995] pp.113-115; 118-132; 458; 479-80; 496-97.

Epistemology DSC 18	4	3	1	NIL	12th Passed	None

Learning Objectives

- We all want knowledge, but do we know what knowledge is? This is a course in epistemology: the theory of knowledge which aims to acquaint students with the various aspects of knowledge and to instruct them on the biggest challenge it faces viz. skepticism.
- The course will cover various theories of knowledge and what definitions of knowledge have been offered.
- The course will acquaint students with whether knowledge is even possible and how to handle objections from skepticism.

Learning Outcomes

The learning outcomes aimed at are the following:

- The students will learn about the concerns that surround the notion of knowledge
- The students will appreciate the problems surrounding the definition of knowledge
- The students will be able to analyse and critically think about the sources of knowledge
- The student will understand the power of radical skepticism and how to respond in a measured and responsible way

UNIT 1: KNOWLEDGE AND ITS DEFINITION (9 Hours, 3 Weeks)

1. Types of knowledge
2. Truth and Belief
3. Knowing Versus Merely Getting It Right
4. The Problem of the Criterion
5. Is Knowledge Justified True Belief?

Essential/Recommended Readings:

Topics 1 – 3, Pritchard, Duncan. What is this thing called Knowledge?,Fourth Edition. RKP, 2018, Chapter 1 and 3 (Part I) Title of Chapter 1: Some Preliminaries, pp.3 - 9

Topic 5, Gettier, Edmund. Is Justified True Belief Knowledge?, Analysis 23 (6), pp. 121-123. 1963.

Topics 4 – 6, Pritchard, Duncan. What is this thing called Knowledge?,Fourth Edition. RKP, 2018, Chapter 3 (Part I) Title of Chapter 3: Defining Knowledge pp. 19 - 29

UNIT 2: KNOWLEDGE AND JUSTIFICATION (12 Hours, 4 Weeks)

1. The nature of Justification

2. Infinitism
3. Coherentism
4. Foundationalism

Essential/Recommended Reading:
Topics 1 – 4, Pritchard, Duncan. What is this thing called knowledge?,Fourth Edition. RKP, 2018, Chapter 4 (Part I) Title of Chapter: The Structure of Knowledge, pp. 30 - 40

UNIT 3: SOURCES OF KNOWLEDGE **(12 Hours, 4 Weeks)**

1. The Problem of Perceptual Knowledge
2. Indirect and Direct Realism
3. Idealism
4. A Priori and Empirical Knowledge and Their Interdependence
5. Introspective Knowledge
6. Deduction
7. Induction
8. Abduction

Recommended Readings:
Topics 1 – 3, Pritchard, Duncan. What is this thing called Knowledge?,Fourth Edition. RKP, 2018, Chapter 7 (Part II) Title of the Chapter: Perception, pp. 67 - 76
Topics 4 – 8, Pritchard, Duncan. What is this thing called Knowledge?,Fourth Edition. RKP, 2018, Chapter 9 (Part II)Title of the Chapter: A Priority and Inference, pp. 88 - 97

UNIT 4: SCEPTICISM **(12 Hours, 4 Weeks)**

1. How do we have knowledge about other minds
2. Strategies and arguments regarding knowledge of other minds
3. Perceiving someone else's mind
4. Radical Scepticism and Closure
5. Mooreanism
6. Contextualism

Recommended Readings:
Topics 1 - 3, Pritchard, Duncan. What is this thing called Knowledge?,Fourth Edition. RKP, 2018, Chapter 18(Part V) Title of Chapter: Scepticism about Other Minds, pp. 193 - 200
Topics 4 - 6, Pritchard, Duncan. What is this thing called Knowledge?,Fourth Edition. RKP, 2018, Chapter 19 (Part V) Title of Chapter: Radical Scepticism, pp.201 -213

Suggestive Readings

DISCIPLINE SPECIFIC ELECTIVE – (DSE-10): Feminist Perspectives on Epistemology and Ethics

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Feminist Perspectives on Epistemology and Ethics DSE 10	**4**	**3**	**1**	**Nil**	**12th Passed**	**None**

Learning Objectives

- A course in alternative perspectives is needed to sensitise students to trends of thought that acts as a filter—a lens through which all subjects must be studied.
- It seeks to create gender sensitization and develops a holistic approach towards education.
- This course addresses the concerns of women in terms of debates on gender, body, knowledge and what is right and wrong.

Learning Outcomes

- Study of Feminist perspective arms the student with analytical skills to develop valid arguments to counter gender discrimination, sexism and patriarchal dominance.
- Feminist theory has a social agenda i.e. to initiate transformation in social structures, customs and practices.
- Thus the study of Feminism is not only an empowering tool against gender oppression but also against other systems of oppression such as race, class and colour

Unit I Feminist Epistemology (9 Hours, 3 Weeks)

1. Feminist Epistemology
2. Critiquing the androcentricity of Philosophy

Essential/recommended readings

- Anderson, Elizabeth. "Feminist Epistemology: An Interpretation and a Defence", *Hypatia* 10, no.3(1995):50-84.

- Gatens, Moira. "The Feminist Critique of Philosophy." In *Feminism and Philosophy: Perspective on Difference and Equality* by Moira Gatens, 85-99. UK: Polity Press, 1991.

Unit II Body and Gender **(12 Hours, 4 Weeks)**

1. Gender and the biological life
2. Analyzing the Notion of Self: Gendered or Not?

Essential/recommended readings

- Birke, Lynda. "Life as we have known It: Feminism and Biology of Gender." In *Science and Sensibility: Gender Enquiry,1780-1945,* edited by Marina Benjamin, 243-264. UK: Oxford; MA: Cambridge; USA: B. Blackwell, 1991.
- Vanita, Ruth. "The Self Is Not Gendered: Sulabha's Debate with King Janaka." NWSA Journal, 15(2003):76-93.

Unit III Women and the Surrounding **(12 Hours, 4 Weeks)**

1. Women in Ancient India
2. Islamic Perspective on Feminism

Essential/recommended readings

- Adamson, P and Ganeri, J (2020). "Women in Ancient India" In *Classical Indian Philosophy,* OUP
- Chakravarty, Uma. "Whatever happened to the Vedic Dasi? Orientalism, Nationalism and a Script for the Past." In *Recasting Women: Essays in Indian Colonial History,* edited by Kumkum Sangari and Sudesh Vaid, 27-87. New Brunswick, New Jersey: Rutgers University Press, 1990.
- Lughod, Lila Abu. "Do Muslim Women Really Need Saving? Anthropological Reflections on Cultural Relativism and Its Others." *American Anthropologist,* 47, no.3(2002):783-790.

Unit IV Feminist Perspectives

1. Feminist Perspective on Ethics
2. Feminist Perspective on Bioethics

Essential/recommended readings

- Jaggar, Alison. "Feminist Ethics: Project, Problems and Prospects". In *Feminist Ethics,* edited by C. Card, 78-104. Lawrence: University Press of Kansas, 1991.

- Rogers, Wendy A. "Feminist Bioethics". In *The Routledge Companion to Feminist Philosophy*, edited by Ann Garry, Serene J. Khader and Alison Stone, 579-592. New York & London: Routledge, 2017.

Suggestive Readings

- Jagger, Alison M. and Iris Marion Young, eds.*Companion to Feminist Philosophy: Blackwell Companion to Philosophy*. Oxford: Blackwell Publishers, 1998.
- Hooks, Bell. "Feminism: A Movement to End Sexist Oppression". In *Feminisms* edited by Sandra Kemp and Judith Squires, 22-27. New York: OUP, 2009.

DISCIPLINE SPECIFIC ELECTIVE - (DSE-11) – Indian Theories of Consciousness

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Indian Theories of Consciousness DSE 11	4	3	1	Nil	12th Passed	Basic Knowledge of Classical Indian Tradition

Learning Objectives

- The aim is to make students familiar with and develop a clear understanding of the major concepts such as the nature of the self (*Atman/Brahman*), *paravidya*and*aparavidya*, No-soul theory, karma and rebirth, etc. within spectrum of Indian theories of consciousness.
- To develop a deeper understanding of the nature of the self which ultimately reveals one's own existence or being.
- The reading of original texts help students to know the fundamental tenants of different schools of Classical Indian thought.
- Exposure to various methodologies, interpretations used in the writing style of ancient Indian philosophers..

Learning outcomes

- Students will have knowledge of the Indian Theories of Consciousness given in *Mandukyopanishad,Bhagavadgita, Buddhism, Charvaka, Nyaya and Advaita Vedanta.*
- In all four units students will learn to develop scientific, logical and rational inquiry for understanding the Indian Philosophical systems. Students will able to do a comparative analysis of all systems which will further enhance their debating skills.
- This paper helps to enhance students' ratiocinatively abilities and writing skills which are essential for establishing logical conclusions in all aspects of human existence.

UNIT-I Introduction **(12 Hours, 4 weeks)**

1. Consciousness in Mandukya Upanishad
2. Consciousness in Bhagavad Gita

Essential/Recommended Readings

Mandukyopanishad., Tr. and Annoted by Swami Nikhilananda, Advaita Ashram, Calcutta, 2000, PP. 7-85.
Bhagavadgītā: Chapter II, Verses 11-30; TheBhagavadgītā (Text and Translation) by R. C. Zahner, Oxford University Press, New York, 1973.

UNIT-II Buddhist Understanding of Consciousness **(9 Hours, 3 Weeks)**

Essential/Recommended Readings

1. King Milinda's Questions

The Questions of King Milinda, Book II, Translated from Pali by T. W. Rhys David, MotilalBanarsidas, Delhi, 1965, pp 40-99.

UNIT-III Nyaya theory of Consciousness **(12 Hours, 4 Weeks)**

1. Jayanta Bhatta's Exposition

Essential/Recommended Readings

Nyāyamañjarī of Jayanta Bhaṭṭa, Dehātmavāda (Śarīrātmavādī-cārvāka-mata),Indian Council of Philosophical Research, New Delhi, 1990, pp 109-128

UNIT-IV Advaita Vedanta on Consciousness **(12 Hours, 4 Weeks)**

1. Sankara's introduction to the Brahmasutra

Sankara's introduction to the Brahmasutra called *Upodghata*, pp.1-4, Brahmasutrasamkarabhashya (edited by Vasudeva Sharma) Published by TukaramJavaji,NimayaSagara,Bombay.

DISCIPLINE SPECIFIC ELECTIVE (DSE-12) – Aesthetics

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Aesthetics DSE 12	4	3	1	Nil	12th Passed	None

Course Objective

- This course is about how to think about art.
- The experience of art is common but its analysis is rare. This course will inculcate an analytical and critical look at art
- The course is aimed to make students understand various philosophical traditions and approaches to contextualise the nature, meaning anddefinition of art, craft, beauty, creativity and aesthetic experience. The course also includes an eclectic collection of textual references.

Learning Outcomes:

- The students will appreciate the nature of art better by taking this course
- The students will understand art from various dimensions and

- The student will come to analyse art from spiritual, sublime, and disinterested perspectives
- The student will also be acquainted with Indian theory of art
- The student will have a richer comprehension of art

Unit-1:An Introduction to the Nature and Meaning of Aesthetics (9 Hours, 3 Weeks)

1. Art and Craft, Comparison of Art Forms
2. Philosophy of Art, Beauty, Creativity and Imagination

Essential/Recommended Readings:

Gupta, S. Art, Beauty and Creativity, (Delhi: D.K Printers, 1999) Chapters I,3,4,5,7,8 and 9
Jhanji, R. The Sensuous in Art: Reflections on Indian Aesthetics. (Indian Institute of Advanced Study:Shimla, 1989). Chapter-1

Unit-2Axiological Aspect (12 Hours, 4 Weeks)

1. What is Art
2. Art and Morality: Comparison and Contrast
3. Marcuse on Aesthetics

Essential/Recommended Readings

Hiriyanna, M. 'Art and Morality' in Art Experience, (Indira Gandhi National Centre for the Arts: Manohar, Revised edition: 1997)

Sartre, Jean Paul, 'The Work of Art' in Aesthetics, Harold Osborne, (London: Oxford University Press, 1972).

Marcuse, H. The Aesthetic Dimension: Towards a Critique of Marxist Aesthetics. Kindle Edition.

Unit 3 Rasa theory and art (12 Hours, 4 Weeks)

1. Rasa in comparison with Spiritual bliss
2. Art as a Spiritual Activity

Essential/Recommended Readings:

Hiriyanna, M. Art Experience,(Indira Gandhi National Centre for the Arts, Manohar: Delhi, This edition: 1997). Chapters 1 and 5.

Coomaraswamy, A.The Transformation of Nature in Art,(Sterling Publishers, 1995) Chapter-1 (p.1-39)

Tagore, R. *Sadhana* in Tagore Omnibus, Volume IV. Rupa Publications Pvt Ltd.

Unit-4 Art and Aesthetic Attitude (12 Hours, 4 Weeks)

1. Idea of Art
2. Kant's Disinterestedness

Essential/Recommended Readings:

Daniels, Paul, Kant on the Beautiful: The Interest is Disinterestedness, (Colloquy, 16, 2008, p. 198-209) URL: https://www.monash.edu/__data/assets/pdf_file/0006/1762206/daniels.pdf

DISCIPLINE SPECIFIC ELECTIVE - (DSE-13) – Philosophy of Logic

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Philosophy of Logic DSE 13	4	3	1	Nil	12th Passed	Knowledge of Truth functional Logic

Learning Objectives

- This course is essentially about the nature of logic
- This course is designed to apprise students of the diversity of point of views on the problematic and debatable logical issues.
- The selection of issues is done keeping in mind the topics that the student is already familiar with. Introductory courses on Logic include syllogism, the laws of thought and symbolic logic.
- Hence this course includes theoretical discussions of issues in these areas of deductive logic.

Learning Outcomes

- Students will understand the debates around the nature of logic
- Students will develop the critical ability to engage with abstract concepts in logic
- Students will appreciate the problems and beauty of the basics of logic
- Students will realize that what seems trivial is actually profound and can be subject to change

UNIT 1 Nature of Logic (12 Hours, 4 Weeks)

1. The Formal Laws of Thought: Immanuel Kant
2. Logic as the Essence of Philosophy: Bertrand Russell

Essential/Recommended Reading

I. M. Copi, J.A. Gould (ed.), Readings on Logic 1st edn., New York, NY: Macmillan (1964), 38-42.

I. M. Copi, J.A. Gould (ed.), Readings on Logic 1st edn., New York, NY: Macmillan (1964), 78-92

UNIT 2 The Syllogism (9 Hours, 12 Weeks)

1. What the Tortoise said to Achilles:Lewis Carroll
2. Aristotle's Logic: Bertrand Russell

Essential/Recommended Readings

Carroll, L. (1895), "What the Tortoise Said to Achilles", Mind N.S. 4, 278–280 Also reprinted inI. M. Copi, J.A. Gould (ed.), Readings on Logic 1st edn., New York, NY: Macmillan (1964), 122–124.

I. M. Copi, J.A. Gould (ed.), Readings on Logic 1st edn., New York, NY: Macmillan (1964), 125-130.

UNIT 3 Laws of Thought **(12 Hours, 4 Weeks)**

1. Proving the Laws of Thought by Aristotle
2. A Defense of the Law of Excluded Middle by Bertrand Russell

Essential/Recommended Reading

I. M. Copi, J.A. Gould (ed.), Readings on Logic 1st edn., New York, NY: Macmillan (1964), 133-144.

I. M. Copi, J.A. Gould (ed.), Readings on Logic 1st edn., New York, NY: Macmillan (1964), 117-186

UNIT 4 Symbolic Logic **(12 Hours, 4 Weeks)**

1. Mathematics and Logic by Bertrand Russell

Essential/Recommended Reading

I. M. Copi, J.A. Gould (ed.), Readings on Logic 1st edn., New York, NY: Macmillan (1964), 216-223

Suggestive Readings

- Barnes, Jonathan, 1981. "Proof and the Syllogism", 17–59 in Berti 1981.
- Boolos, G., 1998, *Logic, Logic, and Logic*, Cambridge: Harvard University Press.

Category II

BA (Prog.) with Philosophy as Major

(Courses for Undergraduate Programme of study with Philosophy discipline as one of the Core Disciplines)

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

DISCIPLINE SPECIFIC CORE COURSE (DSC-11) : Analytic Philosophy

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Analytic Philosophy DSC 11	4	3	1	NIL	12th Passed	None

Learning Objective

- The course aims at exposing students to Analytic Philosophy, a school of thought that has held a dominant position in Western Philosophy since the beginning of the twentieth century.
- As a philosophical tradition it is characterized by an emphasis on, scientific rigor, argumentative precision and logical clarity in the development of thought and concept.
- Its familiar tools are formal logic, conceptual analysis, and, mathematics.

Learning Outcomes

- The students will develop acquaintance with one of the most vital streams of philosophy in contemporary times
- The students will learn to analyze topics in epistemology, metaphysics, philosophy of mind and language through the methods and techniques of analytic philosophy

Unit 1 Metaphysics **(12 Hours, 4 Weeks)**

1. Fundamental Problems
2. Appearance and Reality
3. The Reality of Matter

Essential/Recommended Reading

1) The Problems of Philosophy - Bertrand Russell (Chapters 1, 2, and 3) in The Problems of Philosophy, OUP, 1980 reprint

Unit 2 Epistemology **(12 Hours, 4 Weeks)**

1. Proof of an external world
2. Knowledge by Acquaintance
3. Knowledge by Description

Essential/Recommended Reading

1) Proof of an External World - G. E. Moore, in G. E. Moore Selected Writings, Thomas Baldwin, ed., Routledge, 1993
2) Knowledge by Acquaintance & Knowledge by Description - Bertrand Russell, The Problems of Philosophy, Chapter 5

Unit 3 Philosophy of Mind **(12 Hours, 4 Weeks)**

1. Can a computer think?
2. Subjective experience

Essential/Recommended Readings

1) Can Computers Think? - John R. Searle, Analytic Philosophy: An Anthology, A. P. Martinich& David Sosa, eds., Wiley Blackwell , 4th edn., 2009, Part IV, Chapter 27
2) What is it Like to be a Bat? - Thomas Nagel, Analytic Philosophy: An Anthology, Part IV, Chapter 25

Unit 4 Philosophy of Language **(9 Hours, 3 Weeks)**

1. Logical Analysis
2. Elimination of Metaphysics

Essential/Recommended Reading

The Elimination of Metaphysics Through Logical Analysis of Language - Rudolph Carnap, 1931, (Translated by Arthur Pap) *www.ditext.com/carnap/elimination.html*

Suggestive Readings

- Ayer, A. J. *Language, Truth and Logic*. New York: Dover Publications, 2002.

DISCIPLINE SPECIFIC CORE COURSE – 10 (DSC-12): Philosophical Understanding of Religion

Credit distribution, Eligibility and Prerequisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical / Practice		
Philosophical Understanding of Religion DSC 12	**4**	**3**	**1**	**NIL**	**12th Passed**	**None**

Learning Objective

- The course familiarizes the students with basic arguments regarding religion that philosophers have presented
- The course cover topics like the language of religion, cognitive and non-cognitivist theories, key proofs for the existence of God and the ethics of belief
- The course will give students a very important orientation regarding the manner of assessment of arguments and claims made by religion.

Learning Outcomes

- The students will be able to analyze arguments presented in religion
- The students will learn to pay attention to the nuances of the language of religion

- The students will comprehend the complications involved in choosing between faith and reason and will come to have a better appreciation of the religious life.

UNIT 1 Philosophy of Religion: Indian and Western (9 Hours, 3 Weeks)

1. Nature of Religion and its relation to Philosophy of Religion
2. Metaphysical attributes of God
3. Indian Philosophy of Religion

Essential/Recommended Readings

Meister,Chad, *Philosophy of Religion Reader*, Routledge New York,2008

Brody, Baruch A, *Readings in Philosophy of Religion*,Ed. Vol 1,New Jersey,PHI, 1974.

Ramamurty, A. *Indian Philosophy of Religion,* Decent Books, New Delhi, 2002, pg. 1-13 ("Introduction")

UNIT 2 Evil and Belief (12 Hours, 4 Weeks)

1. Problem of Evil
2. "The Ethics of Belief" - W.K.Clifford

Essential/Recommended Readings

Meister, Chad, *Philosophy of Religion,* Reader, Routledge, NewYork, 2008.

John H.Hick, *Philosophy of Religion*, New Jersey Prentice Hall, Englewood Cliffs,1990.

Aesthetics: Indian and Western Perspectives DSE 8	4	3	1	Nil	12th Passed	None

Learning Objective

- Experiencing art is common, but coming to understand it is not. This course aims at bringing students the critical ability to understand art
- This course will bring both western and Indian perspectives on art to the fore, with more emphasis on the Indian perspective.
- This course will make students appreciate art in different artistic forms

Learning Outcomes

- Upon completing this course, students will learn to appreciate artistic forms better
- The students will come to express in language what they only felt before as an experience
- The students will be able to critically analyze art forms
- The student will be equipped to pursue a career in art criticism and aesthetics
