Time Series Models

Stochastic Models: White noise Process, Random walk, Moving Average (MA), Auto-Regressive (AR), Auto-Regressive Moving Average (ARMA) models, and their properties using correlogram, ACF, and PACF, Yule walker equations; Fitting of AR(1), AR(2), MA(1), MA(2), and ARMA(1,1) processes. Non-Stationary models: Auto-Regressive Integrated Moving Average (ARIMA) and Seasonal Auto-Regressive Integrated Moving Average (SARIMA) models; Dicky Fuller test, Augmented Dickey-Fuller test. Wold's Decomposition Theorem; Non-linear time series models: Auto-Regressive Conditional Heteroskedasticity (ARCH) and Generalized Auto-Regressive Conditional Heteroskedasticity (GARCH) Process.

UNIT IV **(12 Hours)**

Univariate Forecasting Procedures

Principles of Forecasting; Performance Evaluation; Extrapolation of Trend Curves; Exponential smoothing; Holt-Winter's; Box- Jenkins' Methodology.

PRACTICAL / LAB WORK – 30 hours

List of Practicals:

1. Fitting and plotting of modified exponential curves by different methods.
2. Fitting and plotting of Gompertz curve by different methods.
3. Fitting and plotting of logistic curves by different methods.
4. Fitting of the trend by the Moving Average Method for a given extent and for an estimated extent.
5. Measurement of Seasonal indices: a) Fixed and b) Changing Patterns
6. Construction of Periodogram and Harmonic Analysis
7. Estimation of variance of the random component
8. Construction of Correlogram for given AR(1), AR(2), MA(1), MA(2), and ARMA(1,1) processes.
9. Fitting of AR(1), AR(2), MA(1), MA(2), and ARMA(1,1) processes for given datasets.
10. Forecasting by various exponential smoothing procedures.
11. Forecasting by Box-Jenkins methodology.

Practical work to be conducted using electronic spreadsheet / EXCEL/ Statistical Software Package/ SPSS/ calculators.

B.Sc. (P)/B.A(P) with Statistics as Major

Category II

DISCIPLINE SPECIFIC CORE COURSE-7: ELEMENTS OF STATISTICAL INFERENCE

CREDIT DISTRIBUTION, ELIGIBILITY, AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the Course			Eligibility Criteria	Pre-requisite of the Course (if any)
		Lecture	Tutorial	Practical/ Practice		
Elements of Statistical Inference	4	3	0	1	Class XII with Mathematics	Basic probability, probability distributions and sampling distributions

Learning Objectives:

The learning objectives of this course are as follows:

- To understand the concept of estimation theory and testing of hypothesis.
- To draw inferences about the unknown population parameters based on random samples.
- To validate the estimation/ inference about the population using hypothesis testing.

Learning Outcomes:

After successful completion of this course, students will be able to:

- Understanding of estimation theory, Point and interval estimations.
- Characteristics of a good estimator and different methods of estimation.
- Demonstrate the use of these techniques in data analysis.
- Develop the best/most powerful statistical tests to test the hypotheses regarding unknown population parameters by using Neyman-Pearson theory.

SYLLABUS OF DSC-7

Theory

UNIT I **(15 hours)**

Estimation Theory

Parameter space, sample space, point estimation, requirement of a good estimator, consistency, unbiasedness, efficiency, sufficiency, Minimum variance unbiased estimators, Factorization theorem, Fisher- Neyman Criterion: statement and applications, Cramer- Rao inequality:

statement and application, MVB estimators and their applications, Statement of Rao-Blackwell theorem and Lehmann-Scheffe theorem..

UNIT II **(15 hours)**

Method of Estimation

Maximum likelihood, least squares and minimum variance, Properties of maximum likelihood estimators (illustration), Interval Estimation: confidence interval and confidence limits for the parameters of normal distribution, confidence intervals for large samples.

UNIT III **(15 hours)**

Test of Significance

Principles of test of significance: Null and alternative hypotheses, simple and composite, Type-I and Type-II errors, critical region, level of significance, power of the test, best critical region, most powerful test, uniformly most powerful test, uniformly most powerful unbiased (UMPU) critical region, Neyman- Pearson Lemma: statement and its applications to construct most powerful test.

PRACTICAL / LAB WORK – 30 hours

List of Practical

Practical Based on:

1. Unbiased estimators and consistent estimators.
2. Efficient estimators and relative efficiency of estimators.
3. Sufficient estimators and factorization theorem.
4. Cramer- Rao inequality and MVB estimators.
5. Method of maximum likelihood estimation.
6. Method of least squares and minimum variance.
7. Confidence interval and confidence limits for the parameters of normal distribution.
8. Confidence intervals in case of large samples.
9. Type I and Type II errors, power of the test.
10. Most powerful critical region (NP Lemma).

Practical work to be conducted using electronic spreadsheet / EXCEL/ Statistical Software Package/ SPSS/ calculators.

DISCIPLINE SPECIFIC CORE COURSE-8: INTRODUCTION TO VITAL STATISTICS AND DEMOGRAPHY

CREDIT DISTRIBUTION, ELIGIBILITY, AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the Course			Eligibility Criteria	Pre-requisite of the Course (if any)
		Lecture	Tutorial	Practical/ Practice		
Introduction to Vital Statistics and Demography	4	3	0	1	Class XII with Mathematics	knowledge of basic statistics

Learning Objectives:

The learning objectives of this course are as follows:

- To collect valid Demographic data using different methods.
- To learn basic measures of Mortality, Fertility, and Population Growth.
- To construct life tables.

Learning Outcomes:

After successful completion of this course, students will be able to:

- Distinguish between Vital Statistics and Demography.
- Understand errors in Demographic data.
- Comprehend sources of data collection on Vital Statistics and errors therein.
- Use methods for measurement of Population.
- Distinguish between Rate and Ratio.
- Understand the basic measures of Mortality.
- Describe and apply the concepts of Stable and Stationary Populations.
- Understand the concept of Life Tables and their construction.
- Understand the basic measures of Fertility.
- Apply measures of Population Growth.

SYLLABUS OF DSC-8

Theory

UNIT I **(10 Hours)**

Introduction to Vital Statistics

Introduction and sources of collecting data on vital statistics, errors in the census, and registration data. Measurement of population, rate, and the ratio of vital events.

UNIT II **(12 Hours)**

Measurements of Mortality

Crude Death Rate (CDR), Specific Death Rate (SDR), Infant Mortality Rate (IMR), and Standardized Death Rates. Stationary and Stable population, Central Mortality Rates, and Force of Mortality.

UNIT III **(10 Hours)**

Life Tables

Life(Mortality) Tables: Assumption, description, construction of Life Tables, and Uses of Life Tables.

UNIT IV **(13 Hours)**

Measurements of Fertility

Crude Birth Rate (CBR), General Fertility Rate (GFR), Specific Fertility Rate (SFR), and Total Fertility Rate (TFR). Measurement of Population Growth: Crude rates of natural increase, Pearl's Vital Index, Gross Reproduction Rate (GRR), and Net Reproduction Rate (NRR).

PRACTICAL/LAB WORK - 30 hours

List of Practicals:

1. To calculate CDR and Age Specific death rate for a given set of data.
2. To find a standardized death rate by (i) Direct method and (ii) Indirect method.
3. To construct a complete life table.
4. To fill in the missing entries in a life table.
5. To calculate CBR, GFR, SFR, TFR for a given set of data.
6. To calculate Crude rate of Natural Increase and Pearle's Vital Index for a given set of data.
7. Calculate GRR and NRR for a given set of data and compare them.

Practical work to be conducted using electronic spreadsheet / EXCEL/ Statistical Software Package/ SPSS/ calculators.

ESSENTIAL READINGS:

Discipline Specific Elective
Category-V

DISCIPLINE SPECIFIC ELECTIVE COURSE-2A: COMPUTER PROGRAMMING IN C

CREDIT DISTRIBUTION, ELIGIBILITY, AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the Course			Eligibility Criteria	Pre-requisite of the Course (if any)
		Lecture	Tutorial	Practical / Practice		
Computer Programming in C	4	3	0	1	Class XII with Mathematics	NIL

Learning Objectives:

The learning objectives of this course are as follows:

- To introduce computer programming and its roles in problem-solving.
- To describe data structures
- To develop logics that will help to create well-structured programs using C language

Learning Outcomes:

After successful completion of this course, students will be able to:

- Understand various data types, operators, library functions, Input/Output operations.
- Decision making and branching and looping.
- Use Arrays, Characters, and strings.
- Understand user-defined functions, and recursive functions.
- Storage class of Variables
- Apply Pointers and Structure
- Pre-processors: Macro substitution, macro with argument
- File inclusion in C, I/O operations on files.

SYLLABUS OF DSE-2A

Theory

UNIT I **(6 hours)**

Introduction to C

History and importance of C. Components, basic structure programming, character set, C tokens, Keywords and Identifiers and execution of a C program. Data types: Basic data types, Enumerated data types, derived data types. Constants and variables: declaration and assignment of variables, Symbolic Constants, overflow and underflow of data.

UNIT II **(9 hours)**

Expressions and I/O functions

Operators and Expressions: Arithmetic, relational, logical, assignment, increment/decrement and conditional operators, precedence of operators in an expression. Managing input and output from the standard devices.

UNIT III **(12 hours)**

Branching and Arrays

Decision making and branching - if…else, nesting of if…else, else if ladder, switch. Looping in C: for, while, do…while, jumps in and out of loops.

Arrays: Declaration and initialization of one-dim and two-dim arrays. Character arrays and strings: Declaring and initializing string variables, reading and writing strings from Terminal (using scanf and printf only).

UNIT IV **(9 hours)**

Functions and Storage class

User- defined functions: definition of functions, return values and their types, function prototypes and calls. Category of Functions and recursive function. Passing arrays to functions, Storage class of Variables.

UNIT V **(9 hours)**

Pointers, Macros and Files

Pointers: Declaration and initialization of pointer variables, accessing the address of a variable, accessing a variable through its pointer, pointer expressions, pointer increments/decrement and scale factor. Pointers and arrays, functions returning pointers. Introduction of structure. Pre-processors: Macro substitution, macro with argument, file inclusion in C. Defining and opening a file (only r, w and a modes), closing a file, I/O operations on files-fscanf and fprintf functions.

PRACTICAL/LAB WORK – 30 Hours

List of Practicals:

1. Roots of a quadratic equation (with imaginary roots also)
2. Sorting of an array and hence finding median
3. Mean, Median and Mode of a Grouped Frequency Data
4. Variance and coefficient of variation of a Grouped Frequency Data
5. Preparing a frequency table
6. Value of n! using recursion
7. Random number generation from exponential, normal (using CLT) and gamma distribution calculate sample mean and variance.
8. Matrix addition, subtraction, multiplication, Transpose and Trace
9. Fitting of Binomial distribution and apply Chi-square test for goodness of fit
10. Chi-square contingency table
11. t-test for difference of means
12. Paired t-test
13. F-ratio test
14. Multiple and Partial correlation.
15. Compute ranks and then calculate rank correlation(without tied ranks)

16. Fitting of lines of regression

Practical work to be conducted using electronic spreadsheet / EXCEL/ Statistical Software Package/ SPSS/ calculators.

ESSENTIAL READINGS:

- Balagurusamy, E. (2019): Programming in ANSI C, 8th Edition, Tata McGraw Hill.
- Gottfried, B.S. (1998): Schaum's Outlines: Programming with C, 2nd Edition, Tata McGraw Hill

SUGGESTED READING:

- Kanetkar, Y. (2020) : Let Us C, 18th Edition, BPB Publications
- Perry, G. and Miller, D. (2015) : C Programming Absolute Beginner's Guide, 3rd Edition, Pearson Publications

Note: Examination scheme and mode shall be as prescribed by the Examination Branch University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVE-2B: ADVANCED TECHNIQUES OF SAMPLE SURVEYS

CREDIT DISTRIBUTION, ELIGIBILITY, AND PRE-REQUISITES OF THE COURSE

Course title and code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lectures	Tutorials	Practical/ Practice		
Advanced Techniques of Sample Surveys	4	3	0	1	Class XII with Mathematics	Knowledge of sample surveys

Learning Objectives:

The learning objectives of this course are as follows:

- To introduce advanced techniques relating to stratified and systematic sampling, ratio and regression methods of estimation.
- To introduce cluster and two-stage sampling when the population is divided into groups.
- To describe the errors due to factors other than the inductive process of inferring about the population from a sample.

Learning Outcomes:

After successful completion of this course, students will be able to:

- Understand Post Stratification,
- Determine the optimum number of strata and their construction
- Comprehend Circular systematic sampling

- Apply Ratio and Regression method of estimation under the Superpopulation model
- Use Cluster sampling, and Two-stage sampling
- Classify non-sampling errors

SYLLABUS OF DSE-2B

Theory

UNIT I **(15 Hours)**

Stratified and Systematic Sampling

Stratified Sampling: Post Stratification, effect of increasing the number of strata, determination of optimum number of strata, construction of strata (Neyman allocation, Proportional allocation and approximate method by Dalenius and Hodges), method of collapsed strata, allocation requiring more than 100% sampling.

Systematic Sampling: Circular systematic sampling, Yates' and Cochran method of estimation of sampling variance.

UNIT II **(15 Hours)**

Superpopulation Model and Cluster Sampling

Superpopulation model, Ratio method of estimation under superpopulation model, regression method of estimation under superpopulation model.

Cluster Sampling (equal-sized clusters): Estimation of population mean and its variance, efficiency of cluster sampling, the effect of formation of clusters randomly, efficiency of cluster sampling in terms of intra-class correlation, estimation of efficiency, optimum size of cluster.

UNIT III **(15 Hours)**

Two-Stage Sampling and Non-Sampling Errors

Two-stage sampling/sub-sampling (Equal first stage units): Estimation of population mean and its variance, Estimator of variance of the sample mean, allocation of sample to two-stages, comparison of two-stage with one-stage sampling.

Non-sampling errors: Classification of non-sampling errors, types of non-sampling errors, bias due to non-response, Hansen and Hurwitz technique, comparison of Hansen and Hurwitz technique with SRS under a cost constraint

PRACTICAL/LAB WORK – 30 Hours

List of Practicals:

Practical Work based on:

1. Dalenius and Hodges method of construction of strata
2. Determination of optimum number of strata
3. Cluster sampling
4. Circular systematic sample
5. Ratio method of estimation under superpopulation model
6. Regression method of estimation under superpopulation model
7. Two-stage sampling

Practical work to be conducted using electronic spreadsheet / EXCEL/ Statistical Software Package/ SPSS/ calculators.

ESSENTIAL READINGS:

- Cochran, W.G. (2011): Sampling Techniques (3rd Ed.), Wiley Eastern John Wiley and Sons..
- Sukhatme, P. V., Sukhatme, B. V., Sukhatme, S., Asok, C.(1984). Sampling Theories of Survey with Application, IOWA State University Press and Indian Society of Agricultural Statistics.

DISCIPLINE SPECIFIC ELECTIVE-2C: DEMOGRAPHY (Not for category II)

CREDIT DISTRIBUTION, ELIGIBILITY, AND PRE-REQUISITES OF THE COURSE

Course title and code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lectures	Tutorials	Practical/ Practice		
Demography	4	3	0	1	Class XII with Mathematics	knowledge of basic statistics

Learning Objectives:

The learning objectives of this course are as follows:

- To introduce various demographic concepts and to explain the nature and scope of population studies.
- To explain evaluation and adjustments in age data using different indices.
- To introduce the construction of abridged life tables and the estimation and projection of population by different methods.
- To describe the Graduation of mortality rates by different methods.

Learning Outcomes:

After successful completion of this course, students will be able to:

- Understand the various components of Demography, sources of demographic data collection and errors therein.
- Comprehend population potential, density and concentration.
- Analyse the completeness of registration data using the Chandrasekharan-Deming formula.
- Use concepts of Stable and Stationary Populations.
- Use Balancing Equations.

- Use Myer's and UN indices in evaluating age data.
- Apply measures of the aging of population.
- Understand the concept of Abridged life tables and their construction by Reed and Merrell method and Greville's method.
- Synthesize population estimation and projection by different methods.
- Use Graduation of mortality rates by Makeham's and Gompertz graduation formula.
- Fit of Logistic curve and Makeham's formula.
- Understand the scope of population studies and its relationship with other disciplines.

SYLLABUS OF DSE-2C

Theory

UNIT I: (15 Hours)

Demographic concepts

Definition of demography and its various components, Major sources of demographic data collection and errors therein; Coverage and content errors, Rate of population change, Population density, Population potential, Population composition, Scale of urbanization and scale of population concentration, Concept of Stationary and stable populations, Nature and scope of population studies and its relationship with other disciplines. Balancing equations and its uses.

UNIT II: (15 Hours)

Adjustment of demographic data and abridged life tables

Measures of aging of population: Aged-child ratio, Old-age dependency ratio, Child dependency ratio, Age-dependency ratio, Adjustment of age data at younger age groups and adult ages. Chandrasekharan-Deming formula to check completeness of registration data. Myer's index, United Nation's index.

Abridged life tables: Concept and its construction by Reed-Merrell method and Greville's method.

UNIT III (15 Hours)

Population Estimates and Projections and Graduation of Mortality Rates:

Inter-censal and post-censal estimates by mathematical and component method ; Population Projection by the mathematical method: Logistic curve and its fitting by Pearl and Reed method and Rhodes method. Graduation of mortality rates: Makeham's and Gompertz graduation formula. Fitting of Makeham's formula.

PRACTICAL/LAB WORK - 30 hours

List of Practicals:

1. To find the Population density of a place.
2. To find Population Potential.
3. To find Rate of population change
4. To find Age Dependency ratio.
5. To find Aged Child ratio.
6. To find Child Dependency ratio.
7. To construct Abridged Life Table by Reed and Merrell method.
8. To Construct Abridged Life Table by Greville's method.

9. To fit Logistic curve by Pearl and Reed method.
10. To fit Logistic curve by Rhode's method.
11. To fit Makeham's formula by the method of Four Selected Points.
12. To fit Makeham's formula by the method of Partial Sums.

Practical work to be conducted using electronic spreadsheet / EXCEL/ Statistical Software Package/ SPSS/ calculators.

ESSENTIAL READINGS:

COMMON POOL OF GENERIC ELECTIVES (GE) COURSES OFFERED BY DEPARTMENT OF STATISTICS CATEGORY-VI

GENERIC ELECTIVE 4A: BASICS OF STATISTICAL INFERENCE

CREDIT DISTRIBUTION, ELIGIBILITY, AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the Course			Eligibility Criteria	Pre-requisite of the Course (if any)
		Lecture	Tutorial	Practical/ Practice		
Basics of Statistical Inference	4	3	0	1	Class XII with Mathematics	Basic knowledge of probability, probability distributions and sampling distributions

Learning Objectives:

The learning objectives of this course are as follows:

- To introduce the concept of estimation theory and testing of hypothesis.
- To infer about the unknown population parameters based on random samples.
- To introduce the estimation/ inference about the population using hypothesis testing.

Learning Outcomes:

After successful completion of this course, students will be able to:

- Understanding of estimation theory, Point and interval estimations.
- Characteristics of a good estimator and different methods of estimation.
- Demonstrate the use of these techniques in data analysis.
- Develop the best/most powerful statistical tests to test the hypotheses regarding unknown population parameters by using the Neyman-Pearson theory.

SYLLABUS OF GE 4A

Theory

UNIT I: **(15 Hours)**

Estimation Theory

Estimation: Parameter space, sample space, point estimation, requirement of a good estimator, consistency, unbiasedness, efficiency, sufficiency, Minimum variance unbiased estimators, Factorization theorem, Fisher- Neyman Criterion: statement and applications, Cramer- Rao inequality: statement and application, MVB estimators and their applications, Statement of Rao-Blackwell theorem and Lehmann-Scheffe theorem..

UNIT II: (15 Hours)

Methods of Estimation

Methods of estimation: maximum likelihood, least squares and minimum variance, Properties of maximum likelihood estimators (illustration), Interval Estimation: confidence interval and confidence limits for the parameters of normal distribution, confidence intervals for large samples.

UNIT III: (15 Hours)

Test of Significance

Principles of test of significance: Null and alternative hypotheses, simple and composite, Type-I and Type-II errors, critical region, level of significance, power of the test, best critical region, most powerful test, uniformly most powerful test, uniformly most powerful unbiased critical region (UMPU), Neyman- Pearson Lemma: statement and its applications to construct most powerful test.

PRACTICAL/LAB WORK – 30 Hours

List of Practical / Lab Work:

1. Unbiased estimators and consistent estimators.
2. Efficient estimators and relative efficiency of estimators.
3. Sufficient estimators and factorization theorem.
4. Cramer- Rao inequality and MVB estimators.
5. Method of maximum likelihood estimation.
6. Method of least squares and minimum variance.
7. Confidence interval and confidence limits for the parameters of normal distribution.
8. Confidence intervals in case of large samples.
9. Type I and Type II errors, power of the test.
10. Most powerful critical region (NP Lemma).

Practical work to be conducted using electronic spreadsheet / EXCEL/ Statistical Software Package/ SPSS/ calculators.

GENERIC ELECTIVE 4B: STATISTICAL COMPUTING USING R

CREDIT DISTRIBUTION, ELIGIBILITY, AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Statistical Computation using R	**4**	**2**	0	**2**	Class XII pass with Mathematics.	Basic knowledge of computers and basics of Statistics

Learning Objectives:

The learning objectives of this course are as follows:

- Review and expand upon core topics in probability and statistics.
- Practice of graphical interpretation, probability distribution and data analysis using `R'.

Learning Outcomes:

After completing this course, students would have developed a clear understanding of:

- Various Graphical representation and interpretation of data.
- Automated reports giving detailed descriptive statistics.
- Understanding data and fitting suitable distribution.
- Testing of hypothesis, p-value and confidence interval.

- Random number generation and sampling procedures.
- Importing data, Code editing in R and flow controls if (), for (), while ()

SYLLABUS OF GE 4B

Theory

UNIT I **(07 hours)**

Overview of the R language

Installing R and R studio; working on R studio, scripts and text editors, creating and saving R workspaces, installing packages and loading libraries.

Data types in R (Numeric, Integer, Character, Logical, and Complex) Data structures in R (Vector, Matrix, Data frames, List). Mathematical operators, Relational Operators, and Logical operators and use of functions: class(), names(), head(), tail(),rbind(), cbind(), rownames(), colnames() etc. Learn how to load data, importing a data file viz. .xlsx. handling missing data in R

UNIT II **(10 hours)**

Descriptive statistics and Graphs

Generate automated reports giving detailed descriptive statistics mean, median, mode, variance, skewness, five-point summary , frequency table. Statistical/mathematical functions, scan(), summary(),str(), table(), cut(),cumsum(), cumprod()etc.

Graphical representation of data: bar-plot, pie-chart, boxplot, frequency polygon, ogives , scatter plot, Fitting of curve lm(): linear, quadratic, exponential functions, correlation, and linear and multiple regression with the interpretation of results.

UNIT III **(10 hours)**

Decision-making and distributions

Introduction to flow control: if, if-else, while, and for loops, simple coding. Distribution functions(r,d,p,q) for Binomial, Poisson, Exponential, and Normal . Data distribution: qqplot(), qqnorm()

UNIT IV **(08 hours)**

Testing of Hypothesis and Time series

Basics of statistical inference in order to understand hypothesis testing, and compute p-values and confidence intervals. Applications on t-test, F-test, and Chi-square test with the interpretation of results. Time series analysis, components of a time series data, time series model, ts(), decomposition(), and smoothing with the interpretation of results.

PRACTICAL/LAB WORK – 30 Hours

List of Practical / Lab Work:

1. Graphical representation of data with bar-plot, pie-chart, and boxplot.
2. Histogram with equal and unequal class intervals, frequency polygon
3. Less than and more than Ogives.
4. Fitting of curve linear, quadratic, exponential functions,
5. Scatter plots, correlation
6. Linear and multiple regression

7. Drawing sample using SRSWR, SRSWOR
8. Drawing sample using stratified under proportion allocation and systematic sampling,
9. functions(r,d,p,q) for discrete distributions viz. Binomial, Poisson.
10. functions(r,d,p,q) for continuous distribution viz. Uniform,Exponential, and Normal .
11. Test the goodness of fit for Binomial, Poisson distribution.
12. Chi- Square test for independence of attributes.
13. Single, paired and independent samples t-test.
14. Components of a time series data.
15. decomposition(), and smoothing() under time series data

ESSENTIAL READINGS:

- Braun, W. J., and Murdoch, D. J. (2007). A First Course in Statistical Programming with R. Cambridge University Press. New York.
- Gardener, M. (2012). Beginning R: The Statistical Programming Language, Wiley Publications.

SUGGESTIVE READING:

- Crawley, M. J. (2012). The R Book. 2nd Ed., John Wiley & Sons.
- Dalgaard, P. (2008). Introductory Statistics with R. 2nd Ed., Springer.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch University of Delhi, from time to time.

Semester 5

DEPARTMENT OF STATISTICS

B. Sc. (H) Statistics

Category I

DISCIPLINE SPECIFIC CORE COURSE – 13: THEORY OF ESTIMATION

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Theory of Estimation	4	3	0	1	Class XII pass with Mathematics	Basic knowledge of probability, probability distributions and sampling distributions

Learning Objectives

The learning objectives include:

- Characterisation of the population based on sample information
- Understanding process of learning and determining the population characteristics based the available data.
- Strength and weakness of various methods for obtaining point and interval estimators with respect to optimal/desirable properties.

Learning Outcomes:

After completing this course, students will develop a clear understanding of:

- List desirable properties of point estimators based on an unknown parameter of a distribution viz. Unbiasedness, Consistency, Efficiency and Sufficiency.
- Derive the UMVUE of a parameter or function of a parameter (Using Cramer- Rao inequality, Rao-Blackwell theorem, and Lehmann- Scheffé Theorem).
- Understand and apply different techniques of finding optimal point estimators such as Maximum Likelihood Estimation, Method of Least Squares, Method of moments and the method of minimum chi-Squares

- Construct interval estimators, pivot method (Confidence Intervals) for unknown population parameters.

SYLLABUS OF DSC-13

Theory

UNIT I **(18 hours)**

Estimation

Estimation: Concepts of estimation, unbiasedness, sufficiency, consistency and efficiency. Fisher-Neyman Criterion (statement and applications), Factorization theorem. Complete statistic, Minimum variance unbiased estimator (MVUE), Rao-Blackwell and Lehmann-Scheffe theorems and their applications. Cramer-Rao inequality, Minimum Variance Bound estimators (MVBE) and their applications.

UNIT II **(10 hours)**

Methods of Estimations

Methods of Estimation: Method of moments, method of maximum likelihood estimation and method of minimum Chi-square.

UNIT III **(12 hours)**

Interval estimation

Interval estimation - Confidence intervals for parameters of various distributions, confidence interval for Binomial proportion, confidence interval for population correlation coefficient for Bivariate Normal distribution, pivotal quantity method of constructing confidence intervals, shortest length confidence intervals, large sample confidence intervals.

UNIT IV **(5 hours)**

Censored Data

Failure censored samples, time censored sample, estimation of expected lifetime in failure censored samples for one parameter exponential lifetime distribution

PRACTICAL/LABWORK (30 hours):

List of Practical

1. Unbiased estimators (including unbiased but absurd estimators)
2. Consistent estimators, efficient estimators and relative efficiency of estimators.
3. Cramer-Rao inequality and MVB estimators
4. Sufficient Estimators – Factorization Theorem, Complete Sufficient estimators, Rao-Blackwell theorem.
5. Lehman-Scheffe theorem and UMVUE
6. Maximum Likelihood Estimation
7. Asymptotic distribution of maximum likelihood estimators
8. Estimation by the method of moments,
9. Estimation by method of minimum Chi-square
10. Confidence interval based on large sample test
11. Confidence interval based on exact sample test

Practical work to be conducted using electronic spreadsheet / EXCEL/ Statistical Software Package/ SPSS/ calculators.

ESSENTIAL READINGS:

DISCIPLINE SPECIFIC CORE COURSE-14: LINEAR MODELS

CREDIT DISTRIBUTION, ELIGIBILITY, AND PRE-REQUISITES OF THE COURSE

Course title & code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lectures	tutorials	practical		
Linear Models	4	3	0	1	Class XII pass with Mathematics	Basic knowledge of matrix theory, probability distributions and sampling distributions

Learning Objectives:

learning objectives include:

- Developing a clear understanding of the fundamental concepts of linear models.
- Developing associated skills allowing the students to work effectively with them.

Learning Outcomes:

After completion of this course, students will develop a clear understanding of:

- Theory and estimation of Linear Models.
- Gauss-Markov Theorem and its use.
- Distribution of quadratic forms.
- Simple and Multiple linear regression models and their applications.

- Fitting of these models to real or synthetic data, derivation of confidence and prediction intervals, and a sound scientific interpretation of the results.
- Techniques of Analysis of Variance and Covariance under fixed effects model.
- Assessment of the quality of the fit using classical diagnostics, awareness of potential problems (outliers, etc.) and application of remedies to deal with them.

SYLLABUS OF DSC-14

THEORY

UNIT I **(10 Hours)**

Estimation theory and Distribution of Quadratic forms

Gauss-Markov setup, Theory of linear estimation, Estimability of linear parametric functions, Method of least squares, Gauss-Markov theorem, Estimation of error variance. Cochran's theorem and distribution of quadratic forms.

UNIT II **(10 Hours)**

Analysis of Variance

Definition of fixed, random, and mixed effect models, Technique of ANOVA, assumptions for its validity, analysis of variance in one-way classified data and in two-way classified data with an equal number of observations per cell for fixed effect models.

UNIT III **(14 Hours)**

Regression analysis:

Estimation and hypothesis testing in case of simple and multiple linear regression analysis, Confidence intervals, and Prediction intervals, Concept of model matrix and its use in estimation. Effect of orthogonal columns in the X matrix, Partial F-test and Sequential F-test, Bias in regression estimates.

UNIT IV **(4 Hours)**

Analysis of Covariance:

Technique of ANOCOVA, assumptions for its validity, use, and analysis of covariance in one-way classified data with a single concomitant variable.

UNIT V **(7 Hours)**

Model checking and Model Building

Prediction from a fitted model, Residuals and Outliers, Lack of fit and pure error, Violation of usual assumptions concerning normality, Homoscedasticity, and collinearity, Diagnostics using quantile-quantile plots. Techniques for Variable selection. Polynomial Regression models: Orthogonal Polynomials.

PRACTICAL/LABWORK -30 Hours

List of Practicals

1. Estimability when X is a full rank matrix.
2. Estimability when X is not a full rank matrix.
3. Distribution of Quadratic forms.
4. Simple Linear Regression.
5. Multiple Regression.
6. Tests for Linear Hypothesis.
7. Bias in regression estimates.
8. Lack of fit.
9. Stepwise regression procedure.

10. Analysis of Variance of a one-way classified data.
11. Analysis of Variance of two-way classified data with one observation per cell.
12. Analysis of Variance of two-way classified data with m (> 1) observations per cell.
13. Analysis of Covariance of a one-way classified data.
14. Residual Analysis.
15. Orthogonal Polynomials.

Practical work to be conducted using electronic spreadsheet / EXCEL/ Statistical Software Package/ SPSS/ calculators.

ESSENTIAL READINGS

Note: Examination scheme and mode shall be as prescribed by the Examination Branch University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE 15 –: STOCHASTIC PROCESSES

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Stochastic Processes	4	3	0	1	Class XII pass with Mathematics.	Knowledge of probability, probability distributions, and sampling distributions

Learning Objectives:

- To define, design and model

- To analyze transitions through Markov chains
- To identify the real life applications of stochastic processes

Learning Outcomes:

After completing this course, students will develop a clear understanding of:

- The fundamental concepts of stochastic processes.
- Tools needed to analyze stochastic processes.
- Markov processes and Markov chains.
- Markov chain applications.
- Poisson process and its variations.
- Random walk and ruin theory

SYLLABUS OF DSC-15

Theory

UNIT I **(13 hours)**

Introduction of Stochastic Process

Probability Distributions: Generating functions, Bivariate probability generating functions, and their application.

Stochastic Process: Introduction, Covariance stationary, and Stationary Process.

UNIT II **(15 hours)**

Markov Chains

Markov Chains: Definition of Markov Chain, transition probability matrix, order of Markov chain, Markov chain as graphs, higher transition probabilities.

Classification of states and chains, stationary process, and stability of Markov system. Generalization of independent Bernoulli trials,

UNIT III **(12 hours)**

Poisson Process

Poisson Process: postulates of Poisson process, and properties of Poisson process and applications.

Gambler's Ruin Problem: Classical ruin problem, expected duration of the game.

PRACTICAL/LAB WORK – (30 hours)

List of Practical:

1. Applications of Partial Fraction Theorem.
2. Problems based on (covariance) stationary processes.
3. Simulation of Markov chains.
4. Calculation of transition probability matrices.
5. To check whether the given chain is irreducible or not.
6. Classification of states.
7. Computation of probabilities in case of generalizations of independent Bernoulli trials.
8. Simulation and applications of Poisson processes.
9. Transition Markov chain in case of gambler's ruin problem .
10. Calculation of probabilities for ruin problems.

Practical work to be conducted using electronic spreadsheet / EXCEL/ Statistical Software Package/ SPSS/ calculators.

ESSENTIAL READINGS

B.Sc. (P)/B.A(P) with Statistics as Major

Category II

DISCIPLINE SPECIFIC CORE COURSE - 9: INTRODUCTION TO DESIGN OF EXPERIMENTS

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Introduction to Design of Experiments	4	3	0	1	Class XII pass with Mathematics	knowledge of inferential statistics, and ANOVA

Learning Objectives:

The learning objectives include

- To design and conduct experiments.
- To analyze and interpret data.

Learning Outcomes:

After completing this course, students will developed a clear understanding of

- The fundamental concepts of Design of Experiments.
- Introduction to planning valid and economical experiments.
- Completely randomized design.
- Randomized block design.
- Latin square design.
- Balanced incomplete block design.
- Full and confounded factorial designs with two levels.
- Fractional factorial designs with two levels.

SYLLABUS OF DSC-9

Theory

UNIT I **(15 hours)**

Experimental designs

Experimental designs: Role, historical perspective, terminology, experimental error, basic principles, uniformity trials, fertility contour maps, choice of size and shape of plots and blocks. Basic designs: Completely Randomized Design (CRD), Randomized Block Design (RBD), Latin Square Design (LSD) - layout, model and statistical analysis, relative efficiency.

UNIT II **(09 hours)**

Balanced Incomplete Block Designs

Balanced Incomplete Block Design (BIBD)- parameters, relationships among its parameters, incidence matrix and its properties, Symmetric BIBD, Resolvable BIBD, Affine Resolvable BIBD.

UNIT III **(15 hours)**

Factorial experiments

Factorial experiments**:** Concepts, notations and advantages, 2^2, $2^3 \ldots 2^n$ factorial experiments, design and analysis, Total and Partial confounding for 2^n ($n \leq 5$). Factorial experiments in a single replicate.

UNIT IV **(06 hours)**

Fractional factorial experiments

Fractional factorial experiments**:** Construction of one-half and one-quarter fractions of 2^n ($n \leq 5$) factorial experiments, Alias structure, Resolution of a design.

PRACTICAL/LAB WORK – (30 hours)
List of Practical:

1. Analysis of CRD, RBD & LSD.
2. Analysis of 2^2 and 2^3 factorial experiments in CRD and RBD.
3. Analysis of a completely confounded two level factorial designs in 2 and 4 blocks.
4. Analysis of a partially confounded two level factorial design.
5. Analysis of a single replicate of a 2^n design.
6. Analysis of one-half and one-quarter fractions of 2^n factorial design.

Practical work to be conducted using electronic spreadsheet / EXCEL/ Statistical Software Package/ SPSS/ calculators.

ESSENTIAL READINGS

DISCIPLINE SPECIFIC CORE COURSE– 10: STATISTICAL SIMULATION

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Statistical Simulation	4	3	0	1	Class XII pass with Mathematics	knowledge of basic statistics

Learning Objectives

The learning objectives include:

- Concept of simulation and simulation modelling.
- Generation of Pseudo random number generators as well as from standard statistical distributions. Monte-Carlo simulation technique.
- Application of simulation techniques.

Learning Outcomes

After completing this course, students will possess skills concerning:

- How simulation may be used to understand the behavior of real world systems by utilizing mathematical models with an emphasis on simulation.
- How to generate random numbers by the different methods.
- Hands-on experience in using simulation software packages/structured programming languages.

SYLLABUS OF DSC- 10

Theory

UNIT I **(12 Hours)**

Introduction to simulation:

Introduction, Definitions of simulation, Need for simulation, general principles, types of simulation, Simulation models, Phases in simulation models, Event type simulation, Monte Carlo simulation technique.

UNIT II **(18 Hours)**

Random numbers generation:

Methods for the generation of Random numbers, Pseudo random number generators, Mid square method for the generation of random number and its limitations, the inverse transform method; Generating the Discrete and Continuous random variables.

UNIT III **(15 Hours)**

Applications of simulation:

Applications of simulation in different fields of study, simulation of Inventory problems and simulation of Queueing problems. Advantages and disadvantages of simulation, Simulation languages, Scope of simulation techniques.

Practical/Lab Work – (30 hours)

List of Practical:

1. Pseudo random number generators;
2. Generation of U(0,1).
3. Generation using the inverse transform method applied to:
   (a) Discrete distribution and
   (b) Continuous distribution.
4. Monte Carlo simulation method and applications.
5. Problems based on Queueing systems.
6. Problems based on Inventory Controls, etc.

Practical work to be conducted using electronic spreadsheet / EXCEL/ Statistical Software Package/ SPSS/ calculators.

Discipline Specific Elective
Category-V

DISCIPLINE SPECIFIC ELECTIVE COURSE – 3A: ACTUARIAL STATISTICS

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Actuarial Statistics	4	**3**	0	1	Class XII pass with Mathematics	**NIL**

Learning Objectives

The learning objectives include:

· To learn basics of Actuarial Science.

· To learn advanced techniques in Actuarial Science with practical applications in daily life.

Learning Outcomes:

After completing this course, students will develop a clear understanding of:

· Basics of Actuarial Science.

· Tools for applying actuarial methods in phenomena for financial research and insurance.

· computation of premiums and settlement of claims

SYLLABUS OF DSE-3A

Theory

UNIT I **(9 Hours)**

Introductory Statistics and Insurance Applications

Introductory Statistics and Insurance Applications: Discrete, continuous and mixed probability distributions. Insurance applications, sum of random variables. Utility theory: Utility functions, expected utility criterion, types of utility function, insurance and utility theory.

UNIT II **(12 Hours)**

Principles of Premium Calculation

Principles of Premium Calculation**:** Properties of premium principles, examples of premium principles. Individual risk models: models for individual claims, the sum of independent claims, approximations and their applications.

UNIT III **(6 Hours)**

Survival Distribution and Life Tables:

Survival Distribution and Life Tables: Uncertainty of age at death, survival function, time-until-death for a person, curate future lifetime, force of mortality, life tables with examples, deterministic survivorship group, life table characteristics

UNIT IV **(15 Hours)**

Life Insurance
Life Insurance: Models for insurance payable at the moment of death, insurance payable at the end of the year of death and their relationships. Life annuities: continuous life annuities, discrete life annuities. Premiums: continuous and discrete premiums.

PRACTICAL/LAB WORK – (30 hours)
List of Practical:
1. Risk computation for different utility models.
2. Discrete and continuous risk calculations.
3. Calculation of aggregate claims for collective risks.
4. Calculation of aggregate claim for individual risks.
5. Computing Ruin probabilities and aggregate losses.
6. Annuity and present value of contract.
7. Computing premium for different insurance schemes.
8. Practical based on life models and tables.

Practical work to be conducted using electronic spreadsheet / EXCEL/ Statistical Software Package/ SPSS/ calculators.

ESSENTIAL READINGS

- Dickson, C. M. D. (2005): Insurance Risk And Ruin (International Series On Actuarial Science), Cambridge University Press. Bowers, N. L., Gerber, H. U., Hickman,
- Atkinson, M.E. and Dickson, D.C.M. (2011): An Introduction to Actuarial Studies, Elgar Publishing.

SUGGESTIVE READINGS

- J. C., Jones, D. A. And Nesbitt, C. J. (1997): .Actuarial Mathematics, Society Of Actuaries, Itasca, Illinois, U.S.A.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVE COURSE– 3B: SIMULATION TECHNIQUES IN STATISTICS (Not for category II)

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Simulation Techniques in Statistics	4	3	0	1	Class XII pass with Mathematics	knowledge of basic statistics

Learning Objectives

The learning objectives include:

- The objective of this course is to introduce the nuances of techniques involved in simulation studies as applicable to modeling of systems.
- The programming implementations will be completed using C/MATLAB/R/Python.

Learning Outcomes

After completing this course, students will possess skills concerning:

- Use of simulation to understand the behavior of real world systems.
- Ability to generate Pseudo-random numbers by the different methods.
- Random variable generation from theoretical distributions.
- Use of Monte Carlo methods and regenerative simulation.
- Ability to develop programs for the purpose of simulation.

SYLLABUS OF DSE- 6d

Theory

UNIT I **(12 Hours)**

Introduction to simulation

Introduction, Systems, Simulation models, Classification of simulation models; Simulation and Monte Carlo Methods, Pseudo-random number generators; Statistical tests of Pseudo-random numbers.

UNIT II **(18 Hours)**

Generation of random numbers

Random number generation. Random variable generation- Inverse transform method, Composition method, Acceptance-Rejection method. Generating from common statistical distributions- Discrete and Continuous. Simulation of random vectors, Generating Poisson processes and Markov chain.

UNIT III **(15 Hours)**

Applications of simulation

Discrete event simulation; Monte Carlo integration; Variance reduction techniques; Applications to statistical inference; Point Estimators, Confidence Intervals and hypothesis tests.

Practical work to be conducted using electronic spreadsheet / EXCEL/ Statistical Software Package/ SPSS/ calculators.

PRACTICAL/ LAB WORK – (30 hours)

List of Practical:

1. Pseudo random number generators.
2. Generation of U (0, 1).
3. Problems based on statistical tests.
4. Application to standard statistical distributions (discrete and continuous):
   (a) The inverse transforms method.

(b) Acceptance-Rejection method.

5. Problems based on Composition Method.
6. Problems based on Monte Carlo integration.
7. Problems based on Regenerative methods.

ESSENTIAL READINGS:

- Rubinstein, R.Y. (2017). Simulation and the Monte Carlo Methods, Wiley.

DISCIPLINE-SPECIFIC ELECTIVE COURSE–3C: ENVIRONMENTAL STATISTICS

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Environmental Statistics	4	3	0	1	Class XII pass with Mathematics	knowledge of sampling distributions and linear models

Learning Objectives

The learning objectives include:

· To study the role of Statistics in Environmental Science.

· To study different Statistical distributions, sampling procedures, linear models and analysis of variance.
- To study environmental monitoring.
- To study time-series analysis and Spatial-data analysis.
- To learn about censored data and risk assessment.

Learning Outcomes:

After completing this course, students will develop a clear understanding of:

- The role of Statistics in Environmental Science.
- Uses and applications of different Statistical distributions, sampling procedures, linear models and analysis of variance.
- Environmental monitoring.
- Time-series analysis and Spatial-data analysis.
- Censored data and risk assessment.
- They will be able to do risk analysis using spreadsheet.

SYLLABUS OF DSE – 3C

Theory

UNIT I: (9 hours)

Introduction

The Role of Statistics in Environmental Science: Introduction, Examples, Base-line, Targeted, Regular monitoring, Role of Statistics in Environmental Science. Environmental Sampling: Introduction, Sampling Procedures, Sampling in the wild.

UNIT II: (9 hours)

Models for Data and Environmental Monitoring

Models for Data: Statistical models, Discrete statistical distribution, Continuous statistical distributions, Linear Models, ANOVA. Environmental Monitoring: Detection of changes by ANOVA, Detection of changes using control chart, Chi squared tests for a change in a distribution.

UNIT III: (9 hours)

Time Series and Spatial-Data Analysis

Introduction to Time Series Analysis, Components of Time Series, Serial correlation. Introduction to Spatial-Data Analysis, Types of spatial data, Spatial Patterns in quadrat counts, and Correlation between quadrat counts.

UNIT IV: (9 hours)

Censored Data and Risk Assessment:

Introduction to Censored Data, Single sample estimation, Types of censoring. Introduction to Risk Assessment, Principles for Monte Carlo Risk Assessment, Risk Analysis using spreadsheet.

PRACTICAL/LAB WORK - (30 HOURS)

List of Practical:

1. Collection of environmental data.

2. Fitting different discrete distributions. Case: Estimate the survival rates of salmon in rivers and continuous distributions,
3. Fitting regression model (simple and multiple), Case: Chlorophyll-a in lakes/rivers as an indicator of lake/river water quality, Soil, and Vegetation data.
4. Change detection in the environment using ANOVA, Control Charts, Hypotheses testing- Case: pH values, SO_4 concentrations etc in lakes/rivers, Annual ring widths in trees,
5. Time series analysis- Case: World Temperature data, Annual sunspot data, Rainfall data, or on any environmental issues.
6. Serial correlation- Case: Northern and Southern Hemisphere temperatures
7. Single sample estimation,
8. Correlation between quadrats counts- Case: Correlation between counts for two different species in a water body.
9. Analysis of censored environmental data,
10. Risk analysis- Case: Contaminant uptake in Tap-water

Practical work to be conducted using electronic spreadsheet / EXCEL/ Statistical Software Package/ SPSS/ calculators.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVE COURSE – 3d: REGRESSION ANALYSIS (Not for category I)

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Regression Analysis	4	3	0	1	Class XII pass with Mathematics	knowledge of sampling distributions and matrix theory

Learning Objectives

The learning objectives include:

- Be able to carry out and interpret Correlation Analysis
- Be able to carry out and interpret inference procedures for simple linear regression.
- Know the simple and multiple linear regression models, and be able to state and explain the standard methods of estimation for these models.

Learning Outcomes:

After completing this course, students will develop a clear understanding of:

- Basic concept of matrix, its types and operations,
- correlation and regression techniques, the two very powerful tools in statistics,
- Linear and Multiple Linear regression,
- regression diagnostics, multicollinearity, residual plots and estimation and tests for regression coefficients.
- concept of coefficient of determination and inference on partial and multiple correlation coefficients.

SYLLABUS OF DSE-3d

Theory

UNIT I **(15 hours)**

Introduction

Correlation, Types of correlation, Methods of studying simple correlation - Scatter diagram, Covariance between two variables: Definition, computation, effect of change of origin and scale, Karl Pearson's coefficient of correlation, Spearman's Rank correlation coefficient.

UNIT II **(15 hours)**

Linear Regression

Linear Regression: Meaning of regression, difference between correlation and regression, simple linear regression model, Estimation of regression parameters by least squares method (fitting of regression

model), Interpretation of parameters. Test of significance of regression and confidence interval, Concept of residual, Residual plots, comparison of two models on the basis of residual sum of squares.

UNIT III **(15 hours)**

Multiple Linear Regression

Multiple linear regression: Estimation of regression parameters by least square method and their properties, Interpretation of parameters. Concept of coefficient of determination R^2 and adj R^2. Testing of hypothesis and bias in regression estimates.

PRACTICAL/LAB WORK – (30 hours)

List of Practical:

1. Computation of covariance, coefficient of correlation, checking for independence and uncorrelatedness of two variables.
2. Lines of regression, angle between lines and estimation of parameters.
3. Lines of regression and regression coefficients.
4. Spearman rank correlation with/without ties.
5. Fitting of simple linear regression model
6. Testing of hypothesis in SLRM
7. Fitting of multiple linear regression model
8. Testing of hypothesis in MLRM
9. Bias in regression parameters

Practical work to be conducted using electronic spreadsheet / EXCEL/ Statistical Software Package/ SPSS/ calculators.

ESSENTIAL READINGS

COMMON POOL OF GENERIC ELECTIVES (GE) COURSES
OFFERED BY DEPARTMENT OF STATISTICS
CATEGORY-VI

GENERIC ELECTIVE -5A: INTRODUCTION TO STATISTICAL LINEAR MODELS

CREDIT DISTRIBUTION, ELIGIBILITY, AND PRE-REQUISITES OF THE COURSE

Course title & code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lectures	tutorials	practical		
Introduction to Statistical Linear Models	4	3	0	1	Class XII pass with Mathematics	knowledge of sampling distributions and matrix theory

Learning Objectives:
learning objectives include:

- Developing a clear understanding of the fundamental concepts of linear models.
- Developing associated skills allowing the students to work effectively with them.

Learning Outcomes:
After completion of this course, students will have developed a clear understanding of:

- Theory and estimation of Linear Models.
- Gauss-Markov Theorem and its use.
- Distribution of quadratic forms.
- Simple and Multiple linear regression models and their applications.
- Fitting of these models to real or synthetic data, derivation of confidence and prediction intervals, and a sound scientific interpretation of the results.
- Techniques of Analysis of Variance under fixed effects model.
- Assessment of the quality of the fit using classical diagnostics,

SYLLABUS OF GE-5A
THEORY

UNIT I: **(12 hours)**

Introduction:

Statistical linear models and their classification, Estimability of linear parametric functions, Gauss-Markov set-up, Normal equations, and Gauss-Markov theorem: full rank case and non-full rank case (without proof).

UNIT II: **(8 hours)**

Distribution of Quadratic Forms:

Cochran's theorem (without proof), Necessary and sufficient conditions for the mutual independence of quadratic forms and for the mutual independence of a linear function and a quadratic form.

UNIT III: **(13 hours)**

Regression Analysis:

Simple and Multiple linear regression: Estimation and testing of hypothesis, confidence interval, bias in regression estimates, Lack of fit and pure error, Residuals, and their plot. Techniques for Variable selection. Polynomial Regression models: Orthogonal Polynomials.

UNIT IV: **(12 hours)**

Analysis of Variance (ANOVA):

The technique of ANOVA for one-way and two-way classifications with an equal number of observations per cell under a fixed effects model.

PRACTICAL/LABWORK -30 Hours

List of Practicals

1. Estimability when X is a full rank matrix
2. Estimability when X is not a full rank matrix
3. Distribution of Quadratic forms
4. Simple Linear Regression
5. Multiple Regression
6. Tests for Linear Hypothesis
7. Bias in regression estimates
8. Lack of fit
9. Orthogonal Polynomials
10. Analysis of Variance of a one-way classified data.
11. Analysis of Variance of a two-way classified data with one observation per cell.
12. Analysis of Variance of two-way classified data with m (> 1) observations per cell.

Practical work to be conducted using electronic spreadsheet / EXCEL/ Statistical Software Package/ SPSS/ calculators.

ESSENTIAL READINGS

Note: Examination scheme and mode shall be as prescribed by the Examination Branch University of Delhi, from time to time.

GENERIC ELECTIVE – 5b: STATSTICAL TECHNIQUES FOR QUALITY CONTROL

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Statistical Techniques for Quality Control	4	3	0	1	Class XII pass with Mathematics	knowledge of basic statistics

Learning Objectives

The learning objectives include:

- This course will help students to learn techniques and approach of SQC being used in industry to manufacture goods and services of high quality at low cost.
- This course will also give exposure to Sampling Inspection Plan.

Learning Outcomes:

After completing this course, students will develop a clear understanding of:

- Quality, Historical background, ISO standards.
- Statistical process control tools- Control charts for variables, attributes.
- Statistical product control tools- Sampling inspection plans, Dodge and Romig plans.

SYLLABUS OF GE-5b

Theory

UNIT I **(10 hours)**

Introduction, historical perspective and ISO Quality Standards

Quality: Definition, dimensions of quality, its concept, application and importance. Brief historical perspective of quality control and improvements. Quality system and standards: Introduction to ISO quality standards. Introduction to Process and Product Control, Statistical Process Control, Chance and Assignable causes of variation.

UNIT II **(20 hours)**

Statistical Control Charts

Construction and Statistical basis of 3-σ Control charts. Control charts for variables: X-bar & R-chart, X-bar & s-chart. Rational Sub-grouping, Revised and Modified Control Limits. Control charts for attributes: np-chart, p-chart, c-chart and u-chart. Comparison between control charts for variables and control charts for attributes. Analysis of patterns on control chart, estimation of process capability.

UNIT III **(15 hours)**

Acceptance sampling plan

Principle of acceptance sampling plans. Single sampling plans their OC, AQL, LTPD, AOQ, AOQL, ASN, ATI functions with graphical interpretation, use and interpretation of Dodge and Romig's sampling inspection plan tables.

PRACTICAL/LAB WORK – (30 hours)

List of Practical:

1. Construction and interpretation of statistical control charts $\bar{X}$& R-chart for known parameters.
2. Construction and interpretation of statistical control charts $\bar{X}$ & R-chart with revised control limits for unknown parameters.
3. Construction and interpretation of statistical control charts $\bar{X}$ & s-chart with revised control limits for unknown parameters.
4. Construction and interpretation of statistical control charts np chart.
5. Construction and interpretation of statistical control charts p-chart with fixed sample size.
6. Construction and interpretation of statistical control charts p-chart with variable sample size.
7. Construction and interpretation of statistical control charts c-chart.
8. Construction and interpretation of statistical control charts u-chart.
9. Single sample inspection plan: Construction and interpretation of OC, AQL, LTPD, ASN, ATI, AOQ, AOQL curves.
10. Single sample inspection plan: Construction and interpretation of OC, AQL, LTPD, ASN, ATI, AOQ, AOQL curves for varying acceptance number.
11. Calculation of process capability and comparison of 3-sigma control limits with specification limits.

Practical work to be conducted using electronic spreadsheet / EXCEL/ Statistical Software Package/ SPSS/ calculators.

ESSENTIAL READINGS

- Montogomery, D. C. (2013). Introduction to Statistical Quality Control, 7th Edition, Wiley India Pvt. Ltd.

SUGGESTIVE READINGS:

- Goon A.M., Gupta M.K. and Dasgupta B. (2002): Fundamentals of Statistics, Vol. I & II, 8th Edn. The World Press, Kolkata.
- Gupta S.C., Kapoor V.K.(2007): Fundamentals of Applied Statistics. 4th Edition, Sultan Chand and Sons., New Delhi.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch University of Delhi, from time to time.

Semester 6

DEPARTMENT OF STATISTICS

B. Sc. (H) Statistics

Category I

DISCIPLINE SPECIFIC CORE COURSE – 16: TESTING OF HYPOTHESIS

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Testing of Hypothesis	4	3	0	1	Class XII pass with Mathematics	Basic knowledge of sampling distributions

Learning Objectives

The learning objectives of this course are to introduce:

- Hypothesis testing as a statistical procedure for testing whether chance is a plausible explanation of a random experiment
- The logic of hypothesis testing with focus on theory and implementation of hypothesis testing with knowledge about types of error type, power and the correct computation and interpretation of p-values
- Use of nonparametric test as an alternative when assumptions of parameterization of distribution or the family itself is violated.
- Sequential Probability Ratio test with its entities like OC Curve, ASN etc.

Learning Outcomes:

After completing this course, students will develop a clear understanding of:

- The notion of statistical hypothesis test, error and its nature and the idea of acceptance and rejection region.
- Identify simple and composite hypothesis. Find critical region, size and power of the test.
- Apply Neymann-Pearson lemma to find most powerful test. Find UMP and UMPU test. Make use of likelihood ratio principle for testing of hypothesis
- Make distinction between parametric and nonparametric test. Identify suitable nonparametric test for both location and scale (Kolmogorov- Smirnov one sample and two sample tests, sign test, Wilcoxon signed rank test, run test. Median test, Kruskal-Wallis one-way analysis of variance by ranks, Friedman two way analysis of variance by ranks).
- Derive SPRT for test the parameters of normal distribution, binomial and Poisson distributions also find OC function, Average sample Number etc. of a SPRT.

SYLLABUS OF DSC-16

Theory

UNIT I **(15 hours)**

Principles of test of significance

Principles of test of significance: Null and alternative hypotheses (simple and composite), Type-I and Type-II errors, critical region, level of significance, size and power, best critical region, most powerful test, uniformly most powerful test, uniformly most powerful unbiased critical region (UMPU). Neyman Pearson Lemma and its application to construct most powerful tests.

Unit II **(10 hours)**

Likelihood ratio test

Likelihood ratio test and its application, properties of likelihood ratio tests (without proof).

UNIT III **(10 hours)**

Sequential Probability Ratio Test

Sequential Probability Ratio Test. Determination of stopping bounds A and B, OC and ASN functions of SPRT.

UNIT IV **(10 hours)**

Non-Parametric tests

Non-Parametric tests. Empirical distribution function, one sample and two-sample sign test. Wald-Wolfowitz run test. Run test for randomness, Median test, Wilcoxon-Mann-Whitney U-test. Kolmogorov-Smirnov one-sample test, Kruskal-Walli's test.

PRACTICAL/LAB. WORK(30 hours):

List of Practical

1. Type I and Type II errors
2. Most powerful critical region (NP Lemma)
3. Uniformly most powerful critical region
4. Unbiased critical region
5. Power curves of hypothesis tests.
6. Likelihood ratio test
7. Non Parametric test based on quantile and Empirical distribution
8. Test for location and scale both one and two samples
9. Test of Association for bivariate samples
10. SPRT for binomial, Poisson and Normal distribution
11. OC Curve and ASN function

Practical work to be conducted using electronic spreadsheet / EXCEL/ Statistical Software Package/ SPSS/ calculators.

ESSENTIAL READINGS:

- Goon, A.M., Gupta, M.K., and Dasgupta, B. (2005).: An Out Line of Statistical Theory, Volume 2, Third Edition.
- Gupta, S.C. and Kapoor, V.K.(2020): Fundamental of Mathematical Statistics, 12^{h} Edn. Sultan Chand and Sons.

DISCIPLINE SPECIFIC CORE COURSE –17: DESIGN OF EXPERIMENTS

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Design of Experiments	4	3	0	1	Class XII pass with Mathematics	knowledge of sampling distributions and linear models

Learning Objectives

The learning objectives include:

- To design and conduct experiments.
- To analyze and interpret data.

Learning Outcomes:

After completing this course, students will develop a clear understanding of:

- The fundamental concepts of design of experiments.
- Introduction to planning valid and economical experiments within given resources.
- Completely randomized design.
- Randomized block design.
- Latin square design.
- Balanced incomplete block design.
- Full and confounded factorial designs with two levels.
- Introduction to factorial designs at three levels.
- Fractional factorial designs with two levels

SYLLABUS OF DSC-17

Theory

UNIT I **(13 hours)**

Experimental designs

Role, historical perspective, terminology, experimental error, basic principles, uniformity trials, fertility contour maps, choice of size and shape of plots and blocks. Basic designs: Completely Randomized Design (CRD), Randomized Block Design (RBD), Latin Square Design (LSD) – layout, model and statistical analysis, relative efficiency, analysis with one missing observation in case of RBD.

UNIT II **(10 hours)**

Incomplete Block Designs

Balanced Incomplete Block Design (BIBD) – parameters, relationships among its parameters, incidence matrix and its properties, Symmetric BIBD, Resolvable BIBD, Affine Resolvable BIBD, Complimentary BIBD, Residual BIBD, Dual BIBD, Derived BIBD.

UNIT III **(12 hours)**

Factorial experiments

advantages, notations and concepts, 2^2, 2^3,…, 2^n, 3^2 factorial experiments, design and analysis, Total and Partial confounding for 2^n ($n \leq 6$), Factorial experiments in a single replicate.

UNIT IV **(10 hours)**

Fractional factorial experiments: Construction of one-half and one-quarter fractions of 2^n ($n \leq 6$) factorial experiments, Alias structure, Resolution of a design.

PRACTICAL/LAB WORK – (30 hours)

List of Practical:

1. Analysis of a CRD with equal and unequal replicates.
2. Analysis of RBD.
3. Analysis of LSD.
4. Analysis of RBD with one missing observation.
5. Analysis of 2^2 and 2^3 factorial in CRD, RBD and LSD.
6. Analysis of 3^2 factorial in CRD, RBD.
7. Analysis of a completely confounded two level factorial design in 2 blocks.
8. Analysis of a completely confounded two level factorial design in 4 blocks.
9. Analysis of a partially confounded two level factorial design.
10. Analysis of a single replicate of a 2^n design.
11. Analysis of one half fraction of 2^n factorial design.
12. Analysis of one quarter fraction of 2^n factorial design.

Practical work to be conducted using electronic spreadsheet / EXCEL/ Statistical Software Package/ SPSS/ calculators.

DISCIPLINE SPECIFIC CORE COURSE –18: ECONOMETRICS

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Econometrics	4	3	0	1	Class XII pass with Mathematics	knowledge of sampling distributions and linear models

Learning Objectives

A broad knowledge of regression analysis relevant for analyzing economic data.

- Interpretation and critical evaluation of the outcomes of empirical analysis.
- Distinguish the results of violating the assumptions of a classical regression model.
- To judge the validity of the economic theories and carry out their evaluation in numerical terms.
- To extract useful information about important economic policy issues from the available data.
- The course is designed to provide the students with the basic quantitative techniques needed to undertake applied research projects.
- The students learn to quantify and examine economic relationships employing statistical methods based on observed data.

Learning Outcomes:

After completing this course, students will develop a clear understanding of:

- Students will be trained to write a good quality undergraduate research paper in applied statistics using the econometric methods taught in this class.
- The fundamental concepts of econometrics.
- Specification of the model.
- Multiple Linear Regression.
- Multicollinearity.
- Heteroscedasticity.
- Autocorrelation.
- Autoregressive and Lag models

SYLLABUS OF DSC-18

Theory

UNIT I **(15 hours)**

Introduction

Objective behind building econometric models, Nature and scope of econometrics, model building, role of econometrics. General linear model (GLM). Estimation under linear restrictions.

UNIT II **(10 hours)**

Multicollinearity

Introduction and concepts, detection of multicollinearity, consequences, remedies Multicollinearity, tests and solutions of multicollinearity.

UNIT III **(10 hours)**

Generalized least squares and Autocorrelation

Generalized least squares estimation, Aitken estimators. Autocorrelation: concept, consequences of autocorrelated disturbances, detection and solution of autocorrelation.

UNIT IV **(10 hours)**

Heteroscedastic disturbances

Heteroscedastic disturbances: Concepts and efficiency of Aitken estimator with OLS estimator under heteroscedasticity. Consequences of heteroscedasticity. Tests and solutions of heteroscedasticity. Qualitative Forecasting Methods.

PRACTICAL/LAB WORK – (30 hours)

List of Practical:

1. Problems based on estimation of General linear model.
2. Testing of parameters of General linear model.
3. Forecasting of General linear model.
4. Problems related to consequences of Multicollinearity.
5. Diagnostics of Multicollinearity.
6. Problems related to consequences of Autocorrelation (AR(I)).
7. Diagnostics of Autocorrelation.
8. Estimation of General linear model under Autocorrelation.
9. Problems related to consequences Heteroscedasticity.
10. Diagnostics of Heteroscedasticity.
11. Estimation of problems of General linear model under Heteroscedastic disturbance terms.
12. Problems concerning specification errors as a reason for induction of Autocorrelation, Heteroscedasticity and Multicollinearity.
13. Problems related to General linear model under (Aitken Estimation).
14. Forecasting methods.

Practical work to be conducted using electronic spreadsheet / EXCEL/ Statistical Software Package/ SPSS/ calculators.

B.Sc. (P)/B.A(P) with Statistics as Major

Category II

DISCIPLINE SPECIFIC ELECTIVE COURSE –: 11 SURVEY SAMPLING

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Survey Sampling	4	3	0	1	Class XII pass with Mathematics	knowledge of basic statistics

Learning Objectives:

The learning objectives of this course are to introduce:

- Tools and techniques for selecting a representative sample from a target population keeping in mind the objectives to be fulfilled.
- Obtain an estimator of the population parameter on the basis of the selected sample and study its properties.

Learning Outcomes:

After successful completion of this course, students should be able to:

- Understand the fundamental concepts of population and sample and the principles of sample survey
- Describe the value and methodologies for sample surveys versus other approaches to collecting information from populations.
- Determine the appropriate sample size and its allocation for nationwide sample surveys or for surveys to be conducted in a program area.
- Identify a proper sampling frame and select primary sample points.
- Apply steps involved in selecting a sample using Simple Random Sampling with or without replacement, Stratified Sampling, Systematic Sampling and Ratio and Regression Methods of Estimation

SYLLABUS OF DSC-11

Theory

Unit I **(15 Hours)**

Basic Concepts and Simple Random Sampling

Concept of population and sample, complete enumeration versus sampling, sampling and non-sampling errors. Types of sampling: non-probability and probability sampling basic principles of sample survey, Steps involved in survey sampling.

Simple random sampling (SRS)with and without replacement, their properties, procedures of selecting a simple random sample, estimation of population mean, and total sampling for proportions, determination of sample size.

Unit 2 **(10 Hours)**

Stratified random sampling:

Estimation of population mean and its variance. Allocation of samples in different strata using equal, proportional, and Neyman allocation. Comparison of Stratified sampling under proportional and Neyman allocation with SRSWOR. Practical difficulties in adopting Neyman allocation.

Unit 3 **(10 Hours)**

Systematic sampling:

Estimation of population mean, and total. Comparison of systematic sampling with simple random sampling and stratified sampling in the presence of linear trend. Definition and concept of circular systematic sampling.

Unit 4 **(10 Hours)**

Introduction to Indian Official Statistics:

Present official Statistical System in India, Methods of collection official statistics, their reliability and limitations. Role of Ministry of Statistics and Programme Implementation (MOSPI), Central Statistical Office CSO, NSSO.

PRACTICAL/LAB.. WORK: (30 Hours)

List of Practicals:

1. To select SRS with and without replacement.
2. For a population of size 5, estimate population mean, population mean square, and population variance. Enumerate all possible samples of size 2 by WR and WOR.
3. Estimate mean standard error and the sample size for SRSWOR.
4. Allocation of sample to strata by proportional method.
5. Allocation of sample to strata by Neyman methods.
6. Compare the efficiencies of proportional and Neyman allocation relative to SRS.
7. Comparison of systematic sampling with stratified sampling and SRS in the presence of a linear trend.

Practical work to be conducted using electronic spreadsheet / EXCEL/ Statistical Software Package/ SPSS/ calculators.

DISCIPLINE SPECIFIC ELECTIVE COURSE –: 12 STATISTICAL METHODS FOR PSYCHOLOGY AND EDUCATION

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Statistical Methods in Psychology and Education	4	3	0	1	Class XII pass with Mathematics	knowledge of basic statistics

Learning Objectives:

The learning objectives include:
- To measure psychological traits and mental abilities
- To learn basic methods of test construction, item writing and item analysis
- To check the reliability and validity of test scores.

Learning Outcomes:

After successful completion of this course, students should be able to:
- Distinguish between Psychological measurement and physical measurement.
- Understand the meaning of Tests in Psychology and Education.
- Appreciate the uses and limitations of Psychological tests.
- Learn the meaning and purpose of Item writing and analysis.
- Understand concepts of reliability and validity of test scores and their differences.
- Convert raw scores into different transformed scores.
- Apply Scaling rankings and ratings in terms of the Normal Probability Curve.

SYLLABUS OF DSC-12

Theory

Unit 1: **(15 Hours)**

Importance of statistics in psychology and education.

Importance of statistics in psychology and education. Levels of measurement: nominal ordinal interval and ratio scales. Distinction between psychological and physical measurements. General problems and sources of errors in measurements.
Meaning and types of tests in psychology and education. History of psychological measurement and testing. Uses and limitations of tests. Varieties of tests. Characteristics of a good test. General steps of test construction. Test administration and scoring.
Item writing and item analysis: Meaning and types of test items, Purpose and methods for evaluating test items.

Unit 2: (15 Hours)

Reliability and Validity:

Reliability: definition Methods of determining reliability: Test-retest, Alternate or parallel forms, Split half technique, Rational equivalence. Effect upon reliability of lengthening or repeating or test. Reliability coefficient as a measure of true variance. Estimating true scores by way of regression equation and reliability coefficient. Index of reliability.
Validity: meaning; Estimation of validity; Types of validity: validity and test length; comparison between reliability and validity.

Unit 3: (15 Hours)

Test Scores:

Meaning and differences between norm referencing and criterion referencing.
Raw score transformations- percentile scores, standard score, normalised standard scores, T- scores and Stanine scores.
Intelligence: definition. Types of intelligence test scores. Psychological scaling methods- scaling of individual test items in terms of difficulty, scaling of rankings and ratings in terms of the normal probability curve.

PRACTICAL LAB WORK (30 hours)

List of Practical:

1. Computation of reliability by Rulon and Kuder Richardson formulas.
2. Computing reliability of a test whose length is increased/decreased.
3. Computing index of reliability standard error of measurement.
4. Computing validity oblique maximum validity then test length is increased.
5. Computing relative difficulty of questions difference in difficulty between different tests.
6. Problem based on Z scores.
7. Problem based on t scores.
8. Problem based on Stanine scales.
9. Problem based on percentile scores.
10. Computing numerical scores corresponding to grades or ratings.

Practical work to be conducted using electronic spreadsheet / EXCEL/ Statistical Software Package/ SPSS/ calculators.

Category III

DISCIPLINE SPECIFIC CORE COURSE –: 6 SURVEY SAMPLING

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Survey Sampling	4	3	0	1	Class XII pass with Mathematics	knowledge of basic statistics

Learning Objectives:

The learning objectives of this course are to introduce:

- Tools and techniques for selecting a representative sample from a target population keeping in mind the objectives to be fulfilled.
- Obtain an estimator of the population parameter on the basis of the selected sample and study its properties.

Learning Outcomes:

After successful completion of this course, students should be able to:

- Understand the fundamental concepts of population and sample and the principles of sample survey
- Describe the value and methodologies for sample surveys versus other approaches to collecting information from populations.
- Determine the appropriate sample size and its allocation for nationwide sample surveys or for surveys to be conducted in a program area.
- Identify a proper sampling frame and select primary sample points.

- Apply steps involved in selecting a sample using Simple Random Sampling with or without replacement, Stratified Sampling, Systematic Sampling and Ratio and Regression Methods of Estimation

SYLLABUS OF DSC-6

Theory

Unit I **(15 Hours)**

Basic Concepts and Simple Random Sampling

Concept of population and sample, complete enumeration versus sampling, sampling and non-sampling errors. Types of sampling: non-probability and probability sampling basic principles of sample survey, Steps involved in survey sampling.

Simple random sampling (SRS)with and without replacement, their properties, procedures of selecting a simple random sample, estimation of population mean, and total sampling for proportions, determination of sample size

Unit 2 **(10 Hours)**

Stratified random sampling:

Estimation of population mean and its variance. Allocation of samples in different strata using equal, proportional, and Neyman allocation. Comparison of Stratified sampling under proportional and Neyman allocation with SRSWOR. Practical difficulties in adopting Neyman allocation.

Unit 3 **(10 Hours)**

Systematic sampling:

Estimation of population mean, and total. Comparison of systematic sampling with simple random sampling and stratified sampling in the presence of linear trend. Definition and concept of circular systematic sampling.

Unit 4 **(10 Hours)**

Introduction to Indian Official Statistics:

Present official Statistical System in India, Methods of collection official statistics, their reliability and limitations. Role of Ministry of Statistics and Programme Implementation (MOSPI), Central Statistical Office CSO, NSSO.

PRACTICAL/ LAB WORK (30 HOURS)

List of Practicals:

1. To select SRS with and without replacement.
2. For a population of size 5, estimate population mean, population mean square, and population variance. Enumerate all possible samples of size 2 by WR and WOR.
3. Estimate mean standard error and the sample size for SRSWOR.
4. Allocation of sample to strata by proportional method.
5. Allocation of sample to strata by Neyman methods.
6. Compare the efficiencies of proportional and Neyman allocation relative to SRS.
7. Comparison of systematic sampling with stratified sampling and SRS in the presence of a linear trend.

Practical work to be conducted using electronic spreadsheet / EXCEL/ Statistical Software Package/ SPSS/ calculators.

ESSENTIAL READINGS:

Discipline Specific Elective
Category V

DISCIPLINE SPECIFIC ELECTIVE COURSE –4A: BIOSTATISTICS

CREDIT DISTRIBUTION, ELIGIBILITY, AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Biostatistics	**4**	**3**	0	**1**	Class XII pass with Mathematics .	knowledge of Statistical Inference and stochastic processes

Learning objectives:

- Parametric Models for Survival data.
- Different types of censoring and its application in public health.
- Estimation of death probabilities by using the theory of competing risks.
- Non-parametric methods for incomplete survival data.
- Computation of the probability of gametes in different generations under random mating.

Learning Outcomes:

After completing this course, students will develop a clear understanding of:

- The fundamental concepts of survival functions and their interrelationship.
- Survival models and their applications.
- Handling censored data and estimating mean survival time of the patients.
- Actuarial and Kaplan-Meier methods.
- Competing Risk Theory.
- Basic concept of Statistical genetics.

SYLLABUS OF DSE-4A

Theory

UNIT I **(11 Hours)**

Survival Analysis

Survival Analysis: Functions of survival times, survival distributions and their applications exponential, gamma, Weibull, Rayleigh, lognormal, death density function for a distribution having bath-tub shaped hazard function.

UNIT II **(13 Hours)**

Censoring Schemes

Censoring Schemes: Type I, Type II and progressive or random censoring with biological examples. Estimation of mean survival time and variance of the estimator for Type I and Type II censored data with numerical examples. Non-parametric methods: Actuarial and Kaplan-Meier methods for estimating survival function and variance of the Estimator.

UNIT III **(10 Hours)**

Competing Risk Theory:

Indices for measurement of the probability of death under competing risks and their inter-relations. Estimation of probabilities of death using maximum likelihood method and modified chi squire method.

UNIT IV **(11 Hours)**

Statistical Genetics:

Statistical Genetics: Introduction, concepts-Genotype, Phenotype, Dominance, Recessiveness, Linkage and Recombination, Coupling, and Repulsion. Mendelian laws of Heredity, Random mating, Gametic array, Genotypic array, Relation between genotypic array and gametic array under random mating. Distribution of genotypes under random mating. Hardy-Weinberg law. Concept of gene frequencies.

PRACTICAL/ LAB. WORK (30 HOURS)

List of Practical:

1. Estimation of survival function, death density function and hazard function.
2. Estimation of mean survival time using various parametric survival models.
3. To Identify and analyse type-I censored data.
4. To Identify and analyse type-II censored data.
5. To Identify and analyse progressively type I censored data.
6. Estimation of mean survival time and variance of the estimator for type I censored data.
7. Estimation of mean survival time and variance of the estimator for type II censored data.
8. Estimation of mean survival time and variance of the estimator for progressively type I censored data.
9. To estimate the survival function and variance of the estimator using Actuarial methods.
10. To estimate the survival function and variance of the estimator using Kaplan-Meier method.
11. To estimate Crude probability of death.
12. To estimate Net-type I probability of death.
13. To estimate Net-type II probability of death.
14. To estimate partially crude probability of death.
15. To estimate gene frequencies.

Practical work to be conducted using electronic spreadsheet / EXCEL/ Statistical Software Package/ SPSS/ calculators.

DISCIPLINE SPECIFIC ELECTIVE COURSE – 4b: ORDER STATISTICS AND ITS APPLICATIONS

CREDIT DISTRIBUTION, ELIGIBILITY, AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Order Statistics and its Applications	4	3	0	1	Class XII pass with Mathematics	knowledge of statistical distributions and stochastic processes

Learning Objectives

The learning objective of this course is to make the students aware of the properties and applications of order statistics.

Learning Outcomes:

On successful completion of the course, the student will be able to:

- Find joint, marginal distributions and conditional distributions of order statistics in the continuous and discrete case.
- Find the distribution of sample range and other systematic statistics in case of sampling from an arbitrary continuous population and from some specific continuous distributions such as uniform and exponential.
- Understand the Markov Chain property of order statistics in the continuous case.
- Learn how to obtain distribution-free confidence intervals for population quantile for population distributions based on order statistics.
- Understand the distribution-free bounds for moments of order statistics and of the range.
- Derive the recurrence relations and identities for moments of order statistics drawn from an arbitrary population (discrete or continuous), as well as from some specific distributions.
- Understand the concept of L-moments and L-moments estimation of parameters.
- Derive the Linear estimation of location and scale parameters based on the moments of order statistics.

SYLLABUS OF DSE-4b

Theory

UNIT I **(15 hours)**
Introduction to Order Statistics

Definition and applications of order statistics. Basic distribution theory. Joint and marginal distributions of order statistics in the continuous case. Distribution of the median, range and other systematic statistics. Order statistics for a discrete parent. Examples based on discrete and continuous distributions.

UNIT II **(10 hours)**

Conditional distribution of order statistics

Conditional distribution of order statistics. Order statistics as a Markov Chain. Distribution-free confidence intervals for population quantiles. Distribution-free bounds for moments of order statistics and of the range.

UNIT III **(10 hours)**

Moments of order statistics

Moments of order statistics. Recurrence relations and identities for moments of order statistics from an arbitrary distribution. Recurrence relations for moments of order statistics from some specific distributions.

UNIT IV **(10 hours)**

Order statistics in statistical inference

Order statistics in statistical inference. L-moments and L-moments estimation. Linear estimation based on order statistics. Examples based on some specific continuous distributions.

PRACTICAL/LAB WORK – (30 hours)

List of Practical:

1. Problem-solving using joint, marginal, and conditional distributions of order statistics for some specific continuous distributions.
2. Distribution-free confidence intervals for population quantiles for various distributions.
3. Calculating Means, variances, and covariances by using exact expressions for the moment of order statistics for some specific continuous distribution.
4. Calculating Means, variances, and covariances by using recurrence relations for some specific continuous distributions.
5. Calculation of L-moments for some specific continuous distributions.
6. L-moments estimation of parameters for some specific continuous distributions.
7. Calculation of linear unbiased estimation for location and scale parameters for some specific continuous distributions.

Practical work to be conducted using electronic spreadsheet / EXCEL/ Statistical Software Package/ SPSS/ calculators.

DISCIPLINE SPECIFIC ELECTIVE COURSE – 4c: STATISTICAL COMPUTING AND BASIC DATA MINING

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Statistical Computing and Basic Data Mining	4	3	0	1	Class XII pass with Mathematics	Knowledge of MATLAB / OCTAVE / R / Python / C

Learning Objectives

learning objectives include:

- Understand the theoretical foundations and practical aspects of statistical computing and data mining.
- Develop skills in the use of statistical computing and data mining software to solve problems and analyze data. The programming implementations will be completed using MATLAB/OCTAVE/R/Python/C.

Learning Outcomes:

After completion of this course, students will develop a clear understanding of:

- Apply knowledge of statistical computing and data mining techniques to solve problems and analyze data.
- Communicate effectively about statistical computing and data mining concepts and techniques both orally and in writing.
- Develop ability for programming implementation using MATLAB/OCTAVE/R/Python/C.

SYLLABUS OF DSE-4C

Theory

UNIT I **(15 hours)**

Simulation techniques
Random number generation: Review; Simulating multivariate distributions; Simulating stochastic processes. Variance reduction methods.

UNIT II **(12 hours)**
Markov Chain Monte Carlo methods
Markov Chain Monte Carlo methods: The Metropolis–Hastings Algorithm; Gibbs sampling.

UNIT III **(18 hours)**
Data Mining and its applications
Introduction to Data Mining and its Applications. Data Pre-processing Techniques: Data Cleaning, Data Integration, Data Transformation, and Data Reduction. Exploratory Data Analysis. Classification Techniques: Decision Trees, Naive Bayes, k-Nearest Neighbors (k-NN). Clustering Techniques: K-Means, Hierarchical Clustering. Association rule mining. Evaluation of Data Mining Models.

PRACTICAL/LAB WORK – (30 hours)
List of Practical:

1. Practical based on random number generation: univariate and multivariate distributions.
2. Practical on simulating stochastic processes; variance reduction.
3. Simple practical problems on MCMC.
4. Practical based on Data pre-processing, transformation, reduction.
5. Practical based on classification and clustering.

Practical work to be conducted using electronic spreadsheet / EXCEL/ Statistical Software Package/ SPSS/ calculators.

DISCIPLINE SPECIFIC ELECTIVE COURSE – 4d : RESEARCH METHODOLOGY

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Research Methodology	4	3	0	1	Class XII pass with Mathematics	Nil

Learning Objectives:

The learning objectives include

- To provide scientific approaches to develop the domain of human knowledge through empirical studies.
- To enable the student researchers to understand basic concepts and aspects related to research, data collection, analyses, interpretation and report writing.

Learning Outcomes:

After completion of this course, students will develop a clear understanding of

- Research Methods.

- Research Problems.
- Research Designs.
- Comparative study of different methods of data collection.
- Guidelines for construction of questionnaires.
- Processing and Analysis of data.
- Interpretation and Report writing.

SYLLABUS OF DSE – 4D

Theory

UNIT I **(09 hours)**

Introduction to Research:

Importance and need for research ethics, Objectives of research, Types of research, Research approaches, Review of literature, Mode of literature survey: Books and Monographs, Journals, Conference proceedings, Abstracting and Indexing Journals, E-Journals/Books, Formulation of a research problem, Identifying variables, Constructing hypothesis, Conceptualization of a research design.

UNIT II **(09 hours)**

Methods & Techniques of Data Collection:

Survey methodology and Data collection, Source of data collection-Use of secondary data, Methods of collecting primary data, Develop a questionnaire, Questions and answers in surveys, Non-response, Errors in surveys, Sample size, sampling frames and coverage error.

UNIT III **(15 hours)**

Data Processing & Analysis:

Data processing, Exploratory data analysis, Review of various techniques (Parametric and Nonparametric tests, Correlation and Regression analysis, ANOVA, Multivariate Techniques) for data analysis covered in core statistics papers, Techniques of interpretation, Precaution in interpretation.

Report writing:

Discussions, Conclusions, Referencing and various formats for reference writing, Bibliography, Thesis writing, Formats of publications in research journals including subject classification, Impact factor, Citation index.

UNIT IV **(12 hours)**

Computer Application:

Data Communication and networks, Website, Webpage, Search Engines, Scientific search engines. Scientific Word Processing with LaTeX and MS-Word, MS Equation editor, Slides making-Power Point Features, Slide preparation, SPSS, Statistical Programming with R, Simulation.

PRACTICAL/LAB WORK – (30 hours)

PROJECT WORK (using a spreadsheet, Scientific Word Processing with LaTeX and MS-Word, MS Equation editor, Slides making-Power Point Features, Slide preparation, SPSS, Statistical Programming with R, Simulation.)

COMMON POOL OF GENERIC ELECTIVES (GE) COURSES

OFFERED BY DEPARTMENT OF STATISTICS

Category VI

GENERIC ELECTIVE COURSE – 6a: SURVEY SAMPLING AND DESIGN OF EXPERIMENTS

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Survey Sampling and Design of Experiments	4	3	0	1	Class XII pass with Mathematics	knowledge of basics statistics

Learning Objectives

The learning objectives include:

- To learn about sample surveys, its need and objectives.
- To learn to draw appropriate sample and interpret the result.
- To learn to design and conduct experiments.
- To analyse and interpret the data.

Learning Outcomes:

After completing this course, students will develop a clear understanding of:

- The basic concept of sample survey and its need.
- Simple random sampling.
- Stratified random sampling
- One-way and two-way analysis of variance.
- Basic concepts of design of experiments.
- Completely randomized design.
- Randomized design.
- Latin square design.
- Factorial experiments.

SYLLABUS OF GE-6a

Theory

UNIT I **(11 hours)**

Sample Surveys

Basic concepts of sample survey, concept of sampling, need for sampling, complete enumeration v/s sampling, principles of sampling theory, principal steps in a sample surveys, planning and organization of a sample survey, sampling and non-sampling errors.
Simple random sampling (SRSWR and SRSWOR): Definition and procedures of selecting a sample, properties of simple random sample, estimation of mean and sampling variance of sample mean.

UNIT II **(12 Hours)**

Stratified random sampling

Introduction, estimation of population mean and its variance, choice of sample sizes in different strata, comparison of stratified sampling under proportional and Neyman allocation with SRSWOR in terms of precision.

Unit III **(12 Hours)**

Analysis of variance and Design of experiments

One-way and two-way classified data with one observation per cell only. Design of experiments: Principles of Design of experiments, uniformity trails, completely randomized, Randomized block and Latin square designs.

Unit IV **(10 Hours)**

Factorial Experiments and Designs

Factorial experiments: 2^2 and 2^3, Factorial Design: construction and analysis.

PRACTICAL/LAB WORK – (30 hours)
List of Practical:

1. Select a SRS with and without replacement.
2. For a population of size 5, estimate population means, the population mean square and population variance. Enumerate all possible samples of size 2 by WR and WOR and establish all properties relative to SRS.
3. For SRSWOR, estimate mean, standard error, the sample size.
4. Stratified Sampling: allocation of sample to strata by proportional and Neyman's methods Compare the efficiencies of the above two methods relative to SRS.
5. Estimation of gain in precision in stratified sampling.
6. Analysis of Variance of one-way classified data
7. Analysis Variance of two-way classified data
8. Analysis of CRD
9. Analysis of RBD.
10. Analysis of LSD.
11. Analysis of 2^2 and 2^3 factorial in CRD and RBD.

Practical work to be conducted using electronic spreadsheet / EXCEL/ Statistical Software Package/ SPSS/ calculators.

GENERIC ELECTIVE COURSE – 6B: Statistics in Actuaries

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Statistics in Actuaries	4	3	0	1	Class XII pass with Mathematics	Nil

Learning Objectives

The learning objectives include:

- To learn about Utility theory
- To learn the principles of premium calculations
- To understand the survival distribution and life tables
- To learn Life Insurance models and life annuities

Learning Outcomes:

After completing this course, students will develop a clear understanding of:

- Statistics and Insurance applications
- Utility theory
- Principles of premium calculations
- Survival distribution and life tables
- Life insurance models and Life annuities.

SYLLABUS OF GE-6B

Theory

UNIT I **(11 hours)**

Introductory Statistics and Insurance applications

Introductory Statistics and Insurance applications: discrete, continuous, and mixed probability distributions. Insurance applications, sum of random variables. Utility theory: Utility functions expected utility criterion, types of utility function, insurance and utility theory.

UNIT II **(12 Hours)**

Principles of premium calculation
Principles of premium calculation: Properties of premium principles, examples of premium principles

Unit III **(12 Hours)**
Survival distribution and life tables
Survival distribution and life tables: Uncertainty of age and death, survival function, time-until-death for a person, curate future lifetime, the force of mortality, life tables with examples

Unit IV **(10 Hours)**
Life Insurance and annuities
Life insurance: Models for insurance payable at the moment of death, insurance payable at the end of the year of death, and their relationships. Life annuities: continuous life annuities, discrete life annuities.

PRACTICAL/LAB WORK – (30 hours)
List of Practical:
1. Risk computation for different utility models
2. Discrete and continuous risk calculations
3. Calculation of aggregate claims for collective risks
4. Calculation of aggregate claim for individual risks
5. Computing ruin probabilities and aggregate losses
6. Annuity and present value of contract
7. Computing premium for different insurance schemes
8. Practical based on life models and tables

Practical work to be conducted using electronic spreadsheet / EXCEL/ Statistical Software Package/ SPSS/ calculators.

Essential Readings:

- Dixon C. M. D. (2005) Insurance Risk and Ruin (International Series on Actuarial Science), Cambridge University Press.
- Atkinson M.E. and Dickson, D.C.M. (2011): An Introduction to Actuarial Studies, Elgar Publishing.

Suggested Readings:

- Bowers N.L., Gerber H.U., Hickman J.C., Jones D.A., and Nesbitt C.J. (1997): Actuarial Mathematics, Society of Actuaries, Itasca, Illinois USA.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch University of Delhi, from time to time.

SEMESTER-IV

(B.Sc. Honours in Operational Research)

DISCIPLINE SPECIFIC CORE COURSE – 10: SCHEDULING TECHNIQUES

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Scheduling Techniques (DSC-10)	4	3	0	1	Class XII with Maths	Nil

Learning Objectives

The objective of this course is to acquaint students with various scheduling problems and their real-life applications.

Learning outcomes

After completion of the course, students will possess knowledge and skills required to

- Gain an understanding of network analysis and related mathematical models.
- Use standard methodologies for solving network flow problems.
- Manage projects with deterministic and probabilistic activity times.
- Carry out time-cost trade-off analysis in a project.
- Understand the utility of some sequencing problems.

SYLLABUS OF DSC-10

Unit I: Introduction to Network Analysis **(12 hours)**

Meaning and application of a network diagram, Construction of a network diagram, time estimates in network analysis, float and slack analysis, critical path analysis, Critical path method (CPM) for project management.

Unit II: Project Scheduling **(12 hours)**

Program Evaluation and Review Technique (PERT) for project management, three time estimates in PERT, Expected completion time and standard deviation of completion time in PERT, probability of project completion within scheduled time.

Unit III: Project Crashing **(12 hours)**

Project time crashing (time-cost trade off analysis): meaning and significance for project management, direct and indirect costs, finding optimal completion time of project by doing time-cost trade off analysis.

Unit IV: Theory of sequencing **(9 hours)**

Basic concepts: sequencing of jobs through machines; total elapsed time; idle time on a machine; Gantt chart, Flow shop problem, Johnsons' optimality rule, parallel processing.

Practical component (if any) [30 Hours] -

Practical/Lab to be performed on a computer using OR/Statistical packages

- Construct the network of a project with deterministic activity times.
- Finding different types of floats involved in a project network.
- Conduct time-cost trade off analysis in the context of a project network.
- Construct the network of a project with probabilistic activity times.
- Finding expected completion time and variance of completion time in PERT.
- Finding probability of completing the project within scheduled time in PERT.
- Flow shop problem: processing of n Jobs through 2 machines.
- Flow shop problem: processing of n Jobs through 3 machines.
- Flow shop problem: parallel processing.

Essential/recommended readings

- Elmaghraby, S. E. (1977). Activity networks: project planning and control by network models. John Wiley & Sons.
- Ford Jr, L. R., & Fulkerson, D. R. (2015). Flows in networks. Princeton University Press.
- Levy, F. K., & Wiest, J. D. (2016). Management guide to PERT/CPM; with GERT/PDM/DCPM and other networks. Prentice-Hall of India.
- Swarup, K., & Gupta, P. K., & Mohan, M. (2019). Operations Research (Introduction to Management Science). Sultan Chand and Sons.

Suggestive readings Nil

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE – 11: STATISTICAL INFERENCE

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Statistical Inference (DSC-11)	4	3	0	1	class XII with Maths	Nil

Learning Objectives

The Learning Objectives of this course are as follows:

- To acquaint the students with how to infer about the population using a sample drawn from it
- To explain how different parametric tests can be used in real life.

Learning outcomes

Upon successful completion of this course the student will be able to:

- Analyze the population or phenomenon from which the sample is drawn.
- Examine inferential methods wherein the distributional form of population or phenomenon from which the sample is drawn is known (parametric) .
- Conduct parametric tests of hypotheses

SYLLABUS OF DSC-11

Unit I: Introduction (12 Hours)
Concept of Inductive inference, Population and samples, Distribution of sample, statistic and sample moments, Sampling from Normal Distributions: Chi-Square, t and F-distributions, basic concepts of order statistics.

Unit II: Parametric Point Estimation (12 Hours)
Properties of point estimators- unbiasedness, consistency, sufficiency, efficiency, method of maximum likelihood for finding estimators, properties of maximum likelihood estimators, method of moments for finding estimators.

Unit III: Tests of Hypotheses (12 Hours)
Simple and Composite Hypotheses; Likelihood Ratio Tests; Construction of Confidence Intervals.

Unit IV: Parametric and Nonparametric Tests (9 Hours)
Normal tests for proportion and mean based on single sample ; Chi-Square test for variability; t-test for single mean; t-test for difference of means; paired t-test; F test for equality of variances, Chi-Square test for goodness of fit, sign test, Wilcoxon Signed Rank Test, Median Test.

Practical component (if any) [30 Hours] –

- Practicals based on applications of t-tests
- Practicals based on applications of F-tests
- Practicals based on applications of chi-square tests
- Practicals based on sign test, Wilcoxon Signed Rank Test,
- Practicals based on Median Test.

Essential/recommended readings

- Dudewicz, E. J., & Misra S. N. (1988). Modern mathematical statistics, Wiley.
- Fruend, J. E. (2013). Mathematical statistics with applications (8th ed.). Pearson Education India.
- Levin, R. I., Masood, H. S., Rubin, S. D., & Rastogi, S. (2017). Statistics for management (8th ed.). Pearson Education.
- Mood, A. M., Grabill, F. A., & Boes, D. C. (1974). Introduction to the theory of statistics (3rd ed.). McGraw Hill.

Suggestive readings:

- Goon, A. M., Gupta, A. K., & Dasgupta, B. (1989). An outline of statistical theory (volume 1) (2nd ed.). World Press Pvt. Ltd.
- Rohatgi, V. K., & Ehsanes Saleh, A. K. Md. (2000). An introduction to probability and statistics (2nd ed.). Wiley.

DISCIPLINE SPECIFIC CORE COURSE – 12: DATABASE MANAGEMENT SYSTEM

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Database Management System (DSC-12)	4	3	0	1	class XII with Maths	Nil

Learning Objectives

The Learning Objectives of this course are as follows:

- To make students understand the basics of database management systems.
- To acquaint them with fundamental concepts, functions and applications of the discipline, so as to deal with different types of problems faced by database managers.

Learning Outcomes

Students completing this course will be able to:

- Gain an understanding of basic concepts of database management and differentiate between DBMS and RDBMS.
- Know the importance of ER Diagrams and their relative conversions.
- Recognize the significance of Functional Dependencies and related concepts for businesses and organizations.
- Understand the utility of structured query language (SQL) for managing databases.

SYLLABUS OF DSC-12

Unit I: Fundamentals of DBMS **(9 Hours)**

Introduction to Database Management System, Purpose and characteristics of Database approach, Data Models, Database Languages, Database Users, Database Management System Architecture, Data Independence.

Unit II: Understanding Entity Relationship (ER) Modeling **(6 Hours)**

Entity Relationship (ER) Modeling: Entity, Attribute, Relationship, Entity Relationship (ER) diagram, designing a database using ER-diagrams.

Unit III: Normalization Concepts **(15 Hours)**

Relational Model concepts, Relational Algebra, Functional Dependencies, Normalization: 1NF, 2NF and 3NF.

Unit IV: Structured Query Language (SQL) **(15 Hours)**
Introduction, purpose and application. Queries in SQL. Transaction Processing: ACID properties, concurrency control.

Practical component (if any) [30 Hours]-

Practical/Lab to be performed on a computer using MS SQL Server/MySQL package

- Using DDL commands of create table, alter table, drop table.
- Utilization of DML commands of select, insert, update, delete.
- Understanding of condition specification using Boolean and comparison operators (AND,
- OR, =, >, < etc.) .
- Utility of arithmetic operators and aggregate functions (COUNT, SUM, AVG etc.).
- Application of Join condition on different tables and same table.
- Using nested select statements for database management.
- Dealing with Null values.
- Sorting of data in ascending or descending order using ORDERBY clause.
- Grouping of similar data using GROUPBY clause and application of HAVING condition.

Essential/recommended readings

- Date, C. J. (2003). Addison-Wesley, Introduction to Database Systems 8TH Edition, Pearson Education.
- Elmasri, R., & Navathe, S. B. (2017). Fundamentals of Database Systems 7 th Edition. Pearson Education

- Ramakrishnan, R., Gehrke, J., & Gehrke, J. (2003). Database management systems (Vol. 3). New York: McGraw-Hill.

Suggestive readings Nil

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Category II

Operational Research Courses for Undergraduate Programme of study with Operational Research as one of the Core Disciplines

(B.A. Programme with Operational Research as Major discipline)

DISCIPLINE SPECIFIC CORE COURSE – 7: Optimization Techniques

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Optimization Techniques (DSC-7)	4	3	1	0	Class XII with Maths	Nil

Learning Objectives:
To impart knowledge about the formulations and solution techniques of integer linear and multi-objective goal programming problems.

Learning Outcomes:
Students completing this course will be able to:

- Identify different types of optimization problems and their characteristics in real life.
- Explain the theoretical concepts related to unconstrained optimization problems and demonstrate optimality conditions and solution approaches for them.
- Develop the concepts of a multi-objective programming problem and demonstrate its solution using goal programming.
- Formulate real-life problems as integer linear programming problems and solve them using Branch and Bound method.

SYLLABUS OF DSC-7

Unit I: Unconstrained Optimization **(10 Hours)**

Single and multiple variable problems, First and Second order necessary and sufficient conditions for finding extrema, Solution methods: Newton, Gradient search.

Unit II: Convex Functions **(10 Hours)**

Local and global maxima/minima for functions of one and two variables, inflection point, positive/negative definite and semi-definite matrices, convex/concave functions, and their properties, Verifying convexity/concavity through a Hessian matrix.

Unit III: Goal Programming **(12 Hours)**

Goal Programming: Basics of goal programming, Weighted and pre-emptive goal programming, Formulation of a goal programming problem, Graphical solution method, Modified Simplex method.

Unit IV: Integer Linear Programming **(13 Hours)**

Introduction to Integer linear programming problem (ILPP), Pure ILPP, Mixed ILPP, and 0-1 ILPP, Formulation of real life ILPPs, Branch and bound solution method.

Practical component (if any) – NIL
Tutorial : [30 hours]

Essential/recommended readings

- Chandra, S., Jayadeva, & Mehra, A. (2013). *Numerical optimization with applications.* New Delhi: Narosa Publishing House.
- Ravindran, A., Phillips, D. T., & Solberg, J. J. (2007). *Operations research- principles and practice* (2nd ed.). New Delhi: Wiley India (Indian print).

DISCIPLINE SPECIFIC ELECTIVE (DSE-2 (a)): Introduction to Stochastic Processes

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Introduction to Stochastic Processes (DSE-2(a))	4	3	1	0	Class XII with Maths	Nil

Learning Objectives

The Learning Objectives of this course are as follows:

- To acquaint students with the basic concepts of stochastic processes and its mathematical framework.
- To introduce some standard stochastic processes and their properties.
- To provide students necessary mathematical support and confidence to analyze the probabilistic evolution of randomly evolving systems.

Learning outcomes

Students completing this course will be able to:

- Elucidate the power of stochastic processes and their range of applications.
- State the defining properties of various stochastic process models.
- Demonstrate essential stochastic modeling tools.
- Identify appropriate stochastic process model(s) for a given research or applied problem.
- Formulate and solve problems which involve setting up stochastic models.

SYLLABUS OF DSE-2(a)

Unit I: Introduction to Stochastic processes (6 hours)

Definition, specification of stochastic processes, stationary processes, martingales.

Unit II: Markov chains (12 hours)
Introduction, Classification of states, Limiting behaviour, Applications to Queueing Theory.

Unit III: Markov Processes (12 hours)
Introduction, Structure of Markov Processes, Limit Theorems, Birth and Death Processes.

Unit IV: Counting Processes (15 hours)
Introduction, Types of counting processes, Poisson process: definition and examples, Markov property of Poisson process, superposition of Poisson processes, thinning of Poisson processes, basics of ordinary renewal processes and non-homogenous Poisson processes, Applications in Reliability and Maintenance Theory.

Practical component (if any) – NIL
Tutorial: [30 Hours]

Essential/recommended readings :

- Kulkarni, V. G. (2011), *Modeling and Analysis of Stochastic Systems*, (2nd edition), CRC Press.
- Ross, Sheldon, M. (1995). *Stochastic Processes* (2nd edition), John Wiley.
- Pinsky, Mark A. and Karlin, Samuel. (2011), *An Introduction to Stochastic Modeling*, Elsevier.

- Trivedi, K. S. (2016), *Probability & Statistics with Reliability, Queuing & Computer Science Applications* (2nd edition), New Jersey, John Wiley & Sons, Inc.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVE (DSE-2 (b)): Multivariate Data Analysis

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Multivariate Data Analysis & DSE 2(b)	4	3	0	**1**	Class XII with Mathematics	Knowledge of elementary descriptive and inferential Statistics

Learning Objectives

The primary objective of this course is to introduce:

- Understanding the principles and concepts of multivariate data analysis.
- Developing skills in using statistical software to analyze and interpret multivariate data.
- Familiarizing with different types of multivariate techniques.

Learning outcomes

Students completing this course will be able to:

- To examine the difference between univariate and multivariate data analysis.
- To analyse data using quantitative and qualitative response regression modelsregression models.
- To conduct factor analysis.

SYLLABUS OF DSE-2(b)

Unit I: Exploring Multivariate Data **(6 Hours)**

The aims of multivariate analysis, basics of matrix and vector algebra, positive definite matrices, random vectors, and matrices, mean vectors and covariance matrices, Types of Data; Organization of data- Arrays, Descriptive Statistics, Graphical Techniques- The scatterplot, The scatterplot matrix, multiple box plots, concept of distance in multivariate techniques, checking distributional assumptions using probability plots.

Unit II: Regression and the Analysis of variance **(15 Hours)**

Multiple Regression Models: Assumptions, Estimation, Testing of Hypotheses, ANOVA models, MANOVA(one-way classification)

Unit III: Qualitative Response Regression Models: **(12 Hours)**

Introduction, Binary Logistic Regression, Estimation, Goodness of fit, ROC curves, basics of multinomial logistic regression, use of logistic regression for classification, 2 x 2 contingency and three - way table.

Unit IV: Factor analysis **(12 Hours)**

Introduction, Exploratory factor analysis, reliability of factor scales: internal consistency of scales, Confirmatory factor analysis, Structural equation modelling.

Practical Component (if any) [30 Hours]:

- Practical based on multiple regression
- Practical based on ANOVA & MANOVA – one way classification
- Practical based on ANOVA – two way classification
- Practical based on Logistic Regression
- Practical based on Factor Analysis

Essential/recommended readings:

- Cleff, T. (2019). Applied Statistics and Multivariate Data Analysis for Business and Economics- A Modern Approach Using SPSS, Stata, and Excel, Springer Nature, Switzerland.

- Hardle, W. K. and Simar, L. (2015). Applied Multivariate Statistical Analysis, 4th Edn., Springer.

Suggestive Readings:Nil

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVE (DSE-2 (c)): INTRODUCTION TO SOCIAL MEDIA ANALYTICS

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
INTRODUCTION TO SOCIAL MEDIA ANALYTICS (DSE-2(c))	4	3	0	1	Class XII with Maths	Nil

Learning Objectives

The Learning Objectives of this course are as follows:

- To make students understand the basic types of social media platform.
- To equip students with skills to collect, analyse and derive actionable insights from social media websites.
- To impart knowledge of methods of social media marketing and related analytical central concepts.

Learning Outcomes

Students completing this course will be able to:

- Understand the role of social media data and analytics in helping organizations achieve their goals.
- Identify and select key performance indicators to accurately measure the success of social media efforts.
- Analyze social media data using native analytics (e.g. YouTube, Facebook, Twitter, Instagram) and social media measurement tools.
- Draw meaningful insights and provide actionable and strategic recommendations based on social media data analysis.

SYLLABUS OF DSE 2(C)

Unit I: Introduction **(9 Hours)**

Difference between social network data, Nodes, Relations, Scales of measurement, statistics and social network data., Introduction to formal methods, efficiency, using computers, seeing patterns.

Unit II: Graphs and Sociograms (12 Hours)

Introduction to graphs, sociograms, kinds of graphs. Working with NetDraw to visualize graphs: Introduction, node attributes, relation properties, location, highlighting parts of the network.

Knowledge of Network models, degree of separation, Tools for Social Network Visualization

Unit III: Ego Networks and Centrality (12 Hours)

Fundamentals of Ego network, Introduction to Degree centrality, closeness centrality, between-ness centrality, Concept of Link Analysis.

Unit IV: Concept of Virality, broadcasting and Information Diffusion (12 Hours)

Quantification of virality of information in online Social Networks, Modeling of View Count Dynamics, life cycle of a video and viewers cataloguing, Information Diffusion: Probabilistic Models of Information Flow, Cascading Behavior: Decision Based Models of Cascades and epidemic modeling to understand the spread of information.

Practical component (if any) [30 Hours]–

- Analyze the degree distribution of any social network
- Analyze various centrality measures of any Social Network using UCINET tool
- Examine the clustering coefficient of any network
- Analyze the diameter, path length
- Analyze the ego networks and evaluate them
- Apply centrality metrics (Degree, between-ness, closeness) and related algorithms to determine the topological significance of the nodes in a network.
- Extract clusters of related nodes using efficient community detection algorithms and evaluate the effectiveness of the partitioning.

Essential/recommended readings

Suggestive readings: Nil

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

CATEGORY-VI

COMMON POOL OF GENERIC ELECTIVES (GE) COURSES OFFERED BY THE DEPARTMENT

GENERIC ELECTIVES (GE-4): CONVEX AND DISCRETE OPTIMIZATION

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Convex and Discrete Optimization (GE-4)	4	3	1	0	Class XII with Maths	Nil

Learning Objectives:
To impart knowledge about the formulations and solution techniques of integer linear and multi-objective goal programming problems.

Learning Outcomes:
Students completing this course will be able to:

- Identify different types of optimization problems which occur in real life and their characteristics.
- Explain the theoretical concepts related to unconstrained optimization problems and demonstrate optimality conditions and solution approaches for them.
- Develop the concepts of a multi-objective programming problem and demonstrate its solution using goal programming.
- Formulate real-life problems as integer linear programming problems and solve them using Branch and Bound method.

SYLLABUS OF GE 4

Unit I: Unconstrained Optimization **(10 Hours)**

Single and multiple variable problems, Necessary and sufficient conditions for finding extrema, Solution methods: Bisection, Newton, Golden section, Gradient search.

Unit II: **Convex Functions** **(10 Hours)**

Local and global maxima/minima for functions of one and two variables, inflection point, positive/negative definite and semi-definite matrices, convex/concave functions, and their properties, Verifying convexity/concavity through a Hessian matrix.

Unit III: Goal Programming (10 Hours)

Goal Programming: Basics of goal programming, Weighted and pre-emptive goal programming, Formulation of a goal programming problem, Graphical solution method, Modified Simplex method.

Unit IV: Integer Linear Programming (15 Hours)

Introduction to Integer linear programming problem (ILPP), Pure ILPP, Mixed ILPP, and 0-1 ILPP, Applications of ILPP: Capital budgeting, problem Fixed charge problem, Travelling salesman problem, Media allocation, Knapsack problem, Gomory's cutting plane method, Branch and bound method.

Essential/recommended readings :

- Chandra, S., Jayadeva, & Mehra, A. (2013). *Numerical optimization with applications.* New Delhi: Narosa Publishing House.
- Ravindran, A., Phillips, D. T., & Solberg, J. J. (2007). *Operations research- principles and practice* (2nd ed.). New Delhi: Wiley India (Indian print).
- Sinha, S. M. (2006). *Mathematical programming- theory and methods* (1st ed.). New Delhi: Elsevier Science (Indian print).

Practical component (if any) – NIL
Tutorial: [30 Hours]

Essential Readings:

- Bazaraa, M. S., Sherali, H. D., & Shetty, C. M. (2006). *Nonlinear programming-Theory and algorithms (3rd ed.).* New Delhi: John Wiley & Sons (Indian print).
- Chandra, S., Jayadeva, & Mehra, A. (2009). *Numerical optimization with applications*. New Delhi: Narosa Publishing House.

Suggested Readings:

- Antoniou, A., & Lu, Wu-Sheng (2007). *Practical optimization- Algorithms and engineering applications*. New York: Springer.
- Hillier, F. S., & Lieberman, G. J. (2010). *Introduction to operations research- Concepts and cases (9th ed.).* New Delhi: Tata McGraw Hill (Indian print).

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

SEMESTER-V

Category I

(B.Sc. Honours in Operational Research)

DISCIPLINE SPECIFIC CORE COURSE – 13: NONLINEAR AND DYNAMIC PROGRAMMING (THEORY AND PRACTICAL)

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Nonlinear and Dynamic Programming (DSC-13)	4	3	1	0	Class XII with Maths	Nil

Learning Objectives:

- To impart knowledge about the formulations and solution techniques of nonlinear and dynamic programming.

Learning Outcomes:

Students completing this course will be able to:

- Identify different optimization problems and their characteristics in real-life to be formulated as nonlinear programming problems.
- Explain the theoretical concepts of nonlinear programming problems and demonstrate solution approaches.
- Understand the basics of Quadratic programming problems and describe their various applications. Then, demonstrate solution methods for these problems.
- Formulate and solve nonlinear programming problems in which the objective function and constraints are separable functions using concepts of separable programming.
- Solve different types of real-life problems using Dynamic programming.

SYLLABUS OF DSC-13

Unit I: **Nonlinear Programming (NLP)** **(15 Hours)**

Basics of NLP, Method of Lagrange multiplier, Fritz John optimality conditions, Karush-Kuhn-Tucker (KKT) optimality conditions, Verification of sufficient optimality conditions.

Unit II: Special Nonlinear Programming Problems **(15 Hours)**

Basics of Quadratic programming problem (QPP), Applications of QPP, Wolfe's method, Beale's method, Duality**,** Separable programming problem and its solution using piece-wise linear approximation.

Unit III: **Dynamic programming** **(15 Hours)**

Multistage decision processes, Recursive nature of computations, Forward and backward recursion, Bellman's principle of optimality, Selective dynamic programming applications and their solutions involving additive and multiplicative separable returns for objective as well as constraint functions, Problem of dimensionality.

Practical component (if any) – NIL
Tutorial: [30 Hours]

Essential/recommended readings

- Chandra, S., Jayadeva, & Mehra, A. (2013). *Numerical optimization with applications.* New Delhi: Narosa Publishing House.
- Ravindran, A., Phillips, D. T., & Solberg, J. J. (2007). *Operations research- principles and practice* (2nd ed.). New Delhi: Wiley India (Indian print).
- Sinha, S. M. (2006). *Mathematical programming- theory and methods* (1st ed.). New Delhi: Elsevier Science (Indian print).
- Wayne, Winston, L. (2003). *Operations research: applications and algorithms,* (4th ed.). Duxbury Press.

Suggestive readings: Nil

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE – 14: Reliability Theory

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Reliability Theory (DSC-14)	4	3	0	1	Class XII with Maths	Nil

Learning Objectives

The Learning Objectives of this course are as follows:

- To introduce students about the key concepts and methods in reliability engineering.

- To explain reliability modelling of systems with different configurations
- To explain concept of repair and its impact on the performance of the system along with formulation of maintenance and replacement policies

Learning outcomes

Upon successful completion of this course the student will be able to:

- To develop reliability models for non-repairable systems with different configurations
- Develop models for repairable systems using renewal process , Non Homogenous Poisson Process and State- space method
- Formulate system maintenance strategies.

SYLLABUS OF DSC-14

Unit I: Introduction (12 Hours)
Basics of reliability, Classes of life distributions based on notion of aging, concepts of structure function, coherent systems, cut sets, path sets, reliability of series, parallel, k-out-of-n, series-parallel, parallel-series, bridge structure, standby systems

Unit II: Repairable Systems (15 Hours)
Types of Repair, Availability theory, types of Availability measures, Perfect Repair Models: Introduction to Renewal theory, Types of Renewal Processes and their Asymptotic Properties, Reward Renewal Processes, Minimal Repair Models: Introduction to Non Homogenous Poisson Process, Power Law Process

Unit III: State Space Models for System Performance Analysis (10 Hours)
Markovian approach for reliability/ availability analysis of repairable series and parallel systems.

Unit IV: Maintenance Policies (8 Hours)
Types of Maintenance: Corrective Maintenance; Preventive Maintenance, Age Replacement Policy: cost type criterion, Block Replacement Policy: Cost-type criterion

Practical component (if any) [30 Hours]–

- Practicals based on computation of reliability of systems with various configurations
- Practicals based on finding reliability and availability measures of repairable series and parallel systems
- Practicals based on formulation of age and block replacement policies

Essential/recommended readings

- Barlow, R. E., & Proschan, F. (1975). Statistical theory of reliability and life testing. Holt, Rinehert & Winston Inc.
- Gertsbakh, I. (2013). Reliability theory with applications to preventive maintenance. Springer.
- Nakagawa, T. (2005). Maintenance theory on reliability. London: Springer-Verlag.

- Rau, J. G. (1970). Optimization and probability in systems engineering. V.N. Reinhold Co.
- Rausand, M., & Hoyland, A. (2003). System reliability theory: models, statistical methods, and applications. John Wiley & Sons.

Suggestive readings: Nil

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE – 15: QUANTITATIVE FINANCE

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Quantitative Finance (DSC-15)	4	3	1	0	Class XII with Maths	Nil

Learning Objectives

The Learning Objectives of this course are as follows:

- To make students understand the basics of Quantitative finance.
- To familiarize them with the principles, practices, techniques and applications of quantitative finance, so as to enable them to deal with various business decisions in an efficient manner.

Learning Outcomes

Students completing this course will be able to:

- Relate financial knowledge to varied decisions in a business environment.
- Gain an understanding of financial assets.
- Utilize the concepts, techniques and methods of finance for quantitative analysis.
- Convey financial information and prepare financial management solutions.

SYLLABUS OF DSC-15

Unit I: Introduction to finance functions (6 hours)

Purpose and objectives of Quantitative finance, financial markets, Functions of finance: Investment, Financing and Dividend decisions, roles and responsibilities of a finance manager.

Unit II: Time value of money **(9 hours)**

Time value of money: Present value and Future value; Ordinary Annuity, Annuity Due and Perpetuity, Valuation of securities: Bonds and their valuation, Bond Yields, Common and preferred stock and their valuation.

Unit III: Risk-Return trade-off **(9 hours)**

Introduction to Risk and Return: Concept and significance, application of standard deviation and coefficient of variation, systematic and unsystematic risks, risk and return in a portfolio context, Capital Asset Pricing Model (CAPM), alternatives to CAPM.

Unit IV: Financial statement analysis **(12 hours)**

Financial statements: Balance sheet, Income statement, Cash flows statement. Analysis of financial statements: Ratio analysis, Du Pont equations.

Unit V: Capital Budgeting and Working Capital Management **(9 hours)**

The long term investment decision: Capital budgeting, Estimation of cash flows. Capital budgeting methods: Discounted and non-discounted cash flow based techniques. Interpretation and significance of working capital, permanent and temporary working capital, determinants of working capital, Goal Programming model of working capital management, Cash management: motives and objectives; Baumol's model of cash management.

Practical component (if any) – Nil

Tutorial: [30 Hours]

Essential/recommended readings

- Gitman, L. J., Juchau, R., & Flanagan, J. (2015). *Principles of managerial finance*. Pearson Higher Education AU.
- Koller, T., Dobbs, R., & Huyett, B. (2010). *Value: The four cornerstones of corporate finance*. John Wiley & Sons.
- Levy, H., & Sarnat, M. (1988). *Principles of financial management*. Prentice Hall.
- Ross, S. A., Westerfield, R., & Jaffe, J. F. (1999). *Corporate finance*. Irwin/McGraw-Hill.
- Van Horne, J. C., & Wachowicz, J. M. (2008). *Fundamentals of financial management* (13th ed.). Harlow: Prentice Hall Inc.

Suggestive readings

- Blyth, S. (2013). *An introduction to quantitative finance*. Oxford University Press.
- Wilmott, P. (2013). *Paul Wilmott on quantitative finance*. John Wiley & Sons.

Suggestive readings: Nil

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Category II

Operational Research Courses for Undergraduate Programme of study with Operational Research as one of the Core Disciplines

(B.A. Programme with Operational Research as Major discipline)

DISCIPLINE SPECIFIC CORE COURSE – 9: Quantitative Finance and Marketing

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Quantitative Finance and Marketing (DSC-9)	4	3	1	0	Class XII with Maths	Nil

Learning Objectives

The Learning Objectives of this course are as follows:

- To make students understand the basics of Financial Management.
- To impart knowledge of central concepts and methods of marketing and related optimization problems.
- To familiarize them with the principles, practices, techniques and applications of financial management, so as to enable them to deal with various business decisions in an efficient manner.

Learning Outcomes

Students completing this course will be able to:

- Relate financial knowledge to varied decisions in a business environment.
- Gain an understanding of financial assets.
- Utilize the concepts, techniques and methods of finance for quantitative analysis.
- Convey financial information and prepare financial and other management solutions.

SYLLABUS OF DSC- 9

Unit I: Introductory concepts in Quantitative finance (9 Hours)

Meaning, significance and scope of finance, profit maximization versus wealth maximization, Interpretation of finance function: Investment, financing and dividend decisions, Time value of money: Present Value and Future Value, Valuation of bonds, Risk and return: Capital Asset Pricing Model, Financial statements: Balance sheet, Income statement and Cash flows statement.

Unit II: Capital Budgeting and Working Capital Management (12 Hours)

The long term investment decision: Capital budgeting, Estimation of cash flows. Capital budgeting methods: Discounted and non-discounted cash flow based techniques. Interpretation and significance of working capital, permanent and temporary working capital, determinants of working capital, Goal Programming model of working capital management, Cash management: motives and objectives; Baumol's model of cash management.

Unit III: Market Analysis (12 Hours)

Concept of Marketing, Marketing Orientation and related concepts, Decision Making: A Quantitative Approach: Business Decisions, Abstraction, Model Building, Solutions, Errors, Model-Building Techniques, Marketing Mix-The Traditional 4 Ps, Marketing Mix- The Modern Concept, Diffusion Modeling, Buyers and Adopters, Mathematical Models for Consumer Buying Behaviour.

Unit IV: New Product Development and Management (12 Hours)

Product Life Cycle (PLC), Product line, Product mix strategies, New product development, , Brand switching analysis, Types of Competition: Perfect and Imperfect., Promotional Efforts and related Models

Practical component (if any) - Nil

Tutorial : [30 Hours]

Essential/recommended readings

- Curtis, A. (2008). Marketing for engineers, scientists and technologists. John Wiley & Sons.

DISCIPLINE SPECIFIC CORE COURSE – 10: Stochastic Modelling and Applications

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Stochastic Modelling and Applications (DSC-10)	4	3	0	1	Class XII with Maths	Nil

Learning Objectives

The Learning Objectives of this course are as follows:

- To make the students familiar with the concept of stochastic modeling and its applications in the field of queueing theory, reliability theory and inventory management.
- To provide students a rigorous mathematical framework to develop mathematical models for different queueing systems.
- To introduce students with the concept of system reliability and make them learn to evaluate reliability of various system configurations.
- To make students learn how to model uncertainties in demand in inventory management problems.
- To provide students hands-on experience of analyzing queueing, reliability and inventory models through practical sessions using certain software.

Learning Outcomes

Students completing this course will be able to:

- Learn the concepts of stochastic processes, Markov processes, Markov chains and apply these mathematical models in real-life problems.
- Understand the concepts and mathematical theory related to queuing systems & system reliability required to understand, analyse and solve any real-world problem.
- Evaluate the performance metrics of any queuing system.
- Compute the system reliability of any type of system-configuration.
- Understand and develop stochastic inventory models.
- Make use of software for problem analysis.

Syllabus of DSC-10

Unit I: Introduction **(9 Hours)**

Basics of random variables, Probability distributions and their moments, Some standard probability distributions: Binomial, Poisson, Normal, Exponential, Random (stochastic) processes, Lack of memory property of exponential distribution, Markov process, Pure-birth process, Pure-death process.

Unit II: Introduction to Queueing Systems **(12 Hours)**

Characteristics of a queueing system, Kendall's notation, Performance measures of a queueing system, Markovian queueing models with single & multiple servers, and finite & infinite system capacity – M/M/1, M/M/c.

Unit III: System Reliability **(12 Hours)**

Introduction to reliability, Reliability function and related concepts like hazard rate, mean time to failure (MTTF), and mean time before failure (MTBF), Classes of lifetime distributions, Hazard rate of exponential and Weibull distributions, Reliability of various system configurations- series, parallel, mixed configuration, k out of n system and stand-by systems.

Unit IV: Stochastic inventory models **(12 Hours)**

Introduction to stochastic inventory models, Single period probabilistic inventory models with discrete and continuous demand.

Practical component (if any) [30 Hours]:

Practical/Lab to be performed using OR/Statistical packages

- Finding measures of performance for deterministic queuing system.
- Finding measures of performance for M/M/1 queuing system with infinite capacity.
- Finding measures of performance for M/M/1 queuing system with finite capacity.
- Finding measures of performance for M/M/c queuing system with infinite capacity.
- Measuring reliability of different types of system configuration.
- Measuring reliability, hazard rate and MTSF of different types of system configuration.
- Finding optimal inventory policy for probabilistic inventory model with discrete demand.

- Finding optimal inventory policy for probabilistic inventory model with continuous demand.

Essential/recommended readings

- Gross, D., Shortle, J. F, Thompson J. M., & Harris, C. M. (2008), *Fundamentals of Queuing Theory* (4th edition), New Jersey, John Wiley & Sons, inc.
- Rausand, M. & Hoyland, A. (2003), *System Reliability Theory: Models, Statistical Methods & Applications* (2nd edition), New Jersey, John Wiley & Sons, Inc.

DISCIPLINE SPECIFIC ELECTIVE (DSE-3 (a)): Software Engineering

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Software Engineering (DSE-3(a))	4	3	0	1	Class XII Pass with Mathematics as one of the papers in Class XII	Nil

Learning Objectives

The Learning Objectives of this course are as follows:

- To introduce the basic concepts of Software Engineering and related terminologies
- The students will be made familiar with the concepts of software development process, various life cycles and reliability assessment.
- To introduce various approaches for software project planning, Risk assessment & mitigation

Learning outcomes

Upon successful completion of this course the student will be able to:

- Understand software development life cycle, its various stages, and different approaches for software development projects.
- Know about Software Project management activities including planning, scheduling, risk management, etc.
- Comprehend various software testing approaches.
- Understand about the mathematical models for software reliability assessment and prediction
- Gain knowledge about tools and techniques of large-scale software systems development.

SYLLABUS OF DSE-3(a)

Unit I: Introduction (12 Hours)
Software Scope, Software Development Challenges, Software Engineering Discipline, Software Methodologies and Software development life-cycle Models, Introduction to Agile Software Engineering.

Unit II: Software Requirement Management, System Design and Testing (12 Hours)
Requirement Analysis and Modeling, Techniques, SRS: Needs, Characteristics and its Components, Design Principles, design specification, Cohesiveness and Coupling, Software Testing Fundamentals, , Software testing strategies, Validation Testing, System Testing, Black-Box Testing, White-Box Testing and their types.

Unit III: Software Project Management (9 Hours)
Estimation in Project Planning Process, Project Scheduling, Software Risks, Risk Identification, Risk Projection and Risk Refinement, Risk mitigation, monitoring & management-The RMMM Plan

Unit IV: Understanding Software Reliability (12 Hours)
Introduction to Software Reliability, Difference between Hardware and Software Reliability, Non-homogeneous Poisson Process based modeling, Software Quality Assurance, Quality Standards ISO 9000, Capability Maturity Model (CMM)

Practical component (if any) [30 Hours]:

Practical/Lab to be performed using OR/Statistical packages

- Problems related to Process Model
- Problems related to Requirement Analysis
- Problems related to Design Engineering
- Problems related to Project Management
- Problems related to Project Effort Estimation
- Problems related to Project Risk Management
- Problems related to Software Testing
- Problems related to Software Quality Assurance
- Software Reliability Prediction using mathematical models

DISCIPLINE SPECIFIC ELECTIVE (DSE-3 (b)): Managerial Economics

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Managerial Economics & DSE 3(b)	4	3	1	0	Class XII with Maths	NIL

Learning Objectives

The Learning Objectives of this course are as follows:

- To make students understand the concepts and techniques used in Micro-economic theory necessary for evaluating business decisions.
- To explain the importance and application of tools of micro economic theory in managerial decision-making.

Learning Outcomes

Students completing this course will be able to:

- Understand the application of economics principles most relevant to managers.
- Develop an understanding of basic concepts and issues in Managerial Economics and their applications in managerial decisions.
- Identify different economic factors and their importance in managerial decision making.
- Understand, evaluate and forecast demand and production functions in economics.
- Design competitive strategies according to the market structure.

SYLLABUS OF DSE-3 (b)

Unit I: Fundamentals of Managerial Economics (6 hours)
Introduction, scope and significance of managerial economics, circular flow in an economy, roles and responsibilities of managerial economist, theory and objectives of the firm, Managerial economics: Microeconomics and Macroeconomics.

Unit II: Demand and Supply analysis (15 hours)
Demand theory and determinants of demand, Law of demand, theory of consumer behavior, Price elasticity of demand, factors affecting price elasticity of demand, Income elasticity of demand, Cross price elasticity of demand, Determinants of Supply, Law of supply, elasticity of supply, Concept, significance and methods of demand forecasting.

Unit III: Cost and Production analysis (15 hours)
Meaning and significance of production, factors of production and production function, Production functions in the short run and long run, Concept and significance of cost, determinants of cost, cost function, types of cost, Economies and diseconomies of scale.

Unit IV: Market structures and pricing (9 hours)
Perfect competition: features and pricing under perfect competition, Monopoly: features and pricing under monopoly, Monopolistic competition: features and pricing under monopolistic competition, Oligopoly: features and pricing under oligopoly.

Practical component (if any) : NIL
Practical/Lab to be performed using OR/Statistical packages
Tutorial : [30 Hours]

DISCIPLINE SPECIFIC ELECTIVE (DSE-3 (c)): HEALTH SYSTEMS MODELLING

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Health Systems Modelling (DSE-3(c))	4	3	1	0	Class XII with Maths	Nil

Learning Objectives

The Learning Objectives of this course are as follows:

- This course aims at providing a useful tool to bridge the ongoing trends of the health care system with the operational research techniques and methods by tackling problems through the integration of quantitative methods and operational research methodology.
- Use of common spreadsheet software, data modelling applications will prove to be the catalysts used for the management of health care system in a more practical environment.

.

Learning Outcomes

Students completing this course will be able to:

- Apply their analytical skills and acknowledge the techniques underlining the decisions about delivering the healthcare of supreme quality.
- Review and describe the key roles and responsibilities of health care managers.
- Understand, brainstorm, and implement the scope of health services and follow the footprints of the recent trend in healthcare.
- Create a connection between the people's expectations and what the health care industry has to offer in the clearest way.
- Work on reducing regularity, risks and implementing measures to improve people's health and safety.
- Promote ethics and social responsibility at all levels of health services and management.

SYLLABUS OF DSE-3 (c)

Unit I: Health Care Business Operations & Role of Quantitative Methods (6 Hours)

Health care operations management: role, functions and need, Factors driving increased health care cost, Financial distress in health care, Characteristics of health care services and its management, Implications of operations and logistics management, importance of quantitative methods in health care management.

Unit II: Decision Making in Health Care and Quality Improvement (12 Hours)
Decision making under uncertainty and risk, sensitivity analysis, clinical decision making and its implications for management, Quantitative analysis in strategic planning. Business process map and its improvement methodology, service improvement, six sigma.

Unit III: Facility Location and Layout (6 Hours)
Location methods: Factor rating and center of gravity methods, GIS in health care, product layout**.**

Unit IV: Process Flow Optimization and Resource Optimization (16 Hours)
Discrete Event Simulation Methodology, Queuing analytics, Capacity problems: outpatient clinic, ICU capacity, operating rooms, daily load levelling of elective procedures, scheduling and staffing problems. Forecasting Time series and Regression analysis: patients' volume forecasting. Resource allocation problems: patients service volume, clinical unit staffing, resident physician restricted work hours, patients discharged from ED.

Unit V: Material Management (5 Hours)
Customer service in material management, Laundry and Linen, Role of Inventory in healthcare, inventory planning and policies**.**

Practical component (if any): NIL
Tutorial:[30 Hours]
Essential/recommended readings

CATEGORY-VI

COMMON POOL OF GENERIC ELECTIVES (GE) COURSES OFFERED BY THE DEPARTMENT

GENERIC ELECTIVES (GE-5): SCHEDULING TECHNIQUES

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Scheduling Techniques (GE-5)	4	3	0	1	Class XII with Maths	Nil

Learning Objectives

- To acquaint students with various scheduling problems and their real-life applications.

Learning outcomes

After completion of the course, students will possess knowledge and skills required to

- Gain an understanding of network analysis and related mathematical models.
- Use standard methodologies for solving network flow problems.
- Manage projects with deterministic and probabilistic activity times.
- Carry out time-cost trade-off analysis in a project.
- Understand the utility of some sequencing problems.

SYLLABUS OF GE-5

Unit I: Introduction to Network Analysis **(12 hours)**

Meaning and application of a network diagram, Construction of a network diagram, time estimates in network analysis, float and slack analysis, critical path analysis, Critical path method (CPM) for project management.

Unit II: Project Scheduling **(12 hours)**

Program Evaluation and Review Technique (PERT) for project management, three time estimates in PERT, Expected completion time and standard deviation of completion time in PERT, probability of project completion within scheduled time.

Unit III: Project Crashing **(12 hours)**

Project time crashing (time-cost trade off analysis): meaning and significance for project management, direct and indirect costs, finding optimal completion time of project by doing time-cost trade off analysis.

Unit IV: Theory of sequencing **(9 hours)**

Basic concepts: sequencing of jobs through machines; total elapsed time; idle time on a machine; Gantt chart, Flow shop problem, Johnsons' optimality rule, parallel processing.

Practical component (if any) [30 Hours]–

Practical/Lab to be performed on a computer using OR/Statistical packages

- Construct the network of a project with deterministic activity times.
- Finding different types of floats involved in a project network.
- Conduct time-cost trade off analysis in the context of a project network.
- Construct the network of a project with probabilistic activity times.
- Finding expected completion time and variance of completion time in PERT.
- Finding probability of completing the project within scheduled time in PERT.
- Flow shop problem: processing of n Jobs through 2 machines.
- Flow shop problem: processing of n Jobs through 3 machines.
- Flow shop problem: parallel processing.

Essential/recommended readings

- Elmaghraby, S. E. (1977). Activity networks: project planning and control by network models. John Wiley & Sons.
- Ford Jr, L. R., & Fulkerson, D. R. (2015). Flows in networks. Princeton University Press.
- Levy, F. K., & Wiest, J. D. (2016). Management guide to PERT/CPM; with GERT/PDM/DCPM and other networks. Prentice-Hall of India.
- Swarup, K., & Gupta, P. K., & Mohan, M. (2019). Operations Research (Introduction to Management Science). Sultan Chand and Sons.

Suggestive readings: **Nil**

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Semester-VI

Category I

(B.Sc. Honours in Operational Research)

DISCIPLINE SPECIFIC CORE COURSE – 16: QUALITY MANAGEMENT

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Quality Management (DSC-16)	4	3	1	0	Class XII with Maths	Nil

Learning Objectives

The Learning Objectives of this course are as follows:

- To impart knowledge of concepts related to quality management.
- To impart knowledge of popularly used tools for quality control and management of a plan.
- To develop practical skills for continuous quality improvement.

Learning outcomes

Students completing this course will be able to:

- Demonstrate understanding of total quality management philosophies, concepts, organization, practices, framework, and quality standards.
- Demonstrate understanding of quality management and problem-solving tools and techniques for product and process design.
- Apply statistical analysis tools for measuring and controlling quality.
- Illustrate use of process improvement methods and tools for process analysis and improvement to achieve performance excellence.
- Describe the concept and role of six sigma along with theoretical workings of the implementation of six sigma.

SYLLABUS OF DSC 16

Unit I: Introduction to Quality Management (8 Hours)
Concept of quality management, History, evolution, and importance of quality in organizations, Concepts of product and service quality, Principles, practices and techniques of quality management, Philosophies and frameworks of quality given by various Quality Gurus.

Unit II: Tools and Techniques for Quality Improvement (12 Hours)
Designing quality goods and services, Designing quality processes, Process control and improvement, Cost of quality, Tools: check sheet, flow charts, histograms, pareto analysis, Ishikawa diagram, scatter diagram, PDCA cycle.

Unit III: Statistical Quality Control (15 Hours)
Variation, Causes of variations (natural and assignable), Measurement system analysis, Statistical process control, Process capability measurement, Control charts for variable: mean charts, range charts, Control charts for attributes: p-charts, np-charts, c-charts, u-charts, Product control, Acceptable quality level, Average outgoing quality, Average outgoing quality limit, OC curve, Consumers risk, Producers risk, Acceptable sampling plan: Single sampling plan, Double sampling plan, Sequential sampling plan.

Unit IV: Six Sigma (10 Hours)
Introduction to six-sigma, Evolution of six-sigma, Principles of six-sigma, Statistical basis of 3.4 DPMO, Implementing six-sigma, Application of DMAIC, DMADV, Lean six-sigma and Lean six-sigma in services.

Practical component (if any) – Nil
Tutorial: [30 Hours]

Essential Readings:

- Charantimath, P. M. (2011). *Total Quality Management.* Pearson Education India: India.
- Gupta, S. C., & Kapoor, V. K. (2009). *Fundamentals of applied statistics*. India: Sultan Chand & Sons.
- Besterfield, D. H., Besterfield-Michna, C., Besterfield, G. H., Besterfield-Sacre, M., Urdhwareshe, H., & Urdhwareshe, R. (2014). *Total Quality Management (5th ed.).* Pearson Education India.

Suggested Readings:

- Montgomery, D. C. (2009). *Introduction to statistical quality control.* New York: John Wiley & Sons.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE – 17: Quantitative Models in Marketing

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Quantitative Models in Marketing (DSC-17)	4	3	1	0	Class XII with Maths	Nil

Learning Objectives

The Learning Objectives of this course are as follows:

- To impart knowledge of central concepts and methods of marketing and related optimization problems.
- To impart knowledge of mathematical models available in handling real life situations.
- Formulations of various real-world problems arising in science, engineering, and management.

Learning outcomes

Students completing this course will be able to:

- Understand the concepts related to aid management decision making.
- Analyse the difference between different analytical perspectives, management decision tools used in businesses
- Apply their learning by formulating real-world problems under different categories
- Describe the theoretical workings of the producer as well as consumer
- Describe the theoretical workings of the innovation diffusion process and do sales forecasting for new products

SYLLABUS OF DSC-17

Unit I: Scientific Marketing Analysis **(8 Hours)**

Concept of Marketing, Marketing Orientation and related concepts, Decision Making: A Quantitative Approach: Business Decisions, Abstraction, Model Building, Solutions, Errors, Model-Building Techniques, Marketing Mix-The Traditional 4 Ps, Marketing Mix- The Modern Concept.

Unit II: Models of Consumer Behaviour (9 Hours)
Consumer Behaviour, Consumer buying process models, What Influences Consumer Behaviour, Key Psychological Processes, The Buying Decision Process: The Five Stage Model, Other Theories of Consumer Decision Making, External-Internal Influence Diffusion Model, The Howard-Sheth model of Buying Behaviour

Unit III: Theory of Pricing (9 Hours)
Product Markets: Perfect competition, Monopoly, Monopolistic competition, Oligopoly; Equilibrium determination and pricing under different market structures.

Unit IV: New Product Development and Management (9 Hours)
Product Life Cycle (PLC), Product line, Product mix strategies, New product development, Brand, Brand name selection, Brand equity, Brand switching analysis

Unit V: Promotional Management (10 Hours)
Promotion Mix, Push vs. Pull Strategy, Promotional Objectives, Advertising- Meaning and Importance, Types, Media Decisions (Mathematical Model for Media Allocation), Optimal Allocation of Advertising expenditure, Sales Promotion – Purpose and Types, Sales Response to Advertising in Presence of Competition.

Practical component (if any) – Nil
Practical/Lab to be performed on a computer using OR/Statistical packages
Tutorial :[30 Hours]

Essential Readings:

- Hooley G. J., & Hassey, M. K., (1999). Quantitative methods in marketing. International Thomson Business Press.
- Curtis, A. (2008). Marketing for engineers, scientists and technologists. John Wiley & Sons.
- Kotler, P., & Keller, K. L. (2009). Marketing management. Prentice-Hall.
- Lilien, G. L., Kotler, P., & Moorthy, K. S. (2003). Marketing models. Prentice-Hall of India.

Suggested Readings:

- Armstrong, G., Adam, S., Denize, S., & Kotler, P. (2014). Principles of marketing. Australia: Pearson.
- Dowling, G. R., & Dowling, G. R. (2004). The art and science of marketing: marketing for marketing managers. USA: Oxford University Press.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE – 18: MACHINE LEARNING

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Machine Learning (DSC-18)	4	3	0	1	Class XII with Maths	Nil

Learning Objectives

The Learning Objectives of this course are as follows:

- This course will present foundations of Machine Learning algorithms, as well as their real-world applications.
- The course will cover two major learning approaches: supervised and unsupervised.

Learning outcomes

Upon successful completion of this course the student will be able to:

- Differentiate between supervised and unsupervised learning tasks.
- Normalize the data and perform outlier analysis.
- Execute various machine learning algorithms learnt in the course.
- Understand the concepts of regression, clustering and dimensionality reduction.

SYLLABUS OF DSC-18

Unit I: Introduction to Machine Learning (8 Hours)

Definition, History, Future and basic concepts of Machine Learning, Statistical learning vs machine learning, Key elements of Machine Learning, Supervised vs. Unsupervised Learning, Data measurement scales, Feature Engineering: normalizing data, missing value treatment, outliers. Creating graphs (bar/line/pie/boxplot/histogram, etc.), summarizing data, descriptive statistics, univariate analysis (distribution of data), bivariate analysis (cross tabs, distributions and relationships, graphical analysis), Splitting dataset into training and test set.

Unit II: Supervised Learning- I (12 Hours)

Linear Regression: Regression with one variable, multiple variables, over-fitting, regularization. Regression evaluation metrics. Logistic Regression, Discriminant Analysis,

Unit III: Supervised Learning- II (12 Hours)

k-nearest neighbor classifier, Naive Bayes classifier, Neural networks, Boosting, Support vector Machines, Decision trees, Bagging, Ensemble of Trees, Evaluating a Classification Model Performance, K-fold Cross-validation, ROC Curve

Unit IV: Unsupervised Learning (13 Hours)

Clustering: Approaches for clustering, distance metrics, K-means clustering, hierarchical clustering, and feature selection methods. Dimensionality reduction (Principal Component Analysis). Association Rules Analysis.

Practical component (if any) [30 Hours]–

Use Python for practical labs for Machine Learning.

List of Practicals:

- Normalizing Data by Min-Max scaling
- Split datasets into training and test sets and evaluate the decision models.
- Summarizing Data through graphs and descriptive analysis.
- Create Prediction Model for linear regression.
- Make Prediction Model for logistic regression.
- Make prediction models for Naïve Bayes Classifier
- Implement Decision Tree
- Implement SVM classification.
- Perform K-means clustering.
- Perform Principal Component analysis.

Essential Readings

- Brownlee, J. (2018). Statistical methods for machine learning: Discover how to transform data into knowledge with Python. Machine Learning Mastery.
- James, G., Witten, D., Hastie, T., & Tibshirani, R. (2013). An introduction to statistical learning (Vol. 112, p. 18). New York: springer.
- Raschka, S., & Mirjalili, V. (2019). Python machine learning: Machine learning and deep learning with Python, scikit-learn, and TensorFlow 2. Packt Publishing Ltd.
- Shalev-Shwartz, S., & Ben-David, S. (2014). Understanding machine learning: From theory to algorithms. Cambridge university press.

Suggested Readings: **NIL**

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Category II

Operational Research Courses for Undergraduate Programme of study with Operational Research as one of the Core Disciplines

(B.A. Programme with Operational Research as Major discipline)

DISCIPLINE SPECIFIC CORE COURSE – 11: Project Management

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Project Management (DSC-11)	4	3	0	1	Class XII with Maths	Nil

Learning Objectives

The objective of this course is to acquaint students with the fundamental concepts of project planning and management.

Learning outcomes

After completion of the course, students will possess knowledge and skills required to

- Formulate, evaluate, monitor and control a project.
- Gain an understanding of tools and techniques for project management.
- Use network analysis techniques to solve problems related to project management.
- Manage projects with deterministic and probabilistic activity times.
- Carry out time-cost trade-off analysis in a project.
- Understand the utility of some real-life applications of project management problems.

SYLLABUS OF DSC-11

Unit I: Introduction **(6 hours)**

Meaning of a project, project classification, Lifecycle and phases of a project, Concept of project management, Objectives and significance of project management, Roles and responsibilities of a project manager, Tools and techniques of project management.

Unit II: Project Appraisal **(12 hours)**

Market feasibility analysis: Market and demand analysis, collection of primary and secondary information, demand forecasting. Technical feasibility analysis: Material input and manufacturing process, selection of locations, Technology selection. Financial feasibility

analysis: Project cost estimation and working capital requirements, sources of financing, financial risk analysis using payback period and net present value techniques.

Unit III: Project Scheduling and Network analysis (12 hours)
Steps involved in project scheduling, Meaning and application of a network diagram, Construction of a network diagram for a project, time estimates in network analysis, float and slack analysis, critical path analysis, Introduction to Critical path method (CPM) and Program Evaluation and Review Technique (PERT) for project management.

Unit IV: Project Time Crashing (9 hours)
Project time crashing (time-cost trade off analysis): meaning and significance for project management, direct and indirect costs, finding optimal completion time of project by doing time-cost trade off analysis.

Unit V: Project Monitoring, Control and termination: (6 hours)
Data collection and reporting for project evaluation, Social cost-benefit analysis and Abandonment analysis. Project Termination: types of terminations, project termination process.

Practical component (if any) [30 Hours]-

Practical/Lab to be performed on a computer using OR/Statistical packages

- Construction of a network.
- Construct the network of a project with deterministic activity times.
- Finding different types of floats involved in a project network.
- Conduct time-cost trade off analysis in the context of a project network.
- Construct the network of a project with probabilistic activity times.
- Finding expected completion time and variance of completion time in PERT.
- Finding probability of completing the project within scheduled time in PERT.

(ii)BA(P)with OR AS Major & Minor DISCIPLINE

(iii)B.Sc. (Physical Sciences/Mathematical Sciences) with OR as one of the

DISCIPLINE SPECIFIC ELECTIVE (DSE-4 (a)): Econometric Modelling

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Econometric Modelling (DSE-4(a))	4	3	0	1	Class XII with Maths	Nil

Learning Objectives

The Learning Objectives of this course are as follows:

- To explain the meaning of econometrics-the social science in which the tools of economic theory, mathematics and statistical inference are applied to study economic phenomena.
- To explain the need and concept behind single equation regression models – Single and Multiple Linear Regression Models and also underlying methodology
- To explain Time Series modelling and forecasting.
- To explain the purpose, concept and methodology behind simultaneous equation models.

Learning Outcomes

Students completing this course will be able to:

- Understand concepts, issues and applications of econometric modelling.
- Analyse Econometric model involving single equation with single response variable.
- Analyse Econometric model involving single equation with multiple response variables.
- Analyse time series and simultaneous equation models.

SYLLABUS OF DSE-4(a)

Unit I: Introduction to Econometrics (6 hours)
The nature and scope of Econometrics, The Methodology of Econometrics, Types of data: Time series data, Cross-sectional data, Panel data

Unit II: Regression Analysis (15 hours)
Classical Linear Regression Models (CLRMs): Single and Multiple linear regression, Model coefficients, Ordinary least squares estimation, Residuals, fitted values, goodness of fit, Violating the assumptions of CLRMs: Multicollinearity; Hetreoscedasticity; Autocorrelation, Step-wise regression.

Unit III: Time Series Modelling (12 hours)
Stationary and non-stationary time series, Consequences and detection of non-stationarity, Introduction to AR, MA and ARMA models, ARIMA model, Box Jenkins approach to forecasting.

Unit IV: Simultaneous Equations Modelling (12 hours)
Simultaneous equations models: Basic definitions, Identification problem, Estimation, Forecasting from a simultaneous model

Practical component (if any) [30 Hours]-

Practical/Lab to be performed on a computer using OR/Statistical packages

- Fitting of a single linear regression model using ordinary least squares estimation.
- Fitting of a multiple linear regression model having two explanatory variables using ordinary least squares estimation.
- Fitting of a multiple linear regression model having more than two explanatory variables using ordinary least squares estimation.
- Testing for the presence of Multicollinearity.
- Testing for the presence of Heteroscedasticity.
- Testing for the presence of Autocorrelation.
- Testing for stationary and non-stationary time series.
- Estimating a simultaneous equations model.
- Forecasting from a simultaneous equations model.

DISCIPLINE SPECIFIC ELECTIVE (DSE-4 (b)): Research Methodology

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Research Methodology & DSE 4(b)	4	3	0	1	Class XII with Maths	NIL

Learning Objectives

- To give students an understanding of quantitative and qualitative research's basic techniques and tools.
- To provide exposure to the students about the nature and extent of research orientation, which they are expected to possess for higher studies, research, and the job market.

Learning outcomes

Upon successful completion of this course, the student will be able to:

- Identity and analyse research problems.
- Understand and apply the types of research designs and research tools.
- Do data collection and formulate research questionnaires and conduct surveys.
- Present research reports.

SYLLABUS OF DSC 4(b)

Unit I : Research : Role and Scope **(6 Hours)**

Nature and scope of Research – Role of Research in decision making. Applications of research in various disciplines. The Research Process – Steps in the research process; the research proposal.

Unit II: Research Design and Documentation (12 Hours)
Research Design: Exploratory, Descriptive, Causal. Secondary Data Research: Advantages & Disadvantages of Secondary Data, Criteria for evaluating secondary sources, secondary sources of data in Indian Context, Syndicated Research (in India).

Unit III: Data and Scaling (14 Hours)
Primary Data Collection: Survey vs. Observations. Qualitative Research Tools: Depth Interviews focus groups and projective techniques; Measurement & Scaling: Primary scales of Measurement-Nominal, Ordinal, Interval& Ratio. Scaling techniques- paired comparison, rank order scale, constant sum scale, semantic differential scale, itemized ratings, scale, Likert Scale; Questionnaire- form & design**.**

Unit IV: Sampling (13 Hours)
Sampling: Sampling techniques, Data Analysis: Chi-square test, non-parametric test: Mann Whitney U test, Wilcoxon Signed-Rank test for paired samples, One-Way ANOVA Analysis, Factor Analysis and Discriminant Analysis. Conjoint Analysis, Report writing.

Practical component (if any) [30 Hours] –
Use Microsoft Excel/SPSS for practical labs for Research Methodology

List of Practicals:
- Chi-square Test
- Mann Whitney U test.
- Wilcoxon Signed-Rank Test.
- One Way ANOVA
- Factor Analysis (PCA)
- Discriminant Analysis (LDA)

Quantitative Models in Marketing (GE-6)	4	3	1	0	Class XII with Maths	Nil

Learning Objectives

The Learning Objectives of this course are as follows:

- To impart knowledge of central concepts and methods of marketing and related optimization problems.
- To impart knowledge of mathematical models available in handling real life situations.
- Formulations of various real-world problems arising in science, engineering, and management.

Learning outcomes

Students completing this course will be able to:

- Understand the concepts related to aid management decision making.
- Analyse the difference between different analytical perspectives, management decision tools used in businesses
- Apply their learning by formulating real-world problems under different categories
- Describe the theoretical workings of the producer as well as consumer
- Describe the theoretical workings of the innovation diffusion process and do sales forecasting for new products

SYLLABUS OF GE-6

Learning Objectives

The Learning Objectives of this course are as follows:

- To impart knowledge of central concepts and methods of marketing and related optimization problems.
- To impart knowledge of mathematical models available in handling real life situations.
- Formulations of various real-world problems arising in science, engineering, and management.

Learning outcomes

Students completing this course will be able to:

- Understand the concepts related to aid management decision making.
- Analyse the difference between different analytical perspectives, management decision tools used in businesses
- Apply their learning by formulating real-world problems under different categories
- Describe the theoretical workings of the producer as well as consumer
- Describe the theoretical workings of the innovation diffusion process and do sales forecasting for new products

SYLLABUS OF GE-6

Unit I: Scientific Marketing Analysis (8 Hours)
Concept of Marketing, Marketing Orientation and related concepts, Decision Making: A Quantitative Approach: Business Decisions, Abstraction, Model Building, Solutions, Errors, Model-Building Techniques, Marketing Mix-The Traditional 4 Ps, Marketing Mix- The Modern Concept.

Unit II: Models of Consumer Behaviour (9 Hours)
Consumer Behaviour, Consumer buying process models, What Influences Consumer Behaviour, Key Psychological Processes, The Buying Decision Process: The Five Stage Model, Other Theories of Consumer Decision Making, External-Internal Influence Diffusion Model, The Howard-Sheth model of Buying Behaviour

Unit III: Theory of Pricing (9 Hours)
Product Markets: Perfect competition, Monopoly, Monopolistic competition, Oligopoly; Equilibrium determination and pricing under different market structures.

Unit IV: New Product Development and Management (9 Hours)
Product Life Cycle (PLC), Product line, Product mix strategies, New product development, Brand, Brand name selection, Brand equity, Brand switching analysis

Unit V: Promotional Management (10 Hours)
Promotion Mix, Push vs. Pull Strategy, Promotional Objectives, Advertising- Meaning and Importance, Types, Media Decisions (Mathematical Model for Media Allocation), Optimal Allocation of Advertising expenditure, Sales Promotion – Purpose and Types, Sales Response to Advertising in Presence of Competition.

Practical component (if any) – NA

Practical/Lab to be performed on a computer using OR/Statistical packages
Tutorial: [30 Hours]

SEMESTER-4

DEPARTMENT OF COMPUTER SCIENCE
[UG Programme for Bachelor in Computer Science (Honours)]

DISCIPLINE SPECIFIC CORE COURSE - 10 (DSC-10) : Design and Analysis of Algorithms

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSC 10 Design and Analysis of Algorithms	**4**	**3**	**0**	**1**	Pass in Class XII	DSC 07 Data Structures with C++

Learning Objectives

The course is designed to develop understanding of different algorithm design techniques and use them for problem solving. The course shall also enable the students to verify correctness of algorithms and analyze their time complexity.

Learning outcomes

On successful completion of the course, students will be able to:

- Compute and compare the asymptotic time complexity of algorithms.
- Prove correctness of algorithms.
- Use appropriate algorithm design technique(s) for solving a given problem.
- Distinguish between tractable and intractable problems.

Unit 1 (10 hours)

Searching, Sorting, Selection: Linear Search, Binary Search, Insertion Sort, Selection Sort, Bubble Sort, Heapsort, Linear Time Sorting, Selection Problem, running time analysis and correctness.

Unit 2 (5 hours)

Graphs: Review of graph traversals**,** graph connectivity, testing bipartiteness, Directed Acyclic Graphs and Topological Ordering.

Unit 3 (10 hours)

Divide and Conquer: Introduction to divide and conquer technique, Merge Sort, Quick Sort, Maximum-subarray problem, Strassen's algorithm for matrix multiplication.

Unit 4 (5 hours)

Greedy algorithms: Introduction to the Greedy algorithm design approach, application to minimum spanning trees, fractional knapsack problem, etc. with correctness, and analysis of time complexity.

Unit 5 (5 hours)

Dynamic Programming: Introduction to the Dynamic Programming approach, application to subset sum, integer knapsack problem etc., correctness, and analysis of time complexity.

Unit 6 (5 hours)

Intractability: Concept of polynomial time computation, polynomial time reductions, decision vs optimization problems, Introduction to NP, NP-hard and NP-Complete classes.

Unit 7 (5 hours)

Advanced Analysis of Algorithms: Amortized Analysis.

Essential/recommended readings

1. Cormen, T.H., Leiserson, C.E., Rivest, R. L., Stein C. *Introduction to Algorithms*, 4th edition, Prentice Hall of India, 2022.
2. Kleinberg, J., Tardos, E. *Algorithm Design,* 1st edition, Pearson, 2013.

Additional references

1. Basse, S., Gelder, A. V., *Computer Algorithms: Introduction to Design and Analysis,* 3rd edition, Pearson, 1999.

Practical List (If any): (30 Hours)

1. i. Write a program to sort the elements of an array using Insertion Sort (The program should report the number of comparisons).
   ii. Write a program to sort the elements of an array using Merge Sort (The program should report the number of comparisons).
2. Write a program to sort the elements of an array using Heap Sort (The program should report the number of comparisons).
3. Write a program to multiply two matrices using the Strassen's algorithm for matrix multiplication.

4. Write a program to sort the elements of an array using Radix Sort.
5. Write a program to sort the elements of an array using Bucket Sort.
6. Display the data stored in a given graph using the Breadth-First Search algorithm.
7. Display the data stored in a given graph using the Depth-First Search algorithm.
8. Write a program to determine a minimum spanning tree of a graph using the Prim's algorithm.
9. Write a program to implement Dijkstra's algorithm to find the shortest paths from a given source node to all other nodes in a graph.
10. Write a program to solve the weighted interval scheduling problem.
11. Write a program to solve the 0-1 knapsack problem.

For the algorithms at S.No 1 and 2, test run the algorithm on 100 different input sizes varying from 30 to 1000. For each size find the number of comparisons averaged on 10 different input instances; plot a graph for the average number of comparisons against each input size. Compare it with a graph of nlogn.

DISCIPLINE SPECIFIC CORE COURSE – 11 (DSC11): Database Management Systems

Credit distribution, Eligibility and Prerequisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSC 11 Database Management Systems	**4**	**3**	**0**	**1**	Pass in Class XII	DSC01 Programming using Python / A course in Python at plus 2 level, DSC08

Learning Objectives

The course introduces the students to the fundamentals of database management system and its architecture. Emphasis is given on the popular relational database system including data models and data manipulation. Students will learn about the importance of database structure and its designing using conceptual approach using Entity Relationship Model and formal approach using Normalization. The importance of file indexing and controlled execution of transactions will be taught. The course would give students hands-on practice of structured query language in a relational database management system and glimpse of basic database administration commands.

Learning outcomes

On successful completion of the course, students will be able to:

- Use database management system software to create and manipulate the database.
- Create conceptual data models using entity relationship diagrams for modeling real-life situations and designing the database schema.
- Use the concept of functional dependencies to remove redundancy and update anomalies.
- Apply normalization theory to get a normalized database scheme.
- Write queries using relational algebra, a procedural language.

SYLLABUS OF DSC11

Unit 1 (5 hours)

Introduction to Database: Purpose of database system, Characteristics of database approach, data models, database management system, database system architecture, three-schema architecture, components of DBMS, data independence, and file system approach vs database system approach.

Unit 2 (7 hours)

Entity Relationship Modeling: Conceptual data modeling - motivation, entities, entity types, attributes, relationships, relationship types, constraints on relationship, Entity Relationship diagram notation.

Unit 3 (7 hours)

Relational Data Model: Update anomalies, Relational Data Model - Concept of relations, schema-instance distinction, keys, relational integrity constraints, referential integrity and foreign keys, relational algebra operators and queries.

Unit 4 (10 hours)

Structured Query Language (SQL): Querying in SQL, DDL to create database and tables, table constraints, update database-update behaviors, DML, aggregation functions group by

and having clauses, retrieve data from the database, generate and query views. Access and manipulate databases using ODBC. Basic Database administration SQL commands.

Unit 5 (8 hours)

Database Design: Mapping an Entity Relationship model to relational database, functional dependencies and Normal forms, 1NF, 2NF, 3NF and BCNF decompositions and desirable properties of them.

Unit 6 (8 hours)

File indexing and Transaction Processing: Data Storage and Indexes- Need of file indexes, file organizations, index structures, single- and multi-level indexing, concurrent execution of transactions, ACID properties, need of data recovery and log file.

Essential/recommended readings

3. Connolly, T. M., Begg, C. E. *Database Systems: A Practical Approach to Design, Implementation, and Management*, 6th edition, Pearson, 2019.

Suggested Practical List (If any): (30 Hours)

Practical exercises such as

It has three components.

I. Create and use the following student-society database schema for a college to answer the given (sample) queries using the standalone SQL editor.

STUDENT	**Roll No**	**StudentName**	**Course**	**DOB**
	Char(6)	Varchar(20)	Varchar(10)	Date

SOCIETY	SID	SocName	MentorName	TotalSeats
	Char(6)	Varchar(20)	Varchar(15)	Unsigned int

ENROLLMENT	Roll No	SID	DateOfEnrollment
	Char(6)	Char(6)	Date

Here Rollno (ENROLLMENT) and SID (ENROLLMENT) are foreign keys.

1. Retrieve names of students enrolled in any society.
2. Retrieve all society names.
3. Retrieve students' names starting with letter ‘A’.
4. Retrieve students' details studying in courses ‘computer science’ or ‘chemistry’.
5. Retrieve students’ names whose roll no either starts with ‘X’ or ‘Z’ and ends with ‘9’
6. Find society details with more than N TotalSeats where N is to be input by the user
7. Update society table for mentor name of a specific society
8. Find society names in which more than five students have enrolled
9. Find the name of youngest student enrolled in society ‘NSS’
10. Find the name of most popular society (on the basis of enrolled students)
11. Find the name of two least popular societies (on the basis of enrolled students)
12. Find the student names who are not enrolled in any society
13. Find the student names enrolled in at least two societies
14. Find society names in which maximum students are enrolled
15. Find names of all students who have enrolled in any society and society names in which at least one student has enrolled
16. Find names of students who are enrolled in any of the three societies ‘Debating’, ‘Dancing’ and ‘Sashakt’.
17. Find society names such that its mentor has a name with ‘Gupta’ in it.
18. Find the society names in which the number of enrolled students is only 10% of its capacity.
19. Display the vacant seats for each society.
20. Increment Total Seats of each society by 10%
21. Add enrollment fees paid (‘yes’/’No’) field in the enrollment table.
22. Update date of enrollment of society id ‘s1’ to ‘2018-01-15’, ‘s2’ to current date and ‘s3’ to ‘2018-01-02’.
23. Create a view to keep track of society names with the total number of students enrolled in it.
24. Find student names enrolled in all the societies.
25. Count number of societies with more than 5 student enrolled in it
26. Add column Mobile number in student table with default value ‘9999999999’
27. Find the total number of students whose age is > 20 years.
28. Find names of students who are born in 2001 and are enrolled in at least one society.
29. Count all societies whose name starts with ‘S’ and ends with ‘t’ and at least 5 students are enrolled in the society.
30. Display the following information:

Society name Mentor name Total Capacity Total Enrolled Unfilled Seats

II. Do the following database administration commands:
create user, create role, grant privileges to a role, revoke privileges from a role, create index

II. Execute queries given in part I through a high-level language using ODBC connection.

DISCIPLINE SPECIFIC CORE COURSE– 12 (DSC-12): Computer Networks

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits				Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSC12 Computer Networks	**4**	**3**	**0**	**1**	Pass in Class XII	DSC 04 Object Oriented Programming with C++/ GE 1a Programming using C++ / GE1b Programming with Python/ DSC 01 Programming using Python/ GE 3b: Java Programming

Learning Objectives
The course objectives of this paper are to:

- Understand the concepts behind computer networks and data communication.
- Learn the different types of networks, network topologies and their characteristics.
- Learn the working of protocols used at various layers.
- Understand the utility of different networking devices.

Learning outcomes

Upon successful completion of the course, students will be able to:

- differentiate between various types of computer networks and their topologies.
- understand the difference between the OSI and TCP/IP protocol suit.

- distinguish between different types of network devices and their functions.
- design/implement data link and network layer protocols in a simulated networking environment.

SYLLABUS OF DSC06

Unit 1 (8 hours)
Introduction: Types of computer networks, Internet, Intranet, network topologies (bus, star, ring, mesh, tree, hybrid topologies), network classifications. layered architecture approach, OSI Reference Model, TCP/IP Reference Model. Transmission Modes: simplex, half duplex and full duplex.

Unit 2 (9 hours)
Physical Layer: Analog signal, digital signal, the maximum data rate of a channel, transmission media (guided transmission media, wireless transmission, satellite communication), multiplexing (frequency division multiplexing, time-division multiplexing, wavelength division multiplexing). Guided Media (Wired) (Twisted pair, Coaxial Cable, Fiber Optics. Unguided Media (Radio Waves, Infrared, Micro-wave, Satellite).

Unit 3 (10 hours)
Data Link and MAC Layer: Data link layer services, error detection and correction techniques, error recovery protocols (stop and wait, go back n, selective repeat), multiple access protocols with collision detection, MAC addressing, Ethernet, data link layer switching, point-to-point protocol.

Unit 4 (8 hours)
Network layer: Networks and Internetworks, virtual circuits and datagrams, addressing, subnetting, Dijkstra Routing algorithm, Distance vector routing, Network Layer protocol- (ARP, IPV4, ICMP).

Unit 5 (10 hours)
Transport and Application Layer: Process to process Delivery- (client-server paradigm, connectionless versus connection-oriented service); User Datagram Protocols, TCP/IP protocol, Flow Control. FTP (File Transfer Protocol), SMTP (Simple Mail Transfer Protocol), Telnet (Remote login protocol), WWW (World Wide Web), HTTP (HyperText Transfer Protocol), URL (Uniform Resource Locator).

Essential/recommended readings

1. Tanenbaum, A.S. & Wethrall, D.J.. *Computer Networks*, 5th edition, Pearson Education, 2012.

2. Forouzan, B. A.. *Data Communication and Networking*, 4th edition, McGraw-Hill Education, 2017.

Additional References

1. Comer, D. E.. *Computer Networks and Internet,* 6th edition, Pearson education, 2015.

2. Stallings, W., *Data and Computer Communications,* 10th edition, Pearson education India, 2017.

Suggested Practical List :

Practical exercises such as

Introduce students to any network simulator tool and do the following:

1. To Study basic network command and Network configuration commands.
2. To study and perform PC to PC communication.
3. To create Star topology using Hub and Switch.
4. To create Bus, Ring, Tree, Hybrid, Mesh topologies.
5. Perform an initial Switch configuration.
6. Perform an initial Router configuration.
7. To implement Client Server Network.
8. To implement connection between devices using router.
9. To perform remote desktop sharing within LAN connection.

Computer Science Courses for Undergraduate Programme of study with Computer Science discipline Elective

DISCIPLINE SPECIFIC ELECTIVE COURSE: Data Mining - I

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Data Mining - I	**4**	**3**	**0**	**1**	Pass in Class XII	DSC01 Programming using Python / GE1b Programming with Python

Learning Objectives

This course aims to introduce data mining techniques and their application on real-life datasets. The students will learn to pre-process the dataset and make it ready for application of data mining techniques. The course will focus on three main techniques of data mining i.e. Classification, Clustering and Association Rule Mining. Different algorithms for these techniques will be discussed along with appropriate evaluation metrics to judge the performance of the results delivered.

Learning outcomes

On successful completion of the course, students will be able to :

1. Pre-process the data for subsequent data mining tasks
2. Apply a suitable classification algorithm to train the classifier and evaluate its performance.
3. Apply appropriate clustering algorithm to cluster the data and evaluate clustering quality
4. Use association rule mining algorithms and generate frequent item-sets and association rules

SYLLABUS OF DSE

Unit 1 (5 hours)

Introduction to Data Mining: Motivation and challenges for data mining, Types of data mining tasks, Applications of data mining, Data measurements, Data quality, Supervised vs. unsupervised techniques

Unit 2 (10 hours)

Data Pre-processing: Data aggregation, sampling, dimensionality reduction, feature subset selection, feature creation, variable transformation.

Unit 3 (10 hours)

Cluster Analysis: Basic concepts of clustering, measure of similarity, types of clusters and clustering methods, K-means algorithm, measures for cluster validation, determine optimal number of clusters

Unit 4 (10 hours)

Association Rule mining: Transaction data-set, frequent itemset, support measure, rule generation, confidence of association rule, Apriori algorithm, Apriori principle

Unit 5 (10 hours)

Classification: Naive Bayes classifier, Nearest Neighbour classifier, decision tree, overfitting, confusion matrix, evaluation metrics and model evaluation.

Essential/recommended readings

1. Tan P.N., Steinbach M, Karpatne A. and Kumar V. *Introduction to Data Mining,* 2nd edition, Pearson, 2021.
2. Han J., Kamber M. and Pei J. *Data Mining: Concepts and Techniques*, 3rd edition, 2011, Morgan Kaufmann Publishers.
3. Zaki M. J. and Meira J. Jr. *Data Mining and Machine Learning: Fundamental Concepts and Algorithms*, 2nd edition, Cambridge University Press, 2020.

Additional References

1. Aggarwal C. C. *Data Mining: The Textbook*, Springer, 2015.
2. Dunham M. *Data Mining: Introductory and Advanced Topics,* 1st edition, Pearson Education India, 2006.

Suggested Practical List (If any): (30 Hours)

Practical exercises such as

All topics covered in theory will be implemented using Python. The operations may be performed on the datasets loaded through scikit, seaborn libraries or can be downloaded from from Open Data Portal (https:// data.gov.in/, UCI repository http://archive.ics.uci.edu/ml/).

Recommended Datasets for :

Classification: Abalone, Artificial Characters, Breast Cancer Wisconsin (Diagnostic)

Clustering: Grammatical Facial Expressions, HTRU2, Perfume data

Association Rule Mining: MovieLens, Titanics

Additional Suggested Practicals List

1. Apply data cleaning techniques on any dataset (e,g, wine dataset). Techniques may include handling missing values, outliers, inconsistent values. A set of validation rules can be prepared based on the dataset and validations can be performed.
2. Apply data pre-processing techniques such as standardization / normalization, transformation, aggregation, discretization/binarization, sampling etc. on any dataset
3. Run Apriori algorithm to find frequent itemsets and association rules on 2 real datasets and use appropriate evaluation measures to compute correctness of obtained patterns
    a) Use minimum support as 50% and minimum confidence as 75%
    b) Use minimum support as 60% and minimum confidence as 60 %

4. Use Naive bayes, K-nearest, and Decision tree classification algorithms and build classifiers on any two datasets. Divide the data set into training and test set. Compare the accuracy of the different classifiers under the following situations:
    I. a) Training set = 75% Test set = 25% b) Training set = 66.6% (2/3rd of total), Test set = 33.3%
    II. Training set is chosen by i) hold out method ii) Random subsampling iii) Cross-Validation. Compare the accuracy of the classifiers obtained.

    Data is scaled to standard format.
5. Use Simple K-means algorithm for clustering on any dataset. Compare the performance of clusters by changing the parameters involved in the algorithm. Plot MSE computed after each iteration using a line plot for any set of parameters.

Project: Students should be promoted to take up one project on any UCI/kaggle/data.gov.in or a dataset verified by the teacher. Preprocessing steps and at least one data mining technique should be shown on the selected dataset. This will allow the students to have a practical knowledge of how to apply the various skills learnt in the subject for a single problem/project.

DISCIPLINE SPECIFIC ELECTIVE COURSE: Combinatorial Optimization

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Combinatorial Optimization	**4**	**3**	**1**	**0**	Pass in Class XII	NIL

Learning Objectives

This course is designed to introduce the fundamentals of combinatorial optimization to the students in terms of both theory and applications, so as to equip them to explore the more advanced areas of convex and non-convex optimizations.

Learning outcomes

On successful completion of the course, students will be able to:

- Model problems using linear and integer programs
- Apply polyhedral analysis to develop algorithms for optimization problems
- Use the concept of duality for design of algorithms

SYLLABUS OF DSE

Unit 1 (9 hours)

Introduction: Introduction to Combinatorial Optimization Problems, Linear and Integer Programs- LP Formulation, understanding integer programs, computational complexities of IP vs LP, using LP to find optimal or approximate integral solutions, concept of integrality gap.

Unit 2 (14 hours)

Theory of Linear Programming and Algorithmic Perspective to Simplex Method: standard vs. equational form, basic feasible solutions, convexity and convex polyhedra, correspondence between vertices and basic feasible solutions, geometry of Simplex algorithm, exception handling (unboundedness, degeneracy, infeasibility), Simplex algorithm, avoiding cycles.

Unit 3 (12 hours)

Primal-Dual Algorithms: interpretation of dual, optimality conditions for primal and dual, weak and strong duality, complementary slackness, primal-dual algorithm for the shortest path problem.

Unit 4 (10 hours)

Network Flows: linear programming formulations for network flows and bipartite matching, totally unimodular matrices.

DISCIPLINE SPECIFIC ELECTIVE COURSE: Network Security

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Network Security		**3**	**1**	**0**	Pass in Class XII	DSC 04 Object Oriented Programming with C++/ GE 1a Programming using C++ / GE1b Programming with Python/ DSC 01 Programming using Python/ GE 3b: Java Programming

Learning Objectives

This course will provide students with an understanding of the fundamental concepts, principles, and techniques of network security. Students will learn how to assess, design, and implement secure networks using various tools and technologies.

Learning outcomes

On successful completion of the course, students will be able to:

- Describe the importance of network security and the principles of the CIA triad (confidentiality, integrity, and availability), types of security threats and attacks
- Describe the basics of cryptography, including symmetric and asymmetric encryption, hash functions, digital signatures, and public key infrastructure (PKI).
- Apply authentication and access control techniques, including password-based, token-based, and biometric authentication, as well as authorization models and single sign-on (SSO).
- Design and implement secure networks using network segmentation, security zones, and VPNs for remote access.

- Implement and manage firewalls, intrusion detection systems (IDS), and intrusion prevention systems (IPS) to protect network resources, secure wireless networks,
- Implement endpoint security and malware protection measures, including antivirus, patch management, and host-based firewalls.

SYLLABUS OF DSE

Unit 1 (10 hours)

Introduction to Network Security and Network Fundamentals: Importance of network security, Confidentiality, integrity, and availability (CIA) triad, Types of security threats and attacks. OSI and TCP/IP models. IP addressing and subnetting. Networking devices (hubs, switches, routers, firewalls). Network protocols and services (HTTP, HTTPS, FTP, SSH, etc.).

Unit 2 (12 hours)

Cryptography Basics, Authentication and Access Control, Secure Network Design: Symmetric and asymmetric encryption, Hash functions and digital signatures, Public key infrastructure (PKI), Common cryptographic algorithms (AES, RSA, SHA, etc.). Authentication techniques (passwords, tokens, biometrics), Authorization and access control models (RBAC, ABAC, MAC, DAC), Single sign-on (SSO) and multi-factor authentication (MFA). Defense-in-depth strategy, Network segmentation and isolation, Security zones and DMZ, VPNs and secure remote access.

Unit 3 (12 hours)

Firewalls and Intrusion Detection/Prevention Systems, Wireless Network Security: Types of firewalls (packet filtering, stateful inspection, application layer), IDS and IPS concepts and deployment, Signature-based and anomaly-based detection, Honeypots and honeynets. Wireless standards and technologies (802.11, Bluetooth, RFID), Wireless security protocols (WEP, WPA, WPA2, WPA3), Rogue access points and wireless attacks, Securing wireless networks.

Unit 4 (8 hours)

Endpoint Security and Malware Protection, Security Monitoring and Incident Response: Antivirus and antimalware solutions, Patch management and software updates, Host-based firewalls and intrusion detection, Mobile device management (MDM). Security Information and Event Management (SIEM) systems, Log management and analysis, Incident response process and procedures, Forensic analysis and evidence handling.

Unit 5 (3 hours)

Network Security Best Practices and Compliance: Security policies and procedures, Risk assessment and management, Security awareness training, Regulatory compliance (HIPAA, GDPR, PCI-DSS, etc.).

Essential/recommended readings

DISCIPLINE SPECIFIC ELECTIVE COURSE: Introduction to Web Programming

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Introduction to web programming	**4**	**3**	**0**	**1**	Pass in Class XII	NIL

Learning Objectives

The course aims at introducing the basic concepts and techniques of client side web programming. The student shall be able to develop simple websites using HTML, CSS and Javascript.

Learning outcomes

On successful completion of the course, students will be able to :

- Build websites using the elements of HTML.
- Build dynamic websites using the client side programming techniques with CSS, Javascript and jQuery.
- Learn to validate client-side data.

SYLLABUS OF DSE

Unit 1 (5 hours)

Introduction: Introduction to Internet and web design. Basic concepts of web architecture.

Unit 2 (12 hours)

HTML: Introduction to hypertext mark-up language (html), creating web pages, lists, hyperlinks, tables, web forms, inserting images, frames.

Unit 3 (8 hours)

Cascading style sheet (CSS): Concept of CSS, creating style sheet, Importing style sheets, CSS properties, CSS styling (background, text format, controlling fonts), CSS rules, Style Types, CSS Selectors, CSS cascade, working with block elements and objects, working with lists and tables, CSS id and class, box model (introduction, border properties, padding

properties, margin properties).

Unit 4 (10 hours)

Javascript: Document object model, data types and variables, functions, methods and events, controlling program flow, JavaScript object model, built-in objects and operators, validations.

Unit 5 (10 hours)

jQuery and JSON: Introduction to jQuery, syntax, selectors, events. JSON file format for storing and transporting data.

Essential/recommended readings

1. Nixon, R. *Learning PHP, MySQL & JavaScript with jQuery, CSS and HTML5*, O'Rielly, 2018.
2. Powell, T.A. *HTML & CSS: The Complete Reference, 5th edition*, Tata McGrawHill, 2010.
3. Duckett, J. *JavaScript and JQuery: Interactive Front-End Web Development*, Wiley, 2014.

3. J. A. Ramalho *Learn Advanced HTML 4.0 with DHTML*, BPB Publications, 2007.
4. Ivan Bayross *Web Enabled Commercial Application Development Using Html, Dhtml, Javascript, Perl CGI*, BPB Publications, 2009.

Suggested Practical List (If any): (30 Hours)

Practical exercises such as

HTML

1. Create an HTML document with following formatting – Bold, Italics, Underline, Colors, Headings, Title, Font and Font Width, Background, Paragraph, Line Brakes, Horizontal Line, Blinking text as well as marquee text.
2. Create an HTML document with Ordered and Unordered lists, Inserting Images, Internal and External linking
3. Create an HTML displaying this semester's time table.
4. Create a website with horizontal and vertical frames. Top horizontal frame showing your college's name and logo. Bottom horizontal frame split into two vertical frames. The left frame with hyperlinks to pages related to faculty, courses, student activities, etc. The right frame showing corresponding pages based on the link clicked on the left frame.
5. Create a student registration form using HTML which has the following controls:

I. Text Box
II. Dropdown box
III. Option/radio buttons
IV. Check boxes
V. Reset and Submit button

CSS

Create a webpage for your department with drop down navigation menu for faculty, courses, activities, etc.. Implement the webpage using styles, rules, selectors, ID, class.

Javascript

1. Create event driven programs for the following:
    a. Enter a number and on click of a button print its multiplication table.
    b. Print the largest of three numbers entered by the user.
    c. Find the factorial of a number entered by the user.
    d. Enter a list of positive numbers using the prompt terminated by a zero. Find the sum and average of these numbers.
2. Create a student registration form using text, radio button, check box, drop down box, text field and all other required HTML elements. Customise the CSS and javascript to input and validate all data. Create functions to perform validation of each element, example:
    a. Roll number is a 7-digit numeric value
    b. Name should be an alphabetical value(String)
    c. Non-empty and valid fields like DOB

jQuery and JSON

1. Change text color and contents using button click events using jQuery
2. Select elements using ID, class, elements name, attribute name
3. Run code on click events in jQuery
4. Handle HTML form, store the data in JSON object, pass them to another page and display it there using jQuery/Javascript

COMMON POOL OF GENERIC ELECTIVES (GE) COURSES

GENERIC ELECTIVES (GE-4a): Data Structures using C++

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
GE4a Data Structures using C++	**4**	**3**	**0**	**1**	Pass in Class XII	NIL

Learning Objectives

The course aims at developing the ability to use basic data structures like arrays, stacks, queues, lists, trees to solve problems. C++ is chosen as the language to understand implementation of these data structures.

Learning outcomes

On successful completion of the course, students will be able to:

- Compare two functions for their rates of growth.
- Understand abstract specification of data-structures and their implementation.
- Compute time and space complexity of operations on a data-structure.
- Identify the appropriate data structure(s) for a given application and understand the trade-offs involved in terms of time and space complexity.
- Apply recursive techniques to solve problems.

SYLLABUS OF GE-4a

Unit 1 (7 hours)

Growth of Functions, Recurrence Relations: Functions used in analysis, asymptotic notations, asymptotic analysis, solving recurrences using recursion tree, Master Theorem.

Unit 2 (14 hours)

Arrays, Linked Lists, Stacks, Queues, Deques: Arrays: array operations, applications, sorting, two-dimensional arrays, dynamic allocation of arrays; Linked Lists: singly linked lists, doubly linked lists, circularly linked lists, Stacks: stack as an ADT, implementing stacks using arrays, implementing stacks using linked lists, applications of stacks; Queues: queue as an ADT, implementing queues using arrays, implementing queues using linked lists, double-ended queue as an ADT. Time complexity analysis of operations on all data structures.

Unit 3 (4 hours)

Sorting: Insertion Sort, Count Sort and their complexity analysis.

Unit 4 (4 hours)

Recursion: Recursive functions, linear recursion, binary recursion.

Unit 5 (10 hours)

Trees, Binary Trees: Trees: definition and properties, binary trees: definition and properties, traversal of binary trees and their time complexity analysis. Binary Search Trees: insert, delete (by copying), search operations, time complexity analysis of these operation.

Unit 6 (6 hours)

Binary Heap, Priority Queue: Binary Heaps: motivation and introduction, application of heaps - Priority Queues.

Essential/recommended readings

1. Goodrich, M.T, Tamassia, R., & Mount, D., *Data Structures and Algorithms Analysis in C++,* 2nd edition, Wiley, 2011.
2. Cormen, T.H., Leiserson, C.E., Rivest, R. L., Stein C., Introduction to Algorithms. 4th edition. Prentice Hall of India. 2022.
3. Drozdek, A., *Data Structures and Algorithms in C++*, 4th edition, Cengage Learning, 2012.

Additional References

1. Sahni, S. *Data Structures, Algorithms and applications in C++*, 2nd edition. Universities Press, 2011.
2. Langsam Y., Augenstein, M. J., & Tanenbaum, A. M. *Data Structures Using C and C++*, 2nd edition, Pearson, 2009.

Suggested Practical List (If any): (30 Hours)

Practical exercises such as

1. Perform matrix addition and multiplication.
2. Implement following recursive functions:
    a. Factorialof a number
    b. N^{th} fibonacci number
    c. Power function: x^y
3. Implement singly linked lists.
3. Implement doubly linked lists.

4. Implement circular linked lists.
5. Implement stack data structure and its operations using arrays.
6. Implement stack data structure and its operations using linked lists.
7. Convert Prefix expression to Infix and Postfix expressions, and evaluate.
8. Implement queue data structure and its operations using arrays.
9. Implement queue data structure and its operations using linked lists.
10. Implement Binary Trees and its traversals.

GENERIC ELECTIVES (GE-4b): Introduction to Web Programming

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
GE4b: Introduction to Programming	**4**	**3**	**0**	**1**	Pass in Class XII	NIL

Learning Objectives

The course aims at introducing the basic concepts and techniques of client side web programming. The student shall be able to develop simple websites using HTML, CSS and Javascript.

Learning outcomes

On successful completion of the course, students will be able to :

- Build websites using the elements of HTML.
- Build dynamic websites using the client side programming techniques with CSS, Javascript and jQuery.
- Learn to validate client-side data.

SYLLABUS OF GE4b

Unit 1 (5 hours)

Introduction: Introduction to Internet and web design. Basic concepts of web architecture.

Unit 2 (12 hours)

HTML: Introduction to hypertext mark-up language (html), creating web pages, lists,

hyperlinks, tables, web forms, inserting images, frames.

Unit 3 (8 hours)

Cascading style sheet (CSS): Concept of CSS, creating style sheet, Importing style sheets, CSS properties, CSS styling (background, text format, controlling fonts), CSS rules, Style Types, CSS Selectors, CSS cascade, working with block elements and objects, working with lists and tables, CSS id and class, box model (introduction, border properties, padding properties, margin properties).

Unit 4 (10 hours)

Javascript: Document object model, data types and variables, functions, methods and events, controlling program flow, JavaScript object model, built-in objects and operators, validations.

Unit 5 (10 hours)

jQuery and JSON: Introduction to jQuery, syntax, selectors, events. JSON file format for storing and transporting data.

Essential/recommended readings

4. Ivan Bayross *Web Enabled Commercial Application Development Using Html, Dhtml, Javascript, Perl CGI*, BPB Publications, 2009.

Suggested Practical List (If any): (30 Hours)

Practical exercises such as

HTML

1. Create an HTML document with following formatting – Bold, Italics, Underline, Colors, Headings, Title, Font and Font Width, Background, Paragraph, Line Brakes, Horizontal Line, Blinking text as well as marquee text.
2. Create an HTML document with Ordered and Unordered lists, Inserting Images, Internal and External linking
3. Create an HTML displaying this semester's time table.
4. Create a website with horizontal and vertical frames. Top horizontal frame showing

your college's name and logo. Bottom horizontal frame split into two vertical frames. The left frame with hyperlinks to pages related to faculty, courses, student activities, etc. The right frame showing corresponding pages based on the link clicked on the left frame.

5. Create a student registration form using HTML which has the following controls:
   I. Text Box
   II. Dropdown box
   III. Option/radio buttons
   IV. Check boxes
   V. Reset and Submit button

CSS

Create a webpage for your department with drop down navigation menu for faculty, courses, activities, etc.. Implement the webpage using styles, rules, selectors, ID, class.

Javascript

1. Create event driven programs for the following:
   e. Enter a number and on click of a button print its multiplication table.
   f. Print the largest of three numbers entered by the user.
   g. Find the factorial of a number entered by the user.
   h. Enter a list of positive numbers using the prompt terminated by a zero. Find the sum and average of these numbers.
2. Create a student registration form using text, radio button, check box, drop down box, text field and all other required HTML elements. Customise the CSS and javascript to input and validate all data. Create functions to perform validation of each element, example:
   d. Roll number is a 7-digit numeric value
   e. Name should be an alphabetical value(String)
   f. Non-empty and valid fields like DOB

jQuery and JSON

1. Change text color and contents using button click events using jQuery
2. Select elements using ID, class, elements name, attribute name
3. Run code on click events in jQuery

(Computer Science Courses for Undergraduate Programme of study with Computer Science discipline as one of the three Core Disciplines)

DISCIPLINE SPECIFIC CORE COURSE (DSC04): Operating Systems

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSC04: Operating Systems	**4**	**3**	**0**	**1**	Pass in Class XII	DSC 01 Programming using Python/ A course in C/C++/Python at plus 2 level.

Learning Objectives

This course introduces the students to Operating Systems and its importance in computer systems. The focus is to explain the common services provided by an operating system like process management, memory (primary, secondary & virtual) management, I/O management, file management. The course talks about the various functional components of the operating and their design.

Learning outcomes

On successful completion of the course, students will be able to

- gain knowledge of different concepts of the operating System and its components.
- learn about shell scripts and would be able to use the system in an efficient manner.

SYLLABUS OF DSC04

Unit 1 (4 hours)

Introduction: Operating Systems (OS) definition and its purpose, Multiprogrammed and Time Sharing Systems, OS Structure, OS Operations: Dual and Multi-mode, OS as resource manager.

Unit 2 (10 hours)

Operating System Structures: OS Services, System Calls: Process Control, File Management, Device Management, and Information Maintenance, Inter-process Communication, and Protection, System programs, OS structure- Simple, Layered, Microkernel, and Modular.

Unit 3 (9 hours)

Process Management: Process Concept, States. Process Control Block, Context Switch, Process scheduling, Schedulers, Overview of threads and Scheduling Algorithms: First Come First Served, Shortest-Job-First, Priority & Round-Robin.

Unit 4 (9 hours)

Memory Management: Physical and Logical address space, Swapping Contiguous memory allocation strategies - fixed and variable partitions, Segmentation, Paging, virtual memory: Demand Paging.

Unit 5 (8 hours)

File and Input / Output Device Management: File Concepts, File Attributes, File Access Methods, Directory Structure: Single-Level, Two-Level, Tree-Structured, and Acyclic-Graph Directories, Magnetic Disks, Solid-State Disks, Magnetic Tapes.

Unit 6 (5 hours)

Shell Scripting: Shell variables, parameter passing conditional statements, iterative statements, writing and executing shell scripts, utility programs (cut, paste, grep, echo, pipe, filter etc.)

Essential/recommended readings

1. Galvin, S. P. B., Gagne, G., *Operating System Concepts*, 9th edition, John Wiley Publications, 2016.
2. G. Nutt, Operating Systems, Pearson, 2009
3. Das, S., *Unix: Concepts and Applications*, 4th edition, TMH, 2009.

Additional References

1. Dhamdhere, D. M., *Operating Systems: A Concept-based Approach,* 2nd edition, Tata McGraw-Hill Education, 2017.
2. Kernighan, B. W., Pike, R., *The Unix Programming Environment*, Englewood Cliffs, NJ: Prentice-Hall, 1984.
3. Stallings, W., *Operating Systems: Internals and Design Principles*, 9th edition, Pearson Education, 2018.
4. Tanenbaum, A. S., *Modern Operating Systems.* 3rd edition, Pearson Education, 2007.

Suggested Practical List (If any): (30 Hours)

Practical exercises such as

1. Execute various LINUX commands for:
   i. Information Maintenance: wc, clear, cal, who, date, pwd
   ii. File Management: cat, cp, rm, mv, cmp, comm, diff, find, grep
   iii. Directory Management : cd, mkdir, rmdir, ls

2. Execute various LINUX commands for:
   i. Process Control: fork, getpid, ps
   ii. Communication: Input-output redirection, Pipe
   iii. Protection Management: chmod, chown, chgrp
3. Write a program(using fork() and/or exec() commands) where parent and child execute:
   i. same program, same code.
   ii. same program, different code.
   iii. before terminating, the parent waits for the child to finish its task.
4. Write a program to calculate sum of n numbers using Pthreads.
5. Write a program to generate a Fibonacci Series of numbers using Pthreads.
6. Write a program to implement best-fit and worst-fit allocation strategies
7. Write a program to copy files using system calls and using pthreads and compare timings.
8. Write a program to implement FCFS scheduling algorithm.
9. Write a program to implement SJF scheduling algorithm.
10. Write a program to implement non-preemptive priority based scheduling algorithm.

DISCIPLINE SPECIFIC CORE COURSE (A4): Data Mining-II

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
A4: Data Mining - II	**4**	**3**	**0**	**1**	Pass in Class XII	DSC01 Programming using Python, / GE1b

						Programming with Python / A1 Programming Fundamentals using Python ,Data Mining-I

Learning Objectives

The course introduces the students to the supervised and unsupervised learning techniques. Students will learn about the importance of ensemble methods, cluster analysis, anomaly detection and their applicability in mining patterns in real applications. At the end students will be exposed to two advanced topics: text mining and time-series mining. Students will use the learned topics in solving real applications using open-source software.

Learning outcomes

On successful completion of the course, students will be able to:

- Differentiate between partition-based, density-based and hierarchical clustering
- Build ensemble models to improve predictive performance of the classifier
- Identify anomalies and outliers using supervised and unsupervised techniques
- Analyze time-series data and extract patterns from the stamped data
- Mine textual data and do topic modeling

SYLLABUS OF A4

Unit 1 (9 hours)

Clustering: Partitioning Methods, Hierarchical Methods, Density-Based Methods, Comparison of different methods

Unit 2 (8 hours)

Ensemble Methods: Need of ensemble, Random Forests, Bagging and Boosting

Unit 3 (10 hours)

Anomaly Detection: Outliers and Outlier Analysis, Outlier Detection Methods, Statistical Approaches, Proximity-based and density-based outlier detection, Clustering-based approaches

Unit 4 (8 hours)

Mining Text Data: Document Preparation and Similarity, Clustering Methods for Text, Topic Modeling

Unit 5 (10 hours)

Stream Mining: Time series basics, Date Ranges, Frequencies, and Shifting, Resampling and moving windows functions, Decay function, Clustering stamped data: STREAM and CluStream

Essential/recommended readings

1. Tan P.N., Steinbach M, Karpatne A. and Kumar V. *Introduction to Data Mining,* 2nd edition, Pearson, 2019.
2. Zaki M. J. and Meira J. Jr. *Data Mining and Machine Learning: Fundamental Concepts and Algorithms*, 2nd edition, Cambridge University Press, 2020.
3. Aggarwal C. C. *Data Mining: The Textbook*, Springer, 2015.

Additional References

1. Han J. Kamber M. and Pei J. *Data Mining: Concepts and Techniques*, Morgan Kaufmann Publishers, 2011.
2. Dunham M. *Data Mining: Introductory and Advanced Topics*, Pearson, 2006.

Suggested Practicals List (If any): (30 Hours)

Practical exercise such as

1. Apply Partitioning Methods, Hierarchical Methods, Density-Based Methods for clustering on a data set and compare the performance of the obtained results using different metrics
2. Create an ensemble using Random Forest and show the impact of bagging and boosting on the performance
3. Apply different outlier-detection methods on a noisy dataset and compare their effectiveness in terms of outliers reported
4. Compute similarity between two documents after required document preparation
5. Considering a time-stamped data (sales data/weather data), compare the aggregate values visually using different moving windows function
6. Write a program to find the latent topics in a document using any topic modeling method and display top 5 terms that contribute to each topic along with their strength. Also, visualize the distribution of terms contributing to the topics.

Project: Students should be promoted to take up one project covering at least one unit of the syllabus on any UCI/kaggle/data.gov.in or a dataset verified by the teacher. This will allow the students to have a practical knowledge of how to apply the various skills learnt in the subject for a single problem/project.

Computer Science Courses for Undergraduate Programme of study with Computer Science discipline as one of the two Core Disciplines
(For e.g. courses for B.A. Programmes with Computer Science as Non-major discipline)

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSC04: Operating Systems	**4**	**3**	**0**	**1**	Pass in Class XII	DSC 01 Programming using Python/ A course in C/C++/Python at plus 2 level

Learning Objectives

This course introduces the students to Operating Systems and its importance in computer systems. The focus is to explain the common services provided by an operating system like process management, memory (primary, secondary & virtual) management, I/O management, file management. The course talks about the various functional components of the operating and their design.

Learning outcomes

On successful completion of the course, students will be able to

- gain knowledge of different concepts of the operating System and its components.
- learn about shell scripts and would be able to use the system in an efficient manner.

SYLLABUS OF DSC04

Unit 1 (4 hours)

Introduction: Operating Systems (OS) definition and its purpose, Multiprogrammed and Time Sharing Systems, OS Structure, OS Operations: Dual and Multi-mode, OS as resource manager.

Unit 2 (10 hours)

Operating System Structures: OS Services, System Calls: Process Control, File Management, Device Management, and Information Maintenance, Inter-process Communication, and Protection, System programs, OS structure- Simple, Layered, Microkernel, and Modular.

Unit 3 (9 hours)

Process Management: Process Concept, States. Process Control Block, Context Switch, Process scheduling, Schedulers, Overview of threads and Scheduling Algorithms: First Come First Served, Shortest-Job-First, Priority & Round-Robin.

Unit 4 (9 hours)

Memory Management: Physical and Logical address space, Swapping Contiguous memory allocation strategies - fixed and variable partitions, Segmentation, Paging, virtual memory: Demand Paging.

Unit 5 (8 hours)

File and Input / Output Device Management: File Concepts, File Attributes, File Access Methods, Directory Structure: Single-Level, Two-Level, Tree-Structured, and Acyclic-Graph Directories, Magnetic Disks, Solid-State Disks, Magnetic Tapes.

Unit 6 (5 hours)

Shell Scripting: Shell variables, parameter passing conditional statements, iterative statements, writing and executing shell scripts, utility programs (cut, paste, grep, echo, pipe, filter etc.)

Essential/recommended readings

1. Galvin, S. P. B., Gagne, G., *Operating System Concepts*, 9th edition, John Wiley Publications, 2016.
2. G. Nutt, Operating Systems, Pearson, 2009
3. Das, S., *Unix: Concepts and Applications*, 4th edition, TMH, 2009.

Additional References

1. Dhamdhere, D. M., *Operating Systems: A Concept-based Approach,* 2nd edition, Tata McGraw-Hill Education, 2017.
2. Kernighan, B. W., Pike, R., *The Unix Programming Environment*, Englewood Cliffs, NJ: Prentice-Hall, 1984.
3. Stallings, W., *Operating Systems: Internals and Design Principles*, 9th edition, Pearson Education, 2018.
4. Tanenbaum, A. S., *Modern Operating Systems.* 3rd edition, Pearson Education, 2007.

Suggested Practical List (If any): (30 Hours)

Practical exercises such as

1. Execute various LINUX commands for:
   i. Information Maintenance: wc, clear, cal, who, date, pwd
   vi. File Management: cat, cp, rm, mv, cmp, comm, diff, find, grep
   vii. Directory Management : cd, mkdir, rmdir, ls

2. Execute various LINUX commands for:

vii. Process Control: fork, getpid, ps

viii. Communication: Input-output redirection, Pipe

ix. Protection Management: chmod, chown, chgrp

3. Write a program(using fork() and/or exec() commands) where parent and child execute:

vii. same program, same code.

viii. same program, different code.

ix. before terminating, the parent waits for the child to finish its task.

4. Write a program to calculate sum of n numbers using Pthreads.

5. Write a program to generate a Fibonacci Series of numbers using Pthreads.

6. Write a program to implement best-fit and worst-fit allocation strategies

7. Write a program to copy files using system calls and using pthreads and compare timings.

8. Write a program to implement FCFS scheduling algorithm.

9. Write a program to implement SJF scheduling algorithm.

10. Write a program to implement non-preemptive priority based scheduling algorithm.

SEMESTER-5

DEPARTMENT OF COMPUTER SCIENCE
[UG Programme for Bachelor in Computer Science (Honours)]

DISCIPLINE SPECIFIC CORE COURSE - 13 (DSC-13) : Algorithms and Advanced Data Structures

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
DSC 13 Algorithms and Advanced Data Structures	**4**	**3**	**0**	**1**	Pass in Class XII	DSC 07 Data Structures with C++, DSC 10 Design and Analysis of Algorithms

Learning Objectives

This course is designed to build upon the fundamentals in data structures and algorithm design and gain exposure to more data structures and algorithms for new problems.

Learning outcomes

On successful completion of the course, students will be able to:

- Comprehend and use data structures for lists.
- Use hash tables for dictionaries.
- Comprehend and use data structures and algorithms for string matching.
- Apply disk based data structures.
- Implement and analyze advanced data structures and algorithms for graphs.
- Describe the purpose of randomization in data structures and algorithms.

Unit 1 (4 hours)

List and Iterator ADTs: Vectors, Lists, Sequences

Unit 2 (6 hours)

Hash Tables, Dictionaries: Hash Functions, Collision resolution schemes.

Unit 3 (8 hours)

Strings: String Matching: KMP algorithm; Tries: Standard Tries, Compressed Tries, Suffix Tries, Search Engines

Unit 4 (8 hours)

More on Trees: 2-4 Trees, B Trees

Unit 5 (8 hours)

More on Graphs: Bellman Ford Algorithm, Union Find Data Structures - application Kruskal's algorithm

Unit 6 (6 hours)

Randomization: Randomized Quicksort, Randomized Select, Skip lists

Unit 7 (5 hours)

Network Flows: Ford Fulkerson algorithm for max flow problem.

Essential/recommended readings

1. Goodrich, M.T, Tamassia, R., & Mount, D. *Data Structures and Algorithms Analysis in C++*, 2nd edition, Wiley, 2011.
2. Cormen, T.H., Leiserson, C.E., Rivest, R. L., Stein C. *Introduction to Algorithms*, 4th edition, Prentice Hall of India, 2022.
3. Kleinberg, J., Tardos, E. *Algorithm Design*, 1st edition, Pearson, 2013.
4. Drozdek, A. *Data Structures and Algorithms in C++*, 4th edition, Cengage Learning. 2012.

Practical List : (30 Hours)

Practical exercises such as

1. Write a program to sort the elements of an array using Randomized Quick sort (the program should report the number of comparisons).
2. Write a program to find the ith smallest element of an array using Randomized Select.
3. Write a program to determine the minimum spanning tree of a graph using Kruskal's algorithm.
4. Write a program to implement the Bellman Ford algorithm to find the shortest paths from a given source node to all other nodes in a graph.

5. Write a program to implement a B-Tree.
6. Write a program to implement the Tree Data structure, which supports the following operations:
   I. Insert
   II. Search
7. Write a program to search a pattern in a given text using the KMP algorithm.
8. Write a program to implement a Suffix tree.

DISCIPLINE SPECIFIC CORE COURSE – 14 (DSC-14): Theory of Computation

Credit distribution, Eligibility and Prerequisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
DSC 14 Theory of Computation	**4**	**3**	**0**	**1**	Pass in Class XII	DSC04 Object Oriented Programming with C++ / GE1a Programming using C++ /A course in C/C++ at plus 2 level

Learning Objectives

This course introduces formal models of computation, namely, finite automaton, pushdown automaton, and Turing machine; and their relationships with formal languages. make students aware of the notion of computation using abstract computing devices. Students will also learn about the limitations of computing machines as this course addresses the issue of which problems can be solved by computational means (decidability vs undecidability

Learning outcomes

On successful completion of the course, students will be able to:

- design a finite automaton, pushdown automaton or a Turing machine for a problem at hand.

- apply pumping lemma to prove that a language is non-regular/non-context-free.
- describe limitations of a computing machines and
- recognize what can be solved and what cannot be solved using these machines.

SYLLABUS OF DSC 14

Unit 1 (7 hours)

Introduction: Alphabets, string, language, basic operations on language, concatenation, union, Kleene star.

Unit 2 (15 hours)

Finite Automata and Regular: Regular expressions, Deterministic Finite Automata (DFA), Non-deterministic Finite Automata (NFA), relationship between NFA and DFA, Transition Graphs (TG), properties of regular languages, the relationship between regular languages and finite automata, pumping lemma, Kleene's theorem.

Unit 3 (15 hours)

Context-Free Languages (CFL): Context-Free Grammars (CFG), deterministic and non-deterministic Pushdown Automata (PDA), relationship between CFG and PDA, parse trees, leftmost derivation, Ambiguities in grammars, pumping lemma for CFL, properties of CFL, Chomsky Normal Form.

Unit 4 (8 hours)

Turing Machines and Models of Computations: Turing machine as a model of computation, configuration of Turing machine, Recursive and recursively enumerable languages, Church Turing Thesis, Universal Turing Machine, decidability, Halting problem.

Essential/recommended readings

1. Harry R. Lewis and Christos H. Papadimitriou, *Elements of the Theory of Computation*, 2nd Edition, Prentice Hall of India (PHI), 2002
2. Daniel I.A. Cohen, *Introduction to Computer Theory*, 2nd Edition, Wiley India Pvt. Ltd., 2011.

Additional References

1. J.E. Hopcroft, R. Motwani, and J.D. Ullman, *Introduction to Automata Theory, Languages and Computation*, 3rd edition, Addison Wesley, 2006.
2. Peter Linz, *An Introduction to Formal Languages and Automata*, 6th edition, Jones & Bartlett Learning, 2017.
3. Michael Sipser, *Introduction to the Theory of Computation*, Cengage, 2014

DISCIPLINE SPECIFIC CORE COURSE– 15 (DSC-15): Software Engineering

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
DSC 15 Software Engineering		**3**	**0**	**1**	Pass in Class XII	DSC01 Programming using Python/ DSC04 Object Oriented Programming with C++/A course in C/C++ or Python at plus 2 level

Learning Objectives

This course will acquaint the student with different approaches and techniques used to develop good quality software. The course includes learning of various software development process frameworks, requirement analysis, design modeling, qualitative and quantitative software metrics, risk management, and testing techniques.

Learning outcomes

On successful completion of the course, a student will be able to:

- describe the software development models.
- analyse and model customer requirements and build design models.
- estimate and prepare schedule for software projects.
- analyse the impact of risks involved in software development.
- design and build test cases, and perform software testing.

SYLLABUS OF DSC 15

Unit 1 (9 hours)

Introduction: Software Engineering - A Layered Approach; Software Process – Process Framework, Umbrella Activities; Process Models – Waterfall Model, Incremental Model, and Evolutionary process Model (Prototyping, Spiral Model); Introduction to Agile, Agile Model – Scrum.

Unit 2 (6 hours)

Software Requirements Analysis and Specification: Use Case Approach, Software Requirement Specification Document, Flow-oriented Model, Data Flow Model

Unit 3 (8 hours)

Design Modeling: Translating the Requirements model into the Design Model, The Design Process, Design Concepts - Abstraction, Modularity and Functional Independence; Structure Charts.

Unit 4 (7 hours)

Software Metrics and Project Estimation: Function based Metrics, Software Measurement, Metrics for Software Quality; Software Project Estimation (FP based estimations); Project Scheduling (Timeline charts, tracking the schedule).

Unit 5 (5 hours)

Quality Control and Risk Management: Quality Control and Quality Assurance, Software Process Assessment and Improvement; Software Risks, Risk Identification, Risk Projection, Risk Mitigation, Monitoring and Management.

Unit 6 (10 hours)

Software Testing: Strategic Approach to Software Testing, Unit Testing, Integration Testing, Validation Testing, System Testing; Black-Box and White Box Testing, Basis Path Testing.

Essential/recommended readings

1. Pressman, R.S. *Software Engineering: A Practitioner's Approach*, 9th edition, McGraw-Hill, 2020.
2. Aggarwal, K.K., Singh, Y. *Software Engineering*, 3rd edition, New Age International Publishers, 2007.
3. Jalote, P. An Integrated Approach to Software Engineering, 3rd Edition, Narosa Publishing House, 2005.

Additional References

1. Sommerville, I. *Software Engineering*, 9th edition, Addison Wesley, 2011.
2. *The Definitive Guide to Scrum: The Rules of the Game*, Ken Schwaber, Jeff Sutherland, July 2016.

Suggested Practical List :(30 Hours)

Practical exercises such as

The students document, design and code a module of a Software Project using an appropriate Software Process model. The Software Project should include the use of software engineering tools and include.

1. Problem Statement, Process Model
2. Requirement Analysis: Create Data Flow, Data Dictionary, Use Cases, Sequence Diagram, Software Requirement Specification Document
3. Project Management: Timeline Chart, Compute FP, Effort, Cost, Risk Table.
4. Design Engineering: Architectural Design, Pseudocode of a small module.
5. Coding: Develop at least a single module using any programming Language
6. Testing: Compute Basic path set for at least one module from a project, Generate test cases.

Some of the sample projects are given below:

1. Criminal Record Management: Implement a criminal record management system for jailers, police officers and CBI officers
2. DTC Route Information: Online information about the bus routes and their frequency and fares.
3. Car Pooling: To maintain a web-based intranet application that enables the corporate employees within an organization to avail the facility of carpooling effectively.
4. Patient Appointment and Prescription Management System
5. Organized Retail Shopping Management Software
6. Online Hotel Reservation Service System
7. Examination and Result computation System
8. Automatic Internal Assessment System
9. Parking Allocation System

Computer Science Courses for Undergraduate Programme of study with Computer Science discipline Elective

DISCIPLINE SPECIFIC ELECTIVE COURSE: Data Mining-II

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Data Mining-II	**4**	**3**	**0**	**1**	Pass in Class XII	DSC01 Programming using Python, / GE1b Programming with Python / A1 Programming Fundamentals using Python ,Data Mining-I

Learning Objectives

The course introduces the students to the important supervised and unsupervised learning techniques. Students will learn about the importance of ensemble methods, cluster analysis, anomaly detection and their applicability in mining patterns in real applications. At the end students will be exposed to two advanced topics: text mining and time-series mining. Students will use the learned topics in solving real applications using Open-source software.

Learning outcomes

On successful completion of the course, students will be able to:

- Differentiate between partition-based, density-based and hierarchical clustering.
- Build ensemble models to improve predictive performance of the classifier.
- Identify anomalies and outliers using supervised and unsupervised techniques.
- Analyze time-series data and extract patterns from the stamped data.
- Mine textual data and do topic modelling.

SYLLABUS OF DSE

Unit 1 (10 hours)

Clustering: Partitioning Methods, Hierarchical Methods, Density-Based Methods, Comparison of different methods

Unit 2 (8 hours)

Ensemble Methods: Need of ensemble, Random Forests, Bagging and Boosting

Unit 3 (10 hours)

Anomaly Detection: Outliers and Outlier Analysis, Outlier Detection Methods, Statistical Approaches, Proximity-based and density-based outlier detection, Clustering-based approaches

Unit 4 (7 hours)

Mining Text Data: Document Preparation and Similarity, Clustering Methods for Text, Topic Modeling

Unit 5 (10 hours)

Stream Mining: Time series basics, Date Ranges, Frequencies, and Shifting, Resampling and moving windows functions, Decay function, Clustering stamped data**:** STREAM and CluStream

Essential/recommended readings

1. Tan P.N., Steinbach M, Karpatne A. and Kumar V. *Introduction to Data Mining,* 2nd edition, Pearson, 2019.
2. Zaki M. J. and Meira J. Jr. *Data Mining and Machine Learning: Fundamental Concepts and Algorithms*, 2nd edition, Cambridge University Press, 2020.
3. Aggarwal C. C. *Data Mining: The Textbook*, Springer, 2015.

Additional References

1. Han J. Kamber M. and Pei J. *Data Mining: Concepts and Techniques*, Morgan Kaufmann Publishers, 2011.
2. Dunham M. *Data Mining: Introductory and Advanced Topics*, Pearson, 2006.

Suggested Practical List : (30 Hours)

Practical exercises such as

Use a dataset of your choice from Open Data Portal (https:// data.gov.in/, UCI repository or a dataset verified by the teacher) or load from scikit, seaborn library for the following exercises to practice the concepts learnt.

1. Apply Partitioning Methods, Hierarchical Methods, Density-Based Methods for clustering on a data set and compare the performance of the obtained results using different metrics.
2. Create an ensemble using Random Forest and show the impact of bagging and boosting on the performance.

3. Apply different outlier-detection methods on a noisy dataset and compare their effectiveness in terms of outliers reported.
4. Compute similarity between two documents after required document preparation.
5. Considering a time-stamped data (sales data/weather data), compare the aggregate values visually using different moving windows function.
6. Write a program to find the latent topics in a document using any topic modeling method and display top 5 terms that contribute to each topic along with their strength. Also, visualize the distribution of terms contributing to the topics.

Project: Students are encouraged to work on a good dataset in consultation with their faculty and apply the concepts learned in the course.

DISCIPLINE SPECIFIC ELECTIVE COURSE: Data Privacy

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Data Privacy	**4**	**3**	**0**	**1**	Pass in Class XII	NIL

Learning Objectives

This course aims to provide students with an ability to identify privacy related aspects of data uses(including attacks on data privacy), evaluate proposed mechanisms for privacy protection and relate to ethical issues related to data privacy.

On successful completion of the course, students will be able to:

- Understand the basic principles of data privacy and the implications of data breaches.
- Identify and evaluate different methods of protecting sensitive data.
- Explain the role of privacy regulations in safeguarding personal information.
- Implement basic cryptographic techniques to secure data.
- Apply data anonymization techniques to protect personal information.
- Analyze the ethical considerations in data privacy

SYLLABUS OF DSE

Unit 1 (10 hours)

Introduction to Data Privacy and Privacy Regulations: Notion of data privacy, Historical context of data privacy, Types of sensitive data, Privacy laws and regulations.

Unit 2 (15 hours)

Data Privacy Attacks, Cryptography and Data Protection: Type of Attacks/ Data Breaches on Data Privacy, Impact of Data Breaches / Attacks, Introduction to cryptography, Symmetric and asymmetric encryption, Hashing and digital signatures.

Unit 3 (10 hours)

Data Collection, Use and Reuse: Harms Associated with Data collections, use and reuse, Introduction to data anonymization, Data Anonymization Techniques for anonymizing data, Challenges in anonymizing data

Unit 4 (10 hours)

Ethical considerations in Data Privacy: Privacy and Surveillance, Ethics of Data Collection and Use, Bias and discrimination in data analysis

Essential/recommended readings

1. Ronald Leenes, Rosamunde van Brakel, and Serge Gutwirth: *Data Protection and Privacy: The Age of Intelligent Machines*, Hart Publishing, 2017.
2. Naavi: *Personal Data Protection Act of India (PDPA 2020)*: Be Aware, Be Ready and Be Compliant, Notion Press, 2020.
3. Ravinder Kumar Gaurav Goyal, *The Right to Privacy in India: Concept and Evolution*, Publisher: Lightning Source, 2016.

Additional References

1. https://onlinecourses.nptel.ac.in/noc22_cs37/preview
2. https://www.coursera.org/learn/northeastern-data-privacy/home/info

Suggested Practical List : (30 Hours)

Practical exercises such as

1. Data Privacy Audit: Students can conduct a data privacy audit of a company or organization to identify potential vulnerabilities and risks in their data privacy practices.

2. Privacy Impact Assessment: Students can conduct a privacy impact assessment (PIA) of a new technology or system to identify potential privacy risks and develop strategies to mitigate them.
3. Regulation Compliance: Students can explore the requirements of the Data Protection Regulations and develop a plan for ensuring compliance with the regulation.
4. Cryptography: Students can learn about different cryptographic techniques and tools, such as encryption, hashing, and digital signatures, and implement them in practice.
5. Anonymization Techniques: Students can learn about data anonymization techniques, such as k-anonymity, differential privacy, and data masking, and apply them to a real-world dataset.
6. Privacy Policy Analysis: Students can analyze the privacy policies of different companies and identify gaps or areas for improvement.
7. Privacy-Enhancing Technologies: Students can explore privacy-enhancing technologies (PETs), such as virtual private networks (VPNs), Tor, and secure messaging apps, and evaluate their effectiveness in protecting privacy.
8. Privacy Breach Response Plan: Students can develop a privacy breach response plan for a company or organization, including steps to take in the event of a data breach and strategies for communicating with affected parties.
9. Ethical Considerations: Students can explore ethical considerations in data privacy, such as the balance between privacy and security, the impact of data collection and analysis on marginalized communities, and the role of data ethics in technology development.
10. Case Studies: Students can analyze case studies of privacy breaches or successful privacy protection strategies, and identify key lessons and takeaways.

DISCIPLINE SPECIFIC ELECTIVE COURSE: Unix Network Programming

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	
		Lecture	Tutorial	Practical/ Practice		
Unix Network Programming	**4**	**3**	**0**	**1**	Pass in Class XII	DSC 04 Object Oriented Programming with C++/ GE 1a Programming using C++ / GE1b Programming with Python/ DSC 01 Programming using Python/ GE 3b: Java Programming

Learning Objectives

This course introduces the concepts of Internet protocols, ports used during communication, Client/Server concepts and various transport protocols used in computer network applications and services. The objective is to equip the students with technical knowledge of it comprises of the study of the sockets used with TCP and UDP.

Learning outcomes

On successful completion of the course, students will be able to:

- Describe and analyze the various Internet Transport layer protocols used in TCP AND UDP.
- Comprehend the concepts and structures of both TCP based connection-oriented and UDP based connectionless client server applications.
- Write various real-life client-server applications using socket programming.
- Modify, maintain and extend the present internet client-server applications and write any new type of internet applications to suit the current needs of Internet users.

SYLLABUS OF DSE

Unit 1 (6 hours)

Introduction Basics of Client Server applications, Example of day time client server, concurrent servers, protocols, sockets, port numbers.

Unit 2 (17 hours)

Connection-oriented Socket Applications: Elementary TCP sockets – Socket, connect, bind, listen, accept, fork and exec function, close function, Socket Address Structures, Byte Ordering and Manipulation Functions, TCP Client and Server for Echo, Signal Handling in case of crashing and rebooting of server, Shutdown process function. Socket Options: Getsockopt and stockpot functions, Socket states, Generic socket option.

Unit 3 (15 hours)

Connectionless Socket Applications: TCP-oriented basic concurrent client server applications, UDP oriented Echo client and server application, Handling of errors like lost datagram, Lack of flow control with UDP, determining outgoing interface with UDP.

Unit 4 (7 hours)

Elementary name and Address conversions: Domain Name System, socket functions like gethostbyname, gethostbyname2, gethostbyaddr function, uname function, gethostname function, getservbyname and getservbyport functions.

Essential/recommended readings

1. W. Richard Stevens, Bill Fenner, Andrew M. Rudoff, *Unix Network Programming*, The sockets Networking API, Vol. 1, 3rd Edition, PHI.
2. B. A. Forouzan: *Data Communications and Networking*, THM Publishing Company Ltd
3. R. Stevens, *Unix Network Programming*, PHI 2nd Edition

Suggested Practical List : (30 Hours)

Practical exercises such as

1. Implement TCP Echo client and TCP Echo server (Iterative).
2. Implement TCP Echo client and TCP Echo server (Concurrent).
3. Implement TCP daytime client and TCP daytime server (Iterative).
4. Implement TCP daytime client and TCP daytime server (concurrent).
5. Implement UDP Echo Client and UDP Echo Server.
6. Implement UDP daytime Client and UDP daytime server.
7. Implement TCP client and server (concurrent) where client gets input from the user and sends it to server. Server displays it on the screen. Server then gets another input from the user and sends it to client. Client displays it on the screen. The process continues till server or client sends “bye” to the other party.
8. Implement TCP client and server (concurrent) where client requests server to transfer a file. Assume file is smaller than 1K size. If the file is present on the server, it is sent to the client otherwise an error message is sent to client. Client copies the file on the hard disk and disconnects.
9. Implement UDP client and UDP server where server displays the IP address and port number of the client sending the datagram. Client sends a datagram (size 64 bytes) three times to the same server. Server sends the message back to client. Client reports the time elapsed in sending and receiving of the message. Use connected UDP sockets.
10. Write a program to
    a) display name of the host
    b) all IP addresses of the host.
    c) Check whether FTP and HTTP services are running on the system.
    d) Display the name of the service running on port number specified by user.

COMMON POOL OF GENERIC ELECTIVES (GE) COURSES

(For all the Generic Elective courses offered by your department, please put it in the format provided below)

GENERIC ELECTIVES (GE-5a): Operating Systems

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
GE-5a Operating Systems	**4**	**3**	**0**	**1**	Pass in Class XII	Knowledge of Programming in C/C++/Java/Python at class XII level or above

Learning Objectives

The course introduces Operating System and its importance in computer systems. The focus is to explain the common services provided by an operating system like process management, memory (primary, secondary & virtual) management, I/O management, file management. The course talks about the various functional components of the operating and their design.

Learning outcomes

On successful completion of the course, students will be able to gain knowledge of different concepts of the operating System and its components. They would learn about shell scripts and would be able to use the system in an efficient manner.

SYLLABUS OF GE-5a

Unit 1 (5 hours)

Introduction: Operating Systems (OS) definition and its purpose, Multiprogrammed and Time-Sharing Systems, OS Structure, OS Operations: Dual and Multi-mode, OS as resource manager.

Unit 2 (6 hours)

Operating System Structures: OS Services, System Calls: Process Control, File Management, Device Management, and Information Maintenance, Inter-process Communication, and Protection, System programs, OS structure- Simple, Layered, Microkernel, and Modular.

Unit 3 (10 hours)

Process Management: Process Concept, States. Process Control Block, Context Switch, Process scheduling, Schedulers, Overview of threads and Scheduling Algorithms: First Come First Served, Shortest-Job-First, Priority & Round-Robin.

Unit 4 (10 hours)

Memory Management: Physical and Logical address space, Swapping Contiguous memory allocation strategies - fixed and variable partitions, Segmentation, Paging, virtual memory: Demand Paging.

Unit 5 (8 hours)

File and Input / Output Device Management: File Concepts, File Attributes, File Access Methods, Directory Structure: Single-Level, Two-Level, Tree-Structured, and Acyclic-Graph Directories, Magnetic Disks, Solid-State Disks, Magnetic Tapes.

Unit 6 (6 hours)

Shell Scripting: Shell variables, parameter passing conditional statements, iterative statements, writing and executing shell scripts, utility programs (cut, paste, grep, echo, pipe, filter etc.)

Essential/recommended readings

1. Galvin, S. P. B., Gagne, G., *Operating System Concepts*, 9th edition, John Wiley Publications, 2016.
2. G. Nutt, Operating Systems, Pearson, 2009

Additional References

2. Kernighan, B. W., Pike, R., *The Unix Programming Environment*, Englewood Cliffs, NJ: Prentice-Hall, 1984.
3. Stallings, W., *Operating Systems: Internals and Design Principles*, 9th edition, Pearson Education, 2018.
4. Tanenbaum, A. S., *Modern Operating Systems.* 3rd edition. Pearson Education, 2007.

Suggested Practical List : (30 Hours)

Practical exercises such as

1. Usage of following commands: ls, pwd, cat, who, rm, mkdir, rmdir,cd.

2. Usage of following commands: cal, cat(append), cat(concatenate), mv, cp, man, date.
3. Usage of following commands: chmod, grep, bc.
4. Write a shell script to display date in the mm/dd/yy format.
5. Write a shell script to display the multiplication table any number.
6. Write a shell script to find the factorial of a given number.
7. Program to show the pyramid of special character "*".
8. Write a shell script to find the sum of digits of a given number.
9. Write a shell script to perform the tasks of basic calculator.
10. Write a shell script to find the power of a given number.
11. Write a shell script to check whether the number is Armstrong or not.
12. Write a shell script to find the GCD (greatest common divisor) of two numbers.
13. Write a shell script to check if the number entered at the command line is prime or not.
14. Write a shell script to display on the screen sorted output of "who" command along with the total number of users.
15. Write a shell script to accept a login name. If not a valid login name display message – "Entered login name is invalid".
16. Write a shell script to compare two files and if found equal asks the user to delete the duplicate file.
17. Write a shell script to merge the contents of three files, sort the contents and then display them page by page.
18. Write a shell script to check whether the file have all the permissions or not.
19. Write a shell script to modify "cal" command to display calendars of the specified months.
20. Write a shell script to modify "cal" command to display calendars of the specified range of months.

GENERIC ELECTIVES (GE-5b): Advanced Web Programming

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
GE5b: Advanced Web Programming	**4**	**3**	**0**	**1**	Pass in Class XII	Knowledge of HTML, CSS

Learning Objectives

The course aims to familiarize the students with the concepts and techniques of server side web programming. This will enable the students to create dynamically generated web pages using HTML, PHP, MySql and JQuery.

Learning outcomes

On completion of this course, the student will be able to:

- develop interactive and dynamic websites.
- write programs to communicate with the server using GET and POST methods
- learn to connect and manipulate databases using MySql
- validate server-side/backend data

SYLLABUS OF GE-5b

Unit 1 (7 hours)

Introduction to PHP: Basic syntax, defining variables and constants, data types including arrays, operators and expressions, decision making statements, constructs for iterations.

Unit 2 (5 hours)

String Handling: Creating a string and accessing its content, searching and replacing content of a string, and other built-in functions.

Unit 3 (12 hours)

Handling HTML Form with PHP: Creating a form, submitting data to the server at the backend using GET and POST methods, GET vs POST methods, PHP global functions.

Unit 4 (15 hours)

Database: Connectivity with MySQL: Connectivity with database, database creation, creating tables, create, retrieve, update, and delete (CRUD) operations

Unit 5 (6 hours)

jQuery and JSON: Introduction to jQuery syntax (selectors, events, AJAX, JSON).

Essential/recommended readings

1. Nixon, R. Learning PHP, MySQL & JavaScript with jQuery, CSS and HTML5, O'Reilly, 2018.
2. Holzner S. PHP: The Complete Reference, McGraw Hill, 2017
3. Murach J, Murach's PHP and MySQL, 2nd edition, Mike Murach & Associates, 2014.
4. Duckett, J. JavaScript and JQuery: Interactive Front-End Web Development, Wiley, 2014.

Additional References

1. https://www.w3schools.com/php/default.asp

2. https://www.tutorialspoint.com/php/index.htm

Suggested Practical List : (30 Hours)

Practical exercises such as

1. Write a PHP script to reverse the digits of a number.
2. Create a web page containing two text boxes and a button named "Evaluate". When the user enters numbers in the text boxes and clicks on the "Evaluate" button, a function should evaluate the sum of the numbers and display the result.
3. Write a PHP script to perform following string operations using in-built functions and built an interactive web page having buttons for each of the following operation:
    a. Find the length of a string
    b. Find a substring from a string
    c. Replace text within a string
    d. Remove whitespace and other predefined characters from both sides of a string.
    e. Check if a value is a string
    f. Convert the first character of each word in a string into uppercase.
4. Design a Login form and validate that form using PHP code. Display error message box when data is not valid otherwise redirect to the next page and display "Welcome username!".
5. Design a student registration form, using appropriate input fields consisting of following:
    a. First Name
    b. Last Name
    c. Gender
    d. Roll Number
    e. Phone Number
    f. Course

Submit and retrieve the form data using $_POST, $_GET variable.

6. Write PHP Code to make connection to MySql database, create database and tables and perform insertion, deletion, and retrieval of the data (Using SQL operations like .JOIN, ORDER BY, GROUP BY) Display the messages such as "The record is added in the database!" when data is inserted into the database, "A record is deleted from the database" when data is deleted from the database. Use appropriate button names such as Add Data, Delete Data, and Display Data.

jQuery and JSON

1. Change text color and contents using button click events using jQuery
2. Select elements using ID, class, elements name, attribute name
3. Run code on click events in jQuery

4. Handle HTML form, store the data in JSON object, pass them to another page and display it there using jQuery/Javascript

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
GE5c: Java Based Web App Development	**4**	**3**	**0**	**1**	Pass in Class XII	DSC 04 Object Oriented Programming with C++/ GE 1a Programming using C++ / GE1b Programming with Python/ DSC 01 Programming using Python/ GE 3b: Java Programming / A programming course at class XII level

Learning Objectives

The course aims to familiarize the students with the concepts and techniques of web app development based on Java. The students will learn about database connectivity, use of HTTP protocol, client side programming, and use of servlets and JSP for server side programming.

Learning outcomes

On successful completion of this course, students will be able to:

- develop an understand of client-server architecture, HTTP protocol, and web application components.
- connect an application to database and perform basic database operations.
- create servlets and JSP for web applications
- deploy web applications

SYLLABUS OF GE-5c

Unit 1 (8 hours)

Review of Programming Language: Programming Constructs, Data types, Operators, Concepts of Class, Interface, Inheritance, Exception Handling, Util package, Multithreading, event handling.

Unit 2 (10 hours)

Java Database Connections: Database connectivity, Connection, statement, result set object, Metadata, Connection pooling, CRUD operations, Prepared and callable statements

Unit 3 (15 hours)

Introduction to servlets: Concepts of Streams, events and listener, recap of HTML, CSS, XML, Servlet package and interface, life cycle of servlet, deployment descriptor, Filters, HHTP and Generic servlet, request dispatcher, Request Response classes, Dynamic page designing using servlet.

Unit 4 (12 hours)

Introduction to JSP: JSP Life cycle, tags in JSP, custom tags, Expression Language, Introduction to Struts Framework, Implicit objects, database access using JSP

Essential/recommended readings

1. Herbert Schildt, *Java : The Complete Reference***,** 12th edition, McGraw-Hill Education, 2021.
2. Hans Bergsten, *Java Server Pages*, 3rd edition, O′Reilly, 2003.
3. Jim Keogh, *The Complete Reference J2EE*, 1st edition, McGraw-Hill Education, 2017.

Suggested Practical List : (30 Hours)

Practical exercises such as

1. Setting up the development environment: Install Java Development Kit (JDK), Eclipse IDE, and Apache Tomcat web server. Create a new web project in Eclipse.
2. Writing and deploying a "Hello World" servlet: Create a simple servlet that prints "Hello World" on the web page. Deploy the servlet on Tomcat and test it in a web browser.
3. Handling HTTP requests and responses: Write a servlet that reads input from HTTP requests and sends output as HTTP responses.
4. Creating a JSP page: Create a JSP page that displays dynamic.
5. Write a servlet that handles form submissions and saves the data to a database using JDBC.
6. Write a servlet that implements user authentication and authorization using a database.
7. Creating a web application using MVC architecture: Create a web application using Model-View-Controller (MVC) architecture. Use servlets as controllers, JSP pages as views.
8. Deploying a web application to a server: Configure and deploy a web application to a server using Apache Tomcat Manager or other deployment tools.

(Computer Science Courses for Undergraduate Programme of study with Computer Science discipline as one of the three Core Disciplines)

DISCIPLINE SPECIFIC CORE COURSE (DSC-5): Database Management Systems

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
DSC 5: Database Management Systems	**4**	**3**	**0**	**1**	Pass in Class XII	NIL

Learning Objectives

The course introduces the students to the fundamentals of database management system and its applications. Emphasis is given on the popular relational database system. Students will learn about the importance of database structure and its designing using Entity Relationship diagram and formal approach using normalization. Basic concepts of file indexing and transaction processing will be taught. The course would give students hands-on practice of structured query language to create, manipulate and implement a relational database.

Learning outcomes

On successful completion of the course, students will be able to:

- Use relational database management software to create and manipulate the database.
- Create conceptual data models using entity relationship diagrams for modeling real-life situations and map it to corresponding relational database schema.
- Use the concept of functional dependencies to remove redundancy and update anomalies.
- Apply normalization theory to get a normalized database scheme to get anomalies free database.
- Write queries in relational algebra.
- Implement relational databases and formulate queries for data retrieval and data update problems using SQL.
- Learn the importance of index structures and concurrent execution of transactions in database systems.

SYLLABUS OF DSC-5

Unit 1 (5 hours)

Introduction to Database: Database, characteristics of database approach, data models, database management system, three-schema architecture, components of DBMS, data independence, and file system approach vs database system approach.

Unit 2 (6 hours)

Entity Relationship Modeling: Conceptual data modeling - motivation, entities, entity types, attributes, relationships, relationship types, constraints on relationship, Entity Relationship diagram as conceptual data model.

Unit 3 (6 hours)

Relational Data Model: Data anomalies, Relational Data Model - Characteristics of a relation, schema-instance distinction, types of keys, relational integrity constraints. Relational algebra operators like selection, projection, cartesian product, join and write queries using them.

Unit 4 (8 hours)

Structured Query Language (SQL): DDL to create database and tables, table constraints, DML, Querying in SQL to retrieve data from the database, aggregation functions group by and having clauses, generate and query views.

Unit 5 (10 hours)

Database Design: Mapping an Entity Relationship diagram to corresponding relational database scheme, functional dependencies and Normal forms, 1NF, 2NF, and 3NF decompositions and desirable properties of them.

Unit 6 (10 hours)

File indexing and Transaction Processing: Need of file indexes, types of indexes, file organizations, single- and multi-level indexing, concurrent execution of transactions, ACID properties, need of data recovery.

Essential/recommended readings

1. Elmasri, R., Navathe, B. S., *Fundamentals of Database Systems*, 7th edition, Pearson Education, 2016.
2. Murach, J., *Murach's MySQL,* 3th edition, Pearson, 2019.

Additional References

1. Connolly, T. M., Begg, C. E., *Database Systems: A Practical Approach to Design, Implementation, and Management*, 6th edition, Pearson, 2019.
2. Ramakrishnan, R., Gehrke, J., *Database Management Systems*, 3rd edition, McGraw-Hill, 2014.
3. Silberschatz, A., Korth, H.F., Sudarshan S., *Database System Concepts*, 7th edition, McGraw Hill, 2019.

Suggested Practical List : (30 Hours)

Practical exercises such as

Create and use the following student-course database schema for a college to answer the given queries using the standalone SQL editor.

STUDENT	**Roll No**	**StudentName**	**CourseID**	**DOB**
	Char(6)	Varchar(20)	Varchar(10)	Date

COURSE	**CID**	**CourseName**	**Course Type**	**Teacher-in-charge**	**TotalSeats**	**Duration**
	Char(6)	Varchar (20)	Char (8)	Varchar (15)	Unsigned int	Unsigned int

ADMISSION	**Roll No**	**CID**	**DateOfAdmission**
	Char(6)	Char(6)	Date

Here Rollno (ADMISSION) and SID (ADMISSION) are foreign keys. Note that course type may have two values viz. Fulltime and Parttime and a student may enroll in any number of courses

1. Retrieve names of students enrolled in any course.

3. Retrieve students' names starting with letter ‘A’.
4. Retrieve students' details studying in courses ‘computer science’ or ‘chemistry’.
5. Retrieve students’ names whose roll no either starts with ‘X’ or ‘Z’ and ends with ‘9’
6. Find course details with more than N students enrolled where N is to be input by the user
7. Update student table for modifying a student name.
8. Find course names in which more than five students have enrolled
9. Find the name of youngest student enrolled in course ‘BSc(P)CS’
10. Find the name of most popular society (on the basis of enrolled students)
11. Find the name of two popular part time courses (on the basis of enrolled students)
12. Find the student names who are admitted to full time courses only.
13. Find course names in which more than 30 students took admission

14. Find names of all students who took admission to any course and course names in which at least one student has enrolled
15. Find course names such that its teacher-in-charge has a name with 'Gupta' in it and the course is full time.
16. Find the course names in which the number of enrolled students is only 10% of its total seats.
17. Display the vacant seats for each course
18. Increment Total Seats of each course by 10%
19. Add enrollment fees paid ('yes'/'No') field in the enrollment table.
20. Update date of admission of all the courses by 1 year.
21. Create a view to keep track of course names with the total number of students enrolled in it.
22. Count the number of courses with more than 5 students enrolled for each type of course.
23. Add column Mobile number in student table with default value '9999999999'
24. Find the total number of students whose age is > 18 years.
25. Find names of students who are born in 2001 and are admitted to at least one part time course.
26. Count all courses having 'science' in the name and starting with the word 'BSc'.

Students are also encouraged to implement the database given in the textbook and do the related queries.

Computer Science Courses for Undergraduate Programme of study with Computer Science discipline as one of the two Core Disciplines
(For e.g. courses for B.A. Programmes with Computer Science as Major discipline)

Computer Science Major

DISCIPLINE SPECIFIC CORE COURSE (DSC-5): Database Management System

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
DSC05: Database Management System	**4**	**3**	**0**	**1**	Class XII Passed	NIL

Learning Objectives

The course will give an overview of categories of data models used by database management systems and writing queries in relational algebra. The importance of file indexing and controlled execution of transactions will be taught. The course would give students hands-on practice to write complex queries, nested queries using aggregate functions in SQL and to use basic database administration commands.

Learning outcomes

On successful completion of the course, students will be able to:

- Write queries using relational algebra, a procedural language.
- Use the concept of functional dependencies to remove data anomalies and arrive at normalized database design.
- Understand the data storage system, file organization and need of file indexing.
- Learn the importance of transaction processing and concurrency control.
- Write complex and nested SQL queries, and learn basic database administration commands.
- Acquire information about emerging technologies.

SYLLABUS OF DSC 05

Unit 1 (6 hours)

Data models and Relational Algebra: Categories of data models, types of database users, Relational Algebra Operations from SET Theory, SELECT, PROJECT, JOIN, DIVISION Operations.

Unit 2 (8 hours)

Normalization: Functional dependencies, minimal cover, normalizing database with multiple keys till 3NF, Boyce-Codd Normal Form

Unit 3 (8 hours)

Database Storage and index Structures: Storage of data, file structure, file organization and its types: Sequential, Heap and Indexed, Hash file, need for file Indexing, single- and multi-level indexing.

Unit 4 (8 hours)

Transaction Processing: Concurrent execution of transactions and their handling, ACID properties, need of data recovery and log files.

Unit 5 (8 hours)

Advanced SQL: Nested and complex queries using Inner JOIN, Left JOIN, Right JOIN, Full JOIN, views, Database Administration Commands: COMMIT, ROLLBACK, drop database, control permissions etc.

Unit 6 (7 hours)

Emerging Technology: Distributed Database Concepts, Introduction to emerging technologies like Data Warehousing and OLAP, Data Mining.

Essential/recommended readings

1. Elmasri R. and Navathe B. S. *Fundamentals of Database Systems*, 7th Edition, Pearson Education, 2016.
2. Murach J. *Murach's MySQL,* 3th Edition, Pearson, 2019.

Additional References

1. Silberschatz, A., Korth, H.F., & Sudarshan, S. Database System Concepts, 8th Edition, McGraw Hill, 2019.

2. Ramakrishnan, R. & Gehrke, J. Database Management Systems, 3rd Edition, Tata McGraw Hill Education, 2014.

Suggested Practical List : (30 Hours)

MySQL might be used for practical purposes.

The following concepts must be introduced to the students:

1. Multiple table queries (join on different and same tables)
2. Nested select statements
3. Set manipulation using (any, in, contains, all, not in, not contains, exists, not exists union, intersect, minus, etc.)
4. Categorization using group by... having
5. Arranging using order by

List of sample queries to be done using the above schema.

Create tables with relevant column and integrity constraints and populate the tables with data.

Perform the following queries on the database:

1. Display all the details of all employees working in the company.
2. Display ssn, lname, fname, address of employees who work in department no 7.
3. Retrieve the birthdate and address of the employee whose name is 'Franklin T. Wong' and who is a manager
4. Retrieve the name and salary of every employee working in department ‘Production’
5. Display maximum and minimum salaries of each department
6. Retrieve all employee names whose address is in ‘Bellaire’ and working on at least one project
7. Modify the datatype of hours column to float in works_on table.
8. Retrieve all employees who age is more than 35 years
9. Retrieve all employees in department 5 whose salary is between 50,000 and 60,000(inclusive)
10. Add another column named “Join_Date” in the employee table and “Address” in the department table
11. Retrieve the names of all employees who do not have supervisors
12. Retrieve SSN and department name for all employees
13. Retrieve the name and address of all employees who work for the 'Research' department
14. For every project located in 'Stafford', list the project number, the controlling department number, and the department manager's last name, address, and birthdate

15. For each employee, retrieve the employee's name, and the name of his or her immediate supervisor
16. Retrieve all combinations of Employee Name and Department Name
17. Make a list of all project numbers for projects that involve an employee whose last name is 'Narayan' either as a worker or as a manager of the department that controls the project
18. Increase the salary of all employees working on the 'ProductX' project by 15%. Retrieve employee name and increased salary of these employees
19. Retrieve a list of employees and the project name each works in, ordered by the employee's department, and within each department ordered alphabetically by employee first name
20. Select the names of employees whose salary does not match with salary of any employee in department 10
21. Drop the column "Join_Date" from the employee table
22. Retrieve the name of each employee who has a dependent with the same first name and same sex as the employee
23. Retrieve the employee numbers of all employees who work on project located in Bellaire, Houston, or Stafford.
24. Change the name of existing table DEPT_LOCATIONS to DLOCATIONS
25. Find the sum of the salaries of all employees, the maximum salary, the minimum salary and the average salary for each department. Display with proper headings
26. Find the sum of the salaries and number of employees of the 'Marketing' department, as well as the maximum salary, the minimum salary, and the average salary in this department
27. Select the names of employees whose salary is greater than the average salary of all employees in department 10
28. For each department, retrieve the department number, the number of employees in the department and their average salary
29. For each project, retrieve the project number, the project name, and the number of employees who work on that project for more than 10 hours
30. Change the location and controlling department number for all projects having more than 5 employees to 'Bellaire' and 6 respectively
31. For each department having more than 10 employees, retrieve the department name, number of employees drawing more than 40,000 as salary
32. Display employee names having no dependent in descending order along with their age
33. For each department, find the number of female and number of male employees along with name of manager of that department
34. Find the name and age of youngest employee in each department
35. Change the name of MINIT attribute of an employee table to MNAME using alter command
36. Create a view to keep names of employees and their department names if they are not working on any project
37. Create a view to keep track of all employee names who are working on same projects as that of employee 'Franklin T. Wong'
38. Execute system administrative commands like commit, rollback, granting control permissions, etc.

DISCIPLINE SPECIFIC CORE COURSE (A5): Machine Learning

0CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
A5: Machine Learning	**4**	**3**	**0**	**1**	Pass in Class XII	A1 Programming Fundamentals using Python, A2 Data Visualization using Python

Learning Objectives

The course aims at introducing the basic concepts and techniques of machine learning so that a student can apply machine learning techniques to a problem at hand.

Learning outcomes

On successful completion of the course, students will be able to:

- Differentiate between supervised and unsupervised learning tasks.
- Appreciate the need of preprocessing, feature scaling and feature selection.
- Understand the fundamentals of classification, regression and clustering
- Implement various machine learning algorithms learnt in the course.

SYLLABUS OF A5

Unit 1 (8 hours)

Introduction: Basic definitions and concepts, key elements, supervised and unsupervised learning, introduction to reinforcement learning, applications of ML.

Unit 2 (10 hours)

Preprocessing: Feature scaling, feature selection methods. dimensionality reduction (Principal Component Analysis).

Unit 3 (12 hours)

Regression: Linear regression with one variable, linear regression with multiple variables, gradient descent, over-fitting, regularization. Regression evaluation metrics.

Unit 4 (15 hours)

Classification: Decision trees, Naive Bayes classifier, logistic regression, k-nearest neighbor classifier, perceptron, multilayer perceptron, neural networks, Support Vector Machine (SVM). Classification evaluation metrics.

Essential/recommended readings

1. Mitchell, T.M. *Machine Learning*, McGraw Hill Education, 2017.
2. James, G., Witten. D., Hastie. T., Tibshirani., R. *An Introduction to Statistical Learning with Applications in R*, Springer, 2014.
3. Alpaydin, E. *Introduction to Machine Learning*, MIT press, 2009.

3. Sebastian Raschka, *Python Machine Learning,* Packt Publishing Ltd, 2019.

Suggested Practicals List : (30 Hours)

Practical exercise such as

Use Python for practical labs for Machine Learning. Utilize publically available datasets from online repositories like https://data.gov.in/ and https://archive.ics.uci.edu/ml/datasets.php

For evaluation of the regression/classification models, perform experiments as follows:

i. Scale/Normalize the data
ii. Reduce dimension of the data with different feature selection techniques

iv. Perform k-cross-validation on datasets for evaluation

Report the efficacy of the machine learning models as follows:

i. MSE and R^2 score for regression models
ii. Accuracy, TP, TN, FP, TN, error, Recall, Specificity, F1-score, AUC for classification models

For relevant datasets make prediction models for the following

1. Naïve Bayes Classifier
2. Simple Linear Regression multiple linear regression
3. Polynomial Regression
4. Lasso and Ridge Regression
5. Logistic regression
6. Artificial Neural Network
7. *k*-NN classifier
8. Decision tree classification
9. SVM classification
10. K-Means Clustering
11. Hierarchical Clustering

23. Retrieve the employee numbers of all employees who work on project located in Bellaire, Houston, or Stafford.
24. Change the name of existing table DEPT_LOCATIONS to DLOCATIONS
25. Find the sum of the salaries of all employees, the maximum salary, the minimum salary and the average salary for each department. Display with proper headings
26. Find the sum of the salaries and number of employees of the ‘Marketing’ department, as well as the maximum salary, the minimum salary, and the average salary in this department
27. Select the names of employees whose salary is greater than the average salary of all employees in department 10
28. For each department, retrieve the department number, the number of employees in the department and their average salary
29. For each project, retrieve the project number, the project name, and the number of employees who work on that project for more than 10 hours
30. Change the location and controlling department number for all projects having more than 5 employees to ‘Bellaire’ and 6 respectively
31. For each department having more than 10 employees, retrieve the department name, number of employees drawing more than 40,000 as salary
32. Display employee names having no dependent in descending order along with their age
33. For each department, find the number of female and number of male employees along with name of manager of that department
34. Find the name and age of youngest employee in each department
35. Change the name of MINIT attribute of an employee table to MNAME using alter command
36. Create a view to keep names of employees and their department names if they are not working on any project
37. Create a view to keep track of all employee names who are working on same projects as that of employee ‘Franklin T. Wong’
38. Execute system administrative commands like commit, rollback, granting control permissions, etc.

Semester-VI

DEPARTMENT OF COMPUTER SCIENCE

[UG Programme for Bachelor in Computer Science (Honours)]

DISCIPLINE SPECIFIC CORE COURSE – 16 (DSC-16) : Artificial Intelligence

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
DSC-16 Artificial Intelligence	**4**	**3**	**0**	**1**	Pass in Class XII	DSC 04 Object Oriented Programming with C++/ GE 1a Programming using C++ / GE1b Programming with Python/ DSC 01 Programming using Python/ GE 3b: Java Programming

Learning Objectives

The course objectives of this course are to:

- To introduce basic concepts and techniques of Artificial Intelligence (AI).
- To apply informed search techniques for different applications.
- To learn various knowledge representation techniques and writing Prolog programs.
- To learn about the latest techniques for developing AI systems.

Learning outcomes

On successful completion of this course, students will be able to:

- identify problems that are amenable to solutions by specific AI methods.
- state the utility of different types of AI agents.
- apply different informed search techniques for solving real world problems.
- use knowledge representation techniques for AI systems.

SYLLABUS OF DSC-16

Unit 1 6 Hours

Introduction: Introduction to artificial intelligence, background and applications, Turing test, Weak AI, Strong AI, Narrow AI, Artificial General Intelligence, Super AI, rational agent

approaches to AI, introduction to intelligent agents, their structure, behavior and task environment.

Unit 2 12 Hours

Problem Solving and Searching Techniques: Problem characteristics, production systems, control strategies, breadth-first search, depth-first search, hill climbing and its variations, heuristics search techniques: best-first search, A* algorithm, constraint satisfaction problem, means-end analysis, introduction to game playing, min-max and alpha-beta pruning algorithms.

Unit 3 16 Hours

Knowledge Representation: Propositional logic, First-Order Predicate logic, resolution principle, unification, semantic nets, conceptual dependencies, frames, and scripts, production rules, Introduction to Programming in Logic (PROLOG).

Unit 4 8 Hours

Understanding Natural Languages: Components and steps of communication, the contrast between formal and natural languages in the context of grammar, Chomsky hierarchy of grammars, parsing, and semantics, Parsing Techniques, Context-Free and Transformational Grammars, Recursive and Augmented transition nets.

Unit 5 3 Hours

AI The Present and the Future: Symbolic AI, Data-driven AI and Machine Learning, Introduction to Machine Learning and Deep Learning based AI, some applications of symbolic and data driven AI, Interpretable and Explainable AI, Ethics of AI: benefits and risks of AI.

Essential/recommended readings

1. Russell, Stuart, J. and Norvig, Peter, *Artificial Intelligence - A Modern Approach*, Pearson, 4th edition, 2020..
2. Bratko, Ivan, *Prolog Programming for Artificial Intelligence*, Addison-Wesley, Pearson Education, 4th edition, 2012.
3. Patterson, DAN,W, *Introduction to A.I. and Expert Systems* – PHI, 2007.
4. Clocksin, W., F. and Mellish, *Programming in PROLOG*, 5th edition, Springer, 2003.

Additional references

1. Kaushik, Saroj, *Artificial Intelligence*, Cengage Learning India, 2011.
2. Rich, Elaine and Knight, Kelvin, *Artificial Intelligence*, 3rd edition, Tata McGraw Hill, 2010

Practical List :

Practical exercises such as

1. Write a program in Prolog to implement TowerOfHanoi(N) where N represents the number of disks.
2. Write a program to implement the Hill climbing search algorithm in Prolog.
3. Write a program to implement the Best first search algorithm in Prolog.
4. Write a program to implement A* search algorithm in Prolog.
5. Write a program to implement the min-max search algorithm in Prolog.

6. Write a program to solve the Water-Jug Problem in Prolog.
7. Implement sudoku problem (minimum 9×9 size) using constraint satisfaction in Prolog.
8. Write a Prolog program to implement the family tree and demonstrate the family relationship.
9. Write a Prolog program to implement knowledge representation using frames with appropriate examples.
10. Write a Prolog program to implement conc(L1, L2, L3) where L2 is the list to be appended with L1 to get the resulted list L3.
11. Write a Prolog program to implement reverse(L, R) where List L is original and List R is reversed list.
12. Write a Prolog program to generate a parse tree of a given sentence in English language assuming the grammar required for parsing.
13. Write a Prolog program to recognize context free grammar $a^n b^n$.

DISCIPLINE SPECIFIC CORE COURSE – 17 (DSC-17): Machine Learning

Credit distribution, Eligibility and Prerequisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
DSC-17 Machine Learning	**4**	**3**	**0**	**1**	Pass in Class XII	DSC01 Programming using Python / A course in Python at plus 2 level

Learning Objectives

The course aims at introducing the basic concepts and techniques of machine learning so that a student can apply machine learning techniques to a problem at hand.

Learning outcomes

On successful completion of the course, students will be able to:

- Differentiate between supervised and unsupervised learning tasks.
- State the need of preprocessing, feature scaling and feature selection.
- Formulate classification, regression and clustering problems as optimization problems
- Implement various machine learning algorithms learnt in the course.

SYLLABUS OF DSC-17

Unit 1 (5 Hours)

Introduction: Basic definitions and concepts, key elements, supervised and unsupervised learning, introduction to reinforcement learning, applications of ML.

Unit 2 (8 Hours)

Preprocessing: Feature scaling, feature selection methods. dimensionality reduction (Principal Component Analysis).

Unit 3 (12 Hours)

Regression: Linear regression with one variable, linear regression with multiple variables, gradient descent, over-fitting, regularization. Regression evaluation metrics.

Unit 4 (12 Hours)

Classification: Decision trees, Naive Bayes classifier, logistic regression, k-nearest neighbor classifier, perceptron, multilayer perceptron, neural networks, back-propagation algorithm, Support Vector Machine (SVM). Classification evaluation metrics.

Unit 5 (8 Hours)

Clustering: Approaches for clustering, distance metrics, K-means clustering, hierarchical clustering.

Essential/recommended readings

1. Mitchell, T.M. *Machine Learning*, McGraw Hill Education, 2017.
2. James, G., Witten. D., Hastie. T., Tibshirani., R. *An Introduction to Statistical Learning with Applications in R*, Springer, 2014.
3. Alpaydin, E. *Introduction to Machine Learning*, MIT press, 2009.

Additional References

1. Flach, P., *Machine Learning: The Art and Science of Algorithms that Make Sense of Data*, Cambridge University Press, 2015.
2. Christopher & Bishop, M., *Pattern Recognition and Machine Learning*, New York: Springer-Verlag, 2016.
3. Sebastian Raschka, *Python Machine Learning,* Packt Publishing Ltd, 2019

Suggested Practical List:

Practical exercises such as

Use Python for practical labs for Machine Learning. Utilize publicly available datasets from online repositories like https://data.gov.in/ and https://archive.ics.uci.edu/ml/datasets.php

For evaluation of the regression/classification models, perform experiments as follows:

- Scale/Normalize the data
- Reduce dimension of the data with different feature selection techniques
- Split datasets into training and test sets and evaluate the decision models
- Perform k-cross-validation on datasets for evaluation

Report the efficacy of the machine learning models as follows:

- MSE and R^2 score for regression models
- Accuracy, TP, TN, FP, TN, error, Recall, Specificity, F1-score, AUC for classification models

For relevant datasets make prediction models for the following

1. Naïve Bayes Classifier
2. Simple Linear Regression multiple linear regression
3. Polynomial Regression
4. Lasso and Ridge Regression
5. Logistic regression
6. Artificial Neural Network
7. *k*-NN classifier
8. Decision tree classification
9. SVM classification
10. K-Means Clustering
11. Hierarchical Clustering

DISCIPLINE SPECIFIC CORE COURSE– 18 (DSC-18): Introduction to Parallel Programming

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
DSC-18 Introduction to Parallel Programming	**4**	**3**	**0**	**1**	Pass in Class XII	DSC-02 Computer Systems Architecture DSC04 /A course in C/C++ at plus 2 level, DSC-07 Data Structures with C++, DSC-08 Operating Systems

Learning Objectives

The course introduces the students to the basic concepts and techniques of parallel programming. It enables them to design and implement parallel algorithms. The course would give the students hands-on practice to write parallel programs using shared and distributed memory models using OpenMP and Message Passing Interface (MPI).

Learning outcomes

On successful completion of this course, the student will be able to:

- State the need of Parallel algorithms
- Describe architectures for parallel and distributed systems.
- Develop elementary parallel algorithms for shared memory models.
- Develop elementary parallel algorithms for distributed memory models.

SYLLABUS OF DSC-18

Unit 1 (6 Hours)

Introduction to Parallel Computing: Trends in microprocessor architectures, memory system performance, dichotomy of parallel computing platforms, physical organization of parallel platforms, communication costs in parallel machines, SIMD versus MIMD architectures, shared versus distributed memory, PRAM shared-memory model, distributed-memory model.

Unit 2 (15 Hours)

OpenMP programming for shared memory systems: Thread Basics, Controlling Thread and Synchronization Attributes, Multi-thread and multi-tasking, Context Switching, Basic OpenMP thread functions, Shared Memory Consistency Models and the Sequential Consistency Model, Race Conditions, Scoping variables, work-sharing constructs, critical sections, atomic operations, locks, OpenMP tasks, Introduction to tasks, Task queues and task execution, Accessing variables in tasks, Completion of tasks and scoping variables in tasks, Recursive task spawning and pitfalls

Unit 3 (15 Hours)
MPI programming for distributed memory systems: MPI basic communication routines (Introduction to MPI and basic calls, MPI calls to send and receive data, MPI call for broadcasting data, MPI Non-blocking calls, MPI Collectives (MPI Collectives and MPI broadcast, MPI Gathering and scattering collectives, MPI reduction and Alltoall collectives, MPI collectives design), Types of interconnects (Characterization of interconnects, Linear arrays, 2D mesh and torus, cliques)

Unit 4 (9 Hours)
Applications: Matrix-matrix multiply, Odd-Even sorting, distributed histogram, Breadth First search, Dijkstra's algorithm

Essential/recommended readings

1. Grama, A., Gupta, A., Karypis, G., Kumar, V., *Introduction to Parallel Computing*, 2nd edition, Addison-Wesley, 2003.
2. Quinn, M. *Parallel Programming in C with MPI and OpenMP*, 1st Edition, McGraw-Hill, 2017.
3. Revdikar, L., Mittal, A., Sharma, A., Gupta, S., *A Naïve Breadth First Search Approach Incorporating Parallel Processing Technique For Optimal Network Traversal*, International Journal of Advanced Research in Computer and Communication Engineering Vol. 5, Issue 5, May 2016.

Additional References

No additional references mentioned

Suggested Practical List :

Practical exercises such as

1. Implement Matrix-Matrix Multiplication in parallel using OpenMP
2. Implement distributed histogram Sorting in parallel using OpenMP
3. Implement Breadth First Search in parallel using OpenMP
4. Implement Dijkstra's Algorithm in parallel using OpenMP

DISCIPLINE SPECIFIC ELECTIVE COURSES

DISCIPLINE SPECIFIC ELECTIVE COURSE: Social Network Analytics

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Social Network Analytics	**4**	**3**	**0**	**1**	Pass in Class XII	DSC 01 Programming using Python, DSC03 Mathematics for Computing

Learning Objectives

The course introduces basic graph theory and draws distinction between graph as an abstract structure and real-life situation modelled as network. This course aims to expose the students to the strengths and capabilities of network analysis and their applications through the use of open source software.

Learning outcomes

On successful completion of the course, students will be able to :

- Model real life situation as networks
- Identify and apply quantitative network measures to characterize social networks at the local and global level
- Generate synthetic networks that satisfy properties of real world networks
- Discover, analyse and evaluate the intrinsic community structure of networks
- Model an information diffusion process for predictive analysis of networks

SYLLABUS OF DSE

Unit 1 (7 Hours)

Introduction to Social Network Analysis: Graph theory, random walk, degree distribution, mapping of real world situation into networks and applications of social network analysis, types of networks

Unit 2 (10 Hours)

Network Measures: Centrality measures, Page Rank, Hubs and Authority, Assortativity, Transitivity and Reciprocity, Similarity and Structural Equivalence

Unit 3 (10 Hours)

Network Models: Properties of Real-World Networks, Random Network Model, Small World Network Model, Preferential Attachment Model

Unit 4 (10 Hours)

Community Structure in Networks: Types of Communities, Community Detection algorithms and evaluation of communities obtained

Unit 5 (8 Hours)

Information Diffusion in Social Media: Information Cascades, Diffusion of Innovations, Basic Epidemic Models

Essential/recommended readings

1. Chakraborty T. *Social Network Analysis***,** 1st edition, Wiley India Pvt. Ltd., 2021.
2. Zafarani R., Abbasi M. A., Liu H. *Social Media Mining: An Introduction***,** 1st edition, Cambridge University Press, 2014.
3. Barabási A. L. , Pósfai M. *Network Science*, 1st edition, Cambridge University Press, 2016.

Additional References

1. Easley, Kleinberg J. *Networks, Crowds, and Markets: Reasoning About a Highly Connected World***,** 1st edition, Cambridge University Press, 2012.

Suggested Practical List :

Practical exercises such as

Python Packages like igraph, NetworkX, NDlib etc. may be used for programming

1. Plot a weighted directed network such that node size and edge width is proportional to their degree and edge weight respectively
2. Compute and plot degree distribution of a real-world network. Also compute its local and global properties.
3. Generate three networks of 1000 nodes each using Random Network Model, Small World Network Model, Preferential Attachment Model and compare their characteristics.
4. Compute different centrality measures to identify top-N nodes and compare their ranks with those obtained by PageRank method.
5. Apply community detection algorithms on a small real-world network (e.g. Karate club) and compare modularity using bar plot. Also plot the communities revealed with different colors.
6. Simulate diffusion trends for different epidemic models and present results using appropriate visuals.

DISCIPLINE SPECIFIC ELECTIVE COURSE: Computer Graphics

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Computer Graphics	**4**	**3**	**1**	**0**	Pass in Class XII	DSC 03 (Mathematics for Computing - I), DSC 04 Object Oriented Programming with C++/ GE 1a Programming using C++ / GE1b Programming with Python/ DSC 01 Programming using Python/ GE 3b Java Programming

Learning Objectives

This course introduces fundamental concepts of Computer Graphics with focus on modeling, rendering and interaction aspects of computer graphics. The course emphasizes the basic principles needed to design, use and understand computer graphics system.

Learning outcomes

On successful completion of the course, students will be able to:

- Describe Standard raster and vector scan devices as well as Graphical Input and output devices
- Implement algorithms for drawing basic primitives such as line, circle and ellipse.
- Implement algorithms for line clipping, polygon clipping and polygon filling.
- Implement a 3D object representation scheme, carryout 2D and 3D transformation, 3D projections
- Implement visible surface determination algorithms, Illumination models and surface rendering methods
- Implement a simple computer animation algorithm

SYLLABUS OF DSE

Unit 1 (8 Hours)

Introduction: Introduction to Graphics systems, Basic elements of Computer graphics, Applications of computer graphics. Architecture of Raster and Random scan display devices, input/output devices.

Unit 2 (8 Hours)
Drawing and clipping primitives: Raster scan line, circle and ellipse drawing algorithms, Polygon filling, line clipping and polygon clipping algorithms

Unit 3 (12 Hours)
Transformation and Viewing: 2D and 3D Geometric Transformations, 2D and 3D Viewing transformations (Projections- Parallel and Perspective), Vanishing points.

Unit 4 (9 Hours)
Geometric Modeling: Polygon Mesh Representation, Cubic Polynomial curves (Hermite and Bezier).

Unit 5 (8 Hours)
Visible Surface determination and Surface Rendering: Z-buffer algorithm, List-priority algorithm and area subdivision algorithm for visible surface determination. Illumination and shading models, RGB Color model and Basics of Computer Animation.

Essential/recommended readings

1. Hearn, D & Baker, M.P. *Computer Graphics*, 2nd edition, Prentice Hall of India, 2009.
2. Foley, J. D., Dam, A.V, Feiner, S. K., & Hughes, J. F. *Computer Graphics: Principles and Practice in C*, 2nd edition, Pearson education, 2002.
3. Rogers, D. F. *Mathematical Elements for Computer Graphics*, 2nd edition, McGraw Hill Education, 2017.

Additional References

1. Bhattacharya, S. *Computer Graphics*, Oxford University Press, 2018.
2. Marschner, S., & Shirley, P. *Fundamentals of Computer Graphics,* 4th edition CRC Press, 2017.

Suggested Practical List :

Practical exercises such as

1. Write a program to implement Bresenham's line drawing algorithm.
2. Write a program to implement a midpoint circle drawing algorithm.
3. Write a program to clip a line using Cohen and Sutherland line clipping algorithm.
4. Write a program to clip a polygon using Sutherland Hodgeman algorithm.
5. Write a program to fill a polygon using the Scan line fill algorithm.
6. Write a program to apply various 2D transformations on a 2D object (use homogeneous Coordinates).
7. Write a program to apply various 3D transformations on a 3D object and then apply parallel and perspective projection on it.
8. Write a program to draw Hermite /Bezier curve.

DISCIPLINE SPECIFIC ELECTIVE COURSE: Deep Learning

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Deep Learning	**4**	**3**	**0**	**1**	Pass in Class XII	DSC03 Mathematics for Computing - I, DSC17 Machine Learning

Learning Objectives

The objective of this course is to introduce students to deep learning algorithms and their applications in order to solve real problems.

Learning outcomes

On successful completion of this course, the student will be able to:

- Describe the feed-forward and deep networks.
- Design single and multi-layer feed-forward deep networks and tune various hyper-parameters.
- Implement deep neural networks to solve a problem
- Analyze performance of deep networks.
- Use pre-trained models to solve a problem.

SYLLABUS OF DSE

Unit 1 (8 Hours)

Introduction to neural networks: Artificial neurons, perceptron, computational models of neurons, Structure of neural networks, Multilayer feedforward neural networks (MLFFNN), Backpropagation learning, Empirical risk minimization, bias-variance tradeoff, Regularization, output units: linear, softmax , hidden units:tanh, RELU

Unit 2 (8 Hours)

Deep neural networks: Difficulty of training DNNs, Greedy layerwise training, Optimization for training DNN's, Newer optimization methods for neural networks(AdaGrad, RMSProp, Adam), Regularization methods(dropout, drop connect, batch normalization).

Unit 3 (8 Hours)

Convolution neural networks(CNNs): Introduction to CNN - convolution, pooling, Deep CNNs - LeNet, AlexNet. Training CNNs, weights initialization, batch normalization, hyperparameter optimization, Understanding and visualizing CNNs, Using a pre trained convnet

Unit 4 (8 Hours)
Recurrent neural networks (RNNs): Sequence modeling using RNNs, Backpropagation through time, LongShort Term Memory (LSTM), Bidirectional RNN, Bidirectional LSTM
Unit 5 (8 Hours)
Unsupervised deep learning: Autoencoders, Generative Adversarial Networks.

Unit 6 (5 Hours)
Applications: Computer vision, Speech recognition and NLP.

Essential/recommended readings

1. Ian Goodfellow, Yodhua Bengio and Aaron Courville, *Deep Learning,* MIT Press Book**,** 2016.
2. Francois Chollet, *Deep Learning with python***,** *2nd edition*, Meaning Publications Co, 2021.

Additional References

1. Bunduma, N., *Fundamentals of Deep Learning*, 1st edition, O'reilly Books, 2017.
2. Heaton, J., *Deep Learning and Neural Networks*, 1st edition, Heaton Research Inc., 2015.

Suggested Practical List :

Practical exercises such as

The following practicals are to be conducted using Python.

1. Implement a feed-forward neural networks for classifying movie reviews as positive or negative(using IMDB dataset)
2. Implement a deep-neural feed-forward network for estimating the price of house, given real-estate data(Boston Housing Price)
3. Implement a deep-neural network for classifying news wires by topic (Reuters dataset).
4. Implement CNN for classifying MNIST dataset
5. Create a model for time-series forecasting using RNN/LSTM
6. Implement an auto-encoder

DISCIPLINE SPECIFIC ELECTIVE COURSE: Ethical Hacking

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Ethical Hacking	**4**	**3**	**0**	**1**	Pass in Class XII	Any Programming Language at plus 2 level or above

Learning Objectives

The objective of this course is to enable students to be part of such a team that can conduct the security assessment of an organization through the process of ethical hacking. This course will introduce the students, the idea of security assessment of systems and networks under investigation and how to perform them under the legal and ethical framework. Further, this course will outline the importance of various stages of ethical hacking, including but not limited to tasks such as penetration testing, and usage of various tools at each stage.

Learning outcomes

On successful completion of this course, the student will be able to:

- Understand and acknowledge the relevance of legal, ethical, and professional challenges faced by an ethical hacker.
- Apply fundamental principles of system, application, and network security to ethically attack / penetrate the system to uncover the security flaws.
- Perform evaluation of security systems through a systematic ethical hacking process and recommend countermeasures to improve security.
- Understand and use various tools and techniques used in various stages of the ethical hacking process.

SYLLABUS OF DSE

Unit 1 (4 Hours)

Introduction: Overview of information security threats and attack vectors, vulnerability assessment and penetration testing concepts, information security controls, security laws and standards. OWASP.

Unit 2 (6 hours)

Footprinting and Reconnaissance: Introduction to network reconnaissance tools such ipconfig, ifconfig, domain tools, nmap, Wireshark, etc.

Unit 3 (6 hours)

Scanning and Enumeration: Network penetration testing, Password cracking techniques and countermeasures, NetBIOS tools

Unit 4 (6 hours)

Gaining and Maintaining Access: Network level attacks and countermeasures, Metasploit framework, Burp Suite

Unit 5 (6 hours)

Exploitation and Covering Tracks: Privilege escalation, social Engineering**,** identity theft, countermeasures, Covering tracks using attrib command and creating Alternate Data Stream (ADS) in Windows, Erasing evidence from Windows logs, Strategies for maintaining access.

Unit 6 (6 hours)

Advanced stages: Denial of service, Session hijacking, hacking web servers, hacking web applications, sql injection etc.

Unit 7 (6 hours)

NIST Cybersecurity framework and ISO standards: NIST cybersecurity framework, Cyber Kill chain, ISO/IEC 27001 and related standards.

Unit 8 (5 Hours)

Cyber Defense and Reporting: Preparing vulnerability assessment reports, presenting post testing findings, preparing recommendations

Essential/recommended readings

1. Patrick Engbretson, The Basics of Hacking and Penetration Testing, 2nd Edition, Syngress, 2013.
2. Georgia Weidman, Penetration TEsting: A Hands-On Introduction to Hacking, 1st Edition, No Starch Press, 2014.

    c. https://www.hackingloops.com/ethical-hacking/

Suggested Practical List

Practical exercises such as

Perform the following activities.

(NOTE: Exercise extra caution while performing these exercises and codes)

1. Perform various Virtual Machine based exercises on https://vulnhub.com/
2. Perform exercises from https://www.hacker101.com/
3. Follow the lessons and activities from https://www.hackingloops.com/ethical-hacking/
4. Activities on Google site for hacking https://google-gruyere.appspot.com/
5. ACtivities on OWASP WebGoat https://github.com/WebGoat/WebGoat

DISCIPLINE SPECIFIC ELECTIVE COURSE: Cloud Computing

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Cloud Computing	**4**	**3**	**0**	**1**	Pass in Class XII	NIL

Learning Objectives

The objective of an undergraduate cloud computing course is to provide students with a comprehensive understanding of cloud computing technologies, services, and applications.

Learning outcomes

On successful completion of this course, the student will be able to:

- Knowledge of the fundamental concepts and principles of cloud computing, including virtualization, scalability, reliability, and security.
- Ability to design, develop, and deploy cloud-based applications using popular cloud platforms and services.
- Familiarity with cloud computing architectures, including Infrastructure as a Service (IaaS), Platform as a Service (PaaS), and Software as a Service (SaaS).
- Understanding of the economic, legal, and ethical implications of cloud computing, including issues related to data privacy, ownership, and security.
- Ability to evaluate and select cloud-based solutions based on their technical, economic, and business requirements.
- Understanding of the broader societal and environmental impacts of cloud-based services and applications.

SYLLABUS OF DSE

Unit 1

Overview of Computing Paradigm: Recent trends in Computing : Grid Computing, Cluster Computing, Distributed Computing, Utility Computing, Cloud Computing,

Unit 2

Introduction to Cloud Computing: Introduction to Cloud Computing, History of Cloud Computing, Cloud service providers, Benefits and limitations of Cloud Computing,

Unit 3

Cloud Computing Architecture: Comparison with traditional computing architecture (client/server), Services provided at various levels, Service Models- Infrastructure as a Service(IaaS), Platform as a Service(PaaS), Software as a Service(SaaS), How Cloud Computing Works, Deployment Models- Public cloud, Private cloud, Hybrid cloud, Community cloud, Case study of NIST architecture.

Unit 4

Case Studies: Case study of Service model using Google Cloud Platform (GCP), Amazon Web Services (AWS), Microsoft Azure, Eucalyptus.

Unit 5

Cloud Computing Management: Service Level Agreements(SLAs), Billing & Accounting, Comparing Scaling Hardware: Traditional vs. Cloud, Economics of scaling.

Unit 6

Cloud Computing Security: Infrastructure Security- Network level security, Host level security, Application level security, Data security and Storage- Data privacy and security Issues, Jurisdictional issues raised by Data location, Authentication in cloud computing.

Essential/recommended readings

4. *Cloud Security: A Comprehensive Guide to Secure Cloud Computing,* Ronald L. Krutz, Russell Dean Vines*, Wiley-India,* 2010

Suggested Practical List:

Practical exercises such as

1. Create virtual machines that access different programs on same platform.
2. Create virtual machines that access different programs on different platforms

3. Working on tools used in cloud computing online:
    a. Storage
    b. Sharing of data
    c. manage your calendar, to-do lists,
    d. a document editing tool
4. Exploring Google cloud
5. Exploring Microsoft cloud
6. Exploring Amazon cloud

COMMON POOL OF GENERIC ELECTIVES (GE) COURSES

GENERIC ELECTIVES (GE-6a): Computer Networks

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
GE6a Computer Networks	**4**	**3**	**0**	**1**	Pass in Class XII	DSC 04 Object Oriented Programming with C++/ GE 1a Programming using C++ / GE1b Programming with Python/ DSC 01 Programming using Python/ GE 3b Java Programming

Learning Objectives

The course objectives of this paper are to understand the concepts behind computer networks and data communication. learn the different types of networks, network topologies and their characteristics. learn the working of protocols used at various layers. understand the utility of different networking devices.

Learning outcomes

On successful completion of the course, students will be able to:

- differentiate between various types of computer networks and their topologies.
- understand the difference between the OSI and TCP/IP protocol suit.
- distinguish between different types of network devices and their functions.
- design/implement data link and network layer protocols in a simulated networking environment.

SYLLABUS OF GE-6a

Unit 1

Introduction: Types of computer networks, Internet, Intranet, network topologies (bus, star, ring, mesh, tree, hybrid topologies), network classifications. layered architecture approach, OSI Reference Model, TCP/IP Reference Model. Transmission Modes: simplex, half duplex and full duplex.

Unit 2

Physical Layer: Analog signal, digital signal, the maximum data rate of a channel, transmission media (guided transmission media, wireless transmission, satellite

communication), multiplexing (frequency division multiplexing, time-division multiplexing, wavelength division multiplexing). Guided Media (Wired) (Twisted pair, Coaxial Cable, Fiber Optics. Unguided Media (Radio Waves, Infrared, Micro-wave, Satellite).

Unit 3

Data Link and MAC Layer: Data link layer services, error detection and correction techniques, error recovery protocols (stop and wait, go back n, selective repeat), multiple access protocols with collision detection, MAC addressing, Ethernet, data link layer switching, point-to-point protocol.

Unit 4

Network layer: Networks and Internetworks, virtual circuits and datagrams, addressing, subnetting, Dijkstra Routing algorithm, Distance vector routing, Introduction to Network Layer protocol- (ARP, IPV4, ICMP).

Unit 5

Introduction to Transport and Application Layer: Introduction to Process to process Delivery- (client-server paradigm, connectionless versus connection-oriented service); User Datagram Protocols, TCP/IP protocol, Flow Control. FTP (File Transfer Protocol), SMTP (Simple Mail Transfer Protocol), Telnet (Remote login protocol), WWW (World Wide Web), HTTP (HyperText Transfer Protocol), URL (Uniform Resource Locator).

Essential/recommended readings

1. Tanenbaum, A.S. & Wetherall, D.J., *Computer Networks*, *5th edition*, Pearson Education, 2012.

2. Forouzan, B. A., *Data Communication and Networking*, *4th edition*, McGraw-Hill Education, , 2017.

Additional References

1. Comer, D. E., *Computer Networks and Internet,* 6th edition*,* Pearson Publication, 2015.

2. (ii) Stallings, W., *Data and Computer Communications*, 10th edition, Pearson education India, 2017.

Suggested Practical List :

Practical exercises such as

Introduce students to CISCO Packet Tracer and do the following:

1. To Study basic network command and Network configuration commands.
2. To study and perform PC to PC communication.
3. To create Star topology using Hub and Switch.
4. To create Bus, Ring, Tree, Hybrid, Mesh topologies.
5. Perform an initial Switch configuration.
6. Perform an initial Router configuration.
7. To implement Client Server Network.
8. To implement connection between devices using router.
9. To perform remote desktop sharing within LAN connection.

GENERIC ELECTIVES (GE-6b): Internet Technologies: Web App Design and Development

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
GE6b: Internet Technologies: Web App Design and Development	**4**	**3**	**0**	**1**	Pass in Class XII	NIL

Learning Objectives

The course aims at:

- Develop understanding of Web Development Architecture.
- Using React components in Web applications
- Introduce REST APIs Design
- Understanding of Angular Architecture, data-binding and dependency injection
- Understand form validations and application of templates

Learning outcomes

On successful completion of the course students will be able to

- Develop interfaces for single page applications
- Develop a complete client side solutions using angular js
- Develop a RESTful web services.
- Apply form validations

SYLLABUS OF GE-6b

Unit 1

Introduction to React: Definition of React, React library, React Developer tools, Introduction to ES6, Declaring variables, Arrow Functions, Objects and Arrays, modules, Introduction to AJAX, Functions in AJAX Pure React: Page setup, virtual DOM, React Element, React DOM, Constructing Elements with Data, React Components, DOM Rendering, First React Application using Create React App, React with JSX, React Element as JSX Props, State and Component Tree: Property Validation, Validating Props with createClass, Default Props, ES6 Classes and stateless functional components, React state management, State within the component tree, state vs props, Forms in React

Unit 2

Rest APIs: JSON: Introduction, Syntax, Data Types, Objects, Schema. REST API:

Introduction, WRML, REST API Design, Identifier Design with URIs, Interaction Design with HTTP, Representation Design, Caching, Security.

Unit 3

Angular.js.: Introduction to Angular: Angular architecture; introduction to components, component interaction and styles; templates, interpolation and directives; forms, user input, form validations; data binding and pipes; retrieving data using HTTP; Angular modules

Essential/recommended readings

1. D. Brad, B. Dayley and C. Dayley, *Node. js, MongoDB and Angularjs Web Development: The definitive guide to using the MEAN stack to build web applications*, 2nd edition, Addison-Wesley, 2018.
2. D. Herron, *Node.js Web Development*, 5th edition, Packt Publishing, 2020.
3. A. Banks and E. Porcello, *Learning React: Functional Web Development with React and Redux*, 1st edition, O'Reilly, 2017.
4. M. Masse, *REST API – Design Rulebook*, 1st edition, O'Reilly, 2011.

Additional References

No additional references mentioned.

Suggested Practical List :

Practical exercises such as

1. Angular.js:
a. Build a simple Angular.js application that displays a list of items.
b. Create a form in Angular.js to add new items to the list.
c. Implement filtering and sorting functionality in Angular.js to manipulate the displayed list.
d. Integrate Angular.js with a RESTful API to fetch data and display it in the application.
e. Implement authentication and authorization using Angular.js routing and services.

2. React:
a. Create a basic React component that displays "Hello, World!" on the screen.
b. Build a React application that fetches data from a REST API and renders it in a list.
c. Implement form handling in React to create, update, and delete items from the list.
d. Create a search functionality using React to filter the displayed list based on user input.
e. Implement routing in React to navigate between different pages within the application.

3. REST API:
a. Build a simple REST API using a framework like Node.js and Express.
b. Create endpoints to perform CRUD operations (Create, Read, Update, Delete) on a specific resource (e.g., users, products).
c. Implement authentication and authorization mechanisms using JSON Web Tokens (JWT) to secure the API.
d. Develop endpoints that handle file uploads and downloads.

GENERIC ELECTIVES (GE-6c): Artificial Intelligence

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
GE6c: Artificial Intelligence	**4**	**3**	**0**	**1**	Pass in Class XII	DSC 04 Object Oriented Programming with C++/ GE 1a Programming using C++ / GE1b Programming with Python/ DSC 01 Programming using Python/ GE 3b: Java Programming

Learning Objectives

The course objectives of this course are to:

- To introduce basic concepts and techniques of Artificial Intelligence (AI).
- To apply informed search techniques for different applications.
- To learn various knowledge representation techniques and writing Prolog programs.
- To learn about the latest techniques for developing AI systems.

Learning outcomes

On successful completion of this course, students will be able to:

- identify problems that are amenable to solutions by specific AI methods.
- state the utility of different types of AI agents.
- apply different informed search techniques for solving real world problems.
- use knowledge representation techniques for AI systems.

SYLLABUS OF GE-6c

Unit 1 6 Hours

Introduction: Introduction to artificial intelligence, background and applications, Turing test, Weak AI, Strong AI, Narrow AI, Artificial General Intelligence, Super AI, rational agent approaches to AI, introduction to intelligent agents, their structure, behavior and task environment.

Unit 2 12 Hours

Problem Solving and Searching Techniques: Problem characteristics, production systems, control strategies, breadth-first search, depth-first search, hill climbing and its variations, heuristics search techniques: best-first search, A* algorithm, constraint satisfaction problem, means-end analysis, introduction to game playing, min-max and alpha-beta pruning algorithms.

Unit 3 16 Hours

Knowledge Representation: Propositional logic, First-Order Predicate logic, resolution principle, unification, semantic nets, conceptual dependencies, frames, and scripts, production rules, Introduction to Programming in Logic (PROLOG).

Unit 4 8 Hours

Understanding Natural Languages: Components and steps of communication, the contrast between formal and natural languages in the context of grammar, Chomsky hierarchy of grammars, parsing, and semantics, Parsing Techniques, Context-Free and Transformational Grammars, Recursive and Augmented transition nets.

Unit 5 3 Hours

AI The Present and the Future: Symbolic AI, Data-driven AI and Machine Learning, Introduction to Machine Learning and Deep Learning based AI, some applications of symbolic and data driven AI, Interpretable and Explainable AI, Ethics of AI: benefits and risks of AI.

Essential/recommended readings

1. Russell, Stuart, J. and Norvig, Peter, *Artificial Intelligence - A Modern Approach*, Pearson, 4th edition, 2020..
2. Bratko, Ivan, *Prolog Programming for Artificial Intelligence*, Addison-Wesley, Pearson Education, 4th edition, 2012.
3. Patterson, DAN,W, *Introduction to A.I. and Expert Systems* – PHI, 2007.
4. Clocksin, W., F. and Mellish, *Programming in PROLOG*, 5th edition, Springer, 2003.

Additional references

1. Kaushik, Saroj, *Artificial Intelligence*, Cengage Learning India, 2011.
2. Rich, Elaine and Knight, Kelvin, *Artificial Intelligence*, 3rd edition, Tata McGraw Hill, 2010

Practical List :

Practical exercises such as

14. Write a program in Prolog to implement TowerOfHanoi(N) where N represents the number of disks.
15. Write a program to implement the Hill climbing search algorithm in Prolog.
16. Write a program to implement the Best first search algorithm in Prolog.
17. Write a program to implement A* search algorithm in Prolog.
18. Write a program to implement the min-max search algorithm in Prolog.
19. Write a program to solve the Water-Jug Problem in Prolog.
20. Implement sudoku problem (minimum 9×9 size) using constraint satisfaction in Prolog.
21. Write a Prolog program to implement the family tree and demonstrate the family relationship.
22. Write a Prolog program to implement knowledge representation using frames with appropriate examples.
23. Write a Prolog program to implement conc(L1, L2, L3) where L2 is the list to be appended with L1 to get the resulted list L3.
24. Write a Prolog program to implement reverse(L, R) where List L is original and List R is reversed list.
25. Write a Prolog program to generate a parse tree of a given sentence in English language assuming the grammar required for parsing.
26. Write a Prolog program to recognize context free grammar $a^n b^n$.

(Computer Science Courses for Undergraduate Programme of study with Computer Science discipline as one of the three Core Disciplines)

DISCIPLINE SPECIFIC CORE COURSE (DSC06): Computer Networks

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
DSC06: Computer Networks	**4**	**3**	**0**	**1**	Pass in Class XII	DSC 04 Object Oriented Programming with C++/ GE 1a Programming using C++ / GE1b Programming with Python/ DSC 01 Programming using Python/ GE 3b: Java Programming

Learning Objectives
The course objectives of this paper are to:

- Understand the concepts behind computer networks and data communication.
- Learn the different types of networks, network topologies and their characteristics.
- Learn the working of protocols used at various layers.
- Understand the utility of different networking devices.

Learning outcomes

Upon successful completion of the course, students will be able to:

- differentiate between various types of computer networks and their topologies.
- understand the difference between the OSI and TCP/IP protocol suit.
- distinguish between different types of network devices and their functions.
- design/implement data link and network layer protocols in a simulated networking environment.

SYLLABUS OF DSC06

Unit 1 (8 hours)
Introduction: Types of computer networks, Internet, Intranet, network topologies (bus, star, ring, mesh, tree, hybrid topologies), network classifications. layered architecture approach,

OSI Reference Model, TCP/IP Reference Model. Transmission Modes: simplex, half duplex and full duplex.

Unit 2 (9 hours)
Physical Layer: Analog signal, digital signal, the maximum data rate of a channel, transmission media (guided transmission media, wireless transmission, satellite communication), multiplexing (frequency division multiplexing, time-division multiplexing, wavelength division multiplexing). Guided Media (Wired) (Twisted pair, Coaxial Cable, Fiber Optics. Unguided Media (Radio Waves, Infrared, Micro-wave, Satellite).

Unit 3 (10 hours)
Data Link and MAC Layer: Data link layer services, error detection and correction techniques, error recovery protocols (stop and wait, go back n, selective repeat), multiple access protocols with collision detection, MAC addressing, Ethernet, data link layer switching, point-to-point protocol.

Unit 4 (8 hours)
Network layer: Networks and Internetworks, virtual circuits and datagrams, addressing, subnetting, Dijkstra Routing algorithm, Distance vector routing, Network Layer protocol- (ARP, IPV4, ICMP).

Unit 5 (10 hours)
Transport and Application Layer: Process to process Delivery- (client-server paradigm, connectionless versus connection-oriented service); User Datagram Protocols, TCP/IP protocol, Flow Control. FTP (File Transfer Protocol), SMTP (Simple Mail Transfer Protocol), Telnet (Remote login protocol), WWW (World Wide Web), HTTP (HyperText Transfer Protocol), URL (Uniform Resource Locator).

Essential/recommended readings

1. Tanenbaum, A.S. & Wethrall, D.J.. *Computer Networks*, 5th edition, Pearson Education, 2012.

2. Stallings, W., *Data and Computer Communications,* 10th edition, Pearson education India, 2017.

Suggested Practical List :

Practical exercises such as

Introduce students to any network simulator tool and do the following:

1. To Study basic network command and Network configuration commands.
2. To study and perform PC to PC communication.

3. To create Star topology using Hub and Switch.
4. To create Bus, Ring, Tree, Hybrid, Mesh topologies.
5. Perform an initial Switch configuration.
6. Perform an initial Router configuration.
7. To implement Client Server Network.
8. To implement connection between devices using router.
9. To perform remote desktop sharing within LAN connection.

DISCIPLINE COURSE (A6): Deep Learning

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
A6: Deep Learning	**4**	**3**	**0**	**1**	Pass in Class XII	A5 Machine Learning

Learning Objectives

The objective of this course is to introduce students to deep learning algorithms and their applications in order to solve real problems.

Learning outcomes

On successful completion of this course, the student will be able to:

- Describe the feed-forward and deep networks.
- Design single and multi-layer feed-forward deep networks and tune various hyper-parameters.
- Implement deep neural networks to solve a problem
- Analyze performance of deep networks.
- Use pre-trained models to solve a problem.

SYLLABUS OF A6

Unit 1 (15 hours)
Introduction to neural networks: Artificial neurons, perceptron, computational models of neurons, Structure of neural networks, Multilayer feedforward neural networks (MLFFNN), Backpropagation learning, Empirical risk minimization, bias-variance trade-off, Regularization, output units: linear, softmax, hidden units:tanh, RELU

Unit 2 (15 hours)
Deep neural networks: Difficulty of training DNNs, Greedy layerwise training, Optimization for training DNN's, Newer optimization methods for neural networks (AdaGrad, RMSProp, Adam), Regularization methods (dropout, drop connect, batch normalization).

Unit 3 (15 hours)
Convolution neural networks (CNNs): Introduction to CNN - convolution, pooling, Deep CNNs - LeNet, AlexNet. Training CNNs, weights initialization, batch normalization, hyperparameter optimization, Understanding and visualizing CNNs, Using a pre-trained convnet

Suggested Practical List

The following practicals are to be conducted using Python.

1. Implement a feed-forward neural networks for classifying movie reviews as positive or negative (using IMDB dataset)
2. Implement a deep-neural feed-forward network for estimating the price of house, given real-estate data (Boston Housing Price)
3. Implement a deep-neural network for classifying news wires by topic (Reuters dataset).
4. Implement CNN for classifying MNIST dataset.

2. Stallings, W. *Data and Computer Communications,* 10th edition. Pearson education India, 2017.

Suggested Practical List :

1. Simulate Cyclic Redundancy Check (CRC) error detection algorithm for noisy channel.
2. Simulate and implement stop and wait protocol for noisy channel.
3. Simulate and implement go back n sliding window protocol.
4. Simulate and implement selective repeat sliding window protocol.
5. Simulate and implement distance vector routing algorithm.
6. Simulate and implement the Dijkstra algorithm for shortest-path routing.

ANNEXURE-27

Sub: Amendment to Ordinance V

[E.C Resolution No. 14-1/ (14-1-12) and 27-1 (27-1-14) dated 09.06.2023 and 25.08.2023]

Following addition be made to Appendix-II-A to the Ordinance V (2-A) of the Ordinances of the University;

Add the following:

Skill Enhancement Courses (SECs)
Under UGCF-2022
Listed under Appendix-II-A to the Ordinance V (2-A) of the Ordinances of the University
(with effect from Academic Year 2022-23)

A student who pursues any undergraduate programme in the University and its Colleges is offered a pool of Skill Enhancement Courses. A list of such courses as passed by the Executive Council in its meeting dated 09.06.2023 and 25.08.2023 is as below:

1) Plant Tissue Culture
2) Application of Plant Tissue Culture
3) Exploring medicinal plants: from cultivations to applications
4) DNA barcoding of medicinal/ commercially important plants
5) Cultivation of Lac: an eco-friendly multiuse wonder product of nature
6) Lac Characterization and Processing
7) Drosophila and Zebrafish model organism in biological studies
8) Isolation and characterization of Plasmid DNA
9) Isolation, characterization and quality check of Genome DNA
10) Polymerase chain reaction (PCR) and its applications
11) CAD (Computer aided Jewellery Design-I)
12) CAD (Computer aided Jewellery Design-II)
13) CAD (Computer aided Jewellery Design-III)
14) CAD (Computer aided Jewellery Design-IV)
15) Harmonium -II- Study of Harmonium
16) Reading & Writing skills in Brahmi Scripts

17) Acting Skills in Sanskrit Dramaturgy
18) Script writing skills in Sanskrit Dramaturgy
19) Fundamentals of Indian Manuscriptology
20) Traditional Indian Gastronomy
21) E-Learning Tools and Techniques for Sanskrit
22) Practices in Horoscopes -I
23) Basics of Food Science and Nutrition
24) Basic Forensic science
25) Basic Laboratory Techniques
26) Public health, hygiene and nutrition
27) LaTeX Typesetting for Beginners
28) Mathematical Modeling with Excel
29) Financial Modeling with Excel
30) Network Flows
31) R-Shiny: Powerful Web Apps for Everyone
32) Spoken Persian: Elementary level

Plant Tissue Culture

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Plant Tissue Culture	**2**	**NIL**	**NIL**	**2**	**Class XII**	**NIL**

Learning Objectives

The learning objectives of this course are as follows:

- To discuss the principle of Plant Tissue Culture
- To understand the importance of Plant Tissue Culture and its applications
- To impart hands-on training on various aspects of Tissue Culture
- To understand the importance of aseptic culturing techniques
- To equip the learner to effectively utilize the techniques in various areas like basic research, genetic transformation studies, secondary metabolite production, pharmaceuticals etc

Learning Outcomes

By the end of this course, students will

- Get familiarized with aseptic culture techniques
- Be able to prepare stock solutions and media for experimental purposes
- Comprehend different modes of regeneration
- Have understood the micro propagation mechanism and its intricacies.
- Be able to establish a regeneration protocol using different explant material
- Students will be able to appreciate the applications of plant tissue culture in various domains.
- An industrial visit will give them the required exposure for their holistic understanding of the commercial applications and entrepreneurship avenues in this field of plant tissue culture

Skill development and job opportunities

After completion of this course students may be engaged in following opportunities:

- Entrepreneurship development: Students can start their own Tissue culture set-up
- Tissue culture industry: Individuals can work as researchers, technicians and support staff at tissue culture based industries
- Academia: Individuals can pursue higher education and research opportunities in the field of tissue culture and genetic transformation in universities and research institutions.

SYLLABUS 60 hours

Unit 1: Introduction to Plant tissue Culture 8 hours

Introduction to Plant Tissue culture, Terms and definitions, Historical background, laboratory organization: Design and layout for wash area, media preparation, methods of sterilization, transfer area for aseptic manipulations, Culture rooms, and observation/data collection areas.

Practical:

1. Familiarization with the tissue culture laboratory set-up
2. Familiarization with basic equipment in tissue culture techniques- Autoclave, Laminar Air Flow
3. To understand history, theory and principles of plant tissue culture and concept of cellular totipotency.

Unit 2: Tissue Culture Media 12 hours

Introduction, Types of Media and its importance; Preparation of stock solutions of macronutrients, micronutrients, PGRs and vitamins. pH and buffers- their significance in media. Plant Growth Regulators: Role of PGRs (auxins, cytokinins, abscissic acid, ethylene and Gibberellins) in plant development

Practical:

4. Preparation of stock solutions- Macronutrients, Micronutrients and PGRs
5. Preparation of Murashige and Skoogs medium

Unit 3: Aseptic Techniques 12 hours

Methods of sterilization of equipment's, culture media and explants:-Washing and preparation of glassware's, packing and sterilization, media sterilization, surface sterilization. Precautions to maintain aseptic conditions.

Practical:

6. Study of methods of sterilization A) Moist heat sterilization B) Dry heat sterilization C) Filter sterilization
7. Sterilization of MS medium
8. Surface sterilization of Explant Material

Unit 4: Initiation of Cultures 12 hours

Callus Induction and growth parameters, Callus subculture and maintenance, growth measurements, morphogenesis in callus culture – organogenesis, somatic embryogenesis

Practical:

9. Establishment of callus cultures
10. Establishment of suspension cultures from callus
11. Characterization and sub-culturing of Callus cultures

Unit 5: Micropopagation 12 hours

Micropropagation – stages, advantages, applications, Somatic embryogenesis-induction, factors, comparison with zygotic embryogenesis.

Practical:

12. Establishment of cultures using shoot tip and nodal explants (axillary proliferation)
13. Visit to a Tissue Culture Set-up/ Industry

Unit 6: *Agrobacterium*-mediated genetic transformation **4 hours**

Agrobacterium-the natural plant genetic engineer, understanding the Ti plasmid, selection of recombinants by selectable marker and reporter genes (GUS, luciferase, GFP). Applications.

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Applications of Plant Tissue Culture	**2**	**NIL**	**NIL**	**2**	**Class XII**	**NIL**

Learning Objectives

The learning objectives of this course are as follows:

- To discuss the principle of Plant Tissue Culture
- To understand the importance of Plant Tissue Culture and its applications
- To impart hands-on training on various aspects of Tissue Culture
- To understand the importance of aseptic culturing techniques
- To equip the learner to effectively utilize the techniques in various areas like basic research, genetic transformation studies, secondary metabolite production, pharmaceuticals etc

Learning Outcomes

By the end of this course, students will

- Get familiarized with aseptic culture techniques
- Be able to prepare stock solutions and media for experimental purposes
- Have understood the micro propagation mechanism and its intricacies.
- Be able to establish a regeneration protocol using different explant material
- Students will be able to appreciate the applications of plant tissue culture in various domains.
- Able to do mass propagation of true to type and disease free, quality medicinal plants/ornamental plants,/fruit and forest trees through tissue culture

Skill development and job opportunities

After completion of this course students may be engaged in following opportunities:

- Entrepreneurship development: Students can start their own Tissue culture set-up and do mass propagation of true to type and disease free, quality medicinal plants/ornamental plants,/fruit and forest trees through tissue culture
- Tissue culture industry: Individuals can work as researchers, technicians and support staff at tissue culture based industries
- Academia: Individuals can pursue higher education and research opportunities in the field of tissue culture and genetic transformation in universities and research institutions.

SYLLABUS 60 hours

Micropropagation of medicinally/economically important plants **32 hours**

1. Preparation of stock solutions of macronutrients, micronutrients, vitamins, PGRs
2. Preparation of MS medium fortified with the appropriate PGR for explant culture
3. Preparation of the explant material (shoot tips/nodal segments/leaf discs etc.) - excising the material and surface sterilization
4. Culturing of the explant on MS medium
5. Sub-culturing on maintenance medium / rooting medium
6. Acclimatization of the micropropagated plantlets
7. Transfer of plantlets to pots

Anther Culture for production of Adrogenic haploids **28 hours**

8. Identification of unicellular microspore stage of the anther
9. Media Preparation
10. Anther culture (*Datura innoxia)*
11. Complete regeneration of Haploid Plants

Recommended Books:

1. Bhojwani, S. S., & Razdan, M. K. (1986). *Plant tissue culture: theory and practice*. Elsevier.
2. Razdan, M. K. (2002). *Introduction To Plant Tissue Culture, 2/E*. Oxford and IBH publishing.
3. Gamborg, O., & Phillips, G. C. (Eds.). (2013). *Plant cell, tissue and organ culture: fundamental methods*. Springer Science & Business Media.
4. Taji, A., Dodd, W. A., & Williams, R. R. (1992). *Plant tissue culture practice*. University of New England.
5. Smith, R. H. (2012). Plant tissue culture: techniques and experiments. Academic press.

Examination scheme and mode:

Evaluation scheme and mode will be as per the guidelines notified by the University of Delhi.

Exploring Medicinal Plants: From Cultivation to Applications

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Exploring Medicinal Plants: From Cultivation to Applications	**2**	**0**	**0**	**2**	**Class XII**	**NIL**

Learning Objectives:

The learning objectives of this course are as follows:

- To learn various methods of propagating medicinal plants, such as seed germination, stem cuttings, and division.
- To develop the ability to observe and document macroscopic characteristics of herbal materials.
- To learn the microscopic techniques for examination of plant materials.
- To learn the different methods used in extracting bioactive compounds from medicinal plants and the factors to be considered in choosing the appropriate method.
- To conduct phytochemical screening tests to detect the presence of various compounds in medicinal plant extracts.
- To analyze the separated compounds from medicinal plant extracts using Thin Layer Chromatography (TLC).

Learning Outcomes:

By studying this course, students will be able to:

- acquire knowledge of proper care and maintenance of medicinal plants during cultivation.
- learn to identify and describe variations in size, color, odor, and surface texture among different plant specimens.
- acquire the skills to observe and count stomata, the tiny openings on leaf surfaces.
- perform commonly used phytochemical screening methods such as the alkaloid test, glycoside test, steroid and triterpenoid test, tannin test, flavonoid test, and phenol test and interpret the results
- use Thin Layer Chromatography (TLC) to separate compounds from a medicinal plant extract and analyze the separated compounds.
- evaluate the current research and developments in the field of medicinal plants.

PRACTICAL **(60 hours)**

1. Cultivate and monitor medicinal plants to learn propagation techniques.
2. Conduct macroscopic examination of herbal material based on their size, color, odor, and surface texture.
3. Perform microscopic examination to determine stomatal number and index.
4. Conduct microscopic examination to measure the size of calcium oxalate crystals.
5. Determine the moisture content of crude medicinal plant extract.
6. Determine the alcohol-soluble extractive value of medicinal plant extract.
7. Determine the water-soluble extractive value of medicinal plant extract.
8. Perform solvent extraction of bioactive compounds from medicinal plants.
9. Perform phytochemical screening tests for alkaloids, glycosides, tannins, flavonoids, and phenols.
10. Conduct fractionation and purification using chromatographic technique (TLC) to separate compounds from medicinal plant extracts.
11. Visit industries/institutes and prepare a report based on your observations and learning.

DNA barcoding of medicinal/commercially important plants

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DNA barcoding of medicinal/commercially important plants	**2**	**NIL**	**NIL**	**2**	**Class XII**	**NIL**

Learning Objectives

The Learning Objectives of this course are as follows:

- To give laboratory based first-hand training in various steps involved in DNA barcoding.
- To gain computational laboratory (Bioinformatics) based hands-on-training for DNA barcoding.
- To understand the importance of medicinal/herbal plants in Ayurveda, Unani, Siddha and Homeopathy and other commercially important plants.
- To gather knowledge of the potential adulterants and their harmful effect in medicinal/herbal/commercially important plant formulations as well as herbal trade.
- To gain experience in the management for identifying herbal plant parts vs their potential adulterants.

Learning Outcomes

By the end of the course, the students will be able to:

- Learn DNA barcoding technology.
- Apply DNA barcoding technique in identification of herbal plant/parts and commercially important plant/parts from their potential adulterants.
- Familiarize with the applications of medicinal/herbal plants in Ayurveda, Unani, Siddha and Homeopathy.
- Identify and understand about potential adulterants of medicinal/herbal plant formulations as well as in herbal trade.

Skill development and job opportunities

After completion of this course students may be

- Employed in various herbal plant-based companies.
- Employed in various trade companies related to medicinal/herbal plants.
- Setup a laboratory for DNA barcoding and provide the DNA barcode for herbal plants/ commercially important plants and generate employments.

SYLLABUS 60 hours

Unit 1: Medicinal/Commercially important plant parts and their potential adulterants. 8 hours

Overview of Medicinal/herbal plants and other commercially important plants and their parts, applications of medicinal plants and plant parts such leaves, bark, flower, roots etc. in Ayurveda, Unani, Siddha and Homeopathy. Adulteration in the herbal formulations and herbal trade, applications of DNA barcoding in distinguishing plants/parts/powder from their potential adulterants.

Experiments:

1. Collection of selected medicinally important plant parts/commercially important plant parts and their potential adulterants for DNA isolation.
2. Visit a herbal garden/industry.

Unit 2: DNA barcoding 36 hours

Overview of DNA barcoding, Plant, chloroplast and mitochondrial genomes and genes, structure of nucleic acids, DNA denaturation and renaturation kinetics, melting temperature (Tm) of DNA, primer designing, potential loci for DNA barcoding, DNA sequencing methods.

Experiments:

3. DNA isolation of selected medicinal plant part and other commercially important plant parts and their potential adulterants using CTAB and other methods.
4. Qualitative analysis of isolated DNA using Gel electrophoresis.
5. Qualitative (A^{260}/A^{280}) and quantitative analysis of DNA using *UV-VIS* Spectrophotometer.
6. PCR amplification of loci for plant DNA barcoding using specific primers.
7. Analysis of PCR product by Gel electrophoresis.
8. PCR amplified product sequencing.

Unit 3: Bioinformatics for DNA barcoding 16 hours

Introduction of biological databases, The Barcode of Life Datasystems (BOLD), Medicinal Materials DNA Barcode Database (MMDBD) https://rdccm.cuhk.edu.hk/mherbsdb/, Primer designing tools, The Basic Local Alignment Search Tool (BLAST) and its application in DNA barcoding, Sequence alignment and construction of tree.

Experiments:

9. Biological databases including DNA barcode databases.
10. Primer designing for DNA barcode using primer 3 plus and other tools.
11. Analysis of DNA barcode sequence using The Basic Local Alignment Search Tool (BLAST).
12. Sequence alignment and construction of tree

Recommended Books:

1. W. John Kress and David L. Erickson (2012) DNA Barcodes: Methods and Protocols. Humana Totowa, NJ. https://doi.org/10.1007/978-1-61779-591-6.

Examination scheme and mode:

Evaluation scheme and mode will be as per the guidelines notified by the University of Delhi.

Cultivation of Lac: An eco-friendly multiuse wonder product of nature

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Cultivation of Lac: An eco-friendly multiuse wonder product of nature	**2**	**1**	**NIL**	**1**	**Class XII**	**NIL**

Learning Objectives

The Learning Objectives of this course are as follows:

- Understanding the basic principles and concepts of lac cultivation, such as the life cycle of lac insects, methods of propagation, and cultivation techniques.
- Acquiring knowledge of the different species of lac insects, their characteristics, and their ecological requirements.
- Learning about the various methods of harvesting lac, including timing, collection, and processing techniques.
- Developing practical skills in the management of lac plantations, such as pest and disease control, irrigation, and fertilization.
- Understanding the ecological and environmental impacts of lac cultivation and its sustainability.

Learning Outcomes

By the end of the course, the students will be able to:

- understand the basic principles and concepts of lac cultivation, including the life cycle of lac insects, methods of propagation, and cultivation techniques.
- distinguish the different species of lac insects, their characteristics, and their ecological requirements.
- demonstrate proficiency in the methods of harvesting lac, including timing, collection, and processing techniques.
- apply quality control and assurance measures in lac cultivation.
- attain practical skills in the management of lac plantations, such as pest and disease control, irrigation, and fertilization.
- communicate effectively with stakeholders such as farmers, policymakers, and researchers in the field of lac cultivation.
- analyse and evaluate the challenges and opportunities in lac cultivation and proposing innovative solutions.

Skill development and job opportunities

After completion of this course students may be engaged in following job opportunities:

- Entrepreneurship development: Students can start their own entrepreneurship of scientific lac cultivation.
- Lac cultivation and processing industry: Individuals can work in the lac cultivation and processing industry as plantation managers, quality control supervisors, production supervisors, etc.
- NGOs and development agencies: Individuals can work with NGOs and development agencies to promote sustainable lac cultivation practices and provide technical support to small-scale lac farmers.
- Government agencies: Individuals can work with government agencies involved in the promotion and regulation of the lac cultivation industry.
- Academia: Individuals can pursue higher education and research opportunities in the field of lac cultivation in particular and economically important trans-kingdom interactions in general in universities and research institutions.

SYLLABUS

Unit 1: Lac: Composition and their applications **2 hours**

Historical introduction of lac, Types of lac and its composition, industrial applications of lac viz. resin, dye, wax, various chemicals of lac cultivation, Socioeconomic aspects of lac.

Unit 2: Lac production: multiple partners involved and their role **5 hours**

Major and minor lac host pants, Raising major lac host plantations of *Schleichera oleosa*, *Butea monosperma* and *Ziziphus mauritiana*, Selection of suitable host plant, Raising plantations of bushy lac host taxa namely, *Flemingia* sp. and *Calliandra* sp. for intensive lac cultivation, Pruning management of host plants, Integrated nutrient management of host plants. Morphology and lifecycle of lac insect, Crop cycle on host plant, multiparter interactions involving plant host-lac insect- endosymbiont and their role, implications of endosymbionts in lac production.

Practical: **12 hours**

1. How to select suitable lac host plant
2. Scientific pruning techniques of lac host plants
3. Methods and techniques of nutrient management of host plants
4. Study of morphology and life stages of lac insect
5. Crop cycles of lac on different host plants

Unit 3: Pests and diseases in lac ecosystem and their management **1 hours**

Pests and diseases of lac host plants and lac insects; pest management in lac.

Practical: **4 hours**

6. Identification of lac insect pests and diseases
7. Techniques of pest management in lac

Unit 4: Broodlac and inoculation management **2 hours**

Selection, procurement, storing and transport of brood lac, brood Lac Inoculation Methods and inoculation management.

Practical: **4 hours**

8. Methods of determination of brood lac maturity
9. Scientific Brood Lac Inoculation Methods

Unit 5: Scientific lac production methods **4 hours**

Rangini lac production on *Butea monosperma*, Rangini lac production on *Ziziphus mauritiana*, Kusmi lac production on *Schleichera oleosa*, Winter Kusmi lac production on *Ziziphus mauritiana*, Coupe system of lac cultivation, Utilizing multiple lac hosts through coupe system, Intensive lac production on bushy lac host *Flemingia* sp. and *Calliandra* sp., Lac integrated farming system, Alternation of conventional host for sustainable brood lac quality.

Practical: **8 hours**

10. Designing of coupe system of lac cultivation
11. How to formulate lac integrated farming system
    - Students visit to an Institute/Field and Prepare a report.

Unit 6: Harvesting and post-harvest management of lac **1 hours**

Harvesting of lac, harvest management of lac.

Practical: **2 hours**

12. How to harvest lac and harvesting tools
13. Methods of post-harvest management of lac

Recommended Books:

1. Sharma, K.K. & Ramani, R. (Eds.). (2011). *Recent advances in lac culture*. ICAR-IINRG publications.
2. Mathur, P. N., & Lal, S. B. (1993). *Lac Production, Processing and Marketing*. Indian Council of Agricultural Research.

6. Roy, D., & Dasgupta, P. (Eds.). (2016). *Lac Insect (Kerria lacca) Cultivation*, Processing and Uses. CRC Press.

Examination Scheme and mode: Evaluation scheme and mode will be as per the guidelines notified by the University of Delhi.

Lac Characterization and Processing

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Lac Characterization and Processing	**2**	**NIL**	**NIL**	**2**	**Class XII**	**NIL**

Learning Objectives

This course's Learning Objectives are as follows:

- To provide first-hand laboratory training in the various steps involved lac processing.
- To gain laboratory experience in characterization of various types of lac.
- To develop skills in isolating lac wax and lac dye.
- To acquire practical laboratory experience characterising these substances.
- To gain the knowledge of industrial applications lac.
- To give students hands-on experience in the lab isolating a high-value product, aleuritic acid.

Learning Outcomes

By the end of this course, students will

- Be familiar with various steps of lac processing.
- Learn how to characterise different kinds of lac in the lab.
- Be trained in separation of lac wax and lac dye.
- Gain hands-on experience in characterising these compounds in the lab.
- Have real-world laboratory experience in separating a valuable compound (aleuritic acid).

Skill development and job opportunities

Students who successfully complete this course may be qualified for the following positions:

- Students can enhance their entrepreneurial skills by starting their own scientific lac processing unit and lac export unit.
- Quality control supervisors, production supervisors, etc. are only few of the jobs available in the lac processing business.
- Students can collaborate with non-governmental organisations (NGOs) and development agencies (DAs) to disseminate information on sustainable lac farming practises and offer assistance to local lac farmers.

- Employment opportunities exist in government entities that promote and regulate the lac sector.

SYLLABUS

Practical **60 hours**

1. Collection of lac stick from the host plants and scrapping of stick lac
2. Primary processing of stick lac to seed lac
3. Processing of stick lac to seed lac
4. Characterization of the seed lac
5. Processing of seed lac to button lac/ shellac
6. Characterization of button lac /shellac
7. Extraction and purification of lac dye
8. Estimation of lac dye content and its characterization
9. Extraction of lac wax and its characterization
10. Isolation of Aleuritic acid from lac, value added lac product.
11. Project: Applications, Industries, Export and Marketing strategies of lac
12. Industry/ Institute Visit and prepare a report.

Recommended Books:

1. Bangali babu and D.N. Goswami (2010) Processing, chemistry and applications of lac. ICAR publication. ISBN 978-81-7164-065-2.
2. Natural material and products from insects: Chemistry and applications (2020) ed. Dhiraj Kumar and Mohammad Shahid. Springer. ISBN 978-3-030-36610-0
3. Y. Sankaranarayanan (1968) Shellac: Modifications and Compositions. Indian Lac Research Institute, Namkum, Rachi, India.

Examination scheme and mode:

Evaluation scheme and mode will be as per the guidelines notified by the University of Delhi.

SKILL ENHANCEMENT ELECTIVE (SEC) COURSES

Drosophila and Zebrafish model organism in Biological Studies

(CREDITS: PRACTICAL-2)

Course Title & Code	**Credits**	**Credit distribution of the course**			**Eligibility criteria**	**Pre-requisite of the course (if any)**
		Lecture	**Tutorial**	**Practical / Practice**		
Drosophila and Zebrafish model organism in Biological studies	**2**			**2**	12th pass with Biology	NIL

LEARNING OBJECTIVES:

The course will help students to understand the skills required to work with model organisms. To learn the use of model organisms such as Drosophila and Zebrafish in understanding the Biological concepts and processes and its applications in biomedical and Pharma research and industry. The specific objectives of the course are:

- To learn basic requirements for setting up Drosophila and Zebrafish lab.
- To learn to handle, breed and maintain Drosophila and Zebrafish model organism.
- To learn more about biological processes, genetics, drug discovery, toxicology and human diseases using these model organisms.
- To learn to design experiments using these model organisms.

COURSE OUTCOMES

Upon completion of this course students will be skill trained in Drosophila and Zebrafish model system and its applications in Bioscience education, research and Pharmacology and Biotechnology industry.

- Will be able to set up Drosophila and zebrafish lab.
- Will be skilled trained in maintenance of Drosophila stocks and propagation and zebrafish husbandary.

- Have knowledge of designing experiments in genetics, toxicology, behavioural and human disease modelling using these model systems.
- Analyze and interpret the data collected in the laboratory experiments.

Practical (2 credits) **Total 15 weeks**

Total hours: 60

Unit I: Introduction to Drosophila model system (4 weeks)

- Introduction to different model organisms, advantage and disadvantage of using various model organisms, animal ethics.
- Study of life cycle and developmental stages of Drosophila melanogaster
- Male female differentiation
- Study of various mutants
- TLC of eye pigments
- Study of polytene chromosome in Drosophila

Unit II: Mendelian and non Mendelian Genetics (3 weeks)

Drosophila as a model organism to study different principles of genetics

- Collection of virgin fly
- Setting up of crosses in Drosophila
- Scoring of F1 and F2 population, chi-square test

Unit III: Introduction to Zebrafish model system (3 weeks)

Advantages of zebrafish model organism. Basic requirement to set up zebrafish lab. Zebrafish husbandry. Study development stages and developmental phenotypic end points.

- Handling zebrafish, identify male and female zebrafish, and breeding setup.
- To prepare Zebrafish feed and culture Pramecium and Artemia.
- Egg collection and study of developmental stages starting from the zygote - cleavage - blastula - gastrula - segmentation, pharyngula, hatching and early larval development.

Unit IV: Zebrafish as a research and education model (5 weeks)

Importance of zebrafish as a versatile research and education model. Genetic and morphological homology with humans.

- Query based experimental design using zebrafish model system.
- Perform Toxicological assays.
- Perform Behavioral assays.
- Create Human disease models in zebrafish
- Use of transgenic reporter lines.

Isolation and characterisation of Plasmid DNA

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Isolation and characterisation of Plasmid DNA	**2**		**NIL**	**2**	**Class XII**	**NIL**

Learning Objectives:

Students of this course should be able to learn:

- Fundamentals of nucleic acid molecules.
- Handling and growing of non-pathogenic bacterial strains of E. coli for recombinant DNA work.
- Basics of Plasmids and its isolation from the culture using different methods.
- Basics of electrophoresis techniques employed for the separation of Nucleic acid molecules.

Learning Outcomes:

At the end of this course, students should be able to learn and perform in Hands-on mode:

- Fundamentals of operation of different types of centrifuges, Electrophoresis, Spectrophotometer and about Good Laboratory Practices and working environment of Genomic Laboratory.
- Use of micropipettes, preparation of solutions, media and sterilisation.
- Basics of different types of nucleic acids
- Handle bacterial strains of E. coli for the isolation of single colony and growth in liquid media.
- Isolate Plasmids using different methods and characterise by agarose gel electrophoresis.

Unit 1: Basic microbiological techniques for culturing and growth of bacteria (16 hours)

Information on general and molecular biology laboratory practices including Biosafety, Information about important strains E. coli used in recombinant DNA work; chemical composition of media used for growing E. coli both on solid surface and in liquid culture.

Practical:

1.1 Pipetting using macro and micro pipettes, macro and micro weighing, measurement of pH, preparation of buffers and other solutions.

1.2 Preparation of solid and liquid media for growing E. coli, sterilization using autoclave and use of Biosafety cabinet.

1.3 Pouring of Petri plates with solid agar media and streaking of E. coli to isolate single colonies.

1.4 Inoculation of E. coli from streaked plate to obtain grown culture.

Unit 2: Isolation of Plasmids and their characterisation (32 hours)

Definition and Features of a plasmid, Comparative description of different plasmids in respect of copy number, compatibility and antibiotics resistance markers, various plasmid isolation methods, Gel electrophoresis for nucleic acids.

Practical:

2.1 Isolation of plasmid DNA using the available culture by alkaline lysis method

2.2 Preparation of agarose gel, electrophoresis and visualization of plasmid DNA on the gel using transilluminator, characterisation of different forms of plasmid DNA.

Unit 3: Isolation and characterization of plasmid DNA by use of column (16 hours)

Technology for isolation of nucleic acids using column, principle of binding and elution of DNA from column. Chromatographic techniques for isolation of nucleic acids.

Practical:

3.1 Isolation of plasmid DNA using the self-grown culture by spin column method.

3.2 Preparation of agarose gel, electrophoresis and visualization of plasmid DNA on the gel, characterisation of different forms of plasmid DNA.

3.3 Documentation of the gel using gel documentation system.

Essential/ Recommended Readings:

1. Sambrook J, Fritsch EF & Maniatis T. Molecular Cloning. A laboratory Manual. 3rd Edition. Cold Spring Harbor Laboratory Press. New York.

Suggestive Reading:

1. Ausubel FM, Brent R, Kingston RE, Moore DD, Seidman JG, Smith JA, Struhl K. Current Protocols in Molecular Biology. (eds.) John Wiley & Sons, Inc. New York.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Isolation, characterisation and Quality Check of Genomic DNA

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Isolation, characterisation and Quality Check of Genomic DNA	**2**	**NIL**	**NIL**	**2**	**Class XII**	**NIL**

Learning Objectives:

Students of this course should be able to learn:

- Basics of Genomic DNA, need for isolation of genomic DNA and different methods for its isolation.
- Problems due to RNA contamination in further use of genomic DNA and Methods for elimination of contaminating RNA.
- Use of electrophoresis and spectrophotometric techniques for the quantification and quality check of DNA

Learning Outcomes:

At the end of this course, students should be able to learn and perform in Hands-on mode:

- Different methods for isolation of genomic DNA from prokaryotic and eukaryotic cells.
- Handle prokaryotic and eukaryotic cell samples.
- Isolate Genomic DNA and characterise by agarose gel electrophoresis
- Remove RNA contamination from genomic DNA
- Quantify and check quality of DNA by spectrophotometric technique.

Unit 1: Isolation of Genomic DNA from prokaryotic cell (24 hours)

Information on differences between eukaryotic and prokaryotic cells wrt lysis of cells and extraction of DNA, different methods used for isolation of genomic DNA; different kinds of samples as starting material for extraction of DNA.

Practical: Isolation of Genomic DNA

1.1 Composition and preparation of required reagents.

1.2 Isolation of genomic DNA from E. coli culture.

1.3. Gel electrophoresis for isolated genomic DNA

Unit 2: Isolation of Genomic DNA from eukaryotic cell (24 hours)

Different methods used for isolation of genomic DNA; different kinds of samples as starting material for extraction of DNA.

Practical: Isolation of Genomic DNA

2.1 Composition and preparation of required reagents.

2.2 Isolation of genomic DNA from Blood sample etc.

2.3. Gel electrophoresis for isolated genomic DNA

Unit 3: Elimination of RNA contamination followed by quantitation and quality check (16 hours)

Problems due to RNA contamination in further use of genomic DNA in different applications, various methods for removal of RNA from genomic DNA preparation, Gel electrophoresis and UV-visible spectrophotometry-based quantification and quality check of DNA. Other automated systems of quality check for nucleic acids.

Practical Session:

3.1 Removal of RNA from genomic DNA preparation

3.2 Gel electrophoresis of the genomic DNA preparation

3.3 Spectrophotometry-based quantification and quality check of DNA

Essential/ Recommended Readings:

1. Sambrook J, Fritsch EF & Maniatis T. Molecular Cloning. A laboratory Manual. 3rd Edition. Cold Spring Harbor Laboratory Press. New York.
2. Ausubel FM, Brent R, Kingston RE, Moore DD, Seidman JG, Smith JA, Struhl K. Current Protocols in Molecular Biology. (eds.) John Wiley & Sons, Inc. New York.

Suggestive Reading:

1. Alberts, B.,Bray, D, Lewis, J., et al. The Molecular Biology of the Cell. Garland Publishing, New York.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Polymerase chain reaction (PCR) and its applications

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Polymerase chain reaction (PCR) and its applications	2	NIL	NIL	2	Class XII	NIL

Learning Objectives:

Students of this course should be able to learn:

- Concept of PCR and different types of PCR.
- Principles of oligonucleotide (primer) synthesis and purification
- Designing of Primers for PCR.
- Hands-on setting up of PCR reaction and analysis of the amplified product.
- Purification of PCR product

Learning Outcomes:

At the end of this course, students should be able to learn and perform:

- PCR and its application for research.
- Designing of Primers for PCR and obtaining Primers as synthetic oligonucleotides of
- appropriate quality from commercial sources.
- Designing conditions for setting up a PCR and perform analysis of amplified DNA.
- Purification of PCR-amplified DNA using columns for downstream application.

Unit 1 Concept of PCR and different types of PCR with some applications (12 hours)

Principle of Polymerase Chain reaction and amplification process, use of thermocycler and other equipment required to perform PCR and analysis of amplified DNA, use of synthetic oligonucleotide as primers in PCR.

Practical:

1.1 Demonstration of thermocycler, setting of conditions for a PCR for different types of templates and understanding the reagents used in PCR.

1.2 Chemistry of oligonucleotide synthesis and purification techniques, designing the Primer sequence for PCR through the use of online free software. Handling and storage of Primers for long term use.

Unit 2: PCR reaction for amplification and analysis of the amplified product (32 hours)

Designing and Setting up PCR, understanding about different reaction components, use of different types of polymerases for different length of amplicons, concept of fidelity and processivity of polymerases.

Practical:

2.1 Demonstration of a PCR to explain all the steps required for setting up the reaction and analysis of the amplified product.

2.2 Designing and setting up a PCR individually to amplify a 500 bp product and analysis of the amplified product using agarose gel electrophoresis.

2.3. Designing and setting up a PCR individually to amplify a 1500 bp product and analysis of the amplified product using agarose gel electrophoresis.

Unit 3: Purification of PCR-amplified DNA and downstream applications (20 hours)

Purpose of purification of PCR product, methods for purification, downstream applications of PCR products.

Practical:

3.1 Purification of PCR products by spin column method

3.2 Agarose gel electrophoresis and visualization of the product after purification.

Essential/ Recommended Readings:

1. Sambrook J, Fritsch EF & Maniatis T. Molecular Cloning. A laboratory Manual. 3rd Edition. Cold Spring Harbor Laboratory Press. New York.
2. Ausubel FM, Brent R, Kingston RE, Moore DD, Seidman JG, Smith JA, Struhl K. Current Protocols in Molecular Biology. (eds.) John Wiley & Sons, Inc. New York.

Suggestive Reading:

1. Alberts, B.,Bray, D, Lewis, J., et al. The Molecular Biology of the Cell. Garland Publishing, New York.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

CAD (Computer aided Jewellery Design-I) Coral Draw

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
CAD (Computer aided Jewellery Design-I)	2	0	0	2	Class XII	NIL

Learning Objective:

This course will enable the students to -

- Acquire proficiency in computer application in jewellery designing.
- Introduction about various tools used in coral draw.
- Prepare computer sketches on specified themes.

Learning outcomes

The students will be able to –

- Demonstrate knowledge of technical. Specification using appropriate Coral Draw software
- Competency of modelling & product presentation on this Software.
- Creating Jewellery Designs using this software.
- Develop digital portfolio & show reel.

UNIT 1

Introduction to Corel Draw, Basic Tools in Coral Draw, Various Shapes.

UNIT 2

Drawing & Shaping Objects, Transforming Objects, Corel Draw Effects, Working with Layer, Design Development, Colour Fills and Outlines Tools, Gold Colour Creation.

UNIT 3

Motif Development to Make jewellery, Interactive Blend Tool, Diamond with Measurement, Stone Setting, Creating Shapes & Painting

UNIT 4

Theme Based Designing-Earrings, Bracelets, Pendants, Ring, Brooch, Necklace

UNIT 5

Special Effects to Images-Backgrounds, Text Option, Detail Of jewellery Piece

TEXT BOOKS/WEBSITE

• http://product.corel.com/help/CorelDRAW/540229932/Main/EN/User Guide/CorelDRAWX7.pdf

• http://howto.corel.com/

• http://www.insidegraphics.com/corel_basics/corel_draw_guidelines.asp

• An Introduction to computer aided design for jewellery casting by Lucian Taylor

• Corel Draw 11: the official guide dream tech publishers

CAD (Computer aided Jewellery Design-II) Coral Draw

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
CAD (Computer aided Jewellery Design-II)	2	0	0	2	Class XII	NIL

Learning Objectives:

This course will enable the students to –

- Learn how to convert Manual Design to Digital Form with Exact Measurements using Corel.
- Learn about creating variation and Orthography in this module.
- Additionally, learn how to apply the 3D rendering Effect in Photoshop

Learning Outcomes:

Students will learn the basics of jewellery Design Software “Coral Draw”.

• Each section will include a thorough examination of 2D design research conducted with Coral Draw.

• By visiting PCSIR and PGJDC, students will gain knowledge of the CAM manufacturing process.

• Examining various perspectives regarding jewellery, including traditional and contemporary perspectives.

• Learning to create two-dimensional illustrations.

Each endeavor requires research and documentation.

• Submissions: PowerPoint presentation with digital prints.

UNIT 1

Corel Draw, Photoshop, Creating & Editing 3-D Images.

UNIT 2

Introduction to Corel Draw, Drawing & Shaping Objects, Transforming Objects, Corel Draw Effects.

UNIT 3

Working with Layer, Creating Shapes & Painting, Concept of Orthography by Corel.

UNIT 4

Gold Color Creation, Stone Setting.

UNIT 5

Color & Element Variation, 3D Rendering.

CAD (Computer aided Jewellery Design-III) RHINO

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
CAD (Computer aided Jewellery Design-III) RHINO	2	0	0	2	Class XII	NIL

Learning Objectives:

Students will learn the advance level of tools by learning Jewelry Design Software "RHINO"

• Each content will cover the meticulous research about the 3D design by using Rhino

• Students will learn the process of manufacturing through CAM by visiting PCSIR and PGJDC

• Investigating different perceptions about jewellery including traditional and contemporary

• Learning how to develop 3D perspectives and execution of CAD.

• Research and documentation of each project with the final 3D processing

• The Final outcome in result of CAM.

Learning Outcomes:

At the end students will:

- Understand use of specialist 3D technology and processes in chosen pathway
- Be able to apply understanding of specialist processes to produce design work
- Be able to produce outcomes using specialist 3D technology and processes
- Be able to evaluate own work

UNIT 1

Introduction To Rhino, Surfacing, Stone Setting, Texture

UNIT 2

Text Surfacing, Scooping, Creating Gallery & J-Bag,

UNIT 3

Gold Weight Controlling,

UNIT 4

Creating Human Figure in Rhino

UNIT 5

Converting In to Dye Format, Casting Through CAD-CAM Process.

TEXT BOOKS/WEBSITE

- Rhino for Jewelry Paperback – 2 Jul 2010 by Dana Buscaglia (Author)

CAD (Computer aided Jewellery Design-IV) RHINO

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
CAD (Computer aided Jewellery Design-IV) RHINO	**2**	**0**	**0**	**2**	**Class XII**	**NIL**

Learning Objectives:

Each content will cover the meticulous research about the 3D design by using "RHINO"

• Students will learn the process of manufacturing through CAM by visiting PCSIR and PGJDC

• Investigating different perceptions about jewellery including traditional and contemporary

• Learning how to develop 2D drawings in multiple 3D perspectives and execution of CAD

• Research and documentation of each project with the final 3D processing

• The Final outcome in result of CAM

Learning Outcomes:

At the end students will be:

Able to develop 3D Design with Rendering.

Able to develop exact setting in Design.

Able to Gold Controlling.

Able to Create Master Model & Rubber Dye to Create Different Joints for flexibility.

UNIT 1

Concept Of 3D & 3Design, Concept of Surfacing,

UNIT 2

Stone Setting, Texture Concept, Text Surfacing

UNIT 3

Stone Setting, Texture Concept, Text Surfacing, Concept of Scooping, Concept of Beezal Creating

UNIT 4

Concept of Gold Weight Controlling, Concept of Human Design Creating by Shaper

UNIT 5

Real 3D Rendering, Video Creating, Concept of Converting in Dye Formatting,

Concept Of Casting Through CAD-CAM Process.

B.A. (Hons.) I Music - Hindustani Music
Vocal/Instrumental (Sitar/Sarod/Guitar/Violin/Santoor)

Syllabus for SEC Papers

SEMESTER - II

SEC – : HARMONIUM - II

Course Title & Code	Credits	Credit distribution of the course			Eligibility Criteria	Pre-requisite of the course
		L	T	P		
Study of Harmonium (201)	2	1	0	1	Class XII Pass	Nil

Learning Objectives:

- To throw light on the structure,origin and parts of Harmonium.
- To discuss the notation system
- To understand the different ragas and talas.

Learning Outcomes:

- Students learn the origin and initial form of Harmonium.
- Students are able to demonstrate the various talas and their layakaries.
- Students are able to understand the notation system.

Unit – I (4 weeks)

Study of the origin of Harmonium.

Unit – II (4 weeks)

Study of the structure of the Harmonium.

Unit – III (2 weeks)

Use of Harmonium in various forms of Indian music.

Unit – IV (2 weeks)

Writing notation of compositions in prescribed ragas

Unit V (2 weeks)

Writing notation of Talas with Thah, Dugun, Tigun and Chaugun – Dadra

Unit VI (2 weeks)

Theoretical knowledge of the prescribed ragas

Suggestive readings:

1. Bhartiya Sangeet Ka Itihasa – Dr. Sharad Chandra.Shridhar. Paranjape :- Madhye Pradesh Hindi Granth Acadamy , Bhopal, 2nd Edition: 1985
2. Bhartiye Sangeet Ka Itihasa – Dr. Thakur Jaidev Singh:- Sangeet Research, Kolkatta, Editor: Premlata Sharma, 1st Edition: 1994
3. Sangeet Bodh : Dr. Sharad Chandra Shridhar Paranjape, Madhye Pradesh, Hindi Academy, Bhopal, 1st Edition: 1972
4. Kramik Pustak Malika Part- II , III & IV: - V.N Bhatkhande, Sangeet Karyalaya, Hathras, Jan-2008, Editor: Dr. Laxminarayan Garg
5. Harmonium: Vividh Aayam: Dr. Vinay Kumar Mishra :- Akanksha Publication, New Delhi, 1stEditon: 2015
6. Taal Parichay Part III, Girish Chandra Srivastava, Rubi Prakashan , New Delhi, 2ndEditon: June-2002

SEC – Stage Performance and Viva Voce

Learning Objectives:

- To continue to focus on the basics of playing the Harmonium.
- To encourage the student to attempt to improvise while playing the instrument
- To focus on his learning of newer talas
- To further his training in performance, with other basic ragas as prescribed

Learning Outcomes:

- The basics of the student will get further strengthened
- The student will start to gain self-belief and make attempts to improvise while performing a raga.
- The student will begin to gain some command over increasingly complex talas
- With other basic ragas, the student will understand how to use the flat and sharp notes in ragas with varied tonal phrases
- He will gain confidence of playing with the Tabla

Syllabus:

Prescribed ragas:

1. Bhairav
2. Bhupali
3. Kafi

Unit – I (2 weeks)

Five alankars to be presented in the prescribed ragas.

Unit -II (2 weeks)

One Sargam Geet each in the prescribed ragas

Unit -III (2 weeks)

One Lakshan Geet each in the prescribed ragas

Unit- IV (2 weeks)

Two Drut Khyals with elaborations in any of the prescribed ragas

Unit - V (2 weeks)

Ability to play a Dhun in raga Kafi

Unit - VI (2 weeks)

In-depth knowledge of the prescribed ragas

Unit - VII (2 weeks)

Knowledge and demonstration of the following tala with dugun, tigun and chaugun - Dadra

Unit- VIII (2 weeks)

Basic knowledge of Harmonium and its various parts

Suggestive readings:

- Bhartiya Sangeet Ka Itihasa – Dr. Sharad Chandra.Shridhar. Paranjape :- Madhye Pradesh Hindi Granth Acadamy , Bhopal, 2nd Edition: 1985
- Bhartiye Sangeet Ka Itihasa – Dr. Thakur Jaidev Singh:- Sangeet Research, Kolkatta, Editor: Premlata Sharma, 1st Edition: 1994
- Sangeet Bodh : Dr. Sharad Chandra Shridhar Paranjape, Madhye Pradesh, Hindi Academy, Bhopal, 1st Edition: 1972
- Kramik Pustak Malika Part- II , III & IV: - V.N Bhatkhande, Sangeet Karyalaya, Hathras, Jan-2008, Editor: Dr. Laxminarayan Garg
- Harmonium: Vividh Aayam: Dr. Vinay Kumar Mishra :- Akanksha Publication, New Delhi, 1stEditon: 2015
- Taal Parichay Part III, Girish Chandra Srivastava, Rubi Prakashan , New Delhi, 2nd Edition: June-2002

SEC-1: Reading & Writing Skills in Brahmi Scripts

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Prerequisite of the course
		Lecture	Tutorial	Practical/ Practice		
Reading & Writing Skills in Brahmi Scripts	**02**	**1**		**1**	**Class XII Pass**	**Nil**

Learning Objectives

Course of Epigraphy & script is an inter-disciplinary course within Sanskrit. The Brahmi script used in Indian inscriptions was developed into all modern Indian scripts like Tamil, Malayalam, Oriya, Bangali, Gurmukhi, among others. Study of inscriptions written mostly in Sanskrit languages, helps in preparation of ancient history.

Learning outcomes

This course is helpful for students to investigate how actually Brahmi script developed and transformed into a wide variety at a time when mode and means of transport and communication were extremely slow. After acquiring knowledge of its variation, it will certainly be helpful in ascertaining to understand period of an inscription whose date is uncertain. This course is highly helpful for the students willing to adopt archaeology as their occupation with a background of Sanskrit.

Detailed Syllabus

Unit I
Introduction to Brahmi Script

Introduction to Brahmi Script (Origin and Development)
Early Brahmi alphabet Aśokan period

Unit II
Translation

Translation to variations up to 4th century C.E.
Reading Asokan Inscriptions

Essential/recommended readings

1. Dani, A.H.: Indian Paleography, 1963

2. Upasak, C.S.: History & Paleography of Mauryan Brahmi Script, 1960

3. Verma, T.P.: Paleography of Brahmi script in North India, 1971

4. ओझा, गौ. ही. भारतीय प्राचीन प्रमाला

5. पाण्डेय, राजबली अशोक के आभलेख 1967

Examination scheme and mode: Subject to directions from the Examination Branch/University of Delhi from time to time

SEC-2: Acting Skills in Sanskrit Dramaturgy

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Prerequisite of the course
		Lecture	Tutorial	Practical/ Practice		
Acting Skills in Sanskrit Dramaturgy	**02**	**1**		**1**	**Class XII Pass**	**Nil**

Learning Objectives

The idea of acting has its connection with the practical aspects of the play related literary works. This paper aims at teaching the fundamental notions that go with the performance of a play on the stage. The practice of performance of drama can further enhance performance's hidden and natural talent. This paper deals with the rules of performance of play (acting) and aims at sharpening the dramatic talent of the students.

Learning outcomes

After the completion of this course the students will be able to know about the various aspects of performance of the dramatic arts in the Indian context. The course will make the students inspired and encouraged for performing the dramatic arts on the stage.

Detailed Syllabus

Unit I

Some Theatrical rules

Competent person for Acting.
Nāṭya-prayoktās-gaṇa (Members of theatrical group) : sūtradhāra nāṭyakāra, naṭa, kuśīlava, bharata, nartaka, vidūṣaka etc.
General and particular rules of assigning the roles.

Unit II

Types of Abhinaya

Lokadharmī and Nātyadharmī Abhinaya.
Types of four Abhinyas with various forms.
Analysis of acting in the context of Abhijñānaśākuntalam

Essential/recommended readings

1. Ghosh, M.M.: ***Nāṭyaśāstra ,*** Bharata, vol-1, Manisha Granthalaya, Calcutta, 1967.
   Hass, **The Daśarūpaka : A Treatise on Hindu Dramaturgy,** Columbia University, NewYork , 1912.

2. Adyarangachrya, ***Introduction to Bharata's Nāṭyaśāstra*,** Popular Prakashan Bombay, 1966.
3. मीरा द्विवेदी , ***संस्कृत नाट्य : अभिनय एवं पटकथा लेखन***, परिमल पब्लिकेशन्स,दिल्ली,2018
4. द्विवेदी,हजारी प्रसाद, ***नाट्यशास्त्र की भारतीय परम्परा और दशरूपक***, राजकमल प्रकाशन दिल्ली,1963.

Additional Resources:

1. सीताराम, झा, ***नाटक और रंगमंच*,** बिहार राष्ट्रभाषा परिषद्, पटना, 1981.
2. राधावल्लभ, त्रिपाठी, ***भारतीय नाट्य****: स्वरूप और परंपरा*, हरिसिंह गौर विश्वविघालय, सागर, 1988.
3. वाचस्पति, गैरोला — ***भारतीय नाट्यपरम्परा और अभिनयदर्पण***, इलाहाबाद, 1967.

त्रिपाठी, राधावल्लभ, ***भारतीय नाट्यशास्त्र की परम्परा और विश्व रंगमंच***, प्रतिभा प्रकाशन, दिल्ली,1999.

Examination scheme and mode: Subject to directions from the Examination Branch/University of Delhi from time to time

SEC-3: Script Writing Skills in Sanskrit Dramaturgy

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Prerequisite of the course
		Lecture	Tutorial	Practical/ Practice		
Script Writing Skills in Sanskrit Dramaturgy	02	1		1	Class XII Pass	Nil

Learning Objectives

The script writing forms as essential point in developing a plot into play relates to the practical aspects of theatre skill. It has a close relationship with Acting. This paper aims at acquainting the learners with the basic notions and aspects of the performing art especially of Drama. The practice in composition of drama can enhance one's natural talent. This paper deals with the rules, skills and practices of dramatic composition (script writing) and aims at sharpening the dramatic talent of the students.

Learning outcomes

After complete this course the students are supposed to be able in developing a plot into a dramatic composition in context to the Indian Dramaturgy. They will learn the skills of constructing a story or an incident into script of a play. The Students will also be inspired and encouraged to prepare the scripts for drama.

Detailed Syllabus

Unit I

Some Components of Scripts

Development of plot

Types of dramatic production:
Sukumāra (Delicate), Āviddha (Energetic
Various kinds of of plot (Vastu):.
Dṛsya (presentable) and Sūchya (Restricted scenes)
Starting of a play by using Pūrvaraṅga-
Raṅgadvāra, Nāndī, Prastāvanā and Prarocanā.
Sources and objectives of play:
Sources : Prakhyat (Historic), Utpaddya (Imaginary), Mishra
Objectives : Dharm, Artha & kaama
Steps of developing a Plot :
(i.)Elements for Developing a plot **:**

- Arthaprakṛtis (caustations),
- Kāryāvasthā (stages of the actions)

- Sandhi (junctures) and

Arthopakṣepaka(interludes)- praveshaka etc.

Unit II

Dialogues and Three Unities

A. Kinds of saṁvāda(Dialogue):

- Sarvaśrāvya or Prakāśa,
- Aśrāvya or Svagata (aside)
- Niyataśrāvya :
    - Janāntika (personal address),
    - Apavārita (confidential),
    - Ākāśabhāṣita (conversation with imaginary person).

B. Arrangement of a play by Three Unities :

Time, Actions and place

C. Analysis of Script Writing in the context of Abhijñānaśākuntalam

Essential/recommended readings

1. Ghosh, M.M.: *Nāṭyaśāstra* , Bharata, vol-1, Manisha Granthalaya, Calcutta, 1967. Hass, The Daśarūpaka : A Treatise on Hindu Dramaturgy, Columbia University, NewYork , 1912.
2. Adyarangachrya*, Introduction to Bharata's Nāṭyaśāstra*, Popular Prakashan Bombay, 1966.
3. मीरा द्विवेदी , *संस्कृत नाट्य : अभिनय एवं पटकथा लेखन,* परिमल पब्लिकेशन्स,दिल्ली,2018

द्विवेदी,हजारी प्रसाद, *नाट्यशास्त्र की भारतीय परंपरा और दशरूपक*, राजकमल प्रकाशन दिल्ली,1963.

Additional Resources:

1. सीताराम, झा, *नाटक और रंगमंच*, बिहार राष्ट्रभाषा परिषद्, पटना, 1981.
2. राधावल्लभ, त्रिपाठी, *भारतीय नाट्यः स्वरूप और परंपरा*, हरिसिंह गौर विश्वविघालय, सागर, 1988.
3. वाचस्पति, गैरोला — *भारतीय नाट्यपरम्परा और अभिनयदर्पण*, इलाहाबाद, 1967.
4. त्रिपाठी, राधावल्लभ, *भारतीय नाट्यशास्त्र की परम्परा और विश्व रंगमंच*, प्रतिभा प्रकाशन, दिल्ली,1999.

Examination scheme and mode: Subject to directions from the Examination Branch/University of Delhi from time to time

SEC-4: Fundamentals of Indian Manuscriptology

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Prerequisite of the course
		Lecture	Tutorial	Practical/ Practice		
Fundamentals of Indian Manuscriptology	02	1		1	Class XII Pass	Nil

Learning Objectives

The manuscript repository of India, having more than 10 million codices, is an embodiment of its knowledge tradition. In order to make India a knowledge driven society, it is inevitable that the new generation understand important aspects of manuscripts and by treating and preserving the same may exert to find out and publish hitherto unexplored wisdom lying therein

Learning outcomes

(i) This course will enable the students to discern importance of the manuscripts and instant need of curating and editing the same.
(ii) The student will be able to understand the process of treating the manuscripts of different nature.
(iii) The student will be aware of the process of preserving the manuscripts for coming generations.

Detailed Syllabus

Unit I

Some Components of Scripts

(i) Importance of manuscripts for unleashing India's greatness.
(ii) Salient features of Indian manuscriptology.
(iii) Sources for Indian Manuscripts – different catalogues and Reports.
(iv) Important manuscript reservoirs in India and abroad and methodology of accessing them

Unit II

Dialogues and Three Unities

(i) Dire and Instant need of treating Indian manuscripts.
(ii) Process of treatment of Indian manuscripts and their preservation.
(iii) Modes operandi of Mass awareness for preservation of the manuscripts.
(iv) Basics of critical edition of a text- Identifying various corruptions and their removal.

Essential/recommended readings

1. Chaubey , B.B. *Manuscriptology: Past and Present* . Poona Orientalia, V0l, V, Pg.49

2. Katre, S.M. 1941. *Introduction to Indian textual Criticism*. Bombay : Karnataka Publishing House.
3. लक्ष्मीनरसिंहभट्ट:, जा. रामकृष्ण:, विरूपाक्ष वि. जड्डीपाल: (अनुवादकौ) *भारतीयग्रन्थसम्पादनशास्त्रप्रवेशिनी* (आङ्ग्लमूलप्रणेता – आचार्य एस. एम. कत्रे), २००२. तिरुपति : राष्ट्रिय संस्कृत विद्यापीठम्.
4. Sankrityayana, Rahula.1938. "Search for Sanskrit MSS. In Tibet." In *Journal of the Bihar and Orissa Research Society*.Vol.XXIV Part IV. 137-163.

SEC-5: Traditional Indian Gastronomy (Bhāratīya Pāka Śāstra)

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Prerequisite of the course
		Lecture	Tutorial	Practical/ Practice		
Traditional Indian Gastronomy (Bhāratīya Pāka Śāstra)	02	1		1	Class XII Pass	Nil

Learning Objectives

To train and develop students in Indian Cuisine and Food Culture through Industry Interface and Culinary experts. To strengthen students' Knowledge and skills with instruction based on Indian tradition and culture. The course also aims at enhancing learning menu planning as per festival, quantity preparations and management of resources. To develop competencies to understand Ayurveda and wellness cooking.

Learning outcomes

Acquire knowledge and skill in Indian culinary practices.
Identify and apply contemporary food safety and sanitation practices along with traditional principles of wellness and Ayurveda.

Detailed Syllabus

Unit I
Pāka Kalā in Sanskrit Sāhitya
***Pāka Kalā* (The art of Indian Cuisine):** Ancient Indian food culture, Characteristics of Indian Cuisine and food commodities, Indian culinary terminology.

***Āhāra in Sanskrit Sāhitya* (Food in Sanskrit Literature) :**Food **divisions in Sanskrit literature, Food and Drinks in ancient India, diet in Vedic period , food and related art in the Vedic age, food in Sanskrit poetry.**

***Swastha Āhāra* (Food and Ayurveda) :** Fundamentals of Ayurveda, Identifying the various constituents of Ayurveda and their characteristics, Outline the Three Vital essence (Tridoṣa) of

Ayurveda, Prakriti and Vikriti, Identify the concept about Rasa, Virya, Vipakah and Prabha, Dietary recommendations for Vāta doṣa, Pitta doṣa, Kapha doṣa.

Unit II

Āhāra

1. ***Prādeśika Āhāra* (Regional Food):** Cuisines of North India, Cuisines of East India, Cuisines of North India, Cuisines of South India.
2. ***Pāka evam Paryaṭana* (Travel and Food):** Culinary journey of India, various types of food travel.
3. ***Prasād Paramparā (*Ritual food tradition*):***Tradition of prasad culture inVaishnav, Shaiva and Shakt sects of Hindu religion.

4.*Pūrva tathā Paścima* (Cuisines of East and West*):***Specialty cuisines, staple diets, festival and signature dishes of different regions, various cooking methods and techniques used in different regions, preparation, classic recipes**.

Essential/recommended readings

1. *Ayurvedic Science Of Food And Nutrition* by Sanjeev Rastogi , Springer (2014).
2. *Feast and Fasts: A History of Food in India* by Colleen Taylor Sen, (2016).
3. *Aahara : Ancient Secret of Diet in Ayurveda & Yoga* by Dr Pradipkumar R. Suryawanshi (2018).
4. *Indian food: A Historical Companion* by K.T.Achaya, Indian food: A Historical Companion, Oxford UniversityPress, 1998.
5. *Food and Drinks in Ancient India* (Based on Original Sanskrit Sources) by R Mitra, COSMO PUBLICATIONS, NEW DELHI, (2007).
6. *Prasāda, the Gracious Gift, in Contemporary and Classical South Asia* by Andrea Marion Pinkney. Journal of the American Academy of Religion, September 2013, Vol. 81, No. 3, pp. 734–756.
7. *From the God's Kitchen: The Mahāprasād In Shri Jagannāth Temple*, Puri, India, by Sili Rout, SHSS XXIX, NUMBER 1, Summer 2022.
8. *From the Earliest Times to the Sixth Century*, B.C.by Romesh Chunder Dutt, C.I.E.1906. (Chapter 4 – Food and Art in the Vedic age).
9. *Food and Love in Sanskrit Poetry: On the Margin of Desires* by Danielle Feller. Cracow Indological Studies Vol. XXI, No. 2 (2019), pp. 69–124.

Examination scheme and mode: Subject to directions from the Examination Branch/University of Delhi from time to time

SEC-6: E-Learning Tools and Techniques for Sanskrit

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Prerequisite of the course
		Lecture	Tutorial	Practical/ Practice		
E-Learning Tools and Techniques for Sanskrit	**02**	**1**		**1**		**Nil**

Learning Objectives

This course will introduce the current resea
rch and development in Sanskrit computing. Primary emphasis will be on tools and techniques developed under government and private funding and to explore new technologies for Sanskrit. Special focus will be on e-learning and interacting tools, web application for Sanskrit, Unicode Devanagari typing tools and language computing. HTML will be taught for web application.

Learning outcomes

The course-level learning outcomes that a student of this course is required to demonstrate are indicated below:

- Learn the basic Interactive Sanskrit Teaching Learning Tools.
- Learn the Basics of Multimedia, Web based tools development.
- Working knowledge of HTML and web page development.
- Working with Unicode Typing in Devanagari Scripts.
- Learn the Various Typing Tools and Software for Devanagari Unicode.
- Learn the Text preservation techniques and web publishing.

Detailed Syllabus

Unit I

Interactive Sanskrit Teaching Learning Tools and Typing Tools:

Basics of Multimedia, Web based tools development.
Basics of HTML and web technology
Standard for Indian Languages (Unicode)
Unicode Typing in Devanagari Scripts, Various Typing Tools and Software for Devanagari Script: Baraha, Google Input Tools, Google Assistant

Unit II

Survey of Various developed Computational Tools for Sanskrit:

Sanskrit Grammar Tools
Sanskrit Text Preservation and Search
Online Indexing Tools for Sanskrit Texts

Machine Translation for Sanskrit
Text Preservation: Databases and Text Files

Essential/recommended readings

1. Bharti A., R. Sangal, V. Chaitanya, “NL, Complexity Theory and Logic” in Foundations of Software Technology and Theoretical Computer Science, Springer, 1990.
2. E-Content suggested by Teacher
3. Tools developed by Computational Linguistics Group, Department of Sanskrit, University of Delhi, Delhi-110007 available at: http://sanskrit.du.ac.in
4. Basic concept and issues of multimedia: http://www.newagepublishers.com/samplechapter/001697.pdf
5. Content creation and E-learning in Indian languages: a model: http://eprints.rclis.org/7189/1/vijayakumarjk_01.pdf
6. HTML Tutorial - W3Schools: www.w3schools.com/html
7. The Unicode Consortium: http://unicode.org
8. http://baraha.com/v10/help/Keyboards/kan_phonetic.htm
9. https://www.google.co.in/inputtools/try/

Examination scheme and mode: Subject to directions from the Examination Branch/University of Delhi from time to time

SEC-7: Practices in Horoscope-I

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Prerequisite of the course
		Lecture	Tutorial	Practical/ Practice		
Practices in Horoscope-I	**02**	**1**		**1**		**Nil**

Learning Objectives

The objective of this paper is to teach the students about basic principles for horoscope and develop the ability/skill for making Horoscope.

Learning outcomes

After studying this course students:
Will be able to know the concept behind Panchanga.
Will be able to know the concept of Horoscope.
Will be able to get Knowledge about how to make a horoscope.

Detailed Syllabus

Unit I

सौरपरिवार का सामान्य परिचय,काल के भेद, पञ्चाङ्ग परिचय,द्वादशभाव परिचय।
ग्रहों का स्वरूप, ग्रहों की उच्च-नीच एवं मूलत्रिकोण राशियाँ, ग्रहदृष्टिविचार।
ग्रहमैत्री विचार, चर एवं स्थिरकारक ग्रह, राशियों के गुणधर्म एवं स्वामी।

Unit II

समयज्ञान, मानक, स्थानीय सूर्योदय, सूर्यास्त, दिनमान
इष्टकाल, चालन, भयात्-भभोग साधन, स्पष्टग्रहसाधन, चन्द्र स्पष्टीकरण
अयनांश साधन, पलभा ज्ञान, चर-खण्ड ज्ञान, लंकोदयमान, स्वोदयमान
लग्नसाधन, ससन्धिद्वादशभावसाधन

Essential/recommended readings

1. भारतीयकुण्डलीविज्ञानम् – मीठालालहिम्मतराम ओझा, देवर्षिप्रकाशन, वाराणसी।
2. भारतीयज्योतिषम् - शिवनाथझारखण्डी, उत्तरप्रदेशहिन्दीसंस्थान, लखनऊ, 2010
3. भारतीयज्योतिषम् – नेमिचंद्र शास्त्री, भारतीय ज्ञानपीठ प्रकाशन, दिल्ली, 1992

4. ज्योतिष सर्वस्व- सुरेश चन्द्र मिश्र, रंजन पब्लिकेशन, दिल्ली, 2022
5. भारतीय ज्योतिष का इतिहास-गोरखप्रसाद, उत्तरप्रदेशहिन्दीसंस्थान, लखनऊ, 2010

Examination scheme and mode: Subject to directions from the Examination Branch/University of Delhi from time to time

SEC- : Basics of Food Science and Nutrition

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Basics of Food Science and Nutrition	**2**			**2**	XIIth pass	NIL

Learning Objectives

1. The primary objective of this course is to provide an understanding to the students of the types and biological importance of macro and micronutrients found in the dietary sources.
2. The students will get an opportunity to understand the integrated learning between the areas of Food science and Nutrition.
3. The course will also provide hands-on experience of different methods used to estimate different types of nutrients that will help the students learn the concept nutrition and health.

Learning Outcomes

Learners will be able to:

1. Analyse and evaluate concepts in human nutrition and its relation with food and health
2. Understand the concept of food exchange and meal planning
3. Understand the essentiality of macro and micronutrients in food items
4. Assess the quality and nutritive value of food.

Skill development and job opportunities:

Students will be able to take up jobs in public and community health schemes where food assessment is done. They can also as serve as assistants in program where meal planning is done like home care facilities, schools, hostels, old age homes. It will provide them the training to apply for jobs in any business establishments concerning food processing, packaging and production. After completion of the entire series, students will be able to take up job opportunities in any business involved with advanced food processing. They would also be eligible to get placements in food and drug assessment centres. The course will also enable student to apply to advance food science and tech courses.

SYLLABUS OF SEC- :

Unit I **4 weeks**

Introduction to nutrition and food science: Defining nutrition, nutrients and role of nutrients. Food groups- Grouping of foods based on composition. Classification of nutrients: Macronutrients and Micronutrients. Food Energy and the concept of Energy Balance. Principals of meal planning, food exchanges and Balanced diet.

Practical Exercises:

- Determination of calorie content and nutritive value of different food items.
- Estimation of Total moisture and ash content in the food items.
- Meal planning for healthy individuals depending on adult men and women.

Unit II: Macronutrients in food **5 weeks**

Introduction to Dietary Carbohydrates, Proteins and Fats and their roles in body functions, dietary sources and RDA

Practical Exercises:

- Estimation of Total Carbohydrate content in food by Molisch's test, Hanes method or Folin and Wu
- Estimation of Total lipid content in food by Soxhlet extraction or Bligh and Dyer method
- Estimation of Total protein content in food by modified Lowry's method.

Unit III: Micronutrients **6 weeks**

Introduction to water- and fat-soluble vitamins, brief overview of functions, dietary sources and RDA. Introduction to minerals, brief overview of functions, dietary sources and RDA

Practical Exercises:

- Quantitative estimation of Vitamin C in foods by titration
- Quantitative estimation of Vitamin A/E in oils by spectrophotometric methods
- Quantitative of Estimation of mineral content in food. (Ca, P/ Na/K and Fe)

Essential Reading

- Plummer, D. T. (1998) *An Introduction to Practical Biochemistry* (3rd ed.), Tata McGraw Hill Education Pvt. Ltd. (New Delhi); ISBN: 13: 978-0-07-099487-4 / ISBN:10: 0-07-099487-0.
- Cooper, T. G. (2011) *The Tools of Biochemistry* (2nd ed.), Wiley-Interscience Publication (New Delhi); ISBN: 13:9788126530168.

- Manay, N. S. O. (2001). Food: facts and principles. New Age International.

Suggested Readings

- Practical Biochemistry, Damodaran Geetha K, Jaypee Brothers Medical Publishers Private Limited; 1st edition (1 January 2011), ISBN: 9789350251416
- Mahan, L. K., & Raymond, J. L. (2016). Krause's food & the nutrition care process. Elsevier Health Sciences.
- Malik, D., Narayanasamy, N., Vavilala, P., Takur, J., Sinha, N., (2022). Textbook of Nutritional Biochemistry. Springer Singapore, ISBN978-981-19-4149-8.

Examination scheme and mode:

Total Marks: 50
Internal Assessment (Practical): 25 marks
End Semester Practical Exam*: 25 marks

The Internal Assessment for the course may include Class participation, Assignments, Class tests, Projects, Field Work, Presentations, amongst others as decided by the faculty.

SEC- : Basic Forensic science: crime scene investigation and evidence collection

CREDIT DISTRIBUTION, ELIGIBILITY, AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Basic Forensic science	2			2	Class XII	-

Learning Objectives

Forensic science is an essential part of the criminal and civil justice system. Forensic scientists collect and analyze evidences from crime scene and elsewhere. The objective of this analysis is to provide data that can assist in criminal or civil investigation, so that prosecution of suspects of the crime is done or an innocent person is cleared off the crime beyond any reasonable doubt. The specific objectives of this course are as follows:

- To provide an understanding of the sanctity of crime scene
- To understand collection and preservation of forensic evidence.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Comprehend the developments in the field of forensic sciences; learn to observe a crime scene for identification of relevant evidences and samples for forensic analysis.
- Understand the importance of collection, packaging and preservation of samples to ensure reliability of data generated.

Skill development and job opportunities

- After completion of this course students would obtain the training in collection, documentation, and analysis of physical evidences. They will be encouraged to do short internships in police station, forensic laboratories and research institutes.
- The students will also able to take a job in a forensic laboratories or police station even after completing a one-year course as they are able to collection, preservation and documentation of evidence, drawing a crime scene and doing preliminary analysis at crime scene.

SYLLABUS OF SEC-

Unit 1: Basic Forensic **1 week**

Introduction, need, scope and Significance of forensic science, History, laws and basic principles of forensic science. Branches of forensic science. Organizational set up of forensic science laboratories.

Practical Exercise

- Understanding a crime using case studies.

Unit 2: Crime scene investigation **6 weeks**

Definition, Identification, Mapping, and preservation of a crime scene, Classification in a crime scene.Precautions to ensure credibility of a crime scene. Investigative strategies and eye witness report.

Practical exercises:

- Drawing a crime scene.
- Drawing and mapping a crime scene of an unusual case (fire, blast, water)
- Case studies in different indoor and outdoor primary and secondary crime scenes
- Documenting and reconstructing a crime scene.
- Virtual exercise / field trip to a crime scene

Unit 3: Forensic evidences **8 weeks**

Definition of a forensic evidence. Classification based on legal and forensic value Understanding chain of custody. Collection, Preservation, Packaging, and Labeling of chemical, physical evidence and biological evidence (blood, semen and other biological fluids, hair, fibers and fabrics, pollen) for forensic investigation.

Practical exercises:

- Collection and preservation of a fresh and dried body fluid sample
- Collection of tissues post mortem.
- Collection of a trace evidence like hair, fiber and pollenfrom crime scene and during autopsy
- Collection and preservation of a soil sample from crime scene and during autopsy
- Collection of a hand or foot print, tyre-print, fingerprint
- Collection and preservation of evidence for chemical/ballistic analysis.

Essential/ recommended readings

- James, S.H., Nordby, J.J. & Bell, S. (2014). *Forensic Science: An Introduction to Scientific and Investigative Techniques, Fourth Edition*: Taylor & Francis. ISBN 9781439853832
- Jones, P., & Williams, R.E. (2009). *Crime Scene Processing and Laboratory Workbook First Edition*: CRC Press. ISBN 9780429249976

- Saferstein, R. (2018). *Criminalistics: An Introduction to Forensic Science, Twelfth edition*: Pearson Education. ISBN 10:0134477596, ISBN 13: 9780134477596
- Lee, H., Palmbach, T. & Miller, M. (2001). *Henry Lee's crime scene handbook, First Edition*: Academic Press ISBN 9780080507989
- Parikh, C.K. (2016). *Parikh's textbook of medical jurisprudence, forensic medicine and toxicology: for classrooms and courtrooms*, *Seventh Edition*: CBS Publishers and Distributors. ISBN 9788123926469

Note: Learners are advised to use the latest edition of readings.

Examination scheme and mode:

Total Marks: 50

Internal Assessment: 25 marks

Practical Exam (Internal): 25 marks

The Internal Assessment for the course may include Class participation, Assignments, Class tests, Projects, Field Work, Presentations, amongst others as decided by the faculty.

SEC : Basic Laboratory Techniques

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Basic Laboratory Techniques	**2**			**2**	XII pass	

Learning Objectives

This course will help students understand skills required for working in Laboratories. To comprehend the standard operating procedures for laboratory chemicals, autoclave and water wash applications. The specific objectives of the course are:

- To be familiar with laboratory safety manual and GLPs and regulatory requirements.
- To learn about use and working of lab instruments such as pH meters, auto clave, laminar flow, microscopes, spectrophotometers, centrifuges and incubators.
- knowledge of preparation and testing of reagent water in the laboratory Learn how to make solutions and buffers
- Learn about microbiological techniques

Learning outcomes

At the end of the course the students will be

- Trained in best lab practices
- Able to use lab instruments such as pH meters, auto clave, laminar flow, microscopes, spectrophotometers, centrifuges and incubators
- Able to prepare solutions and buffers
- Able to prepare media and grow microbial culture in aseptic conditions

Job opportunities:

Students trained in lab skills will be employable in research labs, R & D labs in Pharma and Biotechnology industry and Diagnostic labs

SYLLABUS OF SEC-

Unit 1 – Laboratory safety and standards **2 weeks**

- Precision, accuracy and sensitivity

Unit 2– Preparation of solutions/ media **2 weeks**

- Preparation of solution (w/w, w/v, Molar, Normal, Stock, standard and serial dilutions)
- Preparation of buffer solution, pH scale, pH meter, Henderson-Hasselbalch equation, pK, (acetate/ phosphate buffer)

Unit 3– Microbial Techniques **6 weeks**

Instrumentation (Microscopy, Laminar Hood, autoclave, shaker incubator, BOD incubator hot air oven)

- Sterilization methods
- Types of Microbial media: Microbial growth media: Minimal Media, Defined media, Complex media, Enriched media, Selective media, and Differential media.
- Staining techniques for microbes
- Isolation of pure cultures of bacteria by streaking method.
- Enumeration of colony forming units (CFU) count by spread plate method
- Growth curve of bacteria
- Culture transfer Techniques: Streaking, Serial dilution and Plating methods. Phases of bacterial growth

Unit 4 – Bioinstrumentation for Separation techniques **5 weeks**

Chromatography

- Separate biomolecules/dyes using paper/thin layer and column chromatography to illustrate the principle and application of chromatography. Calculate the Rf value of each component.

Centrifugation

- Principle of centrifugation, Basics of sedimentation, Sedimentation coefficient, Factors affecting sedimentation.
- Types of centrifuges and rotors. Microfuges
- Separation plasma and blood cells/ cell fractionation

Spectroscopy:

- Principle of UV-visible absorption spectrophotometry, Lambert's Law, Beer's Law, Working of a spectrophotometer.
- Determination of absorption maxima (λmax).

- Verification of Lambert's and Beer's law

Gel Electrophoresis

- Principle, instrumentation, application and maintenance of horizontal and vertical electrophoresis.
- Separation of protein sample in denaturing condition and calculation of its molecular weight and mobility.
- Demonstration of separation of nucleic acids using agarose gel electrophoresis.

Essential/Recommended readings

- Biochemistry Laboratory: Modern Theory and Techniques, (6th edition), Boston, Mass: Prentice Hall; ISBN-13:978-0136043027Boyer, R.F. (2012).
- An Introduction to Practical Biochemistry (1998) 3rd ed., Plummer D. T., Tata McGraw Hill Education Pvt. Ltd. (New Delhi), ISBN:13: 978-0-07-099487-4/ ISBN:10: 0-07-099487-0.
- Cappucino, J. and Sherman, N. (2013). Microbiology: A Laboratory Manual. (10th ed.) Pearson Education Limited; ISBN 13: 9780321840226 Additional Resources: 1. Madigan, M.T., Martinko, J.M., Dunlap, P.V. and Clark, D.P. (2010).

Examination scheme and mode:

Total Marks: 50
Internal Assessment: 25
Practical: 25
Exam (Internal): NIL
End Semester University Exam: NO End Term Exam
The Internal Assessment for the course may include Class participation, Assignments, Class tests, Projects, Field Work, Presentations, amongst others as decided by the faculty.

SEC : Public health, hygiene and nutrition

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Creditdistributionofthecourse			Eligibilitycriteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
SEC-	2	0	NIL	2	Class XII	NIL

Learning Objectives

In the post covid scenario, the students have experienced live the various area where public health is of primary importance. The present course attempts to provide an interdisciplinary understanding of public health issues in India. Learning about processes of proper waste disposal and management of water will have great impact on human health as unsafe drinking water and sanitation was the second leading risk responsible for disease burden in India, mainly through diarrhea and other infections. The specific objectives of the course are:

- To provide a basic understanding of the scope of public health issues, particularly related to collection of primary data in the area of public health nutrition, infectious biology and sanitation, social and preventive medicine, and the environmental issues that affect public health.
- To generate a discussion platform that would encourage a healthy inter- and multidisciplinary interaction amongst the students to get a holistic view of public health issues in India.
- A mini research project on any relevant topic related to public health will be taken up after completing the course.
- After completing the course, the students can also apply for some higher-level courses in different areas of public health as the course helps in building a basic understanding on different aspects related to public health

Eligibility: Being interdisciplinary in its nature and scope, the course will be equally engaging and beneficial for students of all subject streams.

Learning Outcomes

By the end of the course, the students will be able to:

- get a holistic overview of the inter disciplinary nature of Public health. They will be able to understand and address behavioral, social and cultural factors that impact individual and population health disparities.
- understand public health issues in India particularly related to Malnutrition,

sanitation issues and related burden of infectious disease, and the role of pollution as a public health concern.

- gets hands-on training on preparation of questionnaire and collection of primary and secondary data relevant to public health issues. They will be trained to use epidemiological methods to analyze patterns of disease progression in a population and describe applications and programs that can help address or mitigate the issue.
- To study various factors deteriorating quality of water by collecting samples from various parts of cities. Check TDS, pH, colour, odour, and transparency of water sample.
- Study of probable causes of stress and mental health problems. Design of some remedial strategies to overcome these problems.
- They will also learn to present the relevant data after subjecting it to statistical analysis. They will be able to identify and apply the appropriate statistical method needed to analyze and describe a public health problem.

Skill development and job opportunities:

Public health professionals are involved in everything from identifying diseases to creating public policy to helping refugees integrate into new communities. Now more than ever most of the world has witnessed first-hand a public health crisis and there will be no shortage or demand for well-trained public health professionals.

- After completion the course, students will be able to have career opportunities that include Medical and Health Services Manager, Biostatistician, Health care consultant, Epidemiologist, Occupational Health and Safety Specialist, Social and Community Service Manager, Health Education Special

SYLLABUS OF SEC

Unit I: Introduction to public health and hygiene **3 weeks**

Significance of public health, and hygiene to prevent spread of diseases (e.g. TB, leprosy, cholera, food poisoning etc.). Introduction to health care and **WASH** (Water, Sanitation and Hygiene)

Practical exercises:

1. To study various hygiene practices like personal, menstrual, oral and hand hygiene etc.

2. Field visit for understanding the health programs and hygiene like Asha worker interviews/Sulabh international museum of toilets/Water Treatment Plant (any one)

Unit II: Public health Biology **7 weeks**

What is public health nutrition? Application of nutrition concepts to design programs of public health concern, What are communicable diseases?

Understanding the biology, socioeconomic factors and other environmental conditions that influence the transmission and infection by pathogenic (disease-causing) bacteria, viruses, parasites, and fungi.

Practical exercises

Assessment of nutritional status using anthropometric indices like BMI, WHR.
Assessment of Nutritional status by a survey of clinical and non-invasive biochemical parameters.

- To study the following medically important organisms like mosquito, house fly cockroach and rats as transmission vectors for infectious disease
- Measuring blood pressure and correlating it with lifestyle.
- Case study of a disease (Nutritional, infectious and lifestyle) along with the public health data with analysis and discussion

Unit III: Environmental determinants of Public Health 5 weeks

Determinants of Environmental Health: factors that affect environmental health; Occupational environment and health concerns; Understanding effect of air, water and soil Pollution on health.

Practical exercises:

- To determine the portability of water using, pH, BOD, COD and MPN of the water sample from different sources.
- Collecting secondary data on AQI from different areas and correlate with health indices in that area.
- Field visits to nearby health care center to collect some data on the rate of a particular disease over past few months or years.

Essential/Recommended readings

1. Aschengrau A, Seage G.R., (2013) Essentials Of Epidemiology In Public Health Jones and Bartlett Publishers, Inc; 3rd edition
2. Bamji MS, Rao NP, Reddy V.(2017).Textbook of human nutrition. (4thed). Delhi: Oxford and IBH Publishing co. (P) Ltd.
3. Environmental Microbiology edited by I.L. Pepper, C.P. Gerba, T.J. Gentry. 3rd edition. Academic Press, USA. 2014.

Suggested readings:

1. Gibney et al.(2004). Public health nutrition. Hoboken, NJ: Blackwell Publishing
2. N. Okafor. (2011) Environmental Microbiology of Aquatic and Waste Systems by Springer, USA.
3. Waste Water Microbiology by D.H. Bergey. 2nd Edition. Medtech, India. 2019.
4. Park, K. (2017), Preventive and Social Medicine, B.B. Publishers.

5. Engelkirk P.G. and Duben-Engelkirk J. (2015) Burton's Microbiology for the HealthSciences, 10th Edn. Wolters Kluwer Health.
6. Shanmugavel, G. and George, B. Textbook of public health and hygiene. Darshan Publishers, 25-Jan-2021

Examination scheme and mode:

Total Marks: 50
Internal Assessment (Practical): 25 marks
End Semester Practical Exam*: 25 marks

The Internal Assessment for the course may include Class participation, Assignments, Class tests, Projects, Field Work, Presentations, amongst others as decided by the faculty.
For End Semester Practical Exam External to be appointed by the parent Department.

LaTeX TYPESETTING FOR BEGINNERS

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
LaTeX Typesetting for Beginners	2	0	0	2	Class XII	NIL

Learning Objectives: The objective of this course is to introduce:

- LaTeX, a high-quality open-source typesetting software that produces professional prints and PDF files for research articles and books in all subjects, and languages.
- Typesetting in Indian languages using LaTeX by transliteration and ITRANS packages.

Learning Outcomes: After completion of the course the learner will be able to:

- Prepare a LaTeX document with title page including contents, references, and index.
- Understand the Indian language transliteration package (ITRANS-processor) for typesetting Sanskrit, Hindi, Punjabi, Malayalam, etc. using LaTeX.

UNIT-I: Getting Started with LaTeX (24 hours)

Installing and using LaTeX for creating a first LaTeX document; Formatting text and understanding LaTeX commands and environments; Designing pages, Creating a book with chapters and table of contents, Creating and customizing lists, Including images, and creating tables with captions.

UNIT-II: Cross-References, Index, Bibliography and Large Documents (16 hours)

Setting labels and references, Hyperlinks; Customizing the table of contents, Generating an index, Creating a bibliography; Writing basic math formulas and equations; Developing large documents by splitting the input and creating front/back matter.

UNIT-III: Typesetting in Indian Languages using LaTeX (20 hours)

Transliteration symbols with illustrative examples of the Indian languages, such as Sanskrit, Hindi (Devanagari), Punjabi, and Malayalam; Creation of the transliterated document for typesetting in Devanagari (for Sanskrit, Hindi, and Marathi), Gurumukhi (for Punjabi), and Rachana (for Malayalam); ITRANS pre-processor package to convert English-encoded text into various Indian language script such as Gujarati, Bengali, Kannada, Tamil, Telugu, etc.

Essential Readings

1. Kottwitz, Stefan (2021). LaTeX Beginner's Guide (2nd ed.). Packet Publishing Ltd.
2. Nambudiripad, K.B.M. (2014). LaTeX for Beginners. Narosa Publishing House, Delhi.
3. https://ctan.org/pkg/devanagari; https://www.ctan.org/pkg/gurmukhi-singh
4. https://ctan.org/tex-archive/language/indian/itrans

Suggested Reading

- Lamport, Leslie (1994). LaTeX: A Document Preparation System, User's Guide and Reference Manual (2nd ed.). Pearson Education. Indian Reprint.

Practical Exercises: Getting started with free open-source software LaTeX for typesetting documents from chapter 1 of the text book [1]: LaTeX Beginner's Guide (2nd ed.) by Stefan Kottwitz for installing and using LaTeX. Learners are required to:

- Design a LaTeX document by choosing title, author, date, address, page dimensions, margins, adjust line spacing, add footnotes, and orientation.
- Create a document with bulleted lists, numbered lists, and definition lists. Furthermore, modify the document with compact and customized versions of such lists, including spacing adjustments and interrupting and resuming.
- Create tables, adding captions to tables, putting text into columns, spanning columns and rows, using LaTeX packages to auto-fit columns.
- Generate a document by customizing the table of contents, lists of figures and tables, producing an index pointing to relevant information for keywords and phrases.
- Typesetting fine-tune math expressions, align and number equations, and use various math symbols from the amsmath package in LaTeX.
- Generate a list of five books related to your field of interest under an automatically generated title 'Bibliography', using thebibliography command in LaTeX. Illustrate how these references are cited in the body of a document.
- Create a LaTeX file to manage large documents consisting of several LaTeX files by splitting the input, including front and back matter and a separate title page.
- Transliterate these six names: Aryabhata, Arthashastra, Bhaskaracharya, Chanakya, Ganita Bharati, and Shankaracharya, and write them in itemize form using Devanagari package in LaTeX. Also use the verbatim environment to display the LaTeX code.
- Typeset ten words of your choice using ITRANS pre-processor package in LaTeX to convert English-encoded text into any one Indian language script.

Teaching Plan (SEC Paper: LaTeX Typesetting for Beginners)

Week 1: Installing and using LaTeX for creating a first LaTeX document. **[1]**: **Chapter 1**.
Week 2: Formatting text and understanding LaTeX commands and environments. [1]: **Chapter 2**.
Week 3: Designing pages, Creating a book with chapters and table of contents. [1]: **Chapter 3**.
Week 4: Creating and customizing lists. [1]: **Chapter 4**.
Week 5: Including images. [1]: **Chapter 5**.
Week 6: Creating tables with captions. [1]: **Chapter 6**.
Week 7: Setting labels and references, Hyperlinks. [1]: **Chapter 7**.
Week 8: Customizing the table of contents, Generating an index, Creating a bibliography. [1]: **Chapter 8**.
Week 9: Writing basic math formulas and equations. [1]: **Chapter 9**.
Week 10: Developing large documents by splitting the input and creating front/back matter. [1]: **Chapter 11**.
Weeks 11, and 12: Transliteration symbols with illustrative examples of the Indian languages, such as Sanskrit, Hindi (Devanagari), Punjabi, and Malayalam. [2]: **Chapter 9**; and **gurmukhi**
Weeks 13, and 14: Creation of transliterated document for typesetting in Devanagari (Sanskrit, Hindi and Marathi), Gurumukhi (Punjabi), and Rachana (Malayalam). [2]: **Chapter 10**; [3]: **Devanagari**, and **Gurmukhi**.
Week 15: ITRANS pre-processor package to convert English-encoded text into various Indian language script such as Gujarati, Bengali, Kannada, Tamil, Telugu, etc. [4]: **Itrans: Indian languages**

MATHEMATICAL MODELING WITH EXCEL

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Mathematical Modeling with Excel	2	0	0	2	Class XII pass with Mathematics	NIL

Learning Objectives: The objective of this course is to introduce:

- The importance and significance of assumptions behind a mathematical model.
- The long–term behavior of discrete dynamical systems numerically and graphically.
- Monte Carlo simulations with real-life examples.
- Linear programming, transportation, assignment and traveling salesman problems.

Learning Outcomes: After completion of the course the learner will be able to:

- Understand the purpose and process of mathematical modeling.
- Model different scenarios with linear discrete dynamical systems.
- Formulate and solve LP, transportation and assignment problems using Excel Solver.

UNIT-I: Modeling with Proportionality and Geometric Similarity (20 hours)

Definition, purpose, process, assumptions, and examples of mathematical modeling; Charts in excel using given data, Modeling with proportionality: Population growth, Radioactive decay, and Free-falling object; Fitting straight lines analytically, Geometric similarity, and Linearizable models.

UNIT-II: Discrete-time Models (16 hours)

Discrete dynamical system concepts and examples; Long-term behavior and equilibria, Discrete logistic equation, Linear predator-prey model, SIR model of epidemics, SIS model.

UNIT-III: Simulations and Linear Optimization (24 hours)

Monte Carlo simulation: Flipping a coin, Area under a curve, Car dealership contest, and the birthday problem; Formulation of linear programming, transportation and assignment problems and their solutions using Excel Solver tool; Traveling salesman problem.

Essential Reading

1. Albright, Brian, & Fox, William P. (2020). Mathematical Modeling with Excel (2nd ed.). CRC Press, Taylor & Francis Group.

Suggested Reading

- Giordano, Frank R., Fox, William P., & Horton, Steven B. (2014). A First Course in Mathematical Modeling (5th ed.). CENGAGE Learning India.

Practical Exercises: Practical work to be performed using Excel spreadsheets for the modeling of the following type of problems:

- The data given below measures shoe length (to the nearest quarter of an inch) and height (to the nearest half inch) of ten persons, to determine if there is a relationship between shoe length and height of a person. Graph Height vs. Shoe Length and fit a straight line to the data. How well does this model fit the data?

Shoe Length	9	10	10.5	11	11.5	11.75	12	12.5	12.75	13
Height	62	64	64.5	69	70	73	72	75	74	77

- The table below contains the total length and weight of 10 black bears. Graph weight vs. length, fit different linearizable models to the data, and select the one that best fits the data. Explain.

Length	139	138	139	120.5	149	141	150	166	180	129.5
Weight	110	60	90	60	85	95	85	155	220	105

- The table below contains data on the population of foxes in a forest over a period of several years. Fit a discrete logistic equation to the data. How well does the model fit the data?

n	0	1	2	3	4	5	6	7	8	9	10
a_n	50	85	110	130	175	200	215	221	228	232	234

- Consider a disease such as the common cold where a person is *not* immune once they are 'healed.' Once healed, a person becomes susceptible again. Such a disease could be modeled with an SIS model. Implement your model in an Excel worksheet to describe the spread of the common cold through a population of 1,000 where initially 4 people have the cold and assuming that the cold lasts an average of 2 weeks (use α = 0.00167). What do you observe?
- Random number generation in Excel and then use it to simulate area under a given curve.
- An automobile repair company performs paint-less dent removal from hail damaged cars and trucks. Each vehicle must be processed in both the body assembly shop and the finishing shop. In the body shop it takes 0.5 man-hours to repair a car and 0.5 man-hours to repair a truck. There are 25 body shop man-hours available per day. In the finishing shop it takes 0.4 man-hours to finish a car and 0.6 man-hours to finish a truck. There are 24 finishing man hours available per day. Each car contributes Rs. 20000 to overall profit, and each truck contributes Rs. 22500 to overall profit. Find number of cars & trucks the company can service a day to maximize overall profit, using Solver.

Teaching Plan (SEC Paper: Mathematical Modeling with Excel)

Week 1: Definition, purpose, process, assumptions, and examples of mathematical modeling; **[1]**:Chapter 1.

Week 2: Charts in excel using given data. **[1]**: Chapter 2 (Sections 2.1, and 2.2).

Week 3: Modeling with proportionality: Population growth, Radioactive decay, and Free-falling object. [1]: Chapter 2 (Section 2.3).

Weeks 4 and 5: Fitting straight lines analytically, Geometric similarity, and Linearizable models. [1]: Chapter 2 (Sections 2.4 to 2.6).

Weeks 6, and 7: Discrete dynamical system concepts and examples; Long-term behavior and equilibria, Discrete logistic equation. [1]: Chapter 4 (Sections 4.1 to 4.3).

Weeks 8, and 9: Linear predator-prey model, SIR model of epidemics, and SIS model. [1]: Chapter 4 (Sections 4.4, and 4.6).

Weeks 10, and 11: Monte Carlo simulation: Flipping a coin, Area under a curve, Car dealership contest, and the birthday problem. [1]: Chapter 6 (Section 6.2), and Section 6.3 (Example 6.3.2 and Exercise 6.3.4 only).

Weeks 12 to 14: Formulation of linear programming, transportation and assignment problems and their solutions using Excel Solver tool. [1]: Chapter 7 (Sections 7.2 to 7.4).

Week 15: Traveling salesman problem. [1]: Chapter 8 (Section 8.8).

FINANCIAL MODELING WITH EXCEL

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Financial Modeling with Excel	2	0	0	2	Class XII	NIL

Learning Objectives: The objective of this course is to:

- Build financial models using Excel functions to solve some real-life financial problems.
- Acquire practical skills and knowledge that are useful for investment banking.

Learning Outcomes: After completion of the course the learner will be able to:

- Compute present value and future value of a cashflow or annuity.
- Create loans and amortization tables, and find price, yield, and duration of a bond.
- Draw option payoff diagrams and option strategy diagrams.
- Find option price using Black-Scholes, and binomial models.

UNIT-I: Time Value of Money (28 hours)

Building good financial models, Interest rates, Future value, Present value, Annuity, Perpetuity, Present value of an annuity, Present value of a perpetuity, Present value of non-annuity cash flows; Net present value (NPV), Internal rate of return (IRR), NPV vs IRR; Loans and amortization tables, Interest-only loan, An equal amortization term loan, Mortgage; Effective interest rates, Cost of a mortgage, Continuous compounding and discounting.

UNIT-II: Bond Pricing and Duration (12 hours)

Characteristics of bonds, Zero-coupon bond, Bond valuation, Yield to maturity, Yield curve and forward rates; Macaulay duration, Modified duration, and convexity.

UNIT-III: Options, Black-Scholes, and Binomial Models (20 hours)

Call and put options, Option strategies, Put-call parity, Black-Scholes formulae for prices of call and put options; Binomial option pricing model, and two-period binomial model.

Essential Readings

1. Benninga, Simon & Mofkadi, Tal (2018). Principles of Finance with Excel (3rd ed.). Oxford University Press, New York.
2. Sengupta, Chandan (2004). Financial Modeling using Excel and VBA. John Wiley.

Suggested Readings

- Day, Alastair L. (2015). Mastering Financial Mathematics in Microsoft Excel (3rd ed.). Pearson Education Ltd.
- Luenberger, David G. (2014). Investment Science (2nd ed.). Oxford University Press.

Practical Exercises: Review of Excel spreadsheets concepts including functions and graphs from [1]: Part Five Excel Skills. Practical work to be performed using Excel spreadsheets for the modeling of the following type of problems:

1. Calculating future value, present value, and present value of an annuity. Use of Excel functions **FV**, **PV, NPV, and PMT**. [1]: Chapter 2, Exercises 1,3,5, and 7 pages 46-47.
2. Calculating net-present value (NPV) and internal rate of return (IRR). NPV vs IRR. Use of Excel functions **NPV** and **IRR.** [1]: Chapter 3, Exercises 1 to 3 pages 99-100.
3. Creating loan and amortization table. Use of Excel functions **IPMT** and **PPMT**. [1]: Chapter 4, Exercises 1 to 3 pages 132-133.
4. Computing effective annual interest rate (EAIR), using function **IRR**, and **XIRR** (for dates, not evenly spaced). [1]: Chapter 5, Exercises 1, 4, 7, and 9 pages 169-171.
5. Calculating bond price and yield to maturity (YTM) of a bond. Use of Excel functions **PRICE**, **YIELD**, **IRR**, and **XIRR** (for non-periodic cash flows). [2]: Models 2, and 3 pages 276-279.
6. Computing duration, modified duration, and convexity of a bond. Use of Excel functions **DURATION,** and **MDURATION.** [2]: Models 4, and 5 pages 280-284.
7. Computing payoffs of call and put options, and draw profit diagrams in Excel. [1]: Chapter 17, Exercises 1 to 4 pages 572-574.
8. Studying and comparing option strategies: Bear spread, Bull spread, and Butterfly spread, and draw corresponding profit diagrams in Excel. [1]: Chapter 17, Exercises 18, 19, and 21 pages 581-583.
9. Using Black-Scholes formulae to find prices of call and put options. [1]: Chapter 19, Exercises 1 to 4 page 626.
10. Using binomial model to find prices of call and put options, and Excel tree diagram. [1]: Chapter 20, Exercises 3 to 5 page 653.

Teaching Plan (SEC Paper: Financial Modeling with Excel)

Week 1: Excel Skills, Building good financial models.
[1]: Review of Excel basics and functions from Chapters 21 to 23, and Chapter 1(Section 1.4).
Week 2: Interest rates, Future value. [1]: Chapter 2 (Section 2.1).
Weeks 3, and 4: Present value, Annuity, Perpetuity, Present value of an annuity, Present value of a perpetuity, Present value of non-annuity cash flows. [1]: Chapter 2 (Section 2.2).
Week 5: Net present value (NPV), Internal rate of return (IRR), NPV vs IRR.[1]: Chapter 3 (3.1 to 3.3).
Week 6: Loans and amortization tables, Interest-only loan, An equal amortization term loan, Mortgage. [1]: Chapter 4 (Sections 4.2 to 4.5).
Week 7: Effective interest rates, Cost of a mortgage, Continuous compounding and discounting.
[1]: Chapter 5 (Sections 5.1, 5.2, and 5.7).
Weeks 8 to 10: Characteristics of bonds, Zero-coupon bond, Bond valuation, Yield, Yield curve and forward rates; Macaulay duration, Modified duration, and convexity. **[2]**: Chapter 10.
Weeks 11 to 13: Call and put options, Option strategies, Put-call parity.
[1]: Chapter 17, and Chapter 18 (Section 18.3, and Exercises 4 to 6, page 602).
Week 14: Black-Scholes formulae for prices of call and put options. [1]: Chapter 19 (Section 19.1).
Week 15: Binomial option pricing model, Two-period binomial model. [1]: Chapter 20 (20.1 to 20.3).

NETWORK FLOWS

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Network Flows	2	0	0	2	Class XII	NIL

Learning Objectives: The objective of this course is to:

- Introduce the transportation and assignment problems as network models.
- Learn more about network optimization models and describe the characteristics of various network flow problems.
- Understand the critical path method (CPM) designed to assist in the planning, scheduling, and control of projects.

Learning Outcomes: After completion of the course the learner will be able to:

- Formulate and solve transportation and assignment problems using Excel.
- Understand the network flow problem of types - shortest-path problem, minimum spanning tree problem, maximum flow, and minimum cost flow problems, and their optimum solutions using Excel spreadsheet.
- Apply the critical path method (CPM) of time-cost trade-offs for project management.

UNIT-I: Transportation and Assignment Problems (20 hours)

Network representation of the transportation and assignment problems, Formulate transportation and assignment problems, and solve using Excel.

UNIT-II: Network Optimization Models (24 hours)

Terminology of networks; Formulate and use Excel to solve shortest-path, minimum spanning tree, maximum flow, and minimum cost flow problems; Critical path method (CPM) of time-cost trade-offs using Excel spreadsheet.

UNIT-III: Case Studies (16 hours)

Shipping wood to market, Project pickings, Money in motion, Steps to success.

Essential Reading

1. Hillier, Frederick S., & Lieberman, Gerald J. (2021). Introduction to Operations Research, (11th ed.). McGraw-Hill Education.

Suggested Readings

- Ragsdale, Cliff T. (2022). Spreadsheet Modeling and Decision Analysis: A Practical Introduction to Business Analytics (9th ed.). CENGAGE Learning.
- Taha, Hamdy A. (2017). Operations Research: An Introduction (10th ed.). Pearson Education Limited.

Practical Exercises: Use Excel spreadsheet to solve transportation, and assignment problems, shortest-path problem, maximum flow problem, minimum cost flow problem, and CPM calculations of following type of exercises from the chapters 9 and 10 of [1].

- 9.1-1, 9.3-1, Case 9.1 (Shipping Wood to Market), and Case 9.3 (Project Pickings).
- 10.3-2, 10.3-6, 10.5-3, 10.6-5, 10.8-1, Case 10.1 (Money in motion), and Case 10.3 (Steps to success).

Teaching Plan (SEC Paper: Network Flows)

Weeks 1 to 5: Network representation of the transportation and assignment problems, Formulate transportation and assignment problems, and solve using Excel.
[1]: Chapter 9 (Sections 9.1, and 9.3).
Weeks 6, and 7: Terminology of networks, Formulate and use Excel to solve Shortest-path problem.
[1]: Chapter 10 (Sections 10.2, and 10.3).
Week 8: The minimum spanning tree problem. [1]: Chapter 10 (Section 10.4).
Weeks 9, and 10: Formulate maximum flow, and minimum cost flow problems and solve using Excel.
[1]: Chapter 10 [Sections 10.5, and 10.6 (including special cases fit into the network format of the minimum cost flow problems, pages 388-390)].
Week 11: Critical path method (CPM) of time-cost trade-offs using Excel spreadsheet.
[1]: Chapter 10 (Section 10.8).
Week 12: Shipping wood to market. [1]: Chapter 9 (Case 9.1).
Week 13: Project pickings. [1]: Chapter 9 (**Case 9.3**).
Week 14: Money in motion. [1]: Chapter 10 (Case 10.1).
Week 15: Steps to success. [1]: Chapter 10 (**Case 10.3**).

R-SHINY: POWERFUL WEB APPS FOR EVERYONE

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
R-Shiny: Powerful Web Apps for Everyone	2	0	0	2	Class XII	NIL

Learning Objectives: The objective of this course is to:

- Build interactive web applications for charts, tables, graphs, and maps using R Shiny.
- Create, develop, and deploy Shiny web applications using reactive components.
- Customize the appearance of Shiny web apps using Shiny in R Markdown.

Learning Outcomes: After completion of the course the learner will be able to:

- Understand the fundamentals of Shiny and develop interactive web applications.
- Understand reactive programming concepts and building reactive web applications.
- Learn R Markdown and deploy Shiny apps locally and to the web with flexdashboard.

UNIT-I: Introduction to Shiny and Basic User Interface (UI) components (20 hours)

What is Shiny? How Shiny works with R; Create Shiny app directory and file, Adding UI controls, and behaviour; Building the UI using the fluidPage(), Input, and Output functions, and deploy Shiny apps locally using server function.

UNIT-II: Reactive Programming in Shiny (20 hours)

Basic reactivity: The server function and creating reactive outputs using Shiny's render functions, Reactive programming, Reactive graph, and reactive expressions.

UNIT-III: Shiny in R Markdown (20 hours)

R Markdown: Installation, Basics**,** Shiny with flexdashboard**,** Building Shiny documents by adding the option 'runtime: shiny' to the YAML metadata; Deploy Shiny apps to the web, Embedded Shiny apps, and Shiny widgets.

Essential Readings

1. Wickham, Hadley (2021). Mastering Shiny: Building Interactive Apps, Reports, and Dashboards Powered by R. O'Reilly Media. (https://mastering-shiny.org/)
2. https://shiny.rstudio.com/tutorial/
3. Xie, Yihui, Allaire, J.J, & Grolemund, Garrett (2019). R Markdown: The Definitive Guide. CRC Press, Taylor & Francis Group. (https://bookdown.org/yihui/rmarkdown/)

Suggested Reading

- Granjon, David (2022). Outstanding User Interfaces with Shiny. CRC Press.

Practical Exercises: Practice exercises from first three chapters of Hadley's Mastering Shiny.

Teaching Plan (SEC Paper: R-Shiny: Powerful Web Apps for Everyone)

Weeks 1, and 2: What is Shiny? How Shiny works with R; Create Shiny app directory and file, Adding UI controls, and behaviour. **[1]**: Preface, and Chapter 1.
[2]: Welcome to Shiny: **Lesson1**, and **getting started**
Weeks 3 to 5: Basic UI: Building the UI using the fluidPage(), Input, and Output functions, and deploy Shiny apps locally using server function. [1]: Chapter 2
[2]: Build a UI and control widgets: **Lesson2**, and **Lesson3**
[2]: **User Interface and server function**
Weeks 6 to 8: Basic reactivity: The server function and creating reactive outputs using Shiny's render functions. [1]: Chapter 3 (pages 27-30); [2]: Reactive output: **Lesson4**
[2]: **Reactive Flow**, and **Reactive Elements**
Weeks 9, and 10: Reactive programming, Reactive graph, and reactive expressions.
[1]: Chapter 3 (pages 30-35).
[2]: Reactive expressions: **Lesson6**
Weeks 11, and 12: R Markdown: Installation, Basics, Shiny with flexdashboard.
[3]: Chapter 1, Chapter 2 (p. 5-8, and section 2.8.2, p. 42-45), Chapter 5 (Section 5.3, p. 131-135).
Weeks 13 to 15: Building Shiny documents by adding the option 'runtime: shiny' to the YAML metadata; Deploy Shiny apps to the web, Embedded Shiny apps, and Shiny widgets.
[3]: Chapter 19 (Sections 19.1 to 19.4, pages 283-293); [2]: Share Shiny Apps: **Lesson7**

COMMON POOL OF SKILL ENHANCEMENT COURSES (SECs) OFFERED BY THE DEPARTMENTS in 1st SEMESTER

(SEC-1): Spoken Persian – Elementary level

Credit distribution, Eligibility and Pre-requisites of the Course:

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Spoken Persian: Elementary level	2	2	Nil	Nil	12th Class Pass	Nil

Learning Objectives

The Learning Objectives of this course are as follows:

- To enable the students to speak daily usage spoken Persian

Learning outcomes

The Learning Outcomes of this course are as follows:

- By learning this course, the students will be able to speak in commonly spoken Persian language
- By learning this course, the students may get a chance to work as a tourist guide.

SYLLABUS OF SEC-1

UNIT – I (3 Weeks)

- Applied Grammar

UNIT – II (3 Weeks)

- Persian conversation techniques

UNIT – III (2 Weeks)

- Translation from Persian to English and vice-versa

Essential/recommended readings

1. Let's Learn Persian (first half of the book; pp. 1-103) NCPUL, MHRD, New Delhi.

2. Gargesh, R. Goswami, Translation and Interpretation, University of Delhi, Delhi.
3. Kumar, Rajinder, Elementary Persian Grammar, Great Book Contractor, Lal Kuan, Delhi-110006, 2018.
4. English Farsi Phrasebook with useful wordlist, US Department of State, Washington DC.
5. Sufi, Abdul Aziz, Essentials of Persian Translation, Indo-Iran Society, Lal Kuan, Delhi-06, 1999.

ANNEXURE-28

Sub: Amendment to Ordinance V

[E.C Resolution No. 27-1-9/- dated 25.08.2023]

Following addition be made to Appendix-II-A to the Ordinance V (2-A) of the Ordinances of the University;

Add the following:

Following courses have been included in the Pool of Generic Electives offered by Delhi School for Skill Enhancement and Entrepreneurship Development (DSSEED) for Entrepreneurship and Delhi School of Analytics for Data Analytics :

Generic Elective (Entrepreneurship) offered by DSSEED	**Generic Elective (Data Analytics) offered by Delhi School of Analytics**
1. Entrepreneurship Essentials – 1 2. Entrepreneurship Essentials – 2 3. Creativity and Innovation 4. Fundraising and Management for Entrepreneurs 5. Marketing and Sales for Entrepreneurs 6. Startup Operations and Future-proofing 7. Social Entrepreneurship and Social Innovation	1. Python and data fundamentals 2. Machine Learning and Applications 3. Deep Learning and Application 4. Natural Language Processing 5. Financial Analytics 6. Marketing Analytics 7. Accounting Analytics 8. Human Resource Analytics 9. Social Media Analytics

POOL OF GENERIC ELECTIVES (ENTREPRENEURSHIP)
OFFERED BY DELHI SCHOOL FOR SKILL ENHANCEMENT AND ENTREPRENEURSHIP DEVELOPMENT (DSEEED)

GENERIC ELECTIVE (GE-1)

Credit distribution, Eligibility and Pre-requisites of the Course						
Course title	**Credits**	**Credit distribution of the course**			**Eligibility criteria**	**Pre-requisite of the course**
		Lecture	**Tutorial**	**Practical/ Practice**		
Entrepreneurship Essentials - 1	**4**	**2**		**2**	**Class XII pass**	**Nil**

Course Description:
This course provides an overview of the essential aspects of entrepreneurship, equipping students with the knowledge and skills required to identify opportunities, develop innovative business models, and launch successful ventures. The course combines theoretical lectures with practical Session, enabling students to gain hands-on experience in developing their entrepreneurial projects.

Learning Objectives
Students of this course should be able to:

- Understand fundamental concepts and principles of entrepreneurship, including opportunity recognition and value creation.
- Develop an entrepreneurial mindset and skills that will enable them to identify, evaluate, and pursue viable business opportunities with confidence.
- Formulate comprehensive business plans that address key elements such as market analysis, product/service development, marketing strategy, sales strategy, and financial planning.
- Enhance leadership and team management capabilities, empowering them to foster a positive and productive work environment within their ventures.
- Acquire knowledge and skills in marketing aspects of entrepreneurship, including branding, positioning, sales techniques, digital marketing, and networking.

Learning outcomes
At the end of this course, students should be able to:

- Understand the fundamental of entrepreneurship, importance of opportunity recognition and value creation in entrepreneurship.
- Interpret and analyze market research data and customer analysis to make informed business decisions.
- Apply entrepreneurial thinking and skills to identify and evaluate business opportunities.
- Evaluate financial data and projections to make informed financial decisions and manage cash flow effectively.

- Develop effective marketing and sales strategies by combining knowledge of customer analysis, branding, and positioning.

SYLLABUS

Unit 1: Introduction to Entrepreneurship and Opportunity Recognition (16 hours)
Classroom Sessions:

1.1.1 Understanding Entrepreneurship: Concepts and Importance
1.1.2 Why be an Entrepreneur?
1.1.3 Traits of Successful Entrepreneurs, Types of Entrepreneurs (entrepreneurs as leaders)
1.1.4 Entrepreneurial Ecosystem in India

Practical Sessions:

1.1.1 Guest Speaker Session
1.1.2 Entrepreneurial Mindset Assessment (GETT)
1.1.3 Entrepreneurial Traits Analysis and Role Play
1.1.4 A field trip to a local startup incubator

Essential Readings:

1.1.1 Baron, R. A., & Shane, S. A. (2008). Entrepreneurship: A process perspective. Cengage Learning. .
1.1.2 Hisrich, R. D., Peters, M. P., & Shepherd, D. A. (2019). Entrepreneurship (11th ed.). McGraw-Hill Education.

Suggested Readings:

1.1.1 Shane, S. A. (2003). A general theory of entrepreneurship: The individual-opportunity nexus. Edward Elgar Publishing. .
1.1.2 Gupta, V. K., & Batra, S. (2019). Entrepreneurship: New Venture Creation (2nd ed.). Pearson.

Suggested Case Studies (Indian Context):

1.1.1 Online e-commerce websites like Flipkart etc. (Focus on Laying the foundations)
1.1.2 Online Fintect providers like Paytm etc. (Focus on Launching Digital Wallets in India)
1.1.3 Online hotel room agrregators like OYO etc. (Focus on Starting small in an unorganised sector)

Unit 2: Entrepreneurial Mindset (16 hours)
Classroom Sessions:

1.2.1 Introduction to Entrepreneurial Mindset
1.2.2 Key Dimensions of Entrepreneurial Mindset and its role in Entrepreneurial Success
1.2.3 Developing & Cultivating an Entrepreneurial Mindset
1.2.4 Ethical Considerations for Entrepreneurs

Practical Sessions:

1.2.1 Mindset Reflection Exercise (Gratitude Journal, SWOT analysis, Failures and Learnings)
1.2.2 Interaction with a successful entrepreneur
1.2.3 Personal Growth Plan
1.2.4 Case Study Analysis

Essential Readings:

1.2.1 Neck, H. M., Neck, C. P., & Murray, E. L. (2017). Entrepreneurship: The practice and mindset. SAGE Publications. .

1.2.2 Dweck, C. S. (2006). Mindset: The new psychology of success. Ballantine Books.

Suggested Readings:

1.2.1 Sarasvathy, S. D. (2009). Effectuation: Elements of entrepreneurial expertise. Edward Elgar Publishing. .

1.2.2 Morris, M. H., Kuratko, D. F., & Covin, J. G. (2020). Corporate entrepreneurship: Entrepreneurial development within organizations. Cengage Learning.

Suggested Case Studies (Indian Context):

1.2.1 Influential Indian entrepreneurs like Dhirubhai Ambani etc.

1.2.2 Industry leaders like Narayana Murthy etc. (Focus on building businesses from Scratch)

1.2.3 Important corporate scandals in India like the Satyam Scandal (Focus on Lessons in Corporate Ethics)

Unit 3: Business Opportunities Identification (12 hours)

Classroom Sessions:

1.3.1 Identifying, Evaluating Business Opportunities and Generating Ideas

1.3.2 Concept of Empathy and Design Thinking

1.3.3 Identifying opportunities for social entrepreneurship

1.3.4 Feasibility & Viability Analysis

Practical Sessions:

1.3.1 Opportunity Scanning and Idea Generation Workshop

1.3.2 Design Thinking Challenge

1.3.3 Social Impact Assessment Workshop

1.3.4 Feasibility Study Simulation

Essential Readings:

1.3.1 Ries, E. (2011). The Lean Startup: How Today's Entrepreneurs Use Continuous Innovation to Create Radically Successful Businesses. Crown Business.

1.3.2 Bornstein, David. (2003). How to change the world : social entrepreneurs and the power of new ideas. Oxford ; New York : Oxford University Press.

Suggested Readings:

1.3.1 Baron, R. A. (2018). Opportunity recognition as pattern recognition: How entrepreneurs "connect the dots" to identify new business opportunities. Academy of Management Perspectives, 32(3), 332-345.

1.3.2 Timmons, J. A., & Spinelli, S. (2019). New venture creation: Entrepreneurship for the 21st century. McGraw-Hill Education.

Suggested Case Studies (Indian Context):

1.3.1 Online Cab aggregators like Ola Cabs (Focus on Revolutionizing the Taxi Industry)

1.3.2 Social upliftment ventures like Project Chirag etc. (Focus on Empowering Rural India)

1.3.3. Online food delivery aggregators like Zomato (Focus on making the move from Start-up to Unicorn)

Unit 4: Market Analysis & Customer Research (16 hours)

Classroom Sessions:

1.4.1 Know your customers: Basics of Segmenting the customer and the market

1.4.2 Identifying Customer Segmentation and Conducting Market Research

1.4.3 Customer Value Proposition

1.4.4 Moving ahead with customer targeting

Practical Sessions:

1.4.1 Market Segmentation Activity

1.4.2 Designing a Market Research Plan

1.4.3 Crafting a Unique Value Proposition

1.4.4 Customer Targeting Simulation

Essential Readings:

1.4.1 Kotler, P., Keller, K.L., & Cunningham, P.H. (2018). Marketing Management. Pearson .

McDonald, M., & Dunbar, I. (2012). Market segmentation: How to do it, how to profit from it. John Wiley & Sons.

1.4.2 Osterwalder, A., Pigneur, Y., Bernarda, G., & Smith, A. (2014). Value proposition design: How to create products and services customers want. John Wiley & Sons. .

Suggested Readings:

1.4.1 Zeithaml, V. A. (1988). Consumer perceptions of price, quality, and value: A means-end model and synthesis of evidence. Journal of Marketing, 52(3),

1.4.2 Dibb, S., Simkin, L., Pride, W. M., & Ferrell, O. C. (2019). Marketing concepts and strategies. Cengage Learning. .

Suggested Case Studies (Indian Context):

1.4.1 Dairy co-operatives in India like Amul etc. (Focus on Targeting Different Customer Segments)

1.4.2 Online e-commerce websites like Flipkart etc. (Focus on Crafting a Customer-Centric Value Proposition)

1.4.3 Online food delivery aggregators like Swiggy etc. (Focus on Revolutionizing Food Delivery through Targeted Marketing)

GENERIC ELECTIVE (GE-2)

Credit distribution, Eligibility and Pre-requisites of the Course						
Course title	**Credits**	**Credit distribution of the course**			**Eligibility criteria**	**Pre-requisite of the course**
		Lecture	**Tutorial**	**Practical/ Practice**		
Entrepreneurship Essentials - 2	**4**	**2**		**2**	**Class XII pass**	**Entrepreneurship Essentials - 1**

Course Description:

Course Description:

This course provides a comprehensive understanding of key concepts and strategies in entrepreneurship and innovation. It covers various aspects of starting and growing a business, including business models, funding and financial management, marketing, and scaling the venture. Through a combination of theoretical knowledge and practical applications, learners will develop the necessary skills to identify opportunities, create value propositions, and navigate the challenges of entrepreneurship.

Learning Objectives:

Students of this course should be able to:

- Understand the fundamentals of business models, lean startup methodology, competitive analysis, and go-to-market strategies.
- Explore different funding sources for startups and evaluate financing options available, including government and non-government schemes.
- Develop skills in financial planning, projection, and project evaluation to make informed financial decisions.
- Gain insights into branding, positioning, sales techniques, customer acquisition strategies, and the use of social media and digital marketing for entrepreneurial success.
- Learn how to build strategic partnerships and alliances, manage operations, and navigate legal and intellectual property considerations.
- Explore growth strategies, business expansion, and scaling techniques, while understanding exit strategies and preparing for potential exits.

Learning Outcomes:

At the end of this course, students will be able to:

- Analyze and create business models using the Business Model Canvas framework, incorporating lean startup principles and competitive analysis.
- Identify and evaluate different funding sources and financing options suitable for startups, and develop financial plans and projections.
- Apply marketing techniques to effectively brand, position, and promote products or services, utilizing social media and digital marketing channels.

- Employ sales techniques and customer acquisition strategies to drive business growth and profitability.
- Understand the importance of networking and collaboration for business growth, and build strategic partnerships and alliances.
- Demonstrate knowledge of operational management considerations, including organizing, staffing, and legal and intellectual property rights.
- Evaluate growth strategies, expansion opportunities, and scaling techniques to sustain and develop the venture.
- Identify exit strategies and effectively plan for an exit, considering various factors such as valuation and succession planning.
- Following Bloom's Taxonomy, the learning outcomes cover various cognitive levels, including understanding, applying, analyzing, evaluating, and creating.

SYLLABUS

Unit 1: Business Models & Go-to-Market (16 hours)

Classroom Sessions:

2.1.1 Introduction to Business Models and Business Model Canvas
2.1.2 Lean Business model and its key components
2.1.3 Competitive Analysis and Market Positioning
2.1.4 Go-to-Market and Pricing Strategies

Practical Sessions:

2.1.1 Business Model Canvas Workshop
2.1.2 Lean Business Model Simulation Game
2.1.3 Competitive Analysis and Positioning Exercise
2.1.4 Go-to-Market Strategy Simulation

Essential Readings:

2.1.1 Osterwalder, A., & Pigneur, Y. (2010). Business model generation: A handbook for visionaries, game changers, and challengers. Wiley.
2.1.2 Mullins, J.W., & Komisar, R. (2009). Getting to Plan B: Breaking Through to a Better Business Model. Harvard Business Press.
2.1.3. Ries, E. (2011). The Lean Startup: How Today's Entrepreneurs Use Continuous Innovation to Create Radically Successful Businesses. Crown Business.

Suggested Readings:

2.1.1. Amit, R., & Zott, C. (2012). Creating value through business model innovation. MIT Sloan Management Review, 53(3), 41-49.
2.1.2 McGrath, R. G. (2010). Business models: A discovery driven approach. Long Range Planning, 43(2-3), 247-261.

Suggested Case Studies (Indian Context):

2.1.1 Online e-commerce websites like Flipkart etc. (Focus on Business Models)
2.1.2 Focus on Indian FMCG companies like Patanjali Ayurved etc. (Focus on Disrupting the FMCG Sector in India)
2.1.3 Online hotel room aggregators like OYO (Focs on Revolutionizing the Hospitality Industry with a Lean Business Model)

Unit 2: Funding and Financial Management (16 hours)

Classroom Sessions:

2.2.1 Funding Sources for startups (Bootstrapping, Venture Capital, Angel Investors, Crowdfunding)

2.2.2 Funding Schemes and Financing Options for Startups (govt and non-govt)

2.2.3 Financial Planning and Projections

2.2.4 Project Evaluation and Break-even Analysis

Practical Sessions:

2.2.1 Developing investor pitch

2.2.2 Exploring Suitable Government and Non-Government Financing Programs for specific Business Model.

2.2.3 Developing Financial Projections for Your idea

2.2.4 Analysing Cash Flow and Break-even Scenarios

Essential Readings:

2.2.1 Hisrich, R. D., & Ramadani, V. (2017). Financing Entrepreneurship and Innovation in Emerging Markets. Springer.

2.2.2 Megginson, W. L., Byrd, J. W., & Megginson, L. C. (2015). Small Business Management: An Entrepreneur's Guidebook. McGraw-Hill Education.

2.2.3 Gompers, P. A., & Lerner, J. (2004). The Money of Invention: How Venture Capital Creates New Wealth. Harvard Business Press.

Suggested Readings:

2.2.1 John Wiley & Sons.Moyer, R.C., McGuigan, J.R., & Kretlow, W.J. (2018). Contemporary Financial Management. Cengage Learning.

2.2.2 Blank, S., & Dorf, B. (2012). The Startup Owner's Manual: The Step-by-Step Guide for Building a Great Company. K&S Ranch. .

Suggested Case Studies (Indian Context):

2.2.1 Online room aggregtaors like Treebo and OYO etc. (Focus on moving from Bootstrapping to Unicorn)

2.2.2 Govt. schemes like Startup India (Focus on Boosting Entrepreneurship in India)

2.2.3 Govt intitiatives in Fintech sector like BHIM App (Focus on Government Initiative for Digital Payments and Startup Funding)

Unit 3: Marketing Aspects of Entrepreneurship (12 hours)

Classroom Sessions:

2.3.1 Branding and Positioning

2.3.2 Sales techniques and customer acquisition strategies

2.3.3 Social Media and Digital Marketing for Entrepreneurs

2.3.4 Networking and Collaborating for Business Growth

Practical Sessions:

2.3.1 Discuss a case study on brand building

2.3.2 Sales Role-Play Exercise

2.3.3 Social Media Campaign Development

2.3.4 Networking and Negotiations exercise

Essential Readings:

2.3.1 Keller, K. L. (2013). Strategic brand management: Building, measuring, and managing brand equity. Pearson.

2.3.2 Chaffey, D., & Ellis-Chadwick, F. (2019). Digital marketing: Strategy, implementation, and practice. Pearson.

Suggested Readings:

2.3.1 Qualman, E. (2019). Socialnomics: How social media transforms the way we live and do business. Wiley.

2.3.2 Zig Ziglar. (1984). Secrets of Closing the Sale. Revell.

Suggested Case Studies (Indian Context):

2.3.1 Dairy co-operatives like Amul etc. (Focus on Branding and Positioning)

2.3.2 Online e-commerce providers like Amazon India etc. (Focus on Revolutionizing E-commerce Sales in India)

2.3.3 Online food delivery aggregators like Zomato etc. (Focus on Leveraging Social Media for Growth)

Unit 4: Scaling the Venture and Growth Strategies (16 hours)

Classroom Sessions:

2.4.1 Growth Strategies and Business Expansion

2.4.2 Building Strategic Partnerships and Alliances

2.4.3 Operational Management Considerations (Organizing, Staffing, Legal, IPR)

2.4.4 Exit Strategies and Preparing for an Exit

Practical Sessions:

2.4.1 Analysing Growth Strategies and Business Expansion Options

2.4.2 Designing the Operational Framework for a Startup

2.4.3 Identifying and Evaluating Potential Strategic Partnerships and Alliances

2.4.4 Exit Planning and Valuation Simulation

Essential Readings:

2.4.1 Christensen, C.M., & Raynor, M.E. (2013). The Innovator's Solution: Creating and Sustaining Successful Growth. Harvard Business Review Press.

2.4.2 Collis, D. J., & Montgomery, C. A. (2008). Competing on resources: Strategy in the 1990s. Harvard Business Review, 73(4), 118-128.

Suggested Readings:

2.4.1 Das, T. K., & Teng, B. (2001). Trust, control, and risk in strategic alliances: An integrated framework. Organization Studies, 22(2), 251-283.

2.4.2 Huse, M., & Ovesen, G. H. (2016). Preparing for exit: A qualitative study of business exit in SMEs. Journal of Small Business and Enterprise Development, 23(3), 706-724.

Suggested Case Studies (Indian Context):

2.4.1 Dairy co-operatives like Amul etc. (Focus on taking Indian dairy brand products Global)

2.4.2 Coffee chains like Tata Starbucks (Focus on Strategic Alliances for Market Penetration)

2.4.3 Online fintech service providers like Paytm etc. (Focus on Managing Operations)

GENERIC ELECTIVE (GE-3)

Credit distribution, Eligibility and Pre-requisites of the Course						
Course title	**Credits**	**Credit distribution of the course**			**Eligibility criteria**	**Pre-requisite of the course**
		Lecture	**Tutorial**	**Practical/ Practice**		
Creativity, and Innovation	**4**	**2**		**2**	**Class XII pass**	**Nil**

Course Description:
This engaging course combines creativity, innovation, and Lean Startup principles to equip entrepreneurs with the tools to turn ideas into successful businesses. Participants will learn to foster a creative mindset, implement innovative solutions, and use Lean Startup techniques such as MVPs and the build-measure-learn feedback loop. The blend of classroom sessions, practical activities, and case studies ensures that participants can apply these strategies to their own ventures in today's competitive business environment.

Learning Objectives:
Students of this course should be able to:

- Identify with a creative mindset that can help enhance creative problem-solving skills.
- Examine the importance of innovation in business success.
- Apply tools and techniques to foster creativity and innovation within their organizations.
- Evaluate the key principles of the Lean Startup methodology.
- Experiment to test Minimum Viable Products (MVPs) and validate business ideas.
- Formulate a Build-Measure-Learn feedback loop for continuous improvement.
- Assemble customer feedback and data-driven decisions to scale and pivot the business.

Learning Outcomes:
At the end of this course, students should be able to:

- Enhanced creative thinking and problem-solving skills to generate innovative ideas and solutions.
- Use their understanding of the role innovation plays in driving business success.
- Judge the application of suitable tools and techniques to foster creativity and innovation within their organizations.
- Set up the implementation of the Lean Startup methodology and its principles for efficient business development.
- Select specific measures to design, test, and validate Minimum Viable Products (MVPs) to assess business ideas.
- Interpret the learnings from the build-measure-learn feedback loop to facilitate continuous improvement and learning.

SYLLABUS

Unit 1: Foundations of Creativity and Innovation (16 hours)

Classroom Sessions:

3.1.1 Foundations of Creativity and Innovations

3.1.2 Creative thinking process, Developing a creative mindset, and Overcoming creative blocks

3.1.3 Types of Innovation: Incremental, Disruptive, and Radical, The Innovation Process: from idea to execution

3.1.4 Managing risk and uncertainty in innovation, measuring innovation success

Practical Sessions:

3.1.1 Creativity and Idea Generation Exercises like Brainstorming, SCAMPER, and Random word association etc.

3.1.2 Exploring Types of Innovation through Case Studies

3.1.3 Idea evaluation and selection exercises

3.1.4 Risk assessment and mitigation workshops

Essential Readings:

3.1.1 Csikszentmihalyi, M. (1996). Creativity: Flow and the Psychology of Discovery and Invention. HarperCollins.

3.1.2 Tidd, J., & Bessant, J. (2018). Managing Innovation: Integrating Technological, Market and Organizational Change. John Wiley & Sons.

3.1.3 Christensen, C.M. (2016). The Innovator's Dilemma: When New Technologies Cause Great Firms to Fail. Harvard Business Review Press.

Suggested Readings:

3.1.1 Dyer, J., Gregersen, H., & Christensen, C.M. (2011). The Innovator's DNA: Mastering the Five Skills of Disruptive Innovators. Harvard Business Review Press.

3.1.2 Kelley, T., & Littman, J. (2001). The Art of Innovation: Lessons in Creativity from IDEO, America's Leading Design Firm. Currency.

Suggested Case Studies (Indian Context):

3.1.1 Dairy co-operatives like Amul etc. (Focus on Growing through Cooperative Innovation)

3.1.2 Video-on-demand service providers like The Viral Fever (TVF) etc. (Focus on Redefining Indian Digital Entertainment)

3.1.3 Food start-ups like ID Fresh Food etc. (Focus on Disrupting the Indian Food Market)

Unit 2: Design Thinking and Prototyping (16 hours)

Classroom Sessions:

3.2.1 Introduction to Design Thinking: Principles and Process

3.2.2 Empathy and Understanding User Needs

3.2.3 Ideation, Concept Development, and Selection

3.2.4 Prototyping, Testing, and Iteration

Practical Sessions:

3.2.1 Design Thinking Workshop: Defining a Problem or Opportunity

3.2.2 Empathy Mapping and User Research

3.2.3 Ideation and Concept Development Exercises

3.2.4 Prototyping, Testing, and Iteration

Essential Readings:

3.2.1 Brown, T. (2009). Change by Design: How Design Thinking Transforms Organizations and Inspires Innovation. Harper Business.

3.2.2 Liedtka, J., & Ogilvie, T. (2011). Designing for Growth: A Design Thinking Tool Kit for Managers. Columbia University Press.

Suggested Readings:

3.2.1 Norman, D. A. (2013). The Design of Everyday Things: Revised and Expanded Edition. Basic Books.

3.2.2 Ries, E. (2011). The Lean Startup: How Today's Entrepreneurs Use Continuous Innovation to Create Radically Successful Businesses. Crown Business.

Suggested Case Studies (Indian Context):

3.2.1 Online fintech providers like Razorpay etc. (Focus on Digital Payments for a large user base)

3.2.2 Online education providers like Unacademy etc. (Focus on Online Learning)

3.3.3 IT Start-ups like Khatabook etc. (Focus on Digitizing India's Small Businesses)

3.3.4 Online fintech providers like CRED etc. (Focus on Building Trust and growing the business)

Unit 3: Innovate and Iterate: The Power of Lean Startups (12 hours)

Classroom Sessions:

3.3.1 Overview of the Lean Startup Methodology and its Principles

3.3.2 Understanding the concepts like Split Testing, Pivot, Business-Measure-Learn (BML) and Minimum Viable Product (MVP)

3.3.3 Designing market scenarios to test hypotheses

3.3.4 Analysing results and making data-driven decisions

Practical Sessions:

3.3.1 Identifying customer needs and problems to solve

3.3.2 Designing a Value Proposition and Defining Customer Segments

3.3.3 Developing an MVP for your business idea, conducting experiments and gathering customer feedback

3.3.4 Measuring the success of your MVP and experiments, Iterating and refining your business idea based on feedback

Essential Readings:

3.3.1 Ries, E. (2011). The Lean Startup: How Today's Entrepreneurs Use Continuous Innovation to Create Radically Successful Businesses. Crown Business.

3.3.2 Maurya, A. (2012). Running Lean: Iterate from Plan A to a Plan That Works. O'Reilly Media.

Suggested Readings:

3.3.1 Blank, S., & Dorf, B. (2012). The Startup Owner's Manual: The Step-by-Step Guide for Building a Great Company. K&S Ranch.

3.3.2 Osterwalder, A., Pigneur, Y., & Papadakos, T. (2014). Value Proposition Design: How to Create Products and Services Customers Want. John Wiley & Sons.

Suggested Case Studies (Indian Context):

3.3.1 Online hotel room aggregators like OYO etc. (Focus on Embracing Lean Startup Principles in the Indian Hospitality Industry)

3.3.2 Online food delivery aggregators like Zomato etc. (Focus on Scaling with Lean Startup Methodology)
3.3.3 Online grocery delivery providers like Grofers etc. (Focus on Adapting and Growing with a Lean Approach)
3.3.4 Online car rental providers like Zoomcar etc. (Focus on Navigating the Car Rental Industry with Lean Startup Principles)

Unit 4: Launching and Scaling Innovative Ventures (16 hours)

Classroom Sessions:

3.4.1 Innovating for Social Causes
3.4.2 New Product development and testing
3.4.3 Growth Strategies for Innovative Businesses
3.4.4 Managing Innovation and Building an Innovative Culture

Practical Sessions:

3.4.1 Identifying Funding and Financing Options for Your Venture
3.4.2 Identifying new product development processes and benchmarks and testing plans and parameters
3.4.3 Designing a Growth Strategy for Your Innovative Venture
3.4.4 Creating an Action Plan for Building an Innovative Culture

Essential Readings:

3.4.1 Kawasaki, G. (2015). The Art of the Start 2.0: The Time-Tested, Battle-Hardened Guide for Anyone Starting Anything. Portfolio.
3.4.2 Blank, S., & Dorf, B. (2012). The Startup Owner's Manual: The Step-by-Step Guide for Building a Great Company. K&S Ranch.

Suggested Readings:

3.4.1 Hoffman, R., & Casnocha, B. (2012). The Start-up of You: Adapt to the Future, Invest in Yourself, and Transform Your Career. Crown Business.
3.4.2 Thiel, P., & Masters, B. (2014). Zero to One: Notes on Startups, or How to Build the Future. Crown Business.

Suggested Case Studies (Indian Context):

3.4.1 EdTech service providers like Byju's etc. (Focus on Disrupting the EdTech Space with Personalized Learning)
3.4.2 Online hyperlocal delivery providers like Dunzo etc. (Focus on Transforming Hyperlocal Delivery through Technology)

GENERIC ELECTIVE (GE-4)

Credit distribution, Eligibility and Pre-requisites of the Course						
Course title	**Credits**	**Credit distribution of the course**			**Eligibility criteria**	**Pre-requisite of the course**
		Lecture	**Tutorial**	**Practical/ Practice**		
Fundraising and Management for Entrepreneurs	**4**	**2**		**2**	**Class XII pass**	**Nil**

Course Description:
This course explores various fundraising strategies and techniques for entrepreneurs while emphasizing effective management of acquired funds. Students will learn about different sources of funding, investor relations, financial planning, and budgeting. The course combines classroom lectures with hands-on Practical Session, providing students with practical experience in fundraising and financial management.

Learning Objectives:
Students of this course should be able to:

- Describe the key concepts, principles, and strategies related to fundraising and financial management for entrepreneurial ventures.
- Compare various funding sources, including angel investors, venture capitalists, grants, and crowdfunding platforms, and determine the most suitable options for their businesses.
- Devise and create compelling investor pitches, develop financial projections, and effectively manage their venture's financial resources.
- Assemble some real-world examples and case studies that will help them understand the practical aspects of fundraising and financial management in the context of entrepreneurship.
- Assess their critical thinking, problem-solving, and decision-making skills.

Learning Outcomes:
At the end of this course, students should be able to:

- Recognize various fundraising strategies and techniques, enabling students to choose the most appropriate funding sources for their entrepreneurial ventures.
- Sketch effective pitches and fundraising campaigns tailored to different types of investors and funding sources, ensuring successful capital-raising efforts.
- Manage strong investor relationships through effective communication and reporting, fostering trust and ongoing support.
- Prepare comprehensive financial plans and budgets for their businesses, supporting both short-term and long-term financial goals.
- Test to determine optimal cash flows and working capital management, that will help ensure the financial sustainability and growth of their ventures.

SYLLABUS

Unit 1: Fundraising Strategies and Sources (16 hours)

Classroom Sessions:

4.1.1 Introduction to Fundraising for Entrepreneurs

4.1.2 Bootstrapping and Self-Financing

4.1.3 Financial Planning and Budgeting for Entrepreneurs

4.1.4 Cash Flow Management and Working Capital Optimization

Practical Sessions:

4.1.1 Evaluating Different Fundraising Strategies

4.1.2 Developing a Self-Financing Plan

4.1.3 Crafting an Effective Pitch for Investors

4.1.4 Analysing Debt Financing Options

Essential Readings:

4.1.1 Gompers, P.A., & Lerner, J. (2004). The Venture Capital Cycle. MIT Press.

4.1.2 Bhide, A. (2000). The Origin and Evolution of New Businesses. Oxford University Press.

Suggested Readings:

4.1.1 Bygrave, W.D., & Zacharakis, A. (2014). Entrepreneurship. Wiley.

4.1.2 Dorsey, D. (2003). Bootstrap Business. Adams Media.

Suggested Case Studies (Indian Context):

4.1.1 Online food delivery aggregators like Zomato etc. (Focus on Navigating the venture capital landscape)

4.1.2 Online cab aggregators like Ola Cabs etc. (Focus on Raising capital through multiple funding rounds)

4.1.3 Indian FMCG companies like Patanjali Ayurveda etc. (Focus on Bootstrapping and organic growth in the FMCG sector)

Unit 2: Crowdfunding and Alternative Financing (16 hours)

Classroom Sessions:

4.2.1 Crowdfunding: Types, Platforms, and Best Practices

4.2.2 Peer-to-Peer Lending, Microfinancing and Social Stock Exchange

4.2.3 Strategic Partnerships and Joint Ventures

4.2.4 Social Impact Investing and Corporate Social Responsibility

Practical Session:

4.2.1 Developing a Crowdfunding Campaign

4.2.2 Exploring Peer-to-Peer Lending and Microfinancing Platforms

4.2.3 Identifying Potential Strategic Partners and Joint Ventures

4.2.4 Assessing Social Impact Investment Opportunities

Essential Readings:

4.2.1 Macht, S.A. (2014). The Crowdfunding Revolution: Social Networking Meets Venture Financing. CreateSpace Independent Publishing Platform.

4.2.2 Yunus, M., Moingeon, B., & Lehmann-Ortega, L. (2010). Building Social Business: The New Kind of Capitalism that Serves Humanity's Most Pressing Needs. Public Affairs.

Suggested Readings:

4.2.1 Mollick, E. (2014). The Dynamics of Crowdfunding: An Exploratory Study. Journal of Business Venturing.

4.2.2 Morduch, J., & Haley, B. (2002). Analysis of the Effects of Microfinance on Poverty Reduction. NYU Wagner Working Paper.

Suggested Case Studies (Indian Context):

4.2.1 Online donation services providers like Ketto etc. (Focus on Success and challenges of crowdfunding in India)

4.2.2 Online fintech services providers like Milaap etc. (Focus on the Impact of peer-to-peer lending and microfinancing in India)

4.2.3 Electricity generation and service providers like Tata Power etc. (Focus on Strategic partnerships and joint ventures in the renewable energy sector)

Unit 3: Investor Relations and Communications (12 hours)

Classroom Sessions:

4.3.1 Building and Maintaining Investor Relationships

4.3.2 Effective Communication Strategies for Investors

4.3.3 Reporting Financial Performance and Progress

4.3.4 Navigating Difficult Conversations and Negotiations

Practical Session:

4.3.1 Role-Playing Investor Meetings

4.3.2 Creating an Investor Relations Communications Plan

4.3.3 Preparing Financial Reports for Investors

4.3.4 Practicing Difficult Conversations and Negotiations with Investors

Essential Readings:

4.3.1 Mahon, J.F., & Wartick, S.L. (2003). Dealing with Stakeholders: How Reputation, Credibility, and Framing Influence the Game. Corporate Reputation Review.

4.3.2 Goleman, D., Boyatzis, R., & McKee, A. (2013). Primal Leadership: Unleashing the Power of Emotional Intelligence. Harvard Business Review Press.

Suggested Readings:

4.3.1 Fisher, R., Ury, W., & Patton, B. (2011). Getting to Yes: Negotiating Agreement Without Giving In. Penguin Books.

4.3.2 Gallo, C. (2014). Talk Like TED: The 9 Public Speaking Secrets of the World's Top Minds. St. Martin's Press.

Suggested Case Studies (Indian Context):

4.3.1 Online e-commerce providers like Flipkart etc. (Focus on Investor relations)

4.3.2 Online fintech providers like Paytm etc. (Focus on Investor Communications)

4.3.3 Online hotel room aggregators like OYO Rooms etc. (Focus on Managing investor expectations amidst global expansion)

Unit 4: Financial Management and Budgeting (16 hours)

Classroom Sessions:

4.4.1 Equity Financing: Seed Fund, Angel Investors and Venture Capital

4.4.2 Debt Financing: Loans, Grants, and Government Schemes

4.4.3 Monitoring and Controlling Expenditure

4.4.4 Financial Performance Analysis and Benchmarking

Practical Sessions:

4.4.1 Creating a Financial Plan and Budget for a Business

4.4.2 Analysing Cash Flow and Working Capital Management

4.4.3 Implementing Cost Control Measures

4.4.4 Conducting Financial Performance Analysis and Benchmarking

Essential Readings:

4.4.1 Brigham, E.F., & Ehrhardt, M.C. (2016). Financial Management: Theory & Practice. Cengage Learning.

4.4.2 Atrill, P., & McLaney, E. (2018). Accounting and Finance for Non-Specialists. Pearson.

Suggested Readings:

4.4.1 Horngren, C.T., Sundem, G.L., Schatzberg, J.O., & Burgstahler, D. (2017). Introduction to Management Accounting. Pearson.

4.4.2 Gitman, L.J., & Zutter, C.J. (2018). Principles of Managerial Finance. Pearson.

Suggested Case Studies (Indian Context):

4.4.1 Online FMCG and grocery delivery providers like BigBasket etc. (Focus on Financial management during rapid growth and increased competition)

4.4.2 Personal care service providers like Nykaa (Focus on Balancing growth and profitability in the Indian e-commerce space)

4.4.3 Online food delivery aggregators like Swiggy (Focus on Cash flow management and working capital optimization in the food delivery industry)

GENERIC ELECTIVE (GE-5)

Credit distribution, Eligibility and Pre-requisites of the Course						
Course title	**Credits**	**Credit distribution of the course**			**Eligibility criteria**	**Pre-requisite of the course**
		Lecture	**Tutorial**	**Practical/ Practice**		
Marketing and Sales for Entrepreneurs	**4**	**2**		**2**	**Class XII pass**	**Nil**

Course Description:
This Marketing and Sales for Entrepreneurs course focuses on marketing and sales fundamentals, tailored specifically for entrepreneurs. Students will learn about marketing strategies, customer acquisition, and sales techniques to effectively promote and sell their products or services. The course combines classroom lectures with hands-on Practical Session, providing students with practical experience in marketing and sales.

Learning Objectives:
Students of this course should be able to:

- Describe the key concepts, principles, and strategies related to marketing and sales for entrepreneurial ventures.
- Construct, develop and execute effective marketing campaigns, leveraging digital marketing tools and techniques.
- Discover the skills and knowledge needed to master the sales process, build lasting customer relationships, and achieve customer retention.
- Compare real-world examples and case studies to enable better understanding of the practical aspects of marketing and sales in the context of entrepreneurship.

Learning outcomes:
At the end of this course, students should be able to:

- Recall the fundamentals of marketing and sales in the entrepreneurial context.
- Use tailored marketing strategies, including segmentation, targeting, and positioning.
- Test and implement digital marketing techniques like social media, content marketing, and SEO.
- Set up and maintain strong customer relationships.
- Manage customer retention and business development strategies.

SYLLABUS

Unit 1: Marketing Basics and Strategy for Entrepreneurs (16 hours)
Classroom Sessions:

5.1.1 Marketing Fundamentals for Entrepreneurs
5.1.2 Market Segmentation, Targeting, and Positioning

5.1.3 Creating a Unique Selling Proposition (USP)
5.1.4 Developing a Marketing Strategy and Marketing Mix

Practical Sessions:

5.1.1 Identifying Target Markets and Customer Profiles
5.1.2 Developing a USP and Positioning Statement
5.1.3 Crafting a Marketing Strategy
5.1.4 Analysing the Marketing Mix (Product, Price, Place, Promotion)

Essential Readings:

5.1.1 Kotler, P., & Armstrong, G. (2020). Principles of Marketing. Pearson.
5.1.2 Godin, S. (2003). Purple Cow: Transform Your Business by Being Remarkable. Portfolio.
Suggested Readings:

Suggested Readings:

5.1.1 Ries, E. (2017). The Startup Way: How Modern Companies Use Entrepreneurial Management to Transform Culture and Drive Long-Term Growth. Currency.
5.1.2 McCarthy, J., & Perreault, W. (2008). Basic Marketing: A Global-Managerial Approach. McGraw-Hill.

Suggested Case Studies (Indian Context):

5.1.1 Dairy co-operatives like Amul etc. (Focus on Building a strong brand through cooperative marketing)
5.1.2 Food start-ups like Paper Boat etc. (Focus on Nostalgia-driven marketing in the Indian beverage industry)
5.1.3 Online food delivery aggregators like Zomato etc. (Focus on Harnessing digital marketing for growth in the food delivery space)

Unit 2: Digital Marketing for Entrepreneurs (16 hours)

Classroom Sessions:

5.2.1 Introduction to Digital Marketing
5.2.2 Social Media Marketing and Advertising
5.2.3 Search Engine Optimization (SEO) and Online Advertising.
5.2.4 Content and Email Marketing.

Practical Sessions:

5.2.1 Developing a Digital Marketing Strategy
5.2.2 Creating Social Media Marketing Campaigns
5.2.3 Implementing Content Marketing and SEO Techniques
5.2.4 Designing Email Marketing Campaigns and Online Advertising

Essential Readings:

5.2.1 Ryan, D. (2019). Digital Marketing: Strategy, Implementation, and Practice. Pearson.
5.2.2 Halligan, B., & Shah, D. (2014). Inbound Marketing: Attract, Engage, and Delight Customers Online. Wiley.

Suggested Readings:

5.2.1 Chaffey, D., & Ellis-Chadwick, F. (2019). Digital Marketing. Pearson.
5.2.2 Patel, N., & Hines, K. (2018). The Definitive Guide to Growth Hacking. Quick Sprout.

Suggested Case Studies (Indian Context):

5.2.1 Online e-commerce providers like Flipkart etc. (Focus on Pioneering e-commerce marketing in India)

5.2.2 Personal care services providers Nykaa (Leveraging social media and content marketing to build a beauty empire)

5.2.3 EdTech service providers like Byju's etc. (Focus on Scaling an ed-tech startup through online advertising and app marketing)

Unit 3: Sales and Business Development (12 hours)

Classroom Sessions:

5.3.1 Sales Fundamentals for Entrepreneurs

5.3.2 The Sales Process and Sales Techniques

5.3.3 Negotiation Skills and Closing Deals

5.3.4 Business Development and Strategic Partnerships

Practical Sessions:

5.3.1 Creating a Sales Plan and Setting Sales Goals

5.3.2 Role-playing Sales Scenarios and Techniques

5.3.3 Practicing Negotiation Skills and Closing Techniques

5.3.4 Identifying Business Development Opportunities and Partnerships

Essential Readings:

5.3.1 Tracy, B. (2006). The Psychology of Selling: Increase Your Sales Faster and Easier Than You Ever Thought Possible. HarperCollins Leadership.

5.3.2 Gitomer, J. (2004). The Little Red Book of Selling: 12.5 Principles of Sales Greatness. Bard Press.

Suggested Readings:

5.3.1 Pink, D. H. (2012). To Sell Is Human: The Surprising Truth About Moving Others. Riverhead Books.

5.3.2 Rackham, N. (1988). SPIN Selling. McGraw-Hill.

Suggested Case Studies (Indian Context):

5.3.1 Online cab aggregators like Ola Cabs etc. (Focus on Sales and business development strategies in the Indian ride-hailing market)

5.3.2 Optical services provider start-ups like Lenskart etc. (Focus on Expanding through online and offline sales channels)

5.3.3 Software services providers like Zoho etc. (Focus on Global growth and business development in the software industry)

Unit 4: Customer Relationship Management (CRM) and Retention (16 hours)

Classroom Session:

5.4.1 Introduction to Customer Relationship Management (CRM)

5.4.2 Building and Maintaining Customer Relationships

5.4.3 Customer Retention Strategies and Loyalty Programs

5.4.4 Measuring Customer Satisfaction, Customer Acquisition Cost (CAC) and Customer Lifetime Value (CLV)

Practical Session:

5.4.1 Exploring CRM Tools and Techniques

5.4.2 Designing Customer Engagement and Communication Plans

5.4.3 Developing Customer Retention Strategies and Loyalty Programs

5.4.4 Analysing Customer Satisfaction Metrics and CLV

Essential Readings:

5.4.1 Peppers, D., & Rogers, M. (2016). Managing Customer Experience and Relationships: A Strategic Framework. Wiley.

5.4.2 Reichheld, F.F. (2003). The Loyalty Effect: The Hidden Force Behind Growth, Profits, and Lasting Value. Harvard Business Review Press.

Suggested Readings:

5.4.1 Blattberg, R.C., Malthouse, E.C., & Neslin, S.A. (2009). Customer Lifetime Value: Reshaping the Way We Manage to Maximize Profits. Wiley.

5.4.2 Gartner, A. (2014). Customer Success: How Innovative Companies Are Reducing Churn and Growing Recurring Revenue. Wiley.

Suggested Case Studies (Indian Context):

5.4.1 Online fintech services providers like Paytm etc. (Focus on Enhancing customer engagement and loyalty through innovative CRM strategies)

5.4.2 Online FMCG and grocery delivery providers like BigBasket etc. (Focus on Building customer retention in the competitive online grocery market)

5.4.3 Online food derlivery aggregators like Swiggy etc. (Focus on Balancing customer satisfaction and operational efficiency in food delivery)

GENERIC ELECTIVE (GE-6)						
Credit distribution, Eligibility and Pre-requisites of the Course						
Course title	**Credits**	**Credit distribution of the course**			**Eligibility criteria**	**Pre-requisite of the course**
		Lecture	**Tutorial**	**Practical/ Practice**		
Startup Operations and Future-proofing	**4**	**2**		**2**	**Class XII pass**	**Nil**

Course Description:

This course focuses on the operational aspects of starting and running a successful startup venture. Students will learn how to protect their intellectual property, navigate legal channels, and future-proof their business. The course combines theoretical lectures with practical sessions, enabling students to gain hands-on experience in developing their startup operations.

Learning Objectives:

Students of this course should be able to:

- Describe the key operational aspects of starting and running a successful startup venture.
- Assess the importance of safeguarding innovation and intellectual property.
- Assemble knowledge of legal and regulatory requirements for startups, including compliance with relevant regulations.
- Devise ways to future-proof their business and adapt to changing market conditions.

Learning Outcomes:

At the end of this course, students should be able to:

- Recognize the key operational aspects of starting and running a successful startup venture.
- Sketch out an effective understanding of how to protect their innovation and intellectual property.
- Manage legal and regulatory requirements and compliances for startups.
- Prepare strategies to future-proof their business and adapt to changing market conditions.

SYLLABUS

Unit 1: Introduction to Startup Operations (16 hours)

Classroom Sessions:

6.1.1 Introduction to Startup Operations, Key Operational Challenges for Startups

6.1.2 Operations Strategy: Aligning operations with business goals

6.1.3 Key Operational Functions: Production, Supply Chain and Quality Management

6.1.4 Operational Resilience: Concept and Implementation

Practical Sessions:

6.1.1 Identifying Key Operational Challenges for Startups

6.1.2 Developing Operational Plans

6.1.3 Evaluating Operational Risks and Challenges

6.1.4 Building Operational Resilience, Mapping Start-up value streams and identifying improvement areas.

Essential Readings:

6.1.1 Blank, S. (2012). The Four Steps to the Epiphany. K&S Ranch.

6.1.2 Eisenmann, T. (2012). Entrepreneurship: Starting, Developing, and Managing a New Enterprise. Pearson.

6.1.3 Campbell, A., Gutierrez, M., & Lancelott, M. (2017). Operating Model Canvas: Aligning Operations and Organization with Strategy. Van Haren Publishing.

Suggested Readings:

6.1.1 Osterwalder, A. (2014). Value Proposition Design: How to Create Products and Services Customers Want. Wiley.

6.1.2 Maurya, A. (2012). Running Lean: Iterate from Plan A to a Plan That Works. O'Reilly Media.

Relevant Case Studies:

6.1.1 Online homestay aggregators like Airbnb etc. (Focus on Building Operational Resilience through Crisis Management)

6.1.1 Online cab aggregators like Uber etc. (Focus on Managing Rapid Growth and Operational Scale)

Unit 2: Safeguarding Innovation and IPR (12 hours)

Classroom Sessions:

6.2.1 Importance of Innovation and Intellectual Property

6.2.2 Types of Intellectual Property

6.2.3 Intellectual Property Protection Strategies

6.2.4 Intellectual Property Management

Practical Session:

6.2.1 Identifying Intellectual Property

6.2.2 Developing an Intellectual Property Strategy

6.2.3 Filing for Intellectual Property Protection

6.2.4 Intellectual Property Management

Essential Readings:

6.2.1 Chesbrough, H.W. (2010). Open Business Models: How to Thrive in the New Innovation Landscape. Harvard Business Press.

6.2.2 Furr, N., & Dyer, J.H. (2014). The Innovator's Method: Bringing the Lean Start-up into Your Organization. Harvard Business Review Press.

Suggested Readings:

6.2.1 Gassmann, O., Frankenberger, K., & Csik, M. (2014). The Business Model Navigator: 55 Models That Will Revolutionize Your Business. Pearson.

6.2.2 Harreld, J.B., O'Reilly III, C.A., & Tushman, M.L. (2018). Winning Now, Winning Later: How Companies Can Succeed in the Short Term While Investing for the Long Term. Crown Business.

Relevant Case Studies:

6.2.1 Start-up electric vehicle manufacturers like Tesla etc. (Focus on Protecting Innovation through Intellectual Property)

6.2.2 Beverage manufacturers like Coca-Cola etc. (Focus on Managing Trademark Protection and Brand Value)

Unit 3: Navigating Legal Channels (16 hours)

Classroom Sessions:

6.3.1 Introduction to Legal Channels for Startups
6.3.2 Legal Structures for Startups
6.3.3 Contracts and Agreements for Startups
6.3.4 Compliance and Regulations for Startups

Practical Session:

6.3.1 Choosing a Legal Structure for Your Startup
6.3.2 Drafting Contracts and Agreements
6.3.3 Understanding Compliance and Regulations
6.3.4 Legal Due Diligence and Risk Management

Essential Readings:

6.3.1 Bagley, C.E., & Dauchy, C.E. (2011). The Entrepreneur's Guide to Business Law. Cengage Learning.
6.3.2 Kohlhagen, R.W. (2018). Business Law: An Introduction. Cengage Learning.

Suggested Readings:

6.3.1 Bygrave, W.D., & Zacharakis, A. (2013). Entrepreneurship: A Process Perspective. Cengage Learning.
6.3.2 Macey, J.R. (2010). Macey on Corporation Laws. Aspen Publishers.

Relevant Case Studies:

6.3.1 Tech and IT Device manufacturers like Apple etc. (Navigating Legal Issues for a Tech Startup)
6.3.2 Search engine services like Google etc. (Legal Due Diligence for Acquisitions and Partnerships)

Unit 4: Future-Proofing the Business (16 hours)

Classroom Sessions:

6.4.1 Understanding Market Trends and Disruptions
6.4.2 Innovation and Adaptability for Startups
6.4.3 Building a Resilient Business Model
6.4.4 Strategies for Growth and Expansion

Practical Sessions:

6.4.1 Analysing Market Trends and Disruptions
6.4.2 Developing Innovation and Adaptability Strategies
6.4.3 Building a Resilient Business Model
6.4.4 Planning for Growth and Expansion

Essential Readings:

6.4.1 Christensen, C.M. (2016). The Innovator's Dilemma: When New Technologies Cause Great Firms to Fail. Harvard Business Review Press.
6.4.2 Moore, G.A. (2014). Crossing the Chasm: Marketing and Selling High-Tech Products to Mainstream Customers. HarperCollins.

Suggested Readings:

6.4.1 Blank, S. (2012). The Four Steps to the Epiphany. K&S Ranch.

6.4.2 Furr, N., & Dyer, J.H. (2014). The Innovator's Method: Bringing the Lean Start-up into Your Organization. Harvard Business Review Press.

Relevant Case Studies:

6.4.1 Online e-commerce providers like Amazon etc. (Focus on Innovation and Adaptability in the E-Commerce Industry)

6.4.2 OTT entertainment providers like Netflix etc. (Focus on Building a Resilient Business Model through Disruptive Innovation)

GENERIC ELECTIVE (GE-7)

Credit distribution, Eligibility and Pre-requisites of the Course						
Course title	**Credits**	**Credit distribution of the course**			**Eligibility criteria**	**Pre-requisite of the course**
		Lecture	**Tutorial**	**Practical/ Practice**		
Social Entrepreneurship and Social Innovation	**4**	**2**		**2**	**Class XII pass**	**Nil**

Course Description:

The course provides students with the knowledge and skills needed to create and manage ventures that address social, environmental, or cultural issues. Students will explore the principles of social entrepreneurship, learn how to develop innovative solutions to pressing social challenges and understand the unique business models, funding strategies, and impact measurement approaches used by social enterprises. Through case studies, interactive lectures, and practical exercises, students will gain the expertise required to turn their passion for social change into viable, sustainable, and impactful ventures.

Learning Objectives:

Students of this course should be able to:

- Identify the key concepts, principles, and strategies related to social entrepreneurship and social innovation.
- Discover how to identify social, environmental, or cultural issues and develop innovative solutions using entrepreneurial approaches.
- Classify the skills and knowledge needed to create, manage, and scale social enterprises, including unique business models, funding strategies, and impact measurement approaches.
- Examine real-world examples and case studies, helping them understand the practical aspects of social entrepreneurship and social innovation.
- Assemble tools that help the students develop critical thinking, problem-solving, and decision-making skills; thus, enabling them to better navigate the complex landscape of social entrepreneurship and create meaningful social impact.

Learning Outcomes:

At the end of this course, students will be able to:

- Match and apply the key concepts and principles of social entrepreneurship and social innovation in various contexts.
- Inspect social, environmental, or cultural issues and develop innovative solutions using entrepreneurial approaches.
- Manage, create and scale social enterprises
- Select the various critical thinking, problem-solving, and decision-making skills that they have absorbed to navigate the complex landscape of social entrepreneurship and create meaningful social impact

SYLLABUS

Unit 1: Introduction to Social Entrepreneurship and Social Innovation (16 hours)

Classroom Sessions:

7.1.1 Understanding Social Entrepreneurship and Social Innovation

7.1.2 The Social Entrepreneurial Mindset and Skills

7.1.3 Identifying Social Needs and Opportunities

7.1.4 Social Enterprise Models and Legal Structures

Practical Sessions:

7.1.1 Assessing Personal Social Entrepreneurial Mindsets

7.1.2 Identifying Social Needs and Opportunities

7.1.3 Evaluating Social Business Models

7.1.4 Selecting Social Enterprise Legal Structures

Essential Readings:

7.1.1 Bornstein, D., & Davis, S. (2010). Social Entrepreneurship: What Everyone Needs to Know. Oxford University Press.

7.1.2 Mair, J., & Marti, I. (2006). Social Entrepreneurship Research: A Source of Explanation, Prediction, and Delight. Journal of World Business.

Suggested Readings:

7.1.1 Dees, J. G., Emerson, J., & Economy, P. (2002). Enterprising Nonprofits: A Toolkit for Social Entrepreneurs. Wiley.

7.1.2 Nicholls, A. (2008). Social Entrepreneurship: New Models of Sustainable Social Change. Oxford University Press.

Suggested Case Studies (Indian Context):

7.1.1 Social start-ups like SELCO India etc. (Focus on Pioneering off-grid solar energy solutions)

7.1.2 Social healthcare providers like Aravind Eye Care System etc. (Accessible eye care for all)

7.1.3 Furnishings start-ups like Jaipur Rugs etc. (Empowering rural artisans through a sustainable supply chain)

Unit 2: Designing and Implementing Social Innovation (16 hours)

Classroom Sessions:

7.2.1 The Social Innovation Process

7.2.2 Human-Centred Design for Social Impact

7.2.3 Prototyping and Testing Social Innovations

7.2.4 Measuring and Evaluating Social Impact

Practical Sessions:

7.2.1 Understanding the Social Innovation Process

7.2.2 Applying Human-Centred Design for Social Impact

7.2.3 Prototyping and Testing Social Innovations

7.2.4 Measuring and Evaluating Social Impact

Essential Readings:

7.2.1 Mulgan, G. (2018). The Process of Social Innovation. MIT Press.

7.2.2 Brown, T., & Wyatt, J. (2010). Design Thinking for Social Innovation. Stanford Social Innovation Review.

Suggested Readings:

7.2.1 Altringer, B. (2019). The Design Thinking Playbook. MIT Press.

7.2.2 Pol, E., & Ville, S. (2009). Social Innovation: Buzzword or Enduring Term? The Journal of Socio-Economics.

Suggested Case Studies (Indian Context):

7.2.1 Social start-ups like Pratham etc. (Focus on Innovative education models to address illiteracy in India)

7.2.2 Social start-ups like SEWA etc. (Focus on Empowering women through skill development and microfinance)

7.2.3 Social start-ups like Gram Vikas etc. (Focus on Sustainable and inclusive rural development)

Unit 3: Funding and Scaling Social Enterprises and Innovations (12 hours)

Classroom Sessions:

7.3.1 Funding Sources for Social Enterprises and Innovations

7.3.2 Impact Investing and Social Venture Capital

7.3.3 Grant Funding and Philanthropy

7.3.4 Scaling Strategies for Social Enterprises and Innovations

Practical Sessions:

7.3.1 Identifying Funding Sources for Social Enterprises and Innovations

7.3.2 Exploring Impact Investing and Social Venture Capital

7.3.3 Securing Grant Funding and Philanthropic Support

7.3.4 Developing a Scaling Strategy for Social Enterprises and Innovations

Essential Readings:

7.3.1 Bugg-Levine, A., & Emerson, J. (2011). Impact Investing: Transforming How We Make Money While Making a Difference. Wiley.

7.3.2 Epstein, M.J., & Yuthas, K. (2014). Measuring and Improving Social Impacts: A Guide for Nonprofits, Companies, and Impact Investors. Berrett-Koehler Publishers.

Suggested Readings:

7.3.1 Clark, C., Emerson, J., & Thornley, B. (2012). The Impact Investor: Lessons in Leadership and Strategy for Collaborative Capitalism. Jossey-Bass.

7.3.2 Reis, T., & Clohesy, S. (2001). Unleashing New Resources and Entrepreneurship for the Common Good: A Scan, Synthesis and Scenario for Action. W.K. Kellogg Foundation.

Suggested Case Studies (Indian Context):

7.3.1 Social start-ups like Pratham etc. (Focus on Scaling educational impact through partnerships)

7.3.2 Social start-ups like Waste Ventures India etc. (Focus on Tackling waste management through innovative business models)

7.3.3 Social start-ups like WaterHealth International etc. (Focus on Providing clean water to rural communities)

Unit 4: Collaborations and Partnerships for Social Impact (16 hours)

Classroom Sessions:

7.4.1 Public-Private Partnerships for Social Impact

7.4.2 Collaborating with NGOs and Nonprofits

7.4.3 Cross-sector Collaboration and Collective Impact

7.4.4 Networking and Building Partnerships for Social Enterprises and Innovations

Practical Sessions:

7.4.1 Analysing Public-Private Partnerships for Social Impact

7.4.2 Exploring Collaborations with NGOs and Nonprofits

7.4.3 Designing Cross-sector Collaboration and Collective Impact Initiatives

7.4.4 Practicing Networking and Partnership Building Skills

Essential Readings:

7.4.1 Austin, J.E., & Seitanidi, M.M. (2012). Collaborative Value Creation: A Review of Partnering Between Nonprofits and Businesses. Nonprofit and Voluntary Sector Quarterly.

7.4.2 Kania, J., & Kramer, M. (2011). Collective Impact. Stanford Social Innovation Review.

Suggested Readings:

7.4.1 Selsky, J.W., & Parker, B. (2005). Cross-sector Partnerships to Address Social Issues: Challenges to Theory and Practice. Journal of Management.

7.4.2 Waddell, S., Waddock, S., Cornell, S., Dentoni, D., McLachlan, M., & Meszoely, G. (2015). Large Systems Change: An Emerging Field of Transformation and Transitions. Journal of Corporate Citizenship.

Suggested Case Studies (Indian Context):

7.4.1 Social service providers like Akshaya Patra etc. (Focus on Public-private partnership for school meal programs)

7.4.2 Social education start-ups like Barefoot College etc. (Empowering rural communities through education and skill development)

7.4.3 Social NGOS' like Goonj etc. (Focus on Cross-sector collaboration for resource management and upcycling)

Pedagogy and Course Operations

1. **Course Credits:** Taking all 7 courses on offer under this GE will allow the student to earn 28 credits, thus conferring a Minor specialisation upon the student for their regular course.
2. **Interactive Classroom Sessions:** Classroom Sessions should incorporate real-life examples, case studies, and multimedia elements to facilitate learning.
3. **Group Discussions:** Students will participate in group discussions during class, sharing their insights, experiences, and ideas to enhance collective learning and promote critical thinking.
4. **In-class Exercises:** Students will engage in practical exercises and activities designed to reinforce the concepts and skills taught in the Classroom Sessions. These may include individual or group work, brainstorming sessions, or problem-solving exercises.
5. **Case Studies:** Suggested Case Studies will be integrated into the curriculum to help students analyse and understand real-world entrepreneurial challenges and opportunities. Students will be encouraged to dissect the cases, propose solutions, and learn from the experiences of other entrepreneurs.
6. **Practice Labs:** Students will participate in hands-on practical sessions; working on projects or assignments that apply entrepreneurship concepts learned in class. These sessions will allow students to develop and refine their entrepreneurial skills through practical experience.
7. **Student Presentations:** The students will be encouraged to present their ideas and projects in workshops and seminars.

8. **Reflection Activities:** Regular reflection activities will be incorporated into the course, encouraging students to assess their progress, identify areas for improvement, and develop a deeper understanding of their entrepreneurial journey.
9. **Mentorship and Feedback:** Instructors and/or industry mentors will provide ongoing guidance, support, and feedback to students, helping them navigate challenges and make informed decisions.
10. **Assessment and Evaluation:** A combination of assignments, quizzes, exams, and project work will be used to evaluate students' understanding of the course material and their ability to apply entrepreneurial principles and practices effectively.
11. **Course Improvements:** This is a new course thus regular evolution is needed. The course contents would need to thus modified. DSSEED would constitute a Course Improvement Committee which should be able to monitor and implement changes upto 20% of the course content without the need to seek approval from the statutory bodies of the University of Delhi.
12. **Teachers:** The course teaching will be supplemented by practitioners and industry experts to enhance the learning experience.

POOL OF GENERIC ELECTIVES (DATA ANALYTICS)

OFFERED BY DELHI SCHOOL OF ANALYTICS

GENERIC ELECTIVES (GE-1)

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Python and data fundamentals	4	3	0	1	12th Pass	Basic understanding of statistics

Learning Objectives

The Learning Objectives of this course are as follows:

1. Understand the context of machine learning.
2. Know how to use python/R for machine learning

Learning outcomes

The Learning Outcomes of this course are as follows:

1. Understand the data needs of generalised machine learning algorithms.
2. Have a working knowledge of machine learning algorithms.

SYLLABUS OF GE-1

Unit 1 (3 weeks)

Fundamentals of python for machine learning: Basic operations and functions, loops, assign variables, python data types, tuples, lists, dictionary, slicing, if statements, arrays, python libraries and their use- pandas, numpy, matplotlib, sci-kit learn, pyspark, reading and manipulating data -selecting rows/columns, merging data, OOPS in python

Unit 2 (3Weeks)

Machine Learning: Introduction, Definitions and types of machine learning

Foundation of Data Analytics: – Introduction, Evolution, Concept and Scopes, Data, Big Data, Metrics and Data classification, Data Reliability & Validity, Introduction to Descriptive Analytics, Predictive Analytics and Prescriptive Analytics.

Unit 3 (4 Weeks)

Data pre-processing and cleaning: data manipulation steps (sorting, filtering, duplicates, merging, appending, subsetting, derived variables, data type conversions, renaming,

formatting, etc.), normalizing data, sampling, missing value treatment, outliers, coding nominal and ordinal variables.

Unit 4 (4 weeks)

Exploratory data analysis: Data visualization using matplotlib, seaborn libraries, creating graphs (bar/line/pie/boxplot/histogram, etc.), summarizing data, descriptive statistics, univariate analysis (distribution of data), bivariate analysis (cross tabs, distributions and relationships, graphical analysis)

Practical component (if any) - The entire syllabus is based on practical exercise i.e. learning through specified software's like Python or R.

Essential/recommended readings

1. Machine Learning using Python, Manaranjan Pradhan, U Dinesh Kumar, ISBN: 9788126579907

2. Ethem Alpaydin, "Introduction to Machine Learning" 2nd Edition, The MIT Press, 2009.

3. Tom M. Mitchell, "Machine Learning", First Edition by Tata McGraw-Hill Education, 2013.

4. Christopher M. Bishop, "Pattern Recognition and Machine Learning" by Springer, 2007.

5. Mevin P. Murphy, "Machine Learning: A Probabilistic Perspective" by The MIT Press, 2012.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

GENERIC ELECTIVES (GE-2)

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Machine Learning and Applications	**4**	**3**	**0**	**1**	**12th Pass**	**Basic understanding of statistics**

Learning Objectives

The Learning Objectives of this course are as follows:

1. Understand the various machine learning algorithms
2. Understand their applicability and context

Learning outcomes

The Learning Outcomes of this course are as follows:

1.Have a working knowledge of machine learning algorithms.
2. Understand how to evaluate performance of the algorithms

SYLLABUS OF GE-2

Unit 1 (5 Weeks)

Supervised Machine Learning: Linear Regression, Multiple Linear Regression, Logistic Regression, Application to multi-class classification, Overfitting and Regularization. Classification using K-Nearest Neighbourhood algorithm, Naive Bayes classifier, Decision Trees (CHAID Analytics), Support Vector Machines. Handling class imbalance in classification problems, Performance metrics for classification and regression problems-their meaning, understanding and application

Unit 2 (5 Weeks)

Unsupervised Machine Learning: Introduction, Clustering, K-Means algorithm, Affinity Propagation, Agglomerative Hierarchical, DBSCAN, Dimensionality Reduction using Principal Component Analysis. Detailed understanding of the performance metrics for these algorithms.

Unit 3 (4 Weeks)

Handling standard datasets available at machine learning repositories for classification and regression problems. Handling unsupervised problems in real datasets

Practical component (if any) - The entire syllabus is based on practical exercise i.e. learning through specified software's like Python or R.

Essential/recommended readings

1. Machine Learning using Python, Manaranjan Pradhan, U Dinesh Kumar, ISBN: 9788126579907

2. Ethem Alpaydin, "Introduction to Machine Learning" 2nd Edition, The MIT Press, 2009.

3. Tom M. Mitchell, "Machine Learning", First Edition by Tata McGraw-Hill Education, 2013.

4. Christopher M. Bishop, "Pattern Recognition and Machine Learning" by Springer, 2007.

5. Mevin P. Murphy, "Machine Learning: A Probabilistic Perspective" by The MIT Press, 2012.

Practical:
The entire syllabus is based on practical exercise i.e. learning through specified software's like Python or R.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

GENERIC ELECTIVES (GE-3)

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Deep Learning and Application	4	3	0	1	12th Pass	Basic understanding of Statistics

Learning Objectives

This course focuses on the most recent advances in Deep Learning and Artificial Intelligence. In understandable steps, this course builds from a one node neural network to multiple features, multiple output neural networks.

Learning outcomes

- Understand the context of neural networks and deep learning.
- Know how to use a neural network.
- Understand the data needs of generalised deep learning algorithms.
- Have a working knowledge of neural networks and Reinforcement learning algorithms.
- Explore the parameters for neural networks.

SYLLABUS OF GE-3

Unit 1 (4 Weeks)

An introduction to Neural Networks: The basic architecture of neural network, single computational layer: the perceptron, objective function, choice of activation and loss function, choice of number of output nodes, some useful activation functions

Multilayer Neural Networks: Basics, computational graph, training a neural network with backpropagation, the problem of overfitting, difficulties in convergence

Common Neural Architectures: Radial Basis Function Network, Recurrent Neural Networks, Convoluted Neural Networks. (Theory Only) *Practical in Python on the following - Using SVM -Building a Perceptron , choosing loss functions*

Unit 2 Shallow Neural Networks (3 Weeks)

Neural Architecture for Binary Classification models: Least square regression (Widrow- Hoff Learning), Logistic Regression, SVM

Neural Architectures for Multiclass Models: Multiclass Perceptron, Weston- Watkins SVM, SoftMax Classifier, Hierarchical SoftMax for many classes, backpropagated Saliency for feature selection. *Practical in Python on the following: - Multiclass Perceptron- Hierarchical SoftMax for many classes*

Unit 3 Autoencoders (3 Weeks)

Principal Component Analysis and its interpretations, Singular Value Decomposition, Autoencoders with single hidden layer, sharing weights in encoder and decoder, Matrix factorization with Autoencoders, non-linear activation, application in outlier detection Practical *in Python on the following:* -Matrix factorization with Autoencoders - Backpropagation

Unit 4 (4 Weeks)

Generalised Deep Learning

Fundamentals: Bias- Variance Trade-Off, Penalty based regularisation: L1, L2 Regularisation, Lasso Regression, Ridge regression

Reinforcement Learning: basic framework of Reinforcement learning, challenges in reinforcement learning, Naïve Algorithm, epsilon- greedy algorithm, upper bounding methods

Practical component (if any) - The entire syllabus is based on practical exercise i.e. learning through specified software's like Python or R.

Essential/recommended readings

Neural Networks and Deep Learning: A Textbook by Charu C Aggarwal, Springer (ISBN 978-3-319-94462-3)

Suggestive readings

1. Deep Learning- Ian Goodfellow, Yoshua Benjio, Aaron Courville, The MIT Press
2. Pattern Classification- Richard O. Duda, Peter E. Hart, David G. Stork, John Wiley & Sons Inc.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

GENERIC ELECTIVES (GE-4)

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Natural Language Processing	4	3	0	1	12th Pass	Basic understanding of statistics

Learning Objectives

Natural language processing deals with written text. Students will learn how to process written text from basic of fundamental knowledge starts with Finite automata, Regular expression and probabilistic model with n-grams. Recognizing Speech and parsing with grammar. We will focus on the computational properties of natural languages and of the algorithms used to process them, as well as the match between grammar formalisms and the linguistic data that needs to be covered.

Learning outcomes

- Explain the advantages and disadvantages of different NLP technologies and their applicability in different business situations.

- Use NLP technologies to explore and gain a broad understanding of text data.
- Use NLP methods to analyse sentiment of a text document.
- Learn both a linguistic and an algorithmic perspective

SYLLABUS OF GE-4

Unit 1 Introduction (3 Weeks)

Introduction: What is NLP, Origins, Challenges, Language and Grammar, NLP Applications, some successful early NLP systems, Information retrieval Language Modelling: Introduction, Grammar based language models, statistical language models

Unit 2 Word Analysis (3 Weeks)

Word Level Analysis : Regular Expressions, finite state automata, morphological parsing, spelling error detection and correction, words and word classes ,part of speech tagging Syntactic and Semantic Analysis : Context- free grammar, parsing, probabilistic parsing, lexical semantics, ambiguity, word sense disambiguation

Unit 3 Information Retrieval (4 Weeks)

Information Retrieval: Design Features of Information Retrieval systems , information retrieval models, classical information retrieval models, natural language processing in IR, relational matching, knowledge-based approaches , conceptual graphs in IR.

Unit 4 Text Analysis- Practical Unit (4 Weeks)

Overview, Sentiment Classification (Loading, Exploring) Pre-processing of data: Bag-of-Words(BoW) Model, Creating Count Vectors, displaying document vectors, understanding and removing low-frequency words, understanding and removing stop words, creating count vectors, distribution of words across different sentiments Naive Bayes Model: Fundamentals of Naive Bayes, building the Naive Bayes model, making prediction on test case, model accuracy Using TF-IDF Vectorizer, n-grams, building model using n-grams.

Essential/recommended readings

1. Natural Language Processing and Information Retrieval, by Tanveer Siddiqui and U.S Tiwary , Oxford Higher Education
2. Machine Learning using Python by Manaranjan Pradhan and U Dinesh Kumar , Wiley Publishing

Suggestive readings

1. Natural Language Processing Crash Course for Beginners: Theory and Applications of NLP using TensorFlow 2.0 and Keras by AI Publishing
2. Practical Natural Language Processing: A Comprehensive Guide to Building Real-World NLP Systems (Greyscale Indian Edition

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

GENERIC ELECTIVES (GE-5)

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Financial Analytics	4	3	0	1	12th Pass	Basic understanding of statistics

Learning Objectives

Nearly every industry is generating a vast amount of data and nearly every business leader today understands the importance of making sense out of that data to drive business strategy. Companies need more from finance than just accurate financial statement analysis. They need predictive insights which can improve their real-time day to day decision making. Finance analytics enables to combine internal financial information with external information by using social media and big data to provide predictive insights. Whether it is with respect to stock market prediction or customer profitability, finance analytics enables to provide a direction in predicting all.

Learning outcomes

1. Understand Importance of analysing data in designing business strategy
2. Apply the knowledge to perform the required financial analytics using powerful tools like R and/or python

SYLLABUS OF GE-5

Unit – 1 (3 Weeks)

Introduction to R. Introduction to Finance. Accounting Data Analysis. Understanding data in finance, sources of data, cleaning and pre-processing data. Use of Machine Learning models in Finance.

Unit – 2 (4 Weeks)

Building Models Using Accounting Data, Modelling and forecasting of financial statements, Fraud Analytics, News Analytics, Sentiment Analysis.

Unit – 3 (4 Weeks)

Time Series Analysis in R/python, Understanding stock price behaviour, Introduction to Technical Analysis and Back-testing Trading Models.

Unit – 4 (3 Weeks)

Introduction to Algorithmic Trading and Building stock prices forecasting models using Machine Learning and Deep learning

Practical component (if any) - The entire syllabus is based on practical exercise i.e. learning through R /python software.

Essential/recommended readings

1. Financial Analytics with R: Building a Laptop Laboratory for Data Science Book by Dirk L. Hugen and Mark Joseph
2. Python for Finance: Mastering Data-Driven Finance by Yves Hilpisch.
3. Basic R for Finance by Diethelm Wurtz, Longhow Lam, Andrew Ellis and Yohan Chalabi

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

GENERIC ELECTIVES (GE-6)

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Marketing Analytics	4	3	0	1	12th Pass	Basic understanding of statistics

Learning Objectives

Marketing and Retail analytics is the process of measuring, managing, and analyzing marketing performance to maximize effectiveness and optimize investment return. This supports the business to improve its operations and customer experience by providing a 360-degree view of the customer's needs. The course focuses on the application of Analytics from a business perspective. It focuses on the concepts and the understanding of applications. .

Learning outcomes

- By the end of this course, participants will be able to:•Understand the “WHY”, WHERE” and “HOW” of Analytics in Marketing and retail.
- “Why” Analytics has now become imperative for businesses
- “Where” you can apply Analytics
- “How” you can apply Analytics
- Learn how to plan and implement Analytics projects
- Move beyond predictive analytics into prescriptive analytics• Choose the appropriate analytic technique to solve specific business problems

SYLLABUS OF GE-6

Unit 1 Digital Analytics (3 Weeks)

Introduction, Data collection, Key metrics, outcome analysis (conversion rate, average order value, multi-channel funnel), experience analysis, making web analytics actionable, dashboard creation Segmentation: fundamentals of PCA, Factor Analysis, choice modelling and classification, principal component analysis, cluster and conjoint analysis, K-means clustering, Hierarchical clustering, DBSCAN

Unit 2 Affiliates and Attribution Modelling (3 Weeks)

what is Affiliate marketing, how affiliates get paid Multi-channel attribution , last interaction attribution model, first interaction attribution model, time decay attribution mode, position based attribution model, multi-channel funnel report Marketing Mix: Introduction, Market Mix Modelling, Variables in Market Mix Modelling, Techniques of Market Mix Modelling *Practical- LTA model in R/Python-FTA model in R/Python*

Unit 3

Customer Analysis (4 Weeks)

Customer Journey: Introduction, Importance of Customer Journey, What is Customer Journey Mapping?, Customer Journey Mapping and Use of Analytics, How to Map a Customer’s Journey?, What Does Analytics with Customer Journeys Involve?, Customer Journey Use Case for a Beverage Brand, Journey of a Loyal Customer, Applying Principal Components to Brand Nurturing Customers: Introduction, Metrics for Tracking Customer Experience

Upgrading Customers: Use Case of Upselling, Logistic Regression Analysis, Use of Logistic Regression as a Classification Technique Customer Analytics: Introduction, Customer Lifetime Value, Churn Analytics

Unit 4 Learning KNIME tool (4 Weeks)

This unit is primarily practical

Installation and the KNIME Workspace, Virtual Tour Through KNIME Analytics Platform, Analytics Platform Welcome Page, Workbench,Node,Workflow, Workflows and Workflow Groups, The Node Repository, Importing and Exporting Workflows, Node Creation and Basic Commands, Data Table Structure, Annotations and Comments, Customizing KNIME Analytics Platform, Installing Extensions, Simple Metanodes and Wrapped Metanodes

Blending: Data Access with KNIME,The KNIME Protocol, The Excel Reader Node, The File Reader Node, The Table Reader Node, The Join Operation and Methods, The Joiner Node, What is Concatenation

Data Manipulation: Row Filtering Based on Pattern Matching, Row Filtering Based on Numerical Values, Row Filtering Based on Row ID, What is a Column Filter?, The Column Filter Node, Numbers, Strings, and Rules, What is Data Aggregation?, The Group By Node, Advanced Aggregation with the Group By Node, The Pivoting Node

Practical component (if any) - The entire syllabus is based on practical exercise i.e. learning through specified software's like Python or R.

Essential/recommended readings

1. Digital Marketing 2nd Edition by Seema Gupta, McGraw Hill
2. Marketing Analytics by Seema Gupta and Avadhoot Jathar, Wiley Analytics Series for Management
3. Learning Material :https://www.knime.com/learning

Suggestive readings

1. Marketing Analytics - For Strategic Decision-Making by Moutusy Maity and Pavankumar Gurazada, Oxford Publishing

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

GENERIC ELECTIVES (GE-7)

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Accounting Analytics	4	3	0	1	12th Pass	Basic understanding of statistics

Learning Objectives

This course provides the analytics knowledge, skills, and competencies to address earnings management issues in organisations. It introduces the central concepts of accounting analytics and via hands-on exercises, builds skills and competencies around the management, analysis and representation of data.

Learning outcomes

- Students are able to do a ratio analysis of a company to identify the sources of its competitive advantage (or red flags of potential trouble), and then use that information to forecast its future financial statements**.**
- How to spot earnings management and get a more accurate picture of earnings, so that students are able to catch some bad guys in finance reporting.
- Students will have a knowledge of a very strong tool kit that will help to detect financial statements that may have been manipulated by managers.
- How predictive analytics can be used to determine what you should be measuring, how to weigh very, very different performance measures when trying to analyse potential financial results, how to make trade-offs between short-term and long-term objectives, and how to set performance targets for optimal financial performance.

SYLLABUS OF GE- 7

Unit 1 - Ratios and Forecasting (3 Weeks)

Review financial statements and sources of financial statement information. The company's strategy and business model and Du-pont analysis. Ratio analysis – short term solvency ratios, long term solvency ratios, turnover ratios and profitability ratios (Historical ratio analysis of real company using Excel). How to use all the ratios, to forecast future financial statements. Accounting based valuation.

Unit 2 - Earnings Management (4 Weeks)

Overview of earnings management: Means, motive, opportunity, how managers actually make their earnings look better, their incentives for manipulating earnings, and how they get away with it. Revenue recognition red flags: revenue before cash collection. Revenue recognition red flags: revenue after cash collection. Expense recognition red flags: capitalizing vs. expensing. Expense recognition red flags: reserve Accounts and write-offs.

Unit 3 - Big Data and Prediction Models (4 Weeks)

Overview big data and prediction models. Discretionary accruals models: model the non-cash portion of earnings or accruals. Discretionary expenditure Models: model the cash portion of earnings. Fraud prediction models and Benford's law.

Unit – 4 Non-financial Metrics and Financial Performance (3 Weeks)

Introduction: Connecting numbers to non-financial performance measures. Linking non-financial metrics to financial performance: Overview and steps. Targets setting, incorporation of analysis results in financial models and how to use analytics to choose action plans.

Practical component (if any) - PYTHON/R

Essential/recommended readings

1. Introduction to Earnings Management by Malek El Diri
2. Data Analytics for Accounting by Vernon J. Richardson (Author), Ryan A. Teeter, Katie L. Terrell, Partha Sarathi Mohapatra.
3. Predictive Analytics for Business Strategy - Reasoning from Data to Actionable Knowledge by Jeffrey T. Prince, Amarnath Bose

Practical component (if any) - The entire syllabus is based on practical exercise or case studies i.e. learning through specified software's like Python, R and Stata

Essential/recommended readings:

1. Introduction to Earnings Management by Malek El Diri

2. Data Analytics for Accounting by Vernon J. Richardson (Author), Ryan A. Teeter, Katie L. Terrell, Partha Sarathi Mohapatra.

3. Predictive Analytics for Business Strategy - Reasoning from Data to Actionable Knowledge by Jeffrey T. Prince, Amarnath Bose

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

GENERIC ELECTIVES (GE-8)

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Human Resource Analytics	4	3	0	1	12th Pass	Basic understanding of statistics

Learning Objectives

This course provides the analytics knowledge, skills, and competencies to address human resource issues in organisations. It introduces the central concepts of people orientated analytics and via hands-on exercises, builds skills and Competencies around the management, analysis and representation of data.

Learning outcomes

- Understand and discuss the value of human capital analytics concepts
- Understand and discuss the value of methodological concepts relevant to analytics
- Demonstrate skills in implementing analytics to solve HR issues
- Persuasively communicate appropriate (i.e., theoretically sound and practical) recommendations

SYLLABUS OF GE-8

Unit 1

HR Analytics Using Basic Statistical Techniques (3 weeks)

Design Compensation and Benefit Plan Using Conjoint Analysis, Forecast HR Cost Using Time Series Modelling (ARIMA), Manpower Planning Using Monte Carlo Simulation and Markov Chain

Unit 2

HR Analytics Using Unsupervised Machine Learning (3 weeks)

Identify Association of Employee Job Satisfaction Using Association Rule, Determine Factors of Performance Appraisal System Using Dimension Reduction Algorithms, Assess Employee Absenteeism Using Clustering Techniques

Unit 3

HR Analytics Using Supervised Machine Learning (4 weeks)

Predict Employee Salary/Pay Rate Using Supervised Machine Learning Regression Techniques, Predict Employee Attrition Using Supervised Machine Learning Classification Techniques, Predict Employee Promotion Using Neural Network Model

HR Analytics: Practical Approach Using Python by Bharti Motwani, Wiley
Chapter 12, Chapter 13, Chapter 14

Unit 4

HR Analytics for Text Data (4 weeks)

Review Resume Using Text Mining, Evaluate Employee Reviews Using Sentiment Analysis, Automate HR Help Desk Using Chatbots, Employee Recruitment and Selection Using Recommendation System

Practical component (if any) - The entire syllabus is based on practical exercise i.e. learning through specified software's like Python or R.

Essential/recommended readings

1. Motwani,B. (2021). HR Analytics: Practical Approach Using Python, Wiley. ISBN:9789354240027
2. Ng, M.S. (2019) Predictive HR Analytics, Text Mining & Organizational Network Analysis: with Excel, Amazon Digital Services LLC .ISBN: 9781077226906

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

GENERIC ELECTIVES (GE-9)

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Social Media Analytics	4	3	0	1	12th Pass	Basic understanding of statistics

Learning Objectives

Web Analytics, Social Media Analytics, Network Analytics, Mobile Analytics, Influencer Marketing. This course tries to address questions on how organisations can use the wealth of

available data to devise a more result-oriented marketing strategy and leverage digital marketing to enjoy greater ROI.

Learning outcomes

- Understand the concept of digital marketing and its real-world iterations
- Articulate innovative insights of digital marketing enabling a competitive edge
- Understand how to create and run digital media based campaigns
- Identify and utilise various tools such as social media etc.

SYLLABUS OF GE- 9

Unit 1 Social Media Marketing (4 Weeks)

Social Media Marketing: Introduction, Process – Goals, Channels, Implementation, Analyze. Tools: Google and the Search Engine, Facebook, Twitter, YouTube and LinkedIn. Issues: Credibility, Fake News, Paid Influencers; social media and Hate/ Phobic campaigns. Analytics and linkage with social media. The Social Community.

Unit 2 Email Marketing (3 Weeks)

Introduction, email marketing process, design and content, delivery, discovery. Mobile Marketing: Introduction and concept, Process of mobile marketing: goals, setup, monitor, analyse

Unit 3 Mobile Marketing (4 Weeks)

Introduction and concept, Process of mobile marketing: goals, setup, monitor, analyze; Enhancing Digital Experiences with Mobile Apps. Pros and Cons; Targeted advertising. Issues: Data Collection, Privacy, Data Mining, Money and Apps, Security, Spam. Growth Areas.

Unit 4 Managing Digital Marketing (3 Weeks)

Content Production; Video based marketing; Credibility and Digital Marketing; IoT; User Experience; Future of Digital Marketing.

Practical component (if any) - NIL

Essential/recommended readings

1. Dodson, Ian: The Art of Digital Marketing. Wiley
2. Ryan, Damien: Understanding Digital Marketing. Kogan Page Limited

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

ANNEXURE-29

Sub: Amendment to Ordinance V

[E.C Resolution No. 14-1/-(14-1-3/-) dated 09.06.2023 and
EC Resolution No.27-1 (27-1-5) dated 25.08.2023]

Following addition be made to Appendix-II-A to the Ordinance V (2-A) of the Ordinances of the University;

Add the following:

Syllabi of Semester-IV, V and VI of the following departments under Faculty of Social Sciences based on Under Graduate Curriculum Framework -2022 implemented from the Academic Year 2022-23 :

(i) History
(ii) Geography
(iii) Sociology
(iv) Economics

SEMESTER – IV

DEPARTMENT OF HISTORY

Category I

BA (Hons.) History

DISCIPLINE SPECIFIC CORE COURSE -1 (DSC-1) – : History of India – IV: c.1200 – 1500

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisiteof the course (if any)
		Lecture	Tutorial	Practical/ Practice		
History of India – IV: c.1200 – 1500	4	3	1	0	12th Pass	Should have studied History of India- III : 750-1200

Learning Objectives

This course seeks to engage students in an analytical understanding of the varied perspectives from which historians study the three centuries between the thirteenth and the fifteenth centuries. It provides them with a basic understanding of the political,economic and socio-cultural processes of the time especially with reference to Gujarat sultanate, Vijayanagara state as well as the Delhi Sultanate. Sufism and major trends in bhakti 'movement' are explained to the stu-dents. Learners are also encouraged to engage with diverse corpus of sources available to historians for the period under study.

Learning outcomes

On completion of this course, the students shall be able to:

- Discuss different kinds of sources available for writing histories of various aspects of life during the thirteenth to the fifteenth centuries.
- Critically evaluate the multiple perspectives from which historians have studied the politics, cultural developments and economic trends in India during the period of study.
- Appreciate the ways in which technological changes, commercial developments and challenges to patriarchy by certain women shaped thetimes.

SYLLABUS OF DSC-1

Unit I: Survey of sources

1. Persian ta'rīkh traditions
2. Malfuzat and premakhyans

3. Inscriptions and regional identity: Kakatiyas

Unit II: Political structures

1. Sultanates of Delhi: transitions in ruling elites, service cultures, iqtas
2. Articulating political authority: monuments and rituals
3. Political cultures: Vijayanagara and **'Surāṣṭrān'**

Unit III: Society and economy

1. Agricultural production,
2. Technology and changes in society
3. Monetization; market regulations; urban centres; trade and craft

Unit IV: Religion, society and cultures

1. Sufi silsilas: Chishtis and Suhrawardis; doctrines and practices; social roles
2. Bhakti; Sant tradition: Kabir and Nanak, **Jnanaeshwar. and Namdev** cults: Jagannath and Warkari
3. Gender roles: women bhaktas and rulers

Practical component (if any) – NIL

Essential/Recommended Readings

Unit I: This unit will familiarise students with the range of sources available for the period of study in the paper. It also aims to apprise them of the varied ways inwhich historians interpret these sources. (**Teaching Time: 12 hrs. Approx**.)

- Habib, Irfan. (1981). "Barani's Theory of the History of the Delhi Sultanate", Indian Historical Review, vol. 7, pp. 99-115.
- Alam, Muzaffar. (2004). The Languages of Political Islam in India, Delhi: Permanent Black. The sections most useful for our present topic can be found on pp. 1-98. Particularly im-portant is the section on Zia Barani.
- Kumar, Sunil. (2007). Appendix: 'Persian Literary Traditions and Narrativizing the Del-hi Sultanate'. In The Emergence of the Delhi Sultanate 1192-1286, by Sunil Kumar, Ranikhet: Per-manent Black, pp. 362-77.
- Hardy, Peter. (1962). 'Some Studies in Pre-Mughal Muslim Historiography', in Historians of India, Pakistan and Ceylon, edited by C.H. Philips, pp. 115-27. (Alternatively, you may find Hardy's views in the relevant chapter in his book entitled Historians of Medieval India.)
- Ernst, Carl W. (1992). Eternal Garden: Mysticism, History and Politics at a South Asian Sufi Center. Albany: State University of New York Press, 1992. Therelevant portion is Chapter 4, entitled 'The Textual Formation of Oral Teachings in the Early Chishtī Order', pp. 62-84.
- Trivedi, Madhu. (2008). 'Images of Women from the Fourteenth to the Sixteenth centu-ry: A Study of Sufi Premakhyans'. In Rethinking A Millennium: Perspectives

on Indian History from Eighth to the Eighteenth Century, edited by Rajat Datta, Delhi: Aakar Books, pp. 198-221.

- Behl, Aditya. 2012. Love's Subtle Magic: An Indian Islamic Literary Tradition 1379–1545, edited by Wendy Doniger, New York: Oxford University Press, pp. 286-338 (chap. 9-10: 'Hier-archies of Response' and 'The Story of Stories').
- Orsini, Francesca. (2012). 'How to Do Multilingual Literary History? Lessons from fifteenth- and sixteenth-century north India', Indian Economic and SocialHistory Review, vol. 49 (2), pp. 225-46.

		Lecture	Tutorial	Practical/ Practice		
Rise of the Modern West – II	4	3	1	0	12th Pass	Should have studied Rise of the Modern West – I

Learning Objectives

This paper offers an in-depth historical analysis of economic, political and social transformations in Europe during the 17th and 18th centuries. Cyclical and secular trends in history, important political shifts, modern scientific views, and intellectual developments of the 17th and 18th centuries will be analysed closely. The paper will trace the development of socio-economic and technological forces which went into the making of the Industrial Revolution in late 18th century Britain. The role of trade and empire,colonial networks, and slavery will be examined to emphasize their contribution to industrial capitalism. The divergence debate will further help draw parallels and subsequent differences between Europe and Asia, and broaden our understanding of early modern Europe.

Learning outcomes

Upon completion of this course the student shall be able to:

- Explain major economic, social, political and intellectual developments inEurope during the 17th and 18th centuries.
- Contextualize elements of modernity in these realms.
- Discuss the features of Europe's economy and origins of the IndustrialRevolution.
- Analyse the relationship between trade, empire, and slavery and industrialcapitalism. Examine the divergence debate.

SYLLABUS OF DSC- 2

Unit 1: The 17th century European crisis: economic, social, and political dimensions.

Unit 2: The English Revolution (1603-1688): major issues, strands and implications.

Unit 3: Mercantilism and European economies: Trade and Empire - 17th - 18thcenturies.
Unit 4: Scientific Revolution. Enlightenment: political, economic and social ideas.
Unit 5: Origins of the Industrial Revolution and the Divergence debate.

Practical component (if any) - NIL

Essential/recommended readings

Unit 1: The Unit examines various aspects of the 17th century crisis and economic recovery in differ-ent parts of Europe. **(Teaching period: 9hrs. approx.)**

DISCIPLINE SPECIFIC CORE COURSE– 3 (DSC-3): History of Modern Japan (c. 1868 – 1950s)

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
History of Modern Japan (c. 1868 – 1950s)	**4**	**3**	**1**	**0**	**12 th Pass**	**NIL**

Learning Objectives

The course studies the transition of Japan from quasi-feudalism to a modern industrialised capitalist nation. It focuses on the political and economic strategies adopted by Japan to meet the challenges posed by western imperialistic intrusions. It facilitates an understanding of Japan's emergence as a major non-European power withinan international order dominated by western imperial powers. It studies the trajectory of Japan towards ultra-nationalism and militarism in the context of a failed parliamentary democracy, eventually leading to disaster in the Second World War. The course aims to pay close attention to historiographical shifts, contextualizing these against the backdrop of their contemporary history and politics.

Learning outcomes

Upon the completion of this course the student shall be able to:

- Explain Japan's attempts to create new institutional structures and recasttraditions to encounter challenges of the west.
- Analyse historiographical shifts in Japanese history in the context of global politics. Examine the divergent pathways to modernity followed by Japan.
- Locate and contextualise the history of Japan in world politics.
- Critically discuss contemporary international studies with much greater claritybased on the knowledge of history and culture of Japan.

SYLLABUS OF DSC-3

Unit 1: Transition from Feudalism to Capitalism

1. Crisis of the Tokugawa Bakuhan System
2. The Meiji Restoration: Nature and Significance; Early Meiji Reforms
3. Economic Development in the Meiji Era

Unit 2: Democracy and Militarism

1. Meiji Constitution
2. Failure of Parliamentary Democracy; Militarism and Fascism

Unit 3: Imperialistic Expansion

1. Korea
2. Manchuria
3. China

Unit 4: American Occupation, post-War Reconstruction

Practical component (if any) – NIL

Essential/recommended readings

Unit 1: This unit will introduce students to the history of Japan's transition from feudalism to capitalism. The Unit will also examine historical processes which led to Meiji Restoration and its impact on the economy of Japan. **(Teaching Time: 9 hrs. approx.)**

Learning Objectives

This course aims to introduce the students to the environmental historiography ofthe Indian subcontinent. The idea is to familiarize the students to the recent interventions in the methodologies, theories, and concepts of doing environmental history. The course has the following broad objectives: To introduce historical studies that explores the long-term trajectories of man-nature interactions and revise the political history-based periodization of the sub- continent's past as self-contained ancient, medieval, and modern periods. The course also introduces inter-disciplinary approaches- cartographic, geological, zoological, ecological knowledge -that helps historians study the crucial role played by ecology in the shaping of past societies.The themes and issues discussed in this course familiarizes the students to the methods of using archaeological, bio and geo-archival sources, artistic depictions andoral history sources to study the past relationship between human and environment.This will also enable students to situate the environmental historiography that revises the colonial notion of depicting pre-colonial India as an unchanging landscape.

Learning outcomes

After completing this course, students should be able to -

- Understand the historical methodologies and concepts to explain theenvironmental contexts of the past social and cultural transformations.
- Develop a historical perspective on the complex relationship between society and nature from prehistory to the present in the context of the Indian subcontinent.
- Discuss how societies developed technologies, sources of energy, and modes of organising lives to adapt to varied ecological landscapes.
- Discuss environmental issues within a socio-cultural framework.

- Examine the social, political and economic contexts of creating inequalities in resource use, with reference to the case studies regarding water rights, forest rights, and the right to have liveable cities.
- Locate solutions to environmental problems within a framework of greater democratisation of resource use.

SYLLABUS OF DSE

Unit 1: Introduction to the Environmental History of the Indian Subcontinent

1. Doing Environmental History: Issues and Perspectives, Historiography
2. Sources: Archaeological, Bio and Geo-Archives, Arts and Crafts, and OralHistory

Unit 2: Living with Nature

1. Environment and Early Urban Societies: Harappan Civilization
2. Beliefs, Practices, and Natural Resources

Unit 3: Environment and Livelihood in Medieval Times

1. Pastoralism, Animal Husbandry, and Agriculture
2. Forests and Tribal Groups

Unit 4: Colonial Capitalism and Natural Resources

1. Changing Energy Regimes; Railway and Deforestation, Dams and HydroelectricPower
2. Rivers, Canals, and Embankments

Unit 5: Environmental Crisis and the Future

1. Factories and Urban Spaces; Bombay, Calcutta and Delhi
2. Industrial Agriculture; Biodiversity Loss; Species Extinction

Practical component (if any) - NIL

Essential/recommended readings

Unit 1: This unit provides an overview of environmental historiography of the Indian subcontinent. The first rubric introduces the methods, theoretical concepts, and the major sub- fields of environmental history. The second rubric explores how archeological records, bio-mass, artistic depictions of nature, and oral history sources are integrated into environmental history narratives. **(Teaching time: 9 hrs. approx.)**

Unit 2: This unit gives a synoptic overview of human interaction with the animals, plants, and natural elements that sustained life. It shows how from the times of gathering, scavenging and hunting to the beginning of agriculture, humans adapted to the environment even as they tried to manipulate it, and maintained harmonywith it and advocated conservation of earthly resources**. (Teaching time: 9 hrs.approx)**

Unit 3: This unit explores the patterns and processes of the expansion of agrarian landscapes, pastoralism, and forest economies in India up to the eighteenth century. Providing an overview of the dynamics of human-nature interaction during the medieval times will help students to challenge the notions of considering pre- modern environments as a timeless continuum. **(Teaching time: 9 hrs. approx.)**

Unit 4: This unit explores how colonial capitalism as a powerful agent ofenvironmental transformations made fundamental changes to the land use patterns and livelihood resources. The first rubric explores the environmental history of the colonial appropriation of forests as raw material for railways expansion and rivers as dams and other hydraulic infrastructures for industrial production and long-distance transportation. The second rubric elaborates how the colonial appropriation of waterbodies and common lands through the new revenue policies, acts and regulations affected indigenous fishing and other livelihood patterns based on hydraulic resources. **(Teaching time: 9 hrs. approx.)**

Unit 5: Historical thinking and writing on climate change help to provide a long-term perspective on contemporary social, ecological, economic crisis with the question of socio-environmental justice as a central concern. By focusing on the specific contextsof Bombay, Calcutta and Delhi, the first rubric provides a historical perspective to the contemporary urban problems of air and water pollution, and issues related to access to energy sources as social issues of urbanized environment. The second rubric explains how the issues of biodiversity loss, species extinction, and the industrialization of agricultural production transforms livelihood patterns and cultural landscapes. **(Teaching time: 9 hrs. approx)**

DISCIPLINE SPECIFIC ELECTIVE COURSE– 1 (DSE): History of South East Asia – II

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
History of South East Asia – II	**4**	**3**	**1**	**0**	**12th Pass**	**Should have studied History of South East Asia – I**

Learning Objectives

This paper offers an overview of modern Southeast Asian history to students who could be familiar or unfamiliar with the region. A study of the social, economic, and political transformations in Southeast Asia during the colonial period will enable students to develop a critical and comparative approach, given their in-depth study of South Asian history. In this paper students will learn how to engage with recent historiographical developments, especially on themes of education, gender, race, historical anthropology, and maritime history. The paper offers analysis of impact of colonialism and the process of decolonisation on the region. The student shall analyse the establishment and changing character of the European presence from a commercial enterprise to a colonial state; the transformation of local society and the emergence of anti-colonial movements; and the transformations in the region since the Second World War.

Learning outcomes

Upon the completion of this course the student shall be able to:

- Explain the character and functioning of colonial state and society.
- Analyse the impact of the European presence on maritime and agrarianeconomy of the region.
- Examine the impact of maritime activity of local society and polity and the developments in the economic and architectural history of the region.
- Discern the influences of new forms of knowledge, Euro-centric notions of modernity and how ideas of race defined local religion.
- Illustrate the transformation of the local agrarian and labour economy.
- Interpret the history of popular movements and peasant revolts
- Describe the historiographical trends to study history of Southeast Asia

SYLLABUS OF DSC-3

Unit 1: From Commerce to Colonialism:

1. The Dutch and English ascendancy
2. Changing Patterns of Maritime Trade: The Straits of Malaka

Unit II: Colonialism in Dutch Indonesia, British Burma: The 19th and 20th centuries

1. The Colonial State: Traditional elite, Race and the Legal Order
2. Agrarian Transformation: Plantation Economy, Peasant Protests
3. Colonial Modernity: Education and religion in the early twentieth century

Unit III: Southeast Asia: Nationalism, Anti-Colonial Movements 1900-1970s

1. Burma: From Independence to the Revolutionary Council
2. Indonesia: The Revolution, the making of Indonesia, Sukarno

Unit IV: Post War Southeast Asia

1. Language and Politics in Modern Southeast Asia: The Malay and the making ofmodern Malaysia
2. The Port and City in Southeast Asia: Singapore

Practical component (if any) - NIL

Essential/recommended readings

Unit-I: The student will be able to demonstrate their understanding of the beginningsof European Colonialism in the region by specifically taking up the case studies of theEnglish and Dutch East India Companies in the 17th and 18th centuries. They will alsodemonstrate an understanding of how ethnic communities like those in the straits of Melaka responded to the changes in trade and politics. **(Teaching time: 6 hrs. approx.)**

- Tarling, Nicholas. (1993). Cambridge History of South East Asia, Volume I & II, Cambridge: Cambridge University Press
- Reid, Anthony. (1993). Southeast Asia in Early Modern era: Trade, Power andBelief,
- Ithaca and London: Cornell University Press
- Goor, Jurrien van. (2004). Prelude to Colonialism: The Dutch in Asia,Hilversum: Uitgeverij Verloren

Unit- II: At the end of this rubric the students will be able to demonstrate an understanding of the nature of the colonial state in Southeast Asia. They will throughthe case studies of Dutch Indonesia and British Burma learn about the structure and organization of the colonial state and how the agrarian plantation economy altered the political and economic landscape of the region during this period. They will also through a specific case study of Indonesia, show how certain policies of the colonial state and western notions of modernity impacted local society and Islam. **(Teaching time: 15 hrs. approx.)**

DSE for BA (Hons.)

DISCIPLINE SPECIFIC ELECTIVE COURSE (DSE): History of Vernacular Literature

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSE- History of Vernacular Literature	**4**	**3**	**1**	**0**	**12th Pass**	**-**

Learning Objectives

In their peregrinations across the globe, humans have created thousands of languages. Yet all languages are not equal. In each region, there are dominant languages with better standardisation of the rules for writing and articulation, and other languages. The elite languages tend to be spoken by a minority and other languages, of peoples who interact with the speakers of the elite/cosmopolitan language, evolve interacting with those languages. In ancient Europe, Latin was the cosmopolitan language, the languages of the regions conquered or influenced by Rome, such as the Germanic realms, England, Gaul and Iberia were deemed vernaculars. Over time, these vernaculars, German, French, English and Spanish evolved into fully articulated languages of high status in their own right and serving as the cosmopolitan language of the colonies of their respective empires.

In the Indian subcontinent, too, it is possible to see a similar evolution of different languages in different parts of the country. Sanskrit, the name itself meaning refined, was the elite language for exacting standards of scientific inquiry, administration, and aesthetic exploration, whereas assorted Prakrit grew into what came to be called Indian vernaculars. While Sanskrit had a pan-India presence, Southern India saw Tamil serving in that role for the region's other languages such as Kannada, Telugu and Malayalam, all of which interacted with Sanskrit as well.

The evolution of these languages — some developed elaborate grammar and capacity to become the written standard for assorted variations and dialects, others live on without a written form — played a huge role in shaping the histories of India's regions. The Indian Constitution's recognition of 22 languages in the Eighth Schedule is testimony to how core these languages are to the identities of their speakers.

Learning Outcomes

This paper would help the student perceive the historical development of different regions and their particular languages. A defining characteristic of humans is language, the medium for communication, coherent conceptualisation, accumulation and development as well as revision of knowledge, creation of culture and its transmission across geography and generations. Language plays a big role in constituting identity – of the self and of imagined communities.

SYLLABUS OF DSC-3

Unit 1: Debating the Vernacular and its significance for History
Unit 2: Language Culture and Histories from the South

Unit 3: The Early Modern Context of Language and Region
Unit 4: The Colonial Context

Practical component (if any) – NIL

Essential/recommended readings

Unit 1: Debating the Vernacular and its significance for History: This section would introduce students to appreciating India's history by looking at different regional histories through the prism of their languages. A discussion of the debates relating to the use of the terminology 'vernacular' and its meanings in the Indian context would be the focal point. (Teaching Hours: 09 hours)

Essential Readings

- Orsini, Francesca, "How to do Multi-lingual Literary History? Lessons from Fifteenth- and Sixteenth-century North India", The Indian Economic & Social History Review, June 2012, pp. 225-246.
- Partha Chatterjee and Raziuddin Aquil (eds), History in the Vernacular, Permanent Black, Ranikhet/New Delhi, 2008 (Introduction).
- Pollock, Sheldon, "The Cosmopolitan Vernacular", The Journal of Asian Studies, Vol. 57, No. 1, February 1998, pp. 6-37.
- Zutshi, Chitralekha, "Translating the Past: Rethinking 'Rajatarangini' Narratives in Colonial India, The Journal of Asian Studies, Vol. 70, No. 1, February 2011, pp. 5-27.

Unit 2: Language Culture and Histories from the South: In the context of Indian History, the significance of the continuities and discontinuities that constitute the concept of the Tamil region and its dynamics of regional histories. The connections between Sanskrit and early Kannada scholarship would be a point of discussion for studying the Kannadiga region. (Teaching time: 09 hours)

1. Tamizhakkam
2. Kannada and state patronage

Essential Readings

- Ganesh, K.N., "Spaces in History: A Study in Human Geography in the Context of Sangam Texts", Human Geography in the Context of Sangam Texts", Studies in History, 25(2), 151–195, 2009
- Pollock, Sheldon, "The Cosmopolitan Vernacular Author", The Journal of Asian Studies, Vol. 57, No. 1, February 1998, pp. 6-37.
- Ramaswamy, Sumathi, "Language of the People in the World of Gods: Ideologies of Tamil before the Nation", Journal of Asian Studies, Vol. 57, No. 1, February 1998, pp. 66-92.
- Ramaswamy, Sumathi, Passions of the Tongue Language Devotion in Tamil India, 1891–1970, University of California Press, 1997.

Unit 3: In this section, the student will engage with the formation of regional languages and identities through some case studies. Promising areas of language and literature shaping the voice of the region will induce exciting conversations. (Teaching time: 09 hours)

The Early Modern Context of Language and Region:

1. Marathas and Marathi
2. Hindavi/ Awadhi
3. Braj and the Vernacular debate

Essenatial Readings

- Busch, Allison, "Hidden in Plain View: Brajbhasha Poets at the Mughal Court", Modern Asian Studies, Vol. 44, No. 2, 2010, pp. 267-309.

Unit 4: The period of the nineteenth and the twentieth centuries in some ways is also about the making of the idea of India. The mingling of languages, the firming of scripts, selections and eliminations, and overall standardisation of the languages became the turf of immense discussion and debate, indicating moments of crisis and shifts. The period became a site of contestation in the making of the region and the nation. (Teaching Time:18 hours)

The Colonial Context:

1. Standardisation of Language
2. Language Movements and Identities: Odia/ North East (Kuki or Assamese)
3. Vernacular to National

Category II

BA (Prog.) with History as Major

DISCIPLINE SPECIFIC CORE COURSE -1 (DSC-1) – : History of India c.1550 – 1700

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
History of India c. 1550 – 1700	4	3	1	0	12 th Pass	Should have studied History of India, 1200-1550

Learning Objectives

This course provides an analytical study of the history of India from 1550 to 1700 CE. It introduces students to a thematic study of the main aspects of the period delineating major transitions, changes and developments that include the establishment of the Mughal state and Rajput polities, encompassing political, administrative, cultural and economic aspects. Through select regional case studies it also underlines the interconnectedness of the subcontinental region in its transition.

Learning outcomes

After the successful completion of this Course, the students will be able to:

- Identify the major political developments in the history of India during the period between the sixteenth century and between the beginning of the eighteenth century.
- Outline the changes and continuities in the field of culture, especially with regard to art, architecture and Sufi movement.
- Discuss the economic history of the period under study in India especially, where agrarian production and its implications are concerned.
- Delineate the development of trade and urban complexes during this period.

SYLLABUS OF DSC-1

Unit I: Foundation, expansion and consolidation of the Mughal State, c.16th to 17th century: Expansion and consolidation; Administrative structures: Mansabdari and Jagirdari.
Unit II: Akbar to Aurangzeb: Rajputs, imperial ideology; religious policy.

Category III

BA (Prog.) with History as Non-Major

DISCIPLINE SPECIFIC CORE COURSE (DSC-1): History of India c. 1550 – 1700

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
History of India c. 1550 – 1700	4	3	1	0	12 th Pass	Should have studied History of India c. 1200-1550

Learning Objectives

This course provides an analytical study of the history of India from 1550 to 1700 CE. It introduces students to a thematic study of the main aspects of the period delineating major transitions, changes and developments that include the establishment of the Mughal state and Rajput polities, encompassing political, administrative, cultural and economic aspects. Through select regional case studies it also underlines the interconnectedness of the subcontinental region in its transition.

Learning outcomes

After the successful completion of this Course, the students will be able to:

- Identify the major political developments in the history of India during the period between the sixteenth century and between the beginning of the eighteenth century.
- Outline the changes and continuities in the field of culture, especially with regard to art, architecture and Sufi movement.
- Discuss the economic history of the period under study in India especially, where agrarian production and its implications are concerned.
- Delineate the development of trade and urban complexes during this period.

SYLLABUS OF DSC-1

Unit I: Foundation, expansion and consolidation of the Mughal State, c.16th to 17th century: Expansion and consolidation; Administrative structures: Mansabdari and Jagirdari.
Unit II: Akbar to Aurangzeb: Rajputs, imperial ideology; religious policy.
Unit III: 17th century transition: Marathas, Sikhs.
Unit IV: Art and architecture: Taj Mahal and Red Fort; Mughal painting.
Unit V: Society, culture and religion: Sufism: Naqshbandi; popular literature from theDeccan: Chakki-Nama and Charkha-Nama.
Unit VI: Economy and integrated patterns of exchange: Inland and maritime trade; non-agrarian production.

Practical component (if any) - NIL

Essential/recommended readings
Unit I: This unit would have taught students about the complex political, cultural and social world constructed under the Mughal regime. It will also introduce students tothe administrative structure of the Mughal state. **(Teaching Time: 9 hrs. approx.)**

- Alam, M., and S. Subrahmanayam. (1998). The Mughal State 1526-1750. Delhi:Oxford University Press.
- Richards, J F. (1996). The New Cambridge History of India: The Mughal Empire.

Learning Objectives

One of the purposes of learning History is to evolve a critical lens with which one can make sense of one's immediate and lived experience. Popular culture happens to be a significant component of that experience surrounding us, particularly since it is easy to access. This course aims to provide students with a critical understanding of popular culture. One of the course objectives is to help the student attempt to define popular culture through a study of the complex theoretical discussion on the subject. This theoretical engagement is expected to enable learners to comprehend various aspects of popular culture both in non-Indian and Indian contexts focusing particularly on themes about religion, performative traditions, food cultures as well as the constitution of a 'new public' concerning its patterns of consumption of culture, in contemporary times.

Learning outcomes

Upon successful completion of the course, students will be able to:

- Engage with a range of theoretical perspectives in an attempt to define popular culture,
- Describe the methodological issues involved in a historical study of popular culture,
- Identify the relevant archives necessary for undertaking a study of popular culture while pointing out the problems with conventional archives and the need to move beyond them,
- Interpret the above theoretical concerns to actual historical studies through a case study,
- Estimate the popular aspects of the everyday experience of religion and religiosity through a wide range of case studies relating to festivals and rituals,healing practices as well as pilgrimage and pilgrim practices,
- Examine the role of orality and memory in popular literary traditions,
- Demonstrate the evolution of theatre and dance within the popular performative traditions,
- Analyse the role of technology in the transformation of music from elite to popular forms,
- Examine the relationship between recipes/recipe books and the construction of national/regional identities,
- Identify the history of the cultures of food consumption and its relationship with the

constitution of a modern bourgeoisie,

- Examine the process of emergence of a pattern of 'public consumption' of culture in contemporary times, with specific reference to art, media and cinema

SYLLABUS OF DSE-3

Unit I: Defining Popular Culture:

1. Popular Culture as Folk Culture,
2. Mass Culture- High Culture,
3. People's culture

Unit II: Popular Culture and Visual Expressions:

1. Folk art, calendar art, photography, advertisements;
2. Cinema (themes and trends like freedom struggle and nation-building),television (Case study of televised serials, Ramayana and Chanakya)
3. Internet: Digital age and popular culture

Unit III: Performative traditions, fairs, festivals and pilgrimage:

1. Folktales & folk theatre: swang and nautanki;
2. Music- folksongs and folk dances
3. Festivals and Rituals: Case studies of Navaratri in Madras / Urs in Ajmer /Kumbh Mela

Unit IV: Cuisine as an expression of culture:

1. Food and Public Cultures of Eating
2. Regional cuisines
3. Cultures of Consumption

Practical component (if any) - NIL

Essential/recommended readings

Unit I: This unit intends to apprise students of the conceptual and theoretical categories that scholars deploy to classify and analyse various forms of popularculture. **(Teaching Time: 12 hrs. approx.)**

- Fiske, John. (2010) *Understanding popular culture*. Routledge.
- Storey, J. (2001) *Cultural Theory and Popular Culture*. London: Routledge. (Chap. 1, 'What is Popular Culture', pp. 1-17)
- Dubey, Shyam Charan. Manav aur Sanskriti. Rajkamal Prakashan, NewDelhi, 2010.

Unit II: This unit focuses on a study of the various audio and visual forms of popular culture. It also explores the more recent forms of popular culture as embodied in the new age technologies of communication. **(Teaching Time: 12 hrs. approx.)**

- Dissanayake W. and K.M. Gokul Singh, (1998). *Indian Popular Cinema, A Narrative of Cultural Change*. New Delhi: Orient Longman.
- Fiske, John. (2001) *Television Culture: Popular Pleasures and Politics*. London: Routledge.
- Spracklen, Karl. (2015) *Digital Leisure, the Internet and Popular Culture: Communities and identities in a Digital Ag*e. London: Palgrave Macmillan, pp. 1-52.

Unit III: The Indian subcontinent is rich in diverse beliefs and practices of rituals, pilgrimages, and performative traditions. This unit will focus on exploring the meanings of performative traditions (folk music, folk tales, etc.), rituals, pilgrimages, etc. **(Teaching Time: 12 hrs. approx.)**

- Bharucha, Rustam. (2003) *Rajasthan: An Oral History, Conversations with Komal Kothari*, Delhi: Penguin, chap 1, 'The Past in the Present: Women's Songs', pp. 16-35.
- शकु धव. (2015). 'लोक - आखान: यशकीघोषणा' , तानाबाना, प्रवेशांक, pp. 19-26.

Unit IV: The focus of this unit will be on food and its history. The units will encourage students to think about cooking and eating habits of 'people' as historical, subject to change and embodying social and political significations that go much beyond individual initiatives**. (Teaching Time: 9 hrs. approx.)**

COMMON POOL OF GENERIC ELECTIVES (GE) COURSES

GENERIC ELECTIVES (GE-1): Religious Traditions in the Indian Subcontinent

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Religious Traditions in the Indian Subcontinent	**4**	**3**	**1**	**0**	**12 th Pass**	**NIL**

Learning Objectives

This course seeks to provide an understanding of (a) multiple religious traditions that flourished through the ages in the Indian subcontinent; (b) how each religious tradition is dynamic and changing in relation to each other and in relation to its own past; (c) the ways in which each ex-panded or contracted; (d) how the modern Indian state and its constitution dealt with the issue of multiplicity of beliefs; and (e) to understand the varied approaches to each of the issues out-lined above.

Learning outcomes

Upon completion of this course the student shall be able to:

- Describe the basic chronological, spatial and substantive contours of each of the religious traditions as well as certain intellectual currents that questioned them.
- Analyse and articulate the long-term changes that each religious tradition undergoes in a dynamic relationship with its own past, with non-religious aspects of life, and with other religious traditions. · Identify and describe the formation of religious identities and the scope for the liminal spaces in between.
- Appreciate, examine and relate to the debates on the ways in which the modern Indian state and its constitution must deal with the issue of plurality of religious beliefs and practices.

SYLLABUS OF GE

Unit-I: Major Religious Traditions in Ancient India

1. Vedic and Puranic traditions

2. Schools of Buddhism and Jainism

Unit-II: Major Religious Traditions in Medieval India

1. Bhakti traditions: Saguna; Nirguna
2. Sufi traditions: Development of Chishtiyya and Suhrawardiyya
3. Emergence of Sikhism

Unit-III: Socialisation and Dissemination from the Early Medieval to Early Modern Era

1. Approaches to Shaiva, Shakta and Vaishnava in the Early Medieval Era
2. Approaches to Islamisation in the Medieval Period

Unit-IV: Modernity and Religion

1. Making of Sacred Spaces: Banaras; Modern Religious Identities
2. Debates on Secularism and the Indian Constitution

Practical component (if any) - NIL

Essential/recommended readings

Unit-I. The unit should familiarise students with diverse religious traditions thatoriginated in the Indian–subcontinent. It also explores intellectual currents that questioned them. **(Teaching Time: 12 hrs. approx.)**

GENERIC ELECTIVES (GE-2): Sacred Spaces, Temple and Temple Economy (North and South Indian Traditions)

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Sacred Spaces, Temple and Temple Economy (North and South Indian Traditions)	4	3	1	0	12 th Pass	NIL

Learning Objectives

The course seeks to inculcate an appreciation for sacred spaces in Indian context with its multi-facetness and complexity. The idea is to treat sacred space not only as a geographical entity but as vibrant texts which have multi-layered histories and give us an insight how communities and individuals relate with them over time. Sacred spaces are demarcated or conceptualized with the establishment of temples which are also architectural embodiments of divinity. The course begins with the conceptualization of sacred space and how they were thoroughly enmeshed in their respective temples spatially and temporally. The next unit intends to study in brief the meanings and normative models of temple style. Another area of exploration is how temples have played the role in legitimization of political institutions, patronage patterns and the how pilgrimages, rituals and festivals are embedded in sacred spaces within which they are generated and persists. Highlighting the political and social significance of temple the template is set to study the role of temple complexes as major instruments of integration and economic development. Apart from situating temples in historical context it's significance in contemporary times is also explored. Skilled with this knowledge, the student can be employed in fields of tourism, journalism and other like industries, besides being aware of significant temple towns and country's rich heritage.

Learning outcomes

At the end of the course, the student should be able to:

- Understand the concept of sacred spaces and the role of temples in definingand ensuring longevity of those spaces.
- Differentiate between various styles of temples.
- Discuss the themes of legitimization and sacred kingship in historical temples.
- Understand patronage patterns, deity- patron relationship and gender roles intemple.
- Comprehend the ideas disseminated by sculptures.

- Point out the regional variations and cultural diversity in temple traditions.
- Linking historical sacred spaces to their contemporary times.

SYLLABUS OF GE

Unit I: Defining Sacred Spaces: Sacred Sites, Forests Hills and Rivers

Unit II: Sacred spaces and Monumentality: Temple

1. Structure and Forms
2. Ecological dimension
3. Temple and sacred kingship

Unit III: Royal patronage and community integration

1. Patronage patterns and power affiliations
2. Pilgrimage, Rituals and festivals
3. Temple spaces and gender roles

Unit IV: Temple Towns and Economy

1. Interconnecting temples, corresponding towns and urbanism.
2. Urbanization and economic growth
3. Situating Temple in contemporary spaces

Practical component (if any) - NIL

Essential/recommended readings

Unit I: The unit will introduce the meaning of sacred spaces along with the inherent understanding of sacred and profane. The dominant paradigms for conceptualizing sacred space in a given context will also be examined as they are historically contingent and constructed by specific circumstances and perspectives. **(Teaching time: 12 hrs. approx.)**

- S.Verma and H.P.Ray, (2017)The Archaeology of Sacred Spaces- Introduction, Routledge, New York.
- Vinayak Bharne and Krupali Krusche (2012) Rediscovering the Hindu Temple: The Sacred Architecture and Urbanism of India, Cambridge Scholars Publishing, Chapter 1 ,5,8,9,11 (Relevant for all the rubrics).
- Baidyanath, Sarawati (1984) The Spectrum of the Sacred: Essays on the Religious Traditions of India, Concept Publishing Company, New Delhi.
- Eck, Diana L, (1998), The Imagined Landscape in Pattern in Construction of Hindu Sacred Geography, CIS, (32) (2).

UNIT II: Under this rubric an attempt is made to study temple's meaning and forms encompassing the regional variation which also articulate the tangible and symbolic authority of the sacred spaces. Temples in different spaces and time cannot be treated in isolation from

other processes and discourses on power and legitimization.The evolution of temple tradition also needs to be highlighted right from the stage ofit's inception to formalized structure of worship. One also needs to highlight how temples depicts the political processes particularly the changing nature of kingship, glorified the ruler and legitimized power in the domain of deity. **(Teaching time: 12 hrs. approx.)**

- Kaimal, Padma, "Early Chola Kings and Early Chola Temples: Art and the Evolution of Kingship", Artibus Asiae, Vol. 56, No. 1-4, 1996, pp.33-66.

Unit III: This unit will discuss the patterns of patronage and how power of thepatrons are reflected in the temples they built. Another area of study would be how temples tend to create their respective pilgrim fields and their rituals, festivals integrate individual into society by symbolically articulating social patterns and relationships. The nature of activities and roles played by women in these sacred spaces is also explored. It is also intended to examine how sculptural panels transmit ideas which can be a useful source of historical knowledge. (Teaching time: 12 hrs. approx.)

Unit 4: This unit will emphasize that temples are also integral to the towns that surround them. Temple and it's related activities are of significance for the entry it provides in the construction of social, cultural and religious dimensions of any sanctified place. With the help of case studies, it would be demonstrated that templewas a major instrument of agrarian expansion and integration. An attempt would also be made to situate temples in its contemporality reinforcing that sacredness stillplays a pivotal role in the shaping of towns and cities**. (Teaching time: 9 hrs.approx.)**

Field trips/Project work

- Visit to the temple towns to gain a hands-on knowledge are part of thecourse. Some suggested samples for projects:
- How are modern day temples, like the Birla Mandir and the Akshardham Mandir different/similar from/to the Khajuraho assemblage and the Tanjore?
- Comparison of festivals and rituals in both North and South Indian tradition appreciating the plurality of traditions.
- To look into the possibilities of preservation and conservation of sacredspaces.

Note: Examination scheme and mode shall be as prescribed by the ExaminationBranch, University of Delhi, from time to time.

GENERIC ELECTIVES (GE-3): Climate Change and Human History

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Climate Change and Human History	4	3	1	0	12 th Pass	NIL

Learning Objectives

Climate change is an urgent and significant global challenge that has far-reaching implications for human societies. This course explores the historical dimensions of climate change and its impact on human civilizations. By examining the complex relationship between climate, global warming and cooling, and human societies, students will gain a comprehensive understanding of how we arrived at the current state of the climate crisis, which is considered a defining feature of the Anthropocene era. By introducing students to interdisciplinary, it welcomes students from various academic backgrounds, including humanities and social sciences. By integrating perspectives from different disciplines, we aim to foster a comprehensive understanding of climate change as a multifaceted issue with profound implications for human societies. The course critically analyzes climate change denialism, exploring its historical roots, ideological underpinnings, and its impact on public discourse and policy-making.

Learning outcomes

After completing this course, students should be able to -

- Understand the historical relationship between climate and human societies.
- Explore climate as an active historical actor rather than a passive backdrop.
- Examine case studies from around the world to illustrate the impact of climate on human civilizations.
- Gain insights into the history of weather and climate.
- Analyze the phenomenon of climate change denialism and its historical and ideological roots.
- Foster interdisciplinary dialogue and collaboration among students from different academic backgrounds.

SYLLABUS OF GE

Unit 1: Anthropogenic Climate Change and Studying History
Unit 2: End of the Ice Age and the Early Holocene Human History; Plant and Animal Domestication; Civilisations; Mining
Unit 3: Climate Disasters and Social Transformations-Empires; Wars; Famine: Population Movements and Migrations
Unit 4: Little Ice Age and Seventeenth Century Crisis
Unit 5: Capitalism and Nature- Climate Change Denialism vs. Climate Justice; Metabolic Rift; Planetary Boundaries.

Practical component (if any) - NIL

Essential/recommended readings

Unit 1: The unit explains the concept of climate change and how climate can be studied as a historical actor. The unit is also aimed to evaluate the various scientific traditions that engage anthropogenic climate change. This will enable the students to appreciate the history of scientific ideas on the issues of global warming and the Anthropocene. (Teaching time: 9 hours approx.)

Readings:

- James R. Fleming, "Climate, Change and History", Environment and History, Vol. 20, No. 4, (November 2014), pp. 577-586
- David Wallace-Wells, The Uninhabitable Earth: Life After Warming (New York: Tim Duggan Books, 2019).
- Steffen, Will, Crutzen, Paul J and McNeill J. R. (2008). "The Anthropocene: Are Humans Now Overwhelming the Great Forces of Nature", Ambio, Vol. 36, No.8, pp. 614-621.
- Michael E. Mann, The Madhouse Effect: How Climate Change Denial Threatening Our Planet (New York: Columbia University Press, 2016), Chapter 2, pp. 15-29;

Unit 2: This unit will examine the influence of climate on human civilisations, including the ecological, migratory, and cultural implications of changing climate conditions. They provide a deeper understanding of how past climatic shifts have impacted the trajectory of human societies. This unit shall provide overview on how domestication and agriculture began with the end of the Ice Age and what was the influence of climate on human civilisations. (Teaching time: 3 weeks approx..- 9 lectures)

Readings:

- R. Fleming, Historical Perspectives on Climate Change (New York: Oxford University Press, 1998).
- John L.Brooke, Climate Change and the Course of Global History (New York: Cambridge University Press, 2014), Chapter 7.
- Vardy, Mark, Michael Oppenheimer, Navroz K. Dubash, Jessica O'Reilly, and Dale Jamieson. "The Intergovernmental Panel on Climate Change: Challenges and Opportunities." Annual Review of Environment and Resources, Vol. 42, No.1, (2017), pp. 55–75.

Unit 3: The unit examines how shifts in climate, including cooling temperatures and droughts, disrupted agricultural production, weakened the empire's economy, and contributed to social and political instability. The unit also considers the role of climate change as contributing factor to the collapse of the empires of the past centuries. (Teaching time: 9 houes approx.)

Readings:

- Kyle Harper, The Fate of Rome: Climate, Disease, and the End of an Empire
- Jared Diamond, Collapse: How Societies Choose to Fail or Succeed. New York: Viking 2005, pp. 157-177.
- Joseph Tainter, Collapse of Complex Societies. Cambridge: CUP, 1988, pp. 1-21.
- Brian M. Fagan. Floods, Famines and Emperors: El Nino and the Fate of Civilizations. Basic Books, 1999.
- Vasile Ersek, How climate change caused the world's first ever empire to collapse, Future of the Environment , 9th January 2019, https://www.weforum.org/agenda/2019/01/how-

climate-change-caused-the-world-s-first-ever-empire-to-collapse/

Unit 4: This unit enquires into the Seventeenth Century Crisis that coincided with the peak of the Little Ice Age and refers to a period of widespread political, social, and economic turmoil that occurred in Europe during the 17th century. The unit will also explain to the students how its impact varied across different regions. (Teaching time: 3 weeks approx..- 9 lectures)

Readings:

- John L.Brooke, Climate Change and the Course of Global History (New York: Cambridge University Press, 2014), pp.444-466.
- Dagmore Degroot, The Frigid Golden Age: Climate Change, the Little Ice Age, and the Dutch Republic, 1560–1720 (Cambridge: Cambridge University Press, 2018).
- Wolfgang Behringer, A Cultural History of Climate. Cambridge: Polity. Chapters 2 & 3.
- G. Parker, Global Crisis, War, Climate Change and Catastrophe in the Seventeenth Century. Yale University Press, 2013, [Introduction and chapter 1]

Unit 5: The use of fossil fuels as the main source of energy has fundamentally redefined human relationships with nature. By exploring the link between the use of fossil fuels and the emergence of capitalism, this unit explores how industrialisation did play a central role in anthropogenic climate change. It also introduces and elaborates on two key theoretical concepts- the Metabolic Rift and Planetary Boundaries to understand how climate change reproduces class, gender, and race. It also elaborates on the nature of the ongoing debates on the issues of climate change, including the powerful tendency to deny climate change as well as the strengthening of climate justice movements in the global peripheries. (Teaching time: 9 hours approx.)

Readings:

- Michael E. Mann, The Madhouse Effect: How Climate Change Denial Threatening Our Planet (New York: Columbia University Press, 2016).
- "The Intergovernmental Panel on Climate Change: Challenges and Opportunities" by Diana Liverman and Ronald L. Mitchell, Annual Review of Environment and Resources.

GENERIC ELECTIVES (GE-4): Educational Arrangements and Knowledge in Modern India

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Educational Arrangements and Knowledge in Modern India	**4**	**3**	**1**	**0**	**12th Pass**	**NIL**

Learning Objectives

This course will provide students a critical understanding of different historical traditions of transmission of learning and educational apparatus in India from indigenous to colonial and their socio-political aspects.

Learning outcomes

- The course will allow them to understand the diverse manner in which production of knowledge and its preservation and transmission took place through formal and informal
- socio-cultural networks within indigenous education in India at the eve of colonial encounter.
- It will enhance learners' comprehension of the complex historical trajectories of the expansion as well as limitations of educational opportunities in India during colonial and post-colonial periods.
- It will help them to engage with the issues of contemporary education in light of colonial trajectories of our historical development.

SYLLABUS OF GE

Unit 1. Debates on Forms of Knowledge, nature of institutions, pedagogy and social participation within Indigenous Education in India and its interface with colonialism.
Unit 2. Colonial Education in India.
Unit 3. Chief characteristic features of educational discourse of Freedom Struggle in India.
Unit 4. Critical appraisal of educational policies, institutions and practices in Independent India from 1947 to 1990s.

Practical component (if any) - NIL

Essential/recommended readings

Unit 1. This unit will familiarize students with different forms of knowledge and institutions of learning that were prevalent in India during late 18th and 19th centuries. It will engage with the question of their decline in relation with the different historiographical debates. It shows how the two systems, indigenous and colonial interfaced or encountered with each other during 18th and 19th century. How this impacted upon different spheres of knowledge formation and forms of transmission or pedagogy within informal as well as formal centres of learning. (Ten hours)

Essential Readings:

- Acharya, Poromesh. (2000), *Desaj Siksha, Aupniveshik Virasat and Jatiya Vikalp*, (translated in Hindi by Anil Rajimwale), Granth Shilpi, New Delhi. Alternatively, Acharya, Poromesh. (1978) 'Indigenous Vernacular Education in Pre-British Era: Traditions and Problems', *Economic and Political Weekly,* 13, 1983-88.
- Dharampal. (1971), Indian Science and Technology in the Eighteenth Century: Some Contemporary European Accounts, Delhi: Impex India. (Especially Introduction, pp. 1-36).

- Shukla, Suresh Chandra. (1959), *Elementary Education in British India during Later Nineteenth Century*, New Delhi: Central institute of Education.

Unit 2. This unit explores how a complex relationship of coalition and conflict emerged between European officers and upper classes and castes of Indian society with the arrival of European trading companies and Christian Missionaries and how it reordered the arrangements of knowledge and learning in India. What kind of structure of curricular knowledge and formal education emerged out of this coalition and interface? What were its implications for knowledge formation and languages of its transmission? The unit also examines the efforts made by non-state agencies like Christian Missionaries and social reformers for spreading this knowledge to backward castes, Muslims and women. (Thirteen Hours)

SEMESTER – V

DEPARTMENT OF HISTORY

COURSES OFFERED BY DEPARTMENT OF HISTORY

Category I

[UG Programme for Bachelor in History (Honours) degree in three years]

DISCIPLINE SPECIFIC CORE COURSE -1 (DSC-1) – : History of India – V: c. 1500 – 1600

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
History of India – V: c. 1500 – 1600	4	3	1	0	12 th Pass	Should have studied History of India – IV: c. 1200 – 1500

Learning Objectives

The course is intended to engage students into a critical discussion of political, institutional and cultural processes that led to the establishment and consolidation of theMughal state in India. It also provides a basic understanding of major developments in other regions of the Indian sub-continent not ruled by the Mughals in the sixteenth century. The students would familiarise themselves with the nature and variety of sources as well as the diverse and uneven ways in which historians have treated and interpreted them

Learning outcomes

Upon completion of this course the student shall be able to:

- Critically evaluate major sources available in Persian and vernacular languages forthe period under study
- Compare, discuss and examine the varied scholarly perspectives on the issues ofthe establishment and consolidation of the Mughal state.
- Explain the religious milieu of the time by engaging with some prominent religious traditions.
- Discuss how different means such as visual culture was used to articulate authorityby the rulers
- Discern the nuances of the process of state formation in the areas beyond thedirect control of the Mughal state.

SYLLABUS OF DSC

Unit I: Sources and Historiography

1. An overview of Persian Literary Traditions
2. Vernacular Literature- Brajbhasha and Telugu/Tamil

Unit II: Political Formations and Institutions

1. Mughal state- Role of Military tactics and technology; Changing notions ofKingship ; Institutions (Evolution of Mansab, Jagir and land revenue system)
2. Rajput and Ahom Political culture
3. Formation of Nayaka states of Madurai, Thanjavur and Jinji

Unit III: Political and Religious Ideas

1. Sulh-i-kul and Akhlaqi tradition; Ideological challenges
2. Vaishnava Bhakti Traditions of North India
3. Shaivite traditions

Unit IV: Visual culture and articulation of Authority

1. Fatehpur Sikri.
2. Chittor Fort.
3. Temples and Gopurams of the Nayakas: Meenakshi temple

Practical component (if any) – NIL

Essential/recommended readings

Unit I. This unit introduces students to the available Persian and vernacular literary sources for the study of the period under study. It also provides an opportunity to the students to critically analyse these sources based on their modern historiographical interpretations. **(Teaching Time: 9 hrs. approx.)**

Essential Readings:

- Rizvi, S. A. A. (1975)- Religious and Intellectual History of the Muslims During the Reign of Akbar (1556-1605), Delhi: Munshiram Manoharlal
- Truschke, Audrey (2016). Culture of Encounters, New Delhi: Penguin Allen Lane, (Chapter 4 'Abul Fazl Redefines Islamicate Knowledge and Akbar's Sovereignty', pp. 142- 165)
- Alam, Muzaffar (2004). Languages of Political Islam, Delhi: Permanent Black, (Chapter 4, 'Language and Power', pp. 115-140)
- Ali, S Athar. (1992). "Translations of Sanskrit Works at Akbar's Court" Social Scientist, vol. 20 no.9, pp, 38-45
- Busch, Allison (2005), "Literary Responses to the Mughal Imperium: the Historical Poems of Kesavdas" in South Asia Research, Vol. 25, No.1, pp 31-54
- Busch, Allison (2010) "Hidden in Plain view: Brajbhasha poets at the MughalCourt"
- Modern Asian Studies. Vol. 44, No.2, pp 267-309
- Sharma, Sandhya (2011). Literature, Culture and History in Mughal NorthIndia, 1550- 1800, Delhi: Primus (Introduction and Chapter 5)
- Rao, V N, David Shulman, and Sanjay Subrahmanyam (eds.) (2001). Textures ofTime: Writing History in South India 1600-1800, Delhi: Permanent Black
- Sreenivasan, Ramya (2014) "Rethinking Kingship and Authority in South Asia: Amber (Rajasthan), Ca. 1560-1615." Journal of the Economic and Social History of the Orient 57, no. 4, pp 549–86

Unit II. This unit enables students to understand the various contexts and processes involved in the establishment and consolidation of the Mughal state encompassing such themes as the role of military tactics and technology,legitimacy through innovative notions of kingship and administrative institutions. Besides the Mughal state, it also discusses other political formations, some of considerable resilience and importance that complicated the processes of imperial integration. To provide a rounded picture of these developments the unit also discusses the histories of the emerging Rajput regimes. To underline the variegated nature of politics of this period, the unit also studies the Nayaka state formation in South India. **(Teaching Time- 15 hrs. approx.)**

DISCIPLINE SPECIFIC CORE COURSE – 2 (DSC-2): History of India – VI: c. 1750 – 1857

Credit distribution, Eligibility and Prerequisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
History of India – VI: c. 1750 – 1857	4	3	1	0	12 th Pass	Should have studied History of India – IV: c. 1200 – 1500

Learning Objectives

The paper introduces students to key features of the 18th century in the Indian subcontinent. It analyses the interface between the 18th century kingdoms and the early colonial state. The pa-per also discusses the processes by which the British East India Company transformed itself into a state and gradually consolidated its position over a vast expanse. Apart from the evolution of colonial institutions of governance and developing forms of colonial exploitation, the paper also highlights the interface between Company Raj and indigenous elite on various social issues. The paper concludes with a critical survey of peasant resistance to colonial agrarian policies, and the 1857 revolt against the Company Raj.

Learning outcomes

Upon completion of this course the student shall be able to:

- Outline key developments of the 18th century in the Indian subcontinent.
- Explain the establishment of Company rule and important features of theearly colonial regime.
- Explain the peculiarities of evolving colonial institutions and their impact.
- Elucidate the impact of colonial rule on the economy.
- Discuss the social churning on questions of tradition, reform, etc. during thefirst century of British colonial rule.
- Assess the issues of landed elites, and those of struggling peasants, tribals and artisans during the Company Raj.

SYLLABUS OF DSC

Unit I: India in the mid-18th Century: society, economy, polity and culture

1. Issues and Debates
2. Continuity and change

Unit II: Colonial expansion: policies and methods with reference to any two of the following Bengal, Mysore, Marathas, Awadh, Punjab and the North- East

		Lecture	Tutorial	Practical/ Practice		
History of Modern Europe – I	**4**	**3**	**1**	**0**	**12 th Pass**	**Nil**

Learning Objectives

This paper shall provide a critical overview of the French Revolution, and acquaint the students with the repercussions of the revolution, both within and beyond France. It shallalso trace the patterns and outcomes of social upheaval throughout Europe in the first half of the 19th century. The debates on the development and impact of industrialcapitalism shall be discussed. The birth of new social movements, political ideas and structures shall be contextualised within developing capitalism of the nineteenth century.

Learning outcomes

On completing this course, the students will be able to:

- Identify what is meant by the French Revolution.
- Trace short-term and long-term repercussions of revolutionary regimes andEmpire-building by France.
- Explain features of revolutionary actions and reactionary politics of threatened monarchical regimes.
- Delineate diverse patterns of industrialization in Europe and assess the socialimpact of capitalist industrialization.
- Analyse patterns of resistance to industrial capital and the emerging politicalassertions by new social classes.

SYLLABUS OF DSC-3

Unit I: The French Revolution

1. The Enlightenment, political and economic crisis of the Ancien Regime
2. A new political culture and transformations: Democratisation of polity and academies, changing social relations
3. Historiographical Perspectives on the French Revolution

Unit II: Continuity and change in the early nineteenth century

1. First French empire and monarchical consolidation
2. Revolutions 1830s-1850s

Unit III: Industrial Revolution and Social Transformation (the 19th century)

1. Experience of Industrialisation France, Germany and Eastern / SouthernEurope
2. Impact of the Industrial Revolution: Work, Family and Gender

Unit IV: Political movements in the 19th century

1. Parliamentary and institutional reforms in Britain, chartists & suffragettes
2. Industrial unrest, development of socialism: Utopians, Marxism, the International working class movement and social democracy

Unit V: Culture and Society: 1789-1850s

1. Popular Consumption of Culture: Neo Classical Art, Romanticism and Realism in art and literature
2. The City in the age of Industrialization

Practical component (if any) - NIL

Essential/recommended readings

Unit 1: In this rubric the students would have learnt about the origins of the French Revolution and political transformation in late eighteenth century France. They would have explored various themes linking the phases of the revolution with various key developments during the revolutionary years, transformation of institutions and social relations. **(Teaching time: 15 hrs. approx.)**

DISCIPLINE ELECTIVE CORE COURSE– 1 (DSE): History of the USSR: From Revolution to Disintegration (c. 1917 – 1991)

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
History of the USSR: From Revolution to Disintegration (c. 1917 –1991)	**4**	**3**	**1**	**0**	**12 th Pass**	**NIL**

Learning Objectives

The course introduces students to the history of the USSR from the two revolutions of 1917 to the disintegration of USSR. Students study the various challenges faced by the Bolsheviks and the steps taken to resolve these issues. Students will also trace the evolution of new institutions and ways of organizing production both in the factory and at the farm. They will also evaluate important foreign policy issues and the Soviet Union's involvement and role in the World War II. The course studies the most dramatic years in the history of the USSR i.e., the period between 1945 to 1991. The extent of major economic and political changes between 1956 and 1991 will be examined and the period of reconstruction , stagnation and growth will be examined. The reforms of the Gorbachev era will provide some of the contexts for the study of the larger [global] processes that led to the dissolution of the Soviet Union.

Learning outcomes

On completion of this course students shall be able to

- Explain how USSR emerged out of Imperial Russia.
- Explain the new organization of production in the fields and in the factory.
- Outline and explain key developments in the history of the USSR between 1917 and 1991.
- Examine Soviet policies for the period of the course in relation to nationalities and gender questions.
- Outline Soviet foreign policy issues.
- Analyse the factors leading to disintegration of the Soviet Union and the formation of
- Confederation of Independent States.

SYLLABUS OF DSE

I. The Russian Revolutions of February and October 1917; Background, Causes and Outbreak.

II. Aspects of Socialist Industrialization -Ideas, Debates and Planning
   a) War Communism, NEP, Great Debate
   b) Collectivization
   c) Industrialization and Planning

III. Soviet Foreign Policy from World War II to Cold War – (1930s-64)

IV. Soviet Union from Reconstruction to Stagnation to Recovery
a) Khrushchev
b) Brezhnev
c) Gorbachev

V. Question of Nationalism and Disintegration of USSR

VI. Aspects of Culture in Soviet Union
a) Gender 1917-45
b) Literature and Arts 1917-64
c) Cinema and Sports 1920s-91

Essential Readings and Unit Wise Teaching Outcomes:

Unit I: In this unit students will learn about the background to the Russian Revolutions of February and October 1917 its causes and outbreak.

DISCIPLINE SPECIFIC ELECTIVE COURSE– 1 (DSE): Gender in Indian History upto 1500

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Gender in Indian History up to 1500	**4**	**3**	**1**	**0**	**12th Pass**	**NIL**

Learning Objectives

The course teaches how 'Gender' is not a 'value free' term denoting biological differences but indicates social and culturally constructed unequal relationships that need careful historical analysis in the context of Indian history. The focus is not merely on studying 'women's history' but to go beyond and explore aspect of masculinities as well as alternative sexualities, spanning temporal frames from earliest times to 1500 CE. There is an added emphasis on learning inter- disciplinary analytical tools and frames of analysis concerning familiar topics such as class, caste and patronage that enriches an understanding of historical processes.

Learning outcomes

On completion of this course students shall be able to

- Explain critical concepts such as gender and patriarchy and demonstrate their use as tools for historical analysis
- Examine the role and functioning of power equations within social contexts in Indian history during the ancient and medieval period, in the construction of gender identities
- Critically examine representations of gender in literature, art, focusing onideas of love, manliness and religiosity

SYLLABUS OF DSE

Unit I: Gender in Context of historical analyatis: Theories and concepts

1. Understanding Structures of Patriarchy, Patrilocality Patriliny and Matriarchy, Matrilocality and Matriliny
2. Gender: a tool of Historical Analysis

Unit II: Aspects of Gender: Socio-Economic and Political Ramifications

1. Types of households, property and patronage

2. Women and exercise of Power, with special reference to Rudrama-Deviand Razia Sultan
3. Questions of Sexualities including masculinities and alternative gender

Unit III: Gendered Representations in the World of Divinity and Art

1. Vedic-Puranic, Buddhist, Korravai-Durga, Shakta and Warkari Panths
2. Visual Representation at Mathura and Khajurao

Practical component (if any) - NIL

Essential/recommended readings

Unit -I: The unit should familiarise students with theoretical frames of patriarchy andgender and how these concepts provide tools for historical analysis. **(Teaching time: 12 hrs. approx.)**

		Lecture	Tutorial	Practical/ Practice		
History of Africa c. 1500 – 1960s	**4**	**3**	**1**	**0**	**12th Pass**	**NIL**

Learning Objectives

This paper offers a historical overview of the African continent. It traces major long-term continuities and changes in Africa's socio-economic structures, cultural life and political formations from the 16th century to the mid-twentieth century. The paper closely examines colonial trade and rule, as well as anti-colonial resistance. It offers a critical analysis of the immediate post-independence years, and situates the specific positioning of Africa in connected histories of a globalizing world.

Learning outcomes

On completion of this course the student shall be able to

- Critique stereotypes on the African continent and outline major shifts in African history.
- Explain elements of change and continuity in the African political experience, political regimes and national formations, economy, society and cultural milieu from the 16th to 20th centuries.
- Contextualize the impact of colonialism on the African continent.
- Explain social protest and anti-colonial resistance in Africa, as well as practices of 'transculturation'.
- Discuss the dilemmas and contradictions emerging from the post-independence economic, social, political and cultural milieu.

SYLLABUS OF DSE

Unit I: Historiographies on Africa: Development of historiography on Africa and abrief survey of pre-15th century cultures and civilizations.

Unit II: Africa and World: Trade Relations from 15th century to 19th century:Economy, society and state in Africa from the end of the 15th to 19th centuries.

Unit III: Colonization of Africa: Atlantic Slave trade; Africa's contribution to the development of European capitalism.

Unit IV: Movements against Slave Trade and Slave Autobiographies: the end of the slave trade, and the shift to 'Legitimate Commerce' and 'Informal Empire'.

Unit V: Race, Imperialism and Apartheid:

1. The historical roots and meaning of Apartheid in South Africa and the struggleagainst Apartheid
2. The making of colonial economies in Sub-Saharan Africa, towards the end ofthe 19th century
3. The colonial experience of Algeria under the French, and the NationalLiberation Movement of Algeria

Unit VI: Negritude, Diaspora and Independence Movement: Various forms of protest and National Liberation Movements century to 1939; peasant and worker protests, popular culture, gender and ethnicity.

Practical component (if any) - NIL

Essential/recommended readings

Unit I: This unit deals with Development of historiography on Africa and a brief survey of pre-15thcentury cultures and civilizations in Africa. **(Teaching time: 6 hrs. approx.)**

BA (Prog.) with History as Major

DISCIPLINE SPECIFIC CORE COURSE– 1 (DSC): History of India 1700 – 1857

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
History of India 1700 – 1857	4	3	1	0	12 th Pass	Should have studied History of India 1550 – 1700

Learning Objectives

The paper introduces the students to the key features of the 18th century, and contextualise the establishment of the early colonial state. The paper will focus on colonial policies and their impact on the socio-economic life of the people of India as well as the discontent caused by such policies. While introducing reform measures, colonial rule created a sense of self-consciousness and assertion which manifested itself in variousuprisings against the colonial rule.

Learning outcomes

On completion of this course the student shall be able to:

- Explain the process of the establishment of Company rule and the policies and practises to sustain the process of expansion and consolidation of the Company rule.
- Understand the impact of various economic policies and how they contributed to dissatisfaction with colonial rule.
- Evaluate the reform measures implemented during under the colonial rule and how they served the interests of the Empire, particularly in the context of education.

SYLLABUS OF DSC

Unit I: India in the 18th century: Background, Debate

Unit II: Expansion and consolidation of British power:

1. Bengal, Mysore, Maratha, Punjab
2. Ideologies/Strategies of Raj

Unit III: Making of a colonial Economy:

1. Land Revenue Settlements
2. Commercialisation of Agriculture
3. De-Industrialisation

Unit IV: Social and Religious Reform Movements:

1. An overview of the reformist movements of the 19th century

2. Indigenous and Modern education

Unit V: The Revolt of 1857: Causes, Nature, and Consequences

Practical component (if any) - NIL

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
History of Europe: 1789-1870	**4**	**3**	**1**	**0**	**12 th Pass**	**NIL**

Learning Objectives

This paper offers a historical overview of the development stemming from the French revolution and the subsequent period of revolutionary upheavals in Europe during the first half the nineteenth century. It traces the different trajectories of industrialization in various parts of Europe, the accompanying transformations in social life and the world of work, as well as the development of new ideologies that accompanied the formation of new social classes in the industrial era. Students will also be familiarized with the factors that fuelled the emergence of nationalism and nation-states in the given period.

Learning outcomes

Upon completion of this course the student shall be able to:

- Trace the key repercussions of the French revolution and Empire-building by France.
- Distinguish the patterns of industrialization in Europe and assess the widespread impact of the industrial revolution.
- Highlight the growth of labour movements and new ideologies in the industrial era.
- Comprehend the broad varieties of nationalist aspirations that emerged in the nineteenth century, and the processes by which new nation-states were carved out in Italy and Germany.

SYLLABUS OF DSC

Unit- 1: The French revolution

1. Causes, phases, and legacy
2. Napoleonic reforms and their impacts: authoritarian state, stirrings ofnationalism in the First French Empire

Unit- 2: Restoration and revolutions, 1815-1848

1. Congress of Vienna and Concert of Europe
2. Revolutions of 1830 and 1848

Unit-3: Socio-economic transformations in the early 19th century

1. Industrialization: patterns, changing nature of work, transformations insociety, life in the industrial city
2. Social ferment: labour movements; rise of liberalism and early socialism

Unit-4: Nations and nationalism

1. Patterns of nationalism
2. Unification of Italy and Germany

Practical component (if any) - NIL

Essential/recommended readings

Unit-I: At the end of this rubric students would have developed an understanding of the conditions that paved the way for a revolution in late eighteenth century France, and the subsequent transformations in French society since 1789. They will be familiarized with the larger legacy of the French revolution, as well asthe impact of Napoleonic rule on monarchies and socio-economic structuresoutside France. **(Teaching time: 12 hrs. approx.)**

Category III

BA (Prog.) with History as Non-Major

DISCIPLINE SPECIFIC CORE – HISTORY OF INDIA 1700-1857

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
History of India 1700 – 1857	4	3	1	0	12th Pass	Should have studied History of India 1550 – 1700

Learning Objectives

The paper introduces the students to the key features of the 18th century, and contextualise the establishment of the early colonial state. The paper will focus on colonial policies and their impact on the socio-economic life of the people of India as well as the discontent caused by such policies. While introducing reform measures, colonial rule created a sense of self-consciousness and assertion which manifested itself in variousuprisings against the colonial rule.

Learning outcomes

On completion of this course the student shall be able to:

- Explain the process of the establishment of Company rule and the policies and practises to sustain the process of expansion and consolidation of the Company rule.
- Understand the impact of various economic policies and how they contributed to dissatisfaction with colonial rule.
- Evaluate the reform measures implemented during under the colonial rule and how they served the interests of the Empire, particularly in the context of education.

SYLLABUS OF DSC-1

Unit I: India in the 18th century: Background, Debate

Unit II: Expansion and consolidation of British power:

3. Bengal, Mysore, Maratha, Punjab
4. Ideologies/Strategies of Raj

Unit III: Making of a colonial Economy:

4. Land Revenue Settlements
5. Commercialisation of Agriculture
6. De-Industrialisation

Unit IV: Social and Religious Reform Movements:

3. An overview of the reformist movements of the 19th century
4. Indigenous and Modern education

Unit V: The Revolt of 1857: Causes, Nature, and Consequences

Practical component (if any) - NIL

Essential/recommended readings

Pool of DSE for BA (Prog.)

DISCIPLINE SPECIFIC ELECTIVE COURSE (DSE): Merchant and Mercantile Practices in India

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Merchant and Mercantile Practices in India	4	3	1	0	12th Pass	NIL

Learning Objectives

This course explores the ways in which merchants and mercantile practices have been approached, appropriated and understood in Indian history. The diverse narratives of a high degree of merchant mobility, institutional adaptation, and diversification into banking and manufacturing map out dimensions of variation reflected in a huge diversity of business practice and social organization. The endeavor is to familiarize students with merchant communities and practices distinguished by location, geographic scope, and type of commodities traded. Their regional distribution, internal and social organization, standards for behaviour, and resource opportunities varied accordingly and thus one could analysis historical evolution of merchants and mercantile communities of the IndianSubcontinent and their changing role. Here response and adaptation of the mercantile communities towards the changing socio-political environment too becomes vital to be explored.

Learning outcomes

Students will also learn what histories of merchants and mercantile practices can tell us about ex-change patterns across social formations. We will aim simultaneously to see merchants and mate-rial culture more generally, as playing a fundamental role inthe shaping of our past.

Theory and Practical/ Field work/Hands-on-learning:

Through the course students are expected to continuously interact with the mercantile sector through programmes built into the academic curriculum like field studies, internships, projects, audio-visual projects and its cluster initiatives.

SYLLABUS OF DSE

Unit I: Introduction: Situating merchants and mercantile practices in Indian History

1. Sources and Historiography: Inscriptions, Bahis, Khatas, Khatpatras,
2. Inception: Mechanism and means of exchange and involvement of groups(barter, coined and uncoined money)

Unit II: Origins, Identities and Organizations of Merchant Communities:

1. Crafts and commerce in early historical India: Craft Guilds and Trading Guilds (Shreni, Puga, Nigama, Sartha) the Craftsperson as a Petty Trader: Organization, rules, and regulations;
2. Occupational specialisation and spatial distribution: Nagaram,
3. Mercantile Public Identities:Chettiars, Baniyas, Jains, Marwaris, Shikarpuris, Banjaras, Bohras, Parsis

Unit III: Social Interface and world of the Merchants

1. Momentum of Markets, Urbanisation and engagement of merchants in exchange practices/development of Mercantile spaces- qasbas, bazaars, katras, melas and haats,
2. Merchants and mercantile practices in relation to the state and temple in Medieval India.

Unit IV: Changing patterns of Mercantile Communities & Practices:

1. Growth of interregional specialisation and India's interaction with Global trade.
2. Merchant families, marriage alliances, family firms, and mercantile elites,
3. Money, instruments of exchange, banking and interest,
4. European Trade, Companies and Agency houses.

Practical component (if any) - NIL

Essential/recommended readings

Unit I: This unit seeks to introduce the concept of Mercantile activities and the role of merchants through the analysis of Inscriptions, Bahis, Khatas, Khatpatras, The ideais to make student familiar with the inception of mechanism and means of exchange and involvement of groups. **(Teaching time: 9 hrs. approx.)**

DISCIPLINE SPECIFIC ELECTIVE COURSE (DSE -2): Urbanisation and Urbanism in Indian

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Urbanisation and Urbanism in Indian History	**4**	**3**	**1**	**0**	**12 th Pass**	**NIL**

Learning Objectives

This course provides a comprehensive insight into the concepts of urbanisation, urbanism and urban centres in historical context. It aims to give the students an understanding of the process of urban development and decline in different historical periods and phases emphasising on the role of various factors and impetus including technology, trade, economic institutions, state-system and religious ideologies in the urbanization of prominent cities of Indian history.

Learning outcomes

On completion of this course, the students shall be able to:

- Discern the idea of urbanisation, urbanism, quintessential characteristics of an urban centre in distinct historical background and the determining factors of the emergence of urban centres in Indian history.
- Comprehend the origin and fall of early urbanism and urban centres in the light of archaeological evidence with special reference to first urbanization.
- Recognise the role of technology, economic development and state formations in the revival of urbanisation and important urban cities in ancient times.
- Identify the causes and features of urbanisation in medieval India after obtaining the knowledge of the cities in context of economic growth, political transformation and religious institutions.
- Engage with the idea of imperial ideology of the British government shaping the creation of colonial cities.
- Get acquainted with the various aspects of urbanization in the colonial period centred on trade, urban planning, transportation and polity.

SYLLABUS OF DSE-2

UNIT I: Interpreting Urbanization, Urbanism, and Urban-Rural Fringe; Survey of Sources and Historiography.

UNIT II: The First and Second Urbanization: Origin, Development, Decline and Continuity; Case studies - Harappa, Rakhigarhi, Mathura, Sopara and Kanchipuram.

UNIT III: Urban efflorescence in the medieval period: State, Trade and Religion; Case studies - Thanjavur, Hampi, Puri, Agra.

UNIT IV: Urbanization in the colonial period with special reference to trade, urban planning, transportation and polity; Case Studies - Madras, Calcutta, Bombay, New Delhi.

Practical component (if any) - NIL

Essential/recommended readings

Unit-I: This unit lays stress on the concepts of urbanisation, de-urbanisation, urbanism, and urban-rural relations in historical perspective. It further explains the subtle nuances of the various sources such as archaeological, literary and archival records while discussing the process of urbanisation, its several phases, patterns and classifications in Indian history. (Teaching Time: 6 hours approx.)

Unit IV. This unit aims to familiarise the students with the process of urbanization that was broadly influenced by the colonial policies of the British rule in India, and with the fact that urban centres were created as symbols of Imperialism. It further engages with the idea that trade and commerce, transportation, urban planning including landscapes allotted for administrative and educational purposes, as well as for cantonments, were linked to the creation of colonial cities. DISCIPLINE SPECIFIC ELECTIVE COURSE– 3 (DSE): Prehistory and Protohistory of India

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Prehistory and Protohistory of India	**4**	**3**	**1**	**0**	**12 th Pass**	**NIL**

Learning Objectives

This course aims to introduce the concepts of pre and proto history through a survey of various cultures/periods of the Indian subcontinent. The course provides an understanding of the shifts and developments in the technology and subsistence practices through the hunting-gathering, food producing, urban and Iron using societies. The cultural diversity of different geographical zones of the Indian subcontinent would behighlighted through a study of settlement patterns.

Learning outcomes

At the end of the course, students would:

- Have the ability to differentiate between various pre and proto historic cultures/periods.
- Understand the changes and continuity in distribution, tool technology and subsist-ence practices during the Palaeolithic and Mesolithic periods.
- Identify the characteristic features of Neolithic cultures in the Indiansubcontinent with their regional distribution
- Recognise the various copper using cultures of India.
- Distinguish the different phases of Harappan civilization.
- Locate the development of Iron technology in different geographical zones ofIndia.

SYLLABUS OF DSE

Unit 1: Introduction Understanding the concept, scope and terminology of Pre and Proto history

1. Sources

Unit 2: Prehistoric Hunter Gatherers

1. Survey of Palaeolithic cultures: Sites, Sequence, tool typology and technology, Subsistence patterns
2. Survey of Mesolithic cultures in India: distribution, tool technology andtypology and artefacts
3. Survey of rock art in India

Unit 3: Early Farming Communities: Beginning of Food Production

1. Understanding Neolithic: Regional distribution, subsistence practices andsettlement patterns

2. Survey of Chalcolithic cultures in Indian subcontinent

Unit 4: Harappan Civilization: Extent, features of urbanisation and legacy (4 Weeks)

1. Early Harappan
2. Mature Harappan
3. Late Harappan

Unit 5: Early Iron using societies: Beginning and development of iron technology (3 Weeks)

1. Survey of PGW Cultures in Indian Subcontinent with special reference to Ahichhatra and Atranjikhera
2. Megalithic Cultures: Distribution pattern, Burial practices and types

Practical component (if any) - NIL

Essential/recommended readings

Unit 1: In this unit the students will be introduced to the major concepts and terminologies relating to the prehistoric archaeology. They will also be introduced to the other such disciplines which are utilized in the interpretation of prehistoric objects. **(Teaching Time: 6 hrs. approx.)**

COMMON POOL OF GENERIC ELECTIVES (GE) COURSES

GENERIC ELECTIVES (GE-1): Twentieth Century World History: 1900 – 1945.

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Twentieth Century World History: 1900 – 1945.	4	3	1	0	12th Pass	NIL

Learning Objectives

This course conveys an understanding of an interconnected world history in the twentieth century. The course focuses on, why and how the world changed in the first half of the twentieth century. It also offers specific case studies to empirically underline the holistic nature of world history. One of the aims of this course is to make UGstudents aware of the contemporary world of ideas they inhabit.

Learning outcomes

This course will enable the students to:

- Define world history, and the factors, that determined it in the twentieth century.
- Understand key concepts like Imperialism, Colonialism and the world wars whichacted as catalysts of historical change throughout the world
- Comprehend the twentieth century revolutions and dictatorships in their variousforms.

SYLLABUS OF GE

Unit I: The Concept and Definition of World History: An Overview
Modernity, Imperialism, Colonialism, Interconnectedness, Economic Crisis, Revolutions, anti- colonial struggles

Unit II: First World War:

1. Consequences in Europe and the world,
2. League of Nations

Unit III: 1917 Russian Revolution:

1. Formation of the USSR;
2. Debates on socialism and the role of the Communist International (Comintern)

Unit IV: Fascism, Nazism and Militarism:

1. Italy,
2. Germany
3. Japan
4. Spain

Unit V: Second World War

1. Causes
2. Main Events
3. Consequences

Essential Readings

Unit 1: This Unit shall introduce the students to the concept and definition of world history. **(Teaching Time: 6 hrs. approx.)**

GENERIC ELECTIVES (GE-2): Women in Indian History

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Women in Indian History	4	3	1	0	12 th Pass	NIL

Learning Objectives

The paper introduces learners to a historical analysis of the lived experiences of women at specific historical moments in the Indian subcontinent. It explores the concerned issues within an interdisciplinary framework. The students will also be familiarized with the theoretical reflections on the study of women's issues with reference to latest researchesin the field. The course seeks to make students reflect on the specificity of women's issues in different times and con-texts. At the same time, it also traces deeper continuities from a gender perspective.

Learning outcomes

After successful completion of the course, students will be able to:

- Provide an elementary outline of gender as a concept and patriarchy as ahistorically constituted system of power.
- Explore women's experiences within specific contexts at specific historicalmoments.
- To discuss the material basis of women's experiences with reference to specificissues like ownership of property.

SYLLABUS OF GE

Unit I: Exploring Aspects of History of women in India

1. Understanding Gender
2. Patriarchy, Patrilocality, Patriliny ,and Matriarchy, Matrilocality and Matriliny

Unit II: Women in Ancient India

1. Evolution of Patriarchy in Early India
2. Women and work: voices from Sangam Corpus

Unit III: Women in Medieval India

1. Politics of the Harem and Public Sphere
2. Women Queens and Bhaktas: Case Studies of Queen Kittur Chennamma and Mira Bai

Unit IV: Women in Modern India

1. Debates on Women Education: Women Participation in Indian NationalMovement

2. Partition, Refugee Women and Rehabilitation.

Practical component (if any) - NIL

Essential/recommended readings

Unit I. The unit aims to familiarize students with the theoretical framework of Gender with special focus on patriarchy and feminism and how these concepts can provide tools for historical analysis. **(Teaching Time: 6 hrs. approx.)**

- Bhasin, Kamla. (2000). Understanding Gender. New Delhi: Women Unlimited.

Unit II. The segment should apprise students of historiographical trends in ancient India pertaining to women. The idea is to explore their voices in specific spaces and during historical moments. **(Teaching Time: 15 hrs. approx.)**

- Instead put Uma Chakravarti.(2009). Of Meta Narratives and Master Paradigms: Sexuality and the Reification of Women in Early India. CWDS Occasional Paper.and State". Economic and Political Weekly. Vol. 28 no.14, pp. 579- 85.
- Ramaswamy, Vijaya. (2000). "Aspects of Women and Work in Early South India".

Unit III. The focus in this section is on studying women through fluctuating gender relations in diverse spaces and explore linkages between women, power and politics.**(Teaching Time: 12 hrs. approx.)**

DISCIPLINE SPECIFIC ELECTIVE COURSE (DSE -2): Thoughts in Indian History

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Thoughts in Indian History	4	3	1	0	12th Pass	NIL

Learning Objectives

Thoughts and ideas, especially about history, across time and cultures have always been a fascination dimension of history, not long ago, even serving as entry-points for their understanding. Imageries about cosmology, human physiology, life and death, amongst several others, have helped mankind conceptualise everything around them – from real to fantacised experiences – in past. In historical times, with the accompanying complexities of human, social and institutional lives, these thoughts got more systematized and sophisticated in their articulation in historical records. Cosmological imageries underpinned astrological insights or vice-versa, soil irrigation facilitated medical models of hu-man physiology, food chain and interdependence offered insights into social ordering and so forth.

Learning outcomes

The paper 'Thought in Indian History' attempts to cull and analyse several such thoughts and ide-as that are germane to the Indian social, political and spiritual life across time in history. Notions about state, sovereignty, kingship, wellness, gender, social order, 'ahimsa', freedom and justice – as conceived and elaborated in a select set of historical works across the ancient, medieval and modern Indian history – constitute the reference coordinates to analyse and make sense of various trajectories of Indian past, including their spill-over to the contemporary times.

SYLLABUS OF GE-3

Arthashastra of Kautilya
Nitisara
Rajatarangini of Kalhana
Ziauddin Barani: Fatwa-i Jahandari
Mahatma Gandhi
B. R. Ambedkar

Practical component (if any) - NIL

Essential/recommended readings
Arthashastra
Essential Readings:

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

SEMESTER – VI

DEPARTMENT OF HISTORY

Category I

[UG Programme for Bachelor in History (Honours) degree in three years]

DISCIPLINE SPECIFIC CORE COURSE -1 (DSC-1) – : History of India – VII: 1600 – 1750s

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
History of India – VII: 1600 – 1750s	4	3	1	0	Class XII	Should have studies History of India I – VI

Learning Objectives

The course draws students into a discussion of the multiple historiographical narratives available for the history of India in the period between the early seventeenth and the mid-eighteenth centuries. It intends to familiarise them with challenges that the Mughal Empire faced in the process of territorial expansion and regional contestations. Students also get to explore state sponsored art and architecture as a visual expression of authority. They would also be introduced to the nature of the pre-colonial agrarian society as well as Indian participation in the international trade. In addition, the course aims to introduce students to contrasting religious ideologies of the times and their effect on the contemporary political dispensation.

Learning outcomes

On completion of this course, the students shall be able to:

- Critically evaluate the gamut of non-Persian contemporaneous literature available in the form of personal accounts and vernacular tradition.
- Describe the major social, economic, political and cultural developments of the times
- Explain the intellectual ferment of the seventeenth and eighteenth centuries and its relation to state policies.
- Discern the larger motives behind the Imperial patronage of art and architecture

- Understand the complexities of medieval Indian rural society and appreciate the resilience of the mercantile communities in furthering the maritime trade of India with long term economic implications.

SYLLABUS OF DSC-1

Unit I. Sources

1. Sanskrit Sources
2. Travelogues- Bernier and Manucci
3. Vernacular Literary Traditions- Mangal Kavya

Unit II. Political Developments and State Formation

1. Rajput State Formation and Negotiations
2. Mughal State- Changes and Crises
3. Maratha State under Shivaji and Peshwas

Unit III. Religious Ideas and Visual Culture

1. Religious ideas of Dara Shikoh; Aurangzeb's policy towards Jizya, Temples and Music
2. Articulation of Imperial Ideology: Mughals and Nayakas
3. Art- Allegory and Symbolism in the Paintings of Rajput and Mughal Paintings
4. Architecture- Shahjahanabad

Unit IV. Economy and Society

1. Rural Society- Village Community; Role of Zamindars
2. Merchant Communities
3. Pattern of India's Oceanic Trade and its impact on the Indian Economy

Practical component (if any) - NIL

Essential/recommended readings

Unit I: Introduces students to the historical source materials of the seventeenth and the eighteenth centuries other than the official chronicles. Through reading non-official, courtly and vernacular, public and personal accounts students shall be urged to think through histories, genres, and sources and rethink the above categories. The unit thus, contemplates a critical historiography. (Teaching Time: 9 hours Approx.)

DISCIPLINE SPECIFIC CORE COURSE (DSC-2): History of India – VIII: c. 1857 – 1950

Credit distribution, Eligibility and Prerequisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
History of India – VIII: c. 1857 – 1950	4	3	1	0	Class XII	Should have studies History of India I – VI

Learning Objectives

This paper introduces students to broad aspects of formation of identities and the manner in which these identities unfolded themselves during the course of the Indian freedom struggle. It provides an overview of socio-economic and political trends in colonial India from the latter half of the 19th century. The paper critically analyses the various trends in the national liberation movement and other aspects of politics which were foundational for the modern Indian state. The aim is to develop interdisciplinary analytical skills at the undergraduate level.

Learning outcomes

After successful completion of the course, the students will be able to:

- Identify how community, caste, and national identity developed in the late 19th, and early 20th centuries.
- Outline the social and economic facets of colonial India and their influence on the national movement.
- Explain the various trends of anti-colonial struggles in colonial India.
- Analyse the complex developments leading to partition and independence.
- Discuss the key debates on the making of the Indian Constitution, and need for socio- economic restructuring after independence

SYLLABUS OF DSC- 2

Unit 1: Colonial Economy

1. Economic critique of colonial rule with special reference to Drain of Wealth
2. Rise of modern industry and capitalist class

Unit 2: Early Nationalism

1. Emergence of Indian National Congress (INC)

2. ‘Moderates’ and ‘Extremists’ Nationalist
3. Swadeshi and early Revolutionary Movements

Unit 3: Emergence and social base of Gandhian Nationalism
1. Foundations of Gandhian Nationalism
2. Gandhi and National Movements
    a. Champaran, Kheda, Ahmedabad,
    b. Rowlatt, Khilafat and Non-Cooperation Movements
    c. Civil Disobedience Movement
    d. d) Quit India Movement

Unit 4: Alternative trends in National Movement
1. Ambedkar and the Dalit Movement, Dravidian movements
2. Hindustan Socialist Republican Association (HSRA) and Revolutionary Movements
3. Gadhar, Singh Sabha and the Akali Movement
4. Peasants, Workers and Tribal movements; Emergence of the Left
5. Subhas Chandra Bose and Indian National Army; Royal Indian Navy Mutiny

Unit 5: Towards Independence and after
1. Independence and Partition
2. The Making of the Constitution

Unit 6: Formation of Identities
1. Caste
2. Community
3. Nation

Practical component (if any) - NIL

Essential/recommended readings

Unit I: This unit studies aspects of the colonial economy and its critique particularly with reference to the phenomenon of ‘Drain of Wealth. It develops an understanding of the emergence of modern industry and capitalist class in colonial India. **(Teaching Time: 6 hours Approx.)**

DISCIPLINE SPECIFIC CORE COURSE (DSC-3): History of Modern Europe – II

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
History of Modern Europe – II	**4**	**3**	**1**	**0**	**Class XII**	**Should have studies History of India I – VI**

Learning Objectives

This paper offers a historical overview of the development of nationalities and nation-states in the 19th and 20th centuries. Among the various case studies discussed, the paper traces the build-up to a revolution in the disintegrating Russian empire. It also introduces students to the concept of imperialism. In this light, the paper discusses the varied historical writings on World War One and on the nature of developments during the inter-war period. It familiarises students with the intellectual and art movements that were linked to the changes in the socio-economic and political milieu of 19th and early 20th century Europe.

Learning outcomes

Upon completion of this course the student shall be able to:

- Trace varieties of nationalists and the processes by which new nation-states were carved out.
- Discuss the peculiarities of the disintegration of large empires and remaking of Europe's map.
- Deliberate on the meaning of imperialism and the manifestations of imperialist rivalry and expansion in the 19th and early 20th century.
- Analyse the conflict between radical and conservative forces, and the gradual consolidation of ultra-nationalist and authoritarian regimes in Europe.
- Contextualise major currents in the intellectual sphere and arts.

SYLLABUS OF DSC-3

Unit I: Nations and Nationalism in the nineteenth century

1. Theories of Nationalism

2. Nationalist aspirations in Germany, Italy and the Austro-Hungarian Empire / Ottoman Empire
3. State and Politics in post-unification Germany / Italy

Unit II: The First World War and Revolutions
1. Theories of Imperialism
2. Causes and Impact of the War: Historiographical debates
3. Revolutions: Russia 1905 and 1917

Unit III: Europe Between the World Wars
1. Fascism: Historiographical debates
2. Nature of the State in Fascist Italy / Nazi Germany
3. Origins of the Second World War

Unit IV: Cultural Transformation of Europe (1850-1939)
Choose any two sub themes for study (1) or (2) or (3)
- Trends in Painting, Architecture and National Art Galleries
- [Emerging Forms of Expression: Photography, Radio and Cinema
- Institutions of Knowledge: Exhibitions, Museums / Archives and History as a discipline

Practical component (if any) - NIL

Essential/recommended readings

Unit I: At the end of this rubric the student will be expected to comprehend the important theories on nationalism, which are crucial for recognising the nature of different nationalist aspirations that emerged in nineteenth century Europe. The student would also be able to demonstrate an understanding of the complex political and economic interplay associated with the unification of Germany and Italy. Students will be able to trace these complexities into the politics of state formation post unification. **(Teaching time: 12 hours Approx.)**

Unit-II: At the end of this rubric the student will be familiar with the key theories on imperialism which are important for understanding the outbreak of the World Wars and the complex post-War scenarios. The student will also be familiarized with a range of historiographical issues reflected in historical analyses of the First World War. The student will also learn of how revolutionary possibilities emerged during the First World War. In this regard, the economic, social and political issues that led to the fall of the Tsarist regime in Russia and emergence of a socialist state by October 1917 will be explained. **(Teaching time: 12 hours Approx.)**

Unit- III: The student will be expected to develop an understanding of European politics of the inter-war period. She/he will examine the emergence of international institutions and the impact of war on European society and economy. This would also be essential to the students' understanding of the emergence of right wing movements in Europe. The student will be expected to demonstrate a familiarity with the historiographical debates and discussion associated with the rise and development of the fascist/Nazi state in Italy and Germany, eventually leading to the outbreak of the Second World War. **(Teaching time: 12 hours Approx.)**

DISCIPLINE SPECIFIC ELECTIVE COURSE (DSE): Gender in Indian History, c.1500-1950

Credit distribution, Eligibility and Prerequisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Gender in Indian History, c.1500-1950	4	3	1	0	Class XII	

Learning Objectives

The module will delineate gendered constructs in Early Modern and Modern India. It contextualizes the participation and contribution of women in courtly culture and domestic spaces. While examining questions and debates on law, education, social differentiation and partition, it questions patriarchy and the nuances of historical gender dynamics. The course tries to historicize and analyse institutions of family and norms of manhood. The course also tries to give students a critical overview of the tangled paradigms that labels women as victims and agents, and objects and subjects.

Learning outcomes

Upon completion of this course the student shall be able to:

- Critically assess popularly held notions about women in Islamic empires.
- Examine critical issues of gender and power in the context of Early Modern and Modern Indian history.
- Examine the issues around the 'women's question' in the modern period of Indian history.
- Discuss issues of gender in the context of partition and the post-partition period of the construction of the independent state.

SYLLABUS OF DSE – 1

Unit I: Women in Early Modern India: 1500 to 1750's

Rethinking Courtly and Domestic Spaces: Power, Household and Family

Constructing Gender Identities: Behaviour and Practices

Unit II: Women, Colonialism and Modernity: 1750's to 1950's

The Women's Question: Social Reform, Law and Education

Women, Work and Social Differentiation

Gender and Print Culture

Unit III: Partition and Women: Family, Community and State

Practical component (if any) - NIL

Essential/recommended readings

Unit I: Women in Early Modern India: 1500 to 1750's

The learning outcome of this unit is to question gender stereotypes about women in Early Modern India. It provides for a more contextual and nuanced understanding of how historical and gendered constructions of spaces, institutions and norms helped create sensibilities in Early Modern India. (Teaching time: 18 hours)

- Joshi, Varsha, Polygamy and Purdah: Women and Society among Rajputs. Jaipur: Rawat Publications, 1995.

DISCIPLINE SPECIFIC ELECTIVE COURSE : Fundamentals of Historical Methodology

NOTE: 'Fundamentals of Historical Methodology' is offered as one of the DSE courses in VI and VII Semesters. Students of the History Honors Program can opt for it either in the VI semester or VII semester.

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Fundamentals of Historical Methodology DSE – No.#	4	3	1	-	Class 12th Pass	Nil

Learning Objectives

This course aims to prepare the students with elementary techniques of conducting historical research within the larger social science framework. It does so by familiarising them with the theoretical frameworks and procedures/techniques of research that historians deploy in order to construct a meaningful narrative about the past. The course proceeds to equip students with the preliminary research steps like identifying research questions, theoretical context, survey of the literature; locating reliable sources; framing a research paper, etc.; as well acquainting them with research ethics.

Learning Outcomes

Having finished the course, the students would have learnt:

- The distinctiveness of historical research
- The issues and problems in writing history
- How to carefully choose interpretative techniques when reading sources
- How to choose a historical "field" and within that field a specific research question
- The skills and protocols related to academic writing and research in history
- The essentials of research ethics.

SYLLABUS OF DSE

Unit I: Distinctiveness of historical inquiry

1. The nature of history
2. The scope of historical research

Unit II: Issues and problems in historical research

1. Facts and inference
2. Explanation and historical research
3. Objectivity and history writing
4. History writing and relations of power

Unit III: Sources and interpretation

1. Types of historical sources: their use and limitations
2. Analytical frames in historical research
3. Varieties of approaches to sources and methods

Unit IV: Conducting historical research

1. Selecting a topic and preliminary work
2. Protocols of academic writing and avoiding plagiarism

Practical component (if any) - NIL

Essential/recommended readings:

Unit I: This introductory Unit seeks to enable students to i) distinguish the historical from the past, memory and myth; ii) comprehend the relationship of history with social science theories and concepts; iii) distinguish aspects of history (social, political, economic, religious, cultural, ecological). (Teaching Time: 9 hours)

DISCIPLINE SPECIFIC CORE COURSE (DSE-3) – : Select Themes in the History of Education in India

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Select Themes in the History of Education in India	**4**	**3**	**1**	**0**	**12th Pass**	**NIL**

Learning Objectives

This course will provide students with a critical understanding of different historical traditions of education in India from ancient to colonial periods and their socio-political aspects. It is a thematic course, which seeks to focus on various aspects of formal and informal systems of education in India from the earliest times to the modern period. The course takes up some aspects of the rich and varied epistemological traditions, practices and pedagogies that emerged, evolved, adopted or adapted in the Indian subcontinent.

Learning outcomes

- The course will enhance learners' comprehension of the complex historical trajectories of the expansion as well as limitations of educational opportunities in India;
- It will allow them to understand the diverse manner in which production and reproduction of knowledge took place through formal and informal socio-cultural networks.
- It will make them aware about the rich educational legacy of India and enable them to make a critical appraisal of the same.
- The course will create a greater understanding of the linkage between education and power, the role of the state, the elite and different social categories in deciding what construes as 'knowledge', its transmission, the strategies of inclusion and exclusion in knowledge dissemination in different regions and in varied chronological frameworks.
- It will provide them historical insights to engage with the issues of contemporary education.

SYLLABUS OF DSE-3

Unit 1. Knowledge Traditions, Pedagogy and Centres of Learning in Ancient India.

Unit 2. Educational Institutions and Knowledge Formation in India from 11th to 18th century.
Unit 3. History of Education during Colonial Period.
Unit 4. Educational Discourse of Freedom Struggle.

Practical component (if any) - NIL

Essential/recommended readings

Unit 1. This unit will trace the emergence of diverse knowledge traditions and the methods adopted for their transmission and dissemination. Students will be introduced to the key epistemological concepts and the philosophical traditions, and how what was construed as knowledge and education was constantly being debated, contested and modified. The unit will explore the varied pedagogic practices prevalent in ancient India - from the early Vedic śākhās to centres of learnings like Taxila and Nalanda; along with others. This unit will also familiarise the students with diverse knowledge systems from the Vedic and post-Vedic corpus, Buddhist and Jain scriptures, Carvaka and Tantric philosophy, early numerical systems, along with practices and traditions of healing, such as Ayurveda and Yoga. Knowledge traditions, concepts and educational practices will be critically interpreted in the context of their linkages with socio-political and religious structures of power and social stratifications and the question of their accessibility to caste, gender and other marginalised categories. (eleven hours)

Essential Readings:

- Divakaran, P.P. (2019), The Mathematics of India: Concepts, Methods, Connections, Springer, Singapore. Introduction. pp. 1-21.
- Lowe, Roy, Yasuhara, Yoshihito. (2016), The Origins of Higher Learning: Knowledge Networks and the Early Development of Universities, Routledge. Chapter Two 'From the Indus to the Ganges, Spread of Higher Learning in India'.

Unit 2. This unit engages with different kinds of institutional, communitarian and individual arrangements of learning and structures of patronage that existed in India from 11th to 18th century. It explores how these arrangements promoted the development of different knowledge traditions in different trans-local linguistic idioms, such as Sanskrit, Arabic and Persian alongside with a wide range of literature and genres within regional languages and translation projects in different fields like Philosophy, Philology, Aesthetics, Astrology, Law,

Mathematics, Physical Sciences, Medicine, Music, Hermeneutics, Grammar, Lexicography and Doxography. It will also deal with the questions of what were the forces of educational expansion as well as control over it, and what does this history of education tell us about social relations in the period under study. (eleven hours)

Unit 3. This unit deals with the emergence of colonial education and marginalization of indigenous education from 18th century onwards. How the two systems, indigenous and the colonial, impacted each other during this period. How this transition was shaped by the interventions of the colonial state, Christian missionaries, dominant castes and classes and the social reformers?? It will engage with how the nature of education during this period was shaped by the colonial state and dominant sections of Indian society, and what were the implications of this alliance in general and particularly for marginalised sections. It will also explore how the colonial education transformed language hierarchies and knowledge traditions in India. (twelve hours)

DISCIPLINE SPECIFIC ELECTIVE COURSE (DSE-4): History of Latin America c. 1500 – 1960s

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
History of Latin America c. 1500 – 1960s	**4**	**3**	**1**	**0**	**12th Pass**	**NIL**

Learning Objectives

This paper offers a historical overview of Latin America. It traces major long- term continuities and changes in Latin America's socio-economic structures, cultural life and political formations from the 16th century to the mid-twentieth century. The paper closely examines colonial trade and rule, as well as anti-colonial resistance. It offers a critical analysis of the immediate years post-independence, and situates the specific positioning of Latin America in connected histories of a globalising world.

Learning outcomes

On completion of this course the student shall be able to

- Critique stereotypes on Latin America and outline major shifts in Latin American history.
- Explain elements of change and continuity in Latin American polities, economy, society and cultural milieu from the 16th to 20th centuries.
- Contextualise the impact of colonialism on Latin America.
- Explain social protest and anti-colonial resistance in Latin America, as well as practices of 'transculturation'.
- Discuss the dilemmas and contradictions emerging from the post-independence economic, social, political and cultural milieu.

SYLLABUS OF DSE-4

Unit I: Historiography

Unit II: Colonization of Central and South America by Iberian powers and Movements for In-dependence:

1. Driving forces for conquest; Impacts of colonization – key agrarian transformation; the question of labour and slavery; transatlantic commerce

and the modern world system; institutions of state; the advent of Christianity and evangelization.
2. Movements for independence in the early 19th century

Unit III: Developments in the new Latin American Nations (1830s-1930s): Case studies of Mexico, Argentina, and Brazil
1. Class and state formation, industrialization, export economies, immigration
2. Popular culture

Unit IV: Political and socio-cultural developments, 1930s to the 1960s
1. Authoritarianism, populism, revolutions
2. Politics of literature, music and sports

Practical component (if any) - NIL

Essential/recommended readings

Unit-I: This Unit provides an introduction into what constitutes as Latin America and the importance of the engaging with the modern history of the region. The Unit also familiarizes the students with the historiography of Latin America. **(Teaching time: 9 hours Approx.)**

- Bethell, L., ed. (1997). Cambridge History of Latin America: Colonial Latin America, Vol.
- II. Cambridge: Cambridge University Press.
- Bethell, L., ed. (2002). Cambridge History of Latin America: From Independence to c. 1870, Vol. III. Cambridge: Cambridge University Press.

Unit II: This Unit provides an overview of the colonization of Central and South America by Spain and Portugal from 1490s onwards. It will also examine the nature of important transformations ushered in by the colonial encounter, as well as the early independence struggles against the Spanish and Portuguese. **(Teaching time: 9 hours Approx.)**

- Chasteen, J. (2006). Born in Blood and Fire: A Concise History of Latin America. New York: W.W. Norton and Company.

DISCIPLINE SPECIFIC CORE COURSE (DSC-1): History of India 1858 – 1947

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
History of India 1858 – 1947	**4**	**3**	**1**	**0**	**Class XII**	**Should have History of India I – VI**

Learning Objectives

The paper aims to engage students in a critical discussion of socio-economic and political trends in colonial India since the latter half of the 19th century. The paper focuses on the rise of national consciousness which manifested itself into a powerful anti-colonial nationalist movement that developed along several trajectories. It makes an attempt to critically examine various currents of the national movement which often intersected with one another each other. The paper would also look at the development of communal politics as well as Partition and Independence.

Learning outcomes

On completion of this course the student shall be able to:

- Examine various reform movements as well as issues such as gender and caste.
- Understand how the socio-political and economic experiences of the people of India under colonial rule provided a context for the emergence of a powerful anti-colonial nationalist movement in India.
- Analyse the complexities of communal politics that resulted in Partition and Independence.

SYLLABUS OF DSC-1

Unit I: Social issues and Reform Movements:

1. Revivalist / Reformist Movements of the 19th century
2. Phule, Ambedkar and the Caste question
3. Women
4. Peasants, Tribal and the Caste movements
5. Arya Samaj

Unit II: Economy under the colonial state:

1. Drain of Wealth
2. Modern Industries and Industrialization
3. Indian capitalist class

Unit III: Nationalist Politics:

1. Rise and Growth of Nationalism
2. Foundation of Indian National Congress
3. 'Moderates' and 'Extremists' Nationalists
4. Mahatma Gandhi and Mass Nationalism: Gandhian thought, techniques and movements

Unit IV: Other currents in Nationalism:

1. Hindustan Socialist Republican Association (HSRA) and Bhagat Singh
2. Subhas Chandra Bose and INA
3. Left: peasants, workers movements, Jayaprakash and Narayans socialist party
4. Nationalist politics in southern India

Unit V: Towards Freedom:

1. Overview of the growth of communal politics
2. Freedom and Partition

Practical component (if any) - NIL

Essential/recommended readings

Unit I: The unit seeks to study various reform movements as well as issues such as gender and caste. **(Teaching time: 9 hours Approx.)**

DISCIPLINE SPECIFIC CORE COURSE (DSC-2): History of Europe: 1870 – 1945

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
History of Europe: 1870 – 1945	4	3	1	0	12th Pass	NIL

Learning Objectives

This paper offers a historical overview of the consolidation of capitalist industrialization in the late nineteenth century, and its impact in terms of facilitating the age of 'new imperialism'. Among the key case studies discussed, the paper traces the build-up to a revolution in the disintegrating Russian empire. It details the formation of defensive alliances and power blocs, as well as contentious international issues that led up to First World War. The paper proceeds to discuss the crucial aspects of the post-War Peace Settlement, and the emergence of ultra-nationalist regimes prior to the Second World War. The course of the Second World War and important developments stemming from it are also highlighted in the paper.

Learning outcomes

Upon completion of this course the student shall be able to:

- Deliberate on the meaning of imperialism and the manifestations of imperialist rivalry and expansion in the 19th and early 20th century.
- Distinguish the varied impacts of the First World War as well as the outbreak of a revolution in the Russian Empire during the War.
- Analyse the conflict between radical and conservative forces, and the gradual consolidation of ultra-nationalist and authoritarian regimes in Europe between the World Wars.
- Delineate the reasons for the outbreak of the Second World War, and the course of the War.
- Analyse the key, immediate repercussions of the Second World War

SYLLABUS OF DSC-2

Unit-I: The European economy in the late 19th century

1. Second Industrial Revolution, new business practices, new consumption patterns
2. The economic down turn of 1873; growth of finance capital

Unit II: European politics, 1870-1918

1. Political developments in the Russian Empire (1905 revolution; February and October revolutions of 1917)
2. The 'Eastern question' and Balkan nationalism; scramble for African colonies; imperialist rivalries; power blocks and alliances
3. The First World War 1914-1918

Unit III: Europe between the World Wars

1. The Post-War Peace Settlement (treaties, League of Nations and International Labour Organization); Comintern on national liberation struggles and fascism; economic crisis-the Great Depression of 1929
2. Growth of Fascism (Italy) and Nazism (Germany)
3. Spanish Civil War

Unit IV: Catastrophe of WWII

1. World War II: Causes, civilian resistance to allied victory
2. Repercussions of WWII: UNO; origins of the Cold War

Practical component (if any) - NIL

Essential/recommended readings

Unit-1: In this Unit, the students will discuss the industrial, technological, and commercial innovations that characterized the latter half of the nineteenth century, and which backed the ambitions of the emerging nation-states in Europe. An overview will be provided of the growth the capitalism in its imperialist phase. **(Teaching time: 9 hours approx.)**

Learning Objectives

The paper aims to engage students in a critical discussion of socio-economic and political trends in colonial India since the latter half of the 19th century. The paper focuses on the rise of national consciousness which manifested itself into a powerful anti-colonial nationalist movement that developed along several trajectories. It makes an attempt to critically examine various currents of the national movement which often intersected with one another each other. The paper would also look at the development of communal politics as well as Partition and Independence.

Learning outcomes

On completion of this course the student shall be able to:

- Examine various reform movements as well as issues such as gender and caste.
- Understand how the socio-political and economic experiences of the people of India under colonial rule provided a context for the emergence of a powerful anti-colonial nationalist movement in India.
- Analyse the complexities of communal politics that resulted in Partition and Independence.

SYLLABUS OF DSC-1

Unit I: Social issues and Reform Movements:

6. Revivalist / Reformist Movements of the 19th century
7. Phule, Ambedkar and the Caste question
8. Women
9. Peasants, Tribal and the Caste movements
10. Arya Samaj

Unit II: Economy under the colonial state:

4. Drain of Wealth
5. Modern Industries and Industrialization
6. Indian capitalist class

Unit III: Nationalist Politics:

5. Rise and Growth of Nationalism
6. Foundation of Indian National Congress
7. 'Moderates' and 'Extremists' Nationalists
8. Mahatma Gandhi and Mass Nationalism: Gandhian thought, techniques and movements

Unit IV: Other currents in Nationalism:

5. Hindustan Socialist Republican Association (HSRA) and Bhagat Singh
6. Subhas Chandra Bose and INA
7. Left: peasants, workers movements, Jayaprakash and Narayans socialist party
8. Nationalist politics in southern India

Unit V: Towards Freedom:

3. Overview of the growth of communal politics
4. Freedom and Partition

Practical component (if any) - NIL

Essential/recommended readings

Unit I: The unit seeks to study various reform movements as well as issues such as gender and caste. **(Teaching time: 9 hours Approx.)**

Pool of DSE for Multidiciplinary Studies

DISCIPLINE SPECIFIC ELECTIVE COURSE (DSE -1): Art, Society and Culture in India c. 300 BCE to 1000 CE

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Art, Society and Culture in India c. 300 BCE to 1000 CE	4	3	1	0	12th Pass	NIL

Learning Objectives

This paper deals with the three most important and interconnected broad facets of history i.e art, society and culture from early historical to early medieval periods. Their trajectory of develop-ment, dynamic and ever evolving nature is highlighted clearly through this study. A regional rep-resentational approach has been adopted in order to provide a comprehensive approach to the pa-per.

Learning outcomes

At the end of the course students should be able to:

- Grasp various dimensions of visual medium of art, architecture, sculpture and paintings, as a primary source of history, which will enable them to develop a deep understanding of the theme.
- Comprehend the different perspectives that explain the emergence and crystallization of various social structures – varna, jati, untouchability and also gender relations.
- Understand that the society displayed flexibility in terms of assimilation, mobility, providing corresponding spaces to new entrants.
- Grasp the essentials of the major religious traditions of the given time period.
- Develop an understanding about the cultural florescence as reflected in rich literature produced in Sanskrit and vernacular languages.

SYLLABUS OF DSE-1

UNIT I:

1. Mauryan period: architecture, sculpture, terracotta; sources of inspiration

2. Post Mauryan period: features of Stupa architecture and relief sculptures: case study of Sanchi or Amravati – narrative art; patronage of art, terracottas; Mathura, Gandhara and Amravati schools of art
3. Rock architecture of western ghats
4. Gupta period: temples, rock cut caves and sculpture, Paintings
5. Post – Gupta period: Pratiharas, Pallava and Chalukya architecture

UNIT II:

1. Social stratification and changes within: class; varna; jati; varnasamkara, untouchability; gender relations; marriage and property relations

Unit III:

2. Religious doctrines and practices: renunciatory tradition with special reference to Buddhism, Jainism
3. Theistic trends: Puranic Hinduism – Visnuism, Sivaism and Saktism; Murugan cult of south India; the Mahayana schools; the emergence of Tantra
4. Literary and technical works in Sanskrit, Prakrit and Tamil

Practical component (if any) - NIL

DISCIPLINE SPECIFIC ELECTIVE COURSE (DSE-2): Basics of Historical Research Methodology

NOTE: 'Fundamentals of Historical Methodology' is offered as one of the DSE courses in VI and VII Semesters. Students of the History Honors Program can opt for it either in the VI semester or VII semester.

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Fundamentals of Historical Methodology DSE – No.#	4	3	1	-	12th Pass	NIL

Learning Objectives

This course aims to prepare the students with elementary techniques of conducting historical research within the larger social science framework. It does so by familiarising them with the theoretical frameworks and procedures/techniques of research that historians deploy in order to construct a meaningful narrative about the past. The course proceeds to equip students with the preliminary research steps like identifying research questions, theoretical context, survey of the literature; locating reliable sources; framing a research paper, etc.; as well acquainting them with research ethics.

Learning Outcomes

Having finished the course, the students would have learnt:

- The distinctiveness of historical research
- The issues and problems in writing history
- How to carefully choose interpretative techniques when reading sources
- How to choose a historical "field" and within that field a specific research question
- The skills and protocols related to academic writing and research in history
- The essentials of research ethics.

SYLLABUS OF DSE

Unit I: Distinctiveness of historical inquiry

3. The nature of history

4. The scope of historical research

Unit II: Issues and problems in historical research

5. Facts and inference
6. Explanation and historical research
7. Objectivity and history writing
8. History writing and relations of power

Unit III: Sources and interpretation

4. Types of historical sources: their use and limitations
5. Analytical frames in historical research
6. Varieties of approaches to sources and methods

Unit IV: Conducting historical research

3. Selecting a topic and preliminary work
4. Protocols of academic writing and avoiding plagiarism

Practical component (if any) - NIL

Essential/recommended readings:

Unit I: This introductory Unit seeks to enable students to i) distinguish the historical from the past, memory and myth; ii) comprehend the relationship of history with social science theories and concepts; iii) distinguish aspects of history (social, political, economic, religious, cultural, ecological). (Teaching Time: 9 hours)

- Hobsbawm, Eric J. (1998). On History, UK: Abacus (Ch.2, "A Sense of the Past", and Ch.3, "What Can History Tell Us About Contemporary Society").

DISCIPLINE SPECIFIC ELECTIVE COURSE (DSE-3): Travel in History: Trade, Politics and Society

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Travel in History: Trade, Politics and Society	**4**	**3**	**1**	**0**	**12th Pass**	**NIL**

Learning Objectives

This paper shall provide an overview of the history of travel. It will acquaint students with the various genres, contexts and cultural literary traditions in which these travels were undertaken and written about. The course focusses on the transformative nature of travel especially the impact of industrialisation. The course will show the student how new technologies impacted the movement of people and their ability to record their experiences. Through a critical historical and literary study of a select list of travelogues, the course would introduce the stu-dents to the varied interests of travellers and their descriptions of local societies, economic practices and socio-cultural traditions. It will engage students with a series of problematics and issues arising from writings on cross cultural engagements and social stereotyping associated with European colonialism. This course will equip stu-dents to critically read travelogues and commentaries on travels.

Learning outcomes

After completing the course students will be able to:

- Describe and historically analyse various aspects of travel experience and writing.
- Analyse the the varied and changing engagements of travellers in time.
- Develop the skills to analyse travelogues and critically evaluate cross cultural literature.
- Critically engage with the Eurocentric emphasis in travel narratives.
- Critically examine questions of colonialism, technology, race, language, gender and religion in travel narratives.

SYLLABUS OF DSE-3

Unit I: Writing Travel:

1. Writing Travel: Genre, Time and Place

2. Travel in History: Religion, Society and Economy

Unit II: Travel in the Modern Era

1. Industrialisation and a new travel culture: Railways and Photography
2. The Nineteenth and Twentieth centuries

Unit III: Travel, Texts and History (choose any 3 travellers, select at least 1 from each category)

Travel in the Pre-Modern World: [I] Huen tsang [ii] Marco Polo [iii] Christopher Colombus [iv] Varthema [v] Jan Huygen van Linschoten [vi] Guru Nanak

B. Travel in the Modern World: [I] Durgabati Das [ii] Cathanar Thomman Paremmakkal [iii] Rahul Sankrtyaya-na [iv] W. S. Caine [v] Samanth Subramanian [vi] R. L. Stevenson

Practical component (if any) - NIL

Essential/recommended readings

Unit I: This unit aims to familiarise the students with travel writing. They will read about the varied contexts in which travellers come to record their experiences. Students will be familiarised with how travelogues have been used to enabling cross cultural engagements, and in establishing certain cultural and social stereotypes. They shall learn to read travelogues as distinct texts that introduce the readers to layered visions of diverse communi-ties and practices. (**Teaching Time: 15 hours approx.)**

Unit II: In this unit, students shall study about transformations in travel and travel writing. They shall read about the experience of travel through in a period shaped by Colonialism and the industrial revolution. The stu-dents will read about how the introduction of railways and new machines like the camera transformed the nature of

travel. They will engage with these transformations alongside questions of race, gender, and culture in travel narratives. They will engage with how geography, culture, language, social practices, economic activity and religion have been conceptualised by different actors. **(Teaching Time: 15 hours approx.)**

Unit III: In this unit the student will choose travelogues as case studies. The student will select 3 travelogues from a list of 12. S/he will focus on these three and use the insights discussed in the earlier units to critically analyse these texts. The learners shall be encouraged to explore in greater detail specific themes that interest them, such as gender, religion, race, social practices, technology, architecture, ecology & nature, economic ex-changes, etc. **(Teaching Time: 15 hours approx.)**

COMMON POOL OF GENERIC ELECTIVES (GE) COURSES

GENERIC ELECTIVES (GE-1): Media and Cinema

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Media and Cinema	**4**	**3**	**1**	**0**	**12th Pass**	**NIL**

Learning Objectives

The course will apprise the students with the elementary outlines of the history of media in India, from its beginnings to contemporary times. The different forms of media – Print, Audio-Visual and Electronic – the modes and methods will be discussed, and the potent ways in which technology and larger socio-political and economic trends intersected will be highlighted.

Learning outcomes

Upon successful completion of the course, students will be able to:

- Delineate the historical context within which the beginnings of each media platform can be understood.
- Analyze the state's attempts to control and organize media output through laws and policies.
- Explain the conjunctures of technological breakthroughs, advances and larger socio- economic and political matrices.
- Better appreciate the trends in media production, and its efforts in engaging with current ideological and socio-political issues.

SYLLABUS OF GE-1

Unit I: Forms and Contexts - **9 Hours**

1. Introduction – Types of media to be studied and their unique Indian context and adaptations

2. Significance and impact of media in history

Unit II: Press/Print media - **9 Hours**

1. Press censorship in British India; Vernacular Press Act
2. Role of the Indian press in the freedom movement; views of Leaders,
3. Press in India after independence

Unit III: Radio Transmission - **9 Hours**

1. Radio Transmission in Colonial India – Foundation, Inter-war years; AIR Programming, Expansion and broadening of listenership base
2. Establishment and Expansion of Akashvani after 1947 – The Keskar years; Classical vs. Popular; Radio Ceylon and Vividh Bharati
3. Government Policies and Bandwidth matters since the 1970s – end of License Raj; FM Radio Wave; Community Radio; Podcasts

Unit IV: The Cinematic Turn - **9 Hours**

1. Cinema during Colonial Period - Silent Era, Genres, Censorship
2. Post-Independence Cinema till 1980s- Nation Building, Mainstream Cinema and Parallel Cinema
3. Era of Liberalization, Globalization and Privatization- Changes in Production, Distribution and Exhibition, Experimental Cinema

Unit V: Studying Television and Digital Media - **9 Hours**

1. Television in India-The Doordarshan era- Entertainment, Infotainment
2. Rise of the Satellite TV – Soap Operas and 24x7 News, Changes and Effects
3. Digital Media - Effects of Digital Media - Privacy and Surveillance, Misinformation and Disinformation

GENERIC ELECTIVES (GE-2): Gender in Modern World

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Gender in Modern World	4	3	1	0	12th Pass	NIL

Learning Objectives

The course seeks to introduce students to the location of gender in the historical pasts of the modern world. It focusses on different regions and locations, and analyses complexities of historical issues involving women's representation, mass movement and gendered mobilization.

Learning outcomes

After the completion of the course the students would be able to

- Understanding larger histories of patriarchy and feminism
- Analyse gender realities in international contexts
- Discuss issues of gender in world history in comparative frames
- Delineate women's movements across different regions of the world

SYLLABUS OF GE-2

Unit I: Historicizing Gender: Patriarchy, Matriarchy and Feminism
Unit II: Gender in the French Revolution: Women's participation; iconography
Unit III: Liberal Democratic Women's movements: Case Studies- Britain/ USA/South Africa
Unit IV: Women in the Socialist, Communist & Other Political Mobilization-Russian Revolution/ Chinese Revolution/ West Asia

Practical component (if any) - NIL

Essential/recommended readings

Unit I. The unit aims to make students conversant with the conceptual issues around Gender with a special focus on patriarchy and feminism. **(Teaching Time: 9 hours approx.)**

GENERIC ELECTIVES (GE-3): History of Textiles

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
History of Textiles	4	3	1	0	12th Pass	NIL

Learning Objectives

This course explores the ways in which textiles has been approached, appropriated and understood in Indian history and beyond. The patterns in which textiles have been situated in history, how they are made, what they are made of, where they are made, what use or function they serve, what they codify for different communities, rituals and events, their historical and economic significance, etc. will be our main focus. The multiple narratives embedded in textiles, especially the hand woven and handcrafted textiles, which go back millennia and which, through centuries, have linked India to the rest of the world will enable the students to dialogue with a great culture of textiles.

Learning outcomes

Students will also learn what textile can tell us about trade and commerce, empire, gender, sexuality, class, race, industry, revolution, nation-building, identity politics and globalization. We will aim simultaneously to see textile and material culture more generally, as playing a fundamental role in the shaping of our past.

Theory and Practical/ Field work/Hands-on-learning

Through the course students are expected to continuously interact with the textile sector through programmes built into the academic curriculum like field studies, internships, design projects, audio-visual projects and its cluster initiatives.

SYLLABUS OF GE-3

Unit 1: Textiles (Past to Present)

1. Sources and Historiography
2. Textiles in ancient India.
3. Textiles in Medieval India.
4. Textiles in Modern India.
5. Textiles in Contemporary India.

Unit 2: Theories of evolution of Textiles and Regional perspectives.

1. Local skills, Craftsmen (Case study of Weavers, Iron Smith and Carpenters) and Knowledge systems of Textiles.
2. Textiles of North, East, South, West and North-East.
3. Traditional and tribal costumes of India – North, East, South, West and North-East. d) Effect of textile culture and colours for different ceremonies and occasions.

Unit 3: Material Culture of Textiles: Study of Textile Crafts of India: with reference to history, production centers, techniques, designs, colours, products and gender (Case study of Female Weavers).

1. Woven Textiles: Benaras Brocades, Jamdanis and Baluchars of Bengal, Kani Shawls of Kashmir, Bhagalpuri Silk and Kachipuram Silk.
2. Embroidered Textiles: Kanthas of Bengal, Kasuti of Karnataka, Phulkari of Punjab, Chikankari of Uttar Pradesh, Kashida of Kashmir, Gujarat embroideries.
3. Painted and Printed textiles: Kalamkaris of Andhra Pradesh, Dabu printing of Rajasthan, Ajarakh prints of Gujarat.
4. Dyed textiles: Bandhnis of Rajasthan and Gujarat, Ikats- Patola of Gujarat, Bandhas / Sambalpuri of Orissa and Telia Rumal of Andhra Pradesh

Unit 4: Making of Modern Textiles, Responses and Resistance.

1. Introduction of Powerloom and Weavers.
2. Khadi, Gandhi and Indian Nationalism.
3. Conservation and Preservation of Textiles
4. Textiles and Globalization.

Practical component (if any) - NIL

Essential/recommended readings

Unit I: The Unit will give an overview to the paper through sources, historiography and past history and present conditions of the textile. (Teaching Time: 9 hours approx.)

DEPARTMENT OF GEOGRAPHY

Category I

(B.A. Honours in Geography in three years)

SEMESTER-IV

DISCIPLINE SPECIFIC CORE COURSE – OCENOGRAPHY (DSC 10)

Course title & Code	Credits	Duration (Hrs per week)			Eligibility Criteria	Prerequisite
		Lecture	Tutorial	Practical/ Practice		
OCEANOGRAPHY	4	3	1	0	Class 12th	NIL

Learning Objectives:

The Learning Objectives of this course are as follows:

- To enable the learner to understand the basics of oceanography.
- To enable the learner to explain the configuration of the ocean bottom
- To enable the learner to discuss ocean water and its unique ecosystem
- To equip the learner to appreciate and elaborate the problems and policies for sustainable oceans
-

Learning Outcomes:

The Learning Outcomes of this course are as follows:

- The students would be able to comprehend and establish the relationship between human action and global ocean conditions. They would be able to explain the ocean as a regulator of global climate.
- Illustrate the dynamic ocean bottom topography and appreciate the circulation of cold and warm Ocean currents.
- Discuss the salinity and temperature distribution of ocean water on a three-dimensional spatial perspective.
- Elaborate the marine ecosystems as well as explain the problems and address the policies to resolve them.

Course Outline:

UNIT 1: Introduction to Oceanography: (8 hrs)

- Significance of Oceanography, Human actions and the Oceans, Challenges to Sustainability of Marine Ecosystems, Role ofSea surface Temperature (SST) as Global Climate Regulator

UNIT 2: Geomorphological Oceanography: (8 hrs)

- Ocean Bottom Topography – Relief ofOcean Floor with Global examples

UNIT 3: Physical and Chemical Oceanography: (9 hrs)

- Properties of Ocean Water: Salinityand Temperature (Horizontal and Vertical Distribution); Oceanic currents

UNIT 4: Biological Oceanography: (10 hrs)

- Marine Ecosystems: Coral Reef, Mangrove, Openand Deep Sea

UNIT 5: Sustainability of Oceans- Problems and Policies: (10 hrs)

- Marine Challenges andManagement, Marine Policy: Integrated Coastal Zone Management (ICZM) with reference to India and SDG 14; Life Below Water

Readings

- Basu S.K. (2003). Hand Book of Oceanography. Global Vision, Delhi.
- Davis, R. J.A. (1996). Oceanography: An Introduction to the Marine Environment. Brown Co, Lowa.
- Garrison, T. (2016). Oceanography: An Invitation to Marine Science. 9th ed, Cengage Learning, Boston.
- Lal. D.S. (2003) Oceanography. Sharada Pustak Bhavan, Allahabad.
- Pinet, P.R. (2014). Invitation to Oceanography. 7th ed, Jones and Barlett Publishers, Burlington.
- Sharma, R. C. and Vatal, M. (2018) Oceanography for Geographers. Surjeet Publications, Delhi.
- Singh, S. (2015). Oceanography. Pravalika Publication, Allahabad,
- Sverdrup K. A. and Armrest, E. V. (2008). An Introduction to the World Ocean. McGraw Hill, Boston.

Readings (Hindi)

- Gautam, A. (2005) Jalwayu Evam Samudra Vigyan. Rastogi Publication, Meeruth.
- Kulshrestha, K.P. (2004). Samudra Vigyan. Kitab Ghar, Kanpur.
- Singh, S. (2015). Samudra Vigyan. Pravalika Publication, Allahabad.
- Tiwari, R. K. (2016). Bhautik Bhugol. Rajsthan Hindi Granth Academy, Jaipur.

DISCIPLINE SPECIFIC CORE COURSE – ECONOMIC GEOGRAPHY (DSC 11)

Course title & Code	Credits	Duration (Hrs per week)			Eligibility Criteria	Prerequisite
		Lecture	Tutorial	Practical/ Practice		
ECONOMIC GEOGRAPHY	4	3	1	0	Class 12th	NIL

Learning Objectives:

- To evolve an understanding about the significance of space and time as attributes of human economic activities.
- To comprehend the role of geographical factors in determining the transformation of human economic activities.
- To develop an understanding of historical progression of trends and transformation of Primary, Secondary and Tertiary economic activities.

Learning Outcomes:

- To enable the learner to appreciate the role of geographical parameters in determining various economic activities and to understand the scope of economic geography, differentiating it from classification of economic activities.
- To enable the learner to assess and analyse the role of space and location in pursuit of economic activities.
- To enable the learner to develop the capability of analyzing transformation of economic activities with reference to space, time and diffusion of technology.

Course Outline

UNIT 1: Introduction: (10 hrs)

- Nature, scope and concepts and Approaches to EconomicGeography; Classification of Economic activities.

UNIT 2: Locational Factors of Economic Activities: (9 hrs)

- Factors affecting location of economic activities in agriculture industry and services; Weber's Theory of IndustrialLocation.

UNIT 3: Transitions and emerging trends in primary and secondary economic activities: (9 hrs)

- contemporary agriculture, Agro based Industry; SEZ and Technology Parks.; Pharmaceutical Industry

UNIT 4: Progressions in Tertiary Activities: **(9 hrs)**

- Case study approach to Knowledge basedindustries; IT enabled Services industry; Wellness industry

UNIT 5: Globalization of Economic activities: **(8 hrs)**

- globalization, liberalization, Ecommerce, gig economy (selected case studies)

Readings

- Alexander J. W., 1963: Economic Geography, Prentice-Hall Inc., Englewood Cliffs, New Jersey.
- Coe N. M., Kelly P. F. and Yeung H. W., 2007: Economic Geography: A Contemporary Introduction,Wiley-Blackwell.
- Roy, Prithwish, 2014, Economic Geography, New Central Book Agency.

- Wheeler J. O., 1998: Economic Geography, Wiley..
- Maurya, S. D., 2018, Economic Geography, Pravalika Publication, Allahabad.
- Bagchi-Sen S. and Smith H. L., 2006: Economic Geography: Past, Present and Future, Taylor and Francis.
- Singh, S. and Saroha, J., 2021, Human and Economic Geography, Pearson.
- MacKinnon, D, and Cumbers A., 2007, An Introduction to Economic Geography: Globalization, Uneven Development and Place, Harlow: Pearson Education.
- Mamoria, C. and Joshi, R., 2019, Aarthik Bhugol (Economic Geography), Sahitya Bhawan Publication, Agra. (Hindi Edition).

DISCIPLINE SPECIFIC CORE COURSE – FUNDAMENTALS OF GIS (PRACTICAL) (DSC 12)

	Credits	Duration (Hrs per week)				Prerequisite
Course title & Code		**Lecture**	**Tutorial**	**Practical/ Practice**	**Eligibility Criteria**	
FUNDAMENTALS OF GIS (PRACTICAL)	**4**	**2**	**0**	**2**	**Class 12th**	**NIL**

Learning Objectives:

The learning objectives of this course are as following:

- In this course the students will get the basic understanding of the concept of GIS, its definitions and components and its significance in geographical study.

- They will gain the working experience to handle digitally, both spatial and attribute geographical data, its collection, storage and management through GIS and the use of locational specific data in GIS using GPS.
- They learn the fundamental steps in data analysis and the GIS application to the geographical study of land uses, urban sprawl, and forests through the means of spatial mapping.

Learning Outcomes:

Through this practical, hands-on course the students will be able to know the GIS basics and when completed they would be able to:

- Develop a basic understanding of GIS skills and learn to work on a GIS Software using computer/ laptop/ and or any other digital medium.
- Understand GIS Data Structures and GIS Data Analysis for geographical enquiry.
- Learn to apply basic GIS operations/skills to analyse the spatial data for mapping, monitoring and to detect both spatial and temporal changes in land use/cover, forests, urban sprawl, and natural resources.
- Students will be aware of spatial thinking and its manifestation in resolving issues through this computer-based technology.

Course Outline

UNIT 1: Geographical Information System/Science (GIS): **(5 hrs)**

- Definition and overview,Components, Different types of GIS Software, Significance and emerging trends.

UNIT 2 : GIS Data Structures: (5 hrs)

- Types (spatial and non-spatial), Point, Line and Area;Raster and Vector Data Structure, Database Management System (DBMS).

UNIT 3: GIS Data Analysis – I: **(5 hrs)**

- Data Input; Methods, Geo-referencing, GPS for GIS Data creation, Digitization, Input of Attribute data, Data Editing; Errors in input data, BasicGeo-processing tools.

UNIT 4: GIS Data Analysis – II: (5 hrs)

- Query and Output; Conversion, Buffering, Overlays, MapLayout

UNIT 5: Application of GIS : (5 hrs)

- Land Use / Land Cover Change, Morphometric Analysis,Urban Studies

Practical Record: 60 Hrs.

- A **record file** consisting of **5 exercises** using any GIS Software.
- The exercises should focus on any one of the above-mentioned applications based on using vector / raster data layers for Query analysis /Proximities / Finding relationship / Seeing Patterns / monitoring change.

DISCIPLINE SPECIFIC ELECTIVE COURSE – GEOGRAPHY OF HIMALAYAS (DSE 3)

Course title& Code	Credits	Duration (Hrs per week)			Eligibility Criteria	Prerequisite
		Lecture	Tutorial	Practical/ Practice		
GEOGRAPHY OF HIMALAYAS	4	3	1	0	Class 12th	NIL

Learning Objectives:

- Understanding the importance of the Himalayan Mountains.
- Various aspects of the physical and human geography of the Himalayan mountain ranges.
- Understanding of climate change adaptation practices and initiatives by international and national agencies and communities.

Learning outcomes:

- To enable understanding of origin and, Political-Climatological-Social-Spiritual-Ecological significance of the Himalayan Mountain ranges.
- To understand the distinct physiography, climatology, hydrology, population dynamics, livelihood options, and developmental activities in the Himalayan Mountain ranges.
- To appreciate climate change and human activities-led impacts in the Himalayan region and related initiatives to cope up with these impacts.

Course Outline

Unit 1: Understanding Himalayan Mountains: **(5 hrs)**

- Origin, Climatological-Social-Spiritual-Ecological significance.

Unit 2: Geography of the Himalayas: **(11 hrs)**

- Geology and Physiography; soils andvegetation; Climates and River Systems of the Himalayas

Unit 3: Population dynamics: **(11 hrs)**

- Demographic indicators, population, livelihood optionsand, developmental activities in the Himalayan Region

Unit 4: Climate change and human-induced impacts: **(10 hrs)**

- Environmental degradation, Hydro-meteorological and geo-environmental disasters; glacial recession; Land usechange, deforestation and biodiversity loss

Unit 5: Policy Initiatives and Disaster Mitigation: (8 hrs)

- Climate Change Adaptation Practices, Disaster Risk Reduction, Role of International and National Institutions,Community-based eco-friendly practices

DISCIPLINE SPECIFIC ELECTIVE COURSE – RURAL DEVELOPMENT (DSE 4)

Course title & Code	Credits	Duration (Hrs per week)			Eligibility Criteria	Prerequisite
		Lecture	Tutorial	Practical/ Practice		
RURAL DEVELOPMENT	4	3	1	0	Class 12th	NIL

Learning Objectives:

- The course is designed to impart an integrated understanding of the crucial dimensions of rural development.
- It aims to introduce students to the need and practice of rural development projects and programmes in India.

Learning Outcomes:

At the end of the course, the students shall develop an understand of the following :

- concepts related to the need and approaches to rural development;
- Issues pertaining to rural society and economy;
- the existing rural development programs and institutions and knowledge of successful case studies from India and the sub-continent.

Course Outline

Unit 1. Understanding Rural Development: (5 hrs)

- Concept of Development; Development, Relevance and Approaches to Rural Development

Unit 2. Theories of Rural Development: (11 hrs)

- Modernization Theory; Dependency Theory;Theory of The Big Push; Leibenstein's Critical Minimum Effort theory

Unit 3. Rural Society and Economy: (11 hrs)

- Agriculture and allied activities; Seasonality and need for expanding non-farm activities; Issues of landholdings and land reforms; Concepts of social mobility and social change.

Unit 4. Rural Development Programs in India: (10 hrs)

- Poverty Alleviation Programmes;Programmes for Employment and Social Security; Other Development Programmes (PMGSY, MNREGA, PURA)

Unit 5. Rural Development Institutions and Case studies: (8 hrs)

- Panchayati Raj institutions,Cooperatives, Training & Finance Institutions, and Voluntary organisations. RuralDevelopment Experience (case study from India and the Indian sub-continent)

Readings:

- Venkata Reddy, K. Agriculture and Rural Development (Emerging Trends and Right Approach to Development), HmalayaPublshing House Pvt., Ltd., Mumbai, 2012.

DISCIPLINE SPECIFIC ELECTIVE COURSE – NATURAL RESOURCE MANAGEMENT (DSE 5)

Course title & Code	Credits	Duration (Hrs per week)			Eligibility Criteria	Prerequisite
		Lecture	Tutorial	Practical/ Practice		
NATURAL RESOURCE MANAGEMENT	4	3	1	0	Class 12th	NIL

Learning Objectives:

The learning objectives of this course are as follows:

- To understand the basic concepts of natural resources, resource appraisal and resource management
- To explain the issues and challenges of management of different natural resources
- To discuss sustainable development of natural resources
- To analyse the resource management policies

Learning Outcomes:

The Learning Outcomes of this course are as follows:

- The students would be able to comprehend the concepts related to the field of natural resource management.
- The students would be able to assess the issues and challenges of management land, soil, water, forest and energy resources.
- The students would elaborate sustainable resource development, natural resource governance and policies.

Course Outline

Unit 1: Introduction: (9 hrs)

- Meaning and concepts of Natural Resources; Classification ofnatural resources, Approaches to Natural Resource Management, Resource Appraisal

Unit 2: Land and Soil Resources: (9 hrs)

- Utilization, Issues and challenges; Management andconservation**Unit 3: Water and Forest Resources: (9 hrs)**
- Utilization, Issues and challenges;Management and conservation

Unit 4: Energy Resources: (9 hrs)

- Growing global energy needs; Use of alternate energyresources; Management and conservation

Unit 5: Contemporary Strategies for Natural Resource Management: (9 hrs)

- SustainableResource Development; Natural Resources Governance Framework; Resource Management Policies.

Readings

- Gautam, A. (2018 Natural Resource: Exploitation, Conservation and Management, Sharda Pustak Bhawan, Allhabad.

GENERAL ELECTIVE -SUSTAINABLE DEVELOPMENT: SOCIETY AND POLICY INTERFACE (GE 10)

NOTECourse title & Code	Credits	Duration (per week)			Eligibility Criteria	Prerequisite
		Lecture	Tutorial	Practical/ Practice		
SUSTAINABLE DEVELOPMENT: SOCIETY AND POLICY INTERFACE	4	3	1	0	Class 12th	NIL

Learning Objectives:

- To understand emerging sustainable science disciplines and associated concepts,
- To explain principles of sustainable development, including components of sustainable development
- To discuss methods of measuring sustainable development and issues related to the same.

Learning Outcomes:

After transacting the course, students will be able to:

- Understand the basic concept of sustainable development.
- Assess sustainability and related methods to measure the same.
- To explain major issues related to sustainability including ways to achieve the same.

Course Outline

Unit 1: Sustainable Development: (7 hrs)

- Meaning and Concept of Sustainable Development, Components, Historical Background, Sustainability Sciences.

Unit 2: Sustainable Development Goals: (10 hrs)

- Illustrative SDGs**;** Goal-Based Development;Financing for Sustainable Development

Unit 3 : Sustainability Assessment and Appraisal: (10 hrs)

- Sustainability Indicators,Ecological Footprint Analysis, Sustainability Index, India SDG Index.

Unit 4: Issues in Sustainability: (10 hrs)

- Poverty and Disease, Universal Health Coverage;Policies and Global Cooperation for Climate Change, Biodiversity loss

Unit 5: Sustainable Policies and Success Stories: (8 hrs)

- Good Governance for Sustainability, Gandhian Philosophy of rural development, Sustainable Cities, Micro-level Success stories: Piplantri Village (Rajasthan) and Kundrakudi Village (Tamil Nadu)

Practical component (if any) – NIL

GENERAL ELECTIVE-GEOGRAPHY OF CONFLICT AND PEACE STUDIES (GE 11)

Course title & Code	Credits	Duration (per week)			Eligibility Criteria	Prerequisite
		Lecture	Tutorial	Practical/ Practice		
GEOGRAPHY OF CONFLICT AND PEACE STUDIES	**4**	**3**	**1**	**0**	**Class 12th**	**NIL**

Learning Objectives:

- Develop an understanding about the Geography of Conflict and Peace Studies as an academic discipline. The course is organised around three principal themes: Introduction to Geography of Conflict and Peace Studies, Conflict Resolution, Peace building and Peace-making in spatial context.

Learning Outcome:

At the end of the course the students shall understand -

- Core Concepts of Geography of Conflict and Peace Studies
- Conflict and peace related different perspectives
- International and Intra state Conflicts with case examples
- Historical experiences of Conflict Resolution at global and regional level
- Peace making and Peace Building Process
- They will also gain knowledge to explain and analyse world politics around different geographical contexts.

Course Content:

Unit 1: Introduction: (8 hrs)

- Conflict and Peace: Definitions, Cause based classification of conflicts, Emergence of Conflicts and Peace Studies in Geography, Global Indices of Conflict and peace -Global peace Index, Global Conflict Risk Index

Unit 2: Philosophical perspectives on Conflict and peace: (10 hrs)

- Marxist, Socialist, Gandhian: key concepts, Global and Indian Experiences

Unit 3: International and Inter state Conflicts: (9 hrs)

- Conflicts in the International System: Treaty of Versailles and World War II, Intra-state river water and boundary disputes, Contemporary wars-Bio Warfare, Resource wars

Unit 4: Peace making and Peace Building: (9 hrs)

- Concept, Process, approaches; India 's Soft Power and peace-making, India's participation in UN peace keeping

Unit 5: Conflict Resolution - Global and National case studies: (9 hrs)

- Geneva Convention, Hague Conventions of 1899 and 1907, North Atlantic Treaty Organization (NATO) , Formation of League of Nations, Establishment of United Nations ; National Panchsheel Principles , Indian Peace Accords

GENERAL ELECTIVE-REGIONAL DEVELOPMENT (GE 12)

Course title & Code	Credits	Duration (per week)			Eligibility Criteria	Prerequisite
		Lecture	Tutorial	Practical/ Practice		
REGIONAL DEVELOPMENT	4	3	1	0	Class 12th	NIL

Learning Objective

The Learning Objectives of this paper are as follows:

- To understand the importance of balanced regional development.
- To familiarize the students about multi-sectoral regional disparities at regional and global levels
- To introduce students to theoretical and practical aspects of regional planning and regional development.

Learning Outcome:

The Learning Outcomes of this paper are following:

- The students will understand the causes of regional disparities and significance of balanced regional development.
- The students will be able to assess the level of regional inequalities in different sectors
- of economy and in human development.
- The students will gain insights into the spatial- regional aspects of development and the importance of planned efforts to develop backward areas.

Course Outline

- **Unit 1: Introduction: (8 hrs)** Concept of Regional Development, Determinants of regional disparities and significance of balanced Regional Development.
- **Unit 2: Global Regional Disparities**: **(10 hrs)** Spatial patterns of Human Development-HDI of Developed, Developing and Least Developed Countries, Case study of Sahel and Western Europe.
- **Unit 3: Regional Disparities in India: (9 hrs)** Regional disparities in agricultural and industrial development, regional disparities in Human Development (Poverty, Education and Health).
- **Unit 4: Theories of Regional Development**: **(9 hrs)** Growth Pole and Growth Centre; Cumulative Causation and Core-periphery.
- **Unit 5: Regional Development Planning**: **(9 hrs)** Multipurpose Dam Project (Sardar Sarovar Project); Urban Planning (National Capital Region) and Target-Group Approach (Integrated Tribal Development Programme).

Readings

SEMESTER-V

Category I

(B.A. Honours in Geography in three years)

DISCIPLINE SPECIFIC CORE COURSE – ENVIRONMENT AND ECOLOGY (DSC 13)

Course title & Code	Credits	Duration (Hrs per week)			Eligibility Criteria	Prerequisite
		Lecture	Tutorial	Practical/ Practice		
ENVIRONMENT AND ECOLOGY	4	3	1	0	Class 12th	NIL

Learning Objectives:

1. Various dimensions of ecology and ecosystems, their spatial distribution.
2. To learn about the global environmental challenges and management
3. To know about regional environmental challenges.
4. Understanding of environmental governance.

Learning Outcomes:

1. Detailed exposure to the concept of ecology, ecosystem, processes, theories and concepts.
2. In-depth knowledge of anthropogenic interventions and impacts, conservation strategies and planning.
3. Understanding the environmental concerns at global and regional level.
4. Evaluation and achievement of different environmental programs, policies and legislations.

Course Outline:

Unit-1 Introduction: (7 hrs)

- Concept of Environment, Ecology and Ecosystem; Types of Ecology; Concepts of Ecosystem Services; Ecological and Material Footprint; Global Planetary Boundaries.

Unit-2 Ecology and Ecosystem: (9 hrs)

- Species Interactions; Ecological Limiting Factors; Ecosystem: Structure and Functions; Human Adaptation

Unit-3 Global Environmental Challenges and Management: (11 hrs)

- Climate Change,Biodiversity loss, Land degradation and Human health issues

Unit-4 Regional Ecological Issues and Management: (11 hrs)

- Coastal and Marine Ecology: Loss of mangroves and corals, Garbage Patches; Urban Ecology: Waste disposal and Pollution

Unit-5 Programmes and Policies: (7 hrs)

- Environmental Impact Assessment; Global andNational Environment Policy of India

Readings:

- Brewster, E. N. 2010. Climate Change Adaptation: Steps for a Vulnerable Planet, New York, Nova Science.
- Cain, M.L., Bowman, W.D. and Hacker S.D. (2011). Ecology, 2nd Edition, Sinauer Associates Inc.

DISCIPLINE SPECIFIC CORE COURSE – AGRICULTURAL GEOGRAPHY ANDFOOD SECURITY (DSC 14)

Course title& Code	Credits	Duration (per week)			Eligibility Criteria	Prerequisite
		Lecture	Tutorial	Practical/ Practice		
AGRICULTURAL GEOGRAPHY AND FOOD SECURITY	4	3	1	0	Class 12th	NIL

Learning Objectives:

- To understand the nature and scope of agricultural geography.
- To provide a detailed analysis of landuse- landcover classification by NRSA.
- To enable the learners to appreciate the geographical factors affecting agriculture
- To enable the learner to identify and understand modern agricultural practices.
- To enable the learner to identify and understand the concept and dimensions of food security.

Learning Outcomes:

- A detailed insight into the subfield of agricultural geography.
- An in-depth knowledge of geographical factors affecting agriculture.
- An understanding of models and regionalization of agriculture.
- Knowledge of concepts and dimensions of food security.
- An understanding of challenges, programme and policies related to sustainable agriculture.

Course Outline

UNIT 1: **Concept of Agricultural Geography**: **(7 hrs)**

- Nature and Scope, concept andclassification of landuse- landcover (twenty two fold NRSA).

Unit 2: Geographical Factors affecting Agriculture: (10 hrs)

- Physical, Economic, Technological,Institutional and socio-cultural.

Unit 3: Models, Theories and Regionalization: (10 hrs)

- Whittlesey's classification of Agricultural regions; Agro ecological regions of India

Unit 4: Agricultural Development: (11 hrs)

- Concept and relevance of Sustainable Agriculture, Modern Agricultural Practices (Green Revolution, Organic farming, Precision Agriculture: role of Remote Sensing and GIS modelling, role of Artificial Intelligence)

Unit 5: Food Security: (7 hrs)

- Concept and dimensions, Food security in India: Challenges, Programmes and Policy.

Readings:

- Gregor, H.P.: Geography of Agriculture. Prentice Hall, New York, 1970.
- Grigg, D. (1984): 'An Introduction to Agricultural Geography', Hutchinson Publication, London

DISCIPLINE SPECIFIC CORE COURSE – RESEARCH METHODOLOGY AND FIELDWORK (PRACTICAL) (DSC 15)

Course title & Code	Credits	Duration (Hrs per week)			Eligibility Criteria	Prerequisite
		Lecture	Tutorial	Practical/ Practice		
RESEARCH METHODOLOGY AND FIELDWORK (PRACTICAL)	**4**	**2**	**0**	**2**	**Class 12th**	**NIL**

Learning Objectives:

1. To form an understanding of various dimensions of fieldwork and its role in geographical studies.
2. To understand in detail various field techniques .
3. Understanding of nuances of research instruments, field tools and report writing.

Learning Outcomes:

1. Detailed exposure of field techniques to study new geographical landscapes.
2. In-depth knowledge of different research instruments and field techniques.
3. Understanding field ethics.

Course Outline

UNIT 1: Research methodology and fieldwork: **(5 hrs)**

- concept, relevance, ethics and steps.

UNIT 2: Framing a research proposal: (5 hrs)

- identifying the research problem and study area, literature review, research questions, hypothesis, objectives, delineating the database and methods, framing the study relevance.

UNIT 3: Methods of Data collection and fieldwork: **(5 hrs)**

- Observation, Questionnaires,Interviews, Transects and Quadrants, Triangulation, pilot surveys, Recent trends

UNIT 4: Data analysis and interpretation: (5 hrs)

- Qualitative and Quantitative techniques ofanalysis; interpreting research findings

UNIT 5: Field Report: (5 hrs)

- Organisation and preparation, referencing, endnote, footnotes,supplementary materials. **Practical Record: 60 Hours**

1. Each student will prepare a report based on primary and secondary data collected during the field.
2. Handwritten (not less than 30 pages)/ typed (8000-12000 words), including preface, certificate of originality, acknowledgement, table of contents, list of figures and tables, chapters, conclusions, bibliography and appendixes.
3. One copy of the report on A 4 size paper should be submitted in soft binding.

DISCIPLINE SPECIFIC ELECTIVE COURSE - POLITICAL GEOGRAPHY (DSE 6)

Course title & Code	Credits	Duration (per week)			Eligibility Criteria	Prerequisite
		Lecture	Tutorial	Practical/ Practice		
POLITICAL GEOGRAPHY	4	3	1	0	Class 12th	NIL

Learning Objectives

The learning objectives of the course are as follows:

- To explain the evolution of the sub field of political geography, and the contribution of its leading scholars
- To explain the key concepts and theories of the subfield of political geography
- To explain the significance of political processes and their relation to space

Learning outcomes

After completing this course, the student would be able to:

- Distinguish between Political Geography and Geopolitics and understand the importance of both
- Understand how geography affects politics and how politics affects geography
- Understand the role of geographical factors in influencing voter turnout, voting behaviour and the outcome of elections
- Understand conflicts over resources and issues related to displacement at different scales.

Course Outline

Unit 1: Introduction: (9 hrs)

- Evolution of Political Geography; Concept of State, Nation and Nation-state; Attributes of State; Frontiers and Boundaries.

Unit 2: Geopolitics: (10 hrs)

- Geopolitics: Concept; Theories of Ratzel; Geostrategic views of Mackinder and Spykman;

Unit 3: Electoral Geography: (8 hrs)

- Geographic influences on voting pattern; geography of representation and Gerrymandering.

Unit 4: Geography of Conflicts and Displacement (case studies): (9 hrs)

- Water sharingdisputes; Rights of indigenous people to forests; Boundary conflicts and forced migration; Development induced displacement

Unit 5: Contemporary Political Issues: **(9 hrs)**

- Environmental Politics; India as an emerging power (Global and Regional)

DISCIPLINE SPECIFIC ELECTIVE COURSE –SOCIAL GEOGRAPHY (DSE 7)

Course title & Code	Credits	Duration (per week)			Eligibility Criteria	Prerequisite
		Lecture	Tutorial	Practical/ Practice		
SOCIAL GEOGRAPHY	4	3	1	0	Class 12th	NIL

Learning Objectives

- To familiarise the student with the theoretical foundations of Social Geography.
- To help students appreciate how social diversity is manifested in socio-spatial patterns.
- To help student understand that social wellbeing is a spatially variable condition and appreciate its correlates.

Learning Outcomes:

On completion of the course, students will:

- understand the basic concepts of social geography, social diversity, social wellbeing and social exclusion/ inclusion.
- possess the knowledge of socio-cultural regions of India.

- understand patterns of social well-being, and welfare policies and programs in India.
- understand the relation between the process of social exclusion/inclusion and space.

Course Outline

Unit 1: Social Geography: (8 hrs)
- Origin, Nature and Scope; Concept of Social Space.

Unit 2 : Social Differences and Diversity: (10 hrs)
- Concepts; Socio- Cultural Regions, languageregions of India

Unit 3: Social Wellbeing: (9 hrs)
- Concept of Social Well Being; Needs and Wants; Componentsof Social Well Being: Healthcare, Education, Housing; Gender Equality in India.

Unit 4: Social Geographies of Exclusion and Inclusion: (9 hrs)
- Ethnicity, race, religion basedsocial and spatial exclusion, Disability and Space.

Unit 5: Social Welfare Policies and Programs: (9 hrs)
- Policies for People with Disabilities,senior citizens and Transgenders.

GENERAL ELECTIVE- WORLD REGIONAL GEOGRAPHY (GE 13)

Course title & Code	Credits	Duration (per week)			Eligibility Criteria	Prerequisite
		Lecture	Tutorial	Practical/ Practice		
WORLD REGIONAL GEOGRAPHY	**4**	**3**	**1**	**0**	**Class 12th**	**NIL**

Learning Objectives:

- To provide a comprehensive understanding of the world's regions
- To develop an in-depth knowledge about the different regions and their distinctive features
- To understand the interconnectedness of global issues and global regions.

Learning Outcomes:

- Detailed exposure to the concept and nature of regions in geography.
- In-depth knowledge of different regions based on multidimensional criteria.
- Understanding the interrelationship of cultural and economic factors in creating regionscapes.
- Comprehending the intricate interwoven reality of regions through the case study approach of South Asia.

Course Outline

Unit 1- Introduction: (8 hrs)

- Concept of a Region, Classification of Regions- Formal (Natural,Cultural), Functional (Economic, Administrative) and Perceptual Regions (6 Hours)

Unit 2- Natural Regions: (10 hrs)

- Equatorial, Tropical, Temperate, Taiga, Tundra regions (Location,Climate, Natural Vegetation, Human and Economic life in these regions) (12 Hours)

Unit 3- Economic Regions: (9 hrs)

- Major industrial (manufacturing) regions of Asia, North America,South America, Europe and Africa (One Case Study from each continent) (10 Hours)

Unit 4- Cultural Regions: (9 hrs)

- Major Cultural Realms/Regions of the World as given by Russelland Kniffen, 1951 and Broek and Webb, 1967. (7 Hours)

Unit 5- Systematic study of South Asia: (9 hrs)

- Natural Divisions, Economy, Demography andPopulation Dynamics (10 Hours)

Readings

- Broek, J. O. M., Webb, J. W., & Hsu, M. L. (1968). A Geography of Mankind. New York: McGraw-Hill.
- De Blij, H. J., Muller, P. O., Nijman, J., & Schouten, F. G. (2012). Geography: Realms, Regions, and Concepts. Wiley.

GENERAL ELECTIVE- GEOGRAPHY OF TRADE AND COMMERCE (GE 14)

Course title & Code	Credits	Duration (per week)			Eligibility Criteria	Prerequisite
		Lecture	Tutorial	Practical/ Practice		
Geography of Trade and Commerce	4	3	1	0	Class 12th	NIL

Learning Objectives:

The learning objectives for the Course are as follows:

- To develop an understanding of the concepts relating to trade and commerce.
- To introduce major theories of trade
- To learn about spatial patterns and spatiality of trade regimes
- To appreciate the trajectory of India's international trade

Learning Outcomes:

The students will learn the following:

- to appreciate factors and barriers to international trade and commerce
- Students would be able to develop an understanding of the key theories of international trade
- Students would be able to identify the institutional mechanisms governing international trade and be exposed to actual case studies
- Students would be able to analyze the patterns of International Trade with reference to India

Course Outline

Unit 1: Introduction to Trade and Commerce: (8 hrs)

- Definition and Concepts- Internationaltrade, Commerce, Export/Import and Balance of trade; Factors affecting internationaltrade; Barriers to international trade

Unit 2: Theories of Trade: (10 hrs)

- Classical Theories- David Ricardo's Comparative

Advantage, Contemporary Theories-Paul Krugman's New Trade Theory

Unit 3: Trade Blocs and Institutional Bodies: (9 hrs)

- WTO, IMF and World Bank; RegionalTrade Blocks: European Union, ASEAN, CACM, OPEC;

Unit 4: Impact of International Trade: (9 hrs)

- Case studies of Bangladesh garment industryand Brazil service trade

Unit 5: Patterns of International Trade with reference to India: (9 hrs)

- Volume of Trade ;Direction of Trade Flows ; Commodity Composition

Readings

- Batra, A. (2022). India's Trade Policy in the 21st Century. Routledge.
- Dee, M. (2015). The European Union in a multipolar world: world trade, global governance and the case of the WTO. Springer.

GENERAL ELECTIVE- CLIMATE CHANGE AND ADAPTATION (GE 15)

Course title & Code	Credits	Duration (per week)			Eligibility Criteria	Prerequisite
		Lecture	Tutorial	Practical/ Practice		
CLIMATE CHANGE AND ADAPTATION	4	3	1	0	Class 12th	NIL

Learning Objectives:
The course deals with a critical global concern. The key objectives are:

- To explain various dimensions of climate change.
- To develop a detailed analysis of vulnerability and its impacts.
- To discuss the importance of mitigation and adaptation strategies.
- To evaluate the role of global initiatives and policies for climate change.

Learning Outcomes:
On transacting the course students will have an in-depth knowledge of the following:

- Anthropogenic Climate Change and related issues
- Geographic dimensions of vulnerability.
- Impact of climate change, adaptation and mitigation
- Need for effective policy making

Course Outline

Unit 1: Understanding Climate Change: **(9 hrs)**
- Natural and Anthropogenic causes andevidences

Unit 2: Climate Change and Vulnerability: (9 hrs)
- Physical, Economic and SocialVulnerability

Unit 3: Impact of Climate Change: (10 hrs)
- Ecosystem-Terrestrial and Aquatic; Agricultureand Food Security

Unit 4: Global Initiatives for Adaptation and Mitigation: (9 hrs)
- National andinternational case studies

Unit 5: Climate Change Policy: **(8 hrs)**

- Framework from Kyoto to Paris: Role of IPCC;UNFCCC and COPs

Readings

- IPCC. *Climate Change 2022: Impacts, Adaptation, and Vulnerability. SIXTH Assessment Report of the Intergovernmental Panel on Climate Change.* NY, USA:Cambridge University Press, Cambridge, United Kingdom and New York.

SEMESTER-VI

BA (Hons.) Geography

DISCIPLINE SPECIFIC CORE COURSE – REGIONAL GEOGRAPHY OF INDIA (DSC 16)

Course title & Code	Credits	Duration (Hrs per week)			Eligibility Criteria	Prerequisite
		Lecture	Tutorial	Practical/ Practice		
REGIONAL GEOGRAPHY OF INDIA	4	3	1	0	Class 12th	NIL

Learning Objectives:

- To introduce the regional dimensions of physiography, climate, soils and vegetation of India
- To show variations in resource base and population dynamics
- To understand the regionalization of India on the basis of different geographical parameters

Learning Outcomes:

- After completing this course students will be able to understand the regional diversity of India in terms of physiography, climate, resources and demography
- Students will be able to understand the basis of regionalization of India based on physiographic, economic and socio cultural factors

Course Outline

UNIT 1: Physical Setting: (9 hrs)

- Major Physiographic Divisions, Climate, Drainage Basins(Peninsular and Extra Peninsular).

UNIT 2: Natural Resources: (9 hrs)

- Soil, Natural Vegetation, Mineral (Iron Ore), andRenewable Energy Resources.

UNIT 3: Population: (9 hrs)

- Growth, Distribution and Density, Population Composition(Sex, Age and Literacy).

UNIT 4: Economy: (9 hrs)

- Agriculture (Rice and Wheat); Industries (Automobile industry and Information Technology), Development of diversified transport network.

UNIT 5: Regionalisation of India: (9 hrs)

- Physiographic (R.L. Singh), Social-cultural (Sopher)and Economic (P.Sen Gupta)

Teaching Plan

Unit 1: 9 hours

Unit 2: 9 hours

Unit 3: 9 hours

Unit 4: 9 hours

Unit 5: 9 hours

Total : 45 hours

Essential Readings

- Singh, R.L. (ed.) (1971) India: A Regional Geography, National Geographical Society ofIndia, Varanasi.
- Sopher, David E. (1980) An Exploration of India: Geographical Perspectives on Societyand Culture, Cornell University Press, Ithaca, New York.
- Gupta, P.Sen and Galina Sdasyuk (1967) Economic Regionalisation of India: Problemsand Approaches, Census of India (1961); Monography Series – 1(8).

Suggested Readings

- Saroha, J and Singh, S. (2022) Geography of India, Pearson India Education Services,Noida.
- Sharma, T.C. (2013) Economic Geography of India, Rawat Publication, Jaipur.
- Majid, H. (2020) Geography of India, McGraw Hill Education (India) Private Ltd.

DISCIPLINE SPECIFIC CORE COURSE – EVOLUTION OF GEOGRAPHICAL THOUGHT (DSC 17)

Course title & Code	Credits	Duration (Hrs per week)			Eligibility Criteria	Prerequisite
		Lecture	Tutorial	Practical/ Practice		
EVOLUTION OF GEOGRAPHICAL THOUGHT	4	3	1	0	Class 12th	NIL

Learning Objectives:

- The course aims to present an overview of the evolution of the discipline.
- The course will introduce students to the multi paradigmic nature of geography as adiscipline, key debates and emergence of modern geography

Learning Outcomes:

- On transacting this core course the students will be able to grasp the uniquedisciplinary focus of Geography
- Students will be able to identify the key debates that have shaped the subject
- Students will be well acquainted with the changing paradigms in Geography and theemergence of modern geography

Course Outline

Unit-1: Pre-Modern: Foundations of Geography: (9 hrs)

- Greek and Roman School, Arab School, Contributions of Chinese travellers, Age of Discovery and its Impact.

Unit 2: Paradigms in Geography: (9 hrs)

- Definition of 'Paradigm', major paradigms in geography – Determinism, Possibilism, Areal differentiation, Spatial Organization

Unit-3: Key Debates and Developments in Geography: (9 hrs)

- Geography as idiographic & Nomothetic, Systematic and Particular, General and Regional, Quantitative Revolution, Schaefer-Hartshorne Debate, impact of Darwin's theory

Unit-4: Theories and Models in Geography: **9 hrs)**

- Systems Approach and its relevance in Geography, concepts of place, space, environment, interconnection, scale

Unit -5: Emergence of Modern Geography: (9 hrs)

- Emergence of Radical, Behavioral and Feminist Geography, Evolution of Geographical Thinking and Disciplinary Trends in Germany, France and USA, India

Teaching Plan

Unit 1: 9 hours

Unit 2: 9 hours

Unit 3: 9 hours

Unit 4: 9 hours

Unit 5: 9 hours

Total: 45 hours

Essential Readings

- Holt-Jenson, A. (2011), *Geography: History and Concepts*: *A Students Guide*, Sage.
- Couper, P. (2015). *A Student's Introduction to Geographical Thought: Theories, Philosophies, Methodologies*. SAGE Publications.
- Nayak, Anoop, and Alex Jeffrey (2013). *Geographical thought: An introduction to ideas in human geography*. Routledge, 2013.

Suggested Readings

- Cresswell, Tim. (2013). *Geographic thought : a critical introduction*. Chichester, West Sussex, UK :Wiley-Blackwell
- Arentsen M.,Stam R. and Thuijis R.(2000), *Post-Modern Approaches to Space*, e-book
- Kapur, A. (2002) Indian Geography: Voice of Concern, New Delhi: Concept PublishingCompany.

DISCIPLINE SPECIFIC CORE COURSE – DISASTER MANAGEMENT-BASED PROJECT REPORT (DSC 18)

Course title & Code	Credits	Duration (Hrs per week)			Eligibility Criteria	Prerequisite
		Lecture	Tutorial	Practical/ Practice		
DISASTER MANAGEMENT-BASED PROJECT REPORT (PRACTICAL)	**4**	**2**	**0**	**2**	**Class 12th**	**NIL**

Learning Objectives:

- Understanding the basic concepts related to disaster management
- Detailed analysis about the different types of disasters in India
- Evaluating multiple dimensions of disaster management through field based study

Learning Outcomes:

- The course aims to provide an in depth understanding about types disastersoccurring at different scales
- It will provide thorough understanding about human responses to different kinds ofdisasters
- It will give an in-depth knowledge about tracing the

disasterscapes throughfieldwork

Course Outline

Unit 1: Introduction: **(6 hrs)**

- Concept of Hazard, Disaster, Risk, Vulnerability, Classification ofdisasters, Disaster Management Cycle, Capacity and Resilience.

Unit 2: Disasters and Institutional Framework in India: (8 hrs)

- Disaster Profiles of India (Earthquake, Flood, Drought, Cyclone, Landslide, Avalanche, Fire); Disaster Management Act; Role of Government and NGOs in Disaster Management.

Unit 3: Community-Based Disaster Management: **(8 hrs)**

- Concept and Framework; Indigenous Knowledge and Practices; Role of Civil Society.

Unit 4: Data Assessment and Analysis: (8 hrs)

- IMD and Bhuvan Portal-Demonstration; Multi- Criteria Decision Making: Concept and Method.

Unit 5: Project Report: **(60 hrs)**

Project work to be based on any one of three of the following topics of student's choice. (1) The first should be a field-based case study of any particular disasterand the (2) second should be local/college-based term paper. (3) third should be preparation of earthquake/landslide/flood/forest fire or any other hazard susceptibility map of any area

Teaching Plan

Unit 1: 6 hours

Unit 2: 8 hours

Unit 3: 8 hours

Unit 4: 8 hours

Unit 5: 60 hours

Total: 90 hours

Essential Readings

DISCIPLINE SPECIFIC ELECTIVE COURSE –GEOGRAPHIES OF CRIME (DSE 8)

Course title& Code	Credits	Duration (per week)			Eligibility Criteria	Prerequisite
		Lecture	Tutorial	Practical/ Practice		
GEOGRAPHIES OF CRIME	4	3	1	0	Class 12th	NIL

Learning Objectives:

To develop an understanding of Crime from a spatial perspective. The course is organized around three principles: The concept of crime, crime as a spatial construct; and the planning,Governance and spatial strategies to develop a safe place.

Learning Outcomes:

At the end of the course, the students shall understand-

- Definition of crime, its theories and types
- the geographic base of crime
- How differences in society construct space and impact crime;
- What role Policy, planning and Governance strategies play in preventing crime.

Course Outline

Unit 1: Introduction to crime: (9 hrs)

- Definitions; Typology of crimes: Traditional Crimes,Victimless crimes, Family-centered crimes, Environmental Crimes.

Unit 2: Geographies of crime: (9 hrs)

- Crime areas; Environmental correlates of crime; Spatial patterns of crime; Marginalisation of 'Problem Area'

Unit 3: Spatial Construct of Crime: (9 hrs)

- Class, Gender, Age, Disability, Race and Ethnicity based social differences and geographies of crime, Crime against third gender and gendered crimes

Unit 4: Urban Crime: (9 hrs)

- Governance and Policing, Urban settings and Crime Prevention,Attributes and Assessment of safe places.

Unit 5: Policy Intervention: **(9 hrs)**

- Crime Prevention: Environmental design; Local Challenges and situational crime prevention; Policies for awareness generation and deterrence.

Teaching Plan

Unit 1: 9 hours

Unit 2: 9 hours

Unit 3: 9 hours

Unit 4: 9 hours

Unit 5: 9 hours

Total: 45 hours

Essential Readings:

- Wyant, B. R. (2015). Geography and Crime. In *The Encyclopedia of Crime and Punishment* (pp. 1–5). John Wiley & Sons, Inc. https://doi.org/10.1002/9781118519639.wbecpx007

DISCIPLINE SPECIFIC ELECTIVE COURSE – GENDER AND DEVELOPMENT (DSE 9)

	Credits	Duration (per week)				Prerequisite
Course title & Code		Lecture	Tutorial	Practical/ Practice	Eligibility Criteria	
GENDER AND DEVELOPMENT	4	3	1	0	Class 12th	NIL

Learning Objectives

- This course aims to teach the basic idea of development through a gender lens.
- The course also aims to apply feminist approaches to understanding gender inequality
- It aims to bring awareness that development is not a linear and uniformly distributedphenomenon but has gendered patterns.
- The course also aims to demonstrate that gender-inclusive policies can bring sustainable development and social change through examples from the Global Northand Global South.

Learning Outcomes:

The course would enable the student to:

- Develop a basic understanding of the concept of gender, Gender identities, feminism,and related concepts
- Understand the spatial dimensions of development through a gender lens
- Have an idea about the Global North-Global South and Rural-Urban divide of gendereddevelopment

- To know some qualitative and quantitative methods to measure gender development

Course Outline

Unit 1: Introduction: **(9 hrs)**

- Sex and Gender, Gender Identities; Liberal Feminism, Radical Feminism, Socialist Feminism Post Colonial Feminism

Unit 2: Approaches and Measures to Study Gender and Development: (9 hrs)

- Women in Development (WID), Women and Development(WAD), Gender and Development (GAD); Mainstream Gender Equality (MGE); Gender Development Index (GDI), Gender Empowerment Measure (GEM), Gender Parity Index

Unit 3: Gendered Patterns of Well Being and Development: (9 hrs)

- Global patterns of life expectancies, maternal mortality, child-woman ratio, sex ratio, female literacy, Crime against women, electoral participation and women in Leadership Roles

Unit 4: Gendered Work and Livelihoods: (9 hrs)

- Productive paid work and reproductive work; Invisible work and double burdens, women's work participation in Global North and Global South.

Unit 5: Gender and Contemporary Global Concerns: (9 hrs)

- Gendered impacts of hazards and disasters, climate change, tourism, gendered violence and livelihood loss; Sustainable Development Goal (SDG 5); Policy framework for resilient communities.

Teaching Plan

Unit 1: 9 hours

Unit 2: 9 hours

Unit 3: 9 hours

Unit 4: 9 hours

Unit 5: 9 hours

Total : 45 hours

Essential Readings:

- Coles, Anne, Leslie Gray, and Janet Momsen, eds. ***The Routledge Handbook of Gender and Development*.** Routledge, 2015.

GENERAL ELECTIVE- GEO HERITAGE AND GEO TOURISM (GE 16)

Course title & Code	Credits	Duration (per week)			Eligibility Criteria	Prerequisite
		Lecture	Tutorial	Practical/ Practice		
GEO HERITAGE AND GEO TOURISM	**4**	**3**	**1**	**0**	**Class 12th**	**NIL**

Learning Objectives:

- To understand the concepts associated with geoheritage and the emergence of thesubfield of Geoheritage and Geotourism.

- To create awareness about issues related to Geodiversity, geoconservation togetherwith threats and barriers to geoconservation.
- To identify and understand selection criteria for Geoheritage sites and Geoheritageprotection laws.
- To assess the potential and role of geoheritage and geotourism for sustainabledevelopment through case studies.

Learning Outcomes:

Transacting the course will enable students to:

- Evolve a basic understanding of Geoheritage and Geotourism and appreciate theimportance of Geodiversity and Geoconservation.
- Develop a sound knowledge of the potential and role of Geoheritage in sustainabledevelopment with application of GIS
- Apply the principles of Geoconservation to analyse problems associated withunsustainable tourism activities.

Course Outline

Unit 1: Introduction to Geo heritage and Geo tourism: (9 hrs)

- Definition, Concept and evolution; Relationship between Geo heritage and Geo tourism; Significance of Geo heritage and Geo tourism.

Unit 2: Geodiversity and Geo conservation: (9 hrs)

- Geodiversity Values – Intrinsic, cultural, aesthetic, economic, functional, and scientific; Threats to Geodiversity; Geo conservation principles to protect Geo heritage.

Unit 3: Potential of Geo heritage and Geo tourism: (9 hrs)

- Case Study of Geoparks, Mountain landscape, Geothermal sites and Volcanic landscape.

Unit 4: Geoheritage, Geotourism and Sustainable Development: (9 hrs)

- Role of Geoheritage and Geotourism for sustainable social, economic and cultural development of a region.Application of GIS in Geotourism**.**

Unit 5: Inventory of World Geo heritage Sites: (9 hrs)

- Identification and selection criteria with special reference to UNESCO. Geoheritage and Protection Laws: Role of Government**.**

Teaching Plan

Unit 1: 9 hours

Unit 2: 9 hours

Unit 3: 9 hours

Unit 4: 9 hours

Unit 5: 9 hours

Total : 45 hours

Essential Readings

GENERAL ELECTIVE- GEOGRAPHY OF MEDIA (GE 17)

Course title & Code	Credits	Duration (per week)			Eligibility Criteria	Prerequisite
		Lecture	Tutorial	Practical/ Practice		
GEOGRAPHY OF MEDIA	4	3	1	0	Class 12th	NIL

Learning Objectives:

- Geography of media seeks to understand how media depends on and is shaped by geographical patterns and processes.
- This course looks at the basic nature and spatial characteristics of media, its typesand processes.
- The course also deals with various roles mass media plays across geographical boundaries

Learning Outcomes:

Students would be able to:

- To develop an understanding of different forms of media, concepts and process of Media.
- To critically understand media and its functions.
- To understand historical growth, spatial pattern, development and trends ofdifferent forms of media.
- To develop insights about links between media and space and media spaces

Course Outline

Unit 1: Introduction: **(9 hrs)**

- Geography of Media, historical development and approachesto study.

Unit 2: Forms of Media: **(9 hrs)**

- Print, audio visual, digital and social media; vernacular, regional and national circulations, importance and role in geographical knowledge.

Unit 3: Functions of Media is shaping Geographical Spaces: (9 hrs)

- Surveillance, Linkage,Representation and consumption of rural and urban landscapes

Unit 4: Role of Media: (9 hrs)

- Role of media in shaping culture, politics and environmentalvalues, role in creation of global markets.

Unit 5: Media and Development: (9 hrs)

- Media as public sphere and media as public service, coverage of global issues concerning environment, disasters and conflict.

Teaching Plan

Unit 1: 9 hours

Unit 2: 9 hours

Unit 3: 9 hours

Unit 4: 9 hours

Unit 5: 9 hours

Total : 45 hours

GENERAL ELECTIVE- EDUCATION FOR SUSTAINABLE DEVELOPMENT (GE 18)

Course title & Code	Credits	Duration (per week)			Eligibility Criteria	Prerequisite
		Lecture	Tutorial	Practical/ Practice		
EDUCATION FOR SUSTAINABLE DEVELOPMENT	**4**	**3**	**1**	**0**	**Class 12th**	**NIL**

Learning Objectives:

This paper seeks to:

- Clarify concepts of sustainability, sustainability values and principles, sustainablelifestyles and responsible consumption as well as the synergies between them.
- Deepen and expand knowledge about new paradigms of education associated witheducation for sustainability, sustainable lifestyles and transformative education.

- Strengthen the capacities and skills of the students henceforth called learners to integrate the values of sustainability in their areas of action, and promote a new awareness of our relationship with the environment and sustainable lifestyles.
- Motivate and inspire students to contribute, through their areas of action in building more coherent, harmonious, and sustainable societies.

Learning Outcomes:

Transacting the course will enable students to :

- Develop a greater understanding of Education for Sustainable Development (ESD) andits application in education including a basic understanding of Sustainable Development.
- Be familiar with new paradigms of education within the framework of Education for Sustainable Development, and related themes.
- Deepen knowledge to incorporate values-based education for sustainable development in educational programmes and processes.

Course Outline

Unit 1: Education for Sustainable Development: **(9 hrs)**

- Concept and Meaning, History,Global Perspectives

Unit 2: Education for Sustainable Development and Sustainable DevelopmentGoals: **(9 hrs)**

- Quality Education, Gender Equality, Sustainable Lifestyle

Unit 3: Transformative Learning: (9 hrs)

- Values, Ethics and Experiences, Peace Education

Unit 4: Communities and Sustainable Practices: **(9 hrs)**

- Role of Institutions, GreenTechnology and Entrepreneurship, Nature Based Solutions (NBSs)

Unit 5: Education for Sustainable Development in India: **(9 hrs)**

- Educational Policy andCurriculum, Institutes imparting ESD.

Teaching Plan

Unit 1: 9 hours

Unit 2: 9 hours

Unit 3: 9 hours

Unit 4: 9 hours

Unit 5: 9 hours

Total : 45 hours

Semester IV

DEPARTMENT OF SOCIOLOGY

Category I

BA (Honors) Sociology

Sociological Thinkers-1

DISCIPLINE SPECIFIC CORE (DSC) 10: Sociological Thinkers-1

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (If any)
		Lecture	Tutorial	Practical/ Practice		
DSC-10 Sociological Thinkers-I	4	3	1	0	12th Class Pass	BA (H) DSC 04: Sociological Perspectives or equivalent course

Learning Objectives:

1. The course introduces students to the theoretical contributions of Emile Durkheim, Max Weber and Talcott Parsons.
2. It provides an understanding of the conceptual foundations of the positivist, interpretive and American Structural-Functional Schools of Sociology.

Learning outcomes:

Students will be able to:

1. *Outline* the key concepts and theoretical architecture of the sociological thought of Durkheim, Weber and Parsons.
2. *Apply* the concepts and theories to conceptualize research questions to study and analyses social realities.

SYLLABUS OF DSC -10: Sociological Thinkers-I

Unit I. Emile Durkheim (18 Hours)

This unit introduces the students to Durkheim's conception of Sociology as a scientific discipline and enables them to comprehend the relationships between individual and society through the writings of Durkheim.

a. Social Fact

b. Individual and Society

Unit II. Max Weber (18 Hours)

This unit introduces the students to basic concepts of Max Weber's interpretive sociology, his methodological tools and his substantive contribution to the study of social action and the relationship between cultural ideas and social change.

a. Social Action and Ideal Types
b. Ideas and Social Change

Unit III. Talcott Parsons (9 Hours)

The unit introduces the structural-functional theory of Talcott Parsons with a focus on social action, action frame of reference and pattern variables.

a. Action Systems
b. Pattern Variables

Practical Component: NIL

Essential/Recommended Readings:

Unit I. Emile Durkheim

a. Social Fact

Jones, Robert. A. (1986). 'Studying Social Facts: The Rules of Sociological Method' in *Emile Durkheim: An Introduction to Four Major Works*. London: Sage Publications. Ch 3. Pp. 60-81.

b. Individual and Society

Durkheim, Emile. (2005). 'How to Determine Social Causes and Social Types' in *Suicide: A Study in Sociology*. London: Taylor & Francis. Introduction and Book II, Chapter 1, Pp. xxxix-li, 97-104.

Durkheim, Émile. (1984). 'Mechanical Solidarity or Solidarity by Similarities and Solidarity Arising from the Division of Labour or Organic Solidarity' in The *Division of Labour in Society*. United Kingdom: Macmillan. Book 1 -Chapters 2 & 3. Pp. 31- 64, 68-86.

Unit II. Max Weber

a. Social Action and Ideal Types

Weber, Max. (1947). *The Theory of Social and Economic Organization*. New York: The Free Press. Pp. 87-123.

b. Ideas and Social Change

Weber, Max. (2012). *Protestant Ethic and the Spirit of Capitalism.* New York: Routledge. Chapters. 1, 2, 3 & 5. Pp. 3-50, 102-125.

Unit III: Talcott Parsons

a. Action Systems
b. Pattern Variables

Parsons, Talcott. (1951). *The Social System.* London: Routledge. Ch. 1 & 2. Pp. 1-44.

Suggested Readings:

Bhambra Gurminder. and John Holmwood. (2021). *Colonialism and Modern Social Theory*. Cambridge: Polity Press.

Durkheim, E. (1982). *The Rules of Sociological Method (W.D. Halls, Trans.)*. New York London Toronto Sydney: The Free Press.

Freund, J. (1970). *The Sociology of Max Weber*. Penguin Books.

Giddens, A. (1971). *Capitalism and Modern Social Theory: An Analysis of the Writings by Marx, Weber and Durkheim*. Cambridge University Press.

Lukes, S. (1985). *Emile Durkheim: His Life and Work: A Historical and Critical Study*. Stanford University Press.

Turner, J. (1995). The Structure of Sociological Theory. Jaipur: Rawat Publications.

Black, Max ed. (1961). Parsons Sociological Theory in The Social Theories of Talcott Parsons: A Critical Examination .Englewood Cliffs, NJ. Prentice Hall. pp. 1-63.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

B.A. (H) Sociology
Discipline Specific Core (DSC) 11
Economic Sociology

Discipline Specific Core Course -11 (DSC-11) : Economic Sociology

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (If any)
		Lecture	Tutorial	Practical/ Practice		
DSC 11 Economic Sociology	4	3	1	0	12th Class Pass	BA (H) DSC 01: Introduction to Sociology or equivalent course

Learning Objectives:

1. To familiarise students with the key concepts and theoretical perspectives in Economic Sociology.
2. To provide an understanding of the social and cultural bases of various dimensions of the economy such as production, distribution, exchange, consumption and markets.
3. To enable students to comprehend economic processes at all levels as embedded and interconnected.

Learning outcomes:

Students will be able to:

1. *Understand* the key concepts and theories of economic sociology as a specialised branch of knowledge.
2. *Identify* the diverse ways in which the economy is embedded in other aspects of society and culture.
3. *Use* sociological concepts and theories to understand and analyse the transformations of the economy and its key processes and institutions from a comparative perspective.
4. *Generate* research questions and arguments about the intersections of economy and society.

SYLLABUS OF DSC-11: Economic Sociology

Unit I: Introduction to Economic Sociology (15 hours)

This unit provides an understanding of the key concepts and theoretical perspectives of Economic Sociology as a specialised branch of knowledge.

a. What is Economic Sociology?
b. Perspectives in Economic Sociology

Unit II: Economic Action and its Locations (24 hours)

This unit provides an understanding of the various dimensions of economy such as production, distribution and consumption while highlighting their sociocultural bases.

a. Production and its Logics
b. Distribution and its Reach

Unit III: Contemporary Directions in Economic Sociology (6 hours)

This unit provides an understanding of the changing economic processes and institutions in contemporary times.

a. Informal Economy
b. Platform Society

Practical Component: NIL

Essential/Recommended Readings:

Unit I. Introduction to Economic Sociology (15 hours)

a. What is Economic Sociology

Martinelli, Alberto. 2023. 'The conception and definition of economic sociology' in *The Routledge International Handbook of Economic Sociology*. New York: Taylor & Francis, 2023. Pp. 57-74.

Portes, Alejandro. 2010. 'The Assumptions That Ground the Field' in *Economic Sociology: A Systematic Inquiry.* New Jersey: Princeton University Press. Chapter 2. Pp. 10-26.

b. Perspectives in Economic Sociology

Polanyi, Karl. 1992. 'Economy as an Instituted Process' in M. Granovetter and R. Swedberg (eds.) *The Sociology of Economic Life*. Colorado: West View Press. Pp. 27-50.

Granovetter, Mark. 1985. 'Economic Action and Social Structure: The Problem of Embeddedness'. *American Journal of Sociology*. 91(3). Pp. 481- 507.

Unit II: Economic Action and its Locations (24 hours)

a. Production and its Logics

Sahlins, Marshall. 2017. 'The Original Affluent Society' in *Stone Age Economics*. New York: Routledge. Chapter 1. Pp. 1-37.

Scott, James C. 1976. 'The Economics and Sociology of Subsistence Ethics' in *The Moral Economy of the Peasant: Rebellion and Subsistence in Southeast Asia.* Chapter 1. New Haven, Yale University press. Pp. 13-34.

Wallerstein, Immanuel. 1983. 'The Commodification of Everything: Production of Capital' in *Historical Capitalism*. London: Verso. Chapter 1. Pp. 13-46.

b. Distribution and its Reach

Mauss, Marcel. 1966. 'The Gifts and Obligation of Return Gift' and 'Distribution of the System: Generosity, Honour and Money' in *The Gift: Forms and Functions of Exchange in Archaic Societies*. (tr. Ian Cunnison). London: Cohen and West. Chapters. 1, 2. Pp. 1-46.

Patterson, Thomas C. 2005. 'Distribution and Redistribution' in James G. Carrier (ed.) *A Handbook of Economic Anthropology.* Cheltenham: Edward Elgar. Pp. 194-209.

Weiss, Brad. 1996. 'Coffee Breaks and Coffee Connections: The Lived Experience of a Commodity in Tanzanian and European Worlds' in David Howes (ed.) *Cross-Cultural Consumption: Global Market, Local Realities.* London and New York: Routledge. Pp. 93-105.

Unit III: Contemporary Directions in Economic Sociology (6 hours)

a. Informal Economy

Light, Donald W. 2004. 'From Migrant Enclaves to Mainstream: Reconceptualizing Informal Economic Behaviour' in *Theory and Society.* 33(6). Pp. 705-737.

b. Platform Society

Dijck, Jose Van. et al. 2018. 'The Platform Society as a Contested Concept' in *The Platform Society: Public Values in a Connected World.* New York: Oxford University Press. Chapter 1, Pp. 1-30.

Suggested Readings:

Verdery, Katherine. 1996. *What Was Socialism, And What Comes Next?* New Jersey: Princeton University Press.

Zelizer, Viviana A. 1989. 'The Social Meaning of Money: Special Monies'. *American Journal of Sociology*, Vol. 95 (Sept.). Pp. 342-377.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Sociology of Gender

DISCIPLINE SPECIFIC CORE COURSE -12 (DSC-12) : Sociology of Gender

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSC 12 Sociology of Gender	4	3	1	0	12th Class Pass	BA (H) DSC 05: Social Stratification or equivalent course

Learning Objectives:

1. To introduce the sociology of gender as a critical area of sociological inquiry.
2. To provide a sociological understanding of the categories of gender, sex and sexuality.
3. The problematise the common-sense conception of gender from a sociological perspective.

Learning outcomes:

Students will be able to:

1. *Identify* and explain key concepts in the sociology of gender.
2. *Investigate* gendered inequalities in a comparative mode across time and space.
3. *Analyse* gender in relation to other forms of social stratification and identities such as caste, class, family and work.

SYLLABUS OF DSC-12: Sociology of Gender

Unit I. Understanding Gender (9 Hours)

This unit locates the understanding of gender within the framework of sociological theories.

Unit II. Gender, Power and Resistance (9 Hours)

This unit examines the forms of resistance to gender-based power through ideological change and social movements.

a. Power and Subordination

b. Negotiations and Resistance

Unit III. Gender: Differences and Inequalities (12 Hours)

This unit examines the intersection of gender with different forms and locations of social inequality.

a. Stratification and Difference

b. Work and Houehold

Unit IV. Masculinity and Femininity (15 Hours)
This unit elucidates the varied ways in which gender is socially constructed.
a. Production of Masculinity and Femininity
b. Culture and Sexuality

Practical Component: NIL

Essential/Recommended Readings:

Unit I. Understanding Gender

Jackson, S. and S. Scott (eds.) 2002 'Introduction: The Gendering of Sociology' in S. Jackson and S. Scott *Gender: A Sociological Reader*, London: Routledge. pp 1-26.

Risman, Barbara J. 2018. 'Gender as a Social Structure' in Handbook of the Sociology of Gender. Germany, Springer International Publishing, 2018. Pp. 19-38.

Unit II. Gender, Power and Resistance

a. Power and Subordination

Susie, Tharu and Tejaswini Niranjana. 1994. 'Problems for a Contemporary theory of Gender' in *Social Scientist*, Vol.22 No. ¾ (Mar-Apr) Pp. 93-117.

Abu Lughod, Lila. 2002. 'Do Muslim Women Really Need Saving? Anthropological Reflections on Cultural Relativism and its Others.' in *American Anthropologist, Vol.* 104, No. 3. Pp.783-790.

b. Negotiations and Resistance

Kandiyoti, Deniz. 1991. 'Bargaining with Patriarchy' in Judith Lorber and Susan A. Farrell (eds.) *The Social Construction of Gender*, New Delhi: Sage Publications. Pp. 104-118.

Ahmed. S. 2017. 'Bringing Feminist Theory Home' in *Living a Feminist Life*. Durham: Duke University Press. Pp. 1-18.

Unit III. Gender: Differences and Inequalities

a. Stratification and Difference

Walby, Sylvia. 2002. 'Gender, Class and Stratification: Towards a New Approach' in S. Jackson and S. Scott (eds.) *Gender: A Sociological Reader*. London: Routledge. Pp. 93-96.

Rege, S. 1998. 'Dalit Women Talk Differently: A Critique of 'Difference' and Towards a Dalit

Feminist Standpoint Position' in *Economic and Political Weekly*, Vol. 33, No. 44, Oct.31-Nov. 6. Pp. 39-48.

b. Work and Household

Whitehead, A. 1981. 'I'm Hungry Mum: The Politics of Domestic Budgeting' in K. Young et al. (eds.) *Of Marriage and the Market: Women's Subordination Internationally and its Lessons.* London: Routledge and Kegan Paul. Pp. 93-116.

Palriwala, Rajni. 1999. 'Negotiating Patriliny: Intra-household Consumption and Authority in Rajasthan (India)', in Rajni Palriwala and Carla Risseeuw (eds.), *Shifting Circles of Support: Contextualising kinship and gender relations in South Asia and Sub-Saharan Africa.* Delhi: Sage Publications Pp. 190-220.

Unit IV. Masculinity and Femininity

a. Production of Masculinity and Femininity

Halberstam, Judith. 2012. 'An Introduction to Female Masculinity: Masculinity without Men' in *Female Masculinity*.Delhi: Zubaan . Pp. 1-29.

Cornwall, Andrea and Nancy Lindisfarne 1994 'Dislocating Masculinity: Gender, Power and Anthropology' in Cornwall and Lindisfarne (ed.). *Dislocating Masculinity: Comparative Ethnographies*. Routledge. Chapter 1, pp 11-26.

b. Culture and Sexuality

Ortner, Sherry. 1974. 'Is male to female as nature is to culture?' in M.Z. Rosaldo and L. Lamphere (eds.) *Women, Culture and Society*. Stanford: Stanford University Press. Pp. 67-87.

Dube, Leela. 2001. Anthropological Explorations in Gender: Intersecting Fields. Delhi:Sage Publications, 2001. Chapter 3. The Symbolism Of Biological Reproduction and Sexual Relations of Production. Pp. 119-151

DSC 07 Post-Classical Sociological Thinkers	4	3	1	0	12th Class Pass	BA(Prog) DSC 05: Classical Sociological Thinkers or equivalent course

Learning Objectives:

1. To familiarise students with developments in sociological theory in the 20th century.
2. To introduce students to the theoretical work in the traditions of Americal Structural-functionalism, interactionism, and critical theory.
3. To draw the attention of students towards the difference between macro and micro sociologies and traditional and critical theories.

Learning outcomes:

Students will be able to:
1. *Understand* the post-classical developments in Sociological Theory.
2. *Outline* the interdisciplinary nature of sociological concepts.
3. *Apply* the theories they learned in empirical contexts and construct theoretically informed sociological research.

SYLLABUS OF DSC-07: Post-Classical Sociological Thinkers

Unit I: Talcott Parsons: Social Action (12 hours)

The unit explains the ways in which Parsons conceptualises social action as a product of social, cultural and personality systems.

Unit II: Erving Goffman : Dramaturgy (12 hours)

The unit introduces the students to Goffman's dramaturgical perspective and the application of the theory in decoding advertisements from a gendered perspective.

Unit III: Peter Berger and Thomas Luckmann : Social Construction (12 hours)

The unit deals with Berger and Luckmann's concept of reality of how it is being created and shaped by social interactions.

Unit IV: Herbert Marcuse : Critical Theory (9 hours)

The unit introduces the students to the Frankfurt School of critical theory through the original works of Herbert Marcuse.

Practical Component: NIL

Essential/Recommended Readings:

Unit I: Talcott Parsons: Social Action

Turner, J. (1987) *The Structure of Sociological Theory.* India: Rawat Publications. Pp. 57-86

Semester IV
Discipline Specific Core (DSC) 07
Post-Classical Sociological Thinkers

DISCIPLINE SPECIFIC CORE COURSE -07 (DSC-07) : Post-Classical Sociological Thinkers

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (If any)
		Lecture	Tutorial	Practical/ Practice		
DSC 07 Post-Classical Sociological Thinkers	4	3	1	0	12th Class Pass	BA(Prog) DSC 05: Classical Sociological Thinkers or equivalent course

Learning Objectives:

4. To familiarise students with developments in sociological theory in the 20th century.
5. To introduce students to the theoretical work in the traditions of Americal Structural-functionalism, interactionism, and critical theory.
6. To draw the attention of students towards the difference between macro and micro sociologies and traditional and critical theories.

Learning outcomes:

Students will be able to:

4. *Understand* the post-classical developments in Sociological Theory.
5. *Outline* the interdisciplinary nature of sociological concepts.
6. *Apply* the theories they learned in empirical contexts and construct theoretically informed sociological research.

SYLLABUS OF DSC-07: Post-Classical Sociological Thinkers

Unit I: Talcott Parsons: Social Action (12 hours)

The unit explains the ways in which Parsons conceptualises social action as a product of social, cultural and personality systems.

Unit II: Erving Goffman : Dramaturgy (12 hours)

The unit introduces the students to Goffman's dramaturgical perspective and the application of the theory in decoding advertisements from a gendered perspective.

Unit III: Peter Berger and Thomas Luckmann : Social Construction (12 hours)

The unit deals with Berger and Luckmann's concept of reality of how it is being created and shaped by social interactions.

Unit IV: Herbert Marcuse : Critical Theory (9 hours)

The unit introduces the students to the Frankfurt School of critical theory through the original works of Herbert Marcuse.

Practical Component: NIL

Essential/Recommended Readings:

Unit I: Talcott Parsons: Social Action

Turner, J. (1987) *The Structure of Sociological Theory.* India: Rawat Publications. Pp. 57-86

Parsons, T. & Shils, E. (eds). (1951) . *Towards a General Theory of Action.* London: Routledge. Ch. 1 & 2. Pp. 1-44

Unit II: Erving Goffman: Dramaturgy

Goffman, E. (1956). *The Presentation of Self in Everyday Life*. Edinburgh: University of Edinburgh (Monograph No. 2). Pp. 1-9, 132-162.

Goffman, E. (1979). *Gender Advertisements.* New York: Harper and Row Publications. Chapter 1: Gender Display. Pp. 1-9.

Unit III: Peter Berger and Thomas Luckmann: Social Construction

Berger, P. L. & Luckmann, T. (1991). *The Social Construction of Reality*. London: Penguin Books. Pp. 31-62.

Giddens, A. & Sutton, P.W. (2022). *Sociology* (9th edition). Cambridge: Polity Press. Chapter 12: Social Interaction and Everyday Life. Pp. 958-1023.

Unit IV: Herbert Marcuse: Critical Thoery

Marcuse, H. (1964). *One Dimensional Man: Studies in the Ideology of Advanced Industrial Society*. New York: Routledge & Kegan Paul. Introduction. Pp xi- xxxviii.

Suggested Readings:

Smith G. (2015). *Goffman, E* . London & New York: Routledge.

Elliot, A. & Lemert, C. (2022) *Introduction to Contemporary Social Theory*. London & New York: Routledge.

Callincos, A. (1999). Social Theory: A Historical Introduction. United Kingdom: NYU Press.

Craib, I. (2015). Modern Social Theory. United Kingdom: Taylor & Francis.

Common Pool of Discipline Specific Electives (DSE)
Discipline Specific Elective (DSE) 04

Sociology of Education

DISCIPLINE SPECIFIC ELECTIVE COURSE -04 (DSE-04) : Sociology of Education

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSE 04 Sociology of Education	4	3	1	0	12th Class Pass	Nil

Learning Objectives:

1. To introduce sociology of education as an area of sociological interest and investigation.
2. To constitute education as discursive practice at the confluence of various social, political, economic and cultural processes.
3. To map significant issues in the sociology of education in India.

Learning Outcomes:

Students will be able to:

1. *Develop* an understanding of the social dimensions of education.
2. *Recognise* the role of education in the production and reproduction of social structures, categories and identities.
3. *Analyse* the diversity of educational practices and cultures in a comparative context.
4. *Examine* the relationship between the political economy and educational regimes in their social context and translate this understanding into sociologically informed education practice and policy.

SYLLABUS OF DSE 04: Sociology of Education

Unit I: An Introduction to Sociology of Education (9 Hours)
This unit introduces some of the key sociological perspectives on education

Unit II: Education in the Societal Context (24 Hours)
This unit explains the interactions of education with the larger frameworks of modernization, development and inequality. It also brings out nuances of the practices of education that inform and are informed by these interactions

a. Education, Modernity and Development
b. Education, Ideology and Reproduction
c. Textbook, Curriculum and Pedagogies

Unit III: Social Character of Education in India (9 Hours)
This unit focuses on how India has evolved with its own agenda of education; Civilizational, National and constitutional aspirations, social character, diverse practice and its contradictions.

Unit IV: Globalization and Education (3 Hours)
This unit engages with the emerging questions related to the new technological advancements in contemporary times and the nature, role and contradictions of new educational socialization.

Practical Component: Nil

Course Outline and Essential/Recommended Readings:

Unit I: An Introduction to Sociology of Education

Durkheim, Emile. (1985). 'Education: Its Nature and Role;, in Suresh Chandra Shukla and Krishna Kumar (Eds.) *Sociological Perspectives on Education: A Reader*. Delhi: Chanakya Publication. Pp. 9-22.

Sociology
Discipline Specific Elective (DSE) 05
Sociology of Social Movements

DISCIPLINE SPECIFIC ELECTIVE COURSE -05 (DSE-05) : Sociology of Social Movements

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSE 05 Sociology of Social Movements	4	3	1	0	12th Class Pass	Nil

Learning Objectives:

1. This paper introduces students to the sociological study of social movements.
2. It aims to provide students with the major conceptual, theoretical and methodological tenets of the study of social movements.
3. The paper also demonstrates the complex relationship between social movements, culture, and the broader socio-political context, through a series of case studies.

Learning outcomes:

Students will be able to:

1. *Identify* and examine the various dimensions of the phenomenon of social movements and assess the various apporaches to its study.
2. *Describe* the various dimensions of social movements and the relationship and dynamics between them.
3. *Recognise* and *evaluate* the salience of social movements in contemporary society.

SYLLABUS OF DSE-05: Sociology of Social Movements

Unit I: Sociology and Social Movements (12 Hours)

This unit introduces students to the formative issues in the sociological study of social movements.

Unit II: Social Movements: Strategies, Opportunities, Networks, Dynamics (12 Hours)

This unit familiarises students with the relationship between the various organising principles of social movements and their dynamics.

Unit III: States, Everyday Relations and Contention (12 Hours)

This unit apprises students about the relationship between movements and other institutional political phenomena.

Unit IV: Social Movements and Culture (9 Hours)
This unit maps the issues in contemporary studies of social movements.

Practical Component: NIL

Essential/Recommended Readings:

Unit I: Sociology and Social Movements

Sociology
Discipline Specific Elective (DSE) 06
Sociology of Media

DISCIPLINE SPECIFIC ELECTIVE COURSE -06 (DSE-06) : Sociology of Media

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSE 06 Sociology of Media	4	3	1	0	12th Class Pass	Nil

Learning Objectives:

1. To introduce students to the subfield of sociology of media.
2. To equip students with key concepts and theories to grasp the contemporary media landscape from a sociological perspective.
3. To unpack the workings of media on the axis of regulation, representation and reception; and see how these enduring concerns continue to inform the workings of new media.

Learning outcomes:

Students will be able to:

1. *Examine* the nature of media and its relation with society.
2. *Describe* and *apply* the various theoretical perspectives and conceptual tools in the area of sociology of media.
3. *Evaluate* contemporary mass media related issues in terms of their constitution and consequences.

SYLLABUS OF DSE 06: Sociology of Media

Unit I Mass Society and Mass Media (9 hours)

This unit traces the contours of mass society and mass media and prevalent modes of and key motifs in sociological and anthropological investigations of media.

Unit II Sociological Theories of Media (21 hours)

This unit maps out key theoretical interventions in sociology of media in articulation with one another.

a. The Dominant Paradigm

b. Critical Media Theories

c. Semiotics, Cultural Studies, Feminism, and Post-Modernism

Unit III Media Processes (15 hours)

This unit elaborates on the media processes on the axes of regulation, representation, and reception. It concludes with a consideration of developments in new media.

a. Regulation

b. Representation

c. Reception

d. New Media

Practical Component: NIL

Essential/Recommended Readings:

Unit I. Mass Society and Mass Media: An Introduction (9 hours)

Ritzer, George. Ed 2007. *The Blackwell Encyclopedia of Sociology.*United Kingdom, Blackwell Pub., Mass Culture And Mass Society; Media; Pp. 2821-2824 & 2873-2880.

Matthews, Julian. 2020. 'The Sociology of Mass Media', in Kathleen Odell Korgen ed. *The Cambridge Handbook of Sociology: Volume I Core Areas in Sociology and the Development of the Discipline,* United Kingdom, Cambridge University Press, . Pp. 205- 211

Dickey, Sara. 2010. 'Anthropology and Its Contributions to Studies of Mass Media'. *International Social Science Journal*. 49. Pp. 413 - 425.

Unit II. Sociological Theories of Media (21 Hours)

a. The Dominant Paradigm

Gitlin, Todd. 1978. 'Media Sociology: The Dominant Paradigm.' *Theory and Society*, vol. 6, no. 2, pp. 205–224.

b. Critical Media Theories

Bennett, Tony. 2005. 'Theories of the Media, Theories of Society' in, Michael Gurevitch et al. (eds.) *Culture, Society and the Media*. United Kingdom, Taylor & Francis, Pp. 26-50

GENERIC ELECTIVE COURSE 10 (GE- 10): Sociology of Public Health

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
GE 10 Sociology of Public Health	4	3	1	0	12th Class Pass	Nil

Learning Objectives:

1. The course introduces students to public health and its interlinkages with various social determinants.
2. It familiarises students with contemporary concerns and challenges with respect to public health in India.

Learning outcomes:

Students will be able to:

1. Examine and comprehend public health and the varied social determinants of health.
2. Develop a theoretical understanding of health in society and assess the social determinants of health.
3. Evaluate the health systems in terms of new public health initiatives and innovative technologies.

SYLLABUS OF GE 10 : Sociology of Public Health

Unit I. Introduction to Public Health (9 Hours)
This unit introduces the students to the concept of public health from a sociological perspective.

Unit II. Theoretical Approaches to Public Health (6 Hours)
This unit discusses the ways in which public health has been conceptualised.

Unit III. Social Determinants of Public Health (6 Hours)
This unit discusses how non-medical factors influence health outcomes.

Unit IV. Contemporary Issues (24 Hours)

This unit discusses the contemporary concerns and challenges to public health in India.

Practical Component: NIL

Essential/Recommended Readings:

Unit I. Understanding Public Health

Abel J, Kellehear A. (2023). Public Health Reimagined. *Lifestyle Med. e76. Pp.* 1-8.

Craig R. Janes and Kitty K. Corbett. (2009). 'Anthropology and Global Health' in *Anthropology and Global Health*. Simon Fraser University, Burnaby, British Columbia. Pp. 167-183.

Sociology
Generic Elective (GE) 11
Sociology of Organisations

GENERIC ELECTIVE COURSE – 11 (GE-11): SOCIOLOGY OF ORGANISATIONS

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
GE-11 Sociology of Organisations	4	3	1	0	12th Class Pass	Nil

Learning Objectives:

1. This course introduces organisations as an object of sociological inquiry.
2. To generate an interdisciplinary understating of organisation at the confluence of Sociology, Social Anthropology, management studies and organisational studies.
3. To embed organisations in the larger socio-historical process and study them as key sites for the reshaping of society.

Learning outcomes:

Students will be able to:

1. *Examine* organisations sociologically as comprising multiple actors, ideologies and often competing worldviews.
2. *Identify* and describe the ways in which an organisation relates to and impacts its socio-ecological environment.
3. *Outline*, observe, and examine the evolution and contemporary developments in organisational structures.

SYLLABUS OF GE-11: Sociology of Organisations

Unit I. Introducing Sociology of Organisations (10 hours)
This unit lays the ground for the sociological study of organisations through a survey of the history of this subfield followed by a study of the major theoretical approaches.
a. What is an Organisation?
b. Theoretical Approaches

Unit II. Thematic Perspectives (15 hours)
Through a combination of theoretical and ethnographic texts, this unit looks at some of the key concepts and themes animating the sociology of organisations.
a. Investigating the 'Official' and the 'Practical'
b. Organisation and its Environment
c. Organisations and the Making of the 'Selves'

Unit III: Recent Explorations: New Directions in the Study of Organisations (12 hours)
This unit aims to introduce students to more recent developments in this field with respect to contemporary workplaces.
a. Evolution of the New Workplace
b. Stretching the Limits: Criminal Organisations

Unit IV: Conducting Research in Organisations (8 hours)
This unit aims at developing a critical understanding of the methodologies used in the sociological study of organisations.

Practical Component: NIL

Essential/Recommended Readings:

Unit I. Introducing Sociology of Organisations (10 hours)

a. What is an Organisation?

Scott, W.R. and G. F. Davis. 2015. 'Organizations: Overview'. In James D Wright ed. *International Encyclopedia of the Social & Behavioral Sciences, 2nd edition (Volume 16).* Amsterdam: Elsevier. pp. 307-311.

b. Theoretical Approaches

Scott, W. R. 2004. 'Reflections on a Half-Century of Organizational Sociology.' *Annual Review of Sociology, 30,* 1–21.

Unit II. Thematic Perspectives (15 hours)

a. Investigating the 'Official' and the 'Practical'

Braverman, H. 1998. 'Scientific Management' and 'The Primary Effects of Scientific Management' in *Labor and Monopoly Capital: The Degradation of Work in the Twentieth Century*. 25th Anniversary Edition. New York: Monthly Review Press. Chapters 4 & 5. pp. 59-94.

Ong, A. 1988. 'The Production of Possession: Spirits and the Multinational Corporation in Malaysia'. *American Ethnologist*, 15(1), 28–42.

b. Organisation and its Environment

Mathur, N. 2012. 'Transparent-Making Documents and the Crisis of Implementation: A Rural Employment Law and Development Bureaucracy in India'. *POLAR: Political and Legal Anthropology Review* 35 (2), 167–85.

c. Organisations and the Making of 'Selves'

Smith, G. 2006. 'Asylums' in *Erving Goffman*. London: Routledge. Chapter 5. pp. 69-76.

Hochschild, A. 2002. 'Emotional Labour' in S. Jackson and S. Scott (eds.) *Gender: A Sociological Reader*. London: Routledge. Chapter 23. pp. 192-196.

Unit III: Recent Explorations: New Directions in the Study of Organisations (12 hours)

a. Evolution of the New Workplace

Ho, K. 2009. 'Disciplining Investment Bankers, Disciplining the Economy: Wall Street's Institutional Culture of Crisis and the Downsizing of Corporate America'. *American Anthropologist*. 111: 177-189.

Hilhorst. D. 2003. 'Making Sense of NGOs in Everyday Office Life' in *The Real World of NGOs: Discourse, Diversity and Development*. London: Zed Books. Chapter 7. pp. 146-170.

b. Stretching the Limits - Criminal Organisations

Dua, J. 2015. 'After Piracy? Mapping the Means and Ends of Maritime Predation in the Western Indian Ocean'. *Journal of Eastern African Studies,* 9(3), 505-521.

Venkatesh, S. A. 1998. 'Gender and Outlaw Capitalism: A Historical Account of the Black Sisters United Girl Gang'. *Signs,* 23(3), 683–709.

Unit IV: Conducting Research in Organisations (8 hours)

Schwartzman, H.B. 1993. 'Introduction', 'Studying Up and Studying Down' and 'Fieldwork Roles and Fieldwork Processes' in *Ethnography in Organisations*. London: Sage. Chapters 1, 4 & 5. pp. 1-4, 27-40, 47-72.

Suggested Readings:

Wright. S. (ed.) 1994. *Anthropology of Organisations*. London: Routledge.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Sociology
Generic Elective (GE) 12
Sociology of Fashion

GENERIC EILECTIVE COURSE -12 (GE-12) : Sociology of Fashion

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
GE 12 Sociology of Fashion	4	3	1	0	12th Class Pass	Nil

Learning Objectives:

1. This paper aims to introduce students to the sociological study of fashion and its associated domains such as dress and clothing.
2. The objective of the paper is to introduce students to a range of issues arising out of a sociological consideration of fashion: the semiosis, social forms, relationship between fashion and social locations, culture and identity, and the global fashion industries in relation to consumption and sustainability.

Learning outcomes:

Students will be able to:

1. *Acquire* a basic knowledge of the theories and substantive issues in the sociology of fashion.
2. *Identify* and assess the meanings of fashion in its various dimensions such as material culture, as identity, as an economic power, and aesthetic style.
3. *Develop* an informed approach to read fashion in order to analyse and appraise relations between the economic, symbolic and socio-political aspects of contemporary society.

SYLLABUS OF GE-12: Sociology of Fashion

Unit I: Fashion: Between History and Sociology (9 Hours)
This unit introduces students to the basic theoretical and conceptual issues in the sociological study of fashion

Unit II: Making and the Meanings of Fashion (27 Hours)
This unit maps the various dimensions of the sociological study of fashion and enables students to grasp the many meanings of fashion in relation to culture, power and economy.

a. Sociality and Material Culture
b. Commodity and Consumption

c. Identity and Change

Unit III: Fashion in a Global Society (9 Hours)
This unit familiarizes students with the sociology of fashion in the contemporary context of globalization and cultural change.

Practical Component: NIL

Essential/Recommended Readings:

Unit I: Fashion: Between History and Sociology

Wilson, Elizabeth. *Adorned in Dreams: Fashion and Modernity*, London and New York: I. B. Tauris, 2003. Introduction. Pp. 1-15.

Blumer, Herbert. Fashion: From Class Differentiation to Collective Selection. *The Sociological Quarterly*, 10(3), 1969. Pp. 275–290.

Barthes, Roland. The Language of Fashion. United Kingdom: Bloomsbury Publishing, 2013. Pp. 3-14, 85-91.

Unit II: Making and the Meanings of Fashion

a. Sociality and Material Culture

Simmel, Georg. Georg Simmel on Individuality and Social Forms. Chicago: University of Chicago Press, 2003. Chapter 19. Fashon. Pp. 294-323.

Bovone, Laura. 'Approaches to Material culture: The sociology of fashion and clothing' in *Poetics*, 34(6), 2006. Pp. 319–331.

b. Commodity and Consumption

Barnard, Malcolm. *Fashion Theory: An Introduction*. United Kingdom: Taylor & Francis, 2014. Chapter 9. Fashon, Production and Consumption. Pp. 128-144.

Veblen, Thorstein. *The Theory of the Leisure Class*, Oxford: OUP, 2007. Chapter 7. Dress as an Expression of the Pecuniary Culture Pp. 111-124.

Fletcher, Kate. *Sustainable Fashion and Textiles: Design Journeys*. London: Taylor & Francis, 2007 2nd ed. Chapter 6 Local and Light . Pp. 139-159.

c. Identity and Change

Crane, Diana. *Fashion and Its Social Agendas: Class, Gender, and Identity in Clothing*. United Kingdom: University of Chicago Press, 2012. Chapter 1. Fashon, Identity and Social Change. Pp. 1-22.

Davis, Fred. *Fashion, Culture, and Identity*. United Kingdom: University of Chicago Press, 1994. Pp. 21-29, 33-54.

Angela McRobbie (ed.) *Zoot Suits and Second-Hand Dresses*, London: Macmillan, 1989. Chapter 2. Second-Hand Dresses and the Role of the Ragmarket. Pp. 23-48.

Unit III: Fashion in a Global Society

Maynard, Margaret. *Dress and Globalization*. United Kingdom: Manchester University Press, 2004. Pp. 32-49, 69-85

Tarlo, Emma. 'Dress and the South Asian Diaspora', in Joya Chatterji and David Washbrook (ed.) *Routledge Handbook of the South Asian Diaspora*, London & New York: Routledge, 2013. Pp. 363-373.

Green, D. N., Kaiser, S. B. Fashion and Cultural Studies. United Kingdom: Bloomsbury Publishing, 2021.2e. Chapter 5. Pp. 95-116.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

SEMESTER-V
DEPARTMENT OF SOCIOLOGY
Category I
BA (Honors) Sociology
Semester V

Sociological Thinkers- II

DISCIPLINE SPECIFIC CORE COURSE -13 (DSC-13) : Sociological Thinkers II

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSC 13 Sociological Thinkers- II	4	3	1	0	12th Class Pass	BA (H) DSC 10: Sociological Thinkers I or equivalent course

Learning Objectives:

1. To introduce the contributions made by Karl Marx, Claude Levi-Strauss and Pierre Bourdieu to sociological theory.
2. To familiarise students with Marxian and Structuralist and Practice Theories.

Learning Outcomes:

Students will be able to:
1. *Understand* conflict, structural and practice-oriented perspectives in the discipline of sociology.
2. *Conceptualise* research informed by these distinctive theoretical traditions of sociology.

SYLLABUS OF DSC-13: Sociological Thinkers- II

Unit I Karl Marx (18 Hours)

This unit introduces the students to the materialist conception of history as mode of analysis. It explores the basis, processes and consequess of capitalist society through the writings of Karl Marx.

a. Dialectical and Historical Materialism
b. Capitalist Mode of Production and Alienation

Unit II Levi Strauss: Structuralism (9 Hours)
This unit introduces students to structuralism and the study of myths through the writings of Levi-Strauss.

Unit III: Pierre Bourdieu: Theory of Practice (18 Hours)

This unit explains how an individual's practices are tacit and embodied and are an outcome of the interaction between social structures and the individual.

Practical Component: NIL

Essential/Recommended Readings:

Unit I: Karl Marx

a. Dialectical and Historical Materialism:

Marx, K. and F. Engels. 1969. *Selected Works, Vol. 1.* Moscow: Progress Publishers. Pp. 19-26.

b. Capitalist Mode of Production and Alienation

Marx, K. and F. Engels. 1969. *Selected Works Vol. 1*. Moscow: Progress Publishers. Pp. 142-174.

Giddens, Anthony. 1971. *Capitalism and Modern Social Theory: An Analysis of the Writings of Marx, Weber, and Durkheim*. Cambridge: Cambridge University Press. Pp. 1-64.

Unit II: Claude Levi Strauss: Structuralism

Lévi-Strauss, C. 1981. 'Structuralism and Myth' in *The Kenyon Review, New Series*, Vol. 3, No. 2, Spring. Pp. 64-88.

Unit III: Pierre Bourdieu: Theory of Practice

Bourdieu, P. 1977. *Outline of a Theory of Practice.* Cambridge: Cambridge University Press. Chapters. 2 Pp. 72-95.

Suggested Readings:

Bhambra Gurminder. and John Holmwood. 2021. *Colonialism and Modern Social Theory*. Cambridge: Polity Press.
Bottomore, T.(ed.). 1991. *The Dictionary of Marxist Thought.* Delhi: Wiley Blackwell.
Grenfell, M. (ed.) 2012. *Pierre Bourdieu: Key Concepts*. New-Delhi: Rawat Publications.
Seidman, S. 1994. *Contested Knowledge*. Cambridge: Blackwell Publishers.
Thompson, K. & Tunstall, J. (ed.) 1977. *Sociological Perspectives. Selected Readings.* New York: Penguin Books.
Turner, J. 1995. *The Structure of Sociological Theory.* Jaipur: Rawat Publications.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

BA (H) Sociology
Discipline Specific Core (DSC) 14
Sociological Research Methods

Discipline Specific Core Course -14 (DSC-14) : Sociological Research Methods

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSC 14 Sociological Research Methods	4	3	0	1	12th Class Pass	BA (H) DSC 03: Introduction to Sociological Research or equivalent course

LEARNING OBJECTIVES:

1. The course will enable students to learn the philosophical and methodological underpinnings of research.
2. It introduces them to various aspects of research methodology and the use of simple statistics.

LEARNING OUTCOMES:

Students will be able to:

1. *Understand* the deeper philosophical issues that underpin research.
2. *Evaluate* the methodological validity of the claims made by theory.
3. *Assess* research works for its methodological soundness.
4. *Create* research designs for simple research projects.

SYLLABUS OF DSC 14: Sociological Research Methods

Unit 1: Ways of Looking (6 Hours)

This unit introduces students to some of the main philosophical engagements of sociological research and practice.

a. Objectivity in Sociological Research
b. Reflexivity
c. Research Ethics

Unit 2: Methodological Issues (6 Hours)

This unit focuses on some epistemological issues and research practices.

a. Comparative Method
b. Feminist Method

Unit 3: Methods of Data Collection (21 hours)

This unit engages with the building blocks of research - from sampling the population to the common methods of conducting social surveys.

a. Sampling
b. Questionnaire Construction
c. Interview
d. Documents
e. Focus Group

Unit 4: Introduction to Statistics (12 Hours)

This unit introduces the statistical and diagrammatic organization and analysis of data.

a. Graphical and Diagrammatic Presentation of Data
b. Measures of Central Tendency (Simple Arithmetic Mean, Median and Mode).
c. Measures of Dispersion (Standard Deviation, Variance and Covariance).

Practical Component: NIL

Essential/Recommended Readings:

Unit 1: Ways of Looking

a. Objectivity in Sociological Research

Gray, David J. 1968. 'Value-Free Sociology: A Doctrine of Hypocrisy and Irresponsibility' in *The Sociological Quarterly*. Vol. 9, No. 2 (Spring, 1968). Pp. 176- 185.

b. Reflexivity

Gouldner, Alvin. 1970. *The Coming Crisis of Western Sociology*. New York: Basic Books. Chapter 13. Living as a Sociologist. Pp. 481-511.

c. Research Ethics

Martin, John Levi. 2017. Thinking Through Methods: A Social Science Primer. Chicago: University of Chicago Press, Chapter 6. Ethics in Research. Pp. 142-161.

Unit 2: Methodological Issues

a. Comparative Method

Béteille A. 2002. *Sociology: Essays on Approach and Method.* New Delhi: OUP. Chapter 4. Some Observations on the Comparitive Method. Pp. 72-94.

b. Feminist Method

Hammersley, Martyn. 1992. 'On Feminist Methodology' in *Sociology*, Vol. 26, No.2 (May 1992). Pp. 187-206.

Unit 3: Methods of Data Collection

a. Sampling

Bailey, K. 1994. 'Survey Sampling*'* in *Survey Sampling in Methods of Social Research*. 4th edition. New York: Free Press. Chapter 5. Pp. 81-104.

b. Questionnaire Construction

Bailey, K. 1994. 'Questionnaire Construction' in *Questionnaire Construction in Methods of Social Research*. 4th edition. New York: Free Press. Chapter 6. Pp. 105-146.

c. Interview

Bailey, K. 1994. 'Interview Studies' in *Methods of Social Research*. 4th edition. New York: Free Press. Chapter 8, Pp.173-213.

d. Documents

Coffey, Amanda. 'Analysing Documentary Realities', in David Silverman ed. *Qualitative Research: Theory, Method and Practice*. Delhi: SAGE Publications, 2004. Pp. 56-75.

e. Focus Group

Wilkinson, Sue. 'Focus group research' in David Silverman ed. *Qualitative Research: Theory, Method and Practice*. Delhi: SAGE Publications, 2004. Pp. 177-196.

Unit 4: Introduction to Statistics
(To be taught through Practical Classes)

a. Graphical and Diagrammatic presentation of data

Gupta, S. P. 2007. 'Diagrammatic and Graphic Presentation' in *Elementary Statistical Methods*. Sultan Chand & Sons. Chapter 6, Pp.101-108, 115-118, 131-137.

b. Measures of Central Tendency

Gupta, S. P. 2007. 'Measures of Central Value' in *Elementary Statistical Methods*. Sultan Chand & Sons. Chap 7, Pp. 155-168, 173-180, 187-197.

c. Measures of Dispersion

Gupta, S. P. 2007. 'Measures of Variation' in *Elementary Statistical Methods*. Sultan Chand & Sons. Chapter 8 pp. 262-277.

SUGGESTED READINGS:

Radcliffe-Brown, A.R. 1958. *Methods in Social Anthropology*. Delhi: Asia Publishing Corporation. Chapter 5. Pp. 91-108

Durkheim, E. 1958, The Rules of Sociological Method. New York: The Free Press, Chapter 1 and 2. Pp. 1-46

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

B.A. (H) Sociology
Discipline Specific Core (DSC) 15
Understanding Ethnographies

Discipline Specific Core Course -15 (DSC-15) : Understanding Ethnographies

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSC 15 Understanding Ethnographies	4	3	1	0	12th Class Pass	BA (H) DSC 03: Introduction to Sociological Research or equivalent course

Learning Objectives:

1. To familiarise students with ethnography as a genre of writing and representing sociological research.
2. To make them aware of the various issues involved in the process of ethnographic writing through a close reading of ethnographic texts.

Learning outcomes:

Students will be able to:

1. *Inculcate* interdisciplinary thinking between sociology, philosophy and literature, through reading classic and contemporary ethnographies.
2. *Understand* the construction and representation of the ethnographic field.
3. *Critically engage* with the research and data presented in ethnographic texts.

SYLLABUS OF DSC-15:

Unit I: Ethnographic Enquiry and Representation (9 Hours)

This unit attempts to define ethnography and the construction of the research object.

a. What is Ethnography?
b. Constructing the Ethnographic Object

Unit II: Types of Ethnography (15 Hours)

This unit engages students with the many techniques involved in ethnographic research.

a. Fieldwork
b. Visual Ethnography
c. Digital Ethnography
d. Auto-ethnography

Unit III: Compulsory text for use in the syllabus (21 Hours)

This unit takes up a single ethnographic text to encourage students to build the patience to read, understand and critically analyse full-length texts that are often about another, unfamiliar culture, based on the premises outlined in the earlier sections.

Practical Component: NIL

Essential/Recommended Readings:

Unit I: Ethnographic Enquiry and Representation

a. What is Ethnography?

Clifford, James and George E. Marcus, eds. 'Introduction*'* in *Writing Culture: The Poetics and Politics of Ethnography: A School of American Research Advanced Seminar*. University of California Press, 1986. Pp. 1-19.

Nader, Laura. 'Ethnography as Theory' in *HAU: Journal of Ethnographic Theory* 1, no. 1, 2011, Pp. 211-219.

Blasco, Paloma Gay, and Huon Wardle. 'Introduction' in *How to Read Ethnography*. Routledge, 2007. Pp. 1-12.

b. Constructing the Ethnographic Object

Kumar, Nita. *Friends, Brothers, and Informants: Fieldwork Memoirs of Banaras.* Berkeley: University of California Press*,*1992. Chapter 2 and 22, Pp. 36-47 and 216-225.

Unit II: Types of Ethnography

a. Fieldwork

Srinivas, M.N. 'The Insider Versus the Outsider in the Study of Cultures.' In *Methodology and Fieldwork*. Edited by Vinay Kumar Srivastava. Oxford University Press, 2002. Pp. 413-420.

b. Visual Ethnography

Abraham, Janaki. 'Wedding Videos In North Kerala: Technologies, Rituals, And Ideas About Love And Conjugality'in *Visual Anthropology Review* 26.2 (2010), Pp. 116–127.

c. Digital Ethnography

Pink, Sarah, Heather Horst, John Postill, Larissa Hjorth, Tania Lewis, and Jo Tacchi. 'Researching Experience' in *Digital Ethnography: Principles and Practice*. Sage Publications, 2016. Chapter 2: 19-39.

d. Auto-ethnography

Narayan, Kirin. 'How Native is a 'Native' Anthropologist?.'in *American Anthropologist* 95, no. 3, 1993. Pp. 671-686.

Unit III: Compulsory text for use in the syllabus

Option 1

Mead, Margaret. *Coming of Age in Samoa: A Psychological Study of Primitive Youth for Western Civilization*. New York: Harper Collins, 1928.

Option 2

Whyte, William Foote. *Street Corner Society: The Social Structure of an Italian Slum*. University of Chicago Press, 1943.

Option 3

Taussig, Michael. *The Devil and Commodity Fetishism in South America*. Chapel Hill: University of Carolina Press, 2010 (1980).

Option 4

Gold, A. G., Gujar, B. R. (2002*). In the Time of Trees and Sorrows: Nature, Power, and Memory in Rajasthan*. United Kingdom: Duke University Press.
In the Times of Trees and Sorrows

Suggested Readings:

Srinivas, M. N. (1980). *The Remembered Village*. United Kingdom: University of California Press.

Discipline Specific Core (DSC) 09
Sociological Research-I

Discipline Specific Core -9 (DSC 09): Sociological Research -I

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (If any)
		Lecture	Tutorial	Practical/ Practice		
DSC 09 Sociological Research -I	4	3	1	0	12th Class Pass	BA (Prog) DSC 01 An Invitation Sociology or equivalent course

Learning Objectives:

1. The course familiarises students with the theoretical and methodological aspects of sociological research.
2. The course introduces the basic outline of doing research and its philosophical underpinnings.

Learning outcomes:

Students will be able to:

1. *understand* the philosophical and methodological underpinning of research.
2. *develop* a practice-based understanding of the process of research.
3. *differentiate* between the quantitative, qualitative, and mixed methods of research and combine them effectively to conceptualise theoretically informed empirical research practices.

SYLLABUS OF DSC- 09: Sociological Research -I

Unit I: Doing Research (12 Hours)

This unit introduces research as a process and discusses the related issues of the logic of

research and objectivity

.

a. The Logic of doing research
b. The Process of social research
c. Objectivity in research

Unit II: Methodological Perspectives (9 Hours)

This unit delves into perspectives on how to study people.

a. Comparative Method
b. Ethnographic Method

Unit III: Modes Of Enquiry (24 Hours)

This unit looks at the interaction of theory and research and moves to methods of analysing and depicting data

.

a. Theory and Research
b. Analysing Data: Quantitative, Qualitative and Mixed Methods
c. Representing Data: Classification and Tabulation of Data and Diagrammatic and Graphic Representation of Data

Practical Component: NIL

Essential/Recommended Readings:

Unit 1: Doing Research

a. The Logic of Doing Research

Mills, C. W. (1959). 'The Promise' in *The Sociological Imagination*, London: OUP. Chapter 1, pp. 3-24.

b. The Process of Social Research

Srivastava, V.K. et al (Eds.). (2004) 'Introduction' in *Methodology and Fieldwork*, New Delhi: OUP., pp. 1-14.

c. Objectivity in Research

Gouldner, Alvin (1962) *Social Problems,* Vol. 9, No. 3 (Winter), Anti-Minotaur: The Myth of Value-Free Sociology, pp. 199-213.

Unit II: Methodological Perspectives

a. Comparative Method

Béteille, A. (2004) 'The Comparative Method and the Standpoint of the Investigator'. In Vinay

Kumar Srivastava (Ed.) *Methodology and Fieldwork*, New Delhi: OUP, pp. 112-131.

b. Ethnographic Method

Brewer, J.D. (2010). 'What is Ethnography?' in *Ethnography*, Jaipur: Rawat Publication (Indian Reprint). Chapter 1 - Pp. 10-25.

Unit III: Modes of Enquiry

a. Theory and Research

Merton, R. K. (1972). 'The Bearing of Sociological Theory on Empirical Research' and 'The bearing of Empirical Research on Sociological Theory' in *Social Theory and Social Structure*, Delhi: Arvind Publishing House. Chapter 4, 5 -, pp. 139-171.

b. Analysing Data: Quantitative, Qualitative and Mixed Methods

Creswell, J W. (2009). 'Quantitative Procedures', Qualitative Procedures and Mixed Methods Procedures in *Research Design: Qualitative, Quantitative and Mixed Methods Approaches*, 3rd edition. Sage Publications. Chapters 8, 9, 10, , pp. 145-152, 173-200, 203-220.

c.Representing Data: Classification and Tabulation of Data and Diagrammatic and Graphic Representation of Data

Gupta, S. P. (2006). 'Classification and Tabulation' and 'Diagrammatic and Graphic Presentation' in *Elementary Statistical Methods*. Sultan Chand & Sons. Chapter 5, 6, pp.65-100, 101-108, 115- 118, 131-137.

Suggested Readings:

Bailey, K. (1994). The Research Process in Methods of Social Research, 4th edition, New York: Free Press, Pp.3-19.

Béteille, A. (2002), *Sociology: Essays on Approach and Method*, New Delhi: OUP. Chapter 4, Pp. 72-94.

Bryman, Alan. (2004), *Quantity and Quality in Social Research*, New York: Routledge. Chapter 2 & 3, Pp. 11-70.

Durkheim, E. (1958). *The Rules of Sociological Method*, New York: Free Press. Chapter 1 & 2, Pp. 1-46.

Gouldner, Alvin. 1970, *The Coming Crisis of Western Sociology*, New York: Basic Books. Chapter 13, Pp. 481-511.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

B.A. (Prog.) Sociology
Discipline Specific Core (DSC) 10
Investigating Inequalities

DISCIPLINE SPECIFIC CORE -10 (DSC-10): Investigating Inequalities

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSC 10 Investigating Inequalities	4	3	1	0	12th Class Pass	BA (Prog) DSC 01 An Invitation Sociology or equivalent course

Learning Objectives:

1. To introduce the domain of social inequality as a key area of sociological inquiry.
2. To impart an understisng of social inequalities as intersenctional phinominon that impact various dimensions of social life.
3. To engage the new dimentions and changing forms of inequalities in contemporary times.

Learning outcomes:

Students will be able to:

1. *Develop* a descriptive and analytical understanding of social inequality.
2. *Identify* how social inequality operates at different socio-cultural contexts.
3. *Discuss* the key debates that animate contemporary research on inequality.

SYLLABUS OF DSC-10:

Unit I: Understanding Inequality (9 hours)

This unit introduces the concept of social inequality within the discipline of sociology. It also familiarises students to the various theoretical perspectives in the study of social inequality.

a. What is inequality?

b. Perspectives on Inequality

Unit II: Interlocking inequalities in social life (21 hours)

This unit introduces the intersectional character of social inequality and its pervasiveness in social life.

a. Gender

b. Race and Religion

c. Labour Market

d. Health

Unit III. Impact of Globalisation (15 hours)

This unit introduces the issues of exclusion and new forms of inequalities in the era of globalisation.

a. Social Exclusion

b. Technology

c. Climate Change

Practical Component: NIL

Essential/Recommended Readings:

Unit I. Understanding inequality

a. What is Social Inequality?

Beteille, A. (1969). *Social inequality*. Penguin Books.Introduction, Chapter 18. The decline of Social Inequality? Pp. 1-14, 362-380.

b. Perspectives on Inequality

Marger, M. N. (1999). *Social Inequality: Patterns and Processes*. Mountain View. Chapter 2: Theories of Class and Social Inequality. Pp. 26-53.

Walby, S., Armstrong, J., & Strid, S. (2012). Intersectionality: Multiple Inequalities in Social Theory. *Sociology*, 46(2). Pp. 224-240.

Unit II. Interlocking inequalities in Social Life

a. Gender

Dey, A., & Orton, B. (2016). Gender and Caste Intersectionality in India: An Analysis of the Nirbhaya case, 16 December 2012. In *Gender and Race Matter: Global Perspectives on Being a Woman*. Emerald Group Publishing Limited. Pp 87-105.

b. Race and Religion

Macey, M. (2010). *Ethnic, Racial and Religious Inequalities: The Perils of Subjectivity*. Springer. Chapter 2. Religion and Culture Make a Difference Pp. 27-56.

c. Labour Market

Browne, I., & Misra, J. "Labor-market inequality: intersections of gender, race, and class" in Romero, M., & Margolis, E. (Eds.). (2005). The Blackwell companion to social inequalities. John Wiley & Sons. Londres, Blackwell Publishing. Pp. 165-189.

d. Health

Abel, T. (2008). Cultural Capital and Social Inequality in Health. *Journal of Epidemiology & Community Health*, *62*(7). Pp. 1-5.

Unit III: Impact of Globalisation

a. Social Exclusion

Munck, R. (2005). Social Exclusion: New Inequality Paradigm for the Era of Globalization? In Mary Romero and Eric Margolis eds. *The Blackwell Companion to Social Inequalities*. Oxford: Blackwell, 2008. Pp. 31-49.

b. Technology

Pfohl, S. (2005). New Global Technologies of Power: Cybernetic Capitalism and Social Inequality. In Mary Romero and Eric Margolis eds. *The Blackwell Companion to Social Inequalities*. Oxford: Blackwell, 2008. Pp. 546-592.

c. Climate Change

Harlan, Sharon L. et.al. (2015). Climate Justice and Inequality, in Riley E. Dunlap (ed.), Robert J. Brulle (ed.) *Climate Change and Society: Sociological Perspectives.* United States: Oxford University Press. Pp. 127-154.

Suggested Readings:

Tilly, C. (2005). Historical Perspectives on Inequality. Mary Romero and Eric Margolis eds. *The Blackwell Companion to Social Inequalities*. Oxford: Blackwell, 2008. Pp. 15-30

Ragnedda, M. (2017). *The Third Digital Divide: A Weberian approach to Digital Inequalities*. Routledge.

Grusky, D. (2018). *The Inequality Reader: Contemporary and Foundational Readings in Race, Class, and Gender*. Routledge.

Anthony B. Atkinson. (2015) *Inequality: What Can be Done?* Cambridge: Harvard University Press. Pp. 241-308.

Menon, N. (2015). 'Is Feminism about women'? A Critical View on Intersectionality from India. *Economic and Political Weekly*, Vol. 50, No. 17 (APRIL 25, 2015), Pp. 37-44.

John, M. E. (2015). Intersectionality: Rejection or Critical Dialogue? *Economic and Political Weekly*, Vol. 50, No. 33 (AUGUST 15, 2015), Pp. 72-76.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Sociology
Discipline Specific Elective (DSE) 07
Visual Culture

DISCIPLINE SPECIFIC ELECTIVE COURSE -07 (DSE-07) : Visual Culture

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSE 07 Visual Culture	4	3	1	0	12th Class Pass	Nil

Learning Objectives:

1. To introduce students to various perspectives that enable a contextualisation of everyday visual culture within the larger debates around power, politics and identity.
2. To familiarise students to the debates from the field of Art History, Social Sciences and Visual Art Practices and enable them to understand the processes through which different visual environments can be sociologically analysed.
3. To provide students an understanding of how the very process of 'seeing' can be problematised.

Learning outcomes:

Students will be able to:

1. *Apply* sociological concepts to understand and appreciate visuals and constitute their representations as matters of academic interest.
2. *Demonstrate* 'visuality'/'visualization' as a technique of asserting power and dominance in society; simultaneously locating the subversive potential of alternative or 'counter-visualities'.
3. *Analyse* the operations of visuals in an age dominated by techniques of mass production and dissemination of images.

SYLLABUS OF DSE 07 : Visual Culture

Unit I: Introduction to Visual Culture (12 Hours)

This unit problematises the idea that 'seeing' is a natural process, and introduces students to the visual construction of the social world. It also examines the process of seeing in the context of modernity.

a. The Process of 'Seeing'
b. Modernity and Visuality

Unit II: Visual Environments and Representations (33 Hours)

This unit examines different visual environments, with illustrations to elucidate the manner in which visuals allows the constitution of the relationship between self and the everyday.

a. Power, Knowledge and Gaze of the State
b. Visual Contestations
c. Visual Practices and Identity formation
d. Visual Cultures of Everyday Life

Practical Component: NIL

Essential/Recommended Readings:

Unit I. Introduction to Visual Culture (12 Hours)

a. The Process of 'seeing'

Mitchell, W.J.T. (2002) 'Showing Seeing: A Critique of Visual Culture' In *Journal of Visual Culture,* August 2002 vol. 1 no. 2. Pp. 165-180.

Berger, John (1972) *Ways of Seeing*. London: Penguin. Pp. 7- 33.

b. Modernity and Visuality

Debord, Guy(1994). 'Separation Perfected' in *The Society of the Spectacle*, New York: Zone books. Chapter 1. Separation Perfected. Pp. 11-24.

Shohat, Ella & Robert Stam (2002) 'Narrativizing Visual Culture', In Nicholas Mirzoeff (ed) *The Visual Culture Reader*. 2nd ed. London: Routledge. Pp. 37-57.

Chatterji, Roma (2012) 'Global Events and Local Narratives: 9/11 and the Chitrakaars' In *Speaking with Pictures: Folk Art and Narrative Tradition in India*. Pp. 62-103. (20 pages of pictures)

Unit II. Visual Environments and Representations (33 Hours)
a. Power, Knowledge and Gaze of the State

Foucault, Michel (1977) 'Panopticism' In *Discipline and Punish: The Birth of the Prison*. New York: Pantheon. Race/Ethnicity: Multidisciplinary Global Contexts, Volume 2, Number 1, Autumn 2008. Pp. 1-12.

Gilbert, Emily (2010) 'Eye to Eye: Biometrics, the Observer, the Observed and the Body Politic' in Fraser MacDonald, Rachel Hughes and Klaus Dodds (Ed), *Observant States Geopolitics and Visual Culture*, London: I. B. Tauris. Pp. 225-246.

b. Visual Contestations

Morris, Pam(1994) 'Folk Humour and Carnival Laughter' in *The Bakhtin Reader*. London: Arnold. Pp. 194- 206.

Enguix, Begonya(2009) 'Identities, Sexualities and Commemorations: Pride Parades, Public Space and Sexual Dissidence' in *Anthropological Notebooks*, vol. XV: 2. Ljubljana: Slovene Anthropological Society. Pp. 15-35.

c. Visual Practices and Identity Formation

Bourdieu, P(1984) 'Introduction' in *Distinction: A Social Critique of the Judgment of Taste*. Routledge & Kegan Paul, London. Pp. 1-7.

Srivastava, Sanjay (2009) 'Urban spaces, Disney-Divinity and Moral Middle classes in Delhi' In *Economic and Political Weekly* Vol. XLIV, Nos. 26 & 27. Pp. 338-345.

Sociology
Discipline Specific Elective 08
Sociology of the Body

DISCIPLINE SPECIFIC ELECTIVE COURSE – 08 (DSE-08) : Sociology of the Body

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSE 08 Sociology of the Body	4	3	1	0	12th Class Pass	Nil

Learning Objectives:

1. To de-naturalise the body and reconstitute it in sociological terms as a social phenomenon.
2. To familiarise students with various theoretical formulations and ethnographic engagements with body.
3. To outline the broad contours of discourse on the body in South Asian societies.

Learning outcomes:

Students will be able to:

1. *Identify* and explain the concepts that are integral to a sociological study of the body.
2. *Analyse* various bodily practices in their social, historical and institutional contexts.
3. *Apply* the conceptual apparatus developed by sociology to evaluate the emerging issues surrounding the body.

SYLLABUS OF DSE-08: Sociology of the Body

Unit I: Knowing the Body (12 Hours)

This unit establishes the material and social character of the body and traces the sociological tradition of thinking about body from Marcel Mauss to Mary Douglas and beyond.

Unit II: Variations on the Body (24 Hours)

This unit maps various dimensions of bodily practices and institutional practices surrounding the social body. It explores the body in its material and symbolic manifestations,

establishes its complicity in the formations of self and identity, explores its political and economic significance and delineates how it is experienced as a lived reality.

a. Body in Practice

b. Body and Identity

c. Body, Power and Commodification

d. Lived Body

Unit III: Discourse on Body in South Asia (9 Hours)

This unit configures the sociological discourse on the body in South Asia on the axes of caste, community and gender.

Practical Component: NIL

Essential/Recommended Readings:

Course Outline with Readings:

Unit I: Knowing the Body

Lock, Margaret and Judith Farquhar (Eds.) *Beyond the Body Proper: Reading the Anthropology of Material Life*. United Kingdom: Duke University Press, 2007. Introduction; On the Part Played by Labor in the Transition from Ape to Man; Techniques of the Body; Pp. 19-23, 25-29 & 49-68.

Scheper-Hughes, N., & Lock, M. M. 'The Mindful Body: A Prolegomenon to Future Work' in Medical Anthropology. *Medical Anthropology Quarterly*, 1(1), 1987, Pp. 6–31.

Unit II: Variations on the Body

a. Body in Practice

Turner, Terence S. 'The Social Skin', *HAU: Journal of Ethnographic Theory,* 2 (2): 2012. Pp. 486–503.

Bourdieu, Pierre. 'Belief and the body', in *The Logic of Practice*, Oxford: Blackwell, 1984. Chapter 4. Belief and the Body. Pp. 66-79.

b. Body and Identity

Wells, Susan. 'What Is This Body That We Read' in *Our Bodies, Ourselves and the Work of Writing.* United States: Stanford University Press. 2010, Chapter 4. Pp. 134-174.

Scott, Sue and David Morgan. 'You Too Can Have a Body Like Mine: Reflections on the Male Body and Masculinities' in *Body Matters: Essays on The Sociology of The Body*. United Kingdom: Taylor & Francis, 2004. Chapter 5. Pp. 70-88.

Fassin, Didier. 'How to Do Races with Bodies' in Frances E. Mascia-Lees ed. *A Companion to the Anthropology of the Body and Embodiment*, Cambridge: Blackwell, 2011. Pp. 419-431

c. Body, Power and Commodification

Boddy, Janice. 'Colonialism: Bodies under Colonialism', in Frances E. Mascia-Lees ed. *A Companion to the Anthropology of the Body and Embodiment*, Cambridge: Blackwell, 2011. Pp. 119-132.

Foucault, Michel. 'Body/Power' in *Power/knowledge: Selected Interviews and Other Writings*, 1972-1977. New York Knopf Doubleday Publishing Group, 1980. Chapter 3. Pp. 55-62.

Edmonds, A. 'The Poor Have the Right to be Beautiful? Cosmetic Surgery in Neoliberal Brazil'. *Journal of the Royal Anthropological Institute*, 13(2), 2007. Pp. 363–378.

d. Lived Body

Toombs, S. Key. 'The Lived Experience of Disability'. *Human Studies*, 18(1),1995. Pp. 9–22.

Morgan, David. 'The Body in Pain' in, *Real Bodies: A Sociological Introduction*. United Kingdom: Bloomsbury Publishing, 2017. Pp. 79- 94.

Unit III: Discourse on Body in Indian Context

Alter, Joseph S. 'Preface: History, Body, Culture' in *Gandhi's Body: Sex, Diet, and the Politics of Nationalism*. United States: University of Pennsylvania Press, 2011. Pp. ix-xiii

Gorringe, Hugo., & Rafanell, Irene. 'The Embodiment of Caste: Oppression, Protest and Change'. *Sociology*, 41(1), 2007. Pp. 97–112.

Mehta, Deepak. 'Circumcision, Body and Community' in Work, Ritual, Biography : A Muslim community in North India. India: Oxford University Press. 1997. Chapter 6. Pp. 178-213.

Sociology
Discipline Specific Elective (DSE) 09
Sociology and Social Policy

DISCIPLINE SPECIFIC ELECTIVE COURSE -09(DSE-09): Sociology and Social Policy

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSE 09 Sociology and Social Policy	4	3	1	0	12th Class Pass	Nil

Learning Objectives:

1. To consittute social policy as an obhect of sociological investigation and recount key theories, concepts, and methods devoloped foraround it.
2. To impart the methods of analysing the formulation, adoption, implementation of social policy from a sociological vantage.
3. To appreciate social policy analysis as an interdisciplinary field of study and understand the complex dynamics of the politics of decision making.

Learning Outcomes:

Students will be able to:

1. *Develop* critical and analytical skills with respect to examining the complex dynamics involved in social policy making process.
2. *Recognise*, *evaluate* and dissect policies of social importance in the interest of people, society and environment.
3. *Exhibit* the requisite analytical skills to evaluate and improve social policy.

SYLLABUS OF DSE-09: Sociology and Social Policy

Unit I: Social Policy and Sociological Analysis (15 Hours)

This unit invites students to the world of Social Policy and familiarizes them with some of its important conceptual and theoretical frameworks, meanings, evolution and manifest practices.

a. What is Social Policy?
b. Social Policy and Sociological Perspectives

Unit II: Making Social Policy I: Institutions, Ideologies and Actors (15 Hours)

This unit engages with the context, value framework, social character and politics involved in the policy-making process.

a. Social Policy as a Worldview
b. The Character of Social Policies in India

Unit III: Making Social Policy II: Craft and Analysis (15 Hours)

This unit introduces students to the methodological issues involved in the craft of policy-making from a sociological perspective and problematizes the dominance of technocracy and reductionist public policy experts.

a. Methodological and Technical Frameworks
b. Emerging Issues and Concerns in Social Policy

Practical Component: NIL

Course Outline and Essential/Recommended Readings:

Unit I. Social Policy and Sociological Analysis

a. **What is Social Policy?**

Spicker, P. (2014). Introduction: The Nature of Social Policy. In: *Social Policy: Theory and Practice*. Great Britain: Policy Press. Pp. 1–20.

Dreze, J. (2016). Social Policy: An Introduction In: Jean Dreze (ed.) (2016). Social *Policy: Essays from Economic and Political Weekly*, New Delhi: Orient Blackswan. Pp.1-18.

b. Social Policy and Sociological Perspectives

Coffey, A. (2004). Sociological Theory and Social Policy, In: *Re-Conceptualizing Social Policy: Sociological Perspectives on Contemporary Social Policy*. England: Open University Press. Pp.1-4, 10-11, 19-22, 30-41.

Unit II: Making Social Policy I: Institutions, Ideologies and Actors

a. Social Policy Worldview: Ideology, Value Frameworks and Priorities
Spicker, P. (2014). Principles and Values. In: *Social Policy: Theory and practice*. Great Britain: Policy Press. Pp. 181–202.

Category VI
Common List of Generic Electives (GE)
Generic Elective (GE) 13
Understanding Development

GENERIC ELECTIVE COURSE- 13 (GE 13): Understanding Development

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
GE 13 Understanding Devolopment	4	3	1	0	12th Class Pass	Nil

Learning Objectives:

1. To introduce diverse processes of development from a sociological view point.
2. To familiarise students with ideas, theories, and practices of development.
3. To acquaint students with the trajectory and experiences of development in post-colonial India.

Learning outcomes:

Students will be able to:

1. *Identify* and understand different ideas of, and approaches to, development.
2. *Examine* the discourse of development as a relationship between developmental institutions, actors, policies and theories.
3. *Analyse* the key features of developmental processes in post-colonial India.
4. *Evaluate* developmental practices in different locations, moments, and contexts.

SYLLABUS OF GE 13: Understanding Devolopment

Unit I: Unpacking Development (9 Hours)
This unit examines the way development discourse is constituted analytically and historically.

Unit II: Theorizing Development (18 Hours)
This unit introduces students to various theoretical perspectives on development.

a. Modernization, Dependency and the World Systems
b. Gender, Ecology and Devolopment Theory
c. Devolopment as Freedom
d. De-essentialising Development

Unit III: Development: Histories, Practices and Alternatives (18 Hours)
This unit maps analytical and historical contours of development in South Asia and introduces issues arising out of development in practice.

a. Histories
b. Practices
c. Alternatives

Practical Component: NIL

Essential/Recommended Readings:

Unit I. Unpacking Development

Rist, Gilbert. *The History of Development: From Western Origins to Global Faith*. United Kingdom: Zed Books, 2014. Chapter 1. Definitions of Development. Pp. 1-24.

Sachs, Wolfgang (ed). *The Development Dictionary: A Guide to Knowledge as Power.* United Kingdom: Zed Books, 2010.v *Devolopment.* Pp. 1-21.

Unit II. Theorizing Development (18 Hours)

a. Modernization, Dependency and the World Systems

Bernstein, Henry. 'Modernization Theory and the Sociological Study of Development', *The Journal of Development Studies, 1971, Volume* 7, No. 2. Pp. 141-155

Roberts, J. Timmons. *The Globalization and Development Reader: Perspectives on Development and Global Change*. Germany: Wiley, 2014. Pp. 107-114, 126-144.

b. Gender, Ecology and Devolopment Theory

Pearson, Ruth 'The Rise and Rise of Gender and Development' in Kothari, Uuma K. *A Radical History of Development Studies: Individuals, Institutions and Ideologies*. United Kingdom: Zed Books, 2019. Pp. 157- 176.

Redclift, Michael 'Development and the Environment: Managing the Contradictions?' in Leslie Sklair (ed.) *Capitalism and Development*. United Kingdom: Taylor & Francis, 2002. Pp. 123-137

c. Devolopment as Freedom

Sen, Amartya. *Development as Freedom*. United Kingdom: OUP Oxford, 2001. pp. 3-11, 35-54.

d. De-essentialising Development

Sanyal, Kalyan. *Rethinking Capitalist Development: Primitive Accumulation, Governmentality and Post-Colonial Capitalism.* United Kingdom: Taylor & Francis, 2014. Pp. 168-189.

Unit III. Development: History, Practices and Alternatives (18 Hours)

a. History

Ludden, David. 'Development Regimes in South Asia: History and the Governance Conundrum' *Economic and Political Weekly*, 2000, Vol. 40, No. 37. Pp. 4042–51.

Chatterjee, Partha, 2008. 'Democracy and Economic Transformation in India,' *Economic and Political Weekly, 2008,* Vol. 48, No. 16. Pp. 53-62.

Sociology
Generic Elective (GE) 14
Sociology of Disability

GENERIC ELECTIVE COURSE -14 (GE-14) : Sociology of Disability

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
GE 14 Sociology of Disability	4	3	1	0	12th Class Pass	Nil

Learning Objectives:

1. To offer a sociological understanding of disability and outline a pluralitty of theoretical approaches towards its conceptualisation.
2. To familiarise students with critical disability theory and underline its intersections with other systems of oppression, such as caste, class, gender and sexuality.
3. To provide a sociological understanding of ableism and the processes and structures that reproduce it and introduce the disability rights movement in India and its policy interventions and advocacies.

Learning outcomes:

Students will be able to :

1. *Identify* the different sociological perspectives of disability; from social labeling theory to social constructionism and the critical disability theory.
2. *Examine* the cultural representations of disability and look at its various intersections.
3. *Develop* knowledge about disability rights, including the Disability Rights Movement and various policies on Disability.

SYLLABUS OF GE 14: Sociology of Disability

Unit I: Understanding Disability (12 hours)

This unit examines the theoretical engagement with disability, outlining the conceptualisation(s) and theoretical models to understand disability.

a. Meanings and Conceptualisation
b. Sociological Perspectives on Disability

Unit II: Disability and Vulnarability (15 hours)
This unit examines the interaction between disability and other axes of social inequality.

Unit III: Disability in Everyday Life (9 hours)
This unit approaches disability by focusing on the culture of ableism. The unit notes practices of socio-cultural reproduction of ableism and its contestation.

a. Ableism and Inaccessibility
b. Everyday Practices of Resistance

Unit IV: Paradigm Shifts and Emerging Issues (9 hours)

This unit focuses on rights assertion, interventions and emerging issues in disability studies and activism.

a Disability Rights Movements
b. Policy Interventions
c. Emerging Issues

Practical Component: NIL

Essential/Recommended Readings:

Unit I: Understanding Disability

a. Meanings and Conceptualisation

Davis, Lennard. 2017. "Introduction : Disability, Normality, and Power*"* in Lennard J. Davis (eds) *The Disability Studies Reader*. Routledge. Pp 1-16.

Shakespear, Tom. 2017. "The Social Model of Disability" in Lennard J. Davis (eds) *The Disability Studies Reader*. Routledge. Pp 195-203.

b. Sociological Perspectives on Disability

Parsons, Talcott. 1975. "The Sick Role and the Role of the Physician Reconsidered" *The Milbank Memorial Fund Quarterly. Health and Society. Vol 53, No. 3 (Summer 1975)* Pp. 257-278.

Sociology
Generic Elective (GE) 15
Key Debates in Sociology

GENERIC ELECTIVE COURSE -15 (GE-15) : Key Debates in Sociology

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
GE 15 Key Debates in Sociology	4	3	1	0	12th Class Pass	Nil

Learning Objectives:

1. To bring the key theoretical and methodological debates of sociology alive for the students.
2. To impart an understanding of the sociological enterprise as something that is at once conceptual, methodological and substantive.
3. To help students integrate their sociological learning into a vital coherent, organic and evolving sociological vision.

Learning outcomes:

Students will be able to:

1. *Develop* knowledge of key sociological debates, their origins, configurations and interrelations.
2. *Identify* sociology as a dynamic, dialogical and open-ended discipline and ability to practice it as such.
3. *Outline*, assess and analyse the ongoing sociological debates and demonstrate an ability to create a viable sociological investigation and contextualise it in the enduring and active disciplinary legacy of debates.

SYLLABUS OF DSC-15: Key Debates in Sociology

Unit 1: Debates in Sociology: Contexts and Configurations (9 Hours)

This unit locates the sociological debates in their historical context. It also introduces students to the debate surrounding the lines that mark the separation of sociology and social anthropology.

Unit 2: Methods, Concepts and Theories (30 Hours)

This unit discusses key methodological, conceptual and theoretical debates in sociology.

a. Debating Methods

b. Conceptual Debates

i. Community and Society: Comte, Tonnies, Weber, Durkheim

ii. Status and Class: Marx, Weber

iii. Sacred, Profane and Secular: Durkheim, Weber

c. Debating Theory

Unit 3: Debating Modernity (6 Hours)

This unit maps the Sociological debate on the nature of modernity.

Practical Component: NIL

Essential/Recommended Readings:

Unit 1: Debates in Sociology: Contexts and Configurations

Nisbet, Robert. *The Sociological Tradition*. United Kingdom: Taylor & Francis, 2017. Chapter 1. The Unit-Ideas of Sociology Pp. 3-20.

SEMESTER-VI
DEPARTMENT OF SOCIOLOGY
Category I
BA (Honors) Sociology

B.A. (H) Sociology
Discipline Specific Core (DSC) 16
Sociological Thinkers- III

DISCIPLINE SPECIFIC CORE COURSE -16 (DSC-16) : Sociological Thinkers- III

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSC 16 Sociological Thinkers- III	4	3	1	0	12th Class Pass	BA (H) DSC 13 Sociological Thinkers- II Or equivalent course

Learning Objectives:

To familiarise students with the micro, interactionist, and critical thinkers in sociology.
To draw attention to the critique of modernity and its consequences forwarded by 20th century sociological thinkers.
To communicate the diversity and interdisciplinarity of sociological theory at the end of 20th centrury.

Learning outcomes:

Students will be able to:

1. *Develop* a critical perspective in the analysis of contemporary social reality.
2. *Apply* the concepts and theories necessary for sociological analysis of contemporary societies.

Syllabus Of DSC-16: Sociological Thinkers- III:

Unit I: Interactionism: G. H. Mead & Erving Goffman (18 Hours)

The unit introduces students to the symbolic interactionist approach through the works of Erving Goffman and G.H. Mead.

Unit II. Social Construction of Reality: Berger and Luckmann (9 Hours)

This unit explores how everyday reality is socially constructed.

Unit III. Critical Theory: Max Horkheimer & T.W. Adorno (12 Hours)

This unit helps the student to rethink and critique the dominant ideas, social structures and knowledge put forth by capitalism and modernity.

Unit IV : Theorizing Identity: Nancy Frazer (6 Hours)

This unit reexamines the concept of social justice from the perspective of the redistribution of resources and recognition of cultural differences.

Essential Readings

Unit I: Interactionism: G. H. Mead & Erving Goffman (18 Hours)

Mead, G.H. 1934 (1967) *Mind Self and Society*. Chicago: University of Chicago Press. Part III. Pp. 135-226.

Goffman, E. (1963) *Stigma and Social Identity*. London: Penguin Books. Ch. 1 & 4. Pp. 11-54, 150-164.

Unit II. Social Construction of Reality: Berger and Luckmann (6 Hours)

Berger, P. L. and Luckmann, T. (1991). *The Social Construction of Reality*. London: Penguin Books. Pp. 31-62.

Unit III. Critical Theory: Max Horkheimer & T.W. Adorno (12 Hours)

Horkheimer. Max and Adorno. T.W. (2002). *Dialectic of Enlightenment: Philosophical Fragments.* Stanford: Stanford University Press. Ch.1. Pp. 1-34.

Unit IV : Theorizing Identity: Nancy Frazer (6 Hours)

Fraser, Nancy. (1996) Social Justice in the Age of Identity Politics:Redistribution, Recognition, and Participation. The Tanner Lectures On Human Values. Delivered at Stanford University April 30–May 2, 1996. Pp. 1-67

Suggested Readings:

Bottomore, T. (2002). *The Frankfurt School and It's Critics.* London: Routledge.

Elliot, A. & Lemert, C. (2022). *Introduction to Contemporary Social Theory*. London: Routledge.

Goffman, E. (1994). *The Presentation of Self in Everyday Life*. London: Anchor Books. Edinburgh

Baldwin, J. D. (2002). *George Herbert Mead: A Unifying Theory for Sociology*. United States: Kendall/Hunt Publishing Company.

Schweppenhäuser, G. (2009). *Theodor W. Adorno: An Introduction*. United Kingdom: Duke University Press.

Fraser, Nancy and Axel Honneth (2003) · *Redistribution Or Recognition? A Political-Philosophical Exchange*. London:Verso Books.

Turner, Jonathan. (1995). *The Structure Of Sociological Theory*. Jaipur: Rawat Publications.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

BA (H) Sociology
Discipline Specific Core (DSC) 17
Sociology of Kinship

Discipline Specific Core Course -17 (DSC-17) : Sociology of Kinship

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSC17 Sociology of Kinship	4	3	1	0	12th Class Pass	BA (H) DSC 06 Families and Intimacies Or equivalent course

Learning Objectives:

1. To introduce basic concepts in the study of kinship, marriage and family.
2. Develop an understanding of changes in kinship and marriage over time.
3. To indicate the new possibilities in the configurations of kinship made possible by the novel reproductive technologies. .

Learning outcomes:

Students will be able to:

1. *Identify* the methodological shifts in the study of kinship theories.
2. *Apply* an analytical perspective on concepts relevant for understanding kinship
3. *Understand* the coexistence of multiple perspectives in the study of family, marriage and kinship.
4. *Recognise* the significance of technology in recasting kinship.

SYLLABUS OF DSC 17: Sociology Of Kinship

Unit I: Key Terms and Classical Approaches (21 hours)

This unit introduces students to key concepts and approaches relevant for understanding kinship and family.

Unit II: Family, Household and Marriage (9 hours)

This unit acquaints students to the multiple forms of co-existence of the institutions of family and marriage.

Unit III: Re-casting Kinship (15 hours)
This unit maps out the new possibilities in the understanding of family, marriage and kinship by revisiting the concept of relatedness, gender and reproductive technologies.

a. Relatedness
b. Kinship and Gender
c. Re-imagining Families
d. New Reproductive Technologies

Practical Component: NIL

Essential/Recommended Readings:

Unit I: Key Terms and Classical Approaches

Radcliffe-Brown, A. R. and D. Forde (eds.), 1950, *African Systems of Kinship and Marriage*, London: Oxford University Press, Introduction, Pp. 1-39

Evans-Pritchard, E.E., 2004 (1940), 'The Nuer of Southern Sudan', in R. Parkin and L. Stone (eds.), *Kinship and Family: An Anthropological Reader*, U.S.A.: Blackwell, Pp. 64-78.

Leach, Edmund, 1962, 'On Certain Unconsidered Aspects of Double Descent Systems'in *Man*, Vol. 62, Pp. 130-134.

Lévi-Strauss, Claude, 1969, *The Elementary Structures of Kinship*, London: Eyre and Spottiswoode, Chapters 1 & 2, Pp. 3-25

Dumont, L., 1968, 'Marriage Alliance', in D. Shills (ed.), *International Encyclopaedia of the Social Sciences*, U.S.A.: Macmillan and Free Press, Pp. 19- 23.

Schneider, D., 2004, 'What is Kinship All About?' in R. Parkin and L. Stone (eds.) *Kinship and Family: An Anthropological Reader*, U.S.A.: Blackwell, Pp. 257-274.

Das, V., 1994, 'Masks and Faces: An Essay on Punjabi Kinship', in Patricia Uberoi (ed.), *Family, Kinship and Marriage in India*, Delhi: Oxford University Press, Pp.198-222.

Unit II- Family, Household and Marriage (9 hours)

Freeman, J. D., 1958, 'The Family Systems of the Iban of Borneo', in J. Goody (ed.), *The Developmental Cycle in Domestic Groups*, Cambridge: Cambridge University Press, Pp. 15-52.

Leach, E.R., 1961, 'Polyandry, Inheritance and the Definition of Marriage with Particular Reference to Sinhalese Customary Law', in E. R. Leach (ed.), *Rethinking Anthropology,* London: The Athlone Press, Pp. 105-113.

Shah, A. M. (1964). Basic Terms and Concepts in the Study of Family in India. *The Indian Economic & Social History Review*, *1*(3), 1–36.

Gough, Kathleen E., 1959, 'The Nayars and the Definition of Marriage', in *The Journal of the Royal Anthropological Institute of Great Britain and Ireland*, 89, Pp. 23-34

Uberoi, Patricia, 1995, 'When is a Marriage not a Marriage? Sex, Sacrament and Contract in Hindu Marriage', *Contributions to Indian Sociology,* No. 29, 1 & 2, Pp. 319-45

Unit III: Re-casting Kinship (15 hours)

a. Relatedness

Carsten, Janet, 1995, 'The Substance of Kinship and the Heat of the Hearth: Feeding, Personhood, and Relatedness among Malays in Pulau-Langkawi' *American Ethnologist*, 22 (2), Pp. 223-241.

b. Kinship and Gender

Gold, Ann Grodzins, 1994, 'Sexuality, Fertility, and Erotic Imagination in Rajasthani Women's Songs', in Gloria Goodwin Raheja and Ann Grodzins Gold (eds.), *Listen to the Heron's Words: Re-imagining Gender and Kinship in North India*, Delhi: OUP, Pp. 30-72.

c. Re-imagining Families

Weston, Kath, 1991, Families We Choose: Lesbians, Gays, Kinship, New York: Columbia University Press, Pp. 103-136.

d. New Reproductive Technologies

Kahn, Susan Martha, 2004, 'Eggs and Wombs: The Origins of Jewishness', in R. Parkin and L. Stone (eds.), *Kinship and Family: An Anthropological Reader*, U.S.A.: Blackwell, Pp. 362-77.

Vatuk Sylvia, Household Form and Formation: Variability and Social Change among South Indian Muslims in Great, John N. & David J. Mearns (1989). Society from the Inside Out: Anthropological Perspectives on the South Asian Household. New Delhi: Sage, Pp. 107- 137

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

B.A. (H) Sociology
Discipline Specific Core (DSC) 18
Environmental Sociology

Discipline Specific Core Course -18 (Dsc-18): Environmental Sociology

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSC 18 Environmental Sociology	4	3	1	0	12th Class Pass	BA (H) DSC 01 Introduction to Sociology Or equivalent course

Learning Objectives:

1. The course will enable students to reflect on *environment* as an object of sociological inquiry.
2. The course will develop analytical thinking on the linkages between society and the environment from a sociological standpoint.
3. To develop an awareness of the character of causality in environmental sociology and expose students to critical debates on the role of humans in ecological crises.
4. The course will enhance the capacity to examine the social consequences and responses to ecological crises with the help of case studies.

Learning outcomes:

Students will be able to:

1. Understand the dynamic between natural and social worlds from a sociological perspective.
2. Identify and grasp the fundamental principles and core theoretical debates of the discipline.

3. Apply a sociological perspective on environment and contribute to research endeavours or public policy conversations that assess the causes, effects and possible solutions to environmental problems.
4. Examine the intertwining issues of ecology and inequity and address the questions of environmental justice and ethics.

SYLLABUS OF DSC-18: Environmental Sociology

Unit 1: Basic Concepts in Environmental Sociology (12 Hours)
This unit introduces the basic concepts and themes in environmental sociology necessary to develop a holistic perspective.

a. What is Environmental Sociology?
b. Mainstream Ideas in Environmentalism
c. Indian Environmentalism

Unit 2: Social Theory and the Environment (21 Hours)
This unit exposes students to the intersectionality of the environment with social processes and institutions.

a. Theorising the Environment
b. Intersectionality and Environment
c. Social Ecology

Unit 3: Social Responses to Environmental Disruption (12 Hours)
This unit examines the social responses to ecological crises through new issues of livelihood and experiments in sustainable living.

a. Environmental Justice
b. Alternative Engagements

Practical Component: NIL

Essential/Recommended Readings:

Unit 1: Basic Concepts in Environmental Sociology

a. What is Environmental Sociology?

Chung-En Liu, J. and Mayerfeld Bell, M. (2017). 'Environmental Sociology'. In Kathleen O. Korgen (Ed.), *The Cambridge Handbook of Sociology: Core Areas in Sociology and the Development of the Discipline*, Vol. 1. Cambridge: Cambridge University Press. Pp. 435-444.

b. Mainstream Ideas in Environmentalism

Dunlap, Riley E. (2010). 'The Maturation and Diversification of Environmental Sociology: From Constructivism and Realism to Agnosticism and Pragmatism'. In Michael R. Redclift and G. Woodgate (Eds.), *International Handbook of Environmental Sociology*, 2nd Ed. Cheltenham. UK: Edward Elgar. Pp. 15-32.

c. Indian Environmentalism

Gadgil, M and Guha, R (1995) Ideologies of Environmentalism. In Madhav Gadgil and Ramachandra Guha , Ecology and Equity: The Use and Abuse of Nature in Contemporary India. London : Routledge. Chapter 4. Pp.98-112

Chapple, Christopher K. (1998). 'Toward an Indigenous Indian Environmentalism'. In Lance E. Nelson (Ed.), *Purifying the Earthly Body of God: Religion and Ecology in Hindu India.* Albany, USA: State University of New York Press. Pp. 13-38.

Unit 2: Social Theory and the Environment

a. Theorising the Environment

Barbosa, Luiz C. (2009). 'Theories in Environmental Sociology'. In Kenneth A. Gould and Tammy L. Lewis (Ed.), *Twenty Lessons in Environmental Sociology.* New York: Oxford University Press. Pp. 25-44.

Cordner, Alissa (2021). 'Risk'. In Beth S. Caniglia, et al. (Eds.), *Handbook of Environmental Sociology.* Switzerland: Springer. Pp. 167-187.

Agarwal, Bina, (2007). 'The Gender and Environment Debate: Lessons from India'. In Mahesh Rangarajan. (Ed.), *Environmental Issues in India: A Reader*. New Delhi: Pearson, Longman. Pp. 316-324, 342-352.

b. Intersectionality and Environment

Ergas, Christina, McKinney, Laura and Bell, S. Elizabeth (2021). 'Intersectionality and the Environment'. In Beth S. Caniglia, et al. (Eds.), *Handbook of Environmental Sociology*. Switzerland: Springer. Pp. 15-30.

Sharma, Mukul (2017). 'Eco-casteism: Sulabh and the Denial of Dalit Existence'. In Mukul Sharma, *Caste and Nature: Dalits and Indian Environmental Politics*. Delhi: Oxford University Press. Pp. 1-22.

c. Social Ecology

Mukerjee, Radhakamal (1994). 'An Ecological Approach to Sociology'. In Ramchandra Guha (Ed.), *Social Ecology. Oxford in India Readings in Sociology and Social Anthropology*. Delhi: Oxford University Press. Pp. 22-26.

Unit 3: Social Responses to Environmental Disruption

a. Environmental Justice

Maung, Rebecca and Pellow, David. N. (2021). 'Environmental Justice'. In Beth S. Cagnilia, et al. (Eds.) *Handbook of Environmental Sociology*. Switzerland: Springer Pp. 35-47.

Lewis, Tammy L. (2009). 'Environmental Movements in the Global South'. In Kenneth A. Gould and Tammy L. Lewis (Ed.), *Twenty Lessons in Environmental Sociology*. New York: Oxford University Press. Pp. 244-254.

Sangvai, S. (2007). 'The Tragedy of Displacement'. In Mahesh Rangarajan (Ed.), *Environmental Issues in India: A Reader*. New Delhi: Pearson/Longman. Pp. 437-443.

b. Alternative Engagements

Leahy, Terry (2021). 'What is Permaculture? Three Perspectives' in *The Politics of Permaculture*. London: Pluto Press. Pp. 1-23.

Suggested Readings:

Guha, R and Martinez-Alier, J (2006). *Varieties of Environmentalism: Essays North and South*. London: Earthscan

Baviskar, A. (1995). *In the Belly of the River: Tribal Conflicts Over Development in the Narmada Valley.* Delhi, New York: Oxford University Press.

Shiva,V. (1988). Women In Nature. In *Staying Alive: Women Ecology and Development*. New Delhi: Zed Books

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Category II

BA (Prog.) with Sociology as Major
Semester VI

B.A. (Prog.) Sociology
Discipline Specific Core (DSC) 11
Sociological Research-II

DISCIPLINE SPECIFIC CORE -11 (DSC 11): SOCIOLOGICAL RESEARCH -II

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (If any)
		Lecture	Tutorial	Practical/ Practice		
DSC 11: Sociological Research-II	4	3	1	0	12th Class Pass	BA (Prog.) DSC 09 Sociological Research -I or equivalent course

Learning Objectives:

1. The course aims to introduce students to the systematic methods of social research.
2. It acquaints students to ethical issues in research.

Learning outcomes:

Students will be able to:

1. *Develop* an awareness of the building blocks of research and the basic methods of data collection.
2. *Evaluate* the strengths and weaknesses of various research techniques.
3. *Apply* research methods to study diverse social processes.

SYLLABUS OF DSC: Sociological Research-II

Unit I: Basic elements of Research (9 Hours)
This unit introduces the building blocks of research concepts, hypotheses and sampling methods.

a. Concepts
b. Hypotheses
c. Sampling

Unit II: Methods of Data Collection (18 hours)
This unit describes various tools of doing social science research and how they function.

a. Observation
b. Questionnaire
c. Interview
d. Other Research Designs: Case Study, Community Study, Longitudinal Study, Cross Sectional Study, Focus Groups

Unit III: Challenges in Conducting Research (6 hours)
This unit creates awareness of the ethical dimensions of research and problems that could arise in the field.

a. Ethical Issues in Data Collection and Analysis
b. Methodological Problems in the 'field'

Unit IV: Statistical Methods (12 Hours)
This unit moves to the basic statistical concepts that are the basis of data science.

a. Measures of Central Tendency: Mean, Mode, Median
b. Measures of Dispersion: Standard Deviation

Practical Component: NIL

Essential/Recommended Readings:

Unit I: Basic elements of Research

a. Concepts

Becker, Howard S. 'Concepts' in Tricks of the Trade : How to Think about Your Research While You'Re Doing It. Chicago, Ill. :University of Chicago Press, 1998 pp. 152-198.

b. Hypotheses

Schutt, Russell K. Investigating the Social World : the Process and Practice of Research. Thousand Oaks, Calif. :Pine Forge Press, 2004.pp.123- 133.

c. Sampling

Bailey, K. (1994). *Survey Sampling in Methods of Social Research*, 4th edition. New York: Free Press. Chapter 5. Survey Sampling , Pp. 81- 98.

Unit II: Methods of Data Collection

a. Observation

Bailey, K. (1994). 'Observation'. In *Methods of Social Research*, 4th edition. New York: Free Press. Chapter 10, Pp. 241-273.

Cargan, L. (2008). 'The Classic Studies'. In *Doing Social Research*. Rawat Publications., Pp.157-174.

b. Questionnaire

c. Interview

Babbie, E. (2016). *The Practice of Social Research,* 14th Edition. Boston: Cengage Learning, Pp. 246-286.

d. Other Research Designs: Case Study, Community Study, Longitudinal Study, Cross Sectional Study, Focus Groups

Cargan, L. (2008). 'Collecting the Data: Some Special Designs' in *Doing Sociological Research*. Jaipur: Rawat Publications. Chapter 9. Survey Research , Pp. 203-227.

Liahana Gordon (2015). 'Focus Group' in *Real Research: Research Methods Sociology Students Can Use*, Sage Publications pp. 467-533.

Schutt, Russell K. *Investigating the Social World : the Process and Practice of Research*. Thousand Oaks, Calif. :Pine Forge Press, 2004.pp. 696-698.

Unit III: Challenges in Conducting Research

a. Ethical Issues in Data Collection and Analysis

Babbie, E. (2016). 'The Ethics and Politics of Social Research' in *The Practice of Social Research*, 14th edition. Boston: Cengage Learning. Chapter 3, Pp. 60-85.

b. Methodological problems in the 'field'

Srinivas, M. N. (2004). 'The Insider versus the Outsider' In, Vinay Kumar Srivastava (Ed.) *The Study of Cultures in Methodology and Fieldwork*. New Delhi: Oxford University Press, Pp. 413-420.

Unit IV: Statistical Methods:

Gupta, S. P. (2006). 'Diagrammatic and Graphic Presentation, Measures of Central Value and Measures of Variation' in *Elementary Statistical Methods*. Sultan Chand & Sons. Chapters 6, 7, 8 Pp.101-108, 115- 118, 131-137, 155-168, 173-180, 187-197, 263-277.

Suggested Readings:

Association of Social Anthropologists of the UK and Commonwealth, Ethical Guidelines for Good Research Practice

Seale, Clive (2008). *Social Research Methods: A Reader*. London: Routledge.

B.A. (Prog.) Sociology

Discipline Specific Core (DSC) 12
Society and Environment

DISCIPLINE SPECIFIC CORE COURSE -12 (DSC-12) : Society and Environment

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSC 12 Society and Environment	4	3	1	0	12th Class Pass	BA (Prog) DSC 01 An Invitation Sociology or equivalent course

Learning Objectives:

1. This course enables students to reflect on 'environment' as an object of sociological inquiry. It would orient them to the core debates in Environmental Sociology.
2. The course analyses the linkages between society and the environment from a Sociological standpoint.
3. To locate the underlines the human consequences and colletive process within the larger ecological crisis we are facing at the moment.

Learning outcomes:

Students will be able to:

1. *Develop* an understanding of the dynamic between natural and social worlds from a sociological perspective.
2. *Apply* the sociological perspective on environment to contribute to any research endeavours and public policy conversations that assess causes, effects and possible solutions of environmental issues.
3. *Examine* issues of ecology and inequity and address the questions of environmental justice and ethics.

SYLLABUS OF DSC-12: Society and Environment

Unit 1: Sociologial Engagement with the Environment (12 Hours)

This unit helps students to understand the foundational relationship between the environment and society.

a. Introduction

b. Socio-Ecological Interconnectedness

c. Realism and Constructivism

Unit 2: Theoretical Approaches in Environmental Sociology (15 Hours)

This unit examines the core debates in environmental sociology through the lens of Western and Indian environmentalism.

a. Metabolic Rift

b. Ecological Modernization

c. Ecofeminism and Feminist environmentalism

d. Social Ecology

Unit 3: Emerging Environmental Issues and Movements (18 Hours)

This unit explores specific environmental issues through sociological case studies.

a. Water

b. Land

c. Seeds and Crops

d. Climate Change

Practical Component: NIL

Essential/Recommended Readings:

Unit I Sociologial Engagement with the Environment (12 Hours)

a. Introduction

Bell, M.M. (2011). 'Environmental Problem and Society' in *An Invitation to Environmental Sociology*. 4th edition. CA: Thousand Oaks. Sage. Chapter 1. Pp. 1-6.

Hannigan, J. A. (1995). 'Environmental Sociology : Issues and Theoretical Approaches' and 'Towards an Environmental Sociology :1970 to 1995' in *Environmental Sociology.* 2nd Edition. London and New York: Routledge. Chapters 1 & 2. Pp. 10- 35.

b. Socio-Ecological Interconnectedness

Mukerjee, R. (1994) (1932). 'An Ecological Approach to Sociology' in Ramchandra Guha (ed) *Social Ecology*. Delhi: Oxford University Press. Pp. 22-26.

c. Realism and constructivism

Evanoff, Richard J. (2005). 'Reconciling Realism and Constructivism in Environmental Ethics' in *Environmental Values, 14(1).* Pp. 61–81.

Unit 2 Theoretical Premises (15 Hours)

a. Metabolic Rift

Foster, J.B. (1999). 'Marx's Theory of Metabolic Rift: Classical Foundations for Environmental Sociology' in *American Journal of Sociology*, 105(2). Pp. 366-405.

b. Ecological Modernisation

Mol, A. P. (2002). 'Ecological Modernization and the Global Economy' in *Global Environmental Politics*, *2*(2). Pp. 92-115.

c. Feminist Environmentalism

Category III

BA (Prog.) with Sociology as Non-Major
Semester VI

B.A. (Prog.) Sociology
Discipline Specific Core (DSC) 11
Sociological Research-II

DISCIPLINE SPECIFIC CORE -11 (DSC 11): SOCIOLOGICAL RESEARCH -II

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (If any)
		Lecture	Tutorial	Practical/ Practice		
DSC 11: Sociological Research-II	4	3	1	0	12th Class Pass	BA (Prog.) DSC 09 Sociological Research -I or equivalent course Nil

Learning Objectives:

3. The course aims to introduce students to the systematic methods of social research.
4. It acquaints students to ethical issues in research.

Learning outcomes:

Students will be able to:

4. *Develop* an awareness of the building blocks of research and the basic methods of data collection.
5. *Evaluate* the strengths and weaknesses of various research techniques.
6. *Apply* research methods to study diverse social processes.

SYLLABUS OF DSC: Sociological Research-II

Unit I: Basic elements of Research (9 Hours)

This unit introduces the building blocks of research concepts, hypotheses and sampling methods.

a. Concepts
b. Hypotheses
c. Sampling

Unit II: Methods of Data Collection (18 hours)
This unit describes various tools of doing social science research and how they function.

a. Observation
b. Questionnaire
c. Interview
d. Other Research Designs: Case Study, Community Study, Longitudinal Study, Cross Sectional Study, Focus Groups

Unit III: Challenges in Conducting Research (6 hours)
This unit creates awareness of the ethical dimensions of research and problems that could arise in the field.

a. Ethical Issues in Data Collection and Analysis
b. Methodological Problems in the 'field'

Unit IV: Statistical Methods (12 Hours)
This unit moves to the basic statistical concepts that are the basis of data science.

a. Measures of Central Tendency: Mean, Mode, Median
b. Measures of Dispersion: Standard Deviation

Practical Component: NIL

Essential/Recommended Readings:

Unit I: Basic elements of Research

a. Concepts

Becker, Howard S. 'Concepts' in Tricks of the Trade : How to Think about Your Research While You'Re Doing It. Chicago, Ill. :University of Chicago Press, 1998 pp. 152-198.

b. Hypotheses

Schutt, Russell K. Investigating the Social World : the Process and Practice of Research. Thousand Oaks, Calif. :Pine Forge Press, 2004.pp.123- 133.

c. Sampling

Bailey, K. (1994). *Survey Sampling in Methods of Social Research*, 4th edition. New York: Free Press. Chapter 5. Survey Sampling , Pp. 81- 98.

Unit II: Methods of Data Collection

a. Observation

Bailey, K. (1994). 'Observation'. In *Methods of Social Research*, 4th edition. New York: Free Press. Chapter 10, Pp. 241-273.

Cargan, L. (2008). 'The Classic Studies'. In *Doing Social Research*. Rawat Publications., Pp.157-174.

b. Questionnaire

c. Interview

Babbie, E. (2016). *The Practice of Social Research,* 14th Edition. Boston: Cengage Learning, Pp. 246-286.

d. Other Research Designs: Case Study, Community Study, Longitudinal Study, Cross Sectional Study, Focus Groups

Cargan, L. (2008). 'Collecting the Data: Some Special Designs' in *Doing Sociological Research*. Jaipur: Rawat Publications. Chapter 9. Survey Research , Pp. 203-227.

Liahana Gordon (2015). 'Focus Group' in *Real Research: Research Methods Sociology Students Can Use*, Sage Publications pp. 467-533.

Schutt, Russell K. *Investigating the Social World : the Process and Practice of Research*. Thousand Oaks, Calif. :Pine Forge Press, 2004.pp. 696-698.

Unit III: Challenges in Conducting Research

a. Ethical Issues in Data Collection and Analysis

Babbie, E. (2016). 'The Ethics and Politics of Social Research' in *The Practice of Social Research*, 14th edition. Boston: Cengage Learning. Chapter 3, Pp. 60-85.

b. Methodological problems in the 'field'

Srinivas, M. N. (2004). 'The Insider versus the Outsider' In, Vinay Kumar Srivastava (Ed.) *The Study of Cultures in Methodology and Fieldwork*. New Delhi: Oxford University Press, Pp. 413-420.

Unit IV: Statistical Methods:

Gupta, S. P. (2006). 'Diagrammatic and Graphic Presentation, Measures of Central Value and Measures of Variation' in *Elementary Statistical Methods*. Sultan Chand & Sons. Chapters 6, 7, 8 Pp.101-108, 115- 118, 131-137, 155-168, 173-180, 187-197, 263-277.

Category IV
Common Pool of Discipline Specific Electives (DSE)
BA (H) Sociology
Discipline Specific Elective (DSE) 10
Animals and Society

DISCIPLINE SPECIFIC ELECTIVE COURSE -10 (DSE - 10) : Animals and Society

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSE 10 Animals and Society	4	3	1	0	12th Class Pass	Nil

Learning Objectives:

1. To introduce students to the sociological/anthropological study of human-animal relationships and how it can provide a nuanced understanding of interspecies issues in contemporary society.

2. To enable students to understand a variety of contexts of human-animal encounters and study the consequent meaning constructions, interactions, and evolving human attitudes.

3. To develop a critical understanding of the changing status of animals in society by knowing different perspectives regarding the ethical treatment of animals.

Learning outcomes:

Students will be able to:

1. *Outline* the substantive issues and debates within which classic and contemporary human-animal scholarship is situated.

2. *Examine* the sociological, political, personal and legal aspects of human-animal relationships.

3. *Identify* the intersections of gender, caste, class and other identities that shape human-animal interactions.

SYLLABUS OF DSE 10:Animals and Soceity

Unit I: The Sociological Encounter with Animals (12 Hours)
This unit introduces the range and scope of sociological and anthropological scholarship on human-animal relationships.

Unit II: Animals and Culture (12 Hours)
This unit outlines the metaphorical, symbolic and material uses of animals in human societies/affairs.

Unit III: Human-Animal Relatedness (12 Hours)
This unit addresses various forms of bonds established between humans and animals, focusing on their everyday interactions.

Unite IV: Law and Ethics (9 Hours)
The final unit considers the changing nature of human-animal relationships, concerning questions of animal mis/treatment, ethics and rights.

Practical Component: NIL

Essential/Recommended Readings:

Unit I: The Sociological Encounter with Animals

Kirksey, E., & Helmreich, S. (2010). 'The Emergence of Multispecies Ethnography' in *Cultural Anthropology*, 25, Pp. 545-576.

B.A. (H) Sociology
Discipline Specific Elective (DSE) 11
Sociology of Care

DICIPLINE SPECIFIC ELECTIVE – 11 (DSE 11) : SOCIOLOGY OF CARE

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSE 11 Sociology of Care	4	3	1	0	12th Class Pass	Nil

Learning Objectives:

1. The course introduces 'care' as a sociological concept, with its diverse themes, theoretical perspectives, key debates and empirical practices.
2. It attempts to develop a critical understanding of care as a multi-layered concept and its operationalisation in society.

Learning outcomes:

Students will be able to:

1. *Identify* and *assess*, the concept of 'care' and its intersectional nature, from a sociological lens.
2. *Evaluate* the significance of multi-layered nature of 'care' practices, further translating the conceptual and empirical knowledge in both application-based research and in academic discourses.

SYLLABUS OF DSE-11: Sociology of Care

Unit I Conceptualising 'Care' and its Multiple Dimensions (15 hrs)

This unit introduces students to the concept of care and its different dimensions.

Unit II Themes in the 'Sociology of Care' (21 hrs)

This unit maps the multiple themes in the sociology of care through analytical essays and case studies.

a. Moral and Political

b. Economy and Policy

c. Care as Social Justice

d. Global Care Complex

Unit III Care: Contexts, Practices and Current Concerns (09 hrs)

This unit explores the divergent contexts, practices, and current concerns of the sociology of care.

Practical Component: NIL

Essential/Recommended Readings:

Unit I. Conceptualising 'Care' and its Multiple Dimensions

Armenia, Amy. (2018). 'Caring as Work: Research and Theory', in Barbara J. Risman, Carissa Froyum, and William J. Scarborough, eds. *Handbook of the Sociology of Gender.* Cham: Springer International Publishing. Pp. 469-478.

B.A. (H) Sociology

Discipline Specific Elective (DSE) 12
Research Methodology for Sociology
(As Mandated by UGCF22)
(On offer in Semesters VI & VII)

DICIPLINE SPECIFIC ELECTIVE – 12 (DSE 12) : Research Methodology for Sociology

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
DSE 12 Research Methodology for Sociology	4	3	1	0	12th Class Pass	Nil

Learning Objectives:

1. This course builds on concepts and methodology of sociological research to enable students to view the whole research process from design to final report.
2. It exposes students to a wide range of research methods they could use in isolation or combination to achieve an explanation of social reality.

Learning Outcomes:

Students will be able to:

1. *Apply* each of the research methods in a practical context.
2. *Evaluate* the relative merits of each method in relation to a research problem.
3. *Comprehend* the issues around research design and its various facets.
4. *Write* a comprehensive research proposal and a research project.

SYLLABUS OF DSC 12: Research Methodology for Sociology

Unit I: Social Research (9 Hours)

This unit discusses various facets of Research Design.

a. Research Design
b. Triangulation

Unit II: Research Methods (24 hours)

This unit focuses on discussions of a wide range of research methods available to social scientists.

a. Ethnography
b. Action Research
c. Content Analysis
d. Photography and Research
e. Case study
f. Indigenous Methodologies

Unit III: Writing Research Proposal and Report (12 hours)

This unit focuses on the important part of the research process – developing an understanding of writing the research proposal and the culmination of research activity that is writing the final report.

a. Writing a Research Proposal
b. Writing a Research Report

Practical Component: NIL

Essential/Recommended Readings:

Unit I: Social Research
a. Research Design
Blaikie, Norman. (2009) 'Preparing Research Designs and Designing Social Research' in *Designing Social Research*, 2nd Edition, Polity, UK. Ch.1, 2 Pp.12-55.

b. Triangulation
Fusch, Patricia et al, (2018) 'Denzin's Paradigm Shift: Revisiting Triangulation in Qualitative Research*'* in *Social Journal*, volume 10, issue 1, Pp.19-32.

Unit II: Research Methods

a. Ethnography
Fetterman, David M., (2010). 'The First Step: An Overview' in *Ethnography Step by Step,* Sage Publications: Los Angeles. Chapter 1, Pp. 1-14.

b. Action Research
Noffke, Susan and Bridget Somekh. (2005). 'Action Research' in Bridget Somekh and Cathy Lewin (eds), *Research Methods in the Social Sciences*, Sage Publications, London, Ch. 10 Pp. 89-96**.**

c. Content Analysis
Krippendorff, Klaus. **(**2004). 'Conceptualizing Content Analysis and Conceptual Foundation ' in *Content Analysis: An Introduction to Its Methodology* Chapters 1, 2, in, Sage Publications, Thousand Oaks, pp. 3-43.

d. Photography and Research

Pinny, Christopher (2004) 'Sparks of Contingency: Photography and Anthropology in India', in VK Srivastava ed. *Methodology and Fieldwork*, Oxford University Press, pp.257-264.

e. Case Study

Stark, Sheila and Harry Torrance, (2005) 'Case Study' in Bridget Somekh and Cathy Lewin ed. *Research Methods in the Social Sciences*, Sage, London, pp. 33-39

f. Indigenous Methodologies

Denzin, Norman K. and Yvonna S.Lincoln Margaret Kovach, (2018) 'Doing Indigenous Methodologies: A Letter to a Research Class' in *The Sage Handbook of Qualitative Research* Ed. (5th Edition), Chap 9, Pp. 383-411.

Unit III: Writing Research

a. Writing a Research Proposal

Creswell, John W., (2009). 'Writing Strategies and Ethical Considerations' in *Research Design, Qualitative, Quantitative, and Mixed methods Approaches*, Sage, Los Angeles, Ch. 4, pp.73-94.

b. Writing a Research Report

Edwards, M. (2015). 'Section III- Writing Qualitative Papers & Section IV- Chapter 17- Writing a Book Review' in *Writing in Sociology*, (2nd Edition) Sage Publication: London, pp.79-118 & 135-138.

Soichru, C.O. (2023). 'Writing Strategies and Ethical Considerations' in *A Student Guide to Writing Research Reports, Papers, Theses and Dissertations.* Routledge: London. Chapter-9 Academic Writing, Pp- 197-215.

Common List of Generic Electives (GE)
Semester VI
Sociology
Generic Elective (GE) 16
Media, Culture and Society

GENERIC ELECTIVE COURSE-16 (GE-16) : Media, Culture and Society

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
GE 16 Media, Culture and Society	4	3	1	0	12th Class Pass	Nil

Learning Objectives:

1. To provide an interdisciplinary introduction to media modernity through a close examination of the relationship between culture, media and society.
2. To acquaint students with the necessary concepts and theories to grasp complex articulations of media, culture and society.
3. To familiarise students with novelty, complexity and ever-accelerating dynamics of media, culture and society in our times.

Learning outcomes:

Students will be able to:
1. *Identify*, describe and explain the key institutions and processes of mediatised cultures of our times.
2. *Apply* the learning to formulate, analyse and examine the key conundrums in the arena of media, culture and society.
3. *Evaluate* the contemporary cultural phenomenon from a conceptually informed interdisciplinary perspective.

SYLLABUS OF GE-16: Media, Culture and Society

Course Outline:
Unit I: Media and Modernity (9 Hours)

This unit traces the rise of modern media from the early modern era to our own times, paying special attention to the constitution of the Indian public sphere.

Unit II: Theories and Approaches (21 Hours)

This unit introduces students to key theoretical approaches to the study of media such as the Frankfurt school, British cultural studies, semiotics, feminism, post-colonial theory and post-modernist theory.

Unit III: Media, Culture and Society: Contemporary Configurations (15 Hours)

This unit focuses on contemporary phenomena in this arena such as televised family dramas, ubiquitous celebrity culture and selfie culture. These seemingly ordinary actions and processes are examined for their deeper cultural and social significance and embeddedness.

Practical Component: NIL

Essential/Recommended Readings:

Unit I: Media and Modernity

Thompson, John B. *The Media and Modernity: A Social Theory of the Media* Stanford, CA: Stanford UP, 1995. Chapter 2, 'The Media and the Development of Modern Societies' Pp. 52-80.

Rajagopal, Arvind. *The Indian Public Sphere: Readings in Media History*. Delhi: OUP India, 2009. Introductin: The Public Sphere in India: Structure and Transformation. Pp. 1-28.

Unit 2: Theories and Approaches

Sociology

Generic Elective (GE) 17
Sociology of Tourism

GENERIC ELECTIVE COURSE-17 (GE-17) : Sociology of Tourism

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
GE 17 Sociology of Tourism	4	3	1	0	12th Class Pass	Nil

Learning Objectives:

1. This course explores the idea of travel as a social category and the various perspectives in understanding the same.
2. To examine tourism as an activity beyond leisure and contextualise it within a sociological analysis on multiple axes.
3. To understand tourism as a development issue with significant consequences for communities.

Learning outcomes:

Students will be able to:

1. *Develop* a theoretical understanding of tourism as a social category.
2. *Apply* the perspective of commodification and social change in understanding tourism as a social activity.
3. *Assess* the relationship between tourism, state, and communities in the context of globalisation.

SYLLABUS OF GE- 17: Sociology of Tourism

Unit I: Why do people Travel? Conceptualizing Travel and Tourism (15 hours)
This unit will enable students to understand tourism as a sociological and an anthropological category.

Unit II: Tourist and their Choices: Travel beyond Leisure (18 hours)

This unit will introduce tourism as a social activity that is more than a mere leisure activity. It elucidates the varieties of travel and the purposes of travel as an outcome of complex interactions between various forces.

Unit III: Political Economy of Tourism: States and Communities (12 hours)
This unit explores the new challenges in the relationship of host communities and guests and the institutions of state and tourism in a globalised world.

Practical Component: NIL

Essential/Recommended Readings:

Unit I: Why do people Travel? Conceptualizing Travel and Tourism

Greenblat, Cathay Stein and Gagon, John. H. 1983. 'Temporary Strangers: Travel and Tourism from a Sociological Perspective'. *Sociological Perspectives,* Vol. 26 No. 1. pp. 89-110

Sociology
Generic Elective (GE) 18
Sociology of Ageing

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
GE 18 Sociology of Ageing	4	3	1	0	12th Class Pass	Nil

Learning Objectives:

1. The course introduces students to the concept of ageing and outlines the relevance of its study in society through cross-cultural research.
2. The course examines ageing as a socially constructed phenomenon.
3. The course familiarises students with the social, institutional and technological support for the aged.

Learning Outcomes:

Students will be able to:

1. *Analyse* ageing as a sociocultural process and recognise different attitudes and beliefs that shape ageing and develop a more informed and nuanced perspective on the ageing process.
2. *Assess* age-based discrimination and its intersection with other dimensions of inequality.
3. *Examine* the various perspectives on the challenges of ageing and the responses through policy programs.

SYLLABUS OF GE- 18: Sociology of Ageing

Unit I: Understanding Sociology of Ageing (12 hours)
This unit provides an overview of the concept of ageing and the significance of its study.

Unit II: Ageing: Individual, Family and Society (9 hours)
This unit provides an understanding of the interplay between societal responses to ageing and the lived experiences of the individuals within the context of family.

Unit III: Ageing and Social Processes (12 hours)
This section discusses age-based discrimination and its intersection with other dimensions of inequality.

Unit IV: Ageing: Challenges and Responses (12 hours)
This section examines the challenges of ageing and the responses through policy programs.

Practical Component: NIL

Essential/Recommended Readings:

Unit I: Understanding Sociology of Ageing

S Raju. 2014. 'Studies on Ageing in India: A Review' in G.Girdhar, K.M.Satyanarayana, Sanjay Kumar, K.S.James and Moneer Alam(eds.), *Population Ageing in India.* Cambridge University Press. Chapter 7. Pp.180-224.

Achenbaum, W. Andrew. 2020. 'Past as Prologue: Toward a Global History of Ageing' in D.Dannefer and C.Philipson (eds.) *The Sage Handbook of Social Gerontology.* Sage Publications. Chapter 2. Pp. 20-32.

Woodward, Janis and Culbert, Brandan. 2019. 'AAGE and Age: A Conversation with Dr. Christine L. Fry, Founding President of AAGE' in *Anthropology and Ageing*. Vol 40, No. 2. Pp. 72-75.

Harper, Sarah. 2006. 'Understanding Age and Ageing' in *Ageing Societies: Myths, Challenges and Opportunities*. Hodder Arnold. Chapter 3. Pp. 66-92.

Unit II: Ageing: Individual, Family and Society

Gangopadhay, Jagriti. 2020. 'Examining the Lived Experiences of Ageing Among Older Adults Living Alone in India' in M.K.Shankardass (eds.) *Ageing Issues and Responses in India.* Chapter 13. Springer Publications. Pp. 207-220.

SEMESTERS–IV

DEPARTMENT OF ECONOMICS
Category-I
(B.A. Honours in Economics in three years)

STRUCTURE OF FOURTH SEMESTER

DISCIPLINE SPECIFIC CORE COURSE -10 (DSC-10): Intermediate Microeconomics II: Market, Government and Welfare

Course title & Code	Credits	Duration (per week)			Eligibility Criteria	Prerequisite
		Lecture	Tutorial	Practical/ Practice		
Intermediate Microeconomics II: Market, Government and Welfare - ECON010	**4**	**3**	**1**	**0**	**Class 12th with Mathematics**	**NIL**

Learning Objectives

The Learning Objectives of this course are as follows:

- This course introduces students to analysis of multi-commodity markets.
- The efficiency results, known as welfare theorems, are central to understanding of market economy.
- The course also discusses inefficiencies coming from market concentration and externalities.
- It further would discuss the role of government to deal with the inefficiencies and resultant welfare outcomes.

Learning outcomes

The Learning outcomes of this course are as follows:

- This course helps the students to understand efficiency of markets and the environment where the standard market mechanism fails to generate the desirable outcomes in simple general equilibrium settings.
- The issues of market imperfection and market failures lead students to the economics of policy design. The students will learn the efficacy of government interventions for the improved welfare.

Syllabus

UNIT I: Monopoly (9 hours)
Monopoly pricing, Inefficiency, Price discrimination, Regulation

UNIT II: General equilibrium (9 hours)
Exchange economy, Robinson Crusoe economy, Pareto optimality, Welfare theorems, Welfare and social choice

UNIT III: Models of Monopolistic Competition (9 hours)
Firms with differentiated products, mark-up, short-run and long-run equilibrium

UNIT IV: Externalities (9 hours)
Market inefficiency under externalities, Pigou tax, Coase theorem, Market creation and other solutions

UNIT V: Public Good (9 hours)
Inefficiency of market equilibrium, Optimal public good provision, Free rider problem, Lindahl taxes

Recommended readings

- Serrano, Roberto and Feldman, Alan (2012), *A short course in intermediate Microeconomics with Calculus*, Cambridge University Press
- Espinola-Arredondo, Ana and Munoz-Garaia, Felix (2020), *Intermediate Microeconomic Theory*, MITPress
- Munoz-Garaia, Felix (2017) *Practice Exercises for Advanced Microeconomic Theory*, MIT Press.
- Dunaway, Eric; Strandholm, John C., Espinola-Arredondo, Ana and Munoz-Garcia, Felix (2020) *Practice Exercises for Intermediate Microeconomic Theory*, MIT press

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE -11 (DSC-11): Intermediate Macroeconomics II: Policy Issues

Course title & Code	Credits	Duration (per week)			Eligibility Criteria	Prerequisite
		Lecture	Tutorial	Practical/ Practice		
Intermediate Macroeconomics II: Policy Issues – ECON011	**4**	**3**	**1**	**0**	**Class 12th with Mathematics**	**NIL**

Learning Objectives

The Learning Objectives of this course are as follows:

- This course trains the students in policy issues faced by macroeconomists in the real world.
- It discusses issues in monetary and fiscal policies as well as exchange rate dynamics.
- It also introduces the students to the financial system and dynamics of financial crises.
- The students are introduced to macroeconomic concepts in the context of open economies and the policy issues therein.

Learning outcomes

The Learning outcomes of this course are as follows:

- This course enables students to analyse the functioning of macroeconomic policies in the real world in both closed and open economies, understand the dilemmas faced by the policymakers both in the domestic economy and in the globalised world.

Syllabus

UNIT I: Fiscal and monetary policies (15 hours)
Active or passive monetary policies; time inconsistency, monetary policy objectives and targets; rules versus discretion, IS-PC-MR model, fiscal policy, the government budget constraint; government debt and Ricardian equivalence.

UNIT II: Financial markets and crisis (15 hours)
Introduction to financial markets, Financial crises and liquidity trap

UNIT III: Issues in open economy (15 hours)
Short-run open economy models; Mundell-Fleming model, Exchange rate determination; purchasing power parity, asset market approach, Dornbusch's overshooting model; monetary approach to balance of payments, International financial markets.

Recommended readings

- Blanchard,O.(2006).*Macroeconomics*,4th,6thand7thed.PearsonEducation.
- Salvatore, D. (2007), *International Economics*, Wiley.
- Dornbusch,R., Fischer,S.(1994).*Macroeconomics*,6thed.McGraw-Hill.
- Mishkin, Frederic(2012).*Macroeconomics:Policy & Practice*, Pearson.
- Jones, C. (2016). *Macroeconomics*, 4th ed. W. W.Norton.
- Carlin, Wendy and Soskice, David (2015) *Macroeconomics: Institutions, Instability and the Financial System*. Oxford University Press.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE -12 (DSC-12): Introductory Econometrics

Course title & Code	Credits	Duration (per week)			Eligibility Criteria	Prerequisite
		Lecture	Tutorial	Practical/ Practice		
Introductory Econometrics – ECON012	**4**	**3**	**0**	**1**	**Class 12th with Mathematics**	**NIL**

Learning Objectives

The Learning Objectives of this course are as follows:

- This course introduces a basic set of the econometric methods to conduct empirical analysis in economics and social sciences.
- The course is designed to provide the students with the basic quantitative techniques needed to undertake applied research projects.
- It also provides the base for more advanced optional courses in econometrics.
- The tools of econometrics will be useful to establish relationships among economic variables.
- This course will be taught as a combination of theory and practicals.

Learning outcomes

The Learning outcomes of this course are as follows:

- The students will be able to estimate linear models using the method of ordinary least squares and make inferences about population parameters.
- They will also understand the issues of estimation arising due to misspecification of models and violations of assumptions.
- Students will also gain hands-on-experience of applying the concepts learnt to a wide range of problems using econometric software.

Syllabus

UNIT I: Linear Regression Model (9 hours)
OLS method of Estimation and Properties of estimators, Measures of Fit, Testing of Hypotheses, Prediction, Introduction to econometric software and practical application using econometric software (GRETL/EViews/ R/Stata/EXCELetc.)

UNIT II: Multiple Regression Model (9 hours)
OLS method of estimation and Properties of OLS estimators, Testing of Hypotheses, Measures of fit, practical application using econometric software (GRETL/EViews/ R/Stata/EXCEL etc.)

UNIT III: Functional Forms and Qualitative independent variables (9 hours)
Nonlinear Models and Transformations of Variables, Dummy variables, practical application using econometric software (GRETL/EViews/ R/Stata/EXCEL etc.)

UNIT IV: Violations of Assumptions (9 hours)
Consequences, Detection, and Remedies: Multicollinearity, Heteroscedasticity, Serial Correlation, practical application using econometric software (GRETL/EViews/R/Stata/EXCEL etc.)

UNIT V: Specification Bias (9 hours)

Model selection criteria, types of specification errors, omitted variable bias, inclusion of irrelevant variables, incorrect functional form, errors of measurement, practical application using econometric software (GRETL/EViews/ R/Stata/EXCEL etc.)

Recommended readings

- James H. Stock and Mark W.Watson (2019) *Introduction to Econometrics*, Fourth Edition,Pearsons.
- Wooldridge, J. M. (2019). *Introductory econometrics: A modern approach*. 7th edition, C engage learning.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Category II

Economics Courses for Undergraduate Programme of study with Economics as one of the Core Disciplines

(B.A. Programmes with Economics as Major discipline)

DISCIPLINE SPECIFIC CORE COURSE -7 (DSC-7):Intermediate Macroeconomics I: Foundations of Aggregate Income Determination

Course title & Code	Credits	Duration (per week)			Eligibility Criteria	Prerequisite
		Lecture	Tutorial	Practical/ Practice		
Intermediate Macroeconomics I: Foundations of Aggregate Income Determination– ECON008	**4**	**3**	**1**	**0**	**Class 12th**	**NIL**

Learning Objectives

The Learning Objectives of this course are as follows:

- This course builds upon the basic concepts of macroeconomics. It introduces labour markets and the aggregate supply (AS) curve.
- Aggregate Demand (AD) and Aggregate Supply (AS) are brought together to determine equilibrium prices and output examine the policy impacts.
- The course discusses Phillips curve and the alleged trade-off between inflation and unemployment. Both adaptive and rational expectations are introduced.
- A flavour of micro-foundations is introduced with respect to consumption and investment.

Learning outcomes

The Learning outcomes of this course are as follows:

- This course enables students to analyse the interaction of aggregate demand and supply and the effects of fiscal and monetary policy, trade-off between inflation and unemployment, and consumption and investment behaviour of the households.

Syllabus

UNIT I: Short-run and medium-run equilibrium (15 hours)
The labour market, Wage determination; wages, prices, and unemployment; natural rate of unemployment; from employment to output, Derivation of aggregate supply curve, Interaction of aggregate demand and supply to determine equilibrium output, price level and employment.

UNIT II: Philips Curve and Theory of Expectations (15 hours)
Inflation, unemployment and expectations, Phillips Curve; adaptive and rational expectations; policy ineffectiveness debate.

UNIT III: Microeconomic foundations of macroeconomic behaviours (15 hours)
Consumption: Keynesian consumption function; Fisher's theory of optimal intertemporal choice; life-cycle and permanent income hypotheses; other theories of consumption expenditure.

Investment: determinants of business fixed investment; residential investment and inventory investment.

Recommended readings

- Blanchard,O.(2006).*Macroeconomics*,4thed.PearsonEducation.
- C.L.F. Attfield, D.Demery and N.W. Duck (1991). *Rational Expectations in Macroeconomics: an introduction to theory and evidence*2nd Ed.
- Sheffrin, Steve(1996). *Rational Expectations*. 2nd ed., Cambridge University Press.
- Dornbusch,R., Fischer,S.(1994).*Macroeconomics*,6thed.,McGraw-Hill.
- Branson,W.(2013).*Macroeconomics:Theoryandpolicy*,3rded,EastWestPress.
- Carlin, W and D Soskice (2007), *Macroeconomics: Imperfections, Institutions and Policies*, Indian Edition,OUP.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE -8 (DSC-8): Basic Econometrics

Course title & Code	Credits	Duration (per week)			Eligibility Criteria	Prerequisite
		Lecture	Tutorial	Practical/ Practice		
Basic Econometrics – ECON024	**4**	**3**	**1**	**0**	**Class 12th**	**Basic Statistics for Economics (ECON022)**

Learning Objectives

The Learning Objectives of this course are as follows:

- This course introduces students to the econometric methods used to conduct empirical analysis based on the basic statistics.
- It offers the basic quantitative techniques needed to undertake applied research projects to establish the relationship between variables of interests across wide variety of disciplines.

Learning outcomes

The Learning outcomes of this course are as follows:

- Students will learn to estimate simple estimation and inferences about population parameters, to formulate empirical models and analyze data.
- An expertise in econometrics increases the job prospect of the students significantly.

Syllabus

UNIT I: Regression Models (15 hours)
OLS estimators, hypothesis Testing using software and practical application; multi- ple Regression Model - estimation, Testing and practical application using software like GRETL/EViews/ R/Stata/EXCEL etc.

UNIT II: Qualitative variables and Estimation (15 hours)
Application of qualitative variables, Nonlinear Models, Applications of dummy variables

UNIT III: Issues with Classical Assumptions (15 hours)
Violation of normal distribution, Collinearity with independent variables, heteroscedasticity, autocorrelation, practical application

Recommended readings

- Christopher Dougherty, *Introduction to Econometrics*, 4th edition, OUP, Indian edition.
- Damodar Gujarati, *Econometrics by Example*, 2nd edition, Palgrave Macmillan, 2014.
- Gujarati,D.,Porter,D.(2010).*Essentials of Econometrics*,4thed.McGraw-Hill.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Category III

Economics Courses for Undergraduate Programme of study with Economics as one of the Core Disciplines

(B.A. Programmes with Economics as non-Major or Minor discipline)

DISCIPLINE SPECIFIC CORE COURSE -4 (DSC-4):Intermediate Macroeconomics I: Foundations of Aggregate Income

Course title & Code	Credits	Duration (per week)			Eligibility Criteria	Prerequisite
		Lecture	Tutorial	Practical/ Practice		
Intermediate Macroeconomics I: Foundations of Aggregate Income Determination– ECON008	**4**	**3**	**1**	**0**	**Class 12th**	**NIL**

Learning Objectives

The Learning Objectives of this course are as follows:

- This course builds upon the basic concepts of macroeconomics. It introduces labour markets and the aggregate supply (AS) curve.
- Aggregate Demand (AD) and Aggregate Supply (AS) are brought together to determine equilibrium prices and output examine the policy impacts.
- The course discusses Phillips curve and the alleged trade-off between inflation and unemployment. Both adaptive and rational expectations are introduced.
- A flavour of micro-foundations is introduced with respect to consumption and investment.

Learning outcomes

The Learning outcomes of this course are as follows:

- This course enables students to analyse the interaction of aggregate demand and supply and the effects of fiscal and monetary policy, trade-off between inflation and unemployment, and consumption and investment behaviour of the households.

Syllabus

UNIT I: Short-run and medium-run equilibrium (15 hours)
The labour market, Wage determination; wages, prices, and unemployment; natural rate of unemployment; from employment to output, Derivation of aggregate supply curve, Interaction of aggregate demand and supply to determine equilibrium output, price level and employment.

UNIT II: Philips Curve and Theory of Expectations (15 hours)
Inflation, unemployment and expectations, Phillips Curve; adaptive and rational expectations; policy ineffectiveness debate.

UNIT III: Microeconomic foundations of macroeconomic behaviours (15 hours)
Consumption: Keynesian consumption function; Fisher's theory of optimal intertemporal choice; life-cycle and permanent income hypotheses; other theories of consumption expenditure.

Investment: determinants of business fixed investment; residential investment and inventory investment.

Recommended readings

- Blanchard,O.(2006).*Macroeconomics*,4thed.PearsonEducation.
- C.L.F. Attfield, D.Demery and N.W. Duck (1991). *Rational Expectations in Macroeconomics: an introduction to theory and evidence*2nd Ed.
- Sheffrin,Steve(1996). *Rational Expectations*. 2nd ed.,Cambridge University Press.
- Dornbusch,R.,Fischer,S.(1994).*Macroeconomics*,6thed.,McGraw-Hill.
- Branson,W.(2013).*Macroeconomics:Theoryandpolicy*,3rded,EastWestPress.
- Carlin, W and D Soskice (2007), *Macroeconomics: Imperfections, Institutions and Policies*, Indian Edition, OUP.

(B.A. Honours in Economics in three years)

DISCIPLINE SPECIFIC CORE COURSE -13 (DSC-13): Game Theory and Strategic Interactions

Course title & Code	Credits	Duration (per week)			Eligibility Criteria	Prerequisite
		Lecture	Tutorial	Practical/ Practice		
Game Theory and Strategic Interactions – ECON013	**4**	**3**	**1**	**0**	**Class 12th with Mathematics**	**NIL**

Learning Objectives

The Learning Objectives of this course are as follows:

- This course introduces students to formal analysis of game theory and its applications on the micro-economic issues.
- Game theory will be used to analyse market power, commitment problem, coordination problem and various modern market design tools like contract and auction.

Learning outcomes

The Learning outcomes of this course are as follows:

- This course helps the students to understand strategic interactions and importance of information in strategic situations.
- The concepts and tools developed in this course will enable the students to analyse various strategic relations seen in various disciplines, like in economics, management and other social sciences.

Syllabus

UNIT I: Complete information simultaneous move game, Dominance, Nash equilibrium, Mixed strategy Nash equilibrium (9 hours)

UNIT II: Complete information extensive form game (9 hours)
Sequential rationality and subgame perfection

UNIT III: Topics from Industrial Organization (9 hours)

UNIT IV: Incomplete information (9 hours)
Bayes Nash equilibrium, Auction, Moral Hazard, Contract

UNIT V: Communicating information (9 hours)
Perfect Bayesian equilibrium, Job market signaling and reputation

Recommended readings

- Watson, J. (2002). *Strategy: an introduction to game theory*. New York: WW Norton.
- Muñoz-Garcia,F.(2017).*Advancedmicroeconomictheory:anintuitiveapproach with Final Examinationples*. MITPress.
- Muñoz-Garcia,F.(2017).*PracticeExercisesforAdvancedMicroeconomicTheory*. MITPress.
- Dunaway, E., Strandholm, J. C., Espinola-Arredondo, A., & Munoz-Garcia, F. (2020). *Practice Exercises for Intermediate Microeconomic Theory*. MITPress.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE -14 (DSC-14):Economic Growth and Business Cycles

Course title & Code	Credits	Duration (per week)			Eligibility Criteria	Prerequisite
		Lecture	Tutorial	Practical/ Practice		
Economic Growth and Business Cycles – ECON014	**4**	**3**	**1**	**0**	**Class 12th with Mathematics**	**NIL**

Learning Objectives

The Learning Objectives of this course are as follows:

- This course introduces the students to the models of economic growth and business cycles.
- The literature on the differences in the growth rates across economies is discussed.
- Further, the student is exposed to the preliminaries of macroeconomic modelling through different growth models.
- It introduces business cycles through the Real Business Cycle and the New Keynesian approaches.

Learning outcomes

The Learning outcomes of this course are as follows:

- The student would understand the basic drivers of economic growth that are developed through the different approaches using exogenous, semi-endogenous and endogenous models.
- The student will be able to apprise and analyse better the business cycles and familiarise with the debates between the schools of macroeconomic thoughts like Real Business Cycles and New Keynesian Economics.

Syllabus

UNIT I: Introduction to Economic Growth (15 hours)
Introduction to economic growth, data on economic growth, stylised facts of economic growth. Economic growth and economic development, economic growth and income difference, absolute and conditional convergence.

UNIT II: Models of Economic Growth (15 hours)
Solow model and the steady state. Solow model with technology, growth accounting, Economics of ideas and innovation, Romer model, Growth through creative destruction, Growth and technology transfer, institutions, Simple endogenous growth model.

UNIT III: Business Cycles (15 hours)
Real business cycle model, productivity shocks and business cycle fluctuations, New Keynesian models, new Keynesian Short-run AS Phillips curve and dynamics IS curve. Comparison between business cycle models. Introduction to dynamic general equilibrium models.

Recommended readings

- Jones,CharlesIandVollrath,Dietrich(2013)*IntroductiontoEconomicGrowth*.
- W. W. Norton & Co.
- Aghion, Philippe and Howitt, Peter (2010) *The Economics of Growth*. Prentice Hall. Eastern EconomyEdition.

- Barro, R, Chu, A and Cozzie, G (2017), *Intermediate macroeconomics*, First Edn. Cengage Learning.
- Weil,DavidN(2014)*EconomicGrowth*.Routledge.
- Gordon,RobertJ(2015)*Macroeconomics*.Pearson

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE -15 (DSC-15): Introductory Development Economics

Course title & Code	Credits	Duration (per week)			Eligibility Criteria	Prerequisite
		Lecture	Tutorial	Practical/ Practice		
Introductory Development Economics – ECON015	**4**	**3**	**1**	**0**	**Class 12th with Mathematics**	**NIL**

Learning Objectives

The Learning Objectives of this course are as follows:

- This course discusses the basic concept of growth and further links it up with alternative conceptions of development.
- It then proceeds to examine the aspects of poverty and inequality, not just in terms of income and wealth, but in terms of capabilities too.
- The axiomatic basis for inequality measurement is used to develop measures of inequality and poverty.
- It further explores the connections between growth and inequality.
- The course ends by linking political institutions to growth and inequality by discussing the role of the state in economic development and the informational and incentive problems that affect state governance.

Learning outcomes

The Learning outcomes of this course are as follows:

- The students would distinguish between growth and development and get an idea about the factors affecting the level of development as well as the process of economic development.
- Further, they comprehend and analyse various concepts and measures of underdevelopment including poverty and inequality.

Syllabus

UNIT I: Introducing Economic Development: Global Perspective (12 hours)
Conceptions of Economic Growth and Development; Concepts of economic growth and linking it up with alternative measures of development, including human development, documenting the international variation in these measures, comparing development trajectories across nations and within them.

UNIT II: Theories of Economic Development (12 hours)
Classic Theories of Economic Growth and Development - four approaches (linear- stages theories, structural change models, international dependence, neoclassical

UNIT III: The Strategy of Economic Development: Institutional Pathways (9 hours)
Balanced and Unbalanced growth, interlinkages, big-push and the role of markets and state, alternative institutional trajectories and their relationship with economic performance

UNIT IV: Poverty and Inequality (12 hours)
Definitions, Measures and Mechanisms, Inequality axioms and principles; a com- parison of commonly used diagrammatic and mathematical inequality measures, their deficiencies and usage; connections between

inequality and development; inequality trends at international level; conceptualisation of the poverty lines at domestic and international levels; poverty measurement; characteristics of the poor; capability approach to poverty; mechanisms that generate poverty traps and path dependence of growth processes.

Category II

Economics Courses for Undergraduate Programme of study with Economics as one of the Core Disciplines

(B.A. Programmes with Economics as Major discipline)

DISCIPLINE SPECIFIC CORE COURSE -9 (DSC-9): Intermediate Microeconomics II: Market, Government and Welfare

Course title & Code	Credits	Duration (per week)			Eligibility Criteria	Prerequisite
		Lecture	Tutorial	Practical/ Practice		
Intermediate Microeconomics II: Market, Government and Welfare - ECON010	**4**	**3**	**1**	**0**	**Class 12th**	**Introductory/Principles of Microeconomics**

Learning Objectives

The Learning Objectives of this course are as follows:

- This course introduces students to analysis of multi-commodity markets.
- The efficiency results, known as welfare theorems, are central to understanding of market economy.
- The course also discusses inefficiencies coming from market concentration and externalities.
- It further would discuss the role of government to deal with the inefficiencies and resultant welfare outcomes.

Learning outcomes

The Learning outcomes of this course are as follows:

- This course helps the students to understand efficiency of markets and the environment where the standard market mechanism fails to generate the desirable outcomes in simple general equilibrium settings.
- The issues of market imperfection and market failures lead students to the economics of policy design. The students will learn the efficacy of government interventions for the improved welfare.

Syllabus

UNIT I: Monopoly (9 hours)
Monopoly pricing, Inefficiency, Price discrimination, Regulation

UNIT II: General equilibrium (9 hours)
Exchange economy, Robinson Crusoe economy, Pareto optimality, Welfare theorems, Welfare and social choice

UNIT III: Models of Monopolistic Competition (9 hours)
Firms with differentiated products, mark-up, short-run and long-run equilibrium

UNIT IV: Externalities (9 hours)
Market inefficiency under externalities, Pigou tax, Coase theorem, Market creation and other solutions

UNIT V: Public Good (9 hours)
Inefficiency of market equilibrium, Optimal public good provision, Free rider problem, Lindahl taxes

Recommended readings

SEMESTERS–VI

DEPARTMENT OF ECONOMICS

Category I

(B.A. Honours in Economics in three years)

DISCIPLINE SPECIFIC CORE COURSE -16 (DSC-16): International Trade

Course title & Code	Credits	Duration (per week)			Eligibility Criteria	Prerequisite
		Lecture	Tutorial	Practical / Practice		
International Trade – ECON016	4	3	1	0	Class 12th with Mathematics	Introductory/Principles of Microeconomics

Learning Objectives

The Learning Objectives of this course are as follows:

- This course introduces the basics of international trade theory and examines the effects of trade policies for domestic and world welfare. It covers bother classical and new trade theories.
- This course develops a systematic exposition of models that try to explain the composition, direction, and consequences of international trade.
- Apart from the introduction to theoretical models, students will also be exposed to real-world examples and casestudies.

Learning outcomes

The Learning outcomes of this course are as follows:

- The students would be able to understand the main theoretical and empirical concepts in international trade that equip them with a thorough analytical grasp of trade theories, ranging from Ricardian comparative advantage to intra-industry trade.
- It familiarises students with the main issues in trade policy and with the basic features of theinternationaltradingregime.

Syllabus

UNIT I: Neoclassical Trade Theories (15 hours)
Ricardian trade theory of comparative advantage. Gains from trade. Comparative advantage with many goods; Specific factor model; income distribution and trade policy, international factor mobility models; Standard Trade Model, economic growth, immiserizing growth and intertemporal trade; Heckscher-Ohlin theory; factor price equalisation, Rybczynski and Stolper-Samuelson theorems, Heckscher- Ohlin-Vanek Model, Offercurve.

UNIT II: New trade theories and firms in the global economy (15 hours)
External Economies of Scale, learning curve, intra-industry trade, monopolistic competition and firm responses to trade; international Location of Production, horizontal and vertical multinationals; Gravity model, Firms in the global economy. Global value chain and offshoring of goods and services.

UNIT III: International Trade Policy Concerns (15 hours)
Instruments of trade policy, static welfare analysis of tariffs, quotas and subsidies. Equivalence of tariffs and quotas. Effective rate of protection. Export subsidies and countervailing duties; Oligopoly and International trade. Strategic tradepol-icy; International Agreements: Trade, Labour and Environment Multilateralism, WTO, RegionalTradeAgreementsandNewProtectionism

Recommended readings

- Feenstra, R., Taylor, A. (2014). *International Trade*, 3rd ed. Worth Publishers. (Abbreviation used:FT)
- Krugman, P., Obstfeld, M., Melitz, M. (2018). *International Economics - Theory and Policy*, 11th ed. Pearson Education. (Abbreviation used: KOM)
- Gandolfo, G. (2014), *International Trade Theory and Policy (with contribution fromFedericoTrionfetti*)2nded.,Springer.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE -17 (DSC-17): Development Theory and Experience

Course title & Code	Credits	Duration (per week)			Eligibility Criteria	Prerequisite
		Lecture	Tutorial	Practical/ Practice		
Development Theory and Experience – ECON017	**4**	**3**	**1**	**0**	**Class 12th with Mathematics**	**NIL**

Learning Objectives

The Learning Objectives of this course are as follows:

- It highlights the dynamic interconnections between the social and economic aspects of the development process.
- In particular, the course deals with the macro and micro aspects of demography, fertility choices and gender bias.
- It also discusses the process of migration through elaborate models highlighting the rural-urban sectoral interrelationships.
- It describes the peculiar characteristics of rural institutions which shape contracts across labour, land and credit markets in the rural economy.
- It discusses the efficiency of such contracts even while they deviate from the traditional competitive marketcontracts.

Learning outcomes

The Learning outcomes of this course are as follows:

- This course updates the students the unprecedented progress that has been made in many parts of the developing world—but fully confronts the enormous problems and challenges experienced during the recent decades.
- The student would understand the wide diversity of development approaches adopted across the developing world, and the differing positions in the global economy held by developing countries.
- This will help them understand better the economic development policy and programmesacrossemployedbyWorldBankandnationaleconomies.

Syllabus

UNIT I: Demography, Gender and Development (12 hours)
Demographic concepts; birth and death rates, age structure, fertility and mortality; demographic transitions during the process of development; gender bias in preferences and outcomes and evidence on unequal treatment within households; connections between income, mortality, fertility choices and the impact of intra-household gender inequality (in allocation of resources) and labour markets as genderedinstitutions.

UNIT II: Migration and Development (9 hours)
Models of migration, sectoral dynamics and the relationship between rural and urban sectors.

UNIT III: Land, Labour and Credit Markets (12 hours)
The distribution of land ownership; land reform and its effects on productivity; contractual relationships between tenants and landlords; land acquisition; nutrition and labor productivity; informational problems and credit contracts; micro-finance; inter-linkages between rural factor markets.

UNIT IV: Institutions and coordination (12 hours)
The determinants of democracy; alternative institutional trajectories and their relationship with economic performance; within-country differences in the functioning of state institutions; state ownership and regulation; government failures and corruption.

DISCIPLINE SPECIFIC CORE COURSE -18 (DSC-18): Indian Growth and Development

Course title & Code	Credits	Duration (per week)			Eligibility Criteria	Prerequisite
		Lecture	Tutorial	Practical/ Practice		
Indian Growth and Development	**4**	**3**	**1**	**0**	**Class 12th with Mathematics**	**NIL**

Learning Objectives

The Learning Objectives of this course are as follows:

- Using appropriate analytical frameworks, this course reviews major trends in economic indicators of macro and development issues and policy debates in India in the post-Independence period, with particular emphasis on paradigm shifts and turning points.
- This course intends to give an introduction to students as to how they could explore problems related to the Indian economy by familiarizing them with the research studies on areas relating to economic development and policy in India with an emphasis on contemporary debates.

Learning outcomes

The Learning outcomes of this course are as follows:

- The students should be able to understand the development paradigm adopted in India since independence and evaluate its impact on economic as well as social indicators of progress.
- The students will acquire ability to explore current policy debates and contribute to policy making in an informed way using relevantdatabases.

Syllabus

UNIT I: Economic Growth since Independence (12 hours)
Major features of the economy at independence; growth under different policy regimes—goals, constraints, institutions and policy framework; an assessment of performance—sustainability and regional contrasts; structural change, savings and investment

UNIT II: Sectoral Performances and Concerns (12 hours)
Issuesinagriculture,industryandservices.

UNIT III: Inclusive Growth - trends and patterns, Distributional Issues and Policies Demography, Poverty and Unemployment (9 hours)

UNIT IV: Economic Policies and their Impact (12 hours)
Evolution of macroeconomic framework applied in Indian economy and its impact, fiscal policy; financial and monetary policies; trade and investment policy, five-year plans

COMMON POOL OF DISCIPLINE SPECIFIC ELECTIVE (DSE) COURSES
FOR semester-IV/V/VI

Discipline Specific Elective 6 (DSE-6): Advanced Econometrics

Semester	Course title & Code	Credits	Duration (per week)			Eligibility Criteria	Prerequisite
			Lecture	Tutorial	Practical/ Practice		
V/VII	Advanced Econometrics – ECON036	4	3	1	0	Class 12th with Mathematics	Basic Econometrics (ECON024)

Learning Objectives

The Learning Objectives of this course are as follows:

- A prerequisite for this course is the knowledge of concepts in the Basic Econometrics course.
- It builds on the compulsory Basic Econometrics course and teaches students a broad set of commonly used econometric methods.
- These include estimating models with limited dependent variables, the use of instrumental variables to estimate models with endogenous regressors, as also estimation methods for time series and panel data sets.

Learning outcomes

The Learning Outcomes of this course are as follows:
Students will learn the theoretical and practical basis for techniques widely used in empirical research and consider their application in a wide range of estimation problems.

Syllabus

UNIT I: Stages in empirical econometric research (3 hours)

UNIT II: The linear regression model: The matrix approach, Review of model specification, estimation and testing (6 hours)

UNIT III: Limited dependent variables: Logit and Probit models for binary responses, Tobit models for truncated data. (9 hours)

UNIT IV: Selected Topics: Instrumental variable estimation, Simultaneous equation models, Experiments and Quasi-Experiments. (9 hours)

UNIT V: Dynamic econometric models: distributed lag models, autoregressive models; Panel data models and estimation techniques (9 hours)

UNIT VI: Introduction to econometric software (R/GRETL/EViews/Stata: ANY ONE); publicly available data sets and software will be used to estimate models and apply the techniques learnt. (9 hours)

Recommended readings

- Wooldridge, J. (2014). Introduction to econometrics: A modern approach, 5th ed. Cengage Learning.
- Asteriou, D and Hall, Stephen G, Applied Econometrics, 4th Edition, 2021, Pal- grave Macmillan.
- James Stock and Mark Watson, Introduction to Econometrics, 4th Edition, 2019, Pearson.
- Gujarati, D., Porter, D. (2012). Basic econometrics, 5th ed. McGraw-Hill.
- Gujarati, D. (2014). Econometrics by Final Examinationple, 2nd ed. Palgrave Macmillan.
- G.S. Maddala and Kajal Lahiri, Introduction to Econometrics, 4th Edition, 2012, Wiley.
- Badi H. Baltagi, Econometrics, 5th Edition, 2011, Springer.
- J. Johnston and J. DiNardo (2001), Econometric Methods, Fourth Edition, Irwin Mcgraw Hill

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Discipline Specific Elective 8 (DSE-8): Economics of Health

Semester	Course title & Code	Credits	Duration (per week)			Eligibility Criteria	Prerequisite
			Lecture	Tutorial	Practical/ Practice		
V/VII	Economics of Health– ECON038	4	3	1	0	Class 12th Pass	Introductory/Principles of Microeconomics

Learning Objectives

The Learning Objectives of this course are as follows:

- Health is important not only for human well-being but also for economic growth. This course provides a framework to understand the need for the study of health economics and the relationship of health with the GDP of a nation.
- The course also looks at the determinants of health, the demand for health and the need for government intervention in provision of health care. Economic evaluation / health technology assessment is also covered in the course.

Learning outcomes

The Learning Outcomes of this course are as follows:

- The students will learn the economic dimensions of health, determinants of health and microeconomic tools for the study of health care and expenditure.
- The course will enable the students to apply the theory to understand the various policies and market mechanisms in the field of health care. They will also be equipped with the fundamental techniques of economic evaluation of health interventions.

Syllabus

UNIT I: Health Economics (12 hours)
Significance and linkages with the economy:
The need for health economics as a discipline of study, importance of health in the development of an economy and its relationship with macroeconomic performance

UNIT II: Theoretical foundations of Health Economics (12 hours)
Demand for health and health care services, determinants of health, market failure and rationale for public intervention; and health insurance

UNIT III: Economic Evaluation of Health Sector (12 hours)
Cost-effective Analysis, cost-benefit analysis, cost-utility analysis

UNIT IV: Health Systems (9 hours)
An overview of international health systems and Indian experiences, and healthcare financing

Recommended readings

- Phelps, C. E. (2017). Health economics. Routledge
- Jay Bhattacharya Timothy Hyde Peter Tu (2014), Health Economics, Palgrave Macmillan
- William, Jack. (1999) Principles of Health Economics for Developing Countries, World Bank

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Discipline Specific Elective 9 (DSE-9): Environmental Economics

Semester	Course title & Code	Credits	Duration (per week)			Eligibility Criteria	Prerequisite
			Lecture	Tutorial	Practical/ Practice		
V/VII	Environmental Economics– ECON039	4	3	1	0	Class 12th Pass	Introductory/Principles of Microeconomics

Learning Objectives

The Learning Objectives of this course are as follows:

- This course provides basic knowledge of environmental economics, its relationship with microeconomics and welfare economics, to present and explains the significance and application in the present environmental challenges.
- It aims to describe and comprehend various environmental policies by deploying various policy instruments and to understand and measure the various market and non-market benefits of environmental policies.
- The course addresses the problems related to climate change, transboundary environmental problems, and challenges related to trade and the environment also.

Learning outcomes

The Learning Outcomes of this course are as follows:
The students will learn the trade-offs of economy and environment, and related challenges. They will comprehend the role of state and institutions to minimise the trade-offs.

Syllabus

UNIT I: Introduction to Environment Economics (9 hours)
What is environmental economics? review of microeconomics and welfare eco- nomics; Overview of environmental problems in India

UNIT II: Design and Implementation of Environmental Policy (12 hours)
Overview; Pigouvian taxes and effluent fees; tradable permits; choice between taxes and quotas under uncertainty; implementation of environmental policy.

UNIT III: Measuring the Benefits of Environmental Improvements (12 hours)
Non-market values and measurement methods; risk assessment and perception.

UNIT IV: International Environmental Problems (12 hours)
Transboundary environmental problems; economics of climate change; trade and environment.

Recommended readings

Discipline Specific Elective 10 (DSE-10): Gender and Development

Semester	Course title & Code	Credits	Duration (per week)			Eligibility Criteria	Prerequisite
			Lecture	Tutorial	Practical/ Practice		
V/VII	Gender and Development– ECON040	4	3	1	0	Class 12th Pass	NIL

Learning Objectives

The Learning Objectives of this course are as follows:

- This course aims to deepen students' understanding on the main theoretical approaches used in gender analysis of development issues, and understanding of the differential impacts of development interventions on women and men.
- The course aims to enable students to become familiar with the gender theories, use of these theories to Final Examination in detail issues of production (formal and informal work), reproduction (health, child survival, and fertility), the family/household nexus (where production and reproduction meet), and gender biases and inequality in terms of health, education, labour and inheritance.

Learning outcomes

The Learning Outcomes of this course are as follows:
The course aims at making students to be aware about the issues and concepts of gender and development, importance of mainstreaming gender, gender and work relations and gender bias and inequality.

Syllabus

UNIT I: Conceptualising and theorizing gender and development (12 hours)
Concepts in gender and development studies: Distinction between gender and sex, patriarchy and matriarchy; women in development (WID) and women and development (WAD)

UNIT II: Mainstreaming gender (12 hours)
Institutionalization of gender in growth and development, gender and bureaucracy, intra-household bargaining, changing gender relations and gender budgeting.

UNIT III: Work and Gender Relations (Inside/Outside the House) (12 hours)
Gender dynamics within a household, bargaining models, balance of productive and reproductive roles of women, agency, inheritance, unpaid work, marriage, and bride price.

UNIT IV: Gender and Inequality (9 hours)
Gender bias and gender inequality in terms of opportunities available: health and education, occupational segregation and gender wage gap.

Recommended readings

Discipline Specific Elective 11 (DSE-11): Law and Economics

Semester	Course title & Code	Credits	Duration (per week)			Eligibility Criteria	Prerequisite
			Lecture	Tutorial	Practical/ Practice		
V/VII	Law and Economics – ECON041	4	3	1	0	Class 12th Pass	Intermediate Microeconomics II: Market, Government and Welfare - ECON010

Learning Objectives

The Learning Objectives of this course are as follows:

- Law and Economics is an interdisciplinary course, devoted to understanding laws and legal institutions using the tools of economic theory.
- This is essentially an economic analysis of the laws.
- Topics include an introduction to legal institutions and legal analysis, application of economic concepts to the law of property, contracts, torts and criminal law and anti-trust law.

Learning outcomes

The Learning Outcomes of this course are as follows:
This course is designed to gain familiarity with basic facts and application of economic principles to analyse a wide range of legal issues, and better understanding the economic consequences of laws and regulations.

Syllabus

UNIT I: Concepts of Law and uses of foundations of Economics (6 hours)
Tools for Law and Economics: Efficiency criteria in Welfare Economics; Coase theorem; Prisoners' Dilemma

UNIT II: Economics of Tort (Accident) Law/ Liability Rules (6 hours)
Liability for accidents and harms; product liability; efficiency of liability rules; efficiency-compensation trade-off.

UNIT III: Economics of Property Law (6 hours)
Property rights and their role in resource allocation; Coase theorem; Legal remedies for breach of property rights and their economic effects, Eminent Domain (Market and non-market mechanism for land transfer)

UNIT IV: Intellectual Property Rights (IPRs) (6 hours)
Patents, Copyright and Trademarks. Cost and benefits of private IPRs; Individual rights vs common good

UNIT V: Economics of Contract Law (6 hours)
Legal contract; Role of Contracts for functioning of markets; Incomplete contracts; Efficient contracts; Damages measures and their efficiency properties.

UNIT VI: Economics of Criminal Law (6 hours)
Economics of Crime and Law Enforcement; Crime Vs Tort; Repeat Offenders; Death Penalty

UNIT VII: Anti-trust laws, Competition Policy (3 hours)

UNIT VIII: Legal Process (6 hours)
Litigation – its causes and consequences; Benefits of legal certainty

Recommended readings

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Discipline Specific Elective 12 (DSE-12): Open Economy

Semester	Course title & Code	Credits	Duration (per week)			Eligibility Criteria	Prerequisite
			Lecture	Tutorial	Practical/ Practice		
V/VII	Open Economy Macroeconomics – ECON042	4	3	1	0	Class 12th Pass	Intermediate Macroeconomics II (ECON011)

Learning Objectives

The Learning Objectives of this course are as follows:

- The course is designed with the objective of introducing the students to the standard macroeconomic issues in an open economy framework using the Mundell-Fleming model and the exchange rate overshooting model.
- It further exposes them to the models of banking and currency crises which try to make sense of the risks and vulnerabilities in an interdependent economy.
- The course would give an exposure to contemporary concerns in the global economy and the challenges it poses to policy making.

Learning outcomes

The Learning Outcomes of this course are as follows:

- The student would get a good exposure towards the process of macroeconomic policy- making in an open economy and the challenges involved.
- The course would facilitate learning the art of building macro-models in an open economy context. It would also enable the student to relate it to the contemporary issues.
- The student would learn to appreciate contemporary issues by relating the real world data to the theory in this regard.

Syllabus

UNIT I: Introduction to Open Economy Macroeconomics (10 hours)
Intertemporal long run budget constraint, how much can a country borrow, external wealth, external assets and liabilities, net international investment position, financial flows and valuation effects, Feldstein Horioka Puzzle, Harberger-Laursen- Metzler effect, Foreign Exchange Market. An overview of the spot and forward markets, swaps, options and derivatives. Uncovered and Covered Interest Parity. Covered Interest Arbitrage.

UNIT II: Macro-modelling of the Open Economy (20 hours)
Mundell-Fleming model (with Flexible Prices). Dornbusch's exchange rate overshooting model with stability conditions. Monetary Approach to Balance of Payments. PPP and long run monetary approach, Balassa –Samuleson effect and non-tradables, Fisher effect. Portfolio and macroeconomic equilibrium in an open economy. 3 equation model for the open economy. Currency crises (first, second and third generation models). Optimum currency areas and monetary union.

UNIT III: International Monetary System and Policy Co-ordination (15 hours)
Classic specie price flow mechanism and the Gold Standard. Fixed exchange rate system under Bretton Woods. Triffin dilemma and the collapse of the Bretton Woods, SDRs, international consistency condition. Financial trilemma. International liquidity and demand for international reserves. Government policies to- wards capital market, exchange and capital controls. Central bank intervention, sterilization.

Prospects of Macroeconomic policy co-ordination in an open economy, Policy reaction function, Hamada diagram

Discipline Specific Elective 13 (DSE-13): Modern Political Economy

Semester	Course title & Code	Credits	Duration (per week)			Eligibility Criteria	Prerequisite
			Lecture	Tutorial	Practical/ Practice		
V/VII	Modern Political Economy – ECON043	4	3	1	0	Class 12th Pass	NIL

Learning Objectives

The Learning Objectives of this course are as follows:

- This course will use the methodology and tools of economics to study the implications of various political institutions and processes that determine the quantum, scope, and nature of the state's intervention in the economy.
- Political actors are assumed to be goal-oriented and political outcomes are explained by the interaction between these actors within their institutional environment.
- This course will complement the Public Economics course as its focus will be on the positive implications of the state's interventions rather than the normative aspects.

Learning outcomes

The Learning Outcomes of this course are as follows:

- The students will learn to apply the economic paradigm to the study of political action and policy formation, and how economic and political forces may shape the incentives and constraints of policymakers and other political actors.
- They will understand the role of political institutions in shaping the actions of the state and the resulting outcomes.

Syllabus

UNIT I: Collective choice and redistribution (12 hours)
Insurance motive; public good motive; fairness motive; allocative efficiency; determination of redistribution, Majority voting and direct democracy; unanimity rule; Con- direct cycles; one dimensional median voter theorem; multidimensional issues and median voter theorem; agenda manipulation; simple variations of majority voting such as the Borda rule and approval voting

UNIT II: Representative democracy: two-party competition; and multi-party competition (12 hours)
Downsian model; deterministic voting; cycles and median voter theorems; competition in a constrained policy space; uncovered set and valence values; model with probabilistic voting model and an application to taxation, proportionality, and electoral rules; goals of multiple parties; coalition formation with one-dimensional issue space; coalition formation with multi-dimensional issue space; strategic voting.

UNIT III: Rent-seeking; Tariffs and Political economy of taxation (12 hours)
Basic model of rent-seeking and variations; rent-seeking via regulation; effects of tariffs, quotas, and voluntary export restraints; corruption, Distortions, and Diamond-Mirrlees production efficiency theorem.

UNIT IV: Dictatorship; origins and Lobbying (9 hours)
Model of public goods provisioning; Win- Trobe's model, Interest groups, lobbying, and collective action; Olsonian model of collective action; Downsian models

Discipline Specific Elective 14 (DSE-14): Public Economics

Semester	Course title & Code	Credits	Duration (per week)			Eligibility Criteria	Prerequisite
			Lecture	Tutorial	Practical/ Practice		
V/VII	Public Economics – ECON045	4	3	1	0	Class 12th Pass	Intermediate Microeconomics II (ECON010)

Learning Objectives

The Learning Objectives of this course are as follows:

- Public economics is the study of government policy from the points of view of economic efficiency and equity.
- The course deals with the nature of government intervention and its implications for allocation, distribution and stabilization problems.
- Inherently, this study involves a formal analysis of government taxation and expenditures.
- The subject encompasses a host of topics including public goods, market failures and externalities.
- The course is divided into two sections, one dealing with the theory of public economics and the other with the Indian public finances.

Learning outcomes

The Learning Outcomes of this course are as follows:

- The course aims to introduce students to the main theoretical and empirical concepts in public economics, equip students with a thorough analytical grasp of implications of government intervention for allocation, distribution and stabilization, and familiarise students with the main issues in government revenues and expenditure.
- At the end, the students should be able to demonstrate their understanding of the public economics.

Syllabus

UNIT I: Public Economic Theory (30 hours)

- Role of Public Sector - Justification of the Public Sector; Public Sector Growth; Excessive Government
- Political Economy of Public Sector - Public Mechanisms for allocation; Market and Non-Market Mechanism; Theory of Rent Seeking
- Taxation - Economic Effects of Tax; Tax incidence; Dead Weight Loss and Distortion; Efficiency and Equity Considerations; Optimal taxation; Commodity tax; Ramsey rule.

UNIT II: Indian Public Finances (15 hours)

- Tax System – Indian Tax system; Structure and Reforms. Budget, Deficits and Public debt

Recommended readings

Discipline Specific Elective 15 (DSE-15): Research Methodology for Economics

Semester	Course title & Code	Credits	Duration (per week)			Eligibility Criteria	Prerequisite
			Lecture	Tutorial	Practical/ Practice		
IV/VI	Research Methodology for Economics – ECON044	4	3	1	0	Class 12th Pass	NIL

Learning Objectives

The Learning Objectives of this course are as follows:

- The course offers the conceptual and methodological issues in details that go into successful conduction of a scientific research.
- That includes the theoretical and methodological approaches in measurement, proposing and testing hypotheses, scientific communication and the ethical issues in the practice of science.

Learning outcomes

The Learning Outcomes of this course are as follows:

- The students will lean framing research problems, identifying gaps in literature and scientific approaches to conduct both theoretical and empirical research.
- This course will build the capacity to conduct research in the fourth year at the undergraduate level.

Syllabus

UNIT I: Starting a Research Paper (9 hours)
Forming an economic hypotheses; Components of a Research Paper

UNIT II: Sources of Data and Literature (9 hours)
Familiarizing students with a wealth of Secondary Datasets that are available;
Exposing students to the basics of compiling data from Websites; outlets and search engines to study the literature

UNIT III: Creating New Data (9 hours)
Surveys and Experiments

UNIT IV: Analyzing Data (9 hours)
Data Discovery; Causal Inference; Big Data

UNIT V: Writing a Research Paper (9 hours)
Style of writing a Research Paper and Communicating the Results

Discipline Specific Elective 16 (DSE-16): Financial Economics

Semester	Course title & Code	Credits	Duration (per week)			Eligibility Criteria	Prerequisite
			Lecture	Tutorial	Practical / Practice		
IV/VI/VIII	Financial Economics – ECON046	4	3	0	1	Class XII with Mathematics	Introductory Mathematical Methods for Economics/ Basic Statistics

Learning Objectives

- To equip students with essentials tools for understanding Finance at undergraduate level.
- To enable students to use modelling techniques to solve Financial Economics concepts.
- To develop necessary skill and knowledge for financial problem solving

Learning outcomes

- After studying this course, students would be able to understand the basic concepts of finance and financial variables.
- They would develop an understanding of basics of finance including interest rates, annuity, and cash flow.
- The analytical approach adopted in this paper will strengthen and channelise their skills for more advance approaches in finance.

SYLLABUS OF DSE: FINANCIAL ECONOMICS

Unit 1. Deterministic cash-flow streams (12 Hours)
Basic theory of interest; discounting and present value; internal rate of return; evaluation criteria; fixed-income securities; bond prices and yields; interest rate sensitivity and duration; immunisation; the term structure of interest rates; yield curves; spot rates and forward rates.
Berk, DeMarzo
Chapter 4: Time Value of Money (all sections)
Chapter 6: Valuing Bonds (all sections)
Chapter 7: Investment Decision Rules (all sections)
Brealey, Richard A., Myers, Stewart, C., Allen, Franklin:
Chapter 5: Net Present Value and Other Investment Criteria (Section 5.3, pages 107-115)
Bodie, Kane, Marcus
Chapter 14: Bond Prices and Yields (Section 14.1-14.3, Pages 445-460,
Chapter 15: Term Structure of Interest Rate (Section 15.1-15.5, Pages 487-504)
Chapter 16: Managing Bond Portfolios (Section 16.1, 16.3, Pages 515 – 525, 535 – 543)

Unit 2. Single-period random cash flows (12 Hours)
Random asset returns; portfolios of assets; portfolio mean and variance; feasible combinations of mean and variance; mean – variance portfolio analysis; the Markowitz model; risk-free assets
Bodie, Kane, Marcus
Chapter 7: Optimal Risky Portfolio (Section 7.1 – 7.3, 7.4 Pages 205-218 till Example 7.3, 220 – 228)

Berk, DeMarzo
Chapter 11: Optimal Portfolio Choice and CAPM: (Sections 11.1 – 11.6, pages 351 – 378)

Unit 3. Capital Asset Pricing Model (CAPM) (12 Hours)
The capital market line; the capital asset pricing model; the beta of an asset and of a portfolio; security market line; use of the CAPM model in investment analysis and as a pricing formula. Arbitrage pricing theory(APT) and multi-factor model of risk and return.
Bodie, Kane, Marcus
Chapter 9: Capital Asset Pricing Model (Section 9.1, Pages 291-300)
Chapter 10: Arbitrage pricing theory(APT) and multi-factor model of risk and return.
Berk, DeMarzo
Chapter 11: Optimal Portfolio Choice and CAPM: (Sections 11.7 – 11.8 , pages 379 - 399)
Brealey, Richard A., Myers, Stewart, C., Allen, Franklin
Chapter 8: Portfolio Theory and the Capital Asset Pricing Model (Section 8.4, pages 199-203)
David G. Luenberger:
Chapter 7: The Capital Asset Pricing Model (Section 7.3 & 7.7, Pages 177 – 179, 187 - 190)

Unit 4. Market Efficiency & Behavioural Finance(09 Hours)
Bodie, Kane, Marcus
Chapter 11: Efficient Market Hypothesis (Sections 11.1-11.2, 11.4, Pages 349 – 357, 362-63)
Chapter 12: Behavioural Finance & Technical Analysis
Brealey, Richard A., Myers, Stewart, C., Allen, Franklin
Chapter 13: Efficient Markets &Behavioral Finance (Sections 13.2, 13.5, Pages 314 – 318, 329-333)

Practical Component (30Hours)

1. Present Value and Net Present Value
2. Internal Rate of Return and Loan Tables \
3. Multiple Internal Rates of Return
4. Future Values and Applications
5. Continuous Compounding
6. Analyzing the Cash Flows by NPV or IRR
7. Portfolio Models
8. Calculating Efficient Portfolios When There Are No Short-Sale Restrictions

Reference for Practical:
Simon Benninga, Financial Modelling, MIT Press, Third Edition, 2008:
Chapter 1: Basic Financial Calculations (Sections: 1.2, 1.3, 1.4, 1.6, 1.8)
Chapter 7: The Financial Analysis of Leveraged Leases(Sections: 7.1, 7.2, 7.3)
Chapter 8: Portfolio Models
Chapter 9: Calculating Efficient Portfolios When There Are No Short-Sale Restrictions

Discipline Specific Elective 17 (DSE-17): Money and Financial Markets

Semester	Course title & Code	Credits	Duration (per week)			Eligibility Criteria	Prerequisite
			Lecture	Tutorial	Practical/ Practice		
IV/VI/VIII	Money and Financial Markets – ECON047	4	3	1	0	Class 12th Pass	Introductory Macroeconomics

Learning Objectives

The Learning Objectives of this course are as follows:

- This course exposes the theory and functioning of the monetary and financial sectors of the economy. It highlights the organization, structure, and role of financial markets and institutions.
- It also discusses interest rates, monetary management, and instruments of monetary control.
- Financial and banking sector reforms and monetary policy with special reference to India are also covered.

Learning outcomes

The Learning Outcomes of this course are as follows:
This allows students to understand current monetary policies and financial market out- comes. It also enables them to critically evaluate policies and role of the central bank.

Syllabus

UNIT I: Money (9 hours)
Understanding concept and functions of money, Measurement of money supply, Analytics and methodology of computation of money supply, Theories of money supply determination

UNIT II: Financial markets: an Introduction (12 hours)
Role of financial markets and institutions, Money and Capital markets: Pricing and other analytical issues, Financial derivatives: Futures, Options and Swaps, Financial markets in India: Organization, Structure and Reforms in India

UNIT III: Interest Rates (12 hours)
Determination of interest rates, Sources of interest rates differentials and risk, Theories of term structure of interest rates, Interest rates in India

UNIT IV: Central Banking and Monetary policy (12 hours)
Central Bank: Functions and Balance Sheet, Monetary Policy: Targets and instruments, Monetary management in an open economy, Monetary Policy Framework in India: Evolution and current scenario, critical evaluation, Emerging issues in Monetary policy- Changing payment mechanism, Cryptocurrency and others

Recommended readings

- Various publications of RBI and other agencies / institutions

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Discipline Specific Elective 19 (DSE-19): Behavioural Economics

Semester	Course title & Code	Credits	Duration (per week)			Eligibility Criteria	Prerequisite
			Lecture	Tutorial	Practical/ Practice		
VI/VIII	Behavioural Economics – ECON049	4	3	1	0	Class 12th Pass	Game Theory and Strategic Interactions (ECON013)

Learning Objectives

The Learning Objectives of this course are as follows:

- This course introduces departure in behaviour predicted by standard economic theories to provide insights into the new and evolving area of Behavioural Economics.
- First, it outlines the common ideas and theories of Behavioural Economics using the basic mathematical techniques and standard concepts of microeconomics. The empirical basis for the theories of Behavioural Economics is discussed briefly with particular emphasis on the role and nature of experiments.
- The last segment of the course discusses the policy implications of these experiments and policy lessons that have been implemented as a result of empirical support to the theories of behavioural economics.
- The course explains the origin of Behavioural Economics in terms of anomalies in be- haviour that deviate from predicted rational behaviour. It introduces the common ideas and theories of Behavioural Economics. It further familiarise the student with the different types of experiments used for empirical studies.
- The students would demonstrate the policy lessons derived from theories of Behavioural Economics.

Learning outcomes

The Learning Outcomes of this course are as follows:

- This course equips students to contrast the outcomes of standard classical microeconomic theories with real outcomes, to apply the theories that explain anomalies/deviations from rational predicted behaviour.
- It communicate the basic theories of behavioural economics cogently and critically Final Examination in the findings from experiments in terms of their applicability to public policy settings.

Syllabus

UNIT I: Biases/Anomalies and Overview (15 hours)
Some Common Anomalies from Benchmark Theories; Overview of Behavioural Economics

UNIT II: Common Ideas and Theories (15 hours)
Heuristic Thinking; Risk Preferences and Reference-Dependent Preferences; Time Preferences; Social Preferences; Probabilistic Reasoning and Beliefs; Limited Attention; Limited Rationality

UNIT III: Empirical Applications and Policy Suggestions (15 hours)

Methods: Natural experiments, Lab experiments, Field experiments, Survey; Empirical Applications and Policy Suggestions

Recommended readings

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Discipline Specific Elective 20 (DSE-20): Comparative Economic Development

Semester	Course title & Code	Credits	Duration (per week)			Eligibility Criteria	Prerequisite
			Lecture	Tutorial	Practical/ Practice		
VI/VIII	Comparative Economic Development – ECON050	4	3	1	0	Class 12th Pass	NIL

Learning Objectives

The Learning Objectives of this course are as follows:

- This course investigates selected issues in industrialization and development experiences and debates in comparative historical perspective.
- The course focuses on a set of countries (Britain, Japan and East Asian economies) which followed diverse trajectories of growth to achieve their industrial transition.
- It compares the outcomes of these diverse trajectories on sectoral change, intersectoral relations, labour processes and industrial relations.
- It also compares the role of the state in facilitating the respective trajectories.

Learning outcomes

The Learning Outcomes of this course are as follows:
The students will be able to learn critical factors affected economic development in a historical perspective and assimilate materials from diverse narratives. It will help them to think in an interdisciplinary manner.

Syllabus

UNIT I: Introduction (6 hours)
Theoretical issues and comparative historical background.

UNIT II: Agricultural transformation and its role in industrialization (6 hours)
Agrarian and land relations, production and productivity, agrarian surplus in industrial development. Case studies: Britain, Japan and East Asia.

UNIT III: The industrialization process of Britain, Japan and East Asia (6 hours)

UNIT IV: East Asian Development (9 hours)
A Theoretical Debates (Is it a miracle or not? Is it market or the state? Flying Geese Model? Can we have an "East Asian Model"? Lessons for the other countries.)

UNIT V: The factory system and making of the industrial working class. Case studies: Britain, Japan and EastAsia (6 hours)

UNIT VI: The role of the state in industrial and developmental transitions. Case studies: Britain, Japan and East Asia. (6 hours)

UNIT VII: Export Oriented Development in East Asian Countries? Trade and Industry. (Export-Oriented Industrialization (EOI) vs Import-substitution Industrialization (ISI) - International Context and Domestic Requirements. Importance of trade for underdevelopment vs development.) (6 hours)

Discipline Specific Elective 21 (DSE-21): Corporate Finance and Governance

Semester	Course title & Code	Credits	Duration (per week)			Eligibility Criteria	Prerequisite
			Lecture	Tutorial	Practical/ Practice		
VI/VIII	Corporate Finance and Governance – ECON051	4	3	1	0	Class 12th Pass	Game Theory and Strategic Interactions (ECON013)

Learning Objectives

The Learning Objectives of this course are as follows:

- The field of corporate finance has undergone a tremendous mutation in the past three decades, specially after the global financial crisis. A substantial and important body of empirical work has provided a clearer picture of patterns of corporate financing and governance, and of their impact for firm behavior and macroeconomic activity.
- This course aims to introduce the conceptual foundation of those issues. It will introduce firm'sbehavour of finance choice in the presence of tax distortions, transaction costs, informational asymmetries etc.

Learning outcomes

The Learning outcomes of this course are as follows:

- The students will understand the variety of institutions running corporate business in present day world and will be familiar with the strategies to govern them effectively.

Syllabus

UNIT I: An economic overview of corporate institutions (9 hours)

UNIT II: Corporate Governance (9 hours)
Separation of ownership and control, managerial incentives, investor's activism, takeover, leverage buyout

UNIT III: Corporate Financing and Agency Costs Outside Financing Capacity (6 hours)

UNIT IV: Determination of borrowingcapacity (6 hours)

UNIT V: Corporate financing under asymmetric information (9 hours)

UNIT VI: Exit and voice: Passive and active monitoring (6 hours)

Recommended readings

- Tirole, J. (2010). The theory of corporate finance. Princeton universitypress.
- Vernimmen, P., Quiry, P., & Le Fur, Y. (2022). Corporate finance: theory and practice. John Wiley &Sons.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Discipline Specific Elective 22 (DSE-22): Economics of Education

Semester	Course title & Code	Credits	Duration (per week)			Eligibility Criteria	Prerequisite
			Lecture	Tutorial	Practical/ Practice		
VI/VIII	Economics of Education – ECON052	4	3	1	0	Class 12th Pass	Introductory /Principles of Microeconomics

Learning Objectives

The Learning Objectives of this course are as follows:

- This course discusses the economic aspects of current issues in education, using both economic theory and econometric tools.
- Topics include discussion of basic human capital theory, production of education, costing and finance of education, the growing impact of education on earnings and earnings inequality, the labour market for teachers, implications of the introduction of technology (computers) on education, the effectiveness of mid-career training for adult workers, the roles of school choice, and educational outcomes and inequality in demand for education and educational outcomes.

Learning outcomes

The Learning outcomes of this course are as follows:

- This course will develop skills amongst the students to conduct research and analysis in the field of economics of education.

Syllabus

UNIT I: The Role of Education in Human Development (12 hours)
Macro issues in education, human capital theory, returns to education, signalling theory, education and labour market outcomes, costs and benefits of education, education production analysis and early childhood education.

UNIT II: Analysis of School Education (12 hours)
Challenges, educational interventions and attainments, financing, accountability and standards

UNIT III: Higher Education and Training (9 hours)
Issues of higher education in India, role of internship and apprenticeship in improving labour market outcomes

UNIT IV: Education and Inequality (12 hours)
Inequality in uptake and outcomes, and the role of affirmative action.

Discipline Specific Elective 23 (DSE-23): Forecasting Methods for Economics

Semester	Course title & Code	Credits	Duration (per week)			Eligibility Criteria	Prerequisite
			Lecture	Tutorial	Practical/ Practice		
VI/VIII	Forecasting Methods for Economics – ECON053	4	3	1	0	Class 12th Pass	Basic Econometrics (ECON024)

Learning Objectives

The Learning Objectives of this course are as follows:

- This course builds on the compulsory Basic Econometrics course and teaches students a broad set of commonly used econometric methods for forecasting econometric variables.
- These include both quantitative and qualitative Forecasting Techniques including VAR, VECM, ARIMA etc.

Learning outcomes

The Learning outcomes of this course are as follows:

- Students will learn the theoretical and practical basis for forecasting techniques widely used in empirical research and consider their application in a wide range of problems.

Syllabus

UNIT I: Basics of Forecasting (6 hours)
Tools for forecasting, forecasting methods and applications, forecast horizon

UNIT II: Quantitative Forecasting Techniques (9 hours)
Definition,TimeSeries-Naïve,Average, Simple Moving Average, Weighted Moving Average, Exponential Smoothing; Fore- cast Errors Accuracy, Trend Projection, Seasonal Indexes, Holt's, winter's Model, Linear Regression. Smoothing Techniques, Exponential smoothing methods, Decomposition methods.

UNIT III: Box-Jenkins Methodology: Unit roots; Autoregressive models, moving average models, mixed autoregressive and moving average models; Identification, estimation, diagnostic checking and Forecasting (9 hours)

UNIT IV: Forecasting with Multiple Regression Models (6 hours)

UNIT V: Cointegration, Granger Causality, Error Correction (6 hours)

UNIT VI: Qualitative Forecasting Techniques (9 hours)
Definition, Delphi, Precautions in administering Delphi, Sales force composite, Consumer Panel Survey, Nominal group, and their Drawbacks.

Discipline Specific Elective 24 (DSE-24): History of Economic Thought

Semester	Course title & Code	Credits	Duration (per week)			Eligibility Criteria	Prerequisite
			Lecture	Tutorial	Practical/ Practice		
VI/VIII	History of Economic Thought – ECON054	4	3	1	0	Class 12th Pass	NIL

Learning Objectives

The Learning Objectives of this course are as follows:

- This course intends to acquaint students to an evolution of the history of economic thought from its initial thinkers to ideas of institutionalism and the reinvention of liberalism.
- The course will discuss selected authors on economic theory to understand them within the framework of intellectual debate and change.
- The idea is to expose students to the milestones in economic theory and provide a more holistic understanding of the evolution of contemporary economics.
- The course attempts to fulfil the need to integrate thehistoryofeconomicswiththeteachingoftheprinciplesofeconomics.

Learning outcomes

The Learning outcomes of this course are as follows:

- The students will develop an understanding of the historical antecedents and methodological premises of the theories in economics.
- They will also have a grounding in the set of ideas that inform academic debates and the making of policies related to the economyinthecontemporaryworld.

Syllabus

UNIT I: Introduction (9 hours)
Why study economic thought; history of economic thought or his- tories of economic thought.

UNIT II: The surplus approach and the rise of political economy (9 hours)
Value, Price, Money, Income Distribution, Macroeconomic Setting, Growth and Trade: Reading Adam Smith, David Ricardo and Karl Marx.

UNIT III: Marginalism and Keynesianism (9 hours)
Utility, technology and price : Jevons, Menger, Walras and Marshall. Keynes, Kalecki and the principle of effective demand.

UNIT IV: Institutionalism and Evolutionary Economics (9 hours)
Industrial and Pecuniary employments in Thorstein Veblen; labour as an overhead cost: competition and Knowledge – perfect, imperfect and Rivalrous; Schumpeter: creative destruction, innovation and business cycle.

UNIT V: Neoliberalism and Post-Keynesianism Theory, policy, critique and prospects. Milton Friedman (9

hours)

Discipline Specific Elective 25 (DSE-25): Industrial Organisation

Semester	Course title & Code	Credits	Duration (per week)			Eligibility Criteria	Prerequisite
			Lecture	Tutorial	Practical/ Practice		
VI/VIII	Industrial Organisation – ECON055	4	3	1	0	Class 12th Pass	Game Theory and Strategic Interactions (ECON013)

Learning Objectives

The Learning Objectives of this course are as follows:

- The course assumes knowledge of intermediate microeconomics and game theoretical tools. The students should also be comfortable with applications of calculus.
- This course studies imperfectly competitive market and primarily focuses on firms' strategies in oligopolistic market environments.
- This is the foundation course which aims to prepare the students for further study and research.
- Along with classical models of industrial organisation, the course also covers some contemporary topics like mergers and acquisitions, patents, advertising and networks.
- The learning from this course would be useful to understand and analyse different anti-competitive practices of the firms and theneedfordesigningbettercompetitionpolicyforregulatingthemarket.

Learning outcomes

The Learning outcomes of this course are as follows:

- The students will be able to learn classical models in imperfectly competitive market, understand why regulation of firms is necessary.
- They willbeabletorelatemodernissuesofindustrialorganisation

Syllabus

UNIT I: Imperfectly Competitive Market Product Differentiation, Bertrand, Cournot, Hotelling, Salop, Monopolistic Competition (6 hours)

UNIT II: Dynamic Models of Oligopoly, Cartels, Collusion and Entry Deterrence, Anti-trust (9 hours)

UNIT III: VerticalRelationandVerticalRestraint;DoubleMarginalization,SuccessiveOligopoly, Raising Rival's Cost, Resale Price Maintenance (RPM), Exclusive Dealing (6 hours)

UNIT IV: Mergers and Acquisitions, Horizontal and Vertical Integration (6 hours)

UNIT V: Technology, Innovation, R&D; Market structure and innovation, R&D, Patents, Technology Transfer (6 hours)

UNIT VI: Networks; network Effects, Markets for a Single Network Good and Several Net- workgoods (6 hours)

UNIT VII: Advertisement; Social Costs and Benefits of Advertising, Market Structure, Advertising as Barrier to Entry, Product Differentiation and Competition (6 hours)

Recommended readings

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Discipline Specific Elective 26 (DSE-26): Introduction to Causal Inference

Semester	Course title & Code	Credits	Duration (per week)			Eligibility Criteria	Prerequisite
			Lecture	Tutorial	Practical/ Practice		
VI/VIII	Introduction toCausal Inference–ECON056	4	3	2	0	Class 12th Pass	Basic Econometrics (ECON024)

Learning Objectives

The Learning Objectives of this course are as follows:

- This course intends to provide students with the essential econometric tools required for causal inference analysis.
- The course will give an overview about potential outcomes framework,datadesignandanalysis.

Learning outcomes

The Learning outcomes of this course are as follows:

- The students will be able to understand, design and implement various techniques of causal inference for data analysis as a tool for research.
- The students will be able to do anindependentresearchprojectbasedonthetechniquestheywilllearninthiscourse.

Syllabus

UNIT I: Potential Outcomes Framework (9 hours)
Causal Inference and Potential Outcomes Framework

UNIT II: Research Design (9 hours)
Observational data and experimental data; sample selection

UNIT III: Methods of Analysis (9 hours)
Overview: Ordinary Least Squares (OLS) and Limited Dependent Variables (LDV) Models, Instrumental Variables

UNIT IV: Panel Data (including Difference-in-Difference) (9 hours)
Regression Discontinuity Design (RDD); Introduction to Matching

UNIT V: Hands-on Training (9 hours)
Project work using econometric software (EViews/ R/Stata/EXCEL/SPSS/Julia)

Recommended readings

Discipline Specific Elective 27 (DSE-27): Introduction to Macroeconomic Dynamics

Semester	Course title & Code	Credits	Duration (per week)			Eligibility Criteria	Prerequisite
			Lecture	Tutorial	Practical/ Practice		
VI/VIII	Introduction to Macroeconomic Dynamics – ECON057	4	3	1	0	Class 12th with Mathematics	Advanced Mathematical Methods for Economics (ECON009) And Intermediate Macroeconomics

Learning Objectives

The Learning Objectives of this course are as follows:

- This is a course which introduces the student to the basics of macroeconomic modelling through dynamic optimization.
- This includes Bellman equation, Euler's equation, Hamiltonian techniques and optimal control approaches.

Learning outcomes

The Learning outcomes of this course are as follows:

- The student gets insights about the construction of abstract macroeconomic models.
- This enables appreciation of a good body of macroeconomic literature in different spheres.
- The course would prove to particularly useful for those interested in pursuing macroeconomicsasafieldofresearchandinquiry.

Syllabus

UNIT I: Dynamic Optimization (15 hours)
Difference equations; differential equations; phase plane analysis; dynamic optimization

UNIT II: Infinite Horizon and Overlapping Generations model (15 hours)
Optimal growth, Ramsey Cass Koopmans model; overlapping generations model, Diamond Dybvig Model

UNIT III: Optimal Control Theory (15 hours)

Recommended readings

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Discipline Specific Elective 28 (DSE-28): Labour Economics

Semester	Course title & Code	Credits	Duration (per week)			Eligibility Criteria	Prerequisite
			Lecture	Tutorial	Practical/ Practice		
VI/VIII	Labour Economics– ECON058	4	3	1	0	Class 12th Pass	Introductory /Principles of Microeconomics

Learning Objectives

The Learning Objectives of this course are as follows:

- The curriculum is an introduction to labor economics, with an emphasis on applied microeconomic theory and empirical methods critical to microeconomic analysis, as well as the link between research and public policy.
- This course particularly focuses on some of the core theories on labor economics e.g.labor supply, labor demand, role of human capital, incentives, agency, efficiency wages, wage differential and discrimination. The main objective of this course is to enlighten students with some core topics in labor economics with some of the important empirical methods.

Learning outcomes

The Learning outcomes of this course are as follows:

- The students will be able to understand basic theories of labor markets, issues of un- employment, and forms of employment.
- They will learn to critically analyse labour markets in diverse settings including in the macroeconomic context.
- This course will enable the students to evaluate the government policies on labor market critically.

Syllabus

UNIT I: Labor Supply (Static and Intertemporal) (9 hours)
Measuring the Labor Force, Basic Facts about Labor Supply, The Worker's Preferences, The Budget Constraint, The Hours of Work Decision, To Work or Not to Work? The Labor Supply Curve, Estimates of the Labor Supply Elasticity, Labor Supply of Women, Labor Supply over the Life Cycle, Policy Application: Welfare Programs and Work Incentives, Policy Application: The Earned Income Tax Credit, Policy Application: The Decline in Work Attachment among Older Workers.

UNIT II: Labor Demand (9 hours)
The Production Function, The Employment Decision in the Short Run, The Employment Decision in the Long Run, The Long-Run Demand Curve for Labor, The Elasticity of Substitution, Marshall's Rules of Derived Demand, Factor Demand with Many Inputs, Overview of Labor Market Equilibrium, Adjustment Costs and Labor Demand, Trade and Labor Demand, Policy Application: Affirmative Action and Production Costs, Policy Application: The Employment Effects of Minimum Wages Application: Rosie the Riveter as

an InstrumentalVariable

UNIT III: Human Capital (6 hours)
Education in the Labor Market: Some Stylized Facts, The Schooling Model, Education and Earnings, Estimating the Rate of Return to Schooling, Do Workers Maximize Lifetime Earnings? Schooling as a Signal, Post school Human Capital Investments, On-the-Job Training, On-the-Job Training and the Age-Earnings Profile, Policy Application: School Construction in Indonesia, Policy Application: School Quality and Earnings, Policy Application: Evaluating Government Training Programs

UNIT IV: Incentives, Agency and Efficiency Wages (6 hours)
Moral Hazard, Moral Hazard with Limited Liability, Multitasking, Career Concerns, and Applications, Efficiency Wage Models

UNIT V: Wage Differential and Wage Structure (9 hours)
The Market for Risky Jobs, The Hedonic Wage Function, Compensating Differentials and Job Amenities, The Earning Distribution, Measuring Inequality, The Wage Structure: Basic Facts, Inequality across generations. Policy Application: How much is a life worth? Policy Application: Safety and Health Regulations, Policy Application: Health Insurance and the Labor Market, Policy Application: Why did wage inequalityincrease?

UNIT VI: Discrimination (Race and Gender) (6 hours)
Race and Gender in the Labor Market, The Discrimination Coefficient, Employer Discrimination, Employee Discrimination, Customer Discrimination, Statistical Discrimination, Experimental Evidence on Discrimination, Measuring Discrimination, Discrimination against Other Groups, Policy Application: Determinants of the Black–White Wage Ratio, Policy Application: Determinants of the Fe- male–Male Wage Ratio.

Discipline Specific Elective 29 (DSE-29): Sectoral Issues in Indian Economy

Semester	Course title & Code	Credits	Duration (per week)			Eligibility Criteria	Prerequisite
			Lecture	Tutorial	Practical/ Practice		
VI/VIII	Sectoral Issue in Indian Economy – ECON059	4	3	1	0	Class 12th Pass	NIL

Learning Objectives

The Learning Objectives of this course are as follows:
The course imparts in-depth knowledge on the issues relating to the agricultural and industrial economy of India, with the focus on the evolutionary path undertaken and the resultant concerns. This will cover issues of MSMEs and small farms to in form the problems industrialisation as well asincreasedproductivityofagriculture.

Learning outcomes

The Learning outcomes of this course are as follows:
This course will familiarize students with the problems, issues,currentdebates,andpolicyinterventionsforlong-termsustainability,efficiency,and resilience. The students will be able to understand, comprehend and critically analyse the issues and policies and would be able to form a well-informed and well- articulated opinionoftheirown.

Syllabus

UNIT I: Agricultural Performance since Independence: (6 hours)
Output and productivity growth Agricultural Performance since Independence in the context of land andlabour

UNIT II: The Policy Environment: Food security and nutritional concerns, MSPs, Agricultural price policy, subsidies/cash transfers, The public distribution system; Capital formation (9 hours)

UNIT III: Current Issues in Indian Agriculture (selected topics) (15 hours)
Resource Use Efficiency-Fertiliser, Water, Other inputs; Diversification for future Growth and enhanced farm income; Sustainable agricultural growth—concepts and constraints; Prospects for dryland/organic/zero budget farming; trade and competitiveness;useofnewtechnologyandartificialintelligence;Marketing/infrastructure; Crop insurance/agriculturalfinance

UNIT IV: Industry (15 hours)
Overview of the Industrial Scene in India- Trends in growth and productivity; Competitiveness and changes in Policy Regimes- domestic competitiveness and export; Issues relating to Indian Industry (selected topics); Scale and ownership, MSMEs and large industries, Public and Private Sector, Employment growth, labour and capital (domestic and foreign), formal and informal sectors, Infrastructural bottle- necks, research and development.

Discipline Specific Elective 30 (DSE-30): Topics in Game Theory

Semester	Course title & Code	Credits	Duration (per week)			Eligibility Criteria	Prerequisite
			Lecture	Tutorial	Practical/ Practice		
VI/VIII	Topics in Game Theory – ECON060	4	3	1	0	Class 12th with Mathematics	Game Theory and Strategic Interactions (ECON013)

Learning Objectives

The Learning Objectives of this course are as follows:

- This course deals with extensive form games. Students learn the concepts of subgame- perfect equilibrium, Bayesian and Perfect Bayesian equilibrium in static and dynamic forms.

Learning outcomes

The Learning outcomes of this course are as follows:

- The students will learn how to model multi-person decision making in an interactive setting.
- They will understand how to formulate different real-life situations as games and learn to predict the optimal strategies of players and how the players can exploit strategicsituationsfortheirownbenefit.

Syllabus

UNIT I: Extensive form games with perfect information (9 hours)
Extensive games with perfect information; strategies and outcomes; Nash equilibrium; subgame perfect equilibrium; backward induction in finite games; commitment; bargaining; Stackelberg's model of duopoly; a race; other illustrations

UNIT II: Simultaneous move games (9 hours)
Entry into a monopolized industry; electoral competition with strategic voters; committee decision-making; exit from a declining industry

UNIT III: Bayesian games (9 hours)
Strategies; Bayesian Nash equilibrium; Cournot's duopoly game with imperfect information; providing a public good; auctions; juries; other applications.

UNIT IV: Extensive form games with imperfect information (9 hours)
Strategies; Nash equilibrium; beliefs and sequential equilibrium; perfect Bayesian equilibrium; signaling games; applications.

UNIT V: Repeated Games (9 hours)
Payoffs, strategies, Nash equilibrium and subgame perfect equilibrium of repeated games

Recommended readings

- Martin J. Osborne, *An Introduction to Game Theory*, Oxford University Press, New Delhi,2004.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVE COURSE 31(DSE-31) : FINANCIAL DERIVATIVES

Credit distribution, Eligibility and Pre-requisites of the Course

Semester	Course title & Code	Credits	Duration (per week)			Eligibility Criteria	Prerequisite
			Lecture	Tutorial	Practical / Practice		
VI/VIII	Financial Derivatives ECON077	4	3	1	0	Class XII with Mathematics	Introductory Mathematical Methods for Economics ECON002

Learning Objectives

- To equip students with essentials tools for understanding Finance at undergraduate level.
- To provide analytical knowledge to understand complex financial Derivatives.
- To provide advance skills for pricing and formulating trading strategies using Derivative products

Learning outcomes

- After studying this course, students would be able to understand the core concepts of financial derivates. The course would develop an analytical knowledge for understanding the mechanics and characteristics of derivative products such as Future, Options and SWAP agreements.
- After studying this course, students would be able to understand and formulate complex trading strategies adopted using financial derivate products.

SYLLABUS OF DSE: FINANCIAL DERIVATIVES

Unit 1: Futures Contract & SWAP (15 Hours)
Part I: Futures/Forward Contracts: Properties, Pricing and Hedging
a) Introduction to derivatives and options; forward and futures contracts; options; other derivatives
Hull Chapter - 2: Mechanics of Futures Markets (Sections 2.1 - 2.4 & 2.11)

b) Forward and future prices
Hull Chapter-5: Determination of Forward & Futures Prices (Sections 5.1 - 5.5, 5.9, 5.11 & 5.12)

c) Stock index futures & the use of futures for hedging
Hull Chapter - 3: Hedging Strategies using Futures

Part II: Interest Rate Futures
d) Interest rate futures & duration-based hedging strategies
Hull Chapter - 6: Interest rate futures (6.1 to 6.4) [exclude page-158 & 159]

Part III: SWAP & FRA
e) Forward Rate, Forward Rate Agreement and SWAP
Hull Chapter - 4: Interest rate (4.1 to 4.3, 4.6 and 4.7)
Kolb Chapter – 37: Forward Rate Agreements (Page 575- 577)
Hull Chapter - 7: Swaps (7.1 to 7.4)

Kolb Chapter – 1: Swap Contracts (Page 11-13); Chapter - 28: Pricing and Valuation of SWAP (page 407-410)

Unit 2: Options Contract (30 Hours)
Part I: Introduction and Properties of Option Contracts
f) Option markets; call and put options; factors affecting option prices; put-call parity
Hull Chapter - 10: Mechanics of options markets (10.1 to 10.7);
Hull Chapter -11: Properties of stock options (Full Chapter)

Part II: Option Strategies
g) Option trading strategies: spreads; straddles; strips and straps; strangles
Hull Chapter -12: Trading strategies involving options (Full Chapter)

Part III: Pricing of Options, BSM and Greek letters
h) The principle of arbitrage; discrete processes and the binomial tree model; risk neutral valuation, Black Scholes Merton (BSM) Model, Greek letters
Hull Chapter - 13: Binomial trees. Sections 13.1-13.4, 13.6 - 13.9 & Appendix (Derivation of BSM)
Hull Chapter - 14: Section 14.6 ITOˆ ’S Lemma
Hull Chapter - 15: The Black–Scholes–Merton Model: Sections 15.3, 15.4, 15.5, 15.6, 15.8,15.11
Hull Chapter - 19: The Greek Letters

Recommended readings

Hull, John C.,Options, Futures and Other Derivatives, Pearson Education, Inc, 9th Edition (Global Edition), 2018.

Robert W. Kolb, James A. Overdahl, Financial Derivatives: Pricing and Risk Management, John Wiley & Sons, 2010

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Discipline Specific Elective 32 (DSE-32): Political Economy and Globalisation

Semester	Course title & Code	Credits	Duration (per week)			Eligibility Criteria	Prerequisite
			Lecture	Tutorial	Practical/ Practice		
IV/VI/VIII	Political Economy and Globalisation – ECON078	4	3	1	0	Class 12th Pass	NIL

Learning Objectives

The Learning Objectives of this course are as follows:

- To explore some of the fundamental structural changes and dynamics of the advanced capitalist system since the early twentieth century to the contemporary period.
- To analyse the changes in the organization of production, labour market institutions as well as shifts in corporate, managerial, fiscal, financial and inter-firm governance structures.
- To analyse the role of state in the era of globalization. It also integrates contemporary issues of gender and environment in a political economy framework.

Learning outcomes

After completion of the course the learners will be able to:

- Do critical analysis in an integrated and broader political economy framework.
- Analyze some of the most contemporary trends and developments at the global level and evaluate them.
- Analyze the issues studied in the compulsory courses on the Indian Economy and Development Economics.

Syllabus

UNIT I: Changing Dynamics of Capitalist Production, Organisational Form and Labour Process (9 hours)
Historical Overview; changing dynamics of the organisation of production, markets and labour process; Evolution of the multinational corporations and their economic logic; changing nature of employment, job security and labour rights.

UNIT II: The State and the Economy (9 hours)
State and the economy; political economy of macroeconomic policy; state in the international political economy - globalisation and imperialism.

UNIT III: Neoclassical political economy (9 hours)
State and rent seeking; market failure; government failure and decentralized development; institutions and economic development; theory of political transitions.

UNIT IV: Political economy of fiscal consolidation and financialization (9 hours)
Principles of Political economy of Taxation; changing role of finance and the shifts in corporate governance structures: financialization – its nature and consequences.

UNIT V: Broader Perspectives (Gender and Environment) (9 hours)
Dimensions of Gender in work, accumulation and globalization; political economic issues in environment, sustainability and inequality.

COMMON POOL OF GENERIC ELECTIVES (GE) COURSES

GENERIC ELECTIVES (GE-1): PRINCIPLES OF MICROECONOMICS I

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Semester	Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
			Lecture	Tutorial	Practical/ Practice		
I/III/V/VII	Principles of MicroeconomicsI ECON025	4	3	1	0	Class XII pass	NIL

Learning Objectives

The Learning Objectives of this course are as follows:

- This course discusses the basic principles in Microeconomics and their applications. It includes consumer's problem, demand estimation, production function, cost functions and market analysis. It illustrates how the concepts of microeconomics can be applied toanalyzereal-lifeeconomicsituations.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Thestudentslearnsomebasicprinciplesofmicroeconomicsofconsumerandproducers,andinteractions of supply and demand, characteristics of perfect competition, efficiency and welfareoutcomes.

SYLLABUS OF GE-1

UNIT – I: Introduction (12 hours)
Problem of scarcity and choice: scarcity, choice and opportunity cost; production possibility frontier; economic systems. Demand and supply: law of demand, determinants of demand, shifts of demand versus movements along a demand curve, market demand, law of supply, determinants of supply, shifts of supply versus movements along a supply curve, market supply, market equilibrium. Applications of demand and supply: price rationing, price floors, consumer sur- plus, producer surplus. Elasticity: price elasticity of demand, calculating elasticity, determinants of price elasticity, other elasticities

UNIT – II: Consumer Theory (12 hours)
Budget constraint, concept of utility, diminishing marginal utility, Diamond-water paradox, income and substitution effects; consumer choice: indifference curves, derivation of demand curve from indifference curve and budget constraint

UNIT – III: Production and Costs (12 hours)

Production: behaviour of profit maximising firms, production process, production functions, law of variable proportions, choice of technology, isoquant and isocostlines, cost minimizing equilibrium condition
Costs: costs in the short run, costs in the long run, revenue and profit maximization, minimizing losses, short run industry supply curve, economies and dis- economies of scale, long run adjustments

UNIT – IV: Perfect Competition (09 hours)

Assumptions: theory of a firm under perfect competition, demand and revenue; equilibrium of the firm in the short run and long run; Long run industry supply curve: increasing, decreasing and constant cost industries.
Welfare: allocative efficiency under perfect competition.

Practical component (if any) - NIL

Essential/recommended readings

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

GENERIC ELECTIVES (GE-2): BASIC DEVELOPMENT ECONOMICS

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Semester	Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
			Lecture	Tutorial	Practical/ Practice		
I/III/V/VII	**Basic DevelopmentEconomics ECON029**	**4**	**3**	**1**	**0**	**Class XII Pass**	**NIL**

Learning Objectives

The Learning Objectives of this course are as follows:

- This course exposes students to some of the key ideas and concepts in the areas of economic growth, human development and globalisation building on the concept of growth and further links it up with alternative conceptions of development.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Students will develop a critical understanding of the contemporary issues in economic growth and development and their paths. Students will thus be better prepared to face the professional world and can use this knowledge base in a variety of jobs, including in the corporate, civil service and NGOsectors.

SYLLABUS OF GE-2

UNIT – I: Development and underdevelopment (12 hours)
Growth vs Development; Classic Approaches of Development; Contemporary theories of Development and Underdevelopment

UNIT – II: Development goals and indicators, measures of underdevelopment
Various concepts and measures of poverty and inequality, poverty lines using various national and international criteria. (12 hours)

UNIT – III: Capabilities, human development and sustainable development (12 hours)

UNIT – IV: Globalisation and development (9 hours)

Practical component (if any) - NIL

GENERIC ELECTIVES (GE-3): ESSENTIALS OF ECONOMICS

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Semester	Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
			Lecture	Tutorial	Practical/ Practice		
I/III/V/VII	**Essentials of Economics ECON076**	**4**	**3**	**1**	**0**	**Class XII pass**	**NIL**

Learning Objectives

The Learning Objectives of this course are as follows:

- This course will introduce the fundamental concepts of economics, the study of how people manage resources. It contains basic principles of microeconomics (the behaviour of consumers, firms and companies), macroeconomics (national production, employment, inflation and interest rates) and international economics (balance of payment, exchange rate and trade) with graphical illustration and contemporary examples.

Learning outcomes

The Learning Outcomes of this course are as follows:

- By studying this course, the students will learn to think like an economist and understand how a modern market economy function. They will learn about the factors that determine long-run growth and short-term fluctuations and role of government and financial institutions, so they can better understand how economics applies to the everyday life.

SYLLABUS OF GE-3

UNIT – I: Microeconomic Foundations (15 hours)
Foundations of economics, how market works, firms and market structures, markets for factor of production, role of government

UNIT – II: Macroeconomic Foundations (15 hours)
GDP (measuring total production, income and economic growth), unemployment and inflation; aggregate demand and aggregate supply analysis; monetary and fiscal policies

UNIT – III: Foundation of International Economics (15 hours)
Comparative advantage and the gains from trade, macroeconomics in an open economy

Practical component (if any) - NIL

Essential/recommended readings

– Hubbard, G., Garnett, A., & Lewis, P. (2019). Essentials of economics. 5th edition, Pearson Higher Education AU.

– Sloman, J., & Garratt, D. (2016). Essentials of Economics, 7th edition, Pearson

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

GENERIC ELECTIVES (GE-4): PRINCIPLES OF MACROECONOMICS I

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Semester	Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
			Lecture	Tutorial	Practical/ Practice		
II/IV/VI/VIII	**Principles of MacroeconomicsI ECON026**	**4**	**3**	**1**	**0**	**Class XII pass**	**NIL**

Learning Objectives

The Learning Objectives of this course are as follows:

- This course introduces the basic concepts in Macroeconomics both in closed and open economy. It deals with the behaviour and characteristics of aggregate economy.
- This course introduces the definition, measurement of the macroeconomic variables like GDP, consumption, savings, investment and balance of payments.
- The course also discusses various theories and approaches of determining GDP.

Learning outcomes

The Learning Outcomes of this course are as follows:

- The students will learn the broad understanding of macroeconomic variables and their measurement issues like GDP, inflation, money supply, interest rate and their inter- linkages.
- It will also allow them to critically evaluate various macroeconomic policies and their effects on output and interest rate in theeconomy.

SYLLABUS OF GE-4

UNIT – I: Introduction (9 hours)
What is macroeconomics? Macroeconomic issues in an economy

UNIT – II: National Income Accounting (9 hours)
Concepts of GDP and National Income; measurement of national income and re-
lated aggregates; nominal and real income; limitations of the GDP concept

UNIT – III: Determination of GDP (9 hours)
Actual and potential GDP; aggregate expenditure; consumption function; invest-
ment function; equilibrium GDP; concepts of MPS, APS, MPC, APC; autonomous expenditure; Concept of multiplier

UNIT – IV: National Income Determination in an Open Economy with Government (9 hours)
Income determination; Fiscal Policy: impact of changes in government expenditure and taxes; net exports function; net exports and equilibrium national income.

UNIT – V: Money in a Modern Economy (9 hours)

Concept of money in a modern economy; monetary aggregates; demand for money; quantity theory of money; liquidity preference and rate of interest; money supply and credit creation; monetary policy.

Practical component (if any) - NIL

Recommendedreadings

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

GENERIC ELECTIVES (GE-5): BASIC STATISTICS FOR ECONOMICS

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Semester	Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
			Lecture	Tutorial	Practical/ Practice		
II/IV/VI/VIII	**Basic Statistics forEconomics ECON022**	**4**	**3**	**1**	**0**	**Class XII pass**	**Knowledge of Class XII standard Mathematics**

Learning Objectives

The Learning Objectives of this course are as follows:

- The course teaches students the basics of probability theory and statistical inference based on simple technical rigor.
- It includes introductory probability theories, sample distribution and hypothesis testing that set a necessary foundation for the econometrics course taught as a General Elective.

Learning outcomes

The Learning Outcomes of this course are as follows:

- The student will be able to analyse the data using basic statistical concepts.
- They will understand sampling characteristics, estimation as well as examining the hypotheses using discrete and continuous distributions.

SYLLABUS OF GE- 5

UNIT – I: Introduction and overview (12 hours)

Populations and samples; sample statistics; Descriptive Statistics.

UNIT – II: Basic concepts of probability(12 hours)

Spaces and events; probability concepts, conditional probabilities

UNIT – III: Probability distributions and Sampling (12 hours)

Random variables – discrete and continuous, various probability distributions - functions and characteristics; Commonly used distributions - uniform, binomial, exponential, Poisson, hypergeometric and Normal random variables. Jointly distributions- conditional distributions and expectations, covariance and correlation

Unit – IV: Estimation and Hypothesis testing (9 hours)

Estimation of population parameters - methods of moments and maximum likelihood procedures; properties of estimators; confidence intervals; Defining statistical hypotheses; distributions of test statistics; testing hypotheses related to population parameters; Type I and Type II errors; power of a test

Practical component (if any) - NIL

Recommendedreadings

GENERIC ELECTIVES (GE-6):INDIAN ECONOMY

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Semester	Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
			Lecture	Tutorial	Practical/ Practice		
II/IV/VI/VIII	**IndianEconomy ECON030**	**4**	**3**	**1**	**0**	**Class XII pass**	**NIL**

Learning Objectives

The Learning Objectives of this course are as follows:

- This course introduces the economic problems related to the Indian economy by familiarizing them with the research studies on areas relating to economic development and policy in India with an emphasis on contemporary debates.

Learning outcomes

The Learning Outcomes of this course are as follows:

- The students will be able to learn the development paradigm adopted in India since independenceandevaluateitsimpactoneconomicaswellassocialindicatorsofprogress.
- Students will have the ability to explore current policy debates and contribute to policy making in an informed way using relevant databases.
- They will also learn how to conductindependentresearchinthesareas

SYLLABUS OF GE-3

Unit 1 : Historical and general overview of Indian economy since Independence (9 hours)

Unit 2 : Growth and structural change (9 hours)

Unit 3 : The Indian economy in a comparative perspective (9 hours)
Unit 4 : Key issues: poverty, inequality, education, health and gender (9 hours)
Unit 5 : Agriculture, industry, services and international trade (9 hours)

Practical component (if any) - NIL

Generic Elective (GE-7): Theory of Public Finance

Semester	Course title & Code	Credits	Duration (per week)			Eligibility Criteria	Prerequisite
			Lecture	Tutorial	Practical/ Practice		
III/V/VII	Theory of Public Finance – ECON061	4	3	1	0	Class 12th Pass	Introductory /Principles of Microeconomics

Learning Objectives

The Learning Objectives of this course are as follows:

- This course will look into the efficiency and equity aspect of market mechanism of allocating resources and also the design and implications of public sector policies including taxation and monetary policies.
- It will deal with efficiency, equity, public goods, externalities, taxation, subsidies, fiscal multiplier, money supply, interest rate and their interlinkages.

Learning outcomes

The Learning Outcomes of this course are as follows:

- This course aims to develop the broad conceptual frameworks which will enable students to learn economic issues efficiency, equity, public goods, externalities, taxation, subsidies, fiscal multiplier, money supply, interest rate and their interlinkages.
- It will also allow them to critically evaluate various micro and macro aspects of government policies and their effects on output, distribution, and welfare in the economy.
- The course will be useful for students aiming towards careers in the government sector, policy analysis, business and journalism.

Syllabus

UNIT I: Theories of Public Sector and Market Mechanism (12 hours)
Overview of Fiscal Functions; Tools of Normative Analysis; Pareto Efficiency; General Equilibrium Framework; Equity and the Social Welfare

UNIT II: Market Failure (12 hours)
Sources of Market failures; Public Goods; and Externalities.

UNIT III: Theories of Taxation (12 hours)
Product and Factor tax; Tax Burden; Tax Distortions; Tax Design

UNIT IV: Working of Fiscal and Monetary Policies (9 hours)
Fiscal policy; Banking system and creation of Money; Monetary Instruments and Policies; Fiscal and Monetary Management in Indian Context.

Recommended readings

- R.A. Musgrave and P.B. Musgrave ,*Public Finance in Theory and Practice*, 5th Edition.

Generic Elective (GE-8): Money and Banking

Semester	Course title & Code	Credits	Duration (per week)			Eligibility Criteria	Prerequisite
			Lecture	Tutorial	Practical/ Practice		
III/V/VII	**Money and Banking – ECON062**	**4**	**3**	**1**	**0**	**Class 12th Pass**	**Introductory / Principles of Macroeconomics**

Learning Objectives

The Learning Objectives of this course are as follows:

- This course exposes students to the theory and functioning of the monetary and financial sectors of the economy.
- It highlights the organization, structure, and role of financial markets and institutions. It also discusses interest rates, monetary management, and instruments of monetary control.
- Financial and banking sector reforms and monetary policy with special reference to India are also covered.

Learning outcomes

The Learning Outcomes of this course are as follows:
This allows students to understand current monetary policies and financial market out- comes. It also enables them to critically evaluate policies.

Syllabus

UNIT I: Money (9 hours)
Understanding concept and functions of money, Measurement of money supply, Analytics and Methodology of computation of money supply, Theories of money supply determination

UNIT II: Financial markets: an Introduction (12 hours)
Role of financial markets and institutions; Problems of Asymmetric information, Financial Crises; Financial derivatives: Futures, Options and Swaps; Financial markets and Institutions in India: Organization, Structure and Reforms in India

UNIT III: Interest Rates (12 hours)
Determination of interest rates; Sources of interest rates differentials and risk; Theories of term structure of interest rates; Interest rates in India

UNIT IV: Central Banking and Monetary policy (12 hours)
Central Bank: Functions and Balance Sheet
Monetary Policy: Targets and instruments, Monetary management in an open economy
Monetary Policy Framework in India: Evolution and current scenario, critical evaluation
Digital currency: implications and emerging issues in Indian economy

Recommended readings

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Generic Elective (GE-9): Digitalisation and Development

Semester	Course title & Code	Credits	Duration (per week)			Eligibility Criteria	Prerequisite
			Lecture	Tutorial	Practical/ Practice		
III/V/VII	**Digitalisation and Development – ECON063**	**4**	**3**	**1**	**0**	**Class 12th Pass**	**NIL**

Learning Objectives

The Learning Objectives of this course are as follows:

- The analysis of the impact of information and communication technologies (ICTs) on economies and societies is a growing field. Technology is an enabling factor. Technological developments become relevant to the extent that they are economically and socially meaningful.
- This course aims to offers an overview of the understanding of economics of digitalisation and its impact on the life and livelihood with an interdisciplinary approach.

Learning outcomes

The Learning Outcomes of this course are as follows:
The students would understand the functions information technology and its socio- economic impact, wellbeing and progress on the contemporary world.

Syllabus

UNIT I: Digital development - India and the World (12 hours)

UNIT II: The transformation of management practices; work and employment; social net- works, trust and social capital in the digital economy; cultural and motivational aspects (12 hours)

UNIT III: Unit ICTs, Digital Divide and the political economy of inequality (12 hours)

UNIT IV: Access to ICT and poverty and wellbeing, work-life balance (9 hours)

Generic Elective (GE-10): Introduction to Comparative Economic Development

Semester	Course title & Code	Credits	Duration (per week)			Eligibility Criteria	Prerequisite
			Lecture	Tutorial	Practical/ Practice		
III/V/VII	**Introduction to Comparative Economic Development – ECON064**	**4**	**3**	**1**	**0**	**Class 12th Pass**	**NIL**

Learning Objectives

The Learning Objectives of this course are as follows:

- This course investigates selected issues in industrialization and development in comparative historical perspective.
- The course focuses on a set of countries which followed diverse trajectories and patterns of growth to achieve their industrial transition and compares the outcomes of these diverse trajectories on sectoral change, intersectoral relations, labour processes and industrial relations and compares the role of the state in facilitating the respective trajectories.

Learning outcomes

The Learning Outcomes of this course are as follows:

- The students will be able to visualise economic development in a historical perspective and assimilate material from diverse narratives.
- It will help them to understand the diverse paths of economic development in the advanced economies.

Syllabus

UNIT I: Introduction (9 hours)
Theoretical issues and comparative historical background.

UNIT II: Agricultural transformation and its role in industrialization (9 hours)
Agrarian and land relations, production and productivity, agrarian surplus in industrial development. Case studies: Britain, Japan and U.S.S.R.

UNIT III: The industrialization process of Britain, Japan and U.S.S.R. (9 hours)

UNIT IV: The factory system and making of the industrial working class. Case studies: Britain and Japan (9 hours)

UNIT V: The role of the state in industrial and developmental transitions. Case studies: Britain, Japan and U.S.S.R. (9 hours)

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Generic Elective (GE-11): Education and Development

Semester	Course title & Code	Credits	Duration (per week)			Eligibility Criteria	Prerequisite
			Lecture	Tutorial	Practical/ Practice		
III/V/VII	**Education and Development – ECON065**	**4**	**3**	**1**	**0**	**Class 12th Pass**	**NIL**

Learning Objectives

The Learning Objectives of this course are as follows:
This course discusses the role of education in development and policy analysis and formulation in the context of development; the impact of the globalisation on, and the role of international agencies in, education for development; human capital theory and human resource development; education and aid; research and consultancy strategies and ethics. he emphasis in this course is laid on understanding the theoretical aspects of education and linking it with the issues of education in a developing country like India.

Learning outcomes

The Learning Outcomes of this course are as follows:
This course will develop skills amongst the students to role of education and strategies to expand education in highly unequal societies. This will further help to conduct research and analysis the role of institutions for the outcome of education.

Syllabus

UNIT I: Introduction (9 hours)
Defining the educational problem

UNIT II: Human capital theory (6 hours)
The basic economic perspective on education

UNIT III: Early childhood education: How important? When did earnings become so dependent on education? Do our regression estimates overestimate the impact of education on earnings? The case of ability bias. (9 hours)

UNIT IV: Education as a signal of skill (9 hours)
If the return to education is real, does it reflect skills learned or is it a signal? Why has the rate of return to education increased? What skills are now rewarded in the workplace?

UNIT V: Schooling and Achievement (6 hours)
Do smaller classes raise achievement? School vouchers and parental choice; School accountability, standards and testing; Teacher quality and teacher training; Can technology complement what teachers do?

UNIT VI: Higher Education (6 hours)
Basic issues and structure; Higher education policy

Generic Elective (GE-12): Basic Resource and Energy Economics

Semester	Course title & Code	Credits	Duration (per week)			Eligibility Criteria	Prerequisite
			Lecture	Tutorial	Practical/ Practice		
III/V/VII	**Basic Resource and Energy Economics – ECON066**	**4**	**3**	**2**	**0**	**Class 12th with Mathematics**	**Introductory /Principles of Microeconomics**

Learning Objectives

The Learning Objectives of this course are as follows:
ThiscoursewillintroducethebasicsofResourceandEnergyeconomics.Theobjectiveofthis course is to provide theoretical and empirical topics on Resource economics, energy economics, energy transition, and energy security. This course introduces the conceptual and theoretical foundations of Resource Economics. In particular, the policies and potential sources are both renewable and non-renewable. The objective of thiscourseistoprovideknowledgeontheprinciplesofgoverningandmanagingnaturalresources.

Learning outcomes

The Learning outcomes of this course are as follows:
The students will learn some issues of resource economics relating to the basics of supply, demand, and prices, income elasticities, world oil markets, and depletable resources, pathways of energy transition from conventional to renewable energysources.

Syllabus

UNIT I: Resource Economics (Renewable and non-renewable sources) (15 hours)
Optimal extraction of a non-renewable resource, Optimal management of renewable resources -Fishery and Forestry, Tom Tietenberg and Lynne Lewis, Environment and Natural Resource Economics, 9th edition, Chapter 5,6,12 and13

UNIT II: Energy Economics (15 hours)
Types of energy sources, Introduction to Basics of supply, demand, and prices, energy supply and economics of depletable resources, world oil markets

UNIT III: Energy transition and energy security Pathways of energy transition from conventional to renewable energy sources, Policy instruments, Energy security, accessibility and 4 A definition, and Energy poverty (15 hours)

Recommended readings

Generic Elective (GE-13): Principles of Microeconomics II

Semester	Course title & Code	Credits	Duration (per week)			Eligibility Criteria	Prerequisite
			Lecture	Tutorial	Practical/ Practice		
III/V/VII	Principles of Microeconomics II – ECON027	4	3	1	0	Class 12th with Mathematics	Introductory Microeconomics (ECON001)/ Principles of Microeconomics I (ECON025)

Learning Objectives

The Learning Objectives of this course are as follows:

- This course covers imperfect markets and equilibrium analysis, consumer and producer theories under various markets and its failure, and international trade.

Learning outcomes

The Learning outcomes of this course are as follows:

- This course helps the students to understand different forms of market imperfections and market failures observed in real life situations.
- The students learn about the environment where the standard market mechanism fails to generate the desirable outcomes.
- They develop a sense of how the production is distributed among the different factors of production and the demand for inputs.
- Some preliminary concepts of international tradearealsocoveredinthiscourse.

Syllabus

UNIT I: Market Structures (12 hours)
Theory of a Monopoly Firm: Concept of imperfect competition; short run and long run price and output decisions of a monopoly firm; concept of a supply curve under monopoly; comparison of perfect competition and monopoly, social cost of monopoly, price discrimination; remedies for monopoly: Antitrust laws, natural monopoly
Imperfect Competition: Monopolistic competition: Assumptions, SR and LR price and output determinations under monopolistic competition, economic efficiency and resource allocation; oligopoly: assumptions, oligopoly models, game theory, contestable markets, role of government

UNIT II: Consumer and Producer Theory (12 hours)
Consumer and Producer Theory in Action: Externalities, marginal cost pricing, internalising externalities, public goods; imperfect information: adverse selection, moral hazard, social choice, government inefficiency.
Markets and Market Failure: Market adjustment to changes in demand, efficiency of perfect competition; sources of market failure: imperfect markets, public goods, externalities, imperfect information; evaluating the market mechanism.

UNIT III: Income Distribution and Factor pricing (12 hours)
Input markets: demand for inputs; labour markets, land markets, profit maximisation condition in input markets, input demand curves, distribution of Income.

UNIT IV: International Trade (9 hours)
Absolute advantage, comparative advantage, terms of trade, sources of comparative advantage, trade barriers, free trade/ protectionism.

Recommended readings

- Mankiw,N.G.(2018).*PrinciplesofMicroeconomics*8thed.
- Bernheim,B.,Whinston,M.(2009).*Microeconomics*.TataMcGraw-Hill.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Generic Elective (GE-14): Corporate Finance, Governance and Development

Semester	Course title & Code	Credits	Duration (per week)			Eligibility Criteria	Prerequisite
			Lecture	Tutorial	Practical/ Practice		
V/VII	Corporate Finance, Governance and Development – ECON067	4	3	2	0	Class 12th with Mathematics	Basic Statistics

Learning Objectives

The Learning Objectives of this course are as follows:

- This course covers the important financial decisions that face companies and corporate world in the modern economies.
- This will cover investment, financing and dividend decisions, together with the management of risk.

Learning outcomes

The Learning outcomes of this course are as follows:

- The students will be able to under the risk and decisions taken by the corporate world in the present-daysituations.
- The student will learn the practical issues of assets formation in the share and equity markets.
- They will also learn the role of institution in regulating uncertain and risky behaviours of the corporate firms.

Syllabus

UNIT I: Investment decisions (12 hours)
Traditional methods of investment appraisal, Investment–consumption decision model, The discounted cash flow approach, Net present value and internal rate of return, Project cash flows, Capitalrationing

UNIT II: Risk analysis (12 hours)
Simple risk techniques, Risk and return, Portfolio theory, The capital asset pricing model, Option valuation, Interest rate risk

UNIT III: Financing decisions (12 hours)
Financial markets, the cost of capital, Weighted average cost of capital, Capital structure in a simple world, Capital structure in a complex world, Investment and financing interactions, The dividend decision

UNIT IV: International issues (9 hours)
Foreign exchange, Foreign exchange hedging, Foreign direct investment

Recommended readings

- Lumby, S., & Jones, C. (2003). Corporate finance: Theory & practice. Cengage LearningEMEA.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Generic Elective (GE-15): Principles of Macroeconomics II

Semester	Course title & Code	Credits	Duration (per week)			Eligibility Criteria	Prerequisite
			Lecture	Tutorial	Practical/ Practice		
IV/VI/VIII	Principles of Macroeconomics II – ECON028	4	3	1	0	Class 12th with Mathematics	Introductory Macroeconomics/ Principles of Macroeconomics I

Learning Objectives

The Learning Objectives of this course are as follows:

- This course introduces labour markets and derives the aggregate supply (AS) curve.
- Then, it integrates with Aggregate Demand (AD) to determine equilibrium prices and output.
- The course discusses Phillips curve and the alleged trade-off between inflation andunemployment.
- Both adaptive and rational expectations are introduced.

Learning outcomes

The Learning outcomes of this course are as follows:

- The students would learn an analytical framework to analyse the basic functioning of the aggregate macroeconomy under closed and open economy.
- It also enables them to analyse the functioning of the economies in term of the effects of fiscal and monetary policy and trade-off between inflation and unemployment.

Syllabus

UNIT I: IS-LM Analysis for income determination (12 hours)
Derivations of the IS and LM functions; IS-LM and aggregate demand; shifts in the ADcurve

UNIT II: GDP and Price Level in Short Run and Long Run (12 hours)
Aggregate demand and aggregate supply; multiplier analysis with AD curve and changes in price levels; aggregate supply in the SR and LR

UNIT III: Inflation and Unemployment (12 hours)
Concept of inflation; determinants of inflation; relationship between inflation and unemployment: Phillips Curve in short-run and long-run

UNIT IV: Balance of Payments and Exchange Rate (9 hours)
Balance of payments: current account and capital account; market for foreign exchange; determination of exchange rate

Recommended readings

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Generic Elective (GE-16): Basic Econometrics

Semester	Course title & Code	Credits	Duration (per week)			Eligibility Criteria	Prerequisite
			Lecture	Tutorial	Practical/ Practice		
IV/VI/VIII	Basic Econometrics – ECON024	4	3	2	0	Class 12th Pass	Knowledge of Class XII standard Mathematics AND Basic Statistics

Learning Objectives

The Learning Objectives of this course are as follows:

- This course introduces students to the econometric methods used to conduct empirical analysis based on the basic statistics.
- It offers the basic quantitative techniques needed to undertake applied research projects to establish the relationship between variables of interestsacrosswidevarietyofdisciplines.

Learning outcomes

The Learning outcomes of this course are as follows:

- Students will learn to estimate simple estimation and inferences about population parameters, to formulate empirical models and analyze data.
- An expertise in econometrics increases the job prospect of the students significantly.

Syllabus

UNIT I: Regression Models (15 hours)
OLS estimators, hypothesis Testing using software and practical application; multi- ple Regression Model - estimation, Testing and practical application using software like GRETL/EViews/ R/Stata/EXCEL etc.

UNIT II: Qualitative variables and Estimation (15 hours)
Application of qualitative variables, Nonlinear Models, Applications of dummy variables

UNIT III: Issues with Classical Assumptions (15 hours)
Violation of normal distribution, Collinearity with independent variables, heteroscedasticity, autocorrelation, practical application

Recommended readings

- Christopher Dougherty, *Introduction to Econometrics*, 4th edition, OUP, Indian edition.
- Damodar Gujarati, *Econometrics by Example*, 2nd edition, Palgrave Macmillan, 2014.
- Gujarati,D.,Porter,D.(2010).*EssentialsofEconometrics*,4thed.McGraw-Hill.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Generic Elective (GE-17): Sectoral Issues in Indian Economy

Semester	Course title & Code	Credits	Duration (per week)			Eligibility Criteria	Prerequisite
			Lecture	Tutorial	Practical/ Practice		
IV/VI/VIII	Sectoral Issue in Indian Economy – ECON059	4	3	1	0	Class 12th Pass	NIL

Learning Objectives

The Learning Objectives of this course are as follows:

- The course imparts in-depth knowledge on the issues relating to the agricultural and industrial economy of India, with the focus on the evolutionary path undertaken and the resultant concerns.
- This will cover issues of MSMEs and small farms toinformtheproblemsindustrialisationaswellasincreasedproductivityofagriculture.

Learning outcomes

The Learning outcomes of this course are as follows:

- This course will familiarize students with the problems, issues,currentdebates,andpolicyinterventionsforlong-termsustainability,efficiency,and resilience.
- The students will be able to understand, comprehend and critically analyse the issues and policies and would be able to form a well-informed and well- articulated opinionoftheirown.

Syllabus

UNIT I: Agricultural Performance since Independence: (9 hours)
Output and productivity growth Agricultural Performance since Independence in the context of land andlabour

UNIT II: The Policy Environment: Food security and nutritional concerns, MSPs, Agricultural price policy, subsidies/cash transfers, The public distribution system; Capital formation (12 hours)

UNIT III: Current Issues in Indian Agriculture (selected topics) (12 hours)
Resource Use Efficiency-Fertiliser, Water, Other inputs; Diversification for future Growth and enhanced farm income; Sustainable agricultural growth—concepts and constraints; Prospects for dryland/organic/zero budget farming; trade and competitiveness;useofnewtechnologyandartificialintelligence;Marketing/infrastructure; Crop insurance/agriculturalfinance

UNIT IV: Industry (12 hours)
Overview of the Industrial Scene in India- Trends in growth and productivity; Competitiveness and changes in Policy Regimes- domestic competitiveness and export; Issues relating to Indian Industry (selected topics); Scale and ownership, MSMEs and large industries, Public and Private Sector, Employment growth, labour and capital (domestic and foreign), formal and informal sectors, Infrastructural bottle- necks, research and development.

Generic Elective (GE-18): Game Theory and Social Sciences

Semester	Course title & Code	Credits	Duration (per week)			Eligibility Criteria	Prerequisite
			Lecture	Tutorial	Practical/ Practice		
IV/VI/VIII	**Game Theory and Social Sciences – ECON068**	**4**	**3**	**1**	**0**	**Class 12th Pass**	**Knowledge of Class XII Standard Mathematics**

Learning Objectives

The Learning Objectives of this course are as follows:

- This course will teach the basic elements of game theory with applications to political science and other social sciences.
- It will coversimultaneous games, extensive-form games, repeated games, and spatial models of elections.
- The course will also focus on using the logic of games to make inferences and arguments about political and social behavior, with readings on collective action, voting, bargaining, repeated interaction, war, and other FinalExamples.

Learning outcomes

The Learning outcomes of this course are as follows:

- The students will learn how to apply multi-person decision making in an interactive setting.
- They will understand how to formulate different real-life situations as games and learn to predict the optimal strategies of players and how the players can exploit strategic situations for their own benefit.
- They will solve basic and intermediate games, including simultaneous-move and extensive-form games, as well as basic games of asymmetric information.
- The students can create and solve an original model designed to understand a social or political problem of interest.

Syllabus

UNIT I: Rational choice; interacting decision-makers; the normal/strategic form (9 hours)

UNIT II: Dominant and dominated strategies; rationalizability; iterated elimination of dominated strategies; dominance solvability; best response functions; Nash equilibrium. (12 hours)

UNIT III: Extensive-form and simultaneous game, Strategic game and its application in social sciences, electoral competition; the war of attrition, auctions; accident law; mixed strategies; finding mixed strategy equilibria;symmetricgamesandsymmetricequilibria;illustrations:reportingacrime;expertdiagnosis (12 hours)

UNIT IV: Strictly competitive equilibrium and maximization (12 hours)

Recommended readings

- Martin J. Osborne, *An Introduction to Game Theory*, Oxford University Press, New Delhi,2004.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Generic Elective (GE-19): Economy of Colonial India

Semester	Course title & Code	Credits	Duration (per week)			Eligibility Criteria	Prerequisite
			Lecture	Tutorial	Practical/ Practice		
IV/VI/VIII	**Economy of Colonial India – ECON069**	**4**	**3**	**1**	**0**	**Class 12th Pass**	**NIL**

Learning Objectives

The Learning Objectives of this course are as follows:

- This course Final Examples some key spheres and trends of India's economy under colonial rule and situates them in the realms of land, labour, capital and state policy as they emerged from the shadows of the Mughal decline and moved into the colonial era.
- A special focus will be given on the peasants, artisans, migrants and their changing relationships with state power.
- The course will revisit some influential debates of Indian economic history: deindustrialisation, the nature of growth under colonial conditions, forced commercialization, the modernity of its industrialisation, working classes, drain of wealth and the role of the colonialstate.

Learning outcomes

The Learning outcomes of this course are as follows:

- The students will be able to learn economic transformation from pre-colonial period to the British colonial regime that paved the way of distorted path of growth and development.
- They will understand the nature of colonial economy and how resources of colonies were exploited by the colonial power.
- They will acquire skill to critically engagewithideasofeconomicchangesinthelasttwocenturies.

Syllabus

UNIT I: Economic transformation from pre-colonial to colonial regime (12 hours)
Economic transition, Colonial exploitation and resultant tyranny affected the trend of population, national income; occupational structure, merchandise trade, emergence of state with the East India Company and nature of its rule.

UNIT II: Agrarian Transformation (12 hours)
Colonial Rule on Indian Soil affected land revenue settlements, commercialization of agriculture, changing cropping pattern, land market, rural credit and indebtedness. It further influenced agrarian relations that includes agricultural labour, regional variations, peasant commodity production and generated debates on the 'mode of production in Indian agriculture', the 'invisible' women of India's agrarian history.

UNIT III: The de-industrialisation debate (12 hours)
Role of infrastructure for merchandise trade, evolution of entrepreneurial and industrial structure; constraints on industrial growth; labourrelations; drain of wealth; international trade and Balance of Payments

UNIT IV: Evolution of State and Financial Market (9 hours)
Evolution of state and its function for social welfare and relief under famine and starvation; Public Finance, Government revenue, expenditure and investment over the years; Emergence of Modern Banking in India and its role in economy; Overall assessment of colonial economy: stagnation and decline with regional variations.

Generic Elective (GE-20): Basic Environmental Economics

Semester	Course title & Code	Credits	Duration (per week)			Eligibility Criteria	Prerequisite
			Lecture	Tutorial	Practical/ Practice		
IV/VI/VIII	**Basic Environmental Economics – ECON070**	**4**	**3**	**1**	**0**	**Class 12th Pass**	**Introductory /Principles of Microeconomics**

CourseObjectives:

- The objective of this course is to provide basic knowledge of environmental economics, and its relationship between microeconomics and welfare economics.
- It covers the sig- nificance and application of Environmental Economics in the present environmental challenges in India. It describes and comprehends various environmental policies by de- ployingvarious policy instruments as well as measure the various market and non-market benefits of environmental policies.
- Finally, the course addresses the transboundary en- vironmental problems, and challenges related to trade and the environment.

Course LearningOutcomes

- The students will be able to learn the basic factors influencing the environmental chal- lenges faced by the present world.
- They will comprehend the functions of state and institution in mitigating such challenges.

Content (Unit-wise):

Unit 1 : Introduction to Environment Economics (9 hours)

What is environmental economics, Overview of environmental problems in India Unit 2 :

Welfare economics and inefficiencies (9 hours)

Pareto efficiency in consumption (Edgeworth Box), Pareto efficiency in Production, Theorems of welfare economics

Unit 3 : Externalities, property rights and Environmental Policy (9 hours)

Market Failure, externalities in Production and consumption, Externalities in prop- erty rights. Types of environmental goods (use and non-use value)

Unit 4 : Bargaining Solutions and Environmental Policies (9 hours)

Coase Theorem and its implications, Overview of regulatory policies related to environment, implementation of environmental policy

Unit 5 : International Environmental Problems (9 hours)

Environment and World Trade Organization, GATT, Multilateral Environmental Agreements, Transboundary environmental problems

SuggestedReadings:

– Charles Kolstad. Intermediate Environmental Economics, Oxford University Press, 2ndedition(2012).[Indianreprintavailable.]

- Roger Perman, Yue Ma, James McGilvray and Michael Common. Natural Re- source and Environmental Economics, Pearson Education/Addison Wesley, 4th edition(2011).

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Generic Elective (GE-21): Law and Development

Semester	Course title & Code	Credits	Duration (per week)			Eligibility Criteria	Prerequisite
			Lecture	Tutorial	Practical/ Practice		
IV/VI/VIII	**Law and Development – ECON071**	**4**	**3**	**1**	**0**	**Class 12th Pass**	**Introductory /Principles of Microeconomics**

CourseObjectives:

- Law is widely thought of a prerequisite to economic development. The course focuses on how property rights play a central role in economic development and individuals investif they can reap the future benefits of their investments as well formation of assetswithcollateral.
- Thecoursedealswiththequestions,wherepropertyrightscome from, how they are made and evolve, why, by whom and in what manner attributes of property rights are grafted onto different objects, claims, or assets.
- More specifically, the course covers key areas such as property rights, business transactions, and industrial promotion,withguidanceforpro-developmentlegislationineach.

Course learning outcomes:

- The students will acquire understanding the efficacy of laws and institutions in the modern economies for property rights and debt that helped equity and transparency for economic development.
- The students will learn the facility incomparativelaw,approachestolegalinstitutionalism,andlawandpoliticaleconomy.

Content(unit-wise):

Unit 1 : Introduction (9 hours)

The Importance of Laws and institutions for EconomicDevelopment

Unit 2 : Property Rights and Economic Development (12 hours)

Property rights and their role in resource allocation (Market and non-market mechanism for land transfer); Intellectual Property Rights (IPRs) Patents, Copyright and Trademarks. Cost and benefits of private IPRs; Individual rights vs common good

Unit 3 : Legal Frameworks for Business Transactions and Economic Development (12 hours)

Economics of Contract Law Legal contract; Role of Contracts for functioning of markets; Incomplete contracts; Efficient contracts; Damages measures and theirefficiency properties.

Unit 4 : Law and Industrial Promotion as Tools for Economic Development (12 hours)

Anti-trust laws, Competition Policy; Legal Process: Litigation – its causes and consequences; Benefits of legal certainty

- SuggestedReadings:

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Generic Elective (GE-22): Public Finance inIndia

Semester	Course title & Code	Credits	Duration (per week)			Eligibility Criteria	Prerequisite
			Lecture	Tutorial	Practical/ Practice		
IV/VI/VIII	**Public Finance in India – ECON072**	**4**	**3**	**1**	**0**	**Class 12th Pass**	**NIL**

CourseObjectives:

- This course covers an overview of recent trends and issues in government finances of India.
- It will look into the recent trends in budget, deficits, reforms in taxes of the centre, states and the local governments and the issues of fiscal federalism and decentralisation in India.
- It also offers an overview of principles and finances of India's flagships welfare programs.

Course LearningOutcomes:

- The students will learn India's recent trends and issues in direct and indirect taxes, intergovernmental transfers and welfare policies.
- It will enable them to compare and contrast India's public sector performance with the conceptual standards and perfor- mances of other nations.
- It will also equip them to engage in empirical based public policy debates around taxation, fiscal federalism and welfare policies.
- The course will be useful for students aiming towards careers in the government sector, policy analysis, business andjournalism.

Content (Unit-wise):

Unit 1 : Current Issues of India's Tax system (12 hours)

Overview of India's tax system and performance; GST; Issues in Direct Taxes; other issues in indirect taxes (eg. taxes on petroleum products)

Unit 2 . Analysis of Budget and Deficits: (12 hours)

Union and State Budget analysis; Deficit and Debt Management; Unit

3 Fiscal Federalism in India (12 hours)

Theories of Fiscal Federalism; Overview of Fiscal Federalism Structure in India; Intergovernmental Transfers; Local Finances in India

Unit 4 : Development and Welfare Policies- (9 hours)

India's Flagship Programs- Public Distribution system, National Health Mission, Universal Health Insurance, Education, other Central and State sponsored schemes

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Generic Elective (GE-23): Health andDevelopment

Semester	Course title & Code	Credits	Duration (per week)			Eligibility Criteria	Prerequisite
			Lecture	Tutorial	Practical/ Practice		
IV/VI/VIII	Health and Development – ECON073	4	3	1	0	Class 12th Pass	NIL

CourseObjectives:

- Thiscoursedealswiththeinterfacebetweenthehealthanddevelopment,bothmonetaryandnon-monetary terms.
- It identifies how health care markets differ from other goods and services, the unique role of health insurance for health equity.
- The course address how medical spending has evolved over time, role of state and institution for delivering health care services.
- It also covers the various strategies address by the nation and internationalorganisationsforensuringhealthcareandbetterlife.

Course LearningOutcomes:

- The students will be able to understand economic dimensions of health services, determinants of health care, role of state and institution, policies relating to health equity andstrategiestodealwithcommunicableandnon-communicablediseases

CourseOutline:

Unit 1 : Health, Wealth, and Welfare; Utility and Health; Causes and Consequences of Regional Variations in Health Care (9 hours)

Unit 2 : Health expenditure

Health Care Spending Growth; The Transformation of Medical Care to Health; TheDemandforMedicalCare;out-pocketexpenditure (9 hours)

Unit 3 : Health Insurance (9 hours)

Externalities in Health and Medical Care; The Demand for Health Insurance; Health Insurance Supply and Managed Care; Government Provision of Health Insurance; Universal Insurance Issues and International Comparisons of Health Care Systems; managing market (9 hours)

Unit 4 : Economics and mental health (9 hours)

Unit 5 : Health Systems (9 hours)

International health systems and Indian experiences, and health care financing.

Suggested Readings: Following is the suggested list of books/papers, which can be updated with more recent papers as ans when they becomeavailable.

Generic Elective (GE-24): Global Political Economy

Semester	Course title & Code	Credits	Duration (per week)			Eligibility Criteria	Prerequisite
			Lecture	Tutorial	Practical/ Practice		
IV/VI/VIII	Global Political Economy – ECON074	4	3	1	0	Class 12th Pass	NIL

- CourseObjectives:
  - This course introduces students to the contemporary structures, trends and developments in the world economy from a political economy perspective.
  - The period covered is from the end of Second World War up to global economic crisis of 2008. Areas covered include the organization of production and corporate structure; changes in labour processes and labour regimes;
  - The financialization of the world economy; and the shift intheunderstandingofthenatureandroleofthestateunderglobalisation.
- Course LearningOutcomes:
  - This course enables students to develop a critical understanding of the contemporary global economy, changing dynamics of political economic relation and developments over the last five or six decades.

Content (Unit-wise):

Unit 1 : Introduction (6 hours)

The political economy of globalisation, a theoretical and historical overview.

Unit 2 : Changing dynamics of capitalist production. (9 hours)

Organisational forms and labour processes in the Fordist and Post-Fordist produc- tion regimes; multinational corporations – evolution, structural form and dynam- ics; global value chains and production networks; the nature of employment, job security and labour rights in a globalising world.

Unit 3 : Institutional setting of global trade. (6 hours)

Evolution of the role, structure and mechanisms of the international trade regime.

Unit 4 : The role of finance in the globalised economy. (9 hours)

Financialization– trends, instruments, features and consequences.

Unit 5 : The state in the era of globalisation: (6 hours)

Globalisation and the limits of the welfare and developmental states; the neoliberal state.

Unit 6 : Global economic instability and crisis: (9 hours)

The 2008 global economic crisis – prelude; proximate and long-term causes; and policy response.

Generic Elective (GE-25): History of Indian Economic Thought

Semester	Course title & Code	Credits	Duration (per week)			Eligibility Criteria	Prerequisite
			Lecture	Tutorial	Practical/ Practice		
IV/VI/VIII	History of Indian Economic Thought – ECON075	4	3	1	0	Class 12th Pass	NIL

CourseObjectives:

- The purpose of this course is to develop understanding among the students about Indian Economic Thinking in ancient and pre-independence India.
- This course exposes students to prominent Indian economic thinkers from the ancient period till the early 20th century. The course will provide intellectual underpinning of ancient Indian economics, which will help them solve many ongoing economic problems.

Course LearningOutcomes:

- The students will be able to have idea about the ancient Indian economic system
- The course will help the students to understand the current economic system in view of the economic history of the country

- Content (Unit-wise):

Unit 1: Ancient and pre-colonial period (15 hours)

Postulates of Ancient Indian Economics; Buddhism and economics; Consumption, production, exchange and distribution in Ancient Indian Economy; Public finance and economic functions of government.

Unit 2 : Colonialism, Exploitation and Economic development (15 hours)

Classical & Neoclassical economics and Indian economic thought during colonial period; Theory of wealth drain and, famine and poverty; Industrialization, agrarian policy, infrastructure and structural changes.

Unit 3 : Economic thought: Indian Freedom Movement (15 hours)

Gandhian Economic model of swadeshi; Gokhle and Economics of Education; free trade to discriminating protection; Ranade and Economics of development; Ambedkar's thought on population, agriculture, banking and industrilisation.

Modern Physics DSC – 10	**4**	**3**	**0**	**1**	Class XII Pass with PCM	Studied 'DSC-Light and Matter' & Mathematical Physics-I, II & III

LEARNING OBJECTIVES

This course introduces modern development in Physics. Starting from Planck's law, it develops the idea of probability interpretation and then discusses the formulation of Schrodinger equation and its applications to step potential and rectangular potential problems. This paper aims to provide knowledge about atomic physics, hydrogen atoms and X-rays. This paper covers the in-depth knowledge of lasers, its principle and working. It also introduces concepts of nuclear physics and accelerators.

LEARNING OUTCOMES

After getting exposure to this course, the following topics would be learnt.

- Main aspects of the inadequacies of classical mechanics as well as understanding of the historical development of quantum mechanics. Heisenberg's Uncertainty principle and its applications, photoelectric effect and Compton scattering.
- The Schrodinger equation in 1-dimension, wave function, probability and probability current densities, normalization, conditions for physical acceptability of wave functions, position and momentum operators and their expectation values, Commutator of position and momentum operators.
- Time independent Schrodinger equation, derivation by separation of variables, wave packets, particle in a box problem, energy levels. Reflection and transmission across a step and rectangular potential barrier.
- Modification in Bohr's quantum model: Sommerfeld theory of elliptical orbits
- Hydrogen atom energy levels and spectra emission and absorption spectra.
- X-rays: their production and spectra: continuous and characteristic X-rays, Moseley Law.
- Lasers and their working principle, spontaneous and stimulated emissions and absorption, Einstein's A and B coefficients, Metastable states, components of a laser and lasing action in He-Ne lasers and free electron laser.
- Basic properties of nuclei, nuclear binding energy, semi-empirical mass formula, nuclear force and meson theory. Radioactivity.
- Types of Accelerators, Van-de Graaff generator linear accelerator, cyclotron.

SYLLABUS OF DSC – 10

THEORY COMPONENT

Unit – I **(9 Hours)**

Origin of Quantum Theory: Black body radiation and failure of classical theory, Planck's quantum hypothesis, Planck's radiation law, quantitative treatment of photo-electric effect and Compton scattering, Heisenberg's uncertainty principle, Gamma ray microscope thought experiment, position - momentum uncertainty, consequences of uncertainty principle.

Unit – II **(9 Hours)**

The Schrodinger Equation: The Schrodinger equation in one dimension, statistical interpretation of wave function, probability and probability current densities. Normalization, conditions for physical acceptability of wave functions with examples, position and momentum operators and their expectation values. Commutator of position and momentum operators

Unit – III **(9 Hours)**

Time Independent Schrodinger Equation: Demonstration of separation of variable method for time independent Schrodinger equation: Free particle wave function, wave packets, application to energy eigen values and stationary states for particle in a box problem. Reflection and transmission across a step and rectangular potential barrier

Unit - IV **(9 Hours)**

Atomic Physics: Beyond the Bohr's Quantum Model: Sommerfeld theory of elliptical orbits; Hydrogen atom energy levels and spectra, emission and absorption spectra; Correspondence principle; X-rays: Method of production, Continuous and Characteristic X-rays, Moseley's law.

Lasers: Lifetime of excited states, natural and Doppler width of spectral lines, emission (spontaneous and stimulated) and absorption processes, Einstein's A and B coefficients, principle of detailed balancing, metastable states, components of a laser and lasing action, working principle of a 4 level laser, e.g. He-Ne lasers; qualitative idea of X-ray free electron lasers.

Unit - V **(9 Hours)**

Basic Properties of Nuclei: Introduction (notation, a basic idea about nuclear size, mass, angular momentum, spin, parity, isospin), N-Z graph, nuclear binding energy, semi-empirical mass formula, and basic idea about the nuclear force and meson theory.

Radioactivity: Law of radioactivity and secular equilibrium.

Accelerators: Accelerator facility available in India: Van-de Graaff generator (Tandem accelerator), linear accelerator, cyclotron (principle, construction, working, advantages and disadvantages), discovery of new elements of the periodic table

9) Thirty years that shook physics: The story of quantum theory, G. Gamow, Garden City, NY: Doubleday, 1966.

PRACTICAL COMPONENT

(15 Weeks with 2 hours of laboratory session per week)

Mandatory activity:

- Sessions on the review of experimental data analysis, sources of error and their estimation in detail, writing of scientific laboratory reports including proper reporting of errors.
- Application to the specific experiments done in the lab
- Familiarization with Schuster`s focusing; determination of angle of prism.

At least five experiments to be performed from the following list

1) Measurement of Planck's constant using black body radiation and photo-detector
2) Photo-electric effect: photo current versus intensity and wavelength of light, maximum energy of photo-electrons versus frequency of light
3) To determine the work function of material of filament of directly heated vacuum diode.
4) To determine the Planck's constant using LEDs of at least 4 different colours.
5) To determine the wavelength of the H-alpha emission line of Hydrogen atoms.
6) To determine the ionization potential of mercury.
7) To determine the value of e/m by (a) Magnetic focusing or (b) Bar magnet.
8) To show the tunneling effect in tunnel diodes using I-V characteristics.
9) One innovative experiment designed by the teacher relevant to the syllabus.

DISCIPLINE SPECIFIC CORE COURSE – DSC - 11: SOLID STATE PHYSICS

Course Title & Code	Credits	Credit distribution of the course			Eligibility Criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical		
Solid State Physics DSC – 11	**4**	**3**	**0**	**1**	Class XII Pass with PCM	Studied 'Thermal Physics, Electricity & Magnetism' and Mathematical Physics-I,II & III

LEARNING OBJECTIVES

This course introduces the basic concepts and principles required to understand the various properties exhibited by condensed matter, especially solids. It enables the students to appreciate how the interesting and wonderful properties exhibited by matter depend upon the arrangement of its atomic and molecular constituents. The gained knowledge helps to solve problems in solid state physics using relevant mathematical tools. It also communicates the importance of solid- state physics in modern society.

LEARNING OUTCOMES

On successful completion of the module students should be able to,

- Elucidate the concept of lattice, crystals and symmetry operations
- Understand elementary lattice dynamics and its influence on the properties of materials
- Describe the origin of energy bands, and their influence on electronic behaviour
- Explain the origin of dia-, para-, and ferro-magnetic properties of solids
- Explain the origin of the dielectric properties exhibited by solids and the concept of polarizability
- Understand the basics of superconductivity
- In the laboratory students will carry out experiments based on the theory that they have learned to measure the magnetic susceptibility, dielectric constant, trace hysteresis loop. They will also employ to four probe methods to measure electrical conductivity and the hall set up to determine the hall coefficient of a semiconductor

SYLLABUS OF DSC - 11

THEORY COMPONENT

Unit – I - Crystal Structure **(10 Hours)**

Classification of solids as amorphous and crystalline materials, basic understanding of bonding in crystals, closed packed structure and packing fractions, lattice translation vectors, lattice with a basis, types of lattices, unit cell, symmetry elements, crystal planes and Miller indices, reciprocal lattice and Ewald's construction (geometrical), Brillouin Zones, Diffraction of X-rays: single crystal and powder method. Bragg's Law

Unit – II - Elementary band theory **(6 Hours)**

Brief discussion on free electron model, success and failure of free electron model, Kronig-Penney model, band gap, direct and indirect band gap, effective mass, concept of mobility, Hall effect (Semiconductor).

Unit – III - Elementary Lattice Dynamics (10 Hours)
Lattice Vibrations and Phonons: Linear monoatomic and diatomic chains, acoustic and optical phonons, Dulong and Petit's Law, Einstein and Debye theories of specific heat of solids. T^3 law

Unit – IV - Magnetic Properties of Matter (9 Hours)
Dia-, Para-, Ferri- and Ferromagnetic Materials, Classical Langevin Theory of dia– and para-magnetism, Weiss's Theory of Ferromagnetism and Ferromagnetic Domains, Curie's law, B-H Curve, hysteresis and energy loss, soft and hard material

Unit – V - Dielectric Properties of Materials (7 Hours)
Polarization, local electric field in solids, depolarization field, electric susceptibility, polarizability, Clausius Mossotti equation, classical theory of electronic polarizability, AC electronic polarizability, normal and anomalous dispersion, complex dielectric constant, basic idea of ferroelectricity and PE Hysteresis loop.

Unit – VI – Superconductivity (3 Hours)
Experimental results, critical temperature, critical magnetic field, Meissner effect, Type I and type II superconductors

References:
Essential Readings:

1) Introduction to Solid State Physics, Charles Kittel, 8th edition, 2004, Wiley India Pvt. Ltd.
2) Elements of Solid State Physics, J. P. Srivastava, 2nd edition, 2006, Prentice-Hall of India.
3) Introduction to Solids, Leonid V. Azaroff, 2004, Tata Mc-Graw Hill.
4) Solid State Physics, N. W. Ashcroft and N. D. Mermin, 1976, Cengage Learning.
5) Solid-state Physics, H. Ibach and H. Luth, 2009, Springer

Additional Readings:

1) Elementary Solid State Physics, M. Ali Omar, 2006, Pearson
2) Solid State Physics, R. John, 2014, McGraw Hill
3) Solid State Physics, M. A. Wahab, 2011, Narosa Publications

PRACTICAL COMPONENT

(15 Weeks with 2 hours of laboratory session per week)

- Sessions on the construction and use of specific measurement instruments and experimental apparatus used in the solid state physics laboratory, including necessary precautions.
- Sessions on the review of experimental data analysis, sources of error and their estimation in detail, writing of scientific laboratory reports including proper reporting of errors.
- Application to the specific experiments done in the laboratory.

At least four experiments to be performed from the following list

1) Measurement of susceptibility of paramagnetic solution (Quinck's tube method).
2) To measure the magnetic susceptibility of solids.
3) To study the dielectric constant of a material/s (solid/liquid) as a function of temperature and frequency.
4) To determine the complex dielectric constant and plasma frequency of a metal using Surface Plasmon Resonance (SPR) technique.
5) To determine the refractive index of a dielectric material using SPR technique.
6) To study the PE Hysteresis loop of a ferroelectric crystal.
7) To draw the BH curve of iron (Fe) using solenoid and determine the energy loss from hysteresis loop.
8) To measure the resistivity of a semiconductor (Ge) with temperature (up to 150^{o}C) by four-probe method and determine its band gap.
9) To determine the Hall coefficient of a semiconductor sample.
10) Analysis of X-ray diffraction data in terms of unit cell parameters and estimation of particle size.
11) To study magnetoresistance in a semiconductor with magnetic field

References for laboratory work:

5) Practical Physics, C. L. Arora, 19th edition, 2015, S. Chand

DISCIPLINE SPECIFIC CORE COURSE – DSC - 12: ANALOG ELECTRONICS

Course Title & Code	Credits	Credit distribution of the course			Eligibility Criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical		
Analog Electronics DSC – 12	**4**	**2**	**0**	**2**	Class XII Pass with PCM	Studied 'Electrical Circuit Analysis'

LEARNING OBJECTIVES

This course introduces the concept of semiconductor devices and their analog applications. It also emphasizes on understanding of amplifiers, oscillators, operational amplifier and their applications.

LEARNING OUTCOMES

At the end of this course, the following concepts will be learnt.

- To learn about diodes and its uses in rectification
- To gain an insight into working principle of photodiodes, solar cells, LED and zener diode as voltage regulator
- To gain an understanding of construction and working principle of bipolar junction transistors (BJTs), characteristics of different configurations, biasing and analysis of transistor amplifier
- To be able to design and understand use of different types of oscillators
- To learn the fundamentals of operation amplifiers and understand their operations to compare, add, or subtract two or more signals and to differentiate or integrate signals etc.

In the laboratory course, the students will be able to study characteristics of various diodes and BJT. They will be able to design amplifiers, and oscillators. Also different applications using Op-Amp will be designed.

SYLLABUS OF DSC - 12

THEORY COMPONENT

Unit – I - Two-terminal devices and their applications (5 Hours)

IV characteristics of a diode and its application as rectifier (half-wave and full wave rectifier), IV characteristics of a zener diode and its use as voltage regulator, principle, structure and characteristics of (1) LED, (2) Photodiode and (3) Solar Cell

Unit – II - Bipolar junction transistors (4 Hours)

n-p-n and p-n-p transistors, IV characteristics of CB and CE configurations, active, cut-off and saturation regions, current gains α and β, relations between α and β, physical mechanism of current flow

Unit – III – Amplifiers and sinusoidal oscillators (11 Hours)

Load line analysis of transistor, DC load line and Q-point, fixed bias and voltage divider bias,

transistor as 2-port network, h-parameter equivalent circuit of a transistor, analysis of a single-stage CE amplifier using hybrid model (input and output impedance, current and voltage gain)
Sinusoidal Oscillators: General idea of positive and negative feedback, Barkhausen's criterion for self-sustained oscillations, RC phase shift oscillator, determination of frequency, Hartley and Colpitts oscillators

Unit – IV - Operational Amplifiers (Black Box approach) (10 Hours)
Characteristics of an ideal and practical Op-Amp (IC 741), open-loop and closed-loop gain, frequency response, CMRR, slew rate and concept of virtual ground
Applications of Op-Amps: (1) Inverting and non-inverting amplifiers, (2) Adder, (3) Subtractor, (4) Differentiator, (5) Integrator, (6) Comparator and Zero crossing detector (7) Wein bridge oscillator

6) Electronic Principles, A. Malvino, D. J. Bates, 7th edition, 2018, Tata Mc-Graw Hill Education.
7) Electronic Devices and circuit Theory, R. L. Boylestad and L. D. Nashelsky, 2009, Pearson

Additional Readings:

1) Learning Electronic Devices and circuits, S. Salivahanan and N. S. Kumar, 3rd edition, 2012, Tata Mc-Graw Hill
2) Microelectronic Circuits, M. H. Rashid, 2nd edition, Cengage Learning
3) Microelectronic Devices and Circuits, D. A. Bell, 5th edition, 2015, Oxford University Press
4) Basic Electronics: Principles and Applications, C. Saha, A. Halder and D. Ganguli, 1st edition, 2018, Cambridge University Press
5) Solid State Electronic Devices, B. G.Streetman and S. K. Banerjee, 6th edition, 2009, PHI

PRACTICAL COMPONENT

(15 Weeks with 4 hours of laboratory session per week)

- Session on the construction and use of specific analogue devices and experimental apparatuses used in the lab, including necessary precautions
- Sessions on the review of experimental data analysis, sources of error and their estimation in detail, writing of scientific laboratory reports including proper reporting of errors.
- Application to the specific experiments done in the lab.

At least six experiments to be performed from the following list

1) To study the V-I characteristics of a Zener diode and its use as voltage regulator.
2) Study of V-I and power curves of solar cells, and find maximum power point and efficiency.
3) To study the characteristics of a Bipolar Junction Transistor in CE configuration.
4) To design a CE transistor amplifier of a given gain (mid-gain) using voltage divider bias.
5) To design a Wien bridge oscillator for given frequency using an op-amp.
6) To design an inverting amplifier using Op-amp (741, 351) for dc voltage of given gain
7) To design inverting amplifier using Op-amp (741, 351) and study its frequency response
8) To design non-inverting amplifier using Op-amp (741, 351) and study frequency response
9) To add two dc voltages using Op-amp in inverting and non-inverting mode
10) To study the zero-crossing detector and comparator
11) To investigate the use of an op-amp as an integrator
12) To investigate the use of an op-amp as a differentiator.

DISCIPLINE SPECIFIC ELECTIVE COURSE – DSE 3: ADVANCED MATHEMATICAL PHYSICS I

Course Title & Code	Credits	Credit distribution of the course			Eligibility Criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical		
Advanced Mathematical Physics I DSE – 3	**4**	**3**	**1**	**0**	Class XII Pass with PCM	Studied DSC 'Mathematical Physics I, II & Physics III'

LEARNING OBJECTIVES

The objective of the course is to impart the concept of generalized mathematical constructs in terms of algebraic structures mainly vector spaces. Linear algebra studies linear vector spaces, linear transformations, and the matrices and is an important mathematical tool with applications in physics, engineering, machine learning, economics and even life sciences and social sciences. This course is intended to provide a solid foundation in linear algebra as used by physicists and has direct applications in classical and quantum mechanics.

LEARNING OUTCOMES

After completing this course, students will be able to,

- Understand algebraic structures in n-dimension and basic properties of the linear vector spaces.
- Understand the concept of dual spaces and inner product spaces.
- Represent linear transformations as matrices and understand basic properties of matrices.
- Determine the eigenvalues and eigenvectors of matrices and diagonalise the matrices.
- Determine orthogonal basis for a vector space using Gram-Schmidt procedure.

SYLLABUS OF DSE - 3

THEORY COMPONENT

Unit – I **(13 Hours)**

Vector Spaces as Algebraic Structures: Definition and examples of groups, rings, fields and vector spaces. Real and Complex fields, Use of ket notation $|\alpha>$ for vectors. Subspaces, Linear combination of vectors, Linear dependence and independence of vectors, span of a subset of vectors, Bases and dimension of vector space, direct sum of spaces, representation of vectors as column vectors with R^n as example.

Inner Product Spaces: Inner product of vectors ($<\alpha|\beta>$) and norm of a vector, euclidean spaces and unitary spaces. Cauchy-Schwartz inequality, concept of length and distance, metric spaces. Hilbert Space (definition only). Linear functional, dual space, dual basis ($<\alpha|$ notation); Orthogonality of vectors, orthonormal basis, Gram-Schmidt procedure to construct an orthonormal basis.

Unit – II **(8 Hours)**

Linear Transformation: Linear Mappings and Examples, Homomorphism and Isomorphism of vector space, rank and nullity of a linear mapping, Range space and Kernel (null space) of a linear mapping, non-singular transformations, Nilpotent and Idempotent Transformations.

Unit – III **(10 Hours)**

Matrices as Representations: Matrix Representation of a Linear transformations, composition of linear transformations and matrix multiplication, linear algebra. Algebra of matrices, determinant and trace of matrix and their properties. Non-singular matrices. Rank of a matrix and invertibility of matrices. Direct sum and direct product of matrices.

Change of basis transformation, similar matrices, trace and determinant as invariants of basis change. Transpose and adjoint of a linear transformation, self-adjoint operators. Symmetric and hermitian matrices. Preservation of norms by orthogonal and unitary transformations.

Unit – IV **(14 Hours)**

Eigen-values and Eigenvectors: Eigen-values and eigen vectors of a transformation and corresponding matrix representation. Cayley- Hamilton Theorem (Statement only), its applications like inverse and powers of a matrix. Eigensystems of hermitian and unitary matrices. Diagonalization of matrices. Normal matrices. Simultaneous diagonalizability of two matrices.

Use of Matrices in Solving Coupled Linear first order ordinary differential equations with constant coefficients. Minimal Polynomial, Functions of a Matrix.

DISCIPLINE SPECIFIC ELECTIVE COURSE – DSE 4: PHYSICS OF DEVICES

Course Title & Code	Credits	Credit distribution of the course			Eligibility Criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical		
Physics of Devices DSE – 4	**4**	**2**	**0**	**2**	Class XII Pass with PCM	'Mathematical Physics-I', 'Mechanics' and 'Electrical Circuit Analysis'.

LEARNING OBJECTIVES

This paper is based on advanced electronics which covers the devices such as UJT, JFET, MOSFET, CMOS etc. Process of IC fabrication is discussed in detail.

LEARNING OUTCOMES

At the end of this course, students will be able to,

- Develop the basic knowledge of semiconductor device physics and electronic circuits along with the practical technological considerations and applications.
- Understand the operation of devices such as UJT, JFET, MOS, various bias circuits of MOSFET, basics of CMOS and charge coupled devices.
- Learn to analyse MOSFET circuits and develop an understanding of MOSFET I-V characteristics and the allowed frequency limits.
- Learn the IC fabrication technology involving the process of diffusion, implantation, oxidation and etching with an emphasis on photolithography and electron-lithography
- Apply concepts for the regulation of power supply by developing an understanding of various kinds of RC filters classified on the basis of allowed range of frequencies.
- Learn to use semiconductor diode as a clipper and clamper circuit

SYLLABUS OF DSE - 4

THEORY COMPONENT

Unit – I **(7 Hours)**

Semiconductors (P and N type), Energy band diagram, Barrier formation in pn junction diode, Derivation of barrier potential and barrier width, storage and depletion capacitances, current flow mechanism in forward and reverse bias junction, current components in a transistor, tunnel diode, metal-semiconductor contacts, Schottky junction and Ohmic junction

Unit – II **(6 Hours)**

Diode as clipper and clamper circuits, RC Filters: Passive-Low pass and High pass filters, Active (1st order Butterworth)-Low Pass, High Pass, Band Pass, and band reject Filters.

Unit – III **(11 Hours)**

Characteristic and small-signal equivalent circuits of UJT and JFET, introduction to metal oxide semiconductor (MOS) device/MOSFET, MOSFET - their frequency limits, enhancement and depletion mode MOSFETS, basic idea of CMOS and charge coupled devices, importance of power devices: power diode, SCR. Construction and I-V characteristics of DIAC and TRIAC.

Unit – IV **(4 Hours)**

(Basic idea) Basic process flow for IC fabrication, diffusion and implantation of dopants, passivation/oxidation technique for Si, contacts and metallization technique, basic idea of thermal evaporation and sputtering techniques, basic idea of photolithography, electron-lithography, SSI, MSI, LSI, VLSI and USI.

Unit – V **(2 Hours)**

Basic idea about sensors (gas/fire) and piezoelectric transducer

2) Introduction to Measurements and Instrumentation, A. K. Ghosh, 4th edition, 2017, PHI Learning
3) Semiconductor Physics and Devices, D. A. Neamen, 4th edition, 2011, Tata McGraw Hill

PRACTICAL COMPONENT

(15 Weeks with 4 hours of laboratory session per week)

At least six experiments to be performed from the following list

1) To design the active low pass and high pass filters of given specification.
2) To design the active filter (wide band pass and band reject) of given specification.
3) To study the output and transfer characteristics of a JFET.
4) To design a common source JFET amplifier and study its frequency response.
5) To study the output characteristics of a MOSFET.
6) To study the characteristics of a UJT and design a simple relaxation oscillator.
7) To study diode as clipper circuit.
8) To study diode as a clamper circuit.
9) Pattern the given structure on silicon wafer by wet chemical etching.

Suggested extra experiment:

1) Deposition of metallic thin films using thermal evaporation technique.
2) Preparation of a pn junction and study its IV characteristics.

DISCIPLINE SPECIFIC ELECTIVE COURSE – DSE 5: PHYSICS OF EARTH

Course Title & Code	Credits	Credit distribution of the course			Eligibility Criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical		
Physics of Earth DSE – 5	**4**	**3**	**1**	**0**	Class XII Pass with PCM	NIL

LEARNING OBJECTIVES

This course familiarizes the students with the origin of earth in the solar system and various processes occurring in atmosphere, oceans and earth's internal structure.

LEARNING OUTCOMES

At the end of this course student will be able to,

- Have an overview of structure of the earth as well as various dynamical processes occurring on it.
- Develop an understanding of evolution of the earth.
- Apply physical principles of elasticity and elastic wave propagation to understand modern global seismology as a probe of the Earth's internal structure.
- Understand the origin of magnetic field, Geodynamics of earthquakes and the description of seismic sources; a simple but fundamental theory of thermal convection.
- Explore various roles played by water cycle, carbon cycle, nitrogen cycles in maintaining steady state of earth leading to better understanding of the contemporary dilemmas (climate change, bio diversity loss, population growth, etc.) disturbing the Earth.
- Develop the problem solving skills by adding numerical and simulations to clarify the fundamental concepts.

SYLLABUS OF DSE - 5

THEORY COMPONENT

Unit – I **(10 Hours)**

The Earth and the Universe:

a) General characteristics and origin of the Universe. The Big Bang Theory. Estimation of age of the Universe and Hubble constant. Formation of Galaxies. Types of galaxies, Milky Way galaxy, Nebular hypothesis, Solar system, The Terrestrial and Jovian planets (Sizes, Acceleration due to gravity, Obliquity, Flatness, Eccentricity, Density, Temperature, Pressure, Atmosphere, Moons, Exceptions in trends). Titius-Bode law. Asteroid belt. Asteroids: origin types and examples, Meteorites.

b) Earth in the Solar system, origin, size, shape, mass, density, rotational and revolution parameters and its age. Earth's orbit and spin, the Moon's orbit and spin.

c) Energy and particle fluxes incident on the Earth.

Unit – II **(8 Hours)**

Structure of Earth:

a) Internal structure of Earth: Core, mental, magnetic field. Origin of the Magnetic field. Convection in Earth's core and production of its magnetic field. Dynamo Theory, calculation of magnetic fields, Causes of variation of Magnetic Field and Palaeomagnetism.
b) The Hydrosphere: The oceans, their extent, depth, volume, chemical composition. Ocean circulations. Oceanic current system and effect of Coriolis forces.
c) The Cryosphere: Polar caps and ice sheets. Mountain glaciers, permafrost.

Unit – III **(8 Hours)**

Dynamical Processes:

a) The Solid Earth: Concept of plate tectonics; types of plate movements, hotspots; sea-floor spreading and continental drift.
b) Earthquake and earthquake belts. Types and properties of Seismic waves, Richter scale, geophones.
c) Volcanoes: types, products and distribution.
d) Concepts of eustasy, air-sea interaction; wave erosion and beach processes. Tides. Tsunamis.

Unit – IV **(10 Hours)**

The Atmosphere

a) The Atmosphere: Features of different layers, variation of temperature with altitude; Dry, moist and environmental lapse rate, variation of density and pressure with altitude, Types of clouds and formation.
b) The Atmosphere: Atmospheric circulation. Causes of Atmospheric circulation, Formation of three cells, Easterlies and Westerlies, and ICTZ, Weather and climatic changes. Earth's heat budget. Cyclones and anti-cyclones, tropical storms, hurricanes and tornadoes.
c) Climate: Earth's temperature and greenhouse effect. Paleoclimate and recent climate changes. The Indian monsoon system.

Unit – V **(9 Hours)**

Disturbing the Earth – Contemporary dilemmas

a) Hydrosphere: Fresh water depletion.
b) Geosphere: Chemical effluents, nuclear waste.
c) Biosphere: Biodiversity loss. Deforestation. Water cycle, Carbon cycle. The role of cycles in maintaining a steady state.
d) Air Pollution: Types of air pollutants, Effects on atmosphere and living organisms. Ozone Hole.

DISCIPLINE SPECIFIC CORE COURSE – PHYSICS DSC 4: WAVES AND OPTICS

Course Title & Code	Credits	Credit distribution of the course			Eligibility Criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical		
Waves and Optics PHYSICS DSC – 4	**4**	**2**	**0**	**2**	Class XII Pass with Science	Studied Mathematical Physics-I, Mechanics

LEARNING OBJECTIVES

This is a core course in Physics curriculum that begins with explaining ideas of superposition of harmonic oscillations leading to physics of travelling and standing waves. The course also provides an in depth understanding of wave phenomena of light, namely, interference and diffraction with emphasis on practical applications of the same.

LEARNING OUTCOMES

On successfully completing the requirements of this course, the students will have the skill and knowledge to,

- Understand simple harmonic oscillation and superposition principle.
- Understand superposition of a range of collinear and mutually perpendicular simple harmonic motions and their applications.
- Understand concept of normal modes in stationary waves: their frequencies and configurations.
- Understand interference as superposition of waves from coherent sources derived from same parent source.
- Demonstrate understanding of interference experiments: Young's double slit, Fresnel's biprism, Llyod's mirror, Newton's rings
- Demonstrate basic concepts of diffraction: Superposition of wavelets diffracted from apertures
- Understand Fraunhoffer diffraction from apertures: single slit, double slit, grating
- Demonstrate fundamental understanding of Fresnel diffraction: Half period zones, diffraction of different apertures
- Laboratory course is designed to understand the principles of measurement and skills in experimental designs.

SYLLABUS OF PHYSICS DSC – 4

THEORY COMPONENT

Unit – I **(11 Hours)**

Superposition of collinear harmonic oscillations: Simple harmonic motion (SHM); linearity and superposition principle; superposition of two collinear oscillations having (1) equal frequencies and (2) different frequencies (beats).

Superposition of two perpendicular harmonic oscillations: Graphical and analytical methods.

Lissajous figures with equal and unequal frequencies and their uses
Superposition of two harmonic Waves: Standing (stationary) waves in a string; normal modes of stretched strings

Unit – II **(8 Hours)**

Interference: Division of amplitude and division of wavefront; Young's double slit experiment: width and shape of fringes; Fresnel's biprism; Lloyd's mirror; Phase change on reflection: Stokes' treatment; Interference in thin films: parallel and wedge-shaped films. Fringes of equal inclination (Haidinger fringes); Fringes of equal thickness (Fizeau Fringes); Newton's rings: Measurement of wavelength and refractive index

Unit – III **(11 Hours)**

Diffraction:
Fraunhofer diffraction: Single slit, double slit, diffraction grating
Fresnel diffraction: Fresnel's assumptions. Fresnel's half-period zones for plane wave. Explanation of rectilinear propagation of light; Fresnel's diffraction pattern of a straight edge, a slit and a wire using half-period zone analysis

4) Fundamental of Optics, A. Kumar, H. R. Gulati and D. R. Khanna, 2011, R. Chand Publications.
5) Optics, A. Ghatak, 6th edition, 2017, McGraw-Hill Education, New Delhi
6) The Physics of Vibrations and Waves, H. J. Pain, 2013, John Wiley and Sons.

Additional Readings:

1) Principles of Optics, M. Born and E. Wolf, 7th edition, 1999, Pergamon Press.
2) Optics, E. Hecht, 4th edition, 2014, Pearson Education.
3) Fundamentals of Optics, F. A. Jenkins and H. E. White, 1981, McGraw-Hill

PRACTICAL COMPONENT

(15 Weeks with 4 hours of laboratory session per week)

At least 7 experiments to be performed from the following list

1) To determine the frequency of an electric tuning fork by Melde's experiment and verify λ^2–T law.
2) To study Lissajous figures.
3) Familiarization with Schuster`s focusing and determination of angle of prism.
4) To determine refractive index of the material of a prism using sodium light.
5) To determine the dispersive power and Cauchy's constants of the material of a prism using mercury light.
6) To determine wavelength of sodium light using Fresnel biprism.
7) To determine wavelength of sodium light using Newton's rings.
8) To determine the thickness of a thin paper by measuring the width of the interference fringes produced by a wedge-shaped film.

9) To determine wavelength of (1) Na source and (2) spectral lines of Hg source using plane diffraction grating.
10) To determine dispersive power and resolving power of a plane diffraction grating.

DISCIPLINE SPECIFIC ELECTIVE COURSE – PHYSICS DSE 14a: INTRODUCTION TO NUMERICAL METHODS

Course Title & Code	Credits	Credit distribution of the course			Eligibility Criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical		
Introduction to Numerical Methods PHYSICS DSE 14a	**4**	**2**	**0**	**2**	Class XII Pass with Science	Elementary calculus

LEARNING OBJECTIVES

The main objective of this course is to introduce the students to the field of numerical analysis enabling them to solve a wide range of physics problems. The skills developed during the course will prepare them not only for doing fundamental and applied research but also for a wide variety of careers.

LEARNING OUTCOMES

After completing this course, student will be able to,

- Analyse a physics problem, establish the mathematical model and determine the appropriate numerical techniques to solve it.
- Derive numerical methods for various mathematical tasks such as root finding, interpolation, least squares fitting, numerical differentiation, numerical integration, and solution of initial value problems.
- Analyse and evaluate the accuracy of the numerical methods learned.

In the laboratory course, the students will learn to implement these numerical methods in Python and develop codes to solve various physics problems and interpret the results.

SYLLABUS OF PHYSICS DSE – 14a
THEORY COMPONENT

Unit – I **(7 Hours)**

Approximation and errors in computing: Introduction to numerical computation, Taylor's expansion and mean value theorem; Floating point computation, overflow and underflow; IEEE single and double precision format; Rounding and truncation error, absolute and relative error, error propagation.

Solutions of algebraic and transcendental equations: Basic idea of iteration method, Bisection method, Secant method, Newton Raphson method; comparison of order of convergence.

Unit – II **(7 hours)**

Interpolation: Interpolation and Lagrange polynomial, divided differences, Newton divided-difference form of the interpolating polynomial with equally spaced nodes. Theoretical error in interpolation.

Least Squares Approximation: Least squares linear regression, Least squares regression for exponential and power functions by taking logarithm.

Unit - III **(8 Hours)**

Numerical Differentiation: Using finite difference to approximate derivatives of first and second order using Taylor series and error in this approximation.

Numerical Integration: Newton Cotes quadrature methods; derivation of Trapezoidal and Simpson (1/3 and 3/8) rules from Lagrange interpolating polynomial; error and degree of precision of a quadrature formula; composite formulae for trapezoidal and Simpson methods; Gauss Legendre quadrature method.

Unit - IV **(8 Hours)**

Initial Value Problems: Solution of initial value problems by Euler, modified Euler and Runge Kutta (RK2, RK4) methods; local and global errors, comparison of errors in the Euler and RK methods, system of first order differential equations. Solving higher order initial value problems by converting them into a system of first order equations.

4) A Friendly Introduction to Numerical Analysis, B. Bradie, 2007, Pearson India

Additional Readings:

1) Numerical Recipes: The art of scientific computing, W. H. Press, S. A. Teukolsky and W. Vetterling, 3rd edition, 2007, Cambridge University Press
2) Numerical Methods for Scientists and Engineers, R. W. Hamming, 1987, Dover Publications
3) Applied numerical analysis, C. F. Gerald and P. O. Wheatley, 2007, Pearson Education
4) Numerical Analysis, R. L. Burden and J. D. Faires, 2011, Brooks/Cole, Cengage Learning
5) Numerical Methods, V. N. Vedamurthy and N. Ch. S.N. Iyengar, 2011, Vikas Publishing House

PRACTICAL COMPONENT

(15 Weeks with 4 hours of laboratory session per week)

The aim of this Lab is not just to teach computer programming and numerical analysis but to emphasize its role in solving problems in Physics.

- Assessment is to be done not only on the programming but also on the basis of formulating the problem.
- The list of recommended programs is suggestive only. Students should be encouraged to do more physics applications. Emphasis should be given to formulate a physics problem as mathematical one and solve by computational methods.
- The students should be encouraged to develop and present an independent project.
- **At least 12 programs must be attempted (taking two from each unit). The implementation is to be done in Python. Use of scipy inbuilt functions may be encouraged**

Unit 1

Basic Elements of Python: The Python interpreter, the print statement, comments, Python as simple calculator, objects and expressions, variables (numeric, character and sequence types) and assignments, mathematical operators. Strings, Lists, Tuples and Dictionaries, type conversions, input statement, list methods. List mutability, formatting in the print statement.

Control Structures: Conditional operations, ***if, if-else, if-elif-else, while*** and ***for*** Loops, indentation, break and continue, List comprehension. Simple programs for practice like solving quadratic equations, temperature conversion etc.

Functions: Inbuilt functions, user-defined functions, local and global variables, passing functions, modules, importing modules, math module, making new modules. Writing functions to perform simple operations like finding largest of three numbers, listing prime numbers, etc. Use of inbuilt functions to generate pseudo random numbers.

Recommended List of Programs

a) Make a function that takes a number *N* as input and returns the value of factorial of *N*. Use this function to print the number of ways a set of *m* red and *n* blue balls can be arranged.
b) Generate random numbers (integers and floats) in a given range and calculate area and volume of regular shapes with random dimensions.
c) Write functions to convert Cartesian coordinates of a given point to cylindrical and spherical polar coordinates or vice versa.
d) Solve quadratic equations for the three cases of distinct real, double real and complex conjugate roots.

Unit 2

NumPy Fundamentals: Importing *Numpy*, Difference between List and NumPy array, Adding, removing and sorting elements, creating arrays using *ones(), zeros(), random(), arange(), linspace()*. Basic array operations (*sum, max, min, mean, variance*), 2-d arrays, matrix operations, reshaping and transposing arrays, savetxt() and loadtxt().

Plotting with Matplotlib: *matplotlib.pyplot* functions, plotting of functions given in closed form as well as in the form of discrete data and making histograms

Recommended List of Programs

(a) To generate data for coordinates of a projectile and plot the trajectory. Determine the range, maximum height and time of flight for a projectile motion.
(b) To plot the displacement-time and velocity-time graph for the undamped, under damped critically damped and over damped oscillator using *matplotlib* (using given formulae).
(c) To generate array of N random numbers drawn from a given distribution (uniform, binomial, poisson and gaussian) and draw histogram using *matplotlib* for increasing N to verify the distribution.
(d) To approximate the elementary functions (e.g. $\exp(x)$, $\sin(x)$, $\cos(x)$, $\ln(1+x)$, etc.) by a finite number of terms of Taylor's series and discuss the truncation error. To plot the function as well the nth partial sum of its series for various values of *n* on the same graph and visualise the convergence of series.

Unit 3

Root Finding: Implement the algorithms for Bisection, Secant and Newton Raphson methods or their combinations to,

(a) Determine the depth up to which a spherical homogeneous object of given radius and density will sink into a fluid of given density.

(b) Solve transcendental equations like $\alpha = \tan(\alpha)$.
(c) Approximate nth root of a number up to a given number of significant digits.

Unit 4

Interpolation and Least Square Fitting:

a) Given a dataset (x, y) with equidistant x values, prepare the Newton's divided difference table. Generate a tabulated data for an elementary function, approximate it by a polynomial and compare with the true function.
b) Given a dataset (x, y) corresponding to a physics problem, use Lagrange and Newton's forms of interpolating polynomials and compare. Determine the value of y at an intermediate value of x not included in the data set. This may be done with equally spaced and non-equally spaced x-values.
c) Make Python function for least square fitting, use it for fitting given data (*x, y*) and estimate the parameters *a, b* as well as uncertainties in the parameters for the following cases :

i. Linear $(y = ax + b)$
ii. Power law $(y = ax^b)$ and
iii. Exponential $(y = ae^{bx})$

The real data taken in physics lab may be used here.

d) Compare the interpolating polynomial for a given dataset (following a known form e.g. exponential) with the approximation obtained by least square fitting.

Unit 5

Differentiation and Integration:

a) To compute the left, right and central approximations for derivative of a function given in closed form. Plot both the function and derivative on the same graph. Plot (using *matplotlib)* the error as a function of step size on a log-log graph, study the behaviour of the plot as step size decreases and hence discuss the effect of round off error.
b) Use integral definition of error function to compute and plot erf(x) in a given range. Use Trapezoidal, Simpson and Gauss Legendre methods and compare the results for small and large values of x.
c) Verify the degree of precision of each quadrature rule.
d) Approximate the value of π by evaluating the integral $\int_0^\infty \frac{1}{x^2+1} dx$ using Simpson and Gauss Legendre method. More integrals may be evaluated.

Unit 6

Initial Value Problems (IVP):

a) Compare the errors in Euler, RK2 and RK4 by solving a first order IVP with known solution. Reduce the step size to a point where the round off errors takes over.
b) Radioactive decay: With a given number of initial nuclei and decay constant plot the number of nuclei left as a function of time and determine the half life
c) Solve a system of two first order differential equations by Euler, RK2 and RK4 methods. Use it to solve an nth order IVP. Solve a damped free and forced harmonic oscillator problem using this.
d) Solve a physics problem like free fall with air drag or parachute problem using RK method.
e) Obtain the current flowing in a series LCR circuit with constant voltage for a given set of initial conditions.

DISCIPLINE SPECIFIC ELECTIVE COURSE – PHYSICS DSE 14b: ANALOG ELECTRONICS

Course Title & Code	Credits	Credit distribution of the course			Eligibility Criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical		
Analog Electronics PHYSICS DSE – 14b	4	2	0	2	Class XII Pass with Science	NIL

LEARNING OBJECTIVES

This course introduces the concept of semiconductor devices and their analog applications. It also emphasizes on understanding of amplifiers, oscillators, operational amplifier and their applications.

LEARNING OUTCOMES

At the end of this course, the following concepts will be learnt.

- To learn about diodes and its uses in rectification
- To gain an insight into working principle of photodiodes, solar cells, LED and zener diode as voltage regulator
- To gain an understanding of construction and working principle of bipolar junction transistors (BJTs), characteristics of different configurations, biasing and analysis of transistor amplifier
- To be able to design and understand use of different types of oscillators
- To learn the fundamentals of operation amplifiers and understand their operations to compare, add, or subtract two or more signals and to differentiate or integrate signals etc.

In the laboratory course, the students will be able to study characteristics of various diodes and BJT. They will be able to design amplifiers, and oscillators. Also different applications using Op-Amp will be designed.

SYLLABUS OF Physics DSE – 14b

THEORY COMPONENT

Unit – I - Two-terminal devices and their applications (5 Hours)

IV characteristics of a diode and its application as rectifier (half-wave and full wave rectifier), IV characteristics of a zener diode and its use as voltage regulator, principle, structure and characteristics of (1) LED, (2) Photodiode and (3) Solar Cell

Unit – II - Bipolar junction transistors (4 Hours)

n-p-n and p-n-p transistors, IV characteristics of CB and CE configurations, active, cut-off and saturation regions, current gains α and β, relations between α and β, physical mechanism of current flow

Unit – III – Amplifiers and sinusoidal oscillators (11 Hours)

Load line analysis of transistor, DC load line and Q-point, fixed bias and voltage divider bias, transistor as 2-port network, h-parameter equivalent circuit of a transistor, analysis of a

single-stage CE amplifier using hybrid model (input and output impedance, current and voltage gain)
Sinusoidal Oscillators: General idea of positive and negative feedback, Barkhausen's criterion for self-sustained oscillations, RC phase shift oscillator, determination of frequency, Hartley and Colpitts oscillators

Unit – IV - Operational Amplifiers (Black Box approach) (10 Hours)
Characteristics of an ideal and practical Op-Amp (IC 741), open-loop and closed-loop gain, frequency response, CMRR, slew rate and concept of virtual ground
Applications of Op-Amps: (1) Inverting and non-inverting amplifiers, (2) Adder, (3) Subtractor, (4) Differentiator, (5) Integrator, (6) Comparator and Zero crossing detector (7) Wein bridge oscillator

5) Solid State Electronic Devices, B. G.Streetman and S. K. Banerjee, 6th edition, 2009, PHI

PRACTICAL COMPONENT

(15 Weeks with 4 hours of laboratory session per week)

- Session on the construction and use of specific analogue devices and experimental apparatuses used in the lab, including necessary precautions
- Sessions on the review of experimental data analysis, sources of error and their estimation in detail, writing of scientific laboratory reports including proper reporting of errors.
- Application to the specific experiments done in the lab.

At least six experiments to be performed from the following list

1) To study the V-I characteristics of a Zener diode and its use as voltage regulator.

2) Study of V-I and power curves of solar cells, and find maximum power point and efficiency.
3) To study the characteristics of a Bipolar Junction Transistor in CE configuration.
4) To design a CE transistor amplifier of a given gain (mid-gain) using voltage divider bias.
5) To design a Wien bridge oscillator for given frequency using an op-amp.
6) To design an inverting amplifier using Op-amp (741, 351) for dc voltage of given gain
7) To design inverting amplifier using Op-amp (741, 351) and study its frequency response
8) To design non-inverting amplifier using Op-amp (741, 351) and study frequency response
9) To add two dc voltages using Op-amp in inverting and non-inverting mode
10) To study the zero-crossing detector and comparator
11) To investigate the use of an op-amp as an integrator
12) To investigate the use of an op-amp as a differentiator.

DISCIPLINE SPECIFIC ELECTIVE COURSE – PHYSICS DSE 14c: PHYSICS OF EARTH

Course Title & Code	Credits	Credit distribution of the course			Eligibility Criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical		
Physics of Earth PHYSICS DSE – 14c	**4**	**3**	**1**	**0**	Class XII Pass with Science	NIL

LEARNING OBJECTIVES

This course familiarizes the students with the origin of earth in the solar system and various processes occurring in atmosphere, oceans and earth's internal structure.

LEARNING OUTCOMES

At the end of this course student will be able to,

- Have an overview of structure of the earth as well as various dynamical processes occurring on it.
- Develop an understanding of evolution of the earth.
- Apply physical principles of elasticity and elastic wave propagation to understand modern global seismology as a probe of the Earth's internal structure.
- Understand the origin of magnetic field, geodynamics of earthquakes and the description of seismic sources; a simple but fundamental theory of thermal convection; the distinctive rheological behaviour of the upper mantle and its top.
- Explore various roles played by water cycle, carbon cycle, nitrogen cycles in maintaining steady state of earth leading to better understanding of the contemporary dilemmas (climate change, bio diversity loss, population growth, etc.) disturbing the Earth
- Develop the problem solving skills by adding numerical and simulations to clarify the fundamental concepts.

SYLLABUS OF DSE – 14c

THEORY COMPONENT

Unit – I **(10 Hours)**

The Earth and the Universe:

a) General characteristics and origin of the Universe. The Big Bang Theory. Estimation of age of the Universe and Hubble constant. Formation of Galaxies. Types of galaxies, Milky Way galaxy, Nebular hypothesis, Solar system, The Terrestrial and Jovian planets (Sizes, Acceleration due to gravity, Obliquity, Flatness, Eccentricity, Density, Temperature, Pressure, Atmosphere, Moons, Exceptions in trends). Titius-Bode law. Asteroid belt. Asteroids: origin types and examples, Meteorites.

b) Earth in the Solar system, origin, size, shape, mass, density, rotational and revolution parameters and its age. Earth's orbit and spin, the Moon's orbit and spin.

c) Energy and particle fluxes incident on the Earth.

Unit – II **(8 Hours)**

Structure of Earth:

a) Internal structure of Earth: Core, mental, magnetic field. Origin of the Magnetic field. Convection in Earth's core and production of its magnetic field. Dynamo Theory, calculation of magnetic fields, Causes of variation of Magnetic Field and Palaeomagnetism.
b) The Hydrosphere: The oceans, their extent, depth, volume, chemical composition. Ocean circulations. Oceanic current system and effect of Coriolis forces.
c) The Cryosphere: Polar caps and ice sheets. Mountain glaciers, permafrost.

Unit – III **(8 Hours)**

Dynamical Processes:

a) The Solid Earth: Concept of plate tectonics; types of plate movements, hotspots; sea-floor spreading and continental drift.
b) Earthquake and earthquake belts. Types and properties of Seismic waves, Richter scale, geophones.
c) Volcanoes: types, products and distribution.
d) Concepts of eustasy, air-sea interaction; wave erosion and beach processes. Tides. Tsunamis.

Unit – IV **(10 Hours)**

The Atmosphere

a) The Atmosphere: Features of different layers, variation of temperature with altitude; Dry, moist and environmental lapse rate, variation of density and pressure with altitude, Types of clouds and formation.
b) The Atmosphere: Atmospheric circulation. Causes of Atmospheric circulation, Formation of three cells, Easterlies and Westerlies, and ICTZ, Weather and climatic changes. Earth's heat budget. Cyclones and anti-cyclones, tropical storms, hurricanes and tornadoes.
c) Climate: Earth's temperature and greenhouse effect. Paleoclimate and recent climate changes. The Indian monsoon system.

Unit – V **(9 Hours)**

Disturbing the Earth – Contemporary dilemmas

a) Hydrosphere: Fresh water depletion.
b) Geosphere: Chemical effluents, nuclear waste.
c) Biosphere: Biodiversity loss. Deforestation. Water cycle, Carbon cycle. The role of cycles in maintaining a steady state.
d) Air Pollution: Types of air pollutants, Effects on atmosphere and living organisms. Ozone Hole.

LEARNING OBJECTIVES

This is a core course in Physics curriculum that begins with explaining ideas of superposition of harmonic oscillations leading to physics of travelling and standing waves. The course also provides an in depth understanding of wave phenomena of light, namely, interference and diffraction with emphasis on practical applications of the same.

LEARNING OUTCOMES

On successfully completing the requirements of this course, the students will have the skill and knowledge to,

- Understand simple harmonic oscillation and superposition principle.
- Understand superposition of a range of collinear and mutually perpendicular simple harmonic motions and their applications.
- Understand concept of normal modes in stationary waves: their frequencies and configurations.
- Understand interference as superposition of waves from coherent sources derived from same parent source.
- Demonstrate understanding of interference experiments: Young's double slit, Fresnel's biprism, Llyod's mirror, Newton's rings
- Demonstrate basic concepts of diffraction: Superposition of wavelets diffracted from apertures
- Understand Fraunhoffer diffraction from apertures: single slit, double Slit, grating
- Demonstrate fundamental understanding of Fresnel diffraction: Half period zones, diffraction of different apertures
- Laboratory course is designed to understand the principles of measurement and skills in experimental designs.

SYLLABUS OF PHYSICS DSC – 7

THEORY COMPONENT

Unit – I **(11 Hours)**

Superposition of collinear harmonic oscillations: Simple harmonic motion (SHM); linearity and superposition principle; superposition of two collinear oscillations having (1) equal frequencies and (2) different frequencies (beats).

Superposition of two perpendicular harmonic oscillations: Graphical and analytical methods. Lissajous figures with equal and unequal frequencies and their uses

Superposition of two harmonic Waves: Standing (stationary) waves in a string; normal modes of stretched strings

Unit – II **(8 Hours)**

Interference: Division of amplitude and division of wavefront; Young's double slit experiment: width and shape of fringes; Fresnel's biprism; Lloyd's mirror; Phase change on reflection: Stokes' treatment; Interference in thin films: parallel and wedge-shaped films. Fringes of equal inclination (Haidinger fringes); Fringes of equal thickness (Fizeau Fringes); Newton's rings: Measurement of wavelength and refractive index

Unit – III **(11 Hours)**

Diffraction:

Fraunhofer diffraction: Single slit, double slit, diffraction grating

Fresnel diffraction: Fresnel's assumptions. Fresnel's half-period zones for plane wave. Explanation of rectilinear propagation of light; Fresnel's diffraction pattern of a straight edge, a slit and a wire using half-period zone analysis

Additional Readings:

1) Principles of Optics, M. Born and E. Wolf, 7th edition, 1999, Pergamon Press.
2) Optics, E. Hecht, 4th edition, 2014, Pearson Education.
3) Fundamentals of Optics, F. A. Jenkins and H. E. White, 1981, McGraw-Hill

PRACTICAL COMPONENT

(15 Weeks with 4 hours of laboratory session per week)

At least 7 experiments to be performed from the following list

1) To determine the frequency of an electric tuning fork by Melde's experiment and verify λ^2–T law.
2) To study Lissajous figures.
3) Familiarization with Schuster`s focusing and determination of angle of prism.
4) To determine refractive index of the material of a prism using sodium light.
5) To determine the dispersive power and Cauchy's constants of the material of a prism using mercury light.
6) To determine wavelength of sodium light using Fresnel biprism.
7) To determine wavelength of sodium light using Newton's rings.
8) To determine the thickness of a thin paper by measuring the width of the interference fringes produced by a wedge-shaped Film.

9) To determine wavelength of (1) Na source and (2) spectral lines of Hg source using plane diffraction grating.
10) To determine dispersive power and resolving power of a plane diffraction grating.

DISCIPLINE SPECIFIC CORE COURSE – PHYSICS DSC 8: MICROPROCESSOR AND MICROCONTROLLER

Course Title & Code	Credits	Credit distribution of the course			Eligibility Criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical		
Microprocessor and Microcontroller PHYSICS DSC – 8	**4**	**2**	**0**	**2**	Class XII Pass with Science	Basic Electronics

LEARNING OBJECTIVES

This paper introduces the basic concepts of microprocessor and microcontrollers to the undergraduate students. Basic architecture and buildings blocks of a microprocessor and microcontrollers will be discussed in detail. Pin out diagram and the assembly language programming is discussed for both of them. The course is supported by a lab where students will apply the learned concepts and write simple programs to strengthen their classroom learning.

LEARNING OUTCOMES

Upon completion of this course, students will be able to,

- Describe the basic difference between a microprocessor and microcontroller and a general computing system.
- Explain the basic architecture and pin out diagram of 8085 microprocessor and 8051 microcontroller.
- Explain the difference between machine code, mnemonics, assembly language (low level) and high level language.
- Explain the concept of memory, different types of memory available in a system. The concept of memory map and how addresses are assigned to each memory element and peripherals.
- Classify instructions 1-, 2- or 3-byte instructions and into arithmetic, logical types etc.
- Describe the different addressing modes available to perform the same task.
- Write simple programs for 8085 microprocessor and 8051 microcontroller.

SYLLABUS OF PHYSICS DSC - 8

THEORY COMPONENT

Unit – I - Microcomputer organization **(4 Hours)**

Basic organization of a microcomputer/ microprocessor based system, computer memory, memory classification (RAM and ROM), memory organization and addressing, memory interfacing, memory map

Unit – II - 8085 Microprocessor architecture **(4 Hours)**

Main features of 8085, pin-out diagram of 8085, data and address buses, registers, ALU, stack pointer, program counter

Unit – III - 8085 Programming **(7 Hours)**
Instruction classification (data transfer, arithmetic, logical, branch, and control instructions), general discussion on 1 byte, 2 bytes and 3 bytes instructions, subroutines, instruction cycle, timing diagram of MOV and MVI, hardware and software interrupts (general discussion).

Unit – IV - 8051 microcontroller **(8 Hours)**
Microcontroller vs microprocessor, block diagram of 8051 microcontroller, 8051 assembly language programming, program counter and ROM memory map, data types and directives, flag bits and program status word (PSW) register, register banks and stack, jump, loop and call instructions

Unit – V - 8051 I/O port programming **(3 Hours)**
Pin out diagram of 8051 microcontroller, introduction of I/O port and their general features, I/O port programming in 8051 (using assembly language)

Unit – VI - 8051 Programming **(4 Hours)**
8051 addressing modes and accessing memory locations using various addressing modes, arithmetic and logic instructions

Additional Readings:

1) Embedded Systems: Design and Applications, S. F. Barrett, 2008, Pearson Education India.
2) Introduction to embedded system, K. V. Shibu, 1st edition, 2009, McGraw Hill.
3) Embedded Microcomputer systems: Real time interfacing, J. W. Valvano, 2011, Cengage Learning.

PRACTICAL COMPONENT

(15 Weeks with 4 hours of laboratory session per week)

There are two options here:
A. Every Student must perform at least 06 experiments each from Section-A and Section-B
Or
B. Every Student must perform at least 04 experiments each from Section-A and Section-B and a suitable project based on Arduino.

Section-A: Programs using 8085 Microprocessor

1) Addition and subtraction of two 8 bits numbers using direct addressing mode

2) Addition and subtraction of two 8 bits numbers using indirect addressing mode
3) Addition and subtraction of two 16 bits numbers using direct addressing mode
4) Addition and subtraction of two 16 bits numbers using indirect addressing mode
5) Multiplication by repeated addition.
6) Division by repeated subtraction.
7) Handling of 16-bit Numbers.
8) Use of CALL and RETURN Instruction.
9) Block data handling.
10) Parity checking in an 8-bit and 16 bit number.

Section-B: Experiments using 8051 microcontroller:

1) To find that the given numbers is prime or not.
2) To find the factorial of a number.
3) Write a program to make the two numbers equal by increasing the smallest number and decreasing the largest number.
4) Use one of the four ports of 8051 for O/P interfaced to eight LED's. Simulate binary counter (8 bit) on LED's.
5) Program to glow the first four LEDs then next four using TIMER application.
6) Program to rotate the contents of the accumulator first right and then left.
7) Program to run a countdown from 9-0 in the seven segment LED display.
8) To interface seven segment LED display with 8051 microcontroller and display 'HELP' in the seven segment LED display.
9) To toggle '1234' as '1324' in the seven segments LED display.
10) Interface stepper motor with 8051 and write a program to move the motor through a given angle in clock wise or counter clockwise direction.
11) Application of embedded systems: Temperature measurement & display on LCD

DISCIPLINE SPECIFIC ELECTIVE COURSE – PHYSICS DSE 11: INTRODUCTION TO NUMERICAL METHODS

Course Title & Code	Credits	Credit distribution of the course			Eligibility Criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical		
Introduction to Numerical Methods PHYSICS DSE 11	**4**	**2**	**0**	**2**	Class XII Pass with Science	Elementary calculus

LEARNING OBJECTIVES

The main objective of this course is to introduce the students to the field of numerical analysis enabling them to solve a wide range of physics problems. The skills developed during the course will prepare them not only for doing fundamental and applied research but also for a wide variety of careers.

LEARNING OUTCOMES

After completing this course, student will be able to,

- Analyse a physics problem, establish the mathematical model and determine the appropriate numerical techniques to solve it.
- Derive numerical methods for various mathematical tasks such as root finding, interpolation, least squares fitting, numerical differentiation, numerical integration, and solution of initial value problems.
- Analyse and evaluate the accuracy of the numerical methods learned.

In the laboratory course, the students will learn to implement these numerical methods in Python and develop codes to solve various physics problems and interpret the results.

SYLLABUS OF PHYSICS DSE – 11

THEORY COMPONENT

Unit – I **(7 Hours)**

Approximation and errors in computing: Introduction to numerical computation, Taylor's expansion and mean value theorem; Floating point computation, overflow and underflow; IEEE single and double precision format; Rounding and truncation error, absolute and relative error, error propagation.

Solutions of algebraic and transcendental equations: Basic idea of iteration method, Bisection method, Secant method, Newton Raphson method; comparison of order of convergence.

Unit – II **(7 hours)**

Interpolation: Interpolation and Lagrange polynomial, divided differences, Newton divided-difference form of the interpolating polynomial with equally spaced nodes. Theoretical error in interpolation.

Least Squares Approximation: Least squares linear regression, Least squares regression for

exponential and power functions by taking logarithm.

Unit - III **(8 Hours)**

Numerical Differentiation: Using finite difference to approximate derivatives of first and second order using Taylor series and error in this approximation.

Numerical Integration: Newton Cotes quadrature methods; derivation of Trapezoidal and Simpson (1/3 and 3/8) rules from Lagrange interpolating polynomial; error and degree of precision of a quadrature formula; composite formulae for trapezoidal and Simpson methods; Gauss Legendre quadrature method.

Unit - IV **(8 Hours)**

Initial Value Problems: Solution of initial value problems by Euler, modified Euler and Runge Kutta (RK2, RK4) methods; local and global errors, comparison of errors in the Euler and RK methods, system of first order differential equations. Solving higher order initial value problems by converting them into a system of first order equations.

5) Numerical Methods, V. N. Vedamurthy and N. Ch. S.N. Iyengar, 2011, Vikas Publishing House

PRACTICAL COMPONENT

(15 Weeks with 4 hours of laboratory session per week)

The aim of this Lab is not just to teach computer programming and numerical analysis but to emphasize its role in solving problems in Physics.

- Assessment is to be done not only on the programming but also on the basis of formulating the problem.
- The list of recommended programs is suggestive only. Students should be encouraged to do more physics applications. Emphasis should be given to formulate a physics problem as mathematical one and solve by computational methods.
- The students should be encouraged to develop and present an independent project.
- **At least 12 programs must be attempted (taking two from each unit). The implementation is to be done in Python. Use of scipy inbuilt functions may be encouraged.**

Unit 1

Basic Elements of Python: The Python interpreter, the print statement, comments, Python as simple calculator, objects and expressions, variables (numeric, character and sequence types) and assignments, mathematical operators. Strings, Lists, Tuples and Dictionaries, type conversions, input statement, list methods. List mutability, formatting in the print statement.

Control Structures: Conditional operations, ***if, if-else, if-elif-else, while*** and ***for*** Loops, indentation, break and continue, List comprehension. Simple programs for practice like solving quadratic equations, temperature conversion etc.

Functions: Inbuilt functions, user-defined functions, local and global variables, passing functions, modules, importing modules, math module, making new modules. Writing functions to perform simple operations like finding largest of three numbers, listing prime numbers, etc. Use of inbuilt functions to generate pseudo random numbers.

Recommended List of Programs

a) Make a function that takes a number *N* as input and returns the value of factorial of *N*. Use this function to print the number of ways a set of *m* red and *n* blue balls can be arranged.
b) Generate random numbers (integers and floats) in a given range and calculate area and volume of regular shapes with random dimensions.
c) Write functions to convert Cartesian coordinates of a given point to cylindrical and spherical polar coordinates or vice versa.
d) Solve quadratic equations for the three cases of distinct real, double real and complex conjugate roots.

Unit 2

NumPy Fundamentals: Importing *Numpy*, Difference between List and NumPy array, Adding, removing and sorting elements, creating arrays using *ones(), zeros(), random(), arange(), linspace()*. Basic array operations (*sum, max, min, mean, variance*), 2-d arrays, matrix operations, reshaping and transposing arrays, savetxt() and loadtxt().

Plotting with Matplotlib: *matplotlib.pyplot* functions, plotting of functions given in closed form as well as in the form of discrete data and making histograms

Recommended List of Programs

(a) To generate data for coordinates of a projectile and plot the trajectory. Determine the range, maximum height and time of flight for a projectile motion.
(b) To plot the displacement-time and velocity-time graph for the undamped, under damped critically damped and over damped oscillator using *matplotlib* (using given formulae).
(c) To generate array of N random numbers drawn from a given distribution (uniform, binomial, poisson and gaussian) and draw histogram using *matplotlib* for increasing N to verify the distribution.
(d) To approximate the elementary functions (e.g. $\exp(x)$, $\sin(x)$, $\cos(x)$, $\ln(1+x)$, etc.) by a finite number of terms of Taylor's series and discuss the truncation error. To plot the function as well the nth partial sum of its series for various values of *n* on the same graph and visualise the convergence of series.

Unit 3

Root Finding: Implement the algorithms for Bisection, Secant and Newton Raphson methods or their combinations to,

(a) Determine the depth up to which a spherical homogeneous object of given radius and density will sink into a fluid of given density.

(b) Solve transcendental equations like $\alpha = \tan(\alpha)$.
(c) Approximate nth root of a number up to a given number of significant digits.

Unit 4

Interpolation and Least Square Fitting:

a) Given a dataset (x, y) with equidistant x values, prepare the Newton's divided difference table. Generate a tabulated data for an elementary function, approximate it by a polynomial and compare with the true function.
b) Given a dataset (x, y) corresponding to a physics problem, use Lagrange and Newton's forms of interpolating polynomials and compare. Determine the value of y at an intermediate value of x not included in the data set. This may be done with equally spaced and non-equally spaced x-values.
c) Make Python function for least square fitting, use it for fitting given data (*x, y*) and estimate the parameters *a, b* as well as uncertainties in the parameters for the following cases :
   i. Linear $(y = ax + b)$
   ii. Power law $(y = ax^b)$ and
   iii. Exponential $(y = ae^{bx})$
   The real data taken in physics lab may be used here.
d) Compare the interpolating polynomial for a given dataset (following a known form e.g. exponential) with the approximation obtained by least square fitting.

Unit 5

Differentiation and Integration:

a) To compute the left, right and central approximations for derivative of a function given in closed form. Plot both the function and derivative on the same graph. Plot (using *matplotlib)* the error as a function of step size on a log-log graph, study the behaviour of the plot as step size decreases and hence discuss the effect of round off error.
b) Use integral definition of error function to compute and plot erf(x) in a given range. Use Trapezoidal, Simpson and Gauss Legendre methods and compare the results for small and large values of x.
c) Verify the degree of precision of each quadrature rule.
d) Approximate the value of π by evaluating the integral $\int_0^\infty \frac{1}{x^2+1} dx$ using Simpson and Gauss Legendre method. More integrals may be evaluated.

Unit 6

Initial Value Problems (IVP):

a) Compare the errors in Euler, RK2 and RK4 by solving a first order IVP with known solution. Reduce the step size to a point where the round off errors takes over.
b) Radioactive decay: With a given number of initial nuclei and decay constant plot the number of nuclei left as a function of time and determine the half life
c) Solve a system of two first order differential equations by Euler, RK2 and RK4 methods. Use it to solve an nth order IVP. Solve a damped free and forced harmonic oscillator problem using this.
d) Solve a physics problem like free fall with air drag or parachute problem using RK method.
e) Obtain the current flowing in a series LCR circuit with constant voltage for a given set of initial conditions.

DISCIPLINE SPECIFIC ELECTIVE COURSE – PHYSICS DSE 12: PHYSICS OF EARTH

Course Title & Code	Credits	Credit distribution of the course			Eligibility Criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical		
Physics of Earth Physics DSE 12	**4**	**3**	**1**	**0**	Class XII Pass with Science	--

LEARNING OBJECTIVES

This course familiarizes the students with the origin of earth in the solar system and various processes occurring in atmosphere, oceans and earth's internal structure.

LEARNING OUTCOMES

At the end of this course student will be able to,

- Have an overview of structure of the earth as well as various dynamical processes occurring on it.
- Develop an understanding of evolution of the earth.
- Apply physical principles of elasticity and elastic wave propagation to understand modern global seismology as a probe of the Earth's internal structure.
- Understand the origin of magnetic field, geodynamics of earthquakes and the description of seismic sources; a simple but fundamental theory of thermal convection; the distinctive rheological behaviour of the upper mantle and its top.
- Explore various roles played by water cycle, carbon cycle, nitrogen cycles in maintaining steady state of earth leading to better understanding of the contemporary dilemmas (climate change, bio diversity loss, population growth, etc.) disturbing the Earth
- Develop the problem solving skills by adding numerical and simulations to clarify the fundamental concepts.

SYLLABUS OF DSE – 12

THEORY COMPONENT

Unit – I **(10 Hours)**

The Earth and the Universe:

a) General characteristics and origin of the Universe. The Big Bang Theory. Estimation of age of the Universe and Hubble constant. Formation of Galaxies. Types of galaxies, Milky Way galaxy, Nebular hypothesis, Solar system, The Terrestrial and Jovian planets (Sizes, Acceleration due to gravity, Obliquity, Flatness, Eccentricity, Density, Temperature, Pressure, Atmosphere, Moons, Exceptions in trends). Titius-Bode law. Asteroid belt. Asteroids: origin types and examples, Meteorites.

b) Earth in the Solar system, origin, size, shape, mass, density, rotational and revolution parameters and its age. Earth's orbit and spin, the Moon's orbit and spin.

c) Energy and particle fluxes incident on the Earth.

Unit – II **(8 Hours)**

Structure of Earth:

a) Internal structure of Earth: Core, mental, magnetic field. Origin of the Magnetic field. Convection in Earth's core and production of its magnetic field. Dynamo Theory, calculation of magnetic fields, Causes of variation of Magnetic Field and Palaeomagnetism.
b) The Hydrosphere: The oceans, their extent, depth, volume, chemical composition. Ocean circulations. Oceanic current system and effect of Coriolis forces.
c) The Cryosphere: Polar caps and ice sheets. Mountain glaciers, permafrost.

Unit – III **(8 Hours)**

Dynamical Processes:

a) The Solid Earth: Concept of plate tectonics; types of plate movements, hotspots; sea-floor spreading and continental drift.
b) Earthquake and earthquake belts. Types and properties of Seismic waves, Richter scale, geophones.
c) Volcanoes: types, products and distribution.
d) Concepts of eustasy, air-sea interaction; wave erosion and beach processes. Tides. Tsunamis.

Unit – IV **(10 Hours)**

The Atmosphere

a) The Atmosphere: Features of different layers, variation of temperature with altitude; Dry, moist and environmental lapse rate, variation of density and pressure with altitude, Types of clouds and formation.
b) The Atmosphere: Atmospheric circulation. Causes of Atmospheric circulation, Formation of three cells, Easterlies and Westerlies, and ICTZ, Weather and climatic changes. Earth's heat budget. Cyclones and anti-cyclones, tropical storms, hurricanes and tornadoes.
c) Climate: Earth's temperature and greenhouse effect. Paleoclimate and recent climate changes. The Indian monsoon system.

Unit – V **(9 Hours)**

Disturbing the Earth – Contemporary dilemmas

a) Hydrosphere: Fresh water depletion.
b) Geosphere: Chemical effluents, nuclear waste.
c) Biosphere: Biodiversity loss. Deforestation. Water cycle, Carbon cycle. The role of cycles in maintaining a steady state.
d) Air Pollution: Types of air pollutants, Effects on atmosphere and living organisms. Ozone Hole.

COMMON POOL OF GENERIC ELECTIVES (GE) COURSES

GENERIC ELECTIVE (GE - 15): QUANTUM MECHANICS

Course Title & Code	Credits	Credit distribution of the course			Eligibility Criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical		
Quantum Mechanics GE – 15	4	3	1	0	Class XII Pass with Science	GE Modern Physics of this course or its equivalent

LEARNING OBJECTIVES

The development of quantum mechanics has revolutionized the human life. In this course, the students will be exposed to the probabilistic concepts of basic non-relativistic quantum mechanics and its applications to understand the sub atomic world.

LEARNING OUTCOMES

After completing this course, the students will be able to,

- Learn the methods to solve time-dependent and time-independent Schrödinger equation.
- Characteristics of an acceptable wave function for any sub atomic particle in various potentials.
- Applications of the Schrodinger equation to different cases of potentials namely infinite and finite potential well, step potential, rectangular potential barrier, harmonic oscillator potential.
- Solve the Schrodinger equation in 3-D.
- Understand the spectrum and eigen functions for hydrogen atom

SYLLABUS OF GE - 15

THEORY COMPONENT

Unit – I **(10 Hours)**

Review of Schrodinger wave equation, applicability of operator, eigenvalues, eigenfunction, normalisation, expectation value to various kinds of potential, Superposition Principle, linearity of Schrodinger equation, General solution as a linear combination of discrete stationary states, Observables as operators, Commutator of position and momentum operators, Ehrenfest's theorem. Applicability to various kinds of wave functions

Unit – II **(15 Hours)**

General discussion of bound states in an arbitrary potential: Continuity of wave function, boundary conditions and emergence of discrete energy levels. Application to energy eigen states for a particle in a finite square potential well, reflection and transmission across step potential and rectangular potential barrier. Fourier transforms and momentum space wave function, time evolution of Gaussian wave packets, Uncertainty principle

Unit – III **(10 Hours)**

Harmonic oscillator: Energy eigen values and eigen states of a 1-D harmonic oscillator using algebraic method (ladder operators) and using Hermite polynomials. Zero point energy and uncertainty principle. Applications to various kinds of wave functions

Unit – IV **(10 Hours)**

Schrödinger Equation in three dimensions: Probability and probability densities in 3D. Schrödinger equation in spherical polar coordinates, its solution for Hydrogen atom solution using separation of angular and radial variables, Angular momentum operator, quantum numbers and spherical harmonics. Radial wave functions from Frobenius method, Orbital angular momentum quantum numbers l and ml, s, p, d shells

GENERIC ELECTIVE (GE - 16) INTRODUCTION TO EMBEDDED SYSTEM DESIGN

Course Title & Code	Credits	Credit distribution of the course			Eligibility Criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical		
Introduction to Embedded System Design GE – 16	4	2	0	2	Class XII Pass with Science	NIL

LEARNING OBJECTIVES

This paper aims to introduce the basic concepts or fundamentals of embedded system design to students not majoring in physics. The course covers the comprehensive introduction to embedded systems, their role and application areas in our daily life. Basic elements needed to design a typical embedded system are discussed to provide the students a broader perspective. Specific applications of embedded systems which are a part of our daily life were discussed. In the end Arduino Uno is introduced.

LEARNING OUTCOMES

Upon completion of this course, students will be able to,

- Learn about an embedded system and how it is different than a general purpose computing system like computer or laptop etc.
- The student should be able to identify various embedded systems available around us in our daily life.
- Classify embedded systems based on generation, complexity and performance, major applications areas etc.
- Explain the domains and areas of applications of embedded systems. The students should be able to get a broader perspective of different embedded systems available in industry, telecom, photography, homes, automobile, aviation and ship industry etc.
- Explain the roles and uses of various components like microcontroller, memory, sensors and actuators, interface types etc. of embedded systems.
- Know the basic characteristics and quality attributes that any typical embedded system must possess.
- This paper is designed in such a way that the students will be able to connect the textbook knowledge with basic design and working of the various embedded systems present in our daily life. By the end of this course the student will have a fairly good idea of embedded systems and the gained knowledge will be helpful in predicting the possible design and working of an unknown system. Arduino Uno is introduced so that students can learn how to use different sensors to control different processes.

SYLLABUS OF GE - 16

THEORY COMPONENT

UNIT – I - Introduction to Embedded Systems (3 Hours)
Embedded systems, historical background, difference between an embedded systems and general computing systems, classification of embedded systems based on generation, complexity and performance, major applications areas, purpose of embedded systems like in data collection/storage/representation, data communication, data/signal processing, monitoring, control, application specific user interface.

Unit – II - Elements of Embedded System (6 Hours)
Core of the embedded system: General purpose and domain specific processors like microprocessors, microcontrollers and digital signal processors, application specific integrated circuits (ASICs), programmable logic devices (PLDs), commercial off-the-shelf components (COTS), reduced instruction set computing (RISC) and complex instruction set computing (CISC), Harvard vs Von-Neumann architecture, different types of memory (RAM, ROM, Storage etc) their classification and different versions, reset circuit, oscillator unit

Unit – III - Peripheral devices, sensors and actuators (6 Hours)
General discussion on light emitting dodes (LEDs), 7-segment LED display, piezo buzzer, push button switch, keypad or keyboard (discuss design using push button switches), relay (single pole single throw), LDR, thermistor, IR sensor, ultrasonic sensor, opto-coupler, DC motors, servo motor, stepper motor (unipolar and bipolar)

Unit – IV - Communication Interface (2 Hours)
Serial and parallel interface, universal serial bus (USB), Infra-red data transfer, bluetooth (BT), Wi-Fi, general packet radio Service (GPRS), 3G, 4G, LTE

Unit – V - Characteristics and quality attributes of an embedded systems (3 Hours)
Characteristics: Application and domain specific, reactive and real time, operation under harsh environments, distributed or stand alone, size and weight, power consumption
Operational and non-operational attributes: response time, throughput, reliability, maintainability, security, safety, testability and debug-ability, evolvability, portability, cost and revenue

Unit – VI - Applications of Embedded Systems (4 Hours)
General discussion on the design and working of washing machine, refrigerator, microwave oven, automobiles, mobile phones, hearing aid device, electrocardiogram (ECG), AC or TV remote control system, smart watch, digital camera and laser printers etc.

Unit – VII - Introduction to Arduino (6 Hours)
Pin diagram and description of Arduino UNO, basic programming and applications

2) Microprocessors and Microcontrollers, K. Kant, 2nd edition, 2016, PHI learning Pvt. Ltd.
3) The 8051 Microcontroller, Ayala, 3rd edition, Cengage learning

PRACTICAL COMPONENT

(15 Weeks with 4 hours of laboratory session per week)

- Every student must perform at least six experiments from the following list
- Mandatory exercise for all students: Familiarization with power supply, function generator, CRO/DSO, multimeter, bread board etc. Measure the frequency and amplitude (pp or rms) of a given signal using CRO/DSO. (The purpose is to acquaint the students with these instruments so that they can have a basic understanding of these instruments).

ARDUINO based Experiments:

1) Flashing LEDs ON/OFF after a given delay.
2) Design a simple transmitter and receiver circuit using IR LED and a detector and use it for obstacle detection.
3) Interface a simple relay circuit to switch ON and OFF a dc motor/LED.
4) Interface DC motor to Arduin Uno and rotate it clockwise and anticlockwise.
5) Interface Servo motor to Arduin Uno and rotate it clockwise and anticlockwise for a given angle.
6) Interface an ADC and read the output of the LDR sensor. Display the value on the serial monitor.
7) To design an alarm system using an Ultrasonic sensor.
8) To design a counter/Motion sensor alarm using IR Led and Detector
9) To design a circuit to control ON/OFF of LED light using LDR.
10) To design a circuit to control ON/OFF of a process using a thermistor.
11) To design a thermistor based thermometer.
12) Control the speed of the DC motor using LDR.

GENERIC ELECTIVE (GE - 17) NANO PHYSICS

Course Title & Code	Credits	Credit distribution of the course			Eligibility Criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical		
Nano Physics GE – 17	4	2	0	2	Class XII Pass with Science	NIL

LEARNING OBJECTIVES

The syllabus introduces the basic concepts of nanomaterials, their synthesis, properties exhibited by them and finally few applications. Various nanomaterial synthesis/growth methods and characterizations techniques are discussed to explore the field in detail. The effect of dimensional confinement of charge carries on the electrical, optical and structural properties will be discussed. Interesting experiments which shape this filed like conductance quantization in 2DEG (Integer Quantum Hall Effect) and coulomb blockade are introduced. The concept of micro- and nano-electro mechanical systems (MEMS and NEMS) and important applications areas of nanomaterials are discussed.

LEARNING OUTCOMES

On successful completion of the course students should be able to,

- Explain the difference between nanomaterials and bulk materials and their property difference.
- Explain various methods for the synthesis/growth of nanomaterials.
- Explain the role of confinement on the density of state function and so on the various properties exhibited by nanomaterials compared to bulk materials.
- Explain the concept of quasi-particles such as excitons and how they influence the optical properties.
- Explain the direct and indirect band gap semiconductors, radiative and non-radiative processes and the concept of luminescence.
- Explain the structure of 2DEG system and its importance in quantum transport experiments, like integer quantum Hall effect and conductance quantization.
- Explain the conductance quantization in 1D structure and its difference from the 2DEG system.
- Explain the necessary and sufficient conditions required to observe coulomb blockade, single electron transistor and the scope of these devices.
- Explain how MEMS and NEMS devices are produced and their applications.

SYLLABUS OF GE - 17

THEORY COMPONENT

Unit – I – Introduction **(3 Hours)**

Basic introduction to nano-science and technology - Implications on nanoscience on fields like Physics, Chemistry, Biology and Engineering, Classifications of nanostructured materials

as quantum dots (0D), nanowires (1D), Thin films (2D) and Multilayered materials or super lattices; introduction to properties like mechanical, electronic, optical, magnetic and thermal properties and how they change at nano scale dimensions to motivate students (qualitative only).

Unit – II - Nanoscale Systems (8 Hours)

Brief review of Schrodinger equation and its applications in- Infinite potential well, potential step and potential box problems, band structure and density of states of 3D and 2D systems in detail and qualitatively for 1D and 0D, confinement of charges in nanostructures their consequences on electronic and optical properties.

Unit – III - Properties of Nano Scale systems (10 Hours)

Time and length scales (diffusion, elastic and inelastic lengths etc.) of electrons in nanostructured materials, Carrier transport in nanostructures: diffusive and ballistic transport

2D naomaterials: Conductance quantization in 2DEG in GaAs and integer quantum hall effect (semi-classical treatment)

1D nanomaterials: Conductance quantization in 1D structures using split gate in 2DEG system (Qualitative)

0D nanomaterials: Charging effect, Coulomb Blockade effect, Single Electron Transfer (SET) device

Basic understanding of excitons in semiconductors and their consequence on optical properties of the material

Unit – IV - Synthesis of Nanomaterials (Qualitative) (5 Hours)

Top down and Bottom up approach, Ball milling, Spin Coating

Vacuum deposition: Physical vapor deposition (PVD): Thermal evaporation, Sputtering, Chemical vapor deposition (CVD).

Preparation of colloidal solutions of Metals, Metal Oxide nanoparticles

Unit – V - Applications (Qualitative) (4 Hours)

Micro Electromechanical Systems (MEMS), Nano-electromechanical Systems (NEMS), Applications of nanomaterials as probes in medical diagnostics and targeted drug delivery, sunscreen, lotions, and paints and other examples to give broader perspective of applications of nanomaterials

2) Ph.D. thesis, S. Cronewett, 2001, Available as Arxiv
3) Solid State Physics, J. R. Hall and H. E. Hall, 2nd edition, 2014, Wiley

PRACTICAL COMPONENT

(15 Weeks with 4 hours of laboratory session per week)

At least six experiments to be performed from the following list

1) Synthesis of metal (e.g. Au/Ag) nanoparticles by chemical route and study its optical absorption properties.
2) Synthesis of semiconductor (CdS/ZnO/TiO_2/Fe_2O_3 etc) nanoparticles and study its XRD and optical absorption properties as a function of ageing time.
3) Surface Plasmon study of metal nanoparticles as a function of size by UV-Visible spectrophotometer.
4) Analysis of XRD pattern of given nanomaterial and estimate lattice parameters and particle size.
5) To study the effect of the size nanoparticles on its color.
6) To prepare composite of CNTs with other materials and study their optical absorption/Transmission properties.
7) Growth of metallic thin films using thermal evaporation technique.
8) Prepare a ceramic disc of a given compound and study its XRD/I-V characteristics/ measure its dielectric constant or any other property.
9) Fabricate a thin film of nanoparticles by spin coating (or chemical route) and study its XRD and transmittance spectra in UV-Visible region.
10) Prepare thin film capacitor and measure capacitance as a function of temperature or frequency.
11) Fabricate a pn junction diode by diffusing Al over the surface of N-type Si/Ge and study its V-I characteristic.
12) Fabricate thin films (polymer, metal oxide) using electro-deposition
13) To study variation of resistivity or sheet resistance with temperature of the fabricated thin films using four probe method.

GENERIC ELECTIVE (GE - 18): PHYSICS OF DETECTORS

Course Title & Code	Credits	Credit distribution of the course			Eligibility Criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical		
Physics of Detectors GE – 18	4	3	1	0	Class XII Pass with Science	GE Modern Physics of this course or its equivalent

LEARNING OBJECTIVES

A detector is necessary for every physical measurement, and experimental physicists must be proficient in detector physics. The course will provide an overview of radiation and particle detectors, as well as how to use them in various experimental physics settings and application fields. The course covers the theory of detectors, their design and operation including electronic readout systems and signal processing. The fundamental physics processes for detecting radiation and particles are covered in the course, which include the photoelectric effect, Compton scattering, pair creation, excitation, ionization, bremsstrahlung, Cherenkov radiation, nuclear reactions, and secondary emissions.

LEARNING OUTCOMES

After completion of this course, students are expected to be able to,

- Understand the different types underlying fundamental physical processes for the detection of radiation and particles
- Acquire knowledge of design principles and characteristics of different types of detector
- Acquire knowledge of electronic readout systems and signal processing
- Assess the applicability of different types of detectors and detector systems in various fields of physics and applied sciences.

SYLLABUS OF GE - 18

THEORY COMPONENT

Unit – I **(12 Hours)**

Interaction of Radiation with matter: Interaction of radiation with matter (e.m. charged particles); detection of charged particles in magnetic field and measurement of charge to mass ratio; energy loss due to ionization (Bethe-Block formula), energy loss of electrons, Cerenkov radiation; gamma ray interaction through matter (photoelectric effect, Compton scattering, pair production); Dependence of electron and photon energy spectrum on materials (increasing Z); neutron interaction with matter

Unit – II **(8 Hours)**

Introduction to detectors: Basic principle of detector operation and its modes of operation, pulse height spectra, various detector performance parameters: response time, energy resolution, fano factor, efficiency: intrinsic and extrinsic, dead time.

Unit – III **(16 Hours)**

Detectors:

Gas detectors: Detector gases, gas detector characteristics, different types of detectors: gas filled ionization detectors (ionization chamber), bubble and cloud chambers, proportional counters, multi wire proportional counters (MWPC), Geiger Mueller (GM) counters and avalanche counters, gaseous multiplication detector.

Scintillation detectors: General characteristics, organic scintillators (anthracene and plastic), inorganic crystals (NaI(Tl), CsI(Tl)), Charge Coupled Devices (CCD)

Photomultipliers: Basic construction and operation, time response and resolution, noise, gain stability; scintillation counter operation

Semiconductor detectors: Doped semiconductors, np semiconductor junction, depletion depth, detector characteristics of semiconductors. silicon and germanium detectors

Neutron detectors (gas-filled, scintillation, and semiconducting): slow and fast neutron detectors

Bolometric detectors: Working principle, characteristics and use of infrared detectors

Unit - IV **(5 Hours)**

Electronics, signal processing and techniques for data acquisition and analysis: Basic idea of analog and digital signal processing, noise and its types; instrumentation standards for nuclear instruments: NIM, ECL; TTL standards

Data acquisition system: VME and Digital pulse processing system.

Unit - V **(4 Hours)**

Application of detectors: for particle physics experiments, for nuclear physics, for astrophysics and cosmology, medical physics and imaging, by giving two examples each.

GENERIC ELECTIVE (GE - 19): NUCLEAR AND PARTICLE PHYSICS

Course Title & Code	Credits	Credit distribution of the course			Eligibility Criteria	Pre-requisite of the course	Department offering the course
		Lecture	Tutorial	Practical			
Nuclear and Particle Physics GE – 19	4	3	1	0	Class XII Pass with Science	NIL	Physics and Astrophysics

LEARNING OBJECTIVES

This course imparts the understanding of the sub atomic particles and their properties; introduces various nuclear phenomena and their applications, interactions of basic building blocks of matter through fundamental forces, the inherent discrete symmetries of particles and complements each and every topic with applications and problems.

LEARNING OUTCOMES

After completion of this course, students are expected to have an understanding of,

- Nuclear charge and mass density, size, magnetic and electric moments
- Theoretical principles and experimental evidences towards modelling the nucleus
- Kinematics of nuclear reactions and decays
- Energy loss of radiation during propagation in medium
- Principles of nuclear detection technique
- Classification of fundamental forces based on their range, time-scale and mediator mass.
- Scattering cross-sections of 2 to 2 processes and their inherent symmetries.
- Angular and energy distributions for three body decay process.
- Discrete symmetries of nature and associated conservation laws
- Colour triplet quarks and anti-quarks as constituents of observed colour singlet baryons and mesons.

SYLLABUS OF GE 19

THEORY COMPONENT

Unit – I **(5 Hours)**

General properties of nuclei: Constituents of nucleus and their Intrinsic properties: quantitative facts about mass, radii, charge density, matter density, binding energy, N/Z plot, angular momentum, parity, magnetic moment, electric moments.

Unit – II **(5 Hours)**

Nuclear models: Liquid drop model approach, semi empirical mass formula and significance of its various terms, condition of nuclear stability, evidence for nuclear shell structure and the basic assumptions of shell model, magic numbers.

Unit – III **(7 Hours)**

Radioactivity decay: Decay rate and equilibrium (secular and transient)
(a) Alpha decay: basics of α-decay processes, Gamow factor, Geiger Nuttall law, α-decay spectroscopy, decay Chains.
(b) β-decay: energy kinematics for β-decay, β-spectrum, positron emission, electron capture, neutrino hypothesis.
(c) Gamma decay: Gamma ray emission from the excited state of the nucleus and kinematics, internal conversion.

Unit – IV **(5 Hours)**

Nuclear reactions: Kinematics of reactions, Q-value, reaction rate, reaction cross section, Concept of compound and direct reaction, Coulomb scattering (Rutherford scattering).

Unit – V **(8 Hours)**

Interaction of nuclear radiation with matter: Energy loss due to ionization (Bethe-Block formula), energy loss of electrons, Cerenkov radiation; Gamma ray interaction through matter
Detector for nuclear radiations: Basics of types of detectors: gas detectors, scintillation detector, semiconductor detector (principle, schematics of construction and working)

Unit – VI **(15 Hours)**

Particle Physics: Overview of particle spectrum and their interactions in the Standard Model; range, time-scale and relative strength of interactions; interactions at a distance mediated by virtual particles (Exchange Force)
Kinematics for 2 -> 2 scattering processes and crossing symmetries of scattering amplitudes; angular and energy distributions of decaying particles in 1 -> 3 decay processes (muon decay/beta decay); identification of invisibles (neutrinos) from energy and transverse momentum distributions
Lepton and Baryon quantum numbers; isospin, strangeness and hypercharge; Gell-Mann-Nishijima formula; parity and charge conjugation of a particle state; time reversal and general CPT theorem
Valence quark model of Murray Gell-Mann and Yuval Ne'eman, current and constituent masses of quarks, flavor symmetry isospin triplets, baryon octet, decuplet and meson octet; existence of Δ^{++} baryon as a clue for necessity of colour quantum number; evidence for colour triplet quarks from e^+e^- annihilation experiment; confinement of quarks, antiquarks and gluons in hadrons
High energy scattering experiments at linear and circular colliders, inelastic collisions at hadron colliders; elastic and inelastic neutrino-nucleus scattering experiments

GENERIC ELECTIVE (GE - 20): ATOMIC AND MOLECULAR PHYSICS

Course Title & Code	Credits	Credit distribution of the course			Eligibility Criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical		
Atomic and Molecular Physics GE – 20	4	3	1	0	Class XII Pass with Science	GE Modern Physics and GE Quantum Mechanics of this course or their equivalent

LEARNING OBJECTIVES

This course introduces the basic concepts of atomic, molecular and nuclear physics to an undergraduate student. Advanced mathematics is avoided and the results of quantum mechanics are attempts to explain, or even to predict, the experimental observations of spectroscopy. The student will be able to visualize an atom or molecule as a physical entity rather than a series of mathematical equations.

LEARNING OUTCOMES

On successful completion of the module students should be able to elucidate the following main features.

- Stern-Gerlach experiment, electron spin, spin magnetic moments
- Space quantization and Zeeman effect
- Spectral notations for atomic and molecular states and corresponding term symbols
- Understanding of atomic spectra and molecular spectra
- Basic principle of Raman spectroscopy and Franck Condon principle
- To complete scientific potential lies on the way we are able to interpret the fundamental astrophysical and nuclear data. This acquired knowledge will be a common base for the areas of astrophysics, nuclear, medical, geology and other inter-disciplinary fields of Physics, Chemistry and Biology. Special skills required for the different fields will be enhanced.

SYLLABUS OF GE 20

THEORY COMPONENT

Unit – I – Atomic Physics **(23 Hours)**

One-electron atoms: Degeneracy of energy levels and selection rules, modes of relaxation of an excited atomic state, line intensities and the lifetimes of excited states, line shapes and widths

Fine structure of hydrogenic atoms: Shifting of energy levels, splitting of spectral lines, relativistic correction to kinetic energy, spin-orbit term, Darwin term, fine structure spectral lines, Lamb shift (qualitative idea)

Atoms in external magnetic fields: Larmor's theorem, Stern-Gerlach experiment, normal Zeeman effect, Paschen Back effect, and anomalous Zeeman effect, g-factors

Two and multi-electron systems: Spin multiplicity, singlet and triplet states and selection rules in helium atom, central field approximation, Aufbau and Pauli exclusion principle,

Slater determinant, LS and JJ coupling scheme (equivalent and non-equivalent electrons), term symbols and Hund's rule, Lande' interval rule
Qualitative Discussion of: Lamb shift and Auger effect.

Unit – II - Molecular Physics (22 Hours)

Electronic states of diatomic molecules: Linear combination of atomic orbitals (LCAO), bonding and antibonding orbitals; 'gerade', 'ungerade', molecular orbitals and the ground state electronic configurations for homo and hetero-nuclear diatomic molecules, classification of molecular excited states of diatomic molecule, Vector representation of Orbital and electron spin angular momenta in a diatomic molecule, The Born-Oppenheimer approximation, Concept of Potential energy curve for a diatomic molecule, Morse potential. The Franck-Condon principle

Molecular Spectra of diatomic molecule: Rotational Spectra (rigid and non-rigid rotor), Vibrational Spectra (harmonic and anharmonic), Vibration-Rotation Spectrum of a diatomic molecule, Isotope effect, Intensity of spectral lines

Raman Effect: Classical Theory (with derivation) of Raman effect, pure rotational Raman Lines, Stoke's and Anti-Stoke's Lines, comparison with Rayleigh scattering

Idea of spin resonance spectroscopy (Nuclear Magnetic Resonance, Electron Spin Resonance) with few examples, estimation of magnetic field of the Sun.

ANNEXURE-31

Sub: Amendment to Ordinance V

[E.C Resolution No. 14-1-6/-(6) dated 09.06.2023 and 27-1-1/-(7) dated 25.08.2023]

Following addition be made to Appendix-II-A to the Ordinance V (2-A) of the Ordinances of the University;

Add the following:

Syllabi of Semester-IV, V and VI of the following Programmes of Department of Chemistry under Faculty of Science based on Under Graduate Curriculum Framework -2022 implemented from the Academic Year 2022-23 :

(i) BSc. (Hons.) Chemistry

(ii) BSc. (Physical Science) with Chemistry as one of Core Discipline

(iii) BSc. (Life Science) with Chemistry as one of the Core Discipline

(iv) BSc. (Industrial Chemistry) – Chemistry Component

(v) BSc (Hons.) Applied Life Sciences with Agrochemicals and Pest Management.

DEPARTMENT OF CHEMISTRY

SEMESTER IV

B Sc. (Hons) Chemistry

DISCIPLINE SPECIFIC CORE COURSE - 10(DSC-10): Coordination Chemistry and Reaction Mechanism

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Coordination Chemistry and Reaction Mechanism (DSC-10: Inorganic Chemistry - IV)	04	03	--	01	Class 12th with Physics, Chemistry, Mathematics	--

Learning Objectives

The Objectives of this course are as follows:

- To familiarize the students with coordination compounds which find manifold applications in diverse areas.
- To acquaint the student with the concept of Inorganic reaction mechanism.

Learning Outcomes

By studying this course, the students will be able to:

- Explain the terms- ligand, denticity of ligands, chelate, coordination number and use standard rules to name coordination compounds.
- Discuss the various types of isomerism possible in such compounds.
- Use Valence Bond Theory to predict the structure and magnetic behaviour of metal complexes and understand the terms inner and outer orbital complexes.

- Explain the meaning of the terms Δ_o, Δ_t, pairing energy, CFSE, high spin and low spin complexes and how CFSE affects thermodynamic properties like lattice enthalpy and hydration enthalpy.
- Explain magnetic properties and colour of complexes on the basis of Crystal Field Theory.
- Explain the reaction mechanism of coordination compounds and differentiate between kinetic and thermodynamic stability.

SYLLABUS OF DSC-10

Unit-1: Coordination Chemistry **(Hours: 28)**

Werner's Coordination theory, simple problems based on this theory

IUPAC nomenclature of coordination compounds, isomerism in coordination compounds (coordination numbers 4 and 6). Valence bond theory and its application to complexes of coordination numbers 4 and 6.

Crystal field theory, measurement of Δ_o. Calculation of CFSE in weak and strong fields, concept of pairing energies, factors affecting the magnitude of Δ_o. Octahedral vs. tetrahedral coordination, tetragonal distortions from octahedral geometry: Jahn-Teller theorem, square planar geometry. Qualitative aspect of Ligand field and MO Theory (for octahedral σ-donor, π- acceptor and π- donor complexes).

Unit-2: Stability of complexes and Inorganic Reaction Mechanism: **(Hours: 17)**

Brief discussion of thermodynamic and kinetic stability, Factors affecting stability of complexes, such as chelate effect, macrocyclic effect, resonance effect etc., trends in step wise formation constant, interpretation of lability and inertness based on VBT and CFT.

Introduction to inorganic reaction mechanisms, concept of reaction pathways, transition state, intermediate and activated complex. Substitution reactions in square planar complexes, factors affecting the rate of Substitution reactions in square planar complexes- such as charge effect, solvent effect and Trans- effect (Theories of trans-effect).

Practical component
Practical: **Credits: 01**
(Laboratory periods: 15 classes of 2 hours each)

(A) Argentometry

Estimation of Cl^-

(i) By Mohr's method

(ii) By Vohlard's method and

(iii) By Fajan's method

(B) Complexometric Titrations:

(i) Complexometric estimation of Mg^{2+}/ Zn^{2+} using EDTA

(ii) Estimation of total hardness of water samples

(iii) Estimation of Ca^{2+} in solution by substitution method

(iv) Estimation of Ca/Mg in drugs or biological samples**.**

(C) Properties of Complexes

Synthesis of ammine complexes of Ni(II) and its ligand exchange reactions (e.g. bidentate ligands like acetylacetone, dimethyl glyoxime, glycine) by substitution method.

DISCIPLINE SPECIFIC CORE COURSE -11 (DSC-11): Carbohydrates, Lipids and Heterocyclic Compounds

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Carbohydrates, Lipids and Heterocyclic Compounds (DSC-11, Organic Chemistry IV)	04	03	--	01	Class 12th with Physics, Chemistry	--

Learning Objectives

The Objectives of this course are as follows:

- To familiarize students with the chemistry of carbohydrates, lipids, and heterocyclic compounds
- To enable students to develop novel, efficient, convenient, selective and environmentally benign synthetic methods for synthesis of heterocyclic compounds.

Learning outcomes

By studying this course, the students will be able to:

- Describe uses and applications carbohydrates, lipids and heterocycles
- Use the knowledge gained from study of carbohydrates, lipids and heterocycles to propose greener and better synthetic routes.
- Use the chemistry and biology of carbohydrates, lipids and heterocycles to better serve the mankind.

SYLLABUS OF DSC-11

Unit-1: Carbohydrates & Lipids (Hours: 24)

Monosaccharides: Constitution and absolute configuration of glucose and fructose, epimers and anomers, mutarotation, determination of ring size of glucose and fructose, Haworth projection and conformational structures; Interconversion of aldoses and ketoses; Killiani-Fischer synthesis and Ruff degradation; Linkage between monosaccharides: Comparative study of the structure of disaccharides (sucrose, maltose, lactose) and polysaccharides (starch, cellulose and glycogen) excluding their structure elucidation. Reactions of disaccharides-reducing property, hydrolysis, methylation and acetylation.
Lipids: Introduction to lipids, classification. Oils and fats: Common fatty acids present in oils and fats, Omega-3&6 fatty acids, trans fats, hydrogenation, hydrolysis, acid value, saponification value, iodine number. Biological importance of triglycerides, phospholipids, glycolipids, and steroids (cholesterol).

Unit-2: Heterocyclic Compounds (Hours:21)

Classification and nomenclature of heterocyclic compounds (containing only one hetero atom). Structure, aromaticity in 5-membered and 6-membered rings containing one heteroatom; Basicity and relative reactivity towards electrophilic substitution reactions (amongst five membered and six membered rings.

General methods of synthesis for: furan, thiophene, pyrrole (Paal-Knorr synthesis, Hantzsch synthesis), pyridine (Hantzsch synthesis), indole (Fischer Indole synthesis), quinoline (Skraup synthesis, Friedlander's synthesis, Knorr quinoline synthesis, Doebner-Miller synthesis)

Properties: Physical properties, discussion on the following reaction (with mechanism) for furan, pyrrole, thiophene, pyridine, indole and quinoline: Electrophilic substitution- nitration, sulphonation, halogenation, formylation, acylation, mercuration and carboxylation. Oxidation, reduction, addition, reactions showing acidic /basic character, reaction with diazonium salts, ring opening, ring expansion and nucleophilic substitution reaction wherever applicable should be discussed.

Practical: Credits: 01
(Laboratory periods: 15 classes of 2 hours each)

1. Estimation of sugars by using Fehling solution.
2. Functional group tests for amine, nitro and amides.
3. Determination of saponification value of the given oil.
4. Determination of iodine number of the given oil.
5. Systematic qualitative analysis of the given organic compounds containing monofunctional groups (carboxylic acids, carbonyl compounds, carbohydrates and esters) and preparation of one suitable derivative.

Essential/recommended readings

DISCIPLINE SPECIFIC CORE COURSE-12 (DSC-12): Electrochemical Cells, Chemical Kinetics and Catalysis

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Electrochemical Cells, Chemical Kinetics and Catalysis (DSC-12, Physical Chemistry IV)	**04**	**03**	**--**	**01**	**Class 12th with Physics, Chemistry, Mathematics**	**--**

Learning Objectives

The Objectives of this course are as follows:

- To provide a detailed understanding about galvanic cells and their types
- To explain the applications of galvanic cells and EMF measurements.
- To get an understanding of the kinetics of simple and complex chemical reactions
- To give basic concept about catalysts and enzymes.
- To teach the working of potentiometer and different electrodes for performing potentiometric titrations
- To explain the experimental study of kinetics of simple reactions

Learning outcomes

By studying this course, the students will be able to:

- Explain the working of electrochemical cells and different types of galvanic cell.
- Devise a spontaneous galvanic cell using various combinations of half-cells.
- Understand the concept of concentration cell
- Use the appropriate galvanic cell to measure pH, calculate thermodynamic parameters and perform potentiometric titrations.
- Write rate law and derive rate equations for simple and complex reactions and understanding of theories of reaction rates.
- Understand different types of catalysts and mechanism of enzyme catalysis.
- Perform potentiometric titrations using appropriate electrodes for quantitative analysis.
- Set up experiments to study the kinetics of simple reactions.

SYLLABUS OF DSC-12

Unit-1: Electrochemical Cells **(Hours: 21)**

Rules of oxidation/reduction of ions based on half-cell potentials, Chemical cells, reversible and irreversible cells with examples. Electromotive force of a cell and its measurement, Nernst equation; Standard electrode (reduction) potential and its application to different kinds of half-cells. Application of EMF measurements in determining (i) free energy, enthalpy and entropy of a cell reaction, (ii) equilibrium constants, and (iii) pH values, using hydrogen, quinone-hydroquinone, glass and SbO/Sb_2O_3 electrodes. Concentration cells with and without transference, liquid junction potential; determination of activity coefficients and transference numbers. Qualitative discussion of potentiometric titrations (acid-base, redox, precipitation). Structure of electric double layer (qualitative aspects only).

Unit-2: Chemical Kinetics **(Hours: 18)**

Order and molecularity of a reaction, rate laws in terms of the advancement of a reaction, differential and integrated form of rate expressions up to second order reactions, experimental methods for determination of rate laws, kinetics of complex reactions (integrated rate expressions up to first order only): (i) Opposing reactions (ii) parallel reactions and (iii) consecutive reactions and their differential rate equations (steady-state approximation in reaction mechanisms) (iv) chain reactions.

Temperature dependence of reaction rates; Arrhenius equation; activation energy. Collision theory of reaction rates, Lindemann mechanism, qualitative treatment of the theory of absolute reaction rates, introduction to electrode kinetics (qualitative aspects only).

Unit-3: Catalysis: **(Hours: 6)**

Types of catalyst, specificity and selectivity, mechanisms of catalyzed reactions at solid surfaces. Enzyme catalysis, Michaelis-Menten mechanism, acid-base catalysis.

Practical: **Credits: 01**

(Laboratory periods: 15 classes of 2 hours each)

(A) Potentiometry:

Perform the following potentiometric titrations:

1. Strong acid vs. strong base
2. Weak acid vs. strong base
3. Dibasic acid vs. strong base
4. Mixture of strong and weak acid vs strong base
5. Potassium dichromate vs. Mohr's salt

(B) Chemical Kinetics:

Study the kinetics of the following reactions

1. Iodide-persulphate reaction by Initial rate method
2. Acid hydrolysis of methyl acetate with hydrochloric acid.
3. Saponification of ethyl acetate by conductometric measurements.

Suggested experiments

1. To study the kinetics of Iodide-persulphate reaction using integrated rate method.
2. Comparison of the strengths of HCl and H_2SO_4 by studying kinetics of hydrolysis of methyl acetate.

Essential/recommended readings
Theory:

1. Atkins, P.W.; Paula, J.de. (2014), **Atkin's Physical Chemistry Ed**., 10th Edition, Oxford University Press.
2. Ball, D. W. (2017), **Physical Chemistry,** 2nd Edition, Cengage Learning, India.

SEMESTER-V

BSC. (HONS.) CHEMISTRY

DISCIPLINE SPECIFIC CORE COURSE -13 (DSC-13): Basics of Organometallic Chemistry

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Basics of Organometallic Chemistry (DSC-13)-Inorganic Chemistry-V	04	03	--	01	Class 12th with Physics, Chemistry, Mathematics	-

Learning Objectives

The Objectives of this course are as follows:

- To familiarize the students with the interactions of metal atom with organic molecules (or not so typical organic molecule), which is in an entirely different fashion as compared to coordination compounds.
- To familiarize the students with the structure and bonding in organometallic compounds
- To familiarize the student with how organometallic compounds can act as good catalysts for organic transformations and hencehave industrial importance associated with medicines, bioorganic synthesis, and energy production.

Learning Outcomes

By studying this course, the students will be able to:

- Identify and classify organometallic compounds of different types.
- Explain the stability of organometallic compounds and hence the requirement of special experimental conditions for their synthesis.
- Explain the bonding modes through VBT and MOT in these compounds.
- Explain the chemical nature of these compounds through various reactions thus acquiring skills to understand their applications.
- Explain the mechanism of catalysis by these compounds. This may prepare the student to predict the catalytic pathways for new reactions

SYLLABUS OF DSC-13

Unit-1: Introduction to Organometallic Chemistry (Hours: 6)

Definition**,** brief history, classification of organometallic compounds on the basis of bond type. Common notation used in organometallic chemistry, concept of hapticity of organic ligands, importance of organometallic chemistry, organometallic compounds as reagents, additives, and catalysts. Introduction to the 18-electron rule or effective atomic number rule, electron count of mononuclear, polynuclear and substituted metal carbonyls of 3d series and finding metal-metal bonds.

Unit-2: Structure and Bonding in Organometallic Compounds (Hours : 12)

Structures of mononuclear and binuclear carbonyls of Cr, Mn, Fe, Co and Ni using VBT. Molecular orbital theory applied to organometallic compounds, description of bonding of two electron ligands to transition metals. π-acceptor behavior of CO (MO diagram of CO to be discussed), π-bonding of CO with metal (synergic effect) and use of IR data to explain extent of back bonding, bonding modes of CO, symmetry of metal carbonyls.

Bonding between metal atoms and organic π- systems: linear (ethylene, allyl, butadiene) and cyclic (cyclopentadiene, benzene), Zeise's salt and comparison of synergic effect with that in carbonyls.

Metal alkyls and Metal-carbene complexes

Unit-3: Synthesis, Reactions and Applications of Organometallic Compounds (Hours: 16)

General methods of synthesis of metal carbonyls: direct carbonylation, reductive carbonylation, thermal and photochemical decomposition, of mono and binuclear carbonyls of 3d series.

Reaction of metal carbonyls: reduction, oxidation, photochemical substitution, migratory insertion of carbonyls, and nucleophilic addition of CO.

Synthesis of metal-alkene complexes through ligand addition, reduction and substitution and reaction of metal bound alkenes, Zeise's salt

Metal–sandwich compounds**:** Ferrocene: synthesis, physical properties and reactions: acylation, sulfonation, alkylation metallation, acetylation, chloromercuration, Mannich reaction, comparison of aromaticity and reactivity of ferrocene with that of benzene.

Synthesis and reactions of Metal alkyls and Metal-carbenes

Unit-4: Catalysis by Organometallic Compounds (Hours: 11)

General principles of catalysis, properties of catalysts, homogeneous and heterogeneous catalysis. (Catalytic steps, examples and industrial applications), deactivation and regeneration of catalysts, (catalytic poisons and promoter).

Organometallic catalysis of the following reactions of commercial importance and their mechanism:

1. Alkene hydrogenation (using Wilkinson's Catalyst)
2. Synthetic gasoline preparation (Fischer Tropsch reaction)
3. Polymerisation of ethene using Ziegler-Natta catalyst
4. Wacker oxidation process (Smidth process)
5. Hydroformylation reaction (Oxo-process)
6. Monsanto Acetic Acid process

Theoretical aspects of enlisted practicals are also to be included in the theory paper.

Practical component

Practical: Credits: 01

(Laboratory periods: 15 classes of 2 hours each)

1. To study and compare the UV-Vis spectrum of ferrocene (in methanol or acetonitrile) and potassium ferrocyanide (in water).
2. To study the cyclic voltammogram of ferrocene.
3. Preparation of Bis(acetylacetonato)copper(II) complex and characterisation through UV-Visible spectrum of its aqueous solution..
4. Preparation of tris(acetylacetonato)manganese(III) complex.
5. Preparation of Potassium tris(oxalato)ferrate(III) complex.
6. Preparation of Tetraamminecopper(II) sulphate monohydrate complex.
7. Preparation of Pentaamminechloridocobalt(III) chloride.
8. Preparation of Hexaamminecobalt(III) chloride
9. Determination of number of chloride ions in ionisation sphere to confirm the formula of complexes prepared in (6) and (7) through potentiometric titration or conductance measurements. (See reference 5 & 6 of Practicals)
10. Compare and interpret the visible spectrum of complexes prepared in (6) and (7) for shifts in wavelength maxima.

Any other organometallic compounds synthesised from time to time may also be included.

Essential/recommended readings

Theory:

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE - 14 (DSC-14): Nucleic Acids, Amino Acids, Proteins and Enzymes

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Nucleic Acids, Amino Acids, Proteins and Enzymes (DSC-14, Organic Chemistry- V)	**04**	**02**	**--**	**02**	Class 12th with Physics, Chemistry	**--**

Learning Objectives

The objectives of this course are as follows:

- To familiarize students with the fascinating chemistry and biology of biomolecules, *i.e.*, nucleic acids and proteins etc..
- To develop the interest of students in the basic concepts of heredity, which are imparted through replication, transcription, and translation processes.
- To discuss basic fundamentals of enzyme action and inhibition, which forms the basis of drug action.

Learning outcomes

By studying this course, the students will be able to:

- Demonstrate how structure of biomolecules determines their reactivity and biological role.
- Gain insight into concepts of heredity through the study of genetic code, replication, transcription, and translation
- Demonstrate basic understanding of enzyme action and role of inhibitors
- Use knowledge gained to solve real world problems.

SYLLABUS OF DSC-14

Unit-1: Nucleic Acids **(Hours: 8)**

Structure of components of nucleic acids: Bases, Sugars, Nucleosides and Nucleotides. Nomenclature of nucleosides and nucleotides, structure of polynucleotides (DNA and RNA) and factors stabilizing them, biological roles of DNA and RNA; Concept of heredity: Genetic Code, Replication, Transcription and Translation.

Unit-2: Amino Acids, Peptides and Proteins **(Hours: 14)**

Amino acids and their classification; α-amino acids - Synthesis, ionic properties, and reactions. zwitterions, pKa values, isoelectric point, and electrophoresis; Study of peptides: determination of their primary structure-end group analysis; Synthesis of peptides using N-protecting, C-protecting and C-activating groups, Solid-phase synthesis; Overview of primary, secondary and tertiary structures of proteins, protein denaturation.

Unit-3: Enzymes **(Hours: 8)**

Introduction, classification, and characteristics of enzymes. Salient features of active site of enzymes. Mechanism of enzyme action (taking trypsin as an example), factors affecting enzyme action, coenzymes, and cofactors (including ATP, NAD, FAD), specificity of enzyme action (including stereospecificity). Enzyme inhibitors and their importance, phenomenon of inhibition (competitive, uncompetitive, and non-competitive inhibition including allosteric inhibition).

Practical component
Practical: **Credits: 02**
(Laboratory periods: 15 classes of 4 hours each)

1. Study of the titration curve of glycine.
2. Estimation of glycine by Sorenson Formol Titration
3. Qualitative analysis of proteins- Ninhydrin test, Biuret test, Millon's reagent test, Xanthoproteic test.
4. Estimation of proteins by Lowry's method.
5. Study of the action of salivary amylase on starch at room temperature.
6. Effect of temperature on the action of salivary amylase.
7. Effect of pH on the action of salivary amylase
8. Study the inhibition of α-Amylase by copper sulphate
9. Isolation and estimation of DNA using cauliflower/onion.

Essential/recommended readings

DISCIPLINE SPECIFIC CORE COURSE-15 (DSC-15): Quantum Chemistry and Organic Chemistry IV Covalent bonding

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Quantum Chemistry and Covalent bonding (DSC-15, Physical Chemistry V)	**04**	**03**	**--**	**01**	**Class 12th with Physics, Chemistry, Mathematics**	

Learning objectives

The objectives of this course are as follows:

- To make students understand the limitations of classical mechanics and the need of quantum chemistry
- To familiarize the students with the postulates of quantum chemistry
- To explain how to apply the postulates to derive equations for various models and extend to hydrogen atom and hydrogen like atoms.
- To explain the valence bond and molecular orbital theories and their applications to simple molecules
- To explain the use of some computational software

Learning outcomes

By studying this course, students will be able to:

- Explain the limitations of classical mechanics and solution in terms of quantum mechanics for atomic/molecular systems.
- Develop an understanding of quantum mechanical operators, quantization, probability distribution, uncertainty principle
- Set up Schrodinger equations for different types of systems
- Explain the concept of covalent bonding based on valence bond theory and molecular orbital theory.
- Perform calculations using different software and plot different wavefunctions and probability distribution curves.
- Perform simple calculations using appropriate quantum mechanical methods in different computational software

SYLLABUS OF DSC-15

Unit-1: Quantum Chemistry **(Hours: 22)**

Postulates of quantum mechanics, quantum mechanical operators and commutation rules, Schrödinger equation and its application to free particle and particle in a box rigorous treatment), quantization of energy levels, zero-point energy and Heisenberg Uncertainty principle; wave functions, probability distribution functions, nodal properties, Extension to two and three- dimensional boxes, separation of variables, degeneracy.

Qualitative treatment of simple harmonic oscillator model of vibrational motion: Setting up of Schrödinger equation and discussion of solution and wave functions. Vibrational energy of diatomic molecules and zero-point energy.

Angular momentum. Rigid rotator model of rotation of diatomic molecule. Schrödinger equation in Cartesian and spherical polar coordinates (derivation not required). Separation of variables. Spherical harmonics. Discussion of solution (Qualitative).

Unit-2: Hydrogen atom (Hours: 08)

Qualitative treatment of hydrogen atom and hydrogen-like ions: setting up of Schrödinger equation in spherical polar coordinates, radial part and quantization of energy (only final energy expression). Average and most probable distances of electron from nucleus. Zeeman effect, Introduction of spin quantum number and magnetic spin quantum number Setting up of Schrödinger equation for many electron atoms (He, Li), Indistinguishability of electrons and Pauli exclusion principle, Need for approximation methods. Statement of variation theorem and application to simple systems (particle-in-a-box, harmonic oscillator, hydrogen atom).

Unit-3: Covalent bonding (Hours: 15)

Setting up of Schrödinger equation, Born-Openheimer approximation, LCAO-MO treatment of H_2^+ and its qualitative extension to H_2, Valence bond (VB) treatment of H_2, Comparison of LCAO-MO and VB wave functions of H_2 and their refinements, Qualitative description of LCAO-MO of homonuclear and heteronuclear diatomic molecules-HF and LiH.

Practical component

Practical: Credits: 01

(Laboratory periods: 15 classes of 2 hours each)

1. Plot the radial wavefunctions and probability distribution for H atom's 1s, 2s, 2p orbital using software like EXCEL.
2. Using a software such as ArgusLab, plot HOMO, LUMO and ESP maps of various molecules.
3. Draw probability plots for a particle in a 1-dimensional box for different values of quantum number n - commenting on the number of points of zero probability and then correlate them with the correspondence principle.
4. Plot the electron density contour maps of sigma molecular orbitals for diatomic homonuclear molecules.
5. Plotting of the wave function and probability curve for simple harmonic motion and interpret the results for first two levels.

6. Plotting energy as a function of distance for simple harmonic motion - parabolic curve.
7. Using software such as ArgusLab calculate properties such as dipole moment and Mulliken charges using quantum mechanical methods.

Note: Any other suitable software may also be used .

Essential/recommended readings

SEMESTER-VI

BSC. (HONS.) CHEMISTRY

DISCIPLINE SPECIFIC CORE COURSE -16 (DSC-16): Principles in Qualitative Analysis and Bioinorganic Chemistry

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Principles in Qualitative Analysis and Bioinorganic Chemistry (DSC-16: Inorganic Chemistry -VI)	**04**	**02**	**--**	**02**	Class 12th with Physics, Chemistry, Mathematics	**--**

Learning Objectives

The Objectives of this course are as follows:

- To discuss the principles of qualitative analysis
- To understand the concept of solubility products and the common ion effect on the separation of cations.
- To discuss the importance of metal ions in biological systems.
- To discuss the applications of iron in physiology, including iron transport and storage.

Learning Outcomes:

By the end of the course, the students will be able to:

- Explain the basic principles of qualitative inorganic analysis.
- Discuss the influence of solubility products and the common ion effect on the separation of cations.
- Discuss the identification of interfering anions and their removal.
- Explain and discuss the importance of metal ions in biological systems, through discussions on
  metal-containing enzymes, the sodium-potassium pump.
- Discuss the applications of iron in physiology, including iron transport and storage system.

Unit-1: Theoretical Principles in Qualitative Analysis (Hours: 12)

Basic principles involved in analysis of cations and anions. Solubility product, common-ion effect. Principles involved in separation of cations into groups and choice of group reagents. Interfering anions (fluoride, borate, oxalate and phosphate), need to remove them after Group II and methods of removal. Analysis of insoluble substances.

Unit-2: Bioinorganic Chemistry (Hours: 18)

Metal ions present in biological systems, classification of elements according to their action in biological system. Geochemical effect on the distribution of metals. Sodium / potassium pump, conduction of nerve impulses, Ca-pump, carbonic anhydrase and carboxypeptidase. Excess and deficiency of some trace metals. Toxicity of metal ions (Hg, Pb, Cd and As), reasons for toxicity, Use of chelating agents in medicine, Cisplatin as an anti-cancer drug.

Iron and its application in bio-systems, Haemoglobin, Myoglobin, cytochrome-C-oxidase ; Storage and transfer of iron.

Practical: Credits: 02

(Laboratory periods: 15 classes of 4 hours each)

(A) Qualitative semi-micro analysis of mixtures containing 3 anions and 3 cations. Emphasis should be given to the understanding of the chemistry of different reactions. The following radicals are suggested:
CO_3^{2-}, NO_2^-, S^{2-}, SO_3^{2-}, SO_4^{2-}, $S_2O_3^{2-}$, CH_3COO^-, F^-, Cl^-, Br^-, I^-, NO_3^-, BO_3^{3-}, $C_2O_4^{2-}$, PO_4^{3-}, NH_4^+, K^+, Pb^{2+}, Cu^{2+}, Cd^{2+}, Bi^{3+}, Sn^{2+}, Sb^{3+}, Fe^{3+}, Al^{3+}, Cr^{3+}, Zn^{2+}, Mn^{2+}, Co^{2+}, Ni^{2+}, Ba^{2+}, Sr^{2+}, Ca^{2+}, Mg^{2+}

(B) Mixtures should preferably contain one interfering anion, or insoluble component ($BaSO_4$, $SrSO_4$, $PbSO_4$, CaF_2 or Al_2O_3) or combination of anions e.g. CO_3^{2-} and SO_3^{2-}, NO_2^- and NO_3^-, $Cl^-$and Br^-, Cl^- and I^-, Br^- and I^-, NO_3^- and Br^-, NO_3^- and I^-. Spot tests should be done whenever possible.

Essential/recommended readings

1. Svehla, G. (1996), **Vogel's Qualitative Inorganic Analysis**,7th Edition, Prentice Hall.
2. Huheey, J.E.; Keiter, E.A., Keiter; R. L.; Medhi, O. K. (2009), **Inorganic Chemistry Principles of Structure and Reactivity**, Pearson Education.
3. Lippard, S.J.; Berg, J.M. (1994), **Principles of Bioinorganic Chemistry**, Panima Publishing Company.
4. *Biological Inorganic Chemistry* by **RR Crichton** in additional books
5. *Bioinorganic Chemistry- Inorganic Elements in the Chemistry of Life: An Introduction and Guide*, 2nd Edition by **Wolfgang Kaim, Brigitte Schwederski, Alex Klein**
6. Atkins, P.W.; Overton, T.L.; Rourke, J.P.; Weller, M.T.; Armstrong, F.A. (2010), 5th Edition, Oxford University Press.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC CORE COURSE – 17 (DSC-17): Polynuclear Hydrocarbons, Photochemistry, Pericyclic Reactions, and Spectroscopy of Organic Compounds

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Polynuclear Hydrocarbons, Photochemistry, Pericyclic Reactions, and Spectroscopy of Organic Compounds (DSC-17, Organic Chemistry-VI)	04	03	--	01	Class 12th with Physics, Chemistry	-

Learning objectives

The objectives of this course are as follows:

- To provide thorough knowledge of the chemistry of polynuclear hydrocarbons .
- To detail the basic principles and applications of pericyclic reactions and photochemistry
- To familiarize students with the various tools and techniques for identifying and characterizing the organic compounds through their interactions with electromagnetic radiations *viz.* UV-Visible, IR and NMR spectroscopy.

Learning outcomes

By studying this course, students will be able to:

- Discuss and use the chemistry of polynuclear hydrocarbons for application in real world problems.
- Discuss and use the pericyclic reactions and photochemistry for research and other applications.
- Use spectroscopic techniques to determine structure and stereochemistry of known and unknown compounds.

SYLLABUS OF DSC-17

Unit-1: Polynuclear Hydrocarbons (Hours: 6)

Introduction, classification, structure, nomenclature and uses. Aromaticity of polynuclear hydrocarbons, structure elucidation of Naphthalene and general methods of preparation of naphthalene and anthracene (including Haworth method, Friedel Craft acylation, Diels Alder reaction, Elbs reaction). Relative reactivity of naphthalene and anthracene in comparison to benzene.

Discussion on the following reactions (with mechanism) for Naphthalene and Anthracene: Addition reactions, Oxidation, Electrophilic substitution- Friedel Craft reaction, Chloromethylation, Halogenation, Formylation, Nitration and sulphonation. Reduction reaction and Diels Alder reaction.

Unit-2: **Photochemistry and Pericyclic reactions (Hours: 12)**

Photochemistry

Introduction and basic principles of photochemistry, photochemical energy, photolytic cleavage, photochemistry of carbonyl compounds (Norrish type 1, Norrish type 2 and Peterno Buchi reactions)

Pericyclic Reactions

Introduction: Types of pericyclic reactions (Electrocyclic, Cycloaddition and Sigmatropic Rearrangements), Symmetry in σ and π molecular orbitals, Frontier Molecular Orbitals.

Electrocyclic Reactions: Conrotatory and Disrotatory motion in ring opening and ring closing reactions in (4n) and (4n+2) π electron systems, FMO method, Woodward Hoffmann rule.

Cycloaddition Reactions: [2+2] and [4+2] π cycloaddition reactions, Diels Alder reaction (electron rich and electron poor dienes and dienophiles, Stereochemistry, Alder rule of endo addition).

Sigmatropic Reactions: [1,3], [1,5] and [3,3] sigmatropic rearrangements, Cope rearrangement, Claisen Rearrangements.

Unit-3: **Spectroscopy of Organic Compounds** **(Hours: 27)**

UV-Visible Spectroscopy: Types of electronic transitions, λ_{max}, chromophores and Auxochromes, bathochromic and hypsochromic shifts, intensity of absorption, factors affecting λ_{max} values, application of Woodward Rules for calculation of λ_{max} for the following systems: α, β-unsaturated aldehydes, ketones, carboxylic acids and esters; conjugated dienes: alicyclic, homoannular and heteroannular; Extended conjugated systems (aldehydes, ketones and dienes); distinction between *cis* and *trans* isomers by UV; Colour concept, Theory of colour and constitution-Witt's theory, valence bond and molecular orbital theory.

IR Spectroscopy: Fundamental and non-fundamental molecular vibrations; IR absorption positions of O and N containing functional groups; effect of H-bonding, conjugation, resonance and ring size on IR absorptions; fingerprint region and its significance, application of IR in functional group analysis.

^{1}H-NMR Spectroscopy: Basic principles of proton magnetic resonance, chemical shift and factors, influencing it; equivalent and non-equivalent protons (chemical and magnetic equivalence), Spin–Spin coupling and coupling constant; Anisotropic effects in alkene, alkyne, aldehydes and aromatics. Interpretation of NMR spectra of simple compounds containing AX, AX_2, AX_3, A_2X_3 spin systems, special case of 1-nitropropane.

Applications of IR, UV and ^{1}H-NMR Spectroscopy for identification of simple organic compounds (spectra to be provided for some representative compounds).

Practical component

Practical: **Credits: 01**

(Laboratory periods: 15 classes of 2 hours each)

1. Systematic qualitative analysis of the given organic compounds containing monofunctional groups (Aryl halides, nitro compounds, amines and amides) and simple

bifunctional compounds like salicylic acid, cinnamic acid, *p*-nitro phenol etc. and preparation of one suitable crystalline derivative.

2. Differentiation between of *o*-/*p*-hydroxybenzaldehyde by IR spectroscopy (Spectra to be provided).
3. Differentiation between of benzoic acid and cinnamic acid by UV spectroscopy (Spectra to be provided).

Essential/recommended readings

DISCIPLINE SPECIFIC CORE COURSE-18 (DSC-18): Photochemistry and Spectroscopy

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Photochemistry and Spectroscopy (DSC-18, Physical Chemistry VI)	**04**	**02**	**-**	**02**	**Class XII with Physics, Chemistry and Mathematics**	

Learning Objectives:

The Learning Objectives of this course are as follows:

- To make students understand the laws of photochemistry and their applications
- To understand the basis of molecular spectroscopy
- To study different types of spectroscopic techniques and their applications

Learning Outcomes:

By studying this course, students will be able to:

- Explain low and high quantum yield
- Explain photosensitized reactions
- Apply the concept of quantization to spectroscopy.
- Interpret various types of spectra and know about their application in structure elucidation

SYLLABUS OF DSC-18

Unit-1: Introduction to Molecular Spectroscopy and Photochemistry (Hours: 6)

Interaction of electromagnetic radiation with molecules and various types of spectra; Born Oppenheimer approximation.

Characteristics of electromagnetic radiation. Lambert-Beer's law and its limitations, physical significance of absorption coefficients. Laws of photochemistry, quantum yield, actinometry, examples of low and high quantum yields, photochemical equilibrium and the differential rate of photochemical reactions, photosensitized reactions, quenching. Role of photochemical reactions in biochemical processes, photostationary states, chemiluminescence.

Unit-2: Rotational, Vibrational , Raman and Electronic Spectroscopy (Hours: 14)

Rotational spectroscopy: Selection rules, intensities of spectral lines, determination of bond lengths of diatomic molecules, isotopic substitution, classification of molecules based on moment of inertia, applications of rotation spectroscopy (e.g. microwave appliances)

Vibrational spectroscopy: Classical equation of vibration, computation of force constant, amplitude of diatomic molecular vibrations, anharmonicity, Morse potential, dissociation energies, fundamental frequencies, overtones, hot bands, degrees of freedom for polyatomic molecules, modes of vibration, concept of group frequencies.

Vibration-rotation spectroscopy: diatomic vibrating rotator, P, Q, R branches.

Raman spectroscopy: Qualitative treatment of Rotational Raman effect; effect of nuclear spin, Vibrational Raman spectra, Stokes and anti-Stokes lines; their intensity difference, rule of mutual exclusion.

Electronic spectroscopy

Franck-Condon principle, electronic transitions, singlet and triplet states, Jablonski diagrams, fluorescence and phosphorescence, dissociation and predissociation, calculation of electronic transitions of polyenes using free electron model.

Unit-3: NMR and ESR (Hours: 10)

Nuclear Magnetic Resonance (NMR) spectroscopy: Principles of NMR spectroscopy, Larmor precession, chemical shift and low-resolution spectra, different scales (δ and T), spin-spin coupling and high resolution spectra, interpretation of PMR spectra of simple organic molecules like methanol, ethanol and acetaldehyde.

Principles of ESR spectroscopy, hyperfine structures, ESR of simple radicals

Practical component

Practical: Credits: 02

(Laboratory periods: 15 classes of 4 hours each)

(A) Colorimetry :

1. Verify Lambert-Beer's law and determine the concentration of (i) $CuSO_4$ (ii) $KMnO_4$ (iii) $K_2Cr_2O_7$ in a solution of unknown concentration

2. Determine the concentrations of $KMnO_4$ and $K_2Cr_2O_7$in a mixture.
3. Study the kinetics of iodination of propanone in acidic medium.
4. Determine the amount of iron present in a sample using 1,10-phenathroline.
5. Determine the dissociation constant of an indicator (phenolphthalein).
6. Study the kinetics of interaction of crystal violet/ phenolphthalein with sodium hydroxide

(B) UV/Visible spectroscopy:

1. Study the 200-500 nm absorbance spectra of $KMnO_4$ and $K_2Cr_2O_7$ (in 0.1 M H_2SO_4) and determine the λ_{max} values. Calculate the energies of the two transitions in different units (J molecule^{-1}, kJ mol^{-1}, cm^{-1}, eV).
2. Study the pH-dependence of the UV-Vis spectrum (200-500 nm) of $K_2Cr_2O_7$.
3. Record the 200-350 nm UV spectra of the given compounds (acetone, acetaldehyde, 2- propanol, acetic acid) in water. Comment on the effect of structure on the UV spectra of organic compounds.

(C) Analysis of the given vibration-rotation spectrum of HCl(g)

Essential/recommended readings

Theory:

1. Banwell, C.N.; McCash, E.M. (2006), **Fundamentals of Molecular Spectroscopy**, Tata McGraw- Hill.
2. Kapoor, K.L. (2015), **A Textbook of Physical Chemistry**, McGraw Hill Education, Vol 4, 5th Edition, McGraw Hill Education.
3. Kakkar, R. (2015), **Atomic & Molecular Spectroscopy**, Cambridge University Press.

Suggested Readings:

1. Engel, T.; Reid, P. (2013), **Quantum Chemistry and Spectroscopy**, Pearson

Practical:

1. Khosla, B.D.; Garg, V.C.; Gulati, A. (2015), **Senior Practical Physical Chemistry**, R. Chand & Co, New Delhi.
2. Garland, C. W.; Nibler, J. W.; Shoemaker, D. P. (2003), **Experiments in Physical Chemistry**, 8th Edition, McGraw-Hill, New York
3. Kapoor, K.L. (2019), **A Textbook of Physical Chemistry**, Vol.7, 1st Edition, McGraw Hill Education.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

POOL OF DSE FOR III/IV/V/VI SEMESTER

DISCIPLINE SPECIFIC ELECTIVE COURSE - 1 (DSE-1): Inorganic Materials of Industrial Importance

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Inorganic Materials of Industrial Importance (DSE-1)	**04**	**03**	**--**	**01**	Class 12th with Physics, Chemistry	--

Learning Objectives

The objectives of this course are as follows:

- To make students understand the diverse roles of inorganic materials in the industry and to give an insight into how these raw materials are converted into products used in day-to-day life.
- To make students learn about silicates, fertilizers, surface coatings, batteries, engineering materials for mechanical construction.
- To develop the interest of students in the frontier areas of inorganic and material chemistry.

Learning outcomes

By studying this course, the students will be able to:

- State the composition and applications of the different kinds of glass.
- State the composition of cement and discuss the mechanism of setting of cement.
- Defend the suitability of fertilizers for different kinds of crops and soil.
- Explain the process of formulation of paints and the basic principle behind the protection offered by the surface coatings.
- Describe the principle, working and applications of different batteries.
- Evaluate the synthesis and properties of nano-dimensional materials, various semiconductor and superconductor oxides.

SYLLABUS OF DSE-1

Unit 1: Silicate Industries **(6 Hours**

Glass: Glassy state and its properties, classification (silicate and non-silicate glasses). Manufacture and processing of glass. Composition and properties of the following types of glasses: Soda lime glass, lead glass, armoured glass, different types of safety glass, borosilicate glass, fluorosilicate glass, coloured glass, photosensitive glass, photochromic glass, glass wool and optical fibre.

Cement: Manufacture of Portland cement and the setting process, Different types of cements: quick setting cements, eco-friendly cement (slag cement), pozzolana cement.

Unit 2: Fertilizers (6 Hours)

Different types of fertilizers (N, P and K). Importance of fertilizers, chemistry involved in the manufacture of the following fertilizers: urea, calcium ammonium nitrate, ammonium phosphates, superphosphate of lime and potassium nitrate.

Unit 3: Surface Coatings (18 Hours

Brief introduction to and classification of surface coatings, paints and pigments: formulation, composition and related properties, pigment volume concentration (PVC)and critical pigment volume concentration (CPVC), fillers, thinners, enamels and emulsifying agents. Special paints: heat retardant, fire retardant, eco-friendly paints, plastic paints, water and oil paints. Preliminary methods for surface preparation, metallic coatings (electrolytic and electroless with reference to chrome plating and nickel plating), metal spraying and anodizing.

Contemporary surface coating methods like physical vapor deposition, chemical vapor deposition, galvanising, carburizing, sherardising, boriding, nitriding and cementation.

Unit 4: Batteries (9 Hours)

Primary and secondary batteries, characteristics of an Ideal Battery, principle, working, applications and comparison of the following batteries: Pb- acid battery, Li-metal batteries, Li-ion batteries, Li-polymer batteries, solid state electrolyte batteries, fuel cells, solar cells and polymer cells.

Unit 5: Nano dimensional materials (6 Hours)

Introduction to zero, one and two-dimensional nanomaterial: Synthesis, properties and applications of fullerenes, carbon nanotubes, carbon fibres, semiconducting and superconducting oxides.

Practical component

Practicals: Credits:

01 (Laboratory periods:15 classes of 2 hours each)

(At least four experiments to be performed)

1. Detection of constituents of Ammonium Sulphate fertilizer (Ammonium and Sulphate ions) by qualitative analysis and determine its free acidity.

2. Detection of constituents of CAN fertilizer (Calcium, Ammonium and Nitrate ions) fertilizer and estimation of Calcium content.

3. Detection of constituents of Superphosphate fertilizer (Calcium and Phosphate ions) and estimation of phosphoric acid content.

4. Analysis of (Cu, Ni) in alloy or synthetic samples (methods involving Gravimetry and Spectrophotometry).

5. Analysis of (Cu, Zn) in alloy or synthetic samples (Multiple methods involving Iodometry, and Potentiometry).

6. Synthesis of pure ZnO and Cu doped ZnO nanoparticles.

7. Synthesis of silver nanoparticles by green and chemical approach methods and its characterization using UV-visible spectrophotometer

Essential/recommended readings

DISCIPLINE SPECIFIC ELECTIVE COURSE – 2 (DSE-2): Green Chemistry in Organic Synthesis

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Green Chemistry in Organic Synthesis (DSE-2)	04	03	--	01	Class 12th with Physics, Chemistry	Basic knowledge of organic reactions

Learning objectives

The objectives of this course are as follows:

- To create awareness about the chemistry that is not harmful for human health and the environment.
- To provide thorough knowledge of the green chemistry principles that can be used to develop chemistry in greener way.
- To familiarize students with new remediation technologies for the cleaning up of hazardous substances.
- To use green chemistry for boosting profits, increase productivity and ensure sustainability with absolute zero waste.
- To learn about innovations and applications of green chemistry in education that helps companies to gain environmental benefits as well as to achieve economic and societal goals also
- The objective of the practical component is to develop basic skills to be able to design, develop and run chemical processes in a sustainable way.

Learning outcomes

By studying this course, students will be able to:

- List the twelve principles of green chemistry and build the basic understanding of toxicity, hazard and risk related to chemical substances.
- Calculate atom economy, E-factor and relate them in all organic synthesis
- State the uses of catalyst over stoichiometric reagents
- Debate and use green solvents, renewable feedstock, and renewable energy sources for carrying out safer chemistry
- Use green chemistry for problem solving, innovation and finding solutions to environmental problems.

- Design safer processes, chemicals, and products through understanding of inherently safer design (ISD)
- Discuss the success stories and use real-world cases to practice green chemistry

SYLLABUS OF DSE-2

UNIT – 1: Introduction (3 Hours

Introduction to Green Chemistry, some important environmental laws, pollution prevention Act of 1990, emergence of green chemistry, need for Green Chemistry. Goals of Green Chemistry. Limitations/ Obstacles in the pursuit of the goals of Green Chemistry. Green chemistry in sustainable development.

UNIT – 2: **Application of Green Chemistry Principles (36 Hours**

Principles of Green Chemistry and designing a chemical synthesis
Concept familiarization and application of green chemistry principles using specific examples

1. Prevention of waste/ by products; waste or pollution prevention hierarchy
2. Green metrics to assess greenness of a reaction: Calculation of atom economy of the rearrangement, addition, substitution, and elimination reactions; calculation of E-factor for industrial processes
3. Prevention/ minimization of hazardous/ toxic products
4. Safer Solvent and Auxiliaries: Problems associated with conventional reaction media Some Common Green solvents: Introduction, application, advantages, and disadvantages of green solvents in organic synthesis (taking suitable examples). Special emphasis on the following:
   i. Super Critical Fluids (with special reference to carbon dioxide)
   ii. Water: Concept of In-water, and on-water reactions (with special reference to synthesis of terpinol and linalool in water, Benzoin condensation, Heck reaction)
   iii. Ionic Liquids: Physical properties and classification of Ionic Liquids (with special reference to Diels Alder reaction and Coumarin synthesis in ionic liquids)
   iv. Biomass derived Solvents: Physicochemical properties, Use of glycerol and its derivatives (Mizoroki–Heck reaction) and 2-methyltetrahydrofuran (Suzuki–Miyaura reaction).
5. Design for energy efficiency: Phenomenon of accelerating organic reactions by using the following Green Chemistry tools (taking suitable examples) and its advantages:
   i. Mechanochemistry
   ii. Ultrasound assisted reactions: Taking examples like Simmons Smith reaction, Diels–Alder reaction,
   iii. Microwave assisted reactions: Special emphasis on solvent-free synthesis- copper phthalocyanine and aspirin, In-water reactions-Hofmann Elimination, methyl benzoate to benzoic acid and Decarboxylation reaction;
   iv. Electrocatalysis: Taking examples like adiponitrile synthesis, synthesis of 3-bromothiophene.
   v. Visible light induced Reactions: with examples such as, syntheses of caprolactam and vitamin D_3, cis-trans isomerization of alkenes
6. Use of renewable starting materials: Illustrate with few examples such as biodiesel, bioethanol, polymers from renewable resources (PLA from corn), Synthesis and

properties of 2-Methyltetrahydrofuran, furfural and 5-Aminolevulinic acid (DALA) from levulinic acid

7. Avoidance of unnecessary derivatization – careful use of blocking/protecting groups (taking specific examples like selective oxidation of aldehydic group and synthesis of 6-Aminopenicillanic Acid (6-APA) from penicillin G
8. Catalysis and green chemistry
   Introduction to Catalysis (including concept of selectivity, turnover frequency and turnover number), Types of Catalysts: Heterogeneous catalysis and homogeneous catalysis (H-beta and zeolites in organic synthesis), General catalytic cycle for heterogeneous catalysis; Asymmetric catalysis (Monsanto route to L-dopa via asymmetric hydrogenation, synthesis of carbapenhem via Asymmetric reduction); Photocatalysis (with special reference to TiO2); Biocatalysis (Synthesis of adipic acid/catechol using biocatalyst) and Nanocatalysis (oxazole synthesis using nanocatalyst)
9. Design for degradation: (Illustrate with the help of examples: soaps and detergents, pesticides, polymers)
10. Real Time monitoring of chemical processes using inline, offline, and online techniques
11. Inherently safer design/chemistry:
    Principle and subdivision of ISD, Bhopal Gas Tragedy (safer route to carbaryl) and Flixiborough accident (safer route to cyclohexanol, Asahi Process)

UNIT – 3: Industrial Applications and Success Stories (6 Hours)

- Vitamin C Synthesis using enzymes (Hoffman La Roche)
- Zoloft -Presidential Chemistry Award Winning Innovation (Pfizer)
- Methyl Methacrylate syngas process (Eastman Chemicals)
- Synthesis of herbicide disodium iminodiacetate
- Rightfit pigments azo dyes synthesis and their applications
- Healthier Fats and oils by Green Chemistry: Enzymatic Interesterification for production of No Trans-Fats and Oils.
- Synthesis of anti-tuberculosis drug Paramycin from waste water stream

Practical component Credits:

01 (Laboratory periods:15 classes of 2 hours each)

Note: Characterization by melting point, UV-Visible spectroscopy, IR spectroscopy and any other specific method should be done (wherever applicable).

1. Preparation and characterization of nanoparticles of gold using tea leaves/silver nanoparticles using plant extracts.
2. Preparation of biodiesel from waste cooking oil and characterization (TLC, pH, solubility, combustion test, density, viscosity, gel formation at low temperature and IR can be provided).
3. Benzoin condensation using thiamine hydrochloride as a catalyst instead of cyanide.
4. Extraction of D-limonene from orange peel using liquid CO2 prepared from dry ice.
5. Mechanochemical solvent free, solid-solid synthesis of azomethine using p-toluidine and o-vanillin/p-vanillin.
6. Microwave-assisted Knoevenagel reaction using anisaldehyde, ethylcyanoacetate and ammonium formate.

7. Photoreduction of benzophenone to benzopinacol in the presence of sunlight.
8. Photochemical conversion of dimethyl maleate to dimethyl fumarate (cis-trans isomerisation)
9. Benzil- Benzilic acid rearrangement: Preparation of benzilic acid in solid state under solvent-free condition.
10. Preparation of dibenzalacetone by cross aldol condensation reaction using base catalysed green method.

Solutions, Colligative properties, Phase Equilibria and adsorption (DSE-3)	**04**	**03**	**-**	**01**	Class 12th with Physics, Chemistry	

Learning Objectives

The Learning Objectives of this course are as follows:

- To make the students understand the various properties of dilute solutions.
- To make the students understand the thermodynamic basis of colligative properties.
- To explain the concept of phase, co-existence of phases, phase diagram for various types of system, CST and distribution law.
- To introduce the concept of adsorption, its dependence on various conditions and applications

Learning outcomes

By studying this course, students will be able to:

- Explain different types of phase equilibrium, draw a well labelled phase diagram.
- Predict the existence of a substance in a given phase under different conditions of temperature and pressure
- Apply the concepts of phase, solutions and distribution law while studying other chemistry courses and every-day life processes.
- Explain the type of adsorption that can take place in different systems and predict the conditions to get maximum adsorption.

SYLLABUS OF DSE-3

UNIT-1: Solutions and Colligative Properties **(12 Hours**

Dilute solutions; lowering of vapour pressure, Raoult's law, Henry's law. Thermodynamic basis of the colligative properties - lowering of vapour pressure, elevation of Boiling Point, Depression of Freezing point and Osmotic pressure and derivation of expressions for these using chemical potential. Application of colligative properties in calculating molar masses of normal, dissociated and associated solutes in solutions, van't Hoff factor and its applications. Concept of activity and activity coefficients.

UNIT-2: Phase Equilibria (24 Hours)

Concept of phases, components and degrees of freedom, derivation of Gibbs Phase Rule for nonreactive and reactive systems; Clausius-Clapeyron equation and its applications to solid-liquid, liquid-vapour and solid-vapour equilibria, phase diagram for one component systems (H_2O and S), with applications. A comparison between the phase diagram of CO_2 and H_2O. Phase diagrams for systems of solid-liquid equilibria involving eutectic, congruent and incongruent melting points, solid solutions (excluding partial miscibility). Binary solutions: Gibbs-Duhem-Margules equation, its derivation and applications to fractional distillation of binary miscible liquids (ideal and non-ideal), Konovalov's laws, azeotropes, lever rule, partial miscibility of liquids, CST, miscible pairs, steam distillation. Nernst distribution law: its derivation and applications.
Three component systems, water-chloroform-acetic acid system, triangular plots.

UNIT-3: Surface chemistry (9 Hours

Physical adsorption, chemisorption, adsorption isotherms (Langmuir and Freundlich). Nature of adsorbed state. Multilayer adsorption, BET equation derivation, thermodynamic treatment of adsorption-Gibbs equation.

Practical component Credit: 01

(Laboratory periods: 15 classes of 2 hours each)

Practical

Phase Equilibrium

1. Determination of critical solution temperature and composition at CST of the phenol water system
2. To study the effect of impurities of sodium chloride and succinic acid on the CST of phenol-water system.
3. To study the cooling curves for the following systems:
   (i) simple eutectic
   (ii) congruently melting systems.

Adsorption

Verify the Freundlich and Langmuir isotherms for adsorption of acetic acid on activated charcoal.

Essential/recommended readings

Theory:

1. Peter, A.; Paula, J. de. (2011), **Physical Chemistry**, 9th Edition, Oxford University Press.
2. Castellan, G. W. (2004), **Physical Chemistry**, 4th Edition, Narosa.
3. Kapoor, K.L. (2015), **A Textbook of Physical Chemistry**, Vol 3, 6th Edition, McGraw Hill Education.
4. Kapoor, K.L. (2015),**A Textbook of Physical Chemistry**, Vol 5, 6th Edition, McGraw Hill Education.
5. Ball, D. W. (2017), **Physical Chemistry,** 2nd Edition, Cengage Learning, India.

Practical:

1. Khosla, B.D.; Garg, V.C.; Gulati, A. (2015), **Senior Practical Physical Chemistry**, R. Chand & Co, New Delhi.
2. Garland, C. W.; Nibler, J. W.; Shoemaker, D. P. (2003), **Experiments in Physical Chemistry**, 8th Edition, McGraw-Hill, New York.

Suggestive readings

1. Levine, I.N. (2010), **Physical Chemistry**, Tata Mc Graw Hill.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVE COURSE -4 (DSE-4): Nuclear and Environmental Chemistry

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Nuclear and Environmental Chemistry (DSE-4)	**04**	**03**	**--**	**01**	Class 12th with Physics, Chemistry	**--**

Learning Objectives

The Objectives of this course are as follows:

- To make students know more about nuclear chemistry
- To familiarise the students about environmental chemistry, especially with respect to air and water

Learning outcomes

By studying this course, the students will be able to:

- Gain knowledge about Nuclear chemistry, radioactive decay, nuclear disasters, and nuclear waste and their disposal.
- Describe the composition of air, various air pollutants, effects and control measures of air pollutants.
- List different sources of water, water quality parameters, impacts of water pollution, water treatment.
- Identify different industrial effluents and their treatment methods.

SYLLABUS OF DSE-4

Unit-1 : Nuclear Chemistry **(21 Hours**

The nucleus: subatomic particles, e liquid drop model; forces in nucleus-mesons; stability of nucleus-n/p ratio, binding energy; radioactive elements.
Radioactive decay- α-decay, β-decay, γ-decay; neutron emission, positron emission; unit of radioactivity (curie); half life period; radioactive displacement law, radioactive series.
Measurement of radioactivity: ionization chamber, Geiger Counters, Scintillation counters.
Nuclear reactions: Nuclear fission-theory of nuclear fission; chain reaction; nuclear fusion; nuclear reactors-fast breeder reactors, fuels used in nuclear reactors, separation of isotopes, moderators, coolants; nuclear reactors in India.
Applications: Dating of rocks and minerals, carbon dating, neutron activation analysis, isotopic labeling studies, nuclear medicine- ^{99m}Tc radio pharmaceuticals.
Nuclear disasters – Chernobyl disaster, Three Mile Island Disaster, Disposal of nuclear waste and its management.

UNIT – 2: Air Pollution **(**12 Hours

Major regions of atmosphere, chemical and photochemical reactions in atmosphere. Air pollutants: types, sources, particle size and chemical nature, Major sources of air pollution, Pollution by SO_2, CO_2, CO, NO_x, H_2S and other foul-smelling gases, methods of estimation of CO, NO_x, SO_x and control procedures.

Chemistry and environment impact of the following: Photochemical smog, Greenhouse effect, Ozone depletion

Air pollution control, Settling Chambers, Venturi Scrubbers, Electrostatic Precipitators (ESPs).

UNIT – 3 : Water Pollution: (12 Hours)

Hydrological cycle, water resources, aquatic ecosystems, Sources and nature of water pollutants, Techniques for measuring water pollution, Impacts of water pollution on hydrological cycle and ecosystems. Water purification methods. Effluent treatment plants (primary, secondary and tertiary treatment).

Sludge disposal. Industrial waste management, incineration of waste. Water treatment and purification (reverse osmosis, electro dialysis, ion-exchange). Water quality parameters for wastewater, industrial water and domestic water.

Practical component
Practical: Credits: 01
(Laboratory periods:15 classes of 2 hours each)
(At least four experiments to be performed)

1. Determination of dissolved oxygen in a given sample of water.
2. Determination of Chemical Oxygen Demand (COD) in a given sample of water.
3. Determination of Biological Oxygen Demand (BOD) in a given sample of water.

4. Measurement of chloride, sulphate and salinity of water samples by simple titration method ($AgNO_3$ and potassium chromate).
5. Estimation of total alkalinity of water samples (CO_3^{2-}, HCO_3^-) using double titration method.
6. Measurement of dissolved CO_2 in a given sample of water.
7. Determination of hexavalent Chromium Cr(VI) concentration in tannery wastes/ waste water sample using UV-Vis spectrophotometry technique.

Essential/recommended readings

2. Gopalan, R.; Anand, A.; Sugumar R.W. (2008), **A Laboratory Manual for Environmental Chemistry**, I. K. International.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVE COURSE – 5 (DSE-5): Reactions, Reagents and Chemical Process

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Reactions, Reagents and Chemical Process (DSE-5)	04	03	--	01	Class 12^{th} with Physics, Chemistry	Basic knowledge of organic reactions

Learning objectives

The objectives of this course are as follows:

- To study the important organic name and rearrangement reactions that are crucial for the synthesis of valuable organic compounds.
- To give the knowledge belonging to the role of reagents in organic reactions for the synthesis of chemo-, diastereo- and enantio-selective products.
- To impart the knowledge of process chemistry that is a key part of the large-scale synthesis of chemical products essential for day-to-day life

Learning outcomes

By studying this course, students will be able to:

- Explain the reaction mechanism of various name and rearrangement reactions
- Discuss the role of the reagents in organic synthesis and apply these reagents for the bulk chemical synthesis
- Debate and use oxidizing and reducing reagents for selective synthesis organic products
- Apply the learnt techniques to chemical processes
- Acquire skills for human resource building especially in the chemical industry.

SYLLABUS OF DSE-5

UNIT – 1: Name Reactions **(15 Hours)**

Application, scope and mechanism of following reactions: Prevost Reaction, Chugaev Reaction, Maukaiyama Aldol Reaction, Mozingo Reaction, Ramberg Backlund Reaction, Shapiro Reaction, Barbier Reaction, Clark- Eschweiler Reaction, Darzen's Reaction, Julia-Olifination Reaction, Tiffeneaus Damjanov Reaction, Darkin West Reaction, Bischler-Napieralaski Reaction, Birch reduction of aromatic compounds, Appel Reaction, Mitsunobu

Reaction, Corey Kim Oxidation, Azide-alkyne 1,3-dipolar cycloaddition reaction, Olefin metathesis: Grubbs reaction, Heck Reaction, Suzuki coupling and Wittig reaction.

UNIT – 2: **Reducing Reagents** **(9 Hours)**

Reactions, mechanism and applications of following reducing agents: Sodium borohydride, Lithium aluminium hydride, $NaBH_3CN$, DIBALH, lithium-tri-*tert*-butoxyaluminum hydride, Red-Al $Na[AlH_2(OCH_2OCH_2OCH_3)_2]$, Zinc borohydride, L and K selectrides, $LiBHEt_3$ and $KBHEt_3$, Luche Reagent $NaBH_4$-$CeCl_3$, $K[BH(OAc)_3]$, *bis*-Boric Acid (BBA), Catecholborane, DEMS (Diethoxymethylsilane), 3-Mercapto propionic acid, Polymethylhydrosiloxane (PMHS), Schwartz's Reagent (Zirconocene chloride hydride).

UNIT – 3: Oxidizing Reagents **(9 Hours**

Reactions, mechanism and applications of following oxidizing agents: Jones Reagent (CrO_3, H_2SO_4, H_2O), Swern Reagent (DMSO, oxalyl chloride), Dess Martin, TEMPO, TPAP (Tetrapropyl ammonium perruthenate), Fetizon's Reagent, Fenton's Reagent [H_2O_2 + Fe(II) ion], Sodium perborate NaH_2BO_4, Sodium Bismuthate $NaBiO_3$, ABNO (9-Azabicyclo[3.3.1]nonane N-oxyl), DEAP (Diethyl allyl phosphate, 
), AZADO (2-Azaadamantane N-oxyl], Wacker oxidation.

UNIT – 4: Process Chemistry **(12 Hours)**

1. Process chemistry a) Introduction, stages of scale up process: Bench, pilot, and large-scale process with at least two examples of scale up process of API. b) In-process control and validation of large-scale process.
2. Unit Processes: The following unit processes should be studied with mechanism and one example of each process Nitration: Nitrating agents, process equipment for technical nitration. Halogenation: Types of halogenations, catalytic halogenations. Reduction: Catalytic hydrogenation, hydrogen transfer reactions, metal hydrides. Oxidation: Types of oxidative reactions, and non-metallic oxidizing agents such as H, sodium hypochlorite, oxygen gas, ozonolysis.

Practical component **Credits:**

01 (Laboratory periods:15 classes of 2 hours each)

1. Oxidation of alcohols to acid using Jones reagent.
2. Reduction of acetophenone and its derivatives to 1-phenyl ethanol derivatives by $NaBH_4$.
3. Reduction of 4-tert-butyl-cyclohexanone to cis and trans 4-tert-butyl-cyclohexanol.
4. Synthesis of 2,5-dimethyl-2,5-hexanediol from tert-butanol using Fenton's reagents.
5. Wittig reaction of benzyltriphenylphosphonium chloride and 4-bromobenzaldehyde using potassium phosphate (tribasic).
6. Substitution (S_N2) reaction of 1-iodobutane and 2-naphthol.
7. Aldol condensation reaction: solventless synthesis of chalcones.
8. Borohydride reduction of a ketone: hydrobenzoin from benzil.
9. Visit to chemical industry of the demonstration of pilot scale.

Essential/recommended readings

Theory:

2. Clayden, J. Greeves, N., Warren, S. **Organic Chemistry**, South Asian Edition, Oxford University Press, USA
3. Gadamasetti K., **Process Chemistry in the Pharmaceutical Industry: Challenges in an Ever- Changing Climate-An Overview**, Vol-2, CRC Press, London.
4. Murphy R.M., **Introduction to Chemical Processes: Principles, Analysis, Synthesis**, McGraw-Hill Education, New York.

Practical:

1. Mann F.G, Saunders, B.C., **Practical Organic Chemistry**, Dorling Kindersley (India) Pvt. Ltd. (Pearson Education Ltd.), Singapore.
2. Vogel A.I., **Elementary Practical Organic Chemistry**, Dorling Kindersley (India) Pvt. Ltd. (Pearson Education Ltd.), Singapore.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVE COURSE - 6 (DSE- 6): Polymers, Colloids, Surfaces and Interfaces

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Polymers, Colloids, Surfaces and Interfaces (DSE- 6)	**04**	**03**	**--**	**01**	Class 12th with Physics, Chemistry	**--**

Learning Objectives

The objectives of this course are as follows:

- To give students a comprehensive coverage of important physical aspects of polymers chemistry, colloids, emulsions, surfaces and interfaces.
- to study the applications of these aspects.

Learning outcomes

By studying this course, the students will be able to:

- Explain the types of polymers, kinetics of polymerization and polymer properties.
- Understand and apply the concepts of properties of polymer solutions and their thermodynamics.
- Comprehend the basic concepts of surface chemistry specifically in relation to colloids.
- Have a thorough understanding of applications of colloids in various areas.

SYLLABUS OF DSE-6

UNIT 1: Introduction to polymers **(Hours: 6)**

Recapitulation of basic concepts of polymers. Types of polymerizations and their mechanism and kinetics: Free radical, ionic, step-growth, coordination, copolymerization. Polymerization techniques: Bulk, solution, suspension, and emulsion.

UNIT 2: Polymer solution **(Hours: 9)**

Polymer solution – solubility parameter, properties of dilute solutions and their criteria, Thermodynamics of polymer solutions, entropy, enthalpy, and free energy change. Flory Huggins theory.

UNIT 3: Introduction to Colloid Chemistry (Hours: 9)

Recapitulation of basic concepts of Adsorption, Distinction among true solutions, colloids and suspensions, Components of Colloids, classification of colloids - lyophilic, lyophobic; Preparation methods and properties of lyophobic solutions, Hydrophile-lyophile balance (HLB), multi molecular, macromolecular and associated colloids (micelles formation), preparation and properties of colloids - Tyndall effect, Brownian movement, electrophoresis, dialysis, coagulation and flocculation; Charge on Colloidal particles and Electrical double layer concept, Suspensions and their characteristics, Emulsions and their characteristics.

UNIT 4: Surface chemistry in relation to colloids (Hours: 12)

Surface film on liquid surface, surface potential, monomolecular films, Langmuir Blodgett layers. Emulsions, foams and aerosols; electrical aspects of surface chemistry; Surface of solids, solid-liquid interface, stability of dispersions, stabilization of suspensions

UNIT 5: Application of colloids (Hours: 9)

Characterization of colloidal particles, Role of colloid chemistry in Nanotechnology (wet colloid chemical approach, “bottom up” fabrication of nanoparticles and nanostructured materials), applications of colloid chemistry in petroleum recovery, coating and painting, food, pharmaceuticals and cosmetic industry, medicinal chemistry (use in drug formulations), Sewage disposal, Purification of water, cleansing action of soap, Formation of Delta, Smoke precipitation, Photography, Artificial rain

Practical component

Practicals: Credits: 01

(Laboratory periods:15 classes of 2 hours each)

1. Free radical solution polymerization of styrene (St) / Methyl Methacrylate (MMA)/MethylAcrylate (MA).
2. Preparation of nylon 6,6
3. Determination of molecular weight of polyvinyl propylidene in water by viscometry.
4. Determination of the viscosity-average molecular weight of poly(vinyl alcohol) (PVOH) and the fraction of head-to-head monomer linkages in the polymer.
5. Determination of molecular weight by end group analysis of polymethacrylic acid.
6. Estimation of the amount of HCHO in the given solution by sodium sulphite method.
7. Preparation of Colloidal Sols of following
    A. Arsenic sulphide,

B. Antimony sulphide

C. Ferric chloride

D. Aluminium hydroxide

8. To find out the precipitation values of arsenious sulphide sol by using monovalent, bivalent and trivalent cations.
9. To determine the nature of charge on particle in given colloidal solution and their electrophoretic velocity and zeta potential.
10. To prepare lyophilic sol of starch.

Essential/recommended readings

Theory:

1. Carraher,C. E. Jr. (2013), **Seymour's Polymer Chemistry**, Marcel Dekker, Inc.
2. Odian, G. (2004), **Principles of Polymerization**, John Wiley.
3. Billmeyer, F.W. (1984), **Text Book of Polymer Science**, John Wiley
4. Myers D.,Surface, interfaces and colloids Principles and Applications, 2nd Edition, Wiley-VCH
5. V.R. Gowarikar (2010), **Polymer Science**, New Age International Publishers Ltd.

Practical:

1. Sperling, L.H. (2005), **Introduction to Physical Polymer Science**, John Wiley & Sons

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVE COURSE -7 (DSE-7): Novel Inorganic Solids

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Novel Inorganic Solids (DSE-7)	**04**	**03**	**--**	**01**	**Class 12th with Physics, Chemistry**	**--**

Learning Objectives

The Objectives of this course are as follows:

- To familiarize the students with the characterization techniques of inorganic solids
- To familiarize the students with use and manifold applications of composites, carbon or high-tech ceramics

Learning Outcomes:

By studying this course, the students will be able to:

- Explain the mechanism of solid-state synthesis.
- Explain about the different characterization techniques and their principle.
- Explain the importance of composites and their applications.
- Discuss and explain the usage of solid materials in various instruments, batteries, etc. which would help them to appreciate the real-life importance of these materials

SYLLABUS OF DSE- 7

Unit 1: Synthesis of inorganic solids **(Hours: 5)**

Conventional heat and beat method, Co-precipitation method, Sol-gel method, Hydrothermal method, Chemical vapor deposition (CVD), Ion-exchange and Intercalation method.

Unit 2: Characterization techniques of inorganic solids **(Hours: 10)**

Powder X-ray Diffraction, UV-visible spectroscopy, Scanning Electron Microscopy (SEM), Transmission Electron Microscopy (TEM), Fourier-Transform Infrared (FTIR) spectroscopy, Brunauer–Emmett–Teller (BET) surface area analyser, Dynamic Light Scattering (DLS)

Unit 3: Pigments **(Hours: 10)**

Cationic, anionic and mixed solid electrolytes and their applications. Inorganic pigments – coloured, white and black pigments.

One-dimensional metals, molecular magnets, inorganic liquid crystals.

Unit 4: Composite materials **(Hours: 10)**

Introduction, limitations of conventional engineering materials, role of matrix in composites, classification, matrix materials, reinforcements, metal-matrix composites, polymer-matrix composites, fibre-reinforced composites, bio-nanocomposites, environmental effects on composites, applications of composites.

Unit 5: Speciality polymers **(Hours: 10)**

Speciality polymers: Conducting polymers - Introduction, conduction mechanism, polyacetylene, polyparaphenylene, polyaniline. and polypyrrole, applications of conducting polymers, ion-exchange resins and their applications.

Ceramic & Refractory: Introduction, classification, properties, manufacturing and applications of ceramics, refractory and superalloys as examples.

Practicals **Credits: 01**

(Laboratory periods: 15 classes of 2 hours each)

1. Preparation of polyaniline and its characterization using UV-visible spectrophotometer.
2. Intercalation of hydrogen in tungsten trioxide and its conductivity measurement using conductometer.
3. Synthesis of the following inorganic pigments:

   (i) $PbCrO_4$ / chrome yellow

   (ii) Barium white

   (iii) Prussian Blue

   (iv) Malachite

. 4. Preparation of zeolite A and removal of Mg and Ca ions from water samples quantitatively using zeolite.

5. Determination of exchange capacity of cation exchange resins and anion exchange resins.

6. Determination of a mixture of cobalt and nickel (UV-visible spectroscopy).
7. Preparation of a disc of a ceramic compound using ball milling, pressing and sintering, and study its XRD.

Essential/recommended readings

Theory:

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVE COURSE – 8 (DSE-8): Applied Organic Chemistry

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Applied Organic Chemistry (DSE-8)	04	03	--	01	Class 12th with Physics, Chemistry	--

Learning Objectives

The objectives of this course are as follows:

- To make students aware of the importance of organic compounds in daily life.
- To familiarize students with the chemistry and uses of dyes, polymers, terpenoids, alkaloids, steroids and pharmaceutical compounds and their direct or indirect effect on human life and health

Learning outcomes

By the end of this course the students will be able to:

- Discuss and demonstrate the chemistry and uses of commercially important and naturally occurring compounds like dyes, polymers, terpenoids, alkaloids, steroids and pharmaceuticals.
- Appreciate the chemistry of biodegradable and conducting polymers and their importance to human life and society.
- Comprehend the chemistry of dyeing and dyes. Explain why some dyes are better than others. Describe the applications of various types of dyes including those in foods and textiles.
- Comprehend the synthetic routes and mode of action of some selected pharmaceutical compounds
- Use the knowledge gained to solve real world problems

SYLLABUS OF DSE-8

Unit 1: Dyes **(Hours: 7)**

Nomenclature of commercial dyes with at least one example. Suffixes - G, O, R, B, 6B, L, S; colour index and colour index number. Classification of dyes based on structure and application; Chemistry of dyeing.

Synthesis and applications of the following types of dyes: Azo dyes - Methyl orange, Congo red; Triphenyl methane dyes-Malachite green, Rosaniline and Crystal violet; Phthalein Dyes - Phenolphthalein; Natural dyes - Structure elucidation and synthesis of Alizarin and Indigotin; Edible Dyes (natural and synthetic) with examples and effect of synthetic food colours on health.

Unit 2: Polymers **(Hours:12)**

Introduction and classification based on origin, monomer units, thermal response, mode of formation, structure, application and tacticity; di-block, tri-block and amphiphilic polymers; Weight average molecular weight, number average molecular weight, glass transition temperature (Tg) of polymers; Polymerisation Reactions-Addition and condensation. Mechanism of cationic, anionic and free radical addition polymerization; Ziegler-Natta polymerisation of alkenes.

Preparation and applications of: Plastics -thermosetting (phenol-formaldehyde, Polyurethanes) and thermosoftening (PVC, polythene); Fabrics -natural (cellulose and synthetic derivatives of cellulose like rayon and viscose); synthetic (acrylic, polyamide, polyester); Rubbers-natural and synthetic: Buna-N, Buna-S, Neoprene, silicon rubber; Vulcanization; Polymer additives; Introduction to Specialty Polymers: electroluminescent (Organic light emitting diodes), Conducting, biodegradable polymers and liquid crystals.

Unit 3: Natural Product Chemistry- An Introduction to Terpenoids, Alkaloids and Steroids (Hours: 12)

Terpenes: Introduction, occurrence, classification, uses, isoprene and special isoprene rule; structure elucidation, synthesis and industrial application of citral.

Alkaloids: Introduction, occurrence, classification, uses, general structural features, general methods for structure elucidation including Hoffmann's exhaustive methylation and Emde's method. Structure elucidation, synthesis and physiological action of Nicotine.

Steroids: Introduction, occurrence, structure, Diel's hydrocarbon, nomenclature of steroid hydrocarbons, structure and biological functions of the following steroids- Cholesterol, Sex Hormones (Estrogen, androgen and progesterone), Adrenocortical hormones (Cortisone and cortisol) and Ergosterol (antirachitic effect).

Unit 4: Pharmaceutical Compounds **(Hours:14)**

Introduction, classification; Synthesis, uses, mode of action and side effects of the following drugs:

Antipyretics -Paracetamol; Analgesics- Ibuprofen; Antimalarials - Chloroquine; Antitubercular drugs - Isoniazid.

An elementary treatment of Antibiotics and detailed study of chloramphenicol including mode of action. Structure and medicinal uses of curcumin (haldi), azadirachtin (neem), vitamin C and antacid (ranitidine)**.**

Practical component

Practical: **Credits: 01**

(Laboratory periods:15 classes of 2 hours each)

(At least five experiments to be performed)

1. Synthesis of urea formaldehyde resin and test the solubility.
2. Preparation of Starch-PVA Film.
3. Preparation of Methyl orange.
4. Separation of a mixture of dyes by Thin Layer Chromatography (TLC).
5. Isolation and estimation of the content of aspirin in a commercial tablet.
6. Synthesis of 4-methyl-7-hydroxycoumarin by condensation of resorcinol with ethyl acetoacetate.
7. Synthesis of 3,5-dimethyl pyrazole by condensation of acetylacetone and hydrazine.
8. Synthesis of benzimidazole.
9. Synthesis of 2,3-diphenylquinoxaline.
10. Synthesis of paracetamol

Essential/recommended readings

Theory:

1. Finar, I.L. Fifth Edition **Organic Chemistry**, Volume 2, Pearson Education, 2008.
2. Saunders, K. J., (1988), **Organic Polymer Chemistry,** Second Edition Chapman & Hall, London.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVE COURSE- 9 (DSE-9): Applications of Computers in Chemistry

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Applications of Computers in Chemistry (DSE 9)	**04**	**03**	**-**	**01**	Class 12th with Physics, Chemistry	

Learning Objectives

The Objectives of this course are as follows:

- To familiarize the students with the fundamental building blocks and syntax of coding in Python with
- To apply python programming to solve simple Chemistry problems by thinking algorithmically and coding structurally

Learning outcomes

By studying this course, the students will be able to:

- Understand the importance of python programming in chemistry and its applications in the field of AI and ML
- Perform simple computations in python after learning the basic syntax, loop structure, string data manipulation etc.
- Solve chemistry problems such as finding pKa of a weak acid, solving Schrodinger's equation etc.
- Plot experimental data and perform regression analysis

SYLLABUS OF DSE-9

UNIT–1: Basic Computer system **(Hours: 3)**

Hardware and Software; Input devices, Storage devices, Output devices, Central Processing Unit (Control Unit and Arithmetic Logic Unit); Number system (Binary, Octal and

Hexadecimal Operating System); Computer Codes (BCD and ASCII); Numeric/String constants and variables. Operating Systems (DOS, WINDOWS, and Linux); Software languages: Low level and High-Level languages (Machine language, Assembly language; QBASIC, C, C++, FORTRAN 90&95); Compiled versus interpreted languages. Debugging Software Products (Office, chemsketch, scilab, matlab, and hyperchem), internet application

UNIT-2: Introduction to Python (Hours: 3)

Why Python? Python coding environment setup, Python as an interpreted language, Brief history of Python, Uses of Python (including artificial intelligence and machine learning), Applications of Python in Chemistry

UNIT-3: Coding in Python (Hours: 18)

(i) Basic syntax including constants and variables, Operators, Data Types, Declaring and using Numeric data types: int, float, string etc. (ii) Program Flow Control Conditional blocks: if, else and else if, simple FOR loops, FOR loop using ranges, string, list and dictionaries. Use of while loops, Loop manipulation using pass, continue, break and else. (iii) Complex data types: String, List, Arrays, Tuples and Dictionary, String operations and manipulation methods, List operations including slicing, in-built Python Functions. (iv) Python packages - usage of numpy and scipy for mathematical computations.

UNIT-4: Plotting graphs (Hours: 9)

Matplotlib for Plotting - Simple plots, formatting of plots, multiple plots, histograms, bar graphs, distributions, curve fitting – linear regression.

UNIT-5: Numerical Methods in Chemistry (Hours: 12)

Solution of quadratic equation, polynomial equations (formula, iteration, Newton – Raphson methods and binary bisection) with examples of polynomial equations used in chemistry; Numerical differentiation – finite difference method (backward, central and forward), Numerical integration - Trapezoidal and Simpson's rule to calculate area under the curves for chemistry problems, e.g., entropy calculations, Simultaneous equations, Statistical analysis-mean, variance, standard deviation, error, Curve fitting – linear regression, Solving Schrödinger's equation using Python packages.

Practical component

Practicals: Python Programming for Chemists Credits: 01

4. **Writing simple programs using scipy and numpy**
    a. syntax, data types
    b. loop structure, conditional loops

c. To learn string data manipulation
d. Array and lists
e. Sorting, matrix manipulations

5. **Plotting graphs using matplotlib**
   a. Planck's distribution law
   b. Maxwell-Boltzmann distribution curves as a function of temperature and mass
   c. Radial distribution curves for hydrogenic orbitals
   d. Gas law Isotherms – Ideal and Real
   e. Data from phase equilibria studies
   f. Wavefunctions and Probabilities as multiplots
   g. Kinetics data with linear fitting

6. **Numerical Methods in Chemistry**
   a. Solving equations involved in chemical equilibria such as pH of a weak acid at a given concentration, cubic equation obtained from solving van der Waals equation of real gases using Iteration, Newton-Raphson, and Binary Bisection Method
   b. Numerical Differentiation – finding equivalence point given pH metric and potentiometric titrations data by finding the first and the second derivative using the finite difference method
   c. Numerical Integration – Trapezoidal and Simpson's 1/3 rule to calculate enthalpy and entropy of an ideal gas
   d. Statistical Analysis – Calculating Mean, Variance, Standard Deviation
   e. Solving Schrodinger's Equation

Essential/recommended readings

Theory:

7. Dr. M. Kanagasabapathy(2023), **Python for Chemistry: An introduction to Python algorithms, Simulations, and Programing for Chemistry** (English Edition), BPB Publications
8. Robert Johansson (2021), **Numerical Python: Scientific Computing and Data Science Applications with Numpy, SciPy and Matplotlib**, 2nd Edition, Apress

Practical

1. Urban M., Murach J., **Murach's Python programming,** 2nd Indian reprint 2018, Shroff publishers and distributors
2. Gaddis T., **Starting out with python plus My programming Lab** with Pearson e-text-Access card package, 3rd ed.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVE COURSE - 10(DSE-10): Analytical Methods in Chemistry

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Analytical Methods in Chemistry (DSE-10)	**04**	**03**	**--**	**01**	**Class 12th with Physics, Chemistry**	**-**

Learning Objectives

The Objectives of this course are as follows:

- To familiarize the students with concept of sampling, Accuracy, Precision, Statistical test data-F, Q and t test.
- To familiarize the students with the laws of spectroscopy and selection rules governing the possible transitions in the different regions of the electromagnetic spectra.
- To familiarize the students with important separation methods like solvent extraction and chromatography

Learning Outcomes:

By studying this course, the students will be able to:

- Perform experiment with accuracy and precision.
- Develop methods of analysis for different samples independently.
- Test contaminated water samples.
- Use basic principle of instrument like Flame Photometer, UV-Visible spectrophotometer learnt for practical applications.
- Apply knowledge of geometrical isomers and keto-enol tautomers to analysis.
- Determine composition of soil.
- Estimate macronutrients using Flame photometry.

SYLLABUS OF DSE-10

Unit 1: Qualitative and Quantitative Aspects of Analysis: (Hours: 5)

Sampling, evaluation of analytical data, errors, accuracy and precision, methods of their expression.

Normal law of distribution of indeterminate errors, statistical test of data; F, Q and t test, rejection of data, and confidence intervals.

Unit 2: Optical Methods of Analysis (Hours: 25)

Origin of spectra, interaction of radiation with matter, fundamental laws of spectroscopy and selection rules

UV-Visible Spectrometry: Basic principles of instrumentation (choice of source, monochromator and detector) for single and double beam instrument; Transmittance. Absorbance and Beer-Lambert law

Basic principles of quantitative analysis: estimation of metal ions from aqueous solution, geometrical isomers, keto-enol tautomers.

Flame Atomic Absorption and Emission Spectrometry: Basic principles of instrumentation (choice of source, monochromator, detector, choice of flame and Burner designs). Techniques of atomization and sample introduction; Method of background correction, sources of chemical interferences and their method of removal, Techniques for the quantitative estimation of trace level of metal ions from water samples.

Unit 3: Thermal methods of analysis (Hours: 5)

Theory of thermogravimetry (TG) and basic principle of instrumentation of thermal analyser. Techniques for quantitative estimation of Ca and Mg from their mixture.

Unit 4: Separation techniques (Hours:10)

Solvent extraction: Classification, principle and efficiency of the technique.

Mechanism of extraction: extraction by solvation and chelation, Technique of extraction: batch, continuous and counter current extractions, Qualitative and quantitative aspects of solvent extraction: extraction of metal ions from aqueous solution, extraction of organic species from the aqueous and non-aqueous media.

Chromatography: Classification, principle and efficiency of the technique, Mechanism of separation: adsorption, partition & ion-exchange

Practicals Credits 01

(Laboratory periods: 15 classes of 2 hours each)

1. Separation of constituents of leaf pigments by Thin Layer Chromatography

2. Solvent Extractions

   (i) To separate a mixture of Ni^{2+} & Fe^{2+} by complexation with DMG and extracting the Ni^{2+} DMG complex in chloroform, and determine its concentration by spectrophotometry.

3. Analysis of soil:

   (i) Total soluble salt
   (ii) Estimation of exchangeable calcium and magnesium
   (iii) Estimation of carbonate and bicarbonate
   (iv) Qualitative detection of nitrate and phosphate

4. Separation of amino acids from organic acids by ion exchange chromatography.
5. Spectrophotometry

   (i) Verification of Lambert-Beer's law and determination of concentration of a coloured species ($CuSO_4$ / $KMnO_4$ /$CoCl_2$ / $CoSO_4$)
   (ii) Spectrophotometric analysis of caffeine and benzoic acid in a soft drink
   (iii) Determination of concentration of coloured species via following methods;
   (a) Graphical method, (b) Epsilon method, (c) Ratio method, (iv) Standard addition method

6. Flamephotomerty
   (i) Estimation of potassium, calcium and magnesium using flame photometry

Essential/recommended readings

Theory:

1. Willard, H.H.(1988),**Instrumental Methods of Analysis**, 7th Edition, Wardsworth Publishing Company.
2. Christian, G.D.(2004),**Analytical Chemistry**, 6th Edition, John Wiley & Sons, New York.
3. Harris, D. C.(2007),**Quantitative Chemical Analysis**,6th Edition, Freeman.
4. Khopkar, S.M. (2008), **Basic Concepts of Analytical Chemistry,** New Age International Publisher.
5. Skoog, D.A.; Holler F.J.; Nieman, T.A. (2005), **Principles of Instrumental Analysis,** Thomson Asia Pvt. Ltd.

Practicals:

1. Jeffery, G.H.; Bassett, J.; Mendham, J.; Denney, R.C.(1989),**Vogel's Textbook of Quantitative Chemical Analysis**,John Wiley and Sons.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVE COURSE - 11 (DSE-11): Basic Principles of Food Chemistry

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Basic Principles of Food Chemistry (DSE-11)	04	03	--	01	Class 12th with Physics, Chemistry	--

Learning Objectives

The objectives of this course are as follows:

- To make students understand the sources, importance, stability and transformations of food components during handling and processing.
- To make students aware about nature and importance of additives in food chemistry.

Learning outcomes

By studying this course, the students will be able to:

- Develop a strong understanding of basic fundamentals of food chemistry
- Discuss and demonstrate how alterations /transformations during processing and handling affect the quality and stability of food
- Develop an elementary idea on the nature and importance of additives in food chemistry.
- Apply the knowledge gained to real world problems

SYLLABUS OF DSE-11

Unit 1: Introduction **(Hours:3)**

What is food chemistry; An overview of the following: alterations during handling or processing (texture, flavour, colour), chemical and biochemical reactions leading to alteration in food quality (browning, oxidation, hydrolysis, protein denaturation), cause and effect relationship pertaining to food handling; factors governing stability of food (chemical and environmental factors) and role of food chemists.

Unit 2: Water **(Hours:3)**

Definition of water in food, structure of water and ice, types of water, sorption phenomenon, water activity and packaging, water activity and shelf-life.

Unit 3: Carbohydrates (Hours:6)

Introduction, sources, functions, deficiencies, structure and importance of polysaccharides in food chemistry (Agar and Agarose, Pectin, Hemicellulose, Cyclodextrins, Gums, Alginate, Starches, modified starches), Non-enzymatic browning and its prevention, caramelisation, formation of acrylamide in food, role of carbohydrates as sweeteners and comparison with artificial sweeteners.

Unit 4: Proteins (Hours:6)

Introduction, sources, classification, functions, deficiencies, physico-chemical & functional properties of proteins, nature of food proteins (plant and animal proteins).

Unit 5: Lipids (Hours:6)

Introduction, sources, classification and physical properties, functions, deficiencies, effect of frying on fat, reaction of lipids: hydrogenation, interesterification, hydrolysis, auto-oxidation and its prevention; flavour reversion, fat replacers: fat mimetics and fat substitutes.

Unit 6: Vitamins and Minerals (Hours:6)

Vitamins: Introduction, sources, classification: water soluble and water insoluble vitamins, essential vitamins, physiological function, deficiencies, causes of variation and loss in foods, vitamin like compounds, effect of food processing.

Minerals: Introduction, sources, classification: major minerals and trace elements, physiological function, deficiencies, factors affecting mineral content of food, fortification and enrichment of foods with minerals, effect of food processing.

Unit 7: Food Additives (Hours:15)

Additives: Introduction, importance, classification, antioxidants, emulsifiers, stabilizers, gelling agents, gums, thickeners, sweeteners, acidulants, preservatives, humectants, food toxins

Colouring Agents and Pigments: Introduction, natural food colourants: anthocyanins, carotenoids, chlorophyll, caramel, betalains; examples of pigments in common food; Nature-identical colourants: β-Carotene, canthaxanthin and riboflavin; artificial colouring agents; artificial/synthetic colourants: Azo dyes (e.g. amaranth dye, tatrazine, citrous red, Allura red); quinoline (e.g. quinoline yellow); phthalein (e.g. erythrosine); triarylmethanes and indigoid (e.g. indigo carmine), FD&C Dyes and lakes; properties of certified dyes, colours exempt from certification.

Food Flavor: Sensation of taste and odour, chemical dimension of basic types of taste (Salty, Sweet, Bitter, Sour, Umami taste), other sensations like astringency, coolness, pungency/pungency); non-nutritive sweeteners (aspartame, saccharin, sucralose, cyclamate) and nutritive sweeteners, molecular mechanism of flavour perception, biogenesis of fruits and vegetable flavors, taste inhibition, modification and enhancement, common vegetable and spice flavors.

Practical component

Practical: **Credits: 01**

(Laboratory periods:15 classes of 2 hours each)

(At least four experiments to be performed)

1. Determination of moisture in food products by hot air oven-drying method.
2. Paper chromatography of synthetic food dyes.
3. Quantitative determination of food dyes in powdered drink mixes by spectrophotometric method.
4. Colorimetric determination of Iron in vitamin / dietary tablets.
5. Determination of rancidity of edible oils by Kriess Test.
6. Estimation of Vitamin C in a given solution/ lemon Juice/chillies by 2, 6-dichlorophenol by Indophenol Method.
7. Isolation of casein from milk.
8. Qualitative estimation of cholesterol by Liebermann-Burchard method.
9. Detecting the presence of Vanaspati and rancidity in the given Ghee sample through qualitative tests.

Essential/recommended readings

Theory:

1. DeMan, J.M., Finley, J.W., Hurst, W.J., Lee, C.Y. (2018), **Principles of Food Chemistry**, Fourth Edition, Springer.
2. Msagati, T.A.M. (2013), **Chemistry of Food Additives and Preservatives**, Wiley-Blackwell.
3. Fennema, O.R. (2017), **Food Chemistry**, Fifth Edition, CRC Press.
4. Attokaran, M. (2017), **Natural Food Flavors and Colorants**, Second Edition, Wiley-Blackwell.
5. Potter, N.N., Hotchkiss, J.H, (1995) **Food Science,** Fifth Edition, Chapman & Hall.
6. Brannen, D., Davidsin, P.M., Salminen, T. Thorngate III, J.H. (2002), **Food Additives**, Second Edition, CRC Press.
7. Coultate, T. (2016), **Food: The Chemistry of its Components**, Sixth Edition, Royal Society of Chemistry.
8. Belitz, H. D.; Grosch, W. (2009), **Food Chemistry**, Springer.
9. Course: Food Chemistry (iasri.res.in)

Practical:

1. Ranganna, S. (2017). **Handbook of analysis and quality control for fruits and vegetable products**, Second Edition, McGraw Hill Education
2. Sawhney, S.K., Singh, R. (2001), **Introductory Practical Biochemistry**, Narosa Publishing House

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVE COURSE -12 (DSE-12): Computational Methods & Molecular Modelling

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Computational Methods & Molecular Modelling (DSE-12)	**04**	**03**	**--**	**01**	Class 12th with Physics, Chemistry and Mathematics	**--**

Learning Objectives

The Objectives of this course are as follows:

- To make students learn the theoretical background of computational techniques in molecular modelling.
- To give the different flavours of computational chemistry by the end of this course.
- To provide hands-on experience in molecular modelling on various software

Learning outcomes

By studying this course, the students will be able to:

- Explain the theoretical background of computational techniques and selective application to various molecular systems.
- Compare computational and experimental results and explain deviations.
- Perform Optimization of geometry parameters of a molecule (such as shape, bond length and bond angle) through the use of software like Chem Sketch and Argus Lab in interesting hands-on exercises.
- Perform analysis of molecular properties using various software.

SYLLABUS OF DSE-12

UNIT-1 : Introduction **(Hours: 6)**

Introduction to computational chemistry: Overview of Classical and Quantum Mechanical Methods (Ab initio, DFT, Semi-empirical, Molecular Mechanics, Molecular Dynamics, and Monte Carlo)

UNIT – 2: Potential Energy Surfaces **(Hours: 6)**

Intrinsic Reaction Coordinates, Stationary points, Equilibrium points – Local and Global minima, Geometry optimization and energy minimization, the concept of transition state with examples, Hessian matrix

UNIT – 3 : Molecular Mechanics & Molecular Dynamics **(Hours: 9)**

Molecular Mechanics

Force Fields (A brief explanation of all the terms of a basic force field), the basic idea of MM1, MM2, MM3, MM4, MM+, AMBER, BIO+, OPLS.

Molecular Dynamics

The concept of the periodic box, ensembles (microcanonical, canonical, isothermal – isobaric), steps in a typical MD simulation.

UNIT-4: Huckel Molecular Orbital Theory **(Hours: 6)**

Huckel MO with examples: ethene and propenyl systems, Properties calculated – energy, charges, bond order, electronic energies, resonance energies.

UNIT- 5: Computational Methods **(Hours: 18)**

Ab-initio methods

Antisymmetry principle, Slater determinants, SCF method, Hartree-Fock method.
Basis sets, Basis functions, STOs and GTOs, diffuse and polarization functions. Minimal basis sets, Basis set superposition error (BSSE) - Effective core potentials (ECP)
Advantages of ab initio calculations.

Density Functional Theory

A brief description of Density Functional Theory (DFT). Calculation of Electronic Properties in ground and Excited states

Semi-empirical methods

Basic idea about Zero differential overlap (ZDO) approximation

Some important concepts

Concepts of atomic charges, electrostatic potential maps, computation of thermodynamic properties and spectroscopic observables

Practical component

Practical: Credits: 01

(Laboratory periods:15 classes of 2 hours each)

1) Write the Z-Matrix of a given set of molecules.

2) Carry out geometry optimisation on H_2O, H_2S, H_2Se molecules compare the optimized bond angles and dipole moments from the results obtained. Obtain the ESP-mapped density surfaces and interpret the results obtained with reference to bonding in these molecules.

   Suggestive: A comparative analysis of results of the above exercise may be carried out using different quantum mechanical methods.

3) Calculate the energy of the following chemical species and arrange them in order of increasing stability.

   1-hexene, 2-methyl-2-pentene, (E)-3-methyl-2-pentene, (Z)-3-methyl-2-pentene, and 2,3- dimethyl-2-butene in order of increasing stability.

4) Carry out geometry optimisation on the following chemical species and compare the shapes and dipole moments of the molecules.

   1-pentanol, 2-pentanol, 3-pentanol, 2-methylbutan-1-ol, 3-methylbutan-1-ol, 2-methylbutan-2-ol, 2-methylbutan-3-ol and 2,2-dimethylpropanol.

   Correlate the computationally obtained values of the dipole moments with the experimental values of the boiling points: (118 ºC, 100 ºC, 108 ºC, 82 ºC, of 1-butanol, 2-butanol, 2-methyl-1-propanol, and 2-methyl-2- propanol respectively).

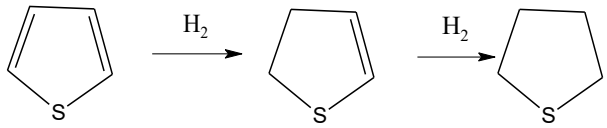
5) Based on the implicit electronic structure calculations, determine the heat of hydrogenation of Propylene.

6) Based on the calculations of enthanlies of the participating chemical species on optimized geometry of the molecules, calculate the reaction enthalpy at 298 K for the following, industrially important reactions:

   $$CH_4 + H_2O \rightarrow CO + 3H_2$$ (steam reforming of methane)

   ≡≡ (Haber-Bosch process)

7) Carry out geometry optimisation and determine the energy of the participating chemical species in the following reactions Using these results calculate the resonance energy of thiophene.



8) Carry out geometry optimisation & Energy calculations on the following species and obtain Frontier Molecular Orbitals. Visualize the Molecular Orbitals of these species and interpret the results for bonding in these molecules.
Benzene, Naphthalene, and Anthracene.

9) Compare the gas phase basicities of the methylamines by comparing the enthalpies of the following reactions:

$$BH^+ + NH_3 \rightarrow B + NH_4^+$$

Where B = CH_3NH_2, $(CH_3)_2NH$, $(CH_3)_3N$

10) On the basis of results of geometry optimization and energy calculations, determine the enthalpy of isomerization of cis and trans 2-butene.

11) Perform a conformational analysis of butane. Plot the graph between the angle of rotation and the energy of the conformers using spreadsheet software.

12) Compute the resonance energy of benzene by comparison of its enthalpy of hydrogenation with that of cyclohexene.

13) Calculate the electronic UV/Visible absorption spectrum of Benzene.

14) Calculate the electronic absorption spectra of formaldehyde.

15) Plot the electrostatic potential mapped on electron density for benzene and use it to predict the type of stacking in the crystal structure of benzene dimer.

16) On a given set of molecules methylamine (CH_3NH_2) carry out geometry optimization, single point energy and NBO calculations and interpret the output results treated at the ab initio RHF/3-21G level.

17) Study the mechanism of SN_2 reaction between Cl^- and CH_3Br involving a Walden inversion computationally.

18) Perform a geometry optimization followed by a frequency assessment (opt+freq keyword) using the B3LYP method and 6-31-G(d) basis set on a given set of small molecules i.e. BH_3, CH_4.
Suggestive: A greater number of molecules may be studied as per instructions received from the concerned teacher.

19) Based on the fundamentals of conceptual DFT calculate the ionization potential (IP), electron affinity (EA), electronegativity and electron chemical potential of a given set of molecules.

20) Perform molecular docking of Sulfonamide-type D-Glucose inhibitor into MurrD active site using Argus Lab.

21) Perform molecular dynamics (MD) simulation of a given alkali metal ion in aqueous function (RDF)

Essential/recommended readings

Theory:

1. Lewars, E. (2003), **Computational Chemistry**, Kluwer academic Publisher.
2. Cramer, C.J. (2004), **Essentials of Computational Chemistry**, John Wiley & Sons.
3. Hinchcliffe, A. (1996), **Modelling Molecular Structures**, John Wiley & Sons.

10. https://vina.scripps.edu/manual/

Important Instruction Note on working approach:

- A student is required to perform/investigate a minimum of 10 exercises from the given set of exercises.
- The students may use open source softwares; ArgusLab, Avogadro and ORCA. In case a licenced version softwares is available, if procured by the college, other licenced softwares may also be used.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVE COURSE – 13 (DSE-13): Research Methodology for Chemists

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Research Methodology for Chemists (DSE-13)	04	03	--	01	Class 12th with Physics, Chemistry	

Learning objectives

The objectives of this course are as follows:

- To make the students aware of fundamental but mandatory ethical practices in chemistry.
- To introduce the concept of data analysis.
- To learn to perform literature survey in different modes.
- To make the students aware of safety handling and safe storage of chemicals.
- To make students aware about plagiarism and how to avoid it.
- To teach the use of different e-resources.

Learning outcomes

By studying this course, students will be able to:

- Follow ethical practices in chemistry
- Do Data analysis
- Literature survey in different modes
- Use e-resources.
- Avoid plagiarism, understand the consequences and how to avoid

SYLLABUS OF DSE-13

UNIT – 1: Scope of Research **(Hours: 3)**

Introduction, overview of research process: define research problem, review literature, formulate hypothesis, design research/experiment, collect and analyse data, interpret and report, scope and importance.

UNIT – 2: **Literature Survey, Databases and Research metrics** **(Hours: 15)**

Print: Sources of information: Primary, secondary, tertiary sources; Journals: Journal abbreviations, Digital: Databases and their responsible use: Google Scholar, Web of science, Scopus, UGC INFONET, SciFinder, PubMed, ResearchGate, E-consortium, e-books; Search techniques: Phrase, Field, Boolean, Proximity, Concept, Limiting/Refining Search Results.
Research metrics: Impact factor of Journal, h-index, i10 index, Altmetrics, Citation index.
Author identifiers/or profiles: ORCID, Publons, Google Scholar, ResearchGate, VIDWAN

UNIT – 3: Communication in Science **(Hours: 12)**

Types of technical documents: Full length research paper, book chapters, reviews, short communication, project proposal, Letters to editor, and thesis.
Thesis writing – different steps and software tools (Word processing, LaTeX, Chemdraw, Chemsketch etc) in the design and preparation of thesis, layout, structure (chapter plan) and language of typical reports, Illustrations and tables, bibliography, referencing: Styles (APA, Oxford etc), annotated bibliography, Citation management tools: Mendeley, Zotero and Endnote; footnotes. Oral presentation/posters – planning, software tools, creating and making effective presentation, use of visual aids, importance of effective communication, electronic manuscript submission, effective oral scientific communication and presentation skills.

UNIT – 4: Research and Publication ethics **(Hours: 9)**

Scientific Conduct: Ethics with respect to science and research, Scientific Misconducts: falsification, fabrication and plagiarism, similarity index, software tools for finding plagiarism (Turnitin, Urkund etc), redundant dublications

Publication Ethics: Introduction, COPE (Committee on Publication Ethics) guidelines; conflicts of interest, publication misconduct: problems that lead to unethical behaviour and vice versa, types, violation of publication ethics, authorship and contributorship, predatory publishers and journals

IPR - Intellectual property rights and patent law, commercialization, copy right, royalty, trade related aspects of intellectual property rights (TRIPS)

UNIT – 5: Statistical analysis for chemists **(Hours: 6)**

Types of data, data collection-Methods and tools, data processing, hypothesis testing, Normal and Binomial distribution, tests of significance: t-test, F-test, chi- square test, ANOVA, multiple range test, regression and correlation.

Features of data analysis with computers and softwares -Microsoft Excel, Origin, SPSS

Practical component **Credits: 01**

(Laboratory periods:15 classes of 2 hours each)

1. Collection of journal articles on a particular topic using Google Scholar and creating a database.
2. Collection of journal articles on a particular topic using Science Direct and creating a database.
3. Collection of journal articles on a particular topic using Scopus and creating a database.
4. Drawing chemical structure, reactions and mechanisms using Chemsketch or ISIS draw or any other software.
5. Collection of chemical structure using ChemSpider and creating a database.
6. Curve fitting using freely available softwares/apps (any one)
7. Making of power point presentation
8. Experimental learning of safe storage hazardous chemicals
9. Experimental learning of handling of hazardous chemicals
10. Technical writing on topics assigned.
11. Demonstration for checking of plagiarism using recommended software

Essential/recommended readings:

Note:

- **Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.**

- **The students are required to opt one paper each from DSEs 1-3 in Semester 3, DSEs 4-6 in Semester 4, DSEs 7-9 in Semester 5 and DSEs 10-13 in Semester 6.**

- **Research Methodology (DSE 13) shall be offered as one of the DSE courses in semester VI or VII. If a student wishes to pursue four years Honours Degree with Research, he/she shall compulsorily opt for a Research Methodology course in either Semester VI or VII.**

BSC. (PHYSICAL SCIENCES)- CHEMISTRY COMPONENT
SEMESTER - IV

DISCIPLINE SPECIFIC CORE COURSE CHEM-DSC -10: Chemistry- IV: Chemistry of Carboxylic Acids & their Derivatives, Amines and Heterocycles

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Chemistry of Carboxylic Acids & their Derivatives, Amines and Heterocycles DSC-10: Chemistry-IV	**04**	**02**	**-**	**02**	**Class 12th with Physics, Chemistry, Mathematics**	

Learning Objectives

The Learning Objectives of this course are as follows:

- To make students learn about the chemistry of carboxylic acids and their derivatives (aliphatic and aromatic)
- To give basic understanding of amines (aliphatic & aromatic), diazonium salts
- To provide basic understanding of heterocyclic systems.

Learning outcomes

By studying this course, students will be able to:

- Understand reactions of carboxylic acids, esters, amides, amines and diazonium salts
- Understand the concept of protection and deprotection.
- Use the synthetic chemistry learnt in this course to do functional group transformations.
- Gain theoretical understanding of chemistry of heterocyclic compounds.

Syllabus

Unit 1: Carboxylic Acids and their Derivatives (aliphatic and aromatic) (1 3 Lectures)

Preparation: Oxidation reactions of alcohols, aldehydes and ketones, Acidic and alkaline

hydrolysis of esters; Reactions: Hell-Volhard Zelinsky reaction,

Carboxylic acid derivatives (aliphatic): Preparation: Acid chlorides, anhydrides, esters and amides from acids and their interconversion, Claisen condensation. Reactions: Relative reactivities of acid derivatives towards nucleophiles, Reformatsky reaction, Perkin condensation.

Active methylene compounds: Keto-enol tautomerism. Preparation and synthetic applications of ethyl acetoacetate

Unit 2: Amines (aliphatic & aromatic) and Diazonium Salts (Hours:10)

Amines

Preparation: from alkyl halides, Gabriel's Phthalimide synthesis, Hoffmann bromamide reaction. Reactions: Hoffmann *vs* Saytzeff elimination, carbylamine test, Hinsberg test, reaction with HNO_2, Schotten-Baumann reaction. Electrophilic substitution (case aniline): nitration, bromination, sulphonation; basicity of amines.

Diazonium salt

Preparation: from aromatic amines; Reactions: conversion to benzene, phenol and dyes.

Unit 3: Heterocyclic Compounds (Hours: 7)

Introduction, classification, structure, nomenclature and uses. Preparation and properties of the following heterocyclic compounds with reference to electrophilic and nucleophilic substitution: furan, pyrrole, thiophene, and pyridine.

Practical Component: Credits: 02

(Laboratory periods: 60)

1. Systematic qualitative analysis and preparation of suitable crystalline derivative (carboxylic acids, carbonyl, alcohols, phenols, amines (1°, 2°, 3°) and amides).
2. Preparation:
   a. Acetylation of Aniline and Phenols.
   b. Benzoylation of Aniline and phenols

The above derivatives should be prepared using 0.5-1g of the organic compound. The solid samples must be collected and may be used for recrystallization and melting point.

BSC. (PHYSICAL SCIENCES)- CHEMISTRY COMPONENT
SEMESTER - V

DISCIPLINE SPECIFIC CORE COURSE CHEM-DSC -13: Chemistry- V: Coordination Chemistry and Organometallics

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Coordination Chemistry and Organometallics DSC-13: Chemistry- V	**04**	**02**	**-**	**02**	**Class 12th with Physics, Chemistry, Mathematics**	

Learning Objectives

The Learning Objectives of this course are as follows:

- To develop basic understanding of coordination chemistry and organometallics which are of immense importance to biological systems, qualitative quantitative analysis, catalysis, medicines, paints and pigments etc.
- The students learn nomenclature, isomerism and bonding in coordination compounds with special emphasis on important coordination compounds in the biological system.
- To understand classification of organometallic compounds, the concept of hapticity and the 18-electron rule governing the stability of a wide variety of organometallic species with special emphasis on metal carbonyls.

Learning outcomes

By studying this course, students will be able to:

- Understand terms: ligand, denticity of ligands, chelate, coordination number.
- Systematically name coordination compounds.
- Discuss the various types of isomerism possible in Octahedral and Tetrahedral coordination compounds.
- Use Valence Bond Theory to predict the structure and magnetic behaviour of metal complexes and understand the terms inner and outer orbital complexes.
- Explain the meaning of the terms $\Delta o.$, Δt, pairing energy, CFSE, high spin and low spin and how CFSE affects thermodynamic properties like lattice enthalpy and hydration enthalpy.

- Explain magnetic properties and colour of complexes on basis of Crystal Field Theory
- Apply 18-electron rule to rationalize the stability of metal carbonyls and related species.
- Learn how IR data can be used to understand extent of back bonding in metal carbonyls.

Syllabus

Unit 1: Introduction to Coordination compounds **(Hours: 6)**

Brief discussion with examples of types of ligands, denticity and concept of chelate. IUPAC system of nomenclature of coordination compounds (mononuclear and binuclear) involving simple monodentate and bidentate ligands. Structural and stereoisomerism in complexes with coordination numbers 4 and 6.

Unit 2: Bonding in Coordination Compounds **(Hours: 14)**

Valence Bond Theory (VBT): Salient features of theory, concept of inner and outer orbital complexes, Drawbacks of VBT.

Crystal Field Theory: Splitting of d orbitals in octahedral symmetry. Crystal field effects for weak and strong fields, Crystal field stabilization energy (CFSE), concept of pairing energy, Factors affecting the magnitude of Δ, Spectrochemical series, Splitting of d orbitals in tetrahedral symmetry, Comparison of CFSE for octahedral and tetrahedral fields, tetragonal distortion of octahedral geometry, Jahn-Teller distortion

Unit 3: Organometallic Chemistry **(Hours: 10)**

Definition and classification with appropriate examples based on nature of metal-carbon bond (ionic, sigma, pi and multicentre bonds), Structure and bonding of methyl lithium and Zeise's salt, Structure and bonding of ferrocene, mononuclear and polynuclear carbonyls of 3d metals, 18-electron rule as applied to carbonyls, π-acceptor behaviour of carbon monoxide (MO diagram of CO to be discussed), synergic effect and use of IR data to explain extent of back bonding.

Practical Component **Credits:02**

(Laboratory periods:60)

1. Estimation of Mg^{2+} by direct complexometric titrations using EDTA.
2. Estimation of Zn^{2+} by direct complexometric titrations using EDTA.
3. Estimation of Ca^{2+} by direct complexometric titrations using EDTA.
4. Estimation of total hardness of a given sample of water by complexometric titration.
5. Determination of the composition of the Fe^{3+} - salicylic acid complex / Fe^{2+}-1, 10-phenanthroline complex in solution by Job's method.

6. Determination of the composition of the Fe^{3+} - salicylic acid complex / Fe^{2+}-1,10-phenanthroline complex in solution by mole ratio method
7. Preparation of the following inorganic compounds:
   a). Tetraamminecopper(II) sulphate
   b). Potassium trioxalatoferrate(III) trihydrate
   c). Chrome alum
   d). *Cis*- and *trans*-Potassium diaquadioxalatochromate(III)
8. Any suitable experiment (other than the listed ones) based upon complexation reactions.

BSC. (PHYSICAL SCIENCES)- CHEMISTRY COMPONENT
SEMESTER -VI

DISCIPLINE SPECIFIC CORE COURSE -16: Chemistry -VI Quantum Chemistry and Spectroscopy

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Quantum Chemistry and Spectroscopy DSC-16: Chemistry-VI	**04**	**02**	**--**	**02**	**Class 12th with Physics, Chemistry, Mathematics**	**NA**

Learning Objectives

The Learning Objectives of this course are as follows:

- To introduce the concepts and methodology of quantum mechanics
- Application of Quantum chemistry to spectroscopy
- To establish the relation between structure determination and spectra.

Learning outcomes

By studying this course, students will be able to:

- Understand basic principles of quantum mechanics: operators, eigen values, averages, probability distributions.
- Understand and use basic concepts of microwave, IR and UV-VIS spectroscopy for interpretation of spectra.

Syllabus

Unit 1: Quantum Chemistry **(Hours: 16)**

Postulates of quantum mechanics, quantum mechanical operators.

Schrodinger equation and its application to free particle and particle in a 1-D box (complete solution), quantization, normalization of wave functions, concept of zero-point energy.

Qualitative treatment of H and H like atoms. Setting up of Schrodinger equation for many electron atoms.

Rotational Motion: Schrödinger equation of a rigid rotator and brief discussion of its results (solution not required). Quantization of rotational energy levels.

Vibrational Motion: Schrödinger equation of a linear harmonic oscillator and brief discussion of its results (solution not required). Quantization of vibrational energy levels.

Unit 2: Spectroscopy (Hours: 14)

Electromagnetic radiation and its interaction with matter. Lambert-Beer's law, Jablonski's diagram. Florescence and Phosphorescence.
Difference between atomic and molecular spectra. Born- Oppenheimer approximation: Separation of molecular energies into translational, rotational, vibrational and electronic components.

Microwave Spectroscopy: Microwave (pure rotational) spectra of diatomic molecules. Selection rules.
Structural information derived from rotational spectroscopy.

IR Spectroscopy: Selection rules, IR spectra of diatomic molecules. Structural information derived fromvibrational spectra. Effect of hydrogen bonding (inter- and intramolecular) and substitution on vibrational frequencies.

Electronic Spectroscopy: Electronic excited states. Free electron model and its application to electronicspectra of polyenes. chromophores, auxochromes, bathochromic and hypsochromic shifts.

Practical component Credits:02

(Laboratory periods: 60)

UV/Visible spectroscopy

1. Study the 200-500 nm absorbance spectra of $KMnO_4$ and $K_2Cr_2O_7$ (in 0.1 M H_2SO_4) and determine the λ_{max} values. Calculate the energies of the two transitions in different units (J molecule^{-1}, kJ mol^{-1}, cm^{-1}, eV).
2. Study the pH-dependence of the UV-Vis spectrum (200-500 nm) of $K_2Cr_2O_7$
3. Record the 200-350 nm UV spectra of the given compounds (acetone, acetaldehyde, 2-propanol, acetic acid) in water. Comment on the effect of structure on the UV spectra of

organic compounds.

Colorimetry

4. Verify Lambert-Beer's law and determine the concentration of $CuSO_4$/ $KMnO_4$/ $K_2Cr_2O_7$/ $CoCl_2$ in a solution of unknown concentration
5. Determine the concentrations of KMnO4 and $K_2Cr_2O_7$ in a mixture.
6. Study the kinetics of iodination of propanone in acidic medium.
7. Determine the amount of iron present in a sample using 1, 10-phenanthroline.
8. Determine the dissociation constant of an indicator (phenolphthalein).
9. Study the kinetics of interaction of crystal violet/ phenolphthalein with sodium hydroxide.

POOL OF DISCIPLINE SPECIFIC ELECTIVES FOR SEMESTER -III/IV/V/VI

SEMESTER III

DISCIPLINE SPECIFIC ELECTIVE COURSE CHEM-DSE -1: Main Group Chemistry

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical / Practice		
Chem-DSE 1: Main Group Chemistry	**04**	**02**	**-**	**02**	**Class XII with Science**	

Learning Objectives

The Learning Objectives of this course are as follows:

- To provide basic understanding of the fundamental principles of metallurgy through study of the different methods of extraction and refining of metals.
- To illustrate the diversity and fascinating aspects of inorganic chemistry through the study of structure, properties and utilities of s- and p-block elements and their compounds.

Learning outcomes

By studying this course, students will be able to:

- Understand the basis of occurrence of metals in nature and the methods that can be applied on minerals to extract the metals from them.
- Explain the importance of free energy of formation of oxides with the choice of reducing agents for extracting the metals.
- Understand and explain the importance of refining of metals and the choice of a refining procedure.
- Explain the group trends observed for different properties of s and p block elements.
- Explain the structures and the bonding of compounds of s- and p- block elements
- Explain the unique properties of alkali metals and some other main group elements
- Understand and explain the polymerization mechanism of inorganic ions to generate inorganic polymers and the difference between organic and inorganic polymers.

Syllabus

Unit 1: General Principles of Metallurgy (Hours: 6)

Chief modes of occurrence of metals based on standard electrode potentials. Ellingham diagrams for reduction of metal oxides using carbon and carbon monoxide as reducing agent. Electrolytic Reduction, Hydrometallurgy with reference to cyanide process for silver and gold. Methods of purification of metals: Electrolytic process, Van Arkel-De Boer process, Zone refining.

Unit 2: General Properties (4 Hours)

General group trends of s- and p-block elements with special reference to melting and boiling points, flame colour, metallic character and complex formation tendency, diagonal relationship and anomalous behaviour of first member of each group, Alkali metal solutions in liquid ammonia

Unit 3: Structure, Bonding, Properties and Applications (Hours: 16)

Structure, bonding, properties (Acidic/Basic nature, stability, ionic/covalent nature, oxidation/reduction, hydrolysis, thermal stability) and applications of the following:

Crown Ethers and cryptates of Alkali metals
Hydrides: hydrides of Group 13 (only diborane), Group 14, Group 15 (EH_3 where E = N, P, As, Sb, Bi), Group 16 and Group 17.
Oxides: Oxides of nitrogen, phosphorus and sulphur.
Oxoacids: oxoacids of phosphorus, sulphur and chlorine
Halides of phosphorus

Unit 4: Inorganic Polymers (4 Hours)

Preparation, properties, structure and uses of the following:
Borazine, Silicates and Silicones.

Practicals Credits:02

(Laboratory periods:60)

Qualitative semi-micro analysis of mixtures containing 2 anions and 2 cations (preferably 7-8 mixtures). Emphasis should be given to the understanding of the chemistry of different reactions. The following radicals are suggested:

CO_3^{2-}, NO_2^-, S^{2-}, SO_3^{2-}, SO_4^{2-}, $S_2O_3^{2-}$, CH_3COO^-, F^-, Cl^-, Br^-, I^-, NO_3^-, BO_3^{3-}, $C_2O_4^{2-}$, PO_4^{3-}, NH_4^+, K^+, Pb^{2+}, Cu^{2+}, Cd^{2+}, Bi^{3+}, Sn^{2+}, Sb^{3+}, Fe^{3+}, Al^{3+}, Cr^{3+}, Zn^{2+}, Mn^{2+}, Co^{2+}, Ni^{2+}, Ba^{2+}, Sr^{2+}, Ca^{2+}, Mg^{2+}.
The mixtures may contain combination of anions/one interfering anion.
Spot tests should be preferred wherever applicable.

DISCIPLINE SPECIFIC ELECTIVE COURSE CHEM-DSE -2: Green Chemistry

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Chem-DSE-2: Green Chemistry	**04**	**02**	**-**	**02**	**Class XII with Science**	

Learning Objectives

The Learning Objectives of this course are as follows:

- To learn about the environmental status, public awareness in evolution, principles involved in green chemistry, bio-catalytic reactions, global warming and its control measures, availability of green analytical methods.
- To practice chemistry in the safest way possible
- To imbibe safeworking conditions in the laboratories as well as the chemical industry extending to society in a sustainable future for the planet.

Learning outcomes

By studying this course, students will be able to:

- Understand the twelve principles of green chemistry and also build the basic understanding of toxicity, hazard and risk related to chemical substances.
- Calculate atom economy, E-factor and relate them in all organic synthesis
- Appreciate the use of catalyst over stoichiometric reagents
- Learn to use green solvents, renewable feedstock and renewable energy sources for carrying out safer chemistry
- Appreciate the use of green chemistry in problem solving skills and critical thinking to innovate and find solutions to environmental problems.
- Learn to design safer processes, chemicals and products through understanding of inherently safer design (ISD)
- Appreciate the success stories and real-world cases as motivation for them topractice green chemistry

Syllabus

Unit 1: Introduction **(Hours: 8)**

Definition of green chemistry and how it is different from conventional chemistry and environmental chemistry.

Need of green chemistry.

Importance of green chemistry in- daily life, Industries and solving human health problems (four examples each).

A brief study of Green Chemistry Challenge Awards (Introduction, award categories and study about five last recent awards).

.

Unit 2: Twelve Principles of Green Chemistry **(Hours: 12)**

The twelve principles of the Green Chemistry with their explanations Special emphasis on the following:

- Prevention of waste / by products, pollution prevention hierarchy.
- Green metrics to assess greenness of a reaction: environmental impact factor, atom economy and calculation of atom economy.
- Green solvents-supercritical fluids, water as a solvent for organic reactions, ionic liquids, solvent less reactions, solvents obtained from renewable sources.
- Catalysis and green chemistry- comparison of heterogeneous and homogeneous catalysis, biocatalysis, asymmetric catalysis and photocatalysis.
- Green energy and sustainability.
- Real-time analysis for pollution prevention.

Prevention of chemical accidents, designing greener processes, principles of inherent safer design (ISD). Bhopal Gas Tragedy (safer route to carbaryl) and Flixborough accident (safer route to cyclohexanol), subdivision of ISD, minimization, simplification, substitution, moderation and limitation.

Unit 3: Real-world Cases in Green Chemistry **(Hours: 10)**

Discussion of the following Real-world Cases in green chemistry: Surfactants for carbon dioxide – replacing smog producing and ozone depleting solvents with CO_2 for precision cleaning and dry cleaning of garments. Designing of environmentally safe marine antifoulant. Right fit pigment: Synthetic azo pigments to replace toxic organic and inorganic pigments. An efficient, green synthesis of a compostable and widely applicable plastic (polylactic acid) made from corn.

Practical Component **Credits:02**

(Laboratory periods:60)

Characterization by melting point, UV-Visible spectroscopy, IR spectroscopy and any other specific method should be done (wherever applicable).

1. Preparation and characterization of nanoparticles of gold using tea leaves/silver nanoparticles using plant extracts.

2. Preparation of biodiesel from waste cooking oil and characterization (TLC, pH, solubility, combustion test, density, viscosity, gel formation at low temperature and IR can be provided).

3. Benzoin condensation using thiamine hydrochloride as a catalyst instead of cyanide.

4. Extraction of D-limonene from orange peel using liquid CO_2 prepared from dry ice.

5. Mechanochemical solvent free, solid-solid synthesis of azomethine using p-toluidine and o-vanillin/p-vanillin.

6 Microwave-assisted Knoevenagel reaction using anisaldehyde, ethyl cyanoacetate and ammonium formate.

7. Photoreduction of benzophenone to benzopinacol in the presence of sunlight.

8. Photochemical conversion of dimethyl maleate to dimethyl fumarate (cis-trans isomerisation)

9. Benzil- Benzilic acid rearrangement: Preparation of benzilic acid in solid state under solvent-free condition.

DISCIPLINE SPECIFIC ELECTIVE COURSE CHEM-DSE 3: Chemistry of Colloids and Adsorption

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Chem-DSE 3: Chemistry of Colloids and Adsorption	**04**	**02**	**-**	**02**	**Class XII with Science**	

Learning Objectives

The Learning Objectives of this course are as follows:

- To develop basic concepts of colloids and colloidal phenomenon.
- Preparation and characterization of sols, understanding about applications of colloid in food, petroleum and cosmetic industry.
- Basic understanding of adsorption, types of adsorption, chemistry of adsorption and its applications.

Learning outcomes

By studying this course, students will be able to:

- Understand colloid solutions, preparation of sols.
- Understand the concept of Electrical double layer, charge on colloidal particles.
- Characterize the colloids sols, learn colloid phenomenon like Tyndall effect, Brownian movement, electrophoresis, dialysis, coagulation and flocculation.
- Understand adsorption, types of adsorption. Characteristics, factors affecting adsorption and its applications

Syllabus

Unit 1: Colloidal State **(Hours: 8)**

Distinction among true solutions, colloids and suspensions, components of Colloids, classification of colloids - lyophilic, lyophobic; Preparation methods and properties of lyophobic solutions, Hydrophile-lyophile balance (HLB), multi molecular, macromolecular and associated colloids (micelles formation), Schulze -Hardy law.

Unit 2: Preparation and Properties of Colloids **(Hours: 14)**

Methods of preparation of colloids, Tyndall effect, Brownian movement, coagulation and flocculation; electrophoresis, dialysis.

Emulsification by surfactants, selection of surfactants as emulsifying agent, colloidal phenomenonin food chemistry, Protein based functional colloids.

Unit 3: Surface Chemistry **(Hours: 8)**

Adsorption, Distinction between adsorption and absorption, Types of Adsorption, Physisorption and chemisorption and their characteristics, factors affecting adsorption of gases on solids - Freundlich and Langmuir adsorption isotherms, Adsorption from solutions. Applications of Adsorption phenomenon in living systems.

Practical component **Credits: 02**

(Laboratory periods: 60)

1. Preparation of Colloidal Sols of following
   a. Egg Albumin
   b. Starch /Gum
   c. Ferric chloride
   d. Aluminum hydroxide
   e. Antimony Sulphide

2. To find out the precipitation values of Antimony Sulphide sol by using monovalent, bivalentand trivalent cations.
3. To verify the Schulze -Hardy law.
4. To verify the Freundlich's Adsorption isotherms.
5. Study of adsorption of HAc on charcoal and prove the validity of Langmuir's adsorption isotherms
6. Study of adsorption of Oxalic acid on charcoal and prove the validity of Langmuir's adsorption isotherms.

5. Berg J. C., **An Introduction to Interfaces and Colloids,** World Scientific Publishing Co., Inc. New Jersey.
6. Israelachvili J. N., **Intermolecular and Surface Forces,** Elsevier Inc.

Practical:

1. Giri, S; Bajpai, D.N.; Pandey, O.P. **Practical Chemistry**, S. Chand Limited.
2. Khosla, B.D.; Garg, V.C.; Gulati, A.(2015), **Senior Practical Physical Chemistry**, R. Chand & Co.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

SEMESTER IV

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

DISCIPLINE SPECIFIC ELECTIVE COURSE CHEM-DSE -4: Nanoscale Materials and their Applications

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Chem-DSE-4: Nanoscale Materials and their Applications	**04**	**02**	**-**	**02**	**Class XII with Science**	

Learning Objectives

The Learning Objectives of this course are as follows:

- To introduce nanoscale materials and their applications.
- To provide an insight into bottom-up and top-down-approach, the methods of synthesis of nanoparticles, simple characterization techniques and applications of nanomaterials.

Learning outcomes

By studying this course, students will be able to:

- Understand the concept of nano dimensions.
- Know the various methods of preparation of nanomaterials.
- Understand the principles of optical and electron microscopy techniques of characterizing nanomaterials.
- Understand and appreciate the real life applications of nanomaterials.

Syllabus

Unit 1: Introduction to Nanodimensions **(Hours: 12)**

0D, 1D, 2D nanomaterials, Quantum Dots, Nanoparticles, Nanostructures (nanowires, thin films, nanorods), carbon nanostructures (carbon nanotubes, carbon nanofibers, fullerenes), Size Effects in nano systems, Quantum confinement and its consequences, Semiconductors. Band structure and band gap. Optical Properties Surface plasmon resonance

.

Unit 2: Preparation of Nanomaterials **(Hours: 10)**

Top down and Bottom up approach, Photolithography. Ball milling. Vacuum deposition. Physical vapor deposition (PVD), Chemical vapor deposition (CVD), Thermal decomposition, Chemical reduction, Sol-Gel synthesis, Hydrothermal synthesis, Spray pyrolysis, Electrochemical deposition, Pulsed Laser deposition. Characterization of nanomaterials: Basic principle of optical methods and electron microscopy.

Unit 3: Applications of Nanomaterials (Hours: 8)

Nanomaterials as Catalysts, semiconductor nanomaterials as photocatalysts, Nanocomposites as catalysts. Carbon nanostructures as catalytic nanoreactors, metal and metal oxides confined inside carbon nanostructures, Nanowires and thin films for photonic devices (LEDs, solar cells, transistors).

Practical Component Credits:02

(Laboratory periods:60)

1. Synthesis of silver nanoparticles by chemical methods and characterization using UV-visible spectrophotometer.
   a. Turkevich Method
   b. Burst Method
2. Synthesis of silver nanoparticles by green approach methods (using soluble starch, glucose or cinnamon bark) and characterization using UV-visible spectrophotometer.
3. Synthesis of metal sulphide nanoparticles and characterization using UV-visible spectrophotometer.
   a. MnS
   b. ZnS
   c. CuS
4. Intercalation of hydrogen in tungsten trioxide and its conductivity measurement using conductometer.
5. Synthesis of pure ZnO and Cu doped ZnO nanoparticles.
6. Phytochemicals mediated synthesis of gold nanoparticles (AuNPs) using tea leaves and to study the effect of size on color of gold/silver nanoparticles.
7. Preparation of magnetic nanoparticles (MNPs) of Fe_3O_4 using green tea leaf extract.
8. Any suitable experiment (other than the listed ones) based upon complexation reactions.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DISCIPLINE SPECIFIC ELECTIVE COURSE CHEM-DSE -5: Molecules of Life

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Chem-DSE-5: Molecules of Life	**04**	**02**	**-**	**02**	**Class XII with Science**	

Learning Objectives

The Learning Objectives of this course are as follows:

- To deliver information about the chemistry of carbohydrates, proteins & enzymes and its relevance in the biological system using suitable examples.
- To provide an insight into the structural principles that govern reactivity/physical /biological properties of biomolecules as opposed to learning structural details.

Learning outcomes

By studying this course, students will be able to:

- Learn and demonstrate how the structure of biomolecules determines their chemical properties, reactivity and biological uses.
- Gain an insight into the mechanism of enzyme action and inhibition.
- Understand the basic principles of drug-receptor interaction and SAR.

Syllabus

Unit 1: Carbohydrates **(Hours: 12)**

Classification of carbohydrates, reducing and non-reducing sugars, biological functions, general properties and reactions of glucose and fructose, their open chain structure, epimers, mutarotation and anomers, reactions of monosaccharides, determination of configuration of glucose (Fischer proof), cyclic structure of glucose. Haworth projections. Cyclic structure of fructose. Linkage between monosaccharides: structure of disaccharides (sucrose, maltose, lactose) and polysaccharides (starch and cellulose) excluding their structure elucidation.

.

Unit 2: Amino acids, Peptides and Proteins **(Hours: 10)**
