COURT MEETING: ***28.03.2024***
Appendix-V

AMENDMENTS TO ORDINANCES
AND
APPENDICES TO THE ORDINANCES

(Amendments approved by the Executive Council in its meetings dated 03.02.2023, 09.06.2023, 25.08.2023)

UNIVERSITY OF DELHI

INDEX

CONTENTS		
		Annexure No.
1. Amendment to Appendix -II-A to the Ordinance V (2-A) of the Ordinances of the University vide EC Resolution 60-1-8 dated 03.02.2023 regarding syllabi of B.Tech under CIC (Sem-3)	-	*Annexure-1*
2. Amendment to Appendix -II-A to the Ordinance V (2-A) of the Ordinances of the University vide EC Resolution 60-1-10 dated 03.02.2023 regarding syllabi under Department of Education (Semester-3)	-	*Annexure-2*
3. Amendment to Appendix -II-A to the Ordinance V (2-A) of the Ordinances of the University vide EC Resolution 60-1-7 dated 03.02.2023 regarding Syllabi under Faculty of Mathematical Sciences (Sem-3)	-	*Annexure-3*
4. Amendment to Appendix -II-A to the Ordinance V (2-A) of the Ordinances of the University vide EC Resolution 60-1-9 dated 03.02.2023 regarding Syllabi of 3rd Semester of Departments under Faculty of Applied Social Sciences & Humanities	-	*Annexure-4*
5. Amendment to Appendix -II-A to the Ordinance V (2-A) of the Ordinances of the University vide EC Resolution 60-1-2 dated 03.02.2023 regarding Syllabi of Semester-3 of Department of Commerce under Faculty of Commerce	-	*Annexure-5*
6. Amendment to Appendix -II-A to the Ordinance V (2-A) of the Ordinances of the University vide EC Resolution 60-1-3 dated 03.02.2023 regarding Syllabi of 3rd Semester of Departments under Faculty of Social Sciences	-	*Annexure-6*
7. Amendment to Appendix -II-A to the Ordinance V (2-A) of the Ordinances of the University vide EC Resolution 60-1-4 dated 03.02.2023 regarding Syllabi of 3rd Semester of Departments under Faculty of Interdisciplinary and Applied Sciences.	-	*Annexure-7*
8. Amendment to Appendix -II-A to the Ordinance V (2-A) of the Ordinances of the University vide EC Resolution 60-1-6 dated 03.02.2023 regarding Syllabi of 3rd Semester of Department of Home Science under Faculty of Science	-	*Annexure-8*
9. Amendment to Appendix -II-A to the Ordinance V (2-A) of the Ordinances of the University vide EC Resolution 60-1-1 dated 03.02.2023 regarding Syllabi of 3rd Semester of Departments under Faculty of Science.	-	*Annexure-9*
10. Amendment to Appendix -II-A to the Ordinance V (2-A) of the Ordinances of the University vide EC Resolution 60-1-11 dated 03.02.2023 regarding Syllabi of 3rd Semester of Five Year Integrated Programme in Journalism under Delhi School of Journalism.	-	*Annexure-10*
11. Amendment to Appendix -II-A to the Ordinance V (2-A) of the Ordinances of the University vide EC Resolution 14-1-3 dated 09.06.2023 regarding Syllabi of 3rd Semester of BA (Vocational Studies) under College of Vocational Studies.	-	*Annexure-11*
12. Amendment to Appendix -II-A to the Ordinance V (2-A) of the Ordinances of the University vide EC Resolution 14-1-1 dated 09.06.2023 regarding Syllabi of 3rd Semester of Department of Hindi	-	*Annexure-12*
13. Amendment to Appendix -II-A to the Ordinance V (2-A) of the Ordinances of the University vide EC Resolution 14-1-1 dated 09.06.2023 regarding pool of Discipline Specific Elective (DSE) in respect of Department of Persian.	-	*Annexure-13*

CONTENTS

		Annexure No.
14. Amendment to Appendix -II-A to the Ordinance V (2-A) of the Ordinances of the University vide EC Resolution 60-1-5 dated 03.02.2023 regarding Syllabi of 3rd Semester of Department of Music.	-	*Annexure-14*
15. Amendment to Appendix -II-A to the Ordinance V (2-A) of the Ordinances of the University vide EC Resolution 60-1-1 dated 03.02.2023 regarding Syllabi of 3rd Semester of Departments under Faculty of Arts	-	*Annexure-15*
16. Amendment to Appendix -II-A to the Ordinance V (2-A) of the Ordinances of the University vide EC Resolution 27-12 dated 25.08.2023 regarding guidelines for internship apprenticeship and community outreach applicable for students of Semester-3 to Semester-6 based on UGCF.	-	*Annexure-16*
17. Amendment to Appendix -II-A to the Ordinance V (2-A) of the Ordinances of the University vide EC Resolution 27-1-6/- dated 25.08.2023 regarding syllabi of Semester-III/IV of AEC-Language Pool.	-	*Annexure-17*
18. Amendment to Appendix -II-A to the Ordinance V (2-A) of the Ordinances of the University vide EC Resolution 27-1-11 dated 25.08.2023 regarding syllabi of Semester-III, IV, V & VI of B.Voc Courses	-	*Annexure-18*
19. Amendment to Appendix -II-A to the Ordinance V (2-A) of the Ordinances of the University vide EC Resolution 27-1-1(8) dated 25.08.2023 regarding paper titled "electronic instrumentation" offered as DSE in 3rd Semester of Department of Physics for BSc. Physical Sciences with Electronics as one of the Core Discipline.	-	*Annexure-19*
20. Amendment to Ordinance V (2) & VII. [EC. Res. 27-1-6/-(7) dated 25.08.2023] regarding syllabi of Compulsory Language Pool of Generic Elective (GEs) in Semester -I, II, III and IV offered by Department of MIL&LS.	-	*Annexure-20*
21. Amendment to Ordinance V (2) & VII. [EC. Res. 14-1-1/- dated 09.06.2023 & 27-1-6 dated 25.08.2023] regarding syllabi of Semester-IV, V and VI in respect of Department of Linguistics, Philosophy, Sanskrit, Psychology and Applied Psychology.	-	*Annexure-21*
22. Amendment to Ordinance V (2) & VII. [EC. Res. 14-1-1/- dated 09.06.2023] regarding syllabi of Semester-IV, V and VI in respect of Department of Arabic, English, English (Journalism), Urdu and Persian.	-	*Annexure-22*
23. Amendment to Ordinance V (2) & VII. [EC. Res. 14-1-4/- dated 09.06.2023] regarding syllabi of Semester-IV, V and VI in respect of Faculty of Interdisciplinary and Applied Sciences.	-	*Annexure-23*
24. Amendment to Ordinance V (2) & VII. [EC. Res. 27-1-13/- dated 25.08.2023] regarding addition of Value Addition Course (VAC) under UGCF.	-	*Annexure-24*
25. Amendment to Ordinance V (2) & VII. [EC. Res. 14-1-3/- dated 09.06.2023] regarding syllabi of Semester IV, V and VI in respect of Department of Political Science and Social Work.	-	*Annexure-25*
26. Amendment to Ordinance V (2) & VII. [EC. Res. 14-1-7/- dated 09.06.2023 and 27-1-2 dated 25.08.2023] regarding syllabi of Semester IV, V and VI in respect of Department of Mathematics, Statistics, Operational Research & Computer Science.	-	*Annexure-26*

CONTENTS

		Annexure No.
27. Amendment to Ordinance V (2) & VII. [EC. Res. 14-1-12/- dated 09.06.2023 and 27-1-14 dated 25.08.2023] regarding addition of Skill Enhancement Course (SEC) in the Pool of SEC courses.	-	*Annexure-27*
28. Amendment to Ordinance V (2) & VII. [EC. Res. 27-1-9/- dated 25.08.2023] regarding Syllabi of Pool of Generic Electives Courses offered by Delhi School for Skill Enhancement and Entrepreneurship Development (DSSEED) and Delhi School of Analytics.	-	*Annexure-28*
29. Amendment to Ordinance V (2) & VII. [EC. Res. 14-1-3/- dated 09.06.2023 and 27-1-5 dated 25.08.2023] regarding Syllabi of Semester IV, V and VI in respect of Department of History, Geography, Sociology and Economics.	-	*Annexure-29*
30. Amendment to Ordinance V (2) & VII. [EC. Res. 14-1-6/- dated 09.06.2023 and 27-1-1 dated 25.08.2023] regarding Syllabi of Semester IV in respect of Department of Physics & Astrophysics.	-	*Annexure-30*
31. Amendment to Ordinance V (2) & VII. [EC. Res. 14-1-6/-(6) dated 09.06.2023 and 27-1-1(7) dated 25.08.2023] regarding Syllabi of Semester IV, V & VI in respect of various Programmes under Department of Chemistry.	-	*Annexure-31*
32. Amendment to Ordinance V (2) & VII. [EC. Res. 14-1-6/- dated 09.06.2023 and 27-1-1 dated 25.08.2023] regarding Syllabi of Semester IV, V & VI in respect of Department of Botany, Geology, Zoology and BSc. Life Science (Zoology component).	-	*Annexure-32*
33. Amendment to Ordinance V (2) & VII. [EC. Res. 14-1-6/- dated 09.06.2023 and 27-1-1 dated 25.08.2023] regarding Syllabi of Semester IV, V & VI in respect of Department of Home Science.	-	*Annexure-33*
34. Amendment to Ordinance V (2) & VII. [EC. Res. 14-1-6/- dated 09.06.2023 and 27-1-1 dated 25.08.2023] regarding Syllabi of Semester IV, V & VI in respect of Department of Anthropology, Biological Sciences, Biomedical Science, Environmental Studies and Polymer Science.	-	*Annexure-34*
35. Amendment to Ordinance V (2) & VII. [EC. Res. 14-1-2/- dated 09.06.2023 and 27-1-7/- dated 25.08.2023] regarding Syllabi of Semester IV, V & VI in respect of Department of Commerce for B.Com (Hons.), B.Com (Prog.) and BA Commerce Based Papers.	-	*Annexure-35*
36. Amendment to Ordinance V (2) & VII. [EC. Res. 14-1-9/- dated 09.06.2023] regarding Syllabi of Semester IV, V & VI in respect of Department of Finance & Business Economics.	-	*Annexure-36*
37. Amendment to Ordinance V (2) & VII. [EC. Res. 14-1-1/- dated 09.06.2023 and 27-1-6/ dated 25.08.2023] regarding Syllabi of Semester IV, V & VI in respect of Department of Punjabi, Hindi and Hindi (Journalism)	-	*Annexure-37*
38. Amendment to Ordinance V (2) & VII. [EC. Res. 27-1-10/- dated 25.08.2023] regarding Syllabi of Semester IV of BSc. (Hons.) Physical Education, Health Education & Sports Sciences and Semester-IV, V & VI of BA (Prog.) Physical Education.	-	*Annexure-38*

CONTENTS

		Annexure No.
39. Amendment to Ordinance V (2) & VII. [EC. Res. 14-1-5/- dated 09.06.2023 and 27-1-8/ dated 25.08.2023] regarding Syllabi of Semester IV, V & VI Department of Music under Faculty of Music & Fine Arts	-	*Annexure-39*
40. Amendment to Appendix -II-A to the Ordinance V (2-A) of the Ordinances of the University regarding addition of Value Addition Course (VAC) – National Cadet Corps -IV.	-	*Annexure-40*
41. Amendment to Appendix -II-A to the Ordinance V (2-A) of the Ordinances of the University regarding Syllabi of Semester-IV of BA (Vocational Studies) under College of Vocational Studies.	-	*Annexure-41*
42. Amendment to Appendix -II-A to the Ordinance V (2-A) of the Ordinances of the University regarding Syllabi of Semester-IV, V and VI of BA (Prog.) in Department of Geography under Faculty of Social Sciences.	-	*Annexure-42*
43. Amendment to Ordinance XX. Colleges and Institutions Maintained by the University. (E.C Res. No. 14-2 dated 9th June, 2023) – Establishment to three centres under Ordinance-XX(Y), XX(Z) and XX(AA)	-	*Annexure-43*
44. Amendment to Appendix -II-A to the Ordinance V (2-A) of the Ordinances of the University vide EC Resolution 14-3 dated 09.06.2023 regarding introduction of Master of Arts in Hindu Studies	-	*Annexure-44*
45. Amendment to Appendix -II-A to the Ordinance V (2-A) of the Ordinances of the University vide EC Resolution 14-1-13 dated 09.06.2023 regarding syllabi alongwith course credit distribution of Semester-I and Semester-II of B.Tech in Computer Engineering, Electronics and Communication Engineering and Electrical Engineering under Faculty of Technology	-	*Annexure-45*
46. Amendment to Appendix -II-A to the Ordinance V (2-A) of the Ordinances of the University vide EC Resolution 60-1-14 dated 03.02.2023 regarding introduction of MBA (Business Analytics) Programme (2 years courses) from academic year 2023-24 under Faculty of Commerce & Business.	-	*Annexure-46*
47. Amendment to Ordinance-VIII (VIII-F) of the Ordinances of the University vide EC Resolution No. 60-1(60-1-13) dated 03.02.2023 regarding assessment pattern of courses based on UGCF-2022	-	*Annexure-47*
48. Amendment to Appendix-II to Ordinance V (2) & VII. [EC Res. No. 38-1-18 dated 08.12.2022] regarding 2-year MCA curriculum in the Department of Computer Science from the academic session 2022-23	-	*Annexure-48*
49. Amendment to Ordinance XXIV. [EC Res. No. 47/- dated 08.12.2022]	-	*Annexure-48*
50. Amendment to Ordinance -IV. [EC Res. No. 51-2/- dated 08.12.2022] regarding re-admission with effect from academic session 2022-2023	-	*Annexure-48*
51. Minor modifications in Course Credit Scheme of Open Elective papers under PG LOCF. (i) M.A. Psychology (ii) M.A. Applied Psychology		*Annexure-49*

CONTENTS

		Annexure No.
52. Adding options on Indian Languages in the Open Elective Course in Semester-III and Semester-IV for syllabus for M.A Comparative Indian Literature (CIL) under the Department of Modern Indian Languages and Literary Studies		*Annexure-49*
53. Minor change in course structure of M.A Programme in Linguistics for Semester-III and Semester-IV under the Department of Linguistics		*Annexure-49*
54. Minor modifications/ introduction in the syllabi under the Department of Slavonic & Finno-Ugrian Studies. (i) M.A Russian. (ii) Full time Intensive Advance Diploma in Russian. (iii) Part-time Certificate/ Diploma/ Advance Diploma Courses in Russian		*Annexure-49*
55. Change of nomenclature of GE Papers in B.A (H) French/ German/ Spanish/ Italian for Semester-I, II, III and IV of CBCS-LOCF Syllabus under the Department of Germanic & Romance Studies.		*Annexure-49*
56. Amendment to Regulation 16 (ii) [EC Resolution No. 49 dated 08.12.2022] regarding order of precedence		*Annexure-50*
57. Amendment to Regulation 16 (iii) [EC Resolution No. 49 dated 08.12.2022] regarding Academic Costumes.		*Annexure-50*
58. Amendment to Ordinance XX-K regarding Cluster Innovation Centre [EC Res. 38-2/]		*Annexure-51*
59. Amendment in Ordinance-VI regarding composition of Board of Research Studies (BRS), Faculty of Technology [EC Res 38-2/]		*Annexure-51*
60. Amendment in Ordinance-VI regarding composition of Board of Research Studies (BRS), Faculty of Technology [EC Res 38-2/]		*Annexure-51*
61. Amendment to Ordinance-V (EC Resolution No. 14-1-1/ dated 09.06.2023 and 27-1-6/ dated 25.08.2023) – BA (Hons.) GRS (German, Spanish, Italian, French)		*Annexure-52*
62. Amendment to Ordinance V (E.C Resolution No. 27-1-6/- dated 25.08.2023] – BA (Prog/ Hons) Bengali		*Annexure-53*
63. Amendment to Ordinance V (EC Resolution No. 14-1-1/ dated 09.06.2023 and 27-1-6/ dated 25.08.2023) – BA (Prog.) Tamil / Telugu		*Annexure-54*

Note : ***Notifications of all the above mentioned amendments are available on the website of the University. Further, notification of Amendment to Ordinance V i.e change in syllabi of courses under UGCF is available on the website under the link {****NEP: UGCF 2022 Syllabi - Delhi University (du.ac.in)****}.***

ANNEXURE-1

Sub: Amendment to Ordinance V

[E.C Resolution No. 60/ (60-1-8) dated 03.02.2023]

Following addition be made to Appendix-II-A to the Ordinance V (2-A) of the Ordinances of the University;

Add the following:

Syllabi of Semester-III of the B.Tech (Information Technology & Mathematical Innovations) under Cluster Innovation Centre based on Under Graduate Curriculum Framework -2022 implemented from the Academic Year 2022-23.

CLUSTER INNOVATION CENTRE

B.Tech. (Information Technology and Mathematical Innovations)

DISCIPLINE SPECIFIC CORE COURSE -7 (DSC-7): Modeling continuous changes through ordinary differential equations

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical / Practice		
DSC-7 Modeling continuous changes through ordinary differential equations	4	3	0	1	Class XII pass	Mathematics till XII

Learning Objectives

Differential equations have the remarkable ability to translate the real-world problems in mathematical language. This course enables students to study many engineering systems, population dynamics in ecology and biology, mechanics of particles in physics, planetary models etc. involving differential equations. The main objective of the paper is to first analyze and understand the real-world problem through a mathematical lens and then develop the corresponding mathematical model with differential equations in the most realistic sense. Once governing equations are obtained, students should be able to solve them analytically and analyze the solution in physical situations. Students will use MATHEMATICA software for the purpose of simulation.

Learning outcomes

After completing this course, student should be able to:

- explain the fundamental concepts of ordinary differential equations (ODEs).
- use MATHEMATICA software to solve problems and applications of ordinary differential equations (ODEs) and complex analysis.
- formulate real life problems as ODEs.
- use concepts of ordinary differential equations to solve physical models such as mass spring, pendulum, alternating current circuits, etc.
- Use knowledge of ODEs, the general and particular structure of solutions and different methods for solutions.

SYLLABUS

Unit I: Review of first order differential equations - Variable separable, homogeneous, linear, exact differential equation - Integrating factors - Existence and uniqueness of solution **[12 hours]**

Unit II: General solutions of second order differential equation - Homogeneous and non-homogeneous differential equations with constant coefficients - Method of variation of parameters - Method of undetermined coefficients, higher order differential equations with constant coefficients **[12 hours]**

Unit III: Planar autonomous linear systems with graphical representation - Determination of stability and classification of equilibrium of a planar nonlinear system by linearization **[9 hours]**

Unit IV: Power series solution about a regular point of an analytic ordinary differential equation - Power series solution of Legendre and Bessel's equation - Laplace transform and its application to differential equations **[12 hours]**

Practical component – The following explorations would be carried out on matrix based numerical mathematics software [30 hours]

- Plotting of slope fields and solution curves of first order and higher order differential equations

- Graphical analysis of solution of Population model, Pollution Model, Acceleration – Velocity Models
- Projectile motion, Mechanical Vibrations – Motion of Simple Pendulum, Free undamped and damped motion, Forced undamped and damped motion
- Plotting of phase plane diagrams for predator – prey model, competing species, epidemic model and their analysis
- Innovation project

Essential/recommended readings

1. *Elementary differential equations*, W. E. Boyce and R. DiPrima, John Wiley, 2005.
2. *Differential equations and boundary value problems: Computing and modeling*, C.H. Edwards and D.E. Penny, Pearson education (Singapore), Pte. Ltd., 2005.
3. *Advanced engineering mathematics*, E. Kreyszig, John Wiley, 1999.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE -8 (DSC-8): Operating Systems

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSC-8 Operating Systems	4	3	0	1	Class XII pass	DSC-3

Learning Objectives

The objective is to introduce students with basic concepts of Operating System, its functions and services and to familiarize the students with various views and management policies adopted by O.S.

as pertaining with processes, Deadlock, memory, File and I/O operations. To brief the students about the functionality of various OS like Unix, Linux and Windows XP as pertaining to resource management and to provide the knowledge of basic concepts towards process synchronization and related issues.

Learning outcomes

After completing this course, student should be able to;

- Analyze the structure of OS and basic architectural components involved in OS design.
- Analyze and design the applications to run in parallel either using process or thread models of different OS.
- Analyze the various device and resource management techniques for timesharing and distributed systems.
- Understand the Mutual exclusion, Deadlock detection and agreement protocols of Distributed operating system.
- Conceptualize the components involved in designing a contemporary OS.

SYLLABUS

Unit I: Overview: Operating systems – structure, operations, components, types, services, user interfaces. System calls, system programs, system boot**.** **[12 hours]**

Unit II: Process management - Processes: concept, scheduling, operations on processes, inter-process communications. Threads – single - and multi-threaded processes. CPU scheduling – criteria, algorithms, multiple-processor scheduling. **[12 hours]**

Unit III: Process synchronization – critical-section problem, semaphores, classic synchronization problems, monitors. Deadlocks – characterization, deadlock prevention, deadlock avoidance, deadlock detection, recovery from deadlock. **[12 hours]**

Unit IV: Memory management: Main memory – memory allocation schemes. **[9 hours]**

Practical component: **[30 hours]**

Engineering Kitchen Activity [Laboratory]:

- Write a program for implementation of Priority scheduling algorithms.
- Write a program for implementation of Round Robin scheduling algorithms.
- Write a program for implementation of FCFS scheduling algorithms.
- Write a program for implementation of SJF scheduling algorithms.
- Write a program to implement the producer – consumer problem using semaphores.
- Write a program to implement IPC using shared memory.
- Write a program to implement banker's algorithm for deadlock avoidance.
- Write a program to implement Threading and Synchronization Applications.
- Write a simple Unix commands.
- Innovation Projects

Essential/recommended readings

1. Operating System Concepts, 10th Edition, Abraham Silberschatz, Peter Baer Galvin, Greg Gagne, John Wiley & Sons, 2009.
2. Manish Kumar Singh, Sachin Kumar, Saibal Kumar Pal, Operating Systems: Concept Building & Problem Solving Approach, Cengage Publication, 2022.
3. John. Lions' Commentary on UNIX® 6th Edition with Source Code. John Lion, San Jose, CA: Peer-to-Peer Communications, 1996.
4. Exokernel: An Operating System Architecture for Application-Level Resource Management., Engler, Dawson R., M. Frans Kaashoek, and James O'Toole Jr., ACM Press, 1995.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE -9 (DSC-9): Computer Systems Architecture

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSC-9 Computer Systems Architecture	4	3	0	1	Class XII pass	Mathematics till XII

Learning Objectives

The objective is to introduce students with the basic concepts of Computer and the principles underlying systems organization, issues in computer system design, and contrasting implementations of modern systems and to familiarize the students with a fundamental knowledge of computer hardware and computer systems, with an emphasis on system design and performance.

Learning outcomes

After completing this course, student should be able to;

- have understanding of Computing Systems, Models & Logic, Organization & Architecture of Memory
- have understanding of CPU, I/O Devices

- have understanding of Distributed Computing, Parallel Architecture, Mobile Systems Architecture
- have understanding about Deconstructing Digital Architecture of a computing devices and study of components (Hardware/Software)
- have hands-on experience with Arduino/ARM Interface, Programming & interfacing with Sensors and Parallel Programming using OPENMP, OpenMPI & CUDA.

SYLLABUS

Unit I: Computer arithmetic: fixed point and floating-point representation and arithmetic, numbers conversion. Digitals circuits: Boolean algebra, logic gates, logical synthesis by minimization of Boolean functions **[12 hours]**

Unit II: Combinational circuits, sequential circuits (synchronous and asynchronous). Construction of the computer: Von Neumann Architecture **[12 hours]**

Unit III: Organization and architecture of memory systems, input/output systems **[12 hours]**

Unit IV: Construction of the simple processor. **[9 hours]**

Practical component: **[30 hours]**

Engineering Kitchen Activity [Laboratory]:

• Logic Gate Designs
• Deconstructing Digital Architecture of a computing devices and study of components (Hardware/Software)
• Hands on experiments with Arduino/ARM Interface
• Programming in Assembler: memory addressing, interrupts, operations on numbers bits and tables, conditional instructions, loops, input/output

Essential/recommended readings

1. Computer System Architecture, Morris Mano, Pearson Education, 2008
2. Computer Systems Architecture: a Networking Approach, Rob Williams, Pearson Education, 2006
3. Advanced Computer Architecture: Parallelism, Scalability, Programmability, K. Hwang, McGraw Hill, 2017.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

COMMON POOL OF GENERIC ELECTIVES (GE) COURSES

NOTE: The core papers offered in the B.Tech. Course at CIC are Mathematics and Information Technology. Therefore, the students will choose GE offered by Physics, Chemistry, Management and Computational Biology faculty members of CIC.

GENERIC ELECTIVES (GE-3.1): Economic Behaviour

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course	Department offering the course
		Lecture	Tutorial	Practical/ Practice			
GE 3.1: Economic Behaviour	4	3	1	0	Class XII pass	NIL	Management Faculty of CIC

Learning Objectives

The purpose of this course is to familiarize the student with the present day modern economics that is both intuitive and relevant to the students. The course introduces the generally accepted concepts of economics both at the micro and macro level. In addition to this, the purpose of this course is to analyse how individual decision-makers, both consumers and producers and the government policies, behave in a variety of economic environments.

Learning outcomes

After completing this course, student should be able to:

- Understand of the basic structure of the economic ecosystem.
- Conception, of how individuals and firms allocate resources and how market prices are determined.
- Able to understand shifts in supply and demand and their implications for price and quantity sold.
- Understand of how to analyse firms' decisions mathematically using a production function and calculate their optimal level of production, costs, and profits.

- Learn to model the decisions made by firm in a monopoly and an oligopoly, and the implications of these alternate structures for consumer welfare.
- Learn to perceive the nation's economy as a whole and compare the views of Keynes and the classical economists.
- Learn various techniques measuring and tracking macroeconomics using GDP and CPI.
- Analyse the model of full employment and use it to examine important macroeconomic issues, such as the extent to which taxes may depress economic activity and lower the level of GDP.

SYLLABUS

Unit I: The Economic Problem: Scarcity and Choice; Market economies and the price system; Variables, correlation and causation; Recommending appropriate policies **[9 hours]**

Unit II: The supply and demand model; Elasticity of supply and demand; Market equilibrium; Demand curve and behaviour of consumers; Supply curve and behaviour of firms **[12 hours]**

Unit III: Efficiency of markets; Rise and fall of industries; Monopoly; Antitrust policy; Taxes, transfers and income distributions **[12 hours]**

Unit IV: Unemployment, inflation and interest rates; Macroeconomic theory and policies; Measuring theoretical and actual GDP **[12 hours]**

Essential/recommended readings

1. Principles of Economics, J.B. Taylor and A. Weerapana, Flatworld, 9th Edition, 2021.
2. Principles of Economics, K. E. Case, R. C. Fair and S. C. Oster, Pearson Education, 13th Edition, 2019.
3. Principles of Economics, N. G. Mankiw, Cengage, 9th Edition, 2021.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

GENERIC ELECTIVES (GE-3.2): Electronic Circuit elements and innovation lab

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course	Department offering the course
		Lecture	Tutorial	Practical/ Practice			
GE 3.2: Electronic Circuit Elements and Innovation Lab	**4**	**2**	**0**	**2**	**Class XII pass**	**Mathematics till XII**	**Physics/ Electronics Faculty of CIC**

Learning Objectives

This module involves interactive learning of A.C. fundamentals. It helps to understand the basic network analysis of electronic circuits. It also provides the interface to understand the working of various electronic devices and its characteristics. Working of electronic instruments will also be understood.

Learning outcomes

- After completing this course, student should be able to;
- Concepts of AC fundamentals
- Good knowledge of Network Analysis
- Basics of Diodes and Transistor based devices
- Knowledge of instruments like CRO, Function Generator, Multimeter, etc.

SYLLABUS

Unit I: AC Fundamentals - Concept of voltage and current sources - KVL and KCL - Node voltage analysis and method of mesh currents - Network theorems **[8 hours]**

Unit II: PN Junction: variants and applications - Bipolar Junction Transistor (BJT) biasing and amplifier design - Field Effect Transistor (FET) variants – FET biasing and amplifier design **[6 hours]**

Unit III: Structure and working of SCR. Structure and operation of LDR, Photo voltaic cell, Photo diode, Photo transitors & LED **[8 hours]**

Unit IV: Operational Amplifiers basics and practical circuits - Feedback and oscillator circuits - Voltmeters-Multimeters-Function generator- Cathode ray oscilloscope - Cathode Ray Tube **[8 hours]**

Practical component – **[60 hours]**

- Engineering Kitchen Activity (matrix based numerical mathematics software) [Laboratory]
- Characteristics of PN junction and Zener diode filters
- Half wave rectifier.
- Full wave rectifier with 2 diodes.
- LC and Pi filters
- Full wave rectifier with 4 diodes (Bridge rectifier). Input, Output and Transfer characteristics of CE and CC Amplifier.
- Amplifiers and Oscillator characteristics.
- Characteristics of LDR, Photo-diode and Phototransistor.
- Transfer characteristics of JFET.
- Transfer characteristics of MOSFET (with depletion and enhancement mode)
- Characteristics of LED with three different wavelengths.
- Series voltage Regulator.
- Shunt voltage Regulator.
- Characteristics of Thermistor.

Essential/recommended readings

1. Circuits and Networks - A.Sudhakar & Shyammohan S. Palli ,TMH, 2010
2. Principles of Electronics- V.K. Mehta and Rohit Mehta, S Chand &Co,2009
3. Electronic Devices and Circuit Theory-R.L.Boylestad and L.Nashelsky, Pearson Education, 2009.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

GENERIC ELECTIVES (GE-3.3): Flow of information in Living Systems

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course	Department offering the course
		Lecture	Tutorial	Practical/ Practice			
GE 3.3 Flow of Information in Living Systems	**4**	**2**	**0**	**2**	**Class XII pass**	**NIL**	**Chemistry / Biology Faculty of CIC**

Learning Objectives

This module is designed to:

- Introduce students to nuclear events such as replication, transcription, translation, condensation, repair and recombination etc.
- Introduce gene regulation in prokaryotes and eukaryotes
- Introduce various biophysical and biochemical techniques related to these nuclear events

Learning Outcomes

Upon completion of the course the students will be able to:

- Understand the structure and function of DNA and RNA
- Build concept about the processes of the Central Dogma of the living systems (replication, transcription, translation, recombination etc.)
- Develop an understanding of prokaryotic and eukaryotic gene regulation

SYLLABUS

Unit I: Structure of the nucleic acids **[8 hours]**

Structure and biophysical properties of the DNA and RNA, forms of DNA and RNA, DNA binding domains, the evolution of DNA

Unit II: Replication, Transcription and Translation **[8 hours]**

DNA replication models, Enzymes of DNA replication, DNA replication in prokaryotes and eukaryotes, regulation of DNA replication;

RNA polymerases, Transcription in prokaryotes, Eukaryotic transcription, Regulation of transcription in Prokaryotes and Eukaryotes, Eukaryotic chromatin

Ribosomes, translation in prokaryotes, translation in eukaryotes

Unit III: DNA repair and recombination **[8 hours]**

Energetics and accuracy of information transfer, DNA damage and repair, Molecular recombination

Unit IV: DNA packaging and chromatin structure, regulation of gene expression in eukaryotes **[6 hours]**

Practical Component **[60 hours]**

- Agarose gel electrophoresis of DNA/ Proteins
- SDS-PAGE Electrophoresis
- Polymerase Chain Reaction (PCR)
- Primer design
- Spectrometry
- Modelling of DNA and RNA forms and motifs through computational tools

Essential/recommended readings

1 Biology, Raven et al. Tata Mc Graw –Hill, 2013

2. Biology: Global Approach. Reece et al., Pearson Educations, Global edition, 2014

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

GENERIC ELECTIVES (GE-3.4): Explorations in Living Systems

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course	Department offering the course
		Lecture	Tutorial	Practical/ Practice			
***GE 3.4 Explorations in Living Systems**	**4**	**2**	**0**	**2**	**Class XII pass**	**NIL**	**Chemistry / Biology Faculty of CIC**

***GE 3.4 can be opted by students in either 3rd or 4th semester.**

Learning Objectives

This module is designed to:

- Introduce students to the living system in terms of their hierarchal organization and their distinction from the nonliving.
- The specific objective of the module is to introduce biology even to students with no biology background and enable them to understand living systems.
- To enthuse students with tools and techniques for studying biology.
- Introduce students to the origin and evolution of living systems
- Introduce students to the essence of model organisms for studying biology

Learning outcomes

After studying this course, the students will be able to:

- Understand the diversity and complexity of living systems
- To comprehend different fields within Bio-Sciences
- To understand experimental processes undertaken in Biology
- Will develop a philosophical understanding of the origin and evolution of living systems, the nature of genetic materials etc.

SYLLABUS

Unit I: Introduction and organization of living systems [6 hours]

Introduction to living state: (living versus non-living), Hierarchy of organization of living systems and classification (cellular, multicellular and organismic and population levels), Cell as the unit of life.

Unit II: Origin and diversification of the living systems [8 hours]

Nature of the genetic material (DNA versus RNA), Introduction to molecular evolution, Origin of life, Evidence of evolution, Theories of evolution, Creating living systems (synthetic cell).

Unit III: Designing living systems [8 hours]

Nature of biological processes - Approaches to study Biology: Observational and Experimental, Physiology and Behaviour

Unit IV: Tools and materials for studying living systems [8 hours]

Observational, synthetic and reductionist approaches for studying living organisms, Microscopy, Centrifugation and separation techniques as basic tools for studying components of living systems, Model organisms.

Practical components [60 hours]

Basic equipment and techniques

a. Observation or permanent slides of pollens, microbes, hydra, Daphnia and bacteria under a microscope
b. Separation techniques:
    - Fraction of cell organelles through centrifugation
    - Separation of chlorophyll pigments by paper chromatography

Exploring different levels of organization (using model organisms)

a. Tissue organization and diversity in cell shapes: studying through plant and animal tissues sections
b. Inflorescence as a model of organization
c. Understanding parts of the flower

Studying cells:

a. Bacterial growth curve analysis
b. Genomic DNA isolation
c. Preparation of metaphase chromosome
d. Preparation of karyotypes using photographs of metaphase spreads
e. Demonstration of osmosis and plasmolysis

Essential/recommended readings

1. *Biology*, Raven et al., Tata McGraw-Hill, 2013.
2. *Biology: Global Approach*. Reece et al., Pearson Educations, Global edition, 2014.

SEMESTER – III
B.A. (Honors) Humanities & Social Sciences
Category II

B.A. (Honors) Humanities & Social Sciences is being run under the Meta-College concept wherein students go to constituent colleges of the University of Delhi to partly earn their credits in addition to earning their credits from the courses run at the Cluster Innovation Centre, towards completion of their degree.

In the 3rd semester the DSCs, VACs, SECs, AECs, will be chosen by the students in the constituent colleges/ centres/ departments of the University of Delhi. However, the students will be choosing the 3rd semester DSEs at CIC only. The purpose of offering these DSEs at the Centre is to encourage students to engage with diverse social problems and work towards their possible innovative solutions. The idea of introducing these modules is to make students work in the field with diverse stakeholders and various social groups. Following is the list of the DSE courses offered at the Centre.

DISCIPLINE SPECIFIC ELECTIVE (DSE-01A): Socially Engaging with the Human World

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Socially Engaging with the Human World (DSE-01A)	4	1	0	3	Class XII Pass	Knowledge of problem identification, community engagement, assessment techniques & ethics.

Learning Objectives

- To make students learn to identify a social problem
- To make students understand the complexity and contours of a social problem.
- To design strategies and solutions using a multi-pronged trans-disciplinary approach towards social interventions.

Learning Outcomes

On completion of the course, students will be able to –

- learn the complexity of a social problem.
- identify relevant social problems for study.
- design strategies to address the identified social problem using innovative means.

OUTLINE OF DSE-01A

It has become imperative for us as a society to engage with issues arising out of social formations and their interaction with social institutions. This approach is useful from an individual's as well as society's perspective, specially keeping in view its implications for public policy, governance and larger social wellbeing. This is an intervention-based module and therefore the students will be guided to identify a problem arising out of any social, cultural, economic, political issue which has larger implications for human society in general and Indian demography in particular. After identifying the problem, the students will be mentored to design a feasible strategy to address the identified problem by suggesting and practicing innovative means and tools such as organising: seminars and workshops, awareness campaigns, dialogue with communities, publishing research and newspaper articles, producing mass media programmes such as blogs, vlogs, documentaries/filmmaking, theatre interventions and interventions through translations, creative writing and other creative mediums. The students will be encouraged to involve various stakeholders, the concerting agencies and other communities pursuing similar goals.

Theoretical Component (01 Credit) **15 hours**

Theoretical concepts drawing from various strands of Humanities, Social Sciences, Science and Technology and Public Policy discussions related to the identified social problem will be introduced to the students through lectures, debates, seminars, workshops and classroom discussions, etc.

Practical component (if any) - 75 % **90 hours**

Indicative Themes:

- Understanding social formations
- Politics of identity
- Social Institutions: issues and challenges
- Public policy and the social groups
- Social and economic policies

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVE (DSE-01B): Gender Issues and Challenges in India

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Gender Issues and Challenges in India (DSE-01B)	**4**	**1**	**0**	**3**	**Class XII Pass**	**Knowledge of problem identification, assessment techniques & ethics in gender studies.**

Learning Objectives

- To introduce students to the concept and issues of Gender and Gender Studies.
- To make students learn the issues around Gender and Gender Normativity.
- To make students learn to identify a social problem arising out of Gender issues.
- To train students to design strategies and solutions using a trans-disciplinary approach towards gender issues.

Learning Outcomes

On completion of the course, students will be able to –

- understand the concepts and issues around Gender and Gender Studies.
- critically analyze Gender Normativity.
- design strategies and solutions towards gender issues.

OUTLINE OF DSE-01B

As society it has become imperative for us to study the issues arising out of complexity of gender. To understand the complexity of gender the students not only need to engage with the recent debates related to gender but they are also required to practically examine the normative practices associated with the gender role. It is an intervention-based module and therefore the students will be guided to identify a problem arising out of the complexity of gender and its larger implications for the individual and society. After identifying the problem, the students will be mentored to design a feasible strategy to address the identified problem by suggesting and practicing innovative means and tools such as challenging stereotypes, organising seminars and workshops, sensitisation campaigns, dialogue with communities, publishing research and newspaper articles, producing mass media programmes such as blogs, vlogs, documentaries/ filmmaking, theatre interventions and interventions through translations, creative writing and other creative mediums. The students will be encouraged to involve various stakeholders, the concerting agencies and other communities pursuing similar goals.

Theoretical Component (01 Credit) **15 hours**

Theoretical concepts drawing from various strands of Humanities, Social Sciences, Science and Technology and Public Policy discussions related to the identified social problem will be introduced to the students through lectures, debates, seminars, workshops and classroom discussions, etc.

Practical component (if any) - 75 % **90 hours**

Indicative Themes:

- Normative gender roles
- Issues and challenges of LGBTQ communities
- Gender rights movements
- Gender as a discourse
- Sexual abuse and sexual harassment
- Gender and economics
- Gender Identity

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVE (DSE-01C): Engaging with Emerging Human Rights Challenges

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Engaging with Emerging Human Rights Challenges (DSE-01C)	4	1	0	3	Class XII Pass	Knowledge of problem identification, human rights and challenges, assessment techniques and ethics.

Learning Objectives

- To make students learn the concepts and paradigms of Human Rights and Rights-based movements.
- To mentor students in identifying causes and concerns of Rights-based movements.

- To mentor students towards ideating and proposing solutions by involving key stakeholders in the process concerning the issue at hand.

Learning Outcomes

On completion of the course, students will be able to –

- understand the concepts and paradigms of Human Rights and Rights-based movements.
- identify the causes and concerns of Rights-based movements.
- ideate and propose solutions by involving key stakeholders.

OUTLINE OF DSE-01C

'Engaging with Emerging Human Rights Challenges' is an intervention-based paper. In this paper the students will be guided to identify a problem arising out of Human Rights issues such as social conflicts, human-nature conflicts, politics of rights-based movements, and movements of identity. After identifying the problem, the students will be mentored to design a feasible strategy to address the identified problem by suggesting and practicing innovative means and tools like challenging stereotypes, organising seminars and workshops, sensitisation campaigns, dialogue with communities, publishing research and newspaper articles, producing mass media programmes such as blogs, vlogs, documentaries/filmmaking, theatre interventions and interventions through translations, creative writing and other creative mediums. The students will be encouraged to involve various stakeholders, the concerting agencies and other communities pursuing similar goals.

Theoretical Component (01 Credit) **15 hours**

Theoretical concepts drawing from various strands of Humanities, Social Sciences, Science and Technology and Public Policy discussions related to the identified social problem will be introduced to the students through lectures, debates, seminars, workshops and classroom discussions, etc.

Practical component (if any) - 75 % **90 hours**

Indicative Themes:

- Paradigms of human rights-based movements
- Public policy and human rights
- The stateless people and the human rights issues

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVE (DSE-01D): Social Challenges and Sensitizations Concerning Marginalised Communities

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Social Challenges and Sensitisations Concerning Marginalised Communities (DSE-01D)	**4**	**1**	**0**	**3**	**Class XII Pass**	**Knowledge of problem identification, rights of vulnerable groups, community engagement, assessment techniques & ethics.**

Learning Objectives

- To sensitize students about issues related to marginalized groups.
- To learn from the marginalized communities.
- To enable students to conceive and devise strategies and solutions using a trans-disciplinary approach towards issues of the marginalized.

Learning Outcomes

On completion of the course, students will be able to –

- understand the challenges faced by marginalized groups/ communities.
- understand the various traditions and socio-cultural practices that impact the well-being of marginalized communities.
- ideate and devise strategies and interventions aimed at achieving an inclusive society.

OUTLINE OF DSE-01D

To achieve the goal of social inclusion it is imperative for us to study the experiences of discrimination as well as the unequal power relationships of the society. This paper will introduce the students to not only the issues related to marginalised communities but they will also develop empathetic attitude towards such communities. It is an intervention-based module and therefore the students will be guided to identify a problem concerning marginalised communities such as the Scheduled Castes, Scheduled Tribes, Women, Persons with Disabilities, Gender-minorities, and the other subaltern groups. After identifying the problem, the students will be sensitised to understand the communication and other cultural barriers in order to establish a meaningful dialogue with the marginalised communities aimed at achieving a socially inclusive society. The students will be encouraged to involve various stakeholders, the concerting agencies and other communities pursuing similar goals.

Theoretical Component (01 Credit) **15 hours**

Theoretical concepts drawing from various strands of Humanities, Social Sciences, Science and Technology and Public Policy discussions related to the identified social problem will be introduced to the students through lectures, debates, seminars, workshops and classroom discussions, etc.

Practical component (if any) – 75 % **90 hours**

Indicative Themes:

- Issues and challenges of scheduled castes and scheduled tribes
- Issues and challenges of persons with disabilities
- Issues and challenges of religious minorities and the other subaltern groups
- Public policy and the marginalised groups

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVE (DSE-01E): Promoting Linguistic Plurality and Cultural Diversity in India

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Promoting Linguistic Plurality and Cultural Diversity in India (DSE-01E)	4	1	0	3	Class XII Pass	Knowledge of problem identification, concepts relating to culture and cultural diversity, culture and identity, assessment techniques and ethics.

Learning Objectives

- To engage students with various cultural and linguistic traditions of India.
- To make students learn to appreciate the cultural and linguistic diversity of our country.
- To make students conceptualize strategies to preserve the lesser-known cultural, linguistic and traditional practices of India.

Learning Outcomes

On completion of the course, students will be able to –

- appreciate the cultural and linguistic diversity of our country.
- engage with various cultural and linguistic traditions of India.
- conceptualize strategies to preserve the lesser-known cultural, linguistic and traditional practices of India.

OUTLINE OF DSE-01E

India is a country of diverse traditions with myriad of languages. The aim of this paper is to make students able to appreciate this rich cultural heritage and linguistic heterogeneity of India. Through this paper students will also learn about the various tools, techniques and practices to preserve the lesser-known cultures, languages and traditions of our country. This is an intervention-based module and therefore the students will be guided to find solutions to preserve various cultural and linguistic traditions of India in order to achieve a culturally heterogeneous and linguistically plural society. The students will be mentored to design a feasible strategy to engage with the identified tradition by suggesting and practicing innovative means and tools such as organising workshops, seminars and talks, awareness campaigns, dialogue with communities, publishing research and newspaper articles, producing mass media programmes such as blogs, vlogs, documentaries/filmmaking, theatre interventions and interventions through translations, creative writing and other creative mediums. The students will be encouraged to involve various stakeholders, the concerting agencies and other communities pursuing similar goals.

Theoretical Component (01 Credit) **15 hours**

Theoretical concepts drawing from various strands of Humanities, Social Sciences, Science and Technology and Public Policy discussions related to the identified social problem will be introduced to the students through lectures, debates, seminars, workshops and classroom discussions, etc.

Practical component (if any) – 75% **90 hours**

Indicative Themes:

- Exploration and promotion of cultural festivals of India
- Preservation and practice of linguistic diversity of India
- Promotion of arts and crafts

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVE (DSE-01F): Exploration and Promotion of Heritage of India

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Exploration and Promotion of Heritage of India (DSE-01F)	**4**	**1**	**0**	**3**	**Class XII Pass**	**Knowledge of problem identification and concepts relating to heritage of India.**

Learning Objectives

- To enable students explore the tangible and in-tangible Heritage of the Nation.
- To make students appreciate the rich heritage of India and its potential for our national growth.
- To mentor students-led intervention to restore, preserve and promote Heritage of India.

Learning Outcomes

On completion of the course, students will be able to –

- understand the tangible and in-tangible Heritage of India.
- gauge the possible role of our National Heritage in contributing towards our development and economy.
- design strategies that will aid in restoring, preserving and promoting Heritage of India.

OUTLINE OF DSE-01F

Through this paper the students will be able to appreciate the vast contours of our geographical, spiritual, religious, architectural, aesthetical, musical, culinary, handicraft, and folk traditions. This is an intervention-based module and therefore the students will be guided to explore the tangible and in-tangible heritage of India. They will work towards promotion of our rich heritage by designing and conducting events like Heritage Walks, Nature Walks, Curating Exhibitions, organising: workshops, seminars and talks, awareness campaigns, dialogue with communities, publishing research and newspaper articles, producing mass media programmes such as blogs, vlogs, documentaries/filmmaking, theatre interventions and interventions through translations, creative writing and other creative mediums. The students will be encouraged to involve various stakeholders, the concerting agencies and other communities pursuing similar goals.

Theoretical Component (01 Credit) **15 hours**

Theoretical concepts drawing from various strands of Humanities, Social Sciences, Science and Technology and Public Policy discussions related to the identified social problem will be introduced to the students through lectures, debates, seminars, workshops and classroom discussions, etc.

Indicative Themes:

- Promotion and preservation of lesser-known monuments
- Appreciating and promoting culinary traditions of India
- Exploration and awareness of folk arts and traditions
- Exploration and promotion of music and dance traditions of India
- Exploring biodiversity of India

Practical component (if any) - 75 % **90 hours**

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

ANNEXURE-2

Sub: Amendment to Ordinance V

[E.C Resolution No. 60/ (60-1-10) dated 03.02.2023]

Following addition be made to Appendix-II-A to the Ordinance V (2-A) of the Ordinances of the University;

Add the following:

Syllabi of Semester-III of Department of Education under Faculty of Education based on Under Graduate Curriculum Framework -2022 implemented from the Academic Year 2022-23.

FACULTY OF EDUCATION
DEPARTMENT OF EDUCATION

Category II

B.A Programme with Education as Major

DISCIPLINE SPECIFIC CORE COURSE – 5 (DSC-5): EDUCATION IN PLURAL SOCIETY

Credit distribution, Eligibility and Prerequisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
EDUCATION IN PLURAL SOCIETY DSC 5	4	3	1	0	• Class XIIth Pass	• No Pre-requisite

Learning Objectives

The Learning Objectives of this course are as follows:

- This paper attempts to introduce introduces the conceptual issues and concerns of education in a plural society.

- It engages with the idea of diversities as well as the challenges posed by inequalities and discrimination.
- It further initiates a critical reflection on the possibilities from education.
- It fosters the conceptual understanding of equality with reference to opportunity, marginalisation, pluralism, multilingualism and patriarchy.

Learning Outcomes

On completion of this course, learners will be able to:

- Make distinction between social diversity and inequalities in education.
- Analyse the special needs and basis for additional provisions of educational opportunities to social groups facing inequalities such as caste, class, gender, religion and disability.
- Explain Constitutional values and provisions that enable social diversity and limit inequality in education.
- Describe multilingualism in Indian context and critically discuss issues of language that are relevant for a learner, with specific focus on home language and school language.
- Locate provisions that enable linguistic diversity in education from the Constitution.
- Identify and critically evaluate the imbalances of gender in education and socialisation.
- Apply an empathetic understanding of diversity in educational institutions.

SYLLABUS OF DSC- 5

Unit 1 : Understanding Pluralism, Diversity and Inclusion (19 Hours)

- Pluralism and Diversity in Indian Society: Religion, Language, Ethnicity and Culture. The school-society interface and its representation in 'explicit' and 'hidden' curriculum.
- Inequalities and Social Exclusion: Differences in access to resources and opportunities among social groups.
- Social Mobility: Aspirations, Opportunities and Challenges.
- Social and Rights based approach to construction of disability and difference; Issues of inclusion.

Unit 2 : Language and the Learner (13 Hours)

- Child's home language; the language of school: Classroom, Textbooks.
- Issues related to mother tongue, standard language, medium of education.
- Understanding multilingualism.
- Provisions for linguistic minority groups in the Constitution.

Unit 3- Gender Concerns in Education (13 Hours)

- Gender as social category and gendered experiences of growing up.
- Gender Socialisation: Home, School and Society.
- Gender dynamics in educational contexts: Inter-sectionalities of gender, caste, class and religion.

Suggested Projects/ Assignments: Any two

- Discuss aspirations from education, and challenges faced by the marginalised group with reference to any of the following books/ chapters: Bhimayana or Jhoothan: A Dalit's Life Or 'Naja goes to school and Doesn't'.

- Critical discussion on the film 'Hindi Medium'.
- Talk to children of the middle school to understand how they express themselves differently in the first and the second languages. Ask children to write a paragraph or talk about their experiences. These narratives are to be analysed for expression, ideas and ease of communication.
- Discuss students' experiences of growing up as a boy/girl following a self-reading of Krishna Kumar's ' Growing up male'.

Note: On the basis of the above, the teacher may design his/her own relevant assignments and projects.

Teaching Learning Process:

The Course will be taught through interactive pedagogic methods such as classroom discussion, debates, film discussions, critical media analysis. Collaborative learning tasks, enhancing reading comprehension of core writings in the area and developing innovative projects. Reflective expression and learning will be encouraged.

Assessment Method

The assessment will be formative in nature and will include student participation. Individual and group tasks and assignments will be given. Summative evaluation will be through end semester examination.

Key words

Education, Plural Society

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE-6 (DSC-6): Equality Perspective in Education

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical / Practice		
Equality Perspective in Education DSC 6	4	3	1	0	• Class XIIth Pass	• No Pre-requisite

Learning Objectives

The Learning Objectives of this course are as follows:

- Understand the relationship between equality and education in a democratic society.
- Critical analysis of history of education in India with reference to equality perspective.
- Analysis of the contemporary education system and practices with reference to equality perspective
- Understand the importance of constitutional provisions in promoting equality.

Learning Outcomes

After completion of the course student will be able to:

- Conceptualize the relational position of society, equality and education
- Understand the historical trajectories of education systems in India.
- Identify and examine various concerns and challenges in achieving equality of education for all.
- Critically reflect and analyse different policy documents on education.
- Identify the ways to address different kinds of educational and social inequalities

SYLLABUS OF DSC- 6

Unit I: Understanding the Concept of Equality and Education (13 Hours)

- Understanding society, equality, system of education and their relational position

- Social, cultural, political, economic and linguistic dynamics of equality and education
- Understanding schooling, diversity and equal opportunity

Unit 2: Equality and Education: Historical Perspective and Emerging Concerns (19 Hours)

- Education and Equality- Socio historical perspectives
- Gender, Education and Society
- Education and economically disadvantaged
- Education and socially marginalized groups

Unit 3: Towards Equality Responsive Perspective (13 Hours)

- Constitution as a source of equality for all
- Democracy, Citizenship and Education
- Dalit and gender literature to address inequalities,
- Critical Pedagogy for equality and education.

Practicum/ Suggested Projects / Assignments (Any Two)

- Comparative study of national curriculum frameworks (NCF2000, NCF2005, NCF2022)
- Critical analysis of literature on marginalized groups.
- Understanding marginalised communities: Locate the communities and identify the issues and challenges they face regarding education
- Critical analysis of media to understand concerns of education, equality and diversity.

Note: On the basis of the above, the teacher may design his/her own relevant projects/ assignments.

Teaching Learning Process:

The course will be taught through interactive pedagogic methods such as classroom discussion, debates, film discussions, critical media analysis, collaborative learning tasks which enhance reading comprehension of core writings in the area and innovative projects. Reflective expression and learning will be encouraged.

Assessment Method

The assessment will be formative in nature and will factor in student's participation. Individual and group tasks and assignments will be given. Summative evaluation will be done through end- semester examination.

Key words: Equality, Education

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Category III

B.A. Programme with Education as Non-Major

DISCIPLINE SPECIFIC CORE COURSE – 5 (DSC-5): EDUCATION IN PLURAL SOCIETY

Credit distribution, Eligibility and Prerequisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
EDUCATION IN PLURAL SOCIETY DSC 5	4	3	1	0	• Class XIIth Pass	• No Pre-requisite

Learning Objectives

The Learning Objectives of this course are as follows:

- This paper attempts to introduce introduces the conceptual issues and concerns of education in a plural society.
- It engages with the idea of diversities as well as the challenges posed by inequalities and discrimination.
- It further initiates a critical reflection on the possibilities from education.
- It fosters the conceptual understanding of equality with reference to opportunity, marginalisation, pluralism, multilingualism and patriarchy.

Learning Outcomes

On completion of this course, learners will be able to:

- Make distinction between social diversity and inequalities in education.
- Analyse the special needs and basis for additional provisions of educational opportunities to social groups facing inequalities such as caste, class, gender, religion and disability.
- Explain Constitutional values and provisions that enable social diversity and limit inequality in education.
- Describe multilingualism in Indian context and critically discuss issues of language that are relevant for a learner, with specific focus on home language and school language.
- Locate provisions that enable linguistic diversity in education from the Constitution.
- Identify and critically evaluate the imbalances of gender in education and socialisation.
- Apply an empathetic understanding of diversity in educational institutions.

SYLLABUS OF DSC- 5

Unit 1 : Understanding Pluralism, Diversity and Inclusion (19 Hours)

- Pluralism and Diversity in Indian Society: Religion, Language, Ethnicity and Culture. The school-society interface and its representation in 'explicit' and 'hidden' curriculum.
- Inequalities and Social Exclusion: Differences in access to resources and opportunities among social groups.
- Social Mobility: Aspirations, Opportunities and Challenges.
- Social and Rights based approach to construction of disability and difference; Issues of inclusion.

Unit 2 : Language and the Learner (13 Hours)

- Child's home language; the language of school: Classroom, Textbooks.
- Issues related to mother tongue, standard language , medium of education.
- Understanding multilingualism.
- Provisions for linguistic minority groups in the Constitution.

Unit 3- Gender Concerns in Education (13 Hours)

- Gender as social category and gendered experiences of growing up.
- Gender Socialisation: Home, School and Society.
- Gender dynamics in educational contexts: Inter-sectionalities of gender, caste, class and religion.

Suggested Projects/ Assignments: Any two

- Discuss aspirations from education, and challenges faced by the marginalised group with reference to any of the following books/ chapters: Bhimayana or Jhoothan: A Dalit's Life Or 'Naja goes to school and Doesn't'.
- Critical discussion on the film 'Hindi Medium'.

- Talk to children of the middle school to understand how they express themselves differently in the first and the second languages. Ask children to write a paragraph or talk about their experiences. These narratives are to be analysed for expression, ideas and ease of communication.
- Discuss students' experiences of growing up as a boy/girl following a self-reading of Krishna Kumar's ' Growing up male'.

Note: On the basis of the above, the teacher may design his/her own relevant assignments and projects.

ANNEXURE-3

Sub: Amendment to Ordinance V

[E.C Resolution No. 60/ (60-1-7/) dated 03.02.2023]

Following addition be made to Appendix-II-A to the Ordinance V (2-A) of the Ordinances of the University;

Add the following:

Syllabi of Semester-III of the following departments under Faculty of Mathematical Sciences based on Under Graduate Curriculum Framework -2022 implemented from the Academic Year 2022-23.

FACULTY OF MATHEMATICAL SCIENCES

DEPARTMENT OF COMPUTER SCIENCE

BSC. (HONS.) COMPUTER SCIENCE

DISCIPLINE SPECIFIC CORE COURSE -7 (DSC-7) : Data Structures

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSC07 Data Structures	4	3	0	1	Passed 12th class with Mathematics	Programming using Python/Object Oriented Programming with C++

Learning Objectives

The course aims at developing the ability to use basic data structures like arrays, stacks, queues, lists, and trees to solve problems. C++ is chosen as the language to implement the implementation of these data structures.

Learning outcomes

On successful completion of the course, students will be able to:

- Compare two functions for their rates of growth.
- Understand abstract specification of data-structures and their implementation.
- Compute time and space complexity of operations on a data-structure.
- Identify the appropriate data structure(s) for a given application and understand the trade-offs involved in terms of time and space complexity.
- Apply recursive techniques to solve problems.

SYLLABUS OF DSC-7

Unit 1 (9 hours)

Growth of Functions, Recurrence Relations: Functions used in analysis, asymptotic notations, asymptotic analysis, solving recurrences using recursion trees, Master Theorem.

Unit 2 (16 hours)

Arrays, Linked Lists, Stacks, Queues: Arrays: array operations, applications, two-dimensional arrays, dynamic allocation of arrays; Linked Lists: singly linked lists, doubly linked lists, circularly linked lists, Stacks: stack as an ADT, implementing stacks using arrays, implementing stacks using linked lists, applications of stacks; Queues: queue as an ADT, implementing queues using arrays, implementing queues using linked lists,. Time complexity analysis.

Unit 3 (5 hours)

Recursion: Recursive functions, linear recursion, binary recursion.

Unit 4 (6 hours)

Trees, Binary Trees: Trees: definition and properties, tree traversal algorithms, and their time complexity analysis; binary trees: definition and properties, traversal of binary trees, and their time complexity analysis.

Unit 5 (7 hours)

Binary Search Trees, Balanced Search Trees: Binary Search Trees: insert, delete, search operations, time complexity analysis of these operations; Balanced Search Trees: insert, search operations, time complexity analysis of these operations. Time complexity analysis.

Unit 6 (2 hours)

Binary Heap: Binary Heaps: heaps, heap operations.

Essential/recommended readings

1. Goodrich, M.T., Tamassia, R., & Mount, D., *Data Structures and Algorithms Analysis in C++,* 2nd edition, Wiley, 2011.
2. Cormen, T.H., Leiserson, C.E., Rivest, R. L., Stein C. *Introduction to Algorithms*, 4th edition, Prentice Hall of India, 2022.

Additional references

1. Sahni, S. *Data Structures, Algorithms and applications in C++*, 2nd edition, Universities Press, 2011.
2. Langsam Y., Augenstein, M. J., & Tanenbaum, A. M. *Data Structures Using C and C++*, Pearson, 2009.

Practical List (If any): (30 Hours)

Practical exercises such as

1. Write a program to implement singly linked list as an ADT that supports the following operations:
   (i) Insert an element x at the beginning of the singly linked list
   (ii) Insert an element x at i^{th} position in the singly linked list
   (iii) Remove an element from the beginning of the singly linked list
   (iv) Remove an element from i^{th} position in the singly link
   (v) Search for an element x in the singly linked list and return its pointer
   (vi) Concatenate two singly linked lists

2. Write a program to implement doubly linked list as an ADT that supports the following operations:
   (i) Insert an element x at the beginning of the doubly linked list
   (ii) Insert an element x at i^{th} position in the doubly linked list
   (iii) Insert an element x at the end of the doubly linked list
   (iv) Remove an element from the beginning of the doubly linked list
   (v) Remove an element from i^{th} position in the doubly linked list.
   (vi) Remove an element from the end of the doubly linked list
   (vii) Search for an element x in the doubly linked list and return its pointer
   (viii) Concatenate two doubly linked lists

3. Write a program to implement circular linked list as an ADT which supports the following operations:
   (i) Insert an element x at the front of the circularly linked list
   (ii) Insert an element x after an element y in the circularly linked list
   (iii) Insert an element x at the back of the circularly linked list
   (iv) Remove an element from the back of the circularly linked list
   (v) Remove an element from the front of the circularly linked list
   (vi) Remove the element x from the circularly linked list
   (vii) Search for an element x in the circularly linked list and return its pointer

(viii) Concatenate two circularly linked lists

4. Implement a stack as an ADT using Arrays.

5. Implement a stack as an ADT using the Linked List ADT.

6. Write a program to evaluate a prefix/postfix expression using stacks.

7. Implement Queue as an ADT using the circular Arrays.

8. Implement Queue as an ADT using the Circular Linked List ADT.

9. Write a program to implement Binary Search Tree as an ADT which supports the following operations:
   (i) Insert an element x
   (ii) Delete an element x
   (iii) Search for an element x in the BST and change its value to y and then place the node with value y at its appropriate position in the BST
   (iv) Display the elements of the BST in preorder, inorder, and postorder traversal
   (v) Display the elements of the BST in level-by-level traversal
   (vi) Display the height of the BST

10. Write a program to implement a balanced search tree as an ADT.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE – 8 (DSC-8): Operating Systems

Credit distribution, Eligibility and Prerequisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSC 08 Operating Systems	**4**	**3**	**0**	**1**	**Passed 12th class with Mathematics**	Programming using Python/Object Oriented Programming with C++, Computer System Architecture

Learning Objectives

The course provides concepts that underlie all operating systems and are not tied to any particular operating system. The emphasis is on explaining the need and structure of an operating system using its common services such as process management (creation, termination etc.), CPU Scheduling, Process Synchronization, Handling Deadlocks, main memory management, virtual memory, secondary memory management. The course also introduces various scheduling algorithms, structures, and techniques used by operating systems to provide these services.

Learning outcomes

On successful completion of the course, students will be able to:

- Describe the need of an operating system and define multiprogramming and Multithreading concepts.
- Implement the process synchronization service (Critical Section, Semaphores), CPU scheduling service with various algorithms.
- Implement Main memory Management (Paging, Segmentation) algorithms, Handling of Deadlocks
- Identify and appreciate the File systems Services, Disk Scheduling service

SYLLABUS OF DSC-8

Unit 1 (6 hours)

Introduction: Operating Systems (OS) definition and its purpose, Multiprogrammed and Time Sharing Systems, OS Structure, OS Operations: Dual and Multi-mode, OS as resource manager.

Unit 2 (9 hours)

Operating System Structures: OS Services, System Calls: Process Control, File Management, Device Management, and Information Maintenance, Inter-process Communication, and Protection, System programs, OS structure- Simple, Layered, Microkernel, and Modular.

Unit 3 (10 hours)

Process Management: Process Concept, States, Process Control Block, Process Scheduling, Schedulers, Context Switch, Operation on processes, Threads, Multicore Programming, Multithreading Models, PThreads, Process Scheduling Algorithms: First Come First Served, Shortest-Job-First, Priority & Round-Robin, Process Synchronization: The critical-section problem and Peterson's Solution, Deadlock characterization, Deadlock handling.

Unit 4 (11 hours)

Memory Management: Physical and Logical address space, Swapping, Contiguous memory allocation strategies - fixed and variable partitions, Segmentation, Paging.
Virtual Memory Management: Demand Paging and Page Replacement algorithms: FIFO Page Replacement, Optimal Page replacement, LRU page replacement.

Unit 5 (9 hours)

File System: File Concepts, File Attributes, File Access Methods, Directory Structure: Single-Level, Two-Level, Tree-Structured, and Acyclic-Graph Directories.
Mass Storage Structure: Magnetic Disks, Solid-State Disks, Magnetic Tapes, Disk Scheduling algorithms: FCFS, SSTF, SCAN, C-SCAN, LOOK, and C-LOOk Scheduling.

Essential/recommended readings

1. Silberschatz, A., Galvin, P. B., Gagne G. *Operating System Concepts,* 9th edition, John Wiley Publications, 2016.
2. Tanenbaum, A. S. *Modern Operating Systems*, 3rd edition, Pearson Education, 2007.
3. Stallings, W. *Operating Systems: Internals and Design Principles,* 9th edition, Pearson Education, 2018.

Additional References

1. Dhamdhere, D. M., *Operating Systems: A Concept-based Approach,* 2nd edition, Tata McGraw-Hill Education, 2017.
2. Kernighan, B. W., Rob Pike, R. *The Unix Programming Environment*, Englewood Cliffs, NJ: Prentice-Hall, 1984.

Suggested Practical List (If any): (30 Hours)

Practical exercises such as

1. Execute various Linux commands for:
   i. Information Maintenance: wc, clear, cal, who, date, pwd
   ii. File Management: cat, cp, rm, mv, cmp, comm, diff, find, grep, awk
   iii. Directory Management : cd, mkdir, rmdir, ls
2. Execute various Linux commands for:
   i. Process Control: fork, getpid, ps, kill, sleep
   ii. Communication: Input-output redirection, Pipe
   iii. Protection Management: chmod, chown, chgrp
3. Write a programme (using fork() and/or exec() commands) where parent and child execute:
   i. same program, same code.
   ii. same program, different code.
   iii. Before terminating, the parent waits for the child to finish its task.
4. Write a program to to report behaviour of Linux kernel including kernel version, CPU type and model. (CPU information)

5. Write a program to report behaviour of Linux kernel including information on 19 configured memory, amount of free and used memory. (Memory information)
6. Write a program to copy files using system calls.
7. Use an operating system simulator to simulate operating system tasks.
8. Write a program to implement scheduling algorithms FCFS/ SJF/ SRTF/ non-preemptive scheduling algorithms.
9. Write a program to calculate the sum of n numbers using Pthreads. A list of n numbers is divided into two smaller lists of equal size, and two separate threads are used to sum the sublists.
10. Write a program to implement first-fit, best-fit and worst-fit allocation strategies.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE– 9 (DSC-9): Numerical Optimization

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSC09 Numerical Optimization	**4**	**3**	**0**	**1**	**Passed 12th class with Mathematics**	Programming using Python/Object Oriented Programming with C++

Learning Objectives

The course aims to provide students with the experience of mathematically formulating a large variety of optimization/decision problems emerging out of various fields like data science, machine learning, business, and finance. The course focuses on learning techniques to optimize problems in order to obtain the best possible solution.

Learning outcomes

At the end of the course, students will be able to:

- Mathematically formulate the optimization problems using the required number of independent variables.
- Define constraint functions on a problem.
- Check the feasibility and optimality of a solution.
- Apply conjugate gradient method to solve the problem.

SYLLABUS OF DSC-9

Unit 1 (6 hours)

Introduction: Mathematical Formulation using example, Continuous versus Discrete Optimization, Constrained and Unconstrained Optimization, Global and Local Optimization, Stochastic and Deterministic Optimization, Convexity, Optimization Algorithms

Unit 2 (14 hours)

Fundamentals of Unconstrained Optimization: Concept of a Solution - Recognizing a Local Minimum, Nonsmooth Problems, Overview of Algorithms - Two Strategies: Line Search and Trust Region, Search Directions for Line Search Methods, Models for Trust-Region Methods, Scaling. Line Search - Convergence of Line Search Methods, Rate of Convergence - Convergence Rate of Steepest Descent; Newton's Method, Quasi-Newton Methods. Trust Region - The Cauchy Point Algorithm; Global Convergence - Reduction Obtained by the Cauchy Point; Convergence to Stationary Points.

Unit 3 (7 hours)

Conjugate Gradient Methods: Basic Properties of the Conjugate Gradient Method, A Practical Form of the Conjugate Gradient Method, and Rate of Convergence

Unit 4 (8 hours)

Calculating Derivatives: Finite-Difference Derivative Approximations, Approximating the Gradient, Approximating a Sparse Jacobian, Approximating the Hessian, Approximating a Sparse Hessian

Unit 5 (10 hours)

Theory of Constrained Optimization: Local and Global Solutions, Smoothness, Examples - A Single Equality Constraint, A Single Inequality Constraint, Two Inequality Constraints, Tangent Cone and Constraint Qualifications, First-Order Optimality Condition, Second-Order Conditions - Second-Order Conditions and Projected Hessians. Linear and non-linear constrained optimization, augmented Lagrangian Method

Essential/recommended readings

1. J. Nocedal and S.J. Wright, *Numerical Optimization*, 2nd edition, Springer Series in Operations Research, 2006.
2. A, Mehra, S Chandra, Jayadeva, *Numerical Optimization with Applications*, Narosa Publishing House, New Delhi, 2009,

Additional References

2. Q. Kong, T. Siauw, A. Bayen, *Python Programming and Numerical Methods: A Guide for Engineers and Scientists,* 1st edition, 2020.

Suggested Practical List (If any) :(30 Hours)

Practical exercises such as

Write a program to implement the following methods:

Constrained and Unconstrained Optimization, Global and Local Optimization, Line Search and Trust Region, Convergence of Line Search Methods, Rate of Convergence - Convergence Rate of Steepest Descent, Newton's Method, Quasi-Newton Methods, The Cauchy Point algorithm, Finite-Difference Derivative Approximations, Convergence to Stationary Points, Conjugate Gradient Method, Rate of Convergence, Approximating a Sparse Jacobian, Approximating the Hessian, Approximating a Sparse Hessian, First-Order Optimality Condition, Second-Order Conditions - Second-Order Conditions, and Projected Hessians. Linear and non-linear constrained optimization Augmented Lagrangian Methods.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Computer Science Courses for Undergraduate Programme of study with Computer Science discipline Elective

DISCIPLINE SPECIFIC ELECTIVE COURSE: Data Analysis and Visualization

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Data Analysis and Visualization (DAV)	**4**	**3**	**0**	**1**	**Pass in XII class**	Programming using Python/ Class XI-XII Computer Science/ Class XI-XII Informatics Practices

Learning Objectives

This course is designed to introduce the students to real-world data analysis problems, the use of statistics to get a deterministic view of data, and interpreting results in the field of exploratory data science using Python. This course is the first in the "Data Science" pathway and builds the foundation for three subsequent courses in the pathway.

Learning outcomes

On successful completion of the course, students will be able to:

1. Apply descriptive statistics to obtain a deterministic view of data
2. Perform data handling using Numpy arrays
3. Load, clean, transform, merge, and reshape data using Pandas
4. Visualize data using Pandas and matplot libraries
5. Solve real world data analysis problems

SYLLABUS OF DSE

Unit 1 (10 hours)

Introduction to basic statistics and analysis: Fundamentals of Data Analysis, Statistical foundations for Data Analysis, Types of data, Descriptive Statistics, Correlation and covariance, Linear Regression, Statistical Hypothesis Generation and Testing, Python Libraries: NumPy, Pandas, Matplotlib

Unit 2 (8 hours)

Array manipulation using Numpy: Numpy array: Creating Numpy arrays; various data types of Numpy arrays, indexing and slicing, swapping axes, transposing arrays, data processing using Numpy arrays.

Unit 3 (12 hours)

Data Manipulation using Pandas: Data Structures in Pandas: Series, DataFrame, Index objects, Loading data into Pandas data frame, Working with DataFrames: Arithmetics, Statistics, Binning, Indexing, Reindexing, Filtering, Handling missing data, Hierarchical indexing, Data wrangling: Data cleaning, transforming, merging and reshaping

Unit 4 (8 hours)

Plotting and Visualization: Using Matplotlib to plot data: figures, subplots, markings, color and line styles, labels and legends, Plotting functions in Pandas: Line, bar, Scatter plots, histograms, stacked bars, Heatmap

Unit 5 (7 hours)

Data Aggregation and Group operations: Group by mechanics, Data aggregation, General split-apply-combine, Pivot tables and cross tabulation

Essential/recommended readings

1. McKinney W. *Python for Data Analysis: Data Wrangling with Pandas, NumPy and IPython*, 2nd edition, O'Reilly Media, 2018.
2. Molin S. *Hands-On Data Analysis with Pandas*, Packt Publishing, 2019.
3. Gupta S.C., Kapoor V.K. *Fundamentals of Mathematical Statistics*,12th edition, Sultan Chand & Sons, 2020.

Additional References

1. Chen D. Y. *Pandas for Everyone: Python Data Analysis*, First edition, Pearson Education, 2018.
2. Miller J.D. *Statistics for Data Science,* Packt Publishing Limited, 2017.

Suggested Practical List (If any): (30 Hours)

Practical exercises such as

Use a dataset of your choice from Open Data Portal (https:// data.gov.in/, UCI repository) or load from scikit, seaborn library for the following exercises to practice the concepts learnt.

1. Load a Pandas dataframe with a selected dataset. Identify and count the missing values in a dataframe. Clean the data after removing noise as follows
   a) Drop duplicate rows.
   b) Detect the outliers and remove the rows having outliers
   c) Identify the most correlated positively correlated attributes and negatively correlated attributes

2. Import iris data using sklearn library or (Download IRIS data from: https://archive.ics.uci.edu/ml/datasets/iris or import it from sklearn.datasets)
    i. Compute mean, mode, median, standard deviation, confidence interval and standard error for each feature
    ii. Compute correlation coefficients between each pair of features and plot heatmap
    iii. Find covariance between length of sepal and petal
    iv. Build contingency table for class feature

3. Load Titanic data from sklearn library , plot the following with proper legend and axis labels:

    a. Plot bar chart to show the frequency of survivors and non-survivors for male and female passengers separately
    b. Draw a scatter plot for any two selected features
    c. Compare density distribution for features age and passenger fare
    d. Use a pair plot to show pairwise bivariate distribution

4. Using Titanic dataset, do the following
    a. Find total number of passengers with age less than 30
    b. Find total fare paid by passengers of first class
    c. Compare number of survivors of each passenger class

5. Download any dataset and do the following
    a. Count number of categorical and numeric features
    b. Remove one correlated attribute (if any)
    c. Display five-number summary of each attribute and show it visually

Project: Students are encouraged to work on a good dataset in consultation with their faculty and apply the concepts learned in the course.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVE COURSE: Microprocessors

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Microprocessors	**4**	**3**	**0**	**1**	**Pass in XII class**	Computer System Architecture

Learning Objectives

This course introduces the internal architecture, programming models of Intel Microprocessors (8086 - Pentium) and assembly language programming. Students will also learn interfacing of memory and I/O devices with microprocessors.

Learning outcomes

On successful completion of the course, students will be able to:

- Describe the internal architecture of Intel microprocessors.
- Define and implement interfaces between the microprocessor and the devices.
- Write assembly language programs.

SYLLABUS OF DSE

Unit 1 (5 hours)

Microprocessor Architecture: Internal Architecture, Programming Model, Addressing Modes, Data Movement Instructions

Unit 2 (7 hours)

Microprocessor programming: Register Organization, instruction formats, Program control instructions, assembly language.

Unit 3 (10 hours)

Interfacing: Bus timings, Memory address decoding, cache memory and cache controllers, I/O interface, keyboard, timer, Interrupt controller, DMA controller, video controllers, communication interfaces.

Unit 4 (7 hours)

Data transfer schemes: Synchronous data transfer, asynchronous data transfer, interrupt driven data transfer, DMA mode data transfer.

Unit 5 (8 hours)

Microprocessor controllers: I/O controllers, interrupt controller, DMA controller, USART controller.

Unit 6 (8 hours)

Advanced microprocessor architecture: CISC architecture, RISC architecture, superscalar architecture, multicore architecture.

Essential/recommended readings

1. Brey, B.B. *The Intel Microprocessors: Architecture, Programming and Interfacing,* 8th edition, Pearson education, 2009.

2. Triebel, W.A., & Singh, A. *The 8088 and 8086 Microprocessors Programming, Interfacing, Software, Hardware and Applications*, 4th edition, Pearson education, 2002.

Additional References

1. Ramesh S Gaonkar *Microprocessor architecture, programming, and applications with the 8085,* 6th edition, Penram International Publishing, 2013.

Suggested Practical List (If any): (30 Hours)

Practical exercises such as

ASSEMBLY LANGUAGE PROGRAMMING

1. Write a program to print 'Hello World'.
2. Write a program to print two strings on two different lines.
3. Write a program to take a single digit number from the user and print that number on the console.
4. Write a program to compare two single digit numbers and check if they are equal or not.
5. Write a program for 8-bit addition of two single digit numbers. Show the result after ASCII adjust.
6. Write a program for 16-bit addition of two double digit numbers. Show the result after ASCII adjust.
7. Write a program for 16-bit BCD addition.
8. Write a program for 32-bit BCD addition and subtraction.
9. Write a program for 32-bit Binary addition,subtraction,multiplication and division.
10. Write a program for Binary to ASCII conversion.
11. Write a program for ASCII to Binary conversion.
12. Write a program to take input in an array and print it on the console.
13. Write a program to sort an array using bubble sort.
14. Write a program to perform linear search in an array.
15. Write a program to perform binary search in an array.
16. Write a program to add and subtract two arrays.
17. write programs to interface a microprocessor with external devices such as a keyboard and elevator.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

(Computer Science Courses for Undergraduate Programme of study with Computer Science discipline as one of the three Core Disciplines)

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSE 01a PYTHON Programming for Data Handling	**4**	**3**	**0**	**1**	Pass in Class XII	NIL

Learning Objectives

The course introduces students to the concept of data handling using files and GUI designing. This would equip the students with knowledge to work on real world data from various applications and GUI development for effective data handling.

Learning outcomes

On successful completion of the course, students will be able to:

- Learn constructs of Python language
- Perform data handling with files using Python.
- Design and implement GUI applications using Tkinter.

SYLLABUS OF DSE 01a

Unit 1 (15 Hours)

Introduction to Python Programming, Basic Constructs, and Python Built-in Data Structures: Introduction to Python programming language, Basic syntax, variables, and data

types in Python, Functions and modular programming; Conditional statements (if, elif, else); Looping structures (for and while loops); Mutable and Immutable Data Structures, Strings-Indexing, slicing, traversal, operations; Lists-indexing, slicing, traversal, operations; tuples, dictionaries, and sets and their operations in Python

Unit 2 (5 Hours)

File Handling: Opening, reading, writing, and closing files; File modes and file object methods; Reading and writing text and binary files; Working with CSV files

Unit 3 (15 Hours)

Designing GUI Applications with Tkinter (15): What is Tkinter? Creating a Tkinter window, Layout managers, Tkinter widgets -Entry, Spinbox, Combobox, Checkbutton, Text, Button, LabelFrame; Implementing the application - LabelInput class, building of form, adding LabelFrame and other widgets, retrieving data from form, resetting form, building our application class.

Unit 4 (10 Hours)

Combining Python file handling and Tkinter: Creating a simple Tkinter application, Reading and writing to csv files in a Tkinter application

Essential/recommended readings

1. Taneja S., Kumar, N. Python Programming- A modular approach, 1st Edition, Pearson Education India, 2018,

2. Moore, Alan D. Python GUI Programming with Tkinter: Develop responsive and powerful GUI applications with Tkinter. Packt Publishing Ltd, 2021.

Additional References:

1. Guttag, J.V. Introduction to computation and programming using Python, 2nd edition, MIT

Online references/material:

1. https://docs.python.org/3/library/csv.html

Suggested Practical List (If any): (30 Hours)

Installing and setting up Python and relevant libraries; Python development environments (e.g., Anaconda, Jupyter Notebook)

1. Write a Python program to calculate the factorial of a number.
2. Write a Python program to generate prime numbers between 1 to n, where n is provided as input by the user.
3. Write a Python program to find the sum and average of numbers in a given list.
4. Given two sets, set1 and set2, write a Python program to find their union, intersection and difference.
5. Given a list of numbers, write a Python program to count the number of times an element occurs in a list and create a dictionary with *element:count* as *key:value* pairs.
6. Write a Python program to swap the first two and last two characters in a given string.
7. Write a Python program to create a text file having names of ten Indian cities.
8. Write a Python program to create a text file having atleast five lines about your college using `writelines()` function.
9. Write a Python program which reads the data from three input files having Employee Names and merges them into one output file.
10. Write a Python program to count the number of vowels in a file and write the *vowel : count* in a dictionary.
11. Write a Python program to create a CSV file having student data: RollNo, Enrollment No, Name, Course, Semester.
12. Write a Python program library to read the CSV file created in the above program and filter out records of II semester students.
13. Write a Python program using tkinter library to create a GUI to enter registration details for an event.
14. Write a Python program using tkinter library to create a calculator to perform addition, subtraction, multiplication and division of two numbers entered by the user.
15. Write a Python program using tkinter library to create an age calculator to calculate age when DOB is entered.
16. Write a Python program using tkinter library to read and write student data to and from a CSV file (refer question 11).

Note: **Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.**

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Android Programming using Java	**4**	**3**	**0**	**1**	Pass in Class XII	NIL

Learning Objective

The course enables the students to understand Android architecture and its key features, making them competent to develop Android applications using Java.

Learning outcomes

On successful completion of the course, students will be able to:

- logically organize Java classes and interfaces using packages.
- understand the design of the Android operating system.
- design user interfaces using various dialog boxes, menus, etc.
- design Android applications with interaction among various activities/applications.

SYLLABUS OF DSE 01b

Unit 1 (15 hours)
Review of Object Oriented Programming and Java Fundamentals: Structure of Java programs, classes and objects, data types, type casting, looping constructs, inheritance.

Unit 2 (2 hours)
Interfaces: Interface basics, defining, implementing and extending interfaces.

Unit 3 (4 hours)
Packages: Basics of packages, creating and accessing packages.

Unit 4 (7 hours)
GUI Programming: AWT classes, event handling.

Unit 5 (5 hours)

Introduction to Android Programming: Introduction to Android Operating System, Android SDK, AVD, components of an Android Application, parcels, and bundles.

Unit 6 (6 hours)

User Interface Architecture: Android Architecture, Contexts in Android, Intents and Intent Filters, Activity Life Cycle, Activity Stack, Fragments, and Fragments Life Cycle.

Unit 7 (6 hours)

User Interface Design: Android Layouts, Views, Spinner, Menu, Toggle Buttons, Radio Buttons, Check Boxes, Alert Box, and Toasts.

Essential/recommended readings

1. Schildt H. Java: The Complete Reference. 12th edition. McGraw-Hill Education, 2021
2. Griffiths D. & Griffiths D. Head First Android Development. O'Reilly, 2017
3. Meier R. Professional AndroidTM 4 Application Development. John Wiley & Sons, Inc., 2012

Additional Resources:

1. Horstmann, C. S. Core Java - Vol. I – Fundamentals. 12th edition. Pearson Education, 2021
2. Murphy M. L. The Busy Coder's Guide to Android Development. CommonsWare, 2018
3. Phillips B., Stewart C., Hardy B. & Marsicano K. Android Programming: The Big Nerd Ranch Guide. Big Nerd Ranch, LLC, 2015
4. Sheusi J. C. Android Application Development for Java Programmers. Cengage Learning, 2013

Suggested Practical List (If any): (30 Hours)

1. Write a function to find whether a number is prime or not. Use this function to determine the nth prime number. Read n from the user.

2. Design a class Complex having a real part (x) and an imaginary part (y). Provide methods to perform the following on complex numbers:

    a. Add two complex numbers.

b. Multiply two complex numbers.

c. toString() method to display complex numbers in the form: x + i y

3. Create a class TwoDim which contains private members as x and y coordinates in package P1. Define the default constructor, a parameterized constructor and override toString() method to display the co-ordinates. Now reuse this class and in package P2 create another class ThreeDim, adding a new dimension as z as its private member. Define the constructors for the subclass and override toString() method in the subclass also. Write appropriate methods to show dynamic method dispatch. The main() function should be in a package P.

4. Write a program to create an Applet. Create a frame as a child of an applet. Implement mouseClicked( ), mouseEntered( ) and mouseExited( ) events for the applet. Frame is visible when mouse enters applet window and hidden when mouse exits from the applet window.

5. Write a program to display a string in a frame window with pink color as background.

6. Write a program to create an Applet that has two buttons named “Red” and “Blue”. When a button is pressed, the background color of the applet is set to the color named by the button’s label.

7. Create a “Hello World” application. That will display “Hello World” in the middle of the screen in the emulator. Also display “Hello World” in the middle of the screen in the Android Phone.

8. Create an Android application with a login module. (Check username and password).

9. Create a Spinner with strings taken from resource folder (res >> value folder) and on changing the spinner value, Image will change.

10. Create a Menu with 5 options and a selected option should appear in the text box.

11. Create an application with three option buttons, on selecting a button colour of the screen will change.

12. Create an Application to display various Activity and Fragment Life Cycle Methods.

13. Create an application with 2 fragments, one to set the background and other to set the fore-color of the text.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

COMMON POOL OF GENERIC ELECTIVES (GE) COURSES

GENERIC ELECTIVES : Database Management Systems

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course	Department offering the course
		Lecture	Tutorial	Practical/ Practice			
Database Management Systems	**4**	**3**	**0**	**1**	**Pass in class XII**	NIL	**Computer Science**

Learning Objectives

The course introduces the students to the fundamentals of database management systems and their applications. Emphasis is given to the popular relational database system. Students will learn about the importance of database structure and its design using entity relationship diagrams and a formal approach using normalization. Basic concepts of file indexing and transaction processing will be taught. The course would give students hands-on practice with structured query language to create, manipulate, and implement a relational database.

Learning outcomes

On successful completion of the course, students will be able to:

- Use relational database management software to create and manipulate the database.
- Create conceptual data models using entity relationship diagrams for modeling real-life situations and map it to corresponding relational database schema.
- Use the concept of functional dependencies to remove redundancy and update anomalies.
- Apply normalization theory to get a normalized database scheme to get anomalies free databases.
- Write queries in relational algebra.
- Implement relational databases and formulate queries for data retrieval and data update problems using SQL.
- Learn the importance of index structures and concurrent execution of transactions in database systems.

SYLLABUS

Unit 1 (5 hours)

Introduction to Database: Database, characteristics of database approach, data models, database management system, three-schema architecture, components of DBMS, data independence, and file system approach vs. database system approach

Unit 2 (8 hours)

Entity Relationship Modeling: Conceptual data modeling - motivation, entities, entity types, attributes, relationships, relationship types, constraints on relationship, Entity Relationship diagram as conceptual data model.

Unit 3 (11 hours)

Relational Data Model: Data anomalies, Relational Data Model - Characteristics of a relation, schema-instance distinction, types of keys, relational integrity constraints. Relational algebra operators like selection, projection, cartesian product, join and write simple queries using them.

Unit 4 (10 hours)

Structured Query Language (SQL): DDL to create database and tables, table constraints, DML, Querying in SQL to retrieve data from the database, aggregation functions group by and having clauses, generate and query views.

Unit 5 (11 hours)

Database Design: Mapping an Entity Relationship diagram to corresponding relational database scheme, functional dependencies and Normal forms, 1NF, 2NF, and 3NF decompositions and desirable properties of them.

Essential/recommended readings

1. Elmasri, R., Navathe, B. S., *Fundamentals of Database Systems*, 7th Edition, Pearson Education, 2016.
2. Murach J., *Murach's MySQL,* 3th Edition, Pearson, 2019.

Additional References

1. Connolly T. M., Begg C. E. *Database Systems: A Practical Approach to Design, Implementation, and Management*, 6th edition, Pearson, 2019.
2. Ramakrishnan R., Gehrke J. *Database Management Systems*, 3rd Edition, McGraw-Hill, 2014.
3. Silberschatz A., Korth H.F., Sudarshan S. *Database System Concepts*, 7th Edition, McGraw Hill, 2019.

Suggested Practical List (if any): (30 hours)

Practical exercises based on a given schema.

Create and use the following student-course database schema for a college to answer the given queries using the standalone SQL editor.

STUDENT	**Roll No**	**Student Name**	**Course ID**	**DOB**
	Char(6)	Varchar(20)	Varchar(10)	Date

COURSE	**CID**	**Course Name**	**Course Type**	**Teacher-in-charge**	**Total Seats**	**Duration**
	Char(6)	Varchar (20)	Char (8)	Varchar (15)	Unsigned int	Unsigned int

ADMISSION	**Roll No**	**CID**	**Date of Admission**
	Char(6)	Char(6)	**Date**

Here, Rollno (ADMISSION) and SID (ADMISSION) are foreign keys. Note that course type may have two values viz. Fulltime and Parttime and a student may enroll in any number of courses

1. Retrieve names of students enrolled in any course.
2. Retrieve names of students enrolled in at least one part time course.
3. Retrieve students' names starting with letter 'A'.
4. Retrieve students' details studying in courses 'computer science' or 'chemistry'.
5. Retrieve students' names whose roll no either starts with 'X' or 'Z' and ends with '9'
6. Find course details with more than N students enrolled where N is to be input by the user.
7. Update student table for modifying a student name.
8. Find course names in which more than five students have enrolled
9. Find the name of youngest student enrolled in course 'BSc(P)CS'
10. Find the name of most popular society (on the basis of enrolled students)
11. Find the name of two popular part time courses (on the basis of enrolled students)
12. Find the student names who are admitted to full time courses only.
13. Find course names in which more than 30 students took admission
14. Find names of all students who took admission to any course and course names in which at least one student has enrolled
15. Find course names such that its teacher-in-charge has a name with 'Gupta' in it and the course is full time.
16. Find the course names in which the number of enrolled students is only 10% of its total seats.
17. Display the vacant seats for each course
18. Increment Total Seats of each course by 10%
19. Add enrollment fees paid ('yes'/'No') field in the enrollment table.
20. Update the date of admission for all the courses by 1 year.
21. Create a view to keep track of course names with the total number of students enrolled in it.

22. Count the number of courses with more than 5 students enrolled for each type of course.
23. Add column Mobile number in student table with default value '9999999999'
24. Find the total number of students whose age is > 18 years.
25. Find names of students who are born in 2001 and are admitted to at least one part time course.
26. Count all courses having 'science' in the name and starting with the word 'BSc'.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

GENERIC ELECTIVES : Java Programming

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course	Department offering the course
		Lecture	Tutorial	Practical/ Practice			
GE: Java Programming	**4**	**3**	**0**	**1**	**Pass in class XII**	NIL	**Computer Science**

Learning Objectives

This course is designed to develop understanding of object-oriented programming concepts like Classes, Objects, Inheritance and Polymorphism using Java. The course provides understanding of multithreading and exception handling in Java. It also introduces how to create Java applications with graphical user interface (GUI).

Learning outcomes

On completion of this course, the student will be able to:

- Understand the object-oriented concepts – Classes, Objects, Inheritance, Polymorphism– for problem solving.
- Create and handle multithreading.
- Handle program exceptions.
- Handle input/output through files.
- Create Java applications with a graphical user interface (GUI).

SYLLABUS OF GE

Unit 1 (6 hours)

Introductory Concepts: program, identifiers, variables, constants, primitive data types, expressions, Naming Conventions, Type casting, operators, control statements, structured data types, arrays, functions.

Unit 2 (13 hours)

Object Oriented Concepts: Abstraction, encapsulation, objects, classes, methods, constructors, inheritance, polymorphism, static and dynamic binding, Anonymous block, Static Data members, overloading and overriding, Usage of super and this keyword, Abstract classes, Interfaces and Packages, Access modifiers, Object class

Unit 3 (11 hours)

Multithreading: Creating Threads, Thread Priority, Blocked States, Extending Thread Class, Runnable Interface, Starting Threads, Thread Synchronization, Sync Code Block, Overriding Synced Methods, Thread Communication, wait, notify and notify all.

Unit 4 (8 hours)

Introduction to Exception handling: Exception and Error, Throw, try and catch Blocks, Exception handlers, java.lang Exceptions, Built-InExceptions.

Unit 5 (7 hours)

Introduction to File Handling: Byte Stream, Character Stream, File I/O Basics, File Operations, Serialization.

Essential/recommended readings

1. Cay S. Horstmann, *Core Java - Vol. I – Fundamentals*, 10th edition, Pearson, 2017.
2. James Gosling, Bill Joy, Guy L. Steele Jr, Gilad Bracha, Alex Buckley, *The Java Language Specification*, *Java SE* 7th edition, Addison-Wesley, 2011

Additional References

1. Herbert Schildt, *Java: The Complete Reference*, 10th edition, McGraw-Hill Education, 2018.

2 Richard Johnson, *An Introduction to Java Programming and Object-Oriented Application Development*, Thomson Learning, 2006.

3. Kathy Sierra and Bert Bates, *Head First Java*, 3rd edition, O'Reilly, 2022.

Suggested Practical List (If any): (30 Hours)

Practical exercises such as

1. Create a java program to implement stack and queue concepts.
2. Write a program to take input from command line arguments.
3. Write a java program to show static and dynamic polymorphism.
4. Write a java program to show multiple inheritance using interfaces.
5. Write a program in java to show the chaining of execution of construction.
6. Write a java program to show multithreaded producer and consumer applications.
7. write a program in java to synchronize the multithreaded application
8. Create a customized exception and also make use of all the exception keywords.
9. Write a program to show different ways to get input from user
10. Design a form using AWT components and the Frame container.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

(Computer Science Courses for Undergraduate Programme of study with Computer Science discipline as one of the three Core Disciplines)

DISCIPLINE SPECIFIC CORE COURSE (DSC-3): Computer System Architecture

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSC03: Computer System Architecture	**4**	**3**	**0**	**1**	**Passed 12th class with Mathematics**	NIL

Learning Objectives

This course introduces students to the fundamental concepts of digital computer organization, design, and architecture. It aims to develop a basic understanding of the building blocks of a computer system and highlights how these blocks are organized together to architect a digital computer system.

Learning outcomes

On successful completion of the course, students will be able to:

- Design combinatorial circuits using basic building blocks. Simplify these circuits using Boolean algebra and Karnaugh maps. Differentiate between combinational circuits and sequential circuits.
- Represent data in binary form, convert numeric data between different number systems, and perform arithmetic operations in binary.
- Determine various stages of the instruction cycle and describe interrupts and their handling.
- Explain how the CPU communicates with memory and I/O devices.
- Simulate the design of a basic computer using a software tool.

SYLLABUS OF DSC-3

Unit 1 (9 hours)

Digital Logic Circuits: Digital Logic Gates, Flip flops and their characteristic table, Logic circuit simplification using Boolean algebra and Karnaugh map, Don't care conditions, Combinational circuits, Introduction to Sequential Circuits

Unit 2 (7 hours)

Digital Components: Decoders, Encoders, Multiplexers, Binary Adder, Binary Adder Subtractor, Binary Incrementor, Registers, and Memory Units

Unit 3 (13 hours)

Data Representation: Binary representation of both numeric and alphanumeric data, representation of numeric data in different number systems, (Binary, Octal, Decimal and Hexadecimal), conversion from one number system to another, complements, representation of signed and unsigned numbers, addition and subtraction of signed and unsigned numbers and overflow detection.

Unit 4 (9 hours)

Basic Computer Organization and Design: Stored program organization, Computer registers, Instruction set and their completeness, Instruction cycle, Memory reference instructions, Register reference instructions, Input- Output reference instructions, Interrupt cycle, Addressing modes.

Unit 5 (7 hours)

Input-Output Organization: I/O interface, I/O vs. Memory Bus, Isolated I/O, Memory Mapped I/O, Direct Memory Access.

Essential/recommended readings

1. M. Morris Mano, *Computer System Architecture*, 3rd edition, Pearson Education, 2017.
2. Linda Null, Julia Lobur, *Essentials of Computer Organization and Architecture*, 5th Edition, 2019.

Additional References

1. D. Comer, *Essentials of Computer Architecture,* 2nd edition, CRC Press, 2017.

Suggested Practical List (If any): (30 Hours)

Practical exercises such as

(Use Simulator – CPU Sim 3.6.9 or any higher version for the implementation)

1. Create a machine based on the following architecture:

Registers

IR	DR	AC	AR	PC	I	E
16 bits	16 bits	16 bits	12 bits	12 bits	1 bit	1 bit

Memory 4096 words	

16 bits per word	Instruction format 15 12 11 0 Opcode | Address

Basic Computer Instructions

Memory Reference			Register Reference	
Symbol	Hex		Symbol	Hex
AND	0xxx	Direct Addressing	CLA	7800
ADD	1xxx		CLE	7400
LDA	2xxx		CMA	7200
STA	3xxx		CME	7100
			HLT	7001

Refer to Chapter-5 for a description of the instructions.

Design the register set, the memory, and the instruction set. Use this machine for the assignments in this section.

1. Implement fetch sequence
2. Write an assembly program to simulate the addition of two numbers when one is stored in memory and another is entered by the user.
3. Write an assembly program to simulate addition of two numbers when both numbers are taken as inputs from user.
4. Write an assembly program to simulate subtraction of two numbers when one number is stored in memory and another is entered by the user.

5. Write an assembly program to simulate subtraction of two numbers when both numbers are taken as inputs from user

6. Write an assembly program to simulate the following logical operations on two user-entered numbers.

i.AND

ii.OR

iii.NOT

7. Write an assembly language program to simulate the machine for following register reference instructions and determine the contents of AC, E, PC, AR and IR registers in decimal after the execution:

i. CLE

ii. CLA

iii. CMA

iv. CME

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

1. Implement fetch sequence
2. Write an assembly program to simulate the addition of two numbers when one is stored in memory and another is entered by the user.
3. Write an assembly program to simulate addition of two numbers when both numbers are taken as inputs from user.
4. Write an assembly program to simulate subtraction of two numbers when one number is stored in memory and another is entered by the user.

5. Write an assembly program to simulate subtraction of two numbers when both numbers are taken as inputs from user

6. Write an assembly program to simulate the following logical operations on two user-entered numbers.

i.AND

ii.OR

iii.NOT

7. Write an assembly language program to simulate the machine for following register reference instructions and determine the contents of AC, E, PC, AR and IR registers in decimal after the execution:

i. CLE

ii. CLA

iii. CMA

iv. CME

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE : Data Mining-I

-

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Data Mining - I	4	3	0	1	Passed 12th class with Mathematics	Programming using Python

Learning Objectives

This course aims to introduce data mining techniques and their application on real-life datasets. The students will learn to pre-process the dataset and make it ready for application

of data mining techniques. The course will focus on three main techniques of data mining i.e. Classification, Clustering and Association Rule Mining. Different algorithms for these techniques will be discussed along with appropriate evaluation metrics to judge the performance of the results delivered.

Learning outcomes

On successful completion of the course, students will be able to:

- Pre-process the data for subsequent data mining tasks
- Apply a suitable classification algorithm to train the classifier and evaluate its performance.
- Apply appropriate clustering algorithm to cluster the data and evaluate clustering quality
- Use association rule mining algorithms and generate frequent item-sets and association rules

SYLLABUS

Unit 1 (8 hours)

Introduction to Data Mining: Motivation and Challenges for data mining, Types of data mining tasks, Applications of data mining, Data measurements, Data quality, Supervised vs. unsupervised techniques

Unit 2 (9 hours)

Data Pre-Processing: Data aggregation, sampling, dimensionality reduction, feature subset selection, feature creation, variable transformation.

Unit 3 (11 hours)

Cluster Analysis: Basic concepts of clustering, measure of similarity, types of clusters and clustering methods, K-means algorithm, measures for cluster validation, determine optimal number of clusters

Unit 4 (8 hours)

Association Rule Mining: Transaction data-set, frequent itemset, support measure, rule generation, confidence of association rule, Apriori algorithm, Apriori principle

Unit 5 (9 hours)

Classification: Naive Bayes classifier, Nearest Neighbour classifier, decision tree, overfitting, confusion matrix, evaluation metrics and model evaluation.

Essential/recommended readings

1. Tan P.N., Steinbach M, Karpatne A. and Kumar V. *Introduction to Data Mining,* 2nd edition, Pearson, 2021.
2. Han J., Kamber M. and Pei J. *Data Mining: Concepts and Techniques*, 3rd edition, 2011, Morgan Kaufmann Publishers.
3. Zaki M. J. and Meira J. Jr. *Data Mining and Machine Learning: Fundamental Concepts and Algorithms*, 2nd edition, Cambridge University Press, 2020.

Additional References

1. Aggarwal C. C. *Data Mining: The Textbook*, Springer, 2015.

2. Dunham M. *Data Mining: Introductory and Advanced Topics,* 1st edition, Pearson Education India, 2006.

Recommended Datasets for :

Classification: Abalone, Artificial Characters, Breast Cancer Wisconsin (Diagnostic)

Clustering: Grammatical Facial Expressions, HTRU2, Perfume data

Association Rule Mining: MovieLens, Titanics

Suggested Practicals List (If any): (30 Hours)

Practical exercise such as

1. Apply data cleaning techniques on any dataset (e,g, wine dataset). Techniques may include handling missing values, outliers, inconsistent values. A set of validation rules can be prepared based on the dataset and validations can be performed.
2. Apply data pre-processing techniques such as standardization/normalization, transformation, aggregation, discretization/binarization, sampling etc. on any dataset
3. Run Apriori algorithm to find frequent itemsets and association rules on 2 real datasets and use appropriate evaluation measures to compute correctness of obtained patterns
   a) Use minimum support as 50% and minimum confidence as 75%
   b) Use minimum support as 60% and minimum confidence as 60 %

4. Use Naive bayes, K-nearest, and Decision tree classification algorithms and build classifiers on any two datasets. Divide the data set into training and test set. Compare the accuracy of the different classifiers under the following situations:
   I. a) Training set = 75% Test set = 25% b) Training set = 66.6% (2/3rd of total), Test set = 33.3%
   II. Training set is chosen by i) hold out method ii) Random subsampling iii) Cross-Validation. Compare the accuracy of the classifiers obtained.

   Data is scaled to standard format.
5. Use Simple K-means algorithm for clustering on any dataset. Compare the performance of clusters by changing the parameters involved in the algorithm. Plot MSE computed after each iteration using a line plot for any set of parameters.

Project: Students should be promoted to take up one project on any UCI/kaggle/data.gov.in or a dataset verified by the teacher. Preprocessing steps and at least one data mining technique should be shown on the selected dataset. This will allow the students to have a practical knowledge of how to apply the various skills learnt in the subject for a single problem/project.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Computer Science Courses for Undergraduate Programme of study with Computer Science discipline as one of the two Core Disciplines
(For e.g. courses for B.A. Programmes with Computer Science as Non-major Discipline)

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSC03: Computer System Architecture	**4**	**3**	**0**	**1**	**Passed 12th class with Mathematics**	NIL

Learning Objectives

This course introduces students to the fundamental concepts of digital computer organization, design, and architecture. It aims to develop a basic understanding of the building blocks of a computer system and highlights how these blocks are organized together to architect a digital computer system.

Learning outcomes

On successful completion of the course, students will be able to:

- Design combinatorial circuits using basic building blocks. Simplify these circuits using Boolean algebra and Karnaugh maps. Differentiate between combinational circuits and sequential circuits.
- Represent data in binary form, convert numeric data between different number systems, and perform arithmetic operations in binary.
- Determine various stages of the instruction cycle and describe interrupts and their handling.
- Explain how the CPU communicates with memory and I/O devices.
- Simulate the design of a basic computer using a software tool.

SYLLABUS OF DSC-3

Unit 1 (9 hours)

Digital Logic Circuits: Digital Logic Gates, Flip flops and their characteristic table, Logic circuit simplification using Boolean algebra and Karnaugh map, Don't care conditions, Combinational circuits, Introduction to Sequential Circuits

Unit 2 (7 hours)

Digital Components: Decoders, Encoders, Multiplexers, Binary Adder, Binary Adder Subtractor, Binary Incrementor, Registers, and Memory Units

Unit 3 (13 hours)

Data Representation: Binary representation of both numeric and alphanumeric data, representation of numeric data in different number systems, (Binary, Octal, Decimal and Hexadecimal), conversion from one number system to another, complements, representation of signed and unsigned numbers, addition and subtraction of signed and unsigned numbers and overflow detection.

Unit 4 (9 hours)

Basic Computer Organization and Design: Stored program organization, Computer registers, Instruction set and their completeness, Instruction cycle, Memory reference instructions, Register reference instructions, Input- Output reference instructions, Interrupt cycle, Addressing modes.

Unit 5 (7 hours)

Input-Output Organization: I/O interface, I/O vs. Memory Bus, Isolated I/O, Memory Mapped I/O, Direct Memory Access.

Essential/recommended readings

1. M. Morris Mano, *Computer System Architecture*, 3rd edition, Pearson Education, 2017.
2. Linda Null, Julia Lobur, *Essentials of Computer Organization and Architecture*, 5th Edition, 2019.

Additional References

3. D. Comer, *Essentials of Computer Architecture,* 2nd edition, CRC Press, 2017.

Suggested Practical List (If any): (30 Hours)

Practical exercises such as

(Use Simulator – CPU Sim 3.6.9 or any higher version for the implementation)

1. Create a machine based on the following architecture:

Registers

IR	DR	AC	AR	PC	I	E
16 bits	16 bits	16 bits	12 bits	12 bits	1 bit	1 bit

Memory 4096 words 16 bits per word	Instruction format 15 12 11 0

	Opcode	Address

Basic Computer Instructions

Memory Reference			Register Reference	
Symbol	Hex		Symbol	Hex
AND	0xxx	Direct Addressing	CLA	7800
ADD	1xxx		CLE	7400
LDA	2xxx		CMA	7200
STA	3xxx		CME	7100
			HLT	7001

Refer to Chapter-5 for a description of the instructions.

Design the register set, the memory, and the instruction set. Use this machine for the assignments in this section.

1. Implement fetch sequence
2. Write an assembly program to simulate the addition of two numbers when one is stored in memory and another is entered by the user.
3. Write an assembly program to simulate addition of two numbers when both numbers are taken as inputs from user.
4. Write an assembly program to simulate subtraction of two numbers when one number is stored in memory and another is entered by the user.
5. Write an assembly program to simulate subtraction of two numbers when both numbers are taken as inputs from user
6. Write an assembly program to simulate the following logical operations on two user-entered numbers.

i.AND

ii.OR

iii.NOT

7. Write an assembly language program to simulate the machine for following register reference instructions and determine the contents of AC, E, PC, AR and IR registers in decimal after the execution:

i. CLE

ii. CLA

iii. CMA

iv. CME

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DEPARTMENT OF OPERATIONAL RESEARCH

B.SC. (HONS) OPERATIONAL RESEARCH

Category I

DISCIPLINE SPECIFIC CORE COURSE – 7: CONVEX AND DISCRETE OPTIMIZATION

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Convex and Discrete Optimization (DSC-7)	4	3	1	0	Passed 12th class with Mathematics	Linear Programming

Learning Objectives:

- To impart knowledge about the formulations and solution techniques of integer linear and multi-objective goal programming problems.

Learning Outcomes:

On successful completion of the course, students will be able to:

- Identify different types of optimization problems which occur in real life and their characteristics.
- Explain the theoretical concepts related to unconstrained optimization problems and demonstrate optimality conditions and solution approaches for them.
- Develop the concepts of a multi-objective programming problem and demonstrate its solution using goal programming.
- Formulate real-life problems as integer linear programming problems and solve them using Branch and Bound method.

SYLLABUS OF DSC-7

Unit I: Unconstrained Optimization **(8 Hours)**

Single and multiple variable problems, Necessary and sufficient conditions for finding extrema, Solution methods: Bisection, Newton, Golden section, Gradient search.

Unit II: **Convex Functions** **(12 Hours)**

Local and global maxima/minima for functions of one and two variables, inflection point, positive/negative definite and semi-definite matrices, convex/concave functions, and their properties, Verifying convexity/concavity through a Hessian matrix.

Unit III: Goal Programming **(12 Hours)**

Goal Programming: Basics of goal programming, Weighted and pre-emptive goal programming, Formulation of a goal programming problem, Graphical solution method, Modified Simplex method.

Unit IV: Integer Linear Programming **(13 Hours)**

Introduction to Integer linear programming problem (ILPP), Pure ILPP, Mixed ILPP, and 0-1 ILPP, Applications of ILPP: Capital budgeting, problem Fixed charge problem, Travelling salesman problem, Media allocation, Knapsack problem, Gomory's cutting plane method, Branch and bound method.

DISCIPLINE SPECIFIC CORE COURSE – 8: ADVANCED CALCULUS

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Advanced Calculus (DSC-8)	4	3	1	0	Passed 12th class with Mathematics	Calculus

Learning Objectives

The Learning Objectives of this course are as follows:

- To acquaint the students with the advanced concepts in Calculus
- To make the students learn effective methods of calculus
- To make the student understand the quantitative change in the behaviour of the variables and apply them on the problems related to Operational Research domain

Learning Outcomes

On successful completion of the course, students will be able to:

- Understand the concepts of function of one variable to functions of two or more variables.
- Evaluate double integral based problems
- Analyse integration based problems in real life cases.
- Understand Calculus.

SYLLABUS OF DSC-8

Unit I: Differential calculus **(15 Hours)**

Function of Two Variables, Limits and continuity, Partial differentiation, Total differential, Approximation, Higher order partial derivative, Homogeneous Function, Taylor's Theorem for

two variables, Maxima and Minima for functions of Two Variables, Lagrange Multiplier and Constrained optimization.

Unit II: Integral calculus **(10 Hours)**
Double Integral, Double Integration over rectangular and nonrectangular regions, Change of variables in integrals.

Unit III: Differential equations **(20 Hours)**
Order and degree of a differential equation, Exact differential equations, Differential equations of first order and first degree, Higher Order Differential Equations: Homogeneous linear differential equations of order n with constant coefficients, The Cauchy-Euler's equation of order n, Method of variation of parameters, Application of differential equations to operational research problems.

Practical component (if any) – Nil

DISCIPLINE SPECIFIC CORE COURSE – 9: QUEUING THEORY

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Queuing Theory (DSC-9)	4	3	0	1	Passed 12th class with Mathematics	Probability and Statistics

Learning Objectives

The Learning Objectives of this course are as follows:

- To introduce queuing (waiting lines) models and their applications in real-life situations.
- To provide necessary mathematical support and confidence to the students to tackle real life problems.
- To make students learn both theory and applications of fundamental and advanced models in this field.

Learning outcomes

On successful completion of the course, students will be able to:

- Understand the concepts of stochastic processes, Markov processes, Markov chains and apply these in analysing queuing systems.
- Understand the concepts and analyse the mathematical theory related to queuing systems.
- Analyse and compute quantitative measures of performance for queuing systems.
- Apply and extend queuing models to analyse real world systems.

SYLLABUS OF DSC-9

Unit I: Queueing systems **(6 Hours)**

Basic characteristics, measures of performance and Kendall's notation. Little's formula, traffic intensity.

Unit II: Stochastic processes **(10 Hours)**

Definition and classification on the basis of state and parameter space. Markov chain: definition, transition probability matrix (TPM), classification of states. Continuous-time

Markov chains: Poisson process (definition and its relationship with exponential distribution), pure birth process and pure death process.

Unit III: Markovian queueing models **(20 Hours)**

General birth-death processes, single-server queue (M/M/1), multi-server queue (M/M/c), queue with finite capacity (M/M/c/K), Erlang's loss formula (M/M/c/c), queues with unlimited service (M/M/∞), finite-source queues, queues with impatience (M/M/1 with balking and M/M/1 with reneging).

Unit IV: Decision problems in queueing theory **(9 Hours)**

Descriptive and prescriptive modeling, performance measures of decision-making, queueing design problems, queueing control problems.

Practical component (if any) – **(30 Hours)**

- Finding measures of performance for deterministic queuing system.
- Finding measures of performance for M/M/1 queuing system with infinite capacity.
- Finding measures of performance for M/M/1 queuing system with finite capacity.
- Finding measures of performance for M/M/c queuing system with infinite capacity.
- Finding measures of performance for M/M/c queuing system with finite capacity.
- Finding measures of performance for any Markovian queuing system with multiple servers and with finite/infinite capacity.

Essential/recommended readings

DISCIPLINE SPECIFIC CORE COURSE – 5: Mathematical Modelling for Business

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Mathematical Modelling for Business (DSC-5)	4	3	0	1	Passed 12th class with Mathematics	Linear Programming

Learning Objectives

To acquaint students with different mathematical modelling techniques applicable in various businesses viz., inventory control, marketing management, and network flow analysis.

Learning outcomes

On successful completion of the course, students will be able to:

- Explain the meaning of Inventory control, its various forms, and the functional role of Inventory.
- Calculate the Economic Order Quantity (EOQ) for various Deterministic Inventory models.
- Comprehend inventory models with All Units Quantity Discounts
- Gain an understanding of the basic concepts and issues in marketing and their application in business decisions.
- Gain an understanding of network analysis and related mathematical models.
- Use standard methodologies for solving network flow problems.

SYLLABUS OF DSC-5

Unit I: Introduction to Inventory Management **(18 Hours)**

Concept and significance of inventory management, Different types of costs in the inventory system. Deterministic continuous review models: Economic order quantity (EOQ) model with and without shortages, Finite replenishment rate Inventory models without and with planned shortages. Determination of reorder point for all the models. Inventory models with All Units Quantity Discounts.

Unit II: Fundamentals for Marketing Management **(15 Hours)**

Nature, Scope, and Importance of Marketing, Basic concepts, Marketing Environment, Consumer Behaviour, Market Classification based on Competitive Conditions, Product Mix, Pricing Strategies, Media allocation for advertisement, Brand switching analysis, Concept of Measurement of Elasticity of Demand, Factors Affecting Elasticity of Demand, Income Elasticity of Demand, Cross Elasticity of Demand, Advertising Elasticity of Demand.

Unit III: Network Analysis **(12 Hours)**

Understanding of network components, Construction of network diagram, Introduction to Network flow problems and their applications: Shortest path problem, Travelling salesman problem, minimum spanning tree.

Practical component (if any) - **(30 Hours)**

Practical/Lab to be performed on a computer using OR/Statistical packages

- To find optimal inventory policy for deterministic inventory models without shortages.
- To find optimal inventory policy for deterministic inventory models without shortages.
- To solve all units quantity discounts model.
- Finding shortest path in a network.
- Solving a travelling salesman problem.
- Finding minimum spanning tree in a network.
- Problems based on media allocation for advertisement.
- Problems based on Brand switching analysis.

Essential/recommended readings

DISCIPLINE SPECIFIC CORE COURSE – 6: Python Programming

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Python Programming (DSC-6)	4	3	0	1	Passed 12th class with Mathematics	Nil

Learning Objectives

The Learning Objectives of this course are as follows:

- To introduce the basic concepts of Python programming. The course will familiarize the students with Python's ability to handle different data formats such as numbers, strings, lists, dictionaries, sets, tuples, etc.
- The students will be made familiar with the concepts of loops. Modularization of code using inbuilt functions as well as user defined functions will also be explained.
- To introduce the basics for various useful libraries so as to equip the students with modern computing skills.

Learning outcomes

On successful completion of the course, students will be able to:

- Learn Python installation and configuration.
- Understand simple scripting using Python.
- Learn Syntax and Semantics of Python Programming.
- Understand different data types and arithmetical, logical and relational expressions in Python.
- Understand the control structures and functions in Python by writing codes for some real-world problems.
- Handle simple data structures, lists, dictionaries, sets and tuples.
- Modularize the code using inbuilt functions and user defined functions.
- Handle various managerial decision making related problems

SYLLABUS OF DSC-6

Unit I: Introduction **(6 Hours)**

Python installation, Basic Terminal Commands, interactive mode and script mode, Structure of a Program, Simple Python Script Writing, script execution, debugging errors and understanding simple programs in Python

Unit II: Understanding Control Statements **(6 Hours)**
Identifiers and keywords; literals, numbers, and strings; Operators and expressions; Input and Output statements; control structures (conditional statements, loop control statements, break, Continue and pass).

Unit III: Functions **(10 Hours)**
Introduction to Functions and its definition: Modules, built in and user-defined functions, passing arguments and returning values, default arguments, functions as data.

Unit IV: Data Structures **(10 Hours)**
Data Structures like; Strings, Lists, Tuples, Sets, Dictionaries, Analysing their functions and basic operations.

Unit V: Advance Libraries **(13 Hours)**
Introduction to Core Libraries in Python : Numpy Library for Arrays (Creating and accessing One and Multi-Dimensional Array), Pandas Library for Data Processing (Basics of DataFrame), Matplotlib Library for Visualization (Pie Chart, Scatter Plot, Histogram, Bar Chart)

Practical component (if any) – **(30 Hours)**

- Write a program to enter a name and display: "Hello, Name".
- Write a program to compute the roots of a quadratic equation.
- Write a program to print a pyramid **pattern** with 8 rows.
- Write a menu driven program to enter a number and print whether the number is odd or even.
- Write a program to build a **random number generator** that generates random numbers between 1 and 6 (simulates a dice).
- Write a program that takes two **lists** and returns "True" if they have at least one common member.
- Write a program to check if one **list** is reverse of another.
- Write a program to check if a given **array** is Monotonic.
- Write a program to find the maximum number out of 3 entered numbers. **(loop)**
- Write a program to build a menu driven **calculator** and perform basic arithmetic operations between two numbers. (Addition, Subtraction, Multiplication and Division)
- Write a program to create a **dictionary** and remove one key.
- Write a program to enter 5 subject's marks and print the grades A/B/C/D. **(loop)**
- Write a program to print a Fibonacci sequence. **(loop)**
- Write a program in python to plot a **graph** for the function $y = x^2$.
- Programmes related to creating and modifying List, Tuple and Dictionary.
- Programmes to find correlation between dependent and independent variables.
- Programme to develop a regression model on an existing data set.
- Programmes for data visualization (Charts using plot() function, Pie Chart, Scatter Plot, Histogram, Bar Chart)
- Solution to deterministic EOQ based models for Inventory Management

Mathematical Modelling for Business (DSC-3)	4	3	0	1	Passed 12th class with Mathematics	Linear Programming

Learning Objectives

To acquaint students with different mathematical modelling techniques applicable in various businesses viz., inventory control, marketing management, and network flow analysis.

Learning outcomes

On successful completion of the course, students will be able to:

- Explain the meaning of Inventory control, its various forms, and the functional role of Inventory.
- Calculate the Economic Order Quantity (EOQ) for various Deterministic Inventory models.
- Comprehend inventory models with All Units Quantity Discounts
- Gain an understanding of the basic concepts and issues in marketing and their application in business decisions.
- Gain an understanding of network analysis and related mathematical models.
- Use standard methodologies for solving network flow problems.

SYLLABUS OF DSC-5

Unit I: Introduction to Inventory Management **(18 Hours)**

Concept and significance of inventory management, Different types of costs in the inventory system. Deterministic continuous review models: Economic order quantity (EOQ) model with

and without shortages, Finite replenishment rate Inventory models without and with planned shortages. Determination of reorder point for all the models. Inventory models with All Units Quantity Discounts.

Unit II: Fundamentals for Marketing Management (15 Hours)

Nature, Scope, and Importance of Marketing, Basic concepts, Marketing Environment, Consumer Behaviour, Market Classification based on Competitive Conditions, Product Mix, Pricing Strategies, Media allocation for advertisement, Brand switching analysis, Concept of Measurement of Elasticity of Demand, Factors Affecting Elasticity of Demand, Income Elasticity of Demand, Cross Elasticity of Demand, Advertising Elasticity of Demand.

Unit III: Network Analysis (12 Hours)

Understanding of network components, Construction of network diagram, Introduction to Network flow problems and their applications: Shortest path problem, Travelling salesman problem, minimum spanning tree.

Practical component (if any) - (30 Hours)

Practical/Lab to be performed on a computer using OR/Statistical packages

- To find optimal inventory policy for deterministic inventory models without shortages.
- To find optimal inventory policy for deterministic inventory models without shortages.
- To solve all units quantity discounts model.
- Finding shortest path in a network.
- Solving a travelling salesman problem.
- Finding minimum spanning tree in a network.
- Problems based on media allocation for advertisement.
- Problems based on Brand switching analysis.

Suggestive readings: Nil

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

CATEGORY-V (a)

COMMON POOL OF DISCIPLINE SPECIFIC ELECTIVES (DSE) COURSES
BSc. Physical Sciences/ Mathematical Sciences with Operational Research as one of the three Core Disciplines

DISCIPLINE SPECIFIC ELECTIVE (DSE): SIMULATION MODELLING & APPLICATIONS

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Simulation Modelling and Applications (DSE-1(a))	4	3	0	1	Passed 12th class with Mathematics	Probability and Statistics

Learning Objectives

The Learning Objectives of this course are as follows:

- To acquaint students with the fundamentals of Simulation modelling
- Develop the students' analytical skills
- Introduce simulation techniques applicable in different situations

Learning outcomes

On successful completion of the course, students will be able to:

- Know the basics of simulation modelling and its scope.
- Gain knowledge of Event Type Simulation and its applications in real life.
- Understand the various methods of random number generation.
- Understand and use Monte Carlo Simulation.
- Apply Simulation Technique in Inventory Control, Queuing Systems.
- Use Simulation in Finance and Investment, Maintenance Problems and Networks.

SYLLABUS OF DSE-1(a)

Unit I: Introduction to Simulation **(18 Hours)**

What is Simulation, Process of Simulation, Advantages and Limitations of Simulation, Classification of Simulation Models, Continuous Event Type Simulation, Discrete Event Simulation: Components and Organization, Application of discrete event simulation in single server queueing system, inventory model and insurance risk model.

Unit II : Random Number Generation **(12 Hours)**

Pseudo Random Number Generators – Mixed Congruence Method, Multiplicative Congruential Method, Additive Congruential Method, the inverse transform method, Discrete and Continuous Distributions, Box Muller Method.

Unit III: Applications in Inventory and Queuing **(9 Hours)**

Monte Carlo Simulation, Application of Simulation in Inventory Control, Simulation of Queueing Systems.

Unit IV: Applications in Project Management **(6 Hours)**

Simulation of Maintenance Problems, Applications of Simulation in Finance and Investment, Simulation of Job Sequencing, Simulation of Networks.

Practical component (if any) – **(30 Hours)**

Practical/Lab to be performed on a computer using OR/Statistical packages

- Modelling randomness in Excel: Pseudo Random Number generators
- Generation of U (0,1)
- Simulating M/M/1 Queues
- Monte Carlo Simulation
- Simulation in Inventory Control
- Forecasting using Simulation
- Simulation in Queueing System using Monte Carlo Simulation
- Simulation in Finance and Investment

Essential/recommended readings

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVE (DSE): PRODUCTION AND OPERATIONS MANAGEMENT

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Production and Operations Management (DSE-1(b))	4	3	1	0	Passed 12th class with Mathematics	Nil

Learning Objectives

The Learning Objectives of this course are as follows:

- To make students understand the strategic significance of Production and Operations Management in service and manufacturing organizations.
- To acquaint them with fundamental concepts, functions and applications of discipline, so as to deal with different types of problems faced by operations managers, and common decision-making approaches.

Learning Outcomes

On successful completion of the course, students will be able to:

- Gain an understanding of basic concepts of Production and Operations management and differentiate between them.
- Analyse the factors affecting Facility Capacity, Location, and Layout.
- Understand the Production planning and Material Requirement Planning techniques.
- Comprehend basic concepts in Just in time (JIT) Manufacturing System, Operations scheduling and Quality management.

SYLLABUS

Unit I: Introduction to Production and Operations Management (POM) (6 Hours)
Overview of Production System, Objectives of Operations Management, Scope of Operations Management, Types of Production Systems, Production Design Process and Process choices. Framework for Managing Operations; Strategic Operations Management.

Unit II: Facility Location, Layout and Capacity (12 Hours)
Factors Influencing Plant Location, Single Facility Location Problem, Multi Facility Location Problem, Models for Facility Location Problem. Facility Layout decision- importance and benefits of layout planning, different types of layouts. Capacity Planning – Measures of capacity, factors affecting demand forecasting and capacity planning, short and long-term capacity planning.

Unit III: Production Planning (12 Hours)
Aggregate planning, Master Production Schedule. Introduction to MRP and MRP II. Lot sizing in MRP systems – Lot for lot method, economic quantity method, periodic order quantity method, part period balancing, Wagner – Whitin approach. Introduction to modern productivity techniques – Just in Time (JIT), Kanban system. Inventory Control – basic concepts, Classification of Inventory System, EOQ Model.

Unit IV: Operations Scheduling and Quality Management (15 Hours)
Flow Shop Scheduling- Introduction, Single Machine Scheduling, n jobs m machines, Johnsons' rule. Quality Management: Introduction, Statistical process control, control charts, Total Quality Management (TQM), Six sigma, ISO 9000 and other ISO series.

Practical component (if any) –Nil

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVE : BUSINESS FORECASTING

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Business Forecasting	4	3	0	1	Passed 12th class with Mathematics	Probability and Statistics

Learning Objectives

The objective of this course is to introduce both managerial and technical aspects of business forecasting to students and expose them to its practical applications.
The Learning Objectives of this course are as follows:

- To introduce both managerial aspect of business forecasting
- Develop the students' ability to understand the technical aspect for business forecasting and its applications
- Introduce various forecasting techniques helpful for better decision making

Learning outcomes

On successful completion of the course, students will be able to:

- Gain an understanding of key concepts of Business Forecasting and its applications.
- Develop analytical methodologies that make prediction of future events of interest to business and industry.
- Make well-informed decisions that require forecasting of relevant variables.
- Identify relevant information to support model selection in scenarios where issues of time series analysis are involved.
- Predict relationships among business and economic variables for supporting short-term and long-term planning.

SYLLABUS OF DSE-1(c)

Unit I: Introduction **(12 Hours)**

Introduction to Business Forecasting, Importance of forecasting, Different types of forecasting methods, Identification of appropriate technique for forecasting, Applications of forecasting methods in industry, Practical issues in forecasting.

Unit II: Time Series Modeling **(15 Hours)**

Time series and its components, modelling and forecasting trend, modelling and forecasting seasonality, characterising cycles in times series, forecasting cycles, Forecasting models with trend seasonality and cycle.

Unit III: Regression Modeling **(9 Hours)**

Simple linear regression and multiple linear regression models and their applications in business.

Unit IV: Some Related Concepts **(9 Hours)**

Stationary and non-stationary time series, Autoregressive (AR) Forecasting model, Moving average (MA) model, Autoregressive moving average model (ARMA), Autoregressive integrated moving average (ARIMA) model, Random walk model. Applications of these models in business.

Practical component (if any) – **(30 Hours)**

Practical/Lab to be performed on a computer using OR/Statistical packages

- Plot and visualize time series data.
- Fitting of trend by using Method of semi averages.
- Fitting of trend by Moving Average Method.
- Measurement of Seasonal indices using method of simple average.
- Measurement of Seasonal indices using Ratio-to-Trend method.
- Measurement of Seasonal indices using Ratio-to-Moving Average method.
- Measurement of seasonal indices using Link Relative method.
- To find cyclical variations using percentage of trend method and relative cyclical residual method.
- Fitting a simple linear regression model for forecasting.
- Fitting a multiple linear regression model for forecasting.

Numerical Analysis

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Numerical Analysis (DSE-1(b))	4	3	0	1	12th class with Mathematics	Nil

Learning Objectives

The Learning Objectives of this course are as follows:

- To acquaint students with the techniques that uses algorithms for approximation problems.
- Develop the students' ability to use various numerical method techniques
- To make the students formulate and apply appropriate strategy to solve real world problems.

Learning outcomes

On successful completion of the course, students will be able to:

- Know the basic elements of numerical methods and error analysis
- Learn Iterative methods for finding the roots of the algebraic and transcendental equations
- Apply the numerical methods to solve system of linear equations and understand the methods convergence analysis.
- Understand the concepts of finite differences, derive the interpolation formulae and understand its applications.

SYLLABUS OF DSE-1(b)

Unit I **(12 Hours)**

Errors: Relative Error, Absolute Error, Round off Error, Truncation Error. Transcendental and Polynomial equations: Bisection method, Newton-Raphson method, Secant method. Method of False Position, Fixed point iterative method, Order and rate of convergence of these methods.

Unit II **(9 Hours)**

System of linear equations: Gauss Elimination and Gauss Jordan methods. Gauss Jacobi method, Gauss Seidel method and their convergence analysis.

Unit III **(9 Hours)**

Interpolation: Lagrange Interpolating Polynomial, Newton's Gregory forward and backward difference interpolating polynomial, Newton's Divided Difference Interpolating Polynomial, Error analysis in each method.

Unit IV **(15 Hours)**

Numerical Integration: Trapezoidal rule, Composite Trapezoidal rule, Simpson's rule, Composite Simpson's rule, Simpsons 3/8th rule. Ordinary Differential Equations: Euler's method, Modified Euler's method, Runge-Kutta method

Practical component (if any) – **(30 Hours)**

Practical/Lab to be performed on a computer using OR/Statistical packages for developing the following numerical programs:

1. Bisection method
2. Newton Raphson method
3. Secant method
4. Regula Falsi method
5. LU decomposition method
6. Gauss-Jacobi method
7. Gauss-Seidel method
8. Lagrange interpolation
9. Newton interpolation
10. Trapezoidal rule
11. Simpson's rule
12. Euler's method

CATEGORY-VI

COMMON POOL OF GENERIC ELECTIVES (GE) COURSES

GENERIC ELECTIVES (GE): QUEUING AND RELIABILITY THEORY

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Queuing and Reliability Theory	4	3	0	1	Passed 12th class with Mathematics	Probability and Statistics

Learning Objectives

The Learning Objectives of this course are as follows:

- To make students understand the basic idea of random variables and their associated probability distributions as it is a prerequisite.
- To enrich students with the concept of stochastic processes and its applications in the field of queuing theory.
- To make students learn the mathematical theory of queuing systems.
- To introduce students with the concept of system reliability and make them learn to evaluate reliability of various system configurations.
- To provide students hands-on experience of the queuing and reliability models through practical sessions using certain software.

Learning outcomes

On successful completion of the course, students will be able to:

- Understand the concepts and mathematical theory related to queuing systems & system reliability required to understand, analyse and solve any real-world problem.

- Learn the concepts of stochastic processes, Markov processes, Markov chains and apply these mathematical models in real-life problems.
- Evaluate the performance metrics of any queuing system.
- Compute the system reliability of any type of system-configuration.
- Make use of software for problem analysis.

SYLLABUS

Unit I : Basic characteristics of a queueing system (12 Hours)
Kendall's notation, performance measures of a queueing system, Little's formula, Traffic intensity, Some general results for G/G/1 and G/G/c queueing models, Introduction to stochastic processes, Markov chain and Markov process, pure-birth process, pure-death process, birth-death process.

Unit II: Markovian queuing models (15 Hours)
single & multiple servers, finite & infinite system capacity, and finite & infinite population size, Cost analysis, Applications of queuing theory.

Unit III: Basic tools of Reliability (9 Hours)
Reliability function, and related concepts like hazard rate, mean time to failure (MTTF), classes of lifetime distributions, and hazard rate of Exponential and Weibull distributions.

Unit IV: System Reliability (9 Hours)
Reliability, hazard rate and MTTF of various system configurations- series, parallel, mixed configuration, k out of n system and stand-by system.

Practical component (if any) – (30 Hours)
Practical/Lab to be performed on a computer using OR/Statistical packages

- Finding measures of performance for deterministic queuing system.
- Finding measures of performance for M/M/1 queuing system with infinite capacity.
- Finding measures of performance for M/M/1 queuing system with finite capacity.
- Finding measures of performance for M/M/c queuing system with infinite capacity.
- Finding measures of performance for M/M/c queuing system with finite capacity.
- Finding measures of performance for any Markovian queuing system with multiple servers and with finite/infinite capacity.
- Measuring reliability of different types of system configuration.
- Measuring reliability, hazard rate and MTTF of different types of system configuration.

DEPARTMENT OF STATISTICS
B. Sc. (H) Statistics
Category-I

DISCIPLINE SPECIFIC CORE COURSE-7: SAMPLE SURVEYS

CREDIT DISTRIBUTION, ELIGIBILITY, AND PRE-REQUISITES OF THE COURSE

Course title & code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Sample Surveys	4	3	0	1	Passed Class XII with Mathematics	Descriptive Statistics and probability theory

Learning Objectives:

The learning objectives of this course are to introduce:

- Tools and techniques for selecting a representative sample from a target population keeping in mind the objectives to be fulfilled.
- Obtain an estimator of the population parameter on the basis of the selected sample and study its properties.

Learning Outcomes:

After successful completion of this course, students should be able to:

- Understand the fundamental concepts of population and sample and the principles of sample survey
- Describe the value and methodologies for sample surveys versus other approaches to collecting information from populations.
- Determine the appropriate sample size and its allocation for nationwide sample surveys or for surveys to be conducted in a program area.
- Identify a proper sampling frame and select primary sample points.
- Apply steps involved in selecting a sample using Simple Random Sampling with or without replacement, Stratified Sampling, Systematic Sampling and Ratio and Regression Methods of Estimation

SYLLABUS OF DSC-7

Theory

UNIT I **(10 Hours)**

Basics of Survey Sampling

Concept of population and sample, complete enumeration versus sampling, sampling and non-sampling errors. Types of sampling: non-probability and probability sampling, basic principles of sample survey, Steps involved in survey sampling.

UNIT II **(8 Hours)**

Simple Random Sampling

Simple random sampling (SRS) with and without replacement, their properties, procedures of selecting a simple random sample, estimation of population mean and total, sampling for proportions, determination of sample size, bivariate population.

UNIT III **(10 Hours)**

Stratified Random Sampling

Stratified Random Sampling: Estimation of population mean and total, Allocation of sample in different strata using equal, proportional, optimum and Neyman allocations, comparison with SRS, practical difficulties in adopting Neyman allocation, estimation of gain in precision due to stratification.

UNIT IV **(7 Hours)**

Systematic Random Sampling

Systematic Random Sampling: Estimation of population mean and total, comparison with SRS and stratified sampling in the presence of linear trend, Yates' correction, definition of circular systematic sampling.

UNIT V **(10 Hours)**

Ratio and Regression Method of Estimation

Ratio method of estimation, first approximation to ratio estimator and its bias, first approximation to variance of ratio estimator, estimator of variance of ratio estimator, comparison of ratio with SRS.

Regression method of estimation, first approximation to linear regression estimator and its bias, first approximation to variance of the linear regression estimator, estimator of variance of the linear regression estimator, comparison with SRS and ratio estimator.

Practical -30 Hours

List of Practicals :

1. To select SRS with and without replacement.
2. For a population of size 5, estimate population mean, population mean square and population variance. Enumerate all possible samples of size 2 by WR and establish all properties relative to SRS.
3. For a population of size 5, estimate population mean, population mean square and population variance. Enumerate all possible samples of size 2 by WOR and establish all properties relative to SRS.
4. Estimate mean, standard error and the sample size for SRSWOR.
5. Stratified Sampling: allocation of sample to strata by proportional. Compare the efficiencies of above method relative to SRS.
6. Stratified Sampling: allocation of sample to strata by Neyman's methods. Compare the efficiencies of above method relative to SRS.
7. Estimation of gain in precision in stratified sampling.
8. Comparison of systematic sampling with stratified sampling and SRS in the presence of a linear trend and using end's correction.
9. Ratio estimation: Calculate the population mean or total of the population. Calculate mean squares. Compare the efficiency of ratio estimator relative to SRS.
10. Regression estimation: Calculate the population mean or total of the population.
11. Calculate mean squares. Compare the efficiency of regression estimator relative to SRS.

Practical work to be conducted using electronic spreadsheet / EXCEL/ Statistical Software Package/ SPSS/ calculators.

DISCIPLINE SPECIFIC CORE COURSE-8: ADVANCED PROBABILITY DISTRIBUTIONS

CREDIT DISTRIBUTION, ELIGIBILITY, AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the Course			Eligibility Criteria	Pre-requisite of the Course (if any)
		Lecture	Tutorial	Practical/ Practice		
Advanced Probability Distributions	4	3	0	1	Passed Class XII with Mathematics	Theory of probability distributions

Learning Objectives

The learning objectives of this course are as follows:

- The course introduces students to advanced discrete and continuous probability distributions, and their important characteristics.
- It will enable them to understand the applications of these distributions.

Learning Outcomes

After successful completion of this course, students should be able to:

- Understand important advanced discrete probability distributions and their properties.
- Understand and apply important advanced continuous probability distributions and their properties.
- Apply their understanding of these distributions in real-life problems related to different areas of statistics.

SYLLABUS OF DSC-8

Theory

UNIT I **(15 hours)**

Discrete Probability Distributions

Negative Binomial Distribution: Probability distribution, particular cases, moment generating function, cumulants, limiting case, derivation of moments from binomial distribution and recurrence relation for probabilities of negative binomial distribution. Examples and applications based on the distribution. Hypergeometric Distribution: Probability distribution, mean, variance, approximation to Binomial Distribution and recurrence relation. Examples and applications based on the distribution. Geometric Distribution: Probability distribution, lack of memory property, moments and moment generating function. Examples and applications based on the distribution. Multinomial Distribution: Probability distribution and practical application.

UNIT II **(15 hours)**

Continuous Probability Distributions

Rectangular or Uniform Distribution: Definition, probability distribution and cumulative probability distribution, moments, and moment generating function, characteristic function and mean deviation about mean. Examples and applications based on the distribution. Gamma Distribution: Definition and properties, probability distribution, mean, variance, moment generating function, cumulant generating function, additive property and limiting case. Examples and applications based on the distribution. Beta Distribution: Beta Distribution of the first kind: Definition, probability distribution and cumulative probability distribution, mean, variance and harmonic mean. Beta Distribution of the second kind: Definition, probability distribution, mean, variance and harmonic mean. Examples and applications based on the distributions.

UNIT III **(15 hours)**

Continuous Probability Distributions (contd.)

Exponential Distribution: Definition, probability distribution and cumulative probability distribution, moment generating function, mean, variance and lack of memory property. Examples and applications based on the distribution. Standard Laplace (Double Exponential) Distribution: Definition, probability distribution, characteristic function and moments. Two Parameter Laplace Distribution: Definition, probability distribution, characteristic function and moments. Examples and applications based on the distribution. Weibull Distribution: Probability distribution, moments and practical applications. Logistic Distributions: Probability distribution, moments and practical applications. Cauchy Distribution: Definition, probability distribution, characteristics function, additive property and moments. Examples and applications based on the distribution.

PRACTICAL – 30 Hours

List of Practicals:

Practicals based on:

1. Application of Negative Binomial Distribution.

2. Fitting of Negative Binomial Distribution.
3. Application of Hypergeometric Distribution
4. Fitting of Geometric Distribution.
5. Lack of memory property of Geometric Distribution
6. Applications of
   (a) Geometric Distribution.
   (b) Multinomial Distribution.
   (c) Rectangular Distribution
   (d) Gamma Distribution
   (e) Beta Distribution.
   (f) Exponential Distribution.
   (g) Weibull Distribution.
   (h) Logistic Distribution.
   (i) Cauchy Distribution.
7. Lack of memory property of Exponential Distribution.

Practical work to be conducted using electronic spreadsheet / EXCEL/ Statistical Software Package/ SPSS.

DISCIPLINE SPECIFIC CORE COURSE – 9: MATHEMATICAL ANALYSIS

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Mathematical Analysis-DSC-09	4	3	0	1	**Passed Class XII with Mathematics**	Nil

Learning Objectives

The learning objectives include:

- To study Real Analysis, which deals with the analytical properties of real functions and sequences.
- To study Numerical Analysis, which is the study of algorithms that use numerical approximation for the problems of mathematical analysis.

Learning Outcomes:

After successful completion of this course, students should be able to:

· Understand the fundamental properties of real numbers and real-valued functions.
· Understand the Analytical properties of sequences.
· Apply Infinite series, their properties and different tests.
· Apply limits, continuity, differentiability, and mean value theorems.
· Use the fundamentals of numerical analysis, interpolation, numerical integration and difference equation.

SYLLABUS OF DSC-9

Theory

UNIT I **(10 hours)**

Set Theory and Sequences

Completeness: The Completeness property of R; Archimedean property in R; Neighbourhood and limit points: Neighbourhood, Open Set, Closed Set, Supremum and Infimum, Limit Point of a Set; Sequences: Definition of a Sequence, Convergent Sequence, Divergent Sequence, Oscillatory Sequence, Cauchy Sequence, Monotone Sequence.

UNIT II **(10 hours)**

Series

Infinite series, positive termed series and their convergence, Comparison test, D'Alembert's ratio test, Cauchy's n^{th} root test, Raabe's test. Gauss test, Cauchy's condensation test and integral test (Statements and Examples only). Absolute convergence of series, Conditional convergence.

UNIT III **(10 hours)**

Limit and Continuity

Review of limit, continuity and differentiability, uniform Continuity and boundedness of a function. Rolle's and Lagrange's Mean Value theorems. Taylor's theorem with Lagrange's and Cauchy's form of remainder (without proof). Taylor's and Maclaurin's series expansions of sin(x), cos(x), log (1+x).

UNIT IV (15 hours)

Numerical Methods

Factorial, finite differences and interpolation. Operators, E and divided difference. Newton's forward, backward and divided differences interpolation formulae. Lagrange's interpolation formulae. Gauss and Stirling interpolation formulae. Numerical integration. Trapezoidal rule, Simpson's one-third rule, three-eights rule, Stirling's approximation to factorial n. Solution of difference equations of first order, Euler Maclaurin's summation formula.

PRACTICAL/LAB WORK – (30 hours)

List of Practical:

Practicals based on:

1. Formation of difference table, fitting of polynomial and missing terms for equal interval of differencing.
2. Newton's Gregory forward difference interpolation formula.
3. Newton's backward difference interpolation formula.
4. Newton's divided difference and Lagrange's interpolation formula.
5. Gauss forward, Gauss backward central difference interpolation formula.
6. Stirling's central difference interpolation formula.
7. Lagrange's Inverse interpolation formula.
8. Method of successive approximation or iteration.
9. Method of reversion of series.
10. Trapezoidal Rule, Simpson's one-third rule, Simpson's three-eighth rule, Weddle's rule.
11. Euler-Maclaurin summation formula

Practical work to be conducted using electronic spreadsheet / EXCEL/ Statistical Software Package/ SPSS/ calculators.

B.SC. (P)/B.A(P) WITH STATISTICS AS MAJOR

Category II

DISCIPLINE SPECIFIC CORE COURSE – 1: SAMPLING DISTRIBUTIONS

CREDIT DISTRIBUTION, ELIGIBILITY, AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Sampling Distributions	4	3	0	1	**Passed Passed Class XII with Mathematics**	Statistical Methods

Learning Objectives:

The learning objectives include:

- To understand the concept of sampling distributions and their applications in statistical inference.
- To understand the process of hypothesis testing.
- To have a clear understanding of when to apply various tests of hypothesis about population parameters using sample statistics and draw appropriate conclusions from the analysis.

Learning Outcomes:

After successful completion of this course, students should be able to:

- Understand the basic concepts of hypothesis testing, including framing of the null and alternative hypotheses.
- Apply hypothesis testing based on a single sample and two samples using both classical and p-value approaches.
- Understand the Chi-square distribution.
- Analyze categorical data by using Chi-square techniques.
- Apply t and F distributions

SYLLABUS OF DSC-5

Theory

Unit I **(15 hours)**

Large sample tests

Large sample tests: Definitions of a random sample, parameter, and statistic, sampling distribution of a statistic, sampling distribution of the sample mean, standard errors of the sample mean, and the sample proportion. Null and alternative hypotheses, level of significance, Type I and Type II errors, their probabilities and critical region. Large sample tests, use of CLT for testing single proportion, difference of two proportions, single mean, difference of two means, standard deviation and difference of standard deviations by classical and p-value approaches.

Unit II **(15 hours)**

Chi-square distribution

Chi-square distribution: Definition and derivation of $\chi 2$ distribution with n degrees of freedom (d.f.) using m.g.f., nature of probability curve for different degrees of freedom, mean, variance, m.g.f., cumulant generating function, mode, additive property and limiting form of $\chi 2$ distribution. Tests of significance and confidence intervals based on χ^2 distribution.

Unit III **(15 hours)**

Exact Sampling Distributions

t and F distributions: Student's t and Fishers t-distributions, Derivation of its p.d.f., nature of probability curve with different degrees of freedom, mean, variance, moments and limiting form of t distribution. Snedecore's F-distribution: Derivation of F distribution, nature of probability curve with different degrees of freedom, mean, variance and mode. Distribution of $1/F(n_1,n_2)$. Relationship between t, F and $\chi 2$ distributions. Test of significance and confidence intervals based on t and F distributions.

PRACTICAL/LAB WORK - 30 hours

List of Practicals

1. Large Sample Tests:
   a) Testing of significance and confidence intervals for single proportion and difference of two proportions.
   b) Testing of significance and confidence intervals for single mean and difference of two means.
   c) Testing of significance and confidence intervals for difference of two standard deviations.
2. Tests based on Chi-Square Distribution:
   a) To test if the population variance has a specific value and its confidence intervals.
   b) To test the goodness of fit.
   c) To test the independence of attributes.
   d) Test based on 2 x 2 contingency table without and with Yates' corrections.
3. Tests based on t- Distribution and F- Distribution:
   a) Testing of significance and confidence intervals for single mean and difference of two means and paired t – test.
   b) Testing of significance and confidence intervals of an observed sample correlation coefficient.
   c) Testing and confidence intervals of equality of two population variances.

Practical work to be conducted using electronic spreadsheet / EXCEL/ Statistical Software Package/ SPSS/ calculators.

ESSENTIAL READINGS :

● Gupta, S. C. and Kapoor, V. K. (2020). Fundamentals of Mathematical Statistics, 12th Ed., S. Chand and Sons. Delhi.

DISCIPLINE SPECIFIC CORE COURSE – 6: STATISTICAL QUALITY CONTROL

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Statistical Quality Control	4	3	0	1	**Passed Class XII with Mathematics**	Statistical Methods

Learning Objectives

The learning objectives include:

- This course will help students to learn techniques and approaches of SQC being used in industry to manufacture goods and services of high quality at low cost.
- This course will also give exposure to sampling inspection plans.

Learning Outcomes:

After successful completion of this course, students should be able to:

- Comprehend the concept of Statistical Quality Control and its application in Industry.
- Apply Statistical process control tools- Control charts for variables, and attributes.
- Analyse different patterns of variation on Control charts
- Apply statistical product control tools- Sampling inspection plans.

SYLLABUS OF DSC-6

Theory

UNIT I: **(9 hours)**

Basics of Quality

Definition, dimensions of quality, its concept, application, and importance. Introduction to Process and Product Control. Statistical Process Control - Seven tools of SPC, Chance and Assignable Causes of quality variation.

UNIT II: **(21 hours)**

Statistical Control Charts

Construction and Statistical basis of 3-σ Control charts, Control charts for variables: $\underline{X}$& R-chart, $\underline{X}$ & s-chart. chart (for known and unknown parameters) Control charts for attributes:

np-chart, p-chart, c-chart (for known and unknown parameters). Revised control limits. Comparison between control charts for variables and control charts for attributes. Analysis of patterns on control chart. Differentiate between Control Limits, Specification Limits and Natural Tolerance Limits. Concept of process capability.

UNIT III: (15 hours)

Acceptance sampling plan

Principle of acceptance sampling plans. Single sampling plan its OC, AQL, LTPD, AOQ, AOQL, ASN, ATI functions with graphical interpretation. Introduction to Dodge and Romig's sampling inspection plan tables.

PRACTICAL/LAB WORK - (30 hours)

List of Practical:

1. Construction and interpretation of statistical control charts for
a) $\underline{X}$ and R-chart
b) $\underline{X}$ *and* s-chart
c) np-chart
d) p-chart
e) c-chart
2. Single sample inspection plan: Construction and interpretation of OC, AQL, LTPD, ASN, ATI, AOQ, AOQL curves.

Practical work to be conducted using electronic spreadsheet / EXCEL/ Statistical Software Package/ SPSS/ calculators.

ESSENTIAL READINGS

Discipline Specific Elective for B. Sc. (H) Statistics

DISCIPLINE SPECIFIC ELECTIVE COURSE-1A: Optimization Techniques

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Operational Research	4	3	0	1	**Passed Class XII with Mathematics**	**Nil**

Learning Objectives:

The learning objectives include:

- To create awareness about the term operational research (OR) and acquaint them with the methodologies, scope, limitations and applications of OR and
- To expose the students with the knowledge of formulation of real life problems using the linear programming method.
- To make the students understand about the theory and practical application of transportation problems and assignment problems
- To introduce 'Game Theory-the science of strategy' to the students, which makes possible the analysis of the decision making process of interdependent subjects.
- To provide a framework to develop mathematical models for different types inventory systems.

Learning Outcomes:

After successful completion of this course, students should be able to:

- Understand the fundamental concepts of Operational Research Techniques
- Apply Linear Programming.
- Solve the Transportation and assignment problems
- Understand the Game Theory
- Use the Inventory Models

SYLLABUS OF DSE-1A

Theory

UNIT I **(15 hours)**

Introduction to OR and LPP

Definition and phases of O.R. Model building, various types of O.R. problems. Linear Programming Problem (L.P.P.): Mathematical formulation of the L.P.P, graphical solutions of L.P.P. Simplex method for solving L.P.P. Charne's M-technique for solving L.P.P. involving artificial variables. Special cases of L.P.P. Concept of Duality in L.P.P. Economic interpretation of Duality. Dual simplex method.

UNIT II **(15 hours)**

Transportation and Assignment Problem

Transportation Problem: Initial solution by North West corner rule, Least cost method and Vogel's approximation method (VAM), MODI's method to find the optimal solution, special cases of transportation problem. Assignment problem: Hungarian method to find optimal assignment, special cases of assignment problem.

UNIT III **(15 hours)**

Game Theory and Inventory Management

Game theory: Rectangular game, minimax - maximin principle, solution to rectangular game using graphical method, dominance and modified dominance property to reduce the game matrix and solution to rectangular game with mixed strategy. Network flow problems and shortest route problem. Inventory Management: ABC inventory system, characteristics of inventory system. EOQ Model and its variations, with and without shortages.

PRACTICAL/LAB WORK – (30 hours)

List of Practical:

1. Mathematical formulation of L.P.P and solving the problem using graphical method.
2. Simplex technique and Charne's Big M method involving artificial variables.
3. Identifying Special cases by Graphical and Simplex method and interpretation:
   a) Degenerate solution
   b) Unbounded solution
   c) Alternate solution
   d) Infeasible solution
4. Allocation problem using Transportation model.
5. Allocation problem using Assignment model.
6. Graphical solution to $mx2$ / $2xn$ rectangular game
7. Mixed strategy
8. To find optimal inventory policy for EOQ models and its variations.

Practical work to be conducted using electronic spreadsheet / EXCEL/ Statistical Software Package/ SPSS/ calculators/ TORA/WINQSB/LINGO

ESSENTIAL READINGS:

DISCIPLINE SPECIFIC ELECTIVE COURSE – 1B: PSYCHOLOGICAL AND EDUCATIONAL STATISTICS

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Psychological and Educational Statistics	4	3	0	1	**Passed Class XII with Mathematics**	**Theory of Probability Distributions**

Learning Objectives:

The learning objectives include:

- To measure psychological traits and mental abilities
- To learn basic methods of test construction, item writing and item analysis
- To check the reliability and validity of test scores.

Learning Outcomes:

After successful completion of this course, students should be able to:

- Distinguish between Psychological measurement and physical measurement.
- Understand the meaning of Tests in Psychology and Education.
- Appreciate the uses and limitations of Psychological tests.
- Learn the meaning and purpose of Item writing and analysis.
- Understand concepts of reliability and validity of test scores and their differences.
- Convert raw scores into different transformed scores.
- Apply Scaling rankings and ratings in terms of the Normal Probability Curve.

SYLLABUS OF DSE-1B

Theory

Unit I **(15 hours)**

Basics of Educational Statistics

Introduction; need and importance of statistics in psychology and education. Measurements: Levels of measurements. Distinction between psychological and physical measurements; general problems, sources of errors. Tests: Meaning of tests in psychology and education; history of psychological measurement and testing, uses, limitations and varieties, characteristics of a good test, general steps of test construction. Test administration. Item writing - Meaning and types; Item analysis – meaning and purpose. Item difficulty (concepts only). Power tests and speed tests.

Unit II **(15 hours)**

Reliability and Validity

Reliability: Meaning, methods (or types); standard error of measurement, reliability of speed test, factors influencing reliability of test scores, factors for their improvement, estimation of true scores and index of reliability. Reliability of difference and composite scores. Validity:

Meaning; content, criterion related and construct validity. Statistical methods for calculating validity, factors influencing validity. Extra validity concerns, relation of validity to reliability.

Unit III **(15 hours)**

Psychological Statistics

Meaning of norm referencing and criterion referencing. Raw score transformations- percentile score, standard scores, normalized standard scores, T-scores, C-scores and Stanine scores. Intelligence: Definition. Types of intelligence test scores. Spearman's two-factor theory and Thomson group factors theory. Psychological scaling methods – Scaling of Individual test items in terms of difficulty, scaling of rankings & ratings in terms of the normal probability curve.

PRACTICAL/LAB WORK - 30 hours

List of Practical:

1. Computation of Reliability by Rulon and Kuder Richardson Formulas.
2. Finding reliability of a test whose length is increased/ decreased n times.
3. Finding index of reliability, standard error of measurement.
4. Finding validity/maximum validity when test length is increased n times/ indefinitely.
5. Finding relative difficulty of questions/ difference in difficulty between different tests.
6. Converting raw scores into Z-scores.
7. Converting raw scores into T-scores.
8. Calculation of T scores for a given frequency distribution.
9. Construction of C-scales and its diagrammatic representation.
10. Construction of Stanine-scales and its diagrammatic representation.
11. Calculation of percentile scores corresponding to rank of an individual among N individuals.
12. Finding numerical scores corresponding to grades or ratings by different judges.

Practical work to be conducted using electronic spreadsheet / EXCEL/ Statistical Software Package/ SPSS/ calculators.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVE FOR B. SC. (P)

DISCIPLINE SPECIFIC ELECTIVE COURSE – 1: TIME SERIES ANALYSIS AND INDEX NUMBERS

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Time Series Analysis and Index Numbers	4	3	0	1	**Passed Class XII with Mathematics**	**Descriptive Statistics and Probability Theory**

Learning Objectives

The Learning Objectives of this course are as follows:

- Introduce the concept of time series, its components, and their estimation.
- Introduce the application of time series.
- Introduce the concept, formulation, and application of index numbers.

Learning outcomes

After completion of this course, the students will be able to:

- Understand the concepts of time series and index numbers.
- Formulate, solve, and analyse the use of time series and index numbers for real-world problems.

SYLLABUS OF DSE 1

Theory

Unit - 1 **(12 hours)**

Components of Time Series

Introduction to Time Series, Components of time series, Decomposition of time series- Additive and multiplicative model with their merits and demerits, Illustrations of time series, Measurement of trend by method of free-hand curve, method of semi-averages and method of least squares (linear, quadratic and exponential).

Unit - 2 **(15 hours)**

Trend and Seasonality

Fitting of modified exponential, Gompertz and logistic curve, Moving average method, Measurement of seasonal variations by method of simple averages, ratio to trend method, and ratio to moving average method.

Unit - III **(18 hours)**

Index Numbers

Introduction to Index numbers, Problems in the construction of index numbers, Construction of price and quantity index numbers: simple aggregate, weighted aggregate (Laspeyres, Paasche's, Drobish-Bowley, Marshall-Edgeworth's, Walsch and Fisher's Formula), simple and weighted

average of price relatives, and chain base method, Criteria for a good index number, Errors in the measurement of price and quantity index numbers, Consumer price index number, its construction and uses, Uses and limitations of index numbers.

Practical - 30 Hours
List of Practicals:

1. Fitting of linear trend
2. Fitting of quadratic trend
3. Fitting of an exponential curve
4. Fitting of modified exponential curve by the method of
    a. Three selected points
    b. Partial sums
5. Fitting of Gompertz curve by the method of
    a. Three selected points
    b. Partial sums
6. Fitting of logistic curve by the method of three selected points
7. Fitting of trend by moving average method (for n even and odd)
8. Measurement of seasonal indices by
    a. Method of simple averages
    b. Ratio-to-trend method
    c. Ratio-to-moving-average method
9. Construction of price and quantity index numbers by simple aggregate method.
10. Construction of price and quantity index numbers by Laspeyres, Paasche's, Drobish-Bowley, Marshall-Edgeworth, Walsch and Fisher's Formula.
11. Construction of price and quantity index numbers by simple and weighted average of price relatives.
12. Construction of index number by Chain base method.
13. Construction of consumer price index number by
    a. Family budget method
    b. Aggregate expenditure method
14. Time Reversal Test and Factor Reversal Test

Practical work to be conducted using electronic spreadsheet / EXCEL/ Statistical Software Package/ SPSS/ calculators.

COMMON POOL OF GENERIC ELECTIVES (GE) COURSES
OFFERED BY DEPARTMENT OF STATISTICS
CATEGORY-VI

GENERIC ELECTIVES – : SAMPLING DISTRIBUTIONS

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Sampling Distributions	4	3	0	1	**Passed Class XII with Mathematics**	Introductory Probability

Learning Objectives:

The learning objectives include:

- To understand the concept of sampling distributions and their applications in statistical inference.
- To understand the process of hypothesis testing.
- To have a clear understanding of when to apply various tests of hypothesis about population parameters using sample statistics and draw appropriate conclusions from the analysis.

Learning Outcomes:

After successful completion of this course, students should be able to:

- Understand the basic concepts of hypothesis testing, including framing of the null and alternative hypotheses.
- Apply hypothesis testing based on a single sample and two samples using both classical and p-value approaches.
- Understand the Chi-square distribution.
- Analyze categorical data by using Chi-square techniques.
- Apply t and F distributions

SYLLABUS OF GE-3A

Theory

Unit I **(15 hours)**

Large sample tests

Large sample tests: Definitions of random sample, parameter and statistic, sampling distribution of a statistic, sampling distribution of sample mean, standard errors of sample mean, and sample proportion. Null and alternative hypotheses, level of significance, Type I

and Type II errors, their probabilities and critical region. Large sample tests, use of CLT for testing single proportion, difference of two proportions, single mean, difference of two means, standard deviation and difference of standard deviations by classical and p-value approaches.

Unit II **(15 hours)**

Chi square distribution

Chi square distribution: Definition and derivation of $\chi 2$ distribution with n degrees of freedom (d.f.) using m.g.f., nature of probability curve for different degrees of freedom, mean, variance, m.g.f., cumulant generating function, mode, additive property and limiting form of $\chi 2$ distribution. Tests of significance and confidence intervals based on $\chi 2$ distribution.

Unit III **(15 hours)**

Exact Sampling Distributions

t and F distributions: Student's t and Fishers t-distributions, Derivation of its p.d.f., nature of probability curve with different degrees of freedom, mean, variance, moments and limiting form of t distribution. Snedecore's F-distribution: Derivation of F distribution, nature of probability curve with different degrees of freedom, mean, variance and mode. Distribution of $1/F(n_1,n_2)$. Relationship between t, F and $\chi 2$ distributions. Test of significance and confidence intervals based on t and F distributions.

PRACTICAL/LAB WORK - 30 hours

List of Practicals

1. Large Sample Tests:

(i) Testing of significance and confidence intervals for single proportion and difference of two proportions.

(ii) Testing of significance and confidence intervals for single mean and difference of two means.

(iii) Testing of significance and confidence intervals for difference of two standard deviations.

2. Tests based on Chi-Square Distribution:

(i) To test if the population variance has a specific value and its confidence intervals.

(ii) To test the goodness of fit.

(iii) To test the independence of attributes.

(iv) Test based on 2 x 2 contingency table without and with Yates' corrections.

3. Tests based on t- Distribution and F- Distribution:

(i) Testing of significance and confidence intervals for single mean and difference of two means and paired t – test.

(ii) Testing of significance and confidence intervals of an observed sample correlation coefficient.

(iii) Testing and confidence intervals of equality of two population variances.

Practical work to be conducted using electronic spreadsheet / EXCEL/ Statistical Software Package/ SPSS/ calculators.

DEPARTMENT OF MATHEMATICS

B.Sc. (Hons) MATHEMATICS

Category-I

DISCIPLINE SPECIFIC CORE COURSE -7: GROUP THEORY

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Group Theory	4	3	1	0	Class XII pass with Mathematics	Algebra

Learning Objectives

The primary objective of this course is to introduce:

- Symmetric groups, normal subgroups, factor groups, and direct products of groups.
- The notions of group homomorphism to study the isomorphism theorems with applications.
- Classification of groups with small order according to isomorphisms.

Learning Outcomes

This course will enable the students to:

- Analyse the structure of 'small' finite groups, and examine examples arising as groups of permutations of a set, symmetries of regular polygons.
- Understand the significance of the notion of cosets, Lagrange's theorem and its consequences.
- Know about group homomorphisms and isomorphisms and to relate groups using these mappings.
- Express a finite abelian group as the direct product of cyclic groups of prime power orders.
- Learn about external direct products and its applications to data security and electric circuits.

SYLLABUS OF DSC - 7

Unit – 1 **(18 hours)**

Permutation Groups, Lagrange's Theorem and Normal Subgroups

Permutation groups and group of symmetries, Cycle notation for permutations and properties, Even and odd permutations, Alternating groups; Cosets and its properties, Lagrange's theorem and consequences including Fermat's Little theorem, Number of elements in product of two finite subgroups; Normal subgroups, Factor groups, Cauchy's theorem for finite Abelian groups.

Unit – 2 **(15 hours)**

Group Homomorphisms and Automorphisms

Group homomorphisms, isomorphisms and properties, Cayley's theorem; First, Second and Third isomorphism theorems for groups; Automorphism, Inner automorphism, Automorphism

groups, Automorphism groups of cyclic groups, Applications of factor groups to automorphism groups.

Unit – 3 **(12 hours)**

Direct Products of Groups and Fundamental Theorem of Finite Abelian Groups

External direct products of groups and its properties, The group of units modulo n as an external direct product, Applications to data security and electric circuits; Internal direct products; Fundamental theorem of finite abelian groups and its isomorphism classes.

DISCIPLINE SPECIFIC CORE COURSE -8: RIEMANN INTEGRATION

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Riemann Integration	4	3	1	0	Class XII pass with Mathematics	Elementary Real Analysis, and Calculus

Learning Objectives

The primary objective of this course is to:

- Understand the integration of bounded functions on a closed and bounded interval and its extension to the cases where either the interval of integration is infinite, or the integrand has infinite limits at a finite number of points on the interval of integration.
- Learn some of the properties of Riemann integrable functions, its generalization and the applications of the fundamental theorems of integration.
- Get an exposure to the utility of integration for practical purposes.

Learning Outcomes

This course will enable the students to:

- Learn about some of the classes and properties of Riemann integrable functions, and the applications of the Riemann sums to the volume and surface of a solid of revolution.
- Get insight of integration by substitution and integration by parts.
- Know about convergence of improper integrals including, beta and gamma functions.

SYLLABUS OF DSC - 8

Unit – 1 **(18 hours)**

The Riemann Integral

Definition of upper and lower Darboux sums, Darboux integral, Inequalities for upper and lower Darboux sums, Necessary and sufficient conditions for the Darboux integrability; Riemann's definition of integrability by Riemann sum and the equivalence of Riemann's and Darboux's definitions of integrability; Definition and examples of the Riemann-Stieltjes integral.

Unit – 2 **(15 hours)**

Properties of The Riemann Integral and Fundamental Theorems

Riemann integrability of monotone functions and continuous functions, Properties of Riemann integrable functions; Definitions of piecewise continuous and piecewise monotone functions and their Riemann integrability; Intermediate value theorem for integrals, Fundamental Theorems of Calculus (I and II).

Unit – 3 **(12 hours)**

Applications of Integrals and Improper Integrals

Methods of integration: integration by substitution and integration by parts; Volume by slicing and cylindrical shells, Length of a curve in the plane and the area of surfaces of revolution. Improper integrals of Type-I, Type-II and mixed type, Convergence of improper integrals, The beta and gamma functions and their properties.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE– 9: DISCRETE MATHEMATICS

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Discrete Mathematics	4	3	0	1	Class XII pass with Mathematics	Algebra and Linear Algebra

Learning Objectives

The primary objective of the course is to:

- Make students embark upon a journey of enlightenment, starting from the abstract concepts in mathematics to practical applications of those concepts in real life.
- Make the students familiar with the notion of partially ordered set and a level up with the study of lattice, Boolean algebra and related concepts.
- Culminate the journey of learning with practical applications using the knowledge attained from the abstract concepts learnt in the course.

Learning Outcomes

This course will enable the students to:

- Understand the notion of partially ordered set, lattice, Boolean algebra with applications.
- Handle the practical aspect of minimization of switching circuits to a great extent with the methods discussed in this course.
- Apply the knowledge of Boolean algebras to logic, set theory and probability theory.

SYLLABUS OF DSC - 9

Unit – 1 **(15 hours)**

Cardinality and Partially Ordered Sets

The cardinality of a set; Definitions, examples and basic properties of partially ordered sets, Order-isomorphisms, Covering relations, Hasse diagrams, Dual of an ordered set, Duality principle, Bottom and top elements, Maximal and minimal elements, Zorn's lemma, Building new ordered sets, Maps between ordered sets.

Unit – 2 **(15 hours)**

Lattices

Lattices as ordered sets, Lattices as algebraic structures, Sublattices, Products, Lattice isomorphism; Definitions, examples and properties of modular and distributive lattices; The $M_3 - N_5$ theorem with applications, Complemented lattice, Relatively complemented lattice, Sectionally complemented lattice.

Unit – 3 **(15 hours)**

Boolean Algebras and Applications

Boolean algebras, De Morgan's laws, Boolean homomorphism, Representation theorem, Boolean polynomials, Boolean polynomial functions, Equivalence of Boolean polynomials, Disjunctive normal form and conjunctive normal form of Boolean polynomials; Minimal forms

of Boolean polynomials, Quine-McCluskey method, Karnaugh diagrams, Switching circuits and applications, Applications of Boolean algebras to logic, set theory and probability theory.

Practical (30 hours):

Practical/Lab work to be performed in a computer Lab using any of the Computer Algebra System Software such as Mathematica/MATLAB /Maple/Maxima/Scilab/SageMath etc., for the following problems based on:

1) Expressing relations as ordered pairs and creating relations.
2) Finding whether or not, a given relation is:
   i. Reflexive ii. Antisymmetric iii. Transitive iv. Partial order
3) Finding the following for a given partially ordered set
   i. Covering relations.
   ii. The corresponding Hasse diagram representation.
   iii. Minimal and maximal elements.
4) Finding the following for a subset S of a given partially ordered set P
   i. Whether a given element in P is an upper bound (lower bound) of S or not.
   ii. Set of all upper bounds (lower bounds) of S.
   iii. The least upper bound (greatest lower bound) of S, if it exists.
5) Creating lattices and determining whether or not, a given partially ordered set is a lattice.
6) Finding the following for a given Boolean polynomial function:
   i. Representation of Boolean polynomial function and finding its value when the Boolean variables in it take particular values over the Boolean algebra $\{0,1\}$.
   ii. Display in table form of all possible values of Boolean polynomial function over the Boolean algebra $\{0,1\}$.
7) Finding the following:
   i. Dual of a given Boolean polynomial/expression.
   ii. Whether or not two given Boolean polynomials are equivalent.
   iii. Disjunctive normal form (Conjunctive normal form) from a given Boolean expression.
   iv. Disjunctive normal form (Conjunctive normal form) when the given Boolean polynomial function is expressed by a table of values.
8) Representing a given circuit diagram (expressed using gates) in the form of Boolean expression.
9) Minimizing a given Boolean expression to find minimal expressions.

Essential Readings

B.Sc. (Hons) Mathematics, Semester-III, DSE-Courses

DISCIPLINE SPECIFIC ELECTIVE COURSE -1(i): GRAPH THEORY

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Graph Theory	4	3	1	0	Class XII pass with Mathematics	Nil

Learning Objectives

The primary objective of this course is to introduce:

- Problem-solving techniques using various concepts of graph theory.
- Various properties like planarity and chromaticity of graphs.
- Several applications of these concepts in solving practical problems.

Learning Outcomes

This course will enable the students to:

- Learn modelling of real-world problems by graphs.
- Know characteristics of different classes of graphs.
- Learn representation of graphs in terms of matrices.
- Learn algorithms to optimize a solution.
- Understand some properties of graphs and their applications in different practical situations.

SYLLABUS OF DSE - 1(i)

Unit – 1 **(12 hours)**

Graphs, Paths and Circuits

Definition, Examples and basic properties of graphs, Subgraphs, Pseudographs, Complete graphs, Bipartite graphs, Isomorphism of graphs, Paths and circuits, Connected graphs, Eulerian circuits, Hamiltonian cycles, Adjacency matrix, Weighted graph, Travelling salesman problem, Shortest path, Dijkstra's algorithm.

Unit – 2 **(15 hours)**

Applications of Paths and Circuits, Trees

Applications of Path and Circuits: The Chinese Postman Problem, Digraphs, Bellman-Ford Algorithm, Tournaments, Scheduling Problem, Trees, Properties of Trees, Spanning Trees, Minimum Spanning Tree Algorithms.

Unit – 3 **(18 hours)**

Connectivity and Graph Coloring, Planar Graphs

Cut-vertices, Blocks and their Characterization, Connectivity and edge-connectivity, Planar graphs, Euler's formula, Kuratowski theorem, Graph coloring and applications, Matchings, Hall's theorem, Independent sets and covers.

Essential Readings

1. Goodaire, Edgar G., & Parmenter, Michael M. (2006). Discrete Mathematics with Graph Theory (3rd ed.). Pearson Education Pvt. Ltd. Indian Reprint.
2. Chartrand, Gary, & Zhang, Ping (2012). A First Course in Graph Theory. Dover Publications.

Suggestive Readings

- Diestel, Reinhard (2017). Graph Theory (5th ed.). Graduate Texts in Mathematics, Springer.
- West, Douglas B. (2001). Introduction to Graph Theory (2nd ed.). Prentice Hall. Indian Reprint.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVE COURSE– 1(ii): MATHEMATICAL PYTHON

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Mathematical Python	4	3	0	1	Class XII pass with Mathematics	Basic knowledge of Python

Learning Objectives

The Learning Objectives of this course are as follows:

- To be able to model and solve mathematical problems using Python Programs.
- To experience utility of open-source resources for numerical and symbolic mathematical software systems.

Learning Outcomes

This course will enable the students to use Python:

- For numerical and symbolic computation in mathematical problems from calculus, algebra, and geometry.
- To tabulate and plot diverse graphs of functions and understand tracing of shapes, geometries, and fractals.
- To prepare smart documents with LaTeX interface.

SYLLABUS OF DSE - 1(ii)

Theory

Unit – 1 **(15 hours)**

Drawing Shapes, Graphing and Visualization

Drawing diverse shapes using code and Turtle; Using matplotlib and NumPy for data organization, Structuring and plotting lines, bars, markers, contours and fields, managing subplots and axes; Pyplot and subplots, Animations of decay, Bayes update, Random walk.

Unit – 2 **(18 hours)**

Numerical and Symbolic Solutions of Mathematical Problems

NumPy for scalars and linear algebra on *n*-dimensional arrays; Computing eigenspace, Solving dynamical systems on coupled ordinary differential equations, Functional programming fundamentals using NumPy; Symbolic computation and SymPy: Differentiation and integration of functions, Limits, Solution of ordinary differential equations, Computation of eigenvalues, Solution of expressions at multiple points (lambdify), Simplification of expressions, Factorization, Collecting and canceling terms, Partial fraction decomposition, Trigonometric simplification, Exponential and logarithms, Series expansion and finite differences, Solvers, Recursive equations.

Unit – 3 **(12 hours)**

Document Generation with Python and LaTeX

Pretty printing using SymPy; Pandas API for IO tools: interfacing Python with text/csv, HTML, LaTeX, XML, MSExcel, OpenDocument, and other such formats; Pylatex and writing document files from Python with auto-computed values, Plots and visualizations.

Practical (30 hours): Software labs using IDE such as Spyder and Python Libraries.

- Installation, update, and maintenance of code, troubleshooting.
- Implementation of all methods learned in theory.
- Explore and explain API level integration and working of two problems with standard Python code.

DISCIPLINE SPECIFIC ELECTIVE COURSE-1(iii): NUMBER THEORY

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Number Theory	4	3	1	0	Class XII pass with Mathematics	Algebra

Learning Objectives

The primary objective of this course is to introduce:

- The number theoretic techniques of computations with the flavour of abstraction.
- The Euclidean algorithm, linear Diophantine equations, congruence equations, arithmetic functions and their applications, Fermat's little, Euler's and Wilson's theorems.
- Primitive roots, quadratic residues and nonresidues, the Legendre symbol and the law of Quadratic Reciprocity.
- Introduction to cryptography, public-key cryptosystems and applications.

Learning Outcomes

This course will enable the students to:

- Use modular arithmetic in solving linear and system of linear congruence equations.
- Work with the number theoretic functions, their properties and their use.
- Learn the forms of positive integers that possess primitive roots and the Quadratic Reciprocity Law which deals with the solvability of quadratic congruences.
- Understand the public-key cryptosystems, in particular, RSA.

SYLLABUS OF DSE - 1(iii)

Unit – 1 **(12 hours)**

Linear Diophantine equation and Theory of Congruences

The Euclidean Algorithm and linear Diophantine equation; Least non-negative residues and complete set of residues modulo n; Linear congruences, The Chinese remainder theorem and system of linear congruences in two variables; Fermat's little theorem, Wilson's theorem and its converse, Application to solve quadratic congruence equation modulo odd prime p.

Unit – 2 **(21 hours)**

Number-Theoretic Functions and Primitive Roots

Number-theoretic functions for the sum and number of divisors, Multiplicative function, Möbius inversion formula and its properties; Greatest integer function with an application to the calendar; Euler's Phi-function, Euler's theorem and some properties of the Phi-function; The order of an integer modulo n and primitive roots for primes, Primitive roots of composite numbers n: when n is of the form 2^k, and when n is a product of two coprime numbers.

Unit – 3 **(12 hours)**

Quadratic Reciprocity Law and Public Key Cryptosystems

The quadratic residue and nonresidue of an odd prime and Euler's criterion, The Legendre symbol and its properties, Quadratic Reciprocity law and its application; Introduction to cryptography, Hill's cipher, Public-key cryptography and RSA.

Essential Reading

- Robbins, Neville (2007). Beginning Number Theory (2nd ed.). Narosa Publishing House Pvt. Ltd. Delhi.
- Rosen, Kenneth H. (2011). Elementary Number Theory and its Applications (6th ed.). Pearson Education. Indian Reprint 2015.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

B.A. (Prog.) with Mathematics as Major

Category-II

DISCIPLINE SPECIFIC CORE COURSE – 3: THEORY OF EQUATIONS AND SYMMETRIES

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Theory of Equations and Symmetries	4	3	1	0	Class X pass with Mathematics	Nil

Learning Objectives

The goal of this paper is to acquaint students with certain ideas about:

- Integral roots, rational roots, an upper bound on number of positive or negative roots of a polynomial.
- Finding roots of cubic and quartic equations in special cases using elementary symmetric functions.
- Using Cardon's and Descartes' methods, respectively.

Learning Outcomes

After completion of this paper, the students will be able to:

- Understand the nature of the roots of polynomial equations and their symmetries.
- Solve cubic and quartic polynomial equations with special condition on roots and in general.
- Find symmetric functions in terms of the elementary symmetric polynomials.

SYLLABUS OF DSC-3

Unit – 1 **(18 hours)**

Polynomial Equations and Properties

General properties of polynomials and equations; Fundamental theorem of algebra and its consequences; Theorems on imaginary, integral and rational roots; Descartes' rule of signs for positive and negative roots; Relations between the roots and coefficients of equations, Applications to solution of equations when an additional relation among the roots is given; De Moivre's theorem for rational indices, the nth roots of unity and symmetries of the solutions.

Unit – 2 **(12 hours)**

Cubic and Biquadratic (Quartic) Equations

Transformation of equations (multiplication, reciprocal, increase/diminish in the roots by a given quantity), Removal of terms; Cardon's method of solving cubic and Descartes' method of solving biquadratic equations.

Unit – 3 **(15 hours)**

Symmetric Functions

Elementary symmetric functions and symmetric functions of the roots of an equation; Newton's theorem on sums of the like powers of the roots; Computation of symmetric functions such as $\sum\alpha^2\beta,\ \sum\alpha^2\beta^2,\ \sum\alpha^2\beta\gamma,\ \sum\frac{1}{\alpha^2\beta\gamma},\ \sum\alpha^{-3},\ \sum(\beta+\gamma-\alpha)^2,\ \sum\frac{\alpha^2+\beta\gamma}{\beta+\gamma},\ldots$ of polynomial equations; Transformation of equations by symmetric functions and in general.

Essential Readings

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE – A-3: DIFFERENTIAL EQUATIONS

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Differential Equations	4	3	1	0	Class XII pass with Mathematics	Nil

Learning Objectives

The primary objective of this course is to introduce:

- Ordinary and partial differential equations.
- Basic theory of higher order linear differential equations, Wronskian and its properties.
- Various techniques to find the solutions of above differential equations which provide a basis to model complex real-world situations.

Learning Outcomes

This course will enable the students to:

- Solve the exact, linear, Bernoulli equations, find orthogonal trajectories and solve rate problems.

- Apply the method of undetermined coefficients and variation of parameters to solve linear differential equations.
- Solve Cauchy-Euler equations and system of linear differential equations.
- Formulate and solve various types of first and second order partial differential equations.

SYLLABUS OF DISCIPLINE A-3

Unit – 1 **(15 hours)**

Ordinary Differential Equations

First order ordinary differential equations: Basic concepts and ideas, First order Exact differential equations, Integrating factors and rules to find integrating factors, Linear equations and Bernoulli equations, Initial value problems, Applications of first order differential equations: Orthogonal trajectories and Rate problems; Basic theory of higher order linear differential equations, Wronskian and its properties.

Unit – 2 **(12 hours)**

Explicit Methods of Solving Higher-Order Linear Differential Equations

Linear homogeneous equations with constant coefficients, Linear non-homogeneous equations, Method of undetermined coefficients, Method of variation of parameters, Two-point boundary value problems, Cauchy-Euler equations, System of linear differential equations.

Unit – 3 **(18 hours)**

First and Second Order Partial Differential Equations

Classification and Construction of first-order partial differential equations, Method of characteristics and general solutions of first-order partial differential equations, Canonical forms and method of separation of variables for first order partial differential equations; Classification and reduction to canonical forms of second-order linear partial differential equations and their general solutions.

Essential Readings

1. Myint-U, Tyn and Debnath, Lokenath (2007). Linear Partial Differential Equations for Scientist and Engineers (4th ed.). Birkhäuser. Indian Reprint.
2. Ross, Shepley L. (1984). Differential Equations (3rd ed.). John Wiley & Sons.

Suggestive Readings

- Edwards, C. Henry, Penney, David E., & Calvis, David T. (2015). Differential Equations and Boundary Value Problems: Computing and Modeling (5th ed.). Pearson Education.
- Kreyszig, Erwin. (2011). Advanced Engineering Mathematics (10th ed.). Wiley India.
- Sneddon I. N. (2006). Elements of Partial Differential Equations. Dover Publications.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

B.A./B.Sc. (Prog.) with Mathematics as Non-Major

Category-III

DISCIPLINE SPECIFIC CORE COURSE – A-3: DIFFERENTIAL EQUATIONS

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Differential Equations	4	3	1	0	Class XII pass with Mathematics	Nil

Learning Objectives

The primary objective of this course is to introduce:

- Ordinary and partial differential equations.
- Basic theory of higher order linear differential equations, Wronskian and its properties.
- Various techniques to find the solutions of above differential equations which provide a basis to model complex real-world situations.

Learning Outcomes

This course will enable the students to:

- Solve the exact, linear, Bernoulli equations, find orthogonal trajectories and solve rate problems.
- Apply the method of undetermined coefficients and variation of parameters to solve linear differential equations.
- Solve Cauchy-Euler equations and System of linear differential equations.
- Formulate and solve various types of first and second order partial differential equations.

SYLLABUS of Discipline A-3

Unit – 1 **(15 hours)**

Ordinary Differential Equations

First order ordinary differential equations: Basic concepts and ideas, First order Exact differential equations, Integrating factors and rules to find integrating factors, Linear equations and Bernoulli equations, Initial value problems, Applications of first order differential equations: Orthogonal trajectories and Rate problems; Basic theory of higher order linear differential equations, Wronskian and its properties.

Unit – 2 **(12 hours)**

Explicit Methods of Solving Higher-Order Linear Differential Equations

Linear homogeneous equations with constant coefficients, Linear non-homogeneous equations, Method of undetermined coefficients, Method of variation of parameters, Two-point boundary value problems, Cauchy-Euler equations, System of linear differential equations.

Unit – 3 **(18 hours)**

First and Second Order Partial Differential Equations

Classification and Construction of first-order partial differential equations, Method of characteristics and general solutions of first-order partial differential equations, Canonical forms and method of separation of variables for first order partial differential equations; Classification and reduction to canonical forms of second-order linear partial differential equations and their general solutions.

Essential Readings

1. Myint-U, Tyn and Debnath, Lokenath (2007). Linear Partial Differential Equations for Scientist and Engineers (4th ed.). Birkhäuser. Indian Reprint.
2. Ross, Shepley L. (1984). Differential Equations (3rd ed.). John Wiley & Sons.

Suggestive Readings

DISCIPLINE SPECIFIC ELECTIVE -1(i): COMBINATORICS

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Combinatorics	4	3	1	0	Class XII pass with Mathematics	Nil

Learning Objectives

The primary objective of this course is to:

- Introduce various techniques of permutations, combinations and inclusion-exclusion.
- Learn basic models of generating functions and recurrence relations in their application to the theory of integer partitions.

Learning Outcomes

After completing the course, student will:

- Enhance the mathematical logical skills by learning different enumeration techniques.
- Be able to apply these techniques in solving problems in other areas of mathematics.
- Be trained to provide reasoning and arguments to justify conclusions.

SYLLABUS OF DSE-1(i)

Unit - 1 **(15 hours)**

Basics of Combinatorics

Basic counting principles, Permutations and Combinations (with and without repetitions), Binomial coefficients, Multinomial coefficients, Counting subsets of size k; Set-partitions, The inclusion-exclusion principle and applications.

Unit - 2 **(18 hours)**

Generating Functions and Recurrence Relations

Generating functions: Generating function models, Calculating coefficients of generating functions, Polynomial expansions, Binomial identity, Exponential generating functions.
Recurrence relations: Recurrence relation models, Divide-and-conquer relations, Solution of linear recurrence relations, Solutions by generating functions.

Unit – 3 **(12 hours)**

Partition

Partition theory of integers: Ordered partition, Unordered partition, Ferrers diagram, Conjugate of partition, Self-conjugate partition, Durfee square, Euler's pentagonal theorem.

Essential Readings

1. Sane, Sharad S. (2013). Combinatorial Techniques. Hindustan Book Agency (India).
2. Tucker, Alan (2012). Applied Combinatorics (6th ed.). John Wiley & Sons, Inc.

Suggested Readings

- Brualdi, Richard A. (2009). Introductory Combinatorics (5th ed.). Pearson Education Inc.
- Cameron, Peter J. (1994). Combinatorics: Topics, Techniques, Algorithms. Cambridge University Press.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVE COURSE-1(ii): ELEMENTS OF NUMBER THEORY

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Elements of Number Theory	4	3	1	0	Class XII pass with Mathematics	Nil

Learning Objectives

The primary objective of this course is to introduce:

- The Euclidean algorithm and linear Diophantine equations, the Fundamental theorem of arithmetic and some of the open problems of number theory viz. the Goldbach conjecture.
- The modular arithmetic, linear congruence equations, system of linear congruence equations, arithmetic functions and multiplicative functions, e.g., Euler's Phi-function.
- Introduction of the simple encryption and decryption techniques, and the numbers of specific forms viz. Mersenne numbers, Fermat numbers etc.

Learning Outcomes

This course will enable the students to:

- Get familiar with the basic number-theoretic techniques.
- Comprehend some of the open problems in number theory.
- Learn the properties and use of number-theoretic functions and special types of numbers.
- Acquire knowledge about public-key cryptosystems, particularly RSA.

SYLLABUS OF DSE-1(ii)

Unit – 1 **(12 hours)**

Divisibility and Prime Numbers

Revisiting: The division algorithm, divisibility and the greatest common divisor. Euclid's lemma; The Euclidean algorithm, Linear Diophantine equations; The Fundamental theorem of Arithmetic, The sieve of Eratosthenes, Euclid theorem and the Goldbach conjecture; The Fibonacci sequence and its nature.

Unit – 2 **(21 hours)**

Theory of Congruences and Number-Theoretic Functions

Congruence relation and its basic properties, Linear congruences and the Chinese remainder theorem, System of linear congruences in two variables; Fermat's little theorem and its generalization, Wilson's theorem and its converse; Number-theoretic functions for sum and the number of divisors of a positive integer, Multiplicative functions, The greatest integer function; Euler's Phi-function and its properties.

Unit – 3 **(12 hours)**

Public Key Encryption and Numbers of Special Form

Basics of cryptography, Hill's cipher, Public-key cryptosystems and RSA encryption and decryption technique; Introduction to perfect numbers, Mersenne numbers and Fermat numbers.

Essential Reading

1. Burton, David M. (2011). Elementary Number Theory (7th ed.). McGraw-Hill Education Pvt. Ltd. Indian Reprint 2017.

Suggestive Readings

- Jones, G. A., & Jones, J. Mary. (2005). Elementary Number Theory. Springer Undergraduate Mathematics Series (SUMS). Indian Reprint.
- Robbins, Neville (2007). Beginning Number Theory (2nd ed.). Narosa Publishing House Pvt. Ltd. Delhi.
- Rosen, Kenneth H. (2011). Elementary Number Theory and its Applications (6th ed.). Pearson Education. Indian Reprint 2015.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVE COURSE - DSE-1(iii): THEORY OF EQUATIONS AND SYMMETRIES

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Theory of Equations and Symmetries	4	3	1	0	Class X pass with Mathematics	Nil

Learning Objectives

The goal of this paper is to acquaint students with certain ideas about:

- Integral roots, rational roots, an upper bound on number of positive or negative roots of a polynomial.
- Finding roots of cubic and quartic equations in special cases using elementary symmetric functions.
- Using Cardon's and Descartes' methods, respectively.

Learning Outcomes

After completion of this paper, the students will be able to:

- Understand the nature of the roots of polynomial equations and their symmetries.
- Solve cubic and quartic polynomial equations with special condition on roots and in general.
- Find symmetric functions in terms of the elementary symmetric polynomials.

SYLLABUS OF DSE-1(iii)

Unit – 1 **(18 hours)**

Polynomial Equations and Properties

General properties of polynomials and equations; Fundamental theorem of algebra and its consequences; Theorems on imaginary, integral and rational roots; Descartes' rule of signs for positive and negative roots; Relations between the roots and coefficients of equations, Applications to solution of equations when an additional relation among the roots is given; De Moivre's theorem for rational indices, the *n*th roots of unity and symmetries of the solutions.

Unit – 2 **(12 hours)**

Cubic and Biquadratic (Quartic) Equations

Transformation of equations (multiplication, reciprocal, increase/diminish in the roots by a given quantity), Removal of terms; Cardon's method of solving cubic and Descartes' method of solving biquadratic equations.

Unit – 3 **(15 hours)**

Symmetric Functions

Elementary symmetric functions and symmetric functions of the roots of an equation; Newton's theorem on sums of the like powers of the roots; Computation of symmetric functions such as $\sum\alpha^2\beta,\ \sum\alpha^2\beta^2, \sum\alpha^2\beta\gamma, \sum\frac{1}{\alpha^2\beta\gamma}, \sum\alpha^{-3}, \sum(\beta+\gamma-\alpha)^2,\ \sum\frac{\alpha^2+\beta\gamma}{\beta+\gamma},\ldots$ of polynomial equations; Transformation of equations by symmetric functions and in general.

Essential Readings

1. Burnside, W.S., & Panton, A.W. (1979). The Theory of Equations (11th ed.). Vol. 1. Dover Publications, Inc. (4th Indian reprint. S. Chand & Co. New Delhi).
2. Dickson, Leonard Eugene (2009). First Course in the Theory of Equations. John Wiley & Sons, Inc. The Project Gutenberg eBook: http://www.gutenberg.org/ebooks/29785

Suggestive Readings

- Prasad, Chandrika (2017). Text Book of Algebra and Theory of Equations. Pothishala Pvt Ltd.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

COMMON POOL OF GENERIC ELECTIVES (GE) COURSES OFFERED BY DEPARTMENT OF MATHEMATICS
Category-IV

GENERIC ELECTIVES-GE-3(i): DIFFERENTIAL EQUATIONS

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Differential Equations	4	3	1	0	Class XII pass with Mathematics	Nil

Learning Objectives

The primary objective of this course is to introduce:

- Ordinary and partial differential equations.
- Basic theory of higher order linear differential equations, Wronskian and its properties.
- Various techniques to find the solutions of above differential equations which provide a basis to model complex real-world situations.

Learning Outcomes

This course will enable the students to:

- Solve the exact, linear, Bernoulli equations, find orthogonal trajectories and solve rate problems.
- Apply the method of undetermined coefficients and variation of parameters to solve linear differential equations.
- Solve Cauchy-Euler equations and System of linear differential equations.
- Formulate and solve various types of first and second order partial differential equations.

SYLLABUS OF GE-3(i)

Unit – 1 **(15 hours)**

Ordinary Differential Equations

First order ordinary differential equations: Basic concepts and ideas, First order Exact differential equations, Integrating factors and rules to find integrating factors, Linear equations and Bernoulli equations, Initial value problems, Applications of first order differential equations: Orthogonal trajectories and Rate problems; Basic theory of higher order linear differential equations, Wronskian and its properties.

Unit – 2 **(12 hours)**

Explicit Methods of Solving Higher-Order Linear Differential Equations

Linear homogeneous equations with constant coefficients, Linear non-homogeneous equations, Method of undetermined coefficients, Method of variation of parameters, Two-point boundary value problems, Cauchy-Euler equations, System of linear differential equations.

Unit – 3 **(18 hours)**

First and Second Order Partial Differential Equations

Classification and Construction of first-order partial differential equations, Method of characteristics and general solutions of first-order partial differential equations, Canonical forms and method of separation of variables for first order partial differential equations; Classification and reduction to canonical forms of second-order linear partial differential equations and their general solutions.

Essential Readings

1. Myint-U, Tyn and Debnath, Lokenath (2007). Linear Partial Differential Equations for Scientist and Engineers (4th ed.). Birkhäuser. Indian Reprint.
2. Ross, Shepley L. (1984). Differential Equations (3rd ed.). John Wiley & Sons.

Suggestive Readings

- Edwards, C. Henry, Penney, David E., & Calvis, David T. (2015). Differential Equations and Boundary Value Problems: Computing and Modeling (5th ed.). Pearson Education.
- Kreyszig, Erwin. (2011). Advanced Engineering Mathematics (10th ed.). Wiley India.
- Sneddon I. N. (2006). Elements of Partial Differential Equations. Dover Publications.

GENERIC ELECTIVES-GE-3(ii): LATTICES AND NUMBER THEORY

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Lattices and Number Theory	4	3	1	0	Class XII pass with Mathematics	Nil

Learning Objectives

The primary objective of this course is to introduce:

- The concepts of ordered sets, lattices, sublattices and homomorphisms between lattices.
- Distributive lattices along with Boolean algebra and their applications in the real-world.
- Divisibility theory of congruences along with some applications.
- The number-theoretic functions and quadratic reciprocity law.

Learning Outcomes

This course will enable the students to:

- Understand the notion of ordered sets. Learn about lattices, distributive lattices, sublattices and homomorphisms between lattices.
- Become familiar with Boolean algebra, Boolean polynomials, switching circuits and their applications.
- Learn the concept of Karnaugh diagrams and Quinn–McCluskey method which gives an aid to apply truth tables in real-world problems.

- Learn about some fascinating properties of prime numbers, and some of the open problems in number theory, viz., Goldbach conjecture etc.
- Know about modular arithmetic and number-theoretic functions like Euler's Phi-function.
- Find quadratic residues and nonresidues modulo primes using Gauss's Quadratic Reciprocity Law.

SYLLABUS OF GE-3(ii)

Unit – 1 **(21 hours)**

Partially Ordered Sets and Lattices

Definitions, Examples and basic properties of partially ordered sets, Order isomorphism, Hasse Diagram, Maximal and minimal elements, Dual of an ordered set, Duality principle; Statements of Well Ordering Principle and Zorn's Lemma; Lattices as ordered sets, Lattices as algebraic structures, Sublattices, Products and homomorphisms, Distributive lattices, Boolean algebras, Boolean polynomials, Minimal forms of Boolean polynomials, Quinn-McCluskey method, Karnaugh diagrams, Switching circuits and applications.

Unit – 2 **(12 hours)**

Divisibility and Theory of Congruences

The division algorithm: GCD, The Euclidean algorithm, Diophantine equation $ax + by = c$ Primes: The Fundamental Theorem of Arithmetic, Infinitude of primes, Twin primes and Goldbach conjecture.

The theory of congruences: Basic properties and applications, Linear congruences and the Chinese Remainder Theorem, Fermat's Little Theorem and Wilson's Theorem.

Unit – 3 **(12 hours)**

Number-Theoretic Functions, Primitive roots and Quadratic Reciprocity Law

Number-Theoretic Functions: Sum and number of divisors, Euler's Phi-function and Euler's generalization of Fermat's Little Theorem.

Primitive roots: The order of an integer modulo n, and primitive roots of an integer.

Quadratic Reciprocity Law: Quadratic residue and nonresidue, Euler's Criterion, The Legendre symbol and its properties and Quadratic Reciprocity Law.

Essential Readings

1. Davey, B A., & Priestley, H. A. (2002). Introduction to Lattices and Order (2nd ed.), Cambridge University Press, Cambridge.
2. Lidl, Rudolf & Pilz, Günter. (1998). Applied Abstract Algebra (2nd ed.), Undergraduate Texts in Mathematics, Springer (SIE), Indian Reprint 2004.
3. Burton, David M. (2012). Elementary Number Theory (7th ed.), Mc-Graw Hill Education Pvt. Ltd. Indian Reprint.

Suggestive Readings

- Rosen, Kenneth H. (2019). Discrete Mathematics and its Applications (8th ed.), Indian adaptation by Kamala Krithivasan. McGraw-Hill Education. Indian Reprint 2021.
- Goodaire, Edgar G., & Parmenter, Michael M. (2006). Discrete Mathematics with Graph Theory (3rd ed.). Pearson Education Pvt. Ltd. Indian Reprint 2018.
- Jones, G. A., & Jones, J. Mary. (2005). Elementary Number Theory. Springer Undergraduate Mathematics Series (SUMS). Indian Reprint.

REGISTRAR

ANNEXURE-4

Sub: Amendment to Ordinance V

[E.C Resolution No. 60/ (60-1-9) dated 03.02.2023]

Following addition be made to Appendix-II-A to the Ordinance V (2-A) of the Ordinances of the University;

Add the following:

Syllabi of Semester-III of the Department of Finance & Business Economics under Faculty of Applied Social Sciences & Humanities based on Under Graduate Curriculum Framework -2022 implemented from the Academic Year 2022-23.

Bachelor of Business Administration (Financial Investment Analysis) [BBA (FIA)]

(FASSH)

DSC 7: CORPORATE FINANCE

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSC 7: CORPORATE FINANCE	4	3	1	NIL	Class XII	NIL

Course Objectives:

- To provide an understanding of the essential elements of the financial environment in which the business firm operates.
- To acquaint students with the techniques of financial management and it's applications for business decision making.
- It aims to give and develop in the students the viewpoint of the CFO of a firm, though it will also be useful in developing relevant skills for various strategic finance roles in the modern business entities.

Learning Outcome:

After studying this course, the student will be able to:

- Understand the basic concepts of financial management.
- Understand how to coordinate various decisions to maximize wealth of an organisation in today`s financial environment.
- Equipped to arrive at strategic corporate finance decisions with the required accuracy which will be aided by using various excel functions.

Course Contents:

Unit 1 (8 Hours)

Nature of Financial Management: Finance and related disciplines; Scope of Financial Management; Profit Maximization, Wealth Maximization. Functions of Finance – Finance Decision, Investment Decision, Dividend Decision; Risk-Return Trade-off in Finance Functions. Organisation of finance function; Concept of Time Value of Money – present value, future value, annuity, growing annuity, perpetuity, growing perpetuity, excel functions of time value of money.

Unit 2 (16 Hours)

Strategic Investment Decisions: Capital Budgeting– Nature and meaning of capital budgeting; Principles and Process; Estimation of relevant cashflows and terminal value; Evaluation techniques– Payback period, Accounting Rate of Return, Payback Period, Net Present Value, Internal Rate of Return & MIRR, NPVvs.IRR, Net Terminal Value, Profitably Index Method, Risk analysis in Capital Budgeting-Sensitivity and Scenario analysis, Certainty Equivalent Approach, RADR, Real options, excel functions of capital budgeting techniques.
Cost of Capital: Meaning and concept, Measurement of cost of capital-Cost of debt; Cost of Equity Share; Cost of Preference Share; Cost of Retained Earning; Computation of over-all cost of capital based on Historical and Market weights(WACC); Adjusting cost of capital for risk.

Unit 3 (12 Hours)

Strategic Financing Decisions – Capital Structure, Theories and Value of the firm **–** NetIncome approach, Net Operating Income approach, Traditional approach, Modigliani Miller (MM) model, HAMADA model; Determining the optimal capital structure, Checklist for capital structure decisions, Costs of bankruptcy and Financial distress, Trade off models, Pecking Order Theory.
Leverage analysis and EBIT-EPS Analysis: Concept of leverage, Types of leverage: Operating leverage, Financial leverage, Combined leverage; EBIT-EPS Analysis, Guidelines for capital structure planning, Link between capital structure and capital budgeting
Dividend Decisions: Factors determining dividend policy, Theories of dividend – Gordon model, Walter model, MM Hypothesis, Signaling Theory, Forms of dividend–Cash dividend, Bonus shares, Stock split, Dividend policies in practice, Patterns observed in payout policies worldwide.

Unit 4 (9 Hours)

Working Capital Management

Working Capital Management: Determination of Working Capital. Determining financing mix of working capital. Receivables Management – Objectives; Credit Policy, Cash Discount, Debtors Outstanding and Ageing Analysis; Costs – Collection Cost, Capital Cost, Default Cost, Delinquency Cost. Management of Cash (Theory only) – Need for Cash, Cash Management Techniques (Lock box,Concentration Banking). Inventory Management (Theory only) – ABC Analysis; Minimum Level; Maximum Level; Reorder Level; Safety Stock; EOQ (Basic Model).

Essential Readings: (Latest editions of the following to be used)

1. Berk, J., & DeMarzo, P. (5th ed.).*Corporate Finance*, Pearson - Prentice Hall.
2. Horne, J. C. V., & Wachowicz, J. M., Jr. (13th ed.). *Fundamentals of Financial Management*. Prentice Hall, Pearson Education.
3. Pandey, I. M. (n.d.). *Financial Management*. Pearson.

Additional Readings:

1. Khan, M.Y. & Jain, P.K.(n.d.) *Financial Management Text Problem and Cases*, Tata Mc Graw Hill Publishing Co. Ltd.
2. Brealey, R.R., Myers.S., Allen, F.,&Mohanty, P.(n.d.)*Principles of Corporate Finance*. New Delhi: Tata Mc-Graw Hill.

Teaching – Learning Process

The teaching-learning process for this paper would include classroom lectures and tutorials; Case study discussions; class presentations; Workshops.

Examination scheme and mode:

Evaluation scheme and mode will be as per the guidelines notified by the University of Delhi.

Key Words

Finance, Capital Budgeting, Wealth Maximization, Cost of Capital, Dividends, Leverage.

DSC 8: FINANCIAL MARKETS & INSTITUTIONS

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSC 8: FINANCIAL MARKETS & INSTITUTIONS	4	3	1	NIL	Class XII	NIL

Course Objectives:

- The objective of this paper is to introduce students to role and functioning of financialmarkets,financialproductsthataretradedinsuchfinancialmarketsandinstitutions associatedwithfinancialmarkets.
- It explains the role of financial system on economic development. Various conceptual issues related to risk and return, the role of regulatory bodies, mechanism of commercial banking, operations of insurance companies and mutual funds are discussed elaborately. This will enable them to take the rational decision in financial environment.

Learning Outcomes:

After studying this course, the student will be able to:

- Financial architecture of an economy and its keyplayers.
- The fabrication of Indian Financial markets.
- Working of Capital market, debt market, money market in India
- FunctioningofdifferentplayersinfinancialmarketincludingRegulators.

Course Contents:

Unit1: IndianFinancialSystemand majorInstitutions (12 Hours)

Structure of Indian Financial System: An overview of the Indian financial system, major reforms in the last decade: Payment banks, GST, innovative remittance services, Insolvency and Bankruptcy code. Regulatory Institutions in India: RBI, SEBI, IRDA, PFRDA. Commercial Banking: Role of Banks, NPA, Risk Management in Banks. Universal Banking: need and importance, Core banking solution (CBS), NBFCs and its types; comparison between Banks and NBFCs.

Unit 2: Financial Markets in India (9 Hours)

Introduction to Financial Markets in India: Role and Importance of Financial Markets, Types of Financial Markets: Money Market; Capital Market; Linkages Between Economy and Financial Markets, Integration of Indian Financial Markets with Global Financial Markets, Primary Market: Instruments, book building process (numerical). Merchant Bank: role and types, Mutual Fund: types of Mutual Funds and different types of schemes. Corporate

Listings:Listing and Delisting of Corporate Stocks, Foreign Exchange Market: Introductory, only Conceptual.

Unit 3: Capital Market in India (12 Hours)

Introduction to Stock Markets, Regional and Modern Stock Exchanges, International Stock Exchanges, Demutualization of exchanges, Indian Stock Indices and their construction. Major Instruments traded in stock markets: Equity Shares, Debentures, Exchange Traded Funds. Trading of securities on a stock exchange; Selection of broker, capital and margin requirementsofabroker,MTMandVARMargins(withnumerical),kindsofbrokers,openingofanaccounttotradeinsecurities,DEMATSystem,placinganorderforpurchase/sale of shares, contract note and settlementof contracts, Commodity Markets – Structure.

Unit4: MoneyMarkets&DebtMarketsinIndia (12 Hours)

MoneyMarket:Meaning,roleandparticipantsinmoney markets,Segmentsofmoneymarkets, Call Money Markets, Repos and reverse Repo concepts, Treasury Bill Markets, Certificateof Deposit and Commercial Paper (with numerical). Debt Market: Introduction and meaning, Primary Market for Corporate Securities in India:Issue of Corporate Securities, Secondarymarket for government/debt securities (NDS-OM), Auction process (with Numerical), CorporateBondsvs. Government Bonds. Retail Participation in Money and Debt Market-RBI Retail Direct platform.

Essential Readings

1. Bhole, L. M., & Mahakud, J. (2018). Financial Institutions and Markets: Structure, Growth and Innovations (6th Edition). McGraw Hill Education.
2. Saunders, A., & Cornett, M. M. (2007). Financial Markets and Institutions (3rd ed.). Tata McGraw Hill.
3. Pathak, B. V. (2008). Indian Financial System: Markets, Institutions and Services (2nd ed.). Pearson Education.
4. Khan, M. Y. (n.d.). Financial Services. McGraw Hill Education.

AdditionalReadings:

1. Madura, J. (2008). *Financial Institutions and Markets*. Cengage Learning EMEA.
2. Kohn, M. G. (2004). *Financial Institutions and Markets*. Oxford University Press.
3. Fabozzi, F. J., & Modigliani, F. (2005). *Capital Markets: Institutions and Markets* (3rd ed.). Prentice Hall of India.

Teaching Learning Process: Lecture, discussion, Power Point presentations, Course Contents: may be discussed in light of latest SEBI regulations and RBI guidelines.

Examination scheme and mode:

Evaluation scheme and mode will be as per the guidelines notified by the University of Delhi.

Key Words: Indian Financial System, Financial Markets, Financial Institutions, Capital Market, Money Market, Debt Markets.

DSC 9: CORPORATE LAW

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSC 9: CORPORATE LAW	4	3	1	NIL	Class XII	NIL

Course Objective(s):

In view of increasing emphasis on adherence to norms of good corporate governance, Company Law assumes an added importance in the corporate legislative it deals with structure, management, administration and conduct of affairs of Companies and to understand the applications of company laws to practical commercial situations.

Learning Outcomes:

After studying this course, the student will be able to:

- Identify the different types of contracts and their characteristics.
- Analyze special contracts such as contract of indemnity and guarantee, bailment and pledge, and agency.
- Acquire theoretical and practical perspective on many aspects of Indian companies Act.
- Understand the concept of formation, functioning, meetings, directors and winding off of company.
- Develop critical thinking through the use of company law cases**.**
- Understand consequences of applicability of contract and Insolvency and bankruptcy laws in business situations.

Course Contents:

Unit 1 **(16 Hours)**

The Indian Contract Act 1872:Meaning and Essentials of contract; Kinds of contract; law relating to offer and acceptance, consideration, competency to contract, free consent, void agreements, performance of contracts, discharge of contracts, breach of contracts and quasi contract; Special contracts: contract of indemnity and guarantee, bailment and pledge, and agency.

Unit 2 **(12 Hours)**

The Companies Act 2013:Meaning and Nature of Company with Emphasis on its Advantages and Disadvantages over other forms of Business organizations, Comparison between Company

and Partnership and Company and Limited Liability Partnership, Kinds of Companies–Public, Private, Holding, Subsidiary, Limited and Unlimited Companies, Share-holding and Guarantee Companies, Small company, One person company, Government company and foreign company.

Unit 3 **(12 Hours)**

3. Maheshwari, M., & Maheshwari, S. (n.d.). *Principles of Mercantile Law*. National Publishing Trust.
4. Aggarwal, R. (n.d.). *Mercantile & Commercial Law*. Taxmann.

Teaching – Learning Process: Lecture, Discussion, Presentations, Course contents shall be discussed in the light of relevant case laws.

Examination scheme and mode:

Evaluation scheme and mode will be as per the guidelines notified by the University of Delhi.

Key Words: Indian Contract Act, Companies Act, Insolvency and Bankruptcycode.

DISCIPLINE SPECIFIC ELECTIVE (DSE) COURSES

DSE 1: PROJECT APPRAISAL AND FINANCING

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSE 1: PROJECT APPRAISAL AND FINANCING	4	3	1	NIL	Class XII	NIL

Course Objectives:

- To provide an understanding to the students about identification of a project, feasibility analysis, alternative project appraisal techniques, Project financing.

Learning Outcomes:

On successful completion of this course, the students will be able to:

- Apply various methods of project Appraisal.
- Use Capital Budgeting techniques for financial evaluation and selection of Projects.
- Understand the concept and application of Social Cost and Benefit Analysis.
- Carry out Risk Analysis for business projects and identify alternative sources of financing.
- Apply appraisal techniques for evaluating live projects.

Course Contents

Unit 1: Introduction to Projects and their Appraisal (9 Hours)

Project Definition, Project Identification, Project Life Cycle, Project Stakeholder Analysis, Feasibility study.Types of Project Appraisal (Brief Overview): Market and Demand Analysis, Technical Appraisal, Financial Appraisal, Economic Appraisal, Managerial Appraisal, and Social Appraisal.

Unit 2: Financial and Social Appraisal (15 Hours)

Project Cost and its components, Investment Evaluation Methods (Non-Discounting and Discounting Methods): Payback Period, Accounting Rate of Return, Discounted Payback Period,Net Present Value, Profitability Index, Internal Rate of Return (IRR), Modified Internal Rate of Return (MIRR). Suitability of Methods to different Projects, Investment Evaluation in Practice. Social Appraisal: Rationale for Social Cost Benefit Analysis, Approaches of SCBA

(UNIDO and Little-Mirrlees Approach), Environment Impact Assessment (EIA) and Social Impact Assessment (SIA) of Projects. Relevant Case Studies.

Unit 3: Project Risk Analysis (12 Hours)

Risk Analysis and Management: Sources and Measures of Risk. Methods of Assessing Risk – Sensitivity Analysis, Scenario Analysis, Break-Even Analysis, Simulation Analysis, Decision Tree Analysis, Project Selection under Risk – Judgmental Evaluation, Payback Period, Risk Adjusted Discount Rate Method, Certainty Equivalent Method, Strategies for Risk Management.

Unit 4: Project Financing (9 Hours)

Capital Structure; Choices of Financing; Sources of Financing – Internal Accruals, Equity Capital, Preference Capital, Debentures (or Bonds), Term Loans, Venture Capital, Private Equity, Venture Capital Vs Private Equity, Loan Syndication, Consortium Financing, Public Private Partnership (PPP), Securitization, Crowd Funding; Raising Capital from International Markets: Foreign Issue, Foreign Direct Investment (FDI), External Commercial Borrowings (ECB).

Essential Readings:

1. Chandra, P: *Projects – Planning, Analysis, Selection, Financing, Implementation, and Review*. 2019 Edition. McGraw Hill Education.

2. Agrawal, R., & Mehra, Y. S. (2017). *Project Appraisal and Management*. Taxman Publications.

Additional Readings:

1. Goodpasture, C.J*Quantitative Methods in Project Management*. J. Ross Publishing.
2. Chandra, P,*Financial Management: Theory and Practice*, McGraw Hill Publishing.

Teaching Learning Process:

Class room lecture, Numerical Problem solving, Case study discussion, Class presentationon the assigned topic by students individually or in group, Workshop, Tutorials, Role play.

Examination scheme and mode:

Evaluation scheme and mode will be as per the guidelines notified by the University of Delhi.

Key Words

Project Appraisal, Market and Demand Analysis, Technical Appraisal, Financialand Investment Appraisal, Risk Analysis, Socio-Economic Appraisal, Project Financing.

DSE 2: DIGITAL FINANCE

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture				
DSE 2: DIGITAL FINANCE	4	3	1	NIL	Class XII	NIL

Course Objective(s): The goal of the course is to get the students acquainted with the dramatic changes in the financial sector generated by the digital revolution.

Learning Outcomes:

After studying this course the student will get the:

- Understanding of the nature of digital revolution in finance.
- Knowledge of key digital technologies and products, and state reaction to the digital revolution.
- Knowledge of FinTech, big data analytics and new financial business models.

Course Contents:

Unit 1: Digital Transformation of Finance (4 Hours)

A Brief History of Financial Innovation, Digitization of Financial Services, Introduction to FinTech & Funds, FinTech Transformation, FinTech Typology, Collaboration between Financial Institutions and Start-ups. Introduction to Regulation and future of RegTech.

Crowdfunding- Role of finance in economy, the role of financial intermediaries, Types and functioning of crowdfunding markets, Differences between traditional funding models and crowdfunding markets, Informational problems in the crowdfunding model.

Unit 2: Payment Systems (9 Hours)

Digitalization of the payment system. The historical evolution of the payment system., Attributes of a well-functioning payment system., Banks as guarantors of the payment system, new entrants and new payment models: risks for the banking system. FinTech applications in Banking & Non-Banking Financial Companies (NBFCs); Insurance; payments; Lending; Audit; and Compliance. Electronic Clearing Service (ECS) ,Real Time Gross Settlement (RTGS), National Electronic Funds Transfer (NEFT), Immediate Payment Service (IMPS), Unified Payments Interface (UPI), Growth of Digital Payments in India, RBI guidelines on Digital Payments.

Unit 3: Crypto Assets and Blockchains (16 Hours)

Introduction: Crypto an asset for trade and Crypto-currency, Problems with issuerscredibility, Fin Tech & Securities Trading; Cryptocurrencies and its future as currency, blockchain as a registration mechanism, Functioning of the block chain system. The integration of digital

currency and blockchain and issuers incentive problems; Proptech: FinTech of Real Estate; Possible alternative uses of blockchain technology in the economy and difficulties in its implementation. Use of bitcoin in money laundering., The regulatory debate. Introduction of Central Bank Digital Currency (CBDC). Other Emerging Financial Technologies: Internet of things (IOT) & AR/VR applications.

Unit 4: FinTech, Big Data Analytics, and new Financial Business Models (16 Hours)
The use of data in traditional credit decisions, the combination of big data and machine learning to improve financing decisions., Smart accounts, customized financial products, risk management and fraud prevention., High frequency trading: opportunities and risks.
Digital security, Challenge of confidentiality, integrity and availability, Digital securities as a new systemic risk in the economy. Regulations on cybersecurity. Latest development in the field of Digital Finance.

Essential Readings:

1. Lynn, T., Mooney, J. G., Rosati, P., & Cummins, M. (2019). *Disrupting finance: FinTech and strategy in the 21st century*. Springer Nature.
2. Beaumont, P. H. (2019). *Digital Finance: Big Data, Start-ups, and the Future of Financial Services*. Routledge.

Additional Readings:

1. Phadke, S. (2020). *FinTech Future: The Digital DNA of Finance*. Sage Publications.
2. Maese, V. A., Avery, A. W., Naftalis, B. A., Wink, S. P., & Valdez, Y. D. (2016). *Cryptocurrency: A primer*. Banking LJ, 133, 468.

Teaching – Learning Process:
Lecture, discussion, Power Point presentations, Case Studies, Workshop, Tutorials.

Examination scheme and mode:

Evaluation scheme and mode will be as per the guidelines notified by the University of Delhi.

Key Words
Crowdfunding, Bitcoin, Blockchain Technology, Fintech, Digital Security, Cryptocurrency.

DSE 3: INSURANCE MANAGEMENT

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture				
DSE 3: INSURANCE MANAGEMENT	4	3	1	NIL	Class XII	NIL

Course Objectives: To enable students to identify and manage different types of risks. They will be able to understand the concepts, types and principles of Insurance. Further, they will know the important aspects and technical components of management of Insurance business.

Learning Outcomes:

On successful completion of his course, the students will be able to:

- identify and analyze various types of risks faced by individuals and businesses, evaluate the role and importance of insurance in mitigating these risks, and differentiate between different types of insurance
- understand the principles of risk management, techniques for managing risks, and legal principles governing insurance contracts, and develop an understanding of real-world risk management scenarios.

Securitization: Concept and Process, Credit Enhancement partiesto a Securitization Transaction, Instruments of Securitization, Types of Securities, Securitization inIndia.

Essential Readings:

1. Pathak,B. (2018). *IndianFinancialSystem*. Pearson Publication. (5thed).
2. Khan,M.Y.(2017).*Financialservices*.McGrawHill Education. (6thed).
3. Machiraju,H.R.(2002).*IndianFinancial System*.VikasPublicationHouse. (5thed).

AdditionalReadings:

1. Verma, J. (1996).*Bharat'smanualofmerchantbanking:Concept,practicesandprocedureswith SEBIclarifications, guidelines,rules andregulations.* BharatLawHouse.
2. Sriram K. *HandBookofLeasing,HirePurchase&Factoring*. Institute of Chartered Financial Analysts of India.
3. Wright M., Watkins T. &Ennew C. (2016). *MarketingofFinancialServices*. Routledge

Teaching Learning Process:

Classroomlecture,NumericalProblemsolving,Casestudydiscussion,Classpresentationonthe assigned topic bystudentsindividuallyorin group,Workshop, Tutorials, Role play.

Examination scheme and mode:

Evaluation scheme and mode will be as per the guidelines notified by the University of Delhi.

Key Words

Banking,MergerandAcquisition,Neobanks,NPA,Leasing,HirePurchase,CreditRatings,Securitization,Venture Capital.

GE9: ECONOMIC LEGISLATION

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
GE9: ECONOMIC LEGISLATION	4	3	1	NIL	Class XII	NIL

Course Objective(s):

- To familiarise students with various legislations in the areas of foreign trade, competition, bankruptcy and economic offences.
- To provide an overview of detailed provisions of various economic legislation.
- To enable students to understand the legal implications of unlawful practices and legal recourse available.

Learning Outcomes:

On successful completion of this course, the students will be able to:

- Understand the legal framework relating to foreign exchange, competition, insolvency and fugitive economic offenders.
- Recognise the legal issues in any business transaction and understand lawful way of conduct of economic activities.
- Analyse the legal implications of any economic decision.
- Evaluate legal remedies available in case of bankruptcy or any wrongdoing.

Course Contents:

Unit 1: Competition Act and Fugitive Economic Offenders Act (15 Hours)

The Competition Act, 2002: Introduction, Prohibition of certain agreements, abuse of dominant position and regulation of combinations, Competition Commission of India, Duties, Powers and Functions of Commission, Penalties, Appellate Tribunal.

The Fugitive Economic Offenders Act: Scope and applicability of Act, Confiscation of property, Powers of Directors, Power of Survey, Search and Seizure, notice, procedure for hearing application, Declaration of Fugitive Economic Offender, Power to disallow civil claims, Management of properties confiscated under this Act, Rules of evidence, Appeals.

Unit 2: The Insolvency and Bankruptcy Code (9 Hours)

The Insolvency and Bankruptcy Code, 2016: Introduction of Insolvency and bankruptcy code**,** Corporate Insolvency Resolution Process, Liquidation Process, Fast Track Insolvency Resolution for Corporate Persons, Voluntary Liquidation of Corporate Persons, Adjudicating

Authority for Corporate Persons, Offences and Penalties, Insolvency resolution and bankruptcy for individuals and partnership firms, Regulation of Insolvency professionals, agencies and information utilities.

Unit 3: The Prevention of Money Laundering Act (12 Hours)

The prevention of money laundering Act, 2002:Introduction and definitions, Punishment for the offence of Money Laundering, Attachment, Adjudication and Confiscation, Obligation of Banking Companies, Financial Institutions and Intermediaries, Summons, Searches And Seizures, Appellate Tribunal and Special Courts, Recovery of fine or penalty.

Unit 4: The Foreign Exchange Management Act (9 Hours)

The Foreign Exchange Management Act, 1999:Introduction of FEMA, Difference between FERA and FEMA, Application and Commencement of FEMA, Regulation and Management of Foreign Exchange, Authorised Person, Contraventions and Penalties, Compounding of Offences, Adjudication and Appeal, Directorate of Enforcement.

Essential Readings:

1. Maheshwari & Maheshwari. *Principle of Business Law.* Himalaya Publishing House

2. Aggarwal R. (2014). *Mercantile & Commercial Law*. Taxmann Publications
3. Kucchal M. &Kuchhal V. (2018). *Mercantile Law*. Vikas Publishing House (P) Ltd.

4. Kapoor N. D. (2018). *Elements of Mercantile Law*. Sultan Chand Publications

Teaching – Learning Process:

Lecture, Discussion, Power Point Presentations. Course contents shall be discussed in the light of relevant case laws.

Examination scheme and mode:

Evaluation scheme and mode will be as per the guidelines notified by the University of Delhi.

Key Words

CCI, Prevention of Money Laundering, Insolvency and Bankruptcy Code, FEMA, Fugitive Economic Offenders Act.

SEMESTER-III
BACHELOR OF MANAGEMENT STUDIES

DEPARTMENT OF FINANCE AND BUSINESS ECONOMICS,
Faculty of Applied Social Sciences and Humanities
Category I

DISCIPLINE SPECIFIC CORE COURSE -7 (DSC-7) – : INTRODUCTION TO BUSINESS ANALYTICS

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Introduction to Business Analytics (DSC 7)	4	3	0	1	Class XII	Basics of Statistics

Learning Objectives

- Familiarise students with basics of predictive and prescriptive analytics in order to solve some business problems using different types of data
- Students should be able to solve business problems, analyse data sets using various relevant statistical software packages, and interpret and effectively communicate the results

Learning outcomes

On successful completion of the course the learner will be able to:

- Understand fundamental concepts in machine learning
- Build basic models in statistical software
- Interpret results
- Compare results of different models to select the best fit
- Drive business decisions using model output

SYLLABUS OF DSC-7

Unit 1: Introduction to Business Analytics and Descriptive Analytics (14 hours)

Introduction to Business Analytics: Role of Analytics for Data Driven Decision Making; Types: Descriptive Analytics, Predictive Analytics, and Prescriptive Analytics. Introduction to the concepts of Big Data Analytics, Web and Social Media Analytics. Overview of Machine Learning Algorithms. Introduction to relevant statistical software packages and carrying out descriptive analysis through it.

Unit 2: Predictive Analytics 1 **(9 hours)**

Simple Linear Regression: Estimation of Parameters, validation of simple linear regression model, Coefficient of determination, Significance tests, Residual analysis, Confidence and Prediction intervals.

Multiple Linear Regression: Interpretation of Partial regression coefficients, working with categorical variables, Multi-collinearity and VIF, Outlier Analysis, Auto-correlation, transformation of variables, variable selection in regression model building.

Unit 3: Predictive Analytics 2 **(9 hours)**

Logistic and Multinomial Regression: Logistic function, Estimation of probability using logistic regression, Omnibus Test, Wald Test, Hosmer Lemshow Test, Pseudo R Square. **Model Performance:** Classification table (sensitivity, specificity, accuracy paradox, precision, F score), Gini coefficient, ROC, AUC, methods for determining the optimal cutoff probability.

Unit 4: Machine Learning Models **(13 hours)**

Decision Trees: Introduction, Chi-Square Automatic Interaction Detection, Bonferroni Correction, Classification and Regression Tree, Gini Impurity Index, Entropy, Cost based splitting Criteria, Ensemble Methods, Random Forest.

Clustering: Introduction, Distance and Dissimilarity measures used in clustering, Quality and Optimal Number of clusters, Clustering Algorithms, K-Means clustering, Hierarchical Clustering.

Practical component (30 hours)

Practical Exercises:

1. Prepare and import data (financial data of companies, macroeconomic data, primary data collected through questionnaires). Calculate and interpret descriptive statistics on R/Python.
2. Perform simple OLS regression on R/Python and interpret the results obtained.
3. Test the assumptions of OLS (multicollinearity, autocorrelation, normality etc.) on R/Python.
4. Perform regression analysis with categorical/dummy/qualitative variables on R/Python.
5. Perform probabilistic regression models (logit and probit) along with validation tests and classification table on R/Python.
6. Apply and interpret the results of decision trees and clustering models on R and Python.

Essential/recommended readings

1. Business Analytics: The Science of Data Driven Decision Making, First Edition (2017), U Dinesh Kumar, Wiley India.

Suggestive readings

1. Introduction to Machine Learning with Python, Andreas C. Mueller and Sarah Guido, O'Reilly Media, Inc.
2. Data Mining or Business Analytics – Concepts, Techniques, and Applications in Python. GalitShmueli, Peter C. Bruce, Peter Gedeck, and Nitin R. Patel. Wiley.
3. Relevant Case Studies from different functional domains of business to be used while covering the Predictive Analytics and Machine Learning models. Following Case Studies may be taken up along with the course topics:
   - Merton Truck Company (HBS Case).

- Supply Chain Optimization at Madurai Aavin Milk Dairy (IIMB Case).
- Red Brand Canners (Stanford Case); Managing Linen at Apollo Hospitals (IIMB Case).

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE – 8 (DSC-8): MACROECONOMICS

Credit distribution, Eligibility and Prerequisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Macroeconomics (DSC 8)	4	3	1	0	Class XII	Basic Microeconomics

Learning Objectives

- Determination of and linkages between major economic variables; level of output and prices, inflation, interest rates and exchange rates.
- The course is designed to study the impact of monetary and fiscal policy on the aggregate behaviour of individuals.

Learning Outcomes

On successful completion of the course the learner will be able to:

- Understand the determination of key macroeconomic variables.
- Describe models of determination of equilibrium outputs, prices and rate of interest.
- Analyse the role of the Government in an economy and examine how it uses its fiscal and monetary policy to influence macroeconomic variables.
- Explain the working of an open economy

SYLLABUS OF DSC- 8

Unit 1 **(6 hours)**

Basic understanding of Ancient Indian Economy, Wealth and its various aspects as per Vedic Philosophy; Kautilya's view on Ways of Financial Management and Economic Governance, Proposition of Welfare states and Good Governance by Kautilya as the foundation of strong Indian Economy; Relevance of Kautilya'sArthsashtra in making of modern and advanced India.

Unit 2 **(18 hours)**

Classical theory of income and employment: Quantity Theory of Money–Cambridge version, Classical aggregate demand curve, Classical theory of interest rate, effect of fiscal and monetary policy.

Simple Keynesian model: goods and money market equilibrium, changes in equilibrium, multiplier, effect of fiscal and monetary policy; IS-LM model: properties of IS-LM curves, factors affecting the position and slope of IS-LM curves, determination of equilibrium income and interest rates, effect of monetary and fiscal policy; slopes of IS-LM curves and effectiveness of fiscal and monetary policies.

Unit 3 **(9 hours)**

Inflation: meaning; demand and supply side factors; natural rate theory; monetary policy-output and inflation (monetarist view); Phillips curve: short run and long run.

Unit 4 **(12 hours)**

Brief introduction to Balance of Payment (BOP) account; market for foreign exchange and exchange rate; monetary and fiscal policy in open economy; Mundell Fleming model: perfect capital mobility and imperfect capital mobility under fixed and flexible exchange rate.

Essential/recommended readings

1. Froyen, R. P. (2011): Macroeconomics-theories and policies (8th Edition). Pearson.
2. Dornbusch and Fischer (2010): Macro economics (9th Edition).Tata McGraw Hill.N
3. Gregory Mankiw (2010). Macro economics (7th Edition).Worth Publishers
4. Kautilya'sArthashastra-The way of Financial management and economic governance (2012)(6th Edition) Jaico Publishing House

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE– 9 (DSC-9): ORGANISATIONAL BEHAVIOUR

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical / Practice		
Organisational Behaviour (DSC 9)	4	3	1	0	Class XII	None

Learning Objectives

- Course presents an integrated view of human behaviour in organisations.
- Building understanding of individual and group behaviour at work for improving the effectiveness of organisations.

Learning outcomes

On successful completion of the course the learner will be able to:

- Understand the importance of Organisational Behaviour as a field of study.
- Understand the role of Perception, personality and learning in explaining Individual behaviour and to apply different motivational theories and leadership styles to increase the productivity and job satisfaction of employees.
- Understand the foundations of group behaviour and the framework for organisational change and development.
- Identify methods to enhance individual and Organisational wellbeing and resolve organisational problems.

SYLLABUS OF DSC-9

Unit 1: Core Concepts in OB in Managing Individual Behaviour (12 hours)

Conceptual Foundations and Importance of organizational Behaviour. Perception and Attribution: Concept, Factors affecting Perception, Attribution theory, Perceptual Organization and Errors in Perception. Personality: Concept, Factors affecting personality and Theories. Learning: Concept and Theories of Learning, Concept of Reinforcement, Schedules of Reinforcement.

Unit 2: Motivation at work, Interpersonal relations & Change Management (12 hours)

Motivation: Concepts and their application, Content theories (Maslow, McClelland and Herzberg's Theories); Process theories (Expectancy theory, Equity theory). Analysis of Interpersonal Relationship: Transactional Analysis, Johari Window. Organisational Change: Concept, Resistance to change, managing resistance to change, Kurt Lewin Theory of Change.

Unit 3: Leadership and Group Processes (9 hours)

Leadership: Trait Approach, Behavioural theories (Ohio and Michigan State Studies, and Blake & Mouton's Managerial grid), and Contingency theories (Fiedler's Contingency Model, Hersey & Blanchard's Situational Leadership Model) Contemporary Leadership issues: Charismatic, Transactional and Transformational Leadership. Groups and Teams: Definition, Stages of Group Development, Group Processes-Group Cohesiveness, Group Think, Group Shift.

Unit 4: Managing Conflict and Enhancing Wellbeing (12 hours)

Organisational Power and Politics: Concept, Sources of Power, Tactics to gain power in Organizations. Nature of organisational politics. Conflict: Concept, Sources, Types, Stages of conflict, Management of conflict. Well-being at Work: Importance and Impact of employee emotions and emotional intelligence in organisations. Work stress and its management.

Essential/recommended readings

1. Stephen P. Robbins, T. A. (2016). Organisational Behavior. Pearson.='
2. Aswathappa, K., & Reddy, G. S. (2009). Organisational behaviour (Vol. 20). Mumbai: Himalaya Publishing House
3. Luthans Fred, Organisational Behaviour, Tata Mc Graw Hill.

4. Singh Kavita, Organisational Behaviour, Pearson.

Suggestive readings

1. Greenberg Jerald and Baron Robert A.: Behavior in Organisations: Understanding and Managing Human side of work, Prentice Hall of India

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVE – MARKETING (DSE-1)

DSE 1: RETAIL MANAGEMENT

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Retail Management (DSE 1)	4	3	1	0	Class XII	Basics of marketing

Learning Objectives

- Understand the concept and characteristics of retailing, emerging trends, and the evolution of the Indian retail industry.
- Gain knowledge about store location selection and store planning, including trading area analysis, site selection, store design and layout, and effective retail space management.
- Develop an understanding of retail marketing and merchandising, including retail marketing mix, advertising and sales promotion, CRM, buying organization formats and processes, merchandise planning, and pricing strategies.
- Acquire knowledge about the various elements/components of retail store operation, store administration, inventory management, customer service, store maintenance, and store security.

Learning Outcomes

On successful completion of the course the learner will be able to:

- Describe the concept and characteristics of retailing and explain the emerging trends and evolution of the Indian retail industry.
- Analyze the characteristics of trading areas and evaluate different types of store locations based on the trading area analysis.

- Develop a retail marketing plan that includes the retail marketing mix, advertising and sales promotion strategies, store positioning, and CRM strategies.
- Formulate pricing objectives, strategies, and types of pricing based on external factors that impact a retail price strategy.
- Recognize and understand the operations-oriented policies, methods, and procedures used by successful retailers in today's global economy.

SYLLABUS OF DSE 1

Unit 1: Introduction to Retailing and Retail Formats (12 hours)

Introduction to Retailing: Definition, Characteristics, emerging trends in retailing, Evolution of retailing in India, Factors behind the change of Indian retail industry. Retail Formats: Retail institutions by ownership, Retail institutions by Store-Based Strategy Mix, Web, Non-store based, and other forms of Non-traditional Retailing.

Unit 2: Choosing a Store Location and Store Planning (12 hours)

Choosing a Store Location: Trading-Area analysis, characteristics of trading areas, Site selection, Types of locations, location and site evaluation. Store Planning: Design & Layout, Retail Image Mix, effective retail space management, floor space management.

Unit 3: Retail Marketing (12 hours)

Retail Marketing: Retail Marketing Mix, Advertising & Sales Promotion, Store Positioning, CRM. Retail Merchandising: Buying Organization Formats and Processes, Devising Merchandise Plans, Shrinkage in retail merchandise management, Markup & Markdown in merchandise management.

Unit 4: Merchandise Pricing and Retail Operations (9 hours)

Merchandise Pricing: Concept of Merchandise Pricing, Pricing Objectives, External factors affecting a retail price strategy, Pricing Strategies, Types of Pricing. Retail Operation: Elements/Components of Retail Store Operation, Store Administration, Store Manager – Responsibilities, Inventory Management, Customer Service, Management of Retail Outlet/Store, Store Maintenance, Store Security.

Essential/recommended Readings (latest edition of readings to be used)

1. Berman, B., & Evans, J. R. (2012). *Retail management.* Pearson Education.
2. Vedamani, G. G. (2010). *Retail management: Functional principles & practices*. Jaico Publishing House.

Suggested Readings (latest edition of readings to be used)

1. Cullen, P., & Newman, A. (2014). *Retailing: Environment & operations.* Cengage Learning

EMEA.
2. Bajaj, K., Tuli, G., & Srivastava, R. K. (2017). *Retail management.* Oxford University Press.
3. Singh, H. (2017). *Retail management.* S. Chand Publishing.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time

DISCIPLINE SPECIFIC ELECTIVE – MARKETING (DSE-2)

DSE 2: MARKETING OF SERVICES

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility Criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Marketing of Services (DSE 2)	4	3	1	0	Class XII	Basics of Marketing

Learning Objectives

- Understand the emerging service environment in India and the world. It emphasises the distinctive aspects of Services Marketing.
- Aims at equipping learners with concepts and techniques that help in taking decisions relating to various services marketing situations.

Learning Outcomes

On successful completion of the course the learner will be able to:

- Understand the Concept and Importance of Services.
- Discuss the relevance of the services in the Indian economy.
- Examine the characteristics of the services in various industries.
- Analyse the role and relevance of Quality in Services.

SYLLABUS OF DSE 2

Unit 1: Introduction to Services Marketing (9 hours)

Defining a Service; Increasing Importance of Services; Nature of Services; Intangibility; Distinguishing Features of a Service; Managing Services; The Service Product; Relationship of Services and the organization; Services as an Opportunity; Service Industry across the world.

Unit 2: Relevance of Services (12 hours)

Emergence of The Service Economy; Outsourcing and Services; Overview of The Indian Economy; Services Sector in The Indian Economy, (Major players, Major services offered, Major centres; Circumstances that contributed to the Services boom in the Indian economy; Role and relevance of Services to the Indian economy; Classification of Services; Variety of Services offered by Indian organizations, Intangible and Tangible Services.

Unit 3: Differentiating Services (12 hours)

Distinguishing Features; The service; Promotion; Price; Place; People; Physical evidence; Process; Elements of Positioning; Service Differentiation; How Indian companies have been at the forefront of the Services industry; What do Indian companies offer to companies seeking Services support; Services as a source of competitive advantage; Increasing integration of Services with organizational plans and activities; Internal Services and External Services, Features, Relevance, Examples; Services Trainings and Hiring; Motivation and Employee Management in the Services sector; Factors affecting attempts of Services Differentiation.

Unit 4: Quality and Strategies (12 hours)

Defining Service Quality; Researching Service Quality; Service Quality Benchmarking (Servqual, TUV, ISO etc.); Setting Quality Standards; Managing the Marketing Mix for Quality; Organizing and Implementing Service Quality; Factors affecting Service Quality Management; Customer and Customer Value Proposition and Value Creation n Services; Managing the Service Encounter; Blueprinting; Managing Customer Demand, Frequency, Quality, Training, Content and Context; Developing Relationships with Customers; Distribution Strategy; Pricing of Services; Promoting Services;. Competitors of the Indian Services Industry; Future of Services Industry in India and elsewhere; Near-shoring and Reshoring; Services and the Gig Economy; Growth potential of the Services Industry.

Essential/recommended Readings (latest edition of readings to be used)

1. Zeithaml Valerie A, & Bitner Mary Jo., Gremler Dwayne D., Pandit Ajay. (2010). *Services Marketing* (5 edition). McGraw Hill.
2. Wirtz Jochen, Lovelock Christopher H, Chatterjee Jayanta., *Services Marketing*, (8e Edition), Pearson.

Suggested Readings (latest editions of readings to be used)

1. Woodruffe, Helen. (1998).*Service Marketing*. MacMillan India.
2. Zeithaml Valerie A, & Bitner Mary Jo., Gremler Dwayne D., Pandit Ajay. (2010). *Services Marketing* (5 edition). McGraw Hill.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVE – MARKETING (DSE-3)

DSE 3: E COMMERCE

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility Criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
E-Commerce (DSE 3)	4	3	1	0	Class XII	Basics of Marketing

Learning Objectives

- To understand how electronic commerce is affecting business enterprises, governments, consumers and people in general.
- To understand the working of different types of e-commerce models
- To understand the transition of e-commerce in India
- To evaluate enabling technologies for e-commerce such as the internet, networks, search engines, software agents, and e-payment systems.

Learning Outcomes

On successful completion of the course the learner will be able to:

- Understand traditional vs e-retailing and different models of e-retailing.
- Evaluate enabling technologies for e-commerce such as the internet, networks, search engines, software agents, and e-payment systems.
- Analyze website design, its role in B2C e-commerce, strategies, and goals.
- Analyze the security risks associated with e-commerce and discuss legal and ethical issues.

SYLLABUS OF DSE 3

Unit 1: Introduction to E-Commerce: Business Models and Concepts (12 Hours) E-Commerce: Meaning and Concept of e-Commerce, Brief history; Transition of e-Commerce in India; Advantages and Disadvantages of e-Commerce; IT act, 2000. E-Commerce models: B2B, B2C, C2C, C2B, G2C; Traditional vs e-retailing, Models of e-retailing; e-Services: Categories of e-services, Web-enabled services, matchmaking services.

Unit 2: Enabling Technologies for E-Commerce (9 Hours)

Technology in e-Commerce, the internet today and future, Networks and internets: communication switching, Internet protocol suite, IPv6, Search engines, software agents, Internet service provider, ISP policy in India, e-payment systems. Information selling on the web, E-

entertainment

Unit 3: Basic Techniques for E-Commerce (12 hours)

Web Hosting: Webhost-types, VPS-Domain for a website, DNS Information. Webhost: Bandwidth Control Panels- Statistics- uptime-Ecommerce. Website Design: Introduction, Role of Website in B2C Ecommerce, Website strategies and Goals. Search Engine Optimization (SEO): Introduction, Importance of SEO, History of Search Engines, how search Engines Operate, Crawling Techniques. Basic types of Search Tools, How People use search engines and portals, Page rank, Anatomy of Hyperlink, Keywords and Queries, how to conduct Keyword Research, Why site structure is important.

Unit 4: E-Marketing (12 Hours)

Concept, traditional marketing vs e-marketing, Browsing behaviour model, advantages of e-marketing, e-marketing strategies: permission-marketing, affiliate marketing, viral marketing, social media marketing, content marketing, m-commerce, e-commerce security risks, legal and ethical issues.

Essential/recommended Readings (latest editions of readings to be used)

1. Laudon, Kenneth C.: *E-Commerce: Business, Technology, Society,* 4th Edition, Pearson.
2. Joseph, S.J.: *E-Commerce: an Indian perspective,* Prentice-Hall of India.
3. Awad, Elias, *M.: Electronic Commerce,* Prentice-Hall of India.
4. Pandey, U.S. and Shukla, Saurabh: *E-Commerce and Mobile commerce Technologies,* S. Chand.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVE – HUMAN RESOURCE MANAGEMENT (DSE-1)

DSE 1: INDUSTRIAL RELATIONS

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Industrial Relations (DSE 1)	4	3	1	0	Class XII	None

Learning Objectives

- To acquaint learners with concepts of industrial relations and related acts in Indian context.
- To familiarise the learners with the implications of law in the industrial environment.

Learning Outcomes

On successful completion of the course the learner will be able to:

- Acquire theoretical and practical perspective on different aspects of industrial relations.
- Understand the key participants, institutions, relationships, and processes in industrial relations.
- Understand employer and employee relations and its management.
- Analyse the rights of labour class in the industrial environment

SYLLABUS OF DSE 1

Unit 1: Industrial Relations (12 hours)

Concept, Objectives of industrial relations, Parties in industrial relations, Aspects of industrial relations. Trade unions: Objectives, Historical perspective of unionism in India, functions, why workers join unions, importance, problems of trade unions, structure of trade unions, Trade union act 1926, Immunity granted to register trade unions, recognition of trade unions.

Unit 2: Industrial Disputes (9 hours)

Concept, Types of industrial disputes, Causes of industrial disputes, Machinery for settlement of industrial disputes, Industrial disputes act 1947. The industrial employment (standing orders act1946, coverage, modification, interpretation).

Unit 3: Labour Turnover (12 hours)

Concept, Rate of labour turnover, Costs of labour turnover, Causes of labour turnover, controlling labour turnover. Absenteeism: Concept, Rate of absenteeism, Causes of absenteeism, Effects of

absenteeism, Measures to control absenteeism.

Unit 4: Collective Bargaining **(12 hours)**

Concept, Essentials of collective bargaining, Problems of collective bargaining, Collective bargaining procedure. Workers' participation in Management: Modes of participation, Measures for successful workers' participation.

Essential/recommended Readings (latest edition of readings to be used)

1. Srivastav S. *Industrial relations and Labour laws*. Vikas Publishing House.
2. Mallik P. *Handbook of Industrial and Labour laws*. Eastern Book Company.
3. Saharay H.K. *Industrial and Labour Laws of India*. Prentice Hall International.
4. Chhabra T. *Industrial Relations and Labour Laws*. Dhanpat Rai Publishing House.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time

DISCIPLINE SPECIFIC ELECTIVE – FINANCE (DSE-1)

DSE 1: PROJECT APPRAISAL, FINANCING AND CONTROL

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Project Appraisal, Financing and Control (DSE 1)	4	3	1	0	Class XII	Basics of Accounting and Finance

Learning Objectives

- To familiarize learners about identification of a project and feasibility analysis,
- To equip them to apply project appraisal, control & management Techniques,
- To understand and appraise project risk analysis and financing

Learning Outcomes

On successful completion of his course, the learners will be able to:

- Understand the process of screening of ideas and carry out appraisal for Projects.
- Use Investment Evaluation Techniques for selection of Projects.
- Carry out Risk Analysis for business projects and identify alternative sources of financing.
- Understand the concept and application of Social Cost benefit Analysis
- Apply project control and management techniques for project success.

SYLLABUS OF DSE 1

Unit 1: Introduction to Projects and their Appraisal (9 hours)

Project Definition, Project Identification, Project Life Cycle, Project Stakeholder Analysis, Feasibility study. Types of Project Appraisal (Brief Overview): Market and Demand Analysis, Technical Appraisal, Financial Appraisal, Economic Appraisal, Managerial Appraisal, and Social Appraisal.

Unit 2: Financial Appraisal (9 hours)

Components of Project Cost, Investment Evaluation Techniques: Non-Discounting Methods (Payback Period, Accounting Rate of Return), Discounting Methods (Net Present Value, Profitability Index, Internal Rate of Return (IRR), Modified Internal Rate of Return (MIRR)). Comparative analysis of Investment Evaluation Techniques, Investment Evaluation in Practice.

Unit 3: Project Risk Analysis and Project Financing (15 hours)

Risk Analysis and Management: Sources and Measures of Risk. Methods of Assessing Risk – Sensitivity Analysis, Scenario Analysis, Break-Even Analysis, Simulation Analysis, Decision Tree Analysis. Strategies for Risk Management.

Sources of Financing – Internal Accruals, Equity Capital, Preference Capital, Debentures (or Bonds), Term Loans, Venture Capital, Private Equity, Venture Capital Vs Private Equity, Loan syndication.

Unit 4: Social Appraisal and Aspects of Project Management (12 hours)

Social Appraisal: Rationale for Social Cost Benefit Analysis (SCBA), Approaches of SCBA (UNIDO and Little-Mirrlees Approach Approach), Environment Impact Assessment (EIA) and Social Impact Assessment (SIA) of Projects. Relevant Case Studies. Network Techniques for Project Cost and Time Management (PERT & CPM) (theory only). Pre-Requisites for Successful Project Implementation. Essentials of a Project Report.

Essential/recommended readings (latest edition of readings to be used)

1. Chandra, Prasanna (2019). *Projects – Planning, Analysis, Selection, Financing, Implementation, and Review*. McGraw Hill Education.
2. Agrawal, R., & Mehra, Y. S. (2021).*Project Appraisal and Management*. TaxmannPublications.

Suggestive Readings (latest edition of readings to be used)

1. Goodpasture, J. C. (2003). *Quantitative methods in project management*. J. Ross Publishing.
2. Project Management Institute. (2021). *A guide to the Project Management Body of Knowledge (PMBOK guide)*. Project Management Institute.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time

DISCIPLINE SPECIFIC ELECTIVE – FINANCE (DSE-2)

DSE 2: INSURANCE

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Insurance (DSE 2)	4	3	1	0	Class XII	None

Learning Objectives

- To equip the learners with the basic characteristics of insurance, different kinds of insurance, and benefits and costs of insurance to society.
- To acquaint the learners with the core concepts of risk management and its objectives.
- To get deep insight into the regulatory environment of IRDA
- To examining the regulatory environment for insurance

Learning Outcomes

On successful completion of his course, the learners will be able to:

- Evaluate the different types of Risks and learn the concept and principles of Insurance.
- Understand Risk Management and learn the concept, principles and technical components of Insurance contracts.
- Comprehend the functioning of Insurance company operations.
- Learn various important and strategic aspects of management of Insurance business.

SYLLABUS OF DSE 2

Unit 1: Insurance and Risk (9 hours)

Risk – Definitions of Risk, Chance of Loss, Peril and Hazard, Classification of Risk, Major Personal Risks and Commercial Risks, Burden of Risk on Economy and Society.

Insurance – Definition of Insurance, Basic Characteristics of Insurance, Law of Large Numbers, Characteristics of an Ideally Insurable Risk, Benefits and Costs of Insurance to Society. Insurance Kinds (briefly) – Life and General Insurance, Difference between Life and General insurance.

Unit 2: Insurance Principles & Risk Management (12 hours)

Risk Management – Meaning of Risk Management, Objectives of Risk Management, Steps in the

Risk Management Process, Techniques for Managing Risk, Benefits of Risk Management. Personal Risk Management. Enterprise Risk Management (briefly) – Concept & Benefits. Case Studies on Management of different Personal and Business Risk to be discussed. Fundamental Legal Principles – Principle of Indemnity, Principle of Insurable Interest, Principle of Subrogation, Principle of Utmost Good Faith. Requirements of an Insurance Contract.

Unit 3: Insurance Company Operations (12 hours)

Requirements of an Insurance Contract, Distinct Legal Characteristics of Insurance Contracts. 3. Hawawini, G., &Viallet, C. (2008). *Finance for Non-Finance Managers*. Cengage Learning.
4. Siciliano, G. (2014). *Finance for Nonfinancial Managers*, 2nd ed. (Briefcase Books Series) . McGraw-Hill.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

GENERIC ELECTIVES (GE-4): WEALTH MANAGEMENT

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Wealth Management (GE 4)	4	3	1	0	Class XII	None

Learning Objective

- To familiarise learners with the essential concepts and fundamentals of financial investments. The course will enable them to understand and make informed choice about the various available financial investment alternatives.

Learning Outcomes

On successful completion of the course the learner will be able to:

- Provide an overview of various aspects related to wealth management.
- Understand the fundamentals of financial investments and the investment decision process.
- Able to compute various measures of risk and return, and understand their role for evaluating investments.
- Understand and carry out security analysis using different approaches.
- Learn basic approaches to managing portfolios.

SYLLABUS OF GE-4

Unit 1: Basics of Wealth Management and Investments (9 hours)

Introduction to Wealth Management, Need for Wealth Management, Components of Wealth Management, Process of Wealth Management. Concept of Investment, Financial Investment Vs. Real Investment, Investment Vs. Speculation, Objectives or Features of Investment, Risk Return Trade Off, Investment Environment – Overview of Securities Market and Different Types of Financial Investment. Investment Decision Process, Direct Investing Vs Indirect Investing, Approaches to Investing – Active Vs Passive.

Unit 2: Risk – Return Analysis (12 hours)

Concepts of Return and Risk, Types of Return (their calculation & utility): Absolute Return, Average Return, Expected Return, Holding Period Return, Effective Annualised Return, Portfolio Return, Risk-Adjusted Return. Causes (or Sources) and Types of Risk – Systematic and Unsystematic Risk, Components of Systematic and Unsystematic Risk. Calculation of Total, Systematic and Unsystematic Risk. Impact of Taxes and Inflation on Investment – Computation of Post Tax and Real Returns.

Unit 3: Security Analysis (12 hours)

Approaches to Security Analysis – Fundamental Analysis, Technical Analysis, and Efficient Market Hypothesis (EMH). Fundamental Analysis – EIC Framework, Economic Analysis, Industry Analysis, and Company Analysis. Technical Analysis – Basic Tenets of Technical Analysis, Tool of Technical Analysis – Charts, and Technical Indicators, Limitations of Technical Analysis. Difference between Fundamental Analysis and Technical Analysis.

Unit 4: Portfolio Management & Estate Planning (12 hours)

Traditional portfolio management for individuals: Objectives, constraints, time horizon, current wealth, tax considerations, liquidity requirements, and anticipated inflation. Asset allocation: Asset allocation pyramid, investor life cycle approach. Portfolio management services: Passive – Index funds, systematic investment plans. Active – market timing, style investing. Portfolio Analysis – Portfolio Risk and Portfolio Return. Estate Planning – Fundamentals of Estate Planning, Impact of Property Ownership and Beneficiary Designations, Estate Planning Documents, and Executing Basic Estate Planning

Essential/recommended Readings (latest edition of readings to be used)

1. Tripathi, V. (2019). *Security Analysis and Portfolio Management: Text and Cases*. Taxmann Publications
2. Chandra, P. (2021). *Investment Analysis and Portfolio Management.* (6th ed.). McGraw Hill Education.

Suggestive Readings (latest edition of readings to be used)

1. Billingsley, R., Gitman, L. J., &Joehnk, M. D. (2020). *Personal Financial Planning*. (15th ed.). Cengage Learning.
2. Tillery, S., & Tillery, T. (2018). *Essentials of Personal Financial Planning* (1st ed.). Wiley.
3. Singh, R. (2017). *Security Analysis and Portfolio Management* (2nd ed.). Excel Books.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

GENERIC ELECTIVES (GE-5): FUNDAMENTALS OF MARKETING MANAGEMENT

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Fundamentals of Marketing Management (GE 5)	4	3	1	0	Class XII	None

Learning Objectives

- To introduce the nature, scope, and importance of marketing and its evolution over time.
- To explain the core marketing concepts and the various company orientations.
- To explain the various product decisions, including the product life cycle, product classification, product line decision, product mix decision, branding decisions, packaging and labeling.
- To understand the various pricing methods and determinants of price, as well as promotion decisions and marketing channel decisions.

Learning Outcomes

On successful completion of the course the learner will be able to:

- Learners will be able to understand the nature, scope, and importance of marketing and its evolution over time.
- Learners will be able to explain the core marketing concepts and the various company orientations.
- Learners will be able to identify and analyse the various factors affecting the marketing environment in the Indian context.
- Learners will be able to apply the concepts of segmentation, targeting, and positioning to develop effective marketing strategies.

- Learners will be able to make informed decisions regarding product decisions, including the product life cycle, product classification, product line decision, product mix decision, branding decisions, packaging and labelling.
- Learners will be able to analyse the various pricing methods and determinants of price, as well as promotion decisions and marketing channel decisions, to develop effective marketing strategies.
- Learners will be able to develop marketing strategies for service firms based on an understanding of the unique characteristics of services.

SYLLABUS OF GE-5

Unit 1: Introduction and Marketing Environment (12 hours)

Introduction: Nature, Scope and Importance of Marketing, Evolution of Marketing; Core marketing concepts; Company orientation - Production concept, Product concept, Selling concept, Marketing concept, Holistic marketing concept. Marketing Environment: Demographic, Economic, Political, Legal, Socio cultural, Technological environment (Indian context); Portfolio approach – Boston Consulting Group (BCG) matrix.

Unit 2: Segmentation, Targeting and Positioning and Product Decisions (12 hours) Segmentation, Targeting and Positioning: Concept; Levels of Market Segmentation, Basis for Segmenting Consumer Markets; Product decisions: Concept of Product Life Cycle (PLC), PLC marketing strategies, Product Classification, Product Line Decision, Product Mix Decision, Branding Decisions, Packaging & Labelling.

Unit 3: Pricing, Promotion and Marketing Channel Decisions (12 hours)

Pricing Decisions: Determinants of Price, Pricing Methods (Non-mathematical treatment), Adapting Price. Promotion Decisions: Factors determining promotion mix, Promotional Tools – Fundamentals of advertisement, Sales Promotion, Public Relations & Publicity and Personal Selling. Marketing Channel Decision: Channel functions, Channel Levels, Types of Intermediaries: Wholesalers and Retailers.

Unit 4: Marketing of Services (9 hours)

Marketing of Services: unique characteristics of services, marketing strategies for service firms – 7Ps.

Essential/recommended Readings (latest edition of readings to be used)

- Kotler, P., Armstrong, G., Agnihotri, P. Y., &UlHaq, E. (2019). *Principles of marketing: A South Asian perspective.* Pearson.
- Kotler, P., & Keller, K. L. (2015). *Marketing management (15th ed.).* Pearson.

Suggestive Readings (latest edition of readings to be used)

- Ramaswamy, V.S. & Namakumari, S.: *Marketing Management: Global Perspective – Indian Context*, Macmillan Publishers India Limited.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

GENERIC ELECTIVES (GE-6): DYNAMICS OF START UPS

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Dynamics of Start Ups (GE 6)	4	3	1	0	Class XII	None

Learning Objectives

- Understand the concept of entrepreneurship, its different types, and the qualities required to become a successful entrepreneur.
- Explore the significance of innovation, creativity, and the role they play in the development and growth of new ventures, particularly in the Indian context.
- Identify and evaluate business opportunities, employing various techniques such as idea generation, selection, and implementation.
- Conduct feasibility analysis, encompassing marketing, technical, and financial aspects, to determine the viability of a new venture.
- Gain knowledge of resource mobilization strategies, including different types of resources and various sources of financing, for successful entrepreneurship. Additionally, comprehend the government initiatives and support available for entrepreneurs in India, along with the mechanisms for scaling up and exiting a business.

Learning Outcomes

On successful completion of the course the learner will be able to:

- Understand the concept of entrepreneurship and differentiate between different types of entrepreneurs. (Knowledge)
- Apply innovative and creative thinking to identify and evaluate business opportunities for start-ups. (Application)

- Assess the feasibility of a new venture through comprehensive analysis of marketing, technical, and financial factors. (Analysis)
- Develop strategies for resource mobilization and financing options for entrepreneurship. (Synthesis)
- Evaluate the challenges, government initiatives, and support systems associated with scaling up and exiting a business. (Evaluation)

SYLLABUS OF GE-6

Unit 1: Entrepreneurship Journey (9 hours)

Meaning of entrepreneur, types of entrepreneurs, making of an entrepreneur, role of innovation and creativity for start-ups, start-up opportunities, creativity: role of creative thinking in development and growth of new venture in India. Challenges in starting start-ups.

Unit 2: Business Setup (12 hours)

Characteristics of opportunity, where to look for opportunities, from identification to evaluation, forms of ownership and suitability, different modes of generating ideas**,** identification of opportunities: idea generation, selection and implementation, search for new ideas: techniques for generating ideas: scamper, brainstorming, mind mapping, storyboarding, role playing. Entry strategies: new product, franchising, buying an existing firm.

Unit 3: Feasibility and Resource Mobilisation (15 hours)

Feasibility analysis: marketing, technical and financial feasibility analysis, industry and competition analysis, assessing new venture, economic environment and socio-economic feasibility of the venture. Resource mobilization for entrepreneurship: what is resource, resources mobilization, types of resources, process of resource mobilization, sources of financing.

Unit 4: Scaling-up of Business and Entrepreneurship Ecosystem (9 hours)

Scaling ventures – preparing for change, harvesting mechanism and exit strategies, managing growth, reasons for new venture failures, the entrepreneurial ecosystem, business incubators, entrepreneurship in India. Government initiatives, government grant and subsidies.

Essential/recommended Readings (latest edition of readings to be used)

1. Hisrich, R. D., Peters, M. P., & Shepherd, D. A. (2021). *Entrepreneurship* (11th ed.). McGraw-Hill Education.
2. Kuratko, D. F., & Hodgetts, R. M. (2020). *Entrepreneurship: Theory, process, and practice* (11th ed.). Cengage Learning.
3. Barringer, B. R., & Ireland, R. D. (2019). *Entrepreneurship: Successfully launching new ventures* (6th ed.). Pearson.

4. Spinelli, S., Adams, R. J., & Timmons, J. A. (2018). *New venture creation: Entrepreneurship for the 21st century* (11th ed.). McGraw-Hill Education.
5. Zimmerer, T. W., Scarborough, N. M., & Wilson, D. (2018). *Essentials of entrepreneurship and small business management* (9th ed.). Pearson.

Suggestive Readings (latest edition of readings to be used)

1. Barringer, B. R., & Ireland, R. D. (2019). *Entrepreneurship: Successfully Launching New Ventures* (6th ed.). Pearson.
2. Hisrich, R. D., Peters, M. P., & Shepherd, D. A. (2020). *Entrepreneurship* (11th ed.). McGraw-Hill Education.
3. Kuratko, D. F., & Hodgetts, R. M. (2017). *Entrepreneurship: Theory, Process, and Practice* (10th ed.). Cengage Learning.
4. Morris, M. H., Kuratko, D. F., &Covin, J. G. (2019). *Corporate Entrepreneurship & Innovation* (4th ed.). Cengage Learning.
5. Timmons, J. A., Spinelli, S., &Zacharakis, A. (2018). *New Venture Creation: Entrepreneurship for the 21st Century* (11th ed.). McGraw-Hill Education.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

SEMESTER -III
B.A (Hons) BUSINESS ECONOMICS
Category I

(B.A. Honours in Business Economics in three years)

DISCIPLINE SPECIFIC CORE COURSE – 7 (DSC-7): MICROECONOMICS-II

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Microeconomics-II (DSC 7)	4	3	1	0	Class 12	None

Learning Objectives

This course aims to provide to the student an understanding of:

- the concepts of a market structure and equilibrium in perfectly and imperfectly competitive market situations.
- the possible equilibria in factor markets
- equilibrium in all commodity and factor markets
- the concept of economic welfare and its properties.

Learning outcomes

By studying this course, the students will be able to:

- Identify different forms of market structure, their resource allocation and welfare implications.
- Express rational agent desires in a game theoretic framework.
- Analyse profit maximising strategies under different oligopoly models.
- Use a social welfare function to evaluate societal outcomes

SYLLABUS OF DSC-7

UNIT–I: Market Structure **(18 hours)**

Perfect Competition: Firm equilibrium in the short and long run. Short run supply curve for the firm and the market, long run industry supply; constant, increasing and decreasing cost industry; producer and consumer surplus. Monopoly: Profit Maximisation, multi-plant firm, monopoly power and its measurement, social costs of monopoly, price discrimination. Monopolistic Competition: product differentiation; equilibrium of the firm in the industry-with entry of new firms and with price competition, Comparisons. Oligopoly and Game Theory: Cournot model and reaction curves, Stackelberg's model, Bertrand model, Quantity leadership, Price leadership, Non collusive stable equilibrium,

Simultaneous quantity setting, Collusion, Cartels, Concepts of Game Theory: Dominant strategies and Nash Equilibrium, Mixed strategies, Prisoner's Dilemma.

UNIT – II: Factor Market (10 hours)

Factor pricing in the case of single and many variable factors, demand for labor in a product market with perfect competition and monopoly, monopsony, bilateral monopoly and role of labour unions. Economic rent and quasi rent.

UNIT – III: General Equilibrium (9 hours)

Equilibrium and efficiency under pure exchange and production; Edgeworth box; Pareto optimality conditions; market trade; Walras' law; existence of equilibrium and efficiency; Implications of the first and second welfare theorem.

UNIT – IV: Welfare (8 hours)

Social Welfare Function; welfare maximization, Fair allocation, Envy and equity, Arrow's Impossibility Theorem

Essential/recommended readings

1. Varian, H. R. (2020). Intermediate microeconomics: A modern approach. W. W. Norton.
2. Bernheim, B., Whinston, M. (2009). Microeconomics. Tata McGraw- Hill.
3. Snyder, C., Nicholson, W. (2010). Fundamentals of Microeconomics. Cengage Learning
4. Pindyck, Robert S. & Rubinfeld, Daniel L. (2017). Microeconomics. Pearson

Suggestive readings

1. Dr. Robert E. Hall and Dr. Marc Lieberman. (2009).Microeconomics - Principles and Applications. South Western Educational Publishing.
2. Bergstrom, T., Varian, H. (2014). Workouts in Intermediate Microeconomics. W. W. Norton.
3. Joseph E. Stiglitz and Carl E. Walsh. (2006). Principles of Microeconomics. W. W. Norton & Co.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE – 8 (DSC-8) MATHEMATICS FOR BUSINESS ECONOMICS - II

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Mathematics for Business Economics –II (DSC 8)	4	3	1	0	Class 12	None

Learning Objectives

This course aims to introduce to the student the understanding of

- real multivariate functions and their properties
- the optimisation conditions for real multivariate functions
- differential equations and their applications
- difference equations and applications

Learning outcomes

By studying this course, the students will able to:

- To be adept in the use of differential and integral calculus to examine the properties of functions used in economics and business
- To solve numerical problems of multivariable optimization and properties of the solutions.
- To model business and economic scenarios in mathematical terminology and to appreciate economic models by using formal mathematical methods.

SYLLABUS OF DSC-8

UNIT – I:Multivariable Functions (12 hours)

Geometric representations: graphs and level curves; differentiability: characterisations, properties with respect to various operations and applications; higher order derivatives: properties and applications; the implicit function theorem and application to comparative statics problems; homogeneous and homothetic functions: characterisations and applications

UNIT – II: Multivariable Optimization (15 hours)

Multivariate optimisation: Convex sets; geometric properties of functions: convex functions, their characterisations, properties and applications; further geometric properties of functions: quasiconvex functions, their characterisations, properties and applications; unconstrained optimisation: geometric characterisations, characterisations

using calculus and applications. Multivariate Optimization with constraints: Constrained optimisation with equality constraints: geometric characterisations, Lagrange characterisation using calculus and applications; properties of value function: envelope theorem and applications.

UNIT – III: Economic Dynamics -1 **(9 hours)**

First order differential equations, phase diagrams and stability.

UNIT – IV: Economic Dynamics -2 **(9 hours)**

First order difference equations, equilibrium and stability

Essential/recommended readings

1. Sydsaeter, K., Hammond, P. (2002). Mathematics for economic analysis. Pearson Educational.

Suggestive readings

1. Chiang, Alpha C., and Wainwright Kevin. Fundamental Methods of Mathematical Economics. Boston, Mass: McGraw-Hill/Irwin, 2005
2. Hoy, Michael, Livernois, John, McKenna, Chris, Rees, Ray and StengosThanasis (2011) Mathematics for Economics. Cambridge, Mass. : MIT Press

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE – 9 (DSC-9): CORPORATE FINANCE

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Corporate Finance (DSC 9)	4	3	1	0	Class 12	None

Learning Objectives

This course aims to

- introduce the basic concepts of financial management and its objectives.
- provide an understanding of investment decisions and of working capital.
- introduce and discuss the issues in the cost of capital.
- examine the theories and analysis involved in financing decisions and dividend distribution.

Learning outcomes

By studying this course, students will be able to:

- To learn the role and objectives of financial management in business corporations.
- To acquire skills to analyse corporate behaviour during procurement and development of resources.
- To understand capital structure and discuss the factors that financial managers consider while determining a company's financing strategy
- To critically discuss the theories relating to dividends policies and cost of capital

SYLLABUS OF DSC-9

UNIT – I: Introduction (6 hours)

Nature and Scope of Financial Management. Traditional and Modern Approach to the concept of financial management. Functions of finance – Finance Decision, Investment Decision, Dividend Decision. Objectives of Financial Management - Profit Maximisation and Wealth Maximisation. Concept of Time Value of Money.

UNIT – II: Investment Decision (15 hours)

Capital Budgeting - Nature and meaning of capital budgeting; Types of decisions: - Accept-Reject, Replacement, Mutually Exclusive. Estimation of Relevant cash flows. Evaluation techniques - Accounting Rate of Return, Pay Back, Net Present Value, Internal Rate of Return, Profitability Index Method.

Concepts and Definition of working capital. Determining Financing Mix; Permanent and temporary working capital; Determinants of working capital; Computation of Working Capital.

UNIT – III: Cost of Capital (9 hours)

Concept and Measurement of Cost of Capital: Measurement of specific costs - Cost of debt:- perpetual debt and Redeemable debt; Cost of Preference Share; Cost of Equity Capital – Dividend valuation model and CAPM; Cost of Retained Earnings. Computation of Overall Cost of Capital based on book value weights and market value weights.

UNIT – IV: Financing Decision (15 hours)

Leverage Analysis - Operating, Financial, and Combined Leverage, Earning Before Interest and Tax (EBIT) – Earning Per Share (EPS) analysis, Indifference point. Capital structures theories - Net income approach; Net operating income approach; Modigliani-Miller (MM) approach. Factors affecting capital Structure.

Dividend Decision: Relevance and irrelevance of dividends. Residual theory of dividends; Modigliani and Miller hypothesis; Walter's model; Gordon's model. Factors affecting Dividend Policy.

Essential/recommended readings

1. Khan, M.Y., & Jain, P.K. Basic Financial Management. Tata McGraw Hill Education Private Limited.
2. Pandey,I.M. Financial Management. Vikas Publishing House Pvt. Ltd. New Delhi
3. Rustagi, R. P. Fundamentals of Financial Management, Taxmann publication(Pvt) Ltd,New Delhi.

Suggestive readings

1. Van Horne, J.C. Financial Management and Policy. Prentice Hall of India.
2. Levy, H. and Sarnat, M. Principles of Financial Management. Prentice Hall.
3. Brealey, Richard, A., & Myers, Stewart, C. Principles of Corporate Finance. Tata McGraw Hill Publishing Company Limited.
4. Chandra, Prasanna. Financial Management-Theory and Practice. Tata McGrawHill.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVE COURSE 1 (DSE-1): INCOME TAX LAW AND PRACTICE

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Income Tax Law and Practice (DSE 1)	4	3	1	0	Class 12	None

Learning Objectives

The course aims at

- Introducing basic definitions in Income Tax Act
- Computing taxable income under the heads Salaries and House Property
- Calculate Profits and Gains of Business or Profession, Capital Gains and Income from other sources
- Understand deductions from gross taxable income and filling of returns.

Learning outcomes

By studying this course, the students will be able to:

- To Understand the Process of determination of taxable income
- To apply the deductions to taxable income as per the latest provisions of Income-tax Act, 1961
- To Acquire the skill of Filling Basic Returns of Income Tax

SYLLABUS OF DSE-1

Unit 1: Introductory Concepts (3 hours)

Permanent Account Number (PAN), Assessment Year, Previous Year, Person, Assessee, Gross Total Income, Total income and its computation, Tax Rates, Residential status; Relationship between Residential Status and Incidence of Tax. Incomes Exempted under section 10.

Unit 2: Computation for "Salaries" and "Income from House Property" (15 hours)

Income under the head "Salaries": Meaning of Salary, basis of charge, Allowances, Perquisites, permissible deductions from salary income, Deduction under Section 80 C.

Income under the head "Income from House Property": Basis of charge, income from let out house property, income from self-occupied property.

Unit 3: Computation for 'Profits and Gains of Business or Profession', 'Capital Gains' and 'Income from other sources' (15 hours)

Profits and gains of business or profession: Basis of charge, important rules regarding assessment of PGBP, computation of Profits from Business or Profession, deductions expressly allowed, expenses expressly disallowed.

Capital gains: basis of charge, meaning of capital asset, cost of acquisition, improvement and indexation, exemptions for capital gains arising from transfer of Capital Assets, calculation of tax on short-term and long-term capital gains.

Income from other sources: basis of charge, dividend, winnings from lotteries, crossword puzzles, etc., interest on securities, advance money received for transfer of a capital asset, permissible deductions.

Unit 4: Computation of Total Income and Tax Liability (12 hours)

Computation of total income; Deductions from gross total income under section 80 C to 80 U; Rebates and reliefs; Set-off and carry forward of losses (Concept only), Concept of advance payment of Tax and Deduction of Tax at Source. Computation of Taxable Income and liability of Tax. e-Filing of Returns: ITR-1 (SAHAJ) and ITR-2

Essential/recommended readings

1. Ahuja, G. and Gupta, R. Simplified Approach to Income Tax. Flair Publications (P) Ltd.
2. Singhania, V.K. and Singhania, M. Students Guide to Income Tax. Taxmann Publications (P) Ltd.

Software to be used for teaching are:

1. 'Excel Utility' available at incometaxindiaefiling.gov.in
2. Vinod Kumar Singhania, e-filing of Income Tax Returns and Computation of Tax Taxmann Publication (P) Ltd, New Delhi. (Latest version)

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVE COURSE 2 (DSE-3): ENTREPRENEURSHIP

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Entrepreneurship (DSE 3)	4	3	1	0	Class 12	None

Learning Objectives

The course aims at:

- To introduce the concept of entrepreneurship and its role in the economy
- To launch an Entrepreneurial Venture and writing a business plan
- To identify and explore legal and financial requirements of a business
- To understand the role and creativity in sustainable Business

Learning outcomes

By studying this course, the students will be able to:

- To develop critical thinking, problem solving skills and entrepreneurial mind-set in students.
- To enhance the understanding of the entrepreneurial process from idea generation, to concept development and creation of the venture.
- To enable the understanding of the business models, legal aspects of enterprise and writing a business plan.
- To apprise students with ways to finance and scale up the business.

SYLLABUS OF DSE-2

Unit 1: Introduction to Entrepreneurship (9 hours)

Concept of Entrepreneurship; Attributes of Entrepreneur; Distinction between entrepreneur and manager; Concept of corporate entrepreneurship/ intrapreneurship; Concept of social entrepreneurship; Role of entrepreneurship for an economy; Understanding business model strategy; Legal forms of enterprise; case study discussion on entrepreneurs, intrapreneurs, business models

Unit 2: Launching Entrepreneurial Venture (12 hours)

Identification of opportunities and Idea generation and screening methods- Brainstorming, mind-mapping, story-telling, SCAMPER, attribute listing, focus group

interviews, customer feedback; Feasibility studies- Marketing, Financial, Technical, Socio-economic Feasibility; Writing Business Plan

Unit 3: Legal and Financial Aspects (12 hours)

Legal requirements of business (Basic concept and relevance of patents, copyrights, and trademark); Financing- Start-up phase financing, growth stage financing, Maturity-phase financing; angel investment and venture capital, other forms of external financing; case study discussion on financing a venture

Unit 4: Sustaining and Scaling Up (12 hours)

Keeping the entrepreneurial spirit alive- Challenges and remedies, Role of creativity and innovation, Barriers to entrepreneurship, Concept of sustainability, Ethical Perspectives; Introducing Shared Innovation into the Business Model; Evolution of CSR from Compliance to Sustainable Entrepreneurship; How to Design CSR Strategies that Optimize Impact for Business and Society

Essential/recommended readings

·1. Harvard Business Review Entrepreneur's Handbook: Everything You Need to Launch and Grow Your New Business

2. Hisrich, R. D. International entrepreneurship: starting, developing, and managing a global venture. Sage Publications.

3. Sharma, S., Starik, M., & Wuebker, R. Sustainability, innovation and entrepreneurship: introduction to the volume.

Additional References:

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

COMMON POOL OF GENERIC ELECTIVES (GE) COURSES OFFERED BY THE DEPARTMENTS

GENERIC ELECTIVES (GE-1): PRINCIPLES OF ECONOMICS

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Principles of Economics (GEC 1)	4	3	1	0	Class 12	None

Learning Objectives

This course aims

- To offer basic understanding of the basic principles of micro economics like problem of scarcity and choice, demand and supply, elasticity.
- To introduce students with basic consumer theory,
- To introduce students with production and cost concept
- to expose the student to the basic principles and concepts in Macroeconomic variables -- GDP, consumption, savings, investment, money and credit etc.
- To learn measurement of national income and related aggregates; nominal and real income
- To determine actual and potential GDP
- To understand the functioning of money market

Learning outcomes

By studying this course, students will be able to:

- To understand the principles of economics of the modern economy.
- To understand the consumer theory, production, and costs etc.
- To understand the basic principles of macroeconomics, national income accounting and determination of GDP.
- To understand the functioning of the money market.

SYLLABUS OF GEC-1

Unit 1: Introduction **(6 hours)**

Problem of scarcity and choice: scarcity, choice and opportunity cost; production possibility frontier; economic systems.

Demand and supply: law of demand, determinants of demand, shifts of demand versus movements along a demand curve, market demand, law of supply, determinants of supply, shifts of supply versus movements along a supply curve, market supply, market equilibrium.

Applications of demand and supply: price rationing, price floors, consumer surplus, producer surplus.Elasticity: price elasticity of demand, calculating elasticity, determinants of price elasticity, other elasticities.

Unit 2: Consumer Theory **(9 hours)**

Budget constraint, concept of utility, diminishing marginal utility, Diamond-water paradox, income and substitution effects; consumer choice: indifference curves, derivation of demand curve from indifference curve and budget constraint.

Unit 3: Production and Costs **(9 hours)**

Production: behaviour of profit maximising firms, production process, production functions, law of variable proportions, choice of technology, isoquant and isocost lines, cost minimizing equilibrium condition.

Costs: costs in the short run, costs in the long run, revenue and profit maximizations, minimizing losses, short run industry supply curve, economies and diseconomies of scale, long run adjustments.

Unit 4: Introduction to Macroeconomics **(6 hours)**

What is macroeconomics? Macroeconomic issues in an economy.

Unit 5: National Income Accounting **(6 hours)**

Concepts of GDP Aggregates and National Income; measurement of national income and related aggregates; nominal and real income; GDP and welfare and the limitations of the GDP concept.

Unit 6: Determination of GDP **(6 hours)**

Actual and potential GDP; aggregate expenditure; consumption function; investment function; equilibrium GDP; concepts of MPS, APS, MPC, APC; autonomous expenditure; Concept of multiplier.

Unit 7: **Money and Credit** **(3 hours)**

Money in a Modern Economy: Concept of money in a modern economy; monetary aggregates; demand for money; quantity theory of money; liquidity preference and rate of interest; money supply and credit creation; monetary policy

Essential/recommended readings

1. Case, K.E., Fair, R. C., and Oster, S. E. (2017). Principles of Economics (12th Ed.). Pearson.
2. Dornbusch, R., Fischer, S. and Startz. R. Macroeconomics (11th Edition). McGraw-Hill.
3. Mankiw, N.G. (2021). Principles of Economics, (9th Edition). Cengage Learning.
4. Acemoglu, D., Laibson, D., List J.A. (2016), Economics, Pearson

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

GENERIC ELECTIVES (GE-3): LEGAL ENVIRONMENT OF BUSINESS

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Legal Environment of Business (GEC 3)	4	3	1	0	Class 12	None

Learning Objectives

The course intends:

- To familiarize the student with the concept and essentials of Indian Contract act which govern business for its efficient conduct and to apply them in real life situations.
- To explain the meaning, nature and incorporation of a company.
- To make students understand and apply the provisions of Sale of Goods Act and Consumer Protection Act.
- To recognize and articulate legal principles related to Limited Liability Partnership and Information Technology Act.

Learning outcomes

By studying this course, students will be able to:

- To understand the basic rules and provisions of Contract and Agreements.
- To know the provisions to Formation and functioning of company and LLP.
- To understand the significance and role of law of sale of goods act
- To have in- depth knowledge of Information Technology Act And legal framework of right to Privacy, Data Security and Data Protection.
- Apply the law correctly to different facts and in different contexts

SYLLABUS OF GEC-3

Unit 1: Indian Contract Act (12 hours)

Meaning and Essentials of a Contract; Valid, Void and Voidable Contract; Offer and Acceptance; Consideration; Capacity of Parties; Free Consent; Discharge of Contract and Remedies for Breach of a Contract.

Unit 2: Companies Act (12 hours)

Meaning and Nature of Company; Promotion and Incorporation of a Company; Memorandum of Association; Articles of Association; Misleading Prospectus and

remedies available to the parties; Board of Directors and their qualification, duties, powers. Company Meetings and Resolutions.

Unit 3: Sale of Goods Act and Consumer Protection Act (12 hours)

Essentials of a Contract of Sale; Sale and Agreement to Sell, Conditions and Warranties; Transfer of Title by Non-Owners; Doctrine of Caveat Emptor; Rights of Unpaid Seller.**Consumer Protection Act 2009**: Scope and Applicability of the Act. Rights of consumer. Procedure for complaints. Duties and power of Central Consumer Protection Authority.

Unit 4: Limited Liability Partnership Act and IT Act (9 hours)

Meaning and nature of LLP; LLP and Company; LLP Agreement, Partners and Designated Partners, Incorporation of LLP; Partners and their Relations, Extent and limitation of liability of LLP.

Information Technology Act 2000: Concept and role; Digital signature, Electronic governance, Attribution, Acknowledgement and dispatch of electronic records, Regulation of certifying authorities, Digital signatures certificates, Duties of subscribers, Penalties and adjudication, Appellate Tribunal , Offences.

Essential/recommended readings

1. Bansal, V & Arora, A. Corporate Laws. Vikas Publishing, House (P) Ltd. New Delhi.
2. Kuchhal M.C & Vivek K. Business Legislation for Management. VIKAS Publishing House (P) Ltd.
3. Kumar, A. Corporate Laws. International Book House (P) Ltd.
4. Bare Acts relating to the laws.

Suggestive readings

1. Chadha, R,. Chadha, S. Corporate Laws. Mayur Paperbacks. New Delhi.
2. Maheshwari & Maheshwari. Business Law. National Publishing House. New Delhi.
3. Singh, Avtar. The Principles of Mercantile Law. Eastern Book Company. Lucknow.
4. Tulsian, P.C. Business Law. Tata McGraw Hill. New Delhi.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

GENERIC ELECTIVES (GE-5): QUANTITATIVE TECHNIQUES IN

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Quantitative Techniques in Management (GEC 5)	4	3	1	0	Class 12	None

Learning Objectives

To apprise students:

- To understand the concepts, formulation and interpretation of linear programming methods and its application in diverse problems.
- To formulate and solve Transportation and Assignment problems
- To understand basic concept, construction of the Network diagram and Critical Path Analysis
- To introduce game theory and network analysis forms part of the course.

Learning outcomes

By studying this course, students will be able to:

- Identify and develop operational research models from the verbal description of the real system.
- Understand the mathematical tools that are needed to solve optimization problems.
- Develop critical thinking and use PERT and CPM techniques to improve decision making.

SYLLABUS OF GEC-5

UNIT – I: Introduction - Operations Research, Linear Programming (15 hours)

(i) Introduction to Operations Research, characteristics, Phases, Methodology, Applications and scope

(ii) Formulation of Linear Programming problems, Graphical Solutions (Special cases: Multiple optimal solution, infeasibility, unbounded solution); Simplex Method, Special cases, Big-M method and Two-phase method; Duality (emphasis on formulation & economic interpretation); Sensitivity Analysis. (Excel Solver application)

UNIT – II:Transportation and Assignment Problem (12 hours)

(i) Transportation Problem: Formulation, Solution by N.W. Corner Rule, Least Cost method, Vogel's Approximation Method (VAM), Modified Distribution Method; Special cases: Multiple Solutions, Maximization case, unbalanced case, prohibited routes.

(ii) Assignment Problem: Hungarian Method, Special cases: Multiple Solutions, Maximization case, Unbalanced case, Restrictions on assignment.

UNIT – III: Network Analysis (9 hours)

Basic Concept, Construction of the Network diagram, Critical Path Analysis, float and slack analysis (Total float, free float, independent float), probability consideration in PERT (Interface with Project Management open-source software)

UNIT – IV: Decision Theory (9 hours)

Decision making environment, Construction of Pay off Table, Opportunity Loss Table, Decision under uncertainty. Decision under Conflict: Game Theory, Two-person Zero-Sum games, Maximin Minimax Principle, Games without Saddle point - Mixed strategy, Dominance Rule.

Essential/recommended readings

1. Vohra, N.D., Quantitative Techniques in Management (5th ed.). Tata McGraw Hill
2. Swarup, K., Gupta, P.K. and Mohan, Man, Introduction to Management Science Operations Research (19th ed.). Sultan Chand & Sons.
3. Sharma, J.K., Operations Research: Theory and Applications (6th ed.). Trinity.
4. Taha, H.A., Operations Research: An Introduction (9th ed.). Pearson.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

GENERIC ELECTIVES (GE-7): ECONOMICS OF STARTUPS

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Economics of Startups (GEC 7)	4	3	1	0	Class 12	None

Learning Objectives

To apprise students:

- To give an overview of startups and its types that would help students to understand basics of starting up new ventures.
- To build and create a successful Business Plan
- To understand various Business models and learn startups
- To familiarize with central and state level institutions supporting small business entreprises.

Learning outcomes

By studying this course, students will be able to:

. · Understand the process and working of a startup.

· Identify the different ways in which entrepreneurs manifest in start-ups.

· Know how to create one's own business venture and the various factors that influence successful set-up and sustainable operations.

· Explore the funding and other institutions supporting small business units.

SYLLABUS OF GEC-7

UNIT – I: Startup, Generation & Experimentation (9 hours)

Concept of Startup, Role of digital technologies, Startup ecosystems, the startup movement in India; Generating a value proposition, how valuable are new ideas, Design thinking principles; Experimenting with the prototype, Introduction to lean start-ups, Lean startup principles, Learning and failing fast.

UNIT – II: Building the Business Plan (15 hours)

Beginning Considerations: Building a competitive advantage. The strategic management processes. Conducting a feasibility analysis. Forms of Business ownership. Franchising and entrepreneurship. Buying an existing business, marketing and financial considerations: Building a powerful marketing plan. E-commerce and Entrepreneur. Pricing strategies. Creating a successful financial plan. Choosing the right location and layout.

UNIT – III: Crafting business models and Lean Start-ups (12 hours)

Introduction to business models; Creating value propositions-conventional industry logic, value innovation logic; customer focused innovation; building and analysing business models; Business model canvas, Business Pitching.

UNIT – IV: Institutions Supporting Small Business Enterprises and Ethics(9 hours)

Central level institutions. State level institutions. Other agencies. Industry Associations. Class exercise- discussions on current government schemes supporting entrepreneurship and finding out which scheme will most suit the business plan devised by the student. Importance of Ethical Entrepreneurship, value of ethics to an entrepreneur.

Essential/recommended readings

1. Scarborough, N. M., Cornwall, J. R., & Zimmerer, T. (2016). Essentials of entrepreneurship and small business management. Boston. Pearson Publications.
2. Hisrich, R.D., Manimala, M.J., Peters, M.P., Shepherd, D.A., Entrepreneurship, Tata McGraw Hill.
3. Shukla, M.B., Entrepreneurship and Small Business Management. Kitab Mahal Publishers.

Suggestive readings

1. Hishrich, R.D. and Peters, M. Entrepreneurship. Irwin Publications.
2. Barringer, B.R. and Ireland, R. Duane. Entrepreneurship: Successfully launching new ventures. (6th Edition) Pearson
3. Kuratko, D.F., and Rao, T.V., Entrepreneurship: A South-Asian Perspective. Cengage Publications.
4. Shankar, R., Entrepreneurship: Theory and Practice. Tata McGraw Hill.
5. Kathleen, R Allen. Launching New Ventures: An Entrepreneurial Approach. Cengage Learning.
6. Fisher, Steve and Duane, Ja-Nae. The Startup Equation - A Visual Guidebook for Building Your Startup. Mc Graw Hill Education India Pvt. Ltd.

Note: **Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.**

ANNEXURE-5

Sub: Amendment to Ordinance V

[E.C Resolution No. 60/ (60-1-2) dated 03.02.2023]

Following addition be made to Appendix-II-A to the Ordinance V (2-A) of the Ordinances of the University;

Add the following:

Syllabi of Semester-III of the Department of Commerce under Faculty of Commerce & Business based on Under Graduate Curriculum Framework -2022 implemented from the Academic Year 2022-23.

B.COM. (HONS.)

Discipline Specific Course- 3.1(DSC-3.1): Business Mathematics

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSC -3.1: Business Mathematics	4	3	0	1	Pass in XII	NIL

Learning Objectives

The course aims to familiarize the learners with the basic mathematical tools with special emphasis on applications to business and economic situations.

Learning outcomes

After completion of the course, learners will be able to:

1. Assess the applicability of matrices as mathematical tools in representing a system of equations.
2. Apply differential calculus to solve simple business problems.
3. Evaluate business problems involving complex linear relationships between decision variables and their determining factors.
4. Explain mathematical formulation and solution of problems related to finance including different methods of interest calculation, future and present value of money.
5. Develop programming for business problems involving constrained optimisation.

SYLLABUS OF DSC-3.1

Unit 1: Matrices and Determinants (9 hours)

Overview of Matrices. Solution of a system of linear equations (having a unique solution and involving not more than three variables) using matrix inversion method and Cramer's Rule

Leontief Input Output Model (Open Model Only).

Unit 2: Calculus-I (6 hours)

Concepts and rules of differentiation. Concept of Marginal Analysis: Marginal Revenue, Marginal Cost. Concept of Elasticity of demand and supply.
Application of Maxima and Minima problems: Revenue, Cost, Profit, Economic Order Quantity, Optimal trade in time.

Unit 3: Calculus-II (12 hours)

Partial Differentiation: Partial derivatives up to second order. Homogeneity of a function and Euler's theorem. Production Function: Returns to factor, Returns to scale. MRTS and Elasticity of Substitution.

Application of Maxima and Minima problems involving two independent variables.

Integration: Nature of commodities and partial elasticity of demand, Applications of marginal analysis, Consumer Surplus and Producer Surplus.

Unit 4: Mathematics of Finance (9 hours)

Rates of interest: nominal, effective and their inter-relationships in different compounding situations.

Compounding a sum using different types of rates. Applications relating to Depreciation of assets and average due date.

Types of annuities: ordinary, due, and deferred - Discrete and continuous. Perpetuity. Determination of future and present values using different types of rates of interest. Applications relating to Capital Expenditure and Leasing.

Unit 5: Linear Programming (9 hours)

Formulation and Assumptions of LPP, Solution by Simplex Method- maximization and minimization cases. Shadow prices of the resources. Special Cases: Identification of unique and multiple optimal solutions, unbounded solution, infeasibility and degeneracy.

Practical Exercises: 30 hours

The learners are required to:

1. Assess the use of matrices in evaluating competing alternatives.
2. Apply differential calculus to solve hypothetical business problems.
3. Evaluate business problems as an application of linear programming.
4. Gather information about various deposit and loan schemes of banks to find out interest rate differentials, and compounded value.
5. Gather information about annuity schemes in the investment markets like periodic home mortgage payments, insurance payments and pension payments, life insurance products as an annuity.
6. Identify the decision-making variables and assess their functional relationship with other variables affecting the decision in a hypothetical business and economic situation.
7. Develop programming for hypothetical business problems involving constrained optimisation.

Suggested Readings:

- Anthony, M., & Biggs, N. (1996). *Mathematics for Economics and Finance*. Cambridge: Cambridge University Press.
- Ayres, F. J. (1963). *Theory and Problems of Mathematics of Finance*. New York: McGraw Hill Publishing.
- Budnick, P. (1986). *Applied Mathematics for Business, Economics, & Social Sciences*. New York: McGraw Hill Publishing.
- Dowling, E. (2011). *Introduction to Mathematical Economics*. New York: McGraw Hill Publishing Kapoor.
- Ghosh & Sinha (2018). *Business Mathematics and Statistics*. Oxford University Press.
- S.K. Sharma and Kaur, G. (2019). *Business Mathematics*. New Delhi: Sultan Chand & Sons (P) Ltd.
- Singh, J. K. (2017). *Business Mathematics*. New Delhi: Himalaya Publishing House.
- Thukral, J. K. (2009). *Mathematics For Business Studies*. New Delhi: Mayur Paperbacks.
- V. K., & Sancheti, D. C. (2014). *Business Mathematics, Theory & Applications*. Delhi: S. Chand Publishing.

Note: Suggested readings will be updated by the Department of Commerce and uploaded on Department's website.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Discipline Specific Course- 3.2(DSC-3.2): Financial Management

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSC-3.2: Financial Management	**4**	**3**	**0**	**1**	**Pass in XII**	**NIL**

Learning Objectives

The course aims to enable students to acquire knowledge of principles and practice of financial management.

Learning outcomes

After completion of the course, learners will be able to:

1. Analyse the conceptual framework of financial management and get an insight into the concept of time value of money, and risk and return.
2. Estimate cash flows for projects, and evaluate their profitability using capital budgeting techniques.
3. Estimate the cost of capital; and critically analyse different capital structure theories and factors affecting capital structure decision of a firm.
4. Analyse different theories of dividend and factors affecting dividend policy.
5. Estimate working capital requirements of a firm, and device optimum credit policy for a firm.

SYLLABUS OF DSC-3.2

Unit 1: Financial Management: An Overview (3 hours)

Nature, scope and objectives of financial management. An overview of time value of money and risk and return.

Unit 2: Capital Budgeting Decision (12 hours)

The Capital Budgeting Process, Cash Flow Estimation, Different techniques of Capital budgeting: Payback Period Method, Discounted Payback Period Method, Accounting Rate of Return, Net Present Value (NPV), Internal Rate of Return (IRR) and Profitability Index.

Unit 3: Cost of Capital and Financing Decision (15 hours)

Cost of Capital: Estimation of components of cost of capital: Method for calculating cost of equity, Cost of retained Earnings, Cost of Debt, Cost of Preference Capital, Weighted Average Cost of Capital (WACC) and Incremental (Marginal) Cost of Capital.

Capital Structure: Theories of Capital Structure (Net Income, Net Operating Income, MM Hypothesis, Traditional Approach). Operating, Financial and Combined Leverage. EBIT-EPS Analysis. Determinants of Capital Structure.

Unit 4: Dividend Decision (6 hours)

Theories for relevance and irrelevance of dividend decision for corporate valuation- MM Approach, Walter's Model, Gordon's Model. Determinants of Dividend policy.

Unit 5: Working Capital Decision (9 hours)

Concepts of Working Capital, Operating & Cash Cycles, Risk-return Trade off, working capital estimation, Receivables Management.

Note: Use of Spreadsheet should be encouraged for doing basic calculations for various topics in the course and giving students subject related assignments for their internal assessment purposes.

Practical Exercises **30 hours**

The learners are required to:

1. Compute risk and return of various investment alternatives using excel spreadsheet. 2. Estimate cash flows for a hypothetical Start-up. Using excel, evaluate the project's profitability by employing capital budgeting evaluation techniques.
2. Extract data from financial statements of different firms/financial databases and estimate the cost of capital using appropriate software.
3. Extract historical data and evaluate different dividend policies followed by companies of specific industries.
4. Estimate working capital requirements for any two companies belonging to different industries and compare them.

Suggested Readings:

Note: Suggested readings will be updated by the Department of Commerce and uploaded on Department's website.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Discipline Specific Course- 3.3(DSC-3.3): Principles of Marketing

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSC 3.3 – Principles of Marketing	**4**	**3**	**1**	**0**	**Pass in XII**	**NIL**

Learning Objectives

The objective of this course is to provide basic knowledge of concepts, principles, tools and techniques of marketing and to

provide knowledge about various developments in the marketing.

Learning outcomes

After completion of the course, learners will be able to:

1. Discuss basic concepts of marketing, marketing philosophies and environmental conditions affecting marketing decisions of a firm.
2. Describe the dynamics of consumer Behaviour and process of market selection through STP.
3. Analyse the process of value creation through marketing decisions involving product development.
4. Analyse the process of value creation through marketing decisions involving product pricing and its distribution.
5. Explore marketing decisions involving product promotion, and draft promotion mix strategies.

SYLLABUS OF DSC-3.3

Unit 1: Introduction to Marketing and Marketing Environment (9 hours)

Introduction to Marketing: Scope and Importance; Core concepts of marketing; Marketing Philosophies; Services Marketing, Marketing Mix.
Marketing Environment: Need for studying marketing environment; Micro environmental factors- company, suppliers, marketing intermediaries, customers, competitors, publics; Macro environmental factors – demographic, economic, natural, technological, politico-legal and socio- cultural.

Unit 2: Consumer Behaviour and Market Selection (9 hours)

Consumer Behaviour: Need for studying consumer Behaviour; Stages in Consumer buying decision process; Factors influencing consumer buying decisions.

Market Selection: Choosing market value through STP. Market Segmentation- bases of segmenting consumer markets. Market Targeting, Product Positioning – concept and bases

Unit 3: Product Decisions and New Product Development (9 hours)

Product Decisions: Concept and classification; Levels of Product. Designing value: Product- mix, Branding- types, significance, and qualities of good brand name; Packaging and Labelling- types and functions; Product support services.

New Product Development: New product development process; Product life cycle – concept and marketing strategies.

Unit 4: Pricing Decisions and Distribution Decisions (9 hours)

Pricing Decisions: Objectives, Factors affecting price of a product, Pricing methods, Pricing strategies.

Distribution Decisions: Delivering Value: Channels of distribution- types and functions; Wholesaling and retailing; Factors affecting choice of distribution channel; Logistics decisions.

Unit 5: Promotion Decisions and Developments in Marketing (9 hours)

Promotion Decisions: Communicating Value: Communication process; Importance of Promotion. Promotion-mix tools advertising, personal selling, sales promotion, public relations, publicity and direct marketing; Integrated Marketing Communication.

Developments in Marketing: Sustainable Marketing- concept and issues. Rural marketing- characteristics and rural marketing mix. Social marketing- concept and issues. Digital marketing- concepts and tools.

Exercises:

The learners are required to:

1. Analyse the marketing environment of any firm of your choice.
2. Prepare a marketing mix for a product of your choice to be targeted to a rural market.
3. Select any product and analyse its segmentation strategy in comparison to its immediate competitive product.
4. Examine the marketing strategies followed by companies to prolong the maturity stage and defer its decline.
5. Suggest an appropriate distribution strategy of a product of your choice.
6. Draft promotion mix strategy for a hypothetical e-commerce firm.

Suggested Readings:

● Baines Et. AL. (2021). Fundamentals of Marketing. Oxford University Press.

● Etzel, M. J., Walker, B. J., Stanton, W. J., Pandit, A. (2010). Marketing. Mc Graw Hill.

● Jain, P & Singhal, N. (2021). Principles of Marketing. Scholar Tech Press, Delhi.

● Kapoor, N. (2021). Principles of Marketing. Prentice Hall of India.

● Kotler, P., Armstrong, G., Agnihotri, P. (2018). Principles of Marketing. Pearson Education. Indian edition.

● Kotler, P., Chernev, A., Keller, K. L. (2022). Marketing Management. United Kingdom: Pearson Education.

● Levy, M., Grewal, D. (2022). Marketing. United States: McGraw-Hill Education.

● Mamoria C.B., Bhatacahrya A.(2021). Marketing Management. Delhi: Kitab Mahal.

● Sharma, K., Aggarwal S. (2021). Principles of Marketing. Delhi: Taxmann Publications.

Note: Suggested readings will be updated by the Department of Commerce and uploaded on Department's website.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Discipline Specific Elective- 3.1(DSE-3.1): Organisational Behaviour

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSE-3.1: Organisational Behaviour	**4**	**3**	**1**	**0**	**Pass in XII**	**NIL**

Learning Objectives

The objective is to develop an in-depth understanding of the concept of organisational behaviour and its relevance in modern organisations. It also aims to expand the knowledge about the complexities of human behaviour, competitiveness, and interpersonal group dynamics.

Learning outcomes

After completion of the course, learners will be able to:

1. Discuss basic concepts of organisational behaviour and their applicability in contemporary organisations.
2. Analyse various means of managing people at the workplace.
3. Recognise the importance of communication and motivation in an organisation.
4. Critically evaluate the different leadership styles and strategies.
5. Summarise the ways to build supportive organisational culture.

SYLLABUS OF DSE-3.1

Unit 1: Introduction (6 hours)

Organisational Behaviour: Concepts and Determinants; Relationship between Management and OB; Emergence of OB; Hawthorne Study; Contributing disciplines of OB; OB models.

Unit 2: Individual Behaviour (9 hours)

Foundations of Individual Behaviour; Personality - Type A/B, Big five personality types, factors influencing personality; Attitude – concept, components, job related attitudes; Learning- concept, theories and reinforcement; Perception and emotions- concept, perceptual process, factors influencing perception, perceptual errors and distortions; Beliefs and values -
concept and types: terminal values and instrumental values.

Unit 3: Communication and Motivation (12 hours)

Communication – Understanding Communication; Persuasive communication; Communication styles; Transactional Analysis (TA), Johari Window.

Motivation – Why people work; Need theories (Maslow's need hierarchy, ERG Theory, McClelland's Theory); Theory X and Theory Y, Two Factors Theory; Contemporary Theories of motivation (Self-Determination Theory, Goal-setting Theory, Reinforcement Theory, Self efficacy Theory).

Unit 4: Group Behaviour and Leadership (12 hours)

Formation of Groups; Group Behaviour - concepts, types- group norms, group roles, and group cohesiveness; Groups Vs Teams; Group decision making – process and types; Organisational conflict – nature, sources, and resolution strategies

Leadership - Concept and theories; Styles of leadership; Leadership continuum; Trait, Behavioural and Situational approach; Leadership grid; Contemporary leadership issue.

Unit 5: Dynamics of Organisational Behaviour (6 hours)

Organisational culture- concept and determinants; Organisational change- importance, types of change, resistance to change, managing change; Stress- individual and organisational factors, prevention and management of stress.

Exercises:

The learners are required to:

1. Analyse the determinants of organisational behaviour in different organisations. 2. Evaluate any personality type as a group activity.
3. Perform a role play on TA and Johari Window.
4. Conduct a primary survey to study leadership styles in different organisations.
5. Practice five different types of stress management techniques including meditation.

Suggested Readings:

● Greenberg, J. (2015). *Behaviour in organisations, 10th edn*. Pearson Education India. ● Hersey, P. K., Blanchard, D., & Johnson, D. (2013). *Management of organisational Behaviour*. Pearson.

● Luthans, F. (2017). *Organisational Behaviour-An evidence based approach*, 12th edn.. McGraw-Hill Education.

● Pareek, U. (2014). *Understanding Organisational Behaviour*. Oxford University Press.
● Robbins, S. T., Judge, T. A. (2019). *Essentials of organisational Behaviour*. Pearson. ● Singh, K. (2015). *Organisational Behaviour: Texts & Cases*, 3rd edn. India: Pearson. Additional Resources

Keywords: Organisational Theories, Personality, Values and Attitudes, Learning, Leadership, Conflict, Organisational Culture.

Note: Latest edition of readings may be used teaching Learning Process The course combines learning through analysis and discussion of case studies and active participation in experiential exercises and simulations. Assessment Methods Class tests/Assignments, Class participation, Presentations, End-semester examination

Note: Suggested readings will be updated by the Department of Commerce and uploaded on Department's website.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Discipline Specific Elective- 3.2(DSE-3.2): Financial Markets and Institutions

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSE-3.2: Financial Markets and Institutions	**4**	**3**	**1**	**0**	**Pass in XII**	**NIL**

Learning Objectives

The course aims to provide students an overview of the financial system to help them understand the role of financial institutions and the financial markets.

Learning outcomes

After completion of the course, learners will be able to:

1. Describe the components and functions of a financial system.
2. Analyse integration and linkages between different financial systems and describe how they operate.
3. Analyse the functioning and working of money and capital markets.
4. Describe the functioning and role of various financial institutions.
5. Assess global financial markets and institutions, and spill over of financial crisis across countries.

SYLLABUS OF DSE-3.2

Unit 1: Introduction (6 hours)

An introduction to financial system - components, inter-linkages between financial system and economic development, financial intermediation, indicators of financial development (World Bank); capital allocation-financial institutions vis-a-vis financial markets; evolution of Indian financial system since 1951; recent reforms and developments in Indian financial system.

Unit 2: Financial Markets I: Money Markets (9 hours)

Financial markets - integration of Indian financial markets with global financial markets; money market – functions, organisations and participants; money market instruments; role of central bank in money market; role of Reserve Bank of India in Indian money market; Fixed Income Money Market and Derivative Association of India (FIMMDA).

Unit 3: Financial Markets II: Capital Markets (9 hours)

Capital Markets - introduction, components, role and functions; equity market-methods of issue; debt market-concept, significance and classification; capital market instruments; raising funds from global financial markets; primary and secondary markets- concept, similarities, differences; stock exchanges in India - NSE, BSE; Stock Indices: concept and construction, Major stock indices - global (including Dow Jones and NASDAQ) and Indian (NIFTY and BSE-SENSEX); concept of DEMAT account and depositories (NSDL, CDSL); SEBI and investor protection.

Unit 4: Financial Institutions (12 hours)

Commercial banking - introduction, classification, role, asset liability management, non performing assets; role of technology in banking sector; financial inclusion, recent developments in banking including restructuring, privatisation, MUDRA financing; Insurance - life and non-life insurance companies in India: public and private; Mutual Funds – introduction and their role in capital market development, types of mutual fund schemes (open ended vs close ended, equity, debt, hybrid schemes and Exchange Traded Funds (ETFs); Non banking Financial Companies (NBFCs) – role and types; private equity, venture capital and hedge funds.

Unit 5: Financial Stability (9 hours)

Financial stability-importance and indicators (World Bank, IMF, RBI); understanding financial crisis - causes and policy response; global financial crisis (2008); emerging challenges to financial stability.

Exercises

The learners are required to:

1. Identify one Indian and one global financial conglomerate. Examine their genesis and evolution.
2. Compare the yield curve of India, any other developing country, and a developed country. Analyse the reasons for similarities and differences in them.
3. Pick two leading stock market indices in India. Analyse the method of their computation. Identify the reasons behind the differences and their implications. 4. Pick any three mutual funds and make a comparison based on their risk parameters, portfolio holdings and historical return.
5. Identify any International Financial crisis other than Sub-Prime crisis (2008) and evaluate its spill over on the rest of the world.

Suggested Readings:

Discipline Specific Elective- 3.3(DSE-3.3): Brand Management

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSE 3.3- Brand Management	**4**	**3**	**1**	**0**	**Pass in XII**	**NIL**

Learning Objectives

The course aims to make students aware of brands, their evolution, extensions, brand Management strategies and its practical implications for business. The course shall focus on developing skills to devise strategies for brand positioning and equity in the market.

Learning outcomes

After completion of the course, learners will be able to:

1. Comprehend the conceptual framework of brand management
2. Analyse brand positioning strategies of popular brands and explore their life cycle 3. Design and implement brand strategies
4. Discuss the concept of brand equity
5. Explore recent issues in branding

SYLLABUS OF DSE-3.3

Unit 1: Introduction (9 hours)
Introduction to Brands and Brand Management, Concept of a Brand, evolution of a Brand, Challenges and Opportunities, Brand Identity, Brands and Consumers, IMC: Evolution and Growth.

Unit 2: Brand Positioning (9 hours)
Brand Building, Identifying and Establishing Brand Positioning and values, Brand Repositioning, Life stages of a Brand, Brand Personality, Brand Image.

Unit 3: Designing Marketing Program (12 hours)
Strategic Brand Management Process, Designing and implementing brand strategies, Contemporary Strategies: storytelling, Internet and Social Media, Brand

Extensions, Brand reinforcement strategies, Brand Portfolio Management, Integrating Advertising with Brand Management.

Unit 4: Brand Equity (12 hours)

Customer based Brand Equity, Measuring and Interpreting Brand Performance: brand equity Management System, New Media Environment: Brands amplifiers, Growing and Sustaining Brand Equity.

Unit 5: Recent Issues in Branding (3 hours)

Managing Strong Brands, Brand Ladder, Country Branding, Global Brand Strategy, Managing Brands over time, Brand Audits, Managing Brands in the Digital Era. Legal and Ethical aspects in Brand Management.

Note: Case Studies may be discussed in every unit, where ever possible to supplement the subject matter.

Exercises:

The learners are required to:

1. Analyse the evolution of brands of various companies.
2. Take up popular brands and analyse the life cycle of select brands.
3. Discuss suggestive strategies for brand positioning.
4. Apply brand management strategies to real life products.
5. Use appeals for advertising and branding of products.
6. Understand the rationale behind a brand story.
7. Develop a brand story for a unique product idea.
8. Discuss case studies on 'Brand Equity' for select popular firms.
9. Participate in group discussions to discuss the recent issues in branding.

Discipline Specific Elective- 3.4(DSE-3.4): Financial Reporting Analysis & Valuation

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSE 3.4- Financial Reporting Analysis & Valuation	**4**	**3**	**1**	**0**	**Pass in XII**	**NIL**

Learning Objectives

The course aims to help the learners to understand, analyse and interpret the basic framework of financial reporting and information incorporated in the corporate annual reports.

Learning outcomes

After completion of the course, learners will be able to:

1. Analyse and interpret the information provided in the financial statements of a company. 2. Evaluate the results of financial statements and disclosures of corporate annual reports. 3. Apply principles valuation to tangible and intangible assets.
4. Identify the elements of financial statements.
5. Summarise the emerging areas in financial reporting.

SYLLABUS OF DSE-3.4

Unit 1: Introduction to Corporate Financial Reporting (3 hours)

Meaning of Financial Statement as per Companies Act, 2013; Corporate Financial Reporting - meaning, need and objectives; Users of financial reports, Conceptual Framework for financial reporting. Financial/Accounting information contained in the Financial Statements, their qualitative characteristics; Presentation of financial statements.

Unit 2: Financial Statements and Disclosures (9 hours)

Components and constituents of Basic Financial Statements; Relevant provisions of the Companies Act, 2013 for the preparation of Statement of Profit & loss and Balance Sheet. Contents of annual report, Mandatory and voluntary disclosures through annual report. Report of the Board of Directors and Auditor's Report as per Companies Act, 2013; Business Responsibility and sustainability reporting by listed entities.

Unit 3: Valuation (12 hours)

Valuation of Property Plant and Equipment: Asset valuation techniques : Historical, Fair Value, Net realisable value, Present value. Valuation of Intangible Assets. Valuation of Inventory.

Unit 4: Elements of Financial Statements (12 hours)

Select Elements of Financial Statements: Revenues- Identification and disclosures, Leases and Accounting for Tax.

Unit 5: Emerging Trends in Reporting (9 hours)

Accounting for E-commerce business – Introduction, elements of e-commerce transactions, business models, classification of e-commerce websites, revenue recognition and measurement of costs. Integrated Reporting – Meaning, Purpose, Salient features of framework. Value Added Statement.

Note: Any revision of relevant Accounting Standards/Indian Accounting Standards, which are covered above would become applicable.

Exercises:

The learners are required to:

1. Download annual reports of reputed companies and analyse the contents of financial statements.
2. Examine the voluntary and mandatory information contained in the annual report of the select companies.
3. Collect information regarding the method of valuation of property plant and equipment followed by select reputed companies.
4. Analyse and compare annual reports of ten companies regarding tax related information disclosure.
5. Collect and summarise information from business newspapers and periodicals related to latest developments in financial reporting and valuation.

Generic Elective- 3.1(GE-3.1): General Management

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
GE -3.1 – General Management	**4**	**3**	**1**	**0**	**Pass in XII**	**NIL**

Learning Objectives

The course aims to equip learners with essential management related knowledge and skills and their applicability in real world.

Learning outcomes

After completion of the course, learners will be able to:

1. Examine the evolution of management and its significance
2. Comprehend and analyse applicability of managerial functions
3. Recognise the role of decision-making in business.
4. Analyse the role of directing in management
5. Appraise the function of controlling and contemporary issues in management

SYLLABUS OF GE-3.1

Unit 1: Introduction to Management (9 hours)

Principles of management - concept, nature and significance; Evolution of Management thought: Classical (Fayol's principles of management; Taylor's scientific management), Neo classical (Hawthorne Experiments), Modern approach (Systems Approach; Contingency Approach).

Unit 2: Functions of Management (6 hours)

Management functions and their relationship- planning, organizing, staffing, directing and controlling; Functional areas of management – an overview; Coordination - concept, characteristics and importance.

Unit 3: Planning and Organising (12 hours)

Planning- meaning, strategic and operations planning; Decision-making- concept, importance and bounded rationality; Organizing- division of labour & specialization; Organisational structures; Factors affecting organisational design.

Unit 4: Directing and Staffing (9 hours)

Directing- concept and importance; Concept and theories of Motivation- Maslow's need hierarchy, Herzberg's two-factor theory, Theory X&Y; Leadership-meaning and importance; Communication- meaning and importance; Staffing- concept, importance and process.

Unit 5: Controlling and Contemporary Issues in Management (9 hours)

Principles of Controlling, performing controlling function; Management challenges of the 21st Century; Factors reshaping and redesigning management purpose, performance and reward perceptions- internationalisation; Digitalisation; Entrepreneurship & innovation; Workplace Diversity

Exercises:

The learners are required to:

1. Assess the applicability of managerial theories in today's corporate world.
2. Discuss the interrelationship between various managerial functions as a group discussion.
3. Perform a role play on bounded rationality or on any other aspect of decision-making.
4. Identify various techniques used by organisations to motivate employees.
5. Study and make a report to assess the impact of emerging issues in management.

Suggested Readings:

● Drucker, P. F. (1954). *The Practice of Management*. New York: Harper & Row.

● Drucker, P. F. (1999). *Management Challenges for the 21st Century*. Harper Collins Publishers Inc.

● Griffin. (2021). *Management Principles and Application*. Cengage.

● Kumar, P. (2019). *Management: Principles and Applications.* Delhi: JSR Publication House LP.

● Mahajan, J.P. & Mahajan, A. (2017). *Management Principles and Applications*. Vikas Publications

● Rao, V.S.P. (2022). *Management Principles and Applications*. Taxmann Publications.

Note: Suggested readings will be updated by the Department of Commerce and uploaded on Department's website.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Generic Elective- 3.2(GE-3.2): Basics of Advertising

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical / Practice		
GE 3.2- Basics of Advertising	4	3	1	0	Pass in XII	Studied MARKETING FOR BEGINNERS (GE- 1.3)

Learning Objectives

The objective of this paper is to familiarise the students with concepts and techniques of advertising used in marketing.

Learning outcomes

After completion of the course, learners will be able to:

1. Identify communication objectives behind advertising various products and services.
2. Evaluate the importance of advertising appeals.
3. Explain various media elements in the advertising decisions.
4. Examine the role of various advertising agencies.
5. Evaluate the effectiveness of advertising campaigns.

SYLLABUS OF GE-3.2

Unit 1: Introduction to Advertising (9 hours)

Marketing Communication Process; Advertising: Significance, Types and Objectives; Target audience selection- basis; DAGMAR Approach; Methods of setting of Advertising Budget.

Unit 2: Message (9 hours)

Advertising Appeals; Advertising Copy: Elements of Print Advertising Copy. **Unit 3: Media Decisions (9 hours)**

Types of Media: Merits and Demerits; Advertising through internet and interactive media issues and considerations.

Unit 4: Advertising Agency (9 hours)

Role, Types and Selection of advertising agency.

Unit 5: Advertising: Effectiveness and Institutional Framework (9 hours)

Rationale of Measuring Advertising Effectiveness: Evaluating Communication and Sales Effect; Pre and Post testing Techniques. Brief role of Advertising Standards Council of India (ASCI).

Exercises:

The learners are required to:

1. Analyse the marketing communication strategies of select firms.
2. Perform a content analysis of various advertising campaigns to:
   a. identify the objective of an advertisement forming part of an advertising campaign.
   b. find out the target audience of a campaign.
   c. prepare a report on various media options used in a campaign.
   d. prepare a report on message strategy and copy elements used in the campaign.
3. Select a product to develop an advertising campaign for it.
4. Evaluate the advertising appeals of certain top brands.
5. Assess the merits and demerits of different forms of media used in advertising.
6. Prepare a list of advertising agencies along with their strategies.
7. Analyse case studies on evaluating the effectiveness of advertising campaigns.

Suggested Readings:

- Belch, G. E., Belch, M. A., & Purani, K. (2009). *Advertising and Promotion: An Integrated Marketing Communications Perspective*. New York: McGraw Hill Education.
- Gupta, R. (2012). *Advertising Principles and Practice*. S. Chand

Note: Suggested readings will be updated by the Department of Commerce and uploaded on Department's website.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Generic Elective- 3.3(GE-3.3): Investing in Stock Markets

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
GE 3.3- Investing in Stock Markets	**4**	**3**	**1**	**0**	**Pass in XII**	**NIL**

Learning Objectives

The course aims to familiarize the students with the skills required to operate in the stock market. They can learn the trading mechanism of the stock exchanges.

Learning outcomes

After completion of the course, learners will be able to:

1. Evaluate the investment environment as well as risk & return framework.

2. Conduct fundamental analysis to identify under-priced/overpriced securities.

3. Conduct technical analysis to make buy and hold decisions in the stock market. 4. Describe the functioning of Indian Stock Market.
5. Analyse mutual funds as an investment alternative.

SYLLABUS OF GE 3.3

Unit 1: Basics of Investing (9 hours)

Basics of investment & investment environment. Concept of risk and return, Risk and return trade-off, Types of investing and investors. Avenues of investments - Equity shares, Preference shares, Bonds & Debentures, Insurance schemes, Mutual funds, Index funds, ETF. Security markets - primary Market, secondary Market and derivative market. Responsible Investment.

Unit 2: Fundamental Analysis (9 hours)

Top-down and bottom-up approaches, Analysis of international & domestic economic scenario, industry analysis, company analysis (quality of management, financial analysis: both annual and quarterly, income statement analysis, position statement analysis including key financial ratios, cash flow statement analysis, EBIT,

capital gearing ratio, return on investment, return on equity, EPS and DPS analysis, Industry market ratios: operating profit ratio, net profit ratio, PE, PEG, price over sales, price over book value, dividend yield, earning yield, debt equity ratio, eva). Understanding the shareholding pattern of the company.

Unit 3: Technical Analysis (9 hours)

Trading rules (credit balance theory, confidence index, filter rules, market breadth, advances vs declines) and charting (use of historic prices, simple moving average and MACD, basic and advanced interactive charts). Do's & Don'ts of investing in markets.

Unit 4: Indian Stock Market (9 hours)

Primary Markets (IPO, FPO, Private placement, OFS), Secondary Markets (cash market and derivative market: Futures and Options), Market Participants: stock broker, investor, depositories, clearing house, stock exchanges. role of stock exchange, stock exchanges in india BSE, NSE and MCX. Security market indices: Nifty, Sensex and sectoral indices, Sources of financial information. Trading in securities: Demat trading, types of orders, using brokerage and analyst recommendations.

Unit 5: Investing in Mutual Funds (9 hours)

Concept and background of mutual funds: advantages, disadvantages of investing in mutual funds, types of mutual funds- open-ended, close-ended, equity, debt, hybrid, index funds, exchange traded funds and money market funds. Factors affecting the choice of mutual funds. CRISIL mutual fund ranking and its usage. Calculation and use of Net Asset Value.

Exercises:

The learners are required to:

1. Compute risk and return of various investment alternatives using excel spreadsheet.
2. Estimate the value of equity stocks of at least 2 listed companies by applying principles of fundamental analysis.
3. Extract historical prices and volumes of equity stocks of any two companies. Predict their price movements using appropriate methods of technical analysis.
4. Extract all the forms and documents required for listing of a public company on the Stock exchange. Prepare a report on the activities performed by a Merchant Banker for launching an Initial Public Offer.
5. Pick any three mutual funds and compare them on the basis of their risk parameters, portfolio holdings and historical return.

Suggested Readings:

- Chandra, P. (2017). Investment Analysis and Portfolio Management: Tata McGraw Hill Education, New Delhi.
- Chaturvedi S., Kaur G., Singh A. & Kaur J. (2021). *Investing in Stock Markets*. Scholar Trust Press.

- Singh J. K. & Singh A. K. (2017). *Investing in Stock Markets.* Delhi: A. K. Publications, Delhi.
- Tripath V. & Pawar N. (2022). Investing in Stock Markets: Taxmann Publications.

Note: Suggested readings will be updated by the Department of Commerce and uploaded on Department's website

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Generic Elective- 3.4(GE-3.4): Financial Statement Analysis

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
GE 3.4 – Financial Statement Analysis	4	3	1	0	Pass in XII	NIL

Learning Objectives

The course aims to enable the student to analyse and interpret the financial statements and related footnotes of publicly traded companies.

Learning outcomes

After completion of the course, learners will be able to:

1. Describe the meaning of financial statements as per Companies Act, 2013. 2. Discuss the techniques of financial statements analysis.
3. Compute the financial ratios using spreadsheets.
4. Examine the cash position of companies using the cash flow statements. 5. Analyse the financial performance of companies using ratio analysis.

SYLLABUS OF GE-3.4

Unit 1: Introduction (9 hours)

Introduction to financial statements ,Uses & Limitations of Financial Statements, users of accounting information, an overview of Financial statements as per companies act,2013, Balance sheet, Statement of Profit and Loss, Cash Flow statement, Statement of changes in Equity, Notes to the accounts, Significant accounting policies,. Brief introduction of accounting standards.

Unit 2: Techniques of financial statements analysis (9 hours)

Comparative and common-size statements: horizontal and vertical analysis, trend analysis.

Unit 3: Ratio analysis (9 hours)

Ratio analysis and interpretation: liquidity, solvency, profitability, activity and market ratios; Du Pont analysis.

Unit 4: Cash Flow Analysis (9 hours)

Importance and objective of understanding a firm's cash flows, Structure of Cash flow statement: Financing, investing and operating activities, Preparation of Cash Flow statement as per AS 3 (revised) and Ind AS 7.

Unit 5: Financial Statement analysis – Real-life case work (9 hours)

Analysis of financial statements (Income Statement, Balance sheet, Cash flow statement) of any two listed companies of similar market capitalization from the same sector/industry using spreadsheets. Use Ratio analysis and Industry averages to draw inferences about the company's financial health.

Exercises:

The learners are required to:

1. Download soft copies of annual reports of public listed companies & analyse the financial statements.
2. Prepare the comparative & common size financial statements for three years of at least two listed companies.
3. Compute accounting ratios to analyse the operating efficiency, solvency, profitability and liquidity position of any company from its financial statements.
4. Analyse & interpret the cash position of companies using the cash flow statements. 5. Analysis & interpret the financial ratios of select companies on the basis of their financial statements.

Note: Students should be encouraged to use spreadsheets for practical exercises. Suggested Readings:

- Gupta, A. (2018). *Financial Accounting for Management - An Analytical Perspective*. Delhi: Pearson Education.
- Lal, J., & Gauba, S. (2018). *Financial Reporting and Analysis*. Delhi: Himalaya Publishing House.

Note: Suggested readings will be updated by the Department of Commerce and uploaded on Department's website.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

B. Com. (Prog.)

Discipline Specific Course- 3.1(DSC-3.1): Business Statistics

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSC - 3.1: Business Statistics	4	3	0	1	Pass in XII	NIL

Learning Objectives

The course aims to develop amongst the learners the ability to summarize, analyse and interpret quantitative information for business decision making.

Learning outcomes

After completion of the course, learners will be able to:

1. Examine and interpret various descriptive properties of statistical data.
2. Identify probability rules and concepts relating to discrete and continuous random variables to answer questions within a business context.
3. Analyse the underlying relationship between variables and perform predictive analysis using regression models.
4. Analyse the trends and tendencies over a period through time series analysis.
5. Apply index numbers to real life situations.

SYLLABUS OF DSC-3.1

Unit 1: **Descriptive Statistics (9 hours)**

Measures of Central Tendency: Concept and properties of averages including Arithmetic mean, Median and Mode.
Measures of Dispersion: An overview of Range, Quartile Deviation and Mean Deviation; Standard deviation; Variance and Coefficient of variation.
Moments: Computation and significance; Skewness; Kurtosis.

Unit 2: Probability and Probability Distributions (15 hours)

Theory and approaches to probability; Probability Theorems: Addition and Multiplication; Conditional probability and Bayes' Theorem.
Expectation and variance of a random variable.
Discrete Probability distributions: Binomial and Poisson (Properties and Applications). Normal distribution: Properties of Normal curve; Computation of Probabilities and Applications.

Unit 3: Simple Correlation and Regression Analysis (12 hours)

Correlation Analysis: Meaning and types of Correlation; Correlation Vs Causation; Pearson's coefficient of correlation (computation and properties); Probable and standard errors; Rank correlation.
Regression Analysis: Principle of least squares and regression lines; Regression equations and estimation; Properties of regression coefficients; Relationship between Correlation and Regression coefficients; Standard Error of Estimate.

Unit 4: Time Series Analysis (6 hours)

Time Series Data; Components of time series; Additive and Multiplicative models.
Trend analysis; Fitting of trend using principle of least squares – linear and second-degree parabola.
Shifting of Origin and Conversion of annual linear trend equation to quarterly/monthly basis and vice-versa.

Unit 5: Index Numbers (3 hours)

Meaning and uses of index numbers.
Construction of Index numbers: Methods of Laspeyres, Paasche and Fisher's Ideal index. Construction and Utility of Consumer Price Indices; BSE SENSEX, and NSE NIFTY.

Practical Exercises: 30 hours

The learners are required to:

1. Observe and apply the concepts of descriptive statistics in real life situations.
2. Practice basic calculations in statistics using spreadsheets and try to use it for solving subject related assignments.
3. Conduct a small primary research/survey in groups and analyse the data using statistical tools discussed in the class (Examples: Buying behaviour, Motivation, Stress, Brand aspects, Sales Projections, Impact of advertisements etc).
4. Conduct a statistical experiment to estimate the probability of any event occurring in future.
5. Analyse the relationship between different factors affecting the demand for any product. Predict future demand of the product using regression analysis.
6. Analyse the past price movement in any equity stock using trend analysis.
7. Construct a hypothetical index that is representative of large cap stocks listed on NSE.

Suggested Readings:

Note: Suggested readings will be updated by the Department of Commerce and uploaded on Department's website.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Discipline Specific Course- 3.2(DSC-3.2): Financial Management

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSC -3.2: Financial Management	**4**	**3**	**0**	**1**	**Pass in XII**	**NIL**

Learning Objectives

The course aims to enable students to acquire knowledge of principles and practice of financial management.

Learning outcomes

After completion of the course, learners will be able to:

1. Analyse the conceptual framework of financial management and get an insight into the concept of time value of money, and risk and return.
2. Estimate cash flows for projects, and evaluate their profitability using capital budgeting techniques.
3. Estimate the cost of capital; and critically analyse different capital structure theories and factors affecting capital structure decision of a firm.
4. Analyse different theories of dividend and factors affecting dividend policy.
5. Estimate working capital requirements of a firm, and device optimum credit policy for a firm.

SYLLABUS OF DSC-3.2

Unit 1: Financial Management: An Overview (3 hours)

Nature, scope and objectives of financial management. An overview of time value of money, risk and return.

Unit 2: Capital Budgeting Decision (12 hours)

The Capital Budgeting Process, Cash Flow Estimation, Different techniques of capital budgeting: Payback Period Method, Discounted Payback Period Method, Accounting Rate of Return, Net Present Value (NPV), Internal Rate of Return (IRR), Profitability Index

Unit 3: Cost of Capital and Financing Decision (15 hours)

Cost of Capital: Estimation of components of cost of capital: Method for calculating cost of equity, cost of retained earnings, cost of debt and cost of preference capital, Weighted Average Cost of Capital (WACC). Incremental (Marginal) cost of capital.
Capital Structure- Theories of capital structure (Net Income, Net Operating Income, MM Hypothesis, Traditional Approach). Operating, Financial and Combined Leverage. EBIT-EPS Analysis. Determinants of Capital Structure

Unit 4: Dividend Decision (6 hours)

Theories for relevance and irrelevance of dividend decision for corporate valuation- MM Approach, Walter's Model, Gordon's Model, Determinants of dividend policy

Unit 5: Working Capital Decision (9 hours)

Concepts of working capital, operating & cash cycles, risk-return trade off, working capital estimation, receivables management.

Note: Use of Spreadsheet should be encouraged for doing basic calculations, quick understanding, problem solving and giving students subject related assignments for their internal assessment purposes.

Practical Exercises **30 hours**

The learners are required to:

1. Compute risk and return of various investment alternatives using excel spreadsheet.
2. Estimate cash flows for a hypothetical Start-up. Using excel, evaluate the project's profitability by employing capital budgeting evaluation techniques.
3. Extract data from financial statements of different firms/financial databases and estimate the cost of capital using appropriate software.
4. Extract historical data and evaluate different dividend policies followed by companies of specific industries.
5. Estimate working capital requirements for any two companies belonging to different industries and compare them.

Discipline Specific Course- 3.3(DSC-3.3): Principles of Marketing

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre requisite of the course (if any)
		Lecture	**Tutorial**	**Practical/ Practice**		
DSC -3.3: Principles of Marketing	**4**	**3**	**1**	**0**	**Pass in XII**	**NIL**

Learning Objectives

The objective of this course is to provide basic knowledge of concepts, principles, tools and techniques of marketing and to provide knowledge about various developments in the marketing.

Learning outcomes

After completion of the course, learners will be able to:

1. Discuss basic concepts of marketing, marketing philosophies and environmental conditions affecting marketing decisions of a firm.
2. Describe the dynamics of consumer behaviour and process of market selection through STP stages.
3. Analyse the process of value creation through marketing decisions involving product development.
4. Analyse the marketing decisions involving product pricing and its distribution.
5. Explore marketing decisions involving product promotion, and draft promotion mix strategies.

SYLLABUS OF DSC-3.2

Unit-1: Introduction to Marketing and Marketing Environment (9 hours)

Introduction to Marketing: Meaning, Scope and Importance; Marketing Philosophies; Marketing Mix for goods and services.

Marketing Environment: Need for studying marketing environment; Micro environmental factors- company, suppliers, marketing intermediaries, customers, competitors, publics; Macro environmental factors – demographic, economic, natural, technological, politico-legal and socio- cultural.

Unit-2: Consumer Behaviour and Market Selection (9 hours)

Consumer Behaviour: Need for studying consumer behaviour; Stages in Consumer buying decision process; Factors influencing consumer buying decisions.

Market Selection: Market Segmentation: Concept and Bases. Market Targeting, Product Positioning – concept and bases.

Unit-3: Product Decisions and New Product Development (9 hours)

Product Decisions: Concept and classification; Levels of Product. Product mix; Branding-concept, types, significance, qualities of good brand name; Packaging and Labeling-types and functions; Product support service; New product development process; Product life cycle – concept and marketing strategies.

Unit-4: Pricing Decisions and Distribution Decisions (9 hours)

Pricing Decisions: Objectives, Factors affecting price of a product; Pricing methods and strategies.

Distribution Decisions: Channels of distribution- types and functions. Factors affecting choice of distribution channel; Distribution logistics decisions.

Unit-5: Promotion Decisions and Developments in Marketing (9 hours)

Promotion Decisions: Communication process; Importance of Promotion. Promotion mix tools: Distinctive characteristics of advertising, personal selling, sales promotion, public relations, and direct marketing.

Developments in Marketing: Sustainable Marketing, Rural marketing, Social marketing Digital marketing – an overview.

Exercises:

The learners are required to:

1. Submit a report on any one marketing aspect of an organisation/group/cell/society/unit/department operating in your College/Institute.

2. Choose any company engaged in sustainable marketing and prepare a presentation of the analysis of its marketing mix. Propose changes to enhance its marketing mix.

3. Describe and analyse the STP strategy of a multinational company of your choice.

4. With reference to the concept of levels of a product examine the marketing strategy of any company which has customized the augmented product and has gained customer satisfaction.

5. Visit two bank branches (one being a public sector and the other being an international bank branch) and meet the PRO/ manager or a suitable staff member. Outline the key elements of the marketing strategy pursued by the branch managers and compare the implementation of the same. Prepare a report about these observations with a critical analysis of the same.

6. Analyse the distribution strategy of any product of your choice.

7. Draft promotion mix strategy for a hypothetical newly floated fine dining restaurant.

*Note: These are suggestive exercises.

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
BAC: Discipline (ESB)-A3: Contemporary Policy and Institutional Frame work (Non-Major/Major)	**4**	**3**	**1**	**0**	**Pass in XII**	**Studied Fundamentals of Entrepreneurship (BAC: Discipline (ESB) – A2)**
BAC: DSC - 3: Business Laws (Major)	**4**	**3**	**1**	**0**	**Pass in XII**	**NIL**

Discipline Core- A3(BAC: Discipline (ESB)-A3): Contemporary Policy and Institutional Framework (Non-Major/Major)

Learning Objectives

The purpose of this paper is to acquaint students with various contemporary policies and institutional framework that support entrepreneurial promotion.

Learning outcomes

After completion of the course, learners will be able to:

1. Discuss the Micro, Small and Medium Enterprises Development Act, 2006
2. Summarize and be well-versed with the changing face of MSME in the light of liberalized economic policy.
3. Describe the legal framework governing MSMEs.
4. Discuss the government support system for entrepreneurial options, and describe the working of promotional programmes for SMEs
5. Evaluate the various marketing and financial support systems.

SYLLABUS OF BAC: Discipline (ESB)-A3

Unit I: Introduction (9 hours)

Micro, Small and Medium Enterprises Development Act (MSMEDA), 2006; Definitions of MSME, institutional support for SMEs; Provisions pertaining to the promotion and development of MSME.

Unit II: Policy Perspective Changes (9 hours)
Changing context of the MSMEs in the era of liberalization, privatization and globalization; Changing perception on competitiveness and quality issues; Changing face of marketing strategy of products of MSMEs; government schemes for SMEs in India.

Unit III: Legal Framework and SMEs (9 hours)

Provisions of various laws applicable to SMEs, (objectives, definition and salient provisions of industrial, commercial and labor laws applied to SMEs), need for a comprehensive legal framework for SME sector.

Unit IV: Support System and SMEs (9 hours)

Promotional programmes for SMEs, evaluation of institutional support system for SMEs operating in the country; Support for entrepreneurship through skill development programmes of government.

Unit V: Marketing and Financial Support System (9 hours)

Institutions for promoting entrepreneurial training and development- objectives, schemes of incentives- financial and non-financial incentives; Training needs of existing entrepreneurs (particularly First generation entrepreneurs); Support for enhancing marketing, production, and export performance.

Suggested Readings

- Nanda, K. C. (1999). *Credit and Banking: What Every Small Entrepreneur (and Banker) Must Know*. SAGE Publications Pvt. Limited.
- Verma, J. C., & Singh, G. (2002). *Small Business and Industry: A Handbook for Entrepreneurs*. Sage Publications..

Additional Resources

Peters, B. G., & Zittoun, P. (2016). Contemporary approaches to public policy. *Theories, Controversies and Perspectives. UK: Palgrave Macmillan*.

Exercises:
The learners are required to:

1. Identify the recent developments in Micro, Small and Medium Enterprises sector.
2. List down the latest government schemes for SMEs.
3. Describe and discuss the legal framework governing MSMEs.
4. Evaluate the institutional support system for SMEs.
5. Identify and evaluate different financial and non-financial incentives available for promotion of entrepreneurship.

Note: Suggested readings will be updated by the Department of Commerce and uploaded on Department's website.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE- 3.1(DSC-3.1): BUSINESS LAWS (MAJOR)

Learning Objectives

To impart basic knowledge of the important business laws relevant for the inception and conduct of general and business activities with relevant case laws.

Learning outcomes

After completion of the course, learners will be able to:

1. Understand and analyse basic aspects of contracts for the formation of the contracts
2. Explore various modes of discharge of contract.
3. Analyse the remedies available for breach of contract
4. Comprehend the provisions of the special contracts viz. Indemnity, guarantee, bailment, and pledge
5. Review various concepts of the contract of agency.

SYLLABUS OF BAC: DSC-3.1

Unit 1: Introduction to the Law of Contracts (18 hours)

Contract – meaning, characteristics and kinds. Essentials of a valid contract - Offer and acceptance, consideration, contractual capacity, free consent, the legality of objects. Void agreements, Quasi Contracts.

Unit 2: Discharge of Contracts (7 hours)

Meaning, Modes of discharge- performance, mutual consent, supervening impossibility, lapse of time, operation of law, breach of contract

Unit 3: Remedies for breach of contract (3 hours)

Rescission, damages, quantum meruit, suit for specific performance, suit for injunction.

Unit 4: Special Contracts-1 (9 hours)

Contract of Indemnity and Guarantee: Meaning of Indemnity, difference between indemnity and guarantee, nature and extent of surety's liability, rights of surety, discharge of surety, Contract of Bailment & Pledge: Pledge by non-owner.

Unit 5: Special Contracts-2 (8 hours)

Contract of Agency: Modes of creation of agency, extent of agent's authority, rights and duties of agents, personal liability of agent, termination of agency.

Exercises:

The learners are required to:

1. Enlist real-life examples to differentiate between offer and invitation to an offer and acceptance.
2. List out some recent cases of supervening impossibility and discharge of contract. 3. Enumerate different types of damages available under different breach of contract situations.
4. Prepare a list of gratuitous and non-gratuitous bailment contracts entered into daily life. 5. Observe from your environment how principal-agent relationships get created in different situations.

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
BAC: Discipline (A&F)- A3: Investment Analysis and Business Valuation (Non-Major/Major)	**4**	**3**	**1**	**0**	**Pass in XII**	**Studied Fundamentals of Investment (BAC: Discipline (A&F) – A2)**
BAC: DSC -3: Business Laws (Major)	**4**	**3**	**1**	**0**	**Pass in XII**	**NIL**

Discipline Core- A3(BAC: Discipline (A&F)-A3): Investment Analysis and Business Valuation (Non-Major/Major)

Learning Objectives

The course aims to equip the student with valuation techniques for different financial instruments for investments.

Learning outcomes

After completion of the course, learners will be able to:

(1) Explain the basic concepts related to investment, risk and return.
(2) Understand the technique of fundamental analysis.
(3) Apply the technique of technical analysis.
(4) Estimate the bond pricing and equity valuation.
(5) Evaluate different approaches to valuation of an asset.

SYLLABUS OF BAC: Discipline (ESB)-A3

Unit 1: Introduction (9 hours)

Introduction to Investments; Objectives of Investments; Basics of Risk and Return: Concept and calculation of risk and returns, Application of standard deviation, coefficient of variation, the concept of beta; Systematic Vs Unsystematic risk (Inflation Risk, Interest Rate Risk, Credit Risk, Maturity Risk, Liquidity Risk, reinvestment risk); impact of taxes and inflation on returns; financial assets vs real assets; Market participants - Investors, Speculators, hedgers and arbitrageurs.

Unit 2: Fundamental Analysis (9 hours)

Top-down and bottom-up approaches, Analysis of international & domestic economic scenario, Industry analysis, Company analysis (Quality of management, financial analysis: Both Annual and Quarterly, Income statement analysis, position statement analysis including key financial ratios, Cash flow statement analysis, EBIT, Capital gearing ratio, Return on Investment, Return on Equity, EPS and DPS analysis, Industry market ratios: Operating Profit Ratio, Net Profit Ratio, PE, PEG, Price over sales, Price over book value, Dividend Yield, Earning Yield, Debt- Equity Ratio, EVA). Understanding the Shareholding pattern of the company.

Unit 3: Technical Analysis and Efficient Market Hypothesis (9 hours)

Introduction to Technical Analysis; Strengths and weakness of Technical Analysis; Dow Theory; Elliott Wave theory; Charting the historical prices (Bar Chart, Line Chart, Point and figure chart, candlestick charts, triangles); Price patterns; Support and resistance level; Weakness and shortcomings of Technical Analysis. Introduction to Efficient Market Hypothesis (EMH); Forms of efficient Markets (An Overview).

Unit 4: Basics of Equity & Bond Valuation and Portfolio Management (9 hours)

Bond fundamentals; bond valuation; estimation of bond yield; Investment in shares; Intrinsic value of shares; Valuation of shares – dividend discounting models, Price earning approach of equity valuation. Introduction to Portfolio, Portfolio diversification, calculation of portfolio risk and return (2 securities only).

Unit 5: Business Valuation (9 hours)

Introduction to Valuation: Approaches to Valuation, Discounted Cash Flow, Relative Valuation, Role of valuation; Discounted Cash-flow Valuation: Estimating discount rates, cost of equity, cost of equity to cost of capital; Valuation of an asset with guaranteed cash flows, introducing uncertainty into the valuation.

Exercises:

The learners are required to:

1. Calculate risk and return of an asset using the spreadsheet.

2. Conduct fundamental analysis of top five companies listed on the national stock exchange.
3. Use technical analysis tool in predicting price movements through line charts, bar charts, candle and stick charts, etc. of top five companies listed on the national stock exchange.
4. Estimate bond pricing of select five companies who have recently issued bonds in india.
5. Analyse financial instruments in case of select five companies listed in bombay stock exchange for overvaluation and undervaluation.

BAC: Discipline (B&I)-A3: Regulatory Framework of Insurance (Non-Major/Major)	4	3	1	0	Pass in XII	Studied Introduction to Banking (BAC: Discipline (B&I) – A2)
BAC: DSC - 3: Business Laws (Major)	4	3	1	0	Pass in XII	NIL

Discipline Core- A3(BAC: Discipline (B&I)-A3): Regulatory Framework of Insurance (Non-Major/Major)

Learning Objectives

The course aims to impart knowledge about the legal aspects and laws governing Insurance sector both life and non- life.

Learning outcomes

After completion of the course, learners will be able to:

1. Discuss The Indian Contract Act, 1872.
2. Discuss The Consumer Protection Act, 2019
3. Describe the main provisions of IRDA Act, 1999
4. Interpret LIC Act, 1956 and General Insurance Business (Nationalisation) Act, 1972.
5. Develop insights on Miscellaneous insurances; and discuss The Marine Insurance Act, 1963 and The Motor Vehicle Act, 1938.

SYLLABUS OF BAC: Discipline (B&I)-A3

Unit 1: The Indian Contract Act, 1872 (9 hours)

Nature of an agreement, essentials of a valid contract, classifications of contracts. Contract of Agency: Agent's duty towards Principal, Principal's duty towards Agent. Effect of Agency on contract with third party.

Unit 2: The Consumer Protection Act, 2019 (9 hours)

Important definitions, extent and coverage of the Act, objects of the Act, Protection of Consumer's interest, Consumer's Rights and Responsibilities, Machinery for consumer grievance redressal, Procedure for filing the complaint, Rights and Relief of Consumers, Insurance Ombudsman Scheme.

Unit 3: Insurance Regulatory and Development Authority Act,1999 (9 hours)

Definitions, coverage and objects of the Act; Salient features of IRDA,1999; Establishment and incorporation of Authority; Duties, power and functions of Authority, Composition of Fund, Power of Central Government under the Act, Protection of Consumer interest under IRDA,1999. Establishment of Insurance Advisory Committee.

Unit 4: Insurance Legislations (9 hours)

Salient provisions of Insurance Act, 1938; Life Insurance Corporation Act, 1956: establishment and incorporation, constitution and functions of the corporation; Constitution of Tribunals; The General Insurance Business (Nationalisation) Act, 1972, definitions and salient features. Brief introduction of Marine, fire, water, motor, health insurances etc.

Unit 5: Miscellaneous Insurances (9 hours)

The Marine Insurance Act 1963: definitions and scope, salient features, Motor Vehicle Act, 1938: features, definitions, policies and other provisions of the Act. Legal aspects of other miscellaneous insurances like crop, property, liability, annuities, commercial vehicle insurances etc.

Exercises:

The learners are required to:

1. Analyse the major provisions of The Indian Contract Act, 1872.
2. Analyse the major provisions of The Consumer Protection Act, 2019.
3. Analyse the major provisions of IRDA Act, 1999.
4. Spread awareness amongst consumers about the legal aspects of insurance by disseminating the knowledge and information learned in the course
5. Interpret the various case laws pertaining to the insurance- life and non-life.
6. Perform role play, group discussion, case study on various settlements of insurance claims.
7. Analyse the salient features of different insurance contracts offered in the market,

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical / Practice		
BAC: Discipline (HRD)-A3: Human Resource Development (Non-Major/Major)	4	3	1	0	Pass in XII	Studied Organizational Behavior (BAC: Discipline (HRM) – A2)
BAC: DSC - 3: Business Laws (Major)	4	3	1	0	Pass in XII	NIL

Discipline Core- A3(BAC: Discipline (HRM)-A3): Human Resource Development (Non-Major/Major)

Learning Objectives

The course aims to make students understand the various aspects of human resource development and its contribution in the organization.

Learning outcomes

After completion of the course, learners will be able to:

1. Discuss the evolution of HRD
2. Analyse the importance of HRD strategies in organisations
3. Interpret the relevance of HRD models
4. Assess the importance of training and development needs in the organisation.

SYLLABUS OF BAC: Discipline (HRM)-A3

Unit 1: Introduction (9 hours)

Human Resource Development (HRD) - concept, components, evolution, need and significance, difference between human resource management and human resource development, Role of HR manager, contemporary issues in HRD.

Unit 2: Strategies in HRD (13 hours)

Concept of Strategic HRD, HRD Interventions-Performance Appraisal, Potential Appraisal, Performance Coaching and Feedback, Career Planning, Training, Rewards, Employee Welfare schemes and Work Life balance, Roles of HR Developer.

Unit 3: Conceptual models for HRD (9 hours)
Learning and HRD, Models and Curriculum of HRD, Principles of Learning for an Individual and Group, Transactional Analysis (TA), Behavioural Modelling and Self Directed Learning.

Unit 4: Training and Development Methods for HRD (14 hours)
Concept and Importance, Assessing Training Needs, Designing and Evaluating Training & Development Programmes, On the job and off the job methods of Training and development such as lecture Method, apprenticeship, internship, special projects, committee assignments, Simulation techniques (Role Play, Business games, Case study), Vestibule Training, Programmed Instruction and Sensitivity Training.

Exercises:

The learners are required to:

1. Discuss the evolution and contemporary issues in HRD.
2. Analyse various HRD interventions used by firms.
3. Analyse different conceptual models for HRD.
4. Explore new ways of training and development.

Suggested Readings:

B.A. Programmes with Commerce (COMMERCIAL LAWS AND CORPORATE GOVERNANCE)

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
BAC: Discipline (CLCG)- A3: Intellectual Property Rights-I (Non-Major/Major)	4	3	1	0	Pass in XII	Studied Cyber Crimes and Laws (BAC: Discipline (CLCG) – A2)
BAC: DSC - 3: Business Laws (Major)	4	3	1	0	Pass in XII	NIL

Discipline Core- A3(BAC: Discipline (CLCG)-A3): Intellectual Property Rights -I (Non-Major/Major)

Learning Objectives

The course aims to impart knowledge of intellectual property rights, IPR related issues and rationale behind IPR protection with a focus on Patent Law and Trademark Law and its role in new age business.

Learning outcomes

After completion of the course, learners will be able to:

1. Discuss the concept of intellectual property and IP rights.
2. Describe different types of intellectual properties.
3. Discuss Indian Patent Law.
4. Comprehend patent infringement and remedies thereof.
5. Discuss the concept of trademark and its registration procedure.

SYLLABUS OF BAC: Discipline (CLCG)-A3

Unit 1: Introduction to IP Rights (6 hours)

Concepts of property and Intellectual Properties; Meaning, Types and Theories of IPR, need for protection of IPR, Importance & Benefits of IPR, Financial value of IPRs, commercial transactions in the intellectual property sphere, IPR Concerns in Cyber Space, Issue of Piracy.

Unit 2: Types of Intellectual Properties (6 hours)

Different Types of Intellectual Properties - Copyrights, Trademarks, Patents, Designs, Utility, Models, Trade secrets & Geographical Indications.

Unit 3: Indian Patent Law (9 hours)

Meaning, Nature & Role of Patent, Objectives of Patenting; Duration of Patents, Conditions of Patent-ability, Types & Procedure of Patent Applications, Revocation of Patents, Surrender of Patents, Patent Search, Patent Agents- Qualification and Procedure of Registration.

Unit 4: Patent Infringement- Meaning and Remedies (9 hours)

Meaning & Classification; Exceptions to Infringement, Justification of Patent infringement, Compulsory Licensing, Parallel Imports, Revocation of patents, Civil and Criminal Remedies, Reliefs in Suits for Infringement, Patent Authorities, Controller General of Patents, Patent Examiners, IPAB-Intellectual Property Appellate Board)

Unit 5: Trademarks (15 hours)

Meaning & Need of Protection of Trademark, Concept of Well-Known Trademark and Permitted use, Difference from Collective Marks & Certification Mark; Trademark Search, Registration Procedure and Grounds of Refusal, Duration and Renewal of Trade Mark Registration, Infringement and exceptions to Infringement; Assignment and Transmission, Position of Unregistered Trademark. Domain Name and Cyber Squatting.

Exercises:

The learners are required to:

1. List out concerns of IPR in cyber space with contemporary examples
2. Discuss the importance of different types of intellectual properties.
3. Prepare a list of patentable and non-patentable items on the basis of conditions of patentability
4. Prepare a summary of at least five cases of patent infringement in India
5. Prepare a list of different fees charged for Trademark applications
6. Prepare a list of points which are required to be considered while adopting a Trademark.

B.A. Programmes with Commerce (TAX PROCEDURES & PRACTICES)

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
BAC: Discipline (TTP)-A3: Fundamentals of Personal Tax Planning (Non-Major/Major)	4	3	1	0	Pass in XII	Studied Income Tax Practice and Procedures (BAC: Discipline (TPP) – A2)
BAC: DSC - 3: Business Laws (Major)	4	3	1	0	Pass in XII	NIL

Discipline Core- A3(BAC: Discipline (TTP)-A3): Fundamentals of Personal Tax Planning (Non-Major/Major)

Learning Objectives

This paper aims to provide comprehensive knowledge for the tax planning of Individuals. It explains the relevance of tax planning and how systematically planned investments can lower the tax liability of an assessee.

Learning outcomes

After completion of the course, learners will be able to:

1. Recognise the difference between tax planning and tax evasion.
2. Determine the tax liability under the alternative tax regime structure.
3. Identify multiple avenues of investments for saving tax liability.
4. Engage in tax planning with reference to salary income.
5. Engage in tax planning with reference to house property income.

SYLLABUS OF BAC: Discipline (TTP)-A3

Unit 1: Tax Planning Concepts (9 hours)

Meaning, need, principles and objectives of tax planning; tax avoidance and tax evasion; legal thinking on tax planning; scope of tax planning; tax management-nature, concept; the relationship between residential status and scope of income.

Unit 2: Tax planning with reference to individuals (9 hours)

Tax planning with special reference to individuals; alternative tax regime under 115BAC; TDS obligations under section 192, 194-IA, 194-IB; advance payment of tax; return of income; interest payable under section 234A, 234B, 234C; fee for late filing of return.

Unit 3: Tax planning through savings and investments (9 hours)

Tax planning through various tax saving investment avenues available for individuals like mutual funds, unit-linked insurance plans, bonds, equity-linked savings schemes, post office savings schemes and others; tax deductions and exemptions under various provisions of Income Tax Act 1961; deductions from gross total income: 80C, 80CCD(1), 80CCD(1B), 80CCD(2), 80D, 80E and 80G.

Unit 4: Tax planning with respect to salary income (9 hours)

Tax planning for salary income: relative tax efficiency of allowances; perquisites; retirement benefits.

Unit 5: Tax planning with reference to house property income (9 hours)

Tax planning for house property income: deductions available under sections 24(a), 24(b); set off and carry forward of house property losses; deduction under section 80C, 80EE with reference to house property income.

Exercises:

The learners are required to

1. Prepare a case which explains the difference between tax planning and tax evasion.
2. Based on hypothetical income, compute tax liability of an individual under the old and new tax regime. Ascertain which is more beneficial.
3. Discuss how an assessee can claim the benefits of deduction under section 80 (C) to 80 (U) to reduce her/his tax liability.
4. Prepare a case study for an individual that explains remuneration planning.
5. Prepare a case study for an individual that explains tax planning with reference to house property income.

Suggested Readings:

- Ahuja, G., & Gupta, R. (2022). *Simplified Approach to Income Tax*. New Delhi: Flair Publications Pvt. Ltd.

- Singhania, V. K., & Singhania, M. (2022). *Student's Guide to Income Tax*. New Delhi: Taxmann Publications Pvt. Ltd.

Additional Resources:

- Income-tax Act 1961 www.incometaxindia.gov.in

Note: Suggested readings will be updated by the Department of Commerce and uploaded on Department's website.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

B.A. Programmes with Commerce (MODERN OFFICE MANAGEMENT)

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical / Practice		
BAC: Discipline (MOM)-A3: stenography (English)-I (Non-Major/Major)	4	3	1	0	Pass in XII	Studied Modern Office Practices (BAC: Discipline (MOM) – A2)
BAC: DSC - 3: Business Laws (Major)	4	3	1	0	Pass in XII	NIL

Discipline Core- A3(BAC: Discipline (MOM)-A3): Stenography(English)-I (Non-Major/Major)

Learning Objectives

The course aims to orient the students to learn the need of writing accurately on the basis of phonic sound. In order to make them a good writer, it is necessary for them to master the fascinating art of good writing. As it is very important for a learner to write accurately, the knowledge of art of writing through spoken sounds with the help of principles of Sir Isaac pitman would help the students to take notes and carry out office work accurately.

Learning outcomes

After completion of the course, learners will be able to:

1. Demonstrate the basic concepts of stenography with grammalogues and logograms.
2. Analyse the basic concepts of alternatives and phraseography.
3. Interpret the use of stroke and circles.
4. Apply the concept of Loops.
5. Summarize the application of hooks in stenography.

SYLLABUS OF BAC: Discipline (MOM)-A3

Unit 1: Basics of Stenography (9 hours)

Stenography – Introduction, brief history of Pitman's shorthand, types of other writing methods.

Consonants – Definitions, types of consonants, consonant and consonant stroke, form of strokes, number, size and direction of strokes, joining of strokes.
Vowels – Its definition, long and short vowels, vowels signs and their places, position of outlines according to vowels, Intervening vowel, Short Forms – Definition, importance and use of logograms, grammalogues.

Unit 2 : Alternatives and Phraseography (9 hours)

Alternative forms of strokes: downward R & L strokes, downward and upward H, tick H and dot H, upward strokes, semi circle or abbreviated W and their use.

Diphthongs and Triphones, punctuation signs and their application and its positions.

The phraseography, the phraseograms, its essential qualities of facility, linearity and legibility.

Unit 3: Small and Large Circles (9 hours)

Circles 'S' & 'Z', use of small circles with straight and curved strokes, exceptions to the use of circle 'S'\'Z', Large Circles 'SW', 'SS or 'SZ', use of large circles with straight and curved strokes, use of different circles initially, medially and finally, Use of large circles in Phraseography. Use of stroke 'S' and 'Z ' with various rules.

Unit 4: Loops preceding initial hook (9 hours)

Loops 'ST' and 'STR', use of small and big loops with straight and curved strokes, initially use of small loops, medially use of small and large loops and final use of small and large loops, exceptions to the use of loops. Alternative forms with small hook for 'Fr', 'Vr' and Large hook for "Fl", "Vl" etc., use of intervening vowels with alternative forms. Circles and loops preceding initial hooks.

Unit 5: Initial and Final Hooks (9 hours)

"S" before straight strokes hooked for R, "S" before other hooked strokes, Small Hooks: 'R' and 'L, use of initial hooks with straight and curved strokes Small Final hooks: 'N','F\V', use of final hooks with straight and curved strokes, medial use of small final hooks, use of small final hooks in Phraseography, Exceptions to the use of small final hooks, circles and loops to final hooks.

Exercises:-

The learners are required to:

1. Apply the basic concepts of Stenography.
2. Practice Alternatives, Diphthongs and Phraseography.
3. Practice Small and Large Circles.

4. Use different Loops.
5. Use Initial and Final Hooks.

Suggested Readings:

- Bhatia, R. C. (2018). *Principles of Short-hand Theory*. India: G.Lal & Co.
- Kuthiala, O. P. (1974). *Shorthand Made Easy.* India: Pitman S.S.Publications.
- Pitman, I. (2002). Pitman's Shorthand Instrcutor , A.H. Wheeler Publications.(India) • Pitman, I. (2010) The New Phonographic : Phrase Book .
- Pitman, I. (2006). *Pitman Shorthand instructor and key*. India: Pearson Education.

Note: Suggested readings will be updated by the Department of Commerce and uploaded on Department's website.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

ANNEXURE-6

N O T I F I C A T I O N

Sub: Amendment to Ordinance V

[E.C Resolution No. 60/ (60-1-3) dated 03.02.2023]

Following addition be made to Appendix-II-A to the Ordinance V (2-A) of the Ordinances of the University;

Add the following:

Syllabi of Semester-III of the following departments under Faculty of Social Sciences based on Under Graduate Curriculum Framework -2022 implemented from the Academic Year 2022-23.

FACULTY OF SOCIAL SCIENCES

DEPARTMENT OF ECONOMICS

BA. (HONS.) ECONOMICS

DISCIPLINE SPECIFIC CORE COURSE -7 (DSC-7): Intermediate Microeconomics I: Behavioural foundations of Market Interactions

Course title & Code	Credits	Duration (per week)			Eligibility Criteria	Prerequisite
		Lecture	Tutorial	Practical/ Practice		
Intermediate Microeconomics I: Behavioural foundations of Market Interactions – ECON007	4	3	1	0	Passed Class 12th	NIL

Learning Objectives

The Learning Objectives of this course are as follows:

- The course is designed to formally analyze the behaviour of individual agents like consumers and producers under certain conditions.
- Mathematical tools are used to facilitate understanding of the basic concepts.
- This course looks at the behaviour of the consumer and the choices of a competitive firm.

Learning outcomes

The Learning outcomes of this course are as follows:

- Students will learn the basic elements of consumption and production theories using various technical frameworks.
- This course provides them the behavioural foundations of market supply and demand.

Syllabus

UNIT I: Consumer behaviour (15 hours)
Preference and utility, Budget and choice, Income and substitution effect, Demand derivation, Labour supply, One-person welfare

UNIT II: Decision-making under uncertainty (15 hours)
Expected utility, Risk aversion, Insurance, Risk spreading

UNIT III: Producer behaviour and markets (15 hours)
Technology, Profit maximization, Cost minimization, Supply, Short and long run

Recommended readings

- Serrano, Roberto and Feldman, Alan (2012), *A short course in intermediate Microeconomics with Calculus*, Cambridge University Press
- Espinola-Arredondo, Ana and Muñoz-Garcia, Felix (2020), *Intermediate Microeconomic Theory*, MIT Press
- Osborne, M J and Rubinstein, A (2020), *Models in Microeconomic Theory*, Open Book Publishers
- Muñoz-Garcia, Felix (2017) Practice *Exercises for Advanced Microeconomic Theory*, MIT Press
- Dunaway, Eric; Strandholm, John C., Espinola-Arredondo, Ana and Munoz-Garcia, Felix (2020) *Practice Exercises for Intermediate Microeconomic Theory*, MIT press

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE -8 (DSC-8): Intermediate Macroeconomics I: Foundations of Aggregate Income Determination

Course title & Code	Credits	Duration (per week)			Eligibility Criteria	Prerequisite
		Lecture	Tutorial	Practical/ Practice		
Intermediate Macroeconomics I: Foundations of Aggregate Income Determination – ECON008	**4**	**3**	**1**	**0**	**Class 12th Pass**	**NIL**

Learning Objectives

The Learning Objectives of this course are as follows:

- This course builds upon the basic concepts of macroeconomics. It introduces labour markets and the aggregate supply (AS) curve.
- Aggregate Demand (AD) and Aggregate Supply (AS) are brought together to determine equilibrium prices and output examine the policy impacts.
- The course discusses Phillips curve and the alleged trade-off between inflation and unemployment. Both adaptive and rational expectations are introduced.
- A flavour of micro-foundations is introduced with respect to consumption and investment.

Learning outcomes

The Learning outcomes of this course are as follows:

- This course enables students to analyse the interaction of aggregate demand and supply and the effects of fiscal and monetary policy, trade-off between inflation and unemployment, and consumption and investment behaviour of the households.

Syllabus

UNIT I: Short-run and medium-run equilibrium (15 hours)
The labour market, Wage determination; wages, prices, and unemployment; natural rate of unemployment; from employment to output, Derivation of aggregate supply curve, Interaction of aggregate demand and supply to determine equilibrium output, price level and employment.

UNIT II: Philips Curve and Theory of Expectations (15 hours)
Inflation, unemployment and expectations, Phillips Curve; adaptive and rational expectations; policy ineffectiveness debate.

UNIT III: Microeconomic foundations of macroeconomic behaviours (15 hours)
Consumption: Keynesian consumption function; Fisher's theory of optimal intertemporal choice; life-cycle and permanent income hypotheses; other theories of consumption expenditure.
Investment: determinants of business fixed investment; residential investment and inventory investment.

Recommended readings

- Blanchard, O. (2006). *Macroeconomics*, 4th ed. Pearson Education.
- C.L.F. Attfield, D. Demery and N.W. Duck (1991). *Rational Expectations in Macroeconomics: an introduction to theory and evidence* 2nd Ed.
- Sheffrin, Steve (1996). *Rational Expectations*. 2nd ed., Cambridge University Press.
- Dornbusch, R., Fischer, S. (1994). *Macroeconomics*, 6th ed., McGraw-Hill.
- Branson, W. (2013). *Macroeconomics: Theory and policy*, 3rd ed, East West Press.
- Carlin, W and D Soskice (2007), *Macroeconomics: Imperfections, Institutions and Policies*, Indian Edition, OUP.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE -9 (DSC-9): Advanced Mathematical Methods for Economics

Course title & Code	Credits	Duration (per week)			Eligibility Criteria	Prerequisite
		Lecture	Tutorial	Practical/ Practice		
Advanced Mathematical Methods for Economics – ECON009	**4**	**3**	**1**	**0**	**Passed Class 12th with Mathematics**	**NIL**

Learning Objectives

This is the last of a compulsory three-course sequence. The Learning Objectives of this course are as follows:

- To transmit the body of basic mathematics that enables the study of economic theory at the undergraduate level, specifically the courses on microeconomic theory, macroeconomic theory, statistics and econometrics set out in this syllabus.

- In this course, particular economic models are not the ends, but the means for illustrating the method of applying mathematical techniques to economic theory in general.

Learning outcomes

The Learning outcomes of this course are as follows:

- The course builds the skills for mathematical foundations necessary required further study of a variety of disciplines including postgraduate economics, statistics, computer science, finance and data analytics.
- The analytical tools introduced in this course have applications wherever optimization techniques especially constrained optimization are used in business decision-making for managers and entrepreneurs alike.
- These tools are necessary for anyone seeking employment as an analyst in the corporate world.

Syllabus

UNIT I: Multivariate Optimization with constraints (15 hours)
Constrained optimisation with equality and inequality constraints: geometric characterisation, Lagrange characterisation using calculus and applications; properties of value function: envelope theorem, applications.

UNIT II: Linear programming (15 hours)
Introduction, graphical solution, matrix formulation, duality, economic interpretation.

UNIT III: Integration, differential equations, and difference equations (15 hours)
Definite integrals, indefinite integrals and economic applications; first order and second order difference equations, equilibrium and its stability; first order differential equations, phase diagrams and stability; second order differential equations.

Recommended readings

- Sydsaeter, K., Hammond, P. (2002). *Mathematics for economic analysis*. Pearson Educational.
- Hoy, M., Livernois, J., McKenna, C., Rees, R., Stengos, T. (2001). *Mathematics for Economics*, Prentice-Hall India.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Category II

B.A. Programmes with Economics as Major discipline

DISCIPLINE SPECIFIC CORE COURSE -5 (DSC-5): Intermediate Microeconomics I: Behavioural foundations of Market Interactions

Course title & Code	Credits	Duration (per week)			Eligibility Criteria	Prerequisite
		Lecture	Tutorial	Practical/ Practice		
Intermediate Microeconomics I: Behavioural foundations of Market Interactions – ECON007	**4**	**3**	**1**	**0**	**Passed Class 12th**	**NIL**

Learning Objectives

The Learning Objectives of this course are as follows:

- The course is designed to formally analyze the behaviour of individual agents like consumers and producers under certain conditions.
- Mathematical tools are used to facilitate understanding of the basic concepts.
- This course looks at the behaviour of the consumer and the choices of a competitive firm.

Learning outcomes

The Learning outcomes of this course are as follows:

- Students will learn the basic elements of consumption and production theories using various technical frameworks.
- This course provides them the behavioural foundations of market supply and demand.

Syllabus

UNIT I: Consumer behaviour (15 hours)
Preference and utility, Budget and choice, Income and substitution effect, Demand derivation, Labour supply, One-person welfare

UNIT II: Decision-making under uncertainty (15 hours)
Expected utility, Risk aversion, Insurance, Risk spreading

UNIT III: Producer behaviour and markets (15 hours)
Technology, Profit maximization, Cost minimization, Supply, Short and long run

Recommended readings

- Serrano, Roberto and Feldman, Alan (2012), *A short course in intermediate Microeconomics with Calculus*, Cambridge University Press
- Espinola-Arredondo, Ana and Muñoz-Garcia, Felix (2020), *Intermediate Microeconomic Theory*, MIT Press
- Osborne, M J and Rubinstein, A (2020), *Models in Microeconomic Theory*, Open Book Publishers

- Dunaway, Eric; Strandholm, John C., Espinola-Arredondo, Ana and Munoz-Garcia, Felix (2020) *Practice Exercises for Intermediate Microeconomic Theory*, MIT press

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE -6 (DSC-6): Optimization Methods for Economic Analysis

Course title & Code	Credits	Duration (per week)			Eligibility Criteria	Prerequisite
		Lecture	Tutorial	Practical/ Practice		
Optimization Methods for Economic Analysis – ECON023	**4**	**3**	**1**	**0**	**Passed Class 12th**	**NIL**

Learning Objectives

The Learning Objectives of this course are as follows:

- This course covers mathematical techniques used for comparative-static analysis and optimisation problems under various circumstances.
- The objective of this course is to transmit the body of basic mathematics that enables the study of economic theory.
- This course, in particular, includes rules of differentiation and its application in comparative-statistic analysis, unconstrained and constrained optimisation problems.

Learning outcomes

The Learning outcomes of this course are as follows:

- The students will be able to solve optimal solution and policy impacts using comparative- static analysis and statistic optimisation techniques.
- This offers the mathematical foundations necessary for further study of a variety of disciplines including postgraduate economics, statistics, computer science, finance and data analytic.
- The analytical tools introduced in this course will help them to apply optimization techniques used in business decision-making for managers, entrepreneurs and policy makers alike.

Syllabus

UNIT I: Comparative-Static Analysis (15 hours)
Derivatives, Slopes, Limit Theorem

UNIT II: Differentials and its role in Comparative static analysis (15 hours)

UNIT III: Optimisation Problems (15 hours)
Unconstrained and constrained optimisation with single and multiple variables, Lagrangian functions, quasi-concavity and convexity, envelope theorem

Recommended readings

COMMON POOL OF DISCIPLINE SPECIFIC ELECTIVE (DSE) COURSES for 3rd, 5th and 7th Semester

Discipline Specific Elective 1 (DSE-1): Economic History of India

Semester	Course title & Code	Credits	Duration (per week)			Eligibility Criteria	Prerequisite
			Lecture	Tutorial	Practical/ Practice		
III/V/VII	Economic History of India – ECON031	4	3	1	0	Passed Class 12th	NIL

Learning Objectives

The Learning Objectives of this course are as follows:

- This course analyses the key aspects of Indian economic development from pre-colonial period to Independence of the country. This will cover the nature and characteristics of economy before colonial rule and its transition to the colonial regime.
- In doing so, it investigates the place of the Indian economy in the wider context of the regime changes, and the mechanisms that linked economic development in India to the compulsions of colonial rule.
- Key themes including the commercialization of agriculture, deindustrialisation hypothesis, mortality and famines and debates around the retreat of the Raj is discussed.

Learning outcomes

The Learning Outcomes of this course are as follows:

- The students develop and enhance critical analytical skills of Indian growth and development trajectories.
- It further exposes the students to understand the intricacies of India's economic, political and social developments in the past that may have relevance in the present times.
- It increases employability of students by enhancing their ability to deal with a variety of textual and statistical sources, appreciate their contexts, strengths and weaknesses, and draw upon them to construct a coherent argument.
- Besides strengthening the ability to pursue post-graduate studies these skills would be useful in a variety of careers in academics and business research, journalism as well as the government.

Syllabus

UNIT I: Economic changes from pre-colonial to colonial regimes - nature and characteristics; Colonialism and the Indian Economy (12 hours)

UNIT II: Population, Mortality and Famines (12 hours)

UNIT III: Agriculture, Industry and Railways (12 hours)

UNIT IV: The Economy and State in the Imperial Context: The Retreat of the Raj (09 hours)

Recommended readings

Discipline Specific Elective 2 (DSE-2): Economics of Climate Change and Natural Resources

Semester	Course title & Code	Credits	Duration (per week)			Eligibility Criteria	Prerequisite
			Lecture	Tutorial	Practical/ Practice		
III/V/VII	Economics of Climate Change and Natural Resources– ECON032	4	3	1	0	Passed Class 12th	Introductory Microeconomics (ECON001)

Learning Objectives

The Learning Objectives of this course are as follows:

- The objective of this course is to provide knowledge on the principles of governing and managing natural resources.
- This course introduces the conceptual and theoretical foundations of Resource Economics. In particular, the efficiency concepts for evaluating natural resource use and policies and potential sources of inefficiency in the context of forestry, fisheries, and exhaustible energy resources will be studied.
- Further, the basics of Economics of Climate change, its implications and policies.

Learning outcomes

The Learning Outcomes of this course are as follows:

- The students get familiarise with basic issues of sustainable resources allocation and economics of climate change.
- It will familiarize students with the Cost-Benefit Analysis, Challenges in estimating costs and benefits of greenhouse gas policies, the Environmental Kuznets curve, and Mitigation of climate change.
- The course will familiarize students with Sustainable development Goals SDGs, History of Convention UNFCCC, India's Intended Nationally Determined Contribution.

Syllabus

UNIT I: Mathematical Prerequisites (12 hours)
Difference equations; differential equations; phase plane analysis; dynamic optimization
Optimal extraction of a non-renewable resource, Optimal management of renewable resources -Fishery and Forestry

UNIT II: Energy Economics, Energy Transition, and Energy Security (12 hours)
Introduction to Basics of supply, demand, and prices, income elasticities, the eco- nomics of depletable resources, world oil markets, Pathways of energy transition from conventional to renewable energy sources, Policy instruments, Energy security, accessibility and A definition, and Energy poverty

UNIT III: The Economics of Climate change, Implications, and Policies (12 hours)
Cost-Benefit Analysis, Challenges in estimating costs and benefits of greenhouse gas policies, Environmental Kuznets curve, Mitigation of climate change, Sectoral impact of Climate change, climate change, and inequality, Policy responses, and instruments

UNIT IV: Sustainable Development (09 hours)
Concepts and Measurement, Weak and strong sustainability, Sustainable development Goals SDGs, History of Convention UNFCCC, India's Intended Nationally Determined Contribution

Discipline Specific Elective 4 (DSE-4): Fiscal Policy and Public Finance in India

Semester	Course title & Code	Credits	Duration (per week)			Eligibility Criteria	Prerequisite
			Lecture	Tutorial	Practical/ Practice		
III/V/VII	Fiscal Policy and Public Finance in India – ECON034	4	3	1	0	Class 12th	Intermediate Macroeconomics (ECON004)

Learning Objectives

The Learning Objectives of this course are as follows:

- Fiscal and Public Policy is the study of government policy and its role for achieving allocation and distribution objectives of the government.
- The course deals with the nature of public expenditures of the government on various social schemes; budgets, debt sustainability and fiscal management by governments; study of decentralization, theory of fiscal federalism, issues of equity and efficiency, designing equalization transfers, conditional and unconditional grants, fiscal federalism.
- The course analyses these concepts theoretically and also specifically looks at the Indian Final Examples.

Learning outcomes

The Learning Objectives of this course are as follows:

- The students would learn the needs and objectives of government expenditure on social schemes and critically evaluate them.
- The student will understand the new concepts of budgeting and analyze the fiscal and debt management policies of the government.
- They will also learn the vast mechanism of fiscal federalism in India and the role and contribution of Finance Commission in achieving equity and efficiency in resource allocation in multiple levels of government.

Syllabus

UNIT I: Income, Social Insurance and Redistribution (15 hours)
Redistribution and welfare policy, Universal Basic Income, Social Security, Health Insurance, Education, Pension Reforms

UNIT II: Public Expenditure and Fiscal Policy (15 hours)
Budget (Gender and Environment), Theories of Public Expenditure, Income and Employment Generation Policies, Public Debt; Sustainability and Debt Financing

UNIT III: Fiscal Federalism and Local Finance (15 hours)
Theory of Fiscal Federalism, Fiscal Federalism in India

Recommended readings

- Jonathan Gruber, (2011), Public Finance and Public Policy, 3rd edition, Worth Publishers. (Main Textbook)
- Hillman A. L., (2009), Public Finance and Public Policy: Responsibilities and Limitations of Government, 2nd edition, Cambridge University Press.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Discipline Specific Elective 5 (DSE-5): Digital Economics

Semester	Course title & Code	Credits	Duration (per week)			Eligibility Criteria	Prerequisite
			Lecture	Tutorial	Practical/ Practice		
III/V/VII	Digital Economics – ECON035	4	3	1	0	Passed Class 12th	Introductory Microeconomics (ECON001)

Learning Objectives

The Learning Objectives of this course are as follows:

- The analysis of the impact of information and communication technologies (ICTs) on economies and societies is a growing field.
- This course will cover the role of ICT on productivity, market structure, information and network effects, and its differential impact across groups and regions (digital divide).
- This theoretical and methodological stance has inspired a rather inter-disciplinary approach to the study of the digital economy.

Learning outcomes

The Learning Outcomes of this course are as follows:

- The students would be able to get an idea how the information technology is changing the life and livelihood of individuals and economy.

Syllabus

UNIT I: Functions of ICTs using productivity function approach and productivity (09 hours)

UNIT II: The transformation of management practices; work and employment; social networks, trust and social capital in the digital economy; cultural and motivational aspects (09 hours)

UNIT III: ICTs, competition, intellectual property right and market (09 hours)

UNIT IV: ICTs and the political economy of inequality etc. (09 hours)

UNIT V: Automation and Jobs (06 hours)

UNIT VI: Digital India (03 hours)

Recommended readings

COMMON POOL OF GENERIC ELECTIVES (GE) COURSES offered by Department of Economics for Semester- 3rd, 5th & 7th

GENERIC ELECTIVES (GE-1): PRINCIPLES OF MICROECONOMICS I

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Semester	Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
			Lecture	Tutorial	Practical/ Practice		
I/III/V/VII	Principles of Microeconomics I ECON025	4	3	1	0	Class XII pass	NIL

Learning Objectives

The Learning Objectives of this course are as follows:

- This course discusses the basic principles in Microeconomics and their applications. It includes consumer's problem, demand estimation, production function, cost functions and market analysis. It illustrates how the concepts of microeconomics can be applied to analyze real-life economic situations.

Learning outcomes

The Learning Outcomes of this course are as follows:

- The students learn some basic principles of microeconomics of consumer and producers, and interactions of supply and demand, characteristics of perfect competition, efficiency and welfare outcomes.

SYLLABUS OF GE-1

UNIT – I: Introduction (12 hours)
Problem of scarcity and choice: scarcity, choice and opportunity cost; production possibility frontier; economic systems. Demand and supply: law of demand, determinants of demand, shifts of demand versus movements along a demand curve, market demand,

law of supply, determinants of supply, shifts of supply versus movements along a supply curve, market supply, market equilibrium. Applications of demand and supply: price rationing, price floors, consumer sur- plus, producer surplus. Elasticity: price elasticity of demand, calculating elasticity, determinants of price elasticity, other elasticities

UNIT – II: Consumer Theory (12 hours)
Budget constraint, concept of utility, diminishing marginal utility, Diamond-water paradox, income and substitution effects; consumer choice: indifference curves, derivation of demand curve from indifference curve and budget constraint

UNIT – III: Production and Costs (12 hours)
Production: behaviour of profit maximising firms, production process, production functions, law of variable proportions, choice of technology, isoquant and isocost lines, cost minimizing equilibrium condition
Costs: costs in the short run, costs in the long run, revenue and profit maximization, minimizing losses, short run industry supply curve, economies and dis- economies of scale, long run adjustments

UNIT – IV: Perfect Competition (09 hours)
Assumptions: theory of a firm under perfect competition, demand and revenue; equilibrium of the firm in the short run and long run; Long run industry supply curve: increasing, decreasing and constant cost industries.
Welfare: allocative efficiency under perfect competition.

Practical component (if any) - NIL

Essential/recommended readings

- Mankiw, N. G. (2018). *Principles of Microeconomics* 8th ed.
- Frank, R. H., & Cartwright, E. (2010). *Microeconomics and behavior*. New York: McGraw-Hill.
- Bernheim, B., Whinston, M. (2009). *Microeconomics*. Tata McGraw-Hill.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

GENERIC ELECTIVES (GE-2): BASIC DEVELOPMENT ECONOMICS

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Semester	Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
			Lecture	Tutorial	Practical/ Practice		
I/III/V/VII	**Basic Development Economics ECON029**	**4**	**3**	**1**	**0**	**Class XII Pass**	**NIL**

Learning Objectives

The Learning Objectives of this course are as follows:

- This course exposes students to some of the key ideas and concepts in the areas of economic growth, human development and globalisation building on the concept of growth and further links it up with alternative conceptions of development.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Students will develop a critical understanding of the contemporary issues in economic growth and development and their paths. Students will thus be better prepared to face the professional world and can use this knowledge base in a variety of jobs, including in the corporate, civil service and NGO sectors.

SYLLABUS OF GE-2

UNIT – I: Development and underdevelopment (12 hours)
Growth vs Development; Classic Approaches of Development; Contemporary theories of Development and Underdevelopment

UNIT – II: Development goals and indicators, measures of underdevelopment
Various concepts and measures of poverty and inequality, poverty lines using various national and international criteria. (12 hours)

UNIT – III: Capabilities, human development and sustainable development (12 hours)

UNIT – IV: Globalisation and development (09 hours)

Practical component (if any) - NIL

Essential/recommended readings

- Debraj Ray, *Development Economics*, (DE), Princeton University Press, 1998.

- Séverine Deneulin with Lila Shahani (ed.), *An Introduction to the Human Development and Capability Approach: Freedom and Agency*, Roultedge, 2009

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

GENERIC ELECTIVES (GE-3): ESSENTIALS OF ECONOMICS

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Semester	Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
			Lecture	Tutorial	Practical/ Practice		
I/III/V/VII	**Essentials of Economics ECON076**	**4**	**3**	**1**	**0**	**Class XII pass**	**NIL**

Learning Objectives

The Learning Objectives of this course are as follows:

- This course will introduce the fundamental concepts of economics, the study of how people manage resources. It contains basic principles of microeconomics (the behaviour of consumers, firms and companies), macroeconomics (national production, employment, inflation and interest rates) and international economics (balance of payment, exchange rate and trade) with graphical illustration and contemporary examples.

Learning outcomes

The Learning Outcomes of this course are as follows:

- By studying this course, the students will learn to think like an economist and understand how a modern market economy function. They will learn about the factors that determine long-run growth and short-term fluctuations and role of government and financial institutions, so they can better understand how economics applies to the everyday life.

SYLLABUS OF GE-3

UNIT – I: Microeconomic Foundations (15 hours)
Foundations of economics, how market works, firms and market structures, markets for factor of production, role of government

UNIT – II: Macroeconomic Foundations (15 hours)
GDP (measuring total production, income and economic growth), unemployment and inflation; aggregate demand and aggregate supply analysis; monetary and fiscal policies

UNIT – III: Foundation of International Economics (15 hours)
Comparative advantage and the gains from trade, macroeconomics in an open economy

Practical component (if any) - NIL

Essential/recommended readings

– Hubbard, G., Garnett, A., & Lewis, P. (2019). Essentials of economics. 5th edition, Pearson Higher Education AU.

– Sloman, J., & Garratt, D. (2016). Essentials of Economics, 7th edition, Pearson

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Generic Elective (GE-7): Theory of Public Finance

Semester	Course title & Code	Credits	Duration (per week)			Eligibility Criteria	Prerequisite
			Lecture	Tutorial	Practical/ Practice		
III/V/VII	Theory of Public Finance – ECON061	4	3	1	0	Passed Class 12th	ECON001/ECON025

Learning Objectives

The Learning Objectives of this course are as follows:

- This course will look into the efficiency and equity aspect of market mechanism of allocating resources and also the design and implications of public sector policies including taxation and monetary policies.
- It will deal with efficiency, equity, public goods, externalities, taxation, subsidies, fiscal multiplier, money supply, interest rate and their interlinkages.

Learning outcomes

The Learning Outcomes of this course are as follows:

- This course aims to develop the broad conceptual frameworks which will enable students to learn economic issues efficiency, equity, public goods, externalities, taxation, subsidies, fiscal multiplier, money supply, interest rate and their interlinkages.
- It will also allow them to critically evaluate various micro and macro aspects of government policies and their effects on output, distribution, and welfare in the economy.
- The course will be useful for students aiming towards careers in the government sector, policy analysis, business and journalism.

Syllabus

UNIT I: Theories of Public Sector and Market Mechanism (12 hours)
Overview of Fiscal Functions; Tools of Normative Analysis; Pareto Efficiency; General Equilibrium Framework; Equity and the Social Welfare

UNIT II: Market Failure (12 hours)
Sources of Market failures; Public Goods; and Externalities.

UNIT III: Theories of Taxation (09 hours)
Product and Factor tax; Tax Burden; Tax Distortions; Tax Design

UNIT IV: Working of Fiscal and Monetary Policies (12 hours)
Fiscal policy; Banking system and creation of Money; Monetary Instruments and Policies; Fiscal and Monetary Management in Indian Context.

Recommended readings

- R.A. Musgrave and P.B. Musgrave , *Public Finance in Theory and Practice*, 5th Edition.
- Rosen, H. & Gayer, T. (2014). *Public finance* (10th ed.). New York: McGraw-Hill.

- A. Bagchi (ed.): Readings in public finance. Oxford University Press.
- Stiglitz, J. (2009). Economics of the public sector, 3rd ed. W. W. Norton.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Generic Elective (GE-8): Money and Banking

Semester	Course title & Code	Credits	Duration (per week)			Eligibility Criteria	Prerequisite
			Lecture	Tutorial	Practical/ Practice		
III/V/VII	**Money and Banking – ECON062**	**4**	**3**	**1**	**0**	**Class 12th Pass**	**NIL**

Learning Objectives

The Learning Objectives of this course are as follows:

- This course exposes students to the theory and functioning of the monetary and financial sectors of the economy.
- It highlights the organization, structure, and role of financial markets and institutions. It also discusses interest rates, monetary management, and instruments of monetary control.
- Financial and banking sector reforms and monetary policy with special reference to India are also covered.

Learning outcomes

The Learning Outcomes of this course are as follows:
This allows students to understand current monetary policies and financial market out- comes. It also enables them to critically evaluate policies.

Syllabus

UNIT I: Money (12 hours)
Understanding concept and functions of money, Measurement of money supply, Analytics and Methodology of computation of money supply, Theories of money supply determination

UNIT II: Financial markets: an Introduction (12 hours)
Role of financial markets and institutions; Problems of Asymmetric information, Financial Crises; Financial derivatives: Futures, Options and Swaps; Financial markets and Institutions in India: Organization, Structure and Reforms in India

UNIT III: Interest Rates (09 hours)
Determination of interest rates; Sources of interest rates differentials and risk; Theories of term structure of interest rates; Interest rates in India

UNIT IV: Central Banking and Monetary policy (12 hours)
Central Bank: Functions and Balance Sheet

Monetary Policy: Targets and instruments, Monetary management in an open economy
Monetary Policy Framework in India: Evolution and current scenario, critical evaluation
Digital currency: implications and emerging issues in Indian economy

Recommended readings

Generic Elective (GE-9): Digitalisation and Development

Semester	Course title & Code	Credits	Duration (per week)			Eligibility Criteria	Prerequisite
			Lecture	Tutorial	Practical/ Practice		
III/V/VII	**Digitalisation and Development – ECON063**	**4**	**3**	**1**	**0**	**Class 12th Pass**	**NIL**

Learning Objectives

The Learning Objectives of this course are as follows:

- The analysis of the impact of information and communication technologies (ICTs) on economies and societies is a growing field. Technology is an enabling factor. Technological developments become relevant to the extent that they are economically and socially meaningful.
- This course aims to offers an overview of the understanding of economics of digitalisation and its impact on the life and livelihood with an interdisciplinary approach.

Learning outcomes

The Learning Outcomes of this course are as follows:
The students would understand the functions information technology and its socio- economic impact, wellbeing and progress on the contemporary world.

Syllabus

UNIT I: Digital development - India and the World (09 hours)

UNIT II: The transformation of management practices; work and employment; social net- works, trust and social capital in the digital economy; cultural and motivational aspects (12 hours)

UNIT III: Unit ICTs, Digital Divide and the political economy of inequality (12 hours)

UNIT IV: Access to ICT and poverty and wellbeing, work-life balance (12 hours)

Generic Elective (GE-10): Introduction to Comparative Economic Development

Semester	Course title & Code	Credits	Duration (per week)			Eligibility Criteria	Prerequisite
			Lecture	Tutorial	Practical/ Practice		
III/V/VII	**Introduction to Comparative Economic Development – ECON064**	**4**	**3**	**1**	**0**	**Class 12th Pass**	**NIL**

Learning Objectives

The Learning Objectives of this course are as follows:

- This course investigates selected issues in industrialization and development in comparative historical perspective.

- The course focuses on a set of countries which followed diverse trajectories and patterns of growth to achieve their industrial transition and compares the outcomes of these diverse trajectories on sectoral change, intersectoral relations, labour processes and industrial relations and compares the role of the state in facilitating the respective trajectories.

Learning outcomes

The Learning Outcomes of this course are as follows:

- The students will be able to visualise economic development in a historical perspective and assimilate material from diverse narratives.
- It will help them to understand the diverse paths of economic development in the advanced economies.

Syllabus

UNIT I: Introduction (09 hours)
Theoretical issues and comparative historical background.

UNIT II: Agricultural transformation and its role in industrialization (09 hours)
Agrarian and land relations, production and productivity, agrarian surplus in industrial development. Case studies: Britain, Japan and U.S.S.R.

UNIT III: The industrialization process of Britain, Japan and U.S.S.R. (09 hours)

UNIT IV: The factory system and making of the industrial working class. Case studies: Britain and Japan (09 hours)

UNIT V: The role of the state in industrial and developmental transitions. Case studies: Britain, Japan and U.S.S.R. (09 hours)

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Generic Elective (GE-11): Education and Development

Semester	Course title & Code	Credits	Duration (per week)			Eligibility Criteria	Prerequisite
			Lecture	Tutorial	Practical/ Practice		
III/V/VII	**Education and Development – ECON065**	**4**	**3**	**1**	**0**	**Class 12thPass**	**NIL**

Learning Objectives

The Learning Objectives of this course are as follows:
This course discusses the role of education in development and policy analysis and formulation in the context of development; the impact of the globalisation on, and the role of international agencies in, education for development; human capital theory and human resource development; education and aid; research and consultancy strategies and ethics. he emphasis in this course is laid on understanding the theoretical aspects of education and linking it with the issues of education in a developing country like India.

Learning outcomes

The Learning Outcomes of this course are as follows:
This course will develop skills amongst the students to role of education and strategies to expand education in highly unequal societies. This will further help to conduct research and analysis the role of institutions for the outcome of education.

Syllabus

UNIT I: Introduction (08 hours)
Defining the educational problem

UNIT II: Human capital theory (08 hours)
The basic economic perspective on education

UNIT III: Early childhood education: How important? When did earnings become so dependent on education? Do our regression estimates overestimate the impact of education on earnings? The case of ability bias. (08 hours)

UNIT IV: Education as a signal of skill (08 hours)
If the return to education is real, does it reflect skills learned or is it a signal? Why has the rate of return to education increased? What skills are now rewarded in the workplace?

UNIT V: Schooling and Achievement (08 hours)
Do smaller classes raise achievement? School vouchers and parental choice; School accountability, standards and testing; Teacher quality and teacher training; Can technology complement what teachers do?

UNIT VI: Higher Education (05 hours)
Basic issues and structure; Higher education policy

Generic Elective (GE-12): Basic Resource and Energy Economics

Semester	Course title & Code	Credits	Duration (per week)			Eligibility Criteria	Prerequisite
			Lecture	Tutorial	Practical/ Practice		
III/V/VII	**Basic Resource and Energy Economics – ECON066**	**4**	**3**	**2**	**0**	**Passed Class 12th with Mathematics**	**ECON001/ECON025**

Learning Objectives

The Learning Objectives of this course are as follows:
This course will introduce the basics of Resource and Energy economics. The objective of this course is to provide theoretical and empirical topics on Resource economics, energy economics, energy transition, and energy security. This course introduces the conceptual and theoretical foundations of Resource Economics. In particular, the policies and potential sources are both renewable and non-renewable. The objective of this course is to provide knowledge on the principles of governing and managing natural resources.

Learning outcomes

The Learning outcomes of this course are as follows:
The students will learn some issues of resource economics relating to the basics of supply, demand, and prices, income elasticities, world oil markets, and depletable resources, pathways of energy transition from conventional to renewable energy sources.

Syllabus

UNIT I: Resource Economics (Renewable and non-renewable sources) (15 hours)
Optimal extraction of a non-renewable resource, Optimal management of renewable resources -Fishery and Forestry, Tom Tietenberg and Lynne Lewis, Environment and Natural Resource Economics, 9th edition, Chapter 5,6,12 and 13

UNIT II: Energy Economics (15 hours)
Types of energy sources, Introduction to Basics of supply, demand, and prices, energy supply and economics of depletable resources, world oil markets

UNIT III: Energy transition and energy security Pathways of energy transition from conventional to renewable energy sources, Policy instruments, Energy security, accessibility and 4 A definition, and Energy poverty (15 hours)

Recommended readings

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Generic Elective (GE-13): Principles of Microeconomics II

Semester	Course title & Code	Credits	Duration (per week)			Eligibility Criteria	Prerequisite
			Lecture	Tutorial	Practical/ Practice		
III/V/VII	Principles of Microeconomics II – ECON027	4	3	1	0	Passed Class 12th with Mathematics	Introductory Microeconomics (ECON001) Principles of Microeconomics I (ECON025)

Learning Objectives

The Learning Objectives of this course are as follows:

- This course covers imperfect markets and equilibrium analysis, consumer and producer theories under various markets and its failure, and international trade.

Learning outcomes

The Learning outcomes of this course are as follows:

- This course helps the students to understand different forms of market imperfections and market failures observed in real life situations.
- The students learn about the environment where the standard market mechanism fails to generate the desirable outcomes.
- They develop a sense of how the production is distributed among the different factors of production and the demand for inputs.
- Some preliminary concepts of international trade are also covered in this course.

Syllabus

UNIT I: Market Structures (12 hours)
Theory of a Monopoly Firm: Concept of imperfect competition; short run and long run price and output decisions of a monopoly firm; concept of a supply curve under monopoly; comparison of perfect competition and monopoly, social cost of monopoly, price discrimination; remedies for monopoly: Antitrust laws, natural monopoly
Imperfect Competition: Monopolistic competition: Assumptions, SR and LR price and output

determinations under monopolistic competition, economic efficiency and resource allocation; oligopoly: assumptions, oligopoly models, game theory, contestable markets, role of government

UNIT II: Consumer and Producer Theory (12 hours)
Consumer and Producer Theory in Action: Externalities, marginal cost pricing, internalising externalities, public goods; imperfect information: adverse selection, moral hazard, social choice, government inefficiency.
Markets and Market Failure: Market adjustment to changes in demand, efficiency of perfect competition; sources of market failure: imperfect markets, public goods, externalities, imperfect information; evaluating the market mechanism.

UNIT III: Income Distribution and Factor pricing (12 hours)
Input markets: demand for inputs; labour markets, land markets, profit maximisation condition in input markets, input demand curves, distribution of Income.

UNIT IV: International Trade (09 hours)
Absolute advantage, comparative advantage, terms of trade, sources of comparative advantage, trade barriers, free trade/ protectionism.

Recommended readings

- Mankiw, N. G. (2018). *Principles of Microeconomics* 8th ed.
- Bernheim, B., Whinston, M. (2009). *Microeconomics*. Tata McGraw-Hill.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DEPARTMENT OF GEOGRAPHY

CATEGORY -I
BA (HONS. GEOGRAPHY

DISCIPLINE SPECIFIC CORE COURSE – 07 (DSC-07): CLIMATOLOGY

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
CLIMATOLOGY	4	3	1	0	12th pass	Nil

Learning Objectives

The Learning Outcomes of this course are as follows:

- Explaining various dimensions of climatology
- Analysing atmospheric moisture along with disturbances
- An understanding world climatic regions

Learning outcomes

The Learning Outcomes of this course are as follows:

- Detailed exposure to climatology.
- In-depth knowledge of atmospheric moisture and cyclonic features.
- Knowledge of the mechanism of monsoon and climatic classification.

SYLLABUS OF DSC-07

Unit-I: Introduction: **(2hrs)**

- Nature, Scope, and Application

Unit-II: Atmospheric Moisture (12hrs)

- Humidity-types, Evapotranspiration, Condensation- process and forms (a. clouds, and b. fog), Precipitation- forms and types, Atmospheric Stability and Instability.(10hrs)

Unit-III: Atmospheric Disturbances: (12hrs)

- Tropical Cyclones- Characteristics, Mechanism and Distribution.

- Temperate Cyclones- Characteristics, Mechanism (Polar Front Theory) and Distribution.(

Unit-IV: Monsoon (10hrs)

- Mechanism of monsoon.
- Global teleconnections in relation to monsoon in India, ENSO, Indian Ocean Dipole Effect.
- Jet Streams and Monsoon in India.

Unit-V: Climatic Classification (9hrs)

- Concept and Purpose of Classification.
- Koppen's Classification.

Practical component (if any) - NIL

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE – 08 (DSC-08): URBAN GEOGRAPHY

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
URBAN GEOGRAPHY	4	3	1	0	12th pass	Nil

Learning Objectives

- To familiarize student with the nature and scope of urban geography.
- To understand the morphology and hierarchy in urban system.
- To learn about the importance of urban issues in mega- cities.
- To provide knowledge about urban planning and governance.
- To make students learn about the new perspectives of futuristic cities.

Learning outcomes

- Comprehend the fundamentals of urbanization, morphology and hierarchy theories that explain the process of urban development.
- Be conversant with the morphology of Indian cities.
- Be Aware about the issues faced in mega cities.
- Have insight into the master plans, renewal plans, UN-Habitat and urban local bodies
- Explore about the concepts of new urbanism, sustainable, smart and inclusive cities.

SYLLABUS OF DSC-08

Unit-1: Introduction (3hrs)

- Definition of urban; Nature and scope of urban geography; Theories of urban origin (reference Carter).

Unit-II: Urban Morphology and Hierarchy (12hrs)

- Concept and Theories of morphology (Kearsley modified Burgess, Harris & Ullman and White' model; Concept and Theories of Hierarchy-Christaller, and Rank size; Morphology of an Indian City (Madurai or Delhi or Jamshedpur) (ONLY ONE).

Unit-III: Urban Issues in Mega Cities of India (9hrs)

- Urban Basic Services (water in detail with reference to Chennai); Housing and slums (Mumbai).
- Heat island (suitable examples).

Unit-IV: Urban Planning and Governance (9hrs)

- Planning: Concept of Master Plans, AMRUT; Institutions: UN-Habitat, Urban local bodies in India.

Unit-V: Futuristic Cities (12hrs)

- Concept of New Urbanism; Concepts of futuristic cities: sustainable city, smart city, compact city, virtual city, network city, world class city, global city and inclusive city (no question on individual concept); Sustainable city or smart city concept in detail (ONLY ONE).

DISCIPLINE SPECIFIC CORE COURSE – 09 (DSC-09): FUNDAMENTALS OF REMOTE SENSING (PRACTICAL)

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course(if any)
		Lecture	Tutorial	Practical/ Practice		
FUNDAMENTALS OF REMOTE SENSING (PRACTICAL)	4	0	0	4	12th Pass	Nil

Note: one credit of practical is equal to two hours

Learning Objectives

The Learning Objectives of this course are as follows:

- To apprise the students with the relevance of Remote Sensing in Geography and the historical growth of Satellites in India and the world.
- To impart the knowledge of fundamentals of remote sensing and its applications.
- To facilitate the students to have hands on experience on different steps of visual interpretation of satellite images & photographs.
- To facilitate the students to have hands on experience on different steps of satellite image processing using one or more software for a geographical application.

Learning outcomes

On completion of this course, the student shall be able:

- To comprehend the concepts related to remote sensing and in understanding their relevance in geography discipline.
- To enhance their ability in describing the basic principles of image processing, visualization and analysis.
- To enrich their ability to conduct basic image processing of satellite multispectral imagery.

Practical Component (120)

SYLLABUS OF DSC-09

UNIT – I: Introduction to Remote Sensing

- Meaning and Definition
- Historical Evolution of Remote Sensing
  - (i) Platforms (Ground, Air, Space)
  - (ii) Types of Remote Sensing (Passive, Active).
  - (iii) Resolution Types (Spatial, Spectral, Radiometric, Temporal)
- Satellite data sources/Search engines: EARTHDATA, USGS, GLCF, LP-DAAC
- Software: QGIS, ARCGIS , ERDAS, IDRISI, TerrSet, ENVI, R, SAGA

UNIT – II: Aerial Photos: Geometry and Types of Aerial Photography, Stereoscope, Annotation, Interpretation Keys, and Interpretation

- Calculation of photo scale
- Orientation of Aerial Photo

- Annotation and Interpretation Keys

UNIT – III: Satellite Remote Sensing:

- Principles, Resolutions, EMR Interaction with Atmosphere and Earth Surface Features; Major Satellites and Sensors (LANDSAT, IRS, IKONOS, SPOT, MODIS, Sentinel, QUICKBIRD, any two)
- Downloading Bhuvan Data
- Downloading LANDSAT data (EARTHDATA)
- Band-wise reflection of EMR
- **UNIT–IV: Satellite Image Processing:**
- Pre-processing (Radiometric and Geometric Correction); Enhancement (Filtering); Classification Basics (Supervised and Un-supervised), DN to reflectance conversion
- Geometric Correction

UNIT – V Application of Remote Sensing :

- Land Use/Land Cover,
- Urban Sprawl,
- Vegetation Monitoring

COMMON POOL OF DISCIPLINE SPECIFIC ELECTIVE (DSE) COURSES OFFERED BY THE DEPARTMENT OF GEOGRAPHY

DISCIPLINE SPECIFIC ELECTIVE COURSE – 01 (DSE-01): BIOGEOGRAPHY

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course	Department offering the course
		Lecture	Tutorial	Practical/ Practice			
BIOGEOGRAPHY	4	3	1	0	12th Pass	Nil	GEOGRAPHY

Course Objectives:

- To understand various dimensions of biogeography.
- To get detailed analysis of energy cycles and their function.
- To understand the concept of ecological succession and various biogeographical processes.
- To identify geographical distribution of flora and flora of the world.
- To realize and understand the conservation of biodiversity.

Learning Outcome:

- Detailed exposure of biogeography and biodiversity.
- In-depth knowledge of circulation of biogeochemical cycles.
- Functionality of the biogeographical processes.
- Knowledge of Phytogeographical realms and Zoogeographical realms.
- Develop understanding of the global level efforts to conserve biodiversity.
-

SYLLABUS OF DSE-01

Unit-I: Introduction (2hrs):

- Nature, Approaches, significance and Scope.

Unit-II: Biogeographical Processes (12hrs):

- Dispersal, Speciation, Ecological Succession, Extinction.

Unit-III: Biogeochemical Cycles (12hrs):

- Oxygen, Carbon and Nitrogen.

Unit-IV: Geographical Distribution of flora and fauna (12hrs):

- Phytogeographical realms, Zoogeographical realms (with specific reference to Wallace and Weber line)- Basis and Classification.

Unit-V: Conservation (7hrs):

- In situ and ex situ, CBD (Convention on Biodiversity).

Suggestive Readings:

1. Bhattacharyya, N.N. (2003). Biogeography. New Delhi, India: Rajesh Publications.
2. Huggett, R.J. (1998). Fundamentals of Biogeography, USA: Routeldge

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVES (DSE-02): GEOGRAPHY OF ARID AND SEMI-ARID REGION

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course	Department offering the course
		Lecture	Tutorial	Practical/ Practice			
GEOGRAPHY OF ARID AND SEMI-ARID REGION	4	3	1	0	12th Pass	Nil	GEOGRAPHY

Course Objectives:

- To evolve the understanding of the regional dimensions of arid and semi-arid regions.
- To correlate the physical dimensions with human perspectives as population size and occupation of arid regions.
- To understand the challenges of aridity in global perspective and measures of sustainability.

Learning Outcome:

- Developing the skill to differentiate the geographical uniquities on space.
- Comprehend the regional knowledge of arid regions for the application of social welfare.
- Analysis and evaluation of regional geographical parameters of aridity related to its challenges and livelihood security.

SYLLABUS OF DSE-02

Unit-I: Introduction (5hrs):

- Extent, Characteristics and Determinants of arid and semi-arid regions of the world

Unit-II: Climate and Vegetation (10hrs):

- Types and characteristics.

Unit-III: Human Aspects (10hrs):

- Population distribution and major tribes.

Unit-IV: Economic Aspects (10hrs):

- Agriculture, Livestock rearing and tertiary activities.

Unit-V: Challenges and sustainability (10hrs):

- Desertification, land degradation, biodiversity loss and practices of livelihood security.

Suggestive Readings:

1. Hill, Michael, 2002, Arid and Semi-Arid Environments, Hodder Murray, London.
2. Campos-Lopez, Enrique and Anderson, Robert J. (eds), 2018, Natural Resources and Development in Arid Regions, Routledge, Newyork.
3. Goudie, Andrew, S., 2013, Arid and Semi-Arid Geomorphology, Cambridge University Press.
4. Ferguson, Gabriel, 2015, Arid and Semi-Arid Environments, NOVA.
5. Whitford, W.G. and Duval, B.D., 2019, Ecology of Desert Systems, Elsevier.
6. Laity. J., 2018, Deserts and Desert Environments, Wiley Blackwell.
7. Sharma, R.C., 1998, Thar: The Great Indian Deserts, Roli Books.
8. Warner, T., 2004, Desert Meteorology, Cambridge University Press.

10. Walton, Kenneth, 2009, The Arid Zones, Aldine Transactions, New Brunswick (UDA), London (UK).
11. Gritzner, Charles F., 2007, Geography of Extreme Environments: Deserts, Chelsea House, Newyork.
12. Aleshire, Peter, 2008, The Extreme Earth: Deserts, Chelsea House, Newyork.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

GENERIC ELECTIVES (GE-07): CONTEMPORARY ENVIRONMENTAL ISSUES

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course	Department offering the course
		Lecture	Tutorial	Practical/ Practice			
CONTEMPORARY ENVIRONMENTAL ISSUES	4	3	1	0	12th Pass	Nil	GEOGRAPHY

Learning Objectives

- To understand the basic concepts of human environment and the resultant impact.
- To evaluate the contemporary environmental issues world over.
- To assess each problem in detail along with a case study of the best practices in the world.
- To discuss the global level initiatives or policies related to these issues.

Learning Outcomes

- The changes that have taken place due to the human impact on nature.
- Recognize the concept of planetary boundaries and how humanity has already crossed the tipping point.
- Have an understanding of both the problems and some specific solutions.
- An in-depth understanding on the global policies and where the world stands today.
-

SYLLABUS OF GE-07

Unit-I: Introduction (5hrs):

- Understanding the human environment relationship and its historical progression, concept of planetary boundaries.

Unit-II: Biodiversity Loss (10hrs):

- Causes and impacts, Conservation and Global initiatives, Case study on best practices.

Unit-III: Pollution (12hrs):

- Air and Water (causes and impacts), Solid Waste (impact and management), Global initiatives, case Study on best practices.

Unit-IV: Land Degradation (10hrs):

- Causes and impacts, Global initiatives, Case Study on best practices.

Unit-V: Climate Change (8hrs):

- Concept, Adaptation and Mitigation.

Suggested Readings

11. Tsing A Lowenhaupt et al. (Ed) (2017) Arts of Living on a Damaged Planet: Ghosts and Monsters of the Anthropocene, University of Minnesota Press, Minneapolis.
12. Wright RT and Boorse DF (2010) Towards a Sustainable Future, PHI Learning Pvt Ltd, New Delhi.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

GENERIC ELECTIVES (GE-08): GEOGRAPHY OF TOURISM

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course	Department offering the course
		Lecture	Tutorial	Practical/ Practice			
GEOGRPHY OF TOURISM	4	3	1	0	12th Pass	NIL	GEOGRAPHY

Course Objectives

- To be aware of the various dimensions of Geography of Tourism.
- To make the students aware about the growth and development of international and domestic tourism with its positive and negative impacts.
- To assess sustainable ecotourism and other contemporary forms of tourism with help of case study.
- To critically evaluate the infrastructure in tourism in India along with reviewing the tourism policy.

Learning Outcome:

- Equip with a basic understanding of nature and scope of geography of tourism and various types of tourists and tourism.
- Have sound knowledge of geographical, environmental, and socio-cultural aspects of tourism.
- Apply the principles of sustainable tourism and analyse the prospects and problems associated with unsustainable tourism activities

SYLLABUS OF GE-08

Unit-I: Introduction (5hrs):

- Nature and Scope; Tourism, Recreation and Leisure;
- Types of Tourism and Types of Tourists

Unit-II: Factors affecting Tourism (10hrs):

- Growth and Development of International and Domestic Tourism.

Unit-III: Significance of Tourism (10hrs):

- Impact on Environment, Economy, Society and Culture.

Unit-IV: Contemporary Forms of Tourism (12hrs):

- Sustainable - Ecotourism (Case Study), Geo-Heritage (Case Study), Space tourism, E-Tourism, MICE.

Unit-V: Tourism Infrastructure (8hrs):

- Infrastructure Development in India, National Tourism Policy of India.

Suggested Readings

1. Brian Boniface, Chris Cooper, Robyn Cooper., Worldwide Destinations: The Geography of Travel and Tourism (8th edition, 2020).

2. Douglas G. Pearce., Tourist Development (Topics in applied geography). 19813rd Edition.

7. पर्यटन भूगोल: प्रा.के.ए. खतीब, मेहता पब्लिशिंग हाऊस

8. Kapoor, B.K. (2008) Paryatan Bhugol, Vishwa Bharti Publication, Delhi.

9. E Book of India Tourism Statistics, 2022. Ministry of Tourism, Govt. of India.

10. UNWTO, 2022. Tourism Data Dashboard.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

GENERIC ELECTIVES (GE-09): SPATIAL INFORMATION TECHNOLOGY

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course	Department offering the course
		Lecture	Tutorial	Practical/ Practice			
SPATIAL INFORMATION TECHNOLOGY	4	3	1	0	12th Pass	NIL	GEOGRAPHY

Course Objectives:

1. The main objective of this course is to give students an insight on the concepts of spatial information technology.
2. The paper discusses the concept, historical developments, functioning and application of spatial information technology in detail.

Learning Outcome:

1. Will be familiar with the concept, components of SIT.
2. Will gained knowledge on various data sources, structures, and their interpolation and modeling.
3. Will acquire in-depth knowledge of various functions applied in SIT.
4. Will gather detailed information on the application of SIT in various fields of mapping.

SYLLABUS OF GE-09

Unit-I: Introduction (5hrs):

- Definitions, Concept, Components and Historical Development.

Unit-II: Spatial Information/Data (10hrs):

- Web data sources; Registration and projection; Data types structures; Data interpolation and modelling.

Unit-III: Working on Spatial Information System (12hrs):

- Data creation with GIS software, making layers, data editing and cleaning, spatial and non-spatial data linking, extracting information.

Unit-IV: Functions of Spatial Information System (12hrs):

- Overlay Analysis; Buffer Analysis, Network Analysis.

Unit-V: Application (6hrs):

- Application of Spatial Information Technology for sustainable development.

Suggested Readings

Department of Social Work

Category I

Semester- III

BA((Honours) Social work

DISCIPLINE SPECIFIC CORE COURSE -7 (DSC-7) – : WORKING WITH INDIVIDUALS

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
WORKING WITH INDIVIDUALS DSC 7 SW301	4	3	0	1	12th Pass	NIL

Learning Objectives

The Learning Objectives of this course are as follows:

- To learn to critically analyse problems of individuals & families and factors affecting them
- To develop understanding of the basic concepts, skills, tools, techniques and process of social case work as a method of social work
- To strengthen ability of establishing and sustaining a professional relationship with the client

Learning outcomes

At the end of the semester, the student will be able to

- Reflect the practical understanding of the process, tools, techniques required for working with individuals and families

- Demonstrate the skills sets required for working with individuals using social casework process
- Demonstrate critical assessment of the real-life situations and gain confidence to apply social casework method in the various settings

SYLLABUS OF DSC-7

Unit I: Introduction to Social Casework **Unit Description:** This unit will provide a conceptual understanding about social casework. The unit will also detail principles and process used in social casework.	**15 Hours**
Subtopics: ● Concept of social casework: meaning, evolution, nature and objectives ● Philosophical assumptions and principles of social casework ● Components of social casework: person, problem, place and process	
Unit II: Understanding Clients **Unit Description:** This unit will give an opportunity to the students to learn the human needs, problems, real-life dynamics. The unit discuss challenges in role performance and coping mechanisms.	**15 Hours**
Subtopics: ● Human needs and problems faced by individuals and families; individual differences, needs and coping-defense mechanisms ● Factors impacting personality development of individuals ● Concept of social role and factors affecting role performance	
Unit III: Tools, Techniques and Skills of Social Casework **Unit Description:** This unit will introduce the students to the various tools, techniques and skills of social casework. The unit will also cover the significance of worker-client relationship.	**15 Hours**
Subtopics: ● Worker-client relationship and use of authority ● Casework tools: listening, observation, interview and home visits, counselling. ● Skills of casework: communication, resource mobilization, rapport building, networking, referral and casework recording	
Unit IV: Application of Social Casework Process **Unit Description:** This unit will engage the students in various practice-learning activities related to approaches, phases and casework practice in different settings.	**30 Hours**

Subtopics: ● Approaches to casework: Psycho-social, Problem Solving, Ecological, crisis intervention, Behaviour Modification and Eclectic ● Phases of casework process: study, assessment, intervention, termination, follow-up and evaluation ● Casework practice in different settings: family, school, community (prepare any one case report)	

Practical component (if any) – Unit IV application based 30 hours

Essential Readings

DISCIPLINE SPECIFIC CORE COURSE – 8 (DSC-8): WORKING WITH GROUPS

Credit distribution, Eligibility and Prerequisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
WORKING WITH GROUPS DSC 8 SW302	4	3	0	1	12th Pass	NIL

Learning Objectives

The Learning Objectives of this course are as follows:

- To develop understanding of group work as a method of social work.
- To develop knowledge, skills and techniques to be used by the social worker in groups.
- To understand the significance of groups as an instrument of change

Learning outcomes

At the end of the semester the students will be able to

- Learn the basic concept of social group work and leaning to handle emerging dynamics.
- Demonstrate skills in group formation, development and techniques used by social workers with different groups.
- Gain confidence in application of various concept of social group work in field work settings

SYLLABUS OF DSC- 8

Unit I : Introduction to Social Group Work **Unit Description:** The unit will introduce the concept of social group work and its process. The unit will also cover various models used in group work practice.	**15 Hours**
Subtopics: • Groups in social work: types, characteristics and significance • Concept of group work: meaning, evolution, nature and principles • Models of group work practice: Remedial, Reciprocal, Social Goal, Mutual Support/Self-Help, Task and Treatment Group	
Unit II: Skills and Techniques of Social Group Work **Unit Description:** The unit will introduce skills and techniques used in social group work. The unit will also demonstrate the significance of programme planning and use of programme media in social group work.	**15 Hours**
Subtopics: • Skills in group work: facilitation, group communication, analytical thinking, leadership building and recording in group work • Techniques of group work: group counselling, group discussion, group decision-making, group therapy • Programme planning and use of program media in social group work	
Unit III: Group Behaviour and Dynamics **Unit Description:** This unit will introduce group behaviour and process of conflict resolution in group work setting. The unit will also focus on various stages of group development and associated dynamics.	**15 Hours**
Subtopics: • Group behaviour: Interaction patterns, emergence and resolution of conflict situations • Stages of group development: Planning, formation/beginning, middle/intervention, ending/termination • Group process and dynamics: determinants, indicators and outcomes, leadership and role of group worker	
Unit IV: Application of Social Group Work Practice **Unit Description:** This unit will give exposure to practical implementation of group formation and development in real life situations.	**30 Hours**

Subtopics: • Practical implementation of group development stages with one group in a social setting • Evaluation and Recording in group work practice • Application of group work with different groups: children, adolescents, women and persons with disability	

Practical component (if any) – Unit IV application based 30 Hours

DISCIPLINE SPECIFIC CORE COURSE– 9 (DSC-9): FIELD WORK PRACTICUM- III

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
FIELD WORK PRACTICUM III **DSC 9 SW 303**	**4**	**0**	**0**	**4**	**12th Pass**	**NIL**

Learning Objectives

The Learning Objectives of this course are as follows:

- To provide an opportunity to practice the methods of working with individuals, families and groups
- To learn to make use of professional relationship and referrals to deal with human problems and to embine the ethics and values of social work profession
- To develop an ability to narrate experience/learning, assessment of services & resources and participate in service delivery.

Course Outcomes:

At the end of the semester, the students will be able to:

- Develop learning plan of action and execute them in the field practice.

- Develop sensitivity towards the needs and problems of individuals, families and groups to work with them in the most efficient manner.
- Develop professional attitude conducive to deal with various problems by making use of supervisory guidance and strengthen skills of writing field work records

SYLLABUS OF DSC-9

Tasks/Activities: 120 hours

1. Perform the assigned tasks during scheduled concurrent field work. The field work agency will remain the same in an academic year. Every student will be assigned a College supervisor for personalized learning and mentoring throughout the academic year.
2. Field work includes- observation visits, orientation programmes, task-based field visits, individual conferences/ mentoring, group conference scientific or experienced based paper presentation, report writing, critical discussion of the reports, workshops, seminars and skill-oriented sessions. Direct field work hours have to be 120 hours in a semester.
3. Establish contact and develop rapport with the agency personnel& volunteers, individuals, families and groups and perform the assigned tasks during concurrent field work.
4. Work with individuals, families and groups alongwith volunteers, paraprofessionals/outreach workers in the agency and/or community and deal with cases (2-3), work with families (3-4) and form group/s.
5. Work with volunteers, para-professionals/outreach workers in the field work agency such as - non-governmental organisations (NGOs) or voluntary organisations (VOs) and governmental organisations (GOs); and/or community.
6. Student will perform the agency-based field work tasks assigned by the respective Agency Supervisor.
7. Regular reporting to all concerned persons (both at agency and college level) during scheduled field visits, meetings and supervisory/individual conferences to seek regular guidance. Minimum 80% of attendance is required in each components of field work.
8. Prepare daily report in prescribed format and submit to the college supervisor on weekly basis. Prepare learning plan, agency/community profile in a timely and appropriate

manner to both the College and Agency Supervisor. Students will engage in 3 hours of report writing per week.

9. The students must get the reports checked during the scheduled Individual Conference (IC) with the college supervisor on weekly basis. Attend Group conferences (GC), prepare group conference paper in consultation with college supervisor, thus learning the roles of presenter, chairperson, and recorder. The individual mentoring (IC & GC) to students by the college supervisor will include 1 hour per week.

10. Attend skill development workshops in which the values, principles, methods, techniques, tools etc. are translated into practice skills, i.e. "learning by doing". The skill workshop will target: (i) Role Plays; (ii) Use of motivational songs and other interactive visual media; (iii) Preparation for street plays including script writing/street theatre; (iv) Simulation exercises; (v) Films screening; (vi) Practice of counselling techniques; (vii) Practice of participative techniques; (viii) Communication; (ix) Mock interviews; and (x) Strategic planning for advocacy.

11. The students are required to submit self-evaluation report in the prescribed format for term end examination. Field work practicum follows continuous evaluation by the supervisor.

Practical component (if any) – 100% Field work

(Direct field work: 120 hours, field work mentoring & report writing: 60 hours)

Essential Readings

DISCIPLINE SPECIFIC ELECTIVE COURSE – 5 (DSE-1): RURAL AND URBAN COMMUNITY DEVELOPMENT(RUCD)

Credit distribution, Eligibility and Prerequisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
RURAL AND URBAN COMMUNITY DEVELOPMENT DSE 1 SW 321	4	3	0	1	12th Pass	NIL

Learning Objectives

The learning objectives of this course are as follows:

- To understand basic concepts, nature and characteristics of rural and urban communities.
- To understand the needs, social concerns and challenges in rural and urban communities
- To develop an insight about government measures, schemes/programmes, agencies of participative and democratic governance

Learning outcomes

At the end of the semester the students will be able to

- Develop a practical understanding of various concerns and challenges in rural and urban community development.
- Develop professional social work practice skills and competencies in addressing developmental concerns.
- Develop an in-depth understanding of the government measures designed for rural and urban communities.

SYLLABUS OF DSE- 1

Unit I: Understanding Basic Concepts **Unit Description:** This unit will provide a conceptual understanding of nature and development of rural and urban communities. The unit will also cover social work practice in rural and urban settings.	**15 Hours**
Subtopics: • Characteristics and Nature of Rural and Urban Societies, Rural and Urban Governance • Socio-economic & political structure of rural and urban communities, Rural and Urban Community development • Social work response to community development	
Unit II: Rural Development : Policies, Programmes and Advocacy **Unit Description:** This unit will introduce students to develop an critical understanding about various policies and programmes. This unit will also include use of policy advocacy, implementation of programmes for development of rural communities .	**15 Hours**
Subtopics: • Key Policies and Programmes – MGNREGA, PMAY-G, PMGSY, DDUGKY, MISSION ANTODYA, NSAP, SAGY, DAY-NRLM, SPMRM (RURBAN), Microfinance and Credit, Forest Rights Act, Agriculture related Policy and Panchayati Raj • Role of IT and ICT in rural development, Social Advocacy in Rural Sector, social entrepreneurship, Role of Social Work Professionals • Case Studies – Best Practices in rural development	
Unit III: Urban Community Development –Characteristics and Approaches **Unit Description:** This unit will focus on urban community development, its history and characteristics. Students will be oriented about the key concerns of urban societies and interventions by social workers and voluntary organisations.	**15 Hours**
Subtopics: • Urban Sites of Development – Slum Resettlements, J J Clusters, Authorised and Unauthorised Colonies, Gated Communities and Ghettoization, Key issues: Homeless, Public Health and Sanitation • Approaches – Urban Growth, Sustainable Development and Participatory Action Plan • Key Policy/Programme Initiatives - SMART City mission , AMRUT, PMAY (U), PMSAVNidhi, DAY-NULM, SBM, URBAN TRANSPORT, JAL SHAKTI, HRIDAY, JNNURM, NERUDP	

Unit IV: RUCD and Social Work Interventions **Unit Description:** This unit will engage students in learning by doing by preparing community profile and undertaking need asseement. The students will be introduced to best practices in community development.	**30 Hours**
Subtopics: • Community profile and mapping • Need Assessment: Community power structure, Sociogram, SWOC Analysis, Stakeholder Analysis, Problem tree, Digital and Technological Skills for Social Workers • Case Studies – Best Practices in rural and urban community development	

Practical component (if any) – Unit IV application based 30 hours

DISCIPLINE SPECIFIC ELECTIVE COURSE – 2 (DSE-2): GENDER AND DEVELOPMENT

Credit distribution, Eligibility and Prerequisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
GENDER AND DEVELOPMENT **DSE 2 SW322**	**4**	**3**	**0**	**1**	**12th Pass**	**NIL**

Learning Objectives

The Learning Objectives of this course are as follows:

- To develop understanding of the gender related concepts, concerns and feminist perspectives
- To understand the approaches towards gender and development
- To develop insights about society, state and civil society initiatives for gender and development

Learning outcomes

At the end of the semester the students will be able to

- Understand the concept of gender and various gender related concerns
- Critically understand different approaches towards gender and development
- Learn various policies and programmes for gender mainstreaming

SYLLABUS OF DSE- 2

Unit I : Conceptual understanding of Gender **Unit Description:** This unit explains the concepts of gender, sex and feminist approaches. Students will learn and analyze various discriminatory processes and concerns related to gender.	**15 Hours**

Subtopics: • Concept of gender and sex, gender identities and disparities • Gender stereotyping, discrimination, violence in relationship, family and community • Feminist perspectives: critical reflections	
Unit II: Approaches on gender and development **Unit Description:** This unit will introduce different approaches towards gender and devlopment.	**15 Hours**
Subtopics: • Women in Development (WID),Women and Development (WAD) • Gender and Development (GAD) • Equality, Equity and Empowerment	
Unit III: Gender Inclusion **Unit Description:** This unit covers the concept and importance of gender inclusion. Students will learn and develop a critical insight on gender equality and empowerment.	**15 Hours**
Subtopics: • Understanding gender vulnerability and Sexual minority • Gender inclusion: Concept, approach and strategies • Understanding Gender based violence	
Unit IV: Policy and Programmes **Unit Description:** This unit will briefly introduce the various provisions for women under constitution and other legislative provisions. Students will learn about various policies, programmes and state mechanisms.	**30 Hours**
Subtopics: • Constitution and legislative safeguards for women • Preparation of a project report: National Policy and programmes for women, Institutional mechanisms: National and State Commissions, Rashtriya Mahila Kosh, Crime Against women Cell and Family Court • Case studies for gender and development and gender mainstreaming in field work settings	

Practical component (if any) – Unit IV application based

DISCIPLINE SPECIFIC ELECTIVE COURSE – 3 (DSE-3): PROJECT FORMULATION AND IMPLEMENTATION

Credit distribution, Eligibility and Prerequisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
PROJECT FORMULATION AND IMPLEMENTATION DSE 3 SW 323	**4**	**3**	**0**	**1**	**12th Pass**	**NIL**

Learning Objectives

The Learning Objectives of this course are as follows:

- To understand the techniques and procedures related to project formulation, project planning and implementation.
- To learn project identification, feasibility analysis, design, financing, implementation, monitoring and evaluation.
- To learn application of various tools for analyzing the problems in order to select the projects.

Learning outcomes

At the end of the semester the students will be able to

- Develop knowledge about the essential components of project formulation and project appraisal.
- Execute a project to achieve specific goals that will benefit the society.
- Apply appropriate approaches to plan a new project and develop project schedule.

SYLLABUS OF DSE- 3

Unit I: Introduction to Project Formulation and Planning **Unit Description:** This unit will give an opportunity to the students to understand the project formulation, planning and selection.	**15 Hours**

Subtopics • Project formulation: meaning, objectives, importance, types, project selection and formulation • Stages of project formulation • Project planning: Project scope, estimation, basic scheduling, resource levelling & allocation	
Unit II: Project Appraisals **Unit Description**: This unit will give an opportunity to the students to learn project appraisal and report writing.	**15 Hours**
Subtopics: • Feasibility study: Types and steps in feasibility study • Project appraisal techniques: Measures of project risk, Sensitivity Analysis, Scenario Analysis, Simulation Analysis • Limitation of project appraisal and report	
Unit III: Project Implementation and Monitoring **Unit Description**: This unit will give an opportunity to the students to gain an in-depth knowledge about project implementation and monitoring	**15 Hours**
Subtopics: • Project implementation: Prerequisites for successful project implementation, stages of implementation and teamwork • Project monitoring: meaning, objectives, needs and significance • Monitoring techniques and monitoring schedules	
Unit IV: Project Evaluation and Review **Unit Description**: The students will be engaged in various learning activities related to practical application of steps and techniques of project evaluation and review.	**30 Hours**
Subtopics: • Project evaluation: meaning, objectives, scope, stages, approach and steps • Techniques of project evaluation: Time estimation, PERT Model, CPM Model, Performance Audit, input analysis, financial cost-benefit analysis, social-cost benefit analysis • Environmental impact assessment, case studies of development projects.

Category I
BA (Honors) Sociology

Discipline Specific Courses for BA (Honors) Sociology

*

B.A. (H) Sociology
Discipline Specific Core (DSC) 07
Sociology of India II

DISCIPLINE SPECIFIC CORE COURSE -07 : SOCIOLOGY OF INDIA II

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSC 07 Sociology of India II	4	3	1	0	12th Class Pass	Nil

Course Learning Objectives:

1. To introduce students to approaches and concepts in the sociological scholarship on the idea of India,
2. To familiarize students with some of the key debates and perspectives on the formation of India as a nation.
3. To acquaint students with the Indian Constitution as an embodiment of the formal idea of the nation.

Course Learning Outcomes:

1.*Demonstrate* conceptual complexity of the idea of India and debates surrounding it.

2. *Identify* the academic and public discourses on Indian society in the historical and social context.

3. *Analyse* the the Indian Constitution as a product of the multiple nuanced social positions and debates

4. *Develop* critical and analytical thinking about studying India.

SYLLABUS OF DSC-07

Unit I. Ideas of India in the Sociological Imagination (21 Hours)
This unit is designed to introduce students to the multiple sociological approaches to the study of Indian society and culture that have emerged in a transforming societal context.

a. Cultural Approach
b. Indological Approach
c. Subaltern Approach

Unit II. Nation in the Public Imagination (18 Hours)
This unit aims to demonstrate the diverse public imaginations of India as a Nation, as emanating in its formative years.

a. M.K Gandhi
b. B.R. Ambedkar
c. J. Nehru
d. V.D Savarkar

Unit III. The Nation and the Constitution (6 Hours)
This unit Sociologically examines how the Indian Constitution, which embodies a formal idea of the nation, results from a synthesis of various imaginations discussed in the earlier units.

Practical component (if any) - NIL

Learning Objectives:

1. To introduce the sub-field of political sociology
2. To provide students the basic conceptual tools for a sociological analysis of political phenomena.
3. To outline classical and contemporary sociological traditions that analyse political institutions and processes.
4. To discuss original sociological writing on interface between politics and society and their divergent theoretical and empirical contexts..
5. To locate the fundamental questions of politics and power in an age of global transformations through an engagement with the three cornerstones of contemporary societies- the state, nation and democracy.

Learning outcomes:

1. *Delineate* the history of sociological study of politics.
2. *Identify and compare* the different perspectives in the sociological study of politics.
3. *Analyse* how political phenomena are embedded in the social and historical contexts of societies.
4. *Apply* the concepts learnt to *formulate* problematics emerging out of their own situations and historical circumstances.

SYLLABUS OF DSC-08

Unit 1. Introducing Political Sociology (3 Hours)

This unit introduces students to the sub-discipline of political sociology, its origins and

analytical concerns.

Unit 2. Concepts, Institutions and Processes (42 Hours)

This unit teaches students the fundamental concepts in political sociology and enables them to understand the workings of political institutions and processes.

a. Power and Authority (18 Hours)

b. Classes, Elites, States and Nations (12 Hours)

c. Democracy, Citizenship and Local Politics (9 hours)

d. Politics, Identities and Technology (6 Hours)

Practical component (if any) – NIL

Essential/Recommended Readings:

Unit 1: Introducing Political Sociology

Sociology of Religion

DISCIPLINE SPECIFIC CORE COURSE -09 : SOCIOLOGY OF RELIGION

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSC 09 Sociology of Religion	4	3	1	0	**12th Class Pass**	Nil

Course Learning Objectives:

1. Introduce students to sociology of religion as distinct field from religious studes through classic and contemporary readings.
2. Examine the dialectics between religion and society through the study of religious practices, customs, beliefs, and rituals.
3. Outline the role of religious faith and beliefs in the modern world.

Course Learning Outcomes:

1. *Identify and distinguish* the sociological approach to religion.
2. *Apply knowledge* of religious practices, customs, beliefs, and rituals to analyse relation between religion and society..
3. *Analyse* the significance of religious faith and beliefs in the modern world.

SYLLABUS OF DSC-09

Unit I Thinking through Sociology of Religion (15 Hours)
This unit introduces students to certain key concepts in Sociology of religion in terms of their definitions, interrelations and trajectories of usage..

a. **Religion in Sociology**
b. **Magic, Science and Religion**
c. **Atheism**

Unit II Religion and Ritual (9 Hours)
This unit provides a sociological understanding of the relationship between religion and rituals and the contexts of ritual practice.

a. Rites of Passage
b. Ritual

Unit III. Sociological Engagements with Religion (15 Hours)
This unit illustrates how religious ideas, beliefs and values shape people's understanding of their world.

a. Hinduism
b. Islam
c. Christianity
d. Buddhism

Unit IV Religion, State and Society (6 Hours)
This section traces the dynamic relationship between religion, state and society in the modern world in context of historical continuities and changes .

Practical component (if any) - NIL

Essential/Recommended Readings

Unit I. Thinking through Sociology of Religion (15 Hours)

a. Religion in Sociology

Davie, G. (2003). The Evolution of the Sociology of Religion: Theme and Variations. In *Handbook of the Sociology of Religion*, ed. Michele Dillon, Cambridge University Press. Pp. 61-75.

Durkheim, E. (2001). *The Elementary Forms of Religious Life*. A new Translation by Carol Cosman, OUP: Oxford. Pp. 25-46.

b. Magic, Science and Religion

Malinowski, B. (1948). *Magic, Science & Religion and Other Essays*. The Free Press: U.S.A.

Pp. 35-70.

c. Atheism

Schaffner, C and R. T. Cragun. (2020). Non-Religion and Atheism, Chapter 20. In *Handbook of Leaving Religion* (Ed.), Daniel Enstedt, Göran Larsson, Teemu T. Mantsinen, Brill, pp. 242-252.

Unit II. Religion and Ritual (9 Hours)

a. Rites of Passage

Van Gennep, A. (1960).*The Rites of Passage*. Routledge & Kegan Paul: London, Introduction and pp1-14, 116-145.

b. Ritual

Parry, J. (1985). Death and Digestion: The Symbolism of Food and Eating in North Indian Mortuary Rites, *Man* , New Series, Vol. 20, No. 4 , pp. 612-630 Published by: Royal Anthropological Institute of Great Britain and Ireland.

Unit III. Sociological Engagements with World Religions (15 Hours)

a. Hinduism

Shah A.M. and. M.N. Srinivas. (1968), Hinduism. In International. Encyclopedia of the Social Sciences, Vol.6, pp358-66.

3.2. Islam

Gilsenan, M. (1982). *Recognising Islam: An Anthropologist's Introduction*. Croom Helm: London. Pp 9-37.

3.3. Christianity

Parsons, T. (1968). Christianity. In *International Encyclopedia of the Social Sciences* Vol. 2, pp 425-447.

3.4. Buddhism

Gethin, R. (1998). The Buddha: The Story of the Awakened One . In *The Foundations of Buddhism*, OUP:Oxford, Chapter 1, pp. 7-34.

DSC 05 Classical Sociological Thinkers	4	3	1	0	12th Pass	Nil

Learning Objectives

1. To familiarise students with the contribution of classical sociological thinkers.
2. To enable students to understand the theoretical concepts that laid the foundation of Sociology as a discipline.
3. To appreciate enduring relevance and contemporary relevance of classical Sociological thought.

Learning outcomes

1. To recognize interconnections between classical sociological theories and contemporary research.
2. To grasp the relevance of classical sociological theory in the development of the discipline.
3. To apply theoretical concepts to examine social issues and concerns.

SYLLABUS OF DSC-1

Unit I
Karl Marx: Materialist Conception of History (15 Hours)
This unit introduces students to one of the key conceptual contributions of Marx that examines the historical development of society.

Unit II
Emile Durkheim: Social Fact (15 Hours)
This unit explains Durkheim's definition of 'Social Fact' and its significance in establishing Sociology as a scientific discipline with a distinct methodology.

Unit III
Max Weber: Ideal Types and Types of Authority (15 Hours)
This unit introduces the concepts of Ideal Types, explaining one of Weber's key methodological tools for developing a sociological study of society. The section further illustrates Weber's use of the concept through his analysis of 'types of authority'.

Practical Component: NIL

Essential/Recommended Readings:

Unit I: Karl Marx

a. Materialist Conception of History

Marx, K. & F. Engels. (1969). *The German ideology.* Moscow: Progress Publishers. pp. 34-42.

Calhoun, J. Craig, (2007). *Classical Sociological Theory*. Malden: 2nd Edition Blackwell. pp. 73-130.

Unit II. Emile Durkheim

Social Fact

Durkheim, E. (1958). *The Rules of Sociological Method.* Glencoe: Free Press, Chapters 1 and 3. pp.50-59; 85-107.

Jones R.A. (1986). *Emile Durkheim: An Introduction to Four Major Works*. London: Sage Publications. Chapters 3 and 4. pp. (60-114).

Unit III. Max Weber

Ideal Types and Types of Authority

Weber, Max. (1947). *The Theory of Social and Economic Organization.* New York: The Free Press, pp. 324-386.

Giddens, Anthony. (1971). *Capitalism and Modern Social Theory: An Analysis of the Writings of Marx, Weber, and Durkheim.* Cambridge: Cambridge University Press. Ch 10.(pp 133-144).

Suggested Readings:

Freund, Julien. (1998). *The Sociology of Max Weber*. New Delhi: Routledge.

Giddens, Anthony. (1971). *Capitalism and Modern Social Theory: An Analysis of the Writings of Marx, Weber and Durkheim.* Edinburgh: Cambridge University Press.

Seidman, Steven. (1994). *Contested Knowledge*. Sussex: Blackwell Publishers.

Key Words:
Historical materialism, social fact, social action, ideal types.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSC 06 Polity and Society	4	3	1	0	12th Pass	Nil

Learning Objectives:

1. To familiarize students with the embeddedness of the political in the social.
2. To outline the theoretical and conceptual heritage of sociology to enable students to understand power, authority and their institutionalizations in modern societies.
3. To provide a sociological understanding of political processes and institutions of India in their historicity and complexity.

Learning outcomes:

Students will be able to:

1. Identify and explain the concepts that are integral to a sociological study of politics.
2. Illustrate the specific ways in which politics is shaped processually in particular historical contexts.
3. Examine the relationship between political institutions and other social and economic institutions and processes

SYLLABUS OF DSC-06:

Unit I On Studying Polity and Society (9 Hours)

This unit introduces students to the sociological study of political life and political institutions

Unit II Conceptual Foundations (16 Hours)
This unit familiarizes students with various perspectives on the sociological study of politics and their conceptual legacies.

Unit III: Themes in Politics and Society in India (20 Hours)
This unit maps the articulation of polity and society in the Indian context from a sociological perspective.

a. **State and the Political Economy**
b. **Democratic Processes and Local Politics**
c. **Political Identities**
d. **Mobilizations and Communications**

Practical Component: NIL

Essential/Recommended Readings:

Unit I. On Studying Polity and Society:

Clemens, Elisabeth S. (2016).*What is Political Sociology*? Polity Press. Chapters 1. Pp. 5-24.

Bottomore, T. B. (1972) *Sociology: A Guide to Problems and Literature*. United Kingdom: Vintage Books, . Chapters 9, Political Institutions. Pp. 151-167.

Unit II Conceptual Foundations

Nisbet, Robert. 1993. *The Sociological Tradition*. United Kingdom: Transaction Publishers. Chapter 4, Authority. Pp. 107-150.

Foucault, Michel. (2019). Power: The Essential Works of Michel Foucault 1954-1984. United Kingdom: Penguin Books Limited. Govermentality. Pp. 201-222

Unit III: Themes in Politics and Society in India

a. **State and the Political Economy**

Rothermund, Dietmar. (2013). *Empires in Indian History and Other Essays*. India: Manohar Publishers. Chapter 3. The State Society in India from Ancient Times to the Present. Pp. 63-82.

Chatterjee, Partha. (2011). *Lineages of Political Society: Studies in Postcolonial Democracy*. New York: Columbia University Press. Chapter 10. Democracy and Economic Transformation. Pp. 208-234.

b. Democratic Processes and Local Politics

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSE-01 Urban Sociology	4	3	1	0	12th Pass	Nil

Learning Objectives:

1. To place the city in its historical and contemporary context.
2. To give an overview of key theoretical perspectives on city and urban phenomena.
3. To illustrate the complexity of urban realities with thematic case studies.

Learning outcomes

At the end of the course the students will be able to:

1. Comprehend the significance of concept of urbanism and process of urbanization in our times.
2. Understand and apply various theories of the city.
3. Analyze and evaluate key urban processes such as migration, displacement and urban slums.
4. Create sociologically informed solutions for contemporary urban issues such as resettlement and rehabilitation.

SYLLABUS OF DSE-01:

Unit 1: Introducing Urban Sociology: Urban, Urbanism and the City (9 Hours)

This unit introduces students to the constitutive elements of urban life as examined in anthropological and sociological writings.

Unit 2: Perspectives in Urban Sociology (15 Hours)
This unit examines the key theoretical perspectives that provide a sociological understanding of urban reality.

a. Ecological
b. Political Economy
c. Network
d. City as Culture

Unit 3: Movements and Settlements (6 Hours)
This unit enables an understanding of urban processes such as migration, displacement, resettlement, rehabilitation etc. and the factors that give rise to them.

Unit 4: Politics of Urban Space (15 Hours)
This unit examines the experience of urban spaces for individuals and communities based on their specific socio-political locations.

a. Caste, Class and Gender
b. Culture and Leisure

Practical Component: NIL

Essential/Recommended Readings:

Unit 1: Urban, Urbanism and the City

Southall, Aidan. 2000. *The City in Time and Space*. Cambridge University Press. Cambridge. Chapter 1. Writing the city under crisis. Pp. 3-22.

Weber, Max. 1978. The City. The Free Press: New York. Pp 65-89.

Unit 2: Perspectives in Urban Sociology

a. Ecological

Hannerz, Ulf. 1980. *Exploring the City: Toward an Urban Anthropology*, NY: Columbia University Press. Chapter 2. Chicago Ethnographers. Pp 19-58.

b. Political Economy

Harvey, David. 1985. The Urban Experience, Baltimore: Johns Hopkins University Press, Chapter 1. Money, Time, Space and the City. Pp. 1-35.

c. Network

Castells, Manuel. 2002, Local and Global: Cities in the Network Society. In The Royal Dutch Geographical Society KNAG, Vol. 93, No. 5, Blackwell Publishers. Pp. 548–558.

d. City as Culture

Simmel, Georg. 1903. Metropolis and the Mental Life. In Gary Bridge and Sophie Watson, (Eds.), *The Blackwell City Reader*. Oxford and Malden, MA: Wiley-Blackwell, 2002. Pp. 12-19

Unit 3: Movements and Settlements

Rao, M.S.A. 1981. Some aspects of the sociology of migration. Sociological Bulletin, Vol. 30, 1. Pp. 21-38.

Anand, Inbanathan. 2003. Migration and Adaptation: Lower Caste Tamils in a Delhi Resettlement Colony. In Ranvinder Singh Sandhu (Ed.), *Urbanization in India*. Sage: New Delhi. Pp. 232-246.

Unit 4: Politics of Urban Space:

a. Caste, Class and Gender

Kamath, Lalitha and Vijayabaskar, M. 2009. Limits and possibilities of middle-class associations as urban collective actors. *Economic & Political Weekly*, June 27, vol XLIV, No. 26 & 27, Pp. 368 -376.

Sociology
Discipline Specific Elective (DSE) 02
Sociology of Work

DISCIPLINE SPECIFIC ELECTIVE COURSE 02: SOCIOLOGY OF WORK

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSE 02 Sociology of Work	4	3	1	0	12th Pass	Nil

Course Learning Objectives:

1. The course journeys into the socio-cultural aspects of work, known commonly by its economic character. It shows how being fundamental to humankind, work took various forms in pre-industrial times, but industrialization integrally changed its character with far-reaching social consequences. In this context, it also traces the evolution of the Sociology of Work as a sub-discipline, in the light of the ideas of the classical sociologists.
2. The course also examines sociological perspectives regarding the nature and socio-cultural consequences of industrialization, critically evaluating them in the context of non-western societies. The extent to which the information revolution has led to a social transformation comparable to that caused by industrialization is also examined in this context.
3. Further, the course addresses various work-related contemporary issues and concerns such as formal and informal sector work, unpaid and forced work, gender segregation and alienation in work and hazardous work.

Course Learning Outcomes

At the end of the course the students will be able to:

1. Learning about the socio-historical context of work, theoretical concerns and problems, and contemporary issues in the area of work and industry.
2. Understanding work in its important social aspects such as gendered work, unpaid work, and alienation as different from its better-known economic dimension.

3. Understanding work in its global dimensions including the mutual relation between work in underdeveloped societies and in developed ones.
4. Developing a comparative perspective in the study of work, focusing on the differences in the social impact of work in western and non-western contexts.
5. Understanding work in its various contexts such as formal and informal sectors, manufacturing and service sectors, home and work-place, etc.
6. Learning about the complexities, disparities and inequalities in the area of work.

SYLLABUS OF DSE-02

Unit 1: Work in Historical Perspective (9 Hours)

In this unit, work is traced through pre-industrial times in the form of gathering and hunting, pre-industrial agriculture and artisan work. Further, the conceptualization of work and its analysis in classical and contemporary sociological literature is reviewed.

a. Work in pre-industrial society
b. Sociology of Work: An Overview

Unit 2: Industrial Culture and Organisation (9 Hours)

This unit addresses work in industrial society, analyzing the social impact of industrialization through the theories of industrialization, industrialism, post-industrialism and information society.

a. Industrialization, Industrialism and post-industrialism
b. Information Society

Unit 3: Work in the Informal Sector (9 Hours)

In this unit, the focus is on the sociological analysis of the informal, unorganized sector of work, with a view to bringing out the many continuities that exist between it and the formal, organized sector.

Unit 4: Dimensions of Work (18 Hours)

This unit discusses various important dimensions of work, focusing on the way in which they have been theoretically conceptualized as well as on their manifestation in actual work contexts.

a. Alienation

b. Gender
c. Unpaid Work and Forced Labour
d. Risk, Hazard and Disaster

Practical component (if any) - NIL

Essential/Recommended Readings

Unit 1: Work in Historical Perspective:

a. Work in pre-industrial society.

Volti, Rudi. (2011)*An Introduction to the Sociology of Work and Occupations*. Sage Publications, Inc. (second edition). Chs. 1 and 2, Pp. 1-16 and 19-35.

b. Sociology of Work: An Overview

Strangleman, Tim. (2016).The Disciplinary Career of the Sociology of Work. In Edgell, Gottfried and Granter (Ed.), *The Sage Handbook of the Sociology of Work and Employment*. Los Angeles/London/New Delhi/Singapore/Washington DC, Sage Reference, Ch. 2.

Unit 2: Industrial Culture and Organization

a. Industrialisation, Industrialism and Post-industrialism

Ramaswamy E. A. and Uma Ramaswamy. (1981) *Industry and Labour*. New Delhi, Oxford University Press. Ch 3, Pp.33-65.

b. Information Society
Kumar, Krishan. (1999).*From Post-Industrial to Post-Modern Society*. Oxford, Blackwell Publishers Ltd. Ch 2, Pp 6-35.

Unit 3: Work in the Informal Sector

Breman, Jan. (2003). The Informal Sector in Veena Das (Ed.), *The Oxford India Companion to Sociology and Social Anthropology*, New Delhi, OUP. Pp. 1287-1312.

Kumar, Sanjay and Sharit Bhowmik. (2010). Street Vending in Delhi in Sharit Bhowmik (Ed.), *Street Vendors in the Urban Global Economy*. Routledge. Pp. 46-67.

Unit 4: Dimensions of Work

a. Alienation

Erikson, Kai. (1990). On Work and Alienation in Erikson, K. and S.P. Vallas (Eds.), *The Nature of Work: Sociological Perspectives*. New Haven and London, American Sociological Association Presidential Series and Yale University Press. Pp. 19-33.

Sociology
Discipline Specific Elective (DSE) 03
Sociology of Health and Medicine

DISCIPLINE SPECIFIC ELECTIVE COURSE - (DSE-03) : Sociology of Health and Medicine

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSE 03 Sociology of Health and Medicine	4	3	1	0	12th Pass	Nil

Course Learning Objectives

1. To render health and medicine as a complex interaction between social and biological processes.
2. To introduce cultural dimension in the construction of illness and medical knowledge.
3. To outline different theoretical approaches in Sociology of Health and Medicine.
4. To illustrate social experiences of health and illness through case studies and health policies.

Course Learning Outcomes

At the end of the course the students will be able to:

1. Analyse the everyday experience of health and illness as an outcome of social, political, economic, cultural, and biological processes.
2. Apply the key concepts and approaches of sociology of health and medicine to understand the social embeddedness of medical ideas and practices.
3. Develop a critical understanding of modern biomedicine, medical pluralism and integration of different systems of medicine.
4. Identify and discuss the contemporary concerns and debates in medical sociology.

SYLLABUS OF DSE-03

Unit 1. Conceptualising Disease, Sickness, and Illness (9 Hours)
The section introduces students to the key concepts in Medical Sociology that define the field as being distinct from Medical Sciences.

Unit 2. Theoretical Orientations to Health and Illness (18 Hours)
This section situates the study of health and illness in the theoretical context of the discipline. It seeks to familiarize the students with the perspectives that have shaped the discourse on health and illness in Sociology.

a. **Systems Approach**
b. **Political Economy of Health**
c. **Health as a Power Discourse**
d. **Feminist Approaches**

Unit 3. Some Issues and Concerns in Medical Sociology (18 Hours)
This section focuses on issues of critical relevance in contemporary times. These issues not only alter the character of medical systems but also impinge on the dynamics of social relations.

a. **Medical Pluralism**
b. **Assisted Reproductive Technologies**
c. **Mental Health**
d. **Digital Technologies and Health**

Practical component (if any) - NIL

Essential/Recommended Readings

Unit 1. Conceptualising Disease, Sickness, and Illness

COMMON POOL OF GENERIC ELECTIVES (GE)

Sociology
Generic Elective 07
Social Inequalities

Generic Elective Course 07 (GE 07) : Social Inequalities

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
GE 07 Social Inequalities	4	3	1	0	12th Pass	Nil

Learning Objectives:

1. To provide an understanding of pervasive and persistent character of inequalities in social life.
2. To outline sociological concepts and theories that help us to comprehend social inequalities.
3. To elaborate multiple ways in which social inequalities manifest and draw out their consequences for the individuals, groups and communities.

Learning outcomes:

At the end of the course, the students will be able to:

1. Identify and recognize how social inequality manifests in different socio-cultural contexts.
2. Critically analyse the configurations and consequences of social inequalities,
3. Define, compare and contrast various theories of social inequality.
4. Apply theoretical knowledge to empirical contexts of inequality.

SYLLABUS OF GE 07

Unit I. Introduction to the study of Inequality (10 Hours)

This unit introduces students to the pervasive character of inequalities in social life and the ways in which it has been studied within the discipline. It also elaborates the concept of social inequality through different theoretical perspectives.

a. Understanding social inequality
b. Perspectives on Inequality

Unit II. Manifestations of inequality in social life (20 Hours)
This unit provides an analysis of the various manifestations and consequences of social inequality on individua lives. The instances of inequalities within family, caste, class, race and gender structure have been examined in this unit.

a. Family structure and inequality
b. Caste and higher education
c. Labour market inequality
d. Racial Inequality
e. Gender inequality

Unit III. Contemporary Issues in Global Inequality (15 Hours)
This unit provides an understanding of emerging issues in the study of social inequality across the globe as a result of cross border migration, tourism and global media.

a. Globalisation and inequality
b. Cross border Migration
c. Cinema and reproduction of inequality
d. Tourism

Practical component (if any) - NIL

Essential/Recommended Readings:

Unit 1: Introduction to the study of Inequality

a. Understanding Social Inequality

Béteille, A. (1969). *Social inequality*. Penguin Books. Pp. 1-14, 362-380.

b. Perspectives on Inequality

Marger, M. N. (1999). *Social Inequality. Patterns and Processes*. Mountain View. Chapter 2. Pp. 26-53.

Unit 2: Manifestations of Inequalities in Social life

a. Family Structure

McLanahan, S &Percheski,C (2008) Family structure and reproduction of inequalities: *Annual Review of Sociology*, 34. Pp. 257-74.

b. Caste and Higher Education

Deshpande, S. (2006). Exclusive Inequalities: Merit, Caste and Discrimination in Indian Higher Education Today. *Economic and Political Weekly*, 41(24). Pp. 2438–2444.

c. Labour Market Inequality

Kreckel, R. (1980). Unequal opportunity structure and labour market segmentation. *Sociology*, 14(4). Pp. 525-550.

d. Racial Inequality

Sociology
Generic Elective 08
Cities and Society

Generic Elective Course 08 (GE 08): Cities and Society

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
GE 08 Cities and Society	4	3	1	0	12th Pass	Nil

Learning Objectives

1. To present and examine some of the distinct issues that cities face in developing countries.
2. To provide a focused discussion on cities in the developing world, equipping students with the theoretical tools necessary to analyse these issues and the processes which underpin them.
3. To generate an understanding on the forms of social inclusion and exclusion in cities in terms of class, gender, ethnicity, and location (neighborhoods).

Learning outcomes

At the end of the course, the students will be able to:

1. Develop a sociological perspective on the nature of contemporary cities in the global south.
2. Assess the distinctiveness of cities in developing nations in terms of their issues and problems.
3. Analyze the processes of inclusion and exclusion that impinge upon the lives of the city dwellers in terms of their identities.
4. Apply a case study approach and arrive at cross cultural analysis of cities.

SYLLABUS OF DSC-1

Unit I: Conceptualising the City in the 21st Century (6 Hours)

In this unit, students will be introduced to the specific issues associated with urbanization in developing nations of 21st century.

Unit II: Experiences of Urban Life in Developing Societies (9 Hours)

This unit highlights the ways in which the social categories of class, gender and ethnicity impacts the individual and community experiences of the city.

a. Class
b. Gender
c. Ethnicity

Unit III Right to the City: The Processes of Claim-making (15 Hours)

This unit focuses on the cultures of resistance that groups and communities have come to adopt in their struggle to communicate issues around access to power and legitimacy.

a. Gender and Citizenship
b. Claims of Urban Poor
c. Cultures of Resistance

Unit IV. Future of Cities in the Developing World (15 Hours)

This unit examines the emerging challenges in the study of cities and highlights the cultural and political directions that further influence the wider context of city life in the developing world.

a. Challenges of Urban growth and Planning
b. Issues of Sustainability: Urban Housing
c. Uncertain cities in Emerging Economies

Practical component (if any) – NIL

Essential/Recommended Readings:

Unit I: Conceptualising the City in 21st Century

Sassen, S. (2010). The city: Its return as a lens for social theory. *City, Culture and Society*, 1(1). Pp.3–11.

Keywords: City, global south, urban, peri-urban, megacities, global city

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Sociology
Generic Elective (GE) 09
Sociology of Climate Change

Generic Elective Course -09 (GE 09): Sociology of Climate Change

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
GE 09 Sociology of Climate Change	4	3	1	0	12th Pass	Nil

Learning Objectives:

1. To introduce students to the issue of climate change from a multidisciplinary perspective.
2. To examine various dimensions of climate change and the efforts at mitigating its effects from a sociological lens.
3. To examine issues sustainability and climate risks in face of climate change.

Learning Outcomes:

After doing this course, students will be able to:

1. Demonstrate an understanding of the various sociological dimensions of climate change and sustainability.
2. Generate sociological research on causes, course and consequences of climate change.
3. Obtain skills to advance and assess solutions for social issues arising out of climate change.

SYLLABUS OF GE 09:

Unit 1 Understanding Climate Change (15 Hours)

This unit attempts to locate the primary arguments related to sociology of climate change by contextualising how society and human activity have contributed to environmental transformations.

a. **Anthropocene**
b. **Population and Consumption**
c. **Development and Sustainability**

Unit 2 Governing Climate Change (15 Hours)

This unit looks at how climate change is not only a social and human issue, but political and legislative as well, with far reaching societal and environmental consequences.

a. Policy and Protocols
b. Disaster and Risk Management
c. Role of Civil Society

Unit 3 Experiencing Climate Change (15 Hours)

This unit highlights the interconnectedness of environment and society, highlighting a need to understand climate change by re-examining social and environmental events and processes.

a. Social Inequalities
b. Migration and Adaptation

Practical component (if any) – NIL

Essential/Recommended Readings:

Unit 1. Understanding Climate Change

a. Anthropocene

Dietz, T., Shwom, R. L., & Whitley, C. T. (2020). Climate change and society. *Annual Review of Sociology*, 46(1), Pp. 135-158.

Rosa, E. A., Et. Al. (2015). The human (anthropogenic) driving forces of global climate change. In R. E. Dunlap & R. J. Brulle. *Climate Change and Society: Sociological perspectives*. Oxford University Press. Pp. 32-60.

b. Population and Consumption

DEPARTMENT OF HISTORY

COURSES OFFERED BY DEPARTMENT OF HISTORY

Category I

[UG Programme for Bachelor in History (Honours) degree in three years]

DISCIPLINE SPECIFIC CORE COURSE -1 (DSC-1) – : History of India – III: 750 – 1200

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
History of India – III: 750 – 1200	4	3	1	0	12 th Pass	Should have studied History of India- II Fourth century to 750

Learning Objectives

This course is designed to make students trace the patterns of change and continuities in the economic, political, social and cultural aspects of life during the 'early medieval period' (c. 750 – 1200 CE) of Indian history. With its focus on multiple historiographical approaches to various issues of historical significance during this period, the course will also apprise students of the divergent ways in which historians approach, read and interpret their sources.

Learning outcomes

Upon completion of this course the student shall be able to:

- Critically assess the major debates among scholars about various changes that took place with the onset of early medieval period in India.
- Explain, in an interconnected manner, the processes of state formation, agrarian expansion, proliferation of caste and urban as well as commercial processes.
- Discuss the major currents of developments in the cultural sphere, namely Bhakti movement, Puranic Hinduism, Tantricism, architecture and art.

SYLLABUS OF DSC-1

Unit I: Studying early medieval India

1. Sources: texts; inscriptions; coins
2. Perspectives on the early medieval

Unit II: Political structures and processes

1. Evolution of political structures: Rajput polities; Chola state; Odisha
2. Symbols of political power: Brahmanas and temples; courtly cultures
3. Issue of 'Foreign and Indian': Arabs and Ghazanavids in the north-west, Cholas in Southeast Asia

Unit III: Social and economic processes

1. Agricultural expansion and social changes
2. Trade and urbanization

Unit IV: Religious and visual cultures

1. Bhakti, Puranic Hinduism; Tantra; Buddhism and Jainism
2. Art and architecture: temples – regional styles

Practical component (if any) - NIL

Essential/recommended readings

Unit I. This unit seeks to familiarise students with the range of sources available for the early medieval period of Indian history. Most importantly, students will engage with the debates and varied scholarly views on the nature of early medieval Indian social formation and the most important aspects and factors of change therein. **(Teaching Time: 12 hrs. approx.)**

Note: **Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.**

DISCIPLINE SPECIFIC CORE COURSE – 2 (DSC-2): Rise of the Modern West – I

Credit distribution, Eligibility and Prerequisites of the Course

Course title & Code	Credits	Credit distribution of the course		

		Lecture	Tutorial	Practical/ Practice	Eligibility criteria	Pre-requisite of the course (if any)
Rise of the Modern West – I	**4**	**3**	**1**	**0**	**12 th Pass**	**NIL**

Learning Objectives

The focus of the course is on transition from feudalism to capitalism in Europe. The paper familiarizes the student with important transitions and transformations in the economy, polity, and socio-cultural life from mid fifteenth century to 1600 in various parts of Europe. The course shall critically examine the dynamics of economic and political power within Europe, and contacts with the New World. The processes by which Europe's economy benefited from colonial expansion and exploitation of indigenous and slave labour will be explained. Students shall also engage with continuities and changes in intellectual and artistic realms; the social and economic milieu which influenced developments in religion; trends in state formation; and the relation-ship between state and religion. Students will be introduced to the concept of Eurocentrism in our understanding of the Rise of the Modern West.

Learning outcomes

On completion of this course students will be able to:

- Outline important changes that took place in Europe from the mid fifteenth century.
- Acquire an integrated approach to the study of economic, social, political and cultural developments in Europe.
- Explain the processes by which major transitions unfolded in Europe's economy, state forms, social structure and cultural life. Examine elements of early modernity in these spheres.
- Critically analyse linkages between Europe's State system and trade and empire.

SYLLABUS OF DSC- 2

Unit 1: Transition from Feudalism to Capitalism

1. Issues and debates
2. Question of Eurocentricism

Unit II: Early colonial Expansion

1. Trade and Empire-Mines and Plantations
2. Labour Systems-Indigenous populations and African Slaves

Unit III: Renaissance

1. Origins
2. Humanism in Italy and its spread in Europe, Art

Unit IV: Origins, course and results of the European Reformation

Unit V: Economic development of the sixteenth century

1. Shift of economic balance from the Mediterranean to the Atlantic
2. Price Revolution

Unit VI: European State Systems: with any two case studies-Spain, France, England and Russia

Practical component (if any) - NIL

Essential/recommended readings

Unit 1: The Unit will give an overview to the paper through issues and debates related to transition from feudalism to capitalism in Europe. The concept of Eurocentrism will be introduced. **(Teaching Time: 9 hrs. approximately)**

- Aston, T.H. and C.H.E. Philpin, (Eds.). (2005). The Brenner Debate, Agrarian Class Structure and Economic Development in Pre-Industrial Europe. Cambridge/Delhi: Cambridge University Press, Ist South Asian Edition.

DISCIPLINE SPECIFIC CORE COURSE– 3 (DSC-3): History of Modern China (1840 – 1950s)

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
History of Modern China (1840 – 1950s)	4	3	1	0	12 th Pass	NIL

Learning Objectives

The course studies the transformation of China from an imperial power into a modern nation taking its place among a constellation of world powers. This transition has been studied in the context of the impact of a specific form of western imperialism on China and the country's numerous internal fissures and contradictions. This paper seeks to focus on a range of responses to the tumultuous changes taking place: various strands of reform (from liberal to authoritarian), popular movements, and revolutionary struggles. It facilitates an understanding of the multiple trajectories of China's political and cultural transition from a late imperial state, to a flawed Republic, to the Communist Revolution led by Mao Tse Tung. The paper shall expose students to historiographical debates pertaining to each of these themes, keeping in mind historical and contemporary concerns centred on such issues.

Learning outcomes

Upon the completion of this course the student shall be able to:

- Develop an in-depth understanding of China's engagement with the challenges posed by imperialism, and the trajectories of transition from feudalism to a bourgeois/ capitalist modernity.
- To locate these historical transitions in light of other contemporaneous trajectories into a global modernity, especially that of Japan.
- Analyse significant historiographical shifts in Chinese history, especially with reference to the dis-courses on nationalism, imperialism, and communism.
- Investigate the political, economic, social and cultural disruptions caused by the breakdown of the centuries old Chinese institutions and ideas, and the recasting of tradition to meet modernist challenges.
- Comprehend the genesis and unique trajectories of the Chinese Communist Revolution.
- Locate the rise of China and Japan in the spheres of Asian and world politics respectively.

SYLLABUS OF DSC-3

Unit I: Late Imperial China and Western Imperialism

1. Confucian Value System; Society, Economy, Polity
2. Opium Wars and the Unequal Treaty System (9 lectures)

Unit II: Popular Movements and Reforms in the 19th century

1. Taiping and Boxer Movements – Genesis, Ideology, Nature
2. Self-Strengthening Movement; Hundred Days Reforms of 1898 (13 lectures)

Unit III: Emergence of Nationalism

- The Revolution of 1911: Nature and Significance
- The May Fourth Movement of 1919 (10 lectures)

Unit IV: Communist Movement in China

1. 1921-1927: Formation of the CCP and the First United Front

2. 1928-1949: Evolution of Maoist Strategy and Revolutionary Measures in Kiangsi and Yenan ; Communist victory (13 lectures)

Practical component (if any) - NIL

Essential/recommended readings

Unit I: This unit will introduce the students to the salient features of Late Imperial China and its confrontation with Western Imperialism. As a backdrop, it will discuss Confucianism. **(Teaching Time: 9 hrs. approx.)**

DISCIPLINE SPECIFIC ELECTIVE COURSE– 1 (DSE-1): Global Environmental History

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Global Environmental History	**4**	**3**	**1**	**0**	**12 th Pass**	**NIL**

Learning Objectives

The objective of this course is to introduce the students to the emerging field of global environmental history. It will explore the transformations in the relationship between society and nature in various places and various time periods around the world. Drawing on environmental, political ecology, and historical geography studies perspectives, the course will introduce the concepts, methods and ideas of global history. Moving beyond regional and national scales of analysing historical processes, the following units elaborate the global interconnectedness of socio-environmental histories. The course adopts a chronological approach to address issues such as human interactions with other living species, modes of resource use, technologies of energy harnessing, migration, modes of transportation, nature protection, pollution, use of fossil fuel and carbon emission, and global warming, among others. Each unit focuses on a general period in history, based on major patterns and large-scale changes in the relationship between societies and the natural world. The role of human agency and unequal power relations in organizing, exploiting, and transforming the natural world will be the central focus of the course. This will enable students to critically assess how historical experiences provide insights in understanding what is happening to human-nature interactions today and to explore ways to achieve socially inclusive ways of addressing climate crisis.

Learning outcomes

Upon the completion of this course the student shall be able to:

- Understand the interconnected histories of the relationship between social formations and environmental transformations around the globe from prehistory to the present.
- Critique an understanding of environmental concerns based on a narrow scientific/technological perspective
- Discuss environmental issues within a socio-political framework.

- Identify the historical roots of current climate crisis.
- Apply interdisciplinary methods of Humanities and Social Sciences to understand the past.
- Examine the role of social inequality, i.e., unequal distribution of and unequal access to environmental resources. This is critical in gaining an understanding of the environmental crisis of the world - from the global to the local
- Locate solutions to environmental problems within a framework of greater democratisation of resource use.
- Problematise the notion of a pristine past and of perfect balance between human societies and nature in pre-modern times.

SYLLABUS OF DSC-3

Unit I: Thinking Globally in the Era of Climate Crisis

1. What is Global Environmental History
2. Interdisciplinary Approaches: Archaeology, Anthropology, Historical-Geography, Political Ecology

Unit II: Ecologies of Subsistence in the Early Societies

1. Human-animal interactions
2. Pre-Industrial Prime Movers and Fuels

Unit III: Into the Early Modern Condition

1. Emergence of the European Empires as Ecological Process; The Columbian Exchange
2. Early Colonialism and Environmental Transformations of the small islands-St. Helena and Mauritius
3. Global Cooling and General Crisis in the Seventeenth Century.

Unit IV: Fossil Fuel, Capitalism, and Planetary Environmental Changes

1. Industrial Agriculture
2. Steam Ships and Hydraulic Engineering
3. Cities and Environment

Unit V: The Great Acceleration and the Anthropocene

1. Carbon Politics; the Middle East Crisis
2. Anthropogenic Natural Disasters; Fukushima
3. The Anthropocene Debate

Practical component (if any) - NIL

Essential/recommended readings

Unit I: This unit will introduce the important themes and perspectives within the emerging field of global environmental history. The readings and discussion will help

the students to understand the interdisciplinary methodologies developed by environmental historians to examine source materials. **(Teaching time: 9 hrs. approx.)**

- McNeil, J. R. and Mauldin, E. S. (2012), A Companion to Global Environmental History. Oxford: Wiley-Blackwell, Introduction pp. xvi-xxiv.
- Conrad, Sebastian (2016), What is Global History. Princeton: Princeton University Press, pp. 1-17, ["Introduction"].
- Corona, Gabriella (2008), "What is Global Environmental History?" Global Environment,
- No. 2, pp. 228-249.

- Hughes, Donald J. (2001), An Environmental History of the World: Humankind's Changing Role in the Community of Life. London: Routledge, pp. 242-248 ["Bibliographical Essay: Writing on Global Environmental History"]

Unit II: This unit provides an overview on the nature and dynamics of human interactions with the environment in the pre-modern world. By focusing on the changing technologies and modes of energy harnessing, the themes discussed in this unit expects the students to explore how the relationship of humans with the animals, plants, landforms and water bodies in turn shaped social relationships, ideas and beliefs. **(Teaching time: 9 hrs. approx.)**

- Bulliet, Richard (2005), Hunters, Herders and Hamburgers: The Past and Future of Human-Animal Relationships. New York: Columbia University Press, pp. 205 -224.
- Edmund Burke III. "The Big Story: Human History, Energy Regime and the Environment" in Edmund Burke III and Kenneth Pomeranz, eds., the Environment and World History. Berkeley: University of California Press, 2009. pp. 33-53.

Unit III: The first rubric of this unit explores how Empires of the New World transferred flora and fauna across continents, affected the demography of local societies and completely transformed landscapes. The second rubric explores how the colonial plantations resulted in rapid socio- environmental changes on oceanic islands, with special focus on the small islands-St. Helena and Mauritius. The third rubric explores the social and cultural impacts of the "Little Ice Age", or the global cooling that continued from the thirteenth through the eighteenth century, with special focus on interlinking climate change and the intensification of famines, and spread of epidemics in the seventeenth century. **(Teaching time: 9 hrs. approx.)**

DISCIPLINE SPECIFIC ELECTIVE COURSE– 2 (DSE-2): History of South East Asia – I

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course	Eligibility criteria	

		Lecture	Tutorial	Practical/ Practice		Pre-requisite of the course (if any)
History of South East Asia – I	**4**	**3**	**1**	**0**	**12 th Pass**	**NIL**

Learning Objectives

This course offers an overview of pre-colonial Southeast Asian history. It seeks to familiarise students with historiographical debates involving the construction of Southeast Asia as a region. It analyses processes of state formations, the impact of maritime activity on society and polity in the mainland and the archipelago. It focuses on the development and localization of religious traditions across a linguistically and culturally diverse region. The paper will require students to engage with recent developments in the historiography especially with recent research on aspects of social and political history, external influences on the region, architecture, urban history and its local histories. Through this the student will develop a clear and comprehensive understanding of different aspects of pre modern Southeast Asian history.

Learning outcomes

Upon the completion of this course the student shall be able to:

- Explain the processes of state formation, the localization and spread of religious traditions like Islam and Buddhism
- Analyse the impact of the European presence on local society
- Examine the impact of maritime activity of local society and polity and the developments in the economic and architectural history of the region.
- Discern the history of Populist and Progressive movements along with introduction of New Deal in response to the Great Depression.
- Describe the historiographical trends to study history of Southeast Asia

SYLLABUS OF DSC-3

Unit I: Introducing maritime and mainland Southeast Asia

1. Environments, Language, Cultures and People; the macro region
2. Sources and the study of Southeast Asian History
3. Perceptions of the Region, historiographical trends

Unit II: Early State formations

1. The religion, architecture, economy and state formation: Pagan, Khmer
2. The maritime trade and political formations in Sea Asia: Champa, Srivijaya-Java

Unit III: Religion in Early Southeast Asia

1. Localisation of Buddhism and Hinduism; The Epics and Buddhist texts

Unit IV: Early modern in South East Asia

1. Majapahit Empire, regional formations

Unit V: Religion in Early Modern Southeast Asia

1. Localisation of Islam: The Hikayats
2. Christianity in Pre Colonial Southeast Asia

Practical component (if any) - NIL

Essential/recommended readings

Unit I: In this unit the student will better appreciate the region and its linguistic, ecological and ethnic diversity. She/he will become familiar with various aspects of the regions micro histories. Recent historiographical debates. In this unit the student will be introduced to the important aspects of the recent historiographical debates. She/he will be familiarised with the questions of social formations linked to the influence of India and China over the region. The student will also engage with recent debates that draw attention to local factors in the regions development. **(Teaching time: 9 hrs. approx.)**

Unit IV: By the end of this rubric the students will be able to trace the changing character of political formations and the establishment of a European presence in Southeast Asia. The student will learn about various dimensions of the maritime activity involving communities, commodities and port cities. The student will read about the beginnings of the European presence in the region and its impact on the local polities, patterns of trade and social networks. **(Teaching time: 12 hrs. approx.)**

Unit V: The student will be expected to learn about the spread of Islam and Christianity in the region. She/he will develop an understanding of how practitioners of these monotheistic religious traditions interfaced with local beliefs and ritual practices in southeast Asia. She/he will be able to demonstrate familiarity with the historical time line and local impact of the spread and localization of important religious traditions in the region. **(Teaching time: 6 hrs. approx.)**

DISCIPLINE SPECIFIC ELECTIVE COURSE (DSE -3): Environment in Indian History

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Environment in Indian History	**4**	**3**	**1**	**0**	12 th Pass	NIL

Learning Objectives:
This course aims to introduce the students to the major themes in the environmental history of the Indian subcontinent. A historically informed understanding on how the past societies shaped the natural world shall enable the students to critically situate the environmental issues that we encounter at present. The issues include global warming, contestation over natural resources, changing land use patterns, human interaction with other living species, impacts of agrarian expansion, ecological consequences of imperialism, impacts of mega infrastructure projects, urban pollution, emergence of environmental justice movements and environmental regulations, changing ideas about the natural world, and gendered dimension of environmental degradation. The course has the following broad objectives: a) to introduce the historical studies that explores the long-term trajectories of man-nature interactions and revises the political history-based periodization of the sub-continent's past as self-contained ancient, medieval, and modern periods; b) to introduce interdisciplinary approaches- cartographic, geological, zoological, ecological knowledges -that helps historians study the crucial role played by ecology in the shaping of the past societies; c) to familiarize the students to the methods of using archaeological, bio and geo-archival sources, artistic depictions and oral history sources to study the past relationship between humans and the natural world. By the end of this course, the students are expected to develop an in-depth understanding of the interdisciplinary approaches to historical thinking and the significance of the environment in human history.

Learning Outcomes:
After completing this course, students should be able to:

- Understand the historical methodologies and concepts to explain the environmental contexts of the past social and cultural transformations.
- Develop a historical perspective on the complex relationship between society and nature from prehistory to the present in the context of the Indian subcontinent.
- Discuss how societies developed technologies, sources of energy, and modes of organizing lives to adapt to varied ecological landscapes.
- Discuss environmental issues within a socio-cultural framework.
- Examine the social, political and economic contexts of creating inequalities in resource use, with reference to the case studies regarding water rights, forest rights, and the right to have livable cities.
- Locate solutions to environmental problems within a framework of greater democratization of resource use.

Course Content:
Unit I: What is Environmental History

1. Historiography and Sources
2. Interdisciplinarity

Unit II: Living with Nature

1. Environment and Early Urban Societies: Harappan Civilization
2. Beliefs, Practices and Natural Resources

Unit III: Era of Major Agrarian Expansion

1. Pastoralism, Agrarian Expansion
2. Forests and Tribal Groups
3. Irrigation and Canals

Unit IV: Colonialism and Transformation of Nature

1. Changing Land Use Patterns; Railway and Deforestation, Dams and Hydroelectric Power
2. Inland Waterbodies and Fisheries
3. Urbanization and Environment; Delhi

Unit V: Development, Environment, and Migration in Contemporary India
1. Big Dams and Displacement; Narmada and Tehri
2. Gender and Environmental Justice
3. Green Revolution; Biodiversity Loss; Species Extinction

Essential Readings and Unit Wise Teaching Outcomes:

Unit 1: This unit provides an overview of environmental historiography of the Indian subcontinent. The first rubric introduces the methods, theoretical concepts, sources, and the major sub-fields of environmental history. The second rubric explores how archeological records, literary sources, bio-mass, artistic depictions of nature, material cultural artifacts and oral history sources are integrated into environmental history narratives. **(Teaching time: 9 hrs. approx)**

- Hughes, Donald (2006), *What is Environmental History?* Cambridge: Polity Press. pp. 1-17 [Chapter 1: "Defining Environmental History]

- Rangarajan, Mahesh (2015), *Nature and Nation: Essay on Environmental History.* Ranikhet: Permanent Black, pp. 1-45 [Chapter 1: "Introduction: Issues in the Writing of Environmental History"]

Unit II: This unit gives a synoptic overview of human interaction with the animals, plants, and natural elements that sustained life. It shows how from the times of gathering, scavenging and hunting to the beginning of agriculture, humans adapted to the environment even as they tried to manipulate it, and maintained harmony with it and advocated conservation of earthly resources. **(Teaching time: 9 hrs. approx.)**

Unit III: This unit explores the patterns and processes of the expansion of agrarian landscapes, pastoralism and forest economies in India up to the eighteenth century. Providing an overview of the dynamics of human-nature interaction during the medieval times will help students to challenge the notions of considering pre-modern environments as a timeless continuum. **(Teaching time: 9 hrs. approx.)**

Unit IV: This unit explores how colonial capitalism as a powerful agent of environmental transformations made fundamental changes to the land use patterns and livelihood resources. The first rubric explores the environmental history of the colonial appropriation of forests as raw material for railways expansion and rivers as dams and other hydraulic infrastructures for industrial production and long-distance transportation. The second rubric elaborates how the colonial appropriation of water bodies and common lands through the new revenue policies, acts and regulations affected indigenous fishing and other livelihood patterns based on hydraulic resources.The third rubric elaborates the environmental problems of urbanization in the context of the colonial city of Delhi. **(Teaching time: 9 hrs. approx.)**

DISCIPLINE SPECIFIC ELECTIVE COURSE (DSE -4): Cultures in Indian Subcontinent – I

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Cultures in Indian Subcontinent – I	**4**	**3**	**1**	**0**	12 th Pass	NIL

Learning Objectives

This course aims to provide an overview of Indian cultural traditions and cultural experience. It will help students to understand the meaning, perspectives and approaches to the study of culture. The section dealing with Indian languages and literature focuses upon the development of Sanskrit, Prakrit, vernacular, Indo-Persian and Urdu language and literature respectively. The content of performing arts will help one appreciate the traditions of music, dance and drama in Indian culture through the ages. This also explores the development of different forms of architecture in India since ancient period.

Learning outcomes

After the successful completion of this Course, the students will be able to:

- understand different perspectives and approaches to the study of culture,
- explain the plurality in Indian cultural traditions,
- learn the growth of Sanskrit, Prakrit, vernacular, Indo-Persian and Urdu language and literature,
- trace the evolution of and the distinction between the Hindustani and Carnatic music culture,
- identify Indian classical dance forms, musical and theatre cultures,
- explain the rich architectural traditions of India.

SYLLABUS OF DSC-1

Unit I: Definitions of Culture and its various aspects

1. Perspective on Cultures: Indian Cultural tradition: An overview.
2. Plurality of Cultures: Social Content of Culture

Unit II: Language and Literature

1. Sanskrit: Kavya – Kalidasa's Ritusamhara; Prakrit: Gatha Saptasati.
2. Development of Vernacular language and literature.
3. Indo-Persian literature: Amir Khusro's works; Urdu poetry and prose: Ghalib.

Unit III: Performing Arts

1. Music: Hindustani, Carnatic Classical Music, Devotional Music: Bhakti and Sufi
2. Dance: Classical and Folk
3. Theatre: Classical, Folk, Colonial and Modern

Unit IV: Architecture: Meanings, Forms and Functions

1. Rock-cut and structural temples: Mamallapuram or Ellora; Khajuraho complex and Tanjavur temple.
2. Fort – Daulatabad or Chittor forts; Palace–dargah at Fatehpur Sikri.
3. Colonial architecture– Lutyens' Delhi.

Practical component (if any) - NIL

Essential/recommended readings

Unit-I: This unit will enable students to understand the meaning of culture and its various perspectives. It will further help them to explain the plural characteristics of cultures in the Indian subcontinent and explore their content which conveys diverse ideas. **(Teaching Time: 9 hrs. approx.)**

- Basham, A.L. The Wonder That was India. Volume I, Rupa & Co., New Delhi, 1997. (in Hindi translation Adhbhut Bharat)

- Maxwell, T.S. Image: Text and Meaning: Gods of South Asia, Oxford University Press, Delhi, 1997.
- Thakaran, R.C, Sheo Dutt and Sanjay Kumar, ed. Bhartiya Upamahadvipa ki Sanskritiyan, (in Hindi), Directorate of Hindi Medium Implementation Board, University of Delhi, 2013.

Unit II: This unit will help students to understand the literary traditions of India since ancient times. The section deals with some of the important literary works of Sanskrit and Prakrit literature in ancient India. It also explores about the origin and development of vernacular literature in India along with the development of Indo-Persian literature in medieval times and, Urdu poetry and prose of modern period. **(Teaching Time: 12 hrs. approx.)**

- Basham, A.L. The Wonder That was India. Volume I, Rupa & Co., New Delhi, 1997. (in Hindi translation Adhbhut Bharat)

Category II

(Courses for Undergraduate Programme of study with Discipline as one of the Core Disciplines)

DISCIPLINE SPECIFIC CORE COURSE (DSC-1): History of India, 1200 – 1550

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
History of India 1200 – 1550	**4**	**3**	**1**	**0**	12 th Pass	Should have studied History of India 750-1200

Learning Objectives

This course provides an analytical study of the history of India from 1200 to 1550 CE. It introduces students to a thematic study of the main aspects of the period delineating major transitions, changes and developments that include the establishment of the Delhi Sultanate, Vijayanagara and Bahmani, encompassing political, administrative, cultural and economic aspects. Through selected regional case studies it also underlines the inter-connectedness of the sub continental region in its transition.

Learning outcomes

After the successful completion of this Course, the students will be able to:

- Identify the major political developments in the history of India during the period between the thirteenth and the first half of sixteenth century.
- Outline the changes and continuities in the field of culture, especially with regard to art, architecture, Bhakti movement and Sufi movement.
- Discuss the economic history of the period under study in India especially, where agrarian production and its implications are concerned.
- Delineate the development of trade and urban complexes during this period.

SYLLABUS OF DSC-1

Unit I: Foundation, expansion and consolidation of the Sultanates of Delhi c.13th to 15th century:
Expansion; Iqta system; nobility; North-Western frontier and the Mongols.

Unit II: Military, administrative and economic structure under the Khaljis and Tughlaqs.
Unit III: Regional political formations: Vijayanagara and Bahmanis.
Unit IV: Second Afghan Empire.
Unit V: Society, culture and religion: Bhakti -- Kabir and Mira Bai; Sufism – Chishti and Suhrawardy.
Unit VI: Art and architecture: Qutb complex; Vijaynagara (Hampi).
Unit VII: Trade and Commerce: Indian merchants in overseas trade, 12th -15th century.

Practical component (if any) - NIL

Essential/recommended readings
Unit I: This unit would have provided students an insight about foundation, expansion and process of consolidation under the various Sultanate regimes. (**Teaching Time: 9 hrs.** approx.)

DISCIPLINE SPECIFIC CORE COURSE (DSC-2): Cultural Transformations in Early Modern Europe-I

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Cultural Transformations in Early Modern Europe – I	**4**	**3**	**1**	**0**	12 th Pass	NIL

Learning Objectives

The objective of the course is designed to make the students familiar with the essential transitions and transformations in early modern European economy, polity and socio-cultural life. The first unit aims to critically examine the dynamics of Europe that emerged from the Middle Age. The second unit dealing with the Renaissance focuses on the developments in art, literature, science and philosophy and also deals with Renaissance beyond Italy. The content in third unit will enable them to understand the spread of Reformation and Counter Reformation and it's economic and cultural impact. The last unit will explore the conquest of the New World with focus on: material, social and cultural aspects. The idea is to give them European perspective of cultural transformations in early modern Europe.

Learning outcomes

After completing this course, students will be able to:

- Understand the different perspectives of cultural developments in Europe.
- Explain the Renaissance in the realm of art, literature, science and philosophy and the processes by which major transformation unfolded in European society and culture.
- Trace the upheaval in Religion in the form of Protestant Reformation and Counter Reformation.
- Identify the material, social and cultural aspects after the conquest of the New World.

SYLLABUS OF DSC-1

Unit I. Key concepts and historical background

1. The idea of the early Modern; perspectives on culture in history
2. An overview of the classical and medieval legacy

Unit II. The Renaissance

1. Society and politics in Italian city-states
2. Humanism in Art and literature
3. Development in science and philosophy
4. Renaissance beyond Italy

Unit III. Upheaval in Religion

1. The papacy and its critics
2. The spread of Protestant sects in Northern Europe
3. Counter Reformation and Religious Strife
4. The economic and cultural impact of the Reformations

Unit IV. The Conquest of the New World: material, social and cultural aspects

1. A Case Study of Portugal or Spain

Practical component (if any) - NIL

Essential/recommended readings

Unit I: The Unit will give critical concepts for the understating of early modern and the perspective on culture in history. The idea of Early modern Europe will be introduced. **(Teaching Time: 9 hrs. approx.)**

- Anderson, M.S. Europe in the Eighteenth Century, 1713-1783. New York: Longman.
- Burke, Peter. Popular Culture in Early Modern Europe. UK: Ashgate, 2009.
- Davies, Norman, Europe: A History. New York: Harper Collins, 1998.

Unit II. This Unit imparts the understanding of the socio-cultural movements and progress in science and philosophy in medieval and early modern Europe. Renaissance artists and scholars celebrated the beauty of nature and the dignity of humanity, helping shape the intellectual and cultural history of the early modern world. **(Teaching Time: 12 hrs. approx.)**

- Burckhardt, Jacob. The Civilisation of the Renaissance in Italy. University of Virginia: Phaidon Press, 1965.
- Burke, Peter. (1999). The Italian Renaissance, Culture and Society in Italy. Princeton: Princeton University Press. (Chpts: Introduction, chpts:1, 2, 3, 4 & 6)

Category III

Courses for Undergraduate Programme of study with discipline as one of the Core Disciplines

(For e.g. courses for B.A. Programmes with (discipline's name) as non-Major or Minor discipline)

DISCIPLINE SPECIFIC CORE COURSE (DSC-1): History of India, 1200 – 1550

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
History of India 1200 – 1550	4	3	1	0	12 th Pass	Should have studied History of India 750-1200

Learning Objectives

This course provides an analytical study of the history of India from 1200 to 1550 CE. It introduces students to a thematic study of the main aspects of the period delineating major transitions, changes and developments that include the establishment of the Delhi Sultanate, Vijayanagara and Bahmani, encompassing political, administrative, cultural and economic aspects. Through selected regional case studies it also underlines the inter-connectedness of the sub continental region in its transition.

Learning outcomes

After the successful completion of this Course, the students will be able to:

- Identify the major political developments in the history of India during the period between the thirteenth and the first half of sixteenth century.
- Outline the changes and continuities in the field of culture, especially with regard to art, architecture, Bhakti movement and Sufi movement.
- Discuss the economic history of the period under study in India especially, where agrarian production and its implications are concerned.
- Delineate the development of trade and urban complexes during this period.

SYLLABUS OF DSC-1

Unit I: Foundation, expansion and consolidation of the Sultanates of Delhi c.13th to 15th century:
Expansion; Iqta system; nobility; North-Western frontier and the Mongols.
Unit II: Military, administrative and economic structure under the Khaljis and Tughlaqs.
Unit III: Regional political formations: Vijayanagara and Bahmanis.
Unit IV: Second Afghan Empire.
Unit V: Society, culture and religion: Bhakti -- Kabir and Mira Bai; Sufism – Chishti and Suhrawardy.
Unit VI: Art and architecture: Qutb complex; Vijaynagara (Hampi).
Unit VII: Trade and Commerce: Indian merchants in overseas trade, 12th -15th century.

Practical component (if any) - NIL

Essential/recommended readings
Unit I: This unit would have provided students an insight about foundation, expansion and process of consolidation under the various Sultanate regimes. **(Teaching Time: 9 hrs. approx.)**

- Jackson, P. (2003). The Delhi Sultanate: A Political and Military History. Cambridge: Cambridge University Press.
- Raychaudhuri, T and I. Habib (Ed.). (1982). The Cambridge Economic History of India, Vol.1: c1200-1750. Delhi: Orient Longman, pp. 45-101
- Habib, Irfan. (1992). 'Formation of Sultanate Ruling class during the thirteenth century', in Medieval India: Researches in the History of India 1200-1750, Vol.1, ed.by Irfan Habib, OUP, New Delhi, pp.1-21.
- Habib, I. (2003). Madhyakalin Bharat ka Arthik Itihas ek Sarvekshan. Delhi: Rajkamal.
- Habib, I. (Ed.). (1981-2003). Madhyakalin Bharat, 10 volumes. Delhi; Rajkamal.
- Verma, H.C. (ed.). (2003). Madhyakalin Bharat, Bhag 1, Delhi: Hindi Madhyam Karyanvan Nideshalaya, Delhi University.

Unit II: This unit would have imparted students an overview of military, political, economic and administrative structure under the Khaljis and Tughlaqs. **(Teaching Time: 9 hrs. approx.)**

- Chandra, Satish. (2004). Medieval India: From Sultanate to the Mughals, Part 1, Haranand Publications, Delhi.

COMMON POOL OF GENERIC ELECTIVES (GE) COURSES

GENERIC ELECTIVES (GE-1): Politics of Nature

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Politics of Nature	**4**	**3**	**1**	**0**	XII Pass	NIL

Learning Objectives

This introductory course familiarizes students with major themes in the history of human inter-action with nature. It studies the long-term transformations made by humans on their surround-ing environment and the reciprocal effects of nature on societies. The themes include the inter-actions between humans and other living species, link between imperialism and environmental transformations, profligate use of resources, population growth, increasing urbanisation, carbon emission, and climate crisis. By focusing on the planetary scale of ecological interconnected-ness, the course enables students to understand the social, political, and cultural roots of the cur-rent environmental crisis. The course will also elaborate how the interdisciplinary approach enabled the environmental historians to arrive at new methodology in critically understanding the past. It integrates concepts and insights from Anthropology, Historical-Geography, Climate Science, Political Ecology, and Economics. The paper explains the politics of nature in terms of an increasing inequality in access to natural resources and the social responses to the unequal distribution of the effects of environmental degradation. Discussions on the politics of nature on a planetary scale will encourage students to innovate and suggest policy changes at the national and international level.

Learning outcomes

Upon completion of this course the student shall be able to:

- Discuss environmental issues within a social and political framework.

- Examine the role of social inequality. How does unequal distribution of and unequal access to environmental resources help understand the environmental crisis of the world - from the global to the local.
- Critique an understanding of environmental concerns based on a narrow scientific/technological perspective.
- Analyse the historical agency of animals.
- Understand how ideas about the environment have evolved in various socio-ecological contexts.
- Examine the complexities of resource distribution and inequalities of resource use, locating these within specific social contexts, with reference to case studies regarding the urban-environmental problems, industrial hazards and the environmental impacts of the mega-infrastructure projects.
- Locate solutions to the contemporary environmental problems within a framework of greater democratisation of resource use.

SYLLABUS OF GE-1

Unit I: Doing Environmental History

1. The themes of Environmental History.
2. Interdisciplinarity; Historical-Geography, Anthropology, Archaeology, and Political Ecology

Unit II: Societies and Natural Resources in the Pre-Modern World

1. Human-animal interactions
2. Pre-Industrial Prime Movers and Fuels

Unit III: Ecology and Imperial Power in the Early Modern World

1. The Columbian Exchange; Diseases
2. Colonialism and Natural Resources; Ecological Imperialism

Unit IV: The Worlds of Fossil Energy

1. Industrial Agriculture Steam Ships and Hydraulic Engineering
2. Cities and Environment; Delhi and Bombay

Unit V: The Great Acceleration and the Future

1. Carbon Emission and Environmental Justice; Climate Change
2. The Anthropocene Debate

Essential Readings

Unit I. This unit provides an overview of the major themes of environmental history and elaborates the interdisciplinary approaches developed by the environmental historians to study the past. **(Teaching time: 9 Hours approx)**

- Hughes, Donald (2006), What is Environmental History?. Cambridge: Polity Press. Chapter 1, pp. 1-17 [“Defining Environmental History”]
- McNeil, J. R. and Mauldin, E. S. (2012). A Companion to Global Environmental History. Oxford: Wiley-Blackwell, Introduction pp. xvi-xxiv.
- Conrad, Sebastian (2016), What is Global History. Princeton: Princeton University Press, pp. 1-17 [“Introduction”].

- Bayly, C. A, et al., “AHR Conversation: On Transnational History,” The American Historical Review, Vol. 111, No. 5, pp. 1440-64.

Unit II. This unit examines human interactions with the environment in pre-modern societies. The two rubrics are aimed to explore how human interaction with animals and the development of energy harnessing technologies transformed social relationships, practices, and ideas. **(Teaching time: 9 Hours approx.)**

- Richard Bulliet. Hunters, Herders and Hamburgers: The Past and Future of Human- Animal Relationships. New York: Columbia University Press, 2005, pp. 205 -224.
- Edmund Burke III. “The Big Story: Human History, Energy Regime and the Environment” in Edmund Burke III and Kenneth Pomeranz, eds., the Environment and World History. Berkeley: University of California Press, 2009. pp. 33-53.
- Smil, Vaclav (1994), Energy in World History. Colorado: Westview, 1994 [Chapter 2 “Energy in Prehistory, pp. 15-27; Chapter 3 “Traditional Agriculture,” pp. 28-91; Chapter 4 “Pre-Industrial Prime Movers and Fuel, 92-156].
- Deloche, John (1993), Transport and Communication in India: Prior to Steam Locomotion. New Delhi: Oxford University Press, pp. 227-254.

Unit III. : This unit explores how Empires of the New World transferred flora and fauna across continents, affected the demography of local societies and completely transformed landscapes. The second rubric explains how colonialism generated new patterns of consumption by appropriating global resources and fossil fuels for industry, to produce an interconnected but unequal world. **(Teaching time: 9 Hours approx.)**

- Crosby, Alfred W. (1967). “Conquistadory Pestilencia: The First New World Pandemic and the Fall of the Great Indian Empires,” The Hispanic American Historical Review, Vol.47(No.3), pp. 321-337.
- Crosby, Alfred W. (1988), “Ecological Imperialism: The Overseas Migration of Western Europeans as a Biological Phenomenon,” In Donald Worster, ed., The Ends of the Earth. New York: Cambridge University Press. pp. 104-105.
- Cronon, William (1983), Changes in the Land: Indians, Colonists and the Ecology of New England. New York: Hill and Wang, pp.3-18.
- McNeill, J.R. (2012). “Biological Exchange in Global Environmental History,” In J. R. McNeill & E. S. Maudlin, eds., Companion to Global Environmental History. Oxford: Blackwell, pp. 433-452.

Unit IV. This unit studies the new energy regimes of the modern world, with a special focus on the histories of landscape transformations. It offers a historical perspective on the increasing inequality of access to natural resources, especially in the context of industrialisation of agricultural production, hydraulic engineering, and the urbanization of natural resources. **(Teaching time: 9 Hours approx.)**

- McKittrick, Meredith (2012), “Industrial Agriculture,” In J. R. McNeill & E. S. Maudlin, eds., Companion to Global Environmental History. Oxford: Blackwell, pp. 411-432.

Cambridge, MA: The MIT Press, [Chapter 3: "Making the Panama Canal Watershed", pp. 37-58; Chapter 6: "Canal Construction and the Politics of Water", pp. 93- 120; Chapter 13: "A Demanding Environment," pp. 129-222].
- Awadhendra B. Sharan. In the City, Out of Place: Nuisance, Pollution, and Dwelling in Delhi, c. 1850-2000. Delhi: Oxford University Press, 2014 [Introduction; Chapter 4: Pollution-page numbers to be added]
- Riding, Tim (2018), "'Making of Bombay Island': Land Reclamation and Geographical Conception of Bombay, 1661-1728," Journal of Historical Geography, Vol. 59, pp. 27-39.
- Klein, Ira (1986), "Urban Development and Death: Bombay City, 1870-1914", Modern Asian Studies, Vol.20, No.4, pp.725-754.

Unit V. This unit introduces the concept of Anthropocene to discuss emergent concerns regarding the influence of humans on the planet's history. This provides a long-term historical perspective on contemporary environmental issues including global warming and the need for innovation and policy change at the national and international levels. **(Teaching time: 9 Hours approx)**

GENERIC ELECTIVES (GE-2): Making of Post-Colonial India

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Making of Post-Colonial India	**4**	**3**	**1**	**0**	XII Pass	NIL

Learning Objectives

This thematic course introduces the students to various perspectives on India's evolving political, economic, social and cultural conditions from the 1940s to the 2000. The course intends to familiarise the students with some select themes pertaining to the gradual historical transformation of political organizations, the emergence of new forms of socio-political mobilization, the patterns of economic development and cultural representation and peoples' movements in the period under study.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Draw a broad outline of the history of the early years of the Indian Republic, focusing on the framing of the Constitution, the integration of princely states, the reorganization of states and the features of our foreign policy.
- Examine critically patterns of economic development in the early years of Independence and the subsequent shifts and the persistent problems of uneven development.
- Trace a broad history of political organizations at the national level and political developments in the regional contexts.
- Examine issues of critical relevance with respect to the assertions and mobilization in the movements on the questions of caste, tribe and women.

SYLLABUS OF GE-2

Unit I: Laying the Foundation of the Nation State

1. Making of Indian Constitution and its salient features;
2. Integration of princely states, delineating provincial boundaries and the formation of newer states;

Unit II: Political Trajectories.

1. Politics and Political Parties: I. Congress hegemony and counter-hegemony, the rise of regional political parties; II. left political parties and Left wing political radicalism; III. J.P. movement / Nav Nirman movement, Emergency and Janta interregnum; and IV. Jansangh and Rise of the BJP.
2. Key features of the foreign policy of India.

Unit III: Socio-Economic Development and underdevelopment

1. Concept of planned economy and the key features of respective five year plans for agrarian, industrial and other sectors;
2. Shift from the model of mixed economy and public sectors to economic liberalization, privatization and globalisation;
3. Discontents amongst peasants and workers and the larger concerns of economic re-distribution, inequality, sustainability and environment.
4. Peoples' Movements for Rights, Liberation and Social Justice: Dalits, Adivasis and women.

Unit IV: Shaping a new public sphere and its discontents

1. Education, science and technology;
2. Language and Literature;
3. Cinema and visual art.

Practical component (if any) - NIL

Essential/recommended readings

Unit I: This unit deals with laying the foundations of the Indian republic by discussing key debates in the framing of the Constitution, some aspects of the finally adopted Constitution and amendments within it particularly focusing upon the questions of citizenship, language, fundamental rights, directive principles and the rights of the minorities. The unit also deals with the integration of princely states and the process of delineating or reorganizing the provincial boundaries. **(Teaching Time: 3 weeks approx.)**

GENERIC ELECTIVES (GE-3): Indian Science and Technology

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Indian Science and Technology	**4**	**3**	**1**	**0**	XII Pass	NIL

Learning Objectives

This course proposes to examine the interlinkages between science and technology with respect to society in India and its historical relevance and evolution. This paper is thematically arranged and provides a historical overview of Indian Science and Technology and acquaints students with historiographical debates. Further this paper takes a brief survey of the material culture as it evolved in Indian history. The students will study the evolution of agriculture in relation to the environment and animals. This paper will also explore the Indian contribution to the development of astronomy and mathematics, medicine, military and warfare technologies.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Critically understand the evolution of science and technology in India.
- Understand the interrelationship between science, technology and society.

SYLLABUS OF GE-3

Unit I: Historiography of Science and Technology

Unit II: The Environment, Agriculture and Animals

Unit III: Mathematics and Astronomy: From Aryabhatta to Sawai Jai Singh

Unit IV: Patients, Doctors and Medicines

Unit V: Military and Warfare Technologies

Practical component (if any) - NIL

Essential/recommended readings

Unit I: In this unit students will understand the debates pertaining to the historiography of Science and Technology in India. They will also examine and explore the question why science did not flourish in India despite significant scientific developments. Factors like the prevalence of social inequality acting as a barrier to the development of scientific temperament and experimentation will be explored. **(Teaching Time: 3 weeks approx.)**

GENERIC ELECTIVES (GE-4): Media in History

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Media in History	**4**	**3**	**1**	**0**	XII Pass	Nil

Print media – Radio Transmission – The Cinematic Turn – Television and Digital Media

Learning Objectives:
The course will apprise the students with the elementary outlines of the history of media in India, from its beginnings to contemporary times. The different forms of media – Print, Audio-Visual and Electronic – the modes and methods will be discussed, and the potent ways in which technology and larger socio-political and economic trends intersected will be highlighted.

Learning Outcomes:
Upon successful completion of the course, students will be able to:

- Delineate the historical context within which the beginnings of each media platform can be understood.
- Analyze the state's attempts to control and organize media output through laws and policies.
- Explain the conjunctures of technological breakthroughs, advances and larger socio-economic and political matrices.
- Better appreciate the trends in media production, and its efforts in engaging with current ideological and socio-political issues.

Course Content

Unit I: Forms and Contexts

1. Introduction – Types of media to be studied and their unique Indian context and adaptation
2. Significance and impact of media in history

Unit II: Press/Print media

1. Press censorship in British India; Vernacular Press Act
2. Role of the Indian press in the freedom movement; views of Leaders,
3. Press in India after independence: The Press Commissions, Contemporary Opportunities and Challenges

Unit III: Radio Transmission

1. Radio Transmission in Colonial India – Foundation, Inter-war years; AIR Programming, Expansion and broadening of listenership base
2. Establishment and Expansion of Akashvani after 1947 – The Keskar years; Classical vs. Popular; Radio Ceylon and Vividh Bharati
3. Government Policies and Bandwidth matters since the 1970s – end of License Raj; FM Radio Wave; Community Radio; Podcasts

Unit IV: The Cinematic Turn

1. Cinema during Colonial Period - Silent Era, Genres and Censorship
2. Post-Independence Cinema till 1980s- Nation Building, Mainstream cinema and Parallel Cinema
3. Era of Liberalization, Globalization and Privatization- Changes in Production, Distribution and Exhibition, Experimental Cinema

Unit V: Studying Television and Digital Media

1. Television in India-The Doordarshan era- Entertainment, Infotainment
2. Rise of the Satellite TV – Soap Operas and 24x7 News, Changes and Effects.
3. Digital Media - Effects of Digital Media-Privacy and Surveillance, Misinformation and Disinformation

Essential Readings and Unit-Wise Teaching Outcomes:

Unit I: As the introductory unit, the focus will be on types of media to be studied and their unique Indian context and adaptations. The cross-fertilization between the terrains of technology, circulation of ideas, means and methods of propagation, and patterns of patronage, production and consumption can be elucidated. **(Teaching time: 2 week approx.)**

- Sarkar, S. 2015. Modern Times: India 1880s to 1950s: Environment, Economy, Culture. New Delhi: Orient Blackswan.
- Khanna, A. 2019. Words. Sounds. Images: A History of Media and Entertainment in India. New Delhi: Harper Collins.
- Chatterjee, K, 2020. Media and Nation Building in Twentieth-Century India: Life and Times of Ramananda Chatterjee. New Delhi: Routledge.

Unit II This unit will give a broad historical overview of the coming of the printing press in the Indian Subcontinent, and discuss aspects of book production under colonial conditions.It aims to make a historical assessment of how Indian readers consume printed contents through well-chosen case studies. **(Teaching time: 3 weeks approx.)**

- Robert Darnton (2002) “Book Production in British India, 1850-1900” Book History, vol. 5, pp. 239-262.
- A.R. Venkatachalapathy (2012) The Province of the Book, Ranikhet: Permanent Black, “Readers, Reading practices, modes of reading” (chapter 7).

DEPARTMENT OF POLITICAL SCIENCE

SEMESTER-III

BA (Hons.) Political Science

DISCIPLINE SPECIFIC CORE COURSE – 7: Political Theory: Concepts and

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Political Theory: Concepts and Debates DSC-7	4	3	1	0	12th Pass	NIL

Learning Objectives

This course will familiarize students with the basic normative concepts in political theory and encourage them to understand how they manifest in social practices while engaging in relevant debates. The course will make use of these concepts, understood as values, in organizing our collective life in a political community. The course will develop a broader understanding of some of the key concepts of political practices which affects lives of people in a significant way. It gives a conceptual framework to further explore some of the important political processes and institutions. It aims to evaluate and analyse political issues, debates and arguments from their core value analysis through significant policy changes. It further endeavours to bring change in the very understanding of values and concepts to address issues of contemporary times.

Learning outcomes

After completing the course, the learner will be able to:

- Understand the dimensions of shared living through these political values and concepts.
- Appreciate how these values and concepts enrich the discourses of political life, sharpening their analytical skills in the process.
- Instigate further developments of these concepts in new ways
- Develop an insight to some of the core political issues
- Develop critical analytical skill to evaluate core political debates and issues.
- Brings conceptual understanding and clarity to social, political, economic and cultural issues.

SYLLABUS OF DSC-7

UNIT – I (9 Hours)
Freedom

a) Liberty: Negative and Positive
b) Freedom, Emancipation, *Swaraj*
Debate: Free speech, expression and dissent

UNIT – II (9 Hours)
Equality

a) Equality of opportunity and Equality of Outcome
b) Egalitarianism: Background inequalities and differential treatment
Debate: Affirmative action

UNIT – III (9 Hours)
Justice

a) Justice: Procedural and Substantive
b) Rawls and his critics
Debate: Scope of Justice – National vs Global

UNIT – IV (9 Hours)
Rights

a) Rights: Natural, Moral and Legal
b) Rights and Obligations
Debate: Human Rights - Universalism or Cultural Relativism

UNIT – V (9 Hours)
Democracy

a) Democracy: Idea and Practice
b) Liberal Democracy and its critics
c) Multiculturalism and Toleration
Debate: Representation vs participation

DISCIPLINE SPECIFIC CORE COURSE – 8:Ancient and Medieval Indian Political Thought

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Ancient and Medieval Indian Political ThoughtDSC-8	4	3	1	0	12th Pass	NIL

Learning Objectives

The political thought which constitutes the dominant element of political Science is essentially euro genetic and Eurocentric. What we study in our universities are ones which evolved and developed with European and Anglo-American tradition. The conceptual framework and

discourses were product of societies and the forces amidst which they took birth and the shape. That does not mean that India had no tradition of political thinking. This paper seeks to critically engage with writers of ancient India who produced wonderful treatise on the statecraft and several elements of government and governance. This includes the concept of monarchy, the forms of government, the role of the state and state individual relationship.

Learning outcomes

After reading the course the students would be able to answer

- What were the major institutions of government in ancient India and how did they function?
- How thinkers like Manu, Shukra, Brihaspati and Kautilya perceived the role of statecraft in society?
- What was the Nitisar tradition? How did it mark a difference from the Arthashastra tradition?
- The students will be able to answer how Kabir epitomised the syncretic traditions of India.
- What was the political and economic ideas of Tiruvallur and what was his take on ethics?

DISCIPLINE SPECIFIC CORE COURSE – 9: Constitutional Government and Democracy in India

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course(if any)
		Lecture	Tutorial	Practical/ Practice		
Constitutional Government and Democracy in India DSC 9	**4**	**3**	**1**	**0**	**12th Pass**	**NIL**

Learning Objectives

The aim of this course is to enable students to know the constitutional design of government and political institutions in India. The purpose is to understand how liberty, equality and justice, territorial decentralization and federalism, development and democracy, serve as values on which constitutional democracy in India is premised. The course traces the contestations over how these values were incorporated in the Constitution, and demonstrates the manner in which they played out in practice. It encourages students to see how institutional practices and constitutional design are impacted by the political contexts within which they unfold. The relationship between emergency provisions, constitutionalism and democracy offers significant insights into these processes. The course helps develop an understanding of how the different organs of government exist in an institutional matrix which is characterised by conflict and cooperation, division of powers in an asymmetrical federal arrangement, protection of the vulnerable against discrimination on the grounds of cases, class, ethnicity and gender, and decentralisation of power to facilitate participatory governance at local levels. The course is expected to enable students to develop the ability to comprehend the r relationships between constitutionalism, democracy and governance by using concepts and analytical frameworks informed by the scholarly literature on the subject buttressed by empirical details.

Learning outcomes

On successful completion of the course, students will demonstrate:

- understanding the specificities of Indian constitutionalism through a reading of the Constituent Assembly debates
- familiarity with the debates around constitutional architecture, institutional design and practice, and constitutional democracy
- awareness of the manner in which government functions through its various organs
- understanding of the division of power between various organs of the government at different levels.

SYLLABUS OF DSC-9

UNIT – I (11 Hours)
The Constituent Assembly and the Constitution

a) Philosophy of the Constitution, the Preamble, and features of the Constitution.
b) Citizenship, Fundamental Rights, Directive Principles and Fundamental Duties

UNIT – II (11 Hours)

Organs of Government

a) The Legislature: Power and Functions of Parliament, Debates on Representation in Parliament.
b) The Executive: Election, Power, Functions and the changing role of President and Prime Minister.
c) The Judiciary: Appointment of Judges in High Courts and the Supreme Court, Power and Functions of High Courts and the Supreme Court.

UNIT – III (12 Hours)

Federalism and Decentralization

a) Centre-State Relations, Asymmetrical Federalism
b) The Panchayats and Municipalities

Discipline Specific Elective (DSE) Courses for Sem – III

DISCIPLINE SPECIFIC ELECTIVE COURSE – 1a: State Politics in India

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
State Politics in India DSE-1a	4	3	1	0	12 Pass	NIL

Learning Objectives

This course situates the study of state politics as one of the key domains of Indian politics. It aims to introduce the students to 'state politics' in India as a significant site where key idioms, processes and practices of democratic politics are produced. Discussing the relevance of the theme, the course focusses on various theories on state politics, the historical and constitutional context that shaped state reorganisation including linguistic demands and other recent demands for smaller states. The course also focuses on the rise of regional parties and movements as the means through which state politics unfolds. It subsequently looks at the political economy of development in the states through a detailed analysis of agrarian change, with specific focus on the rise of the agrarian capitalist class, rural markets, agrarian movements, regional business and economic reforms in the states.

Learning outcomes

On successful completion of the course, the students would demonstrate:

- Knowledge of the historical context and legal framework of the emergence of state politics in India
- Understanding of the phenomenon of state formation and reorganisation as part of both national and regional politics in India
- Awareness of the nature of agrarian politics in India and the political economy of states in India
- Knowledge of electoral politics and political leadership in states in India.

SYLLABUS OF DSE-1a

UNIT – I (9 hours)

State politics in India

Relevance and frameworks of analysis

UNIT – II (9 hours)

States reorganisation and formation of states

UNIT – III (9 hours)

Agrarian politics

Rise of an agrarian capitalist class, rural markets, land acquisition and farmers' movements

UNIT – IV (9 hours)

Political economy of development and reforms in the states

Policy, politics, and regional business.

UNIT – V (9 hours)

Electoral politics in states

Political parties, leadership, and mobilisation

Essential/recommended readings

DISCIPLINE SPECIFIC ELECTIVE COURSE – 1b: Indian Constitution: Key Debates

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Indian Constitution: Key Debates DSE-1b	4	3	1	0	12 Pass	NIL

Learning Objectives

The course has been designed with the aim to familiarise students with the key debates that went into the making of the Indian Constitution. The debates have been identified for their historical significance and contemporary relevance. The course is on the distinguishing features of the constitution, the modalities through which consensus on contentious matters were arrived in the Constituent Assembly, and the political contexts in which these debates have remained significant. The course takes the students back to the Constituent Assembly Debates to help them comprehend the principles that were articulated to resolve or defer a debate. While the Constituent Assembly Debates serve as resources for a historical and a contextual analysis of the Constitution, the forms in which the debates have resurfaced is also paid attention through recourse to debates in the Parliament. Alongside, scholarship produced by political theorists, historians and lawyers have been included to trace the contours of the debate and the constitutional values that emerge out of it.

Learning outcomes

On successful completion of the course, the students will demonstrate:

- Knowledge of the process of constitution making and familiarity with Constituent Assembly debates
- An understanding of the framing of debates in the Constituent Assembly and the forms in which they have remained significant
- An understating of the principles that undergirded the debates and the constitutional values that they sought to entrench

		Lecture	Tutorial	Practical/ Practice		
Ancient and Medieval Indian Political Thought MDSC-3A	4	3	1	0	12 Pass	N*IL*

Learning Objectives

The political thought which constitutes the dominant element of political Science is essentially euro genetic and Eurocentric. What we study in our universities are ones which evolved and developed with European and Anglo-American tradition. The conceptual framework and discourses were product of societies and the forces amidst which they took birth and the shape. That does not mean that India had no tradition of political thinking. This paper seeks to critically engage with writers of ancient India who produced wonderful treatise on the statecraft and several elements of government and governance. This includes the concept of monarchy, the forms of government, the role of the state and state individual relationship.

Learning outcomes

After reading the course the students would be able to answer

- What were the major institutions of government in ancient India and how did they function?
- How thinkers like Manu, Shukra, Brihaspati and Kautilya perceived the role of statecraft in society?
- What was the Nitisar tradition? How did it mark a difference from the Arthashastra tradition?
- The students will be able to answer how Kabir epitomised the syncretic traditions of India.
- What was the political and economic ideas of Tiruvallur and what was his take on ethics?

SYLLABUS OF MDSC-3A

UNIT – I (5 Hours)
Foundations of Indian Political Thought:

- An Overview on Sources of Indian Political Thought
- Cultural and Territorial conception of India
- Distinctive Features of Indian Political Thought

UNIT – II (4 Hours)
Manu

- Authenticity of Manu smriti (Talking Point)
- Social Laws and Conception of Justice

UNIT – III (4 Hours)
Brihaspati: Statecraft, Justice, Inter-state Relations

UNIT – IV (4 Hours)
Shukra/Usana

- Talking Point: Debate on the authenticity of Shukra-Niti
- The Concept of Kingship and Statecraft in Shukra-Niti

UNIT – V (4 Hours)
Kautilya: Theory of State

DISCIPLINE SPECIFIC CORE COURSE (DSC-3B): Theory and Practice of D

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Theory and Practice of Democracy MDSC-3B	4	3	1	0	12 Pass	NIL

Learning Objectives

This course offers an introduction to the evolution, theories, and practices of democracy. The course will introduce debates in democratic theory and practices in the past, and their contested legacies in contemporary times. Students will learn to evaluate past practices, critically examine current practices, learn about recent innovations and discuss the future of democracy. This course will provide an overview of different theories of democracy, covering approaches such as civic republicanism, liberal constitutionalism, participatory and deliberative democracy. The course will engage in challenges and debates on diversity, citizenship, representation and globalization.

Learning outcomes

After completing this course students will be able to:

- Develop a broad historical, normative and empirical understanding of the idea and practice of democracy.
- Distinguish different models of democracy and their normative assumptions
- Understand different theories of democracy and how different theories led to waves of democratization over history.
- Understand/assess some of the major political challenges that democracy faces in the wake of globalization.
- Examine current problems and understand how different democratic crises have emerged in practice
- Apply democratic theories to critically assess political institutions and practices
- Engage in dialogue about the meaning and value of democracy
- Explain and defend how democratic theory might be used to respond to problems being faced by nation-states

SYLLABUS OF MDSC-3B

UNIT – I (11 Hours)

Origins of the idea

Ancient Greece and India
Modern developments
Procedural and substantive accounts
Contemporary innovations

UNIT – II (11 Hours)

Theory

Liberal Representative democracy
Participatory democracy
Deliberative democracy

UNIT – III (11 Hours)

Institutions

Constitutionalism
Legislatures and legislation
Political Parties
Media & the Civil Society

UNIT – IV (12 Hours)

Contemporary Debates

Diversity
Representation
Globalization & Global Issues

Essential/recommended readings

		Lecture	Tutorial	Practical/ Practice		
Ancient and Medieval Indian Political Thought MDSC-3A	4	3	1	0	12 Pass	NIL

Learning Objectives

The political thought which constitutes the dominant element of political Science is essentially euro genetic and Eurocentric. What we study in our universities are ones which evolved and developed with European and Anglo-American tradition. The conceptual framework and discourses were product of societies and the forces amidst which they took birth and the shape. That does not mean that India had no tradition of political thinking. This paper seeks to critically engage with writers of ancient India who produced wonderful treatise on the statecraft and several elements of government and governance. This includes the concept of monarchy, the forms of government, the role of the state and state individual relationship.

Learning outcomes

After reading the course the students would be able to answer

- What were the major institutions of government in ancient India and how did they function?
- How thinkers like Manu, Shukra, Brihaspati and Kautilya perceived the role of statecraft in society?
- What was the Nitisar tradition? How did it mark a difference from the Arthashastra tradition?
- The students will be able to answer how Kabir epitomised the syncretic traditions of India.
- What was the political and economic ideas of Tiruvallur and what was his take on ethics?

SYLLABUS OF MDSC-3A

UNIT – I (5 Hours)

Foundations of Indian Political Thought:

- An Overview on Sources of Indian Political Thought
- Cultural and Territorial conception of India
- Distinctive Features of Indian Political Thought

UNIT – II (4 Hours)
Manu

- Authenticity of Manu smriti (Talking Point)
- Social Laws and Conception of Justice

UNIT – III (4 Hours)
Brihaspati: Statecraft, Justice, Inter-state Relations

UNIT – IV (4 Hours)
Shukra/Usana

- Talking Point: Debate on the authenticity of Shukra-Niti
- The Concept of Kingship and Statecraft in Shukra-Niti

UNIT – V (4 Hours)
Kautilya: Theory of State

UNIT – VI (4 Hours)
Aggannasutta (DighaNikaya): Theory of kingship

UNIT – VII (4 Hours)
Tiruvalluvar: Ethical Life and Politics

UNIT – VIII (4 Hours)
Basavanna

UNIT – IX (4 Hours)
Adi Shankracharya: Advaita

DISCIPLINE SPECIFIC ELECTIVE COURSE – 1a: State Politics in India

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
State Politics in India MDSE-1a	4	3	1	0	12Pass	NIL

Learning Objectives

This course situates the study of state politics as one of the key domains of Indian politics. It aims to introduce the students to 'state politics' in India as a significant site where key idioms, processes and practices of democratic politics are produced. Discussing the relevance of the theme, the course focusses on various theories on state politics, the historical and constitutional context that shaped state reorganisation including linguistic demands and other recent demands for smaller states. The course also focuses on the rise of regional parties and movements as the means through which state politics unfolds. It subsequently looks at the political economy of development in the states through a detailed analysis of agrarian change, with specific focus on the rise of the agrarian capitalist class, rural markets, agrarian movements, regional business and economic reforms in the states.

Learning outcomes

On successful completion of the course, the students would demonstrate:

- Knowledge of the historical context and legal framework of the emergence of state politics in India
- Understanding of the phenomenon of state formation and reorganisation as part of both national and regional politics in India
- Awareness of the nature of agrarian politics in India and the political economy of states in India
- Knowledge of electoral politics and political leadership in states in India.

SYLLABUS OF MDSE-1a

UNIT – I (9 Hours)

State politics in India

Relevance and frameworks of analysis

UNIT – II (9 Hours)

States reorganisation and formation of states

UNIT – III (9 Hours)

Agrarian politics

Rise of an agrarian capitalist class, rural markets, land acquisition and farmers' movements

UNIT – IV (12 Hours)

Political economy of development and reforms in the states

Policy, politics, and regional business.

UNIT – V (9 Hours)

Electoral politics in states

Political parties, leadership, and mobilisation

Essential/recommended readings

DISCIPLINE SPECIFIC ELECTIVE COURSE – 1b: Indian Constitution: Key Debates

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Indian Constitution: Key Debates MDSE-1b	4	3	1	0	12Pass	NIL

Learning Objectives

The course has been designed with the aim to familiarise students with the key debates that went into the making of the Indian Constitution. The debates have been identified for their historical significance and contemporary relevance. The course is on the distinguishing features of the constitution, the modalities through which consensus on contentious matters were arrived in the Constituent Assembly, and the political contexts in which these debates have remained significant. The course takes the students back to the Constituent Assembly Debates to help them comprehend the principles that were articulated to resolve or defer a debate. While the Constituent Assembly Debates serve as resources for a historical and a contextual analysis of the Constitution, the forms in which the debates have resurfaced is also paid attention through recourse to debates in the Parliament. Alongside, scholarship produced by political theorists, historians and lawyers have been included to trace the contours of the debate and the constitutional values that emerge out of it.

Learning outcomes

On successful completion of the course, the students will demonstrate:

- Knowledge of the process of constitution making and familiarity with Constituent Assembly debates
- An understanding of the framing of debates in the Constituent Assembly and the forms in which they have remained significant
- An understating of the principles that undergirded the debates and the constitutional values that they sought to entrench

COMMON POOL OF GENERIC ELECTIVES (GE) COURSES OFFERED BY THE DEPARTMENT OF POLITICAL SCIENCE

GENERIC ELECTIVES (GE-1): Ideas in Indian Political Thought

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Ideas in Indian Political Thought GE-1	4	3	1	0	12 Pass	NIL

Learning Objectives

This paper is designed for students who are from other disciplines and wish to have a basic understanding of the various themes that has shaped Indian society and politics. It revolves around key concepts based on original texts which would help the students to critically engage with the ideas.

Learning outcomes

After completion of this course, students will be able to

- answer about the nature and form of statecraft that existed in Ancient India.
- explain how the texts in ancient India interpreted Dharma and Danda
- answer what were sources and mechanisms to practice Nyay in ancient India.
- make distinction between Rastra and Rajya.
- explain the meaning and foundations of Varna and how are they different from caste.

SYLLABUS OF GE-1

UNIT – I (7 Hours)

Dharma and Danda: Kautilya

UNIT – II (6 Hours)

Gender: Tarabai Shinde

UNIT – III (6 Hours)
Culture and Nationalism: Vivekananda

UNIT – IV (6 Hours)
Swaraj: Gandhi

UNIT – V (6 Hours)
Nyaya: Ambedkar

UNIT – VI (7 Hours)
Hindutva: Savarkar

UNIT – VII (7 Hours)
Integral Humanism: Deen Dayal Upadhyaya

Essential/recommended readings

1. Dharma and Danda: Kautilya

Mehta, V.R. (1992) 'The Pragmatic Vision: Kautilya and His Successor', in Foundations of Indian Political Thought, Delhi: Manohar, pp. 88- 109.

Sharma, R S (2005), Aspects of Political Ideas and Institutions in Ancient India, Motilal Banarsidass, New Delhi pp 143-164

2. Gender: Tarabai Shinde

O' Hanlon, Rosalind (2002) A comparison between women and men: Tarabai Shinde and the critique of Gender Relations in Colonial India. New Delhi: Oxford University Press.

Lele, Jayant (1998) Gender Consciousness in Mid-Nineteenth Century Maharashtra, in Anne Feldhaus*Images of women in Maharastrain Society*. The University of New York Press: New York

3. Culture and Nationalism: Vivekananda

Sen, Amiya P. (2011), 'Vivekanand: Cultural Nationalism', in M. P. Singh and Himanshu Roy (ed.), *Indian Political Thought: Themes and Thinkers* Delhi. Pearson

Kiggley, Dermot (1990) 'Vivekananda's western message from the East' in William Radice (ed) Swami Vivekananda and modernization of Hinduism, New Delhi: Oxford University Press.

4.Swaraj: Gandhi

Parel, A. (ed.) (2002), 'Introduction', in *Gandhi, freedom and Self Rule,* Delhi: Vistaar Publication.

Dalton, Denis (1982) Indian Idea of freedom, Gurgaon: Academic Press, pp 154-190

5. Nyaya: Ambedkar

GENERIC ELECTIVES (GE-2) :Introduction to the Indian Constitution

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Introduction to the Indian Constitution GE-2	4	3	1	0	12 Pass	NIL

Learning Objectives

The course aims to introduce the students to the foundational text of constitutional democracy in India - the Indian Constitution. By providing an overview of the socio-political context of its origin and its basic tenets, which provide the organizing framework for democracy in India, the course expects to bring historical insights in making the constitutional text comprehensible. The course traces the history of the Constitution both in the colonial legislations and in the declaration and reports produced in the course of the Indian National Movement. It focuses on the creation and the working of the Constituent Assembly as part of a transformative vision for independent India. The basic features of the Constitution form the core themes of the course introducing students to the philosophy behind them and the final form in which they were adopted in the Indian Constitution to make it a document for social revolution. The course aims at providing students with both a textual and a contextual introduction to the Indian Constitution.

Learning outcomes

On successful completion of the course, the students will demonstrate

- Knowledge of the origin and contents of the Indian Constitution
- Awareness of the rights and duties of the citizens and the obligations of the state

- Familiarity with the functioning of constitutional governance in India and the division of power between different tiers of the government.

SYLLABUS OF GE-2

UNIT – I (8 Hours)
Constitutional antecedents and the making of the Constitution of India

UNIT – II (7 Hours)
Basic features of the Indian Constitution

UNIT – III (8 Hours)
Fundamental Rights

UNIT – IV (7 Hours)
Obligations of State and Duties of Citizens

UNIT – V (7 Hours)
Organs of Constitutional Governance- Legislature, Executive and Judiciary

UNIT – VI (8 Hours)
Centre-State Relations and Decentralization

Essential/recommended readings

GENERIC ELECTIVES (GE-3): Nationalism in India

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Nationalism in India GE-3	4	3	1	0	12 Pass	NIL

Learning Objectives

The course aims to help students understand the national movement in India. It looks at the movement from different theoretical perspectives that highlight its varied dimensions. The course begins by looking at the Indian responses to colonial dominance in the nineteenth century, and traces the development of the anti-colonial struggle up to the mid-20th century. It successively focuses on the events leading to the Partition and the Independence in 1947. In the process, the course also tries to focus on the various tensions and debates within nationalism in India as it engaged with the questions of communalism, class struggle, caste and gender.

Learning outcomes

On successful completion of the course, students would:

- Gain an understanding of the different theoretical views on the emergence and development of nationalism in India and the tensions that existed between them
- Demonstrate knowledge of the historical trajectory of the development of the nationalist movement in India, with specific focus on its different phases
- Understand the contribution of various social movements in the anti-colonial struggle
- Demonstrate awareness of the history of partition and independence

SYLLABUS OF GE-3

UNIT – I (8 Hours)

Approaches to the Study of Nationalism in India: Nationalist, Imperialist, Marxist, and Subaltern

UNIT – II (8 Hours)

Reformism and Anti-Reformism in the Nineteenth Century: Major Social and Religious Movements in 19th century

UNIT – III (11 Hours)

Nationalist Politics and Expansion of its Social Base

a. Phases of Nationalist Movement: Liberal Constitutionalists; Swadeshi; Revolutionaries, Socialists and Communists; Beginning of Constitutionalism in India
b. Gandhi and Mass Mobilisation: Non-Cooperation Movement, Civil Disobedience Movement, and Quit India Movement
c. Socio-cultural Organizations and National Movement

UNIT – IV (9 Hours)

Social Movements

Peasants, Tribals, Workers, Women and anti-caste movements

UNIT – V (9 Hours)

Partition, Independence and Integration of states

Communalism in Indian Politics, The Two-Nation Theory and Partition, Independence and Integration of Indian States

Essential/recommended readings

GENERIC ELECTIVES (GE-4): Understanding International Relations

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Understanding International Relations GE-4	4	3	1	0	12 Pass	NIL

Learning Objectives

This course aims to make students understand the intersections between politics, economics, culture and nature that shape human life in the contemporary world. These intersectional relations foreground the multiple interactions that constitute the reality of the group life of humans. The issues around which the course is designed consists of the role of state in international politics, cultural identities such as the nation and, issues such as global poverty and global inequalities. Additionally, the course dwells on the psycho-cultural and politico-economic causes of violence, oppression and injustices that make the world a contested space. It examines the ways in which information technology shapes the course of human life in the age of globalization and how the phenomenon of the international manifests both in the virtual and the material world. Going beyond the Westphalian conception of territoriality, the course looks at the ways in which IR manifests in the realm of art/cinema/museums.

Learning outcomes

On successful completion of the course, students would be able to:

- Understand the nature of the contemporary world in which we live through connected histories, economies and societies.
- Analyze the ways in which our world is shaped in both territorial and non-territorial forms leading to basic planetary understandings of both human and non-human relations.
- Enhance cognitive abilities to map out the multiple and complex interactions in international relations between peoples, histories and civilisations.
- To understand the role of the state and its interface with the market, probe into the cultural identities of a nation, analyse global poverty and climate change politics.
- To critically analyse the politics of ‘common yet differentiated responsibilities.’
- Think critically about issues of global inequalities, violence, and injustices in the age of globalization.
- Appreciate the ways in which aesthetic articulation(s) problematize and interrogate the international and our ways of being therein.

SYLLABUS OF GE-4

UNIT – I (7 Hours)

Making Sense of the World

1.1 What is International Relations?
1.2 Understanding Space: How do we sense our planet
1.3 Ways of knowing and being: - Peoples, Histories and Civilisations

UNIT – II (12 Hours)
States, Nations and Markets

2.1 State and Diffusion of authority/power
2.2 Nations and Nationalism
2.3 States and Markets

UNIT – III (12 Hours)
Inequalities

3.1 Politico-military inequalities: big states, small states
3.2 Economic inequalities: rich states, poor states
3.3 Climate Change: Global commons and differentiated responsibilities

UNIT – IV (7 Hours)
Sites of Conflict and Forms of Violence

4.1 Changing Landscape/ Nature of Conflict
4.2 Forms of Violence

UNIT – V (7 Hours)
Knowing our Virtual and Creative World: The Visual Turn in International Relations

5.1 Internet
5.2 Museums
5.3 Cinemas

Essential/recommended readings

GENERIC ELECTIVES (GE-5): Governance: Issues and Challenges

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Governance: Issues and Challenges GE-5	4	3	1	0	12Pass	NIL

Learning Objectives

This paper deals with concepts and different dimensions of governance highlighting the major debates in the contemporary times. There is a need to understand the importance of the concept of governance in the context of a globalising world, environment, administration, development. The essence of governance is explored through the various good governance initiatives introduced in India.

Learning outcomes

On successful completion of the course, the students will be

- acquainted with the changing nature of governance in the era of globalization.
- introduced to the most contemporary ideas of sustainable development and green governance.
- familiarised with a rigorous introduction to the best practices in India on good governance.

SYLLABUS OF GE-5

UNIT – I (10 Hours)

Government and Governance: Concepts

a) Role of State in The Era of Globalisation

b) State, Market and Civil Society

UNIT – II (8 Hours)

Governance and Development

Changing Dimensions of Development Strengthening Democracy through Good Governance

UNIT – III (8 Hours)

Environmental Governance

a) Human-Environment Interaction

b) Green Governance: Sustainable Human Development

UNIT – IV (9 Hours)

Local Governance

a) Democratic Decentralisation

b) People's Participation in Governance

UNIT – V (10 Hours)

Good Governance Initiatives in India: Best Practices

a) Public Service Delivery

b) Electronic Governance

c) Citizens Charter & Right to Information

d) Corporate Social Responsibility

GENERIC ELECTIVES (GE-6): Western Political Philosophy

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Western Political Philosophy GE-6	4	3	1	0	12 Pass	NIL

Learning Objectives

This course familiarizes the students with the manner in which the political questions are posed and answered normatively by select thinkers. The aim is to introduce to the students

the questions, ideas and values of political philosophy addressed by political thinkers and juxtapose the same to contemporary political thinking.

Learning outcomes

By the end of the course students would be able to:

- Understand how to read and decode the classics and use them to engage contemporary socio-political issues.
- Connect with historically written texts and their interpretations.
- Clearly present their own arguments and thoughts about contemporary issues and develop ideas to engage with the latter.

SYLLABUS OF GE-6

UNIT – I (15 Hours)

Classical Political Philosophy

a) Plato
b) Aristotle

UNIT – II (30 Hours)

Renaissance and Modern Political Philosophy

a) Machiavelli
b) Hobbes
c) Rousseau
d) Mill
e) Marx

Essential/recommended readings

Unit 1

R. Kraut (1996) 'Introduction to the study of Plato', in R. Kraut (ed.) *The Cambridge Companion to Plato*. Cambridge: Cambridge University Press, pp. 1-50.

Unit 2

C. Macpherson (1962) *The Political Theory of Possessive Individualism: Hobbes to Locke*. Oxford University Press.

D. Boucher and P. Kelly (eds) *Political Thinkers: From Socrates to the Present.* Oxford: Oxford University Press, pp. 207-224

J. Coleman (2000) ‘Introduction’, in *A History of Political Thought: From Ancient Greece to Early Christianity,* Oxford: Blackwell Publishers.

I. Hampsher-Monk (2001) *A History of Modern Political Thought: Major Political Thinkers from Hobbes to Marx,* Oxford: Blackwell Publishers.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

GENERIC ELECTIVES (GE-7): Politics of Globalisation

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Politics of Globalisation GE-7	4	3	1	0	12 Pass	NIL

Learning Objectives

This course examines the paradoxes of contemporary globalisation. It has been crafted in a manner as to introduce to the students from diverse disciplinary backgrounds the complex multifaceted nature of the contemporary phenomenon of globalization. Students will learn about the evolution of globalization by examining whether globalization is a mere historical process, or, it is also a socio-cultural, politico-economic and,psychological phenomenon and, understand these through different conceptual frames. It then makes the students understand the debates that have been put forth for and against globalization. The course introduces the discourse regarding the Eurocentric formulations of globalization and the ways in which the non-European voices have historically been marginalized in the shaping of Western modernity. Students will also learn about the political, economic and cultural facets of globalization. As a political phenomenon, the course seeks to understand as to how globalization has impacted upon the functioning of the sovereignty of nation-states. In the realm of economy, it introduces the impact of time/space compression upon the macroeconomic structures of trade and finance as well as the structural transformation that information and communications technology has brought in the working of the global political economy. As a cultural phenomenon, the course also discusses the new global mobilizations in the form of global social movements, movements of people across borders and the political and economic impact of global epidemics.

Learning outcomes

Upon successful completion of this course, students will have the knowledge and skills to:

- Understand the nature, significance, and principal debates in the literature on globalisation and the concept of globalization as both a historical process and, a socio-cultural phenomenon.
- Study various approaches which will augment student's knowledge on international political economy.
- Demonstrate basic knowledge of the interconnectedness of global issues, processes, and dynamics.
- Develop insight into the alternative understanding of globalisation and various critical aspects related to it like who are the beneficiaries in this process.
- Understand diverse global challenges like global migration and epidemics.
- Learn the ways in which globalization holds promise for a better world and a developed world and, at the same time, understand how it is laden with deep-seated tendencies to engender strands of inequalities and spur erosion of local cultures.

SYLLABUS OF GE-7

UNIT – I (9 Hours)

Conceptualizing Globalisation

1.1 Is Globalisation New? Historical Perspectives
1.2 Approaches to Understand globalisation
1.3 The Globalisation Debate

UNIT – II (9 Hours)

Globalization: A Eurocentric Project?

2.1 The Question of Post-Coloniality
2.2 Making Sense of Globalization for the People at the Margins

UNIT – III (9 Hours)

Sovereign State in a Globalised World

3.1 Political Dimensions
3.2 Shift from State to Market?

UNIT – IV (9 Hours)

Role of International Institutions: Multi-dimensionality of Globalisation

4.1 World Bank, International Monetary Fund, World Trade Organisation and, G-20
4.2 The Globalisation of Trade
4.3 Global Epidemics and Working of World Health Organization

UNIT – V (9 Hours)

Responses and Resistances to Globalization

5.1 Global Social Movements
5.2 International Migration

GENERIC ELECTIVES (GE-8): Introduction to Public Policy

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Introduction to Public Policy GE-8	4	3	1	0	12 Pass	NIL

Learning Objectives

The paper seeks to provide an understanding to the concept of Public Policy. Public Policy is a proposed course of action of a government to realize its socio-economic objectives. The essence of public policy lies in its effectiveness in translating the governing philosophy into programmes and policies and making it a part of community living. This course will help to understand the complexities of public policy and its interaction with the socio-economic structure.

Learning outcomes

By the end of this course a student will acquire the following knowledge and skills.

a. Contextualization of knowledge;
b. Praxis and technique;
c. Critical Thinking;
d. Research and Communication

SYLLABUS OF GE-8

UNIT – I (10 Hours)

Public Policy

(a) Concept, Characteristics and Significance
(b) Determinants of Public Policy
(c) Policy Impact: Socio-Economic

UNIT – II (10 Hours)

Theoretical Approaches to Public Policy

(a) Elite Theory
(b) Group Theory
(c) Incremental Theory
(d) Rational Choice Theory

UNIT – III (10 Hours)

Process of Public Policy

(a) Policy Formulation
(b) Policy Implementation
(c) Policy Evaluation

UNIT – IV (15 Hours)

Public Policy: Case Studies

(a) Education – National Education Policy (NEP) 2020
(b) Health – National Health Mission (NHM)
(c) Employment – Mahatma Gandhi National Rural Employment Guarantee Act (MNREGA)
(d) Economic Empowerment – Pradhan Mantri Jan-Dhan Yogana (PMJDY), Direct Benefit Transfer (DBT)

Essential/recommended readings

Unit 1

Anderson, J. (1975) Public Policy making. New York: Thomas Nelson and Sons Ltd.

Dye, T. (2002) Understanding Public Policy. New Delhi: Pearson.

Unit 2

Henry, Nicholos (2019) Public Administration and Public Affairs. New York: Routledge.

Simon, Herbert A. (1997) Administrative Behavior. New York: MacMillan.

Unit 3

Sapru, R.K. (1996) Public Policy: Formulation, Implementation and Evaluation. New Delhi: Sterling.

Self, Peter (1972) Administrative Theories and Politics. London: Allen and Unwin.

Unit 4

National Education Policy (NEP) 2020, Ministry of Human Resource Development, Government of India.

National Health Mission, Ministry of Health, Government of India.

Mahatma Gandhi National Rural Employment Guarantee Act-2005, Ministry of Rural Development, Government of India.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

GENERIC ELECTIVES (GE-9): Women and Politics in India: Concepts and Debates

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Women and Politics in India: Concepts and DebatesGE-9	4	3	1	0	12 Pass	NIL

Learning Objectives

The course attempts to bring together feminist theory and praxis by focussing on conceptual categories theorized by feminism and the mobilization of the feminist epistemology to focus on key concerns surrounding the everyday existence of women. This course would serve as the fundament introduction to the history of women's movement with particular emphasis on the women's movement in India. The course opens up the question of women's agency, taking it beyond the question of women empowerment and locates women as radical social agents. It attempts to question the complicity of social structures and relations in preserving gender inequality. This is extended to cover new forms of precarious work and labour under the new economy.

Learning outcomes

After completing this course, the students will be able to:

- Understand the concept of patriarchy, feminism, gender, etc.
- Understand the intersection between family, community and state in feminist debates
- Demonstrate awareness of the history of the women's movement in India

- Show familiarity with and awareness of the key issues taken up by the women's movement

SYLLABUS OF GE-9

UNIT – I (8 Hours)

Patriarchy and Feminism

a. Sex-Gender Debates
b. Public and Private Dichotomy
c. Power

UNIT – II (7 Hours)

Family and Community

UNIT – III (7 Hours)

Law, State and Women

UNIT – IV (8 Hours)

History of the Women's Movement in India

UNIT – V (7 Hours)

Violence against women

UNIT – VI (8 Hours)

Women and Labour: Unpaid labour, Reproductive and care work, Sex work

GENERIC ELECTIVES (GE-10): Digital Social Sciences

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Digital Social SciencesGE-10	4	3	1	0	12 pass	NIL

Learning Objectives

Digital technology in the discipline of Social Science cannot be viewed only as a tool for research but as something that transforms the nature of Social Science and the object of its study- the society- in course of researching about it. This very aspect of digital technology and its capacity for social transformation is the mainstay of the emerging field of Digital Social Sciences. The course aims to introduce students to this field of Digital Social Science sbyprimarily focussing on two intertwined aspects of the field- first, impact of digital technologies on the society and two, the role of digital technologies in the study of Social Sciences or the study of society. The intertwined aspect of the twin focus can be alternately formulated as the attempt of the course to understand social change taking place under the impact of digital technology while digital technology providing with the tools to map out these changes. The course begins with a basic introduction to digital literacy and its contribution to pedagogic Social Science and proceeds by way of foundational introduction to prominent technologies and digital spaces through which the aspects of the social can be understood.

The course throws light on how the digital turn has redefined the contours of debates surrounding personal identity and social identification through biometrical techniques having consequences both for social welfare and social surveillance; whether access to the digital spaces is impacting social cleavages, creating space for democracy or re-entrenching social inequality through the digital divide; is the digital economy offering new forms of employment or restructuring the vulnerability of the forms of labour; and how is algorithm driven digital space reformulating social choice and social classification. These are some of the illustrative questions through which the course intends to reflect upon the evolving relationship between digital technologies and social sciences.

Learning outcomes

On successful completion of the course, the students would demonstrate:

- An understanding of digital technology and the ways in which it shapes the society.
- An understanding into how digital tools are used as research and pedagogic devises to map out social changes
- Clarity on concepts of the digital world such as Big Data, Artificial Intelligence, Algorithm, etc.
- Familiarity with digital techniques such as the biometrics and digital spaces such as the Social Media in the sphere of communication or the Gig Economy in the market sphere

SYLLABUS OF GE-10

UNIT – I (6 Hours)

Digital Literacy in Social Sciences

UNIT – II (7 Hours)

Digital Information and Science of Society

UNIT – III (6 Hours)

Biometrics and identification

UNIT – IV (7 Hours)

Access to Technology and the Internet

UNIT – V (7 Hours)

Social Media and Public Sphere

UNIT – VI (6 Hours)

Labour in Digital Economy

UNIT – VII (6 Hours)

Artificial Intelligence and Algorithm

Essential/recommended readings

1. Digital Literacy in Social Sciences

ANNEXURE-7

N O T I F I C A T I O N

Sub: Amendment to Ordinance V

[E.C Resolution No. 60/ (60-1-4) dated 03.02.2023]

Following addition be made to Appendix-II-A to the Ordinance V (2-A) of the Ordinances of the University;

Add the following:

Syllabi of Semester-III of the following departments under Faculty of Interdisciplinary and Applied Sciences based on Under Graduate Curriculum Framework -2022 implemented from the Academic Year 2022-23.

DEPARTMENT OF BIOCHEMISTRY

Category-I

BSc. (Hons.) Biochemistry

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Metabolism of Lipids	04	02	0	02	Class XII with Science	NIL

Learning Objectives

The aim of this course is to give students an exhaustive understanding of lipid metabolism, enzymes involved in various catabolic and anabolic pathways of lipids, and their regulation. The course will also discuss the significance of such pathways in the context of metabolic disorders.

Learning outcomes

On successful completion of the course students will be able to:

- Explain the concepts of metabolism of lipids, characteristics of metabolic pathways and strategies used to study these pathways.
- Apply the knowledge of various catabolic and anabolic pathways in lipid metabolism and their regulation.
- Describe the diseases caused by defects in metabolism with emphasis on metabolic control.

SYLLABUS OF DSC-7

2.2 Course Contents

Theory

Unit 1. Digestion absorption and transport of lipids (04 Hours)

Digestion and absorption of lipids, Structure, classification and biogenesis of lipoproteins, Endogenous and exogenous pathways, Lipoprotein cycle.

Unit 2. Degradation of lipids (10 Hours)

Fatty acid oxidation: Activation of fatty acids, transport to mitochondria, β oxidation of saturated, unsaturated, odd and branched chain fatty acids, regulation of fatty acid oxidation, peroxisomal β oxidation, ω oxidation and α oxidation. Ketone-body synthesis and utilization and its regulation. Ketone body metabolism in diabetes and starvation.

Unit 3. Synthesis of lipids (12 Hours)

Transport of mitochondrial Acetyl groups to cytosol, Fatty acyl synthase complex, Synthesis of saturated and unsaturated fatty acids, Regulation of fatty acid metabolism. Fatty acid elongation systems, role of mixed function oxidases in fatty acid desaturation. Synthesis of triacylglycerol, glycerophospholipids and sphingolipids.

Unit 4. Cholesterol metabolism (4 Hours)

Biosynthesis of cholesterol and its regulation. Fates of cholesterol, cholesterol transport. Familial Hypercholesterolemia, Dyslipidemia, and atherosclerosis.

2.3 Practical: 60 Hours

1. Isolation of lipids and determination of phospholipid/ cholesterol ratio from egg yolk
2. Separation of Phospholipids by TLC
3. Estimation of Ketone bodies in blood/urine
4. Total Cholesterol estimation and HDL-Cholesterol estimation
5. Triglyceride estimation and lipid profile
6. Case studies: Obesity, Dyslipidaemia, Metabolic syndrome, Fasting, Ketosis

2.4 Essential readings:

1. Nelson, D.L., Cox, M.M. (2021). Lehninger: Principles of Biochemistry (8th ed.). New York, WH: Freeman and Company. ISBN-10: : 1319381499 ISBN-13-978 1319381493
2. Devlin, T.M. (2011). Textbook of Biochemistry with Clinical Correlations (7th ed.). New York, John Wiley & Sons, Inc. ISBN:978-0-470-28173-4.
3. Voet, D., Voet. J. G. (2013). Biochemistry (4th ed.). New Jersey, John Wiley & Sons Asia Pvt. Ltd. ISBN:978-1-11809244-6.

Suggested readings:

1. Stryer, L., Berg, J., Tymoczko, J., Gatto, G. (2019). *Biochemistry* (9th ed.). New York, WH: Freeman ISBN-13: 9781319114671
2. Denise R Ferrier (2018) Lippincott Illustrated Reviews Biochemistry, 7th Edition Publisher. Wolter Kluwer; ISBN-10. 8184739141.

4. Keywords

Lipids, Lipoproteins, triacylglycerol, Fatty acid oxidation, multienzyme complex, desaturases, ketone bodies, cholesterol

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DSC-8 : BIOENERGETICS

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Bioenergetics	04	02	00	02	Class XII with Science	NIL

Learning Objectives

The objective of the course is to provide students with the basic understanding of thermodynamic principles, bioenergetics and the roles of high energy compounds in metabolism. The course will also provide an understanding of the biological oxidation reduction reactions. The course will introduce students to the detailed molecular mechanisms of oxidative phosphorylation and structural as well as functional aspects of ATP synthase. The course will provide an in-depth knowledge of photophosphorylation.

Learning outcomes

On successful completion of the course students will be able to:

- Describe the basic tenets of thermodynamics and energy transformations that are taking place in the cell
- Explain the biological oxidation-reduction reactions and the mechanisms of electron transfer by electron carriers.
- Appreciate the concept of chemiosmotic theory and the mechanism of oxidative phosphorylation and ATP synthesis.
- Elaborate the basic mechanisms photophosphorylation in plants and microbes.

SYLLABUS OF DSC-8

B.Sc. (HONOURS) BIOCHEMISTRY (NEP STRUCTURE)
BCH-DSC-302: BIOENERGETICS
Semester – III

Unit I: Principles of Thermodynamics **(6 Hours)**

Laws of thermodynamics, Thermodynamic quantities: Gibbs free energy, enthalpy, entropy, Free energy change. Standard free energy change, equilibrium constant, actual free energy change, coupled reactions, energy charge, phosphorylation potential, ATP cycle. Chemical

basis of high standard free energy change of hydrolysis of ATP, phosphoenolpyruvate, 1,3 bisphosphoglycerate, phosphocreatine and thioesters. Bioluminescence.

Unit II: Biological Oxidation-reductions (4 Hours)

Redox reactions, reduction potentials, standard reduction potential and its relationship with standard free energy change, Nernst equation. Universal electron carriers-NADH and $FADH_2$.

Unit III: Oxidative phosphorylation (10 Hours)

Mitochondria as the site of oxidative phosphorylation, electron carriers in mitochondria, structural and functional organization of the mitochondrial respiratory chain, proton motive force, chemiosmotic hypothesis, inhibitors and uncouplers of mitochondrial electron transport chain. Structure of FoF1 ATP synthase and mechanism of ATP synthesis. Shuttle systems in mitochondria: Malate-aspartate and Glycerol 3-phosphate. Regulation of oxidative phosphorylation. ROS production and antioxidant mechanisms. Thermogenesis Alternative respiratory pathways in plants.

Unit VI: Photophosphorylation (10 Hours)

Harvesting light energy. General features of photophosphorylation, historical background and Hill's reaction. Role of photosynthetic pigments and light harvesting systems in plants and microbes. Photophosphorylation in purple and Green sulfur bacteria. Photophosphorylation in plants. Molecular architecture of Photosystem I and Photosystem II. The Z-scheme of photosynthetic electron flow. Oxygen evolving complex, cyclic photophosphorylation and its significance, ATP synthesis by photophosphorylation, efficiency of photophosphorylation, Bacteriorhodopsin.

2.3 Practical: - 60 Hours

1. Study the photosynthetic O_2 evolution in hydrilla plant.
2. Isolation of chloroplast from spinach leaves.
3. Estimation of chlorophyll content.
3. Study the Hill reaction by using artificial electron acceptor.
4. Estimation of the activity of PS-II.
5. Separation of photosynthetic pigments by TLC.
6. Isolation of mitochondria from liver and assay of mitochondrial marker enzyme SDH.

2.4 Essential readings:

1. Nelson, D.L., Cox, M.M. (2021). Lehninger: Principles of Biochemistry (8^{th}ed.). New York, WH: Freeman and Company. ISBN: 13: 978-1319381493 / ISBN-10:1319381499.
2. Berg, J.M., Tymoczko, J.L., Gatto G.J., Stryer L. (2019) *W.H:* Freeman and Company, ISBN:10: 1319114679, ISBN:13:978-1319114671

3. Garret, R.H., Grisham, C.M. (2016). Biochemistry (6thed.). Boston, Cengage Learning. ISBN-10: 1305577205, ISBN-13: 978-1305577205

Suggested readings:

1. Lodish, H., Berk, A., Kaiser, C.A., Krieger, M., Bretscher, A., Ploegh, H., Martin, K.C., Yaffe, M., Amon, A. (2021). Molecular Cell Biology (9th ed.). New York, WH: Freeman & Company. ISBN-13: 978-1319208523, ISBN-10:1319208525.
2. Voet, D., Voet. J. G. (2013). Biochemistry (4th ed.). New Jersey, John Wiley & Sons Asia Pvt. Ltd. ISBN : 978-1-11809244-6.

3. Keywords

Thermodynamics, free energy, oxidative phosphorylation, ATP synthase, photophosphorylation

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DSC-9: MEMBRANE BIOLOGY

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Membrane Biology	04	02	00	02	Class XII with Science	NIL

Learning Objectives

The objective of the course is to provide students with the basic understanding of membrane composition, structure-function relationship and properties of membranes. The course will also provide an understanding of the various types of membrane transporters and their molecular mechanisms. This course also provides understanding of molecular mechanisms involved in vesicular transport processes and membrane fusion.

Learning outcomes

On successful completion of the course students will be able to:

- Explain the general composition and structure of biomembranes.
- Describe the basic properties of membranes such as membrane fluidity.
- Elaborate various types of membrane transport mechanisms.
- Apply the knowledge gained about the molecular mechanism of vesicular transport and membrane fusion to understand the functioning of cells.

SYLLABUS OF DSC-9

Theory

Hours – 30 Hours

Unit I: Membrane composition and structure (10 Hours)

Composition of membranes: Lipids -Phospholipids, Glycolipids, sterols; Proteins - Peripheral Proteins, Integral Membrane Proteins and Lipid-Anchored proteins, and carbohydrates.

Historical background and various membrane models. Overview of membrane functions.

Comparison of the composition of various cellular and subcellular membranes. Lateral and transverse asymmetry in membranes. Role of Flippase, Floppase and Scramblase.

Model systems to study membranes - Lipid Monolayers, Planar Bilayer and Liposome, and their application. Polymorphic Lipid-Water Systems. The various determinants of polymorphic phases: CMC, lipid shape, critical packing parameter.

Unit II: Membrane dynamics (5 Hours)

Membrane fluidity: lateral, transverse and rotational motion of lipids and proteins. Factors affecting membrane fluidity- composition, barriers (tight junctions), cytoskeleton interactions,
microdomains – rafts, caveolae. Fence and gate model. Study of RBC membrane architecture.
Homeoviscous Adaptation. Techniques to study membrane dynamics: FRAP, TNBS, SPT.

Unit III: Membrane transport (9 Hours)

Thermodynamics of transport. Simple diffusion and facilitated diffusion. Passive transport glucose transporter and anion transporter. Primary active transporters- P-type ATPases, V-type ATPases, F-type ATPases. Secondary active transporters - lactose permease, Na+ - glucose symporter. ABC family of transporters – MDR and CFTR. Group translocation and bacteriorhodopsin. Ion channels: voltage-gated ion channels (Na+ and K+ channel) and ligand-gated ion channels (acetylcholine receptor), and aquaporins. Ionophores: valinomycin, gramicidin. Relationship of membrane transport and diseases.

Unit IV: Vesicular transport and membrane fusion (6 Hours)

Vesicular transport. Vesicles, Clathrin-Coated Vesicles and COP-Coated Vesicles (COPI and COPII). Molecular Mechanism of Vesicular Transport. Membrane Fusion (dynamin protein, Rab proteins, NSF/ SNAP complex, SNARE proteins). Receptor Mediated Endocytosis: LDL, Transferrin

2.3 Practical:

Total Hours : 60 Hours

1. Effect of lipid composition on the permeability of a lipid monolayer.
2. Isolation of membrane phospholipids and separation by TLC.
3. Effect of temperature, pH, detergents, and ionic strength on Tonoplast membrane of beetroot.
4. Determination of CMC of detergents, neutral and ionic
5. Preparation of RBC ghost cell.
6. Separation of RBC membrane proteins by SDS-PAGE.
7. Demonstration of Histidine uptake from the intestinal membrane.

2.4 Essential readings:

3. Keywords:

Membrane structure composition, membrane fluidity, membrane transport, vesicles, membrane fusion

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

COMMON POOL OF DISCIPLINE SPECIFIC ELECTIVES (DSEs)

DISCIPLINE SPECIFIC ELECTIVE (DSE-1)

credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Environmental Biochemistry	**04**	**02**	**00**	**02**	**Class XII with Science**	**NIL**

Learning Objectives

This course will provide understanding of environment around and which pollutants are of concern to us. It will provide knowledge of sustainability and methods which can help to improve the sustainability. It will also make students understand how toxicity can be monitored in our body and how our body copes to detoxify its internal system. It will also introduce methods which can be used to monitor the pollutants in various samples.

Learning outcomes

On successful completion of the course students will be able to:

- Describe various components of the environment.
- Evaluate the local and global scale of environmental problem.
- Explain the biological, chemical and physical processes relevant to environmental problems.
- Apply the hands on experience of some quantitative and qualitative research tools gained to assess and analyse the environmental problems

Theory

Credits: 2 **Total Hours- 30**

Unit 1: Introduction to Environment and the Pollutants **(9 Hours)**

Components of Environment - Atmosphere, Hydrosphere, Lithosphere and Biosphere. Global Warming and Climate change. Ozone depletion. Normal Chemistry of - Air, Water, Soil. Environmental Toxins-Physical Pollutants- Noise, Light and Radiation and Air Pollutants- Carbon Monoxide, Lead, Nitrogen Oxides, Ozone, Particulate Matter, Sulphur Dioxide, Methane Volatile Organic Chemicals (VOC); Water Pollutants - Volatile Organic Chemicals (VOC), Heavy Metals, Insecticides, Herbicides/ Endocrine Disruptors; Soil Pollutants-

Heavy metals, Herbicides/pesticides, Polyaromatic Carbon (PAH), Microplastics; Source, Effect and Impact on Flora, Fauna including Human Beings. Definition of Terminologies: Air Quality Index (AQI) Suspended Particulate matter (SPM), Water Quality Index (WQI), Air Pollution Tolerance Index (APTI), Anticipated Performance Index (API).

Unit 2: Environment and Xenobiotics (7 Hours)

Understanding the principle of Toxicity. Concept of Dose and Response (LD50). Process of Bioaccumulation, Bioaugmentation and Biotransformation. Impact of pollutants on human health Mammalian Detoxification by Liver to Organic Chemicals (Heavy Metals, Endocrine Disruptors, Microplastics).

Unit 3: Sustainability and its Enhancement (8 Hours)

Concept of Sustainability and Enhancement of Sustainability, Waste Management (Refuse, Reduce, Reuse and Recycle), Sewage treatment and Industrial effluents (tanning and electroplating), Bioremediation- Introduction and Types of Bioremediations- Phytoremediation, Microbial Bioremediation, In-situ Remediation, Ex-situ Remediation.

Unit 4: Techniques to Analyse Pollutants (6 Hours)

Determination of pollutants in soil, water, air, blood by following Analytical Techniques: Flame Photometer; Atomic Absorption Spectroscopy (AAS); Inductive Coupled Plasma (ICP -OES & MS); Gas Liquid Chromatography (GC-MS); Ion Chromatography; High Performance Liquid Chromatography (HPLC); UV spectrophotometer; Biosensors and its application in pollution detection; Metagenomics.

2.3 Practical:

Credits: 2 Total Hours - 60

1. Evaluating APTI and API of Herbs/Shrubs/Trees
2. Evaluating seasonal variations of AQI and SPM
3. Evaluating C/N/P/K content of soil by Spectrophotometry/Titrimetric method
4. Detecting Microbial Contamination of water
5. Composting of waste (Leaf/Kitchen Waste/Cow dung) and Detecting Maturity by pH and Electric conductivity (EC) content changes
6. Studying Enzymatic Activity (amylase/urease) in the soil sample due to microbial activity
7. Student Environment Projects.

2.4 Essential readings:

- Basic Concepts on Environmental Chemistry by Des. W. Conwell (2005) 2nd edition, CRC press, ISBN 9781498770484
- Environmental Chemistry by Stanley E Manahan, 11th Edition, Taylor and Francis,2022, ISBN 9780367560546
- Biodegradation and Bioremediation by Alexander Martin, 2nd Edition, Academic Press, ISBN 978-0-12-049861-8

- Fundamentals of Ecology author Eugene Odum, Cary W. Barrett, 5th edition Cengage learning India. ISBN 9788131500200
- Environment and Ecology author P.D. Sharma, 12th Edition, Rastogi Publication. ISBN 978-93-5078-068-8

3. Keywords

Environment, Climate Change, ozone depletion, Waste Management, Bioremediation, Toxicity, Bioaccumulation, Bioaugmentation, Biotransformation, Detoxification, Biosensors.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVE (DSE-2)

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Biochemical Applications in Forensic Sciences	**04**	**02**	**00**	**02**	**Class XII with Science**	**NIL**

Learning Objectives

The course aims to provide an understanding of the applications of biochemistry in forensic sciences through analysis of evidence, which will help students develop analytical and problem-solving skills for real life situations. With a background of the DSC of Biochemistry, the students get an insight into a major area of application of Modern Biology. The course will keep abreast with all recent developments and emerging trends in forensic science like DNA fingerprinting, brain mapping and facial reconstruction; thus, helping interested students take up forensic science as a future course of study.

Learning outcomes

On successful completion of the course students will be able to:

- Describe the fundamental concepts and principles of forensic science and their significance.
- Explain how a forensic investigation is initiated through preservation of evidences, as well as chemical, physical and biological methods of their analysis
- Identity an individual by document evaluation, fingerprints, footprints and DNA analysis and identify the accurate age, sex and identity of an individual and identify time and cause of death in a forensic investigation.
- Explain the importance of precision, reproducibility and accuracy in identification of a biological sample.
- Elaborate the methods used to analyze samples for drug testing, ink and stain testing and document and handwriting verification.
- Describe the physiology and biochemistry behind tests like Narco Analysis, polygraphy, lie detection and facial reconstruction.
- Apply the knowledge gained from hands-on-experience in some of the basic biochemical processes involved in forensic investigation.

2.2 Course Contents

Theory

Unit I: Introduction to forensic science and application of biological sciences to forensic investigation (10 Hours)

History and Development of Forensic Science, Biochemical analysis of various biological evidences: blood, semen, viscera, bite marks, and hair. Establishment of identity of individuals: fingerprints, footprints, blood and DNA. Anthropology – skeletal remains, Odontology. Time of death - rigor mortis, liver mortis, algor mortis, forensic entomology. Biochemical basis for determination of cause of death. case studies

Unit II: Application of chemical sciences to forensic investigation (6 Hours)

Detection of drugs of abuse and narcotics in biological samples, Toxicological examination of viscera, detection of petroleum products and food adulteration. Analysis of inks and their use in questioned document identification. Blood spatter analysis, Case studies

Unit III: DNA Fingerprinting (6 Hours)

Introduction to DNA-and source of DNA in Forensic case work, Techniques of DNA fingerprinting-RFLP, STR, PCR, DNA fingerprinting in paternity disputes, mass disaster and other forensic case work, studying kinship by DNA profiling: Related individuals have similar DNA profiles, DNA profiling and the remains of the Romanovs. Sex identification by DNA analysis: PCRs directed at Y chromosome-specific sequences, Amelogenin gene typing. Case studies

Unit IV: Recent advances in forensics (8 Hours)

Narco analysis: theory, forensic significance, future prospect, *Brain mapping:* introduction, EEG, P-3000 wave, forensic applications, limitation of technique, *Polygraph*: Principle and technique, polygraph as forensic investigative tool, use of psychoactive drugs in forensic analysis. NHRC guidelines for polygraph test. *Facial reconstruction*: Method and technique, facial reconstruction in forensic identification, Case studies.

2.3 Practicals – 60 Hours

1. Definition, Identification and Mapping of Crime scene
2. Collection, Preservation, Packaging, and Labeling of biological evidence for their forensic investigation.
3. Preliminary and Confirmatory test for blood/semen/saliva
4. Examination of Micro Evidences: fiber, hair, pollen and soil
5. Fingerprint development from various surfaces and their microscopic and chemical examination
6. Handwriting identification based on class characteristic and individual characteristics
7. Identification of dyes, drugs and ink by TLC

8. Blood spatter analysis
9. DNA Fingerprinting: Sex determination through Y specific STRs and Maternal lineage identification through mitochondrial DNA comparisons.
10. Field trip to a forensic laboratory

2.4 Essential readings:

- James, S.H., Nordby, J.J. & Bell, S. (2014). *Forensic Science: An Introduction to Scientific and Investigative Techniques, Fourth Edition*: Taylor & Francis. ISBN 9781439853832

- Saferstein, R. (2018). *Criminalistics: An Introduction to Forensic Science, Twelveth edition*: Pearson Education. ISBN 10:0134477596, ISBN 13: 9780134477596
- Veeraraghavan, V. (2009). *Handbook of Forensic Psychology, First Edition*: Selective & Scientific Books, ISBN 13: 9788189128166.

Suggested readings:

- Lee, H., Palmbach, T. & Miller, M. (2001). *Henry Lee's crime scene handbook, First Edition*: Academic Press ISBN 9780080507989
- Parikh, C.K. (2016). *Parikh's textbook of medical jurisprudence, forensic medicine and toxicology: for classrooms and courtrooms*, *Seventh Edition*: CBS Publishers and Distributors. ISBN 9788123926469

3. **Keywords**

Forensic biology; blood spatter analysis; toxicology; narco-analysis; DNA fingerprinting; polygraph; odontology; forensic entomology.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVE (DSE-3)

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Microbiology	04	02	00	02	Class XII with Science	NIL

Learning Objectives

The course aims to trace the history of development of the discipline of Microbiology and to emphasize the existence of the immense diversity in the microbial world and maintenance of microbes under laboratory conditions. Through this course students will be introduced to the concept of different modes of gene transfer in bacteria. Further, students will be made aware about the applications of microorganisms in food and industry.

Learning outcomes

On successful completion of the course students will be able to:

- Identify different types of microbes
- Perform routine microbiological practices including sterilization, media preparation, maintenance of microbial culture, microbial growth etc.
- Carry out basic research using microbes
- Describe varied applications of microbes

2.2 Course Contents

Theory

Unit I: History and Diversity of Microbial world (8 Hours)

Spontaneous generation versus biogenesis, contributions of Anton von Leeuwenhoek, Joseph Lister, Paul Ehrlich, Richard Petri, Charles Chamberland, Edward Jenner, Louis Pasteur, Robert Koch, Martinus W. Beijerinck, Sergei Winogradsky, Alexander Fleming, Elie Metchnikoff and Emil von Behring. General characteristics of different groups: Acellular microorganisms (Viruses, Viroids, Prions) and Cellular microorganisms (Bacteria, Archaea, Algae, Fungi and Protozoa. Cell-wall: Composition and detailed structure of Gram positive and Gram-negative cell walls, mechanism of Gram staining

Unit II: Microbial Nutrition, Growth and Control (6 Hours)

Nutritional types of microorganisms, growth factors, culture media- synthetic and complex, types of media; isolation of pure cultures, growth curves, mean growth rate constant, generation time; influence of environmental factors on growth of microbes: effect of pH,

temperature, solute, oxygen concentration, pressure and radiations. Sterilization, disinfection and antiseptics.

Unit III: Microbial Genetics **(6 Hours)**

Conjugation, Transformation and Transduction. Gene mapping in Bacteria

Unit IV: Application of Microbes **(10 Hours)**

Basic design of fermenter, continuous and discontinuous culture. Preparation of fermented food products such as curd and cheese. Preparation of alcoholic beverages like wine and beer. Treatment of waste-water (Municipal treatment plant) and sewage. Bioremediation and biodegradation. Human microbiome: Role in health and disease**.** Soil Microbiome: Role in plant health

2.3 Practical: 60 Hours

1. To prepare and sterilize the culture media for the growth of microorganisms
2. To perform various culture transfer techniques: Solid to solid (streaking), liquid to solid (spreading), liquid to liquid, solid to liquid and determine CFU/ml
3. To study growth curve of bacteria
4. To study the effect of pH/temperature on the growth of bacteria
5. To perform gram staining
6. To determine the effect of antibiotics using disc diffusion test
7. Study of different shapes of bacteria, fungi, algae, protozoa using permanent slides/pictographs

2.4 Essential readings:

1. Willey, J., Sherwood, L., Woolverton, C. (2017). Prescott's Microbiology (10th ed.). McGraw Hill international. ISBN 13: 9781259657573.
2. Chan, M. J., Krieg E. C. S., Pelczar, N. R. (2004) Microbiology (5th ed.). McGraw Hill International. ISBN 13: 9780094623206.

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Proteins and Enzymes	04	02	00	02	Class XII with Science	NIL

Learning Objectives

The objective of this course is to provide an overview of protein biochemistry to undergraduate students with diverse science backgrounds, since proteins are the most versatile functional entities in life with applications in various life sciences research as well as in industry and biomedicine. The biochemical, structural, functional and aspects of interaction of proteins will be introduced in this course. The course also aims to provide knowledge about enzyme kinetics, regulation of enzyme activity and diverse applications of enzymes in disease diagnosis and therapy as well as in industry.

Learning outcomes

On successful completion of the course students will be able to:

- Familiar with unique features and characteristics of proteins.
- Aware of the relationship between three-dimensional structure of proteins and their functions.
- Gain insight into the thermodynamic and molecular basis of catalysis by enzymes and the underlying basis of their specificity.
- Understand the kinetics of enzyme catalyzed reactions and clinical importance of enzyme inhibitors.
- Also learn to appreciate how enzymes are regulated and the physiological importance of enzyme regulation in the cell.
- Gain insight into the applications of enzymes in research and medicine.

B.Sc. (HONOURS) BIOCHEMISTRY (NEP STRUCTURE)
BCH-GE-4: PROTEINS AND ENZYMES
Semester – III

2.2 Course Contents

THEORY – Total 30 Hours

UNIT I: Introduction to proteins (8 Hours)

Amino acids and their properties. Peptides and their biological significance - hormones, antibiotics and growth factors. Diversity of proteins and their functions. Conjugated proteins, multimeric proteins and metalloproteins. Organization of protein structure - primary, secondary, tertiary and quaternary structures. Bonds in protein structures - covalent and non-covalent. Dihedral angles. Ramachandran map, Secondary structure - alpha-helices, beta-strands, beta-sheets and turns.

UNIT II: Three-dimensional structures and protein folding (7 Hours)

Characteristics of tertiary and quaternary structures. Structure-function relationship in proteins. 3D structures of globular and fibrous proteins – myoglobin, hemoglobin, collagen and keratin. Protein folding - denaturation and renaturation (Ribonuclease A). Role of chaperones. Protein misfolding diseases - Alzheimer's and Cruetzfeldt-Jakob disease.

UNIT III: Introduction to enzymes and enzyme kinetics (8 Hours)

General characteristics of enzymes; nature of enzymes - protein and non-protein. Cofactor and prosthetic group, apoenzyme, holoenzyme. Classification and nomenclature of enzymes. Catalytic power and specificity of enzymes (concept of active site), Fischer's lock and key hypothesis, Koshland's induced fit hypothesis. Relationship between initial velocity and substrate concentration, equilibrium constant, steady state kinetics. Michaelis-Menten equation, Km and Vmax, Lineweaver-Burk plot. Enzyme inhibition, reversible inhibition (competitive, uncompetitive, non-competitive and mixed) and irreversible inhibition. Examples - FdUMP and penicillin.

UNIT IV: Regulation of enzyme activity and applications of enzymes (7 Hours)

Control of activities of single enzymes and metabolic pathways: feedback inhibition, allosteric modulation (aspartate transcarbamoylase). Regulation by reversible covalent modification (glycogen phosphorylase). Zymogens (chymotrypsinogen).Enzymes as reagents (glucose oxidase), marker enzymes in diagnostics (SGPT, SGOT); Enzyme therapy (streptokinase); Enzymes in research (Taq polymerase, restriction endonucleases).

PRACTICALS – 60 Hours

1. Estimation of proteins by Biuret method.
2. Estimation of proteins by Lowry's method.
3. Determination of isoelectric pH of casein.
4. Determination of activity of an enzyme by continuous assay.
5. Determination of activity of an enzyme by discontinuous assay.
6. To plot a progress curve for an enzyme.
7. Determination of K_m and V_{max} of an enzyme using Lineweaver-Burk plot.

GENERIC ELECTIVES (GE-5)

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Nutrition and Food Science	**04**	**02**	**00**	**02**	**Class XII with Science**	**Nil**

Learning Objectives

The course aims to provide the basic knowledge of food and its importance in nutrition. The students will understand the importance of a balanced diet and the association of life style disorders with unhealthy food eating habits. They will be able to understand the concept of under and over nutrition and the deficiency diseases that result due to deficiency of micronutrients in diet.

Learning outcomes

On successful completion of the course students will be able to:

- Describe the importance of food in our life
- Explain how food is spoiled and learn about some common food borne diseases/ food allergies
- Elaborate the functions of macro and micronutrients in our body
- Apply the knowledge gained to rationalize the diseases associated with malnutrition/ overnutrition and deficiency diseases

2.2 Course Contents

Theory – 30 Hours

Unit 1 –Basics of Food Science and Nutrition (5 Hours)

Definition of Food, Nutrition, Nutrient, Nutritional status

Energy value of foods, determination, physiological fuel values, SDA of foods, BMR & RMR, factors influencing BMR. Recommended allowance-RDA for Indians, basis for requirement, energy allowance for different growth pattern of children, energy allowance for various activities and different age groups. Balanced diet, fad diets

Unit 2– Macronutrients **(10 Hours)**

Introduction to macronutrients and their function, digestion, absorption and assimilation of carbohydrates, lipids and proteins, Glycemic response and glycemic index of foods, dietary fiber- types, properties, sources and its role, importance of essential fatty acids, their requirements and deficiency, role & nutritional significance of PUFA, MUFA, SFA, omega-3/omega 6 fatty acid, essential amino acids, dietary protein quality- PER, NPU, BV, chemical score and PDCAAS. Factors affecting protein bio-availability including anti-nutritional factors, protein toxicity, amino acid complementation and Supplementation in foods

Unit 3 – Micronutrients **(10 Hours)**

Fat soluble vitamins: Sources, physiological importance and deficiency diseases. Water soluble vitamins: Sources, physiological importance and deficiency diseases. Minerals: Sources, physiological importance and diseases due to excess or deficiency of Ca, P, Na, K, Fe, Zn, S, Mg, Se, Cu.

Unit 4 – Food and Health **(5 Hours)**

Food as medicine: medicinal value of functional foods such as garlic, ginger, turmeric, tulsi, fenugreek, ajwain, aloe vera, moringa, role of Gut microbiome in maintaining health, pre and probiotics, various types of food additives: emulsifiers, preservatives and food colors, benefits and risks associated with these, food allergies, food spoilage, food poisoning, food borne diseases, Cholera, Hepatitis, Typhoid,Botulism

2.3 Practicals – 60 Hours

1. Analysis of food labels for the presence of nutrients and other additives.
2. Estimation of carbohydrate content in food
3. Degree of unsaturation of any three different oils using Bromine test
4. Acid value / peroxide value of oil
5. Estimation of vitamin E / vitamin C in food
6. Morphological identification of important yeast and mold in foods (slides and culture)-
7. Assessment of diet chart for the presence/absence of nutrients
8. Case studies: PEM (Marasmus and Kwashiorkor), Diabetes, Obesity, Vitamin and mineral deficiency

2.4 Essential readings:

1. Mahan, L.K., Strings, S. E., Raymond, J. (2012) *Krause's Food and Nutrition Care process.* Elsevier's Publications. ISBN: 978-1-4377-2233-8.

GENERIC ELECTIVES (GE-6)

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course(if any)
		Lecture	Tutorial	Practical/ Practice		
Physiology of Sports and Exercise	**04**	**02**	**00**	**02**	**Class XII with Science**	**Nil**

Learning Objectives

To learn the changes in human body systems due to exercise and sporting activities in an integrated manner. To gain knowledge about sports training. Understanding the basic system physiology in sports. To understand the physiological adaptation and metabolic

changes during exercise at varying intensities. To gain skill in measurement of various physiological responses.

Learning outcomes

On successful completion of the course students will be able to:

- Explain the effect of exercise in detail and in application perspective.
- Measure the changes and interpret them in the context of sports.
- Describe the system concepts behind sports performance.
- Explain human body functioning during exercise and thus provide appropriate nutrition/fuel.

2.2 Course Contents

Theory – 30 Hours

Unit I: Introduction to Exercise Physiology (Total Hours 4)

Structure, types and Function of Skeletal Muscle. Fuel for Exercise: Aerobic and anaerobic muscle metabolism, Muscle Fatigue.

Unit II: Cardiovascular and Pulmonary control in Sports Performance (Total Hours : 10)

Heart rate and Blood Pressure. Electrophysiology of Heart, Introduction and interpretation of EKG/ECG, Pacemakers and its Rhythms. Mechanics of ventilation during exercise. Cardiorespiratory Responses to physical activities. Training of cardiorespiratory responses in different types of physical activities for maximising output.

Unit III: Hormonal Effects on Physical Activities (Total Hours : 8)

Role of epinephrine, cortisol, sex hormones, growth hormones and growth factors on physical endurance. Effect of aging on Sport performance.

Unit IV: Drugs and Doping in Sports (Total Hours :8)

History and evolution of Doping and Anti-doping in Sports, Prevalence of Doping in Sports, Doping Control in Sports, Role of Athlete Support Personnel in Preventing Deliberate and Inadvertent Use of Prohibited Substances, WADA Rules and Regulations.

2.3 Practical: 60 Hours

1. BMI Estimation with and without software - Techniques of taking various anthropometric measurements; Skinfold measurement and Body Fat Percentage calculations.
2. Aerobic Power Field Assessments; Cooper 1.5-Mile Run/Walk Test and 12-Minute Run/Walk Test/Rockport Fitness Walking Test.

3. Tests for anaerobic power; Wingate Test/Anaerobic Cycling Power
4. High-Intensity Fitness Testing/ AAHPER health related physical fitness test Léger 20 m Shuttle Run Test/ Margaria - Kalamen Stair Climb Test,
5. Pulmonary Function Testing: Ratio of Forced expiratory volume (FEV1/FEV6) by spirometry, Lung Volumes and Capacities
6. Determination of age by Radiography (Dry lab)
7. Blood Pressure Measurements: Effects of Body Position, Dynamic Exercise and Isometric Contractions on BP.
8. Determination of Physiological adaptation with training through Submaximal Exercise Testing; Submaximal Bench Step Test/Submaximal Cycle Ergometer Test

2.4 Essential readings:

1. Physiology of Sport and Exercise 6th Edition with Web Study Guide-Loose-Leaf Edition by W. Larry Kenney, Jack Wilmore, David Costill.
2. Endocrinology of Physical Activity and Sport, Second Edition Constantini, Naama, Hackney, Anthony C, 2013.
3. David R. Mottram, Neil Chester (2018) Drugs in Sports, Routledge, ISBN:1351838989. Portefield, Jason (2008) Doping: athletes and drugs, Rosenn Publishing, New York, ISBN:1-4042-1917-5.
4. Laboratory Manual for Exercise Physiology 2nd Edition. With Web Study Guide, Human Kinetics by G. Gregory Haff, Charles Dumke, 2018.
5. Physiological Tests for Elite Athletes 2nd Edition by Australian Institute of Sport Rebecca Tanner, Christopher Gore, 2012.

Suggested readings:

1. A Textbook of Sports & Exercise Physiology by Dey Swapan Kumar, Jaypee Publishers
2. Exercise Physiology: Theory and Application to Fitness and Performance 10th Edition by Scott Powers and Edward Howley 2018.
3. Exercise Physiology: Nutrition, Energy, and Human Performance 8th Edition by William D. McArdle, Frank I. Katch, Victor L. Katch
4. Practical ECG for Exercise Science and Sports Medicine by Greg Whyte, Sanjay Sharma, Human Kinetics, 2010
5. ACSM's Guidelines for Exercise Testing and Prescription, 10th Edition by American College of Sports Medicine. Wolters Kluwer, 2017.

3. Keywords

Muscle metabolism, Muscle Fatigue, Cardiorespiratory Responses, Sport performance, Prohibited Substances

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE – 7: BASIC CONCEPTS OF CELL BIOLOGY

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
MICROB-DSC301: BASIC CONCEPTS OF CELL BIOLOGY	4	3	0	1	Class XII pass with Biology/ Biotechnology/ Biochemistry	NIL

Learning Objectives

The Learning Objectives of this course are as follows:

- The major objective of this course is to introduce the students to the essentials of eukaryotic cell biology. The students will gain knowledge about the physical and chemical architecture of cells as well as structural and functional details of different cell organelles.
- To familiarize the students with cell cycle events, and mechanisms of cell communication and cell death. They will be educated about the hallmarks, etiology and diagnosis of cancers. They will be introduced to the cutting-edge science of stem cell technology, their production and various applications

Learning outcomes

The Learning Outcomes of this course are as follows:

- Student will be able to describe the structure of the cell wall and cell membrane, membrane transport mechanisms, cell-matrix and cell-cell interactions, and the importance of the cytoskeleton.
- Student will be able to describe the organization and functioning of various cell organelles and gain insights into the internal organization of the nucleus.
- Student will be able to discuss the mechanisms of protein sorting, intracellular trafficking, and protein export.
- Student will be able to analyse the structure of the plant and animal cell by microscopic observation and the ultrastructure of cell organelles by electron microscopy.

- Student will be able to demonstrate the fractionation of cell components by ultracentrifugation and describe cell sorting by flow cytometry.

SYLLABUS OF DSC-7

UNIT – I (12 hours)

Cell envelope and cell interactions: Structure and composition of bacterial, fungal and plant cell walls. Composition of plasma membrane: phospholipid bilayer, membrane proteins, glycocalyx. Membrane transport mechanisms: passive diffusion, facilitated diffusion (carrier proteins and channel proteins), active transport (Na+-K+ ATPase, ABC transporters). Components of extracellular matrix: polysaccharides, structural proteins, adhesion proteins. Cell-matrix interactions: cell surface receptors, focal adhesions, hemi-desmosomes. Cell-cell interactions: adhesion junctions, tight junctions, gap junctions, plasmodesmata

UNIT – II (6 hours)

Cytoskeleton: structural organization of actin filaments, microtubule structure and dynamics, structure of centriole, cilia, flagella. Microtubule motor proteins: kinesins and dyneins.

UNIT – III (12 hours)

Structures and functions of nucleus and other cell organelles: Structure and function of nucleus and its components (nuclear envelope, nuclear lamina, nuclear pore complex). Internal organization of nucleus: heterochromatin, euchromatin, nucleolus. Structure and function of cell organelles: mitochondrion, chloroplast, ribosome, peroxisome, lysosome

UNIT – IV (15 hours)

Protein sorting and membrane trafficking: Structure of endoplasmic reticulum (smooth and rough, ER transmembrane proteins). Targeting and translocation of proteins across the endoplasmic reticulum, protein processing, folding and assembly. Brief overview of the role of endoplasmic reticulum in synthesis of lipids and assembly of phospholipid bilayers. Structure and organization of golgi apparatus. Protein glycosylation, protein sorting, and exocytosis. Signal sequences in transmembrane transport: nuclear localization signal, endoplasmic reticulum signal sequence

Practical component **30 Hours**

UNIT 1: (20 hours)

Cell and cell organelles: Use of light microscopy and electron microscopy in studying cells. Study of the structure and function of a plant cell and an animal cell through microscopy. Analysis of the ultrastructure of cell organelles through electron micrographs: nucleus, plasma membrane, mitochondrion, chloroplast, ribosome, endoplasmic reticulum, golgi bodies, lysosome, centriole

Unit 2: (10 hours)

Cell fractionation and sorting: Principle and working of cell fractionation by density gradient centrifugation using virtual lab. Principle and working of cell sorting by flow cytometry using virtual lab. Analysis of cell cycle stages using flow cytometry.

Essential/recommended readings

Theory:

1. Molecular Cell Biology by H. Lodish, A. Berk, C. Kaiser, M. Krieger, A. Bretscher, H.Ploegh, A. Amon and K.C. Martin. 9th edition. W.H. Freeman, UK. 2021.
2. Essential Cell Biology by B. Alberts, K. Hopkin, A.D. Johnson, D. Morgan, and M. Raff. 5th edition. W.W. Norton & Co, USA. 2019.
3. Karp's Cell and Molecular Biology by G. Karp, J. Iwasa and W. Marshall. 9th edition. Wiley, USA. 2019.
4. The Cell: A Molecular Approach by G.M. Cooper. 8th edition. Sinauer Associates, UK. 2018.
5. Cell Biology by T.D. Pollard, W.C. Earnshaw, J. Lippincott-Schwartz and G.T. Johnson. 3rd edition. Elsevier, USA. 2016.
6. Becker's World of the Cell by J. Hardin and G. Bertoni. 9th Edition. Pearson, USA. 2015.
7. Cell and Molecular Biology by E.D.P. De Robertis. 8th edition. Lippincott, Williams and Wilkins, USA. 2006.

Practicals:

1. A Cell Biology Manual by J. Francis. Kendall/Hunt Publishing Co, USA. 2022.
2. Practical Laboratory Manual- Cell Biology by A. Gupta, B.K. Sati. Lambert Academic Publishing, USA. 2019.
3. Cell Biology Practical Manual by R. Gupta, S. Makhija and R. Toteja. Prestige Publishers, India. 2018.
4. Laboratory Manual of Cell Biology by R. Majumdar, R. Sisodia. Prestige Publishers, India. 2018.
5. Essential Cell Biology Vol 1: Cell Structure- A Practical Approach by J. Davey and M.Lord. Oxford University Press, UK. 2003.
6. Essential Cell Biology Vol 2: Cell Function- A Practical Approach by J. Davey and M. Lord. Oxford University Press, UK. 2003.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE –8:
MICROBIAL PHYSIOLOGY AND METABOLISM- I

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
MICROB-DSC302: **MICROBIAL PHYSIOLOGY AND METABOLISM- I**	**4**	**3**	**0**	**1**	**Class XII pass with Biology/ Biotechnology/ Biochemistry**	**NIL**

Learning Objectives

The Learning Objectives of this course are as follows:

- The main objective of this course is to enable students to understand the underlying mechanisms governing various physiological and metabolic features of prokaryotes. These include transport mechanisms for the uptake of nutrients, bacterial growth, and the diversity of prokaryotes due to (i) adaptations to the different habitats in which they grow and (ii) metabolic pathways for energy production and carbon and nitrogen assimilation.
- The course will build the strong foundation needed by the students for further studies in the advanced fields of microbiology including metabolic engineering.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Student will be able to discuss the diverse nutritional categories of bacteria/archaea and mechanisms of transport of nutrients across membranes of microbes.
- Student will be able to describe the physiology of bacterial growth, calculation of generation time and specific growth rate, and the effects of physicochemical factors on microbial growth.
- Student will be able to describe the metabolic pathways used by bacteria for energy generation and conservation during growth on glucose and other carbon sources under aerobic and anaerobic conditions.
- Student will be able to discuss energy production processes in microbes.

- Student will be able to analyse growth kinetics of bacteria, and evaluate the impact of external factors on bacterial growth kinetics.

SYLLABUS OF DSC-8

UNIT – I (10 hours)

Nutritional diversity amongst bacteria and mechanisms of nutrients transport: Classification of bacteria based on carbon, electron and energy sources. Nutrient transport across membrane: passive transport (diffusion- simple and facilitated), active transport (primary and secondary with suitable examples, concept of uniport, symport, antiport) and group translocation. Electrogenic and electroneutral transport. Transport of iron in bacteria through concerted action of primary and secondary active transport.

UNIT – II (12 hours)

Microbial growth patterns, kinetics and physiological adaptations: Batch, continuous, diauxic and synchronous growth. Bacterial growth kinetics: growth curve, generation time and specific growth rate. Physiological adaptations by microbes for growth under different environmental conditions: effect of temperature, pH, oxygen concentration, solute and water activity.

UNIT – III (12 hours)

Chemoheterotrophic metabolism under aerobic conditions: Concept of metabolism and energy production. Glucose degradation/catabolism by microbes via: glycolysis, Entner-Doudoroff (ED) pathway, Pentose phosphate pathway (PPP). The pyruvate dehydrogenase reaction, Krebs Cycle, anaplerotic reactions, Glyoxylate cycle. Utilization of fructose, lactose and pentose

UNIT – IV (11 hours)

Electron transport and energy production: Redox potentials of the electron carriers, organization of electron carriers in mitochondria, coupling sites, mechanisms of proton translocation, chemiosmotic hypothesis, oxidative phosphorylation and ATP generation, uncouplers and inhibitors of respiratory chain, comparison of mitochondrial and bacterial electron transport, branched respiratory chain in E. coli under high and low levels of O_2.

Practical component **30 Hours**

UNIT 1: (20 hours)

Microbial growth: Study of various methods of measurement of microbial growth. Collection of data and plotting of bacterial growth curve of E. coli using turbidometric method (using optical density as the indirect method of measurement of bacterial growth). Understanding bacterial growth kinetics by calculation of generation time and specific growth rate of bacteria from the graph. Study of radial growth of *Aspergillus niger* using point inoculation method

Unit 2: (10 hours)

Effect of environmental factors on microbial growth: Study of the effect of physicochemical factors like temperature and pH variations on the growth of *E.coli*. Understanding the physiological importance of catalase and oxidase in protecting bacteria from the harmful effects of oxidizing environment: detection and assay of their activity in bacteria.

Essential/recommended readings

Theory:

1. Lehninger Principles of Biochemistry by D.L. Nelson and M.M. Cox. 8th edition. W.H. Freeman Fundamentals of Bacterial Physiology and Metabolism by Rani Gupta and Namita Gupta. Springer Nature Singapore Pvt. Ltd., Singapore. 2021.
2. Lehninger Principles of Biochemistry by D.L. Nelson and M.M. Cox. 8th edition. W.H. Freeman and Company, UK. 2021.
3. Brock Biology of Microorganisms by M.T. Madigan,J. Aiyer,D. Buckley,W.Sattley and D. Stahl.16th edition. Pearson, USA. 2021.
4. Prescott's Microbiology by J. M. Willey, K. Sandman and D. Wood. 11th edition. McGrawHill Higher Education, USA. 2019.
5. Microbial Biochemistry by G.N. Cohen. 2nd edition. Springer, Germany. 2014.
6. The Physiology and Biochemistry of Prokaryotes by D. White, J. Drummond and C. Fuqua. 4th edition. Oxford University Press, UK. 2011.
7. Microbial Physiology by S.R. Reddy and S.M. Reddy. Scientific Publishers India. 2007.
8. Microbial Physiology by A.G. Moat, J.W. Foster and M.P. Spector. 4th edition. John Wiley& Sons, USA. 2002.

Practicals:

1. Essentials of Practical Microbiology by A. Sastry and S. Bhat. 2nd edition. Jaypee Brothers Medical Publishers, India. 2021.
2. Microbiology: A Laboratory Manual by J. Cappuccino and C.T. Welsh. 12th edition. Pearson Education, USA. 2020.

4. Microbiology Practical Manual edited by A. Jain, J. Agarwal, V. Venkatesh. Elsevier, India. 2018.
5. Applied Microbial Physiology: A Practical Approach by P. M. Rhodes and P. F. Stanbury. IRC Press. 1997.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE – 9: ENVIRONMENTAL MICROBIOLOGY

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
MICROB-DSC303: ENVIRONMENTAL MICROBIOLOGY	**4**	**3**	**0**	**1**	**Class XII pass with Biology/ Biotechnology/ Biochemistry**	**NIL**

Learning Objectives

The Learning Objectives of this course are as follows:

- The main objective of this paper is to provide students with in-depth knowledge of diverse microbial populations/ communities present in different habitats in the ecosystem.
- Students will become aware of the inter-microbial, microbe-plant and microbe-animal interactions and their benefits. The students will also learn about the management of solid and liquid waste and different strategies for microbial remediation of environment pollutants.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Student will be able to discuss natural habitats of diverse microbial populations and give an overview of the concept of metagenomics.
- Student will be able to analyse various positive and negative interactions amongst microbes and also between microbes and plants / animals.
- Student will be able to explain the importance of microorganisms in mineral cycling within an ecosystem, and their effects on the environment.
- Student will be able to discuss various methods involved in sewage treatment, how we can make water safe for drinking, and various methods for testing water potability.
- Student will be able to evaluate different waste management strategies using microorganisms.
- Student will be able to describe various methods of microbial remediation for treating pollutants present in our environment. Student will be able to determine the importance of quality control in the food industry and describe various indices being used to measure quality and safety in the food industry.

SYLLABUS OF DSC-9

UNIT – I (11 hours)

Natural habitats and their microbial communities: Concepts of habitat, niche. Autochthonous, allochthonous, zymogenous microorganisms. Colonization and succession. Lithosphere: Soil profile, soil characteristics: physical and chemical, soil microbial community. Hydrosphere: Freshwater habitat: stratification and microbial composition of lake. Marine habitat: stratification and microbial composition of ocean. Atmosphere: atmosphere as microbial habitat, dispersal of microorganisms/spores, bioaerosols, methods of air sampling (filtration and deposition). Extreme habitats with reference to temperature, hydrostatic pressure, salinity and low nutrient levels. Concept of metagenomics, use of metagenomics to profile microbial communities in natural habitats.

UNIT – II (9 hours)

Interactions of microbial populations: Microbe-microbe interactions. Positive interactions: mutualism, protocooperation, commensalism. Negative interactions: antagonism, competition, predation, parasitism. Microbe-plant interactions. Symbiotic association: microbes associated with roots and aerial plant surfaces, leguminous roots-rhizobium symbiosis, Anabaena-Azolla symbiosis, mycorrhizal and actinorhizal associations. Microbe- animal interactions. Microflora in ruminant gut, nematophagous fungi and symbiotic luminescent bacteria.

UNIT – III (9 hours)

Mineral cycling by microbes and their effects on the environment : Importance of biogeochemical cycles. Carbon cycle: microbial degradation of cellulose, lignin and chitin, Nitrogen cycle: nitrogen fixation, ammonification, nitrification, denitrification and nitrate reduction. Phosphorus cycle: solubilisation and immobilization. Sulphur cycle: oxidative and reductive sulphur transformation, metal corrosion, acid mining drainage, nitrate pollution

UNIT – IV (9 hours)

Wastewater treatment and water potability: Sources and composition of liquid waste. Sewage strength: BOD and COD. Primary, secondary (aerobic: trickling filter, activated sludge process; anaerobic: septic tank, anaerobic sludge digestor) and tertiary sewage treatment. Treatment and safety of drinking (potable) water, Methods to detect potability of water samples: standard qualitative procedure - presumptive test/MPN test, confirmed and completed tests for fecal coliforms; membrane filter technique and Presence/Absence tests for coliforms, Indicator microorganisms.

UNIT – V (7 hours)

Disposal of solid waste by microbes and microbial remediation of environment: Sources and types of solid waste. Methods of solid waste disposal: sanitary landfills, composting (static piles, aerated piles and continuous feed reactors). Concepts of xenobiotics, recalcitrant compounds and bioremediation. Biodegradation of pesticides (DDT and Propanil), oil spills, e-waste and plastics.

Practical component **30 Hours**

UNIT 1: (15 hours)

Soil microflora:

Study of the presence of microbial activity in soil by qualitative detection of enzyme activity: dehydrogenase, amylase, urease. Microbial interactions: Isolation and quantitation of bacteria from rhizosphere and root-free soil to determine the rhizosphere effect. Isolation of symbiotic and non-symbiotic nitrogen fixers: *Rhizobium* and *Azotobacter* or *Azospirillum*.

Unit 2: (15 hours)

Mineral cycling and waste management by microbial remediation: Demonstration of phosphate solubilization by plate isolation method. Student group project: Preparation of Winogradsky column mini aquatic ecosystem. Assessment of the microbiological quality of water by standard qualitative procedures. Determination of BOD of wastewater sample by Dissolved Oxygen Electrode method/ Winkler's method. **Student group project**: Sewage surveillance in the fight against COVID19.

Essential/recommended readings

6. Methods in Applied Soil Microbiology and Biochemistry by K. Alef and P. Nannipieri. Ist edition. Academic Press, USA. 1995.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVE COURSE – 1:
EUKARYOTIC MICROBES: BIOLOGY AND BIOTECHNOLOGY

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
MICROB-DSE1: **EUKARYOTIC MICROBES: BIOLOGY AND BIOTECHNOLOGY**	**4**	**2**	**0**	**2**	**Class XII pass with Biology/ Biotechnology/ Biochemistry**	**NIL**

Learning Objectives

The Learning Objectives of this course are as follows:

- The main objective of the course is to make students familiar with eukaryotic microorganisms namely algae, protozoa and fungi. They will become aware of their characteristics and applications in various fields such as industry, food, environment and medical science.
- They will understand how eukaryotic microbes can be used to develop eco-friendly and sustainable solutions to problems we are encountering in various fields.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Student will be able to explain the characteristics of major algal types, the applications of micro and macro algae in different fields, and algae mass cultivation methods.
- Student will be able to describe different types of protozoa and their salient features, the significance of protozoa in medical, environmental and other fields.
- Student will be able to explain the characteristics of different types of fungi, their benefits and harmful effects, the biology and commercial importance of mushrooms.
- Student will be able to demonstrate the isolation and identification of green algae from pond water, the extraction and analysis of chlorophyll pigment. They will be able to discuss the thallus organization of different types of algae and the taxonomic position of Euglena.
- Student will be able to identify different types of protozoa and explain their major characteristics, the life cycles of some protozoa which cause diseases transmitted through insects or by contaminated food and water.

- Student will be able to describe different types of fungi and will be able to identify them based on their macroscopic and microscopic characteristics. They will be able to demonstrate fungal techniques, the difference between edible and poisonous mushrooms, steps of mushroom cultivation through visit to mushroom cultivation centre.

Theory component

Unit 1: (10 hours)

Algae structure, ecology and significance: General characteristics and brief account of habitat and thallus organization of major algal types: Chlorophyta, Bacillariophyta, Dinoflagellates, Xanthophyta, Phaeophyta and Rhodophyta. Applications of algae in wastewater treatment, biofuel and bioenergy products, pharmaceutical industries and food and feed sectors with reference to *Chlorella, Euglena, Dunaliella, Porphyra, Gracilaria,* diatoms*, Sargassum* and *Laminaria.* Mass cultivation of algae in open and closed photobioreactors.

Unit 2: (10 hours)

Protozoa structure, ecology and significance: An overview of habitat, cell structure, locomotion, and nutrition of different protozoa: *Entamoeba, Plasmodium, Giardia, Tetrahymena, Trypanosoma and Leishmania*. Disease causing protozoa: list of diseases, causative agent, mode of transmission, preventive measures currently in use (if any). Significance of protozoa in food web and water purification. Marine protozoa as source of filtering agents, chalk, abrasive and building material. Role of protozoa in symbiosis therapy and drug discovery. Role of *Tetrahymena* as model organism.

Unit 3: (10 hours)

Fungal structure, ecology and significance: An overview of habitat, thallus structure, nutrition and positive and negative importance (ecological, industrial, and medical) of different fungi: *Neocallimastix, Saccharomyces, Penicillium, Neurospora, Agaricus* and *Armillaria.* Detailed account of biology and commercial importance of Mushrooms: History, classification and distribution, life cycle, cultivation, nutrient and medicinal values; Edible and poisonous mushrooms.

Practical component **60 Hours**

Unit 1: (24 hours)

Isolation, identification and pigment analysis of algae: Study of the following algae by temporary mounts/permanent slides/photographs (at least one alga to be studied by making temporary mounts): *Chlorella, Porphyra, Gracilaria,* diatoms*, Sargassum, Dunaliella, Caulerpa, Ulva.* Comparison of the vegetative thallus organization. Isolation

of green algae from pond water and their identification by making temporary mounts. Recording of macroscopic and microscopic characterteristics of isolated algae. Extraction of pigment (chlorophyll) from algae and its analysis using chromatography or spectrophotometry. Study of the structure of *Euglena* cell highlighting its algal and protozoa characteristics discussion of its 'taxonomic enigma' status.

Unit 2: (16 hours)

Identification of protozoa and their importance: Study of different protozoa (*Entamoeba, Plasmodium, Giardia, Tetrahymena, Trypanosoma and Leishmania***)** with the help of permanent slides / photographs. Comparison of their structure and important characteristics. Study of the different stages of disease cycles of arthropod-borne protozoal diseases (*Plasmodium, Trypanosoma* and *Leishmania*) with the help of pictorial aids. **Student research study project**: Transmission, symptoms, prevention and cure of these diseases. Study of food and water-borne diseases caused by protozoa (*Entamoeba* and *Giardia*) in reference to life cycle, transmission, symptoms, prevention and cure. Comparison of the disease cycles of *Entamoeba* and *Giardia*.

Unit 3: (20 hours)

Identification of fungi and their importance: Study of fungi by temporary mounts/ permanent slides/photographs (at least one fungus to be studied by making temporary mounts): *Neocallimastix, Saccharomyces, Penicillium, Neurospora, Agaricus* and *Armillaria.* Observation of macroscopic and microscopic identifying characteristics. Preparation of spore suspension of fungus (*Aspergillus niger*) and counting of spores / ml using hemocytometer. Study of edible and poisonous mushrooms with the help of samples/photographs. Visit to mushroom cultivation center to learn various steps involved in mushroom cultivation.

Suggested Reading (Theory & Practical):

8. Algae: Anatomy, Biochemistry, and Biotechnology by L. Barsanti and P.Gualtieri. 2nd edition.CRC Press, Taylor and Francis group,USA. 2014.

9. Introductory Mycology by C.J. Alexopoulos, C.W. Mims and M. Blackwell. 4th edition. John Wiley and Sons, New York. 2012 (reprint).

10. Manual of Soil Fungi by J.C. Gilman. 1st edition. Biotech Books, India. 2012 (Reprint).

11. Introduction to Fungi by J. Webster and R.W.S. Weber. 3rd edition. Cambridge University Press. USA. 2007.

12. The Fungi by G.Sumbali. 2nd edition. Narosa Publishing India House, India. 2005.

13. Protozoa by R.L. Kotpal. 12th edition. Rastogi Publication, India. 2006.

14. Manual of Phycology by G.M.Smith.1st edition. Scientific Publishers Journals, India.1994

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVE COURSE – 2:
Applications of Statistics in Biology

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
MICROB-DSE2: Applications of Statistics in Biology	4	2	0	2	Class XII pass with Biology/ Biotechnology/ Biochemistry	NIL

Learning Objectives

The Learning Objectives of this course are as follows:

- The main objective of this course is to enable the students to understand the basic concepts of statistics and how statistics helps in analysing biological data by using simple examples. Students will learn to handle biological data using statistical tools and to draw appropriate conclusions from the analysis.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Student will be able to explain the collection and analysis of data through descriptive statistics, measures of skewness and kurtosis, Discrete and Continuous Random variable; with emphasis on examples from biological sciences.
- Student will be able to describe correlation and regression, various Discrete and Continuous Distributions namely Binomial, Poisson, Exponential and Normal distribution.
- Student will be able to explain different statistical methods, principles of statistical analysis of biological data, sampling parameters.
- Student will be able to describe large sample test based on normal distribution, and small sample test based on t-test and F test

Contents:

Theory: **30 hours**

Unit 1: (10 hours)

Data collection and handling: Collection, Classification, Tabulation and Graphical representation of Data. Measure of central tendency and dispersion. Correlation and Regression analysis: Relation between two variables, curve fitting, two regression lines, Karl Pearson's coefficient of correlation.

Unit 2: (10 hours)

Probability, variables and types of distribution: Probability theory and concept of Random Variable (discrete and continuous), Standard distributions: Exponential distribution, Binomial distribution, Poisson distribution, Normal distributions.

Unit 3: (10 hours)

p-value and sample tests: Sampling Distributions, Testing of Hypothesis, Level of Significance and Degree of Freedom; Interpretation and significance of p-value. Large Sample Test based on Normal Distribution, small sample test based on t-test and F test.

Practicals: **60 hours**

Unit 1: (20 hours)

Handling of data, dispersion, Karl Pearson coefficient, and regression analysis using Excel: Handling of data using measures of central tendency; handling of data using measures of dispersion; finding Karl Pearson correlation coefficient and interpretation of result; Spearman rank correlation with and without ties; how to obtain regression lines.

Unit 2: (20 hours)

Distributions (Practical Using Excel): Fitting of binomial distributions for n and p = q = ½ given; fitting of Poisson distributions for given value of lambda; application problems based on binomial distribution; application problems based on Poisson distribution; problems based on area property of normal distribution; finding the ordinate for a given area for normal distribution; application based problems using normal distribution

Unit 3: (20 hours)

Sample tests and their applications (Practical Using Excel): Problems based on Large Sample Tests and interpretation of result; estimators of population mean when Population is large; Tests of hypotheses for the parameters of a normal distribution-Single Mean; Tests of hypotheses for the parameters of a normal distribution -Difference of Means; application of t-test- single mean, difference of means and Paired t-test; application of F- test and interpretation of result on given data set.

DISCIPLINE SPECIFIC ELECTIVE COURSE – 3:
MICROBIAL QUALITY CONTROL IN FOOD AND PHARMACEUTICAL INDUSTRIES

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical / Practice		
MICROB-DSE 3: MICROBIAL QUALITY CONTROL IN FOOD AND PHARMACEUTICAL INDUSTRIES	**4**	**2**	**0**	**2**	**Class XII pass with Biology/ Biotechnology / Biochemistry**	**NIL**

Learning Objectives

The Learning Objectives of this course are as follows:

- The main objective of this course is for students to develop an understanding of the concept and implementation of microbial quality control in the food and pharmaceutical industries.
- Students will gain insights into how the final products obtained for human and animal consumption are consistent, certified as safe for human consumption, and compliant with microbial standards.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Student will be able to describe the parameters and techniques of Good Laboratory and Microbiological practices, sources of contamination, microbial monitoring of the environment and the concept of clean areas in the industry.
- Student will be able to explain the techniques of collecting and processing food, water and pharmaceutical samples for bioburden testing, various microscopic, culturing, biochemical, molecular and immunological testing techniques used for assessing the presence of microbes/pathogens as well as the toxic microbial products.
- Student will be able to describe Total Quality Management (TQM) system and Standard Operating Procedures (SOP) for fulfilling the requirements of Quality

Control (QC) are created, various microbiological standards and certifications by accrediting bodies for food and pharmaceutical industries.

- Student will be able to demonstrate the techniques for checking milk quality by performing rapid and standard laboratory tests, method of testing of microbiological quality of water samples (Most Probable Number).
- Student will be able to describe how the food sample is processed for the detection of microorganisms, various differential and selective media to detect and identify different microorganisms present in a food sample.
- Student will be able to demonstrate sterility testing of various food and pharmaceutical products under different conditions.
- Student will be able to develop HACCP flow charts for different products, the application of various standards in quality regulation in food and pharma products with the help of case studies.

Contents:

Theory: **30 hours**

Unit 1. (8 hours)

Microbiological safe practices for food and pharmaceutical industry: Laboratory practices for safety and quality (GLP and GMLP). Concept of Biosafety cabinets. Biosafety
levels (BSL-I to BSL-IV): designs, specifications and uses. Concept of Clean Area and its classification. Microbial monitoring of controlled environments (bioburden). Sources of contamination in food and pharmaceutical industries. Steps to avoid contamination. Food Safety, Sanitation Standard Operating Procedure (SSOP) and Personal Hygiene**.**

Unit 2: (14 hours)

Monitoring and analysis of microbiological quality of food and pharmaceutical samples: Types of products in food and pharmaceutical industries. Bioburden testing for food, beverages and medical devices. Collection and processing of samples for microbiological monitoring. Detection of microorganisms by microscopic method (fluorescence-based Direct Microscopic Count). Detection of microorganisms by cultural methods: enrichment technique, standard plate count, the concept of differential and selective media for detection of pathogens (XLD agar, Salmonella-Shigella agar, Mannitol salt agar, EMB agar, McConkey agar). Microbiological examination of non-sterile pharmaceutical products, concept of microbial limits, sterility testing (its objectives and significance). Molecular, biochemical and immunological methods for detection of microorganisms and their products (Nucleic acid probes, PCR, biosensors, Limulus lysate test, pyrogen testing). Significance of rapid detection methods (Clot on

Boiling Test, dye reduction test by Resazurin) in food industry.

Unit 3: (8 hours)

Microbial quality standards and management: Introduction and importance of quality standards. Concepts and approaches of Total Quality Management (TQM), Quality Management System, ISO 9001:2000, Quality Assurance and Quality Control. Development of Standard Operating Procedures. Hazard analysis of critical control point (HACCP): principles, applications and limitations. Concept of Codex Alimentarius and Codex Standards. Role of accredited certification bodies (BIS, Agmark, FSSAI, ISO) in maintaining product quality.

Practicals: **60 hours**

Unit 1: (20 hours)

Testing of quality of milk and water samples: Checking the effectiveness of pasteurization of milk: Alkaline phosphatase test. Detection of microbiological quality of milk sample through Triphenyltetrazolium chloride (TTC) test, Clot on boil (COB) test and dye reduction test (Resazurin). Determination of microbiological quality of water sample by MPN method.

Unit 2: (30 hours)

Microbiological quality of food and pharmaceutical products: Sample processing for detection of microorganisms in food (one solid: Bread/idli batter/cheese/ biscuits/ pizza base/salad/cake etc. and one liquid:juice/ butter milk/ energy drink etc. sample/s.) Detection and Identification of microorganisms present in processed food samples through different types of media (XLD agar/Salmonella-Shigella agar, Mannitol salt agar, EMB agar, McConkey agar). Sterility testing of food (canned food/tetrapak drink) and pharmaceutical products (eye drops/injection ampoule) for aerobic microbes using cultural methods. Demonstration to test the presence of anaerobic microbes by virtual lab/video .Principle and concept of Limulus lysate (LAL) test for detecting the presence of endotoxin in consumable products by virtual lab/video.

Unit 3: (10 hours)

Quality regulation of food and pharmaceutical products: Study of HACCP of milk/dairy product with the help of flow chart. **Student group project**: applications of various standards (BIS, Agmark, FSSAI, ISO) in quality regulation in food and pharma products: case studies involving at least one food and one pharma product.

DISCIPLINE SPECIFIC ELECTIVE COURSE – 4: BIOTECHNIQUES AND INSTRUMENTATION

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical / Practice		
MICROB-DSE 4: **BIOTECHNIQUES AND INSTRUMENTATION**	**4**	**2**	**0**	**2**	**Class XII pass with Biology/ Biotechnology / Biochemistry**	**NIL**

Learning Objectives

The Learning Objectives of this course are as follows:

- The main objective of this paper is to develop a strong understanding of the principles and applications of some basic and advanced techniques frequently used in sciences dealing with biological systems. This will allow the students to relate the concepts of the various areas being taught to them with the working and applicability of the instruments and techniques involved.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Will have learnt about the main components, working principles, and applications of different types of microscopes. The student will also be familiarized with the preparation of samples and staining for microscopy.
- Will have gained knowledge of basic concepts, applications, merits and limitations of various bio separation techniques like chromatography, electrophoresis and centrifugation.
- Will be acquainted with the principles and applications of some analytical techniques like X-ray diffraction and UV-visible spectrophotometry. Will have been introduced to the concepts of advanced techniques like circular dichroism, NMR spectroscopy and mass spectrometry.
- Will be able to use the microscope to determine the size of microbial cells applying the technique of micrometry. Will also be able to separate biomolecules using planar (paper chromatography/ TLC) and column chromatography.

- Will have gained hands-on experience of separation of mixtures using gel electrophoresis techniques (PAGE/Agarose) and laboratory centrifuges. Will have gained knowledge of working of density gradient centrifugation with the help of virtual lab / videos.
- Will be able to determine the λmax for an unknown sample and be able to calculate its extinction coefficient using a spectrophotometer. Will get familiar with the technique of autoradiography and NMR spectroscopy with the help of virtual lab / videos.

Theory: **30 hours**

Unit 1: (10 hours)

Principles and applications of microscopy: Concept of resolving power and magnification. Principles, working, and applications of : Bright-field and dark-field microscopy, phase contrast microscopy, fluorescence microscopy, confocal microscopy, electron microscopy (scanning electron microscopy, transmission electron microscopy, and cryo- electron microscopy).

Unit 2: (12 hours)

Principles and applications of separation techniques: Partition chromatography: thin layer chromatography. Column chromatography: gel filtration, ion-exchange, affinity and HPLC. Differential and density gradient centrifugation, ultracentrifugation. Agarose gel electrophoresis. Polyacrylamide gel electrophoresis.

Unit 3: (8 hours)

Principles and applications of other analytical techniques: UV-Visual spectrophotometry (Beer and Lambert Law), X-ray diffraction, circular dichroism, nuclear magnetic resonance (NMR) spectroscopy, mass spectrometry.

Practicals: **60 hours**

Unit 1: (24 hours)

Micrometry and chromatography: Principle of micrometry. Determination of the sizes of different microbial cells by micrometry. Separation of complex mixtures of biomolecules by paper chromatography/ Thin Layer Chromatography. Group project: Packing and running column chromatography. Determination of molecular weight of a protein using gel filtration chromatography.

Unit 2: (20 hours)

Electrophoresis and centrifugation: Separation of DNA by agarose gel electrophoresis. Separation of proteins by SDS-PAGE. Separation of components of a given mixture using a laboratory scale centrifuge using various rotors. Understanding density gradient centrifugation with the help of virtual lab.

Unit 3: (16 hours)

Imaging and advanced analytical techniques: Using spectrophotometer to determine λ_{max} for an unknown sample and calculation of extinction coefficient. Principle and working of autoradiography. Demonstration of autoradiography using virtual lab / video. Understanding NMR spectroscopy with the help of virtual lab / video.

DISCIPLINE SPECIFIC ELECTIVE COURSE – 5: PLANT-PATHOGEN INTERACTIONS

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
MICROB-DSE 5: PLANT-PATHOGEN INTERACTIONS	4	2	0	2	Class XII pass with Biology/ Biotechnology/ Biochemistry	NIL

Learning Objectives

The Learning Objectives of this course are as follows:

- The main objective of this course is to provide the students with an overview of the interactions of pathogenic microbes with their host plants, and how these interactions lead to plant disease. The students will become aware of the biochemical basis of plant- pathogen interactions, the production of virulence factors by pathogens, and thei defence mechanisms induced in plants in response to infection.
- They will learn about the genetic basis of disease resistance. They will be able to identify plant pathogens from the symptoms and microscopic study of infected plant specimens.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Student will be able to explain the important terms related to plant diseases, the scientific contributions of prominent plant pathologists, how microbes attack plants using enzymes, toxins, growth regulators etc., thereby affecting their physiological processes.
- Student will be able to explain describe how plants defend themselves upon attack by pathogens with help of Case studies of some important plant diseases.
- Student will be able to describe the genetics of plant disease and resistance, and developing disease-resistant transgenic plants.

- Student will be able to identify plant pathogens by observing symptoms of diseased plants, cutting sections/ preparing whole mounts of diseased plant material, and observing microscopically.
- Student will be able to explain the etiology, symptoms and control measures of specific bacterial, phytoplasma, virus and viroid diseases with the help of photographs of diseased plants, common disease symptoms observed in locally grown plants during a field visit.
- Student will be able to explain the concept of Koch's postulates using pathogen-infected plant material.

Contents:

Theory: **30 hours**

Unit 1: (5 hours)

Introduction to plant pathology: Concepts and history: Concept of disease and pathogenesis. Causal organisms and symptoms associated with common plant diseases: rust, smut, blight, chlorosis, necrosis, gall, mosaic and wilt. Contributions of the following plant pathologists: E. J. Butler, Anton DeBary, Alexis Millardet, E. Smith, T. O. Diener, E. C. Stakman, J. E. Vanderplank, B. B. Mundkur, J. F. Dastur.

Unit 2: (19 hours)

Physiochemical basis of host-pathogen interactions: Virulence factors of pathogens - Enzymes: pectinases, cellulases. Toxins: host-specific (HV, T-toxin) and non-specific (tabtoxin, tentoxin). Growth regulators: auxin, gibberellin. Virulence factors in viruses: replicase, coat protein, silencing suppressors. Host physiological processes affected by pathogens - photosynthesis, respiration, cell membrane permeability, translocation of water and nutrients, plant growth and reproduction. Defense mechanisms in plants - Inducible structural defenses (histological: cork layer, abscission layer, tyloses,gums), inducible biochemical defenses (hypersensitive response (HR), systemic acquired resistance (SAR), phytoalexins, pathogenesis-related (PR) proteins). Study of some important diseases (etiology, epidemiology, symptoms and control measures): bacterial (crown gall), fungal (black stem rust of wheat), viral (Tobacco mosaic virus, Banana bunchy top).

Unit 3: (6 hours)

Genetics of plant disease resistance: Gene for gene hypothesis: concept of resistance (R) gene and avirulence (avr) gene, the gene for gene hypothesis. Types of plant resistance: true resistance– horizontal and vertical, apparent resistance-disease escape, disease tolerance. Genetic engineering for disease resistance in plants: with plant-derived genes and pathogen-derived genes.

Practicals: **Duration: 60 hours**

Unit 1: (24 hours)

Identification of plant pathogens examining infections microscopically: Principle and working method of lactophenol cotton blue staining. Preparation of whole mount of plant material, followed by staining with lactophenol cotton blue and microscopic observation for identification of the pathogen. Cutting fine transverse sections of infected plant material, staining with lactophenol cotton blue and observing the slide microscopically for identification of the pathogen. Any four from: *Albugo/ Puccinia/ Ustilago/ Phytophthora/ Fusarium/ Peronospora.*

Unit 2: (24 hours)

Study of plant diseases: Study of the etiology, symptoms and control measures of the following diseases. Bacterial: angular leaf spot of cotton, citrus canker. Phytoplasma: aster yellow, citrus stubborn. Viral: rice tungro disease, papaya ring spot, leaf curl of tomato. Viroid: potato spindle tuber, coconut cadang cadang disease. Field visit to a local park/college garden, to study common plant disease symptoms in plants. Recording observations in files with photographs of the diseased plants. **Study research study project**: History, etiology, symptoms, control measures, and economic impact if any, of any four rare plant diseases.

Unit 3: (12 hours)

Demonstration of Koch's postulates using a fruit/ vegetable infected with a plant pathogen: Observation of symptoms, isolation of pathogen by inoculation on potato dextrose agar plates, microscopic identification of the pathogen. Reinoculating it on a healthy fruit/vegetable to observe for similar symptoms, followed by reisolating it and observing microscopically in order to prove Koch's postulates.

Suggested Reading (Theory & Practical):

DISCIPLINE SPECIFIC ELECTIVE COURSE – 6:
BIOSAFETY AND INTELLECTUAL PROPERTY RIGHTS

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
MICROB-DSE 6: BIOSAFETY AND INTELLECTUAL PROPERTY RIGHTS	4	2	0	2	Class XII pass with Biology/ Biotechnology/ Biochemistry	NIL

Learning Objectives

The Learning Objectives of this course are as follows:

- The main objective of the course is to introduce students to the fundamental aspects of biosafety and Intellectual Property Rights (IPR) to enable them to understand concerns related to safety from biological hazards and to gain an overview of the biosafety regulatory framework.
- They will be introduced to the importance of protecting intellectual property and become familiar with all aspects of the IPR Acts. Through case studies in law and scientific research students will understand the applications of the legal concepts in the space of scientists, scientific discoveries and innovations.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Student will be able to describe how national and international biosafety regulations are formulated and implemented at the level of research institutes and laboratories locally, so as to safeguard the handlers as well as the environment from potential pathogens.
- Student will be able to describe the role of an IBSC in the biosafety regulatory framework and how to file an application seeking approval of a research proposal involving an LMO.

- Student will be able to explain the guidelines and precautions that need to be followed during the handling of radioisotopes, the concepts of Intellectual Property Rights, how they are protected through patents.
- Student will be able to demonstrate how to file a patent application. Student will be able to explain some International Agreements, Treaties and Acts governing protection of IPR.
- Student will be able to discuss the basic concepts of protection of IP through Copyright, Trademarks, Geographical indications, Industrial designs, Traditional Knowledge and New Plant Varieties along with specific biotechnological cases.

Contents:

Theory: **30 hours**

Unit 1: (12 hours)

Biosafety: Biosafety levels and risk groups. Role of Institutional Biosafety Committees (IBSC). GMOs/LMOs: Concerns and Challenges. GRAS microorganisms. Risk Analysis, and Assessment for Environmental release of GMOs, Cartagena Protocol. AERB/RSD/RES guidelines for using radioisotopes in laboratories and precautions to be taken.

Unit 2: (12 hours)

Intellectual Property Rights and its types: Introduction and need for intellectual property rights (IPR). Patents: Types of inventions protected by a patent. Prior art search, patent applications and its types, patenting process. Patent infringement, Rights and Duties of patent owner. Patent Publications. Trade secrets and know-how agreements. Budapest Treaty on international recognition of the deposit of microorganisms. Patenting life: legal protection of biotechnological inventions-World Intellectual Property Rights Organization (WIPO) TRIPS, compulsory licensing, Patent Co-operation Treaty (PCT)

Unit 3: (6 hours)

Copyrights, Trademarks, Geographical indications, Industrial designs and New Plant Varieties and Traditional knowledge: Concepts, need, coverage and duration. Commercializing Biotechnology Invention. Case studies of Biotechnology.

Practicals: **60 hours**

Unit 1: (24 hours)

Biosafety levels and guidelines: Study of the layout and design of BSL-1, BSL-2, BSL-3 and BSL-4 laboratories and precautions to be followed according to the level of containment. Filing applications for approval from the Institutional Biosafety Committee (IBSC). **Student group project**: the emergence of biotechnology as the most important tool used to combat the Covid19 pandemic, biosafety protocols in handling Sars-CoV2.

Unit 2: (16 hours)

Genetically Modified Organism: Designing a suitable strategy to protect a genetically modified organism. Case study of the release of GMO Bt Cotton. Status of Bt brinjal and GM mustard in India.

Unit 3: (20 hours)

Patent applications and related case studies: The procedure for filing a patent application. Case study of patenting of basmati rice (GI). Case study of turmeric/ neem (traditional knowledge). **Student group project**: Preparation of patent application

DISCIPLINE SPECIFIC ELECTIVE COURSE – 7:
APPLICATIONS OF MICROBES IN BIOREMEDIATION AND PETROLEUM INDUSTRY

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
MICROB-DSE 7: APPLICATIONS OF MICROBES IN BIOREMEDIATION AND PETROLEUM INDUSTRY	**4**	**2**	**0**	**2**	**Class XII pass with Biology/ Biotechnology/ Biochemistry**	**NIL**

Learning Objectives

The Learning Objectives of this course are as follows:

- The main objective of this paper is to provide students with a comprehensive understanding of the process of bioremediation, its strategies, and the role played by microorganism in dealing with environmental pollutants of concern.
- This course highlights the applications of microbes in Microbial Enhanced Oil Recovery (MEOR), clean-up of oil spills, and the detoxification of heavy-metal contaminated environment. Students will acquire hands-on training in the above-mentioned areas.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Student will be able to explain the concepts of microbial bioremediation, its strategies and its applications, the microbiology of oil fields,Microbial Enhanced Oil Recovery (MEOR) and role of microbes in cleaning up of oil-spills.
- Student will be able to describe the use of biosensors in detection of heavy metals, explain heavy metal tolerance in microorganisms and the application of microbes in the detoxification of such contaminated sites.
- Student will be able to demonstrate the practical skills to isolate hydrocarbon-degrading microorganisms and assess their degradation potential.
- Student will be able to demonstrate how to detect and screen biosurfactant-producing microorganisms in the laboratory.

- Student will be able to demonstrate the isolation of heavy metal tolerant microorganisms, and discuss with case-studies on Microbial Enhanced Oil Recovery.

Contents:

Theory: **30 hours**

Unit 1: (12 hours)

Microbes and Bioremediation: Concept of bioremediation. Abiotic and biotic factors affecting bioremediation by microorganisms. *In-situ* bioremediation strategies: Biosparging, Bioventing, Bioslurping, Biostimulation, Bioaugmentation, and Bioattenuation. *Ex-situ* bioremediation techniques: Bioreactor, Biopiling, Landfarming, composting and Biofilters. Use of genetic engineered microorganisms (GEMs). Advantages, disadvantages and applications of bioremediation.

Unit 2: (12 hours)

Bioremediation of oil spills and microbial enhanced oil recovery: Microbiology of oil fields: introduction to oil fields, formation of oil reservoirs, oil production, indigenous microbial communities in oil fields. Hazards of petroleum hydrocarbon contamination. Microbial degradation of petroleum hydrocarbons (aliphatic, alicyclic, aromatic). Abiotic and biotic factors affecting the degradation of petroleum hydrocarbons. Strategies used to clean up oil spills using microorganisms. Applications of microbial consortia and oil-eating superbugs in bioremediation. Enhanced oil recovery (EOR) versus Microbial Enhanced Oil Recovery (MEOR) Microorganisms and microbial products used in MEOR (biomass, bio- surfactants, biopolymers, solvents, acids, and gases). Technologies used in *ex-situ and in - situ* MEOR applications.

Unit 3: (6 hours)

Heavy metal remediation by microbes: Sources and hazards of heavy metal pollution (As, Cu, Pb, Cd, Hg). Metal-microbes interaction and heavy metal tolerance by microorganisms. Applications of microbes in biosorption and detoxification of environment contaminated with heavy metal(s). Use of biosensors in detection of heavy metal contamination.

Practicals: **60 hours**

Unit 1: (20 hours)

Isolation and detection of hydrocarbon-degrading microorganisms: Sample collection from an oil - contamination site, enrichment, isolation on a suitable minimal medium containing petroleum hydrocarbon, identification of isolates by suitable staining and microscopic observation. Detection of hydrocarbon degradation by the isolates using the redox dye Dichlorophenol-indophenol (DCPIP)**.**

Unit 2: (20 hours)

Detection and screening of bio-surfactant producing microorganisms: Detection of biosurfactant production by hydrocarbon-degrading microorganisms using oil spread method. Screening and selection of the biosurfactant-producing microbes by the following hydrophobicity tests: (1) Drop-collapse method using positive control (Tween-80) and negative control (distilled water) (2) Toluene test (spectrophotometric measurement) and (3) by hydrophobic interaction column chromatography (using Octyl-Sepharose resin).

Unit 3: (20 hours)

Isolation of heavy metal-tolerant microorganisms and case-studies: Sample collection from potential heavy metal-contamination sites (soil/sewage/water bodies/mines), isolation on minimal medium with increasing concentrations of the heavy metal, identification of isolate by suitable staining and microscopic observation. Screening of the isolates for their metal tolerance in broth cultures containing heavy metals. Case studies on *ex-situ* and *in-situ* Microbial Enhanced Oil Recovery by discussions and with the help of visual aids.

DISCIPLINE SPECIFIC ELECTIVE COURSE – 8: SCIENTIFIC WRITING AND COMMUNICATION

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
MICROB-DSE 8: SCIENTIFIC WRITING AND COMMUNICATION	4	2	0	2	Class XII pass with Biology/ Biotechnology/ Biochemistry	NIL

Learning Objectives

The Learning Objectives of this course are as follows:

- The main objective of this course is to familiarize the students with the basic principles of science writing and communication. Students will become aware of databases and tools for effective writing and will be empowered to take up careers as research analysts, technical writers, editors of journals and books etc. They will gain insights into the process of scientific publication. They will learn to effectively communicate science to the masses.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Student will be able to demonstrate how to carry out a literature search, and explain various types of scientific writings, structure of scientific manuscript and study design.
- Student will be able to describe various types of journals, the concept of impact factors, steps in publication, and software to detect plagiarism.
- Student will be able to discuss the process of writing grant, and how to communicate effectively on scientific issues
- Student will be able to describe the process of writing research/review articles, the process of presenting scientific data through poster or oral presentation.

Contents:

Theory: **30 hours**

Unit 1: (10 hours)

Scientific literature and study design: Understanding research writing. Conducting literature search, scientific literature databases and gap analysis. Types of contemporary science writing (original research article, review, systematic review, meta-analysis, commentary, and opinion). Structure/outline of a research article. Survey study, questionnaire design, using common statistical tools/software for data analysis and presentation in research articles.

Unit 2: (13 hours)

Publication process: Identifying relevant journals through online tools. Impact factor, H-index, citations, Science Citation Index. Steps of the publication process: preparation of manuscript, textual and graphical abstracts, use of multimedia in scientific writing, editing and proofreading, referencing styles, authorship, ethical requirements in science publication, plagiarism detection tools (URKUND/Turnitin), peer review process, predatory publishers andjournals, open access publication.

Unit 3: (7 hours)

Generating funding for research and elements of communication: Introduction to national (DBT, SERB) and international funding agencies (NIH, Welcome Trust). Basics of grant- writing, and structuring a research proposal for extramural funding.

Practicals: **60 hours**

Unit 1: (15 hours)

Communicating scientific issues to the public: Drafting popular articles (newspaper/ magazines). Multimedia tools for effective writing and communication (creating stories using photos, illustrations, audio, video, animation). Publishing blogs.

Unit 2: (30 hours)

Writing original research / review articles: Drafting abstracts. Hands-on training in the preparation of manuscript text: methods, results, discussion, and conclusion. Presenting data in tables and figures: use of Microsoft Excel. Hands-on training in the use of Mendeley to insert references / citations in an article. Writing a review article based on 10 research papers in 1000 words.

Unit 3: (15 hours)

Presentation of scientific data in conferences/seminars: Designing posters. Training in oral presentations: use of Microsoft Powerpoint. Presenting the research and main findings of recent scientific articles through Journal Club**.**

Suggested Reading (Theory & Practical):

1. Research Methodology and Scientific Writing by C.G. Thomas. 2nd edition. Springer. 2021.
2. Scientific writing and communication by A. Hoffman. 4th edition. Oxford University Press. 2019.
3. Effective writing and publishing scientific papers - Part I: how to get started by D. Kotz and J.W. Cals. 2013. J Clin Epidemiol. 66(4):397.
4. Effective writing and publishing scientific papers - Part II: title and abstract by D. Kotz and J.W. Cals. 2013. J Clin Epidemiol. 66(6):585.
5. Effective writing and publishing scientific papers - Part III: introduction by D. Kotz and J.W. Cals. 2013. J Clin Epidemiol. 66(7):702.
6. Effective writing and publishing scientific papers - Part IV: methods by D. Kotz and J.W. Cals. 2013. J Clin Epidemiol. 66(8):817.
7. Effective writing and publishing scientific papers - Part V: results by D. Kotz and J.W. Cals. 2013. J Clin Epidemiol. 66(9):945.
8. Effective writing and publishing scientific papers - Part VI: discussion by D. Kotz and J.W. Cals. 2013. J Clin Epidemiol. 66(10):1064.
9. Effective writing and publishing scientific papers - Part VII: tables and figures by D. Kotz and J.W. Cals. 2013. J Clin Epidemiol. 66(11):1197.
10. Effective writing and publishing scientific papers - Part VIII: references by D. Kotz and J.W. Cals. 2013. J Clin Epidemiol. 66(11):1198.
11. Effective writing and publishing scientific papers - Part IX: authorship by D. Kotz and J.W. Cals. 2013. J Clin Epidemiol. 66(12):1319.
12. Effective writing and publishing scientific papers - Part X: choice of journal by D. Kotz and J.W. Cals. 2014. J Clin Epidemiol. 67(1):3.
13. Effective writing and publishing scientific papers - Part XI: submitting a paper by D. Kotz and J.W. Cals. 2014. J Clin Epidemiol. 67(2):123.
14. Effective writing and publishing scientific papers - Part XII: responding to reviewers by D. Kotz and J.W. Cals. 2014. J Clin Epidemiol. 67(3):243.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVE COURSE – 9: AGRICULTURAL MICROBIOLOGY

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
MICROB-DSE 9: AGRICULTURAL MICROBIOLOGY	**4**	**2**	**0**	**2**	**Class XII pass with Biology/ Biotechnology/ Biochemistry**	**NIL**

Learning Objectives

The Learning Objectives of this course are as follows:

- The main objective of this paper is to enable students to develop a clear understanding of the importance of microbes in agriculture to enable them to find eco-friendly solutions to agricultural problems.
- Students will get an overview of soil characteristics and the role of microbes and plant-microbe interactions in soil fertility. Students will study about the production and application of different types of commercial biofertilizers, become familiar with microbial biocontrol agents, and gain knowledge of composting, and organic farming. They will gain insights into recent trends in agriculture including agrowaste management and transgenics

Learning outcomes

The Learning Outcomes of this course are as follows:

- Student will be able to explain types of soil and its characteristics, important microorganisms involved in mineralization of essential nutrients present in the soil and their significance in agriculture, plant-microbe interactions including symbiotic and asymbiotic associations, the commercial production of biofertilizers and method of composting.

- Student will be able to describe eco-friendly ways to control agricultural pests and pathogens, the mode of action, mass production and field applications of various biocontrol agents.
- Student will be able to discuss the recent trends in agricultural microbiology with reference to agrowaste management, organic farming and transgenic plants.
- Student will be able to demonstrate the isolation and screening of various microbes important in soil fertility (PGPR, VAM), the isolation of microorganisms from commercially available biofertilizers.
- Student will be able to explain the different stages of nodule development in leguminous plant roots and will observe nodule-forming bacteria under the microscope, the antagonistic potential of Trichoderma spp. as biological control agent against other fungi.
- Student will be able to describe composting as one of the ways of agrowaste management, the role of thermophiles in composting and the different enzymes involved in biodegradation, steps of mass production of blue green algae and application of microbes in organic farming/biogas production.

Theory: **30 hours**

Unit 1: (14 hours)

Soil fertility and Biofertilizers: Physical and chemical characteristics of different types of soil. Macro and micronutrients in soil. Role of NPK and biogeochemical cycles in soil fertility. Scope of microbes as biofertilizers and their advantages over chemical fertilizers. Isolation, characteristics, mass production and field applications of biofertilizers- Symbiotic: *Rhizobium, Frankia, Acetobacter diazotrophicus*, *Anabaena,* Mycorrhizal associations with special emphasis on VAM/AM fungi. Asymbiotic**:** Nitrogen-fixing bacteria (*Azospirillum, Azotobacter*), Plant growth promoting rhizobacteria (PGPR). Composting: types, methods, applications.

Unit 2: (8 hours)

Biocontrol agents and Biopesticides: Importance, potential and types of biocontrol agents. Microbes used as biopesticides, their mode of action, and advantages over chemical pesticides. Mass production and field applications of *Bacillus thuringiensis*, *Baculoviruses, Beauveria bassiana*, *Metarhizium anisopliae* and *Trichoderma spp*.

Unit 3: (8 hours)

Recent trends in Agriculture Microbiology: Agrowaste management and its significance: Biofuel, Bioenergy, Animal Feed. Organic farming: types, methods and advantages. Development of transgenic plants: *Agrobacterium*-mediated plant transformations with specific example of Bt cotton.

Practicals: **60 hours**

Unit 1: (28 hours)

Isolation of microbes important in soil fertility: Isolation and screening of plant growth promoting rhizobacteria (PGPR) from soil. Isolation of microbes from commercially available biofertilizers using solid media. Isolation of VAM spores from the soil sample using "Wet-sieving and decanting technique" for spores extraction and observing them under microscope. Study of VAM colonization using temporary slides/photographs.

Unit 2: (16 hours)

Study of microbe interactions in soil: Demonstration of stages of nodule formation in leguminous plant with the help of photographs. Slide preparation of crushed nodule to observe nodule forming bacteria. Study of antagonistic activity of *Trichoderma* sp. against different fungi (any 2) using dual culture plate technique. Test of antagonistic efficacy on potato dextrose agar: simultaneous inoculation of antagonist and test fungus at two extreme positions and recording of zone of inhibition after 5 days of incubation.

Unit 3: (16 hours)

Agrowaste management: Hands-on training in composting using a variety of plant/food waste. Isolation of thermophiles from compost and qualitative assay of any two enzymes (amylase/cellulase/xylanase) using compost sample. Visit to mass production facility of blue green algae/biogas plant/organic farm.

14. Microbial Ecology: Fundamentals and Applications by R.M. Atlas and R. Bartha. 4th edition. Benjamin Cummings, USA. 2000.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVE COURSE – 10:
PRINCIPLES OF GENETICS

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
MICROB-DSE 10: PRINCIPLES OF GENETICS	**4**	**2**	**0**	**2**	**Class XII pass with Biology/ Biotechnology/ Biochemistry**	**NIL**

Learning Objectives

The Learning Objectives of this course are as follows:

- The main objective of this course is for students to gain knowledge of the major concepts of genetics. Students will build a foundation for understanding the basic principles of inheritance and heredity starting from classical genetics, and will gain insights into chromosomal behaviour, rearrangements and their consequences.
- Students will also learn about complex multifactorial quantitative genetics and population genetics in relation to survival and evolution. Through this course the students will develop a better understanding of life processes, survival and maintenance.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Student will be able to explain the laws of inheritance, linkage, crossing over and its application to gene mapping.
- Student will be able to describe the mechanisms for extranuclear inheritance, complex traits and population genetics principles, model organisms of genetic research.
- Student will be able to explain pedigree analysis, aberrations in chromosomal structure and number.
- Student will be able to demonstrate the techniques of karyotyping and chromosome banding, the giant chromosomes.

Theory: **30 hours**

Unit 1: (12 hours)

Introduction to basics of Genetics: History: A brief account of early genetic experiments: Mendel's work. Studying variation: phenotype and genotype. Single gene inheritance pattern: concept of alleles, allelic interactions, autosomal and X-linked inheritance. Concept of segregation, penetrance, expressivity. Test for allelism: complementation. Two- gene inheritance pattern: independent assortment versus linkage. Molecular basis of phenotypic variation and inheritance patterns. Introduction to genetic maps: three point test crosses.

Unit 2: (9 hours)

Extra-nuclear inheritance and epigenetics: Introduction and rules of extra-nuclear inheritance. Organelle heredity: chloroplast mutations in *Chlamydomonas* and *Mirabilis jalapa.* Maternal effect: shell coiling in *Limnaea peregra.* Infectious heredity: Kappa particles in *Paramecium.*

Unit 3: (9 hours)

Quantitative and Population Genetics: Polygenic inheritance, Johannsen pure-line theory, multiple factor hypothesis. Types of quantitative traits, heritability and its measurements. Genetic structure of populations, gene pool, genotype frequencies, allele frequencies. Hardy–Weinberg Law: Assumptions and Predictions.

Practicals: **60 hours**

Unit 1: (30 hours)

A review of model organisms for genetic analysis: **Student group research study**: Organisms for genetic research: *Escherichia coli, Saccharomyces cerevisiae, Neurospora crassa, Drosophila melanogaster, Caenorhabditis elegans, Arabidopsis thaliana, Tetrahymena thermophila*. Case studies highlighting one major biological finding from studies with each of these organisms. Understanding genetic analysis through problem solving: statistical analysis of given genetic data by Chi-Square Analysis.

Unit 2: (20 hours)

Studying inheritance in humans: Pedigree analysis: chromosomes and aberrations through karyotyping and chromosome banding techniques.

Unit 3: (10 hours)

Study of Giant Chromosomes: Polytene and Lampbrush chromosomes. Preparation of temporary mounts of salivary glands of *Chironomus* / *Drosophila* larvae, and their visualization by bright field microscopy. Study of lampbrush chromosomes through permanent mounts.

Suggested Reading (Theory & Practical):

1. Introduction to genetic analysis by A. Griffiths, J. Doebley, C. Peichel and D. Wassarman. 12th edition. Macmillan Learning. 2020.
2. Laboratory Manual for Principles of Genetics by W. Mhiret. Lap Lambert Academic Publishing. 2020.
3. Concepts of Genetics by W.S. Klug, M.R. Cummings, C. Spencer and M. Palladino. 12thedition. Pearson Education, USA. 2019.
4. Genetics: A Conceptual Approach By B. Pierce. 7th edition. W.H. Freeman and Co. 2019.
5. Genetics: Analysis of Genes and Genomes by D. Hartl and B. Cochrane. 9th edition. Jones and Bartlett Learning, USA. 2017.
6. Introducing Epigenetics : A graphic guide by C. Ennis. Icon Books Ltd, India. 2017.
7. iGenetics- A Molecular Approach by P.J. Russell. 3rd edition. Pearson Education India. 2016.
8. Principles of Genetics by D. Snustad and M. Simmons. 7th edition. Wiley and Sons, UK. 2015.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVE COURSE – 11: MICROBIAL BIOTECHNOLOGY

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
MICROB-DSE 11: **MICROBIAL BIOTECHNOLOGY**	**4**	**2**	**0**	**2**	**Class XII pass with Biology/ Biotechnology/ Biochemistry**	**NIL**

Learning Objectives

The Learning Objectives of this course are as follows:

- The main objective of this course is to give students an overview of the beneficial role of microbial biotechnology in the welfare of humankind. They will learn about harnessing the power of microorganisms to manufacture medicinal, industrial, and agricultural products.
- Students will be acquainted with the large-scale culturing of microorganisms to produce various metabolites at a commercial scale. Students will gain hands-on experience in screening samples for enzyme and pigment producers and dye degrading microorganisms. They will learn to immobilise enzymes and cells and use enzyme-based biosensors for analytical purposes.
- The students will get conversant with applications of bioremediation and the protection of intellectual property rights.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Student will be able to describe the emerging biotechnology industries at the national and international level, use of microbe-based technologies and innovations for the benefit of mankind.
- Student will be able to explain the potential use of high-yielding microorganisms to commercially produce human therapeutics and industrial products, biosensors and steroid biotransformation.

- Student will be able to describe how microorganisms are utilized for the industrial production of biofertilizers and biopesticides, their potential use in environmental pollution management.
- Student will be able to demonstrate immobilization of biocatalysts (whole cells/enzymes) and explain how this technology can find applications in large-scale enzymatic reactions, bioremediation and designing of biosensor-based kits.
- Student will be able to explain the screening of environmental samples to isolate organisms with desired properties (enzyme production, pigment production, dye degradation).
- Student will be able to describe the research work involving GMOs and approvals required thereof and will appreciate the importance of protecting Intellectual Property Rights.

Theory: **30 hours**

Unit 1: (4 hours)

Microbial Biotechnology as an emerging Industry: Global Biotechnology industries and their products. Biotechnology trends in India with particular reference to our country's premier biotechnology institutes and industries and their products : Biocon, Serum Institute of India, Bharat Biotech and Hindustan Antibiotics Ltd. Innovations and Startups based on Microbial Biotechnology. Biotechnology in mass production of valuable products using microorganisms and advantages of using microorganisms (Laboratory, pilot and industrial- scale bioreactors).

Unit 2: (14 hours)

Microbial Biotechnology in the development of human therapeutics and industrial products: Prokaryotes and eukaryotes as expression hosts for heterologous proteins. Microbial production of therapeutic recombinant products: hormones (insulin, human growth hormone), thrombolytic agents (streptokinase and tPA) and vaccines (Hepatitis B and Covid-19 vaccines). Industrial bulk products: Production of microbial polysaccharides (xanthan gum and agar-agar), bioplastics (PHB), food-grade pigments/colorants (phycocyanin and Beta-carotene/lycopene), high fructose corn syrup. Development and functioning of enzyme- based biosensors (GOD and cholesterol oxidase). Microbial transformation of steroids**.**

Unit 3: (12 hours)

Role of Microbial Biotechnology in agriculture and environment management: Biofertilizers: liquid and carrier-based biofertilizers. Mass production of *Rhizobium, Acetobacter diazotrophicus, Azotobacter sp*. Commercial production of Biocontrol agents (*Bacillus thuringiensis* & *Trichoderma harzianum*). Development of transgenic crops with particular emphasis on insect resistance, viral resistance and nutritional quality enhancement (Bt-brinjal, Roundup-ready crops and golden rice). RNAi and its application in crop improvement. Edible vaccines, synthetic meat and Single Cell Protein (*Spirulina* & *Fusarium graminearum*), biodiesel production (algal biofuel).

Microbial bioremediation of oil spills using genetically modified organisms (GMOs) and microbial consortia. Microorganisms in the removal of heavy metals from aqueous effluents and copper bioleaching.

Practicals: **60 hours**

Unit 1: (18 hours)

Immobilization of enzymes, cells and biosensors: Immobilization of yeast cells (*Saccharomyces cerevisiae*) by entrapment using calcium alginate beads/agarose/agar and determination of the invertase activity of the immobilized cells by carrying out an invertase assay. Immobilization of an enzyme (amylase/urease/invertase) using calcium alginate/ agarose/ agar and study of its long term storage stability using enzyme assays. Use of an enzyme-based biosensor (glucose oxidase/glucose-1-dehydrogenase based devices to monitor glucose uptake/consumption during a fermentation; cholesterol oxidase/beta- hydroxybutyrate dehydrogenase-based kits to monitor changes in levels of the substrate over a period of time).

Unit 2: (30 hours)

Screening for enzymes and pigment-producer / dye-degrading microorganisms, and expression of a cloned gene: Primary screening of soil samples to isolate microorganisms that produce hydrolytic enzymes (any one): amylase, protease, lipase, CM cellulase, xylanase. Isolation of pigment-producing microorganisms from the environment and laboratory-scale production of any pigment using the shake-flask technique OR Screening for dye-degrading (methylene blue/ methyl orange/ Rhodamine B, etc.) microorganisms from the environment using plate assays and study of the absorption spectra of any dye. Transformation and expression studies of a given plasmid (expressing Green Fluorescent Protein) in the BL21 strain of *E coli,* analysis of protein expression using SDS-PAGE.

Unit 3: (12 hours)

An orientation to the biosafety regulatory framework for Genetically Modified Organisms (GMOs) in India: An introduction to different methods of protecting Intellectual Property in India (Patents, Copyrights, Trademarks, Geographical Indications, Industrial Design and New Plant Varieties). Filing applications for approval of research proposals by the concerned regulatory bodies. Filing of a patent application to the regulator for the protection of a GMO. **Student group research project:** Case study of any microbial consortium available in India for environmental bioremediation.

DISCIPLINE SPECIFIC ELECTIVE COURSE – 12: RESEARCH METHODOLOGY

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
MICROB-DSE 12: RESEARCH METHODOLOGY	4	2	0	2	Class XII pass with Biology/ Biotechnology/ Biochemistry	NIL

Learning Objectives

The Learning Objectives of this course are as follows:

- The main objective of the course is to give the students a broad understanding about research approaches and tools, and importantly, an ability to deploy them in their degree programme.
- This will impart skills for critical reading of research literature, various research methods, including theory of scientific research and qualitative and quantitative methods and for developing a research proposal. The course will outline all the fundamentals of carrying out research in an ethical manner.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Student will be able to explain the basics of research and hypothesis formulation, the different approaches of doing research, acquiring data, and performing data analysis.
- Student will be able to describe the process of scientific writing and presenting of research data.
- Student will be able to demonstrate the process of effective literature search and writing a review.
- Student will be able to analyse datasets and present them through tables, charts and graphs.
- Student will be able to describe the process of writing proposals for research grants.

Contents:

Theory **30 hours**

Unit 1: (8 hours)

Foundation of research and research ethics: What is research, benefits of research. Selection of research topic. Effective literature search. Problem identification and hypothesis building. Qualities of a good hypothesis, hypothesis testing, null hypothesis and alternative hypothesis, logic and importance. Ethics in research: indices for scientific rigor, honesty and integrity, respect for intellectual property, responsible publication of data.

Unit 2: (14 hours)

Approaches to research and research methods: Basic and applied research, descriptive and analytical research, quantitative and qualitative research, experimental and non-experimental research. Good laboratory practices (GLP): Standard Operating Procedures, Biosafety, Radiation safety. Experimental Design. Concept of Experiment Controls. Concept of independent and dependent variables. Recording experimental protocol and data in lab notebooks, preparation for experiments. Field experiments: sampling, types of sampling studies, characteristics of a good sample, sampling frame, sample size, sampling error, scales of measurement, double blind studies. Data analysis and representation: Use of Excel for tables and charts, Common statistical tests (hypothesis of association, student t test) and introducing popular

statistical packages.

Unit 3: (8 hours)

Research Communication: Knowledge dissemination. Effective presentation in scientific conferences (Poster/oral). Structure of research paper. Structure of a thesis/dissertation. Software for scientific paper formatting (LaTeX/MS Office). Software for management of references (Mendeley/Endnote). Software for image processing. Choosing a journal for publication. Impact factor of journals. Ethical issues related to publishing, plagiarism, software for detection of plagiarism.

Practicals: **60 hours**

Unit 1: (20 hours)

Literature Search and Review: General Search Engines, Bibliographic Databases, Digital Libraries, Types of publications, literature search on a given topic and writing a review.

Unit 2: (20 hours)

Analysis and presentation of given dataset: Training in the use of Microsoft Excel for data presentations in tables, graphs and charts. Training in the use of Microsoft Powerpoint for presenting scientific findings at meetings/conferences. Writing an Abstract for paper/conference based on given data.

Unit 3: (20 hours)

Planning and writing a research proposal: General considerations, finding a research problem. Major Funding agencies in India. Mandate of the call for proposals. How to write a proposal. **Student group project**: writing a research proposal on a given topic

Suggested Reading (Theory & Practical):

1. Research Methodology for Natural Sciences by S. Banerjee. I.I.Sc. Press, India. 2022.
2. Research Methodology and Scientific Writing by C.G. Thomas. 2nd edition. Ane Books, India. 2019.
3. Scientific writing and communication by A. Hoffman. 4th edition. Oxford University Press. 2019.
4. Research Methodology: Methods and Techniques by C.R. Kothari. 4th edition. New Age International Publishers, India. 2019.
5. Testing treatments: Better research for better healthcare by I. Evans, H. Thornton, I. Chalmers and P. Glasziou. 2nd edition. Pinter & Martin Ltd, UK. 2013.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

MICROB-DSE 13: **Applications of Informatics in Biology**	**4**	**2**	**0**	**2**	**Class XII pass with Biology/ Biotechnology/ Biochemistry**	**NIL**

Learning Objectives

The Learning Objectives of this course are as follows:

- The main objective of this paper is to enable the students to develop a clear understanding of the various concepts and applications of bioinformatics, a field which encompasses diverse applied disciplines such as molecular biology, genomics, proteomics, transcriptomics and systems biology. Students will also learn applications of artificial intelligence in bioinformatics.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Student will be able to explain the goals of bioinformatics and its applications, diverse types of biological databases, concept and significance of sequence alignment, phylogeny, types of phylogenetic trees.
- Student will be able to describe the diversity of viral, prokaryotic, eukaryotic genomes and their organization, proteomics along with the details of structure of proteins, protein structure prediction, and energy minimizations.
- Student will be able to explain the significance of artificial intelligence and machine learning in various biological applications, computer-aided drug discovery, epitope prediction and its significance in vaccine development and allergen prediction.
- Student will be able to demonstrate how to work with biological databases, similarity searches, sequence alignments and phylogenetic analysis.

- Student will be able to demonstrate working with databases and analysis, gene prediction and other features, and primer designing.
- Student will be able to demonstrate how to identifying secondary structural features of proteins, prediction of protein structure models from amino acid sequences, molecular docking and epitope prediction.

Contents:

Theory: **30 hours**

Unit 1: (10 hours)

Fundamentals of bioinformatics, sequence alignment and phylogeny: Aims and scope of bioinformatics. Concepts of genome, transcriptome, proteome, systems biology, metabolome, interactome and neural network. Biological databases and types. Sequence similarity and Sequence alignment (Local and Global Sequence alignment), pairwise and multiple sequence alignment. Phylogeny, rooted and unrooted trees.

Unit 2: (10 hours)

Genomics and Proteomics: Features of the viral, prokaryotic (*E. coli*) and eukaryotic (human) genomes. Gene Ontology, Hierarchy, and features of protein structure, Structural classes, motifs, folds and domains. Homology modelling of tertiary structure of protein, Molecular dynamic simulations and energy minimizations, Evaluation by Ramachandran plot.

Unit 3: (10 hours)

Artificial Intelligence in bioinformatics: Role of AI and machine learning in biology (proteomics, structural biology, disease management, drug discovery and genomics). Computer-aided drug discovery and design. Bioinformatics in epitope mapping for vaccine design and allergen prediction.

Practicals: **60 hours**

Unit 1: (24 hours)

Biological Databases, similarity search, sequence alignments and phylogenetic analysis: Study of bioinformatics databases, File formats: FASTA, GenBank. Sequence submission tools: NCBI, PDB. Sequence retrieval and similarity search using BLAST, Multiple sequence (DNA/Protein) alignment using CLUSTAL omega. Phylogenetic analysis using MEGA.

Unit 2: (16 hours)

Identification and analysis of genome features: Picking out a given gene from genomes using

GENSCAN or other software (promoter region identification, repeats in the genome, ORF prediction, Gene finding tools), Genome browsing using Ensemble/Genome Data Viewer (NCBI) for features of E. coli and Human Genome (Search a genomic assembly to display a region annotated with a particular gene), Design and analysis of PCR primers using PRIMER BLAST or any other tool.

Unit 3: (20 hours)

Protein structure prediction and evaluation, molecular docking, epitope prediction: Primary structure analysis. Secondary structure prediction using psi-pred. Molecular visualization using JMOL/PyMOL, protein structure model evaluation, virtual screening of drugs using AUTODOC-VINA/ any other software, Demonstration of IEDB (https://www.iedb.org) server for the prediction of HLA class I and II binding epitopes.

Suggested Reading (Theory & Practical):

8. Bioinformatics: methods and applications, genomic, proteomics and drug discovery by S. Rastogi, N. Mendiratta and P. Rastogi. 4th edition. Prentice Hall India Publication. 2007.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVE COURSE – 14: ADVANCES IN MICROBIOLOGY

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
MICROB-DSE 14: ADVANCES IN MICROBIOLOGY	**4**	**2**	**0**	**2**	**Class XII pass with Biology/ Biotechnology/ Biochemistry**	**NIL**

Learning Objectives

The Learning Objectives of this course are as follows:

- The main objective of this course is to educate students about the latest developments in the field of microbiology and apprise them of the cutting-edge technologies being used for research and development.
- They will learn the uses of omics approaches, meta-omics, systems biology, and synthetic biology. They will become familiar with the development and applications of CRISPR-Cas technology and will gain insights into the versatile field of microbial nanotechnology.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Student will be able to discuss the host-microbe arms race, newer methods to combat challenges of antimicrobial resistance and biofilms, the use of meta-omics approaches in research, latest cutting-edge technology of CRISPR-Cas and its applications.
- Student will be able to explain the Systems and Synthetic Biology and their applications; the principles, techniques, and applications of the versatile field of nanobiotechnology.
- Student will be able to demonstrate soil metagenomics and PCR-based taxonomy analysis, and describe major metagenomics projects worldwide through case studies.
- Student will be able to demonstrate synthesis and testing of silver nanoparticles with antimicrobial properties from plant, fungal/bacterial

extracts; and explain about the analytical research tools to characterize the nanoparticles.

- Student will be able to describe Poliovirus synthesis, mRNA vaccine synthesis and Genome synthesis of mycoplasma through case studies.

Contents:

Theory: 30 hours

Unit 1: (10 hours)

Host- microbe interactions and use of microbes in healthcare: Host-Microbe arms race, genome- pathogenicity islands, Type Three Secretion System (T3SS), Quorum Sensing, and Biofilm formation in bacteria. Viral zoonosis and pandemics. Gene for Gene hypothesis, hypersensitive response, plant resistance genes, and signal transduction mechanism. Addressing the challenges of Anti-Microbial Resistance (AMR) and biofilms by phages, and of cancer through oncolytic viruses.

Unit 2: (10 hours)

Modern molecular techniques in Microbiology: Meta-Omics technology (Metagenomics, Metatranscriptomics, Metaproteomics, and Metabolomics): Principles, techniques deployed, and applications. CRISPR-Cas technology- History, mechanism, applications (in Health, Agriculture and other Industries) and limitations of this technology.

Unit 3: (10 hours)

Systems biology, Synthetic biology, and Nanobiotechnological Approaches in Microbiology: Systems biology approach for holistic perspectives and better outcomes. Types of Biological Networks. Cell signaling and interaction networks. Synthetic biology: principles and applications. Concept, methodology, and applications of Microbial Nanotechnology in health, agriculture, and food industry. Applications of Viral and Viral-like Nanoparticles.

Practicals: 60 hours

Unit 1: (20 hours)

Metagenomic technique to study soil microorganisms: Hands-on training in extraction of DNA from soil, and PCR amplification of metagenomic DNA using universal16S ribosomal gene primers. **Student group project:** Research and review on major metagenomic projects (Sargasso Sea Project, Viral Metagenomics and Human Microbiome Project)

Unit 2: (25 hours)

Synthesis and analysis of silver nanoparticles from plants extracts and microbes (fungi/bacteria). Hands-on training in synthesis of silver nanoparticles by any one method. Testing of antimicrobial properties of synthesized silver nanoparticles. Characterization of nanoparticles by UV-vis Spectroscopy, X-ray Diffraction (XRD), Scanning and Transmission Electron Microscopy (SEM and TEM) through virtual labs / videos. Visit to Sophisticated Instrumentation Facility of a research institution.

Unit 3: (15 hours)

Student research study project: Poliovirus Synthesis: a case study to understand how the poliovirus was synthesized in the laboratory. mRNA-Vaccine Synthesis: a case study of the steps involved in synthesis of mRNA vaccine and testing its efficacy. **Student group project**: Covid19 mRNA vaccines in the market in India and overseas. Genome synthesis of mycoplasma: a case study to develop a synthetic genome of mycoplasma.

DISCIPLINE SPECIFIC ELECTIVE COURSE – 15: MICROBIOME IN HEALTH AND DISEASE

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
MICROB-DSE 15: MICROBIOME IN HEALTH AND DISEASE	4	2	0	2	Class XII pass with Biology/ Biotechnology/ Biochemistry	NIL

Learning Objectives

The Learning Objectives of this course are as follows:

- The main objective of this course is to introduce the human microbiome to students and give them an understanding of its dynamics and function in maintaining homeostasis.
- Students will gain an understanding of the diversity of microbial communities present in various organs in humans. They will gain insights into our current understanding of the impact of microbiome alterations on host health and disease. Students will become aware of techniques used to analyze large omics data sets in investigating microbial communities colonizing humans.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Student will be able to explain about human microbiome and methods to study microbiomes, the link between human microbiome and diseases
- Student will be able to describe microbiome-based therapeutic approaches and their challenges, human microbiome project and various databases and software for microbiome analysis
- Student will be able to discuss the basic workflow in a typical microbiome study and analyze microbiome data

- Student will be able to describe current knowledge on the role of microbiome in various diseases

Contents:

Theory **30 hours**

Unit 1: (14 hours)

The human microbiome: Understanding microbiome, importance of microbiome research, development of the microbiome. Vertical and horizontal transfer of human microbiomes, source of the organisms in the human microbiome. Diversity in oral, gut, respiratory and skin microbiome. Microbiome-Gut-Brain Axis. Methods to study the human microbiome: DNA-based analysis of microbial communities, 16S rDNA gene amplicon sequencing and whole metagenome shotgun sequencing methods. Data pre-processing and quality control. Microbiome data analysis: clustering and OTU picking, taxonomic analysis, alpha and beta-diversity. Comparing microbial communities: phylogenetic trees, UniFrac, principal coordinate analysis, Venn diagrams, heat maps. Functional and comparative analysis: metatranscriptome, metabolome, metaproteome.

Unit 2: (10 hours)

Microbiome and its relation to health and disease: Dysbiosis, correlation of dysbiosis with disturbance in microenvironment. Dysbiosis in progression of non-communicable diseases such as cancer, Inflammatory Bowel Disease (IBD), obesity, diabetes, Alzheimer's, and incommunicable diseases such as COVID-19, tuberculosis and typhoid. Nutritional modulation of the gut microbiome. Prakriti and gut bacteria: perspective of traditional ayurveda. Microbiome and host immune system interaction. Effect of antibiotics on microbiota, oral dysbiosis and oral diseases, skin microbiome alterations and cutaneous allergic diseases.

Unit 3: (6 hours)

Microbiome-based therapeutic approaches: Maintaining and restoring a healthy microbiome. Additive, subtractive, and modulatory microbiome-based therapies. Health benefits of prebiotics and probiotics. Fecal transplant and its applications. Challenges in the field of microbiome therapeutics. Microbiome-based diagnostics.

Practicals **60 hours**

Unit 1: (20 hours)

Tools and techniques to study microbiome: Human Microbiome project. Hands-on exposure to various databases (NCBI, HOMD) and opensource software related to microbiome analysis (microbiome analyst, QIIME 2.1, galaxy).

Unit 2: (20 hours)

Research strategy and experimental design in a typical microbiome study: Sample collection, DNA extraction, library preparation and DNA sequencing through virtual lab. Data analysis. Comparison of alpha and beta diversity in given data sets. Interpretations of given heat maps.

Unit 3: (20 hours)

Student group research study projects: Current knowledge on the role of microbiome in respiratory health, the impact of the human microbiome on auto-immune diseases, the interplay of bacteria and eukaryotic microbes in the human gut: presentation of the findings and submission of research study report.

DISCIPLINE SPECIFIC ELECTIVE COURSE – 16:
MICROBIAL DIAGNOSIS AND PUBLIC HEALTH MANAGEMENT

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
MICROB-DSE 16: MICROBIAL DIAGNOSIS AND PUBLIC HEALTH MANAGEMENT	4	2	0	2	Class XII pass with Biology/ Biotechnology/ Biochemistry	NIL

Learning Objectives

The Learning Objectives of this course are as follows:

- The main objective of this course is to introduce the students to diagnostic microbiology and public health management. Students will be exposed to various methods of sampling of specimens for laboratory diagnosis.
- Student will be introduced to various automated systems and methods of pathogen identification and microbial typing. Students will develop an understanding of basic concepts of epidemiology. They will be introduced to the role of environment in human health and key aspects of disaster management.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Student will be able to explain the methods of collection and transport of clinical specimens, the automated systems for pathogen identification and various methods of microbial typing.
- Student will be able to describe epidemiology, types of epidemics and pandemics, the epidemiology of infectious diseases, the reservoirs of infectious agents and modes of transmission of various diseases.

- Student will be able to explain the concept of one health, various types of zoonoses, overview of air and water pollution and its impact on human health, the key aspects of disaster management.
- Student will be able to describe the significance of various parameters determining health, the methods of blood sampling used for various animals, and demonstrate rapid diagnostic techniques.
- Student will be able to analyze epidemiological data to calculate mortality and morbidity rates, explain about epidemics through case studies.
- Student will be able to describe various disease control regulatory agencies (National and International), genome and disease surveillance.

Contents:

Theory: **30 hours**

Unit 1: (10 hours)

General principles of diagnosis and microbial typing methods: Challenges of diagnosis. General principles of specimen collection. Choice of clinical samples and methods of collection. Transportation of clinical samples. Evaluation of a diagnostic test based on specificity, sensitivity, positive predictive value, negative predictive value. Automated systems of pathogen identification: a brief outline of BACTEC, MALDI-TOF, VITEK, and their advantages and disadvantages. Microbial typing: phage typing, bacteriocin typing, serotyping, antibiogram typing, plasmid profile analysis.

Unit 2: (12 hours)

Basic concepts of epidemiology: Definitions: health, epidemiology, prevalence, birth rate, morbidity, mortality, sero-prevalence, genome surveillance, R^o value, quarantine, endemic, epidemics and types (common source, propagated/progressive, mixed), pandemic, travel notice, public health guidelines. Uses of epidemiology. Infectious disease epidemiology. Modes of transmission of disease and its dynamics, human reservoirs, animal reservoirs, carriers. Investigation of an epidemic. Role of immunization in public health. Clinical trials: randomized control trials (multiple treatment arms, factorial design, cluster design), nonrandomized trials.

Unit 3: (8 hours)

Environment and Health: The concept of one health. Definition, history and socio-economic impact of zoonotic diseases. Classification of zoonoses with examples (based on transmission cycle: orthozoonoses, cyclozoonoses, metazoonoses, saprozoonoses;

based on reservoir hosts: anthrapozoonoses, zooanthroponoses, amphixenoses). Air pollution and its effects. Water pollution and its effect. Disaster management: key aspects.

Practicals: **60 hours**

Unit 1: (30 hours)

Health indicators, blood sampling methods and diagnostic methods: Student individual project: preparation of a short report on indicators of health. Guidelines and collection sites for sampling of blood from humans, cattle, sheep and goat. **Student group study project:** preparation of a flow chart for detection of microbial pathogens for two diseases prevalent in India. Principles and working of rapid antibody detection test using COVID-19 as example. Principles and working of antigen and antibody detection kits for HIV. Principle and working of slide agglutination test for typhoid. Principles and working of quantitative real time PCR test for COVID-19 through virtual lab.

Unit 2: (15 hours)

Epidemiological Data Analysis: Student group research study: Case studies of a common source epidemic (Cholera outbreak, London, 1854) and progressive epidemic (SARS 2002, MERS 2012, and COVID-19). **Student group research project**: Measurement of disease: determination of morbidity and mortality rates/ratios. Generation of epidemiological protocols and reports.

Unit 3: (15 hours)

Case Studies through student group research projects: INSACOG: role in SARS- CoV-2 genome surveillance, Role of WHO and National Centre for Disease Control in disease management, AMR stewardship and National Action Plan, CDC –EOC levels (www.cdc.gov).

DISCIPLINE SPECIFIC CORE COURSE – 7: Engineering Mathematics

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Engineering Mathematics ELDSC-7	**4**	**3**	**00**	**1**	**Course Admission Eligibility**	**NIL**

Learning Objectives

The Learning Objectives of this course are as follows:

- To provide the students with the skill and knowledge to perform calculations for solutions to the problems related to various topics that they would be taught during the course of this programme.
- To prepare the students with the mathematical tools they would require while studying and analysing problems in electronics networks, electronic and optical communications, semiconductor devices such as transistors, diodes, transient circuits in power devices, and problem solving in Electromagnetic theory, waveguides, and antennas.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Use mathematical tools to solve/model the problems related to Electronics
- Solve linear differential equations using a variety of techniques, power series method and special functions
- Understand to solve N coupled equations using matrices, concept of Eigen values and Eigen vectors
- Familiarize with the concept of sequences and series, convergence and divergence
- Appreciate the complex variables and perform operations with complex numbers

SYLLABUS OF ELDSC-7 Total Hours- Theory: 45 Hours, Practicals: 30 Hours

UNIT – I (12 Hours)

Ordinary Differential Equations(ODE): Introduction to First Order Ordinary Differential Equations, Separable Ordinary Differential Equations, Exact Ordinary Differential Equations, Linear Ordinary Differential Equations.

Series Solutions of ODE: Power Series method, Legendre Polynomials, Bessel's equations and Frobenius method.

Special functions: Beta and gamma functions, error functions

UNIT – II (11 Hours)

Matrices: Introduction to Matrices, System of Linear Algebraic Equations, Solution of a system of Linear equations by LU decomposition, Gauss Jordan and Gauss-Seidel Method. Symmetric and Skew Symmetric Matrices, Hermitian and Skew Hermitian Matrices. Real and Complex Matrices.

Matrix Eigen Value Problems: Linear transformation, Eigen values and Eigen vectors, Properties of Eigen values and Eigen vectors.

UNIT – III (11 Hours)

Sequences and Series: Sequences and its kind, Limits of a sequence, Convergent, Divergent and oscillatory sequences.

Convergence of Infinite series, Tests of Convergence: Cauchy's Integral Test, D'Alembert's Ratio Test, Cauchy's nth Root Test, Alternating Series Test.

UNIT – IV (11 Hours)

Complex Variables Analysis: Complex Variables, Complex functions, Continuity, Differentiability, Analyticity, Cauchy-Riemann (C-R) Equations, Harmonic and Conjugate Harmonic Functions, Exponential Functions, Trigonometric Functions, Hyperbolic Functions.

Complex Integration: Line integral in Complex Plane, Cauchy's Integral Theorem, Cauchy's Integral Formula. Taylor series-exponential, logarithmic and trigonometric functions.

Practical component (if any) – Engineering Mathematics

(Scilab/MATLAB/ any other Mathematical Simulation software)

Learning outcomes

The Learning Outcomes of this course are as follows:

- Perform operations with various forms of complex numbers to solve equations
- Use mathematics as a tool for solving/modeling systems in electronics
- Prepare the technical report on the experiments carried.

LIST OF PRACTICALS (Total Practical Hours- 30 Hours)

1. Solution of First Order Differential Equations
2. To test convergence of a given series.
3. To test divergence of a given series.
4. Solution of linear system of equations using Gauss Elimination method.
5. Solution of linear system of equations using Gauss – Seidel method.
6. Solution of linear system of equations using L-U decomposition method.
7. Plots of the exponential, logarithmic and trigonometric functions and comparison with the plots of their Taylor series expansion till first 10 terms

Note: Students shall sincerely work towards completing all the above listed practicals for this course. In any circumstance, the completed number of practicals shall not be less than six.

Essential/recommended readings

1. E. Kreyszig, Advanced Engineering Mathematics, Wiley India (2010), 10th Edition
2. Murray Spiegel, Seymour Lipschutz, John Schiller, Outline of Complex Variables, Schaum Outline Series, Tata McGraw Hill (2009), 2nd Edition
3. C .R. Wylie and L. C. Barrett, Advanced Engineering Mathematics, Tata McGraw-Hill (2004)
4. B. V. Ramana, Higher Engineering Mathematics, Tata McGraw Hill (2006)

Suggestive readings

1. R. K. Jain, and S.R.K. Iyengar, Advanced Engineering Mathematics, Narosa Publishing House (2007).

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE – 8: Analog Electronics-II

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Analog Electronics-II ELDSC-8	4	3	0	1	Course Admission Eligibility	Basic knowledge of BJT based circuits

Learning Objectives

The Learning Objectives of this course are as follows:

- To develop understanding of Analog Devices starting with ideal Op Amp model and assessing the practical device limitations and learning importance of the Data Sheets.
- Design linear applications but also design of non-linear application without feedback (voltage comparators), with positive feedback (Schmitt Trigger), and the negative feedback but using non- linear elements such as diodes and switches (sample and hold circuits)
- Study of Oscillators and other Signal Generators
- Study Multivibrators and its applications using IC 555 Timer

Learning outcomes

The Learning Outcomes of this course are as follows:

- Understand basic building blocks of an op-amp and its parameters for various applications design.
- Elucidate and design the linear and non-linear applications of an op-amp.
- Understanding and Designing of various Signal Generators
- Understand the working of multivibrators using IC 555 timer

SYLLABUS OF ELDSC-8 Total Hours- Theory: 45 Hours, Practicals: 30 Hours

UNIT – I (12 Hours)

Basic Operational Amplifier: Concept of differential amplifiers (Dual Input Balanced and Unbalanced Output), Block Diagram of an Operational Amplifier, Characteristics of an Ideal Op-Amp.

Open and Closed Loop Configurations: Inverting, Non-Inverting and Differential Amplifier

Op-Amp Parameters (IC741): Differential Input Resistance, Output Resistance, Input Capacitance, Input Voltage Range, Large Signal Voltage Gain, Offset Voltage Adjustment Range, Input Offset Voltage, Input Offset Current, Input Bias Current,

Common Mode Rejection Ratio, Supply Voltage Rejection Ratio, Bandwidth, Gain Bandwidth Product, Slew Rate.

UNIT – II (11 Hours)

Frequency Response of an Op-Amp.: High Frequency Op-Amp Equivalent Circuit, Open Loop Voltage Gain as a function of Frequency, Closed Loop Frequency Response, Effect of Slew Rate in Applications.

Linear Applications of an Op-Amp: Summing, Scaling and Averaging Amplifiers, Subtractor, Integrator, Differentiator, Current to voltage converter.

UNIT – III (11 Hours)

Active Filters: First Order Low Pass and High Pass Butterworth Filter, Concept of Higher Order Butterworth Filters, Band Pass Filter, Band Reject Filter, All Pass Filter.

Non-Linear Applications of an Op-Amp: Basic Comparator, Level Detectors, Schmitt Trigger, Characteristics of Comparator, Voltage Limiters, Sample and Hold circuit.

UNIT – IV (11 Hours)

Signal Generators: Phase Shift Oscillator, Wien Bridge Oscillator, Square Wave Generator, Triangle Wave Generator, Saw Tooth Wave Generator

IC 555 Timer: Block Diagram, Astable and Monostable Multivibrator Circuit, Applications of Monostable and Astable Multivibrator.

Practical component (if any) – Analog Electronics- II
(Hardware and Circuit Simulation Software)

Learning outcomes

The Learning Outcomes of this course are as follows:

- Understand the non-ideal behaviour by parameter measurement of Op-amp.
- Design application oriented circuits using Op-amp ICs.
- Generate square wave using different modes of 555 timer IC.
- Prepare the technical report on the experiments carried.

LIST OF PRACTICALS (Total Practical Hours- 30 Hours)

1. Study of op-amp characteristics: CMRR and Slew rate.
2. Designing of an amplifier of given gain for an inverting and non-inverting configuration using an Op-Amp.
3. Designing of an Integrator using op-amp for a given specification.
4. Designing of a Differentiator using op-amp for a given specification.
5. Designing of analog adder/subtractor circuit.
6. Designing of a First Order Low-pass / High Pass Filter using op-amp and study its frequency response.
7. Designing of a RC Phase Shift Oscillator using Op-Amp.
8. Study of IC 555 as an astable multivibrator.

Note: Students shall sincerely work towards completing all the above listed practicals for this course. In any circumstance, the completed number of practicals shall not be less than seven.

Essential/recommended readings

1. R. A. Gayakwad, Op-Amps and Linear Integrated Circuits , Pearson Education
2. R. F. Coughlin and F. F. Driscoll, Operational amplifiers and Linear Integrated circuits, Pearson Education
3. Nutan Kala Joshi and Swati Nagpal, Basic Electronics, Khanna Publishers

Suggestive readings

1. D.Roy Choudhary and Shail B. Jain, Linear Integrated Circuits, New Age International Publishers
2. A.P.Malvino, Electronic Principals, Tata McGraw-Hill

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE – 9: Signals and Systems

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Signals and Systems ELDSC-9	**4**	**3**	**0**	**1**	**Course Admission Eligibility**	**NIL**

Learning Objectives

The Learning Objectives of this course are as follows:

- Understand mathematical description and representation of continuous and discrete time signals and systems.
- Develop input-output relationship for linear shift invariant system and understand the convolution operator for continuous and discrete time system.
- Understand and resolve the signals in frequency domain using Fourier series and Fourier transforms.
- Understand the limitations of Fourier transform and need for Laplace transform and develop the ability to analyze the system in *s*- domain.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Represent various types of continuous-time and discrete-time signals and their convolution.
- Understand concept of convolution, LTI systems and classify them based on their properties and determine the response of LTI system.
- Determine Fourier series of periodic signals.
- Analyze various systems using Fourier and Laplace transformations.

SYLLABUS OF ELDSC-9 Total Hours- Theory: 45 Hours, Practicals: 30 Hours

UNIT – I (11 Hours)

Signals and Systems: Continuous and discrete time signals, time domain operations (shifting, scaling, reflection, *etc.*) with precedence rules. Exponential and sinusoidal signals, impulse and unit step functions, continuous-time and discrete-time systems and their basic properties.

UNIT – II (11 Hours)

Linear Time -Invariant Systems (LTI): Discrete time LTI systems, the Convolution Sum, Continuous time LTI systems, the Convolution integral. Properties of LTI systems, Commutative, Distributive, Associative. LTI systems with and without

memory, invariability, causality, stability, unit step response. Differential and Difference equation formulation. Block diagram representation of first order systems.

UNIT – III (12 Hours)

Fourier series Representation of Periodic Signals: Fourier series representation of periodic continuous and discrete signals. Convergence of the Fourier series (Dirichlet conditions).

Fourier Transform: Aperiodic signals, Periodic signals, Properties of Continuous-time Fourier transform, Convolution and multiplication Properties, Properties of Fourier transform and basic Fourier transform Pairs.

UNIT – IV (11 Hours)

Laplace Transforms: Unilateral Laplace transform, inverse Laplace transform, properties of the Laplace transform, Laplace transform pairs, Laplace transform for signals. Solutions of first and second order differential equations with initial conditions.

Practical component (if any) – Signals and Systems
(Scilab/MATLAB/ OCTAVE/Other Mathematical Simulation software)

Learning outcomes

The Learning Outcomes of this course are as follows:

- Generate/plot various signals, there transformation and compute convolution
- Generate/plot Fourier series of periodic signals.
- Compute Fourier transform
- Learn the use of simulation tools and design skills.

LIST OF PRACTICALS (Total Practical Hours- 30 Hours)

1. Plotting/generation of signals: continuous time
2. Plotting/generation of signals: discrete time
3. Time shifting and time scaling of signals.
4. Convolution of signals
5. Fourier series representation of continuous time signals.
6. Fourier series representation of discrete time signals.
7. Computation of Fourier transform of continuous time signals.
8. Laplace transform of continuous time signals.

Note: Students shall sincerely work towards completing all the above listed practicals for this course. In any circumstance, the completed number of practicals shall not be less than seven.

Essential/recommended readings

1. V. Oppenheim, A. S. Wilsky and S. H. Nawab, Signals and Systems, Pearson Education (2007)
2. H. P. Hsu, Signals and Systems, Tata McGraw Hill (2007).

Suggestive readings

1. S. Haykin and B. V. Veen, Signals and Systems, John Wiley & Sons (2004).

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVES (DSE) COURSES OFFERED BY THE DEPARTMENT

DISCIPLINE SPECIFIC ELECTIVES (DSE-1)

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Artificial Intelligence and Machine Learning ELDSE-1A	**4**	**3**	**-0**	**1**	**Course Admission Eligibility**	**Basic knowledge of Python language**

Learning Objectives

The Learning Objectives of this course are as follows:
Artificial Intelligence and Machine Learning has emerged as one of the most rapidly growing technology sector in today's time. This fascinating technology area which deals with designing 'machines which can think' is finding widespread application in almost every industrial and domestic sector. Advancement in the field of AI and ML has also led to complete revolution in the other technology areas including Robotics, embedded systems and Internet of Things. AI and ML is considered to be one of the major contributor to the paradigm shift in technology which has taken place over the past few decades, which is very similar in scale to past events such as the industrial revolution, the computer age, and the smart phone revolution.
This course will give an opportunity to gain expertise in one of the most fascinating areas of science and technology through a well-structured classroom program that covers almost all the topics related to designing machines which can replicate human intelligence and its applications in industry, defence, healthcare, agriculture and many other areas. This course will give the students a rigorous, advanced and professional graduate-level foundation in Artificial Intelligence and Machine Learning.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Build intelligent agents for search and games
- Solve AI problems through programming with Python
- Learning optimization and inference algorithms for model learning

- Design and develop programs for an agent to learn and act in a structured environment
- To study different supervised and unsupervised learning algorithms.
- To understand the application development process using ML

.

SYLLABUS OF ELDSE-1A Total Hours- Theory: 45 Hours, Practicals: 30 Hours

UNIT – I (11 Hours)

Introduction: Concept of AI, history, current status, scope, Modeling Techniques: Turing Test Approach, Cognitive Modeling Approach, Rational Agent Approach and Laws of Thought Approach, AI System Architecture: Concept of Agent & Environment, Types of Agents: Reactive Agent, Model based Reflex Agent, Omniscient Agent, Goal Based Agent, Utility based Agent and Learning Agent, Knowledge based Agents and Knowledge Representation Techniques. Types of Environment, PEAS representation of Intelligent Agents, Problem Solving Agents, AI Problem Formulation, State space representation

UNIT – II (11 Hours)

Search Algorithms: Uninformed Search Algorithms: Breadth first search, Depth First Search, Depth Limited Search, Uniform Cost Search and Bidirectional Search, Heuristic Search Algorithms: concept of Heuristic Function, Greedy Best First Search, A* search algorithm, Game Search Algorithms: Minimax Search Algorithm and Alpha-Beta Pruning.

Simple AI problems (such as Water Jug Problem, Maze Problem, 8-Tile Puzzle problem, Traveling Salesman Problem).

UNIT – III (11 Hours)

Probabilistic Reasoning Model: Probability, conditional probability, Bayes Rule, Bayesian Networks- representation, construction and inference, Temporal model: concept of Transition probability, Markov Model and Hidden Markov model.

Markov Decision Process Model: MDP formulation, Elements of MDP Model, concept of Sequential Decision Processing, Example of MDP Problem: Agent in a grid world

UNIT – IV (12 Hours)

Machine Learning: Types of Machine Learning: Supervised Learning, Unsupervised Learning and Reinforcement Learning. Supervised Learning Vs. Unsupervised Learning **Supervised Learning Techniques:** Regression Analysis, Linear Regression, Classification Algorithm, Logistic Regression, K-NN Algorithm, Classification Vs. Regression, Linear Regression Vs. Logistic Regression, Decision Tree Classification Algorithm, Random Forest Algorithm, Clustering in Machine Learning, Hierarchical Clustering in Machine Learning, K-Means Clustering Algorithm

Practical component (if any) – Artificial Intelligence and Machine Learning
(Python software)

Learning outcomes

The Learning Outcomes of this course are as follows:

- Implement various search algorithms
- Implement Bayesian network
- Demonstrate classification and clustering
- Make a small project

LIST OF PRACTICALS (Total Practical Hours- 30 Hours)

1. Write a program to solve the given search tree using Breadth First Search
2. Write a program to solve the given search tree using Depth First Search and Depth Limited Search
3. Write a program to solve the given search tree using Uniform Cost Search
4. Write a program to solve the given search tree using Greedy Best First Search
5. Write a program to solve the given game search tree using Minimax Search
6. Program for construction and inference of a Bayesian network
7. Write a Program to perform Regression on given data sets
8. Write a Program to demonstrate Classification
9. Write a Program to demonstrate Clustering
10. Mini Project work

Note: Students shall sincerely work towards completing all the above listed practicals for this course. In any circumstance, the completed number of practicals shall not be less than eight.

Essential/recommended readings

1. Stuart Russell and Peter Norvig, —Artificial Intelligence: A Modern Approach‖ , 3rd Edition, Prentice Hall
2. Elaine Rich and Kevin Knight, —Artificial Intelligence‖, Tata McGraw Hill
3. Trivedi, M.C., —A Classical Approach to Artificial Intelligence‖, Khanna Publishing House, Delhi.
4. Saroj Kaushik, —Artificial Intelligence , Cengage Learning India, 2011
5. Introduction to Machine Learning with Python, by Andreas C. Müller, Sarah Guido, O'Reilly Media, Inc., 2016

Suggestive readings

1. David Poole and Alan Mackworth, —Artificial Intelligence: Foundations for Computational Agents, Cambridge University Press 2010
2. Machine Learning by Tom. M. Mitchell, Tata McGraw Hill
3. Introduction to Machine Learning by Nils. J. Nillson

Note: **Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.**

DISCIPLINE SPECIFIC ELECTIVES (DSE-2)

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Algorithm Design and Analysis ELDSE-1B	**4**	**3**	**0**	**1**	**Course Admission Eligibility**	**Basic Knowledge of Python language**

Learning Objectives

The Learning Objectives of this course are as follows:

- To develop the understanding of usage of basic data structures like stack, queue, linked list, trees
- To introduce the students to design and analyse algorithms
- To highlight the differences between various problem-solving techniques for an efficient algorithm design
- To provide an understanding of algorithm design through a survey of the common algorithm design paradigms of Iterative techniques, Divide and Conquer, Dynamic Programming, Greedy Optimization
- To develop proficiency in Problem Solving and Programming
- To provide an understanding of time and space complexities of algorithms designed to solve computational problems
- To familiarize with various Searching and Sorting techniques

Learning outcomes

The Learning Outcomes of this course are as follows:

- Implement data structures like Stacks, Queues. Linked List, trees
- Use an appropriate algorithm using the algorithm design techniques, namely,
- Iterative, Divide and Conquer, Greedy, Dynamic Programming for a series of
- computational problems
- Apply various Searching and Sorting techniques
- Solve computational problems with an understanding of time and space complexities of algorithms

SYLLABUS OF ELDSE-1B Total Hours- Theory: 45 Hours, Practicals: 30 Hours

UNIT – I (11 Hours)

Data Structures: Stacks, array implementation of stack, operation on stacks, application of stacks-conversion of infix expression to prefix and postfix, evaluation

of expression; Queues, array implementation of queues, operation on queues, Linked List and its implementation of stack and queue.

UNIT – II (11 Hours)

Trees: Introduction to trees, Binary search tree, preorder, postorder and inorder traversal (recursive)

Searching Techniques: Linear and Binary Search, Hashing techniques

UNIT – III (12 Hours)

Algorithm Design Techniques: Iterative techniques-Insertion Sort, Divide and Conquer-Merge Sort, Dynamic Programming-Weighted Interval Scheduling, 0-1 Knapsack Problem

UNIT – IV (11 Hours)

Greedy Algorithm- Interval Scheduling, Fractional Knapsack problem, Dijkstra's shortest path problem. Comparison between Dynamic programming and Greedy algorithm

Sorting Techniques: Quick Sort, Heap sort, Sorting in Linear Time - Bucket Sort, Radix Sort and Count Sort, Time and Space complexity

Practical component (if any) – Algorithm Design and Analysis
(Python/MATLAB software)

Learning outcomes

The Learning Outcomes of this course are as follows:

- Implement Data Structures
- Develop algorithms and write programs in Python language
- Write programs based on Algorithm design techniques
- Implement various Sorting techniques
- Prepare a Technical Report on the experiments carried

LIST OF PRACTICALS (Total Practical Hours – 30 Hours)

1. Program to create a stack and perform Pop, Push, traverse operations on the stack using Linear Linked List
2. Program to create a linear queue using Linked List and implement insertion, deletion and display of the queue elements
3. Program to create a Binary Tree to perform traversals (Preorder, Postorder, Inorder) using the concept of recursion.
4. Program to solve the Interval Scheduling problem
5. Program to solve the Weighted Interval Scheduling problem
6. Program to solve the 0-1 Knapsack problem
7. Program to implement Insertion Sort
8. Program to implement Merge Sort
9. Program to implement Heap Sort
10. Program to implement Quick Sort

11. Program to implement Bucket Sort
12. Program to implement Radix Sort
13. Program to implement Binary Search

Note: Students shall sincerely work towards completing all the above listed practicals for this course. In any circumstance, the completed number of practicals shall not be less than eleven.

Essential/recommended readings

1. M.T.Goodrich, R.Tamassia, M.H.Goldwasser, Data Structures & Algorithms, Wiley
2. T.H. Cormen, C.E. Leiserson, R.L. Rivest and C. Stein, Introduction to Algorithms, Prentice Hall India. Third edition (2015).
3. J. Kleinberg and E. Tardos, Algorithm Design, Pearson Education India, First Edition (2013).
4. S. Lipschutz, Data Structures with C, Schaum's Outlines Series, Tata McGraw Hill
5. A.M.Tenenbaum, Y.Langsam, M.J. Augenstein, Data Structures using C, Pearson/PHI

Suggestive readings

1. Sarabasse and A.V. Gleder, Computer Algorithm-Introduction to Design and Analysis, Pearson Education, Third Edition (1999).

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVES (DSE-3)

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Mathematics Foundation for Computing ELDSE-1C	**4**	**3**	**0**	**1**	**Course Admission Eligibility**	**Basic Knowledge of Python language**

Learning Objectives

The Learning Objectives of this course are as follows:

- The aims is to introduce to students of electronics new mathematics such as Boolean algebra, relations, and graph theory which though look abstract concepts can be used effectively to design and analyze electronic circuits.
- To apply mathematical techniques for real world and engineering problems and expose students to some front-line techniques used in industry and academics.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Formulate recurrence relations to solve problems involving an unknown sequence. Student should see the significance in light of the Forbenius method they learn.
- Use Boolean algebra to design and analyze digital switching circuitry, such as found in personal computers, pocket calculators, CD players, cellular telephones, and a host of other electronic products.
- Appreciate circuit analysis in terms of topology.

SYLLABUS OF ELDSE-1C Total Hours- Theory: 45 Hours, Practicals: 30 Hours

UNIT – I (12 Hours)

Elementary Combinatorics: Basic counting principles, Permutations and Combinations (with and without repetitions), Binomial theorem, Multinomial theorem, Counting subsets, Set-partitions, Stirling numbers Principle of Inclusion and Exclusion, Derangements, Inversion formula.

Generating functions: Algebra of formal power series, Generating function models, Calculating generating functions, Exponential generating functions.

UNIT – II (10 Hours)

Recurrence Relations: Recurrence Relations, generating functions, iteration and induction, Linear Recurrence Relations with constant coefficients and their solution, Substitution Method, Divide and conquer relations, Solution of recurrence relations, Solutions by generating functions.

UNIT – III (11 Hours)

Boolean Algebras and Switching Circuits: Axioms of Boolean Algebra, De Morgan's law, Simplification of Boolean Expressions, Representation theorem, Boolean polynomials, Boolean polynomial functions, Disjunctive normal form and conjunctive normal form, Minimal forms of Boolean polynomial,3, 4 and 5 variable Karnaugh diagrams, Quine-McCluskey method, Switching circuits and applications of switching circuits.

UNIT – IV (12 Hours)

Graph Theory: Introduction to Graph Theory with emphasis on DC circuit analysis, Representing circuital network as a graph, identification of branches, nodes, Tree branch/ twig. Formulation of incidence matrix. Usage of incidence matrix to solve for node voltage in two loop DC circuits with voltage and/ or current sources.

Practical component (if any) – Mathematics Foundation for Computing
(Python software)

Learning outcomes

The Learning Outcomes of this course are as follows:

- Implement python programs to calculate permutation and combinations.
- Write python programs based on Boolean Algebra and Minimize Karnaugh diagrams
- Should be able to do node analysis using incidence matrix/ Graph Theory.

LIST OF PRACTICALS (Total Practical Hours – 30 Hours)

1. Write a program that generates all the permutations of a given set of digits (with or without repetitions).
2. Write a program to generate Fibonacci Series using recursion.
3. Write a program to implement binary search using recursion.
4. Write a Program to accept the truth values of variables x and y, and print the truth table of the following logical operations:
    a. Conjunction
    b. Disjunction
    c. NAND
    d. NOR
    e. Exclusive OR
    f. Exclusive NOR
    g. Negation

5. Determine node voltages of given two loop circuits using given incidence matrix.

Essential/recommended readings

1. V. Krishnamurthy, Combinatorics, Theory and Application, Affiliated East-West Press 1985.
2. C.L. Liu & Mahopatra, Elements of Discrete mathematics, 2nd Sub Edition 1985, Tata McGraw Hill
3. G. Langholz, A. Kandel and J. Mott, Foundations of Digital Logic Design, World Scientific, Singapore, 1998.
4. Kenneth H. Rosen. Discrete Mathematics and Its Application. McGraw-Hill Education, Pennsylvania, U.S.A, 2011.
5. M.O. Albertson and J.P. Hutchinson, Discrete Mathematics with Algorithms, John Wiley and Sons (USA, 1988).

Suggestive readings

1. T.H. Coremen, C.E. Leiserson, R. L. Rivest, Introduction to Algorithms, Prentice Hall India (3rd edition 2009)

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

COMMON POOL OF GENERIC ELECTIVES (GE) COURSES OFFERED BY THE DEPARTMENT

GENERIC ELECTIVES (GE-1)

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Electronic Circuits and Interfacing ELGE-3A	**4**	**3**	**0**	**1**	**-**	**NIL**

Learning Objectives

The Learning Objectives of this course are as follows:

- To understand the basics of operational amplifier and it's linear and nonlinear applications.
- To familiarize IC 555 Timer and its application
- Understand the working of multivibrators
- To understand working of various types of transducers.
- To introduce concept of embedded systems using Arduino.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Familiarize with design of the linear and non-linear applications of an op-amp.
- Understand the working of multivibrators
- Understand working of various types of transducers.
- Understand working of Arduino

SYLLABUS OF ELGE-3A Total Hours- Theory: 45 Hours, Practicals: 30 Hours

UNIT – I (12 Hours)

Basic Operational amplifiers: Block diagram, symbol, op- amp parameters (IC 741).

Op -Amp Circuits: Closed loop Inverting, Non-inverting, Summing and difference amplifier, Integrator, differentiator, Instrumentation Amplifier, Audio Amplifier (LM386) Voltage to current converter.

Comparators: Basic comparator, Schmitt Trigger.

UNIT – II (11 Hours)

Signal Conditioning Circuits: Active filters: First order Butterworth low pass and high pass filter, Wide Band -Pass filter, Wide Band-Reject filter, All-Pass filter (Designing with Circuit diagrams and formulas only for all filter)

Signal Generators: Phase shift oscillator, Wein Bridge oscillator (Designing with Circuit diagrams and formulas)

Multivibrators (IC 555): Block diagram, Astable and Monostable circuit. Applications of Astable and Monostable multivibrators.

UNIT – III (11 Hours)

Transducers (Basic Working): Displacement transducers - Resistive (Potentiometric, Strain Gauges – Types, Gauge Factor, bridge circuits, Semi-conductor strain gauge),Capacitive (diaphragm), Hall effect sensors, Microphone, Touch Switch, Piezoelectric sensors, light (photoconductive, photo emissive, photo voltaic, semiconductor, LDR), Temperature (electrical and non-electrical), Pressure sensor.

UNIT – IV (11 Hours)

A-D and D-A Conversion: D-A conversion: 4-bit binary weighted resistor type, circuit and working. Circuit of R-2R ladder- Basic concept. A-D conversion characteristics (Number of channels, resolution), successive approximation ADC. (Mention the relevant ICs for all).

Data Acquisition using Arduino: Arduino: Birth, Open-Source community, Functional Block Diagram, Functions of each Pin, Applications of Arduino, IDE, Basic Interfacing and I/O Concept, Interfacing LED, Switch,7seg LED.

Practical component (if any) – Electronic Circuits and Interfacing
(Hardware and Circuit Simulation Software)

Learning outcomes

The Learning Outcomes of this course are as follows:

- Design application-oriented circuits using Op-amp.
- Design application-oriented circuits using timer IC
- Familiarization with different specifications of arduino boards.
- Interfacing of various sensors with arduino.

LIST OF PRACTICALS (Total Practical Hours – 30 Hours)

1. Study of inverting and non-inverting amplifier.
2. Study of analog adder/ subtractor circuit.
3. Study of basic integrator circuit/ basic differentiator circuit.
4. Design of first order LPF / first order HPF.
5. Study of basic astable multivibrator / monostable multivibrator.
6. 555 Timer-Rain alarm /Motor control by PWM /LED flasher circuit.

7. To determine the Characteristics of resistance transducer - Strain Gauge (Measurement Strain using half and full bridge.)/ To determine the Characteristics of LVDT.
8. To determine the Characteristics of Thermistors and RTD.
9. Test the different Arduino Boards, Open-Source and Arduino Shields and install Arduino IDE and its development tool.
10. Develop a program to Blink LED for 1second when switch is pressed.

Note: Students shall sincerely work towards completing all the above listed practicals for this course. In any circumstance, the completed number of practicals shall not be less than eight.

Essential/recommended readings

1. Measurement Systems, 4/e, Doeblin McGraw Hill, New York, 1992.
2. Electrical Measurements & Electronic Measurements by A.K. Sawhney
3. Electronic Instrumentation by H.S Kalsi, McGraw Hill
4. R. A. Gayakwad, Op-Amps and Linear IC_s, Pearson Education (2003)
5. Electronic Sensor Circuits and Projects, III Volume, Forrest M Mims, Master Publishing Inc.
6. Beginning Arduino Programming, Brian Evans, Technology in Action

Suggestive readings

1. Instrumentation- Devices and Systems by Rangan, Sarma, and Mani, Tata-McGraw Hill
2. Instrumentation measurements and analysis by Nakra & Choudhary
3. Measurement & Instrumentation- DVS Murthy
4. Timer, Op Amp, and Optoelectronic Circuits & Projects, Forrest M Mims, Master Publishing Inc.
5. Exploring Arduino, Jeremy Blum, Wiley
6. Beginning Arduino, Michael McRobetrs, Technology in Action
7. Practical Arduino Engineering, Harold Timmis, Technology in Action
8. Practical Arduino: Cool Projects for open-source hardware, Jonathan Oxer, Hugh Blemings, Technology in Action

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

GENERIC ELECTIVES (GE-2)

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Modelling and Simulation ELGE-3B	**4**	**3**	**0**	**1**	**12th Pass**	**Basic Knowledge of Python language**

Learning Objectives

The Learning Objectives of this course are as follows:
It covers modeling and simulation principles as applied to engineering and social sciences. It discusses the techniques for modeling a simple to slightly complex system and perform statistical analysis. It covers about the steps involved in developing models for static, continuous and discrete systems. It also offers the introduction to number of latest models and simulation tools being used in industry with a set of examples. Examples may include modeling and analysis of manufacturing systems, computer-communication networks, operating system and various utilities and logistic systems.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Enable to perform simulations for developing models in order to solve problems in static and dynamic systems.
- Evaluate simulation models and do the analysis of a number of systems existing in real life.
- Synthesize queuing theory, random numbers generators and their application to modeling and simulation.

SYLLABUS OF ELGE-3B Total Hours- Theory: 45 Hours, Practicals: 30 Hours

UNIT – I (12 Hours)

Introduction to Modeling and Simulation: Introduction and historical development in Modeling and Simulation. System, Model and Simulation. Real system vs. Model of the system. Analytical solution vs. Simulation. Static vs. Dynamic Simulation Models. Continuous time vs. Discrete time modeling system. Hybrid systems, Feedback systems, Iterative systems Modeling. Random numbers in Simulation, random variables with discrete and continuous probability distribution. Deterministic and Stochastic Modeling System. Mathematical Modeling & Mathematical Tools.

UNIT – II (11 Hours)

Modeling Techniques and Design Steps: Discrete Event Simulation Models. System Models and Events. State variables, Entities and Attributes. Steps of Model Designs, Verification, validation and calibration of the Model.
Single server Queuing system, Database server as Queuing System.
Monte Carlo Method for static System.
Discrete and continuous Markov Models.

UNIT – III (11 Hours)
Simulation Techniques and Specifications: Advantages and disadvantages, Limitations, Steps in Simulation Study.
Differential Equation System Specification DESS, Discrete Event System Specification DEVS, Discrete Time System Specification DTSS.
Random numbers in Simulation. Random numbers generation and testing, Random variables with Discrete and continuous probability distribution. Simulation with Mathematical Models, Stochastic Models

UNIT – IV (11 Hours)
Modeling and Simulation Tools with Applications: System development, Project planning, System definition, Model formulation, input data collection and analysis, Model translation, verification and validation, experimentation and Analysis.
Different Applications domain of Modeling and Simulation.
Case Studies: Simulation of DEVS in a Bank, School, Hospital, or any such system. Modeling and analysis of a manufacturing systems, grocery store, computer-communication network or CPU scheduling.

Importance of different Modeling and Simulation softwares and their selection.
Brief overview and usefulness of Modeling and Simulation softwares- Scilab, SPICE, VHDL, Freemat, IMODELER, platform JModelica.org, Statistical Analysis Software SAS, MS- Excel.

Practical component (if any) – Modelling and Simulation
(Python or any Simulation Software)

Learning outcomes

The Learning Outcomes of this course are as follows:

- Program for implementation, testing of random numbers
- Simulation of gaming dice
- Different Models implementation- GPSS, DEVS
- Implementation of DESS, Monte Carlo Method, Markov Chain
- Simulation of real time problems

LIST OF PRACTICALS (Total Practical Hours- 30 Hours)

1. Implement different methods of random number generation
2. Simulating games of dice that generate discrete random variate, using random number generation

3. GPSS models - queue, storage, facility, multi-server queue, decision making problems
4. Perform an experiment on Testing of random numbers.
5. Write a simulator for any DEVS model that has scalar real values for its inputs, states and outputs.
6. Define a DEVS counter that counts the number of non-zero input events received since initialization and outputs this number when queried by a zero valued input.
7. Formulate a causal simulator for multi-component DESS.
8. Implementing an application of Monte Carlo methods.
9. Implement an application of Markov's chain.
10. Simulation of single queue server system.
11. Study of an implemented goal programming system and on decision making tools.
12. Study of a Game theory problem and solution.

Note: Students shall sincerely work towards completing all the above listed practicals for this course. In any circumstance, the completed number of practicals shall not be less than ten.

Essential/recommended readings

1. Bernard P. Zeigler, Alexandre Muzy, Ernesto Kofman, 3ed, Theory of Modeling and Simulation, Academic Press : Elsevier 1985.
2. Narsingh Deo, System Simulation with Digital Computers, Prentice Hall of India, 1979.
3. Geoffrey Gordon, System Simulation, 2ndEd., PHI, 1987

DISCIPLINE SPECIFIC CORE COURSE – 7: Analytical Instrumentation I (INDSC3A)

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Analytical Instrumentation I (INDSC3A)	**04**	**02**	**0**	**02**	**Course admission eligibility**	**Basic knowledge of chemistry**

Learning Objectives

The Learning Objectives of this course are as follows:

- To familiarize with the classification of analytical methods
- To understand the fundamentals of qualitative and quantitative analysis concepts.
- To categorize and understand the principle behind various separation techniques (planar and columns) and their instrumentation.
- To understand the principle, instrumentation and applications of visible and ultraviolet molecular spectroscopy

Learning outcomes

The Learning Outcomes of this course are as follows:

- Understand the classification of analytical methods
- Comprehend fundamentals of qualitative and quantitative analysis
- Differentiate between principle, instrumentation and operation of PaperChromatography and Thin layer chromatography
- Identify various Column Chromatographic techniques and their instrumentation
- Understand the concept of UV-Visible spectroscopy

SYLLABUS OF DSC-7

UNIT – I **(8 hours)**

Introduction to Analytical methods: Classification of Analytical Methods: Classical and Instrumental, Types of Instrumental Methods, Various sample extraction techniques. Instruments for analysis, Calibration of instrumental methods, Selecting an analytical method

UNIT – II **(7 hours)**

Chromatographic Separation methods: Planar Chromatographic methods: Principle and applications of Paper Chromatography, Thin layer chromatography (TLC) and High-Performance Thin Layer Chromatography (HPTLC).

UNIT – III **(8 hours)**

Column Chromatography: General Description of column chromatography, Classification of Chromatographic Methods, Elution in Column Chromatography, Migration rate of solutes, Band Broadening and column efficiency, Optimization of Column Performance.
Gel Permeation Chromatography (GPC): Principle, Instrumentation and Applications.

UNIT – IV **(7 hours)**

Molecular Spectro-analytical Methods of Analysis: Colorimetry and Spectrophotometry: Introduction, theory: molecular energy levels, types of molecular transitions, Lambert-Beer's Law and limitations, Instrumentation of single beam and double beam instrument.

Practical component: **(60 hours)**

1. Preparation of solutions and buffers.
2. Introduction to the use of Analytical Equipment (Analytical Balance, Volumetric Glassware, pH meter).
3. To extract the spinach pigments using liquid-liquid extraction.
4. Separation of plant pigments by paper chromatography.
5. Separation of food colours by paper chromatography.
6. Separation of pharmaceutical sample mixture using thin layer chromatography.
7. Separation of amino acids/sugar/carbohydrates by Thin Layer Chromatography.
8. Separation of cobalt chloride and Blue Dextran mixture by Gel Permeation Chromatography.
9. To study the effect of various solvents on membrane permeability of beetroot using visible spectroscopy
10. Determination of pKa value for a dye using visible spectroscopy.
11. Spectrometric determination of iron in water samples using double beam spectrophotometer.
12. To identify the given unknown colourless samples using UV spectrophotometer.

Essential/recommended readings

1. H.H. Willard, L.L Merrit, J.A. Dean, F. A. Settle, Instrumental Methods of Analysis, CBS Publishers, 7th edition, 2004.
2. Skoog, Holler and Crouch, Principles of Instrumental Analysis, Cengage Learning, 7th edition, 2016.
3. James W. Robinson, Eileen Skelly Frame, George M. Frame II, Undergraduate Instrumental Analysis, CRC Press, 7th edition, 2014
4. Vogel's Textbook of Qualitative Chemical Analysis, ELBS, 6th edition 2009.

Suggestive readings

1. W. Kemp, Organic Spectroscopy, ELBS, 3rd Edition, 2019.
2. R.S Khandpur, Handbook of Analytical Instruments, Tata McGraw-Hill, 3rd Edition 2015.
3. B.K Sharma, Instrumental Methods of Chemical Analysis, Krishna Prakashan Media, 1st Edition, 2011

Note: **Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.**

DISCIPLINE SPECIFIC CORE COURSE – 8: Operational Amplifiers and Applications (INDSC3B)

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Operational Amplifiers and Applications (INDSC3B)	04	03	0	01	Course admission eligibility	Basics of Analog Electronics- BJT circuits

Learning Objectives

The Learning Objectives of this course are as follows:

- To provide understanding of DC and AC characteristics of operational amplifiers (op-amp)
- Design various filters and oscillators circuits using op-amps
- Study linear and non-linear applications of op-amp
- Design multivibrators and other circuits using op-amp.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Understand the DC and AC characteristics of operational amplifiers (op-amp) and its effect on output, significance of op-amp parameters, and compensation techniques
- Elucidate and design circuits to study linear and non-linear applications of op-amps and special application ICs
- Explain the working of signal generators using op-amp
- Explain and compare the working of multivibrators using general purpose op-amp

SYLLABUS OF DSC- 8

UNIT – I **(11 hours)**

Basic Operational Amplifier: Concept of differential amplifiers (Dual input balanced and unbalanced output, Single input balanced and unbalanced output), constant current bias, current mirror, cascaded differential amplifier stages with concept of level translator, block diagram of an operational amplifier (IC 741).

UNIT – II **(12 hours)**

Op-Amp parameters: input offset voltage, input offset current, input bias current, differential input resistance, input capacitance, offset voltage adjustment range, input voltage range, common mode rejection ratio, slew rate, supply voltage rejection ratio.

Op-Amp Circuits: Open and closed loop configuration, Limitations of open loop, characteristics of ideal op-amp, frequency response of op-amp in open loop and closed loop. Non-Inverting & Inverting amplifiers, Summing & Difference amplifiers, Log & antilog amplifiers, Instrumentation Amplifier, Integrator & Differentiator circuit, Voltage to current converter, Current to voltage converter.

UNIT – III **(11 hours)**

Comparators: Basic comparator, Level detector, Schmitt Trigger. Voltage limiters, Signal **Generators:** Phase shift oscillator, Wein bridge oscillator, square wave generator, triangle wave generator, saw tooth wave generator, and Multivibrators using opamp.

UNIT – IV **(11 hours)**

Signal conditioning circuits: Sample and hold systems, Active filters: Low pass and high pass Butterworth filter (first and second order), Band pass filter, Band reject filter, and All pass filter.

Practical component: **(30 hours)**

1. Study of op-amp characteristics: CMRR and Slew rate.
2. Designing of an amplifier of given gain for an inverting and non-inverting configuration using an op-amp.
3. Designing of analog adder and subtractor circuit.
4. Designing of an integrator using op-amp for a given specification and study its frequency response.
5. Designing of a differentiator using op-amp for a given specification and study its frequency response.
6. Designing of a first order low-pass filter using op-amp and study its frequency response.
7. Designing of a first order high-pass filter using op-amp and study its frequency response.
8. Designing of a RC phase shift oscillator using op-amp.
9. Design an astable multivibrator using opamp.
10. Design a schmitt trigger circuit using op-amp and study its hysteresis loop.

Essential/recommended readings

1. R. A. Gayakwad, Op-Amps and Linear Integrated circuits, Pearson Education, 4th Edition, May 2015.
2. R. F. Coughlin and F. F. Driscoll, Operational amplifiers and Linear Integrated circuits, 6th Edition, Aug 2000, Pearson,
3. Pearson Education (2001).J. Millman and C.C. Halkias, Integrated Electronics, Tata McGraw-Hill, (2001).

Suggestive readings

1. A.P.Malvino, David J Bates, Electronic Principals, 7th Edition, Tata McGraw-Hil Education, (July 2017).

DISCIPLINE SPECIFIC CORE COURSE – 9: Mathematical Techniques for Instrumentation (INDSC3C)

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course(if any)
		Lecture	Tutorial	Practical/ Practice		
Mathematical Techniques for Instrumentation (INDSC3C)	**04**	**03**	**0**	**01**	**Course admission eligibility**	**Basic knowledge of mathematics**

Learning Objectives

The Learning Objectives of this course are as follows:

- To give an ability to apply knowledge of mathematics to engineering problems.
- To introduce the basic concepts required to understand, construct, solve and interpret
- differential equations.
- To teach methods to solve differential equations of various types.
- To teach students to understand the Laplace transform method to solve ordinary differential equations.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Recognize ODEs of varying order and use these to solve engineering problems.
- Derive mathematical models of physical systems.
- Solve the most common PDEs, recurrent in engineering using standard techniques.
- Demonstrate the utility of Laplace transform in solving the ordinary differential equations

SYLLABUS OF DSC-8

UNIT – I **(12 hours)**

Ordinary Differential Equations: First Order Ordinary Differential Equations, Separable Ordinary Differential Equations, Exact and Non-Exact Differential Equations, Linear Ordinary Differential Equations. Linear Independence and Dependence, Linear Differential Equations of Second Order with Constant Coefficients and Variable Coefficients: Homogeneous and non-homogeneous.

Method of Variation of Parameters, Electric Circuits (RL, RC and RLC circuits).

UNIT – II **(11 hours)**

Partial Differential Equations: Formation of Partial Differential Equation, Partial Differential Equation of First Order: Linear and Non-linear. Method of Separation of Variables. Classification of Partial Differential Equations of Second Order, One-dimensional Heat equation, Modeling a Vibrating string and the Wave Equation.

UNIT – III **(11 hours)**

Laplace Transform: Laplace Transform and its properties, Convolution theorem, Laplace Transform of Periodic function, Inverse Laplace transforms and its properties. Application of Laplace Transform to Differential Equations with Constant Coefficients, Solution to System of Simultaneous Differential Equations.

UNIT – IV **(11 hours)**

Fourier series and Transforms: Fourier Series: Even and Odd functions, Half range expansions, Fourier Integral, Fourier Transforms: Fourier Sine and Cosine Transforms, Forced Oscillations.

Practical component: **(30 hours)**

1. Plot the trigonometric functions like sin (x), cos(x), tan(x).
2. Plot the following algebraic expressions log(x), exp(x), x^2, x^3, $x+x^2+\exp(x)$.
3. Plot the following unit step functions u(t), u(t-4) and u(t+2).
4. Solve the first-order ordinary differential equations.
5. Solve the linear differential equation of second order with constant coefficients.
6. Solve the linear differential equation of second order with variable coefficients.
7. Evaluate the Laplace Transform of a given function.
8. Evaluate the inverse Laplace transform of a given function.
9. Evaluate the Fourier series coefficients of a given function.
10. Computing the Fourier Transform of a given signals.

Essential/recommended readings

1. E. Kreyszig, Advanced Engineering Mathematics, John Wiley & Sons, 10th Edition (2020).
2. B. V. Ramana, Higher Engineering Mathematics, Tata McGraw Hill Publishing ,7th Edition.
3. B.S. Grewal, Higher Engineering Mathematics, Khanna Publisher, 43rd Edition (2017).
4. HK Dass, Higher Engineering Mathematics, S.Chand Publishing,22nd Edition.

Suggestive readings

1. Dennis G.Zill,Advanced Engineering Mathematics, Jones & Bartlett Publishers,6th Edition (2016).
2. John Bird**,** Higher Engineering Mathematics,2017

DISCIPLINE SPECIFIC ELECTIVE COURSE – 1: Signal and Systems (INDSE3A)

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Signal and Systems (INDSE3A)	04	03	0-	01	Course admission eligibility	Basic knowledge of mathematics

Learning Objectives

The Learning Objectives of this course are as follows:

- To give information about signals and systems mathematically and perform mathematical operations on signals.
- To teach the properties and the response of the LTI system using convolution.
- To give knowledge about Laplace transform, Fourier Transform and Z-transform for analysing continuous-time and discrete-time signals and systems.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Understand the basic concept and types of signals and systems and their properties which is useful to learn digital tele-communication
- Classify systems based on their properties and determine the response of LTI system using convolution
- Understand how to apply the Laplace transform, Fourier Transform and Z-transform for analyzing continuous-time and discrete-time signals and systems

SYLLABUS OF DSE-1

UNIT – I **(12 hours)**

Signals and Systems: Continuous and discrete time signals, Transformation of the independent variable, Exponential and sinusoidal signals, Impulse and Unit step functions, Continuous-Time and Discrete-Time Systems.

UNIT – II **(11 hours)**

Linear Time-Invariant Systems (LTI): Continuous & discrete time LTI systems, Convolution Sum, Convolution integral, Properties of LTI Systems: Commutative, Distributive and Associative. LTI systems with and without memory, Invariability, Causality, Stability.Unit Step response of System, Differential and Difference equation formulation, Block diagram representation of first order systems.

UNIT – III **(11 hours)**

Sampling: The Sampling Theorem and its implications. Spectra of sampled signals.
Laplace Transform: Laplace Transform Methods in Circuit Analysis, Impulse and Step response of RL, RC and RLC circuits.

UNIT – IV **(11 hours)**

Fourier Transform (FT): Complex exponential form of Fourier series, Fourier integral theorem, Fourier Sine & Cosine integrals, Fourier transform, Fourier Sine & Cosine transforms and their inverses.
Z-transform: properties, transfer function representation, inverse Z transform of rational functions- transform of input/output difference equation, stability of discrete time systems- frequency response of discrete time systems.

Practical component: **(30 hours)**

Learning Scilab/MATLAB (Experiments based on available systems).
Exploration of Signals and Systems using Scilab/MATLAB.

1. Generation of Signals: continuous time
2. Generation of Signals: discrete time
3. Addition, multiplication, folding and reversal of signals.
4. Convolution of Signals.
5. Solution of Difference equations.
6. Introduction to SIMULINK and calculation of output of systems represented by block diagrams.
7. Determination of Fourier Series coefficients of the given signals.
8. Determination of Fourier transform of the given signals.
9. Determination of Z transform of the given signals

Essential/recommended readings

1. H. P. Hsu, Signals and Systems, 4th Edition Tata McGraw Hill (2019).
2. S. T. Karris, Signal and Systems: with MATLAB Computing and Simulink Modelling, 4th EditionOrchard Publications (2008).
3. W. Y. Young, Signals and Systems with MATLAB, Springer (2014).
4. M. Roberts, Fundamentals of Signals and Systems, Tata McGraw Hill (2010).

Suggestive readings

1. Alan V. Oppenheim, Alan S. Willsky with S. Hamid, Signals and Systems, 2nd edition, Pearson, Inc. (2022).

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVE COURSE – 2: VHDL Programming(INDSE3B)

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
VHDL Programming (INDSE3B)	04	02	0	02	Course admission eligibility	Understanding of Digital Electronics

Learning Objectives

The Learning Objectives of this course are as follows:

- To develop the basic understanding of VHDL Modules, entity and architectures.
- To familiarize with different VHDL elements, Keywords and Identifiers
- To describe hardware in VHDL using different Modeling styles.
- To understand concurrent and sequential assignments.
- To introduce built in primitive gates and understand Gate level Modelling

Learning outcomes

The Learning Outcomes of this course are as follows:

- Learn about HDL Modules and simulation tools.
- Apply the knowledge of entity, architectures, VHDL Modules to describe hardware.
- Write and analyze various VHDL codes for combinational and sequential logic circuits
- describe hardware using multiple modeling styles.

SYLLABUS OF DSE-2

UNIT – I **(8 hours)**

Introduction to VHDL: A Brief History of HDL, Structure of HDL Module, Comparison of VHDL and Verilog, Introduction to Simulation and Synthesis Tools, VHDL requirements, VHDL basic language elements, Keywords, Identifiers, White Space Characters, Comments, format, VHDL operators.

VHDL Modeling: Describing hardware in VHDL, entity, architectures, VHDL Modules, Delays, data flow style, behavioural style, structural style, mixed design style, simulating design.

UNIT – II **(8 hours)**

BehavioralModeling: Introduction to behavioural modelling, Signal assignment,

Concurrent and sequential assignments., Entity Declaration, Architecture Body, BehavioralModeling, Process statement, Loop control statements, Multiple Processes, Delay Models, inertial delay model, transport delay model, transport vs inertial delay, Signal Drivers.

UNIT – III **(7 hours)**

Dataflow and Structural Modeling: Data flow Modeling, Concurrent Assignment statements, Block statements, Structural Modeling, Component declaration and Instantiation, generate statements, Process, IF, CASE, LOOP, NEXT, EXIT and ASSERT statements.

UNIT – IV **(7 hours)**

Gate level modeling: Introduction, built in Primitive Gates, multiple input gates, Tri-state gates, pull gates, MOS switches, bidirectional switches, gate delay, array instances, implicit nets, Illustrative Examples (both combinational and sequential logic circuits).

Practical component: **(60 hours)**

Learning Scilab/MATLAB (Experiments based on available systems).
Exploration of Signals and Systems using Scilab/MATLAB.

1. Write code to realize basic and derived logic gates.
2. Half adder, Full Adder using basic and derived gates.
3. Half subtractor and Full Subtractor using basic and derived gates.
4. Clocked D FF, T FF and JK FF (with Reset inputs).
5. Multiplexer (4x1, 8x1) and Demultiplexer using logic gates.
6. Decoder (2x4, 3x8), Encoders and Priority Encoders.
7. Design and simulation of a 4-bit Adder.
8. Code converters (Binary to Gray and vice versa).
9. 3-bit Ripple counter.

Essential/recommended readings

1. J. Bhasker, VHDL Primer, Pearson, 3rd edition ,2015.
2. Volnei. A.Pedroni, Circuit Design with VHDL, MIT Press; Third edition, 2020
3. Sudhakar Yalamanchili, Introductory VHDL-From Simulation to Synthesis, Pearson Education India. First Edition, 2000

Suggestive readings

1. Douglas Perry, VHDL, McGraw-Hill Education; 4th edition, 2002
2. Charles.H.Roth, Digital system Design using VHDL, Cengage; 2nd edition, 2012

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVE COURSE – 3: Programming using MATLAB(INDSE3C)

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Programming Using MATLAB (INDSE3C)	04	02	0	02	Course admission eligibility	Basic knowledge of mathematics

Learning Objectives

The Learning Objectives of this course are as follows:

- To familiarize the student with MATLAB software.
- The objective of this lab is to introduce students to the basic operations of MATLAB.
- To enable the student on how to approach solving Engineering problems using simulation tools.
- To prepare the students to use MATLAB in their project works.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Use MATLAB for interactive computations
- Generate plots and exports them for use in reports
- Familiar with inbuilt MATLAB functions and will be able to generate user defined functions for various applications
- Understands fundamental of digital image and signal processing

SYLLABUS OF DSE-3

UNIT – I **(8 hours)**

Introduction to MATLAB: MATLAB Features, MATLAB Windows, defining variables, variable naming, checking existence, different Operations on variables, clear Operations, data type, precedence, scalar, vectors and Arrays.

UNIT – II **(7 hours)**

Data and Data Flow in MATLAB: Operators in MATLAB, Matrix operations, Reshaping Matrices, Importing & Exporting of Data, Arrays, Data types, File Input-Output, Communication with External Devices.

Character and Strings: Defining character and string, accessing character or substring

from string, string concatenation and comparing, conversion between strings and number. Defining and working with Multidimensional Array and Cell arrays.

UNIT – III **(7 hours)**

Programming: Writing Script Files and Functions files, Error Correction, M-Lint Automatic Code Analyzer, Saving Files. Flow control statement: Conditional or selection, error handling, loop control, program termination. Solution of simultaneous linear equations.

UNIT – IV **(8 hours)**

MATLAB Graphics: Simple Graphics, Graphic Types, Plotting Functions, Creating Plot & Editing Plot, multiple plots, labeling graph, line colors, style and Marker. Introduction of Graphical User Interface (GUI), Generation and implementation of various functions on image.

Practical component: **(60 hours)**

1. Define variables, create a matrix of any size with all possible methods and perform various mathematical operations.
2. Create a multidimensional array and delete any Row/Column from it and create a new array.
3. Plot and label trigonometric functions using subplot command.
4. Generate various kinds of continuous and discrete time signals. Perform time scaling, time shifting and amplitude scaling on them.
5. Generate the (i) square wave and (ii) triangular wave of a specific amplitude and time period and plot it on a single graph.
6. Create a function which compares any two strings of equal length and return 'M' for matched character and 'U' for unmatched Character. Also display the number of characters matched.
7. Generate the (i) square wave and (ii) triangular wave of a specific amplitude and time period and plot it on a single graph.
8. Write a script to test whether a user defined no. is Prime or not.
9. Write a script which can evaluate the percentage (%) and grade of the student when subject marks are entered by the user.
10. Create a function which compares any two strings of equal length and return 'M' for matched character and 'U' for unmatched Character. Also display the number of characters matched.
11. Write a function to generate the AP series.
12. Write a function to generate the GP series.
13. Write a function to generate the Fibonacci series.
14. Write a function to generate the amplitude and frequency modulated signal.

Essential/recommended readings

1. Khanna, M., Bhatt, G. and Kumar, P., MATLAB Essentials for Problem Solving, (2019) PHI Learning, New Delhi.
2. Fausett, L. V., Applied Numerical Analysis Using MATLAB, (2005) Prentice Hall, Upper Saddle River, New Jersey.
3. Linfield, G. & Penny, J., Numerical methods using MATLAB, (2019) Ellis-Horwood.

Suggestive readings

1. Nakamura, S., Numerical Analysis and Graphic Visualization with MATLAB - Second Edition, Prentice Hall PTR, Upper Saddle River, New Jersey

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

COMMON POOL OF GENERIC ELECTIVES (GE) COURSES OFFERED BY THE DEPARTMENTS

GENERIC ELECTIVES (GE-3):

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Virtual Instrumentation (INGE3A)	04	02	0	02	Course admission eligibility	Basic knowledge Electronics

Learning Objectives

The Learning Objectives of this course are as follows:

- To study the basic structure of virtual instrumentation
- To learn the basic programming concepts in LabVIEW
- To understand the basics of data acquisition for designing a Virtual Instrument

Learning outcomes

The Learning Outcomes of this course are as follows:

- Understand the importance and applications of Virtual Instrumentation
- Learn the basic programming concepts in LabVIEW
- Recognize the components of Virtual instrumentation and use them for PC Based measurement

SYLLABUS OF GE-3

UNIT – I **(8 hours)**

Graphical System Design: Graphical system design model, Design flow with GSD,

Virtual Instrumentation, Virtual instrument, and traditional instrument, Hardware and software in virtual instrumentation, Virtual instrumentation for Test, control & design, Graphical system design using LABVIEW, Graphical programming & textual programming.

UNIT – II **(7 hours)**

LabVIEW Basics: Introduction, advantages of LABVIEW software environment, palettes, front panel controls & indicators, Block diagram, Data flow program. Repetition and Loops: For loops, while loops, structure tunnels, terminals inside or outside loops, shift registers, feed-back nodes, control timing, case structure.

UNIT – III **(8 hours)**

Arrays and Clusters: Arrays, Introduction, arrays in LABVIEW, creating one – dimensional array controls, indicators, and constants, creating two-dimensional arrays, creating multidimensional arrays, initializing array, deleting, inserting, and replacing elements, rows, columns, and pages within arrays, arrays functions. Clusters: Cluster controls and indicator, order of cluster elements, Cluster operations.

Plotting Data: Types of waveforms, waveform graphs, waveform charts, XY graphs, Intensity graphs & charts, Digital waveform graphs, 3D graphs, customizing graphs & charts, configuring a graph or chart, Displaying special planners on the XY graph.

UNIT – IV **(7 hours)**

File Input/ Output: File formats, file write &read, generating filenames automatically, String handling,string functions, LABVIEW string formats, parsing of strings. Instrument Control: Introduction, GPIB communication, Hardware specification, software architecture, Instrument I/O assistant, VISA, Instrument drivers, serial port communications, using other interfaces.

Practical component: **(60 hours)**

1. Build a VI to compute the expressions Y = (A*B*C) + (D*E) and Y = mx + c.
2. Split an input string into two outputs with reference to a separating character. Find the length of the input string and reverse the string.
3. Build a VI to perform various Boolean Operations (AND, OR, NAND, NOR, XOR).
4. Write a program in LabVIEW to find whether the given number is odd or even.
5. Create a VI to find the sum of first n natural numbers using a While Loop with a feedback node.
6. Create a VI to compute full adder logic using half adder logic as subVI.
7. Write a program in LabVIEW to find the square of the numbers from 1 to 100 using (a) a For Loop and (b) a While Loop.
8. Create a VI to compare the element of two clusters if the value of the corresponding elements are the same switch on LED in the output cluster.
9. Create a VI to compare clusters and Switch ON an LED in the output cluster if the nth element of cluster 1 is greater than the nth element of cluster 2.
10. Create a 2D numeric array (5 x 5) containing random numbers and find its transpose.
11. Create a VI to read a two-dimensional array and find the sum of the elements

in the row-wise and column-wise separately and display the sums of the rows and columns.

12. Create a 1D array and find its reverse.
13. Build a VI to plot a circle in the XY graph using a For Loop.
14. Build a VI that generates a 1D array of random numbers and sort the ascending descending array and also find the max. and min. value array element.
15. Build a cluster control that consists of a seven-segment LED display, a switch, a string control, and numeric control. Split the cluster elements using the Unbundle function and alter the values of some of the cluster controls. Bundle them again and display in a cluster indicator.
16. Using For loop determine the number of odd numbers between a range of numbers entered by the user.
17. Build a VI to plot different colors in an intensity graph using an array.
18. Create a VI to check whether the cluster elements are in range or not. Specify the upper and lower limits. Display the coerced output and a cluster of LEDs to indicate whether a particular cluster element is in the range or not.
19. Write a program to solve x2+bx+c=0.
20. Build a VI to generate two waveforms of different amplitude and frequencies add the signal to find the resultant and plot it on a separate waveform graph.
21. Create a VI to read a two-dimensional array and find the sum of the elements in the row-wise and column-wise separately and display the sums of the rows and columns.

Essential/recommended readings

1. Jovitha Jerome,Virtual Instrumentation Using Labview,PHI Learning Pvt. Ltd. (2010)
2. John Essick, Hands-on Introduction to LabVIEW for Scientists and Engineers, 3rd Edition, 2015.
3. Gupta, Virtual Instrumentation Using Labview 2E, McGraw Hill. (2010)

Suggestive readings

1. Jeffrey Travis, LabVIEW for everyone, Prentice-Hall PTR,2007.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

GENERIC ELECTIVES (GE-3): Industrial and environmental techniques (INGE3B)

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/		

				Practice		
Industrial and environmental techniques (INGE3B)	**04**	**02**	**0**	**02**	**Course admission eligibility**	**Basic knowledge of chemistry or analytical chemistry**

Learning Objectives

The Learning Objectives of this course are as follows:

- Demonstration of a clear and exhaustive understanding of the basic concepts of Industrial analysis of different industrial products.
- Impart theoretical and practical knowledge of Analysis of food and food products
- Learn analysis of various pharmaceutical drugs as per the standard pharmacopeia
  To expose to different types of Environmental pollutants and their analysis:

Learning outcomes

The Learning Outcomes of this course are as follows:

- Identify the key environmental factors shaping an industry
- Demonstrate ability to use tools and methodologies for performing analysis for various types of industries
- Develop a detailed professional report of Industry Analysis conducted.

SYLLABUS OF GE-3

UNIT – I **(8 hours)**

Industrial analysis

Paints: Definition, constituents and their functions, flash point of paints, separation of pigments, binder and thinner. Analysis of vehicle and thinner.

Pigments: General outline of identification and analysis of pigments -organic and inorganic pigments, their qualitative chemical test, analysis of white and tinted pigments.

Pesticides: Definition and classification of pesticides, analysis of the following in outline – DDT, Malathion, Diagionon.

Alloys: Composition and estimation of main constituents in in the following – Stainless steel, Brass, Solder and Gun metal

Rubber and Polymers: Mechanical, Thermal, Electrical and Optical properties, Analysis and Characterization.

UNIT – II **(8 hours)**

Analysis of food and food products

Composition and analysis of the following: Milk- Specific gravity, total solid, fat, proteins, lactose, contaminants in milk (QAS, artificial color and antibiotic), Wheat flour- Moisture, ash, oil, fat, protein, fiber, acidity, starch and maltose. Beverages-

Alcohol contents. Tea- Moisture, ash, tannin and caffeine. cyclamate. Honey- Moisture, HMF, Free acid, pH and carbohydrate.

UNIT – III **(7 hours)**

Pharmaceutical analysis

Drug, classification of drugs, introduction to Indian pharmacopoeia. Analysis of following drugs as per IP and BP (monograms) - Amoxycillin, Analgin, Proponolol, Pilocarbine nitrate, Rifampicin, Paracetamol, Nimuselide, Ranitidine.

UNIT – IV **(7 hours)**

Environmental analysis

Analysis of water- color, Odor, pH, taste, conductivity, dissolved solid, hardness, DO, COD, BOD, chlorides, sulphates, nitrites and phosphates.

Analysis of air- Sampling, particulate matter, gaseous pollutants-SOX, NOX, COX and organic pollutant

Practical component: **(60 hours)**

1. Determination of physical parameters of wastewater: pH, color, conductivity and Oxidation reduction potential.
2. Determination of dissolved oxygen in given water sample.
3. Estimation of phosphorous in fertilizer
4. Determination of calcium in cement sample (Titrimetry)
5. Estimation of calcium and Magnesium in dolomite ore.
6. Analysis of water for COD.
7. Colorimetric estimation of trace of nitrogen in the given water sample using Nessler's reagent.
8. Analysis of tea and coffee.
9. Determination of refractive index of given edible oil/solvents and determine its percentage purity.
10. Determination of Ascorbic acid.
11. Colorimetric estimation of Rifampicin (IP 1996)
12. Assay of Aspirin.
13. Estimation of specific gravity and total solids present in milk samples.
14. Estimation of lactose content of milk.
15. Determination of glucose in honey.
16. Quality assessment of Rubber/polypropylene/polyethylene samples

Essential/recommended readings

1. Analytical chemistry: an introduction: D. A. Skoog, D. M. West and F. J. Holler, Saunders the College publishers, 6th edition.
2. Vogel's Textbook of Qualitative Chemical Analysis, ELBS, 6th edition 2009.
3. Indian Pharmacopeia (2018)
4. A.B. Mathur and I.S. Bhardwaj, Testing and Evaluation of Plastics, Allied Publishers Pvt Limited, 2003
5. Rao, E. S. (2013). Food Quality Evaluation (I ed.). New Delhi: Variety Book Publishers.
6. DeMan. (2007). Principles of Food Chemistry. Springer, 3rdedition.

Suggestive readings

1. Rao, E. S. (2013). Food Quality Evaluation (I ed.). New Delhi: Variety Book Publishers.
2. DeMan. (2007). Principles of Food Chemistry. Springer, 3rd edition.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Semester-III

Department of Physical Education & Sports Sciences

BSc. (Hons.) Physical Education, Health Education and Sports

B.Sc.-PE- DSC-7 (4) Kinesiology

Sl. No.	Course Title &Code	Credits	Credit Distribution of the Course			Eligibility Criteria	pre- Requisite ofthe Course (if any)
			Lecture	Tutorial	Practical/Practice		
1.	Kinesiology	04	3	0	1	XII Passed	NIL

Objective: To impart the knowledge, practices, Applications and analyses related to Kinesiology.

Learning Outcome: Students will learn the science of movement for better sports performance and the basic knowledge practices, Applications and skills of Kinesiology will help to create a strong foundation for Physical Education and Sports to engage human subjects of all ages, sex, and ability.

The student will learn the concepts and applications meaning, aim & objectives, importance of kinesiology for physical education and sports, Fundamental concepts and Applications Centre of gravity, line of gravity, axis and planes of motion, fundamental starting positions, terminology of fundamental movements, and classification of muscles.

The student will develop the understanding skill and practices about Location & Action of Muscles at Various Joints:- a) Upper extremity – shoulder girdle, shoulder joints, elbow joint, b) Neck, trunk (Lumboth oracic region and c) Lower extremity – Hip joint, knee joint, ankle joint and Muscular analysis of fundamental movements:- Walking, running, jumping, throwing, catching, pulling, pushing, striking, hanging.

The student will gain knowledge and Applications of Structure of Motor Actions: - Structure of cyclic and acyclic motoraction and movement combination, functional relationship of different phases of motor action.

The student will gain knowledge and applications of Qualities & Physiological Principles of Movements such as movement rhythm, movement coupling movement flow, movement precision and movement amplitude.

The Student will be able to analyze (Muscular) the Fundamental, Sports Skills, as their innovative applications.

THEORY SYLLABUS (45 hours/Lectures)

UNIT-I **(11 Hours/lectures)**

Meaning, aim & objectives, importance of kinesiology for physical education and sports
Fundamental concepts: Centre of gravity, line of gravity, axis and planes of motion, fundamental starting positions, terminology of fundamental movements, and classification of muscles

UNIT-II **(11 Hours/lectures)**

Location & Action of Muscles at Various Joints:-
a) Upper extremity – shoulder girdle, shoulder joints, elbow joint
b) Neck, trunk (Lumboth oracic region)
c) Lower extremity – Hip joint, knee joint, ankle joint Muscular analysis of fundamental movements:- Walking, running, jumping, throwing, catching, pulling, pushing,striking, hanging

UNIT-III **(12 hours/lectures)**

Structure of Motor Actions: - Structure of cyclic and acyclic motor action and movement combination, functional relationship of different phases of motor action.

UNIT-IV **(11 hours/lectures)**

Qualities & Physiological Principles Of Movements:- Movement rhythm, movement coupling movement flow, movement precision and movement amplitude.

Practical **(30 hours/lectures)**

1. Demonstration of planes & axes of a given movement.
2. Determination of the location of muscles at various joints:
   - i. Shoulder girdle
   - ii. Shoulder joints
   - iii. Elbow joint
   - iv. Hip joint
   - v. Knee joint
   - vi. Ankle joint
3. Muscular analysis of the techniques of game of your specialization
4. Measurement Demonstration of qualities of movement.

Semester III

DSC-8 (4) EXERCISE & SPORTS PSYCHOLOGY

Sr. No.	Course Title & Code	Credits	Credit Distribution of the Course			Eligibility Criteria	Pre-Requisite of the Course (if any)
			Lecture	Tutorial	Practical/Practice		
1	Exercise & Sports Psychology	4	3	0	1	XII Pass	NIL

Objective: - The student is provided with the knowledge Practices Applications and Innovative of psychological aspects of sports performance.

Learning Outcome: - The student learns the psychological aspects to apply to improve the performance in sports. Such core knowledge and skills helps to create a strong foundation to engage human subject of all ages, sex, and ability

The student will learn about Sports and Exercise Psychology and understanding Practices and Applications, motivation, arousal and anxiety and personality.

The student will gain knowledge applications and practices of about the Group, Dynamic, aggression, psychological preparation and performance enhancement.

The learner will able to create data and its interpretation

THEORY SYLLABUS (45 Hours/Lectures)

Unit-I (i) Sports and Exercise Psychology (ii) Concept, Scope, role of sports and exercise psychologist (iii) Importance of Sports and exercise psychology. (iv) Historical development and future of Sports and Exercise Psychology, **(12 Hours/Lectures)**

Unit-II (i) Motivation: guidelines for building motivation, achievement motivation.
(ii) Arousal and Anxiety: Types, phenomena of Anxiety in relation to performance – Drive Theory, Inverted U Theory and IZOF. **(11 Hours/Lectures)**

Unit-III (i) Personality: approaches to personality – Trait, types and psychodynamic theories, determinants of personality, assessment of personality.
(ii) Team Cohesion: a conceptual model of Cohesion, assessment of Cohesion, relationship of Cohesion with performance. **(11 Hours/Lectures)**

Unit-IV (i) Aggression in sports: types, phenomena of Aggression – Instinct Theory and Social Learning Theory, Assessment of Aggression and Leadership in Sports
(ii) Psychological preparation – Long term and short term psychological preparation, Goal setting and self-confidence **(11 Hours/Lectures)**

Practical Syllabus (30 Hours/ Lectures)

1. Measurement of Motivation
2. Measurement of Anxiety
3. Measurement of Personality
4. Measurement of Team Cohesion
5. Measurement of Aggression

Semester-III
BSc-PE-DSC-9(4)-101: ATHLETICS

Sr. No.	Course Title & Code	Credits	Credit Distribution of the Course			Eligibility Criteria	Pre-Requisite of the Course (if any)
			Lecture	Tutorial	Practical/Practice		
1	Athletics	04	2	0	2	XII Pass	NIL

Objective: - The Students will acquire knowledge and understanding of a specific sport in which an individual wishes to excel.
Learning Outcome:-The student will attain knowledge, understanding, interpreting and analyzing proficiency in a game of one's choice.

After the Completion of First Month:

The student will be able to gain knowledge with respect to Historical Development, Organizational Structure and Playfield Technology of the respective sport/game.

After the Completion of Second Month:

A student will be able to understand and interpret the rules of game as well as game knowledge in the areas of psychological basis of Warming up and technical aspects of coaching.

After the Completion of Third Month:

A student will be able to learn and acquire various skills of sports, gain knowledge about different tests of fitness andskill evaluation as well as the evaluation of player's performance. The technical practice of sprint races, middle and long distance races, hurdles races, jumping event- long jump, throwing events- shot put, hammer throw.

After the Completion of Fourth Month:

A student will be learning about various fitness components and its forms. Further, the student will be able to practice and improve performance on the basis of knowledge gained in understanding various fitness components. Track marking and marking of different arenas for selected events in unit-III.

THEORY SYLLABUS (60 hrs lectures)

Unit-I **(08 hrs lectures)**

- Historical Development and Modern Trends (National and International Level)
- Organisational Structure (State, National and International Level)
- Playfield Technology – Marking and Construction of the playfields.

Unit-II **(08 hrs lectures)**

- Rules and their interpretation of the sport.
- Warming up and psychological basis of Warming up.
- Cooling down and its effect.
- Techniques of Coaching – Pep talk, Pre, during and Post match competition Coaching.

Unit-III **(07 hrs lectures)**

- Basic skills and techniques of the Sports/Game- – sprint races, middle and long distance races, hurdles races, jumping event- long jump, throwing events- shot put, hammer throw.
- Motor Fitness Components Testing
- Skill/Technique Evaluation
- Evaluation of Player's Performance.

Unit-IV **(07 hrs lectures)**

- Introduction to Physical and Motor Fitness components related to sport: Strength, Speed, Endurance, Coordinative Abilities and Flexibility.

- Track marking and marking of different arenas for selected events in unit-III.

Practical - **(60 hrs.)**

1. Learning and demonstrating various skills/techniques of sports- sprint races, middle and long distanceraces, hurdles races, jumping event- long jump, throwing events- shot put.
2. Learning to demonstrate various tests to evaluate motor components as listed in unit IV above.
3. Track marking and marking of different arenas for selected events in unit-III.

Semester III

BSc-PE-DSC-9 (4)-102: BADMINTON

Sr. No.	Course Title & Code	Credits	Credit Distribution of the Course			Eligibility Criteria	Pre-Requisite of the Course (if any)
			Lecture	Tutorial	Practical/Practice		
1	Badminton	04	2	0	2	XII Pass	NIL

Objective: - The Students will acquire knowledge and understanding of a specific sport in which an individualwishes to excel.

Learning Outcome:-The student attains knowledge, understanding, interpreting and analyzing proficiency in agame of one"s choice.

After the Completion of First Month:

A student will be able to gain knowledge with respect to Historical Development, Organisational Structure and Playfield Technology of a sport/game.

After the Completion of Second Month:

A student will be able to understand and interpret the rules of game as well as game knowledge in the areas of physiological basis of Warming up and technical aspects of coaching.

After the Completion of Third Month:

A student will be able to learn and acquire various skills of sports/game, gain knowledge about different techniques evaluation as well as the evaluation of player's performance.

After the Completion of Fourth Month:

A student will be learning about various fitness components and its forms. Further, the student will be able to practice and improve performance on the basis of knowledge gained in understanding various fitness components and its testing.

THEORY SYLLABUS **(30 hrs lectures)**

Unit-I **(08 hrs lectures)**

- Historical Development and Modern Trends (National and International Level)
- organizational Structure (State, National and International Level)
- Playfield Technology – Marking and Construction of the playfields.

Unit-II **(08 hrs lectures)**

- Rules and their interpretation.
- Warming up and physiological basis of Warming up and its effect on performance.
- Cooling down and its effect.
- Techniques of Coaching – Pep talk, Pre, during and Post match coaching.

Unit-III **(07 hrs lectures)**

- Basic skills and techniques of the Sports/Game.
- Skill/Technique Evaluation
- Evaluation of Player's Performance.

Unit-IV

(07 hrs lectures)

- Introduction to Physical and Motor Fitness components: Strength, Speed, Endurance, Coordinative Abilities and Flexibility.
- Motor Fitness Components Testing of above components.

Practical - **(60 hrs.)**

Learning and demonstrating various skills/techniques of sports.
Learning to demonstrate various tests to evaluate motor components as listed in unit IV above.

Semester III

BSc-PE-DSC-9 (4)-106: GYMNASTICS

Sr. No.	Course Title & Code	Credits	Credit Distribution of the Course			Eligibility Criteria	Pre-Requisite of the Course (if any)
			Lecture	Tutorial	Practical/Practice		
1	Gymnastics	04	2	0	2	XII Pass	NIL

Objective:-The Students will acquire knowledge and understanding of a specific sport in which an individual wishes to excel.

Learning Outcome:-The student attains knowledge, understanding, interpreting and analyzing proficiency in a game of one‟s choice.

After the Completion of First Month:

A student will be able to gain knowledge with respect to Historical Development, Organisational Structure and Playfield Technology of Gymnastics.

After the Completion of Second Month:

A student will be able to understand and interpret the rules of game as well as game knowledge in the areas of physiological basis of Warming up and technical aspects of coaching.

After the Completion of Third Month:

A student will be able to learn and acquire various skills of Gymnastics, gain knowledge about different tests of fitness and skill evaluation as well as the evaluation of player‟s performance.

After the Completion of Fourth Month:

A student will be learning about various fitness components and its forms. Further, the student will beable to practice and improve performance on the basis of knowledge gained in understanding various fitness components.

THEORY SYLLABUS

Unit-I **(07 hrs lectures)**

- Historical Development and Modern Trends (National and International Level)
- Organisational Structure (State, National and International Level)
- Playfield Technology – Marking and Construction of the playfields.

Unit-II **(08 hrs lectures)**

- Rules and their interpretation of the sport.
- Warming up and psychological basis of Warming up.
- Cooling down and its effect.
- Techniques of Coaching – Pep talk, Pre, during and Post match coaching.

Unit-III **(08 hrs lectures)**

- Basic skills and techniques of the Artistic Gymnastics, trampoline, parko and rhythmic
- Motor Fitness Components Testing
- Skill/Technique Evaluation
- Evaluation of Player‟s Performance.

Unit-IV **(07 hrs lectures)**

- Introduction to Physical and Motor Fitness components related to sport: Strength, Speed, Endurance, Coordinative Abilities and Flexibility.

- Practical - (60 hrs.)
  - Learning and demonstrating various skills/techniques of Artistic Gymnastics, trampoline, parko and rhythmic.
  - Learning to demonstrate various tests to evaluate motor components as listed in unit IV above.

Semester III

BSc-PE-DSC-9 (4)-107: HANDBALL

Credit = 4 (2 THz + 2 P)

Max. Marks=100 30 hrs Theory + 60 hrs Practical

Sr. No.	Course Title & Code	Credits	Credit Distribution of the Course			Eligibility Criteria	Pre-Requisite of the Course (if any)
			Lecture	Tutorial	Practical/Practice		
1	Handball	04	2	0	2	XII Pass	NIL

Objective: - The Students will acquire knowledge and understanding of a specific sport in which an individual wishes to excel.

Learning Outcome:-The student attains knowledge, understanding, interpreting and analyzing proficiency in a game of one‟s choice.

After the Completion of First Month:

A student will be able to gain knowledge with respect to Historical Development, Organisational Structure and Playfield Technology of a sport/game.

After the Completion of Second Month:

A student will be able to understand and interpret the rules of game as well as game knowledge in the areas of physiological basis of Warming up and technical aspects of coaching.

After the Completion of Third Month:

A student will be able to learn and acquire various skills of sports/game, gain knowledge about different techniques evaluation as well as the evaluation of player‟s performance.

After the Completion of Fourth Month:

A student will be learning about various fitness components and its forms. Further, the student will beable to practice and improve performance on the basis of knowledge gained in understanding various fitness components and it‟s testing.

THEORY SYLLABUS

Unit-I **(08 hrs lectures)**

- Historical Development and Modern Trends (National and International Level)
- Organisational Structure (State, National and International Level)
- Playfield Technology – Marking and Construction of the playfields.

Unit-II **(08 hrs lectures)**

- Rules and their interpretation.
- Warming up and physiological basis of Warming up and its effect on performance.
- Cooling down and its effect.
- Techniques of Coaching – Pep talk, Pre, during and Post match coaching.

Unit-III (07 hrs lectures)

- Basic skills and techniques of the Sports/Game.
- Skill/Technique Evaluation
- Evaluation of Player‟s Performance.

Unit-IV **(07 hrs lectures)**

- Introduction to Physical and Motor Fitness components: Strength, Speed, Endurance, Coordinative Abilities and Flexibility.
- Motor Fitness Components Testing of above components.

Practical - (60 hrs.)

Learning and demonstrating various skills/techniques of sports.

Learning to demonstrate various tests to evaluate motor components as listed in unit IV above.

Semester III

BSc-PE-DSC-9 (4)-113: YOGA Credit = 4 (2 THz + 2 P)

Max. Marks=100 30 hrs Theory + 60 hrs Practical

Sr. No.	Course Title & Code	Credits	Credit Distribution of the Course			Eligibility Criteria	Pre-Requisite of the Course (if any)
			Lecture	Tutorial	Practical/Practice		
1	Yoga	04	2	0	2	XII Pass	NIL

Objective:-The Students will acquire knowledge and understanding of a specific sport in which an individualwishes to excel.
Learning Outcome:-The student will attain knowledge, understanding, interpreting and analyzing proficiency ina game of one"s choice.

After the Completion of First Month:

The Students will develop the understanding and knowledge of Origin of yoga, definition and scope of yoga, limitations and misconceptions, importance of yoga in physical education and other fields, Yoga asana completion at:- State, National, International, SGFI, AIU etc. Philosophical aspects of Yog. Pre-Vedic, Vedic period; Buddhism, Upanishad period, Jainism & tantra, qualifications, qualities and responsibilities of a coach, Duties/responsibilities of technical official, Scoring system and judgment criteria, Protocols for referees, judges and officials.

The student will learn about the prayer.

After the Completion of Second Month:

The Students will develop the understanding and knowledge of Meaning, techniques, precautions & effects of the following:-Asanas : padmasana, vajrasana, sidhasana, paschimottanasa, halasana, sarvangasana, shalabhasana, ardh-matsyendrasana, bhujangasana, tadasana, vrikshasana, matsyasana, gomukhasana, ushtrasana, shavasana, makarasana, vrishchikasana, dhanurasana, purna matsyendrasana, chakrasana, ek pad sikandasana, bakasana, mayurasana, shirshasanaPranayama : anulom-vilom, bhastrika, suryabhedhen pranayama, sheetali, sheetkari, bhramari, ujjayiShatkarma : neti, dhauti, nauli, basti, kunjal, kapal bhati, shankh prakshalanaBandhas : jalandhar, uddyana, mool bandha.

The student will be able to perform Asanas, pranayama, shatkarma, bandha.

After the Completion of Third Month:

The Students will gain knowledge of Disease wise treatment through yoga therapy- Asthma, high & lowB.P, diabetes, obesity, heart disease, insomania, arthritis, backache & female disease.

The student will learn Yoga-nidra/relaxation techniques

After the Completion of Fourth Month:

The Students will gain knowledge of Diet & constitution, components of nutrition, water, natural diet,balanced diet, fasting-its benefits, types & preparation. Importance of vegetarianism in yogic diet.

The student will learn Visit to yoga centers/institutes

THEORY SYLLABUS

UNIT-I **(07 hrs lectures)**

- Origin of yoga, definition and scope of yoga, limitations and misconceptions of Yoga
- Importance of yoga in physical education and other fields
- Yoga asana competition at:- State, National, International, SGFI, AIU etc.

UNIT-II **(07 hrs lectures)**

- Philosophical aspects of yoga-Pre-Vedic, Vedic period; Buddhism, Upanishad period, Jainism & tantra
- Qualifications, qualities and responsibilities of a coach,
- Duties/responsibilities of technical official, Scoring system and judgment criteria,

- Protocols for referees, judges and officials.

UNIT-III **(09 hrs lectures)**

- Meaning, techniques, precautions & effects of the following:-
- Asanas : padmasana, vajrasana, sidhasana, paschimottanasa, halasana, sarvangasana, shalabhasana, ardh-matsyendrasana, bhujangasana, tadasana, vrikshasana, matsyasana, gomukhasana, ushtrasana, shavasana, makarasana, vrishchikasana, dhanurasana, purna matsyendrasana, chakrasana, ek pad sikandasana, bakasana, mayurasana, shirshasana
- Pranayama : anulom-vilom, bhastrika, suryabhedhen pranayama, sheetali, sheetkari, bhramari, ujjayi
- Shatkarma : neti, dhauti, nauli, basti, kunjal, kapal bhati, shankh prakshalana
- Bandhas : jalandhar, uddyana, mool bandha

UNIT-IV **(07 hrs lectures)**

- Disease wise treatment through yoga therapy- Asthma, high & low B.P, diabetes, obesity, heart disease, insomania, arthritis, backache & female disease
- Diet & Nutrition, components of nutrition, water, natural diet, balanced diet, fasting-its benefits, types & preparation, importance of vegetarianism in yogic diet.

PRACTICALS (60 hrs.)

1. Prayer
2. Asanas, pranayama, shatkarma, bandha (as mentioned in theory)
3. Yoga-nidra/relaxation techniques
4. Visit to yoga centers/institutes

Semester III

GE-3(4)-301 Olympic Education

GE-3(4)-301
4 Credits (3 THz+1Tutorial)

Sr. No.	Course Title & Code	Credits	Credit Distribution of the Course			Eligibility Criteria	Pre-Requisite of the Course (if any)
			Lecture	Tutorial	Practical/Practice		
1	Olympic Education	4	3	1	0	XII	---

Objective: To impart the knowledge, practices and applications about the Olympism its functions through the various International sportsfederation, National committees and IOC commissions.

Learning Outcome: Students will learn the deep knowledge about ancient and modern Olympics, administration,organisation of Olympics Games and functions of IOC.

After the Completion of First Month:

The students will develop the understanding practices, applications and knowledge of Concept of Olympics movement, the ancient Olympic Games and the Modern Olympic Games and its movement. It also helps to know about the aims and symbols of the Olympic movement and International Olympic Committee (IOC).

After the Completion of Second Month:

The students will develop the understanding practices, applications and knowledge of The National Olympic Committee (NOC), International Sports Federations (IFs), National Sports Federations (NFs), Volunteerism and Olympics games.

After the Completion of Third Month:

The students will gain understanding practices, applications and knowledge of the Organization of Olympics games, international bid process for selecting sites / city for the games, Participation in Olympic Games and about Women & sports.

After the Completion of Fourth Month:

The students will gain knowledge, practices, applications and understanding of the Olympic museum, Olympic academy and Olympic solidarity programme, Paralympics games and concept of Sports for all. It also helps to know about Culture, Olympism, winning, participation and universality of the games, drug abuse and doping in sports and games.

THEORY SYLLABUS: (60 Hours/Lectures)

UNIT-I THE OLYMPIC MOVEMENT (15 Hours/Lectures)

1 Concept of Olympics movement, the ancient Olympic games and the Modern Olympic games and itsmovement.
2 Aims and symbols of the Olympic movement.
3 The International Olympic Committee (IOC).

UNIT-II STRUCTURE OF THE OLYMPIC MOVEMENT (15 Hours/Lectures)

1. The National Olympic Committee (NOC).
2 The International Sports Federations (IFs).
3 The National Sports Federations (NFs).
4 Volunteerism and Olympics games.

UNIT-III THE OLYMPIC GAME (15 Hours/Lectures)

1 Organization of Olympics games.
2. The international bid process for selecting sites / city for the games.
3. Participation in Olympic Games.
4. Women and sports.

UNIT-IV IOC PROGRAMMES (15 Hours/Lectures)

1. Olympic museum, Olympic academy and Olympic solidarity program.
2. Paralympics games and concept of Sports for all.
3. Culture, Olympism, winning, participation and universality of the games.
4 Drug abuse and doping.

BA(PROG.) WITH PHYSICAL EDUCATION & SPORTS AS NON-MAJOR
SEMESTER-3
B.A.-PE-DSC-3 (MINOR)
HEALTH EDUCATION

DSC

Sl. No.	Course Title & Code	Credits	Credit Distribution of the Course			Eligibility Criteria	Pre-Requisite of the Course (if any)
			Lecture	Tutorial	Practical/Practice		
1.	Health Education	04	3	0	1	XII	--

Objective: To acquaint the students with basic aspects and practices with application to health, health education and various health agencies.

Learning Outcomes of the Paper:

1. The learners will learn the basic concepts of developing the practices of health along with the dimensions, spectrum and determinant of health.
2. The learners will develop the ability to apply the scope and principles of health education in life.
3. The learners will be able to comprehend the role of personal and occupational hygiene for better health practices.
4. The learners will be able to understand and apply the causes and preventive measures of various communicable and non-communicable diseases.
5. The learners will gain knowledge and practices about the role and schemes of various health promoting agencies like WHO, UNICEF, UNDP, MHFW, Red Cross etc.
6. The learners will be able to change their behavioural aspects related to personal health.
7. The learners will be able to create the databases related to health and hygiene.

SYLLABUS

M.M.: 100
No. of Credits: 04 (Lecture-03, Practical-1)
Theory: 45 hours, Practical: 30 hours

Unit-1: Introduction to Health

1. Meaning, Definition & Importance of Health
2. Dimensions of Health
3. Spectrum of Health
4. Determinants of Health

Unit-2: Introduction to Health Education

1. Meaning and Definition of Health Education
2. Aim and Objectives of Health Education
3. Importance and Scope of Health Education
4. Principles of Health Education

Unit-3: Hygiene and Health Issues

1. Personal Hygiene
2. Occupational Hygiene
3. Communicable Diseases : Meaning, Spread and Prevention
4. Non-Communicable Diseases: Meaning, Spread and Prevention

Unit-4: Health Agencies

1. Introduction to International Health Agencies: WHO (World Health Organization), UNICEF (United Nations International Children's Fund), UNDP (United Nations Development Programme)
2. Introduction to National Health Agencies: Ministry of Health and Family Welfare; Indian Red Cross Society, Hind Kushth Nivaran Sangh, Indian Council for Child Welfare, Tuberculosis Association of India, Bharat Sevak Samaj, Central Social Welfare Board

PRACTICAL

1. Conduct a survey on personal hygiene Habits of your college students.
2. Visit to any one national health agency and preparation of a report.
3. Conduct a Survey on anyone of the following:
    a. Communicable Disease
    b. Non-Communicable Disease

BA(PROG.) WITH PHYSICAL EDUCATION & SPORTS AS MAJOR
SEMESTER-3
B.A.-PE-DSC-3 (MAJOR)
SPORTS NUTRITION AND ERGOGENIC AIDS

DSC

Sl. No.	Course Title & Code	Credits	Credit Distribution of the Course			Eligibility Criteria	Pre-Requisite of the Course (if any)
			Lecture	Tutorial	Practical/Practice		
1.	Sports Nutrition and Ergogenic Aids	04	3	0	1	XII	--

Objective: To acquaint the students with basic concepts, application and creativity related to sports nutrition and ergogenic aids.

Learning Outcomes of the Paper:

1. The learners will understand the basic concept and practices of Nutrition and its importance in the field of Sports.
2. The learners will be able to describe the functions of different types of Nutrients and their sources.
3. The learners will gain knowledge of application of nutrient-supplementation and nutrition guidelines.
4. The learners will understand the concept of Ergogenic Aids and their role in sports.
5. The learners will identify the list of prohibited substances to control doping.
6. The learners will be able to create / construct the diet chart/ plan as per individual needs.
7. The learners will be acquainted to the role of World Anti -Doping Agency (WADA) and National Anti-Doping Agency.

SYLLABUS

M.M.: 100
No. of Credits: 04 (Lecture-03, Practical-1)
Theory: 45 hours, Practical: 30 hours

Unit-1: Nutrition

1. Meaning, Definition & Importance of Nutrition
2. Nutrients: Classification, Function, Source
3. Balanced Diet, Dietary Aids, Dietary Gimmicks
4. Achieving a Healthy and Balanced Diet

Unit-2: Sports Nutrition

1. Role of Nutrition in Sports
2. Basic Nutrition Guidelines
3. Energy Balance Equations
4. Pre- and Post-performance Nutrition to athletes

Unit-3: Ergogenic Aids

1. Meaning and Definition of Ergogenic Aids
2. Types of Ergogenic Aids
3. Role of Ergogenic Aids in Sports
4. Nutrition and Ergogenic Aids

Unit-4: Doping and Sports

1. Meaning and Definition of Doping
2. Disadvantages of Doping in Sports
3. Introduction to WADA (World Anti-Doping Agency) and NADA (National Anti-Doping Agency)
4. List of prohibited substances by WADA (World Anti-Doping Agency)

PRACTICAL

1. Preparation of a regular Diet Chart/ Plan for Sportspersons.
2. Preparation of Diet Schedule for Competitive performance (before and after the competition)
3. Visit to Nutritional/ Medical institution and preparation of report.
4. Conduct survey on nutritional practices of sportspersons.

SUGGESTED READINGS

SEMESTER- III
BSc-PE-DSE-1(4)-101: (DSE)
ADAPTED PHYSICAL EDUCATION
DSE

Course Title & Code	Credits	Credit Distribution of the Course			Eligibility Criteria	Pre-Requisite of the Course (if any)
		Lecture	Tutorial	Practical		
ADAPTED PHYSICAL EDUCATION	04	03	0	01	XII	NA

Objective:

The objective of this course is to provide an understanding and practices to the learners about adapted physical education in order to let them realize that Divyang student also are the part of active education system as well.

Learning Outcomes:

At the end of the course the student will be able to-

1. Acquire the knowledge of meaning definition and components of adapted physical educational in suitable modern aspects.
2. Understand the General educational styles, strategies, teaching style and adapted physical education.
3. Recognize suitable general and specific activities for early childhood adapted physical education.
4. Apply the knowledge of measuring & assessing students, Criteria for eligibility for adapted physical education.

PART – A Theory Syllabus

UNIT I - **(09 Hours)**

1.1 Definition of Adapted Physical Education and components of Individualized education Programme (IEP)
1.2 Measuring & Assessing students, Criteria for eligibility for adapted physical education, Alternative instructions in physical education and teaching in inclusive setting

UNIT II **(09 Hours)**

2.1 General educational styles and strategies,

2.2 Teaching style and adapted physical education
2.3 Ways of facilitating skill acquisition and behaviour management approaches emphasized in adapted physical education

UNIT III **(09 Hours)**

3.1 Children and youth with unique needs:-Intellectual disabilities
3.2 Learning disabilities and attention defects
3.3 behavior disorder
3.4 Visual impairment, Deafness, Cerebral palsy, shock
3.5 spinal cord disabilities and amputation
3.6 Students without disabilities with unique needs

UNIT IV **(09 Hours)**

4.1 Development Areas: -
- 4.1.1 Physical fitness
- 4.1.2 Motor Development
- 4.1.3 Perceptual- motor development

4.2 Early childhood adapted physical education

UNIT V **(09 Hours)**

5.1 Activity Areas and adapted physical education:
- 5.1.1 Team sports
- 5.1.2 Individual sports
- 5.1.3 Dual sports
- 5.1.4 Gymnastics
- 5.1.5 Aquatics

5.3 Adventure Sport, Dance, Rhythmic movements

PART – B Practical Syllabus **(30 Hours)**

To prepare Individual Education Programme of different challenged population.
1. To measure and Assess the degree of Help/Need
2. To facilitate special skill acquisitions
3. To prepare programme for: Visual impairment and Deafness
4. To prepare programme for: Spinal cord disability and Amputation
5. Development Areas: Physical Fitness & Motor Development

Note: Evaluation will be done on the basis of practical examination of the activities taught.

SEMESTER- III
BSc-PE-DSE-1(4)-102 (DSE)
PERSONALITY DEVELOPMENT
DSE

Course Title & Code	Credits	Credit Distribution of the Course			Eligibility Criteria	Pre-Requisite of the Course (if any)
		Lecture	Tutorial	Practical		
PERSONALITY DEVELOPMENT	04	03	0	01	XII	NA

Objective:

The objective of this course is to provide an understanding and practices to the learners about Personality development.

Learning Outcomes:

At the end of the course the student will be able to-

5. Acquire the knowledge of meaning, definition and importance of Personality Development.
6. Understand the Components of Physical Personality, Physical Fitness, Self- Responsibility for Health & Personality Development.
7. Use the components of personality and its applications of self-evaluation for one's personality
8. Apply the knowledge of nutrition to enhance personality.

Theory Syllabus

UNIT I INTRODUCTION **(09 Hours)**

1.1 Definition, Meaning and Description of Personality, Components of Personality – Physical, Emotional, Cognitive, Social, Mental, Vital and Spiritual; Role of Physical Personality as Foundation of Personality.
1.2 Components of Physical Personality: Growth & Development; Nutrition, Exercise, Physical Fitness, Self- Responsibility for Health & Personality Development.

UNIT II PHYSICAL GROWTH & DEVELOPMENT **(09 Hours)**

2.1 Meaning and Definition – Physical Growth, Development, Differences between Growth and Development; Growth and Development patterns in various body systems. Role in Promoting Personality Development
2.2 Growth Patterns: Magnitude and Rate of Physical Growth, Distance and Velocity Curves, Classification of Human Growth Cycle – Baby, Child, Adolescent, Post-Adolescent, Adult and Old age.

UNIT III NUTRITION & PERSONALITY DEVELOPMENT **(09 Hours)**

3.1 Meaning & Definitions, Nutrients, Balanced diet for Health Needs and Personality Development, Micro & Macronutrients relation to Personality Development.

3.2 Nutritional Requirements: Nutritional requirements for Growing Age, Physical Activities, Sports, Sports Training, Food Groups: Classification of Food into various groups based on their nutrients, daily intake of various food groups, Nutrients of common foods

UNIT IV PHYSICAL FITNESS & PERSONALITY (09 Hours)

4.1 Meaning & Definition of Physical Fitness and its components. PAR-Q, Health Related Physical Fitness & Personality; Physical Performance components of Fitness, Personal needs and Personality Development

4.2 Personal Physical Fitness: Personal strengths and weaknesses in components of Physical Fitness, Development of weak components, Role of Behaviour changes for developing personal fitness strengths.

UNIT V SELF RESPONSIBILITY (09 Hours)

5.1 Meaning & concept of Self Responsibility

5.1.1Daily Schedules (DS) Awareness and Logbooks for practice of DS.

5.2 Physical Education: Role of Physical Education in promoting Self Responsibility

5.2.1 Self-Responsibility and Behaviour change, PE for Personality Development.

5.2.2 Foundations of Personality Development & Personal Strengths through Physical Education as the basis of self-responsibility

5.2.3 Principles of Self-Responsibility & their relation to art & science of health

5.2.4 Fitness & wellness promotion

PART- B Practical (30 Hours)

1. To demonstrate the components of personality with examples.
2. To demonstrate stages of behaviour change.
3. To demonstrate PAR-Q
4. To demonstrate daily physical log and methods its activities.
5. To demonstrate balanced nutrition with food items and quantity required
6. To demonstrate the application of self-evaluation of one's personality
7. To demonstrate different methods of meditation (At least two)

SEMESTER- 3
BSc-PE-DSE-1(4)-103 (DSE)
EXERCISE PRESCRIPTION FOR HEALTH AND FITNESS
DSE

Course Title & Code	Credits	Credit Distribution of the Course			Eligibility Criteria	Pre-Requisite of the Course (if any)
		Lecture	Tutorial	Practical		
EXERCISE PRESCRIPTION FOR HEALTH AND FITNESS	04	03	0	01	XII	NA

Objective:

The objective of this course is to provide an understanding, skill and practices to the learners about exercise prescription for health and fitness.

Learning Outcomes:

At the end of the course the student will be able to-

9. Acquire the knowledge and practices of exercise prescription on the behalf of health status.
10. Deal with differentiation and relation between exercise & physical activity.
11. Understand and demonstrate the direct and indirect health benefits of the exercise
12. Get understanding and applications of acronyms FITT (Frequency, Intensity, Time (duration), type (Mode of Exercise) (Training principles for batter training)

Theory Syllabus

UNIT I - (09 Hours)

1.1 Background of exercise prescription to non-sports person, basis of exercise prescription and measurement of motivation for physical exercise/activity health status
1.2 Physical personality in relation to physique, attitude, interests.
1.3 Exercise for recreation, health, fitness, wellness and competition.

UNIT II - (09 Hours)

2.1 Meaning and definition of exercise & physical activity
2.1.1Differences between exercise & physical activity (chronic and acute effect for adaptation)
2.1.2 Relation between exercise & physical activity

UNIT III - (09 Hours)

3.1 Health benefits of exercise, exercise as pro-active health care.
3.2 Exercise for prevention of heart disease, osteoporosis, diabetes type-II, hypertension, obesity etc.

UNIT IV - (09 Hours)

4.1 Necessity of exercise prescription
4.1.1 Sedentary population
4.1.2 Different-population
4.1.3 Self-responsibilities and behaviour change stages for exercise regularity

UNIT V - (09 Hours)

5.1 Steps for exercise prescription.
5.2 Exercise, stress test, physical fitness test,
5.3 Understanding acronyms FITT (Frequency, Intensity, Time (duration), Type (Mode of Exercise).
5.4 Principles of fitness training

PART- B Practical Syllabus (30 Hours)

1. Assessment of fitness (At least three)
2. Assessment of physical activity readiness of a person
3. Measurement of health status
4. Prescribing exercise / Programme
5. Evaluation of an exercise Programme

SEMESTER- 3
BSc-PE-DSE-1(4)-104.1 (DSE)
FUNDAMENTALS OF BASKETBALL
DSE

Course Title & Code	Credits	Credit Distribution of the Course			Eligibility Criteria	Pre-Requisite of the Course (if any)
		Lecture	Tutorial	Practical		
FUNDAMENTALS OF BASKETBALL	04	02	0	02	XII	--

Objective:

The learner will be able to understand and comprehend the fundamentals of Basketball game with its practices and skill for better pedagogy and performance in Basketball.

Learning Outcomes:

1. The learner will attain basic knowledge of Basketball for different applications.
2. The learner will be able to gain knowledge with respect to historical development, organizational structure and playfield technology of Basketball.
3. The learner will be able to perform the marking/ drawing/ material organizing for Basketball.
4. The learner will be able to understand, analyze and interpret the fundamental methods and score
5. The learner will be able to learn and acquire fundamental skills (offensive and defensive) of game/sports (Basketball).
6. The students will also be able to demonstrate their knowledge of skills in both part and whole.

SYLLABUS

PART-A: THEORY **(30 hours)**

Unit-1 Court, marking and General Rules **(8 hours)**

1.1 Court Layout (mention each and every specification)
1.2 Dimensions of court (male and female)
1.3 Start and Restart of Play, Duration, Time-out, Suspensions
1.4 Referee Signals, fouls and misconduct
1.5 Technical Officials
1.6 Scoresheet

Unit-2: Demonstrate (By part and whole) Fundamental Skills **(7 hours)**

2.1 Dribble
2.2 Passing
2.3 Shooting
2.4 Rebounding
2.5 Faking

Unit-3: Fundamental Defensive Skills **(8 hours)**

3.1 German drill and suicide drill
3.2 Lay-up shot
3.3 Zone-defence
3.4 Man to man technique
3.5 Attacking skills

Unit-4 Different tests in Basketball **(7 hours)**

4.1 Johnson Basketball Test
4.2 Knox Basketball test
4.3 Harrision Basketball test

PART-B: PRACTICAL **(60 hours)**

1. Court marking on paper and on the playfield as well.
2. General rules and their application and implementation in game situations.
3. Learning and demonstrating various fundamental skills mention in unit 2 and 3.
4. Evaluation / testing of fundamental skills (performance analysis).

Objective:

The learner will be able to understand and comprehend the fundamentals of Cricket game with its practices and skill for better pedagogy and performance in Cricket.

Learning Outcomes:

1. The learner will attain basic knowledge of Cricket for different applications.
2. The learner will be able to gain knowledge with respect to historical development, organizational structure and playfield technology of Cricket.
3. The learner will be able to perform the marking/ drawing/ material organizing for Cricket.
4. The learner will be able to understand, analyze and interpret the fundamental methods and score
5. The learner will be able to learn and acquire fundamental skills (offensive and defensive) of game/sports (Cricket).
6. The students will also be able to demonstrate their knowledge of skills in both part and whole.

SYLLABUS

PART-A: THEORY Syllabus (30 hours)

Unit-1 Ground, marking and General Rules (8 hours)

1.1 Ground Layout (mention each and every specification)
1.2 Dimensions of court (male and female)
1.3 Start and Restart of Play, Duration, Time-out, Suspensions
1.4 Umpire, Referee Signals, soft signals, fouls and misconduct penalty.
1.5 Technical Officials
1.6 Scoresheet

Unit-2: Demonstrate (By part and whole) Fundamental Batting Skills (7 hours)

2.1 Block
2.2 Cut
2.3 Drive

2.4 Hook
2.5 Leg Glance
2.6 Paddle Sweep
2.7 Pull
2.8 Sweep
2.9 Reverse Sweep
2.10 Slog Sweep
2.11 Slog

Unit-3: Demonstrate (By part and whole) Fundamental Bowling Skills (8 hours)

3.1 Fast bowling
3.1.1 Seam Bowling
3.1.2 Swing Bowling
3.1.3 Bouncer, Beamer & Full toss
3.1.4 In dipper
3.1.5 In swinger
3.1.6 Leg Cutter
3.1.7 Off Cutter
3.1.8 Slow Ball
3.1.9 Reverse

3.2 Spin Bowling

3.2.1 Off-Spin
3.2.2 Leg-Spin
3.2.3 Chinaman
3.2.4 Doosra
3.2.5 Googles
3.2.6 Leg Break
3.2.7 Teesra
3.2.8 Arm Ball

Unit-4 Fundamental Wicket keeping & fielding Skills (7 hours)

4.1 Wicket keeping (Stumping, runout & caught behind)
4.2 Fielding skills
4.2.1 Catching grip Indian style and Australian style
4.2.2 High & Low catch
4.2.3 Dive

PART-B: Practical Syllabus (60 hours)

1. Court marking on paper and on the playfield as well.
2. General rules and their application and implementation in game situations.
3. Learning and demonstrating various fundamental skills mention in unit 2 and 3.
4. Evaluation / testing of fundamental skills (performance analysis).

SEMESTER- 3
BSc-PE-DSE-1(4)-104.3 (DSE)
FUNDAMENTALS OF KABADDI
DSE

Course Title & Code	Credits	Credit Distribution of the Course			Eligibility Criteria	Pre-Requisite of the Course (if any)
		Lecture	Tutorial	Practical		
FUNDAMENTALS OF KABADDI	04	02	0	02	XII	NIL

Objective:

The learner will be able to understand and comprehend the fundamentals of kabaddi game with its practices and skill for better pedagogy and performance in kabaddi.

Learning Outcomes:

7. The learner will attain basic knowledge of Kabaddi for different applications.
8. The learner will be able to gain knowledge with respect to historical development, organizational structure and playfield technology of Kabaddi.
9. The learner will be able to perform the marking/ drawing/ material organizing for Kabaddi.
10. The learner will be able to understand, analyze and interpret the fundamental methods and score
11. The learner will be able to learn and acquire fundamental skills (offensive and defensive) of game/sports (Kabaddi).
12. The students will also be able to demonstrate their knowledge of skills in both part and whole.

SYLLABUS

PART-A: THEORY **(30 hours)**

Unit-1 Court, marking and General Rules **(8 hours)**

1.1 Court Layout (Mid line, Baulk line, Bonus line, Boundary line, Lobbies)
1.2 Dimensions of court (male and female)
1.3 Start and Restart of Play, Duration, Time-out, Suspensions
1.4 Referee Signals, fouls and misconduct
1.5 Technical Officials
1.6 Scoresheet (Scoring- Bonus, Lonna and all out points)

Unit-2: Demonstrate (By part and whole) Fundamental Offensive Skills **(8 hours)**

2.1 Hand Touch
2.2 Toe Touch

2.3 Side Kick
2.4 Back Kick
2.5 Mule Kick
2.6 Leg Thrust

Unit-3: Fundamental Defensive Skills **(7 hours)**

3.1 Ankle Hold
3.2 Thigh Hold
3.3 Knee Hold/Double Knee Hold
3.4 Waist/Back/Trunk Hold
3.5 Block Tackle
3.6 Wrist Hold

Unit-4 Different tests in Kabaddi **(7 hours)**

4.1 Johnson Kabaddi Test
4.2 Knox Kabaddi test
4.3 Harrision Kabaddi test

PART-B: PRACTICAL **(60 hours)**

5. Court marking on paper and on the playfield as well.
6. General rules and their application and implementation in game situations.
7. Learning and demonstrating various fundamental skills mention in unit 2 and 3.
8. Evaluation / testing of fundamental skills (performance analysis).

SEMESTER- 3
BSc-PE-DSE-1(4)-104.5 (DSE)
FUNDAMENTALS OF HANDBALL
DSE

Sl. No.	Course Title & Code	Credits	Credit Distribution of the Course			Eligibility Criteria	Pre-Requisite of the Course (if any)
			Lecture	Tutorial	Practical		
9.	**FUNDAMENTALS OF HANDBALL**	04	02	0	02	XII	NIL

Objective:

The learner will be able to understand and comprehend the fundamentals of Handball game with its practices and skill for better pedagogy and performance in Handball.

Learning Outcomes:

13. The learner will attain basic knowledge of Handball for different applications.
14. The learner will be able to gain knowledge and practices with respect to historical development, organizational structure and playfield technology of Handball.
15. The learner will be able to demonstrate the marking/ drawing/ material organizing for Handball.
16. The learner will be able to understand, analyze and interpret the fundamental methods and score.
17. The learner will be able to learn, demonstrate and acquire fundamental skills (offensive and defensive) of game/sports (Handball).
18. The students will also be able to demonstrate their knowledge of skills in both part and whole.

SYLLABUS

PART-A: THEORY **(30 hours)**

Unit-1 Ground marking and General Rules **(8 hours)**

1.1 Ground Layout (mention each and every specification)
1.2 Dimensions of ground (male and female)
1.3 Start and Restart of Play, Duration, Time-out, Suspensions
1.4 Referee Signals, fouls and misconduct
1.5 Technical Officials
1.6 Scoresheet

Unit-2: Demonstrate (By part and whole) Attacking Fundamental Skills **(7 hours)**

2.1 Attacker with the ball
2.1.1 Creating space
2.1.2 Passing & Catching

2.1.3 Faking
2.1.4 Shooting
2.1.5 Dribbling/ bouncing

2.2 Attacker without the ball
2.2.1 Receiving the ball
2.2.2 Available for teammate
2.2.3 Move without ball
2.2.4 Creating space

Unit-3: Demonstrate (By part and whole) Fundamental defensive Skills (7 hours)

3.1 Defending position
3.2 Intercepting the ball
3.3 Blocking

Unit-4 Different Offensive & Defensive skills of goal keeper (8 hours)

4.1 Offensive skills of goal keeper
4.1.1. Movement in the goal
4.1.2 Offensive posture, positioning
4.1.3 Passing to initiate fast break, attack, throws.
4.1.4 Execution of free throw, goalkeeper throw, throw-in.

4.2 Defensive skills of goal keeper
4.2.1. Defensive posture, positioning
4.2.2 Using hands, legs and torso for saves
4.2.3 Catching, deflecting and knocking down shots

PART- B Practical Syllabus (60 hours)

9. Court marking on paper and on the playfield as well.
10. General rules and their application and implementation in game situations.
11. Learning and demonstrating various fundamental skills mention in unit 2 and 3.
12. Evaluation / testing of fundamental skills (performance analysis).

FUNDAMENTALS OF HOCKEY	04	02	0	02	XII	NIL

Objective:

The learner will be able to understand and comprehend the fundamentals of Hockey game with its practices and skill for better pedagogy and performance in Hockey.

Learning Outcomes:

19. The learner will attain basic knowledge of Hockey for different applications.
20. The learner will be able to gain knowledge with respect to historical development, organizational structure and playfield technology of Hockey.
21. The learner will be able to perform the marking/ drawing/ material organizing for Hockey.
22. The learner will be able to understand, analyze and interpret the fundamental methods and score
23. The learner will be able to learn and acquire fundamental skills (offensive and defensive) of game/sports (Hockey).
24. The students will also be able to demonstrate their knowledge of skills in both part and whole.

SYLLABUS

PART-A: THEORY **(30 hours)**

Unit-1 Ground marking and General Rules **(8 hours)**

1.1 Ground Layout (mention each and every specification)
1.2 Dimensions of ground (male and female)
1.3 Start and Restart of Play, Duration, Time-out, Suspensions
1.4 Referee Signals, fouls and misconduct
1.5 Technical Officials
1.6 Scoresheet

Unit-2: Demonstrate (By part and whole) Fundamental Skills **(7 hours)**

2.1 Holding of stick
2.2 Ball carrying and elimination
    2.2.1 Running / rolling the ball
    2.2.2 Dribbling (Indian dribble)
    2.2.3 Jinking
2.3 Distribution
    2.3.1 Pushing
    2.3.2 Hit & Slap Hit
    2.3.3 Reverse Push and Reverse slide
2.5 Tomahawk and Overhead

Unit-3: Fundamental Receiving & Blocking Skills **(8 hours)**

3.1 Fore stick receive
3.2 Reverse stick receive
3.3 Receive with deception
3.4 Receive Arial balls
3.5 Tackling (Block & reverse block)
3.6 Penalty corner skills (Drag out & Trap)

Unit-4 Different tests in Hockey **(7 hours)**

4.1 SAI Hockey Skill Test
4.2 Harbans Singh Field Hockey Test
4.3 Fridel Field Hockey test

PART-B: PRACTICAL SYLLABUS **(60 hours)**

13. Court marking on paper and on the playfield as well.
14. General rules and their application and implementation in game situations.
15. Learning and demonstrating various fundamental skills mention in unit 2 and 3.
16. Evaluation / testing of fundamental skills (performance analysis).

SEMESTER- 3
BSc-PE-DSE-1(4)-104.4 (DSE)
FUNDAMENTALS OF KHO-KHO
DSE

Course Title & Code	Credits	Credit Distribution of the Course			Eligibility Criteria	Pre-Requisite of the Course (if any)
		Lecture	Tutorial	Practical		
FUNDAMENTALS OF KHO-KHO	04	02	0	02	XII	NIL

Objective:

The learner will be able to understand and comprehend the fundamentals of Kho-Kho game with its practices and skill for better pedagogy and performance in Kho-Kho.

Learning Outcomes:

25. The learner will attain basic knowledge of Kho-Kho for different applications.
26. The learner will be able to gain knowledge with respect to historical development, organizational structure and playfield technology of Handball.
27. The learner will be able to perform the marking/ drawing/ material organizing for Handball.
28. The learner will be able to understand, analyze and interpret the fundamental methods and score
29. The learner will be able to learn and acquire fundamental skills (offensive and defensive) of game/sports (Handball).
30. The students will also be able to demonstrate their knowledge of skills in both part and whole.

SYLLABUS

PART-A: THEORY **(30 hours)**

Unit-1 Ground marking and General Rules **(8 hours)**

1.1 Ground Layout (mention each and every specification)
1.2 Dimensions of ground (male and female)
1.3 Start and Restart of Play, Duration, Time-out, Suspensions
1.4 Referee Signals, fouls and misconduct
1.5 Technical Officials
1.6 Scoresheet

Unit-2: Demonstrate (By part and whole) Chasing Fundamental Skills **(7 hours)**

2.1 Giving Kho
2.2 Sudden change
2.3. Turning round the post
2.4 Diving
2.5 Late Kho
2.6 Taking direction
2.7 Taping
2.8 Trapping
2.9

Unit-3: Demonstrate (By part and whole) Fundamental running Skills **(8 hours)**

3.1 Position on court
3.2 Running
3.3 Avoiding trapping
3.4 Positioning near the post

Unit-4 Tactical fundamental skills **(7 hours)**

4.1 Fake Kho
4.2 Dodging
4.2.1 Front dodge
4.2.2 Back dodge
4.2.3 Round the post dodge

PART-B: PRACTICAL **(60 hours)**

17. Court marking on paper and on the playfield as well.
18. General rules and their application and implementation in game situations.
19. Learning and demonstrating various fundamental skills mention in unit 2 and 3.
20. Evaluation / testing of fundamental skills (performance analysis).

ANNEXURE-8

Sub: Amendment to Ordinance V

[E.C Resolution No. 60-1/(60-1-6) dated 03.02.2023]

Following addition be made to Appendix-II-A to the Ordinance V (2-A) of the Ordinances of the University;

Add the following:

Syllabi of Semester-III of the department of Home Science under Faculty of Science based on Under Graduate Curriculum Framework -2022 implemented from the Academic Year 2022-23.

FACULTY OF SCIENCE

DEPARTMENT OF HOME SCIENCE
BSc. Hons. (Home Science)

DISCIPLINE SPECIFIC CORE COURSE – 7

DSC HH 307 : Human Development II: Middle Childhood and Adolescence

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Human Development II: Middle Childhood and Adolescence	**4**	**3**	**0**	**1**	**XII Pass**	**Pass in DSC HH 101** Human Development 1: The Early Years

Learning Objectives

1. To learn about the progression and domains of development during middle

childhood years and adolescence.
2. To understand context specific cultural practices of development during middle childhood years and adolescence.
3. To familiarize students with the use of different techniques of studying development during middle childhood and adolescence.

Learning Outcomes

After completing this course, students will be able to:

1. Acquire a detailed understanding of development across domains from middle childhood through adolescence.
2. Gain insight on context specific cultural practices of development during middle childhood and adolescence.
3. Develop skills of using various techniques to study development during middle childhood and adolescence.

SYLLABUS OF DSC 7

THEORY
(Credits 3; Hours 45)

UNIT I: Middle Childhood Years **12 Hours**

This unit traces the progression of development across domains from 7-12 years of life.
Subtopics:

- Physical-motor development
- Cognitive and language development
- Moral development

UNIT II: Middle Childhood Years: The Social Context **10 Hours**

This unit focuses on the social context of development during the middle childhood years. The role of school, family, community and media is explored here.
Subtopics:

- Social and emotional development
- Role of family and peers
- Significance of School, community and media

UNIT III: Introduction to Adolescence **12 Hours**

This unit describes the transition from childhood to adolescence with a focus on physical development and puberty and its impact on socio-emotional development.

- Theoretical perspectives on adolescence
- Puberty, sexual maturity, nutrition, health and psychological wellbeing
- Self and identity
- Family and peer relationships, interface with media

UNIT IV: Adolescence: Cognitive, Language and Moral development **11 Hours**

This unit describes the progression in cognitive, language and moral development during adolescence.

- Perspectives on cognitive development
- Intelligence and creativity
- Adolescent language
- Adolescent morality

PRACTICAL
(Credits 1; Hours 30)

- Methods of studying in Human Development
- Interview and Questionnaire
- Role of Family and peers during middle childhood
- Physical and sexual changes during puberty
- Sociometry
- Audiovisual resources to study middle childhood and adolescence
- Case profile of an adolescent
- Psychological tests

DISCIPLINE SPECIFIC CORE COURSE – 8
DSC HH 308: Nutrition: A Life Cycle Approach

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title& Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course(if any)
		Lecture	Tutorial	Practical/ Practice		
Nutrition: A Life Cycle Approach	**4**	**3**	**0**	**1**	**XII Pass**	**Pass in DSC HH 102** Food Science and Nutrition

Learning Objectives

1. To acquire knowledge about the nutritional needs and concerns of an individual throughout the life cycle.
2. To enable students in understanding the principles of planning nutritionally adequate diets.
3. To make them exercise food choices consonant with good health based on sound knowledge of principles of nutrition.

Learning Outcomes

After completing this course, students will be able to:

1. Acquire knowledge about the nutritional needs and concerns of an individual throughout the life cycle.
2. Comprehend the principles of planning nutritionally adequate diets.
3. Exercise food choices consonant with good health based on sound knowledge of principles of nutrition.

SYLLABUS OF DSC 8

THEORY
(Credits 3; Hours 45)

UNIT I: Basics of nutrient requirements and meal planning **12 Hours**

Unit Description: Concepts of food groups and food exchange lists for meal planning, factors affecting meal planning will be dealt with. Students will also be introduced to dietary guidelines for Indians. The concept of estimated average requirements, recommended allowances and methods of assessing nutrient requirements in general for Indians will be explained.

Subtopics:

- Food groups
- Food exchange list
- Factors affecting meal planning and food related behaviour, diet diversity
- Dietary guidelines for Indians
- Concept of EAR, RDA, AI and TUL
- Basic concepts of assessment of nutrient requirements

UNIT II: Nutrition during adulthood and old age

12 Hours

- Unit Description: Physiological influence on nutrient requirements during adulthood and old age (EAR/RDA), energy balance, nutritional concerns and changes in requirements during adulthood and old age, concept of healthy food choices, processed and ultra-processed food consumption and factors contributing to longevity will be dealt with.

Subtopics:

- Adult men and women
- Elderly

UNIT III: Nutrition during pregnancy and lactation

9 Hours

Unit Description: Physiological changes in pregnancy and lactation, EAR/RDA during pregnancy and lactation, nutritional guidelines, effect of nutritional status on pregnancy outcome, optimal weight gain and its components during pregnancy, nutrition related problems in pregnancy, importance of nutrition for successful lactation will be dealt with.

Subtopics:

- Pregnant women
- Lactating mothers

UNIT IV: Nutrition during childhood

12 Hours

- Unit Description: Physiological changes during infancy, childhood and adolescence – growth and development; nutrient requirements (EAR/RDA) during these age groups, guidelines on infant and young child feeding, nutrition concerns keeping in mind the changing food habits and importance of physical activity will be dealt with.

Subtopics:

- Infants
- Preschool children
- School children
- Adolescents

PRACTICAL
(Credits 1; Hours 30)

I Introduction to meal planning:

- Rich sources of nutrients
- Use of food exchange lists

II Planning nutritious diets for:

- Adult (Male and Female)

- Pregnant and Lactating woman
- Pre-schooler
- Adolescent girl
- Elderly

III Planning and cooking of nutrient rich snacks/dishes for:

- Infants (Freshly prepared complementary foods)
- Packed tiffin adults, adolescent and school going children (any one)
- Pregnancy/Lactation

Essential readings

DISCIPLINE SPECIFIC CORE COURSE – 9

DSC HH 309: Communication Systems and Social Change

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course(if any)
		Lecture	Tutorial	Practical/ Practice		
Communication Systems and Social Change	**4**	**3**	**0**	**1**	**XII Pass**	**Pass DSC HH 103** Communication Concepts and Theories

Learning Objectives

1. To gain understanding of various Communication Systems and their applications in personal and professional life.
2. To learn about the applications of communication transactions in the field of Development Communication.
3. To recognize the importance of understanding self through concepts of self-concept, self-esteem and self-disclosure.
4. To understand the nuances of different levels of communication ranging from intra personal communication to organizational as well as intercultural communication.
5. To understand how communication transactions helps in persuading, influencing and bring out desired changes in individuals and groups.

Learning Outcomes

The students would be able to:

1. Develop a clear understanding of various communication systems and their relevance.
2. Comprehend the various levels of communication transactions and their applications in Development Communication approaches.
3. Gain understanding of self through self-concept, self-awareness and self-esteem.
4. Recognize and appreciate various communication networks in personal and professional spheres.
5. Understand how mass communication and media impact society through mass communication theories and models and their significance.

SYLLABUS OF DSC 9

THEORY
(Credits 3; Hours 45)

UNIT I: Intrapersonal and Interpersonal Communication **9 Hours**

Elucidate upon the various levels of communication transactions. This Unit in particular lays thrust on the Intrapersonal and Interpersonal Communication Systems and processes.

Subtopics:

- Overview of communication transactions
- Intrapersonal Communication - Self Development, Looking Glass Self Theory, Self-concept and
- self-esteem, Awareness of Self & Johari's Window, Self-Disclosure.
- Interpersonal Communication - Functions, Types of relationships- friendship, families, other relationships, Stages of relationship development, Interpersonal Competence
- Theories of Relationship Development - Social Exchange Theory, Uncertainty Reductions
- Theory, Interpersonal Relationships Model.

UNIT II: Small Group and Organizational Communication **12 Hours**

This Unit highlights the small group communication characteristics, functions and power of group conformity. It emphasizes organizational communication with focus on culture and leadership.

Subtopics:

- Small group communication: Characteristics, Functions & Types
- Small Groups & Social Influence, Power in small group Conformity, Group Think &
  Polarization, Social Loafing
- Theories of group formation - Functional Theory, Structuration Theory, Symbolic Convergence
- Theory, Participatory theory
- Small Group Processes: Culture, Structure, Roles & Leadership
- Organization - concept, types and relationship in organization
- Organizational communication: Types: Formal Informal, Internal External, Direction &
- Networks, Functions, Tools used by organizations, challenges
- Organizational Culture and Leadership.

UNIT III: Public, Intercultural and Mass Communication **12 Hours**

This Unit highlights the Communication networks in professional and public spaces. It provides insight into the dynamics of intercultural communication. It also highlights the various theories and models of mass communication and emphasizes the significance and characteristics of various mass media.

Subtopics:

- Public communication - Concept, types, techniques and skills in public speaking, qualities of an effective public speaker, overcoming speaker apprehension
- Intercultural communication-concept, importance and relevance, stages and barriers
- Mass Communication - concept, significance, functions and elements
- Models and theories of mass communication
- Mass Media - Characteristics, classification, Evolution, significance of print, electronic and web- based media in contemporary society.

UNIT IV: Scope of Levels of Transactions in Communication 12 Hours

This Unit emphasizes role of communication transactions in facilitating change. How communication helps in persuading, influencing and bring out desired changes in individuals groups and organization's It strives to give conceptual clarity about use of communication in addressing conflict and strengthening personal and professional relationships.

Subtopics:

- What is Social Change?, Social change in individuals, communities and organizations Application of communication transactions for Persuasion, influencing ideas and Attitudes of individuals and groups
- Communications and building Self-Confidence, Self-development, identity and personal branding
- Communication in conflict management, relationship development & repair
- Business communication and strengthening organizational processes and efficacy
- Social and Behaviour Change Communication

PRACTICAL
(Credits 1; Hours 30)

- Self-Awareness & Analysis of Communication with self
- Small Group dynamics
- Inter personal conflict resolution
- Media design and production for group and mass communication
- Evaluating & Designing communications for changing attitudes
- Evaluation of various communication strategies for social change

Essential readings

1. Anand, S. & Kumar, A. (2016). *Dynamics of Human Communication*. New Delhi: Orient Black Swan. ISBN: 9788125063254
2. Barker, L. (1990). "Communication", New Jersey: Prentice Hall, Inc; 171.
3. Devito, J. (2012). *Human Communication*. New York: Harper & Row.
4. Vivian, J. & Maurin, P. (2006) The Media of Mass Communication (4th Canadian). Pearson Allyn and Bacon.

Suggested readings

1. Baran, S. (2014) Mass Communication Theory. Wadsworth Publishing
2. McQuail, D. (2000) *Mass Communication Theories*. London: Sage Publications.
3. Patri, V. R. and Patri, N.(2002); Essentials of Communication. Greenspan Publications
4. Stevenson, D. (2002) Understanding Media Studies: Social Theory and Mass Communication, Sage Publications
5. Zeuschner, R. (1997). Communicating Today. California State University, USA

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVE
DSE HH 3A1 : Organization and Management of Children Ñ Institutions

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course(if any)
		Lecture	Tutorial	Practical/ Practice		
Organization and Management of Children's Institutions	**4**	**2**	**0**	**2**	**XII Pass**	**Pass in DSC HH 101** Human Development 1: The Early Years

Learning Objectives

1. To comprehend the importance of services, institutions and programmes needed for children
2. To understand the aspects involved in management of children institutions and programmes
3. To develop sensitivity towards the individual needs of children
4. To develop an orientation towards planning developmentally and contextually appropriate activities for children

Learning Outcomes

The students would be able to:

1. Recognize the importance of providing services, programmes and institutions for children.
2. Describe the aspects involved in the management of children's institutions
3. Demonstrate an understanding of individual children's needs and develop appropriate activities for them
4. Identify challenges and opportunities while working in children's institutions

SYLLABUS OF HH 3A1

THEORY
(Credits 2; Hours 30)

UNIT I: Importance of children's institutions **6 Hours**

Students will understand the purpose of setting up children's institutions, the types of institutions and how to conduct need assessment for such institutions.
Subtopics:

- Need/purpose for institutions for children
- Types of children's institutions- based on philosophy, context, and funds and resources in the country
- Significance of developmentally and contextually appropriate programmes for children
- Need Assessment- Situational Analysis, Baseline surveys, Resource Mapping

UNIT II: Management of children's institutions 12 Hours

Students will be able to develop an understanding of the process involved in the management of children's institutions.
Subtopics:

- Planning and Organizing: Philosophy, concept, nature, goals and characteristics, steps in planning, services to be offered, organizing infrastructure and layout, maintenance, and emergency measures
- Developing the resources and services for the set-up - finance and budgeting, personnel- both managerial and staff (hiring, salary, creating supportive work environments, capacity building), infrastructure and equipment), enrolment of children.
- Supervision and monitoring: Types, factors, steps and requirements of effective supervision and monitoring
- Assessment and evaluation: Importance, types and steps; evaluation of the programme, curriculum, staff, and facilities according to the developed standards.
- Challenges in managing children's institutions and how to overcome them

.

UNIT III: Organizing programmes for children 12 Hours

- Approaches to programme planning through selected case studies
- Using indigenous and local knowledge for planning and creating developmentally and contextually appropriate activities for children
- Ensuring and creating safe and productive spaces for children, importance of play
- Monitoring, assessment and evaluation of programmes and children (records and registers)
- Partnering with community and parents

PRACTICAL
(Credits 2; Hours 60)

- Visit to selected institutions working with children
- Needs assessment: Survey of locality and community (questionnaire)
- Community–baseline survey for programme development (interview/questionnaire)
- Developing checklists: Developmental norms for children, requisites of a good institution
- Case study of a private/government/non government children's institutions
- Placement/internship: Identifying needs and developing activities for all domains of development and undertaking developmentally appropriate activities within existing organisations
- Programme planning and assessment with the help of an organization

- Envisage a small project working in a group in collaboration with an existing organisation Execute the project with special emphasis on individual/ group empowerment
- Plan an outline/layout of setting up an institution on the basis of internship or fieldwork done

Essential readings

DISCIPLINE SPECIFIC ELECTIVE
DSE HH 3B1 : Fundamentals of Human Anatomy and Physiology

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course(if any)
		Lecture	Tutorial	Practical/ Practice		
Fundamentals of Human Anatomy and Physiology	**4**	**2**	**0**	**2**	**XII Pass**	**NIL**

Learning Objectives

1. To learn about the structural organization of the human body.
2. To understand the normal functioning of the organ systems and their interactions.
3. To correlate physiological changes with major disorders and their pathogenesis.
4. To understand and interpret common medical diagnostic tests and reports.

Learning Outcomes

The students would be able to:

1. Understand the knowledge about the functional organization of the human body.
2. Develop insight of normal functioning of all the organ systems of the body and their interactions
3. Correlate physiology with various disorders and their pathogenesis.
4. Understand and interpret common medical diagnostic tests and reports.

SYLLABUS OF HH 3B1

THEORY
(Credits 2; Hours 30)

UNIT I: Introduction to General Human Anatomy and Physiology. 4 Hours

The unit presents the student with an overview of the general concepts of human anatomy and human physiology.

Subtopics:

General terms: Anatomy, Physiology, symmetrical arrangement, anatomical position, Median plane/ lateral plane, Internal/external, Superficial/ deep, Superior/ Inferior, Anterior/ posterior.

Introduction to various systems of the body:

- Animal Cell: structure, functions of each component (organelle) of the cell.
- Tissues: Structure and functions of various types of tissues.
- Various types, functions, structure of bone, cartilage & muscle
- Joints: Classification and movements of various joints.

UNIT II: Fundamentals of Human Anatomy 14 Hours

The unit presents the student with the understanding of the gross and microscopic structure of the major organs of the human body.

Subtopics:

- Heart and its structure
- Arteries, Veins and lymphatic system
- Structure of nose, larynx, trachea, bronchi and lungs
- Digestive system: Mouth, pharynx, oesophagus, stomach, liver, gall bladder, pancreas, spleen, intestines and glands associated with gastrointestinal tract.
- Urinary system structure of kidney, ureters, bladder, and urethra
- Endocrine system Structure and functions of Pituitary, Thyroid, Pancreas, Ovary and Testes
- Structure of uterus, fallopian tubes & mammary gland
- Overview of organization and functions of the Nervous System (cerebrum, cerebellum, spinal cord, sympathetic and parasympathetic system)

UNIT III: Fundamentals of Human Physiology 12 Hours

The unit presents the student with the understanding of the functioning of the major systems of the human body and its correlation with the pathogenesis of disease condition.

Subtopics:

- Cardiovascular System: circulations (systemic, pulmonary and portal), cardiac cycle, Cardiac Output (definition and factors affecting)
- Respiratory System: General overview of the respiratory functions Lung Volume and Capacities
- Digestive System: functions of: Stomach, Liver, Gallbladder, Pancreas and Intestines. Digestion and absorption of carbohydrates, fats and proteins Nervous and hormonal control of digestion (in brief)
- Excretory System: functions of Kidney and Nephron, non-excretory functions of kidneys Mechanism of urine formation,
- Endocrine System: Feedback mechanism/cascade functions of Pituitary, Thyroid, Pancreas, Ovary and Testes
- Reproductive System: Physiology of menstruation, lactation and menopause

PRACTICAL
(Credits 2; Hours 60)

1. Basic concept of blood groups, types, importance, and Rh incompatibility
2. Clinical significance of RBC, WBC and Platelet counting (Slides and videos)

3. Demonstration of haemoglobin estimation methods with help of videos, and its significance. Discussion about different types of anaemias and their aetiology
4. Pulse rate measurement by at least two methods – a) at rest b) after physical activity and c) of a child and an elderly person. Comparative analysis.
5. Recording of BP by using a Sphygmomanometer in Standing, sitting and recumbent position
6. Use of Pulse Oximeter and its significance.
7. Clinical significance of liver function tests and Jaundice
8. Ten histological slides- description, diagrams, and correlation with respective theoretical understanding
    a. Muscle: smooth, skeletal and cardiac
    b. Thyroid
    c. Parathyroid
    d. Kidney and nephron
    e. Small intestine
    f. Liver
    g. Pancreas
    h. Stomach
    i. Testes
    j. Ovaries
9. Clinical significance of variations in blood glucose and Diabetes mellitus. Use of Glucometer
10. Project Report on Birth control Methods

Essential readings

1. Chaudhari S K (2016) Concise Medical Physiology.7rd Edition. Central.
2. Ganong W.F. (2019)-Review of Medical Physiology.26th ed. McGraw Hill.
3. Guyton A.C. and Hall J.E. (2015) Textbook of Medical Physiology.13th ed. India:Harcourt Asia..
4. Tortora G.J and Grabowski S.R. (2020) Principles of Anatomy and Physiology.16th ed. John Wiley and Sons.Inc.

Suggested readings

1. Jain A. K (2019) Human Physiology for BDS (6th Edition), Publisher: Avichal Publishing Company; ISBN: 9788177394337.
2. Marieb E.N(2014) Human Anatomy and Physiology (10th ed)Pearson Education ,Inc, publishing as Benjamin Cummings.
3. West J.B. (1996): Physiological Basis of Medical Practice.12th Edition. B. I. Waverly Pvt. Ltd.
4. Vander's Human Physiology (2016) (WCB APPLIED BIOLOGY). 13th ed.
5. Human Physiology: From Cells to Systems (2012) (Mindtap Course List) 8th ed.
6. Comprehensive Textbook of Medical Physiology (Volume 2), 2017 by Gopal Krushna Pal, Pravati Pal, Nivedita Nanda.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVE
DSE HH 3C1: Media and Cultural Studies

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course(if any)
		Lecture	Tutorial	Practical/ Practice		
Media and Cultural Studies	**4**	**2**	**0**	**2**	**XII Pass**	**Pass DSC HH 103** Communication Concepts and Theories

Learning Objectives

1. To appraise the importance of culture, cultural transmission and cultural influences on human interactions.
2. To gain knowledge of key theories, concepts, models and perspectives in the study of communication & media.
3. To understand the relevance and roles of communication media in individual lives as well as in the larger context of culture & society.
4. To analyze the relationships, dynamics, and trends within communication media, culture & society.

Learning Outcomes

The students would be able to:

1. Assess the significance of culture, cultural transmission and cultural influences on human interactions.
2. Enhance their awareness on the concepts, models and perspectives in the study of communication & media.
3. Comprehend the relevance and roles of communication media in individual lives as well as in larger context of culture & society.
4. Critically analyse the relationships, dynamics, and trends within communication media, culture & society.

SYLLABUS OF HH 3C1

THEORY
(Credits 2; Hours 30)

UNIT I: Understanding Culture **6 Hours**

This unit explores the different dimensions of culture and its types. It also highlights the concepts of hegemony and ideology along with cultural influences and role of media. It touches upon the essence of folk culture and the relation between media, society and popular culture.

Subtopics:

- Concept of cultures, subcultures and counter culture
- Popular, folk and mass culture
- Role of Ideology and hegemony
- Commercialization of folk culture
- Culture in perspective of communities

UNIT II: Media & Media Audience
8 Hours

Unit II highlights the importance of mass media in our lives and the types of media audiences. It elaborates on the processes of media audience analysis

Subtopics:

- Role of Mass Media in society
- Media Audience
- Types of Audience
- Foucault's Notion of Knowledge and Power
- Queer Studies and Representations of Gender in Media

UNIT III: Ideologies in media and culture **8 Hours**

This unit highlights the relation between media, society and ideologies. It explains the concept of Habermas Public sphere and cultural industry

Subtopics:

- Frankfurt school
- Culture and consumption: cultural 'goods', structure and movement of cultural meaning.
- Cultural industry
- Public Sphere

UNIT IV: Media Realism and Technologies **8 Hours**

This particular unit critically acclaims the notion of media and realism along with gaining insights into postcolonial theory. It further elaborates upon the Indian Context to Media, Culture & Society

Subtopics:

- Introduction to Postcolonial Theory
- Indian Context to relationship between Media, Culture & Society
- Postcolonial from Indian perspective
- Digital media and culture

PRACTICAL
(Credits 2; Hours 60)

- Media Critiquing- Choose a movie or television series and apply some of the concepts and techniques about interpretation, ideology, or gender/class/race.

- Audience perceptions about media; audience preferences listenership/ viewership
- Assessing the prevalence of cultural stereotypes in the society and depiction of the same via media

Essential Readings

- Grossberg, Lawrence et al. (1998). *Media-Making: Mass Media in a popular culture.* Sage Publications
- Bannerjee, P. (2021). *Cultural Studies: Texts and Contexts.* India: Dattsons. ISBN: 8171922007

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVE
DSE HH 3D1: Apparel Design and Construction Techniques

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the Course (if any)
		Lecture	Tutorial	Practical/ Practice		
Apparel Design and Construction Techniques	**4**	**2**	**0**	**2**	**XII Pass**	**Pass in DSC HH 204** Fashion Studies

Learning Objectives

1. To impart knowledge regarding the basics of apparel design.
2. To make students understand various terminologies used in relation to garment components and their application in designing garments.
3. To develop a level of proficiency in making patterns for simple garments
4. To be able to independently lay patterns, cut fabric and sew a garment

Learning Outcomes

The students would be able to:

1. Develop basic knowledge of apparel design and describe its terminology.
2. Apply the knowledge of fabrics and fabric terminology to follow preparatory steps before garment cutting
3. Use and apply the concept and techniques of pattern making, laying out and cutting
4. Judicious application of knowledge for producing quality in patterns, and processes in garment assembly
5. Have basic skill in pattern making for women's clothes
6. Use and apply the concept and techniques of various seams and edge finishes

SYLLABUS OF HH 3D1

THEORY
(Credits 2; Hours 30)

UNIT I: Apparel Design with Garment Components **8 Hours**

Unit Description: This unit will acquaint students with different types of garment components.
Subtopics: Garment Components: Types

- Bodices and yokes
- Necklines
- Collars
- Sleeves and cuffs
- Plackets and fasteners

- Pockets

UNIT II: Introduction to Body measurements and pattern making 6 Hours

This unit will delve into the concept, significance and techniques of body measurements, basic block and patterns.
Subtopics:

- Measurement on body – importance, procedure and precautions
- Basic Blocks and patterns – importance, types and pattern information
- Pattern making technique – Slash and spread for added fullness: gathers, pleats, flare and tucks

UNIT III: Preparation for garment construction 8 Hours

This unit provides an insight into the concepts and processes of fabric selection, terms, preparatory steps, fabric layouts, pinning, marking and cutting.
Subtopics:

- Fabric selection: characteristics, construction, drape, weights, widths and trade name
- Fabric Grain – types, identification and importance
- Preparatory steps- preshrinking, straightening and truing
- Layouts for patterns-general guidelines, basic layouts- lengthwise, partial lengthwise,
  crosswise, double fold, open, combination fold
- Layouts for special fabrics- Unidirectional, bold and large prints, plaids, stripes and checks, various widths of fabrics
- Pinning, marking, cutting - Tools and processes

UNIT IV: Sewing, Seams and finishing of raw edges 8 Hours

This unit offers information on sewing machines, appropriate stitching guidelines, seams and various additional techniques required for finishing seams and garment edges.
Subtopics:

- Sewing machines - types, basic parts and their function, basic operations, seam defects and remedies
- Relationship between needle, thread, stitch length & fabric weight
- Seam classification - super imposed seam, enclosed, lapped seam, bound seam, flat seam and decorative seam
- Additional techniques for straight, curved and cornered seams: clipping, notching, grading, seam balancing, trimming, under stitching, stay stitching, trimming a corner, handling unequal seams (easing)
- Edge treatments of straight & curved edges- self finish, bias strip and its importance, bias facing, bias binding, shaped facing, self-finishing, casings and finishing
  with trims

PRACTICAL
(Credits 2; Hours 60)

1. Designing for Children's garments

- Drafting of child's basic bodice and sleeve block

- Adaptation of three bodice-short waist, standard waist and low waist
- Adaptation of sleeves- puffed and its variations, flared
- Developing collars- peter pan and its variations
- Adapting bodice to various frocks - A-line, yoked, short bodice, elongated bodice with gathers, pleats and flares

2. Sewing techniques

- Introduction to a sewing machine – Practice sewing
- Seam – Plain seam - straight and curved, cornered, French seam, Flat Felled seam
- Edge Finishing – Straight and curved (Facing and Binding)
- Construction of plackets with suitable fastener- even hem with button and button hole, continuous wrap
- Construction of any one frock with sleeve and collar

Essential readings

1. Armstrong, H.J., 2009, Pattern Making for Fashion Design, Harper Collins Publishers Inc., New York.
2. Stamper, A.A., S. H. Sharp and L.B. Donnell, 1986, Evaluating Apparel Quality, Fairchild Publications, America
3. Liechty, E.G., Potterberg, D.N., Rasband, J.A., 2010, Fitting and Pattern Alteration: A Multimethod Approach, Fairchild Publications, New York.

Suggested readings

1. Carr H. & Latham B. (1994), The Technology of Clothing Manufacture, 2nd edition, Blackwell SC.
2. Cooklin, G. (1991), Introduction to clothing manufacture, Blackwell publishing.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVE
DSE HH 3E1: Human Resource Management

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course(if any)
		Lecture	Tutorial	Practical/ Practice		
Human Resource Management	**4**	**2**	**0**	**2**	**XII Pass**	**Pass in DSC HH 205** Fundamentals of Resource Management

Learning Objectives

1. To familiarise the students with the importance of human resources and their effective management in organisations.
2. To comprehend functions of human resource management.
3. To sensitize students towards the emerging trends and modern practices in the field of human resource management to meet the changing needs of business environment.

Learning Outcomes

The students would be able to:

1. Develop an understanding about the discipline of human resource management.
2. Aquire knowledge about the functions of human resource management.
3. Gain insight into emerging trends and modern practices in the field of human resource management.

SYLLABUS OF HH 3E1

THEORY
(Credits 2; Hours 30)

UNIT I: Human Resources Management **6 Hours**

The focus of this unit would be on developing the fundamental concepts of human resource management and its applicability in changing business environment.

Subtopics:

- Concept, functions, roles, skills and competencies
- Changing environment of HRM- Globalization, corporate downsizing, cultural environment, work force diversity, changing skill requirement, technological changes.

- HRM support for improvement programs -re engineering processes, contingent workforce, decentralized work sites.

UNIT II: Functions of HRM **10 Hours**

This unit attempts to acquaint the students in understanding the functions of human resource management.

Subtopics:

- Manpower planning
- Job Analysis – job description and job specification
- Recruitment and selection
- Placement and Induction
- Performance appraisal and development
- Compensation and Benefits
- Training and Development
- Motivation

UNIT III: Human Resources Audit **8 Hours**

This unit will help students to gain insights about the components of HR system used in an organization for auditing purposes to check its effectiveness.

Subtopics:

- Concept, significance, components and process
- HRM as a strategic partner
- Work life balance.

UNIT IV: Industrial Relations **6 Hours**

This unit will help students to understand the role of HR in industrial relationship management.

Subtopics:

- Introduction to Industrial Relations and Industrial disputes
- Employee grievances and Discipline
- Collective bargaining

PRACTICAL
(Credits 2; Hours 60)

- Analysis of human resource management environment and HR audit in an organization through case-studies.
- Simulations/Presentations:
    - Human Resource Planning
    - Job Analysis: job description and job specification and Design (levels)
    - Recruitment, selection, and placement Strategies
    - Interview techniques and skills (mock interview)
    - Performance appraisal and management (methods)
- Developing Matrix for skill and talent acquisition

Essential readings

1. Aswathappa K. (2021). Human Resource Management Text and Cases (9th Ed.) McGraw Hill Education India.

2. Dessler G. (2020). Human Resource Management, Prentice Hall of India Pvt. Ltd, New Delhi.
3. Decenzo, D. A., & Robbins, S. P. (2011). Fundamentals of Human Resource Management. India: Wiley.
4. Rao, V.S.P. (2010). Human Resource Management, 3rd Edition, Excel Books.

Suggested readings

1. Noe, R.A., Hollenbeck, Gerhart and Wright (2012). Fundamentals of Human Resource Management, 3rd Edition, McGrawHill Education Ltd.
2. Ivanecevich, J.M.(2010). Human Resource Management, 10th Edition, Tata McGraw Hill Education Pvt. Ltd.
3. Vance, C.M. and Paik, Y. (2009). Managing a Global Workforce: Challenges and Opportunities in International Human Resource Management, PHI Learning.
4. Subbaroo, R. (2007). Personnel and HRM – Text and Cases, Himalaya Publishing House, New Delhi.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

COMMON POOL OF GENERIC ELECTIVES (GE) COURSES

GENERIC ELECTIVE (GE HS 003) : CHALLENGES IN CONTEMPORARY CHILDHOOD

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Challenges in Contemporary Childhood	**4**	**3**	**0**	**1**	**XII Pass**	**NIL**

Learning Objectives

1. To understand the social construction of childhood
2. To understand depiction of childhood experiences in India
3. To know and learn about diverse contexts of childhood
4. To appreciate contemporary themes and challenges of Indian childhood

Learning Outcomes

The students will be able to:

1. Learn the concepts related to multiple childhood
2. Study children's experiences of ethnicity, class, caste, religion and gender
3. Learn about children in difficult circumstances
4. Get sensitized to appreciate diverse contexts of children

SYLLABUS OF GE HS 003

THEORY
(Credits 3; Periods 45)

UNIT I: Influences on Indian Childhood **12 Hours**

Unit Description: This unit presents an overview by revisiting central themes and concerns related to childhood in India

Subtopics:

- Sociology of childhood
- Disadvantaged childhood
- Caste and childhood

- Gender and children

UNIT II: Multiple contexts of Childhood 12 Hours

Unit Description: This unit will focus on understanding children in multiple settings and contexts

Subtopics:

- Childhood in urban, semi-urban, rural and tribal context
- Socialization and growing in diverse families
- Children in foster and institutional settings
- School as a context of development - Educational inequity and learning diversity

UNIT III: Children in Difficult Circumstances 12 Hours

Unit Description: This unit will help us to develop understanding of children in difficult circumstances and the challenges

Subtopics:

- Street and Working children
- Trafficked children and children of sex workers
- Children of migrant and refugee families
- Children in conflict with law and children in contact with law
- Children in war and other disaster situations

UNIT IV: Contemporary Challenges and Childhood 9 Hours

Unit Description: This unit will focus on the various challenges faced by children in different contexts.

Subtopics:

- Childhood in digital era/cyberbullying/child pornography/violence in schools like bullying
- Gender concerns and safety, Body boundaries and consent
- Supporting childhood in India

PRACTICAL
(Credit 1; Periods 30)

- Exploring and analysis of diverse childhood context and challenges through audio-visual materials/social media/print media.
- Interview Street children/working children/ children with disabilities to understand their circumstances
- Profile organisations working for children in difficult circumstances
- Conduct workshop/webinars to understand the various vulnerabilities related to Indian children like cyberbullying, Bodyboundaries, inclusion & diversity

Essential readings

1. Chopra, G. (2016). Child rights in India: challenges and social action. S.l.: Springer, India, private.
2. Sachdeva ,P.,Murmu,D.F. & Sakshi.(2020).Basic Sociology. Delhi . Elite Publishing
3. Saraswathi, T.S. (Ed.) (1999). Culture, Socialization and Human Development: Theory, Research and Applications in India. Sage Publications Chapter 4: Theoretical Frameworks in Cross-cultural Psychology, Chapter 6: Individualism in a Collective Culture: A Case of Co-existence of Opposites

GENERIC ELECTIVE (GE HS 007) : CURRENT CONCERNS IN PUBLIC HEALTH NUTRITION

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course	Department offering the course
		Lecture	Tutorial	Practical / Practice			
Current Concerns in Public Health Nutrition	4	3	0	1	XII Pass	NIL	Home Science

Learning Objectives

1. To understand the multi-faceted nature of nutritional problems and the various interventions that can be adopted at community level for improving the nutritional status.
2. To learn about the policy and intervention programmes operating in India to overcome malnutrition.
3. To understand the concept and determinants of food and nutrition security.

Learning Outcomes

The student will be able to:

1. Understand the multi-faceted nature of nutritional problems.
2. Aware of the various interventions that can be adopted at community level for improving the nutritional status.
3. Familiar with the policy and intervention programmes operating in India to overcome malnutrition.
4. Understand the concept and determinants of food and nutrition security

SYLLABUS OF GE HS 007

THEORY

(Credits 3; Periods 45)

UNIT I: Nutritional Problems Affecting the Community **12**

Unit Description: Students will be explained about the existing nutritional problems in the community in the present scenario.

Subtopics:

Etiology, prevalence, clinical features and preventive strategies for-

- Undernutrition - Protein energy malnutrition, Moderate Acute Malnutrition, Severe Acute Malnutrition, Nutritional Anaemias, Vitamin A Deficiency, Iodine Deficiency Disorders
- Obesity, Metabolic Syndrome
- Coronary heart disease, Diabetes
- Fluorosis

UNIT II: Strategies for Improving Nutrition and Health Status of the Community 9

Unit Description: Students will be taught about the different approaches and strategies that could help alleviate the nutrition and health status of the community.

Subtopics:

- Appropriate interventions involving different sectors such as Food, Health, and Education –
  diet diversification, food fortification, supplementation, genetic modification, improved water and sanitation, immunization, promotion of optimal infant and young child feeding practices, growth monitoring and promotion (GMP), diarrhoea management and prevention

UNIT III: Nutrition Policy and Programmes 12

Unit Description: Students will be introduced to all the major ongoing national level interventions and strategies and goals to combat malnutrition in the nation.

Subtopics:

- Sustainable Development Goals – Introduction, and relevance to nutritional problems in India
- National Nutrition Policy
- Ongoing nutrition programmes – Integrated Child Development Services (ICDS) Scheme, Mid-day Meal Programme (MDMP), National programmesfor prevention of Anaemia, Vitamin A deficiency, Iodine Deficiency Disorders, National Programme for Prevention and Control of Cancers, Diabetes, Cardiovascular Diseases and Stroke (NPCDCS), POSHAN Abhiyaan

UNIT IV: Food and Nutrition Security 12

Unit Description: Students will be taught the concept of food and nutrition security and the associated national level intervention and programs. Subtopics:

- Concept, components, determinants
- Overview of the ongoing public sector programmes for improving food and nutrition security

PRACTICAL
(Credit 1; Periods 30)

Planning of low cost nutritious recipes for preschoolers, school age children, adolescents, pregnant and nursing women.

- Planning of nutritious recipes for an obese and an underweight adult.
- Visit to on-going nutrition programmes.

Essential readings:

1. Bamji, MS, Krishnaswamy, K. & Brahmam, G N(Eds.). (2017). Textbook of Human Nutrition (4th ed.). New Delhi, India: Oxford and IBH Publishing Co. Pvt. Ltd.
2. Longvah, T, Ananthan, R, Bhaskarachary, K & Venkaiah, K (2017). Indian Food Composition Tables. National Institute of Nutrition, ICMR, Hyderabad.
3. Park, K (2017). Park's Textbook of Preventive and Social Medicine (24th ed.). Jabalpur, India: Banarasidas Bhanot Publishers.
4. Vir, S (2011). Public Health Nutrition in Developing Countries (Vol 1 & 2). New Delhi, India: Woodhead Publishing India.

Suggested readings:

1. Gibney, M J, Margetts, B M, Kearney, J M & Arab, L (Eds.). (2005). Public Health Nutrition. Oxford, UK: Blackwell Science.
2. ICMR (2011) Dietary Guidelines for Indians – A Manual. National Institute of Nutrition, Indian Council of Medical Research, Hyderabad.
3. Kishore, J (2016). National Health Programs of India (12th ed.). New Delhi, India: Century Publications.

6. Relevant and ongoing public sector programmes for food and nutrition security from Government of India websites (including Ministry of Agriculture and Farmers Welfare, Ministry of Consumer Affairs, Food and Public Distribution, Ministry of Human Resource Development, and other ministries working for food and nutrition security).

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

GENERIC ELECTIVE (GE HS 010) : PARTICIPATORY DEVELOPMENT AND COMMUNICATION

Credit distribution, Eligibility and Pre-requisites of the Course

Course title &Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course	Department offering thecourse
		Lecture	Tutorial	Practical/ Practice			
Participatory Development and Communication	4	3	0	1	XII Pass	NIL	Home Science

Learning Objectives

1. To understand the concept of participation, Participatory Development and Participatory Communication.
2. To appreciate the role of facilitation for meaningful participation.
3. To develop an understanding of the interplay between the indigenous practices and theoretical concepts of participation.
4. To critically reflect on the role of civil society organizations in promoting participatory approach across sectors and levels of development.
5. To critically examine the use of participatory approach and tools across sectors and regions and relevance to the Indian context.

Learning Outcomes

1. The student will be able to understand the notion of participation and the dimensions of Participatory Communication
2. The student will be able to apply the principles and approaches of Participatory Communication in community research
3. The student will be able to appreciate and use the different tools and methods of Participatory Learning & Appraisal.
4. The student will be able to reflect on the role of civil society organizations in promoting participatory approach across sectors and levels of development
5. The student will be able to explore the nuances of designing and applying Participatory Media.

SYLLABUS OF GE HS 010

THEORY

(Credits 3; Periods 45)

UNIT I: Understanding Participatory Approach 12 Hours

Unit Description: Unit I delves into the core concept and nature of Participation and its relation with development. It highlights the principles and levels of participation. The Unit also asserts the importance and channels of Participatory Communication and how effective facilitation is and essential for participation of marginalized groups.

Subtopics:

- Concepts of Participation and Participatory Development
- Participation, Power, Voice and Marginalization
- History & Theoretical perspectives on Participatory Development
- Principles & Levels of Participation
- Process of Participation: Dialogue, Reflection & Consensus
- Reflective Practice, Empowerment & Social Change

Civil Society Organizations & Participatory Development

UNIT II: Participatory Approach & Methods 9 Hours

Unit Description: Unit II explores the concept, principles, advantages of Participatory Learning & Appraisal with its plethora of tools and their applications.

Subtopics:

- Participatory Learning & Appraisal: Principles and practices
- Scope and Application of PLA Tools
- Classification of PLA Tools: Relationship, Space & Time Related PLA
- Innovative PLA Tools

Participatory Research methodology: approach and praxis

UNIT III: Participatory Learning & Action 12 Hours

Unit Description: This Unit discusses the application of the Participatory Approach in different contexts such as local governance, NGOs and CSOs, M&E .

Subtopics:

- Participatory Approaches & Local Governance
- People's Participation in community development and Development Programs
- Participatory approaches in management of Disasters & Pandemics
- Role of Traditional & Indigenous knowledge in Participatory Approaches

UNIT IV: Participatory Media 12 Hours

Unit Description: The last Unit touches upon the concept, significance, functions and elements of the various Participatory Media.

Subtopics:

- Participatory Communication, Right to Communicate, development & empowerment
- Community Media concept, significance, functions and elements
- Growth, types, characteristics, policy & programing:
    - Community Radio
    - Participatory Video
    - Participatory Print media
    - Participatory New Media
- Alternative Theater and the performing arts

PRACTICAL
(Credit 1; Periods 30)

- Analysis of case studies in Participatory Development
- Situation Analysis using PLA techniques
- Time Related PLA: Daily Activity Chart
- Space Related PLA: Social Mapping, Resource Map, Transect Walk, Facility Assessment
- Relationship Related PLA: Venn Diagram, Spider Web Diagram
- Ranking Methods: Seed Ranking
- Qualitative PLA Research Tools: Interview, Focused Group Discussion, Case Study
- Participatory Media Analysis & Production

Essential readings:

1. Mikkelsen, Britha, (2002). Methods for Development Work and Research. New Delhi: Sage Publications.
2. Robert Chambers. ÎWhat Works and Why?" and ÎPoor PeoplesÒReality" in Whose Reality Counts? Putting the First Last (Intermediate Technology Publications, London, 1997): pp. 130-187.

3. McIntyre (2008) Participatory Action Research Sage University Papers pp.1-60.
4. Dale R, (2004). Evaluating Development Programmes and Projects. New Delhi: Sage Publications.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

GENERIC ELECTIVE (GE HS 017) : FASHION ACCESSORIES

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre- requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Fashion Accessories	4	3	0	1	XII Pass	NIL

Learning Objectives

1. To impart knowledge of fashion accessories
2. To familiarize the students with leading accessory designers
3. To provide knowledge of the basics of common accessories viz., handbag, footwear and hats
4. To help students in understanding design methodology, materials, production process and market dynamics of fashion accessories

Learning Outcomes

The student will be able to

1. Recognize the role and importance of fashion accessories in the apparel industry
2. Describe the various categories, history, styles and production methods of fashion accessories
3. Restyle and coordinate accessories with apparel using creative ideas
4. Understand forecast, trends, and process of accessory designing
5. Develop skills in range planning and creating fashion accessory

SYLLABUS OF GE HS 017

THEORY
(Credits 3; Periods 45)

UNIT I: Overview of Fashion Accessories **12 Hours**

This unit traces the history and importance of fashion accessories. It discusses the fashion cycle, role of an accessory designer and leading accessory brands and designers around the world.

Subtopics:

- History of accessories from ancient times to present

- Importance of fashion accessories in apparel industry
- Fashion cycle of fashion accessories
- Role of an accessory designer
- Leading accessory brands and designers

UNIT II: Categories, Styles and Production Methods of Selected Fashion Accessories 12 Hours

The unit brings forth the categories, styles and production methods of fashion accessories. It also helps to understand the coordination of fashion accessories with apparel.

Subtopics:

- Brief history, components, styles, materials and production methods of accessories: Handbags, Footwear, Hats, Belts, Ties, Scarves, etc.
- Coordinating accessories with apparel

UNIT III: Concept to Creation: Overview of Fashion Accessories Industry 9 Hours

This unit provides an insight into marketing and promotional aspects of fashion accessories.

Subtopics:

- Inspiration and research for design development
- Trend analysis and forecasting process
- Spec-sheets and Tech Packs
- Sourcing of material
- Costing
- Developing a range
- Care and maintenance

UNIT IV: Marketing and Promotion 12 Hours

Ways to increase the life of garments to reduce waste generation.

Subtopics:

- Marketing of fashion accessories
- Window concepts and displays
- Promotional practices

PRACTICAL
(Credit 1; Periods 30)

- Study of materials for fashion accessories
- Sketching of fashion accessories – Handbags and Footwear
- Sketching and rendering of life-size handbag and footwear (One each)
- Reporting of national and international accessory brand/ designer (One each)
- Theme based accessory designing - Mood boards, designing and construction (Any one product)
- Restyling project – Restyle plain accessories using any surface ornamentation technique

Essential readings:

1. Genova Aneta (2011), Accessory Design, Fairchild Publications; 1 edition
2. Know Your Fashion Accessories, Celia Stall- Meadows, Fairchild Books; Student ed. Edition (25 August 2003), ISBN-13: 978-1563672453
3. Lau John (2012), Basics Fashion Design 09: Designing Accessories: Exploring the design and construction of bags, shoes, hats and jewellery, A Publishing; 1

edition
4. Schaffer Jane, Saunders Sue (2012), Fashion Design Course: Accessories: Design Practice and Processes for Creating Hats, Bags, Shoes, and Other Fashion Accessories, Barron's Educational Series
5. Stephens Frings Gini, (2007), Fashion: From Concept to Consumer (9th Edition), Prentice Hall

Suggested readings:

1. Abling Bina (2005), marker rendering for Fashion, Accessories, and Home Fashion, Bloomsbury Academic, Illustrated Edition, ISBN 1563673606, 9781563673603.
2. Gerval Olivier (2009), Fashion Accessories, A&C Black, Illustrated edition, ISBN 140811058X, 9781408110584.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

GENERIC ELECTIVE (GE HS 019) : CORPORATE SOCIAL RESPONSIBILITY

Credit distribution, Eligibility and Pre-requisites of the Course

Course title &Code	Credits	Credit distribution of the course			Eligibility criteria	Pre- requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Corporate Social Responsibility	4	3	0	1	XII Pass	NIL

Learning Objectives

1. To understand the meaning, scope and importance of Corporate Social Responsibility (CSR)
2. To understand CSR projects with respect to SDGs
3. To understand the Indian legislations for CSR
4. To learn about the implementation and monitoring of CSR activities
5. To understand the need, process and tools of communicating CSR projects
6. To understand CSR reporting guidelines

Learning Outcomes

The student will be able to:

1. Understand the meaning, scope and importance of Corporate Social Responsibility (CSR)
2. Assess the role of CSR projects with respect to SDGs
3. Understand Indian legislations for CSR
4. Understand implementation and monitoring of CSR projects through case studies
5. Develop material/tools for CSR communication
6. Understand and evaluate CSR reports as per standard reporting guidelines

SYLLABUS OF GE HS 019

THEORY

(Credits 3; Periods 45)

UNIT I: Introduction to Corporate Social Responsibility (CSR) 9 Hours

Unit Description:

This Unit aims at orienting the students towards the concept and importance of Corporate Social Responsibility (CSR), triple bottom line, and ESG

Subtopics:

- Meaning, definition and importance

- History and evolution of CSR
- Sustainable businesses, triple bottom line, ESG (Environmental, Social and Governance)

UNIT II: International framework for Corporate Social Responsibility 12

Unit Description:

This Unit aims to create an understanding on Indian legislations for CSR, UN guiding principles and SDGs.

Subtopics:

- Indian legislations for CSR; Companies Act, 2013 and Amendments
- UN guiding principles on business and human rights.
- SDGs and CSR

UNIT III: Design, implementation and Monitoring of CSR activities 12

Unit Description:

This Unit aims to create an understanding towards design, implementation and monitoring of CSR activities, CSR funding and audit

Subtopics:

- CSR design, implementation and monitoring
- Role of Stakeholders in CSR
- Funding for CSR activities
- CSR Audit; issues related to CSR Audit
- Globalization and CSR

UNIT IV: CSR Communications 12 Hours

Unit Description: This Unit aims to create an understanding towards the need, process and tools of CSR communication and CSR reporting guidelines Selection of materials

Subtopics:

- Need, process and tools of communicating CSR projects
- Brand building through CSR communications
- CSR Reporting Guidelines

PRACTICAL
(Credit 1; Periods 30)

I: Understanding CSR initiatives

Activities:

- Need Assessment for CSR activities by corporates
- Case studies on CSR initiatives taken by corporates
- Case studies on Foundation/Trust/Section 8 Companies etc. implementing CSR initiatives

II: Planning CSR activities and Communications

Activities:

- Planning innovative CSR Projects/Programmes in context of SDGs
- CSR communications: Presentations, Websites, Print Media, Social media etc.
- Evaluation of CSR reports

Essential readings:

1. Garg, K. (2021). Corporate Social Responsibility (3rd edition). Bharat Law House Pvt. Ltd.

2. Institute of Directors India. (2020). A Handbook on Corporate Social Responsibility, A Condensed Guide for Corporate Directors & Senior Executive. Institute of Directors, New Delhi, India.Antonaras, A., & Dekoulou, P. (2019). Cases on Corporate Social Responsibility and Contemporary Issues in Organizations (Advances in Business Strategy and Competitive Advantage) 1st Edition. IGI Global.
3. Paleri, P. (2019). Corporate Social Responsibility: Concept, Cases and Trends. Cengage Learning India Pvt. Ltd. ISBN-10: 9353501601, ISBN-13: 978-9353501600.
4. Lumde, N. (2018). Corporate Social Responsibility in India: A Practitioner's Perspective. Notion Press. ISBN-10: 1644295431, ISBN-13: 978-1644295434.

Suggested readings:

1. Mitra, N., & Schmidpeter, R. (2016). Corporate Social Responsibility in India: Cases and Development after the Legal Mandate. Springer International Publishing, Switzerland.
2. Reddy, V. R., & Dheeraja, C. (2016). The Six Essential Steps in Implementing CSR. Studera Press, New Delhi.
3. Chakrabarty, B. (2015). CSR in India. Routledge.
4. Agarwal, S. (2013). CSR in India. SAGE Publications.
5. Chatterji, M. (2011). Corporate Social Responsibility. Oxford University Press India; Reprint edition. ISBN-10: 0198069839 ,ISBN-13 : 978-0198069836.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

B.SC. HOME SCIENCE (PROG.)

DISCIPLINE SPECIFIC CORE COURSE
DSC HP 307 : Fundamentals of Textiles

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Fundamentals of Textiles	**4**	**3**	**0**	**1**	**XII Pass**	**Pass in DSC HP 102** Fashion Concepts

Learning Objectives

1. To impart knowledge regarding production, properties and usage of textile fibres and yarns
2. To create awareness regarding various techniques of fabric production and their properties
3. To give an overview of dyeing, printing and finishing of textiles

Learning Outcomes

After completing this course, students will be able to:

1. Describe textile fibres in terms of their production and properties
2. Understand production techniques and properties of yarns
3. Explain various methods of fabric construction and relate them to specific uses keeping in mind fabric properties
4. Recall various dyeing, printing and finishing techniques

SYLLABUS OF DSC HP 307

THEORY
(Credits 3; Hours 45)

UNIT I: Introduction to Textile Fibres **6 Hours**

This unit will deal with the key concepts of textile polymers, morphology of textile fibers, primary, secondary properties and classification of textile fibers.

- Morphology of textile fibers: Monomer, Polymer, Degree of Polymerization, Crystalline and Amorphous Regions, Orientation
- Primary and secondary properties
- Fiber classification

UNIT II: Production, Chemistry, Properties and Usage of Fibers **12 Hours**

This unit will introduce the student to selected commercially significant cellulosic, protein and man-made fibers, their production, chemistry, properties and usage

- Natural fibers: Cotton, Flax, Silk, and Wool
- Man-made fibers: Rayon, Nylon, Polyester, Acrylic, and Elastomeric fibers

UNIT III: **Production and Properties of Yarns** **8 Hours**

This unit will discuss the techniques of yarn production, types of yarns and their properties.

- Yarn construction:
  - Mechanical spinning (Cotton system, Wool system, Worsted system)
  - Chemical spinning (Wet, Dry, Melt)
- Types of yarns: Staple and Filament yarns, Simple and Complex yarns
- Yarn Properties: Yarn Twist and Balance, Yarn Count

UNIT IV: Techniques of Fabric Construction

11 Hours

This unit will apprise the students about different fabric construction techniques. Students will learn basic principles of weaving, knitting and non-woven fabrics.

- **Weaving**
  - Parts of a loom
  - Operations and motions of the loom
  - Classification of weaves- construction, characteristics, usage
- **Knitting**
  - Classification of knits
  - Construction and properties of warp and weft knits
- **Non-wovens**
  - Types
  - Construction
  - Properties and usage

UNIT V: Basics of Wet Processing **8 Hours**

This unit help students gain insight to the fundamentals of textile processing, viz. dyeing, printing and finishing.

- **Dyeing**
  - Fundamentals of dyeing- Dyes and Pigments
  - Stages of dyeing- Advantages and Disadvantages
- **Printing**
  - Fundamentals of printing
  - Difference between dyeing and printing,
  - Methods of printing: Block, Screen
  - Styles of printing: Direct, Resist, Discharge
- **Finishes**
  - Classification of finishes
  - Routine finishes

PRACTICAL
(Credit 1; Hours 30)

- Fibre Identification tests –Visual, burning, microscopic and chemical
- Yarn Identification – Single, ply, cord, textured, elastic, monofilament, multifilament and spun yarn
- Thread count and balance
- Fabric identification (woven, knitted, non-woven)
- Identification of basic weaves
- Tie-Dye

Essential Readings

1. Rastogi, D. & Chopra, S. (Eds.) (2017). *Textile Science*. New Delhi, India: Orient Black Swan Publishing Limited.
2. Rastogi, D, Chopra, S., Arora, C. & Chanchal (Eds.). (2016). *Textile Science-A Practical Manual*. New Delhi, India: Elite Publishing House Private Limited.
3. Sekhri S. (2022). *Textbook of Fabric Science: Fundamentals to Finishing*. IV Edition, Delhi, India: PHI Learning.
4. Joseph, M. L. (1988). *Essentials of Textiles.* (6th Edition). Florida: Holt, Rinehart and Winston Inc.
5. Corbman, P.B. (1983). *Textiles- Fiber to Fabric.* (6th Edition). USA: McGraw Hill.

Suggested Readings

1. Collier B. &Tortora G. Phyllis. (1997). *Understanding Textiles*. USA: Merrill.
2. Hollen, N. and Saddler, J. (1979). *Textile*. New York: Mcmillan.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE

DSC HP 308 : Personal Finance and Consumer Education

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course(if any)
		Lecture	Tutorial	Practical/ Practice		
Personal Finance and Consumer Education	**4**	**3**	**0**	**1**	**XII Pass**	**Pass in DSC HP 101** Introduction to Resource Management

Learning Objectives

1. To provide students' an understanding of income, saving and investment management in the changing socio-economic environment.
2. To acquaint students with the concept of consumers' role in an economy, consumer problems, education and empowerment.
3. To comprehend issues related to consumer protection, legislative measures and redressal mechanisms.
4. To provide insights and practical knowledge of critically evaluating and designing various consumer aids.

Learning Outcomes

1. After completing this course, students will be able to:
2. Gain knowledge of income, saving and investment management in the changing socio-economic environment.
3. Understand the role of consumer in the economy, consumer problems, education and empowerment.
4. Comprehend issues related to consumer protection, legislative measures and redressal mechanisms.
5. Gain practical knowledge of critically evaluating and designing various consumer aids.

SYLLABUS OF DSC HP 308

THEORY
(Credits 3; Hours 45)

UNIT I: Income and Expenditure **15 Hours**

The unit focuses on developing the fundamental concepts of income, savings and investment management and its applicability in changing socio-economic environment.

Subtopics:

- Household Income – Types, Sources, Supplementation of family income
- Income management – significance of budgeting, steps of making a budget, household accounts
- Factors influencing expenditure pattern
- Family savings and investments- need, principles, channels of investment, tax implications
- Consumer credit

UNIT II: Consumer in India: Consumer problems and education **12 Hours**

This unit attempts to acquaint the students in understanding the consumer problems faced, role of consumer education and empowerment in today's context.

Subtopics:

- Definition of a consumer
- Role of consumers in the economy
- Types of consumer problems – products and service related, causes and remedies
- Guidelines for wise buying practices
- Consumer education and empowerment, sustainable consumption
- Changing nature of the business world –e-commerce, e-business

UNIT III: Consumer Protection **9 Hours**

This unit will orient the students in understanding the need for consumer protection, rights and responsibilities available for safeguarding consumers' interest.

Subtopics:

- Consumer protection
- Consumer rights and responsibilities
- Consumer organizations and their role in consumer protection

UNIT IV: Legislative framework for consumers protection **9 Hours**

The unit focuses on the legislative frameworks, acts and redressal mechanisms available for consumers for their protection.

Subtopics:

- Basic legislative framework for consumer protection in India
- Consumer Protection Act (COPRA) and its amendment
- Alternative redressal mechanisms
- Standardization and quality control measures

PRACTICAL
(Credit 1; Hours 30)

- Understanding and designing standardization marks.

- Evaluation and designing of informative and attractive labels of different types of products.
- Evaluation and designing of advertisements in the print media including products, services and social ads.
- Case study of banks and post offices to understand their services and products.
- Learning to fill different bank forms.
- Analysis of consumer redressal through case study approach.
- Food adulteration tests.

Essential readings

1. Mital, M., Sawhney, H. K. (2015). *Family Finance and Consumer Studies*. New Delhi: Elite Publishing House Pvt. Ltd.
2. Mital M., Jain, S., & Mehta, C. (2015). *Family finance and Consumer Studies: A Practical Manual, Second Edition.* New Delhi: Elite Publishing House Pvt. Ltd.
3. Seetharaman, P. and Sethi, M. (2001). *Consumerism: Strength and Tactics*. New Delhi: CBS Publishers.

Suggested readings

1. Khanna, S. R., Hanspal S., Kapoor S. & Awasthi H.K. (2007). *Consumer Affairs*. Universities Press India Pvt. Ltd.
2. Arora, R. *Consumer Grievances Redressal*. New Delhi: Manak Publications.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE

DSC HP 309 : Introductory Physical Science For Home Science

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title& Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course(if any)
		Lecture	Tutorial	Practical/ Practice		
Introductory Physical Science for Home Science	4	2	0	2	XII Pass	NIL

Learning Objectives

1. To develop basic understanding of different chemical and physical concepts and to relate them with everyday life.
2. To enhance skills of students in handling different equipment.

Learning Outcomes

The students would be able to:

1. Study about different chemicals/compounds, their reactions and applications in everyday life.
2. Correlate structures of compounds with their properties and functions.
3. Develop understanding of the basic principles, theories and laws of physics and correlate them with real life situations.
4. Acquire ability to demonstrate basic experimental skills, handling different equipment and understand their working principles.
5. Apply the basic knowledge to different fields of home science.

SYLLABUS OF DSC HP 309

THEORY
(Credits 2; Hours 30)

Section A-Chemistry

UNIT I: Basic Concepts of Chemistry **10 Hours**

Fundamental concepts like solutions, nature of substances and organic chemistry
Subtopics:

- Solutions- Properties of water, types of solutions, ways of expressing concentrations
  of solutions (normality, molarity, strength), colloids (types, properties and applications of colloids)
- Acids and bases – Definition (Arrhenius, Lewis and Bronsted), examples and applications in daily life, pH, pH scale, buffer solutions and pH measurement
- Oxidising and reducing agents - Oxidation and reduction, antioxidants, examples and applications
- Organic Chemistry – Tetravalency of carbon, catenation, functional groups, types of organic compounds and their importance, nomenclature (examples- alkanes, alkenes, alkynes, alcohols, alkyl halides, aldehydes, ketones, amines, acids and esters).

UNIT II: Important Chemical Compounds 6 Hours

Cleaning agents and biomolecules

Subtopics:

- Surfactants – Soaps and synthetic detergents (structure, cleansing action and their applications)
- Disinfectants – Commonly used disinfectants and their hazards, eco-friendly disinfectants
- Dyes- Classification of dyes, natural dyes
- Biomolecules - Importance of carbohydrates, lipids, proteins and nucleic acids.

Section B-Physics

UNIT III: Mechanics and electricity 10 Hours

Basics of mechanics and electricity

Subtopics:

- Measurements of Physical Quantities- Units and dimensions
- Different types of motions- Translational motion, Circular motion, rotational motion, oscillatory motion and their applications
- Elasticity, stress, strain, elastic limit, Hooke's law, stress-strain diagram, Young's modulus, Shear modulus and Bulk modulus
- Concept of current, voltage and Ohm's law. Heating and magnetic effect of current
- Alternating Current, AC motor, comparison between alternating current and direct current
- Electrical Protection: Fuses and disconnect switches, circuit breakers, Earthing
- Estimation of electrical energy used and concept of star rating of household equipment
- Renewable energy- Solar energy, Wind energy, hydro energy, geothermal energy

UNIT IV: Heat, Optics and Sound 4 Hours

Basics of heat, optics and sound

Subtopics:

- Temperature and its measurements
- Calorimetry, change of state with applications
- Heat transfers and thermal conductivity
- Sound waves, production and properties
- Spectrum of light, basics of diffraction and interference

PRACTICAL

(Credits 2; Hours 60)

Section A- Chemistry

- Safe handling and disposal of chemicals generally used in chemical laboratories
- Calculation and preparation of standard solutions (Sodium chloride, sodium bicarbonate)
- Determination of pH of different solutions
- Experiments using Analytical techniques:
    - Acid-base titrations
    - Redox titrations
    - Estimation of salinity in saline water
    - Determination of hardness of water using complexometric titration

Detection of functional groups- Acids, Alcohols, Aldehydes and Ketones
Qualitative tests for carbohydrates

Section B- Physics

- Basic mathematical concepts and study of different types of experimental errors, their reporting and graphing techniques
- Study of least count of different measuring instruments and familiarization of multimeter
- Measurement of volume of the given cylinder using Vernier calliper
- Measurement of area of cross section of a rod and a wire using screw gauge
- Determination of elastic constants of a wire by Searle's method
- Comparison of thermometric scales of temperature using graph method and verification of Newton's law of cooling
- Study of different types of lenses and determination of focal length of double convex lens by one pin method
- Setting up of two way lighting circuit and calculation of cost of electricity consumed
- Verification of Ohm's law and to determine the resistance of a conductor using graph method.
- Study of the voltage and current of the solar cells.
- Demonstration of colour measurement using colorimeter.

Essential readings

1. Ahluwalia V. K. Dhingra, S. and Gulati, A. (2005). College Practical Chemistry, University Press (India) Pvt. Ltd., New Delhi.
2. Bahl A. and Bahl B.S. (2016). A textbook of Organic Chemistry. S. Chand and Sons, New Delhi.
3. Boyle G. (2012). Renewable Energy, Power for a sustainable future 3rd Ed. Oxford University Press, U.S.A.
4. Gomber K.L., Gogia K.L. (2015). Fundamental Physics. Pradeep publications, Jalandhar.
5. Sharma P. and Pathania. (2016). Principles of Physical Chemistry. Vishal Publishing Company, New Delhi.
6. Sukhatme, S.P. and Nayak, J. K. (2017). Solar energy. Tata McGraw - Hill Publishing Company Ltd., India.
7. Walker, J., Resnick, R., Halliday, D. (2013). Fundamentals of Physics. Wiley, United States.

Suggested readings

1. Bahl A. and Bahl B.S. (2012). Advanced Organic Chemistry. S. Chand and Sons, New Delhi.
2. Jacob T. (1979). Textbook of Applied Chemistry. McMillan India Ltd., Noida.
3. Lal S. (1995). Fundamental Physics. Pradeep Publication, Delhi.
4. Morrison and Boyd. (2011). Organic Chemistry. Pearson Education, New Delhi.
5. Singh H. (2001). B.Sc. Practical Physics. S. Chand and Co., New Delhi.
6. Vogel (2009). Quantitative Chemical analysis. Pearson Education, New Delhi.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVE
DSE HP 3A1 : Developmental Diversity across Ecological Settings

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the Course (if any)
		Lecture	Tutorial	Practical/ Practice		
Developmental Diversity across Ecological Settings	**4**	**2**	**0**	**2**	**XII Pass**	**Pass in DSC HP 204** Lifespan Development I: Prenatal and Early Years

Learning Objectives

1. To learn about the concepts, features and theoretical approaches to ecological settings
2. To know about various ecological settings and diversities and how it shapes development
3. To understand relationship between ecological settings and diversity

Learning outcomes

The students would be able to:

1. Acquire an understanding of basic concepts, salient characteristics and theoretical perspectives of ecological settings
2. Demonstrate knowledge of different ecological settings and diversities
3. Be able to identify relationship between ecology, diversity and development

SYLLABUS OF DSE HP 3A1

THEORY
(Credits 2; Hours 30)

UNIT I: Concepts and theoretical foundations **7 Hours**

- Basic concepts and key terms: ecology, diversity and features of human ecology
- Theoretical approaches and perspectives to understanding ecological systems
- Historical and demographic attributes of ecological settings

UNIT II: Diverse ecological landscapes **12 Hours**

- Diverse settings: urban, rural and tribal ecologies, conflict zones, medical settings, post-disaster contexts
- Socio-cultural and individual variables: caste and class, cultural variations, religion, poverty livelihood, gender, education, health and disability.

- Local and global understanding of human geographies

UNIT III: Developmental diversity across settings **11 Hours**

- Experiences of growing up in India: working children, migrant children, sibling caregivers, growing up with disability
- Contemporary issues and themes addressing ecological diversities – poverty and disability/ gender and disability/ immigration/ refugee status/ environmental changes/ mobility
- Diversity, disadvantage, disability: influence on development

PRACTICAL
(Credits 2; Hours 60)

- Visit a locality and write about the physical and social features of the ecology
- Develop a checklist to understand the ecological setting (with reference to children)
- Using a checklist to study daily schedule of a child with special needs/ child from a disadvantaged group and highlight significant factors in the setting
- Exploring different ecological settings using mental mapping and photo elicitation
- Observe and interview children on the street, working children, a child with special needs and map their ecologies
- Using a theoretical framework, analyze oneÑ own ecological setting and reflect on various diversities
- Case profile to understand the ecological setting of any one of the following:
    - A slum
    - A shelter home
    - A village
    - An institutional care setting
- Representing lived experiences of growing up in diverse ecologies through role play technique
- Analyze and understand the changes in demographic characteristics of your city/town/village using secondary sources
- Understanding diversities of childhood ecologies through audio-visual analysis

  Film: Babies/ Traffic signal/ Documentary by UNICEF

Essential readings

DISCIPLINE SPECIFIC ELECTIVE
DSE HP 3B1 : Food Science

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course(if any)
		Lecture	Tutorial	Practical/ Practice		
Food Science	**4**	**2**	**0**	**2**	**XII Pass**	**Pass in DSC HP 205** Foundation of Food Science and Nutrition

Learning Objectives

1. To enable students to understand how food is produced, processed, prepared and preserved.
2. To impart systematic knowledge of sensory & objective evaluation, food laws and their applications in processing of food to meet quality standards.
3. To acquire knowledge about the role of microorganisms in food processing, preservation and spoilage.

Learning outcomes

The students would be able to:

1. Students learn the principles and working of various techniques in order to preserve food, to provide safe food for consumption and produce nutritious food.
2. Gain knowledge of methods of food quality evaluation and applications of food laws essential for maintaining food quality and safety.

SYLLABUS OF 3B1

THEORY
(Credits 2; Hours 30)

UNIT I: Understanding of Food Science and chemistry **12 Hours**

The unit will provide an understanding of the basic terms used in food science, its interdisciplinary approach and applications. The unit will also provide knowledge of the food sources, chemistry and functional properties of important components of the food. Concept of how colloidal systems are formed and their applications in the food industry will be discussed.

Subtopics:

- Introduction to food science: Definition, importance, applications and scope of food science.
- Food Chemistry- Sources, chemistry and functional properties of Carbohydrates, Lipids and Proteins.
- Colloidal Chemistry-Definition, classification, properties and applications of sols, gels, foams and emulsions.

UNIT II: Basic Food Microbiology **8 Hours**

The unit will introduce types of food microorganisms, and their role in spoilage

Subtopics:

- Introduction to microbes in food - Characteristics of predominant micro-organisms in food (yeast, mold and bacteria), bacterial growth curve, factors influencing growth of microorganisms.
- Role of microorganisms in spoilage - Important food spoilage micro-organisms (psychotrophic, thermophilic, osmophilic microbes), spoilage in specific food groups (raw meat, fruits & vegetables), role of microorganisms in food fermentation.

UNIT III: Food Preservation Techniques **5 Hours**

The unit provides an understanding of different food preservation techniques, and their applications in extending shelf life of different food product.

- Low temperature: Freezing, refrigeration
- High temperature: Drying and dehydration, canning, pasteurization
- Irradiation and use of additives

UNIT IV: Sensory Science **5 Hours**

The unit will help in understanding the sensory quality attributes and sensory evaluation of food.

Subtopics:

- Physiological basis of sensory evaluation
- Subjective and objective methods of sensory evaluation

PRACTICAL

(Credits 2; Hours 60)

- Food analysis: Moisture, pH, acidity, Total soluble solids using standard methods of FSSAI.
- Assessment of surface sanitation by swab/rinse method.
- Implementation of GHP, HACCP, ISO 22000 using suitable example.
- Slide preparation and identification of micro-organisms.
- Application of colloidal chemistry to food preparation.
- Preservation of food using different methods (Blanching, Dehydration, Freezing).
- Sol /gel formation and factors affecting gel formation
- Recognition and threshold for basic tastes.
- Evaluation of food labels in accordance with FSSAI rules and regulations on Food labeling and Packaging.

Essential readings

1. Frazier WC and Westhoff DC (2014). Food Microbiology, Fifth Edition. TMH Publication, New Delhi.
2. Manay NS and Shadaksharaswamy M (2008). Food-Facts and Principles, Third Edition.New Age International (P) Ltd. Publishers, New Delhi.
3. Mathur P. (2018). Food Safety and Quality Control. Orient BlackSwan Pvt. Ltd., Hyderabad.
4. Potter NN and Hotchkiss H J (1996). Food Science, Fifth Edition.CBS Publication, New Delhi.
5. Suri, S. and Malhotra, A. (2014). Food Science Nutrition and Safety. Delhi: Pearson India Ltd.

Suggested readings:

1. Mohini Sethi, Eram Rao (2011). Food science- Experiments and applications, Second Edition. CBSpublishers & Distributors Pvt Ltd.
2. Raina U, Kashyap S, Narula V, Thomas S, Suvira, Vir S, Chopra S (2010). Basic Food
3. Preparation: A Complete Manual, Fourth Edition. Orient Black Swan Ltd.
4. Sivashankar. B (2002). Food Processing and Preservation. PHI learning Pvt. Ltd.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVE
DSE HP 3C1: Media, Culture and Society

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course(if any)
		Lecture	Tutorial	Practical/ Practice		
Media, Culture and Society	**4**	**2**	**0**	**2**	**XII Pass**	**NIL**

Learning Objectives

1. To appraise the importance of culture, cultural transmission and cultural influences on human interactions
2. To gain knowledge of key theories, concepts, models and perspectives in the study of communication & media
3. To understand the relevance and roles of communication media in individual lives as well as in the larger context of culture & society
4. To analyze the relationships, dynamics, and trends within communication media, culture & society

Learning Outcomes

The students would be able to:

1. Assess the significance of culture, cultural transmission and cultural influences on human interactions
2. Enhance their awareness on the concepts, models and perspectives in the study of communication & media
3. Comprehend the relevance and roles of communication media in individual lives as well as in larger context of culture & society
4. Critically analyse the relationships, dynamics, and trends within communication media, culture & society

SYLLABUS OF DSE HP 3C1

THEORY
(Credits 2; Hours 30)

UNIT I: Understanding Culture **6 Hours**

This unit explores the different dimensions of culture and its types. It also highlights the concepts of hegemony and ideology along with cultural influences and role of media. It touches upon the

essence of folk culture and the relation between media, society and popular culture. It revisits the work of Raymond Williams and Stuart Hall in explaining the concepts of culture and further provides diverse perspectives on popular culture

Subtopics:

- Concept of cultures, subcultures and counter culture
- Popular, folk and mass culture
- Role of Ideology and hegemony

UNIT II: Media & Media Audience **8 Hours**

Unit II highlights the importance of mass media in our lives and the types of media audiences. It elaborates on the processes of media audience analysis

Subtopics:

- Role of Mass Media in society
- Media Audience
- Media Audience analysis (segmentation)
- Types of Audience
- Foucault's Notion of Knowledge and Power
- Queer Studies and Representations of Gender in Media

UNIT III: Media and Popular Culture **8 Hours**

This unit highlights the relation between media, society and popular culture. It revisits the work of Raymond Williams and Stuart Hall in explaining the concepts of culture and further provides diverse perspectives on popular culture

Subtopics:

- High Culture and Popular Culture
- Relation between Media, Society and Popular culture
- Perspectives of Critical Theorists, Functionalists & Interactionists Raymond Williams, Stuart Hall
- Perspectives of Critical theorists: Culture Industry and Mass Deception; Walter Benjamin

UNIT IV: Media Realism and Technologies **8 Hours**

This particular unit critically acclaims the notion of media and realism along with gaining insights into postcolonial theory. It further elaborates upon the Indian Context to Media, Culture & Society

Subtopics:

- Introduction to Postcolonial Theory
- Indian Context to relationship between Media, Culture & Society
- Interconnections between Literature, media, Culture and Identity
- Postcolonial from Indian perspective
- Digital media and culture

PRACTICAL

(Credits 2; Hours 60)

- Media Critiquing- Choose a movie or television series and apply some of the concepts and techniques about interpretation, ideology, or gender/class/race.
- Audience perceptions about media; audience preferences listenership/ viewership
- Assessing the prevalence of cultural stereotypes in the society and depiction of the same via media

Essential readings

1. Grossberg, Lawrence et al (1998) Media-Making: Mass Media in a popular culture. Sage Publications
2. Mc Quail, Denis. (2000). Mass Communication Theory. London, Thousand Oaks, New Delhi: Sage Publications.
3. Potter, James W (1998) Media Literacy. Sage Publications

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVE
DSE HP 3D1: Pattern Making for Fashion Design

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course(if any)
		Lecture	Tutorial	Practical/ Practice		
Pattern Making for Fashion Design	**4**	**2**	**0**	**2**	**XII Pass**	**Pass in DSC HP 102** Fashion Concepts

Learning Objectives

1. To impart knowledge regarding the basics of apparel design.
2. To make students understand various terminologies used in relation to garment components and their application in designing garments.
3. To develop a level of proficiency in making patterns for simple garments.
4. To be able to independently lay patterns, cut fabric and sew a garment.
5. To teach the students the fundamentals of fit and enable them to design for different figure types.

Learning outcomes

The students would be able to:

1. Develop basic knowledge of apparel design and describe its terminology.
2. Apply the knowledge of fabrics and fabric terminology to follow preparatory steps before garment cutting
3. Use and apply the concept and techniques of pattern making, laying out and cutting
4. Judicious application of knowledge for producing quality in patterns, and processes in garment assembly
5. Use and apply the concept and techniques of various seams and edge finishes

SYLLABUS OF DSE HP 3D1

THEORY
(Credits 2; Hours 30)

UNIT I: Introduction to pattern making **8 Hours**

This unit will delve into the concept, significance and techniques of body measurements, basic block and patterns.

Subtopics:

- Measurement on body and dress form: importance, precautions, landmarks and procedure of taking measurement
- Importance of patterns and pattern information
- Methods of pattern making
- Rules of pattern making
- Shaping methods, dart and dart equivalents

UNIT II: Preparatory steps for garment construction 6 Hours

This unit provides an insight into the concepts and processes of fabric selection, terms, preparatory steps, fabric layouts, pinning, marking and cutting.

Subtopics:

- Fabric types: weights and widths, fabric terms
- Preparatory steps- preshrinking, straightening and truing
- Layouts for patterns- general guidelines, basic layouts- lengthwise, partial lengthwise, crosswise, double fold, open, combination fold
- Layouts for special fabrics- Unidirectional, bold and large prints, plaids, stripes and checks
- Pinning, marking and cutting

UNIT III: Seams and finishing of raw edges 6 Hours

This unit offers information on sewing machines, appropriate stitching guidelines, seams and various additional techniques required for finishing seams and garment edges.

Subtopics:

- Sewing machine and components of sewing machine, basic operations (upper and lower threading, needle insertion, bobbin winding)
- Relationship between needle, thread, stitch length and fabric weight
- Seam defects and remedies
- Seam classification - super imposed seam, enclosed seam, lapped seam, bound seam, flat seam and decorative seam

UNIT IV: Design & Fit 10 Hours

This unit will acquaint students with different types of garment components and fundamental of fitting. **(5 weeks)**

Subtopics:

- Designing for different figure types- Triangular, Inverted triangular, Hourglass, Rectangular
- Garment Components:
  - Bodices and yokes
  - Necklines
  - Collars
  - Sleeves and cuffs
  - Plackets and fasteners
  - Pockets
- Factors affecting fit
- Evaluating fit for a basic garment and its components

PRACTICAL
(Credits 2; Hours 60)

1. Designing garments for self

This unit will provide hands-on skill for making basic slopers and its adaptation to create style variations.

- Development of bodice, Sleeve and skirt for self
- Develop style variations in sleeves and collars for self
- Adaptation of standard skirt block (A-line, Flared, pleated, gathered)
- Adaptation of standard women's bodice block using dart manipulation (single and double dart and dart-tuck)
-

2. Sewing techniques

This unit will train the students in operating a sewing machine efficiently and perform basic sewing processes required for garment assembly. As a result, student will be able to stitch a simple garment for self.

- Introduction to sewing machine and basic sewing exercises
- Development and identification of seams with emphasis on Additional techniques for straight, curved and cornered seams: clipping, notching, grading, seam balancing, trimming, under stitching, stay stitching, trimming a corner, handling unequal seams (easing)
- Plackets and fasteners
- Edge finishing (binding, facing)
- Handling Fullness- dart, dart-tuck, gathers, pleats
- Construction of skirt for self
- Construction of skirt top/ kurta for self

Essential readings

1. Armstrong, H.J., (2009), *Pattern Making for Fashion Design*, Harper Collins Publishers Inc., New York.
2. Liechty, E.G., Potterberg, D.N., Rasband, J.A., (2010), *Fitting and Pattern Alteration: A Multimethod Approach,* Fairchild Publications, New York.
3. Stamper, A.A., S. H. Sharp and L.B. Donnell, (1986), *Evaluating Apparel Quality*, Fairchild Publications,
4. Brown, Patty and Rice Janett (1998) Ready to Wear Apparel Analysis (2nd Edition), Prentice Hall.

Suggested readings

1. Jennifer Lynne & Matthews-Fairbanks, (2018), *Pattern Design: Fundamentals*, Fairbanks Publishing LLC.
2. Reader's Digest (Eds.). (2002), New Complete Guide to Sewing, Reader's Digest Association (Canada) Ltd. Montreal.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVE
DSE HP 3E1: Basics of Design Application

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course(if any)
		Lecture	Tutorial	Practical/ Practice		
Basics of Design Application	**4**	**2**	**0**	**2**	**XII Pass**	**NIL**

Learning Objectives

1. To comprehend the concept of design as applicable to interior spaces.
2. To develop proficiency in making working and presentation drawings to be used by interior space design professional.
3. To understand the application of materials and finishing for creating an aesthetic and sustainable interior

Learning Outcomes

The students would be able to:

1. Students will be able to comprehend the concept of design applicable to interior spaces.
2. Students will gain proficiency in preparing presentation drawings to be used in design profession.
3. Students will understand the application of materials and finishes for designing interior spaces

SYLLABUS OF DSE HP 3E1

THEORY
(Credits 2; Hours 30)

UNIT I: Design Fundamentals **6 Hours**

This unit will develop understanding regarding basics of design.

Subtopics:

- Objectives of design
- Types of design: structural & decorative
- Elements of design
- Principles of design

UNIT II: Design Application in Interiors **8 Hours**

This unit will acquaint students with the concept & application of color, lighting & furnishes in interior spaces.
Subtopics:

- Color in design
- Lighting for interiors
- Surface finishes – wall, floor, ceilings (types and usage)

UNIT III: Furniture & Furnishings **8 Hours**

This unit will help students learn about furniture, furnishings and accessories in interiors.
Subtopics:

- Furniture – styles, types, construction, selection and purchase, arrangement, care and maintenance
- Furnishings – types & selection
- Accessories

UNIT IV: Contemporary trends **8 Hours**

This unit will acquaint students with the contemporary trends in interiors.
Subtopics:

● Recent trends in design: Bio-Mimicry, Bio-philic
● Sustainable design & materials

PRACTICAL
(Credits 2; Hours 60)

1. Introduction to drawing interiors:
- ● Basic drawing techniques
- ● Concept of scale
- ● Lettering

2. Presentation drawings:
- ● Drawing & identification of common symbols
- ● Drawing 1 BHK floor plans & elevations

3. Rendering:
- ● Rendering Techniques
- ● Application of rendering in plans

Essential readings:

1. Chris Grimley,Universal principles of Interior Design , (2022), Rockport publishers .
2. Frida Ramstedt ,(2020)Interior Design Handbook ,Random House publishers
3. S. Goel, P.Seetharaman ,A.Kakkar, Manual on Interior space designing (2015) (ISBN No: 81-88901-44-X),Elite publishers, Delhi
4. M.Pratap Rao (2000), Interior Design Principles and Practice, Standard Publishers Distribution, Delhi.
5. S.K Duggal,(2017) , Building Materials, CRC Press, Delhi.
6. Joseph De Chiara, J. Panero, M. Zelnik(2001), Time Saver Standards for Interior Design and Space Planning , second edition McGraw Hill.
7. Premavathy, Seetharam. & Pannu, Parveen (2005). Interior Design and Decoration. CBS Publishers & Distributers, New Delhi

Suggested readings:

1. CPWD, Manual on Door and Window Details for Residential Building
2. CPWD, Manual on Accessible Built Environment Faulkner, S. and Faulkner,R, Inside Today's Home, Rinehart Publishing company, New York.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

COMMON POOL OF GENERIC ELECTIVES (GE) COURSES

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

GENERIC ELECTIVE (GE HS 003) : CHALLENGES IN CONTEMPORARY CHILDHOOD

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Challenges in Contemporary Childhood	**4**	**3**	**0**	**1**	**XII Pass**	**NIL**

Learning Objectives

1. To understand the social construction of childhood
2. To understand depiction of childhood experiences in India
3. To know and learn about diverse contexts of childhood
4. To appreciate contemporary themes and challenges of Indian childhood

Learning Outcomes

The students will be able to:

1. Learn the concepts related to multiple childhood
2. Study children's experiences of ethnicity, class, caste, religion and gender
3. Learn about children in difficult circumstances
4. Get sensitized to appreciate diverse contexts of children

SYLLABUS OF GE HS 003

THEORY
(Credits 3; Periods 45)

UNIT I: Influences on Indian Childhood **12 Hours**

Unit Description: This unit presents an overview by revisiting central themes and concerns related to childhood in India

Subtopics:

- Sociology of childhood
- Disadvantaged childhood
- Caste and childhood
- Gender and children

UNIT II: Multiple contexts of Childhood 12 Hours

Unit Description: This unit will focus on understanding children in multiple settings and contexts

Subtopics:

- Childhood in urban, semi-urban, rural and tribal context
- Socialization and growing in diverse families
- Children in foster and institutional settings
- School as a context of development - Educational inequity and learning diversity

UNIT III: Children in Difficult Circumstances 12 Hours

Unit Description: This unit will help us to develop understanding of children in difficult circumstances and the challenges

Subtopics:

- Street and Working children
- Trafficked children and children of sex workers
- Children of migrant and refugee families
- Children in conflict with law and children in contact with law
- Children in war and other disaster situations

UNIT IV: Contemporary Challenges and Childhood 9 Hours

Unit Description: This unit will focus on the various challenges faced by children in different contexts.

Subtopics:

- Childhood in digital era/cyberbullying/child pornography/violence in schools like bullying
- Gender concerns and safety, Body boundaries and consent
- Supporting childhood in India

PRACTICAL
(Credit 1; Periods 30)

- Exploring and analysis of diverse childhood context and challenges through audio-visual materials/social media/print media.
- Interview Street children/working children/ children with disabilities to understand their circumstances
- Profile organisations working for children in difficult circumstances
- Conduct workshop/webinars to understand the various vulnerabilities related to Indian children like cyberbullying, Body boundaries, inclusion & diversity

Essential readings

1. Chopra, G. (2016). Child rights in India: challenges and social action. S.l.: Springer, India, private.
2. Sachdeva ,P.,Murmu,D.F. & Sakshi.(2020).Basic Sociology. Delhi . Elite Publishing

GENERIC ELECTIVE (GE HS 007) : CURRENT CONCERNS IN PUBLIC HEALTH NUTRITION

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisiteof the course
		Lecture	Tutorial	Practical/ Practice		
Current Concerns in Public Health Nutrition	4	3	0	1	XII Pass	NIL

Learning Objectives

1. To understand the multi-faceted nature of nutritional problems and the various interventions that can be adopted at community level for improving the nutritional status.
2. To learn about the policy and intervention programmes operating in India to overcome malnutrition.
3. To understand the concept and determinants of food and nutrition security.

Learning Outcomes

The student will be able to:

1. Understand the multi-faceted nature of nutritional problems.
2. Aware of the various interventions that can be adopted at community level for improving the nutritional status.
3. Familiar with the policy and intervention programmes operating in India to overcome malnutrition.
4. Understand the concept and determinants of food and nutrition security

SYLLABUS OF GE HS 007

THEORY

(Credits 3; Periods 45)

UNIT I: Nutritional Problems Affecting the Community **12 Hours**

Unit Description: Students will be explained about the existing nutritional problems in the community in the present scenario.

Subtopics:

Etiology, prevalence, clinical features and preventive strategies for-

- Undernutrition - Protein energy malnutrition, Moderate Acute Malnutrition, Severe Acute

Malnutrition, Nutritional Anaemias, Vitamin A Deficiency, Iodine Deficiency Disorders
- Obesity, Metabolic Syndrome
- Coronary heart disease, Diabetes
- Fluorosis

UNIT II: Strategies for Improving Nutrition and Health Status of the Community 9 Hours

Unit Description: Students will be taught about the different approaches and strategies that could help alleviate the nutrition and health status of the community.

Subtopics:

- Appropriate interventions involving different sectors such as Food, Health, and Education – diet diversification, food fortification, supplementation, genetic modification, improved water and sanitation, immunization, promotion of optimal infant and young child feeding practices, growth monitoring and promotion (GMP), diarrhoea management and prevention

UNIT III: Nutrition Policy and Programmes 12 Hours

Unit Description: Students will be introduced to all the major ongoing national level interventions and strategies and goals to combat malnutrition in the nation.

Subtopics:

- Sustainable Development Goals – Introduction, and relevance to nutritional problems in India
- National Nutrition Policy
- Ongoing nutrition programmes – Integrated Child Development Services (ICDS) Scheme, Mid-day Meal Programme (MDMP), National programmes for prevention of Anaemia, Vitamin A deficiency, Iodine Deficiency Disorders, National Programme for Prevention and Control of Cancers, Diabetes, Cardiovascular Diseases and Stroke (NPCDCS), POSHAN Abhiyaan

UNIT IV: Food and Nutrition Security 12 Hours

Unit Description: Students will be taught the concept of food and nutrition security and the associated national level intervention and programs. Subtopics:

- Concept, components, determinants
- Overview of the ongoing public sector programmes for improving food and nutrition security

PRACTICAL
(Credit 1; Periods 30)

Planning of low cost nutritious recipes for preschoolers, school age children, adolescents, pregnant and nursing women.

- Planning of nutritious recipes for an obese and an underweight adult.
- Visit to on-going nutrition programmes.

Essential readings:

1. Bamji, MS, Krishnaswamy, K. & Brahmam, G N(Eds.). (2017). Textbook of Human Nutrition (4th ed.). New Delhi, India: Oxford and IBH Publishing Co. Pvt. Ltd.
2. Longvah, T, Ananthan, R, Bhaskarachary, K & Venkaiah, K (2017). Indian Food Composition Tables. National Institute of Nutrition, ICMR, Hyderabad.
3. Park, K (2017). Park's Textbook of Preventive and Social Medicine (24th ed.). Jabalpur, India: Banarasidas Bhanot Publishers.
4. Vir, S (2011). Public Health Nutrition in Developing Countries (Vol 1 & 2). New Delhi,

India: Woodhead Publishing India.

Suggested readings:

1. Gibney, M J, Margetts, B M, Kearney, J M & Arab, L (Eds.). (2005). Public Health Nutrition. Oxford, UK: Blackwell Science.
2. ICMR (2011) Dietary Guidelines for Indians – A Manual. National Institute of Nutrition, Indian Council of Medical Research, Hyderabad.
3. Kishore, J (2016). National Health Programs of India (12th ed.). New Delhi, India: Century Publications.
4. Chadha, R and Mathur, P (eds.) (2015). Nutrition A Lifecycle Approach. New Delhi, India: Orient Blackswan Pvt. Ltd.
5. Ministry of Women and Child Development (MWCD), Government of India. (2019). POSHAN Abhiyaan [online]. Available at: https://icds-wcd.nic.in/nnm/home.htm (Accessed: July 12, 2019).
6. Relevant and ongoing public sector programmes for food and nutrition security from Government of India websites (including Ministry of Agriculture and Farmers Welfare, Ministry of Consumer Affairs, Food and Public Distribution, Ministry of Human Resource Development, and other ministries working for food and nutrition security).

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

GENERIC ELECTIVE (GE HS 010) : PARTICIPATORY DEVELOPMENT AND COMMUNICATION

Credit distribution, Eligibility and Pre-requisites of the Course

Course title &Code	Credits	Credit distribution of the course			Eligibility criteria	Pre- requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Participatory Development and Communication	**4**	**3**	**0**	**1**	**XII Pass**	**NIL**

Learning Objectives

1. To understand the concept of participation, Participatory Development and Participatory Communication.
2. To appreciate the role of facilitation for meaningful participation.
3. To develop an understanding of the interplay between the indigenous practices and theoretical concepts of participation.
4. To critically reflect on the role of civil society organizations in promoting participatory approach across sectors and levels of development.
5. To critically examine the use of participatory approach and tools across sectors and regions and relevance to the Indian context.

Learning Outcomes

1. The student will be able to understand the notion of participation and the dimensions of Participatory Communication
2. The student will be able to apply the principles and approaches of Participatory Communication in community research
3. The student will be able to appreciate and use the different tools and methods of Participatory Learning & Appraisal.
4. The student will be able to reflect on the role of civil society organizations in promoting participatory approach across sectors and levels of development
5. The student will be able to explore the nuances of designing and applying Participatory Media.

SYLLABUS OF GE HS 010

THEORY

(Credits 3; Periods 45)

UNIT I: Understanding Participatory Approach **12 Hours**

Unit Description: Unit I delves into the core concept and nature of Participation and its relation with development. It highlights the principles and levels of participation. The Unit also asserts the importance and channels of Participatory Communication and how effective facilitation is and essential for participation of marginalized groups.
Subtopics:

- Concepts of Participation and Participatory Development
- Participation, Power, Voice and Marginalization
- History & Theoretical perspectives on Participatory Development
- Principles & Levels of Participation
- Process of Participation: Dialogue, Reflection & Consensus
- Reflective Practice, Empowerment & Social Change

Civil Society Organizations & Participatory Development

UNIT II: Participatory Approach & Methods 9 Hours

Unit Description: Unit II explores the concept, principles, advantages of Participatory Learning & Appraisal with its plethora of tools and their applications.

Subtopics:

- Participatory Learning & Appraisal: Principles and practices
- Scope and Application of PLA Tools
- Classification of PLA Tools: Relationship, Space & Time Related PLA
- Innovative PLA Tools

Participatory Research methodology: approach and praxis

UNIT III: Participatory Learning & Action 12 Hours

Unit Description: This Unit discusses the application of the Participatory Approach in different contexts such as local governance, NGOs and CSOs, M&E .
Subtopics:

- Participatory Approaches & Local Governance
- People's Participation in community development and Development Programs
- Participatory approaches in management of Disasters & Pandemics
- Role of Traditional & Indigenous knowledge in Participatory Approaches

UNIT IV: Participatory Media 12 Hours

Unit Description: The last Unit touches upon the concept, significance, functions and elements of the various Participatory Media.
Subtopics:

- Participatory Communication, Right to Communicate, development & empowerment
- Community Media concept, significance, functions and elements
- Growth, types, characteristics, policy & programing:
    - Community Radio
    - Participatory Video
    - Participatory Print media
    - Participatory New Media

Alternative Theater and the performing arts

PRACTICAL
(Credit 1; Periods 30)

- Analysis of case studies in Participatory Development
- Situation Analysis using PLA techniques

- Time Related PLA: Daily Activity Chart
- Space Related PLA: Social Mapping, Resource Map, Transect Walk, Facility Assessment
- Relationship Related PLA: Venn Diagram, Spider Web Diagram
- Ranking Methods: Seed Ranking
- Qualitative PLA Research Tools: Interview, Focused Group Discussion, Case Study
- Participatory Media Analysis & Production

Essential readings:

1. Mikkelsen, Britha, (2002). Methods for Development Work and Research. New Delhi: Sage Publications.
2. Robert Chambers. ÎWhat Works and Why?" and ÎPoor Peoples' Reality" in Whose Reality Counts? Putting the First Last (Intermediate Technology Publications, London, 1997): pp. 130-187.

GENERIC ELECTIVE (GE HS 017) : FASHION ACCESSORIES

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course	Department offering the course
		Lecture	Tutorial	Practical/ Practice			
Fashion Accessories	4	3	0	1	XII Pass	NIL	Home Science

Learning Objectives

1. To impart knowledge of fashion accessories
2. To familiarize the students with leading accessory designers
3. To provide knowledge of the basics of common accessories viz., handbag, footwear and hats
4. To help students in understanding design methodology, materials, production process and market dynamics of fashion accessories

Learning Outcomes

The student will be able to

1. Recognize the role and importance of fashion accessories in the apparel industry
2. Describe the various categories, history, styles and production methods of fashion accessories
3. Restyle and coordinate accessories with apparel using creative ideas
4. Understand forecast, trends, and process of accessory designing
5. Develop skills in range planning and creating fashion accessory

SYLLABUS OF GE HS 017

THEORY
(Credits 3; Periods 45)

UNIT I: Overview of Fashion Accessories **12 Hours**

This unit traces the history and importance of fashion accessories. It discusses the fashion cycle, role of an accessory designer and leading accessory brands and designers around the world.

Subtopics:

- History of accessories from ancient times to present
- Importance of fashion accessories in apparel industry
- Fashion cycle of fashion accessories
- Role of an accessory designer

- Leading accessory brands and designers

UNIT II: Categories, Styles and Production Methods of Selected Fashion Accessories 12 Hours

The unit brings forth the categories, styles and production methods of fashion accessories. It also helps to understand the coordination of fashion accessories with apparel.

Subtopics:

- Brief history, components, styles, materials and production methods of accessories: Handbags, Footwear, Hats, Belts, Ties, Scarves, etc.
- Coordinating accessories with apparel

UNIT III: Concept to Creation: Overview of Fashion Accessories Industry 9 Hours

This unit provides an insight into marketing and promotional aspects of fashion accessories.

Subtopics:

- Inspiration and research for design development
- Trend analysis and forecasting process
- Spec-sheets and Tech Packs
- Sourcing of material
- Costing
- Developing a range
- Care and maintenance

UNIT IV: Marketing and Promotion 12 Hours

Ways to increase the life of garments to reduce waste generation.

Subtopics:

- Marketing of fashion accessories
- Window concepts and displays
- Promotional practices

PRACTICAL

(Credit 1; Periods 30)

- Study of materials for fashion accessories
- Sketching of fashion accessories – Handbags and Footwear
- Sketching and rendering of life-size handbag and footwear (One each)
- Reporting of national and international accessory brand/ designer (One each)
- Theme based accessory designing - Mood boards, designing and construction (Any one product)
- Restyling project – Restyle plain accessories using any surface ornamentation technique

Essential readings:

1. Genova Aneta 2011, Accessory Design, Fairchild Publications; 1 edition
2. Know Your Fashion Accessories, Celia Stall- Meadows, Fairchild Books; Student ed. Edition (25 August 2003), ISBN-13: 978-1563672453
3. Lau John 2012, Basics Fashion Design 09: Designing Accessories: Exploring the design and construction of bags, shoes, hats and jewellery, A Publishing; 1 edition
4. Schaffer Jane, Saunders Sue 2012, Fashion Design Course: Accessories: Design Practice and Processes for Creating Hats, Bags, Shoes, and Other Fashion Accessories, Barron's Educational Series
5. Stephens Frings Gini, 2007, Fashion: From Concept to Consumer (9th Edition), Prentice Hall

Suggested readings:

1. Abling Bina 2005, marker rendering for Fashion, Accessories, and Home Fashion, Bloomsbury Academic, Illustrated Edition, ISBN 1563673606, 9781563673603.

2. Gerval Olivier 2009, Fashion Accessories, A&C Black, Illustrated edition, ISBN 140811058X, 9781408110584.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

GENERIC ELECTIVE (GE HS 019) : CORPORATE SOCIAL RESPONSIBILITY

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Corporate Social Responsibility	4	3	0	1	XII Pass	NIL

Learning Objectives

1. To understand the meaning, scope and importance of Corporate Social Responsibility (CSR)
2. To understand CSR projects with respect to SDGs
3. To understand the Indian legislations for CSR
4. To learn about the implementation and monitoring of CSR activities
5. To understand the need, process and tools of communicating CSR projects
6. To understand CSR reporting guidelines

Learning Outcomes

The student will be able to:

1. Understand the meaning, scope and importance of Corporate Social Responsibility (CSR)
2. Assess the role of CSR projects with respect to SDGs
3. Understand Indian legislations for CSR
4. Understand implementation and monitoring of CSR projects through case studies
5. Develop material/tools for CSR communication
6. Understand and evaluate CSR reports as per standard reporting guidelines

SYLLABUS OF GE HS 019

THEORY

(Credits 3; Periods 45)

UNIT I: Introduction to Corporate Social Responsibility (CSR) **9 Hours**

Unit Description:

This Unit aims at orienting the students towards the concept and importance of Corporate Social Responsibility (CSR), triple bottom line, and ESG

Subtopics:

- Meaning, definition and importance
- History and evolution of CSR
- Sustainable businesses, triple bottom line, ESG (Environmental, Social and Governance)

UNIT II: International framework for Corporate Social Responsibility 12 Hours

Unit Description:

This Unit aims to create an understanding on Indian legislations for CSR, UN guiding principles and SDGs.

Subtopics:

- Indian legislations for CSR; Companies Act, 2013 and Amendments
- UN guiding principles on business and human rights.
- SDGs and CSR

UNIT III: Design, implémentation and Monitoring of CSR activities 12 Hours

Unit Description:

This Unit aims to create an understanding towards design, implémentation and monitoring of CSR activities, CSR funding and audit

Subtopics:

- CSR design, implémentation and monitoring
- Role of Stakeholders in CSR
- Funding for CSR activities
- CSR Audit; issues related to CSR Audit
- Globalization and CSR

UNIT IV: CSR Communications 12 Hours

Unit Description: This Unit aims to create an understanding towards the need, process and tools of CSR communication and CSR reporting guidelines Selection of materials

Subtopics:

- Need, process and tools of communicating CSR projects
- Brand building through CSR communications
- CSR Reporting Guidelines

PRACTICAL

(Credit 1; Periods 30)

I: Understanding CSR initiatives

Activities:

- Need Assessment for CSR activities by corporates
- Case studies on CSR initiatives taken by corporates
- Case studies on Foundation/Trust/Section 8 Companies etc. implementing CSR initiatives

II: Planning CSR activities and Communications

Activities:

- Planning innovative CSR Projects/Programmes in context of SDGs
- CSR communications: Presentations, Websites, Print Media, Social media etc.
- Evaluation of CSR reports

Essential readings:

1. Garg, K. (2021). Corporate Social Responsibility (3rd edition). Bharat Law House Pvt. Ltd.
2. Institute of Directors India. (2020). A Handbook on Corporate Social Responsibility, A Condensed Guide for Corporate Directors & Senior Executive. Institute of Directors, New Delhi, India.

5. Chatterji, M. (2011). Corporate Social Responsibility. Oxford University Press India; Reprint edition. ISBN-10: 0198069839 ,ISBN-13 : 978-0198069836.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

BSc. (Hons.) Food Technology

DISCIPLINE SPECIFIC CORE COURSE
DSC FT07: Meat and Fish Processing Technology

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITE OF THE COURSE

Course title & code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Theory	Tutorial	Practical/Practice		
Meat and Fish Processing Technology	4	3	0	1	XII Pass	DSC FT01, DSC FT02, DSC FT03, DSC FT04, DSC FT05, DSC FT06

Learning Objectives

1. To comprehend the meat quality and slaughter processes for meat animals.
2. To understand the concept and methods of processing and preservation of animal foods and by-product utilization.
3. To acquire the knowledge of fish preservation and value-added fish products.

Learning Outcomes

After completing this course, students will be able to:

1. Understand the need and importance of livestock industry.
2. Comprehend the structure, composition and nutritional quality of animal products.
3. Acquire the concept and methods of processing and preservation of animal foods.
4. Know the technology behind preparation of various animal food products and by-product utilization.
5. Apprehend the importance of fishery industry, the techniques that can be used for preservation of fish and manufacturing of various value-added fish products

SYLLABUS OF DSC FT07

THEORY
Credits 3 (45 Hrs.)

UNIT I: Introduction, meat quality, Slaughter process and By-products

Unit Description: The unit will provide information on the status and development of livestock industry, meat quality, ante-mortem and post-mortem examination, and by-products
Subtopics:

- Status of livestock industry in India, Development of meat industry in India and its need in nation's economy
- Effects of feed breed and stress on production of meat animals and their quality.
- Meat Quality-color, flavor, texture, Water-Holding Capacity (WHC), Emulsification capacity of meat.
- Layout of abbatoir, Slaughter, Antemortem examination of meat animals, slaughter of buffalo, sheep/ goat.
- Post-mortem examination of meat, Grading, Post-mortem changes of meat.
- Importance of by-products utilization, classification and uses of by-products, Manufacture of Natural casings

UNIT II: Preservation of meat

Unit Description: The unit will provide knowledge of different meat preservation techniques.

Subtopics:

- Refrigeration and freezing, thermal processing- canning of meat, retort pouch, dehydration, irradiation, meat curing, Sausages-processing, types and defects, Packaging of meat

UNIT III: Introduction, Chilling and Freezing of fish

Unit Description: The unit will provide an understanding of the status of fishery industry in India. Fish chilling, storage, freezing will also be covered.

Subtopics:

- Status of fishery industry in India. Relationship between chilling and storage life, MAP, general aspects of freezing, freezing systems (air blast freezing, plate or contact freezing 36 spray or immersion freezing, freezing on board, onshore processing, changes in quality in chilled and frozen storage, thawing.

UNIT IV: Fish Curing, Smoking and Canning, By-products, fermented fish and concept of other seafoods

Unit Description: The unit will provide an knowledge of the different fish products processing and preservation techniques.

Subtopics:

- Drying and salting of fish, water activity and shelf-life , salting process, salting methods (brining, pickling, kench curing, gaspe curing), types of salts, dried and
- Salted fish products- pindang, fishwood, dried shrimp. Preservation by smoking, smoke production , smoke components, quality, safety and nutritive value of
- Smoked fish, processing and equipment, pre-smoking processes, smoking process control. Traditional chimney kiln, modern mechanical fish smoking kiln, examples of smoked and dried products. Principles of canning, classification based on pH groupings, effect of heat processing on fish, storage of canned fish, pre-process operations, post process operations, cannery operations for specific canned products.(Tuna, Mackerel, Sardine).
- Surimi- Introduction, fish muscle proteins, the surimi process, traditional and modern surimi production lines, quality of surimi products, comparison of surimi and fish mince products.
- Fish protein concentrates (FPC), fish protein extracts (FPE), fish protein hydrolysis (FPH) Flowchart of Indigenous products- Fish sauce and Paste
- Crabs, lobsters, prawns, shrimps.

PRACTICAL

1 Credits (30 Hrs)

- Estimation of moisture content of meat.

- Cut out analysis of canned meat/retort pouches (external parameters).
- Cut out analysis of canned meat/retort pouches (internal parameters).
- Analysis of frozen meat/meat emulsion product.
- Meat/fish product formulation (Ideation/development of product).
- Quality evaluation of fish/prawn.
- Subjective evaluation of Fresh Fish.
- Cut out analysis of canned fish (Sardine/Mackerel/Tuna) (external parameters).
- Cut out analysis of canned fish (Sardine/Mackerel/Tuna) (internal parameters).

Essential Readings

1. Lawrie, R. A. (2017). Lawrie's meat science. 8th ed. England: Woodhead Publishing Ltd.
2. Sen, D.P. (2005). Advances in Fish Processing Technology. Allied Publishers Pvt.Limited.
3. Hall, G.M. (1997). Fish Processing Technology. 2nd edition NY: VCH

Suggested Readings

2. Borda D., Nicolau. A. I and Raspor P (2017). Trends in Fish Processing Technology (Contemporary Food Engineering). 1st edition CRC Press

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE
DSC FT08 : Nutrition Science

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITE OF THE COURSE

Course title & code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Theory	Tutorial	Practical/Practice		
Nutrition Science	4	3	0	1	XII Pass	DSC FT01, DSC FT02, DSC FT03, DSC FT04, DSC FT05, DSC FT06

Learning Objectives:

1. To understand the relationship between food, nutrition and health.
2. To learn the digestion, absorption, functions and food sources of various nutrients.
3. To comprehend the concept of balanced diet.
4. To know the different methods of cooking and ways to prevent nutrient losses.
5. To plan and prepare nutritious dishes for various age groups.
6. To assess nutritional status of adults.

Learning Outcomes:

After completing this course, students will be able to:

1. Students will be able to interpret and apply nutrition concepts to evaluate and improve nutritional health of individuals and communities
2. Comprehend the role of digestion, absorption, functions and food sources of various nutrients.
3. Understand the concept of balanced diet and exchange system.
4. Describe different methods of cooking and ways to prevent nutrient losses.
5. Plan and prepare nutritious dishes for various age groups.
6. Assess nutritional status of adults.

SYLLABUS OF DSC FT08

THEORY
Credits 3 (45 Hrs.)

UNIT 1: Introduction to Food and Nutrition **6 hrs**

Unit Description: This unit will introduce the basic knowledge of food and nutrition, its functions. It will also help in understanding the inter-relationship between food, nutrition and health.

Subtopics:

- Basic terms used in study of food and nutrition
- Methods of assessment of nutritional status
- Functions of food-physiological, psychological and social
- Understanding relationship between food, nutrition and health

UNIT II: Nutrients 20 hrs

Unit Description: This unit will provide an understanding on functions, dietary sources and clinical manifestations of deficiency/excess of the following nutrients

Subtopics:

- Classification, digestion, absorption, functions, dietary sources, RDA, clinical manifestations of deficiency and excess of the following in brief:
- Energy
- Carbohydrates, lipids and proteins
- Fat soluble vitamins-A, D, E and K
- Water soluble vitamins – thiamine, riboflavin, niacin, folate, vitamin B12 and vitamin C
- Minerals – calcium, iron, iodine, fluorine, sodium, potassium, and zinc

Unit III: Planning Balanced Meals and Selection of Healthy Foods 6 hrs

Unit Description: This unit will help in understanding the concepts of food groups and balanced diet.

Subtopics:

- Food Groups
- Concept of Balanced Diets
- Understanding Nutrition labelling of foods

UNIT IV: Methods of Cooking and Nutrient Retention 13 hrs

Unit Description: This unit will help in developing know-how of different methods of cooking and ways to prevent nutrient losses

Subtopics:

- Dry, moist, frying and microwave cooking - Advantages, disadvantages
- Effect of various methods of cooking on foods and nutrients.
- Preventing nutrient losses

PRACTICAL
1 Credits (30 Hrs)

- Assessment of nutritional status using BMI and waist circumference.
- Identification of food sources for various nutrients using food composition tables.
- Introduction to meal planning, concept of food exchange system.
- Planning and preparation of nutritious snacks for adults using different methods of cooking.
- Planning and preparation of nutritious snacks for pregnant women.
- Planning and preparation of nutritious snacks for lactating women
- Planning and preparation of nutritious snacks for pre-schoolers.

- Planning and preparation of nutritious snacks for adolescents.
- Critical analysis of nutritional labelling of food products.

Essential Readings

DISCIPLINE SPECIFIC CORE COURSE
DSC FT09: Cereals, Pulses & Oilseed Processing Technology

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITE OF THE COURSE

Course title & code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Theory	Tutorial	Practical/Practice		
Cereals, Pulses & Oilseed Processing Technology	4	3	0	1	XII Pass	DSC FT01, DSC FT02, DSC FT03, DSC FT04, DSC FT05, DSC FT06

Learning Objectives

1. To impart knowledge of different methods of Cereal, Pulse & Oilseed processing.
2. To learn about processing of various products & by-products.

Learning Outcomes

After completing this course, students will be able to:

1. Understand the concept of quality (composition & types) of Cereals, Pulses & oilseeds for developing good quality end products.
2. Comprehend the processing and preservation of Cereals, Pulses & Oilseeds using various techniques.
3. Comprehend the processing of by-products.

SYLLABUS OF DSC FT09

THEORY
(Credits 3; Hours 45)

UNIT I: Introduction of Cereals

Subtopics:

Cereal Processing Technology

Introduction & chemical composition of cereals

- Wheat—Types, milling, flour grade, flour treatments (bleaching, maturing), flour for various purposes
- Rice: Types, Physicochemical properties, milling (mechanical & solvent extraction), parboiling, ageing of rice, utilization of by- products
- Corn: Milling (wet & dry), cornflakes, corn flakes, corn flour
- Barley: Milling (pearl barley, barley flakes
- Oats: Milling (oatmeal, oatflour & oatflakes), By-products of oat processing
- Rye & Triticate: Milling (flour), uses

UNIT II: : Processing of Coarse Grains
Subtopics:

- Sorghum and Millets (Traditional & commercial milling)

UNIT III: Pulse Processing Technology
Subtopics:

- Introduction to pulses
- Milling of pulses
- Dry milling
- Wet milling
- Improved milling method

UNIT IV: Oilseed Processing Technology

Unit Description: The unit will provide an knowledge of the different fish products processing and preservation techniques.
Subtopics:

- Introduction
- Extraction of oil (Mechanical & Solvent Extraction Milling)
- Refining of oil
- Sources of protein (defatted flour, protein concentrates and isolates, properties and uses)
- Protein texturization, fibre spinning

PRACTICAL
1 Credits (30 Hrs)

- Physical characteristics of Wheat.
- Estimation of Gluten Content of flour.
- Estimation of Pelenske Value of flour.
- Fermenting power of yeast.
- Physical Characteristics of Rice and paddy.
- Cooking characteristics of rice.
- Determination of sedimentation power of flour
- Preparation of Dairy Analogue (Soymilk from Soybeans)

Essential readings:

1. Kent, N.L. 2003. Technology of Cereal, 5th Ed. Pergamon Press.
2. Chakraverty. 1988. Post Harvest Technology of Cereals, Pulses and Oilseeds, revised Ed., Oxford & IBH Publishing Co. Pvt Ltd.

Recommended readings:

1. Marshall, Rice Science and Technology. 1994. Wadsworth Ed., Marcel Dekker, New York.
2. Manay, S. and Sharaswamy, M. 1987. Food Facts and Priniciples.Wiley Eastern Limited.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVE
DSE FT01: Novel Food Processing Technologies

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITE OF THE COURSE

Course title & code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Theory	Tutorial	Practical/Practice		
Novel Food Processing Technologies	4	2	0	2	XII Pass	NIL

Learning Objectives

1. To enable students to learn the basics of novel processing techniques.
2. To impart knowledge about the mechanism of microbial inactivation by various processing techniques.
3. To acquire knowledge about the effects of various novel processing techniques on food quality.

Learning Outcomes

After completing this course, students will be able to:

1. Understand the principles and mechanism of microbial inactivation by various techniques in order to preserve food and provide safe food for consumption.
2. Comprehend the effects of various novel processing techniques on the food quality.

SYLLABUS OF DSE FT01 THEORY

Credits 2 (30 Hrs.)

Unit I: High pressure processing and Hurdle technology (10 hrs)

Unit Description: The unit will provide an understanding of the High-pressure processing used in food industries. The unit will deal with its principle and effects on food quality. The unit will also provide knowledge of the hurdle technology and its use in food preservation.

Subtopics:

- **High Pressure Processing:** Definition, principles of high-pressure processing and effects of high pressure on food quality.
- **Hurdle Technology:** Concept and effect on preservation of food.

UNIT II: Pulsed electric fields processing (8 hrs)

Unit Description: The unit will introduce fundamentals of puled electric field processing. It also deals with concept of e-beam.

Subtopics:

- **Pulsed electric fields processing:** Definition, PEF treatment systems, main processing parameters, mechanisms of microbial inactivation.
- **Concept of E-beam**

UNIT III: Ultrasound and radiofrequency processing (6 hrs)

Unit Description: The unit will help in understanding the use of ultrasound and radiofrequency processing in food industry.

Subtopics:

- Ultrasound as a food preservation and processing aid, effects of ultrasound on food properties
- Radio-frequency processing.

UNIT IV: (6 hrs)

Unit Description: The unit will provide and insight to various other novel processing techniques such as microwave heating, dielectric heating, ohmic heating, irradiation that aids in food preservation.

Subtopics:

- Microwave heating
- Dielectric heating
- Ohmic heating
- Irradiation
- UV-C radiation
- Ozone
- Plasma technology

PRACTICAL
(2 Credits, 60 Hrs)

- Market survey of novel processed foods available
- Concept of hurdle technology
- Blanching using UV light
- Ultrasonication
- Setting up of Ohmic heater
- Applications of Microwave processing
- Layout of irradiation unit
- Ohmic heating process calculations
- Quality analysis of novel processed foods vs conventionally processed foods

Essential readings:

1. P J Fellows (2009). Food Processing Technology: Principles and Practice. Third edition. Wood Head Publishing in Food Science, Technology and Nutrition.
2. Howard Q. Zhang, Gustavo V. Barbosa-Cánovas, V. M. Bala Balasubramaniam, C. Patrick Dunne, Daniel F. Farkas, James T. C. Yuan (2011). Nonthermal Processing Technologies for Food. Wiley-Blackwell.
3. Ortega-Rivas, Enrique (2012). Non-thermal Food Engineering Operations. Springer.
4. Chauhan, O. P. (Ed.). (2019). *Non-thermal processing of foods*. CRC Press.
5. Potter NN and Hotchkiss H J (1996). Food Science, Fifth Edition.CBS Publication, New Delhi.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

COMMON POOL OF GENERIC ELECTIVES (GE) COURSES

GENERIC ELECTIVE (GE FT 03) : SENSORY EVALUATION OF FOOD

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course	Department offering the course
		Lecture	Tutorial	Practical/ Practice			
Sensory Evaluation of Food	4	3	0	1	Class XII	NIL	Home Science

Learning Objectives:

1. To understand sensory organs and their role in sensory evaluation
2. To obtain a basic knowledge of objective and subjective evaluation of food
3. To know the importance of sensory panels and testing methods.
4. Understanding the application of sensory evaluation in food industry.

Learning Outcomes:

Students will be able to:

1. Recognize basic tastes and derived tastes in food.
2. Describe flavours, colours and texture in foods.
3. Comprehend concept of sensory panels and various instruments used in assessing the quality parameters of food.

SYLLABUS OF GE FT01

THEORY
(Credits 3; Periods 45)

UNIT I: Taste **12 Hours**

Unit Description: Chemistry of five basic taste and their perception through tongue

Subtopics:

- Introduction and importance of taste
- Structure and physiology of taste organs- tongue, papillae, tastebuds, salivary glands
- Mechanism of taste perception

- Chemical dimensions of basic tastes- sweet, salt, sour, bitter andumami
- Factors affecting taste quality, reaction time, tastemodification, absolute and recognition threshold
- Taste measurement-Electronic Tongue.
- Taste abnormalities

UNIT II: **Odour** **11 Hours**

Unit Description: Identification of various types of odour's their perception and measurement.

Subtopics:

- Introduction, definition and importance of odour and flavour
- Anatomy of nose, physiology of odour perception
- Mechanism of odour perception
- Odour classification.
- Odour measurement-GC-MS, Electronic Nose,
- Olfactory abnormalities

UNIT III: **Colour** **11 Hours**

Unit Description: Various attributes of colour and their objective measurement in foods.

Subtopics:

- Introduction and importance of colour
- Dimensions and attributes of colour, appearance factors, glossetc.
- Perception of colour
- Colour abnormalities
- Measurement of colour; Munsell colour system,Tintometer, CIE colour system, Hunter colour system.

UNIT IV: **Texture** **11 Hours**

Unit Description: Concept of texture and its objective assessment. Rheology of all foodgroups and instruments used.

Subtopics:

- Introduction, definition and importance of texture
- Phases of oral processing
- Texture perception, receptors involved in texture perception
- Texture classification
- Texture measurement – basic rheological models, forces involvedin texture measurement
- Some objective methods of texture evaluation offoods- TPA, mixograph, Extensiograph, amylograph, spreadimeter, compressimeter etc.

PRACTICAL

(Credit 1; Periods 30)

- Training of sensory panel.
- To perform recognition and sensitivity tests for four basic tastes.
- To perform analytical tests of sensory evaluation.
- Recognition tests for various food flavours.
- Flavour defects in milk.
- Sensory evaluation of dairy products-milk/cheese/butter/ice cream.
- Extraction of pigments from various fruits and vegetables and study the effect oftemperature and pH.
- Texture Profile Analysis of any food product- cookies/ biscuits/chips/fruits.
- Measurement of colour by using Tintometer/ Hunter Colour Lab etc.

Essential readings:

1. Rao, E. S. (2013). Food Quality Evaluation, Variety Books, New Delhi
2. DeMan, J. (2007). Principles of Food Chemistry, 3rd ed., Springer.
3. Meilgard. (1999). Sensory Evaluation Techniques, 3rd ed. CRC Press LLC.

Suggested readings:

1. Amerine, Pangborn, & Roessler. (1965). *Principles of Sensory Evaluation of food*. London:Academic Press.
2. Harry, T., Lawless, Barbara. & Klien, P. (1991). *Sensory Science Theory and Applications inFood*. Marcel Dekker Network.
3. Rao, E.S. (2014). *Food Quality Testing and Evaluation- Sensory Test Instrumental Techniques*.New Delhi: Variety Book Publishers Distributors

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

B.A (Prog) with Nutrition and Health Education (NHE) as Major

Category-II

DISCIPLINE SPECIFIC CORE COURSE – DSC-5-NHE: FOOD REPORTING AND WRITING

CREDIT DISTRIBUTION, ELIGIBILITY AND PREREQUISITES OF THE COURSE

Course Title & Code	Credits	Credit distribution of the course			Eligibility Criteria	Prerequisite of the course
		Lecture	Tutorial	Practical/ Practice		
Food Reporting and Writing	4	3	0	1	Class XII	Nil

LEARNING OBJECTIVES:

1. To introduce students to the concept and prospects of food reporting.
2. To make the students learn to creatively write their own food stories for different forms of food media.
3. To help students gain an understanding of the wide-ranging and pervasive nature of food reporting and writing.
4. To make the students understand the importance of food reporting and writing for creating a sustainable food future.

LEARNING OUTCOMES:

After completion of the course, the students will be able to:

1. Hone food reporting skills and critical analysis of different forms of food media.
2. Create original food writing appraising the sustainable essence of food.
3. Articulate how food writing and reporting can be used as a medium for attaining a sustainable food future.

SYLLABUS OF DSC-5

THEORY
(Credits 3: 45 Hours)

Unit 1: Food Reporting **(10 Hours)**

- *Unit Description*: This unit will introduce the concept of food reporting, different steps involved, skills required to become a good food reporter and the future prospects of food reporting.

- *Subtopics:*
  - Concept of food reporting
  - Steps of reporting
  - Skills of a good food reporter
  - Prospects of food reporting

Unit 2: Food Writing **(15 Hours)**

- *Unit Description:* This unit will train the students to become a good café/restaurant critic as well as help in developing their writing skills for different forms of food media.

- *Subtopics:*
  - Guidelines to write a good food review
  - How to become a good café/restaurant critic
  - Recipe writing
  - Food writing in newspapers, magazines, social media, food blogs

Unit 3: Food Reporting and Writing on Sustainability Issues **(20 Hours)**

- *Unit Description:* This unit will lay emphasis on food reporting and writing on sustainablility issues for achieving nutrition security and a sustainable food future.

- *Subtopics:*
  - Importance of food reporting and writing on sustainability issues
  - Food writing and reporting on sustainability issues:
    - Shifting to healthier and more sustainable foods/diets
    - Reduce food loss and waste
    - Consumption of millets for sustainable agriculture and attaining nutrition security
    - Smart farming – the next green revolution
    - Going green – demand for organic food
    - Growing local – going global

PRACTICAL
(Credits 1: 30 Hours)

Unit 1: Food Reporting **(15 Hours)**

- *Subtopics:*
  - Interview a cook/chef
  - Critical reporting of food related information across various forms of media

Unit 2: Food Writing **(15 Hours)**

- *Subtopics:*
  - Visiting a café/restaurant and writing a review
  - Authentic ethnic food essay
  - Crafting food memoir
  - Travel related food story
  - Food blog on sustainability issues

ESSENTIAL/RECOMMENDED READINGS:

1. Jacob, D. (2010) Will Write for Food. 2nd edition. Cambridge: Da Capo Press.
2. Hughes,H. (2017) Best food writing. 1st edition. New York, NY, Da Capo Lifelong.
3. Siniauer, P. (2015) Writing about Food – a guide to good food journalism. Freie Universität Berlin Helsingin Sanomat Foundation. https://www.hssaatio.fi/wp-content/uploads/2015/07/Siniauer_WRITE-ABOUT-FOOD-a-guide-to-good-food-journalism.pdf
4. Gilbert, S. & Porter, R. (Eds). (2015). Eating Words: The Norton Anthology of Food Writing. New York: W. W. Norton & Company.

SUGGESTED READINGS:

1. Fusté-Forné, Francesc & Masip, Pere. (2019). *Food and journalism*. 10.4324/9781351123389-11.
2. Searchinger, T., Waite, R., & Hanson, C., & Ranganathan, J. (2019). World Resources Institute. World Resources Report. Creating a sustainable food future – a menu of solutions to feed nearly 10 billion people by 2050. Matthews, E (Ed.). https://research.wri.org/sites/default/files/2019-07/WRR_Food_Full_Report_0.pdf

DISCIPLINE SPECIFIC CORE COURSE – DSC-6-NHE: BASICS OF FOOD SAFETY

CREDIT DISTRIBUTION, ELIGIBILITY AND PREREQUISITES OF THE COURSE

Course Title & Code	Credits	Credit distribution of the course			Eligibility Criteria	Prerequisite of the course
		Lecture	Tutorial	Practical/ Practice		
Basics of Food Safety	4	3	1	0	Class XII	Nil

LEARNING OBJECTIVES:

1. To introduce students to the basic concepts of food safety, hygiene, and types of microorganisms associated with food.
2. To equip them with the knowledge of food adulteration and contamination, food borne diseases, and role of microbes in food spoilage.

LEARNING OUTCOMES:

After completion of the course students will be able to:

1. Understand the important genera of microorganisms associated with food and their characteristics.
2. Explain the role of microbes in food spoilage and food borne diseases.
3. Describe food safety and hygiene, types of hazards associated with food.
4. Understand current food safety and standard regulations.

SYLLABUS OF DSC-6

THEORY
(Credits 3: 45 Hours)

Unit 1: Introduction to Food Safety (7 Hours)

- *Unit Description:* This unit will introduce the concept of food safety, hazards and factors affecting food safety.

- *Subtopics*
  - Definitions
  - Importance of food safety
  - Factors affecting food safety
  - Types of hazards
  - Safe-Unsafe food for consumption

Unit 2: Microorganisms in Food (16 Hours)

- *Unit Description:* This unit will introduce the important genera of microorganisms associated with food, their characteristics and factors affecting it.

- *Subtopics:*
  - Bacteria, yeast, mold and virus
  - Role of microbes in food spoilage
  - Food infection and intoxication
  - Food poisoning

Unit 3: Food Safety and Quality Assurance (12 Hours)

- *Unit Description:* This unit will introduce the food additives, adulteration and food regulations.

- *Subtopics:*
  - Food additives
  - Food adulteration
  - Nutritional labelling
  - Food safety and standard regulation
  - HACCP, GMP, GHP

Unit 4: Recent Concerns of Food Safety **(10 Hours)**

- *Unit Description:* This unit will introduce the emerging concerns and new challenges to food safety.

- *Subtopics:*
  - Emerging concerns for food safety
  - Street food safety
  - New challenges to food safety

ESSENTIAL/RECOMMENDED READINGS:

1. Forsythe, S J. (1987) Microbiology of Safe Food.USA: Blackwell Science, Oxford.

B.A (Prog) with Apparel Design and Construction (ADC) as Major

Category-II

DISCIPLINE SPECIFIC CORE COURSE – DSC-5-ADC: INDIAN AND WORLD COSTUMES

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course Title & Code	Credits	Credit distribution of the course			Eligibility Criteria	Prerequisite of the course
		Lecture	Tutorial	Practical/ Practice		
Indian and World Costumes	4	3	1	0	Class XII	Nil

LEARNING OBJECTIVES:

- To give the learners insights into the various styles of Indian and World costumes from ancient times onwards.
- To provide sources of inspiration for the students for their creations and collections.

LEARNING OUTCOMES:

After completing this course, the learner will be able to:

- Compare and contrast the features of salient ancient and historical Indian costumes
- Appreciate the various styles of traditional Indian costumes
- Identify and differentiate the various costumes of different countries/ regions of the World
- Use the knowledge of traditional and Historical costumes in creating contemporary fashion collections.

SYLLABUS OF DSC-5

THEORY
(Credits 3: 45 Hours)

UNIT I: Ancient and Historical Indian Costumes (10 Hours)

- *Unit Description:* This unit provides an understanding of the costumes worn during Ancient India and different periods in the history starting from Mauryan Empire to Mughal Empire.

- *Sub Topics:*
  - Ancient Indian Costumes - Indus valley civilization, Vedic period
  - Overview of Historic Indian Costumes - Maurya period, Gupta, Mughal period.

Unit II: Traditional Costumes of India (15 Hours)

- *Unit Description:* This unit provides basic understanding of diverse traditional costumes of different regions of India.

- *Sub Topics:*
    - Common Traditional Indian Garments and their regional variations – Kurta and Dhoti/ Pyjama, Lehnga-choli, Salwar/Chudidar and Kameez, Bandgala, Pheran, Angrakha.
    - Saree draping styles of different regions of India.
    - Salient Traditional Costumes of Southern and North-Eastern States of India.

Unit III: Costumes of the World **(20 Hours)**

- *Unit Description:* This unit introduces the learners to the diverse ancient and traditional costumes popular in different regions/ countries of the world.

- *Sub Topics:*
    - Overview of Ancient Costumes - Egyptian, Greek, Roman
    - Characteristic features of salient Historic European costumes
    - Salient Traditional Costumes – Middle East, Africa
    - Traditional World Costumes: Kilt (Scotland), Gho and Kira (Bhutan), Tracht (Germany), Flamenco Dress (Spain), Kimono (Japan), Cheongsam, Hanfu and Tang Suit (China), Ao Dai (Vietnam), Sarafan (Russia), Greek Fustanella, Hanbok (South Korea), Bunad (Norway), Barong Tagalog and Baro at Saya (Philippines), Charro suit (Mexico)
    - Project: Study of the traditional/ historic costume of a specific country or region.
    - Visit to Dolls Museum, Textile Museum and Exhibitions

ESSENTIAL READINGS:

1. Alkazi Roshen, (2011), Ancient Indian Costume, National Book Trust.
2. Bhatnagar Parul, (2009), Traditional Indian Costumes and Textiles, Abhishek Publication
3. Black J. Anderson, Garland Madge, (1990), A History Of Fashion, Black Cat Publication.
4. N.N. Mahapatra, (2016), Sarees of India, Woodhead Publishing India Pvt Ltd
5. Peacock John, (2010), The Chronicle of Western Costume: From The Ancient World To The Late Twentieth Century, Thames & Hudson.
6. Welters Linda, Lillethun Abby, (2018), Fashion History: A Global View (Dress, Body, Culture), Bloomsbury Visual Arts.

SUGGESTED READINGS:

1. A Biswas, (2017), Indian Costumes (Second Edition), Publication Division, India.
2. Dorris Flyn, (1971), Costumes of India, Oxford & IBH Publishing Co, Delhi.
3. Jamila Brij Bhushan, (1958), The costumes and textiles of India, D B Taraporevala Sons & Co.

DISCIPLINE SPECIFIC CORE COURSE – DSC-6-ADC: TEXTILE DESIGN TECHNIQUES

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course Title & Code	Credits	Credit distribution of the course			Eligibility Criteria	Prerequisite of the course
		Lecture	Tutorial	Practical/ Practice		
Textile Design Techniques	4	2	0	2	Class XII	Nil

LEARNING OBJECTIVES:

- To introduce the learners to the various applied textile design techniques.
- To provide comprehensive knowledge about the concepts of dyeing and printing.
- To create an understanding of the various traditional Indian embroideries and textiles.

LEARNING OUTCOMES:

After completion of the course, the students will be able to:

- Identify and describe the various methods of applied textile design techniques
- Classify and select dyes based on suitability and fastness for different fabrics.
- Explain the importance and methods of testing colour-fastness of dyes.
- Differentiate between and explain the styles and methods of printing.
- Identify the common dyeing and printing defects.
- Identify and describe the special features of select Indian hand embroideries and traditional Indian textiles
- Apply dyeing and printing techniques such as tie and dye, block printing, screen printing and batik on fabrics
- Apply creative fabric manipulation/ embellishment techniques in apparel design projects.

SYLLABUS OF DSC-6

THEORY
(Credits 2: 30 Hours)

UNIT – 1: Introduction to Textile Design Techniques (3 Hours)

- *Unit Description:* This unit introduces the learners to the various applied textile design techniques.

- *Sub Topics:*
  - Introduction to the various applied textile design techniques - Dyeing and printing, Hand and machine embroidery, Fabric manipulation, Surface embellishment.

- Project: Collection and compilation of Fabric swatches/ images of the various methods of textile design techniques.

UNIT – 2: Dyeing and Printing (12 Hours)

- *Unit Description:* This unit provides an understanding of the various concepts and methods related to dyeing and printing.

- *Sub Topics:*
  - Classification of Dyes - Natural dyes and Synthetic dyes
  - Dye classes: their suitability and fastness on different fabrics-direct, reactive, acid, vat, disperse dyes, pigments; Dyeing procedures: Direct, Reactive, Acid dyes
  - Methods of dyeing: Solution dyeing, Fibre dyeing. Yarn dyeing, Fabric dyeing, Garment dyeing - their effect on finished fabric.
  - Colour-fastness, Testing Wash fastness and Light fastness
  - Styles of printing – Direct, Discharge, Dyed (Mordant), Resist – Tie and Dye, Batik, Mud resist
  - Methods of printing – Stencil, Block, Roller, Screen, Rotary screen, Heat Transfer, Digital, Flock; Newer methods of printing
  - Common dyeing and printing defects

Unit - 3: Traditional Indian Embroideries and Textiles (15 Hours)

- *Unit Description:* This unit creates an understanding and appreciation of the various traditional Indian embroideries and textiles.

- *Sub Topics:*
  - Indian Hand Embroideries with reference to Motifs, Color combination, Types and Stitches used: Kantha, Phulkari, Kasuti, Kashida, Mirrorwork (Gujarat), Chikankari
  - Traditional Indian Textiles with reference to History, production centres, techniques, designs and colours: Brocades, Baluchari, Jamdani, Bandhni, Ikat and patola

PRACTICAL
(Credits 2: 60 Hours)

1. Tie and dye technique
2. Block and Screen printing
3. Batik technique
4. Preparation of samples using creative fabric surface manipulation/ embellishment techniques
5. Preparation of an article/garment using a combination of techniques learnt above.

ESSENTIAL READINGS:

1. Corbman, P.B. (1985). *Textiles-Fibre to Fabric*. USA: McGraw Hill Book Co.

DISCIPLINE SPECIFIC CORE COURSE – DSC-6-ADC: TEXTILE DESIGN TECHNIQUES

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course Title & Code	Credits	Credit distribution of the course			Eligibility Criteria	Prerequisite of the course
		Lecture	Tutorial	Practical/ Practice		
Textile Design Techniques	4	2	0	2	Class XII	Nil

LEARNING OBJECTIVES:

- To introduce the learners to the various applied textile design techniques.
- To provide comprehensive knowledge about the concepts of dyeing and printing.
- To create an understanding of the various traditional Indian embroideries and textiles.

LEARNING OUTCOMES:

After completion of the course, the students will be able to:

- Identify and describe the various methods of applied textile design techniques
- Classify and select dyes based on suitability and fastness for different fabrics.
- Explain the importance and methods of testing colour-fastness of dyes.
- Differentiate between and explain the styles and methods of printing.
- Identify the common dyeing and printing defects.
- Identify and describe the special features of select Indian hand embroideries and traditional Indian textiles

- Apply dyeing and printing techniques such as tie and dye, block printing, screen printing and batik on fabrics
- Apply creative fabric manipulation/ embellishment techniques in apparel design projects.

SYLLABUS OF DSC-6

THEORY
(Credits 2: 30 Hours)

UNIT – 1: Introduction to Textile Design Techniques (3 Hours)

- *Unit Description:* This unit introduces the learners to the various applied textile design techniques.

- *Sub Topics:*
  - Introduction to the various applied textile design techniques - Dyeing and printing, Hand and machine embroidery, Fabric manipulation, Surface embellishment.
  - Project: Collection and compilation of Fabric swatches/ images of the various methods of textile design techniques.

UNIT – 2: Dyeing and Printing (12 Hours)

- *Unit Description:* This unit provides an understanding of the various concepts and methods related to dyeing and printing.

- *Sub Topics:*
  - Classification of Dyes - Natural dyes and Synthetic dyes
  - Dye classes: their suitability and fastness on different fabrics-direct, reactive, acid, vat, disperse dyes, pigments; Dyeing procedures: Direct, Reactive, Acid dyes
  - Methods of dyeing: Solution dyeing, Fibre dyeing. Yarn dyeing, Fabric dyeing, Garment dyeing - their effect on finished fabric.
  - Colour-fastness, Testing Wash fastness and Light fastness
  - Styles of printing – Direct, Discharge, Dyed (Mordant), Resist – Tie and Dye, Batik, Mud resist
  - Methods of printing – Stencil, Block, Roller, Screen, Rotary screen, Heat Transfer, Digital, Flock; Newer methods of printing
  - Common dyeing and printing defects

Unit - 3: Traditional Indian Embroideries and Textiles (15 Hours)

- *Unit Description:* This unit creates an understanding and appreciation of the various traditional Indian embroideries and textiles.

- *Sub Topics*:
  - Indian Hand Embroideries with reference to Motifs, Color combination, Types and Stitches used: Kantha, Phulkari, Kasuti, Kashida, Mirrorwork (Gujarat), Chikankari
  - Traditional Indian Textiles with reference to History, production centres, techniques, designs and colours: Brocades, Baluchari, Jamdani, Bandhni, Ikat and patola

PRACTICAL

(Credits 2: 60 Hours)

1. Tie and dye technique
2. Block and Screen printing
3. Batik technique
4. Preparation of samples using creative fabric surface manipulation/ embellishment techniques
5. Preparation of an article/garment using a combination of techniques learnt above.

B.A (Prog.) with Human Development and Family Empowerment (HDFE) as Major
Category-II

DISCIPLINE SPECIFIC CORE COURSE – DSC-5-HDFE: GENDER AND SOCIAL JUSTICE IN INDIA

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITE OF THE COURSE

Course Title & Code	Credits	Credit distribution of the course			Eligibility Criteria	Prerequisite of the course
		Lecture	Tutorial	Practical/ Practice		
Gender and Social Justice in India	4	2	0	2	Class XII	Nil

LEARNING OBJECTIVES:

- To understand the different terms used to discuss gender.
- To understand about the social construction of gender.
- To understand the situation of gender justice in India.

LEARNING OUTCOMES:

After completion of the course, the students will be able to:

- Understand the different terms used to discuss gender.
- Understand about the social construction of gender
- Understand the situation of gender justice in India.

THEORY
(Credits 2: 30 Hours)

Unit 1: Understanding Gender **(10 Hours)**

- *Unit Description:* Student will get aware about different terms related to gender

- *Subtopics:*
  - Defining terms- Sex and Gender, Masculinity v/s Femininity, Feminism
  - Gender Identity and Gender Fluidity: LGBTQ+ Communities

Unit 2: Social Construction of Gender **(10 Hours)**

- *Unit Description:* The emphasis of this unit will be on patriarchy and violence against women and children.

- *Subtopics:*
    - Gender Stereotypes and Patriarchy
    - Violence against girl child and women

Unit 3: Gender Justice in India **(10 Hours)**

- *Unit Description:* This unit will introduce regarding Constitutional provisions for Women

- *Subtopics:*
    - Constitutional provisions for Women
    - Laws and policies for Women

PRACTICAL
(Credits 2: 60 Hours)

Unit 1: Visit to any one organisation working in the area of Women's Rights

Unit 2: Seminar / Webinar/ Talk by professional working in the area of Women empowerment and the girl child.

Unit 3: Initiatives by the Government in the area of Gender Justice in the last 5 years- Discussion and Documentation.

ESSENTIAL / RECOMMENDED READINGS:

1. Bhasin, Kamla (2000). Understanding Gender. New Delhi. Kaali for Women.
2. Goel, A, Kaur, A and Sultana, A (2006). Violence against women: Issues and Perspectives. New Delhi, Deep & Deep Publishers.
3. Kataria, K. and Parihar, M. (2017) Women Empowerment Gender Equality and Social Justice. Books Treasure.
4. Monica, C. (2022). Gender Justice: Women and Law in India. Deep & Deep Publications.

DISCIPLINE SPECIFIC CORE COURSE – DSC-6-HDFE: EMPOWERMENT OF WOMEN AND CHILDREN

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITE OF THE COURSE

Course Title & Code	Credits	Credit distribution of the course			Eligibility Criteria	Prerequisite of the course
		Lecture	Tutorial	Practical/ Practice		
Empowerment of Women and Children	4	2	0	2	Class XII	Nil

LEARNING OBJECTIVES:

- To develop an understanding about the status of women and children in India.
- To gain awareness about programmes and services for women and children in India.
- To gain understanding about the importance of maternal health and education.

LEARNING OUTCOMES:

After completion of the course, the students will be able to:

- Understand the status of women and children in India.
- Evaluate various programmes and services for women and children in India.
- Understand the importance of maternal health and education.

THEORY
(Credits 2: 30 Hours)

Unit 1: Status of Women and Children in India (08 hours)

- *Unit Description*: This unit focuses on the demographic profile of women and children and important issues concerning them.

- *Subtopics:*
  - Demographic profile of women and children.
  - Issues related to women and children.

Unit 2: Programmes and Services for Women Empowerment (12 hours)

- *Unit Description*: This unit focuses on various programmes and services for women and children in the country.

- *Subtopics:*
  - Women Empowerment: Definition, Need and Importance

- Programmes for Women: Any two
- Programmes for Children: Any Two

Unit 3: Maternal Health and Education (10 hours)

- *Unit Description*: This unit focuses on the importance of maternal health and education and its impact on child development.

- *Subtopics:*
  - Importance of Maternal Health and Education
  - Impact of Maternal Health and Education on Child Development
  - Maternal Mortality: Statistics, Causes and Prevention

PRACTICAL
(Credits 2: 60 Hours)

Unit 1: Visit to one organization working for children.

Unit 2: Visit to one organization working for women.

Unit 3: Review of one movie/ documentary/ video/ book based on children.

Unit 4: Interview of a mother to understand the importance of education and awareness in raising healthy children.

B.A. (Prog) with Food Technology (FT) as Major
Category-II

DISCIPLINE SPECIFIC CORE COURSE – DSC-5-FT:

FOOD BUSINESS OPERATIONS AND ENTREPRENEURSHIP

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course Title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Food Business Operations and Entrepreneurship	4	3	0	1	Class XII	Nil

LEARNING OBJECTIVES:

1. To familiarize students with various food business operations.
2. To make students understand the principles of managing food business
3. To introduce students with the concept of entrepreneurship and commercial food handling.

LEARNING OUTCOMES:

After completion of the course, the students will be able to:
1. Gain theoretical and practical knowledge related to management of food business
2. Lead team or be team members in executing salient unit operations in food processing plant
3. Plan the layouts and designs of commercial kitchen
4. Initiate the entrepreneurial journey in the field food production and processing.

SYLLABUS OF DSC-5-FT

THEORY
(Credits 3: 45 Hours)

UNIT I: Unit I: Food Business Operations **(14 Hours)**

- *Unit Description:* This introductory chapter shall appraise the students about the myriad opportunities associated with food business industry in India. It will also help them understand about the significance and principles of salient unit operations carried out in food processing units.

- *Subtopics:*
  - Scope and Trends of food business in Indian Scenario
  - Salient unit operations in food processing plant – purchase, storage and inventory, grading, sorting, pre-preparation techniques, salient processing operations (Thermal and Non-thermal Processing), marketing and distribution.

UNIT II: Management of Food Business (12 Hours)

- *Unit Description:* This unit will help students understand the principles of managing a food business unit. The important concepts necessary for establishing and running a food business shall also be covered.

- *Subtopics:*
  - FSSAI regulations related to registration and licensing
  - Principles of management
  - Innovative food start-ups
  - Scheduling and forecasting
  - IT Applications and MIS in operations management.

UNIT III: Entrepreneurship (9 Hours)

- *Unit Description:* The chapter shall help student understand the scope and nuances of being an entrepreneur.

- *Subtopics:*
  - Definition and characteristics of an entrepreneur
  - Objectives and phases in entrepreneurship development
  - Types and traits of entrepreneurship
  - Case studies on small scale to large scale food entrepreneurs (Indian traditional family food business).

Unit IV: Commercial Food Production Layout (10 Hours)

- *Unit Description:* Food processing area plays a crucial role in processing food thus, this unit will help students understand the need for different types of kitchens for different types of foods/ food catering units.

- *Subtopics:*
  - Introduction to the concept of commercial kitchen
  - Types of commercial kitchens
  - Principles of commercial kitchens
  - Layouts and designs

PRACTICAL
(Credits 1: 30 Hours)

No. of Students per Practical Class Group: 10-15

1. Prepare presentation on Case study of traditional and contemporary food business (4 Hours)

2. Developing standard operating procedures (SOP) for the pre-preparation of a processed food product (2 Hours)
3. Developing an SOP for the processing of a processed food product (2 Hours)
4. Prepare a checklist for food safety management for any food production unit (4 Hours)
5. Prepare a layout for a commercial/ cloud kitchen (4 Hours)
6. Prepare a presentation on opportunities for raising funds such as bank loans, government schemes, CSR (6 Hours)
7. Developing an SOP for the sale and distribution of a perishable commodity (4 Hours)
8. Plan and implement a food product sale in college premises (4 Hours)

ESSENTIAL/ RECOMMENDED READINGS (Theory and Practical):

DISCIPLINE SPECIFIC CORE COURSE – DSC-6-FT: BASIC BAKING TECHNOLOGY

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course Title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Basic Baking Technology	4	3	0	1	Class XII	Nil

LEARNING OBJECTIVES:

- To impart students' basic knowledge related to the principles of baking
- To introduce the concept of proximate analysis and quality assessment of wheat flour
- To introduce them to the techniques and skills of cake and pastry making.

LEARNING OUTCOMES:

After completion of the course, the students will be able to:

- Describe the present and future trends of the bakery industry.
- Illustrate the basic ingredients and equipment used for baking along with their significance
- Develop and demonstrate the skills of preparing variety of cakes and pastries.
- Evaluate the quality of baked products
- Test wheat flour and conduct labeling, packaging and costing of prepared bakery products.
- Initiate the entrepreneurial journey in the field of bakery.

SYLLABUS OF DSC-6-FT

THEORY
(Credits 3: 45 Hours)

UNIT I: Baking Industry **(10 Hours)**

- *Unit Description:* This unit will introduce the students to the field of Food Bakery Science. It will also give information on nutrition facts of Bakery products.

- *Subtopics:*

- History of bakery - present trends and prospects
- Nutrition facts about bakery products
- Food safety aspects of baked products

UNIT II: Wheat Grain, Baking Ingredients and Equipment (18 Hours)

- *Unit Description:* The unit will focus on various aspects of structure and composition wheat grain and flour. It will also give information on bakery equipments.

- *Subtopics:*
  - Wheat grain– its structure
  - Milling of wheat, types of refined wheat flour; composition of refined wheat flour (gluten, amylose/ amylopectin, enzyme activity, moisture) and its storage
  - Bakery Equipments- oven, mixing tools and accessories

UNIT III: Cake Processing (12 Hours)

- *Unit Description:* The unit is about processing of various types of cakes, their labelling, packaging and evaluation.

- *Subtopics:*
  - Preparation of cakes - types of cakes, methods of batter preparation, steps in cake making, balancing of cake formula, evaluation of the baked cake, operational faults in cake processing and the remedial measures.
  - Packaging, labelling, and costing

UNIT IV: Pastry Technology (5 Hours)

- *Unit Description:* The unit is about processing of various types of pastries, and their evaluation.

- *Subtopics:*
  - Preparation of pastry - types of pastries (short crust, puff/flaky and choux pastry), processing and evaluation, faults and remedies.

PRACTICAL
(Credits 1: 30 Hours)

No. of Students per Practical Class Group: 10-15

1. Quality Testing of Flour: Determination of water absorption power (WAP) of refined wheat flour and whole wheat flour (2 Hours)
2. Determination of moisture content of refined wheat flour (2 Hours)
3. Preparation of Sensory evaluation card (Hedonic scale) for various baked products (2 Hours)
4. Preparation, labelling and sensory evaluation of cakes (12 Hours)
   -Fatless sponge (pineapple sponge, chocolate sponge and Swiss roll)
   -Shortened cake (plain tea cake, Dundee cake, marble cake, fruit cake and innovative nutritious cakes)
   -Eggless cake

5. Preparation and sensory evaluation of pastry (8 Hours)
   -Short crust (jam tarts)
   -Puff/flaky (Bombay khari, vegetable patties/ puff)
   -Choux pastry (chocolate éclairs)
6. Market survey of innovative nutritious bakery products (4 Hours)

ESSENTIAL/ RECOMMENDED READINGS (Theory and Practical):

ANNEXURE-9

N O T I F I C A T I O N

Sub: Amendment to Ordinance V

[E.C Resolution No. 60-1/(60-1-6/-) dated 03.02.2023]

Following addition be made to Appendix-II-A to the Ordinance V (2-A) of the Ordinances of the University;

Add the following:

Syllabi of Semester-III of the following departments under Faculty of Science based on Under Graduate Curriculum Framework -2022 implemented from the Academic Year 2022-23.

FACULTY OF SCIENCE

DEPARTMENT OF ANTHROPOLOGY

BSC. (HONS.) ANTHROPOLOGY

DISCIPLINE SPECIFIC CORE COURSE -7 (DSC-7)
Fundamentals of Human growth and development

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical / Practice		
Fundamentals of Human growth and development - DSC-7	04	03	Nil	01	Passed 10+2 with Science	NIL

Learning objectives

- Students will be able to learn about various stages and environmental factors involved in human growth and development which help them in understanding growth monitoring of a child.
- They will understand the role played by balance diet in leading a healthy life.

Learning outcomes

By studying this course, students will be able to

- Differentiate the term- growth, maturation and development.
- Understand the basic principles of human growth and development
- Comprehend the significance of growth studies

Syllabus of DSC-7

Unit 1: Introduction to Human growth and development (6 hours)

Concept of human growth, development, differentiation and maturation. Evolutionary perspective of human growth (including living primates and fossil hominid ancestors)

Unit 2 : Stages and process involved in growth and development (9 hours)

Prenatal (conception till birth) and postnatal (birth till senescence) periods of growth, physical, cognitive and psycho-social development from conception through adulthood, patterns of normal growth curves, variation from normal growth (canalization, catch-up growth and catch-down growth), secular trend

Unit 3 : Factors and Methods related to growth and development (8 hours)

Bio-cultural factors (genetic, socio-cultural and ecological factors) influencing patterns of human growth and variation, methods and techniques to study growth, significance/ applicability of growth studies; Impact of life-changing health parameters on development of infants, children, adolescents and adults

Unit 4: Relevance of Nutrition in growth studies (7 hours)

Importance of Nutrition in various stages of growth and development, Balanced diet, Malnutrition, Assessment of Nutritional status

Unit 5: Role of body physique and composition in growth process (9 hours)

Human physique and body composition - models and techniques; bisexual and endogamous group differences; Somatotyping and human physique with reference to Sheldon, Parnell, Heath and Carter methods

Unit 6: Adaptation in growth and development (6 hours)

Impact of bio-cultural adaptation to environmental stresses on human growth. Homeostasis and thermoregulation

Practical (30 Hours)

Somatometry:

Stature, Body weight, Mid upper arm circumference, Minimum waist circumference, Maximum hip circumference, Upper extremity length, Lower extremity length, Biacromial breadth, Bicristal breadth), Assessment of chronological age, Percentile, z-score, height for age, weight for age, BMI for age

Obesity assessment

General adiposity indices: BMI, body fat %, Conicity index,

Regional adiposity indices: WC, WHR, WHtR

Assessment of body composition with skinfold thickness and bioelectric impedance

ANTHROPOLOGICAL THEORIES

DISCIPLINE SPECIFIC CORE COURSE -8 (DSC-8) – Anthropological Theories

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical / Practice		
Anthropological theories- DSC-8	**04**	**03**	**Nil**	**01**	Passed 12	**NIL**

Course Objective

- This is an introductory course on the main theoretical approaches which historically and traditionally guided anthropological research and understanding of society and culture.
- The course would involve theory as well as practical.
- The practical will skill the students to apply the approaches critically to study of actual social issues and problems.

Course Learning Outcomes

- The students will be able to explain the major theoretical paradigms in anthropology and link it with the social, political and economic contexts in which they have emerged.
- They should also be able to explain clearly how these ideas have contributed to the process, structure, pattern and search for meanings by human beings.

Syllabus of DSC-8

Unit 1 (15 Hours)

Anthropological Paradigms, Nature of Anthropological Knowledge, Interface with evolutionary theory and colonialism, changing perspectives on Evolutionism, Diffusionism and Culture area theories.

Unit 2 (10 Hours)

Durkheim and social integration, Functionalism and Structural-functionalism and British Social Anthropology; Culture and Psychology

Unit 3 (10 Hours)

Structuralism: Claude Levi-Strauss and Edmund Leach

Unit 4 (10 Hours)

Symbolic and Interpretative approaches; Decolonization and Antistructure, and Contemporary anthropology

Practical (30 Hours)

Practical would focus upon developing skills wherein following exercises will be undertaken by the students so as to enable them to connect the anthropological theories to the empirical world of living.

1. Identify a topic relating to contemporary issue and formulate research questions and clearly identify the theoretical perspectives from which they are derived.
2. Identification of variables of a study.
3. Various types of hypothesis ; Formulation of hypothesis; hypothesis testing and exploratory research
4. Identification of universe and unit of study with justifications.
5. Choice of appropriate research technique and method in the context of theoretical framework. Data collection and analysis

Additional Readings

Geertz, Clifford. 1973. The Interpretation of Cultures. New York: Basic Books

Moore M. and Sanders T. (2006). Anthropology in Theory: Issues in Epistemology, Malden, MA: Blackwell Publishing.

Teaching Learning Process

The students will be encouraged to reflect and apply the ideas introduced to them. Case studies and ethnographies will be read and students will be taught to how to analyze the theoretical perspectives used therein. Wherever possible documentaries and short ethnographic movies will also be shown and discussed in the class

Keywords: Evolutionism, Diffusionism, Durkheim and social integration, Functionalism and Structural- functionalism and British Social Anthropology Durkheim and social integration, Functionalism and Structural-functionalism and British Social Anthropology, Symbolic and Interpretative approaches.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

INDIAN PREHISTORY

DISCIPLINE SPECIFIC CORE COURSE -9 (DSC-9) – Indian Prehistory

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical / Practice		
Indian Prehistory-DSC-9	**04**	**03**	**Nil**	**01**	**Passed 12th**	**NIL**

Learning Objectives

The learning objectives of this course are as follows:

- The course aims to understand the evolutionary perspective of human prehistoric society in India with the help of archaeological cultural remains.
- To learn tool typology and its classification for the reconstruction of prehistoric societies.

Learning Outcomes

By studying this course, students will be able to:

- Understand the landscape of Indian archaeological sites and their relevance in studying prehistoric Indian societies.
- Identify the tools, appreciate the tool typology and classify it appropriately

Syllabus of DSC-9

Unit-1: Understanding culture (12 Hours)

Technique of tool manufacture and estimation of their relative efficiency; Classification of tools: primary and combination fabrication techniques; Typology and cultural nomenclature

Unit-2: Methods of climatic reconstruction (8 Hours)

palynology, paleontology, soil pH estimation.

Unit-3: Prehistoric India (10 Hours)

Pleistocene chronology of India: A critical assessment

Unit-4: Character, distribution and interpretation of habitat and economy of (15 Hours)

Lower Palaeolithic; Middle Palaeolithic; Upper Palaeolithic; Mesolithic culture; Art, ritual and belief

Practical (30 Hours)

Identification of tools:

(a) Handaxe varieties, chopper/chopping tools

(b) Cleaver varieties

(c) Side scraper varieties

(d) Knives

(e) Burins

Identification of lithic technology:

(f) End scrapers

(g) Borers

(h) Microlithic tools

(i) Bone tools

Moloney and Shott, M.J. Lithic Analysis at the Millennium, New York: Routledge, 2016.

Teaching Learning Process

The process of learning will involve acquisition of domain knowledge and understanding of skills required for conducting research in Indian archaeology. Process will involve lectures,

assignments, class-room discussions, practicals and appropriate inference of results and practical file preparation.

Keywords: Geochronology, India archaeology, Cave paintings

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

POOL OF DSE

Palaeoanthropology

DISCIPLINE SPECIFIC ELECTIVE COURSE -1 (DSE-1) – Palaeoanthropology

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical / Practice		
Palaeoanthropology - DSE-1	04	03	Nil	01	Passed 12th with Science	NIL

Learning Objectives

The learning objectives of this course are as follows:

- To understand the fundamentals of palaeoanthropology
- To understand the evolutionary process, assessment of skeletal variability of fossil remains, and modern humans.
- To learn the role of palaeodemography and paleopathology in studying human origins

Learning Outcomes

- Student should understand the fundamental of palaeoanthropology
- Should understand the evolutionary journey of early to modern humans
- Student should learn the role of palaeodemography and paleopathology in studying human origins

Syllabus of

DSE-1 Unit 1

(08 Hours)

Dating methods, geological time scale, taphonomy and interpretation of the paleontological and archaeological records, taxonomic and chronological problems of fossils records.

Unit 2 (08 Hours)

Primate speciation and extinctions: adaptive primate radiation

Unit 3 (10 Hours)

Evolutionary biology: Human origins: Development, distribution and fossilized evidence of Australopithecines, Paranthropus (Zinjanthropus), Homo habilis, Homo erectus, Archaic H. sapiens.

Unit 4 (07 Hours)

Primate and Non-Primate Models for Early Hominid Behaviour; hominization process- Evolution of hominid-human bipedalism

Unit 5 (06 Hours)

Palaeodemography- reconstruction of population patterns from skeletal analysis, determination of demographic variables in prehistoric populations and post-Neolithic population growth.

Unit 6 (06 Hours)

Palaeopathology- bioarchaeological approach of disease; effects of agriculture, urbanization and slavery on health and disease; colonization and disease with special emphasis on the New World.

Practical (30 Hours)

1. Comparative primate osteology

2. Description and identification of the disarticulated skeleton of non-human primates

3. Identification and description of fossil casts

Teaching Learning Process

The process of learning will involve acquisition of subject knowledge and understanding of skills required for a paleoanthropologist. Process will involve lectures, class-room discussion, assignments and practicals.

Keywords

palaeoanthropology, paleopathology, anthropology, and evolution

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Anthropology of Tourism

DISCIPLINE SPECIFIC ELECTIVE COURSE -2 (DSE-2) – Anthropology of Tourism

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical / Practice		
Anthropology of Tourism - DSE-2	04	03	Nil	01	Passed 12th	NIL

Learning Objectives

- Tourism is an important industry in India, valued and promoted by most of the states. Anthropologists have a close association to tourism, with an understanding of both the guest as well as the host community.
- The anthropology of tourism introduces the various aspects of tourism and anthropological approaches to it. It looks at the impact of tourism on the host community, its economy, culture, identity and ecology as well as how the experience of a culture can be transformative for the tourists also.
- Some of the key issues dealt in this paper are cultural aspects of tourism economy, cultural promotion and cultural preservation and its impact on authenticity and commodification of culture, fair and its management, ecotourism and sustainability.
- Types of tourism as well as well as leisure, culture learning, communication and promotion are explored in this paper.

Learning Outcomes:

The students should be able to

- explain the various aspects of tourism and the relationship between culture and tourism economy.
- place anthropology of tourism in relationship to other sub-disciplines within anthropology and allied disciplines like tourism management.
- identify those aspects of culture which can draw in the tourists, as well as allow the communities to express itself and promote their culture.
- use their skills to identify the best practices for sustainable ecotourism, mutually beneficial for the host as well the guest.

UNIT 1: Tourism and Leisure: Theoretical overview (10 Hours)

Anthropology of Tourism: Historical roots, objectives and scope. Interconnections between tourism history and the rise of the socio-cultural study of tourism; Concept of leisure and recreation.

UNIT 2: Types of Tourism (12 Hours)

Pilgrimage, medical tourism, education and tourism, recreational visits, heritage tourism, nature visits, wildlife tourism, visiting relatives, fairs and festival in tribal and rural India., Tourism industry in India : Recent trends and challenges.

UNIT 3: Tourism and Consuming Culture (13 Hours)

Tourism and cross-cultural communication and interaction; role of symbolism, semiotics, and the imagination in tourism; tourism and the commodification of culture or cultural degradation, Issues of staged authenticity

UNIT 4: Society, Tourism and Sustainability (10 Hours)

Ecotourism and sustainable development; tourism policy, applied aspects of anthropology in tourism development and planning

Practical (30 Hours)

1. Identification of three important tourist destinations including heritage, historical, religious, educational (Museum) and recreation spots and understand the historical, cultural, economic, religious and ecological aspects of tourism.

2. Case studies of any two ethnic fairs (frequented by tourists) to understand the representation of culture and culture as an industry. Case studies should focus upon the cultural creators (local people) and cultural consumers (visitors) to understand concepts like souvenir, commodification and cross- cultural communication.

Forensic Anthropology

DISCIPLINE SPECIFIC ELECTIVE COURSE -3 (DSE-3) – Forensic Anthropology

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical / Practice		
Forensic Anthropology - DSE-3	04	03	00	01	Passed 12th with Science	NIL

Learning Objectives

- To understand the basic tenets and applications of forensic anthropology
- To learn the methods and techniques involved in solving the criminal cases
- To appreciate the recent developments in the field of forensic anthropology

Learning Outcomes

- Student should be able to identify and collect the biological materials found at crime scenes
- Student should be able to use the methods and techniques in forensic anthropology
- Student should have the understanding of current knowledge of latest developments in forensic anthropology

Syllabus of DSE-3

Unit 1 (08 hours)

Introduction to Forensic Anthropology: Definition, Brief History, Scope, Applications and relationship with other sciences

Unit 2 (09 hours)

Basic Human Skeletal Biology, Identification of Human and Non-Human Skeletal Remains, Ancestry, age, sex and stature estimation from bones.

Unit 3 (11 hours)

Personal Identification, Complete and Partial Identification, Methods of Identification in Living Persons: Somatometry, Somatoscopy, Occupational Marks, Scars, Bite Marks, Tattoo Marks, hair, fingerprints, footprints, lip prints, nails, handwriting, deformities.

Unit 4 (08 hours)

Serology: Identification and Individualization of bloodstains, urine, semen and saliva strains.

Unit 5 (09 hours)

Individualization: Forensic Odontology-Tooth Structure and Growth, Bite Marks, Facial Reconstruction. DNA Profiling.

Practical (30 Hours)

1. Study of human long bones. Estimation of age, sex and stature from bones.
2. Somatometric and Somatoscopic Observation on living persons.
3. Identification of bloodstain, urine, semen and saliva.
4. Examination of Fingerprints and Handwriting.

Teaching Learning Process

The process of learning will involve the acquisition of subject knowledge and understanding of the skills required for a forensic anthropologist. The learning process will involve lectures, submission of assignments, classroom discussions, reliably conducting the experiments and inferring the results.

Assessment Methods

The theoretical understanding of the student will be assessed using time constrained examination. The assessment of the practicals will be based on conducting the experiment and presenting the results in appropriate manner.

Keywords

forensic, personal identification, DNA profiling, fingerprints

Note: Examination scheme and mode shall be as prescribed by the Examination Branch,

University of Delhi, from time to time.

.

Environmental Anthropology

DISCIPLINE SPECIFIC ELECTIVE COURSE -4 (DSE-4) – Environmental Anthropology

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical / Practice		
Environmental Anthropology - DSE-4	04	03	Nil	01	Passed 12th	NIL

Learning Objectives:

The objective of the paper is to understand about the importance of environment, the problems due to environmental degradations, etc

Learning Outcomes:

By studying the paper, the students will be able to:

- understand the nature and scope of studying environmental anthropology, basic concepts in it etc.
- know the importance of traditional ecological knowledge in conserving environment
- analyze the problems of contemporary environmental issues in the society.

Syllabus of

DSE-4 Unit 1

(13 Hours)

Concepts and Approaches: Environmental Determinism and Possibilism, Ecosystem, Cultural Ecology, Deep Ecology and Political ecology

Unit 2 (12 Hours)

Environment and Women: Nature and Culture debate, Eco-Feminism; Indigenous Knowledge and Gender

Unit 3 (10 Hours)

Issues of Climate Change in Anthropocene, Mobilization of Resource, Green Ecology & the idea of sustainability

Unit 4 (10 Hours)

Community response to recent environmental challenges: Mining, Dam, and other mega projects; resettlement and rehabilitation issues

Practical (30 Hours)

1. Prepare an evaluative study/ a project based on any contemporary environmental issues in India by employing various sources viz. books, journals, magazines, government reports newspaper articles, etc.

2. Presentation of the project and group discussion

POOL OF GENERIC ELECTIVE (GE) COURSES FOR ODD SEMESTERS

Forensic and Criminal investigations

GENERIC ELECTIVE -1 (GE-1)

Forensic and Criminal investigations

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical / Practice		
Forensic and Criminal investigations – GE-1	04	03	Nil	01	Passed 12th with Science	NIL

Course Objectives:

- Give exposure of Forensic Science to students which focuses on the investigation process of a crime.
- Enhance understanding of forensic applications and criminal investigations by teaching and research.
- Develop skills in forensic identification and problem-solving methods.
- Keep up to date knowledge about all recent developments and emerging trends in Forensic science and criminal investigation.

Course Learning Outcomes:

- Understand the aim, concept and significance of Forensic Science and Criminal Investigation.
- To make aware about recent techniques and developments of Forensic Science and Criminal Investigation.

Unit 1: Forensic Science, Crime Scene Management and criminal investigation (10 Hours)

Introduction, history, development, laws and branches of Forensic Science.

Organizational set-up of Forensic science laboratories.

Crime scene protection, isolation, documentation, sketching, field notes and photography.

Definition, concept, types and scope of crime, various control and prevention methods of crime.

Criminology, criminal anthropology and criminal law

Unit 2: Forensic Ballistics and Explosives (5 Hours)

History, background, classification and characteristics of Firearms

Internal, External, Terminal (wound) ballistics

Classification, synthesis and characteristics of explosives.

Examination and identification of firearms and explosives evidences.

Unit 3: Forensic Chemistry and toxicology (10 Hours)

Introduction, sampling, presumptive, screening and analytical techniques in Forensic Chemistry.

Definition, classification and extraction of poisons.

Toxicological techniques used in poisoning cases.

Classification of drugs, Field and laboratory tests of drugs of abuse.

Unit 4: Questioned Documents and fingerprint examination (10 Hours)

Classification of forensic documents, importance of natural variation and disguised writing

Class and individual characteristics of handwriting and documents examination.

History and classification of fingerprints, Conventional and modern methods of developing latent fingerprint.

Automated Fingerprint Identification System (AFIS).

Unit 5: Forensic anthropology, Serology and DNA profiling (10 Hours)

Personal identification of living and non- living individual through various anthropological techniques.

Forensic morphometric techniques of skeleton remains, Human and non-human identification.

Sex determination, stature and age estimation from skeleton remains

History, biochemistry and genetics of ABO, Rh, MN and other blood systems. Blood pattern analysis and blood stains ageing.

DNA profiling and its application in criminal and civil investigations.

Practical (30 Hours)

1. Descriptive study of organizational structure of a forensic science laboratory.
2. Interpretation of crime scene notes, photos, sketches, crime scene reconstruction and mock crime scene investigation.
3. Linkage of suspected bullet and cartridge case with the class and individual characteristics of firearms.
4. TLC and spot test for different toxic and drugs substances
5. Forensic identification of class and individual characteristics of handwriting
6. Examination of passports and currency notes
7. Various powder and chemical methods used for latent fingerprints.
8. Ridge characteristics, counting, and fingerprint comparison
9. Morphometric examination of skeleton remains
10. Sex determination, age and stature estimation from skeleton remains.
11. Examination of blood groups from fresh and dried blood stains
12. Preliminary and confirmatory tests for blood stains.

Anthropology of Sustainable Development

GENERIC ELECTIVE -2 (GE-2)
Anthropology of Sustainable Development

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical / Practice		
Anthropology of Sustainable Development - GE-2	04	03	Nil	01	Passed 12th	NIL

Course Objectives:

The objective of the paper is to understand the discourse around the idea of sustainable environment along with relevant issues and emerging challenges in managing the planetary crisis and the problems due to environmental degradations.

Course Learning Outcomes:

By studying the paper, the students will be able to:

- Understand the nature and scope of sustainable development, basic concepts in it.
- Know the importance of traditional ecological knowledge in sustainable development
- Contemporary issues and challenges in sustainable development and environmental degradation, biodiversity and conservation.

Unit 1 (10 Hours)

Notion of Sustainable Development, Genesis and Approaches; Economy, Equity and Environment: Idea of Triple Bottom-line

Unit 2 (15 Hours)

United Nation's Sustainable Development Goals, Interconnections and Integration, Cultural diversity and Execution of SDG: Ethnographic Cases, Frameworks of Assessment

Unit 3 (10 Hours)

Issues of planetary Crisis and idea of sustainable livelihood, Alternative and Sustainable use of natural resources: water, energy, mines and materials

Unit 4 (10 Hours)

Environmental Issue: Biodiversity, Indigenous Knowledge, Traditional Practices associated with sustainable nature

Practical (30 Hours)

Prepare an evaluative study/ a project based on any contemporary issue in India by employing various sources viz. books, journals, magazines, government reports newspaper articles, etc.

1. Presentation of the project and group discussion

Biodiversity and Indigenous Knowledge

GENERIC ELECTIVE -3 (GE-3)

Biodiversity and Indigenous Knowledge

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical / Practice		
Biodiversity and Indigenous Knowledge – GE-3	04	03	Nil	01	Passed 12th	NIL

Course Objective

- The course will help the students in understanding how indigenous knowledge and biodiversity are complementary phenomena essential to human development.
- Students will recognize indigenous knowledge as an important national resource and understand the collective knowledge of biodiversity and its use.

Course Learning Outcomes

- Students will learn basic concepts of biodiversity and indigenous knowledge along with the rich traditional resources in management and conservation of biological diversity.
- The course will help students to understand concepts pertaining to conservation of biodiversity and protection of indigenous knowledge including the indigenous management strategies of farmers.
- They will also learn policies and laws relating to biodiversity conservation including protection of intellectual property rights relating to indigenous knowledge.

Unit 1 (10 Hours)

Biodiversity: basic concept, UN Convention on biodiversity, health implications of biological diversity; conservation of biological diversity- policies and law.

Unit 2 (10 Hours)

Human-animal interface- interface between human and animal world; Zoonotic diseases- types, etiology and prevention, biodiversity and genetic resources.

Unit 3 (12 Hours)

Indigenous Knowledge: basic concept, critique of western scientific knowledge, historical context of the emergence of indigenous knowledge, contemporary relevance of indigenous knowledge, indigenous knowledge in biodiversity conservation.

Unit 4 (13 Hours)

Problems of Indigenous Knowledge: issues pertaining to transfer of indigenous knowledge, debates for making indigenous knowledge universal, politics of indigenous knowledge, notion of identity and property; Intellectual Property Rights related to biodiversity and indigenous knowledge, protection of plant varieties.

Practical (30 Hours)

Project Report on Indian Cases pertaining to Indigenous Knowledge, Intellectual Property Rights and Biodiversity

GENERIC ELECTIVE -4 (GE-4)
Health Systems, Promotion and Management

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical / Practice		
Health Systems, Promotion and Management – GE-4	04	03	Nil	01	Passed 12th	NIL

Course Objectives

- To understand basic idea of health systems, health promotion
- To assess the health care management strategies
- To understand the public health value of health promotion in different health systems

Course Learning Outcomes

The students will learn the basic concepts of health system research, creatively design health promotion strategies and understand various challenges of health care management.

Unit 1 (10 Hours)

Introduction to the basic concepts of health systems, health promotions and health management

Unit 2 (10 Hours)

Models, Contexts and Agents of health promotion; practice framework of health promotion: lifestyle, diet, and physical activity

Unit 3 (12 Hours)

Health system of (India vs International), health system framework: private and state functioning, health system spending and financing

Unit 4 (13 Hours)

Health care institutes/centre management: health care resource, clinical and technological challenges, cost containment, hospital waste management, health care emergency management

Practical (30 Hours)

Project report based on activity related health promotion, or data collection related to health

systems or management

Teaching Learning Process

The process of learning will involve acquisition of domain knowledge and understanding of skills required for conducting research in health systems, promotion and management. Process will involve lectures and presentations and report submission.

Keywords

Health, Promotion, Health system, health management

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

GENERIC ELECTIVE -5 (GE-5)
Anthropology and Fieldwork

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical / Practice		
Anthropology and Fieldwork – GE-5	04	03	Nil	01	Passed 12th	NIL

Course Objectives

- The objective of the course is to introduce the students to the technique of fieldwork, a highly sophisticated qualitative research method developed in the discipline over a century.
- The students shall learn the innovative ways of designing and doing fieldwork in different anthropological settings.

Course Learning Outcomes

- The students will learn how to design and undertake fieldwork using anthropological tools of research.
- They will also learn the intellectual trajectory of the field work tradition affecting various disciplines.

Unit 1 (10 Hours)

Fieldwork Tradition in Anthropology:

The Beginning: Reports of travellers, administrators and missionaries; Invention of the 'non western others' and the colonial agenda

Unit 2 (12 Hours)

Designing Field Research:

Conceiving the universe of study; Identifying techniques of data collection; Pre-testing and Pilot study; Community immersion and researchers' identity

Unit 3 (10 Hours)

The Changing notion of Anthropological Field:

Anthropological field in the era of globalisation; Mobility and interconnection: multi-sited ethnography

Unit 4 (13 Hours)

Data Analysis and Report Writing:

Qualitative and thematic analysis, content analysis; Analysis of metaphors and narratives; Language of representation and persuasion

Practical (30 Hours)

The students shall prepare a project report using fieldwork as a method of data collection. Practical exercises will include task such as identification of units and universal study, designing tools of field research and to pre-test it for ensuring reliability and validity.

Genetic Research in Anthropology

GENERIC ELECTIVE -6 (GE-6)

Genetic Research in Anthropology

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical / Practice		
Genetic Research in Anthropology – GE-6	04	03	Nil	01	Passed 12th with Science	NIL

Course Objectives

To introduce human genetics through anthropological perspectives where impetus will be laid on building an understanding of biochemical and molecular markers and their relevance in anthropology.

The course focuses on application of anthropological genetics in mendelian populations and molecular basis of complex diseases.

The course also focuses on aspects of field work, data collection, ethical, legal and social issues in genetic research in anthropology.

Course Learning Outcomes

The students will be trained to use biochemical markers with respect to disease profile.

The students can be better equipped to understand the importance of mendelian populations in genetic research that can be applied to disease genetics.

The students will be skilled with basic laboratory techniques for molecular markers.

The students will be better equipped to comprehend fieldwork and data collection along with an understanding of ethical and legal aspects of genetic research.

Unit 1 (08 Hours)

Basic concepts

History and relevance of genetic research in anthropology, evolution of genetic markers as a tool in human research, concept of Hardy-Weinberg Equilibrium principle.

Unit 2 (12 Hours)

Methods of genetic research in anthropology

Twin studies, genetic linkage studies, pedigree analysis, candidate gene studies, cohort studies, cross-sectional studies, hypothesis and technology driven research

Unit 3 (08 Hours)

Data collection in human genetic studies

Field work and data collection strategies, quantitative and qualitative data collection in field

Unit 4 (08 Hours)

Techniques in human genetics

Agglutination, electrophoresis, PCR, sequencing techniques

Unit 5 (09 Hours)

Ethical, legal and social issues in genetic research

Ethical guidelines and practices in genetic research, legal and social issues in genetic research, Indian national guidelines for collaborative research in genetics.

Practical (30 Hours)

1. Pedigree analysis
2. ABO blood group
3. DNA extraction
4. Identification of genetic mutation through specific technique

Teaching Learning Process

Theoretical concepts will be covered through classroom/online lectures and presentations. Hands-on training on various laboratory techniques pertaining to biochemical and molecular techniques will be provided in the scheduled practical classes.

Keywords

Anthropological genetic research, pedigree analysis, fieldwork and data collection, PCR and sequencing techniques

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DEPARTMENT OF GEOLOGY
BSc (H) Geology

Category I

Geology Courses offered for UG Programme of study with Geology as single core discipline

(B.Sc. Honours in Geology in three years)

DISCIPLINE SPECIFIC CORE COURSE -7 (DSC-7) – : Palaeontology

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Palaeontology (DSC-7)	4	3	0	1	Class 12th with Science	Studied Stratigraphy, Sedimentology, and Earth System Science (or equivalent)

Learning Objectives

To learn about the life forms of the geological past. To understand the diversity and evolution of past life. To know the evolutionary transitions and functional adaptations in different groups of animals and plants.

Learning outcomes

On successful completion of the course, the student will be able to: Appreciate how fossils get preserved in rocks, the nature of fossil record and how fossils are named in a taxonomic framework. Get to know different invertebrate fossil groups, their palaeobiology, and how they can be used in relative dating of rocks. Learn how vertebrates originated and their evolution through time. Understand important floral changes over time and the flora of the Indian coal-bearing sedimentary basins. Analyse the indirect evidences preserved in the rocks for the past existence of life. Critically analyse the role of fossils in relative dating of rocks, in interpreting past environments, past distribution of land and sea, and changes in ecosystems over time.

SYLLABUS OF DSC-7

UNIT – I (9 hours)

Detailed content

Fossilization processes and modes of preservation; nature and importance of fossil record

UNIT – II (9 hours)

Detailed contents

Brief introduction to important invertebrate groups (Bivalvia, Gastropoda, Brachiopoda, Graptolites, Trilobites) and their biostratigraphic significance. Significance of ammonites in Mesozoic biostratigraphy and their palaeobiogeographic implications. Functional adaptation in trilobites and ammonoids.

UNIT – III (9 hours)

Detailed contents

Vertebrates: Origin of vertebrates and major steps in vertebrate evolution; Vertebrate evolution in the Palaeozoic Era; Mesozoic reptiles with special reference to origin diversity and extinction of dinosaurs

UNIT – IV (9 hours))

Detailed contents

Introduction to Palaeobotany; fossil record of plants through time; Gondwana Flora.

UNIT – V (9 hours)

Detailed contents

Introduction to Ichnology; Application of fossils in Stratigraphy, Fossils and paleobiogeography; Fossils as a window to the evolution of ecosystems.

Practical Component- (30 Hours)

Study of fossils showing various modes of preservation. Study of diagnostic morphological characters, systematic position, stratigraphic position and age of various invertebrate, vertebrate and plant fossils.

DISCIPLINE SPECIFIC CORE COURSE – 8 (DSC-8): Sedimentary Geology

Credit distribution, Eligibility and Prerequisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Sedimentary Geology (DSC-8)	4	3	0	1	Class 12th with Science	Studied Stratigraphy, Earth System Science (or equivalent)

Learning Objectives

Main objective of the course is to provide basic and advance knowledge to students about sediments origin, transport, and depositions and formation of the sedimentary rocks and their distribution in space and time.

Learning outcomes

Students will learn and appreciate the concepts of weathering and sedimentary flux, the basic concepts of sediment transport and formation of sedimentary structures. Grain size scales and analysis. Students will be able to appreciate sedimentary facies, classification of sedimentary rocks, sedimentary environments and provenance.

SYLLABUS OF DSC- 8

UNIT – I (9 hours)

Detailed contents

Introduction to Sedimentary Geology. Chemistry of weathering processes. Sediments: origin, transportation, deposition, consolidation and diagenesis

.

UNIT – II (9 hours)

Detailed contents

Sediment granulometry: Grain size scales Udden-Wentworth and Krumbein (phi) scale, particle size distribution; mean, median, mode, standard deviation, skewness. Environmental connotation.

UNIT – III (9 hours)

Detailed contents

Sedimentary fabric, textures, Porosity and permeability. Sedimentary structures: Syn-sedimentary, Penecontemporaneous

UNIT – IV (9 hours)

Detailed contents

Ichnofossils: Sediment-organism interaction. classification of sedimentary rocks. Tectonics and Climate Diagenesis of terrigenous and chemical sediments

UNIT – V (9 hours)

Detailed contents

Concept of sedimentary facies, paleoenvironment and paleocurrent analyses. Introduction to sedimentary environment: aeolian, glacial, fluvial, near-shore and deep-marine environments. Introduction to carbonate rocks: classification

Practical Component- (30 Hours)

Study of megascopic characters of major sedimentary rocks:
Sketching of primary sedimentary structures in laboratory and museum specimen: ripple marks, cross beddings, sole marks, biogenic structures.
Microscopic study of textures and diagenetic features in sedimentary rocks:

DISCIPLINE SPECIFIC CORE COURSE– 9 (DSC-9): Metamorphic Geology

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Metamorphic Geology (DSC-9)	4	3	0	1	Class 12th with Science	Studied Earth System Science, Structural Geology, and Mineralogy (or equivalent)

Learning Objectives

This course focuses on teaching about mineralogical and textural transformations in solid state. The main aim is to learn estimating natural state variables at the time of transformation as well as inferring the geodynamic settings of such changes.

Learning outcomes

This course will enable students to identify the mineral assemblages in hand specimen and through microscopic studies utilizing the concept of textural equilibrium, teach them to consider the rocks as chemical systems and apply the principle of phase rule as the major tool for the study of metamorphic rocks. Students will specially learn to infer orogenic processes through metamorphic assemblages and textures.

SYLLABUS OF DSC-9

UNIT – I (9 hours)

Detailed contents

Metamorphism: Definition of metamorphism. Factors controlling metamorphism, Types of metamorphism. Structure and textures of metamorphic rocks, Relationship between metamorphism and deformation

UNIT – II (12 hours)

Detailed contents

Phase rule and Goldschmidt mineralogical phase rule. Chemographic projections, concept of compatible and incompatible assemblages, bulk composition influence on metamorphic assemblages.

UNIT – III (12 hours)

Detailed contents

Metamorphic zones, index minerals and isograds. Continuous and discontinuous reactions, basics of geothermobarometry.

UNIT – IV (12 hours)

Detailed contents

Metamorphism of various protoliths, metamorphic rock associations-schists, gneisses, charnockites and eclogites. Melting and migmatites. Tectonic setting of metamorphic rocks, paired metamorphic belts, concept of P-T-t path.

Practical Component- (30 Hours)

Hand specimen study of metamorphic rocks.
Textural and mineralogical study of metamorphic rocks in thin sections.
Inferring mineral growth versus deformation in metamorphic rocks
Graphical plots of metamorphic mineral assemblages using chemographic projections.
Application of mineral formula calculations in metamorphic rocks

.

Discipline Specific Elective: **DSE-1: Earth Surface Processes (L3, P1) *or* DSE-2: Surveying Techniques (L3, P1)**

Or

One GE from GE pool (GE-3): Fossils and Applications (L3, P1)

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSE-1 Earth Surface Processes (L3, P1)	4	3	0	1	Class 12th with Science	Studied Earth System Science and Structural Geology or Equivalent

Learning Objectives

The course "Earth Surface Processes" is intended to provide a holistic approach to study the surficial features and the processes with emphasis on links and feedbacks between its components. The subject will serve as a dynamic and physical based account of the processes at planets surface with an integrated approach involving the principles of geomorphology and sedimentology.

Learning outcomes

After going through this course students will have sound idea about the Earth's Energy Balance, Hydrological cycle, Topography and bathymetry. This will enable them to learn about the sedimentary flux: origin, transport and deposition and the geomorphic and sedimentological processes related to fluvial, coastal, aeolian, and glacial regimes. Students will also appreciate about the environmental changes and its impact on surface processes and landforms.

SYLLABUS OF DSE-1

UNIT – I (9 Hours)

Detailed contents

Introduction to Earth Surface System. Earth's energy balance, hydrological cycle, carbon cycles, heat transfer, topography and bathymetry.

UNIT – II (9 Hours)

Detailed contents

Earth's critical zone, weathering and formation of soils, sediment routing systems, sediment and solute in drainage basins, importance and impact of climate change and tectonics on sediment yield and transport.

UNIT – III (9 Hours)

Detailed contents

Fluid and sediment dynamics and transport: Natural substances, settling of grains, types of flows and boundary separation layers, sediment continuity, modes of sediment transport, bedforms and stratification.

UNIT – IV (12 Hours)

Detailed contents

Sediment transport and deposition associated with fluvial, aeolian, glacial, coastal and marine regimes.

UNIT – V (6 Hours)

Detailed contents

Impact of environmental changes on Earth Surface processes.

Practical Component- (30 Hours)

Exercises on flexural isostasy.

Exercises related to settling of sediments.

Sediment flux exercises.

Preparation of river profiles (Hack Profile, calculation of SL index, Ksn).

Exercises related to fluvial geomorphology.

Exercises on rate of uplift and incision.

Essential/recommended readings

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSE-2 Surveying Techniques (L3, P1)	4	3	0	1	Class 12th with Science	Studied Earth System Science and Structural Geology (or equivalent)

Learning Objectives

The course "Surveying Techniques" is intended to teach the students basic techniques to operate modern surveying instruments and develop skill to carry out topographic mapping.

Learning outcomes

After going through this course students will have sound idea about the Surveying Method and various types mapping skills. For examples: (i) Principles of surveying techniques, (ii) Operate modern surveying instruments, (iii) Prepare maps

SYLLABUS OF DSE-11

UNIT – I (9 Hours)

Basics of Surveying: Fundamental concepts and principles; Types of surveys; Classes of surveys; Surveying Instrumentation; Units of measurement; Locating position; Errors.

UNIT – II (12 Hours)

Levelling – Theory and Methods: Coordinate system; Geoid; Datum; Curvature and refraction; Categories of levels; Traversing; Differential levelling; sources of error in levelling; Distance measurement; Angles, azimuth and bearings.

UNIT – III (12 Hours)

Surveying Techniques: Principles and use of – Chain survey, Plane Table survey, Compass survey, Dumpy level survey, Theodolite survey, Total Station survey, Global Positioning System (GPS)

UNIT – IV (12 Hours)

Map Preparation: Introduction to QGIS; Map design; Map layout; Basic map plotting procedures; Plotting contours; Lettering; Cartographic map elements; Sources of error in mapping.

Practical Component- (30 Hours)
Chain survey
Plane Table survey
Total Station survey
Survey using GPS
Survey using Drone (if drone is available)
Map making

Essential/recommended readings

Surveying – Vol – I – By S.K.Duggal, Tata McGraw Hill Book Co.
Surveying – Vol – II – By S.K. Duggal, Tata McGraw Hill Book Co

Suggestive readings

Surveying – Vol – I – By S.K.Duggal, Tata McGraw Hill Book Co.
Surveying – Vol – II – By S.K. Duggal, Tata McGraw Hill Book Co

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
GE-3 Fossils and Applications (L3, P1)	4	3	0	1	12th Pass (with science stream)	Nil

Learning Objectives

To provide some basic knowledge on fossils, their preservation in rocks and different groups of invertebrate, vertebrate and plant fossils. To impart knowledge on the utility of some of these fossils in determining the relative age of sedimentary rocks and implication in palaeoecological, palaeoenvironmental, palaeobiogeographical reconstruction. To equip the student with basic understanding of the role of fossils in hydrocarbon exploration.

Learning outcomes

Student will learn about different types of life forms that existed in the geological past. Students will learn about the evolutionary rates of certain important fossil groups and their role in dividing the rocks into distinctive units based on their stratigraphic ranges. Learn how fossils can be used in understanding the past environments, ecosystems, climate and distribution of land and sea. Student will also learn about the role of fossils in the exploration of fossil fuels.

.

SYLLABUS OF GE-3

UNIT – I 9 hours)

Detailed contents

Introduction to fossils: Definition of fossil, fossilization processes (taphonomy), taphonomic attributes and their implications, modes of fossil preservation, role of fossils in development of geological time scale and fossil sampling techniques.

UNIT – II (9 Hours)

Detailed contents

Species concept: Definition of species, species problem in palaeontology, speciation, methods of description and naming of fossils, code of nomenclature.

UNIT – III (9 hours)

Detailed contents

Introduction to various fossils groups: Brief introduction of important fossils groups: invertebrate, vertebrate, microfossils, spore, pollens and plant remains. Important fossiliferous horizons of India

UNIT – IV (9 Hours)

Detailed contents

Application of fossils: Principles and methods of paleoecology, application of fossils in the study of paleoecology, paleobiogeography and paleoclimate; Role of fossils in palaeoenvironmental reconstructions.

UNIT – V (9 Hours)

Detailed contents

Societal importance of fossils: Implication of larger benthic and microfossil in hydrocarbon exploration: identification of reservoirs and their correlation. Application of spore and pollens in correlation of coal seams, spore and pollens as indicator of thermal maturity of hydrocarbons reservoirs, fossils associated with coal deposits, fossils as indicators of pollution.

Practical Component- (30 Hours)

Exercises on flexural isostasy.

Exercises related to settling of sediments.

Sediment flux exercises.

Preparation of river profiles (Hack Profile, calculation of SL index, Ksn).

Exercises related to fluvial geomorphology.

Exercises on rate of uplift and incision.

Essential/recommended readings

Clarkson, E.N.K.1998. Invertebrate Paleontology and Evolution, George Allen &Unwin

Prothero, D.R. 1998. Bringing fossils to life - An introduction to Paleobiology, McGraw Hill.

SRI VENKATESWARA COLLEGE

Biological Science

B.Sc. (HONOURS) BIOLOGICAL SCIENCE

DISCIPLINE SPECIFIC CORE COURSE – 7:

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Physics for Biologists (BS-DSC-301)	**4**	**2**	**0**	**2**	Class XII pass with Biology and chemistry, as one of the papers in Class XII	**NA**

Learning Objectives

The Learning Objectives of this course are as follows:

- To introduce the students to the basic concepts of physics and their applications in biology.
- To empower the students to develop a basic understanding about the principles and concepts of Physics
- To enable the students to develop quantitative approaches to solve physical/biological problems
- Provide a better understanding of various biophysical processes

Learning outcomes

On successful completion of course, the student will:

- Learn about various aspects of mechanics, centrifugal forces, mechanical forces with examples.
- Understand and explain molecular theory, Gauss's law, medical significance and applications of the dielectric properties of biological materials.
- Describe simple harmonic motion, diffraction, lasers and its applications in medical science.
- Appreciate the Doppler effect and the effects of vibrations in humans with respect to physics of hearing, heartbeat etc.
- Learn to investigate the light absorption properties of molecules through spectrophotometry, for qualitative and quantitative analysis of biomolecules

SYLLABUS OF DSC-7

Unit 1: Mechanics **6 Hours**

Conservation of momentum and energy, work energy theorem, Angular momentum, Torque, motion of a particle in the central force field. Influence of mechanical forces (Pressure, shear or elongation) on bone. Viscosity and viscous force, surface tension and viscoelasticity with examples such as, biopolymers, human tissues etc.

Unit 2: Dielectrics **6 Hours**

Dielectrics: Non polar/Polar dielectrics, Molecular theory of Dielectrics, Dielectric Constant, Gauss's Law in presence of dielectric, Three electric vectors and their relations, Electric susceptibility, Energy stored in dielectrics. Behaviour of dielectric in alternating field. Medical significance and applications of the dielectric properties of biological materials.

Unit 3: Waves and Optics **14 Hours**

Simple harmonic motion, Linearity and superposition Principle. Lissajous figures with equal and unequal frequencies and their uses. Effects of vibrations in humans: physics of hearing, heartbeat. Modern Optics: Superposition of waves: Young's double slit interference, Fraunhofer diffraction: diffraction through a single slit/double slit and grating, Resolving power, Resolution of the eye, Lasers: Principle, Population inversion, He-Ne Laser, characteristics of laser, Applications of lasers in medical science, Polarization by double refraction, Nicol prism. Doppler effect.

Unit 4: Spectroscopic techniques **4 Hours**

Beer-Lambert law, light absorption and its transmittance. UV and visible spectrophotometry-principles, instrumentation and applications. Fluorescence spectroscopy, static & dynamic quenching. light scattering in biology.

PRACTICALS

TOTAL HOURS: 60 **CREDIT: 2**

1. Determination of acceleration due to gravity using Kater's pendulum.
2. Determination of the acceleration due to gravity using bar pendulum.
3. Study of Lissajous figures using CRO.
4. Determination of the frequency of an electrically maintained tuning fork by Melde's Experiment.
5. Determination of the wavelength of laser source by through diffraction of (1) Single slit (2) Double slit.
6. Comparison of capacitances using De'Sautty's bridge.
7. Determination of the coefficient of Viscosity of water by capillary flow method (Poiseuille's method).
8. To determine wavelength of sodium light using Newton's Rings.
9. To determine the wavelength of sodium/mercury light using diffraction grating.
10. Verification of Beer Law.
11. Determination of Molar Extinction coefficient.

DISCIPLINE SPECIFIC CORE

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Protein Structure and Enzymology (BS-DSC-302)	**4**	**2**	**0**	**2**	Class XII pass with Biology and chemistry, as one of the papers in Class XII	**Should have studied Chemistry of Biomolecules**

Learning Objectives

The Learning Objectives of this course are as follows:

- Designed with an aim to introduce the students to proteins, most remarkable biomolecules in terms of diversity of structure and function
- Impart knowledge regarding various techniques employed to purify and characterize proteins
- Introduce them to the world of enzymes, biological catalysts with remarkable properties
- Enable them to understand important aspects of enzyme kinetics, mechanism of enzyme action and their regulatory properties
- Introduce the role of proteins and enzymes in medicine

Learning outcomes

Upon completion of the course, the students will be able to:

- Describe the functional diversity of proteins and the different levels of structural organization of proteins
- Explain the relationship between protein structure and function.
- Appreciate and analyse the data from techniques used to purify and characterise proteins.
- Explain enzyme classification, activity, kinetics, inhibition, regulation and mechanism of action of different classes of enzymes
- Acquire knowledge about the application of enzymes in medicine and industry.

SYLLABUS OF DSC- 8

Theory

Unit I: Protein structure and folding 11 Hours

Amino acids: structure and their properties; Peptides and proteins; Diversity of proteins; Organization of protein structure- primary, secondary, tertiary and quaternary structures; Protein sequencing- Edman degradation. Peptide bond- dihedral angles; Ramachandran plot; Secondary structure elements: Helices, sheets and turns. Motifs and domains; Structures of myoglobin and Hemoglobin. Oxygen binding curves of myoglobin and hemoglobin Influence of 2,3-BPG, CO_2. Denaturation and renaturation of proteins and introduction to thermodynamics of folding. Role of chaperones in protein folding.

Unit II: Purification and analysis of proteins 4 Hours

Ammonium sulphate fractionation, dialysis. Chromatographic techniques: Ion exchange chromatography, molecular sieve chromatography. Gel electrophoresis: SDS-PAGE.

Unit III: Introduction to Enzymes and enzyme kinetics 8 Hours

Protein and non-protein nature of enzymes. Cofactor and prosthetic groups. Classification of enzymes; Fischer's lock & key and Koshland's induced fit hypothesis. Enzyme activity and specificity. Enzyme Kinetics-Michaelis-Menten equation and Lineweaver-Burk plot. Determination of Km, Vmax, Kcat. Types of enzyme inhibitions- competitive, uncompetitive, non-competitive, mixed.

Unit IV: Mechanisms of enzyme action and regulation 7 Hours

Acid-base and covalent catalysis (chymotrypsin); Allosteric regulation and feedback inhibition (ATCase); reversible covalent modification (glycogen phosphorylase); Zymogen; Multi-enzyme complex (PDH). Isoenzymes. Applications of enzymes in medicine, industry and research

PRACTICALS (60 Hours)

1. Introduction to spectrophotometer and verification of Beer law.
2. Estimation of proteins by Biuret method.
3. Estimation of proteins by Lowry's method.
4. Ammonium sulphate fractionation of crude homogenate from germinated mung beans.

5. Assay for acid phosphatase activity and specific activity.
6. Progress curve of enzyme
7. Effect of pH on enzyme activity.
8. Determination of Km and Vmax using Lineweaver-Burk plot.
9. Calculation of Ki for an enzyme

DISCIPLINE SPECIFIC CORE COURSE –9 :

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Functional Ecology (BS-DSC-303)	**4**	**2**	**0**	**2**	Class XII pass with Biology and chemistry, as one of the papers in Class XII	**NA**

Learning Objectives

The Learning Objectives of this course are as follows:

- To understand the basic concepts in ecology and levels of organization in an ecosystem
- Obtain a basic understanding of the various aspects of a 'population' and interactions among individuals of the same as well as different species.
- To understand the structure and functions of the community and its processes.
- To comprehend the components of an ecosystem, energy flow and nutrient cycling.
- To appreciate the applied aspects required in restoration of degraded ecosystems.
- To understand trade-offs in life history characteristics of organisms and various behaviors shownby organisms.

Learning outcomes

By the end of the course, the student will be able to:

- To comprehend the principles and applications of ecology and ecosystem.
- Know about the importance of ecosystem in general and the effects of changes inecosystem.
- Understand the techniques used for the quantitative and qualitative estimation of bioticand abiotic components of an ecosystem.
- Gain knowledge about the density, frequency and diversity of species in an ecosystem.
- Understand about key interactions between organisms like competition , predation ,parasitism etc.
- Participate in citizen science initiatives from an ecological perspective

SYLLABUS OF DSC-9

Theory

Unit 1: Introduction to Ecology **03 Hours**

History of ecology, Autecology and synecology, levels of Organisation, Laws of limiting factors (Liebig's law of minimum, Shelford's law of tolerance), ecological range (Eury and Steno).

Unit 2: Population Ecology **12 Hours**

Population: Unitary and Modular populations; Metapopulation: Density, natality, mortality, life tables, fecundity tables, survivorship curves, sex ratio, age pyramids, dispersal and dispersion; carrying capacity, population dynamics (exponential and logistic growth equation and patterns), r and K selection, density-dependent and independent population regulation; Niche concept, Population interactions: Positive and negative interactions; Competition, Gause's Principle for competition with laboratory and field examples, Lotka-Volterra equation for predation.

Unit 3: Community Ecology 08 Hours

Community structure: Dominance, diversity, species richness, abundance, stratification; Diversity indices; Ecotone and edge effect; Community dynamics (succession): Primary and secondary succession, Succession on a bare rock. Climax: monoclimax and polyclimax concepts (preclimax, postclimax, disclimax etc.). Concept of keystone, indicator and flagship species with plant and animal examples.

Unit 4: Ecosystem Ecology 07 Hours

Concept, components, and types of ecosystems (example of Pond ecosystem in detail showing abiotic and biotic components), BOD, eutrophication. Energy flow (Grazing and Detritus food chain), linear and Y-shaped energy flow model, black box model, food web. Ecological pyramids and Ecological efficiencies.

PRACTICALS

CREDITS: 2 **Total weeks: 60 Hours**

1. To understand the principle and working of ecological instruments such as Anemometer, Hygrometer, Luxmeter, Rain gauge, turbidity meter, pH meter, Soil thermometer, Min-Max thermometer.
2. To study biotic interactions using specimens/ photographs/ permanent slides of Parasitic angiosperms, Saprophytic angiosperms, root nodules, velamen roots, lichens , corals
3. 3.To study plant-microbe interactions by preparing temporary stained mounts of VAM fungi / mycorrhizal roots/ root nodules.
4. Mark recapture method for determining population density of animals
5. 5.To determine a minimal quadrat area for sampling
6. To determine density, frequency and abundance of herbaceous vegetation by quadrat method
7. To estimate dissolved oxygen content of a given water sample using Winkler's method.
8. Plotting of survivorship curves from hypothetical life table data.

POOL OF DISCIPLINE SPECIFIC ELECTIVES (DSEs)

DISCIPLINE SPECIFIC ELECTIVE COURSE –DSE-1 :

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Medicinal And Ethnobotany (BS-DSE-1)	**4**	**2**	**0**	**2**	Class XII pass with Biology and chemistry, as one of the papers in Class XII	**NA**

Learning Objectives:

Plants are imperative to mankind with almost all plants known to possess medicinal values. There is an increased emphasis on indigenous system of medicine which has lent prime focus on medicinal plants. Keeping the therapeutic importance of medicinal plants in mind this course is designed to provide education and training on diverse perspectives of medicinal plants. The course also offers comprehensive knowledge about understanding the difference between ancient wisdom and the modern system of medicine.

Learning Outcomes:

On successful completion of the course, a student will:

- Be able to identify the common medicinal plants in their vicinity.
- Learn about the traditional healing sciences namely Ayurveda, Siddha and Unani, which have been used since the ancient times.
- Appreciate the importance of conservation strategies for medicinal plants.
- Be able to understand the importance of medicinal plants, significance of ethnobotany, role of ethnic groups in the conservation of medicinal plants.

Course Contents - Theory

Unit 1: History, Scope and Importance of Medicinal Plants

10 Hours

Introduction to indigenous systems of medicines- Ayurveda, Unani and Siddha

system of medicine)- Ayurveda: History, origin, Panchamahabhutas, Saptadhatu and Tridosha concepts, Siddha: Origin of Siddha medicinal systems, Basis of Siddha system. Unani: History, concept: Umoor-e- tabiya. Plants used in Ayurveda, Siddha and Unani medicine with special reference to *Carum carvi, Plantago ovata, Allium sativum, Asparagus racemosus, Vitis vinifera, Linum usitatissimum, Amaranthus paniculatus.* Polyherbal formulations (with special reference to Safi, Chyawanprash, Trifala, Swalin, Amukkara Choorna, Gandhak rasayana). Natural products – Compounds responsible for biological activity of medicinal plants: their biology, and pharmacology (*Curcumin, Vinblastine, Vincristine, Ecliptine, Cinchonine, Azadirachtin, Artemisinin*).

Unit 2: Conservation of Endangered and Endemic Medicinal Plants

08 Hours

Definition: endemic and endangered medicinal plants, Red list criteria; In situ conservation: Biosphere reserves, sacred groves, National Parks; Ex situ conservation: Botanical Gardens, herbal gardens, Ethnomedicinal plant gardens. Germplasm conservation, cryopreservation (Cryo banks and DNA banks), Role of NBPGR and JNTBGRI in conservation of plants, Propagation of Medicinal Plants: *In vitro* and *In vivo* strategies. Adulteration of Herbal drugs. Organoleptic, microscopic and phytochemical evaluation of plant drugs.

Unit 3: Ethnobotany and Folk Medicines **12 Hours**

Introduction, concept, scope and objectives; Ethnobotany in India: Methods to study ethnobotany; Folk medicines of ethnobotany, Role of ethnobotany in modern medicine with special reference to *Rauvolfia serpentina*, *Trichopus zeylanicus*, *Artemisia*, *Withania.* Major and minor ethnic groups of India and their lifestyles. Application of natural products to certain diseases- Jaundice, cardiac, infertility, diabetics, blood pressure and skin diseases. Role of ethnic groups in conservation of plant genetic resources; Brief account of biopiracy and IPR.

PRACTICAL

Credit: 2 **Total 60 Hours**

1. Identification of any ten common medicinal plants in the surrounding area and study their characteristic features.
2. Collection, identification and preparation of herbarium of any five medicinal plants.
3. Extraction and qualitative estimation of active principle compounds (alkaloids, tanins, saponins and flavanoids) from any four medicinal plants. (*Aloe vera, Ocimum, Azadirachta, Catharanthus, Adhatoda, Withania*)
4. Study of components and medicinal uses of common polyherbal formulations used in the traditional system of medicine (Ayurveda, Unani and Siddha).
5. Study of organoleptic, macroscopic and microscopic parameters of any two medicinal plants.
6. To compare the total phenolic content of few locally available medicinal plants

7. Field trip: Industries/Institutes/herbal garden/ medicinal gardens/ nurseries/tribal museum.
8. e-presentations (System of medicine, Conservation strategies, propagation of medicinal plants, folk medicines, application of natural products to certain diseases listed in the syllabus)

Essential readings:

1. Abdin, M. Z. and Abrol, Y. P., (2006). *Traditional Systems of Medicine.* Narosa Publishing House, New Delhi.
2. Kumar, S., (2018). *Ethnobotany*. Kojo press, New Delhi.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVE COURSE –DSE-2

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Hormone biochemistry (BS-DSE-2)	**4**	**2**		**2**	Class XII pass with Biology and chemistry, as one of the papers in Class XII	**NA**

Learning Objectives:

The course is designed to enable the students to understand and appreciate the delicate network and balance of hormones required for the healthy functioning of the human body. The course emphasizes on studying the different types of hormones along with their physiological action.

The students will be taught the consequences of any hormonal imbalances (over and underproduction of hormones) with special emphasis on human diseases. It provides an understanding of the different endocrine factors that regulate metabolism, growth, electrolyte and mineral homeostasis, glucose homeostasis, stress physiology and reproductive function. It also prepares a student for postgraduate studies in any course related to molecular medicine.

Learning Outcomes:

On successful completion of the course, a student will:

- Understand the role of endocrine system in maintaining ionic and glucose homeostasis
- Should be able to describe molecular, biochemical and physiological effects of all hormones and factors on cells and tissues.
- Understand the integrative communications that regulate, growth, appetite, metabolism and reproduction
- Prepares the student for interpreting clinical parameters in a real-life situation.

Course Contents -Theory

Unit 1: Introduction to hormones and Hypothalamic-hypophyseal system : 5 Hours

Introduction to hormones; Hypothalamic - pituitary axis- anatomy, histology, vasculature, and secretions. Physiological and biochemical actions of hypothalamic hormones and Anterior pituitary hormones; Hormone feed- back regulatory cascade. Posterior pituitary hormones –structure, physiology and biochemical actions of AVP and Oxytocin; Diabetes insipidus

Unit 2: Hormones regulating growth, energy metabolism and calcium homeostasis 10 Hours

Regulation of Growth: growth hormone and somatomedin, Endocrine disorders - gigantism, acromegaly, dwarfism, pygmies. Thyroid gland- Biosynthesis of thyroid hormone and its regulation: Role of TRH, TSH in T_4 synthesis and response. Physiological and biochemical action of Thyroxine. Pathophysiology of thyroxine secretion: Goiter, Graves' disease, cretinism, myxedema.
Regulation of calcium homeostasis: PTH, Vitamin D and calcitonin. Mechanism of Ca^{2+} regulation involving bone, skin, liver, gut and kidneys. Pathophysiology - rickets, osteomalacia, osteoporosis.

Unit 3: Hormones regulating glucose homeostasis, stress physiology and electrolyte balance: 10 Hours

Hormones of the Pancreas: structure, synthesis, regulation of release, incretins, physiology and biochemical actions of insulin and glucagon. Role of these hormones in blood glucose homeostasis; Pathophysiology - diabetes type I and type II. GIT hormones: Secretin, gastrin and incretins.
Physiology and action of Aldosterone; the Renin Angiotensin System. Physiology and Biochemical actions of Cortisol; Role of POMC and CRH in cortisol synthesis;

Adrenal medullary hormones: epinephrine and norepinephrine. The Fight or flight response; Dual receptor hypothesis. General adaptation syndrome: acute and chronic stress response. Pathophysiology – Addison's disease, Conn's syndrome, Cushing syndrome.

Unit 4: Reproductive hormones: **5 Hours**

Male and female sex hormones. Role of testosterone in male secondary sexual characteristics. Interplay of hormones during ovarian and uterine phases of menstrual cycle; Placental hormones; role of hormones during parturition and lactation. Hormone based Contraceptives.

PRACTICAL

Credit: 2 **Total Hours- 60**

1. Glucose tolerance test.
2. Estimation of serum Ca^{2+} by o-CPC method
3. Determining the thyroid profile by estimating T_4 and TSH under normal and pathophysiological conditions.
4. Estimation of estrogen during different days of the menstrual cycle.
5. HCG based pregnancy test.
6. Estimation of serum electrolytes.
7. Presentation on GI Tract hormones and Adipokines
8. Case studies: Diabetes Insipidus, Acromegaly and dwarfism, Diabetes Mellitus, Rickets, Osteoporosis, Cushing syndrome

Essential readings:

1. Vander's Human Physiology (2008) 11th ed.,Widmaier, E.P., Raff, H. and Strang, K.T. McGraw Hill International Publications, ISBN: 978-0-07-128366-3.

DISCIPLINE SPECIFIC ELECTIVE COURSE –DSE-3 :

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Applied entomology (BS-DSE-3)	**4**	**2**	**0**	**2**	Class XII pass with Biology and chemistry, as one of the papers in Class XII	**NA**

Learning Objectives:

The study of Applied Entomology provides an insight about the role of insects as powerful competitors of man as they cause enormous injury to crops and animals and also act as vectors of many diseases. This course will help the students to understand the concept of insect pests and their population dynamics in relation to changing environmental conditions as well as the role of economically important insects in tremendous commercial benefits to humans. The students will learn about various types of pests, their distinguishing features, life cycle, damage to crops and human health by them. This will be of help in choosing the appropriate control measures to manage the pest population in nature and to avoid heavy economic losses.

Learning Outcomes:

Upon completion of the course, students will be able to:

- Learn about the concept of pest and pest status.
- Understand the difference between various types of pests and Crop losses and extent of damage caused by them.
- Gain knowledge about economically important insects; important pests of crops, fruits, vegetables, stored grains and also about medically important insects.
- Analysis of varied types of control measures for management of pest populations and list suitable control measures- specific for every pest.

Course Contents- Theory

Unit 1: Pests and Economically important Insects (05 Hours)

Introduction, Factors responsible for emergence of pest, Pest status, Pest population dynamics. Economically important Insects; Honey Bee and Silkworm

Unit 2: Bionomics and Control of Crop pests (07 Hours)

Rice pest (*Leptocorisa acuta*); Wheat pest (*Sesamia inferens*); Pulse pest (*Helicoverpa armigera*); Cotton pests (*Pectinophora gossypiella*); Vegetable pest (*Raphidopalpa foveic*

Unit 3: Stored Grain Pests (6 Hours)

Bionomics and strategies for the management of stored grain pests; *Sitophilus oryzae*, *Corcyra cephalonica*, *Trogoderma granarium*, *Callosobruchus chinensis*.

Unit 4: Medically Important Pest (05 Hours)

Bionomics and Management of the Medically Important pests; Fleas, Mosquitoes, Housefly.

Unit 5: Pest Management Tactics (7 Hours)

Methods of Physical, Mechanical, Cultural, Biological, Genetic control of insects; Chemical controls. Integrated Pest Management (IPM).

PRACTICAL (Total Hours 60)

1. Identification of Agricultural Pests and Damage caused by them: *Leptocorisa acuta, Sesamia inferens, Helicoverpa armigera, Raphidopalpa foveicollis*.
2. Identification of Stored Grain Pests and Damage caused by them: *Sitophilus oryzae, Corcyra cephalonica, Trogoderma granarium, Callosobruchus chinensis.*
3. Study of the Morphological Features of Rat flea, Mosquitoes, Housefly and their Medical Importance.
4. Determination of LD50 or LC50 of Insecticides based on the data provided.
5. Instruments used in chemical control of pests.
6. Project report on any one economically important insect/ rearing of a pest.
7. Field Trips to Entomological Institutes/Museums/Laboratories

3.3 Essential Readings:

1. Atwal, A.S. (1993) Agricultural Pests of India and South East Asia. Kalyani Publishers, New Delhi.
2. Dennis, S. Hill (2005) Agricultural Insect Pests of the Tropics and Their Management, Cambridge University press. Suggested Readings:
3. S. Pradhan. Insect Pest of Crops. National Book Trust, New Delhi.

Suggested Readings:

1. Pedigo, L.P. (1996) Entomology and Pest Management. Prentice Hall, New Delhi.

DEPARTMENT OF ENVIRONMENTAL SCIENCE

Category-I

BSC (H) ENVIRONMENTAL SCIENCE

DISCIPLINE SPECIFIC CORE COURSE – 7 (DSC-EVS-7): ENVIRONMENTAL BIOTECHNOLOGY

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSC-EVS-7: ENVIRONMENTAL BIOTECHNOLOGY	4	2	0	2	Class XII pass	NA

Learning objectives

The Learning Objectives of this course are as follows:

- Provide theoretical and practical biotechnological skills for environmental goals
- Evolve ecological foundations of using microorganisms in biodiversity assessment, ecosystems restoration, and environmental remediation
- Relate the microbial ecophysiology with biogeochemical cycles that govern the terrestrial ecosphere
- Emphasize the relevance of biotechnological processes in environmental applications and sustainable development

Learning outcomes

After this course, students will be able to learn the following skills.

- Apply the biotechnological methods to improve environmental management
- Perform comparative protein and DNA sequence analyses to elucidate the phylogenetic relationship
- Analyze non-culturable microbial diversity in the environment and classify microbes based on energy and carbon metabolism
- Plan methods for combined biological nutrient removal (BNR), treat wastewater, and remedify soils and water contaminated with organic and inorganic pollutants

SYLLABUS OF DSC-EVS-7

UNIT – I The Structure and Function of DNA, RNA and Protein (7 Hours)

DNA: structural forms and their characteristics (B, A, C, D, T, Z); physical properties: UV absorption spectra, denaturation, and renaturation kinetics; biological significance of different forms; Synthesis.

RNA: structural forms and their characteristics (rRNA, mRNA, tRNA; SnRNA, Si RNA, miRNA, hnRNA); biological significance of different types of RNA; synthesis.

Protein: hierarchical structure (primary, secondary, tertiary, quaternary), types of amino acids; post-translational modifications and their significance; synthesis; types and their role: structural, functional (enzymes).

Central dogma of biology; genetic material prokaryotes, viruses, eukaryotes and organelles; mobile DNA; chromosomal organization (euchromatin, heterochromatin - constitutive and facultative heterochromatin).

UNIT – II Recombinant DNA Technology (7 Hours)

Recombinant DNA: origin and current status; steps of preparation; toolkit of enzymes for manipulation of DNA: restriction enzymes, polymerases (DNA/RNA polymerases, transferase, reverse transcriptase), other DNA modifying enzymes (nucleases, ligase, phosphatases, polynucleotide kinase); genomic and cDNA libraries: construction, screening and uses; cloning and expression vectors (plasmids, bacteriophage, phagmids, cosmids, artificial chromosomes; nucleic acid microarrays

UNIT – III Ecological restoration and bioremediation (10 Hours)

Wastewater treatment: anaerobic, aerobic process, methanogenesis, bioreactors, cell and protein (enzyme) immobilization techniques; treatment schemes for wastewater: dairy, distillery, tannery, sugar, antibiotic industries; solid waste treatment: sources and management (composting, vermiculture and methane production, landfill. hazardous waste treatment); specific bioremediation technologies: land farming, prepared beds, biopiles, composting, bioventing, biosparging, pump and treat method, constructed wetlands, use of bioreactors for bioremediation; phytoremediation; remediation of degraded ecosystems; advantages and disadvantages; degradation of xenobiotics in the environment, decay behavior and degradative plasmids, hydrocarbons, substituted hydrocarbons, oil pollution, surfactants, pesticides, heavy metals degradative pathways.

UNIT – IV Ecologically safe products and processes (6 Hours)

PGPR bacteria: biofertilizers, microbial insecticides, and pesticides; bio-control of the plant pathogen, Integrated pest management; development of stress-tolerant plants, biofuel; mining and metal biotechnology: microbial transformation, accumulation, and concentration of metals, metal leaching, extraction; exploitation of microbes in copper and uranium extraction.

Practicals/Hands-on Exercises – based on theory (02 Credits: 60 hours)

1. Undertake comparative analyses of the ultrastructure of cells and cellular organelles of prokaryotes and eukaryotes.

2. Analyze UV absorption spectra of DNA, RNA and protein
3. Determine denaturation and renaturation of dsDNA
4-5. Estimate contents of DNA and protein in the given samples
6. Visit contaminated or degraded habitats and analyze their vegetation characteristics and compare them with pristine habitat
7. Characterize and analyze plants documented in practical 6 to identify species having the potential for phytoremediation
8-10. Isolate phosphate-solubilizing bacteria from different soils and assess morphological and functional variations in phosphate-solubilizing bacteria
11. Determine bacterial density in soils sampled from contaminated and pristine habitat
12. Visit and analyze various steps of Sewage/Wastewater treatment processes (STP/WTP).
13-15. Explore and use different molecular databases for application in environmental science

Teaching and learning interface for theoretical concepts

To achieve the course objectives and match with the contents, a wide range of teaching and learning tools will be employed, including (a) Formal lectures; (b) Interactive sessions using visual aid; (c) Case study analyses; (d) Hypothetical scenario building; (e) Group discussion on key topics; and (f) documentary screening and critical analyses.

DISCIPLINE SPECIFIC CORE COURSE – 8 (DSC-EVS-8): ATMOSPHERE & GLOBAL CLIMATE CHANGE

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
ATMOSPHERE & GLOBAL CLIMATE CHANGE	4	2	0	2	Class XII pass	NA

Learning objectives

The Learning Objectives of this course are as follows:

- Analyze dynamics of atmospheric processes, which include their composition, meteorological phenomena, and atmospheric chemistry.
- Gain knowledge on the development of the Earth's atmosphere, its dynamic nature, and variability in turns of the global energy balance.
- Describe air masses and formation and impacts fronts and how they affect local weather patterns,
- Develop a better understanding of the elements of the climate and climate change and human impacts on climate initiative policies.
- Train on different methods to understand the functioning of atmospheric processes and their importance in supporting life on Earth

Learning outcomes

After this course, students will be able to

- understand the underlying physical and chemical basis of the natural and anthropogenic greenhouse effect
- develop pathway analysis to develop linkages between various human-induced emissions of natural greenhouse gases and the formation of aerosols
- appreciate the variability in the Earth's climate and correlate the changing climate with different human activity
- critically evaluate the complexities and uncertainties about scientific evidence for climate change
- analyze Earth's past and Anthropocene and global climate
- correlate effects of global climate changes on human communities and impacts of policy and technology initiatives taken at global and regional levels to combat the climate change

SYLLABUS OF DSC-EVS-8

Theory (02 Credits: 30 lectures)

UNIT – I Introduction and Global Energy Balance (4 Hours)

Evolution and development of Earth's atmosphere; atmospheric structure and composition; significance of atmosphere in making the Earth, the only biosphere; Milankovitch cycles. Earth's energy balance; energy transfers in the atmosphere; Earth's radiation budget; greenhouse gases (GHGs); greenhouse effect; global conveyor belt.

UNIT –II Atmospheric circulation (5 Hours)

Movement of air masses; atmosphere and climate; air and sea interaction; southern oscillation; western disturbances; *El Nino* and *La Nina*; tropical cyclone; Indian monsoon and its development, changing monsoon in Holocene in the Indian subcontinent, its impact on agriculture and Indus valley civilization; effect of urbanization on microclimate; Asian brown clouds.

UNIT –III Meteorology and atmospheric stability (4 Hours)

Meteorological parameters (temperature, relative humidity, wind speed and direction, precipitation); atmospheric stability and mixing heights; temperature inversion; plume behavior; Gaussian plume model.

UNIT –IV Atmospheric chemistry (4 Hours)

Chemistry of atmospheric particles and gases; smog – types and processes; photochemical processes; ions and radicals in atmosphere; acid-base reactions in atmosphere; atmospheric water; roles of hydroxyl and hydroperoxyl radicals in atmosphere.

UNIT –V Global warming and climate change (5 Hours))

Earth's climate through ages; trends of global warming and climate change; drivers of global warming and the potential of different greenhouse gases (GHGs) causing the climate change; atmospheric windows; impacts of climate change on atmosphere, weather patterns, sea level rise, agricultural productivity and biological responses - range shift of species, CO_2 fertilization and agriculture; impact on the economy and spread of human diseases.

UNIT –VI Ozone layer depletion (5 Hours)

Ozone layer or ozone shield; Importance of ozone layer; Ozone layer depletion and causes; Chapman cycle; Orocess of springtime ozone depletion over Antarctica; Ozone-depleting substances (ODS); effects of ozone depletion; mitigation measures and international protocols.

UNIT –VII Climate change and policy (3 Hours)

Environmental policy debate; International agreements; Montreal protocol 1987; Kyoto

protocol 1997; Convention on Climate Change; carbon credit and carbon trading; Clean development mechanism.

Teaching and learning interface for theoretical concepts

To achieve the course objectives and match with the contents, a wide range of teaching and learning tools will be employed, including (a) Formal lectures; (b) Interactive sessions using visual aid; (c) Case study analyses; (d) Hypothetical scenario building; (e) Group discussion on key topics; and (f) documentary screening and critical analyses.

Practicals/Hands-on Exercises – based on theory (02 Credits: 60 hours)

1. Analyze the atmospheric chemistry of a given area with respect to target greenhouse gas(es) and its changes over time
2. Identify weather patterns and climate of the given region
3. Calculate the carbon footprint of the given institution (homes and/or college)
4. Evaluate the perception of climate change in developed and developing countries
5. Identify the critical factors governing global climate change and relate with the goals of different international governmental and non-governmental organizations

6-7. Compare the targets and achievements in global efforts to combat global climate change during the past three decades

8-9. Estimate the difference in carbon stock between soil and trees of a given area

10. Understand and correlate annual tree ring data with a historical account of climate
11. Identify the critical factors governing global climate change and relate them with the goals of different international governmental and non-governmental organizations
12. Compare climate change policies of selected developed and developing countries

Teaching and learning interface for practical skills

To impart training on technical and analytical skills related to the course objectives, a wide range of learning methods will be used, including (a) laboratory practicals; (b) field-work exercises; (c) customized exercises based on available data; (d) survey analyses; and (e) developing case studies; (f) demonstration and critical analyses; and (h) experiential learning individually and collectively.

DISCIPLINE SPECIFIC CORE COURSE – 9 (DSC-EVS-9): MARINE ECOLOGY

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
MARINE ECOLOGY	4	2	0	2	Class XII pass	NA

Learning objectives

The Learning Objectives of this course are as follows:

- Gain insights into the dynamic processes that affect oceans, i.e., water, seafloor, and abundant life forms
- Identify the role being played by ocean-atmosphere interaction in the climate processes.
- Investigate the role of ocean processes in coastal and marine landform creation.

Learning outcomes

After this course, students will be able to

- Analyze the role of physical processes in the dynamic process of ocean circulation.
- Formulate solutions ailing the current state of the coastal and marine environment in terms of chemical and biological interactions.
- Implement the knowledge base to promote ocean awareness in light of human exploitation of its resources.
- Assess the impacts of environmental and anthropogenic variables on marine ecosystems and biodiversity with time and space
- Use ecological data to predict the impact of a given factor on marine biodiversity and ecology

SYLLABUS OF DSC-9

Theory (02 Credits: 30 lectures)

UNIT – I Introduction (4 Hours)

A short history of the oceans and continents, History of marine ecology, Morphologic and tectonic domains of the ocean floor; Ocean basins, Ocean sediments; Composition of seawater, carbon dioxide-carbonate system; Atmospheric circulation, Ocean circulation, Life in the ocean, Pelagic communities, Benthic communities, Uses and abuses of the ocean.

UNIT – II Geography and physical forcing of Marine Ecosystems: (4 Hours)

Climate and Circulation of the World Ocean, Geostrophic flow and the central ocean gyres, Convergence zones and fronts, Thermohaline circulation and the origins of deep-water coasts, shallows, and their consequences; Global distribution of ocean productivity, Vertical structure of the pelagic water column, The spring bloom, High-nitrogen low-chlorophyll (HNLC) regions

UNIT – III Biodiversity and biogeography of Ocean (6 Hours)

Magnitude of Biodiversity; Biodiversity on Land and Sea, Phylogenetic Classification of Marine Biodiversity, Functional Organization of Pelagic and Benthic Life, Major Patterns in the Distribution of Marine Life (Spatial, latitudinal, longitudinal, depth, bottom type); Biogeography of Functional Traits, Evidence for Island Biogeography, Integrative Models of Marine Diversification, Biogeographic Classifications of the Ocean, Biogeography of the Anthropocene Ocean.

UNIT – IV Macro- and trait-based ecology of marine organisms (6 Hours)

Species Interactions, Functional groups of phytoplankton, benthic macrophytes, and grazers; Pelagic food webs, microbial loop, Metabolic scaling and life history, Abundance and the energetic equivalence rule, Macroecology of range size Specialization and resource partitioning, Nonequilibrium dynamics; Biological pump and the global carbon cycle, Trophic control in pelagic ecosystems.

UNIT – V Anthropocene Ocean (5 Hours)

Marine populations in the Anthropocene, Marine defaunation and trophic skew, Empirical evidence for regime shifts in marine ecosystems, Mechanisms of marine regime shifts, Ocean Warming and its effects on community and sea level rise, Ocean Acidification and its effects on organisms and communities, Ecological stoichiometry, Climate change and redistribution of global marine fauna, Tropicalization, The Arctic opening

UNIT – VI Ocean Conservation and Management (5 Hours)

Maximum sustainable yield in fisheries, Strategic conservation of vulnerable life stages, Life history and the effectiveness of marine reserves, Organismal Fitness and Adaptation to the Environment, Dispersal, Recruitment, and Metapopulations, Tagging and tracking, Geochemical tags.

Teaching and learning interface for theoretical concepts

To achieve the course objectives and match with the contents, a wide range of teaching and learning tools will be employed, including (a) Formal lectures; (b) Interactive sessions using visual aid; (c) Case study analyses; (d) Hypothetical scenario building; (e) Group discussion on key topics; and (f) documentary screening and critical analyses.

Practicals/Hands-on Exercises – based on theory (02 Credits: 60 hours)

1. Construct microcosm for marine ecology studies
2-3. Determine environmental partitioning of target chemicals in the constructed microcosm
4-5. Determine physico-chemical properties of given sediment sample
6-7. Examine methods to analyze phytoplankton and zooplanktons in the given water samples and its application in analyzing marine ecology
8. Analyze relationships between soil particle characteristics and biological properties of sediment
9. Analyze oceanographic data by GIS and identify ecologically-relevant oceanographic data using remote sensing
10. Isolate bacteria from the freshwater river and estimate their growth in

seawater

11. Determine microbial density in a given marine water sample
12. Compare the biodiversity of freshwater bodies and marine ecosystems by examining a review/research paper
13. Analyze plate tectonic theory and understand the variations in global marine ecosystems
14. Evaluate merit and demerits of ocean acidification manipulation experiments conducted globally
15. Compare and contrast the benefits of using a storage tank, mixing tank, header tank and experimental tank to understand marine ecology

Teaching and learning interface for practical skills

To impart training on technical and analytical skills related to the course objectives, a wide range of learning methods will be used, including (a) laboratory practicals; (b) field-work exercises; (c) customized exercises based on available data; (d) survey analyses; and (e) developing case studies; (f) demonstration and critical analyses; and (h) experiential learning individually and collectively.

DISCIPLINE SPECIFIC ELECTIVE (DSE-EVS-01): ENVIRONMENTAL ECONOMICS

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
DSE-EVS-01: ENVIRONMENTAL ECONOMICS	4	2	0	2	Class XII pass	NA

Learning objectives

The Learning Objectives of this course are as follows:

- Appreciate critical linkages between fundamentals of environmental economics and environmental conservation
- Evaluate five megatrends involving climate, development, ecology, economy, and technology
- Inculcate market-based instruments in designing sustainable development approaches
- Gain insights into intricacies of economic valuation of biodiversity and ecosystems for making evidence-based conservation and development priorities
- Empower with the integrated use of economics & ecology in decision-making and law-making processes.

Learning outcomes

After the course, the students will be able to

- Use cost-benefit analysis and valuation techniques for environmental economics and natural resource management
- Implement economic and ecological concepts to influence society and policymakers for environmental and biodiversity conservation
- Act as a consultant to industries and government ministries aiming for sustainability
- Serve as a catalyst for developing ecoliterate industry and evolving sustainable policies
- Evolve ideas and economics-based techniques to design policy instruments for pollution control and management

SYLLABUS OF DSE-EVS-01

Theory (02 Credits: 30 lectures)

UNIT – I Introduction to microeconomics (7 Hours)

Definition and scope of environmental economics; environmental economics versus traditional economics; brief introduction to major components of economy: consumer, firm and their interaction in the market, producer and consumer surplus, market failure, law of demand and supply, tangible and non-tangible goods; utilitariasm; Pareto optimality; compensation principle.

UNIT – II Environmental economics (8 Hours)

Main characteristics of environmental goods; marginal analysis; markets and market failure; social benefit, costs and welfare functions; meaning and types of environmental values; measures of economic values; tangible and intangible benefits; Pareto principle or criterion; Hardin's Thesis of 'The Tragedy of Commons'; Prisoner's dilemma game; methods of abatement of externalities; social cost-benefit analysis; cost-effectiveness analysis.

UNIT – III Economic solutions to environmental problems (7 Hours)

Social costs and benefits of environmental programmes: marginal social benefit of abatement, marginal social cost of abatement; pollution control: policies for controlling air and water pollution, disposal of toxic and hazardous waste- standards vs. emissions charges, environmental subsidies, modelling and emission charges; polluter pay principles; pollution permit trading system.

UNIT – IV Natural resource economics (3 Hours)

Economics of non-renewable resources; economics of fuels and minerals; Hotelling's rule and extensions; taxation; economics of renewable resources; economics of water use, management of fisheries and forests; introduction to natural resource accounting.

UNIT –V Tools for environmental-economic policy (5 Hours)

Growth and environment; environmental audit and accounting, Kuznets curve, environmental risk analysis, assessing benefits and cost for environmental decision making; cost-benefit analysis and valuation: discounting, principles of Cost-Benefit Analysis, estimation of costs and benefits, techniques of valuation, adjusting and comparing environmental benefits and costs.

Teaching and learning interface for theoretical concepts

To achieve the course objectives and match with the contents, a wide range of teaching and learning tools will be employed, including (a) Formal lectures; (b) Interactive sessions using visual aid; (c) Case study analyses; (d) Hypothetical scenario building; (e) Group discussion on key topics; and (f) documentary screening and critical analyses.

Practicals/Hands-on Exercises – based on theory (02 Credits: 60 hours)

1. Conduct cost-benefit analysis of any developmental project
2. Investigate underlying pattern of behavioural economics of selected environmental problem and suggest appropriate solution
3. Calculate energy requirements for decent living in a given country in the background of climate change
4. Determine the potential economic challenges of decarbonization policies and practices being adopted by a country of your choice
5. Apply LCA tools to calculate the energy of construction and manufacturing for appliances, buildings and infrastructure and assess sustainability of the given country
6. Analyze demand and supply curve using
7. Use demand or supply concept and provide empirical evidence on the effects of climate change on the macroeconomy
8. Compare and contrast the demand for and supply of EQ in developed and developing countries
9. Use Marginal Curve Analysis for a given pollution and determine the efficient level of pollution to maximize the net benefits of pollution
10. Determine the social cost of carbon (SCC) to minimize the climate change damages in the cost-benefit analysis of a given project that increase or reduce carbon emission
11. Calculate the value of damages incurred due to release of an additional tonne of carbon into the atmosphere
12. Use Demand for and supply of environmental quality (EQ) in the Environmental Kuznets Curve (EKC) hypothesis
13. Show the usefulness of (a) utility curve analysis, (b) indifference curve analysis, (c) production possibility frontier, (d) market failure or market equilibrium, and (e) Prisoners' dilemma game
14. Conduct an environmental audit of your institution and suggest strategies to improve its sustainability status

Teaching and learning interface for practical skills

To impart training on technical and analytical skills related to the course objectives, a wide range of learning methods will be used, including (a) laboratory practicals; (b) field-work exercises; (c) customized exercises based on available data; (d) survey analyses; and (e) developing case studies; (f) demonstration and critical analyses; and (h) experiential learning individually and collectively.

DISCIPLINE SPECIFIC ELECTIVES (DSE-EVS-2): SOLID WASTE MANAGEMENT

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
DSE-EVS-2: SOLID WASTE MANAGEMENT	4	2	0	2	Class XII pass	NA

Learning objectives

The Learning Objectives of this course are as follows:

- Understand physical and chemical processes for classifying, segregating, and managing solid wastes
- Characterize the different solid waste types and apply interdisciplinary knowledge for effective solid waste collection and processing of solid waste
- Compare methods of collection, transfer, storage, treatment, disposal, and use of solid waste in developed and developing nations
- Management, construction, and operations of landfill and other solid waste management facilities

Learning outcomes

After successful completion of this course, students will be able to:

- Conduct the life cycle assessment of solid waste and its impact on the urban metabolisms
- Identify and select landfill sites using GIS and other analytical techniques
- Examine and apply technical and legal solutions for sustainable management of solid waste
- Plan and design waste recycling programmes, compost and incineration facilities, and landfills
- Mine and analyze the relevant data and apply multiple criteria decision-making systems for a sustainable integrated solid waste management plan

SYLLABUS OF DSE-EVS-02

Theory (02 Credits: 30 lectures)

UNIT – I Effect of solid waste disposal on the environment (6 Hours)

Sources and generation of solid waste, their classification and chemical composition; characterization of municipal solid waste; hazardous waste and biomedical waste. Impact of solid waste on environment, human and plant health; effect of solid waste and industrial effluent discharge on water quality and aquatic life; mining waste and land degradation; effects of landfill leachate on soil characteristics and groundwater pollution.

UNIT – II Common methods to manage solid waste (4 Hours)

Different techniques used in the collection, storage, transportation and disposal of solid waste (municipal, hazardous and biomedical waste); landfill (traditional and sanitary landfill design); thermal treatment (pyrolysis and incineration) of waste material; drawbacks in waste management techniques.

UNIT – III Industrial waste management and resource recovery (8 Hours)

Types of industrial waste: hazardous and non-hazardous; effect of industrial waste on air, water and soil; industrial waste management and its importance; stack emission control and emission monitoring; effluent treatment plant and sewage treatment plant. 4R- reduce, reuse, recycle and recover; biological processing - composting, anaerobic digestion, aerobic treatment; reductive dehalogenation; mechanical biological treatment; green techniques for waste treatment.

UNIT – IV Integrated waste management and waste-to-energy (8 Hours)

Concept of Integrated waste management; waste management hierarchy; methods and importance of Integrated waste management. Concept of energy recovery from waste; refuse-derived fuel (RDF); different WTE processes: combustion, pyrolysis, landfill gas (LFG) recovery; anaerobic digestion; gasification. Life-cycle assessment (LCA): Cradle to grave approach; lifecycle inventory of solid waste; role of LCA in waste management; advantage and limitation of LCA; case study on LCA of a product.

UNIT – V Policies for solid waste management (4 Hours)

Municipal Solid Wastes (Management and Handling) Rules 2000; Hazardous Wastes Management and Handling Rules 1989; Bio-Medical Waste (Management and Handling) Rules 1998; Ecofriendly or green products.

Teaching and learning interface for theoretical concepts

To achieve the course objectives and match with the contents, a wide range of teaching and learning tools will be employed, including (a) Formal lectures; (b) Interactive sessions using visual aid; (c) Case study analyses; (d) Hypothetical scenario building; (e) Group discussion on key topics; and (f) documentary screening and critical analyses.

Practicals/Hands-on Exercises – based on theory (02 Credits: 60 hours)

1. Conduct life cycle assessment of solid waste generated in your institute/residential area/city
2. Design a composting pit for solid waste management in your institute or its nearby area
3. Conduct geotechnical characterization of the selected solid waste generated in the given area
4. Determine microbial density in the given solid waste collected from your institute
5. Estimate environmental impacts of greenhouse gases released and energy recovery from solid waste being collected in a given landfill
6. Assess cost-benefit analysis of various processing options of the given solid waste being managed in your city
7. Field survey of solid waste dumping site of your city, document the quantum of waste being collected and stored, and identify the hidden environmental issues
8. Analyze the site plan of the waste dumping site visited in 7, and compare and contrast it with the most successful design being used in the given developed country
9. Screen a documentary on solid waste management of national or international relevance. Identify and analyze socio-economic impacts and suggest scientific solutions to address the concerned environmental challenges.
10. Critically evaluate the recent plastic management policy of your country and make specific recommendations for immediate amendment aiming for environmental sustainability
11. Select a type of solid waste and prepare a documentary of its management in your city highlighting the merit/demerit of current practices, associated socio-economic and environmental issues and possible solutions suggested by experts
12. Compare and contrast solid waste management practices being adopted in two areas of your city with photographic and videographic evidence

Teaching and learning interface for practical skills

To impart training on technical and analytical skills related to the course objectives, a wide range of learning methods will be used, including (a) laboratory practicals; (b) field-work exercises; (c) customized exercises based on available data; (d) survey analyses; and (e) developing case studies; (f) demonstration and critical analyses; and (h) experiential learning individually and collectively.

DISCIPLINE SPECIFIC ELECTIVE (DSE-EVS-3): ENVIRONMENTAL MODELLING

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
DSE-EVS-3: ENVIRONMENTAL MODELLING	4	2	0	2	Class XII pass	NA

Learning objectives

The Learning Objectives of this course are as follows:

- Gain insights into the concepts, methods, tools and application of environmental modelling
- Appreciate modelling approach with a clear understanding of its scope, limitations and complexity
- Improve knowledge of fate and transport of pollutants and important natural processes and events
- Empower with the application of modelling in ecosystem management via better environmental management, decision making and policy development

Learning outcomes

After the course, students will be able to:

- Choose the appropriate model for a given ecological question or environmental concern
- Overcome the common challenges of model building for improved predictability
- Evolve a better plan to implement and validate model outputs
- Apply models while keeping in view the strength and weaknesses of different model types
- Practice sustainability management, implement cleaner technologies, and argue in favour of environmental protection.

SYLLABUS OF DSE-EVS-3

Theory (02 Credits: 30 lectures)

UNIT – I Working with models (8 Hours)

Goals, objectives, scope and process of modelling in the environment. Modelling approach: deterministic, stochastic and physical. How to choose, construct and interpret statistical models, Statistical frameworks, Philosophy of statistical modeling, Fitting models to real-world data, Techniques–from simple (distribution fitting) to complex (state-space modeling), Techniques for data manipulation and display. Uncertainties in model development: Design,

analysis, documentation, and communication; Data availability and optimal modelling, Reliability of ecological models

UNIT – II Modelling in Science and Environment (12 Hours)

Science models: Visual models, Mathematical models, and Computer models. Model types: Conceptual, Mathematical, and Computational Models; Individual- or agent-based models, Unstructured population models, and Stage-structured matrix models, Single-, two-, and three-state variable models. Environmental models: Fate and transport models, Emissions and activities models, Exposure models, and Impact models; Models of common ecosystems (aquatic, terrestrial, and man-managed) for biodiversity conservation and ecosystem management; Model of the socio-ecological system.

UNIT – III Models for "out of balance" or environmental problems (10 Hours)

Acidification models in water pollution, Eutrophication models, Models of oxygen depletion, Fire and the spread of fire, Air pollution, Toxic substance pollution, Climate, weather and global warming, Environmental/ecological modeling for regulatory risk assessments and hazard predictions.

Teaching and learning interface for theoretical concepts

To achieve the course objectives and match with the contents, a wide range of teaching and learning tools will be employed, including (a) Formal lectures; (b) Interactive sessions using visual aid; (c) Case study analyses; (d) Hypothetical scenario building; (e) Group discussion on key topics; and (f) documentary screening and critical analyses.

Practicals/Hands-on Exercises – based on theory (02 Credits: 60 hours)

1. Test and practice different steps of model development
2. Validate the functioning of the model developed at 1
3. Apply the model to predict outcomes of different environmental scenarios
4. Formulate mathematical and computational models to visualize solar radiance on Earth
5. Develop model wind speed at a given area for establishing wind energy and power plant
6. Evaluate the given multiple leaf-layer model
7. Formulate, implement and evaluate the discrete model for population dynamics
8. Develop a model to predict predator-prey dynamics
9. Analyze competition between different species using an appropriate model
10. Model hydrological networks of the given area
11. Visualize digital elevation data for hydrological network analysis
12. Compare and contrast commonly used software for environmental and ecological modelling

Teaching and learning interface for practical skills

To impart training on technical and analytical skills related to the course objectives, a wide range of learning methods will be used, including (a) laboratory practicals; (b) field-work exercises; (c) customized exercises based on available data; (d) survey analyses; and (e) developing case studies; (f) demonstration and critical analyses; and (h) experiential learning individually and collectively.

DISCIPLINE SPECIFIC ELECTIVE (DSE-EVS-4): BIOPROSPECTING

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
DSE-EVS-4: BIOPROSPECTING	4	2	0	2	Class XII pass	NA

Learning objectives

The Learning Objectives of this course are as follows:

- Learning the concepts and practices of bioprospecting.
- Empower with traditional and modern knowledge related to bioprospecting
- Gain insights into the discovery of novel chemicals of industrial and ecological significance
- Link between the traditional knowledge and the current state of development
- Approaches being used for bioprospecting and regulations relevant to safeguard biodiversity and traditional knowledge

Learning outcomes:

After the course, students will be able to

- Inventorize and monitor biodiversity in different agro-ecological regions
- Act as a catalyst in the discovery of novel compounds from biodiversity across the ecosystems
- Identify alternative sources of chemicals/genes relevant to industry and society
- Evolve combinatorial approaches for screening and isolation of targeted compounds/genes
- Implement relevant policies and laws for safeguarding biodiversity and ancient knowledge

SYLLABUS OF DSE-EVS-4

Theory (02 Credits: 30 lectures)

UNIT – I Concept and Scope (4 Hours)

Definition, Types, and Current practices; Relevance for society, industry, environment, ecosystems, biodiversity and policy; Global status and national efforts

UNIT – II Targets of Bioprospecting (6 Hours)

Novel chemicals, genes, genotypes, population, idea, and design. Plants, microbes, animals, bioactive compounds, and chemicals. Relevant case studies focusing on different target; Success and failure of bioprospecting in sustainable development

UNIT – III Approaches and Methods of Bioprospecting (10 Hours)

Traditional knowledge, ehnopharmaceutical, ecological, and phylogenetic; Biosynthesis and chemical modification, Genetic engineering, Expression of the target gene, Cultivation and mass propagation of target organism; Choice of approach and its limitations or strength. Tools and techniques to practice bioprospecting; Biochemical, physiological, molecular, and chemical assays; Genomic, proteomic, Computational biology and combinatorial.

UNIT – IV Application of Bioprospecting (6 Hours)

Novel drug development, Species and genetic resource conservation, Sustainable use and conservation of biodiversity, Ecosystem management, Industrial sustainability, Agriculture sustainability, Sustainable health, Disease regulation, and culture conservation, Bridge between ancient knowledge to a modern approach to sustainable development.

UNIT – V Laws and Policies Relevant to Bioprospecting (4 Hours)

Convention on biodiversity; Benefit-sharing, Biodiversity Act, Intellectual Property Rights, Biopiracy; Case studies on neem, turmeric, and basmati rice;

Teaching and learning interface for theoretical concepts

To achieve the course objectives and match with the contents, a wide range of teaching and learning tools will be employed, including (a) Formal lectures; (b) Interactive sessions using visual aid; (c) Case study analyses; (d) Hypothetical scenario building; (e) Group discussion on key topics; and (f) documentary screening and critical analyses.

Practicals/Hands-on Exercises – based on theory (02 Credits: 60 hours)

1. Field visit to a local nursery and document medicinal plants having importance in pharmaceutical industry nationally and globally and identify the bioactive compounds
2. Isolate alkaloids from target species using differential solvent fractionation techniques
3. Analyze the separated bioactive compound from 2 using wavelength spectra and chromatographic technique
4. Determine the antimicrobial activity of the given compound or compound fractionated in 2
5. Screen microbes and plants for their ability to produce different glycosides of ecological and economic significance
6. Isolate and prospect microbes of ecological significance, especially for promoting plant growth
7. Test the given plant extract or microbial culture for their ability to control phytodiseases causing organism
8. Fractionate pigments from targeted plants and microbes and determine their potential industrial use

9. Apply computational biology and phylogenetic approach to identify the novel source of targeted compound/gene/protein or enzyme
10. Screen plants for their antioxidant potential and reduce the oxidative stress
11. Visit laboratories / Industries / Institutes engaged in bioprospecting and submit the report in a prescribed format
12. Analyze policies related to bioprospecting and identify the areas for amendments to improve their applicability

Teaching and learning interface for practical skills

To impart training on technical and analytical skills related to the course objectives, a wide range of learning methods will be used, including (a) laboratory practicals; (b) field-work exercises; (c) customized exercises based on available data; (d) survey analyses; and (e) developing case studies; (f) demonstration and critical analyses; and (h) experiential learning individually and collectively.

DEPARTMENT OF CHEMISTRY
Category-I
B Sc. (Hons) Chemistry

DISCIPLINE SPECIFIC CORE COURSE -7 (DSC-7): Chemistry of d- and f-block Elements & Quantitative Inorganic Analysis

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Chemistry of d- and f- Elements & quantitative Inorganic Analysis (DSC-7)	**04**	**02**	**0**	**02**	Passed Class 12th with Physics, Chemistry, Mathematics	**NIL**

Learning Objectives

The Objectives of this course are as follows:

- To provide thorough knowledge about the d- and f- block elements with respect to the general group trends, physical and chemical properties of these elements.
- To familiarize the students with the d- and f-block elements and get an idea about horizontal similarity in a period in addition to vertical similarity in a group.
- To impart the knowledge about inorganic polymer
- To give an idea about the principles of gravimetric analysis.

Learning outcomes

By studying this course, the students will be able to:

- List the important properties of transition metals, lanthanoids, and actinoids
- Use Latimer diagrams to predict and identify species which are reducing, oxidizing and tend to disproportionate and calculate skip step potentials.
- Describe the classification, structure and applications of Inorganic Polymers.
- List and use the principles of gravimetric analysis for quantitative analysis

SYLLABUS OF DSC-7

UNIT – 1: Transition Elements **(12 Hours)**

General group trends with special reference to electronic configuration, colour, variable valency, magnetic properties, catalytic properties, and ability to form complexes. Stability of various oxidation states and e.m.f. (Latimer diagrams), Frost diagrams of Mn and Cr.

A brief discussion of differences between the first, second and third transition series

UNIT – 2: Lanthanoids and Actinoids (8 Hours)

A brief discussion of electronic configuration, oxidation states, colour, spectral and magnetic properties. Lanthanoid contraction (causes and effects) separation of lanthanoids by ion exchange method.

UNIT – 3: Inorganic Polymer (8 Hours)

Comparison with organic polymers, classification, structure and applications of following inorganic polymers:

- Borates
- Silicates, silicones
- Phosphates
- Phosphazenes (for cyclic polymers, only trimer is to be discussed)

UNIT – 4: Principles of gravimetric analysis (2 Hours)

Particle size, Precipitation, Coagulation, Peptization, Co-precipitation, Digestion, Filtration and washing the precipitate, Drying and ignition the precipitate

Practical component (60 Hours)

(Laboratory periods:15 classes of 4 hours each)

(A) Gravimetry

1. Estimation of Ni(II) using dimethylglyoxime (DMG).
2. Estimation of copper as CuSCN.
3. Estimation of iron as Fe_2O_3 by precipitating iron as $Fe(OH)_3$. (by homogeneous and heterogeneous method)
4. Estimation of Al(III) by precipitating with oxime and weighing as $Al(oxime)_3$ (aluminiumoxinate).

(B) Inorganic Preparations

1. Potassium aluminium sulphate $KAl(SO_4)_2.12H_2O$ (potash alum) or Potassium chromium sulphate $KCr(SO_4)_2.12H_2O$ (chrome alum).
2. Manganese phosphate and
3. Sodium peroxoborate

(C) Paper chromatographic separation of following metal ions (minimum two should be done):

1. Ni(II) and Co(II)

2. Cu(II) and Cd(II)
3. Fe(III) and Al(III)

DISCIPLINE SPECIFIC CORE COURSE -8 (DSC-8): Carbonyls, Carboxylic acids, Amines, Nitro compounds, Nitriles, Isonitriles and Diazonium salts

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Carbonyls, Carboxylic Acids, Amines, Nitro Compounds, Nitriles, Isonitriles and Diazonium salts (DSC-8)	04	03	0	01	Passed Class 12th with Physics, Chemistry, Mathematics	NIL

Learning objectives

The objectives of this course are as follows:

- To infuse students with the details of the chemistry of aldehydes, ketones, carboxylic acids and their derivatives, nitro, amines and diazonium salts.
- To make students aware of the chemical synthesis, properties, reactions and key applications of the listed classes of compounds and develop understanding of detailed mechanistic pathways for each functional group to unravel the spectrum of organic chemistry and the extent of organic transformations.
- To aid in the paramount learning of the concepts and their applications.

Learning outcomes

By studying this course, students will be able to:

- Explain the chemistry of oxygen and nitrogen containing compounds.
- Use the synthetic chemistry learnt in this course to do functional group transformations.
- Propose plausible mechanisms for the reactions under study.

SYLLABUS OF DSC-8

UNIT – 1: Carbonyls, Carboxylic acid & their derivatives (27 Hours)

Carbonyl Compounds: Reaction of carbonyl compounds with ammonia derivatives, Aldol and Benzoin condensation, Knoevenagel condensation, Claisen-Schmidt, Perkin, Cannizzaro and

Wittig reaction, Beckmann and Benzil-Benzilic acid rearrangements, haloform reaction and Baeyer Villiger oxidation, α-substitution reactions, oxidations and reductions (Clemmensen, Wolff Kishner, $LiAlH_4$, $NaBH_4$, MPV, PDC), addition reactions of α,β-unsaturated carbonyl compounds: Michael addition.
Carboxylic acids and derivatives: Effect of substituents on acidic strength on carboxylic acids, HVZ reaction, typical reactions of dicarboxylic acids and hydroxy acids. Comparative study of nucleophilic acyl substitution for acid chlorides, anhydrides, esters and amides, Mechanism of acidic and alkaline hydrolysis of esters, Dieckmann and Reformatsky reactions, Hoffmann-bromamide degradation and Curtius rearrangement.
Active methylene compounds: Keto-enol tautomerism. Preparation and synthetic applications of diethyl malonate and ethyl acetoacetate.

UNIT – 2: **Nitro Compounds, Amines, Diazonium salts, Nitriles and Isonitriles (18 Hours)**

Nitro compounds: General methods of preparation: from alkyl halides, alkanes, oxidation of amines and oximes. Henry reaction, Nef reaction, Reduction-electrolytic reduction, reaction with nitrous acid, reduction in acidic, basic and neutral medium (for aromatic compounds)

Amines: Preparation**,** chirality in amines (pyramidal inversion), Basicity of amines: Effect of substituents, solvent and steric effects, distinction between Primary, secondary and tertiary amines using Hinsberg's method and nitrous acid, Gabriel Phthalimide synthesis, Carbylamine reaction, Mannich reaction, Hoffmann's exhaustive methylation, Hofmann-elimination reaction and Cope elimination.

Diazonium Salts**:** Synthetic applications of diazonium salts including preparation of arenes, haloarenes, phenols, cyano and nitro compounds; Coupling reactions of diazonium salts (preparation of azo dyes).

Nitriles: Preparation using following reactions: Dehydration of amides and aldoximes, substitution reaction in alkyl halides and tosylates, from Grignard reagents and from dehydrogenation of primary amines. Properties: Physical properties, discussion on the following reactions with mechanism: Reaction with Grignard reagent, hydrolysis, addition reaction with HX, NH_3, reaction with aqueous ROH, Reduction reactions-catalytic reduction and Stephen's reaction, Condensation reactions-Thorpe Nitrile Condensation.

Isonitriles: Preparation from the following reactions: Carbylamine reaction, substitution in alkyl halides and dehydrogenation of N-substituted formamides. Properties: Physical properties, discussion on the following reactions with mechanism: Hydrolysis, reduction, addition of– HX, X_2 and sulphur, Grignard reaction, oxidation and rearrangement.

Practical component (30 Hours)
(Laboratory periods:15 classes of 2 hours each)

1. Preparation of oximes for aldehydes/ketones (like benzaldehyde, ethyl methyl ketone, cyclohexanone etc.)
2. Preparation of semicarbazone derivatives for aldehydes/ketones (like benzaldehyde, ethyl methyl ketone, cyclohexanone etc.)
3. Hydrolysis of amides/esters.
4. Selective reduction of *m*-dinitrobenzene to *m*-nitroaniline.
5. Preparation of S-benzylisothiouronium salts for water soluble and water insoluble carboxylic acids.
6. Systematic qualitative analysis of the given organic compounds containing monofunctional groups (aromatic hydrocarbons, alcohols, phenol) and preparation of one suitable derivative.

Students should be exposed to preparative routes for the synthesis of 3,5-dinitrobenzoate, benzoates, acetate derivatives.

Note: The above derivatives should be prepared using 0.5-1.0 g of the organic compound. The solid samples must be collected and may be used for recrystallization, melting point and compound analysis**.**

DISCIPLINE SPECIFIC CORE COURSE – 9 (DSC-9): Chemical equilibrium, Ionic equilibrium, conductance and solid state

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Chemical equilibrium, Ionic equilibrium, conductance and solid state (DSC-9)	**04**	**03**	**0**	**01**	**Passed Class XII with Physics, Chemistry and Mathematics**	**NIL**

Learning Objectives:

The Learning Objectives of this course are as follows:

- To make students understand the concept of chemical equilibrium and ionic equilibrium.
- To introduce the concept of electrolytes, ionization of various electrolytes, pH.
- To explain the applications of ionization in buffer, hydrolysis, acid-base titrations and indicators.
- To introduce the concept of electrolytic conductance with respect to strong and weak electrolytes and then extend it to understand concepts like ionic mobility, transference and related properties.
- To develop the advance concept of solid state with emphasis on crystal structures in general and cubic crystals in details.

Learning Outcomes:

By studying this course, students will be able to:

- Apply the concept of equilibrium to various physical and chemical processes.
- Derive and express the equilibrium constant for various reactions at equilibrium.
- Use Le Chatelier's principle to predict the thermodynamic conditions required to get maximum yield of a reaction
- Apply the concept of equilibrium to various ionic reactions.
- List different types of electrolytes and their properties related to conductance in aqueous solutions.
- Use conductance measurements for calculating many properties of the electrolytes.

- Prepare buffer solutions of appropriate pH.
- Explain the crystal properties and predict the crystal structures of cubic systems form the XRD.
- Use the instruments like pH-meter and conductivity meters.

SYLLABUS OF DSC-9

UNIT – 1: Chemical Equilibrium (6 Hours)

Criteria of thermodynamic equilibrium, degree of advancement of reaction, Chemical equilibria in ideal gases, Thermodynamic derivation of relation between Gibbs free energy of a reaction and reaction quotient, Equilibrium constants and their dependence on temperature, pressure and concentration, Le Chatelier's Principle (Quantitative treatment), Free energy of mixing and spontaneity (qualitative discussion).

UNIT – 2: Ionic equilibrium (12 Hours)

Strong, moderate and weak electrolytes, Arrhenius theory of electrolytic dissociation, degree of ionization, factors affecting degree of ionization, ionization constant and ionic product of water. Ionization of weak acids and bases, pH scale, common ion effect; dissociation constants of mono and diprotic acids. Salt hydrolysis-calculation of hydrolysis constant, degree of hydrolysis and pH for different salts. Buffer solutions; derivation of Henderson equation and its applications. Solubility and solubility product of sparingly soluble salts – applications of solubility product principle. Qualitative treatment of acid – base titration curves. Theory of acid–base indicators; selection of indicators and their limitations.

UNIT – 3: Conductance (12 Hours)

Quantitative aspects of Faraday's laws of electrolysis, Conductivity, equivalent and molar conductivity and their variation with dilution for weak and strong electrolytes. Molar conductivity at infinite dilution. Kohlrausch's law of independent migration of ions. Debye-Huckel-Onsager equation, Wien effect, Debye-Falkenhagen effect, Walden's rule. Ionic velocity, mobility and their determination, transference number and its relation to ionic mobility, determination of transference number using Moving Boundary methods. Applications of conductance measurement: (i) degree of dissociation of weak electrolytes, (ii) ionic product of water (iii) solubility and solubility product of sparingly soluble salts, (iv) conductometric titrations (v) hydrolysis constants of salts.

UNIT – 4: Solid state (15 Hours)

Nature of the solid state, law of constancy of interfacial angles, law of rational indices, Miller indices, elementary idea of symmetry, seven crystal systems and fourteen Bravais lattices; X-ray diffraction, Bragg's law, a simple account of rotating crystal method and powder pattern method. Analysis of powder diffraction patterns of NaCl, CsCl and KCl.

Practical component (30 Hours)

(Laboratory periods: 15 classes of 2 hours each)

pH metry:

1. Study the effect of addition of HCl/NaOH on pH to the solutions of acetic acid, sodium acetate and their mixtures.
2. Preparation of buffer solutions of different pH values
   a. Sodium acetate-acetic acid
   b. Ammonium chloride-ammonium hydroxide
3. pH metric titration of
   a. Strong acid with strong base
   b. Weak acid with strong base. Determination of dissociation constant of a weak acid.

Conductometry:

1. Determination of cell constant
2. Determination of conductivity, molar conductivity, degree of dissociation and dissociation constant of a weak acid.
3. Perform the following conductometric titrations:
   a. Strong acid vs. strong base
   b. Weak acid vs. strong base
   c. Mixture of strong acid and weak acid vs. strong base
   d. Strong acid vs. weak base

p-XRD *(p-XRD crystal pattern to be provided to the students)*

1. Differentiate and classify the given set of the diffraction pattern as crystalline materials or amorphous (Glass) substance.
2. Carry out analysis of a given set of p-XRD and determine the type of the cubic crystal structure
   a. NaCl
   b. CsCl
   c. KCl
3. Determination of approximate crystal size from a given set of p-XRD

POOL OF DISCIPLINE SPECIFIC ELECTIVE COURSE

DISCIPLINE SPECIFIC ELECTIVE COURSE -1 (DSE-1): Nuclear and Environmental Chemistry

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Nuclear and Environmental Chemistry (DSE-1)	**04**	**03**	**0**	**01**	Passed Class 12th with Physics, Chemistry	**NIL**

Learning Objectives

The Objectives of this course are as follows:

- To make students know more about nuclear chemistry
- To familiarise the students about environmental chemistry, especially with respect to air and water

Learning outcomes

By studying this course, the students will be able to:

- Gain knowledge about Nuclear chemistry, radioactive decay, nuclear disasters, and nuclear waste and their disposal.
- Describe the composition of air, various air pollutants, effects and control measures of air pollutants.
- List different sources of water, water quality parameters, impacts of water pollution, water treatment.
- Identify different industrial effluents and their treatment methods.

SYLLABUS OF DSE-1

Unit-1 : Nuclear Chemistry **(21 Hours)**

The nucleus: subatomic particles, e liquid drop model; forces in nucleus-mesons; stability of nucleus-n/p ratio, binding energy; radioactive elements.
Radioactive decay- α-decay, β-decay, γ-decay; neutron emission, positron emission; unit of radioactivity (curie); half life period; radioactive displacement law, radioactive series.
Measurement of radioactivity: ionization chamber, Geiger Counters, Scintillation counters.
Nuclear reactions: Nuclear fission-theory of nuclear fission; chain reaction; nuclear fusion; nuclear reactors-fast breeder reactors, fuels used in nuclear reactors, separation of isotopes, moderators, coolants; nuclear reactors in India.
Applications: Dating of rocks and minerals, carbon dating, neutron activation analysis, isotopic labeling studies, nuclear medicine- ^{99m}Tc radio pharmaceuticals.
Nuclear disasters – Chernobyl disaster, Three Mile Island Disaster, Disposal of nuclear waste and its management.

UNIT – 2: Air Pollution **(12 Hours)**

Major regions of atmosphere, chemical and photochemical reactions in atmosphere. Air pollutants: types, sources, particle size and chemical nature, Major sources of air pollution, Pollution by SO_2, CO_2, CO, NO_x, H_2S and other foul-smelling gases, methods of estimation of CO, NO_x, SO_x and control procedures.

Chemistry and environment impact of the following: Photochemical smog, Greenhouse effect, Ozone depletion

Air pollution control, Settling Chambers, Venturi Scrubbers, Electrostatic Precipitators (ESPs).

UNIT – 3 : Water Pollution: **(12 Hours)**

Hydrological cycle, water resources, aquatic ecosystems, Sources and nature of water pollutants, Techniques for measuring water pollution, Impacts of water pollution on hydrological cycle and ecosystems. Water purification methods. Effluent treatment plants (primary, secondary and tertiary treatment).

Sludge disposal. Industrial waste management, incineration of waste. Water treatment and purification (reverse osmosis, electro dialysis, ion-exchange). Water quality parameters for wastewater, industrial water and domestic water.

Practical component (30 Hours)
(Laboratory periods:15 classes of 2 hours each)
(At least four experiments to be performed)

1. Determination of dissolved oxygen in a given sample of water.
2. Determination of Chemical Oxygen Demand (COD) in a given sample of water.
3. Determination of Biological Oxygen Demand (BOD) in a given sample of water.

4. Measurement of chloride, sulphate and salinity of water samples by simple titration method ($AgNO_3$ and potassium chromate).
5. Estimation of total alkalinity of water samples (CO_3^{2-}, HCO_3^-) using double titration method.
6. Measurement of dissolved CO_2 in a given sample of water.
7. Determination of hexavalent Chromium Cr(VI) concentration in tannery wastes/ waste water sample using UV-Vis spectrophotometry technique.

Essential/recommended readings

DISCIPLINE SPECIFIC ELECTIVE COURSE - 2 (DSE-2): Inorganic materials of industrial importance

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Inorganic Materials of Industrial Importance (DSE-2)	**04**	**03**	**0**	**01**	Passed Class 12th with Physics, Chemistry	**NIL**

Learning Objectives

The objectives of this course are as follows:

- To make students understand the diverse roles of inorganic materials in the industry and to give an insight into how these raw materials are converted into products used in day-to-day life.
- To make students learn about silicates, fertilizers, surface coatings, batteries, engineering materials for mechanical construction.
- To develop the interest of students in the frontier areas of inorganic and material chemistry.

Learning outcomes

By studying this course, the students will be able to:

- State the composition and applications of the different kinds of glass.
- State the composition of cement and discuss the mechanism of setting of cement.
- Defend the suitability of fertilizers for different kinds of crops and soil.
- Explain the process of formulation of paints and the basic principle behind the protection offered by the surface coatings.
- Describe the principle, working and applications of different batteries.
- Evaluate the synthesis and properties of nano-dimensional materials, various semiconductor and superconductor oxides.

SYLLABUS OF DSE-2

Unit 1: Silicate Industries (6 Hours)

Glass: Glassy state and its properties, classification (silicate and non-silicate glasses). Manufacture and processing of glass. Composition and properties of the following types of

glasses: Soda lime glass, lead glass, armoured glass, different types of safety glass, borosilicate glass, fluorosilicate glass, coloured glass, photosensitive glass, photochromic glass, glass wool and optical fibre.

Cement: Manufacture of Portland cement and the setting process, Different types of cements: quick setting cements, eco-friendly cement (slag cement), pozzolana cement.

Unit 2: Fertilizers **(6 Hours)**

Different types of fertilizers (N, P and K). Importance of fertilizers, chemistry involved in the manufacture of the following fertilizers: urea, calcium ammonium nitrate, ammonium phosphates, superphosphate of lime and potassium nitrate.

Unit 3: Surface Coatings **(18 Hours)**

Brief introduction to and classification of surface coatings, paints and pigments: formulation, composition and related properties, pigment volume concentration (PVC)and critical pigment volume concentration (CPVC), fillers, thinners, enamels and emulsifying agents. Special paints: heat retardant, fire retardant, eco-friendly paints, plastic paints, water and oil paints. Preliminary methods for surface preparation, metallic coatings (electrolytic and electroless with reference to chrome plating and nickel plating), metal spraying and anodizing.

Contemporary surface coating methods like physical vapor deposition, chemical vapor deposition, galvanising, carburizing, sherardising, boriding, nitriding and cementation.

Unit 4: Batteries **(9 Hours)**

Primary and secondary batteries, characteristics of an Ideal Battery, principle, working, applications and comparison of the following batteries: Pb- acid battery, Li-metal batteries, Li-ion batteries, Li-polymer batteries, solid state electrolyte batteries, fuel cells, solar cells and polymer cells.

Unit 5: Nano dimensional materials **(6 Hours)**

Introduction to zero, one and two-dimensional nanomaterial: Synthesis, properties and applications of fullerenes, carbon nanotubes, carbon fibres, semiconducting and superconducting oxides.

Practical component (30 Hours)

(Laboratory periods:15 classes of 2 hours each)

(At least four experiments to be performed)

1. Detection of constituents of Ammonium Sulphate fertilizer (Ammonium and Sulphate ions) by qualitative analysis and determine its free acidity.

2. Detection of constituents of CAN fertilizer (Calcium, Ammonium and Nitrate ions) fertilizer and estimation of Calcium content.

3. Detection of constituents of Superphosphate fertilizer (Calcium and Phosphate ions) and estimation of phosphoric acid content.

4. Analysis of (Cu, Ni) in alloy or synthetic samples (methods involving Gravimetry and Spectrophotometry).

5. Analysis of (Cu, Zn) in alloy or synthetic samples (Multiple methods involving Iodometry, and Potentiometry).

6. Synthesis of pure ZnO and Cu doped ZnO nanoparticles.

7. Synthesis of silver nanoparticles by green and chemical approach methods and its characterization using UV-visible spectrophotometer

Essential/recommended readings

Theory:

DISCIPLINE SPECIFIC ELECTIVE COURSE – 3 (DSE-3): Green Chemistry in Organic Synthesis

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Green Chemistry in Organic Synthesis (DSE-3)	04	03	0	01	Passed Class 12th with Physics, Chemistry	Basic knowledge of organic reactions

Learning objectives

The objectives of this course are as follows:

- To create awareness about the chemistry that is not harmful for human health and the environment.
- To provide thorough knowledge of the green chemistry principles that can be used to develop chemistry in greener way.
- To familiarize students with new remediation technologies for the cleaning up of hazardous substances.
- To use green chemistry for boosting profits, increase productivity and ensure sustainability with absolute zero waste.
- To learn about innovations and applications of green chemistry in education that helps companies to gain environmental benefits as well as to achieve economic and societal goals also
- The objective of the practical component is to develop basic skills to be able to design, develop and run chemical processes in a sustainable way.

Learning outcomes

By studying this course, students will be able to:

- List the twelve principles of green chemistry and build the basic understanding of toxicity, hazard and risk related to chemical substances.
- Calculate atom economy, E-factor and relate them in all organic synthesis
- State the uses of catalyst over stoichiometric reagents
- Debate and use green solvents, renewable feedstock, and renewable energy sources for carrying out safer chemistry
- Use green chemistry for problem solving, innovation and finding solutions to environmental problems.
- Design safer processes, chemicals, and products through understanding of inherently safer design (ISD)

- Discuss the success stories and use real-world cases to practice green chemistry

SYLLABUS OF DSE-3

UNIT – 1: Introduction **(3 Hours)**

Introduction to Green Chemistry, some important environmental laws, pollution prevention Act of 1990, emergence of green chemistry, need for Green Chemistry. Goals of Green Chemistry. Limitations/ Obstacles in the pursuit of the goals of Green Chemistry. Green chemistry in sustainable development.

UNIT – 2: **Application of Green Chemistry Principles** **(36 Hours)**

Principles of Green Chemistry and designing a chemical synthesis
Concept familiarization and application of green chemistry principles using specific examples

1. Prevention of waste/ by products; waste or pollution prevention hierarchy
2. Green metrics to assess greenness of a reaction: Calculation of atom economy of the rearrangement, addition, substitution, and elimination reactions; calculation of E-factor for industrial processes
3. Prevention/ minimization of hazardous/ toxic products
4. Safer Solvent and Auxiliaries: Problems associated with conventional reaction media Some Common Green solvents: Introduction, application, advantages, and disadvantages of green solvents in organic synthesis (taking suitable examples). Special emphasis on the following:
   i. Super Critical Fluids (with special reference to carbon dioxide)
   ii. Water: Concept of In-water, and on-water reactions (with special reference to synthesis of terpinol and linalool in water, Benzoin condensation, Heck reaction)
   iii. Ionic Liquids: Physical properties and classification of Ionic Liquids (with special reference to Diels Alder reaction and Coumarin synthesis in ionic liquids)
   iv. Biomass derived Solvents: Physicochemical properties, Use of glycerol and its derivatives (Mizoroki–Heck reaction) and 2-methyltetrahydrofuran (Suzuki–Miyaura reaction).
5. Design for energy efficiency: Phenomenon of accelerating organic reactions by using the following Green Chemistry tools (taking suitable examples) and its advantages:
   i. Mechanochemistry
   ii. Ultrasound assisted reactions: Taking examples like Simmons Smith reaction, Diels–Alder reaction,
   iii. Microwave assisted reactions: Special emphasis on solvent-free synthesis- copper phthalocyanine and aspirin, In-water reactions-Hofmann Elimination, methyl benzoate to benzoic acid and Decarboxylation reaction;
   iv. Electrocatalysis: Taking examples like adiponitrile synthesis, synthesis of 3-bromothiophene.
   v. Visible light induced Reactions: with examples such as, syntheses of caprolactam and vitamin D_3, cis-trans isomerization of alkenes
6. Use of renewable starting materials: Illustrate with few examples such as biodiesel, bioethanol, polymers from renewable resources (PLA from corn), Synthesis and properties of 2-Methyltetrahydrofuran, furfural and 5-Aminolevulinic acid (DALA) from levulinic acid

7. Avoidance of unnecessary derivatization – careful use of blocking/protecting groups (taking specific examples like selective oxidation of aldehydic group and synthesis of 6-Aminopenicillanic Acid (6-APA) from penicillin G
8. Catalysis and green chemistry
   Introduction to Catalysis (including concept of selectivity, turnover frequency and turnover number), Types of Catalysts: Heterogeneous catalysis and homogeneous catalysis (H-beta and zeolites in organic synthesis), General catalytic cycle for heterogeneous catalysis; Asymmetric catalysis (Monsanto route to L-dopa via asymmetric hydrogenation, synthesis of carbapenhem via Asymmetric reduction); Photocatalysis (with special reference to TiO2); Biocatalysis (Synthesis of adipic acid/catechol using biocatalyst) and Nanocatalysis (oxazole synthesis using nanocatalyst)
9. Design for degradation: (Illustrate with the help of examples: soaps and detergents, pesticides, polymers)
10. Real Time monitoring of chemical processes using inline, offline, and online techniques
11. Inherently safer design/chemistry:
    Principle and subdivision of ISD, Bhopal Gas Tragedy (safer route to carbaryl) and Flixiborough accident (safer route to cyclohexanol, Asahi Process)

UNIT – 3: Industrial Applications and Success Stories (6 Hours)

- Vitamin C Synthesis using enzymes (Hoffman La Roche)
- Zoloft -Presidential Chemistry Award Winning Innovation (Pfizer)
- Methyl Methacrylate syngas process (Eastman Chemicals)
- Synthesis of herbicide disodium iminodiacetate
- Rightfit pigments azo dyes synthesis and their applications
- Healthier Fats and oils by Green Chemistry: Enzymatic Interesterification for production of No Trans-Fats and Oils.
- Synthesis of anti-tuberculosis drug Paramycin from waste water stream

Practical component (30 Hours) (Laboratory periods:15 classes of 2 hours each)

Note: Characterization by melting point, UV-Visible spectroscopy, IR spectroscopy and any other specific method should be done (wherever applicable).

1. Preparation and characterization of nanoparticles of gold using tea leaves/silver nanoparticles using plant extracts.
2. Preparation of biodiesel from waste cooking oil and characterization (TLC, pH, solubility, combustion test, density, viscosity, gel formation at low temperature and IR can be provided).
3. Benzoin condensation using thiamine hydrochloride as a catalyst instead of cyanide.
4. Extraction of D-limonene from orange peel using liquid CO2 prepared from dry ice.
5. Mechanochemical solvent free, solid-solid synthesis of azomethine using p-toluidine and o-vanillin/p-vanillin.
6. Microwave-assisted Knoevenagel reaction using anisaldehyde, ethylcyanoacetate and ammonium formate.
7. Photoreduction of benzophenone to benzopinacol in the presence of sunlight.
8. Photochemical conversion of dimethyl maleate to dimethyl fumarate (cis-trans isomerisation)

9. Benzil- Benzilic acid rearrangement: Preparation of benzilic acid in solid state under solvent-free condition.
10. Preparation of dibenzalacetone by cross aldol condensation reaction using base catalysed green method.

DISCIPLINE SPECIFIC ELECTIVE COURSE – 4 (DSE-4): Reactions, Reagents and Chemical Process

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Reactions, Reagents and Chemical Process (DSE-4)	04	03	0	01	Passed Class 12th with Physics, Chemistry	Basic knowledge of organic reactions

Learning objectives

The objectives of this course are as follows:

- To study the important organic name and rearrangement reactions that are crucial for the synthesis of valuable organic compounds.
- To give the knowledge belonging to the role of reagents in organic reactions for the synthesis of chemo-, diastereo- and enantio-selective products.
- To impart the knowledge of process chemistry that is a key part of the large-scale synthesis of chemical products essential for day-to-day life

Learning outcomes

By studying this course, students will be able to:

- Explain the reaction mechanism of various name and rearrangement reactions
- Discuss the role of the reagents in organic synthesis and apply these reagents for the bulk chemical synthesis
- Debate and use oxidizing and reducing reagents for selective synthesis organic products
- Apply the learnt techniques to chemical processes
- Acquire skills for human resource building especially in the chemical industry.

SYLLABUS OF DSE-4

UNIT – 1: Name Reactions **(15 Hours)**

Application, scope and mechanism of following reactions: Prevost Reaction, Chugaev Reaction, Maukaiyama Aldol Reaction, Mozingo Reaction, Ramberg Backlund Reaction, Shapiro Reaction, Barbier Reaction, Clark- Eschweiler Reaction, Darzen's Reaction, Julia-Olifination Reaction, Tiffeneaus Damjanov Reaction, Darkin West Reaction, Bischler-Napieralaski Reaction, Birch reduction of aromatic compounds, Appel Reaction, Mitsunobu Reaction, Corey Kim Oxidation, Azide-alkyne 1,3-dipolar cycloaddition reaction, Olefin metathesis: Grubbs reaction, Heck Reaction, Suzuki coupling and Wittig reaction.

UNIT – 2: **Reducing Reagents** **(9 Hours)**

Reactions, mechanism and applications of following reducing agents: Sodium borohydride, Lithium aluminium hydride, $NaBH_3CN$, DIBALH, lithium-tri-*tert*-butoxyaluminum hydride, Red-Al $Na[AlH_2(OCH_2OCH_2OCH_3)_2]$, Zinc borohydride, L and K selectrides, $LiBHEt_3$ and $KBHEt_3$, Luche Reagent $NaBH_4$-$CeCl_3$, $K[BH(OAc)_3]$, *bis*-Boric Acid (BBA), Catecholborane, DEMS (Diethoxymethylsilane), 3-Mercapto propionic acid, Polymethylhydrosiloxane (PMHS), Schwartz's Reagent (Zirconocene chloride hydride).

UNIT – 3: Oxidizing Reagents **(9 Hours)**

Reactions, mechanism and applications of following oxidizing agents: Jones Reagent (CrO_3, H_2SO_4, H_2O), Swern Reagent (DMSO, oxalyl chloride), Dess Martin, TEMPO, TPAP (Tetrapropyl ammonium perruthenate), Fetizon's Reagent, Fenton's Reagent [H_2O_2 + Fe(II) ion], Sodium perborate NaH_2BO_4, Sodium Bismuthate $NaBiO_3$, ABNO (9-Azabicyclo[3.3.1]nonane N-oxyl), DEAP (Diethyl allyl phosphate,

), AZADO (2-Azaadamantane N-oxyl], Wacker oxidation.

UNIT – 4: Process Chemistry **(12 Hours)**

1. Process chemistry a) Introduction, stages of scale up process: Bench, pilot, and large-scale process with at least two examples of scale up process of API. b) In-process control and validation of large-scale process.
2. Unit Processes: The following unit processes should be studied with mechanism and one example of each process Nitration: Nitrating agents, process equipment for technical nitration. Halogenation: Types of halogenations, catalytic halogenations. Reduction: Catalytic hydrogenation, hydrogen transfer reactions, metal hydrides. Oxidation: Types of oxidative reactions, and non-metallic oxidizing agents such as H, sodium hypochlorite, oxygen gas, ozonolysis.

Practical component (30 Hours)

(Laboratory periods:15 classes of 2 hours each)

1. Oxidation of alcohols to acid using Jones reagent.
2. Reduction of acetophenone and its derivatives to 1-phenyl ethanol derivatives by $NaBH_4$.
3. Reduction of 4-tert-butyl-cyclohexanone to cis and trans 4-tert-butyl-cyclohexanol.
4. Synthesis of 2,5-dimethyl-2,5-hexanediol from tert-butanol using Fenton's reagents.
5. Wittig reaction of benzyltriphenylphosphonium chloride and 4-bromobenzaldehyde using potassium phosphate (tribasic).
6. Substitution (S_N2) reaction of 1-iodobutane and 2-naphthol.
7. Aldol condensation reaction: solventless synthesis of chalcones.
9. Borohydride reduction of a ketone: hydrobenzoin from benzil.
10. Visit to chemical industry for the demonstration of pilot scale.

2. Vogel A.I., **Elementary Practical Organic Chemistry**, Dorling Kindersley (India) Pvt. Ltd. (Pearson Education Ltd.), Singapore.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVE COURSE -5(DSE-5): Solutions, Colligative properties, Phase Equilibria and adsorption

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Solutions, Colligative properties, Phase Equilibria and adsorption (DSE-5)	**04**	**03**	**0**	**01**	Class 12th with Physics, Chemistry	**NIL**

Learning Objectives

The Learning Objectives of this course are as follows:

- To make the students understand the various properties of dilute solutions.

- To make the students understand the thermodynamic basis of colligative properties.
- To explain the concept of phase, co-existence of phases, phase diagram for various types of system, CST and distribution law.
- To introduce the concept of adsorption, its dependence on various conditions and applications

Learning outcomes

By studying this course, students will be able to:

- Explain different types of phase equilibrium, draw a well labelled phase diagram.
- Predict the existence of a substance in a given phase under different conditions of temperature and pressure
- Apply the concepts of phase, solutions and distribution law while studying other chemistry courses and every-day life processes.
- Explain the type of adsorption that can take place in different systems and predict the conditions to get maximum adsorption.

SYLLABUS OF DSE-5

UNIT-1: Solutions and Colligative Properties (12 Hours)

Dilute solutions; lowering of vapour pressure, Raoult's law, Henry's law. Thermodynamic basis of the colligative properties - lowering of vapour pressure, elevation of Boiling Point, Depression of Freezing point and Osmotic pressure and derivation of expressions for these using chemical potential. Application of colligative properties in calculating molar masses of normal, dissociated and associated solutes in solutions, van't Hoff factor and its applications. Concept of activity and activity coefficients.

UNIT-2: Phase Equilibria (24 Hours)

Concept of phases, components and degrees of freedom, derivation of Gibbs Phase Rule for nonreactive and reactive systems; Clausius-Clapeyron equation and its applications to solid-liquid, liquid-vapour and solid-vapour equilibria, phase diagram for one component systems (H_2O and S), with applications. A comparison between the phase diagram of CO_2 and H_2O. Phase diagrams for systems of solid-liquid equilibria involving eutectic, congruent and incongruent melting points, solid solutions (excluding partial miscibility). Binary solutions: Gibbs-Duhem-Margules equation, its derivation and applications to fractional distillation of binary miscible liquids (ideal and non-ideal), Konovalov's laws, azeotropes, lever rule, partial miscibility of liquids, CST, miscible pairs, steam distillation. Nernst distribution law: its derivation and applications.
Three component systems, water-chloroform-acetic acid system, triangular plots.

UNIT-3: Surface chemistry (9 Hours)

Physical adsorption, chemisorption, adsorption isotherms (Langmuir and Freundlich). Nature of adsorbed state. Multilayer adsorption, BET equation derivation, thermodynamic treatment of adsorption-Gibbs equation.

Practical component (30 Hours)
(Laboratory periods: 15 classes of 2 hours each)

Practical

Phase Equilibrium

1. Determination of critical solution temperature and composition at CST of the phenol water system
2. To study the effect of impurities of sodium chloride and succinic acid on the CST of phenol-water system.
3. To study the cooling curves for the following systems:
   (i) simple eutectic
   (ii) congruently melting systems.

Adsorption

Verify the Freundlich and Langmuir isotherms for adsorption of acetic acid on activated charcoal.

DISCIPLINE SPECIFIC ELECTIVE COURSE- 6 (DSE-6): Applications of computers in Chemistry

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Applications of computers in Chemistry (DSE 6)	**04**	**03**	**0**	**01**	Class 12th with Physics, Chemistry	**NIL**

Learning Objectives

The Learning Objectives of this course are as follows:
To make the students learn the working of computer and its applications in chemistry *via* programming language, C language and use of software as a tool to understand chemistry and solve chemistry-based problems.

Learning outcomes

By studying this course, students will be able to:

- Use commands and library functions in programming in C language.
- Develop algorithm to solve problems and write corresponding programs in C language for performing calculations involved in laboratory experiments.
- Use various spreadsheet software to perform theoretical calculations and plot graphs

SYLLABUS OF DSE-6

UNIT 1: Introduction to Basic Computer System (6 Hours)

Hardware and Software; Input devices, Storage devices, Output devices, Central Processing Unit (Control Unit and Arithmetic Logic Unit); Number system (Binary, Octal and Hexadecimal Operating System); Computer Codes (BCD and ASCII); Numeric/String constants and variables. Operating Systems (DOS, WINDOWS, and Linux); Software languages: Low level and High-Level languages (Machine language, Assembly language; QBASIC, C, C++, FORTRAN 90&95); Compiled versus interpreted languages. Debugging Software Products (Office, chemsketch, scilab, matlab, and hyperchem), internet application

UNIT 2: Commands and Library functions in C language (18 Hours)

C language for solving some of the basic and complicated chemistry problems). QB4 version of C language can be used.

Numeric constants, variables & its declaration, Arithmetic expressions, hierarchy of operations, inbuilt functions and header files. Syntax and use of the following commands in C language: scanf, printf, fscanf and fprintf; goto, relational operators, *if-else* statement; *while*, *for* and *do while* loops, *switch-break* statements; header files (<stdio.h>, <stdlib.h>, <math.h>, <ctype.h>, <malloc.h>, <string.h>), arrays & pointers, library functions (abs & fabs, int, float, double, ceil, char, exp, log, rand, sqrt, \t, \v, \n and trigonometric Functions), defining and accessing functions, gnuplot- syntax and commands

Simple programs using C commands, Matrix addition and multiplication

UNIT 3: Use of C language for solving problems in Chemistry (21 Hours)

Solution of quadratic equation, polynomial equations (formula, iteration, Newton – Raphson methods and binary bisection) with examples of polynomial equations used in chemistry; Numerical differential, Numerical integration (Trapezoidal and Simpson's rule), Calculation of area under the curves for chemistry problems, e.g., entropy calculations, Simultaneous equations, Statistical analysis-mean, variance, standard deviation, error, least square method.

Plotting linear graphs using experimental data, plotting (i)trigonometric functions-particle in a one-dimensional box(ii) exponential function (iii) Ideal gas isotherms. Plotting van der Waals Isotherms, and observe whether van der Waal gas equation is valid at temperatures lower than critical temperature where we require to solve a cubic equation.

Practical Component (30 Hours)
(Laboratory periods: 15 classes of 2 hours each)

Computer programs using C language based on numerical methods

1. Simple programs to calculate numerical values of chemistry problems.
2. Roots of equations: (e.g. volume of gas using Van der Waals equation and comparison with ideal gas, pH of a weak acid).
3. Solving polynomial equation using iterative method. (Van der Waal's equation of state, pH of a weak acid using exact expression)
4. Solving polynomial equation using Newton-Raphson's method. (Van der Waal's equation of state, pH of a weak acid using exact expression)
5. Matrix operations: addition, multiplication and transpose
6. Numerical differentiation (e.g., change in pressure for small change in volume of a van der Waals gas, potentiometric titrations).
7. Numerical integration using trapezoidal method. (e.g. entropy/ enthalpy change from heat capacity data).

8. Numerical integration using Simpson's rule
9. Mean, standard deviation
10. Least square curve fitting method for linear equation.
11. Calculate the relative intensities of peaks of a proton obtained after spin-spin coupling with 4 equivalent neighbouring protons in a high-resolution NMR spectrum using GOSUB RETURN.

Computer programs using C language for plotting graphs

1. Van der Waals isotherm
2. Compressibility versus pressure curves
3. Maxwell distribution curves
4. Concentration-time graph using kinetics data
5. pH metric titration curve
6. Conductometric titration curves for strong acid-strong base titrations.
7. Calibration curve using Lambert Beer's law
8. Particle in a one-dimensional box.

Note: Minimum 12 exercises is to be performed relating to C language

Plotting graphs using spreadsheet

1. Particle in a one-dimensional box.
2. van der Waals isotherms below critical temperature, at critical temperature and above critical temperature.
3. Radial plots and radial distribution functions for orbitals of hydrogen atom.
4. Plotting characteristics graphs of zero, first and second order reactions using concentration time data and determine the order of the reaction.

Essential/recommended readings

Theory:

1. McQuarrie, D. A**.** (2008), **Mathematics for Physical Chemistry,** University Science Books.
2. Mortimer, R**.** (2005), **Mathematics for Physical Chemistry**,3rd Edition, Elsevier.

2. Kapoor, K.L. (2019), **A Textbook of Physical Chemistry**, Vol.7, 1st Edition, McGraw Hill Education.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Bachelor of Sciences in Industrial Chemistry

Category II

Industrial Chemistry Course for Undergraduate Programme of study with Industrial Chemistry as one of the Core Disciplines

DISCIPLINE SPECIFIC CORE COURSE – 7: (DSC-7) Industrially important Inorganic Materials

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Industrially important Inorganic Materials (DSC-7: Industrial Chemistry -III)	04	02	0	02	Class XII Pass with Physics, Chemistry, Mathematics	NIL

Learning Objectives

The Learning Objectives of this course are as follows:

- To imparts basic knowledge of chemistry of inorganic materials such as silicates, non-silicates, ceramics, and cement.
- To enrich students with the knowledge of various types of batteries like Pb acid Battery, Li-ion Battery, Fuel Cells and Solar cell.
- To impart the theoretical and practical knowledge of estimation and determination of various industrially important chemicals.

Learning outcomes

By the end of this course, students will be able to:

- Establish an appreciation of the role of inorganic chemistry in the chemical sciences.
- Analyse inorganic materials like silicates, ceramics and cement.

- Familiarized with scientific method of planning, developing, conducting, reviewing and reporting experiments.
- Draw various concepts of industrial metallurgy which will help them to explore new innovative areas of research.
- Explain scientific methods employed in inorganic chemistry.

SYLLABUS OF DSC-7

Unit 1: Silicate Industries **14 Hours**

(a) *Glass*: Glassy state and its properties, Classification (silicate and non-silicate glasses). Manufacture and processing of glass. Composition and properties of the following: Soda lime glass, lead glass, armoured glass, safety glass, borosilicate glass, and photosensitive glass.
(b) *Ceramics*: Ceramic, their types and manufacture. High technology ceramics and their applications, super conducting and semiconducting oxides, fullerenes carbon nanotubes and carbon fiber, clays and feldspar.
(c) *Cement*: Classification of cement, ingredients and their role. Manufacture of cement and the setting process, quick setting cements.

Unit 2: Batteries **8 Hours**

Primary and secondary batteries, battery components and their role and characteristics of battery. Working of following batteries: Pb acid Battery, Li-ion Battery, Fuel Cells, and Solar cell

Unit 3: Fertilizers **8 Hours**

Different types of fertilizers (N, P and K). Importance of fertilizers, chemistry involved in the manufacture of the following fertilizers: urea, ammonium nitrate, calcium ammonium nitrate, ammonium phosphates, superphosphate of lime, potassium chloride and potassium nitrate.

Practical components **(Laboratory periods: 60)**

1. Detection of constituents of Dolomite (Calcium, Magnesium and carbonate ions) by qualitative analysis.
2. Determination of composition of Dolomite using complexometric titration.
3. Detection of constituents of Ammonium Sulphate fertilizer (Ammonium and Sulphate ions) by qualitative analysis.
4. Determine its free acidity in Ammonium Sulphate fertilizer.
5. Detection of constituents of CAN fertilizer (Calcium, Ammonium and Nitrate ions) by qualitative analysis.
6. Estimation of Calcium content in CAN fertilizer.

7. Detection of constituents of Superphosphate fertilizer (Calcium and Phosphate ions) by qualitative analysis.
8. Estimation of phosphoric acid content in Superphosphate fertilizer.
9. To determine the total insoluble residue in the cement sample.
10. To determine the amount of lime (CaO) in the given sample of cement.
11. To determine the silica content in the given sample of cement.
12. To determine the Oxides (Sesquioxides Fe_2O_3 + Al_2O_3) in the given sample of cement.

Essential/recommended readings

Theory:

1. Felder, R. M.; Rousseau, R. W. (2015), **Elementary Principles of Chemical Processes**, Wiley Publishers, New Delhi.
2. Stocchi, E. (1990), **Industrial Chemistry**, Vol -I, Ellis Horwood Ltd. UK.
3. Kingery, W. D.;Bowen, H. K.;Uhlmann, D. R. (1976), **Introduction to Ceramics**, Wiley Publishers, New Delhi.
4. Kent, J. A. (ed**)** (1997), **Riegel's Handbook of Industrial Chemistry**, CBS Publishers, New Delhi.
5. Jain, P. C.; Jain, M. (2013), **Engineering Chemistry**, Dhanpat Rai & Sons, Delhi.
6. Sharma, B. K. (2014), **Engineering Chemistry**, Goel Publishing House, Meerut

Practical:

2. Svehla, G.(1996),**Vogel's Qualitative Inorganic Analysis**, Prentice Hall.
3. Banewicz, J. J.; Kenner, C.T. **Determination of Calcium and Magnesium in Limestones and Dolomites**, Anal. Chem., 1952, 24 (7), 1186–1187.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE –DSC 8: Chemical Energetics and Equilibria

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Chemical Energetics and Equilibria (DSC-8: Chemistry -III)	04	02	0	02	Class XII Pass with Physics, Chemistry, Mathematics	NIL

Learning Objectives

The Learning Objectives of this course are as follows:

- To develop basic understanding of the chemical energetics, laws of thermodynamics and ionic equilibrium.
- To provide basic understanding of the behaviour of electrolytes and their solutions.
- To give an overview of the properties of ideal and real gases and deviation from ideal behaviour.

Learning outcomes

By the end of the course, the students will be able to:

- Explain the laws of thermodynamics, thermochemistry and equilibria.
- Illustrate the concept of pH and its effect on the various physical and chemical properties of the compounds.
- Explain and draw the concepts to predict feasibility of chemical reactions and to study the behaviour of reactions in equilibrium.

SYLLABUS OF DSC-8

Unit 1: Chemical Energetics **16 Hours**

Recapitulation of Intensive and extensive variables; state and path functions; isolated, closed and open systems, concept of heat, Q, work, W, internal energy, U, and enthalpy, H.

First law

Concept of heat, Q, work, W, internal energy, U, and statement of first law; enthalpy, H, relation between heat capacities for ideal gas, Joule's experiment, calculations of Q, W, ΔU and ΔH for reversible expansion of ideal gases under isothermal conditions.

Thermochemistry

Enthalpy of reactions: standard states; enthalpy of neutralization, enthalpy of ionization enthalpy of hydration, enthalpy of formation and enthalpy of combustion, Integral enthalpy of solution, bond dissociation energy and bond enthalpy; Hess's law, Born Haber's cycle (NaCl/ KCl).

Second Law

Concept of entropy; statements of the second law of thermodynamics (Kelvin and Clausius). Calculation of entropy change for reversible processes (for ideal gases). Free Energy Functions: Gibbs and Helmholtz energy (Non-PV work and the work function); Free energy change and concept of spontaneity (for ideal gases).

Third Law

Statement of third law, qualitative treatment of absolute entropy of molecules (examples of NO, CO), concept of residual entropy

Unit 2: Chemical Equilibrium **4 Hours**

Criteria of thermodynamic equilibrium. Free energy change in a chemical reaction and equilibrium constant, exergonic and endergonic reactions with examples such conversion of ATP to ADP or vice versa,, Le Chatelier's principle, relationship between Kp, Kc and Kx for reactions involving ideal gases.

Unit 3: Ionic Equilibria **10 Hours**

Strong, moderate and weak electrolytes, degree of ionization, factors affecting degree of ionization, Ostwald's dilution law, ionization constant and ionic product of water, ionization of weak acids and bases, Degree of ionization, pH scale, common ion effect, Buffer solutions, Henderson-Hasselbach equation. Solubility and solubility product of sparingly soluble salts – applications of solubility product principle

Practicals components **(Laboratory periods: 60)**

Chemical Energetics:

1. Determination of heat capacity of calorimeter.
2. Determination of enthalpy of neutralization of hydrochloric acid with sodium hydroxide.
3. Determination of the enthalpy of ionization of acetic acid.
4. Determination of enthalpy of neutralization of acetic acid and ammonium hydroxide using Hess's law.
5. Determination of integral enthalpy of solution (both endothermic and exothermic)

of salts.

6. Determination of enthalpy of hydration of Copper sulphate.

Ionic equilibria:

7. Preparation of buffer solutions: (i) Sodium acetate-acetic acid or (ii) Ammonium chloride-ammonium acetate. Measurement of the pH of buffer solutions and comparison of the values with theoretical values.
8. Study the effect of addition of HCl/NaOH on pH of the buffer solutions (acetic acid, and sodium acetate).
9. Titration of strong acid with strong base using pH meter.

Essential/recommended readings

Theory:

1. Castellan, G. W. (2004), **Physical Chemistry**, Narosa.
2. Kapoor, K. L. (2015), **A Textbook of Physical Chemistry**, Vol 1, 6th Edition, McGraw Hill Education.
3. Kapoor, K. L. (2015), **A Textbook of Physical Chemistry**, Vol 2, 6thEdition, McGraw Hill Education.
4. Puri, B. R., Sharma, L. R. and Pathania M. S. (2020), **Principles of Physical Chemistry**, Vishal Publishing Co.

Practical:

1. Khosla, B. D.; Garg, V. C.; Gulati, A. (2015), **Senior Practical Physical Chemistry**, R. Chand & Co.
2. Kapoor, K. L. (2019), **A Textbook of Physical Chemistry**, Vol 7, 1st Edition, McGraw Hill Education.
3. Batra, S. K., Kapoor, V and Gulati, S. (2017) 1st Edition, **Experiments in Physical Chemistry,** Book Age series.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE – DSC 9: Elementary Linear Algebra

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Elementary Linear Algebra	4	3	1	0	Class XII pass with Mathematics	NIL

Learning Objectives: The objective of the course is:

- To introduce the concept of vectors in R^n.
- Understanding the nature of solution of system of linear equations.
- To view the $m \times n$ matrices as a linear function from R^n to R^m and vice versa.
- To introduce the concepts of linear independence and dependence, rank and linear transformations has been explained through matrices.

Learning Outcomes: This course will enable the students to:

- Visualize the space R^n in terms of vectors and the interrelation of vectors with matrices.
- Familiarize with concepts of bases, dimension and minimal spanning sets in vector spaces.
- Learn about linear transformation and its corresponding matrix.

SYLLABUS OF DSC-2

UNIT – I: Euclidean Space R^n and Matrices (18 hours)

Fundamental operations with vectors in Euclidean space R^n, Linear combinations of vectors, Dot product and their properties, Cauchy-Schwarz inequality, Triangle inequality, Solving system of linear equations using Gaussian elimination, Application: Curve Fitting, Gauss-Jordan row reduction, Reduced row echelon form, Application: Solving several systems simultaneously, Equivalent systems, Rank and row space of a matrix, Eigenvalues, Eigenvectors, Eigenspace, Diagonalization, Characteristic polynomial of a matrix.

UNIT – II: Introduction to Vector Spaces (12 hours)

Definition, Examples and some elementary properties of vector spaces, Subspaces, Span, Linear independence and linear dependence of vectors, Basis and dimension of a vector space, Maximal linearly independent sets, Minimal spanning sets.

UNIT – II: Linear Transformations (15 hours)

Linear transformations**:** Definition, Examples and elementary properties, The matrix of a linear transformation, Kernel and range of a linear transformation, The dimension theorem, one-to-one and onto linear transformations, Invertible linear transformations, Isomorphic vector spaces.

Essential Reading

1. Andrilli, S., & Hecker, D. (2016). *Elementary Linear Algebr*a (5th ed.). Elsevier India.

Suggestive Readings

- Lay, David C., Lay, Steven R., & McDonald, Judi J. (2016). *Linear Algebra and its Applications* (5th ed.). Pearson Education.
- Kolman, Bernard, & Hill, David R. (2001). *Introductory Linear Algebra with Applications* (7th ed.). Pearson Education, Delhi. First Indian Reprint 2003.

DISCIPLINE SPECIFIC ELECTIVE COURSE – DSE 1: GREEN CHEMISTRY

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course(if any)
		Lecture	Tutorial	Practical/ Practice		
Green Chemistry (DSE-1)	04	02	--	02	12th Pass	NIL

Learning Objectives

The Learning Objectives of this course are as follows:

- Huge rise in environmental pollution, depleting resources, climate change, ozone depletion, heaps and heaps of landfills piling up has forced the society to become more and more environmentally conscious.
- It is not a new branch of chemistry but helps to improve the creative and innovative thinking in undergraduate students. Green chemistry is a way to boost profits, increase productivity and ensure sustainability with absolute zero waste. Innovations and applications of green chemistry in education have helped companies to gain environmental benefits as well as to achieve economic and societal goals also. Undergraduate students are the ultimate scientific community of tomorrow.
- Training them to practice chemistry in the safest way possible is key towards safe working conditions in the laboratories as well as the chemical industry and extends to society in a sustainable future for the planet.
- To develop basic understanding of the chemical energetics, laws of thermodynamics and ionic equilibrium.

Learning outcomes

By the end of the course, the students will be able to:

- Understand the twelve principles of green chemistry and also build the basic understanding of toxicity, hazard and risk related to chemical substances.
- Calculate atom economy, E-factor and relate them in all organic synthesis
- Appreciate the use of catalyst over stoichiometric reagents
- Learn to use green solvents, renewable feedstock and renewable energy sources for carrying out safer chemistry
- Appreciate the use of green chemistry in problem solving skills and critical thinking to innovate and find solutions to environmental problems.

- Learn to design safer processes, chemicals and products through understanding of inherently safer design (ISD)
- Appreciate the success stories and real-world cases as motivation for them to practice green chemistry

SYLLABUS OF DSE-1

Unit :1 Introduction **08 Hours**

Definition of green chemistry and how it is different from conventional chemistry and environmental chemistry.

• Need of green chemistry

• Importance of green chemistry in- daily life, Industries and solving human health problems (four examples each).

• A brief study of Green Chemistry Challenge Awards (Introduction, award categories and study about five last recent awards).

Unit 2: Twelve Principles of Green Chemistry **12 Hours**

The twelve principles of the Green Chemistry with their explanations, Special emphasis on the following:

• Prevention of waste / byproducts, pollution prevention hierarchy.

• Green metrics to assess greenness of a reaction: environmental impact factor, atom economy and calculation of atom economy.

• Green solvents-supercritical fluids, water as a solvent for organic reactions, ionic liquids, solvent less reactions, solvents obtained from renewable sources.

• Catalysis and green chemistry- comparison of heterogeneous and homogeneous catalysis, biocatalysts, asymmetric catalysis and photocatalysis.

• Green energy and sustainability.

• Real-time analysis for pollution prevention.

• Prevention of chemical accidents, designing greener processes, inherent safer design, principle of ISD "What you don't have cannot harm you", greener alternative to Bhopal Gas Tragedy (safer route to carcarbaryl) and Flixiborough accident (safer route to cyclohexanol) subdivision of ISD, minimization, simplification, substitution, moderation and limitation

Unit 3: **10 Hours**

The following Real-world Cases in green chemistry should be discussed: Surfactants for carbon dioxide – replacing smog producing and ozone depleting solvents with CO_2 for precision cleaning and dry cleaning of garments. Designing of environmentally safe

marine antifoulant. Rightfit pigment: Synthetic azo pigments to replace toxic organic and inorganic pigments. An efficient, green synthesis of a compostable and widely applicable plastic (polylactic acid) made from corn.

Practical components: Credit:02, Laboratory periods: 60)

Characterization by melting point, UV-Visible spectroscopy, IR spectroscopy and any other specific method should be done (wherever applicable).

1. Preparation and characterization of nanoparticles of gold using tea leaves/silver nanoparticles using plant extracts.
2. Preparation of biodiesel from waste cooking oil and characterization (TLC, pH, solubility, combustion test, density, viscosity, gel formation at low temperature and IR can be provided).
4. Benzoin condensation using thiamine hydrochloride as a catalyst instead of cyanide.
5. Extraction of D-limonene from orange peel using liquid CO2 prepared from dry ice.
6. Mechanochemical solvent free, solid-solid synthesis of azomethine using p-toluidine and o-vanillin/p-vanillin.
9. 6 Microwave-assisted Knoevenagel reaction using anisaldehyde, ethylcyanoacetate and ammonium formate.
7. Photoreduction of benzophenone to benzopinacol in the presence of sunlight.
8. Photochemical conversion of dimethyl maleate to dimethyl fumarate (cis-trans isomerisation)
9. Benzil- Benzilic acid rearrangement: Preparation of benzilic acid in solid state under solvent-free condition.

Essential/recommended readings

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Course Title: Quantitative Methods of Analysis **Course Code:** Analytical Chemistry-3 (DSC7:AC-3)	04	02	00	02	Class XII Pass with Physics, Chemistry and Mathematics	NIL

Learning Objectives

The Learning Objectives of this course are as follows:

- To acquire knowledge about the basic principles underlying gravimetric and volumetric analysis, different types of titration curves, equilibria principles and environmental analysis

Learning outcomes

By the end of this course, students will be able to:

- By the end of this course, students will be able to:
- Know the concept of volumetric and gravimetric analysis and deducing the conversion factor for determination
- Understand the various titration curves
- Stability of complexes
- Know and analyse various pollutants present in the environment.

SYLLABUS OF Analytical Chemistry-2 (DSC-7: AC-3)

Theory Component

UNIT – I: Gravimetric Analysis (08 Hours)

Requisites of precipitation, Nucleation, precipitation, and growth of precipitates; Particle size and filterability of precipitates; Factors influencing precipitation, Co-precipitation, post-precipitation. Super saturation, digestion, precipitation from homogeneous solution, washing of precipitate and ignition of precipitate, Brief idea about method of filtration and drying of precipitate, Use of reagents used in gravimetry (8-hydroxy quinoline (oxine) and dimethyl glyoxime (DMG).

UNIT – II: Basic principles underlying titrimetric analysis (12 Hours)

- **Acid-base:** pH of strong and weak acid solutions. Buffer solutions. Henderson equations. Preparation of acidic and basic buffers. Relative strength of acids and bases from Ka and Kb values. Neutralisation-titration curve, theory of indicators, choice of indicators.
- **Theory of redox indicator**s: Principle and detection of equivalence point by visual & potentiometric methods
- **Precipitation titrations** Argentometric titrations, indicators for precipitation titrations involving silver nitrate- Volhard's method., Mohr's method, Adsorption indicators.
- **Complexometric titrations:** Stability of complexes, titration involving EDTA: . direct, back, displacement and indirect determinations, Metal ion indicators and characteristics. Application-determination of hardness of water

UNIT – III: Introduction to Environmental Analysis (10 Hours)

- Environmental analysis of water: colour, odour, taste, conductivity, dissolved solids, hardness, DO, COD, BOD, chlorides, sulphates, nitrates and phosphates
- Environmental analysis of air: Sampling, particulate matter, gaseous pollutants-SOx, NOx, COx, and organic pollutants
- Environmental analysis of industrial effluents-estimation of toxic metals Hg, Cd, Pb, As, radiochemical wastes

Practical component - 60 Hours

1. Determination of the pK_a of a weak acid by potentiometric and pH metric titrations.
2. Determination of the strength of the given ferric chloride solution by titrating it against EDTA.
3. Estimation of chloride in water by precipitation method.
4. Estimation of amount of nickel present in given solution as *bis*(dimethylglyoximato)nickel (II) /Aluminium as oxinate.
5. Draw the absorbance curve of bromophenol blue using a colorimeter.
6. Determination of the composition of the Fe^{3+}-salicylic acid complex in solution by Job's method (*Plot curve using excel also*).
7. Determination of the formula of the chelate formed between iron (III) and Tiron.
8. Determination of dissolved oxygen (DO) /biological oxygen demand (BOD),/chemical oxygen demand (COD) (*Use at least two water samples from different sources*)

DISCIPLINE SPECIFIC CORE COURSE – 8: DSC8:C3

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Course Title: CHEMICAL ENERGETICS AND EQUILIBRIA **Course Code:** CHEMISTRY-3 (DSC8-C3)	**04**	**02**	**00**	**02**	**Class XII pass with Physics, Chemistry and Mathematics**	**NIL**

Learning Objectives

The Learning Objectives of this course are as follows:

- The objective of this paper is to develop basic understanding of the chemical energetics, laws of thermodynamics and ionic equilibrium. It provides basic understanding of the behaviour of electrolytes and their solutions.
- The students will also learn about the properties of ideal and real gases and deviation from ideal behaviour.

Learning outcomes

By the end of this course, students will be able to:

- Understand the laws of thermodynamics, thermochemistry and equilibria.
- Understand concept of pH and its effect on the various physical and chemical properties of the compounds.
- Use the concepts learnt to predict feasibility of chemical reactions and to study the behaviour of reactions in equilibrium.

SYLLABUS OF Chemistry-3 (DSC-8:C3)

Theory Component

UNIT – I: Chemical Energetics (14 Hours)

Review of Intensive and extensive variables; state and path functions; isolated, closed and open systems, concept of heat, Q, work, W, internal energy, U, and enthalpy, H.

First law

Concept of heat, Q, work, W, internal energy, U, and statement of first law; enthalpy, H, relation between heat capacities, Joule Thompson Porous Plug experiment, Nature of Joule Thompson coefficient, calculations of Q, W, ΔU and ΔH for reversible, irreversible and free expansion of ideal gases under isothermal conditions.

Thermochemistry

Enthalpy of reactions: standard states; enthalpy of neutralization, enthalpy of hydration, enthalpy of formation and enthalpy of combustion and its applications, bond dissociation energy and bond enthalpy; effect of temperature (Kirchhoff's equations) on enthalpy of reactions.

Second Law

Concept of entropy; statement of the second law of thermodynamics. Calculation of entropy change for reversible processes and irreversible processes (for ideal gases). Free Energy Functions: Gibbs and Helmholtz energy; variation of S, G, A with T, V, P; Free energy change and spontaneity (for ideal gases), Gibbs-Helmholtz equation.

Third Law

Statement of third law, unattainability of absolute zero, calculation of absolute entropy of molecules, concept of residual entropy, calculation of absolute entropy of solid, liquid and gases.

UNIT – II: Chemical Equilibrium (4 Hours)

Criteria of thermodynamic equilibrium, chemical equilibrium in ideal gases. Thermodynamic derivation of relation between Gibbs free energy of reaction and reaction quotient. Equilibrium constants and their qualitative dependence on T, P and concentration (Le Chatelier's principle). Free energy of mixing and spontaneity.

UNIT – III: Ionic Equilibria (12 Hours)

Strong, moderate and weak electrolytes, degree of ionization, factors affecting degree of ionization, Ostwald's dilution law, ionization constant and ionic product of water, ionization of weak acids and bases, pH scale, common ion effect, salt hydrolysis-calculation of hydrolysis constant, degree of hydrolysis and pH for different salts. Buffer solutions, Henderson-Hasselbach equation. Solubility and solubility product of sparingly soluble salts – applications of solubility product principle.

Practical component – 60 Hours

Chemical Energetics:

1. Determination of heat capacity of calorimeter.
2. Determination of enthalpy of neutralization of hydrochloric acid with sodium hydroxide.
3. Determination of the enthalpy of ionization of ethanoic acid.

4. Determination of basicity of a dibasic acid by thermochemical method.
5. Determination of integral enthalpy of solution of salts (KNO_3 or NH_4Cl).
6. Determination of enthalpy of hydration of copper sulphate.

Ionic equilibria:

7. Preparation of buffer solutions: (i) Sodium acetate-acetic acid or (ii) Ammonium chloride-ammonium acetate. Measurement of the pH of buffer solutions and comparison of the values with theoretical values.
8. Study the effect of addition of HCl/NaOH on pH of the buffer solutions (acetic acid, and sodium acetate).
9. pH metric titration of (i) strong acid with strong base, (ii) weak acid with strong base

DISCIPLINE SPECIFIC ELECTIVES (DSE)

DISCIPLINE SPECIFIC ELECTIVE COURSE – DSE-1

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Course Title: ANALYTICAL BIOCHEMISTRY **Course Code:** (DSE-1)	**04**	**02**	**00**	**02**	**Class XII Pass with Physics, Chemistry and Mathematics**	**NIL**

Learning Objectives

The Learning Objectives of this course are as follows:

- Students will learn about proteins, enzymes, nucleic acids and lipids, using suitable examples, drug-receptor interaction and Structure-Activity Relation (SAR) relationship.
- Students will also learn about the genetic code and concept of heredity.

Learning outcomes

By the end of this course, students will be able to:

- Learn about the structures of carbohydrates and Proteins
- Learn about the molecules, macromolecules, polymers and their formations
- Learn about the metabolism of a few biomolecules.
- Know basic principles of drug-receptor interaction and strucstructure-activitytionship (SAR).
- Know the biochemistry of diseases.

SYLLABUS OF DSE-1

Theory Component

UNIT – I: Carbohydrates and Proteins (16 Hours)

Basic understanding of the structures and properties of carbohydrates, biological importance of Carbohydrates.
Monosaccharides: Constitution and absolute configuration of glucose and fructose, epimers and anomers, mutarotation, Haworth projections and conformational structures; Structure elucidation of glucose and fructose (Fischer's proof), Interconversions of aldoses and ketoses; Killiani-Fischer synthesis and Ruff degradation;
Disaccharides – Structure elucidation of maltose, lactose and sucrose.
Polysaccharides – Elementary treatment of starch, cellulose and glycogen.
Amino Acids, Peptides and Proteins:
α-Amino Acids - Classification and characterization, Zwitterions, pKa values, isoelectric point and electrophoresis;
Proteins: Classification, Primary, secondary and tertiary structures of proteins, test for proteins, isolation, characterization, biological importance; denaturation of proteins.
Enzymes: Introduction, classification and characteristics of enzymes. Salient features of active site of enzymes. Mechanism of enzyme action (taking trypsin as an example), factors affecting enzyme action, coenzymes and cofactors (ATP, NAD, FAD), specificity of enzyme action (including stereospecificity).

UNIT – II: Lipids (6 Hours)
Introduction to oils and fats; common fatty acids present in oils and fats, Hydrogenation of fats and oils, Classification. Biological importance of triglycerides and phosphoglycerides and cholesterol; Liposomes and their biological functions and underlying applications. Lipoproteins. Properties, functions and biochemical functions of steroid hormones and peptide hormones.

UNIT – III: Biochemistry of Diseases (8 Hours)
A diagnostic approach by blood/ urine analysis. **Blood:** Composition and functions of blood, blood coagulation. Blood collection and preservation of samples. Causes and symptoms of Anemia.
Urine: Collection and preservation of samples. Formation of urine. Composition and estimation of constituents of normal and pathological urine. Regulation, estimation and interpretation of data for blood sugar, urea, creatinine, cholesterol and bilirubin.

Practical component - 60 Hours

1. Carbohydrate- qualitative and quantitative both.
2. Proteins-qualitative tests
4. Determination of the iodine number of oil.
5. Determination of the saponification value of an oil.
6. Determination of acid value of fats and oils.
7. Determination of cholesterol using Liebermann- Burchard reaction.
8. Estimation of DNA by diphenylamine reaction
9. Isolation and characterization of DNA from Onion/cauliflower.
10. Determination of amount of protein using Lowry's method/ Biuret method.
11. To study the activity of ⟨-amylase.
12. To study the effect of temperature and pH on the activity of ⟨-amylase.

Essential/recommended readings

DISCIPLINE SPECIFIC ELECTIVE COURSE – DSE-2

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Course Title: Green Chemistry **Course Code:** (DSE-2)	04	02	00	02	Class XII Pass with Physics, Chemistry and Mathematics	NIL

Learning Objectives

The Learning Objectives of this course are as follows:

- Huge rise in environmental pollution, depleting resources, climate change, ozone depletion, heaps and heaps of landfills piling up has forced the society to become more and more environmentally conscious. Future chemists and innovators are compelled to work towards sustainable practices. Green chemistry has arisen from these concerns. It is not a new branch of chemistry but helps to improve the creative and innovative thinking in undergraduate students. Green chemistry is a way to boost profits, increase productivity and ensure sustainability with absolute zero waste. Innovations and applications of green chemistry in education have helped companies to gain environmental benefits as well as to achieve economic and societal goals also.
- Undergraduate students are the ultimate scientific community of tomorrow. Training them to practice chemistry in the safest way possible is key towards safe working conditions in the laboratories as well as the chemical industry and extends to society in a sustainable future for the planet.

Learning Outcomes:

By the end of this course, students will be able to:

- Understand the twelve principles of green chemistry and also build the basic understanding of toxicity, hazard and risk related to chemical substances.
- Calculate atom economy, E-factor and relate them in all organic synthesis.
- Appreciate the use of catalyst over stoichiometric reagents.
- Learn to use green solvents, renewable feedstock and renewable energy sources for carrying out safer chemistry.
- Appreciate the use of green chemistry in problem solving skills and critical thinking to innovate and find solutions to environmental problems.

- Learn to design safer processes, chemicals and products through understanding of inherently safer design (ISD).
- Appreciate the success stories and real-world cases as motivation for them to practice green chemistry.

SYLLABUS OF DSE-2

Theory Component

Unit-I: Introduction (8 Hours)

Definition of green chemistry and how it is different from conventional chemistry and environmental chemistry.

• Need of green chemistry

• Importance of green chemistry in- daily life, Industries and solving human health problems (four examples each).

• A brief study of Green Chemistry Challenge Awards (Introduction, award categories and study about five last recent awards).

Unit-II: Twelve Principles of Green Chemistry (12 Hours)

The twelve principles of the Green Chemistry with their explanation's. Special emphasis on the following:

• Prevention of waste / byproducts, pollution prevention hierarchy.

• Green metrics to assess greenness of a reaction: environmental impact factor, atom economy and calculation of atom economy.

• Green solvents-supercritical fluids, water as a solvent for organic reactions, ionic liquids, solvent less reactions, solvents obtained from renewable sources.

• Catalysis and green chemistry- comparison of heterogeneous and homogeneous catalysis, biocatalysis, asymmetric catalysis and photocatalysis.

• Green energy and sustainability.

• Real-time analysis for pollution prevention.

• Prevention of chemical accidents, designing greener processes, inherent safer design, principle of ISD "What you don't have cannot harm you", greener alternative to Bhopal Gas Tragedy (safer route to carcarbaryl) and Flixiborough accident (safer route to cyclohexanol) subdivision of ISD, minimization, simplification, substitution, moderation and limitation

Unit-III: Real-World Cases (10 Hours)

The following Real-world Cases in green chemistry should be discussed: Surfactants for carbon dioxide – replacing smog producing and ozone depleting solvents with CO_2 for precision cleaning and dry cleaning of garments. Designing of environmentally safe marine antifoulant. Rightfit pigment: Synthetic azo pigments to replace toxic organic and inorganic pigments. An

efficient, green synthesis of a compostable and widely applicable plastic (polylactic acid) made from corn.

Practical Component – 60 Hours

Characterization by melting point, UV-Visible spectroscopy, IR spectroscopy and any other specific method should be done (wherever applicable).

1. Preparation and characterization of nanoparticles of gold using tea leaves/silver nanoparticles using plant extracts.
2. Preparation of biodiesel from waste cooking oil and characterization (TLC, pH, solubility, combustion test, density, viscosity, gel formation at low temperature and IR can be provided).
3. Benzoin condensation using thiamine hydrochloride as a catalyst instead of cyanide.
4. Extraction of D-limonene from orange peel using liquid CO_2 prepared from dry ice.
5. Mechanochemical solvent free, solid-solid synthesis of azomethine using *p*-toluidine and *o*-vanillin/*p*-vanillin.
6 Microwave-assisted Knoevenagel reaction using anisaldehyde, ethylcyanoacetate and ammonium formate.
7. Photoreduction of benzophenone to benzopinacol in the presence of sunlight.
8. Photochemical conversion of dimethyl maleate to dimethyl fumarate (*cis-trans* isomerisation)
9. Benzil- Benzilic acid rearrangement: Preparation of benzilic acid in solid state under solvent-free condition.

		Lecture	Tutorial	Practical/ Practice		
Chemical Energetics and Equilibria (DSC-7: Chemistry 03:	04	02	00	02	Passed Class 12th with Physics, Chemistry, Mathematics	NIL

Learning objectives

The objectives of this course are as follows:

- To develop basic understanding of the chemical energetics, laws of thermodynamics and ionic equilibrium.
- to provides basic understanding of the behaviour of electrolytes and their solutions.
- To make students learn about the properties of ideal and real gases and deviation from ideal behavior

Learning outcomes

By studying this course, students will be able to:

- Explain the laws of thermodynamics, thermochemistry and equilibria.
- Use the concept of pH and its effect on the various physical and chemical properties of the compounds.
- Use the concepts learnt to predict feasibility of chemical reactions and to study the behaviour of reactions in equilibrium

SYLLABUS

UNIT-1: Chemical Energetics **(16 Hours)**

Recapitulation of Intensive and extensive variables; state and path functions; Isolated, closed and open systems

First law

Concept of heat (Q), work (W), internal energy (U), and statement of first law; enthalpy (H), relation between heat capacities for ideal gas, Joule's experiment, calculations of Q, W, ΔU and ΔH for reversible expansion of ideal gases under isothermal conditions.

Thermochemistry

Enthalpy of reactions: standard states; enthalpy of neutralization, enthalpy of ionization enthalpy of hydration, enthalpy of formation and enthalpy of combustion, Integral enthalpy of solution, bond dissociation energy and bond enthalpy; Hess's law, Born Haber's cycle (NaCl/ KCl).

Second Law

Concept of entropy; statements of the second law of thermodynamics (Kelvin and Clausius). Calculation of entropy change for reversible processes (for ideal gases). Free Energy Functions: Gibbs and Helmholtz energy (Non-PV work and the work function); Free energy change and concept of spontaneity (for ideal gases).

Third Law

Statement of third law, qualitative treatment of absolute entropy of molecules (examples of NO, CO), concept of residual entropy

UNIT-2: Chemical Equilibrium (4 Hours)

Criteria of thermodynamic equilibrium. Free energy change in a chemical reaction and equilibrium constant, exergenic and endergenic reactions with examples such conversion of ATP to ADP or vice verca,, Le Chatelier's principle, relationship between Kp, Kc and Kx for reactions involving ideal gases.

UNIT-3: Ionic Equilibria (10 Hours)

Strong, moderate and weak electrolytes, degree of ionization, factors affecting degree of ionization, Ostwald's dilution law, ionization constant and ionic product of water, ionization of weak acids and bases, Degree of ionization, pH scale, common ion effect, Buffer solutions, Henderson-Hasselbach equation. Solubility and solubility product of sparingly soluble salts – applications of solubility product principle

Practical Component: 60 Hours

(Laboratory periods: 15 classes of 4 hours each)

Chemical Energetics:

1. Determination of heat capacity of calorimeter.
2. Determination of enthalpy of neutralization of hydrochloric acid with sodiumhydroxide.
3. Determination of the enthalpy of ionization of acetic acid.
4. Determination of enthalpy of neutralization of acetic acid and ammonium hydroxide using Hess's law.

5. Determination of integral enthalpy of solution (both endothermic and exothermic) of salts.
6. Determination of enthalpy of hydration of Copper sulphate.

Ionic equilibria:

7. Preparation of buffer solutions: (i) Sodium acetate-acetic acid or (ii) Ammonium chloride-ammonium acetate. Measurement of the pH of buffer solutions and comparison of the values with theoretical values.
8. Study the effect of addition of HCl/NaOH on pH of the buffer solutions (acetic acid, and sodium acetate).
9. pH metric titration of strong acid with strong base,
10. pH metric titration of weak acid with strong base

Pool of DISCIPLINE SPECIFIC ELECTIVES (DSEs) for BSc. Life Science

DISCIPLINE SPECIFIC ELECTIVE COURSE CHEM-DSE -1:

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Chem-DSE-1: Chemistry of Major and Minor Biogenic Elements	**04**	**02**	**00**	**02**	**Passed Class XII with Science**	**NIL**

Learning Objectives

The Learning Objectives of this course are as follows:

- To review periodic properties of main group elements and their role in the biological systems.
- To discuss the patterns and trends exhibited by main group elements and their compounds with emphasis on synthesis, structure, bonding and their diverse applications in the environment, industry and in the biological system.
- To get an insight into how these compounds such as oxides of N and S affect our day-to-day life.
- To learn about inorganic polymeric compounds borazine, silicates, silicones, phosphonitrilic compounds and their applications.
- To develop the interest of students in the frontier areas of inorganic and material chemistry.

Learning outcomes

By studying this course, students will be able to:

- Explain the periodicity in atomic and ionic radii, electronegativity, ionization enthalpy, electron gain enthalpy of elements of the periodic table.
- Explain oxidation states with reference to the existence of elements in unusual and rare oxidation states in alkalides, carbides and nitrides.
- Explain vital role of sodium, potassium, calcium and magnesium ions etc. in biological systems and the role of oxides of N and S in our environment.
- Predict distribution of major and minor biogenic elements in human beings

SYLLABUS OF CHEM-DSE 1

UNIT-1: Periodic Properties (6 Hours)

Electronic configurations of the atoms. Stability of half-filled and completely filled orbitals, the concept of exchange energy, inert pair effect.
General group trends of main group elements with special reference to size (atomic and ionic), Ionization Enthalpy, Electron Gain Enthalpy, Electronegativity, oxidation states (including rare oxidation states of alkali metals, carbides and nitrides), melting and boiling points, flame colour, metallic character and complex formation tendency (crown ethers and cryptates), Alkali metal solutions in liquid ammonia
Distribution of major and minor biogenic elements in human beings

UNIT 2: Structure, Bonding and Properties (16 Hours)

Structure, bonding and properties: Acidic/Basic nature, stability, ionic/covalent nature, oxidation/reduction, hydrolysis, thermal stability of the following:
Hydrides: hydrides of Group 13 (only diborane), Group 14, Group 15 (EH_3 where E = N, P, As, Sb, Bi), Group 16 and Group 17.
Oxides: Oxides of nitrogen, phosphorus and sulphur
Oxoacids: oxoacids of phosphorus, sulphur and chlorine
Halides of phosphorus

Relevance of above compounds in industrial/environmental/biological systems wherever applicable

UNIT 3: Preparation, Properties, Structure and Uses (8 Hours)

Preparation, properties, structure and uses of the following compounds: Borazine, Silicates, silicones, Phosphonitrilic halides $\{(PNCl_2)_n$ where n = 3 and 4$\}$

Practical component 60 Hours
(Laboratory periods: 15 classes of 4 hours each)

Qualitative semi-micro analysis of mixtures containing 2 anions and 2 cations (preferably 7-8 mixtures). Emphasis should be given to the understanding of the chemistry of different reactions. The following radicals are suggested: CO_3^{2-}, NO_2^- , S^{2-}, SO_3^{2-}, SO_4^{2-} , $S_2O_3^{2-}$, CH_3COO^-, F, Cl^- , Br^- , I^- ,
NO_3^- , BO_3^{3-}, $C_2O_4^{2-}$, PO_4^{3-}, NH_4^+, K^+, Pb^{2+} , Cu^{2+}, Cd^{2+}, Bi^{3+}, Sn^{2+}, Sb^{3+}, Fe^{3+}, Al^{3+}, Cr^{3+}, Zn^{2+}, Mn^{2+}, Co^{2+}, Ni^{2+}, Ba^{2+}, Sr^{2+}, Ca^{2+}, Mg^{2+}.
The mixtures may contain combination of anions/one interfering anion.
Spot tests should be preferred wherever applicable.

DISCIPLINE SPECIFIC ELECTIVE COURSE CHEM-DSE -2:

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Chem-DSE-2: Polynuclear Hydrocarbons, Pharmaceutical Compounds, UV- Visible & IR Spectroscopy	**04**	**02**	**00**	**02**	**Passed Class XII with Science**	**NIL**

Learning Objectives

The Learning Objectives of this course are as follows:

- To introduce the chemistry and applications of polynuclear hydrocarbons and heterocyclic compounds.
- Introduction to spectroscopy, an important analytical tool which allows identification of organic compounds by correlating their spectra to structure.

Learning outcomes

By studying this course, students will be able to:

- Understand the fundamentals of polynuclear hydrocarbons and heterocyclic compounds through the study of methods of preparation, properties and chemical reactions with underlying mechanism.
- Gain insight into the basic fundamental principles of IR and UV-Vis spectroscopic techniques.
- Use basic theoretical principles underlying UV-visible and IR spectroscopy as a tool for functional group identification in organic molecules.

SYLLABUS OF CHEM-DSE-2

UNIT-1: Polynuclear Hydrocarbons (6 Hours)

Introduction, classification, uses, aromaticity of polynuclear compounds, Structure elucidation of naphthalene, preparation and properties of naphthalene and anthracene.

UNIT-2: Pharmaceutical Compounds (12 Hours)

Introduction, classification, general mode of action of antipyretics and analgesics, aspirin; Synthesis, uses and side effects of the following drugs:
Antipyretics - Paracetamol (with synthesis and mode of action); Analgesics- Ibuprofen (with synthesis and overview of the mode of action); Antimalarials - Chloroquine (synthesis and mode of action).
An elementary treatment of Antibiotics and detailed study of chloramphenicol including mode of action. Medicinal values of curcumin (haldi), azadirachtin (neem), vitamin C and antacid (ranitidine)**.**

UNIT-3: UV-Visible and IR Spectroscopy (12 Hours)

UV-Visible and IR Spectroscopy and their application to simple organic molecules. Electromagnetic radiations and their properties; double bond equivalence and hydrogen deficiency. UV-Visible spectroscopy (electronic spectroscopy): General electronic transitions, λ_{max} & ε_{max}, chromophores &auxochromes, bathochromic & hypsochromic shifts. Application of Woodward rules for the calculation of λ_{max} for the following systems: conjugated dienes - alicyclic, homoannular and heteroannular; α, β-unsaturated aldehydes and ketones, charge transfer complex.

Infrared (IR) Spectroscopy: Infrared radiation and types of molecular vibrations, the significance of functional group & fingerprint region. IR spectra of alkanes, alkenes, aromatic hydrocarbons (effect of conjugation and resonance on IR absorptions), simple alcohols (inter and intramolecular hydrogen bonding and IR absorptions), phenol, carbonyl compounds, carboxylic acids and their derivatives (effect of substitution on >C=O stretching absorptions).

Practical component 60 Hours

(Laboratory periods: 15 classes of 4 hours each)

1. Isolation and estimation of the amount of aspirin in a commercial tablet.
2. Preparation of Aspirin.
3. Synthesis of ibuprofen.
4. Systematic qualitative identification and derivative preparation of organic compounds (Aromatic hydrocarbons, Aryl halides)
5. Detection of simple functional groups through examination of IR spectra (spectra to be provided). IR spectra of simple compounds like phenols, aldehydes, ketones, carboxylic acids may be given.
6. Differentiation between of o-/p-hydroxybenzaldehyde by IR spectroscopy (Spectra to be provided).
7. Differentiation between benzoic acid and cinnamic acid by UV spectroscopy.
8. Diel's Alder reaction using Anthracene and Maleic anhydride.

9. Partial Reduction of m-dinitrobenzene to m-nitroaniline and then analysing the IR spectra of reactant and Product.
10. Laboratory preparation of Paraacetamol.

Learning Objectives

The Learning Objectives of this course are as follows:

- To introduce the students to basic computer skills that will help them in solving chemistry problems using spreadsheets and BASIC language.
- To acquaint the students with different software for data tabulation, calculation, graph plotting, data analysis and document preparation.
- To expose the students to the concept of molecular modelling, its applications to various molecular systems, energy minimization techniques, analysis of Mulliken Charge and ESP Plots.

Learning outcomes

By studying this course, students will be able to:

- Have knowledge of most commonly used commands and library functions used in programming in C language.
- Develop algorithm to solve problems and write corresponding programs in C language for performing calculations involved in laboratory experiments.
- Use various spreadsheet software to perform theoretical calculations and plot graphs

SYLLABUS OF CHEM-DSE-3

UNIT-1: Programming using BASIC **(20 Hours)**

Programming Language – Elements of BASIC language, Numeric and string Constants and Variables, arithmetic expressions, hierarchy of operations, inbuilt functions. Syntax and use of the various QBASIC commands: REM, CLS, INPUT, PRINT, GOTO, IF, IF…THEN, IF..THEN..ELSE, IF and END IF, FOR and NEXT etc., DIM, READ, DATA, GOSUB,

RETURN, RESTORE, DEF FNR and Library Functions, Simple programs based on usage of the commands mentioned above.

Statistical analysis using BASIC: Mean, Least square fit - Linear regression, variance, standard deviation.

UNIT-2: Handling of Numerical Data (4 Hours)

Spreadsheet software: MS Excel. Creating a spreadsheet, entering and formatting information, applying basic functions and formulae to the data, drawing charts, tables and graphs, displaying the equation of graph along with the R^2 value, incorporating tables and graphs in Word files, graphical solution of equations, plotting pressure-volume curves of van der Waals gases, Maxwell-Boltzmann distribution, concentration versus time graphs, spectral data, titration curves, etc.

UNIT-3: Molecular Modelling (6 Hours)

Introduction to molecular modelling, overview of classical and quantum mechanical methods (molecular mechanics, semi empirical, ab initio and DFT), general considerations and comparison of these methods.

Practical component 60 Hours
(Laboratory periods: 15 classes of 4 hours each)

Exercises of Programing

1. Calculate pressure of a real gas using Van der Waal's Equation.
2. Calculate the most probable speed, average speed and root men square velocity of an ideal gas.
3. Roots of quadratic equations
4. Binomial coefficient using GOSUB statement.
5. Mean, standard deviation
6. Least square curve fitting method for linear equation.

Plotting graphs using a spreadsheet

1. van der Waals isotherms
2. Maxwell-Boltzmann distribution curves as function of temperature and molecular weight
3. Plot the conductometric titration curve for

   a) strong acid vs strong base and b) weak acid vs strong base

0. Plot the pH metric titration curve for

   a) strong acid vs strong base and b) weak acid vs strong base and determine the pK_a of the weak acid

0. Plot the graphs for the kinetics of first order reaction and determine the rate constant
1. Plot the UV-vis absorbance spectra and determine the molar absorption coefficient.

Molecular Modelling

1. Optimize and compare the geometry parameters of H_2O and H_2S using Argus Lab.
2. Compare the basicities of N atom in ammonia, methylamine, dimethylamine and trimethylamine using Argus Lab by comparing Mulliken charges and ESP map in Argus Lab.
3. Compare C-C bond lengths and bond order in ethane, ethene and ethyne using Argus Lab.
4. Determine enthalpy of isomerization of cis and trans-2-butene in Argus Lab.
5. Compare the HAH bond angles for the second row hydrides (BeH_2, CH_4, NH_3, H_2O) and compare with the results from qualitative MO theory.

Chemical Energetics and Equilibria (DSC-7: Chemistry 03:	04	02	0	02	Passed Class 12th with Physics, Chemistry, Mathematics	NIL

Learning objectives

The objectives of this course are as follows:

- To develop basic understanding of the chemical energetics, laws of thermodynamics and ionic equilibrium.
- to provides basic understanding of the behaviour of electrolytes and their solutions.
- To make students learn about the properties of ideal and real gases and deviation from ideal behavior

Learning outcomes

By studying this course, students will be able to:

- Explain the laws of thermodynamics, thermochemistry and equilibria.
- Use the concept of pH and its effect on the various physical and chemical properties of the compounds.
- Use the concepts learnt to predict feasibility of chemical reactions and to study the behaviour of reactions in equilibrium

SYLLABUS

UNIT-1: Chemical Energetics **(16 Hours)**

Recapitulation of Intensive and extensive variables; state and path functions; Isolated, closed and open systems

First law

Concept of heat (Q), work (W), internal energy (U), and statement of first law; enthalpy (H), relation between heat capacities for ideal gas, Joule's experiment, calculations of Q, W, ΔU and ΔH for reversible expansion of ideal gases under isothermal conditions.

Thermochemistry

Enthalpy of reactions: standard states; enthalpy of neutralization, enthalpy of ionization enthalpy of hydration, enthalpy of formation and enthalpy of combustion, Integral enthalpy of solution, bond dissociation energy and bond enthalpy; Hess's law, Born Haber's cycle (NaCl/ KCl).

Second Law

Concept of entropy; statements of the second law of thermodynamics (Kelvin and Clausius). Calculation of entropy change for reversible processes (for ideal gases). Free Energy Functions: Gibbs and Helmholtz energy (Non-PV work and the work function); Free energy change and concept of spontaneity (for ideal gases).

Third Law

Statement of third law, qualitative treatment of absolute entropy of molecules (examples of NO, CO), concept of residual entropy

UNIT-2: Chemical Equilibrium (4 Hours)

Criteria of thermodynamic equilibrium. Free energy change in a chemical reaction and equilibrium constant, exergenic and endergenic reactions with examples such conversion of ATP to ADP or vice verca,, Le Chatelier's principle, relationship between Kp, Kc and Kx for reactions involving ideal gases.

UNIT-3: Ionic Equilibria (10 Hours)

Strong, moderate and weak electrolytes, degree of ionization, factors affecting degree of ionization, Ostwald's dilution law, ionization constant and ionic product of water, ionization of weak acids and bases, Degree of ionization, pH scale, common ion effect, Buffer solutions, Henderson-Hasselbach equation. Solubility and solubility product of sparingly soluble salts – applications of solubility product principle

Practical Component: 60 Hours

(Laboratory periods: 15 classes of 4 hours each)

Chemical Energetics:

1. Determination of heat capacity ofcalorimeter.
2. Determination of enthalpy of neutralization of hydrochloric acid with sodiumhydroxide.
3. Determination of the enthalpy of ionization of acetic acid.

4. Determination of enthalpy of neutralization of acetic acid and ammonium hydroxide using Hess's law.
5. Determination of integral enthalpy of solution (both endothermic and exothermic) of salts.
6. Determination of enthalpy of hydration of Copper sulphate.

Ionic equilibria:

7. Preparation of buffer solutions: (i) Sodium acetate-acetic acid or (ii) Ammonium chloride-ammonium acetate. Measurement of the pH of buffer solutions and comparison of the values with theoretical values.
8. Study the effect of addition of HCl/NaOH on pH of the buffer solutions (acetic acid, and sodium acetate).
9. pH metric titration of strong acid with strong base,
10. pH metric titration of weak acid with strong base

Learning Objectives

The Learning Objectives of this course are as follows:

- To provide basic understanding of the fundamental principles of metallurgy through study of the different methods of extraction and refining of metals.
- To illustrate the diversity and fascination of inorganic chemistry through the study of structure, properties and utilities of s- and p-block elements and their compounds.

Learning outcomes

By studying this course, students will be able to:

- Understand the basis of occurrence of metals in nature and the methods that can be applied on minerals to extract the metals from them.
- Explain the importance of free energy of formation of oxides with the choice of reducing agent for extracting the metals.
- Understand and explain the importance of refining of metals and the choice of a refining procedure
- Explain the group trends observed for different properties of s and p block elements
- Explain the structures and the bonding basis of compounds of s- and p- block elements
- Explain the uniqueness observed in alkali metals and some other main group elements
- Understand and explain the polymerization of inorganic ions to generate inorganic polymers and the difference between organic and inorganic polymers.

Syllabus

Unit 1: General Principles of Metallurgy **(6 Hours)**

Chief modes of occurrence of metals based on standard electrode potentials. Ellingham diagrams for reduction of metal oxides using carbon and carbon monoxide as reducing agent. Electrolytic Reduction, Hydrometallurgy with reference to cyanide process for silver and gold. Methods of purification of metals: Electrolytic process, Van Arkel-De Boer process, Zone refining.

Unit 2: General Properties **(4 Hours)**

General group trends of s- and p-block elements with special reference to melting and boiling points, flame colour, metallic character and complex formation tendency, diagonal relationship and anomalous behaviour of first member of each group, Alkali metal solutions in liquid ammonia

Unit 3: Structure, Bonding, Properties and Applications **(16 Hours)**

Structure, bonding, properties (Acidic/Basic nature, stability, ionic/covalent nature, oxidation/reduction, hydrolysis, thermal stability) and applications of the following:

Crown Ethers and cryptates of Alkali metals

Hydrides: hydrides of Group 13 (only diborane), Group 14, Group 15 (EH_3 where E = N, P, As, Sb, Bi), Group 16 and Group 17.

Oxides: Oxides of nitrogen, phosphorus and sulphur.

Oxoacids: oxoacids of phosphorus, sulphur and chlorine

Halides of phosphorus

Unit 4: Inorganic Polymers **(4 Hours)**

Preparation, properties, structure and uses of the following:

Borazine, Silicates and Silicones

Practicals **(60 Hours)**

(Laboratory periods:60)

Qualitative semi-micro analysis of mixtures containing 2 anions and 2 cations (preferably 7-8 mixtures). Emphasis should be given to the understanding of the chemistry of different reactions. The following radicals are suggested:

CO_3^{2-}, NO_2^- , S^{2-}, SO_3^{2-}, SO_4^{2-} , $S_2O_3^{2-}$, CH_3COO^-, F^-, Cl^-, Br^-, I^- , NO_3^- , BO_3^{3-}, $C_2O_4^{2-}$, PO_4^{3-},

NH_4^+, K^+, Pb^{2+} , Cu^{2+}, Cd^{2+}, Bi^{3+}, Sn^{2+}, Sb^{3+}, Fe^{3+}, Al^{3+}, Cr^{3+}, Zn^{2+}, Mn^{2+}, Co^{2+}, Ni^{2+}, Ba^{2+}, Sr^{2+}, Ca^{2+}, Mg^{2+}

The mixtures may contain combination of anions/one interfering anion.

Spot tests should be preferred wherever applicable.

DISCIPLINE SPECIFIC ELECTIVE COURSE CHEM-DSE -2:

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Chem-DSE-2: Polynuclear Hydrocarbons, Pharmaceutical Compounds, UV- Visible & IR Spectroscopy	**04**	**02**	**0**	**02**	**Passed Class XII with Science**	**NIL**

Learning Objectives

The Learning Objectives of this course are as follows:

- To introduce the chemistry and applications of polynuclear hydrocarbons and heterocyclic compounds.
- Introduction to spectroscopy, an important analytical tool which allows identification of organic compounds by correlating their spectra to structure.

Learning outcomes

By studying this course, students will be able to:

- Understand the fundamentals of polynuclear hydrocarbons and heterocyclic compounds through the study of methods of preparation, properties and chemical reactions with underlying mechanism.
- Gain insight into the basic fundamental principles of IR and UV-Vis spectroscopic techniques.
- Use basic theoretical principles underlying UV-visible and IR spectroscopy as a tool for functional group identification in organic molecules.

SYLLABUS OF CHEM-DSE-2

UNIT-1: Polynuclear Hydrocarbons **(6 Hours)**

Introduction, classification, uses, aromaticity of polynuclear compounds, Structure elucidation of naphthalene, preparation and properties of naphthalene and anthracene.

UNIT-2: Pharmaceutical Compounds (12 Hours)

Introduction, classification, general mode of action of antipyretics and analgesics, aspirin; Synthesis, uses and side effects of the following drugs:
Antipyretics - Paracetamol (with synthesis and mode of action); Analgesics- Ibuprofen (with synthesis and overview of the mode of action); Antimalarials - Chloroquine (synthesis and mode of action).
An elementary treatment of Antibiotics and detailed study of chloramphenicol including mode of action. Medicinal values of curcumin (haldi), azadirachtin (neem), vitamin C and antacid (ranitidine)**.**

UNIT-3: UV-Visible and IR Spectroscopy (12 Hours)

UV-Visible and IR Spectroscopy and their application to simple organic molecules. Electromagnetic radiations and their properties; double bond equivalence and hydrogen deficiency. UV-Visible spectroscopy (electronic spectroscopy): General electronic transitions, λ_{max} & ε_{max}, chromophores &auxochromes, bathochromic & hypsochromic shifts. Application of Woodward rules for the calculation of λ_{max} for the following systems: conjugated dienes - alicyclic, homoannular and heteroannular; α, β-unsaturated aldehydes and ketones, charge transfer complex.

Infrared (IR) Spectroscopy: Infrared radiation and types of molecular vibrations, the significance of functional group & fingerprint region. IR spectra of alkanes, alkenes, aromatic hydrocarbons (effect of conjugation and resonance on IR absorptions), simple alcohols (inter and intramolecular hydrogen bonding and IR absorptions), phenol, carbonyl compounds, carboxylic acids and their derivatives (effect of substitution on >C=O stretching absorptions).

Practical component 60 Hours

(Laboratory periods: 15 classes of 4 hours each)

1. Isolation and estimation of the amount of aspirin in a commercial tablet.
2. Preparation of Aspirin.
3. Synthesis of ibuprofen.
4. Systematic qualitative identification and derivative preparation of organic compounds (Aromatic hydrocarbons, Aryl halides)
5. Detection of simple functional groups through examination of IR spectra (spectra to be provided). IR spectra of simple compounds like phenols, aldehydes, ketones, carboxylic acids may be given.
6. Differentiation between of o-/p-hydroxybenzaldehyde by IR spectroscopy (Spectra to be provided).
7. Differentiation between benzoic acid and cinnamic acid by UV spectroscopy.
8. Diel's Alder reaction using Anthracene and Maleic anhydride.
9. Partial Reduction of m-dinitrobenzene to m-nitroaniline and then analysing the IR spectra of reactant and Product.
10. Laboratory preparation of Paraacetamol.

- Have knowledge of most commonly used commands and library functions used in programming in C language.
- Develop algorithm to solve problems and write corresponding programs in C language for performing calculations involved in laboratory experiments.
- Use various spreadsheet software to perform theoretical calculations and plot graphs

SYLLABUS OF CHEM-DSE-3

UNIT-1: Programming using BASIC **(20 Hours)**

Programming Language – Elements of BASIC language, Numeric and string Constants and Variables, arithmetic expressions, hierarchy of operations, inbuilt functions. Syntax and use of the various QBASIC commands: REM, CLS, INPUT, PRINT, GOTO, IF, IF…THEN, IF..THEN..ELSE, IF and END IF, FOR and NEXT etc., DIM, READ, DATA, GOSUB,

RETURN, RESTORE, DEF FNR and Library Functions, Simple programs based on usage of the commands mentioned above.

Statistical analysis using BASIC: Mean, Least square fit - Linear regression, variance, standard deviation.

UNIT-2: Handling of Numerical Data (4 Hours)

Spreadsheet software: MS Excel. Creating a spreadsheet, entering and formatting information, applying basic functions and formulae to the data, drawing charts, tables and graphs, displaying the equation of graph along with the R^2 value, incorporating tables and graphs in Word files, graphical solution of equations, plotting pressure-volume curves of van der Waals gases, Maxwell-Boltzmann distribution, concentration versus time graphs, spectral data, titration curves, etc.

UNIT-3: Molecular Modelling (6 Hours)

Introduction to molecular modelling, overview of classical and quantum mechanical methods (molecular mechanics, semi empirical, ab initio and DFT), general considerations and comparison of these methods.

Practical component 60 Hours

(Laboratory periods: 15 classes of 4 hours each)

Exercises of Programing

1. Calculate pressure of a real gas using Van der Waal's Equation.
2. Calculate the most probable speed, average speed and root men square velocity of an ideal gas.
3. Roots of quadratic equations
4. Binomial coefficient using GOSUB statement.
5. Mean, standard deviation
6. Least square curve fitting method for linear equation.

Plotting graphs using a spreadsheet

1. van der Waals isotherms
2. Maxwell-Boltzmann distribution curves as function of temperature and molecular weight
3. Plot the conductometric titration curve for

   a) strong acid vs strong base and b) weak acid vs strong base
4. Plot the pH metric titration curve for

   a) strong acid vs strong base and b) weak acid vs strong base and determine the pK_a of the weak acid
5. Plot the graphs for the kinetics of first order reaction and determine the rate constant
6. Plot the UV-vis absorbance spectra and determine the molar absorption coefficient.

Molecular Modelling

1. Optimize and compare the geometry parameters of H_2O and H_2S using Argus Lab.
2. Compare the basicities of N atom in ammonia, methylamine, dimethylamine and trimethylamine using Argus Lab by comparing Mulliken charges and ESP map in Argus Lab.
3. Compare C-C bond lengths and bond order in ethane, ethene and ethyne using Argus Lab.
4. Determine enthalpy of isomerization of cis and trans-2-butene in Argus Lab.
5. Compare the HAH bond angles for the second row hydrides (BeH_2, CH_4, NH_3, H_2O) and compare with the results from qualitative MO theory.

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
RUBBER ADDITIVES (DSC-7-RA)	4	3	0	1	Passed Class XII with Physics, Chemistry, Maths	NIL

LEARNING OBJECTIVES

The Learning Objectives of this course are as follows:

- To enable the students to know about need for additives in compounding of rubber
- To understand the different types of ingredients in compounding.
- To know about property modification by vulcanization
- To enrich knowledge on testing of compounded rubber

LEARNING OUTCOMES

The Learning Outcomes of this course are as follows:

After completing the course, the students

- Will understand concept of rubber compounding.
- Will modify the properties of rubber by incorporation of additives.
- Will develop rubber compound for required end use application.
- Will modify the strength by varying vulcanizing agents.
- Will do testing of rubber and asses quality of rubber compound.

SYLLABUS OF DSC-7

THEORY COMPONENT-

UNIT – I **(09 Hours)**

FILLERS AND PROCESSING AIDS

Fillers: Carbon black, Non carbon black, Colors and Pigments,Plasticizers, Process aids, Softeners and Extenders.

UNIT – II (9 Hours)

OTHER ADDITIVES FOR RUBBERS

Vulcanizing agents (sulphur, peroxide and metal oxide, phenolic curatives, benzoquinone derivatives, bismaleimides), accelerators (benzothiazoles, benzothiazolesulfenamide, dithiocarbamates, amines), lubricants, retarders (pre-vulcanized inhibitor), activators,

UNIT – III (06 Hours)

ANTIDEGRADATION AND MISCELLEOUS ADDITIVES

Uv stabilizers, Heat stablizers, Antioxidants, Antiozonants- Mechanism of degradation – Mechanism of ozone attack. Special purpose additives: Chemical blowing agents – Flame retardants – Antistatic agent – Abrasives -Integral bonding additives – stiffening agents. antioxidants, thermal), softners, tackifying agents, blowing agents, surface property modifiers etc.

UNIT – IV (06 Hours)

INDIVIDUAL RUBBER FORMULATIONS

Formulating for natural and synthetic rubbers and typical recipes for a few rubber products, Implications of FDA Regulations - Toxicity and environmental issues.

UNIT – V (12 Hours)

FORMULATION FOR PERFORMANCE REQUIREMENTS

Compounding to meet different Hardness requirements – Iow compression set – For damping application – Compounding to meet bonding requirements with metals and textiles– Compounding to meet processing – Economics of compounding – Cost estimation.

PRACTICAL COMPONENT- 60 Hours

- Mastication of NR on two roll mill
- Mixing of rubber compounds
- Compression moulding of rubber compounds
- Preparation of dry rubber products – play ball
- Preparation of dry rubber products – Hawaii sheet
- Preparation of dry rubber products – M.C Sheet
- Preparation of dispersions for compounding of latex
- Preparation of latex products: i. Hand Gloves ii. Balloon iii. Rubber band iv. Thread
- Compression moulding of fabric/rubber composite
- Preparation of rubber blends

		Lecture	Tutorial	Practical/ Practice		
PLASTIC ADDITIVES (DSC-8-PA)	4	3	0	1	Passed Class XII with Physics, Chemistry and Mathematics	NIL

LEARNING OBJECTIVES

The Learning Objectives of this course are as follows:

- **To introduce the basics of polymer additives and their significance**
- **To study different additives and their representative formulations**

LEARNING OUTCOMES

The Learning Outcomes of this course are as follows:

After studying this paper, students will be able to

- Understand the role of various compounding additives used for plastics and rubbers
- Describe various steps & variables for mixing and blending of additives
- Utilize understanding of compounding additives and methods for modification of polymer properties

SYLLABUS OF DSC- 8

THEORY COMPONENT-

UNIT – I (12 Hours)

INTRODUCTION TO ADDITIVES AND COMPOUNDING

Importance of additives and their selection criteria for commercial polymers and technical requirements of additives, limitation of polymer additives, physical behavior of polymer additives (solubility etc.), limitation of polymer compounding, two roll mill, high speed mixer, internal batch mixer, single screw & twin screw extruders

UNIT – II (15 Hours)

ADDITIVES FOR PLASTICS

Plasticizers, theories of plasticization, types of plasticizer (phthalate, polymeric, hydrocarbon oil, vegetable oil, phosphates trimellitic etc.), methods of incorporation, fillers, introduction, classification, selection criteria (particle size, shape & geometry, packing fraction, hardness and abrasiveness, optical properties), impact of fillers on properties (mechanical properties, thermal properties, moisture content and electrical properties), Foaming agents, blowing agents, stabilizers (UV, heat, antioxidants and light), metal deactivators, Colorants (Dyes and pigments, coloring properties, classification of pigments, inorganic and organic pigments, method of incorporation (dispersion, pre mixing, agglomerate breakdown, compaction and wetting)

UNIT – III (09 Hours)

ADDITIVES FOR SPECIAL NEEDS

Flame retardants (halogen based, metal oxides, hydrated salts etc.), impact modifiers, lubricants & flow promoters, dry bonding agent and antistatic agents, conductive additives, biodegradation additives

UNIT – IV (09 Hours)

CASE STUDY

Compounding techniques with illustration of few formulations like:

- Rigid PVC pipes
- Clear bags and flexible films
- Acrylic sheet and display board
- Rubber sole
- Air water hose
- Conveyor belt

PRACTICAL COMPONENT- 30 Hours

- Determination of bulk density of fillers.
- Determination of pore size and net size of fillers.
- Determination of thermal stability of polymer stabilized by heat stabilizer.
- Measurement of flash point of a plasticizer.
- Identification of additives using chromatography.
- Determination of the plasticizer and filler content in plastic materials.
- Evaluate the bleeding and blooming properties of an additive.
- Evaluate the effect of fillers/plasticizers on the properties of a plastic/rubber.
- To prepare a PVC masterbatch.
- Identification of a pigment by spot test.
- Estimation of Iodine value of Castor oil
- Determination of DBP value and sieve analysis of Carbon black.

ESSENTIAL/RECOMMENDED READINGS

SUGGESTIVE READINGS

- Mascia L., (1974) The Role of Additives in Plastics, Edward Arnold Publishers Ltd., U.K.
- Murphy J., (2001) Additives for Plastics Handbook, Second Edition, Elsevier Advanced Technology, Oxford.
- Gerard J. F., (2001) Fillers and Filled Polymers, Wiley-VCH verlag GmbH

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE – 9:

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical / Practice		
POLYMER DEGRADATION (DSC-09-PD)	**4**	**3**	**0**	**1**	**Passed Class XII with Physics, Chemistry and Mathematics**	**NIL**

LEARNING OBJECTIVES

The Learning Objectives of this course are as follows:

- To familiarize with the utility and importance of polymer degradation
- To learn about the conditions and the reactions of degradation of polymers

LEARNING OUTCOMES

The Learning Outcomes of this course are as follows:

After studying this paper, students will be able to

- Explain the factors responsible for degradation
- Understand the handling of various polymers without affecting the properties
- Evaluate degradation of polymers by various methods

SYLLABUS OF DSC-9

THEORY COMPONENT-

UNIT – I (12 Hours)

CONCEPT OF DEGRADATION

Introduction to degradation, classification of degradation based on

a. Pattern of degradation:
   i. Random degradation
   ii. Side chain degradation
   iii. Chain end degradation

b. Cause of degradation (mechanism, factors affecting thermal degradation, example)

i. Thermal degradation
ii. Oxidative degradation
iii. Degradation by radiation
iv. Mechanical degradation
v. Chemical degradation
vi. Biological degradation

UNIT – II (21 Hours)

DEGRADATION OF A FEW THERMOPLASTICS

Different types of degradation patterns with mechanism of the polymers:

- Polyolefins (PE and PP)
- PVC
- Polyamides
- PMMA
- Cellulose
- Polyacrylonitrile (PAN)
- Polystyrene (PS)
- PET

UNIT – III (6 Hours)

DEGRADATION OF ELASTOMERS

i. PU **ii.** Natural rubber **iii.** SBR

UNIT – IV (6 Hours)

QUANTITATIVE AND QUALITATIVE EVALUATION OF DEGRADATION

Degradation studies using DSC, TGA

PRACTICAL COMPONENT- 30 Hours

- To study biodegradation of polymers.
- To study mechanical degradation of polymers and its effect on properties.
- To study thermal degradation of polymers under various conditions.
- To study thermal analysis of a given polymer by DSC/ TGA.
- To study photo-degradation of PVC.
- To evaluate chemical degradation of PET.
- To determine environmental stress cracking resistance of polymers.
- To evaluate chemical degradation of Nylon 66.
- To study epoxidation of Natural Rubber Latex.
- To study the effect of degradation on properties like: Mechanical strength, hardness, solubility, viscosity etc.

ESSENTIAL/RECOMMENDED READINGS

- Krasowska, K., Heimowska, A., & Rutkowska, M. (2015). Environmental degradability of polyurethanes. Thermoplastic Elastomers—Synthesis and Applications; IntechOpen: London, UK, 75-94.

SUGGESTIVE READINGS

- Hamid S.H., Amin M.B., (1992) Handbook of Polymer Degradation, Marcel Dekker.
- Ehrenstein G.W., Riedel G., Trawiel P., (2004) Thermal analysis of plastics, Hanser.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVE COURSES (DSE-1)

Credit distribution, Eligibility and Pre-requisites of the Course

COMMON POOL OF DISCIPLINE SPECIFIC ELECTIVE COURSES (DSE) COURSES OFFERED IN ODD SEMESTERS BY THE DEPARTMENTS

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
ADVANCED ANALYTICAL TECHNIQUES (DSE-01-AAT)	**4**	**2**	**0**	**2**	**Passed 12Th with Science**	**NIL**

LEARNING OBJECTIVES

The Learning Objectives of this course are as follows:

- **To acquaint the students with the modern instrumental techniques and their applications in characterization of polymeric materials**
- **Students will be able to determine a chemical property and identify a chemical substance in a polymer.**

LEARNING OUTCOMES

The Learning Outcomes of this course are as follows:

After studying this paper, students will be able to

- Interpret NMR, raman, mass and IR–spectra for characterization of molecular structure of polymeric materials

- Elucidate the morphology of various polymers
- Acquire the knowledge about separation of components from polymer mixture

SYLLABUS OF DSE-1

THEORY COMPONENT-

UNIT 1 (14 Hours)

SPECTROSCOPIC TECHNIQUES

Principles and applications of structural determination of polymers (functional group, tacticity, molecular structure, purity, unsaturation etc.) using FT-IR, electron spin resonance, raman, nuclear magnetic resonance (^{1}H NMR, ^{13}C NMR).

Mass Spectroscopy: introduction, basic principles, instrumentation, fragmentation patterns, nitrogen rule, McLafferty rearrangement, interpretation of mass spectra and applications, MALDI-TOF, ESI-MS and methods for determination of molecular mass (principles and applications in polymer characterization).

UNIT 2 (08 Hours)

CHROMATOGRAPHY TECHNIQUES

Introduction to chromatographic methods: TLC, column and gas chromatography, principles, instrumentation, GC column, detectors and stationary phases and applications, hyphenated techniques (GC-MS). Liquid chromatography LC/HPLC, gel permeation chromatography (GPC)

UNIT 3 (08 Hours)

MICROSCOPIC AND MISCELLANEOUS TECHNIQUES

Optical microscopy, electron microscopy (SEM, TEM, AFM) and XRD: basics and applications (size, morphology, crystallinity etc.) for polymers characterization. Particle size analyzer, zeta potential, etc.

PRACTICAL COMPONENT- (60 Hours)

- To identify the functional groups in various polymers using FTIR.
- To analyze the NMR spectra of a given polymer.
- To analyze the raman spectra of given polymers.
- Evaluate percentage crystallinity of polymeric samples by XRD.
- To separate additives in a given polymeric sample by chromatography.
- To separate a polymeric mixture by TLC.
- To analyze film morphology by compound/electron/Atomic Force microscope.
- To determine the size of polymer/additives particles by particle size analyzer.
- To study the polymers tacticity using NMR.
- Visit to an analytical laboratory.

ESSENTIAL/RECOMMENDED READINGS

- Willard H.H., Merritt L.L., Dean J.A. (1988) Instrumental method of analysis, Wads worth Publishing Company.

- Banwell C.N., McCash E.M., (2008) Fundamentals of Molecular Spectroscopy, Fourth Edition, Tata McGraw-Hill.

SUGGESTIVE READINGS

- Tanaka T., (1999) Experimental Methods in Polymer Sciences, Academic Press.
- Silverstein R.M., (1991) Spectrometric identification of organic compounds, John Wiley.
- Macomber R.S., (2008) A complete introduction to NMR spectroscopy, Wiley-inter science.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVE COURSES (DSE-2)

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
FIBRE MANUFACTURING TECHNOLOGY (DSE-02-FMT)	4	2	0	2	Passed 12Th with Science	NIL

LEARNING OBJECTIVES

The Learning Objectives of this course are as follows:

- To learn about the basic concepts of spinning including melt and solution spinning.
- To understand various parameters affecting spinning, drawing and heat setting of fibre structure and properties

LEARNING OUTCOMES

The Learning Outcomes of this course are as follows:

After studying this paper, students will be able to

- Manufacture fibre with desired properties.
- Understand the various spinning variables.

SYLLABUS OF DSE-2

THEORY COMPONENT-

UNIT 1(06 Hours)

INTRODUCTION TO FIBRES

Manmade fibres: definition of man-made fibres, brief history of manmade fibres, relative merits and demerits of manmade and natural fibres

UNIT 2: (12 Hours)

MELT SPINNING

Melt spinning process: Crystallization in spin line, stress induced crystallization, melt spinning of PP, polyester and nylon-6 and nylon -66, effect of process parameters on structure and properties of melt spun filament.

UNIT 3 (12 Hours)

SOLUTION DRY & WET SPINNING

Dry spinning of cellulose acetate, acetylation of cellulose, dope preparation and spinning of cellulose diacetate and triacetate, dry spinning of acrylic, significance and types of co-monomers used during polymerization of acrylonitrile (PAN)

Wet spinning of acrylic fibre and viscose rayon, formation of structure in viscose, influence of various additives and temperature of the regeneration bath on the process and properties of viscose rayon

PRACTICAL COMPONENT- 60 Hours

- To prepare polypropylene fibre by melt spinning.
- Melt spinning of Nylon 6/66.
- To prepare polyester fibre by melt spinning
- Solution spinning of acrylic fibre.
- Dry spinning of PAN fibre.
- To characterize a woven fabric with respect to its dimensional properties: thread density , yarn number, yarn crimp, weave, cover factor, areal density, skewness, thickness
- Identification of dyestuff on different substrates
- To determine the crease recovery of fabric and observe the effect of loading time and recovery time on crease recovery.
- Drawing and heat setting of fibres.
- Chemical modification of fibres.

ESSENTIAL/RECOMMENDED READINGS

- Gupta V.B., Kothari V.K., (1997) Manufactured Fibre Technology, 1st Ed Chapman and Hall.
- NPTEL course material on Manufactured fibre Technology.
- Macintyre J.E., (2005) Synthetic Fibres: Nylon, Polyester, Acrylic, Polyolefin, Elsevier Science.

SUGGESTIVE READINGS

- Vaidya A.A., (1988) Production of Synthetic Fibres, First Edition, Prentice Hall of India.
- Kothari V.K., (2000), Textile Fibres: Developments and Innovations, IAFL Publications.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVE COURSES (DSE-3)

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
TYRE TECHNOLOGY (DSE-03-TT)	**4**	**2**	**0**	**2**	**Passed 12Th with science**	**NIL**

LEARNING OBJECTIVES

The Learning Objectives of this course are as follows:

- Familiarizing various types of tyres and their components
- Developing the knowledge of manufacturing techniques of various tyres

LEARNING OUTCOMES

The Learning Outcomes of this course are as follows:

After studying this paper, students will be able to

- Apply knowledge of basic concept of manufacturing technology of tyre
- Understand designing and compounding of various tyre components
- Evaluate testing and quality assessment of tyre

SYLLABUS OF DSE-3

THEORY COMPONENT-

UNIT 1 (08 Hours)

INTRODUCTION AND TYRE MANUFACTURING

Classification: based on construction (pneumatic, radial, bias, cross ply, tube, tubeless, solid), Mixing (Mixing instruments: two roll mill, kneader, internal mixers), processing (extrusion, calendaring, bead winding), building drum, curing (molding machines etc.), mold

UNIT 2 (12 Hours)

TYRE DESIGN

Compound design (selection of chemical ingredients); process design (process parameters correlating with properties); product design (constructions), latest advances in materials and technologies

UNIT 3 (10 Hours)

TYRE TESTING

Endurance, groove crack test, plunger test, traction: dry, wet and snow, air permeation, noise test, rolling resistance, drivability, road test, wet braking test, fuel economy test, tread to ply pull out, bead seating test

PRACTICAL COMPONENT- 60 Hours

- To identify the type of rubber by reverse engineering.
- To prepare fabric- rubber coated ply.
- To test mechanical and physical properties of vulcanized rubber.
- To perform air aging properties of rubber and rubber to fabric ply.
- To determine bonding strength of rubber to fabric.
- To calculate abrasion losses of tyre tread.
- To calculate rebound resilience of a rubber.
- Tyre indexing and cut section analysis.
- To evaluate the compression set of a rubber.
- To determine rolling resistance test
- Industrial Visit of Tyre Industry/ R&D

ESSENTIAL/RECOMMENDED READINGS

- Clark S.K., (1971) Mechanics of Pneumatic Tires, National Bureau of Standards, Monograph, US Govt. printing office.
- French T., (1989) Tyre Technology, Adam Hilger, New York.

- Koutny F., Zling, (2007) Geometry and Mechanics of Pneumatic TIRE, CZE.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVE COURSES (DSE-4)

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
POLYMER PRODUCT DESIGN (DSE-04-PPD)	**4**	**2**	**0**	**2**	**Passed 12Th with science**	**NIL**

LEARNING OBJECTIVES

The Learning Objectives of this course are as follows:

- To learn physical properties of polymers required for product design

- To design plastic parts such as static and dynamic loaded parts for electrical, optical and mechanical applications (gears, bearings, pipes, seals, couplings and vibration dampers)

LEARNING OUTCOMES

The Learning Outcomes of this course are as follows:

After studying this paper, students will be able to

- Demonstrate the response of polymers for various loads.
- Apply the knowledge to develop plastic products.
- Develop the design for polymer products in engineering applications.

SYLLABUS OF DSE-4

THEORY COMPONENT-

UNIT-1 (5 Weeks)

INTRODUCTION

Introduction to structure and physical properties of polymers, stress – strain behaviour of polymers, effect of fillers on properties of polymers, stress analysis of polymers, structural design of beams, plates and other structural members.

UNIT 2 (10 Hours)

CHARACTERISTICS OF PRODUCT DESIGN

Dynamic load response of polymers, effects of cyclic loading, other forms of stress applied to polymer parts, design for stiffness, processing limitations on polymers product design. Material and process interaction and the effects on the performance of plastic parts and the resulting design limitations, performance in service and environmental exposure.

UNIT 3 (10 Hours)

PRODUCT DESIGN TECHNIQUES

Design procedure for plastic parts- basic principles-shrinkage-flash lines-undercuts-suggested wall thickness-draft-tolerance-moulded holes-threads radius- moulded hinges-integral hinge-snap fits – product design thumb rules – case studies and product design. design of plastic structural parts for static loads, design of dynamically loaded plastic parts, design of plastic parts for electrical applications, design of plastic parts for optical applications.

PRACTICAL COMPONENT- (60 Hours)

- To prepare a poly styrene sheet with in-situ polymerization.
- To prepare open and closed cell foam.
- To prepare laminates such as epoxy, polyester and epoxy-polyester.
- To prepare a PMMA sheet using bulk polymerizations.
- To join polymer products by molding.
- Preparation of polymer products by different processing techniques.
- To study the post curing of rubber
- To prepare a composite mouse pad
- To prepare rubber - metal composite products
- To determine mechanical properties of designed products

ESSENTIAL/RECOMMENDED READINGS

- Levy S. & Dubois J.H., (1977) Plastic Product Design Engineering Hand Book, Van Nostrand Reinhold Co., New York.
- Miller E., Plastics Products Design Hand Book, Marcel Dekker,

SUGGESTIVE READINGS

DISCIPLINE SPECIFIC ELECTIVE COURSES (DSE-5)

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
POLYMERS IN BIOMEDICAL APPLICATIONS (DSE-05-PBA)	**4**	**2**	**0**	**2**	**Passed 12Th with science**	**NIL**

LEARNING OBJECTIVES

The Learning Objectives of this course are as follows:

- To acquire knowledge of biocompatibility and biodegradation
- To learn about applications and testing of bio-compatible polymer in tissue engineering

LEARNING OUTCOMES

The Learning Outcomes of this course are as follows:

After studying this paper, students will be able to

- Understand the basic concepts and requirement of biomedical applications and biocompatibility
- Apply the knowledge of various polymers in biomedical application

SYLLABUS OF DSE-5

THEORY COMPONENT-

UNIT 1 (8 Hours)

BASICS OF BIOMATERIALS

Concept of biocompatibility and biodegradability, responsiveness, estimations of degradation and biocompatibility. Importance of biomaterials: hydrogel, fibres, bio-ceramics, bio-elastomers and membrane

UNIT 2 (10 Hours)
POLYMERS AS BIOMATERIALS

Sources, properties and applications: polyamides, polyesters, carbohydrates, natural gums, polyurethanes, polylactic acid, alginates, silicone.

UNIT 3 (12 Hours)
BIOMATERIALS FOR ORGAN TRANSPLANTS & DRUG DELIVERY

Properties and uses of polymers for organ transplant e.g. dental cement, orthopedic, skin, artificial kidney etc., basic concept of tissue engineering, uses of cellulose, chitosan and alginate

Introduction to drug delivery, polymers in controlled drug delivery, dressing strips, polymer drug vessels, core shell and nanogels

PRACTICAL COMPONENT- (60 Hours)

- Evaluate the biocompatibility of polymeric samples.
- Determination of the degradation behavior of polymers such as thermal, hydrolytic etc.
- Preparation of membranes and measurement of their absorption behavior.
- Preparation and characterization of dental cement.
- Prepare a hydrogel and characterization.
- Prepare jaw by powdered silicone rubber
- To find out biocompatibility of polymer products by enigmatic test
- Determination of mechanical strength of polymers.
- To find out hydro degradation of artificial bone.
- To prepare porous membranes.

ESSENTIAL/RECOMMENDED READINGS

DISCIPLINE SPECIFIC ELECTIVE COURSES (DSE-6)

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
CONDUCTING POLYMERS (DSE-06-CP)	**4**	**2**	**0**	**2**	**Passed 12Th with science**	**NIL**

LEARNING OBJECTIVES

The Learning Objectives of this course are as follows:

- **To impart knowledge of structure and electrical properties of conducting polymers.**
- **To learn about applications of conducting polymers.**

LEARNING OUTCOMES

The Learning Outcomes of this course are as follows:

After studying this paper, students will be able to

- Understand synthesis and requirement of doping in polymers.
- Analyze properties of conducting polymers

SYLLABUS OF DSE-6

THEORY COMPONENT-

UNIT 1(8 Hours)

BASIC ASPECTS OF CONDUCTING POLYMERS

Historical background, band structure, band alignment, conduction mechanism, theory of electrical conduction in conducting polymers

UNIT 2 (10 Hours)

SYNTHESIS OF CONDUCTING POLYMERS

Chemical and electrochemical polymerizations: polyaniline, polypyrrole, polythiophene etc.; doping and its effects on properties of conducting polymers

UNIT 3(12 Hours)

PROPERTIES & APPLICATIONS OF CONDUCTING POLYMERS

Electrical properties, resistance, impedance, capacitance, magnetic properties and optical properties

Electronic devices, sensors, rechargeable batteries, solar cells, light emitting devices, biomedical devices, bio-system, organ transplant, artificial mussels and EMI shielding etc.

PRACTICAL COMPONENT- (60 Hours)

- Synthesis of polyaniline, polypyrrole and polythiophene by chemical polymerizations.
- Synthesis of conducting polymers by electro chemical polymerizations.

- To improve electrical conductivity of PANI by doping
- Evaluation of mechanical properties of conducting polymer films/sheets.
- Determination of the thermal properties of conducting polymers.
- To prepare a molded sheet of conducting polymers.
- To Manufacture molded conducting device
- To study the effect of doping of Polypyrrole
- To measure the electrical conductivity and resistivity of conducting polymer films/sheets.
- To design light emitting devices for conducting applications.

ESSENTIAL/RECOMMENDED READINGS

DISCIPLINE SPECIFIC ELECTIVE COURSES (DSE-7)

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
BIO-BASED AND BIODEGRADABLE POLYMERS (DSE-07-BBP)	4	2	0	2	Passed 12Th with science	NIL

LEARNING OBJECTIVES

The Learning Objectives of this course are as follows:

- To gain knowledge of biopolymers and their isolations
- To acquire knowledge on structure and properties of biopolymers
- To understand the basic applications of various biopolymers

COURSE LEARNING OUTCOMES:

After studying this paper, students will be able to

- Gain knowledge of biopolymers applications
- Characterize and analyze biopolymers

SYLLABUS OF DSE-7

THEORY COMPONENT-

UNIT 1 (12 Hours)

BASICS TO BIOPOLYMERS & NATURAL MACROMOLECULES

Significance, classifications, properties and applications of biopolymers and natural polymers such as Starch, cellulose, chitosan, gelatine, protein, fatty acids, lipids, aliphatic polyesters (PLA, PHB), cellulose

UNIT 2

PROCESSING (8 Hours)

Isolation, processing of biopolymers: composite formation, blending and solvent casting

UNIT 3 (10 Hours)

APPLICATIONS

Applications of biopolymers in packaging, biomedical testing and devices, agriculture: soil conditioning and micro-nutrient delivery

PRACTICAL COMPONENT- (60 Hours

- To determine the molecular weight of biopolymers.
- Isolation of starch from wheat/rice/potato
- Isolation of gelatin from natural resources
- To prepare Poly lactic acid
- To prepare a chitosan based composite for biomedical applications.
- To prepare blends of natural polymers and find out miscibility
- Develop a biodegradable film by solution casting of biopolymers.
- Estimate the biodegradability by soil burial test.
- Evaluate swelling index, porosity, hardness of a film.
- Estimate the water vapor transmission rate of a biopolymeric film.

ESSENTIAL/RECOMMENDED READINGS

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

SEMESTER -III
BSc. (Life Science) – Zoology Component

DISCIPLINE SPECIFIC CORE COURSE-9 (Zoo-LS-DSC-9):– Biochemistry: Basic concepts of

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical		
Biochemistry: Basic concepts of metabolism Zoo-LS-DSC-09	**04**	**02**	**00**	**02**	**Passed Class XII**	**NIL**

Learning Objectives

The learning objectives of this course are as follows:

- to learn and develop an understanding of the various metabolic pathways in humans.
- to acquire knowledge of the tissue specific metabolism and its regulation.
- to get acquainted with the concept of enzyme specificity for important metabolic pathways and how the body adjusts to variations in the demand for energy.

Learning Outcomes

By studying this course, students will be able to:

- better understand the properties of carbohydrates, proteins, lipids, and their importance in biological systems.
- explain the biological mechanisms, such as the processes and control of bioenergetics and metabolism, as chemical reactions
- comprehend the concept of enzyme, its mechanism of action and regulation.
- appreciate the importance of high energy compounds, electron transport chain, synthesis of ATP under aerobic and anaerobic conditions.
- acquire knowledge related to the role of TCA cycle in central carbon metabolism, importance of anaplerotic reactions and redox balance.

SYLLABUS OF DSC- 09

UNIT-1: Metabolism of Carbohydrates **8 hrs**

Basic structure and physiological significance of mono-saccharides, disaccharides, homo and hetero-polysaccharides. Glycolysis: Preparatory and Payoff phases, regulation, fates of pyruvate, Pentose phosphate pathway: oxidative and non-oxidative Phases; Gluconeogenesis: Bypass reactions, regulation and reciprocal coordination of glycolysis

and gluconeogenesis; Glycogen Metabolism: Glycogenolysis, Glycogenesis and its coordinated regulation, Kreb's Cycle (formation of Acetyl CoA, reactions of cycle, regulation),

UNIT- 2: Lipid Metabolism **6 hrs**

Basic structure and physiological significance of fatty acids, structure and significance of storage and structural lipids; Biosynthesis: FAS and synthesis reactions, regulation; β oxidation of palmitic acid: activation of fatty acids and oxidation with bioenergetics, regulation.

UNIT- 3: Protein metabolism **6 hrs**

Structure, classification and properties of amino acids, basics of protein structure; Transamination, Deamination, Glutamine formation, Glucose alanine cycle and Urea Cycle

UNIT- 4: Enzyme **6 hrs**

Enzymes and their classification, Introduction (basics of classification, properties and functions), Mechanism of action (understanding of basic concepts, Induced Fit Theory).

UNIT- 5: Oxidative Phosphorylation **4 hrs**

Review of Electron Transport Chain: Basics of electron transfer reactions, Universal Electron Acceptors without detailed structures, electron flow through complexes, Chemiosmotic theory, basics of ATP synthesis.

Practical **60 hrs**

(Laboratory periods: 15 classes of 4 hours each)

1. Qualitative tests to identify functional groups of carbohydrates, amino acids and lipids.
2. Estimation of total protein in given solutions by Lowry's method.
3. Study effect of temperature, pH, and inhibitor on enzymatic activity of salivary amylase.
4. Biological oxidation of goat liver.
5. Identification of normal and abnormal constituents of urine.
6. To study the enzymatic activity of Lipase.
7. Dry Lab: To trace the labelled 'C' atoms of Acetyl-CoA till they evolve as CO_2 in the TCA cycle through models.

Essential/recommended readings

SEMESTER -III
DEPARTMENT OF ZOOLOGY
Category I

(B.Sc. Honours in Zoology in three years)

DISCIPLINE SPECIFIC CORE COURSE -7 –:
Diversity of Chordates
Zoo-DSC-7

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Diversity of Chordates Zoo-DSC-7	**04**	**02**	**Nil**	**02**	**Passed Class XII**	**NIL**

Learning Objectives

The learning objectives of this course are as follows:

- The course aims to impart in-depth knowledge about the diverse life forms from the taxonomic positions of Protochordates and Agnatha to Mammalia.
- It will help the students to identify the body plan types of complex chordates and their systematic organization based on evolutionary relationships, structural and functional affinities.
- The course will help the students to understand the characteristic morphological, adaptive and anatomical features of diverse animals.
- The course will help students to understand the economic and ecological significance of various animals in human life.
- The course will create interest among them to explore and appreciate the animal diversity in nature.

Learning Outcomes

By studying this course, students will be able to

- Correlate the importance of systematics, taxonomy, and structural organization of chordates.
- Recognize the diversity of chordates living in varied ecological habitats.
- critically analyse the organization, complexity and characteristic features of chordates.
- comprehend the economic importance of chordates, their interaction with the

environment and their role in the ecosystem.

- enhance collaborative learning and communication skills through practical sessions, teamwork, group discussions, assignments, and projects.

SYLLABUS OF DSC-7

UNIT-I: Introduction to Chordates **2 hrs**

General characteristics and outline classification.

UNIT-2: Protochordata **3hrs**

General characteristics of Hemichordata, Urochordata and Cephalochordata; Study of Tornaria and Ascidian larval forms in protochordates.

UNIT-3: Origin of Chordates **2 hrs**

Theories of Origin of chordates with detailed concept of Dipleurula and the Echinoderm theory.

UNIT-4: Agnatha **2 hrs**

General characteristics and classification of cyclostomes up to Class.

UNIT- 5: Pisces

3 hrs

General characteristics of Chondrichthyes and Osteichthyes; Classification up to order; Osmoregulation; Swimbladder in fishes

UNIT- 6: Amphibia

4 hrs

General characteristics and classification up to order; Origin of Tetrapods (Evolution of terrestrial ectotherms); Parental care in Amphibians.

UNIT-7: Reptilia

4 hrs

General characteristics and classification up to order; Affinities and evolutionary significance of *Sphenodon*; Poison apparatus and biting mechanism in snakes.

UNIT- 8: Aves

4 hrs

General characteristics and classification up to order; Flight adaptations; Migration in birds.

UNIT- 9: Mammalia **4 hrs**

General characteristics and classification up to order; Adaptive radiation with reference to locomotory appendages.

UNIT- 10: Zoogeography **2 hrs**

Zoogeographical realms, Platetectonics and Continental drift theory.

Practical **60 hrs**

(Laboratory periods: 15 classes of 4 hours each)

1. **Protochordata**: *Balanoglossus, Herdmania, Branchiostoma,* Colonial Urochordata, Sections of *Balanoglossus* through proboscis and branchio-genital regions, Sections of *Amphioxus* through pharyngeal, intestinal and caudal regions. Permanent slide of *Herdmania* spicules.
2. **Agnatha**: *Petromyzon, Myxine.*
3. **Pisces**: *Scoliodon, Sphyrna, Pristis, Torpedo, Chimaera, Mystus, Heteropneustes, Labeo, Exocoetus, Echeneis, Anguilla, Hippocampus, Tetrodon/Diodon, Anabas*, Flatfish. Permanent slides of Placoid and Cycloid Scales.
4. **Amphibia**: *Ichthyophis/Ureotyphlus, Necturus, Bufo, Hyla, Alytes, Salamandra.*
5. **Reptilia**: *Chelone, Trionyx, Hemidactylus, Varanus, Uromastix, Chamaeleon, Ophiosaurus, Draco, Bungarus, Vipera, Naja, Hydrophis, Zamenis, Crocodylus*; Key for Identification of poisonous and non-poisonous snakes.
6. **Aves**: Study of six common birds from different orders. Types of beaks and claws.
7. **Mammalia**: *Sorex,* Bat (Insectivorous and Frugivorous), *Funambulus, Loris, Herpestes*, *Erinaceous.*
8. **Student Presentation**: Power point presentation on any two animals from two different classes.

**__Note__: Refer Young, J.Z. (2004) for the classification of Protochordates and Tetrapods, and Parker T.J. and Haswell W.A. (1972) for the classification of Agnatha and Pisces.*

Essential/recommended readings

1. Young, J.Z. (2004). **The Life of Vertebrates**. III Edition, Oxford University Press.

2. Parker T.J. and Haswell W.A. (1972).**Text book of Zoology Vertebrates**.VII Edition, Volume II.

Suggestive readings

1. Pough H. (2018). **Vertebrate Life**. X Edition, Pearson International.
2. Darlington P.J. (1966).**The Geographical Distribution of Animals**. R.E. Krieger Pub. Co.

NOTE: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE -8 – :
Biochemistry: Metabolic Processes
Zoo-DSC-8

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Biochemistry: Metabolic Processes **Zoo-DSC-8**	**04**	**02**	**Nil**	**02**	Passed 12th Class	**NIL**

Learning Objectives

The learning objectives of this course are as follows:

- To provide fundamental and precise knowledge of the metabolic processes that play a crucial role in all processes of life and the development of diseases.
- To apprise the students of the various functions of the molecules like providing structural integrity to the tissue-engineered constructs.
- Through this course, the students would be able to understand myriads of health, potential treatments of diseases and solve several industrial problems
- The enzymatic study would enable them to understand the various metabolic pathways and physiological reactions.

Learning Outcomes

By studying this course, students will be able to

- Interpret the structure-functional relationships of carbohydrates, proteins, lipids and nucleic acids.
- Understand the clinical knowledge and importance of antioxidants.
- Understand the process of biological oxidation crucial to generation of energy for a living cell.
- Appreciate the action of various types of enzymes under variety of conditions.

Syllabus of DSC-8

UNIT- 1: Carbohydrate Metabolism **9 hrs**

Glycolysis, Citric acid cycle, Phosphate pentose pathway, Gluconeogenesis, Glycogenolysis and Glycogenesis.

UNIT- 2: Lipid Metabolism **7 hrs**

β-oxidation and omega-oxidation of saturated fatty acids with even number of carbon atoms; Biosynthesis of palmitic acid; Ketogenesis.

UNIT- 3: Protein Metabolism **4 hrs**

Catabolism of amino acids: Transamination, Deamination, Urea cycle.

UNIT- 4: Oxidative Phosphorylation **7 hrs**

Redox systems; review of mitochondrial respiratory chain: electron carriers, sites of ATP production, Oxidative phosphorylation; Chemiosmotic hypothesis, mitochondrial shuttle system.

UNIT- 5: Liver as a Major Metabolic Hub **3 hrs**

Inter-connection of glucose-6-phosphate, pyruvate and acetyl-CoA; fates of amino acids, fatty acids and glucose in liver cells; cascade of metabolic events in fasting and starvation.

Practical **60 hrs**

(Laboratory periods: 15 classes of 4 hours each)

1. Estimation of total protein in given solutions by Lowry's method.
2. Detection of SGOT and SGPT in serum/ tissue.
3. Estimation of GST and GSH in serum/ tissue.
4. To study the enzymatic activity of Lipase.
5. Study of biological oxidation (SDH) [goat liver].
6. To perform the Acid and Alkaline phosphatase assay from serum/ tissue.
7. Dry Lab: To trace the labelled 'C' atoms of Acetyl-CoA till they evolve as CO_2in the TCA cycle through models.

Essential/recommended readings
