Contents of a typical life insurance policy, Conditions and privileges: free look period, payment of premium, grace days, loading charges, auto cover, forfeiture, proof of age, suicide, revival of lapsed policy, non-forfeiture regulations, indisputable policy, assignment and trade in policies, nomination, travel, residence and occupation, and other restrictive conditions; Policy as property: attachable or not.

Unit 3: Conventional and new age policies **11 hours**

Types of Life insurance plans, Term Vs Traditional Plan, Whole life plan, Endowment plan, and Money back plan; the concept of Joint life policy and Partnership plan; Special policies for Women and Children, Retirement plans; Single versus regular premium policies.

Unit 4: ULIPs and special policies **11 hours**

Unit linked insurance policies: concept, features, merits, demerits; Types (purpose and death benefit); riders/add on to a policy: requirement for, suitable riders; Different types of ULIP charges, ULIP vs Traditional plan; Variable life policies: concept, pros, and cons; Special Policies: children, women, differently abled persons, etc.

Exercises:

The learners are required to:

1. engage in a group project that gathers primary data from policy buyers regarding
    1. their reason for buying a life insurance policy (Unit1) and
    2. the type of policy purchased (Unit 3)
2. make a group and study the trends in growth of life insurance (public &private companies) and reasons for growth from the annual reports issued by IRDAI. (Unit1)
   Link for data:
   https://irdai.gov.in/annual-reports
3. participate in a classroom discussion comparing direct (online) buying with fee-based (advice) buying through a registered investment advisor (RIA) (Unit3)
4. gather primary data from relatives and neighbours about the understanding of policyholders regarding loading charges, grace days, forfeiture clause, and special policies. (Unit2 &4)
5. make a presentation on the merits and demerits of a comprehensive plan vis-a-vis exclusive rider(s) attached to a no-frills policy. (Unit4)
6. compare and contrast the life insurance policies offered by different companies (Unit 4)

Semester IV
DISCIPLINE SPECIFIC CORE COURSE (DSC 4.2)

Indian Financial System

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course Title & Code	Total Credits	Lectures	Tutorial	Practical	Eligibility criteria	Pre-requisite of the course
Indian Financial System **DSC – 4.2**	4	3	1	-	**Pass in class 12th**	-

Objective: The course aims to provide a conceptual understanding of the overall Indian financial system. It also familiarises the student about the role, types and important functions of the different constituent parts.

Learning Outcomes: After completion of the course, learners will be able to:

1. explain the structure of the Indian financial system and differentiate its components.
2. discuss the linkage between the financial system and economic development.
3. describe and differentiate the functioning of the money and capital markets and the roles of the respective regulators.
4. appraise the recent developments in the banking sector.
5. critique the recent reforms in the Indian financial system.
6. examine the concept of financial stability with respect to the Indian and global financial systems.

Unit 1: Introduction **9 hours**

Functions of the financial system, structure: markets, institutions, instruments, services; Role of financial intermediaries and regulators; inter-linkage between the financial system and economic development; Overview of the evolution of the Indian financial system.

Unit 2: Money and Capital Markets **13 hours**

Money market: functions, participants; money market instruments; role of the central bank (Reserve Bank of India) in the Indian money market.

Capital Market (primary and secondary): functions, participants (including the role of stock exchanges in India (NSE, BSE, MSCI,), depositories (NSDL, CDSL), roles of merchant banking and credit rating; instruments (shares, debentures, bonds, GDRs, ADRs); listing of securities and stock indices; role of SEBI and investor protection.

Unit 3: Commercial banking, MFs and NBFCs and Pension funds **13 hours**

Commercial Banking: classification, functions, nonperforming assets (causes & resolution); recent developments in banking including adoption of technology, financial inclusion, and Mudra financing;

Mutual Funds: structure, types of mutual fund schemes (open ended vs close ended, equity, debt, hybrid schemes and Exchange Traded Funds (ETFs) gold, passive funds, liquid, etc.; factors affecting choice of mutual funds; role in financial system;
Non-banking Financial Companies (NBFCs) & Pension funds: role, function, and types.

Unit 4: Reforms and financial stability 10 hours

Reforms in the Indian financial system: need. reforms since 1990s, impact, future challenges; Financial stability: need; global financial crisis (2008), roles of the Basel Committee on Banking Supervision, Bank of International Settlement, and Financial Stability Board; Challenges to financial stability.

Practical Exercises:

The learners are required to:

1. make a flowchart of the Indian financial system with names of markets, institutions, instruments and services (Unit1)
2. compare the indicators of economic development and the financial systems in India and other countries (Unit1)
3. make a presentation in class highlighting the roles of the regulators based on information displayed on the RBI and SEBI websites (Unit 2)
4. make a group presentation on investor protection based on the recent notifications by SEBI (Unit2)
5. engage in a group project by gathering primary data on financial inclusion, mudra scheme, and the growth of digital banking/wallet/ UPI. (Unit3)
6. make a group project covering the activities of any one NBFC of your choice (Unit3)
7. engage in a classroom discussion on the reforms implemented in the Indian financial system since 2001 (Unit4)
8. make a group presentation on the financial crises caused by Lehman Bros or Yes bank or SVB or any other case of financial bankruptcy (Unit4)

Suggested Readings:

B.A. (VS) Insurance Management
Semester IV
DISCIPLINE SPECIFIC CORE COURSE (DSE- 5.2)
Workers, Markets, And the Future of Work

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE, REQUISITES OF THE COURSE

Course Title & Code	Total Credits	Lectures	Tutorial	Practical	Eligibility criteria	Pre-requisite of the course
Workers, Markets and the future of Work (DSE – 5.2)	4	3	1	-	**Pass in class 12th**	-

Learning Objectives: The course aims to familiarize students with the concepts of workers demand, supply and the determination of market wage. It provides basic understanding of the recent developments in markets for workers in India. It discusses the role of international agencies in safe guarding workers interests and defining decent work.

Learning Outcomes:

After completion of the course, learners will be able to:

1. explain the idea of the labour market and its working, the determination of equilibrium wage and the reasons why people choose to work or withdraw from the market.
2. compare the characteristics of various segments of labour markets in India and examine various trends related to wages and employment.
3. explain the concept of global value chains and Special economic Zones (SEZs) and examine their impact on workers, labour markets and the future of work.
4. appraise the role of International agencies in promoting decent work agenda and maintaining labour standards.

Unit 1: Economics of Labour Market and Wage Determination 11 hours

Supply of individual Worker and Workforce: Workers' preferences and Budget constraints, changes in budget constraints due to changes in non-labour income or wages; the labour supply curve of an individual worker and the Supply curve of workers in an Economy.

Policy applications: Welfare programs and work incentives; Labour supply over the life cycle; the decline in work attachment among older workers.

Demand for Workers: Production function of a firm, profit maximization, short- run and long- run decision making of the firm; Overview of labour Market equilibrium.

Policy application: New Labour Codes and the employment effects of minimum wages.

Unit 2: Labour Markets at Work in India **12 hours**

Employment and Unemployment: Concepts of labour-force, workforce, participation rate, universal basic income and other concepts related to unemployment, measurement and trends in employment and wages, phenomena of jobless growth and unemployment in India, changing dynamics of occupational structure.

Facets of Informalisation and Segmentation of Labour Markets in India: Trends and characteristics of informalisation and contractualization, nature of rural labour markets, the growth of non-farm sector and impact of MGNREGA, internal migration in India, gig employment and its impact on platform workers.

Women in the workforce: feminization and low participation.

Unit 3: **Offshoring, Outsourcing and Global Value Chains** (GVCs) **11hours**

Workers in GVC - India and other Developing Countries, impact on employment in India, Labour Standards in India- Case study, Special Economic Zones in India.

Future of work, *Artificial Intelligence and Future of Labour*: Disruptive technology and adjustment in Workers markets

Unit 4: International agencies and Labour Standards **11 hours**

Role and Structure of ILO, ILO Conventions and Recommendations, Decent work and ILO programmes in India, World Trade Organization and workers.

Practical Exercises: The learners are required to:

1. discuss and practice numerical and graphical exercises based on application of demand and supply of labour and changes in equilibrium wage (Unit1)
2. identify and collect information from Internet on various case studies of employment types and engage in group discussions (Unit2)
3. design a questionnaire for primary data collection from the neighbourhood labour markets, collect data and make a group project based on the analyses of the data collected. (Unit2)
4. locate and discuss in class case studies of gig workers such as delivery workers form Zomato, Big Basket, Amazon and other such platforms. (Unit 3)
5. make a group presentation on implementation of ILO activities and programmes in India (Unit4)

Advanced Phonography- I
CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Advanced Phonography- I (DSC-4.1)	**4**	**-**	**-**	**4**	**12th Pass**	**Knowledge of Basic Phonography**

Learning Objective: The aim of this course is to advance and strengthen the knowledge of phonography rules and help in gaining speed in writing by practicing exercises and learning Grammalogues, Special Contractions and Advanced Phraseography from Pitman Shorthand Instructor. The speedy and accurate transcription of the shorthand notes is the ultimate aim of learning phonographic communication.

Learning Outcomes: After completion of the course, the learners will be able to:

1. demonstrate the techniques of note taking and transcription.
2. create, revise and write the outlines of Grammalogues, Phrases and Special Contractions.
3. articulate, revise and write the outlines of Advanced Phrases.
4. take dictation of seen and unseen passages and transcribe the same on computers.

Unit 1:

Note taking: Techniques of Note Taking, points to be kept in mind while taking down dictation. Transcription: Guidelines for transcription. Revision of Grammalogues, Phrases and Special Contractions (Section 1 to Section 5 of Pitman Shorthand Instructor- Old Course Book).

Unit 2:

Advanced Phraseography (Section 1 to Section 7 of Pitman Shorthand Instructor- Old Course Book)

Unit 3:

Practice of seen dictation exercises (from Exercise No. 121 to 183 of Pitman Shorthand Instructor- Old Course Book) at the speed of 80 words per minute.

Unit 4:

Practice of unseen dictation exercises from other Shorthand books and Shorthand magazines at the speed of 60 words per minute.

Practical Exercises:

The learners are required to:

1. Have someone read aloud a passage or series of phrases related to intersections, business, legal, political, or banking contexts. Take dictation by writing down what is being spoken in real-time. Focus on maintaining accuracy, speed, and proper formatting.
2. Find written materials such as articles, reports, or speeches that cover intersections, business, legal, political, or banking subjects. Read through the content and practice taking concise and organized notes.
3. Choose a short audio or video clip related to intersections, business, legal, political, or banking topics. Play the recording at a faster speed and challenge yourself to take notes quickly while maintaining comprehension and accuracy. Gradually increase the playback speed to improve your note-taking efficiency.
4. Obtain a transcription of a recorded conversation, interview, or speech related to intersections, business, legal, political, or banking subjects. Review the transcription and identify any errors, inconsistencies, or inaccuracies.

Suggested Readings:

COMPANY LAW

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Company Law (DSC-4.2)	**4**	**3**	**1**	**-**	**12th Pass**	**Nil**

Learning Objectives: The course aims to develop and comprehend business and its processes in accordance with the provisions of the Companies Act, 2013 while analysing case laws.

Learning Outcomes: After completion of the course, learners will be able to:

1. analyse the regulatory aspects and the broader procedural aspects involved in different types of companies covering the Companies Act, 2013 and Rules.
2. prepare the basic legal documents required for formation of a company.
3. analyse the process and prepare the documents required for raising capital for the company.
4. analyse the managerial composition of companies and examine the process of company meetings.
5. develop a plan for winding up and the insolvency resolution of a company, considering the interests of the creditors and the company's assets.

Unit 1: Introduction **9 hours**

Meaning and characteristics of a company; Lifting of corporate veil; Overview of administration of Company Law; Types of companies including private and public company, government company, foreign company, one person company, small company, associate company, dormant company and producer company; Association not for profit; Illegal association.

Unit 2: Formation and Incorporation documents **9 hours**

Formation of company, promoters, their legal position and pre-incorporation contracts; Online registration of a company. Memorandum of Association and its alteration, Articles of Association and its alteration, Doctrine of constructive notice, Doctrine of ultra vires and indoor management.

Unit 3: Share Capital **9 hours**

Prospectus, Shelf and Red herring prospectus, misstatement in prospectus; Book building. Allotment and Forfeiture of share, Sweat Equity, ESOPs, Bonus issue, and Further issue of

shares, buyback, split of sharers and provisions regarding buyback; Transfer and transmission of shares; Demat system.

Unit 4: Management and Meetings 9 hours

Directors: Legal position, Disqualifications, Director Identification Number (DIN); Classification of directors, Additional, Alternate and Casual directors, Women directors, Independent director, small shareholder's director; Appointment, Removal of directors; Powers and Duties; Key managerial personnel (KMP); Board Meetings; Shareholders' meetings: AGM and EGM. Convening and conduct of meetings: Requisites of a valid meeting; Resolutions (Virtual meetings); Postal ballot; e-voting.

Unit 5: Dividends, Audit and Winding up 9 hours

Provisions relating to payment of Dividend. Company Audit: auditor's qualification and disqualifications, Auditor's appointment, rotation and removal, Secretarial Audit. Winding Up: Concept and Modes of Winding Up; Provisions of winding up under Insolvency and Bankruptcy Code 2016.

Practical Exercises: The learners are required to:

1. identify the type of company based on information available on NSE/BSE website and then analyse the regulatory and procedural aspects covering the Companies Act, 2013.
2. fill dummy SPICe+ form for incorporation of a company.
3. write about the timeline and details of the book building process of an actual IPO/FPO.
4. identify the actual composition of the Board of Directors and examine the minutes of AGM/EGM of listed companies.
5. develop a plan for winding up and the insolvency resolution process of a company, considering the interests of the creditors and the company's assets.

B.A. (VS) Modern Office Management
Semester IV
DISCIPLINE SPECIFIC CORE COURSE – 4.3 (DSC-4.3) –:
OFFICE AUTOMATION
CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Office Automation (DSC-4.3)	**4**	**3**	**1**	**-**	**12th Pass**	**Nil**

Learning Objective: The objective of this course is to impart knowledge to students for learning and understanding the evolving technologies and the transition to a paperless workplace. It elucidates the various approaches to automation that can be used in modern offices.

Learning Outcomes: After completion of the course, learners will be able to:

1. efficiently manage modern offices with paperless environment
2. facilitate smooth communication using appropriate technological tools
3. handle e-documents in e-offices
4. implement online workflows and settlements
5. apply the functions and applications of ERP in the workplace.

Unit I: Introduction **5 hours**

Meaning, importance of office automation, objectives and use of office automation tools – desktop/personal computers, printers, scanner, photocopier, mobile phones, CCTV Camera, biometric attendance machines and other digital tools. Emerging trends and challenges in office automation

Unit II: Online Communication Tools **10 hours**

Importance of online communication, Online Communication Systems: Internet, e-mail, video conferencing, VoIP, IVRS, Team Collaboration, Skype, Microsoft Teams, Google Teams, Zoom, Facebook, TinyLetter, Drop Box, Flowdock, Chat Services: Google Chat, ChatGPT, Go to Meeting, ProofHub etc.

Unit III: E-Office **10 hours**

Meaning and Nature of e-Office, Benefits of e-Office, Features of e-Office, Collaborative Working e-office, working etiquettes and ethical practices. Legal and ethical considerations associated with using office automation tools. Ensuring compliance with legal and ethical standards in office automation. Introduction to Key Management Services: Online Tour Approval and settlement of Claims. Online leave Applications, Online Leave Approvals, Joining Reports, Leave History, Leave in Credit and Workload of office staff.

Unit IV: E-File Management **10 hours**

Online Diary of Letters, File Processing, Dashboard view with Alerts, Enhanced Scope Based Search, MIS Reports for Monitoring and Analysis, Multilingual support, Added Data security with DSC and e-Sign. Interdepartmental File Movements, Records Management System, Citizen Interface, concept of Public Financial Management System (PFMS).

Unit V: Enterprise Resource Planning (ERP) **10 hours**

Meaning, benefits, and limitations of ERP; components of ERP; Evolution of ERP; Various Modules of ERP; softwares, applications of ERP; ERP and Business – value creation, ERP implementation life cycle, recent trends

Exercises:

The learners are required to:

1. Use different devices such as computers, mobiles, printers, etc, for data input, processing or output. Now design a workflow using office automation tools. For example, create a scenario where you receive a document via email, save it to your computer, edit it using a word processor, print a copy, and then scan it back into digital format for archiving.
2. Compose and send professional emails to peers or instructors, focusing on clarity, conciseness, and appropriate tone and respond to simulated email scenarios, demonstrating effective communication skills in various professional contexts.
3. Form small groups and assign a collaborative document creation task. For example, create a proposal, report, or presentation using online collaborative tools like Google Docs or Microsoft SharePoint.
4. Simulate virtual meetings using video conferencing tools and demonstrate proper meeting etiquette, such as joining on time, muting/unmuting audio, using video appropriately, and utilizing virtual meeting features like screen sharing and chat.
5. Analyze a real-world case study of an organization that implemented an ERP system. Explore the challenges faced, the objectives achieved, and the overall impact on the organization's operations and processes.
   Identify the components of the ERP system implemented, such as modules for finance, human resources, supply chain management, or customer relationship management.

Human Resource Development (DSC- 4.1)	4	3	1	-	Pass in class 12th	Nil

Learning objective: This course aims to enable learners to understand the concept, components, and evolution of HRD, differentiate between HRM and HRD and explore strategic perspectives in HRD.

Learning Outcomes: After completion of the course, learners will be able to:

1. interpret the concept of HRD and examine its evolution.
2. comprehend and apply HRD theory to real-world situations and organizational contexts.
3. compare and contrast the different HRD strategies in organisations and analyse pros and cons of each.
4. review the learning process in an organization starting with training needs, analysis, assessment and evaluation process.
5. assess the different training methods used in industry for their best suitability depending on the job type.

Unit 1: Introduction **9 hours**

Human Resource Development (HRD)- concept, components, evolution, need and significance, difference between human resource management and human resource development, Role of HR manager, HRD culture and climate, contemporary issues in HRD.

Unit 2: The Theory of HRD **9 hours**

The Discipline of HRD, Psychology and the Discipline of HRD – Contributions and limitations, HRD Core Beliefs, HRD Paradigms, Economics – Human Capital Theory and Human Resource Development, System theory as foundation for HRD.

Unit 3: Strategic Perspectives in HRD **9 hours**

Concept of Strategic HRD, HRD Interventions-Performance Appraisal, Potential Appraisal, Performance Coaching and Feedback, Career Planning, Training, Systems Development, Rewards, Employee Welfare and Work Life balance, Roles of HR Developer, Physical and Financial Resources for HRD, HR Accounting, HRD Audit.

Unit 4: Learning Technology for HRD **9 hours**

Learning and HRD, Models and Curriculum, Principles of Learning, Individual and Group Learning, Assessment Centre, Transactional Analysis, Behaviour Modelling and Self-Directed Learning, Evaluating the HRD.

Unit 5: Human Resource Training and Development (T&D) **9 hours**

Concept and Importance, Assessing Training Needs, Designing and Evaluating Training & Development Programmes, Role, Responsibilities and challenges to Training Managers, Strategies of Training Program, Review on T&D Programmes in India.

Exercises:

The learners are required to:

1. Form groups in class & engage in active class discussion to gain a comprehensive understanding of the concept of HRD and evolution of Human Resource Development. For this, students will be required to interview HR professionals who have been working in the field for a significant period. Students can ask questions about the changes they have witnessed in HRD practices throughout their careers, the challenges faced during different stages, and the impact of technological advancements on HRD
2. Prepare class presentation by selecting a real or fictional case study that involves HRD challenges or initiatives. Students should analyze the cases, apply the theory of HRD to understand the underlying issues, and propose suitable solutions or interventions. This exercise allows students to critically assess the contributions and limitations of HRD theory in addressing practical HRD issues.
3. Assign students the task of developing an HRD strategic plan for a hypothetical organization. They should review and document the organization's goals, assess the HRD needs, and create a comprehensive plan aligned with the overall strategic objectives. Students will state and discuss the range of rewards and employee welfare schemes that the companies provide.
4. Select different learning materials, such as textbooks, online courses, or instructional videos from a particular module/course/topic. Students should critically analyze and evaluate the effectiveness of the materials based on principles of learning. They can assess factors like clarity of content, engagement level, use of multimedia, and alignment with learning objectives and engage in classroom discussion.
5. Assess and select an appropriate training program for a specific job role or department within an organization. They should consider the learning objectives, content, delivery methods, evaluation strategies, and resources required for effective training

B.A. (VS) Human Resource Management
Semester IV
DISCIPLINE SPECIFIC CORE COURSE (DSC- 4.2)

Company Law

Credit Distribution, Eligibility and Pre, Requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (If any)
		Lecture	Tutorial	Practical/ Practice		
Company Law (DSC: 4.2)	4	3	1	-	**Pass in class 12th**	NIL

Learning Objectives

The course aims to develop and comprehend business and its processes in accordance with the provisions of the Companies Act, 2013 while analysing case laws.

Learning Outcomes

After completion of the course, learners will be able to:

1. understand and analyse the regulatory aspects and the broader procedural aspects involved in different types of companies covering the Companies Act, 2013 and Rules.
2. prepare the basic legal documents required for formation of a company.
3. analyse the process and prepare the documents required for raising capital for the company.
4. analyse the managerial composition of companies and examine the process of company meetings.
5. develop a plan for winding up and the insolvency resolution of a company, considering the interests of the creditors and the company's assets.

Unit 1: Introduction **9 hours**

Meaning and characteristics of a company; Lifting of corporate veil; Overview of administration of Company Law; Types of companies including private and public company, government company, foreign company, one person company, small company, associate company, dormant company and producer company; Association not for profit; Illegal association.

Unit 2: Formation and Incorporation documents **9 hours**

Formation of company, promoters, their legal position and pre-incorporation contracts; Online registration of a company. Memorandum of Association and its alteration, Articles of Association and its alteration, Doctrine of constructive notice, Doctrine of ultra vires and indoor management.

Unit 3: Share Capital **9 hours**

Prospectus, Shelf and Red herring prospectus, misstatement in prospectus; Book building. Allotment and Forfeiture of share, Sweat Equity, ESOPs, Bonus issue, and Further issue of shares, buyback, split of sharers and provisions regarding buyback; Transfer and transmission of shares; Demat system.

Unit 4: Management and Meetings **9 hours**

Directors: Legal position, Disqualifications, Director Identification Number (DIN); Classification of directors, Additional, Alternate and Casual directors, Women directors, Independent director, small shareholder's director; Appointment, Removal of directors; Powers and Duties; Key managerial personnel (KMP); Board Meetings; Shareholders' meetings: AGM and EGM. Convening and conduct of meetings: Requisites of a valid meeting; Resolutions (Virtual meetings); Postal ballot; e-voting.

Unit 5: Dividends, Audit and Winding up **9 hours**

Provisions relating to payment of Dividend. Company Audit: auditor's qualification and disqualifications, Auditor's appointment, rotation and removal, Secretarial Audit. Winding Up: Concept and Modes of Winding Up; Provisions of winding up under Insolvency and Bankruptcy Code 2016.

Practical Exercises

The learners are required to:

1. Identify the type of company based on information available on NSE/BSE website and then analyse the regulatory and procedural aspects covering the Companies Act, 2013.
2. Create small groups effectively and collaborate to fill out a dummy Spice+ form for the incorporation of a sample company, gaining hands-on experience and understanding the necessary steps and requirements involved in the process.
3. Create small groups & collect data on the timeline and details of the book building process of an actual IPO/FPO.
4. Engage in classroom discussion to identify the actual composition of the Board of Directors and examine the minutes of AGM/EGM of listed companies.
5. Make a project on developing a plan for winding up and the insolvency resolution process of a company, considering the interests of the creditors and the company's assets.

B.A. (VS) Human Resource Management
Semester IV
DISCIPLINE SPECIFIC CORE COURSE
Workers, Markets, and the Future Of Work

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE, REQUISITES OF THE COURSE

Course Title & Code	Total Credits	Lectures	Tutorial	Practical	Eligibility criteria	Pre-requisite of the course
Workers, Markets and the future of Work	4	3	1	-	**Pass in Class 12th**	**Nil**

Learning Objectives: The course aims to familiarize students with the concepts of workers demand, supply and the determination of market wage. It provides basic understanding of the recent developments in markets for workers in India. It discusses the role of international agencies in safe guarding workers interests and defining decent work.

Learning Outcomes:

After completion of the course, learners will be able to:

1. explain the idea of the labour market and its working, the determination of equilibrium wage and the reasons why people choose to work or withdraw from the market.
2. compare the characteristics of various segments of labour markets in India and examine various trends related to wages and employment.
3. explain the concept of global value chains and Special economic Zones (SEZs) and examine their impact on workers, labour markets and the future of work.
4. appraise the role of International agencies in promoting decent work agenda and maintaining labour standards.

Unit 1: Economics of Labour Market and Wage Determination 11 hours

Supply of individual Worker and Workforce: Workers' preferences and Budget constraints, changes in budget constraints due to changes in non-labour income or wages; the labour supply curve of an individual worker and the Supply curve of workers in an Economy.

Policy applications: Welfare programs and work incentives; Labour supply over the life cycle; the decline in work attachment among older workers.

Demand for Workers: Production function of a firm, profit maximization, short- run and long- run decision making of the firm; Overview of labour Market equilibrium.

Policy application: New Labour Codes and the employment effects of minimum wages.

Unit 2: Labour Markets at Work in India 12 hours

Employment and Unemployment: Concepts of labour-force, workforce, participation rate, universal basic income and other concepts related to unemployment, measurement and trends in employment and wages, phenomena of jobless growth and unemployment in India, changing dynamics of occupational structure.

Facets of Informalisation and Segmentation of Labour Markets in India: Trends and characteristics of informalisation and contractualization, nature of rural labour markets, the growth of non-farm sector and impact of MGNREGA, internal migration in India, gig employment and its impact on platform workers.

Women in the workforce: feminization and low participation.

Unit 3: **Offshoring, Outsourcing and Global Value Chains** (GVCs) **11hours**

Workers in GVC - India and other Developing Countries, impact on employment in India, Labour Standards in India- Case study, Special Economic Zones in India.

Future of work, *Artificial Intelligence and Future of Labour*: Disruptive technology and adjustment in Workers markets

Unit 4: International agencies and Labour Standards 11 hours

Role and Structure of ILO, ILO Conventions and Recommendations, Decent work and ILO programmes in India, World Trade Organization and workers.

Exercises: The learners are required to:

1. discuss and practice numerical and graphical exercises based on application of demand and supply of labour and changes in equilibrium wage (Unit1)
2. identify and collect information from Internet on various case studies of employment types and engage in group discussions (Unit2)
3. design a questionnaire for primary data collection from the neighbourhood labour markets, collect data and make a group project based on the analyses of the data collected. (Unit2)
4. locate and discuss in class case studies of gig workers such as delivery workers form Zomato, Big Basket, Amazon and other such platforms. (Unit 3)
5. make a group presentation on implementation of ILO activities and programmes in India (Unit4)

DISCIPLINE SPECIFIC CORE COURSE (DSC-4.1)

Consumer Behavior

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Consumer Behaviour (DSC: 4.1)	**4**	**3**	**1**	**-**	**Pass in Class XII**	**-**

Learning Objectives: The course aims to equip learners with essential management-related knowledge and skills and their applicability in the real world.

Learning Outcomes: After completion of the course, learners will be able to:

1. identify characteristics of consumer behaviour and how to use market segmentation techniques.
2. examine the influence of internal dynamics on consumer behaviour.
3. explain external factors that influence consumer behaviour.
4. appraise consumption pattern and influences that exert during these processes.

Unit 1: Introduction to Consumer Behaviour ` 9 Hours

Nature, scope & application; Importance of consumer behaviour in marketing decisions; characteristics of consumer behaviour; distinguish between customer and consumer; the role of consumer research; Market Segmentation, VALS 2 segmentation profile.

Unit 2: Internal Influences on Consumer Behaviour 15 Hours

Consumer Needs & Motivation: Characteristics of motivation, arousal of motives; theories of needs & motivation-Maslow's hierarchy of needs, McClelland's APA theory; Consumer Personality- theories of personality- Freudian theory, Neo- Freudian theory, Trait theory; Consumer Perception: Concept of absolute threshold limit, differential threshold limit & subliminal perception; Consumer Attitudes: Formation of attitudes; functions performed by attitudes; models of attitudes.

Unit 3: External Influences on Consumer Behaviour 12 Hours

Group Dynamics & consumer reference groups: Different types of reference groups; factors affecting reference group influence. Family & Consumer Behaviour: Consumer socialization

process; consumer roles within a family; purchase influences and role played by children; family life cycle. Characteristics of culture; core values held by society & their influence on consumer behaviour

Unit 4: Customer Decision Making **9 Hours**

Customer Decision-making process: problem recognition; pre-purchase search influences; information evaluation; purchase decision- compensatory decision rule, conjunctive decision, rule, Lexicographic rule, affect referral, disjunctive rule; post-purchase evaluation. Contemporary issues in consumer behavior- Social media marketing, digital marketing, Influencer marketing etc.

Exercises:

1. Construct separate advertising executions for a cosmetics product that targets the Believer, Achiever, Experiencer and Maker VALs segment types. (Unit 1)
2. You are a member of an advertising team assembled to develop a promotional campaign for a new digital camera. Develop three headlines for this campaign, each based on one of the levels in Maslow's need hierarchy. (Unit 2)
3. Think of a recent major purchase your family has made. Analyze the roles performed by the various family members in terms of the following consumption roles; influencers, gatekeepers, deciders, buyers, preparers, users, maintainers and disposers. (Unit 3)
4. Select a newspaper or magazine advertisement that attempt (a) to provide the consumer with a strategy to follow in making a purchase decision or (b) to reduce the perceived risk associated with a purchase. Evaluate the effectiveness of the ad. (Unit 4)

Company Law (DSC: 4.2)	4	3	1	-	**Pass in Class XII**	-

Learning Objectives

The course aims to develop and comprehend business and its processes in accordance with the provisions of the Companies Act, 2013 while analysing case laws.

Learning Outcomes

After completion of the course, learners will be able to:

1. understand and analyse the regulatory aspects and the broader procedural aspects involved in different types of companies covering the Companies Act, 2013 and Rules.
2. prepare the basic legal documents required for formation of a company.
3. analyse the process and prepare the documents required for raising capital for the company.
4. analyse the managerial composition of companies and examine the process of company meetings.
5. develop a plan for winding up and the insolvency resolution of a company, considering the interests of the creditors and the company's assets.

Unit 1: Introduction **9 hours**

Meaning and characteristics of a company; Lifting of corporate veil; Overview of administration of Company Law; Types of companies including private and public company, government company, foreign company, one person company, small company, associate company, dormant company and producer company; Association not for profit; Illegal association.

Unit 2: Formation and Incorporation documents **9 hours**

Formation of company, promoters, their legal position and pre-incorporation contracts; Online registration of a company. Memorandum of Association and its alteration, Articles of

Association and its alteration, Doctrine of constructive notice, Doctrine of ultra vires and indoor management.

Unit 3: Share Capital **9 hours**

Prospectus, Shelf and Red herring prospectus, misstatement in prospectus; Book building. Allotment and Forfeiture of share, Sweat Equity, ESOPs, Bonus issue, and Further issue of shares, buyback, split of sharers and provisions regarding buyback; Transfer and transmission of shares; Demat system.

Unit 4: Management and Meetings **9 hours**

Directors: Legal position, Disqualifications, Director Identification Number (DIN); Classification of directors, Additional, Alternate and Casual directors, Women directors, Independent director, small shareholder's director; Appointment, Removal of directors; Powers and Duties; Key managerial personnel (KMP); Board Meetings; Shareholders' meetings: AGM and EGM. Convening and conduct of meetings: Requisites of a valid meeting; Resolutions (Virtual meetings); Postal ballot; e-voting.

Unit 5: Dividends, Audit and Winding up **9 hours**

Provisions relating to payment of Dividend. Company Audit: auditor's qualification and disqualifications, Auditor's appointment, rotation and removal, Secretarial Audit. Winding Up: Concept and Modes of Winding Up; Provisions of winding up under Insolvency and Bankruptcy Code 2016.

Practical Exercises

The learners are required to:

1. Identify the type of company based on information available on NSE/BSE website and then analyse the regulatory and procedural aspects covering the Companies Act, 2013.
2. Create small groups effectively and collaborate to fill out a dummy Spice+ form for the incorporation of a sample company, gaining hands-on experience and understanding the necessary steps and requirements involved in the process.
3. Create small groups & collect data on the timeline and details of the book building process of an actual IPO/FPO.
4. Engage in classroom discussion to identify the actual composition of the Board of Directors and examine the minutes of AGM/EGM of listed companies.
5. Make a project on developing a plan for winding up and the insolvency resolution process of a company, considering the interests of the creditors and the company's assets.

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Transportation and Logistics Planning **DSC: 4.1**	4	3	1	-	Pass in Class XII	NIL

Learning Objectives

The course aims to enhance the understanding of the students to with the concept of multimodal transport and logistics planning. It will enable the student to comprehend the nuances in multimodal operations and logistics planning. It will help students to understand the legal aspects of multimodal transport and logistics network at the international level.

Learning Outcomes

After completion of this course, the learners will be able to:

1. identify and analyze the factors that make shippers prefer multimodal transportation over other modes, such as cost savings, time efficiency, and reduced environmental impact.
2. develop a transportation plan for a business, including the selection of the most suitable mode and route based on cost, time, and other factors affecting the shipment.
3. describe the requirements for the transportation of perishable goods and the regulations governing their transport, including temperature control and packaging.
4. construct a logistics and transport environment analysis, including a SWOT analysis and PESTEL analysis, to identify opportunities and challenges in the logistics and transport industry.
5. analyse the challenges of managing an international logistics network, including cultural differences, regulatory compliance, and technology integration.

Unit 1: Introduction to Transportation **9 hours**

Definition and Importance of Transportation and Logistics, Transportation Modes and Services, Transportation Planning Principles, Route Planning and Optimization, Transportation Modes and Services, Multimodal Trade Routes, Evolution, Basic Intermodal System, Modal Interface, Factors outlining why shipper prefer Multimodal, Multi-Modalism Strategy, Components. Role of multimodal transport in international logistics

Unit 2: Logistics and Transport Planning **9 hours**

Different Types of Logistics and Transport Organizational Structures. Logistics and Transport planning –controlling decision, making. Logistics and Transport Environment Analysis, Legal and Ethical framework. Container corporation of India: Function and role.

Unit 3: Physical Multimodal Operations **9 hours**

Liners, Trams, Specialized Vessels, Terms, Road transport vehicle – Road Transport Weight and Measurement, Rail Transport Vehicle and Equipment – Air Transport, Ports, LCL, FCL, NVOCC, Freight forwarders, Consolidator, ICD, CFS, Free Trade Area, SEZ, Water ways, Factors affecting mode and route choice.

Unit 4: Conventions Relating to Multimodal Transport **9 hours**

Cargo Liability Convention: International Conventions relating to Bill of Lading (The Hague and Hague/Visby Rules (Appendix 8), Hamburg Rule, Convention relating to Through Transport operation by Land, Rail, Air – Conventions relation to Dangerous Cargo, Carriage of Perishable Goods, International Convention for safe containers 1972 (CSC), Baltic index

Unit 5: International Logistics Networks **9 hours**

Continuous Improvement in Transportation and Logistics Systems, Key Performance Indicators, Lean Logistics and Six Sigma, Characteristics of international logistics networks, networks owned by international corporations, leadership network partnership network, management of international logistics network

Exercises

1. You are a logistics manager of a manufacturing company located in Country A, and you have been tasked to transport a shipment of goods to a warehouse in Country B. The shipment consists of 1000 cartons of electronic items, and the total weight is 20 tons. You need to develop a multi-modal transport plan that ensures the safe and efficient movement of goods from the factory to the warehouse. Prepare a suitable transport plan for exporter and manufacturer from North India.
2. A business needs to transport a large quantity of raw materials from its suppliers in South America to its manufacturing facility in Europe. The company has multiple options for

transportation modes, including air, sea, rail, and truck. Develop a transportation plan for the company, considering the cost, time, and other factors that could affect the shipment. Create a presentation to present your transportation plan to the company's executive team.

3. You are a logistics manager for a company that specializes in the transportation of fresh produce. The company needs to transport a large shipment of strawberries from a farm in California to a supermarket in New York. Develop a transportation plan that outlines the requirements for the transportation of perishable goods and the regulations governing their transport. Consider the temperature control and packaging needed to ensure the strawberries arrive at their destination in excellent condition. Present your plan in a written report and justify your decisions.
4. You are a logistics manager for a company that is expanding its operations overseas. The company needs to choose an organizational structure that will support its international logistics and transport needs. Develop a comparative analysis of the different types of logistics and transport organizational structures, including functional, matrix, and network structures. Consider the advantages and disadvantages of each structure and present your findings in a written report. Recommend the best organizational structure for the company based on its specific needs.
5. You are the logistics manager of an international corporation that has recently expanded its business to multiple countries. Your task is to design an international logistics network for your company that is efficient and cost-effective. Develop a plan that includes the following:
    a. Identify the different modes of transportation that can be used in the logistics network.
    b. Analyze the benefits and drawbacks of each mode of transportation.
    c. Determine the best mode of transportation for each leg of the journey.
    d. Create a plan for managing the logistics network, including the use of technology and personnel.
    e. Explain how you will maintain ethical and legal compliance in the logistics network.

B.A. (VS) MATERIALS MANAGEMENT

DSC 4.2: Company Law

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE, REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (If any)
		Lecture	Tutorial	Practical/ Practice		
Company Law **DSC: 4.2**	4	3	1	-	Pass in Class XII	NIL

Learning Objectives

The course aims to develop and comprehend business and its processes in accordance with the provisions of the Companies Act, 2013 while analyzing case laws.

Learning Outcomes

After completion of the course, learners will be able to:

1. analyse the regulatory aspects and the broader procedural aspects involved in different types of companies covering the Companies Act, 2013 and Rules.
2. prepare the basic legal documents required for formation of a company.
3. analyse the process and prepare the documents required for raising capital for the company.
4. analyse the managerial composition of companies and examine the process of company meetings.
5. develop a plan for winding up and the insolvency resolution of a company, considering the interests of the creditors and the company's assets.

Unit 1: Introduction **9 hours**

Meaning and characteristics of a company; Lifting of corporate veil; Overview of administration of Company Law; Types of companies including private and public company, government company, foreign company, one person company, small company, associate company, dormant company and producer company; Association not for profit; Illegal association.

Unit 2: Formation and Incorporation documents **9 hours**

Formation of company, promoters, their legal position and pre-incorporation contracts; Online registration of a company. Memorandum of Association and its alteration, Articles of Association and its alteration, Doctrine of constructive notice, Doctrine of ultra vires and indoor management.

Unit 3: Share Capital **9 hours**

Prospectus, Shelf and Red herring prospectus, misstatement in prospectus; Book building. Allotment and Forfeiture of share, Sweat Equity, ESOPs, Bonus issue, and Further issue of shares, buyback, split of sharers and provisions regarding buyback; Transfer and transmission of shares; Demat system.

Unit 4: Management and Meetings **9 hours**

Directors: Legal position, Disqualifications, Director Identification Number (DIN); Classification of directors, Additional, Alternate and Casual directors, Women directors, Independent director, small shareholder's director; Appointment, Removal of directors; Powers and Duties; Key managerial personnel (KMP); Board Meetings; Shareholders' meetings: AGM and EGM. Convening and conduct of meetings: Requisites of a valid meeting; Resolutions (Virtual meetings); Postal ballot; e-voting.

Unit 5: Dividends, Audit and Winding up **9 hours**

Provisions relating to payment of Dividend. Company Audit: auditor's qualification and disqualifications, Auditor's appointment, rotation and removal, Secretarial Audit. Winding Up: Concept and Modes of Winding Up; Provisions of winding up under Insolvency and Bankruptcy Code 2016.

Exercises

The learners are required to:

1. identify the type of company based on information available on NSE/BSE website and then analyse the regulatory and procedural aspects covering the Companies Act, 2013.
2. fill dummy SPICe+ form for incorporation of a company.
3. write about the timeline and details of the book building process of an actual IPO/FPO.
4. identify the actual composition of the Board of Directors and examine the minutes of AGM/EGM of listed companies.
5. develop a plan for winding up and the insolvency resolution process of a company, considering the interests of the creditors and the company's assets.

B.A. (VS) MATERIALS MANAGEMENT

Discipline Specific Core

DSC- 5.2: Workers, markets, and the future of work

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE, REQUISITES OF THE COURSE

Course Title & Code	Total Credits	Lectures	Tutorial	Practical	Eligibility criteria	Pre-requisite of the course
Workers, Markets and the future of Work **DSC**	4	3	1	-	**Class XII**	**Nil**

Learning Objectives: The course aims to familiarize students with the concepts of workers demand, supply and the determination of market wage. It provides basic understanding of the recent developments in markets for workers in India. It discusses the role of international agencies in safe guarding workers interests and defining decent work.

Learning Outcomes:

After completion of the course, learners will be able to:

1. explain the idea of the labour market and its working, the determination of equilibrium wage and the reasons why people choose to work or withdraw from the market.
2. compare the characteristics of various segments of labour markets in India and examine various trends related to wages and employment.
3. explain the concept of global value chains and Special economic Zones (SEZs) and examine their impact on workers, labour markets and the future of work.
4. appraise the role of International agencies in promoting decent work agenda and maintaining labour standards.

Unit 1: Economics of Labour Market and Wage Determination 11 hours

Supply of individual Worker and Workforce: Workers' preferences and Budget constraints, changes in budget constraints due to changes in non-labour income or wages; the labour supply curve of an individual worker and the Supply curve of workers in an Economy.

Policy applications: Welfare programs and work incentives; Labour supply over the life cycle; the decline in work attachment among older workers.

Demand for Workers: Production function of a firm, profit maximization, short- run and long-run decision making of the firm; Overview of labour Market equilibrium.

Policy application: New Labour Codes and the employment effects of minimum wages.

Unit 2: Labour Markets at Work in India **12 hours**

Employment and Unemployment: Concepts of labour-force, workforce, participation rate, universal basic income and other concepts related to unemployment, measurement and trends in employment and wages, phenomena of jobless growth and unemployment in India, changing dynamics of occupational structure.

Facets of Informalisation and Segmentation of Labour Markets in India: Trends and characteristics of informalisation and contractualization, nature of rural labour markets, the growth of non-farm sector and impact of MGNREGA, internal migration in India, gig employment and its impact on platform workers.

Women in the workforce: feminization and low participation.

Unit 3: **Offshoring, Outsourcing and Global Value Chains** (GVCs) **11hours**

Workers in GVC - India and other Developing Countries, impact on employment in India, Labour Standards in India- Case study, Special Economic Zones in India.

Future of work, *Artificial Intelligence and Future of Labour*: Disruptive technology and adjustment in Workers markets

Unit 4: International agencies and Labour Standards **11 hours**

Role and Structure of ILO, ILO Conventions and Recommendations, Decent work and ILO programmes in India, World Trade Organization and workers.

Practical Exercises: The learners are required to:

1. discuss and practice numerical and graphical exercises based on application of demand and supply of labour and changes in equilibrium wage (Unit1)
2. identify and collect information from Internet on various case studies of employment types and engage in group discussions (Unit2)
3. design a questionnaire for primary data collection from the neighbourhood labour markets, collect data and make a group project based on the analyses of the data collected. (Unit2)
4. locate and discuss in class case studies of gig workers such as delivery workers form Zomato, Big Basket, Amazon and other such platforms. (Unit 3)
5. make a group presentation on implementation of ILO activities and programmes in India (Unit4)

Course Title and Code	Course Code	No. of credits	Components of the course			Eligibility Criteria	Pre-requisites of the course
			Lecture	Tutorial	Practical		
Contemporary Trends in Tourism (DSC 4.1)	DSC 4.1	4	3	1	-	Pass in Class 12th	-

Learning Objectives

The aim of this course is to give the students a wide knowledge of the existing and emerging trends. The course also aims at developing an insight on the strongly emerging types and forms of tourism so that the students are able to perceive the scope of Tourism development at a given 'Destination'/'Destination Region. The course intends to help the students to acquire and develop skills for rational decision making in the discipline of tourism management.

Learning Outcomes

After completing this course, the learners would be able to:

1. evaluate contemporary trends in international tourism and interpret global tourist traffic and tourism receipt patterns. Further, students will be able to categorize emerging tourist demand patterns and factors affecting international tourism.
2. illustrate segmentation of potential tourism market of India on the basis of Geographic, Demographic and Psychographic Segmentation and analyze India's Performance in International Tourism.
3. develop an understanding about new age tourism like new age tourists, space tourism, short haul tourism, accessible tourism, Island tourism, Pro-poor tourism etc.
4. appraise the use of social media, artificial intelligence, virtual reality and information and communication technology (ICT) in tourism industry. Further, students will be able to develop an insight into the characteristics and patterns of India's major domestic tourism markets and international tourism markets.

Unit-1

Contemporary Trends in International Tourism **12 Hours**

Contemporary Trends in International Tourism – Global Tourist Traffic and Tourism Receipt Patterns, Emerging Tourist Demand Patterns –Eco, Ethnic, Adventure, MICE, Medical and Well-being Tourism, Factors Affecting International Tourism and Need for Effective Crisis Management.

Unit-2

Contemporary Trends in Indian Tourism **10 Hours**

Geographic, Demographic and Psychographic Segmentation of Effective and Potential Tourism Markets of India, India's Performance in International Tourism – A Critical Assessments, Regional Gap in Indian Tourism and the Dynamically Changing Market-Destination Trends

Unit-3

New Age Tourism **12 Hours**

New age tourists, Space tourism, Short haul tourism, Accessible tourism, Island tourism, Pro-poor tourism, Solo tourism, Food tourism, Modern tourism trends, Special Interest Areas, Winter tourism

Unit – 4

Emerging Trends and New Thrust Areas of Tourism **11 Hours**

Digital Tourism- Use of ICT in tourism, Role of social media, Artificial Intelligence and Virtual Reality in tourism, Characteristics of Indian outbound tourism, Characteristics & patterns of India's major international markets, Domestic tourism in India, Patterns & characteristics, & major tourist generating states, Future prospects of tourism in India.

Exercises

The learners are required to:

1. explain contemporary trends in international tourism by way of class presentation. Group discussion on the scope of medical and well-being tourism in India.
2. make a power point presentation on the segmentation of India's potential tourism market on the basis of Geographic, Demographic and Psychographic Segmentation.
3. assess the understanding of new age tourism like space tourism, short haul tourism, accessible tourism, Island tourism, Pro-poor tourism, Solo tourism, by objective and subjective assessment (Class test, assignments, MCQs, Fill in the blanks and quiz).
4. visit nearby hotels, conference/convention center and find out the latest ICT used by them in order to provide services to the guests. Make a detailed report. Further students can make an assignment on domestic tourism patterns and characteristics.

Semester IV
DISCIPLINE SPECIFIC CORE COURSE (DSC- 4.2)

Adventure Tourism

Credit Distribution, Eligibility and Pre-requisites of the Course

Course Title & Code	Credits	Components of the course			Eligibility criteria	Pre-requisites of the course
		Lecture	Tutorial	Practical		
Adventure Tourism **DSC 4.2**	**4**	**3**	**1**	**-**	**Pass in class 12th**	**-**

Learning Objectives:

The course aims to familiarize the students with a comprehensive understanding of concepts, activities, current trends and benefits and challenges of adventure tourism. The learners will know about the popular adventure tourism destinations, their sustainable practices and associated adventure activities.
This course focuses on risk management principles and safety protocols to ensure participant safety during adventure activities. This course equips the students with the knowledge of designing and planning adventure tours and expeditions considering logistical, financial, and sustainability aspects.
The learners will learn about the marketing strategies and promotional techniques suitable for adventure tourism products.

Learning Outcomes:

After completing this course, the learners would be able to:

1. demonstrate a comprehensive understanding of adventure tourism concepts, activities, and current trends.
2. analyze the benefits and challenges of adventure tourism.
3. evaluate popular adventure tourism destinations worldwide and their management and sustainability considerations.
4. analyze the typology of adventure tourism activities (land-based, air-based and water-based adventure) their safety measures, equipment, and associated technical skills.
5. apply risk management principles and safety protocols to ensure participant safety during adventure activities.
6. demonstrate the knowledge of designing and planning adventure tours and expeditions considering logistical, financial, and sustainability aspects.
7. evaluate the marketing strategies and promotional materials specific to adventure tourism.

Unit-1

Adventure Tourism - An Overview **10 Hours**

The concept, scope, and importance of adventure tourism, Adventure activities and associated characteristics, Current trends in adventure tourism, Benefits and challenges of adventure tourism, job opportunities in adventure tourism.

Unit-2

Adventure Tourism Destinations and Adventure Activities **12 Hours**

Identify and evaluate popular adventure tourism destinations worldwide, Analyze the natural and cultural attributes that make a destination suitable for adventure tourism, Management and sustainability considerations for adventure tourism destinations. Types of adventure tourism activities (land-based, air-based and water-based adventure), Equipment, Safety measures, and technical skills associated with different adventure activities.

Unit-3

Risk Management and Safety in Adventure Tourism Operations **15 Hours**

The principles of risk management in adventure tourism, Identify potential risks and hazards associated with adventure activities, Strategies for assessing, mitigating, and managing risks to ensure participant safety, Planning and organization of adventure tours and expeditions, Develop skills in itinerary development, budgeting, and resource management for adventure tourism operations.

Unit-4

Marketing and Promotion of Adventure Tourism **8 Hours**

Marketing strategies specific to adventure tourism, target market analysis and customer behavior in adventure tourism, Promotional materials, and digital marketing campaigns, Certificate programs for adventure tourism.

Exercises

The learners are required to:

1. conduct a risk assessment for a specific adventure activity and develop a safety plan.
2. design an adventure tour itinerary considering logistical factors and budget constraints.
3. develop a marketing campaign for an adventure tourism destination or activity.
4. create digital promotional materials, such as brochures or social media content, for an adventure tour.
5. conduct a field trip to an adventure tourism destination and assess its sustainability

practices.

6. lead a guided adventure activity and demonstrate proper guiding and instructional techniques.
7. participate in a simulated emergency response exercise and practice crisis management skills.

Globalization and Indian Tourism DSC 4.3	4	3	1	-	Pass in class 12th	-

Learning objective:

Through this course students will learn about Indian tourism in a comparative perspective, and the advantages and issues of operating in a globalized world. This course is designed to help students get acquainted with various aspects of the economy and the factors that impact the tourism industry. It will help to understand the two-way relationship between tourism and development. The course studies the impact of foreign trade and capital on tourism and its inter-linkages with other sectors of the economy. It includes case studies of specific success stories such as Himachal Pradesh, North eastern states, Kerala and Rajasthan tourism. It also examines the ecological aspects and the special case of hill tourism.

Learning outcomes

After completion of the course, learners would be able to:

1. recall a brief overview of India's economic development and the role of tourism in a globalized environment.
2. explain the inter sectoral linkages and the two-way relationship between tourism and development.
3. examine and appraise the important contribution that tourism makes to economic and social outcomes and the building up of foreign exchange reserves.
4. critically evaluate the recent developments in various sectors, including infrastructure, services and their impact on tourism and vice versa.
5. appraise the impact of tourism on the overall development and suggest policy measures for promoting tourism.

UNIT- 1 **12 hours**

India today – development indicators and comparisons

Redefining development - changing ideas on growth and development- concept of human development, measuring human development – the Human Development Index (HDI), the HDI ranking of India, gender related development index, (GDI) and Gender Inequality Index (GII) measurement, and India's performance on these indicators. Understanding the concept of the circular economy and sustainability in the context of sustainable development goals (SDGs) specifically for the tourism sector.

Indian economy today- size, population, Gross Domestic product (GDP), Per capita income, rate of growth, structure of GDP and the challenges of unemployment, poverty and inequality and how tourism can be an instrument in addressing these challenges.

UNIT- 2 **11 Hours**

Brief overview of India's economic development experience post 2000, focusing on the Trends in Travel and Tourism industry

Indian Tourism in a comparative perspective, a comparison with South Asia, BRICS countries and the other poorest countries in the world (excluding Africa)'. Economic reforms in India; privatization, liberalisation and globalization- the performance of the economy focusing specifically on the 2003 to 2008 period of high growth and the role of tourism and the subsequent slowdown after 2012 and its impact on Tourism industry. A brief appraisal of economic reforms – issues of poverty, growth without employment, regional and other inequalities and the tourism as an instrument of change.

UNIT-3 **11 Hours**

Tourism and development- synergies and concerns

India's share in global tourism, the role of tourism in India's economy, potential for growth, the tourism multiplier and the inter-sectoral linkages.

Case studies of Kerala, Rajasthan, Himachal Pradesh and North-Eastern states, examples of successful strategies that illustrate the linkages, the role of Government, the success of the Incredible India campaign, Kerala's branding as 'God's own Country' and Rajasthan's success in Heritage and cultural tourism. Recent developments that caution us to the hazards of over exposure, particularly in the case of Kerala. Branding of North-east, attractions and circuits in North eastern

India. The special case of hill tourism- fine balance between development and ecological concerns – examples of Ladakh, Uttarakhand, Himachal and other hill states. State-wise trends in Indian /global tourists and the GDP generated through tourism in the post reform period.

UNIT- 4 **11 Hours**

Linkages of Tourism with the global economy: Foreign trade, foreign capital, and servicification.

The role of foreign trade and foreign capital in tourism industry of India; advantages and disadvantages of Foreign Direct Investment (FDI) for tourism Industry. The special case of the hospitality sector and the tourism industry- the enabling role of digitization, servicification and technology on the sector.

Exercises:

1. Watch a few films on tourism in class such as 'Kashmir ki kali', 'Everest' 'Cycling around the world' or any other suitable film followed by thematic discussion on tourism. (Unit 1)
2. Students may be asked to collect data and material from one specific state of India and prepare presentation on the 'Circular economy and tourism in India'. (Unit 1)
3. A study tour to a tourist destination may be organized by the teacher for experiential learning of the issues and the linkages of tourism with other sectors of the economy. Students may be asked to submit project report after that. Students may also be encouraged to plan the trip. (Unit 3)
4. Students may be asked to prepare group projects on multinational corporations (MNC) such as Amazon, Apple, Google or any other and their impact on tourism industry worldwide. (Unit 4)
5. Make a group project based on field work. Identify a transport service, Parlour or a eatery in the neighborhood, prepare questionnaire and study its working and role in promoting travel and tourism. This will a part of experiential learning about the role of small businesses in promoting travel and tourism in India. (Unit 4)
6. Class room discussions on the comparative tourism and the tourism potential of India may be organized, where experiences of different countries such as the United Kingdom, France, Thailand, etc. are discussed. (Unit 4)

1. **Suggested Readings will be updated and uploaded on college website from time to time.**
2. **Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.**

ANNEXURE-42

Sub: Amendment to Ordinance V

Following addition be made to Appendix-II-A to the Ordinance V (2-A) of the Ordinances of the University;

Add the following:

Syllabi of following programmes of Semester-IV, V and VI of the Department of Geography under Faculty of Social Sciences based on Under Graduate Curriculum Framework -2022 implemented from the Academic Year 2022-23 :

(i) BA (Prog.) with Geography as Major/ Non-Major – Semester-IV

(ii) BA (Prog.) with Geography as Major/ Non-Major – Semester-V

(iii) BA (Prog.) with Geography as Major/ Non-Major – Semester-VI

The credit distribution and the course content of the syllabi is as per ***Annexure-1***

ANNEXURE-1

DEPARTMENT OF GEOGRAPHY
SEMESTER IV
Category II
Geography Courses for Undergraduate Programme of study with Geography as one of the Core Disciplines
(B.A. Programmes with Geography as Major discipline)
DSC-07

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit Distribution of the course			Eligibility Criteria	Prerequisite
		Lecture	Tutorial	Practical/ Practice		
OCEANOGRAPHY	4	3	1	0	Class 12th	NIL

Learning Objectives:

The Learning Objectives of this course are as follows:

- To enable the learner to understand the basics of oceanography.
- To enable the learner to explain the configuration of the ocean bottom
- To enable the learner to discuss ocean water and its unique ecosystem
- To equip the learner to appreciate and elaborate the problems and policies for sustainable oceans
-

Learning Outcomes:

The Learning Outcomes of this course are as follows:

- The students would be able to comprehend and establish the relationship between human action and global ocean conditions. They would be able to explain the ocean as a regulator of global climate.
- Illustrate the dynamic ocean bottom topography and appreciate the circulation of cold and warm Ocean currents.
- Discuss the salinity and temperature distribution of ocean water on a three-dimensional spatial perspective.
- Elaborate the marine ecosystems as well as explain the problems and address the policies to resolve them.

Course Outline:

UNIT 1: Introduction to Oceanography: (8 hrs)

- Significance of Oceanography, Human actions and the Oceans, Challenges to Sustainability of Marine Ecosystems, Role ofSea surface Temperature (SST) as Global Climate Regulator

UNIT 2: Geomorphological Oceanography: (8 hrs)

- Ocean Bottom Topography – Relief ofOcean Floor with Global examples

UNIT 3: Physical and Chemical Oceanography: (9 hrs)

- Properties of Ocean Water: Salinityand Temperature (Horizontal and Vertical Distribution); Oceanic currents

UNIT 4: Biological Oceanography: (10 hrs)

- Marine Ecosystems: Coral Reef, Mangrove, Openand Deep Sea

UNIT 5: Sustainability of Oceans- Problems and Policies: (10 hrs)

- Marine Challenges andManagement, Marine Policy: Integrated Coastal Zone Management (ICZM) with reference to India and SDG 14; Life Below Water

Readings

- Basu S.K. (2003). Hand Book of Oceanography. Global Vision, Delhi.
- Davis, R. J.A. (1996). Oceanography: An Introduction to the Marine Environment. Brown Co, Lowa.
- Garrison, T. (2016). Oceanography: An Invitation to Marine Science. 9th ed, Cengage Learning, Boston.
- Lal. D.S. (2003) Oceanography. Sharada Pustak Bhavan, Allahabad.
- Pinet, P.R. (2014). Invitation to Oceanography. 7th ed, Jones and Barlett Publishers, Burlington.
- Sharma, R. C. and Vatal, M. (2018) Oceanography for Geographers. Surjeet Publications, Delhi.
- Singh, S. (2015). Oceanography. Pravalika Publication, Allahabad,
- Sverdrup K. A. and Armrest, E. V. (2008). An Introduction to the World Ocean. McGraw Hill, Boston.

Readings (Hindi)

- Gautam, A. (2005) Jalwayu Evam Samudra Vigyan. Rastogi Publication, Meeruth.
- Kulshrestha, K.P. (2004). Samudra Vigyan. Kitab Ghar, Kanpur.
- Singh, S. (2015). Samudra Vigyan. Pravalika Publication, Allahabad.
- Tiwari, R. K. (2016). Bhautik Bhugol. Rajsthan Hindi Granth Academy, Jaipur.

DISCIPLINE SPECIFIC CORE COURSE – ECONOMIC GEOGRAPHY (DSC 8)

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit Distribution of the course			Eligibility Criteria	Prerequisite
		Lecture	Tutorial	Practical/ Practice		
ECONOMIC GEOGRAPHY	4	3	1	0	Class 12th	NIL

Learning Objectives:

- To evolve an understanding about the significance of space and time as attributes of human economic activities.
- To comprehend the role of geographical factors in determining the transformation of human economic activities.
- To develop an understanding of historical progression of trends and transformation of Primary, Secondary and Tertiary economic activities.

Learning Outcomes:

- To enable the learner to appreciate the role of geographical parameters in determining various economic activities and to understand the scope of economic geography, differentiating it from classification of economic activities.
- To enable the learner to assess and analyse the role of space and location in pursuit of economic activities.
- To enable the learner to develop the capability of analyzing transformation of economic activities with reference to space, time and diffusion of technology.

Course Outline

UNIT 1: Introduction: **(10 hrs)**

- Nature, scope and concepts and Approaches to EconomicGeography; Classification of Economic activities.

UNIT 2: Locational Factors of Economic Activities: **(9 hrs)**

- Factors affecting location of economic activities in agriculture industry and services; Weber's Theory of IndustrialLocation.

UNIT 3: Transitions and emerging trends in primary and secondary economic activities: **(9 hrs)**

- contemporary agriculture, Agro based Industry; SEZ and Technology Parks.; Pharmaceutical Industry

UNIT 4: Progressions in Tertiary Activities: **(9 hrs)**

- Case study approach to Knowledge basedindustries; IT enabled Services industry; Wellness industry

UNIT 5: Globalization of Economic activities: **(8 hrs)**

- globalization, liberalization, Ecommerce, gig economy (selected case studies)

Readings

- Alexander J. W., 1963: Economic Geography, Prentice-Hall Inc., Englewood Cliffs, New Jersey.
- Coe N. M., Kelly P. F. and Yeung H. W., 2007: Economic Geography: A Contemporary Introduction,Wiley-Blackwell.
- Roy, Prithwish, 2014, Economic Geography, New Central Book Agency.
- Combes P., Mayer T. and Thisse J. F., 2008: Economic Geography: The Integration of Regions and Nations, Princeton University Press.
- Wheeler J. O., 1998: Economic Geography, Wiley..
- Maurya, S. D., 2018, Economic Geography, Pravalika Publication, Allahabad.
- Bagchi-Sen S. and Smith H. L., 2006: Economic Geography: Past, Present and Future, Taylor and Francis.
- Singh, S. and Saroha, J., 2021, Human and Economic Geography, Pearson.
- MacKinnon, D, and Cumbers A., 2007, An Introduction to Economic Geography: Globalization, Uneven Development and Place, Harlow: Pearson Education.
- Mamoria, C. and Joshi, R., 2019, Aarthik Bhugol (Economic Geography), Sahitya Bhawan Publication, Agra. (Hindi Edition).

DEPARTMENT OF GEOGRAPHY
SEMESTER-V
Category II
Geography Courses for Undergraduate Programme of study with Geography as one of the Core Disciplines
(B.A. Programmes with Geography as Major discipline)
CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

DISCIPLINE SPECIFIC CORE COURSE – ENVIRONMENT AND ECOLOGY (DSC 9)

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit Distribution of the course			Eligibility Criteria	Prerequisite
		Lecture	Tutorial	Practical/ Practice		
ENVIRONMENT AND ECOLOGY	4	3	1	0	Class 12th	NIL

Learning Objectives:

1. Various dimensions of ecology and ecosystems, their spatial distribution.
2. To learn about the global environmental challenges and management
3. To know about regional environmental challenges.
4. Understanding of environmental governance.

Learning Outcomes:

1. Detailed exposure to the concept of ecology, ecosystem, processes, theories and concepts.
2. In-depth knowledge of anthropogenic interventions and impacts, conservation strategies and planning.
3. Understanding the environmental concerns at global and regional level.
4. Evaluation and achievement of different environmental programs, policies and legislations.

Course Outline:

Unit-1 Introduction: (7 hrs)

- Concept of Environment, Ecology and Ecosystem; Types of Ecology; Concepts of Ecosystem Services; Ecological and Material Footprint; Global Planetary Boundaries.

Unit-2 Ecology and Ecosystem: (9 hrs)

- Species Interactions; Ecological Limiting Factors; Ecosystem: Structure and Functions; Human Adaptation

Unit-3 Global Environmental Challenges and Management: (11 hrs)

- Climate Change,Biodiversity loss, Land degradation and Human health issues

Unit-4 Regional Ecological Issues and Management: (11 hrs)

- Coastal and Marine Ecology: Loss of mangroves and corals, Garbage Patches; Urban Ecology: Waste disposal and Pollution

Unit-5 Programmes and Policies: (7 hrs)

- Environmental Impact Assessment; Global andNational Environment Policy of India

Readings:

- Brewster, E. N. 2010. Climate Change Adaptation: Steps for a Vulnerable Planet, New York, Nova Science.
- Cain, M.L., Bowman, W.D. and Hacker S.D. (2011). Ecology, 2nd Edition, Sinauer Associates Inc.

DISCIPLINE SPECIFIC CORE COURSE – AGRICULTURAL GEOGRAPHY ANDFOOD SECURITY (DSC 10)

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit Distribution of the course			Eligibility Criteria	Prerequisite
		Lecture	Tutorial	Practical/ Practice		
AGRICULTURAL GEOGRAPHY AND FOOD SECURITY	4	3	1	0	Class 12th	NIL

Learning Objectives:

- To understand the nature and scope of agricultural geography.
- To provide a detailed analysis of landuse- landcover classification by NRSA.
- To enable the learners to appreciate the geographical factors affecting agriculture
- To enable the learner to identify and understand modern agricultural practices.
- To enable the learner to identify and understand the concept and dimensions of food security.

Learning Outcomes:

- A detailed insight into the subfield of agricultural geography.
- An in-depth knowledge of geographical factors affecting agriculture.
- An understanding of models and regionalization of agriculture.
- Knowledge of concepts and dimensions of food security.
- An understanding of challenges, programme and policies related to sustainable agriculture.

Course Outline

UNIT 1: **Concept of Agricultural Geography**: **(7 hrs)**

- Nature and Scope, concept andclassification of landuse- landcover (twenty two fold NRSA).

Unit 2: Geographical Factors affecting Agriculture: (10 hrs)

- Physical, Economic, Technological,Institutional and socio-cultural.

Unit 3: Models, Theories and Regionalization: (10 hrs)

- Whittlesey's classification of Agricultural regions; Agro ecological regions of India

Unit 4: Agricultural Development: (11 hrs)

- Concept and relevance of Sustainable Agriculture, Modern Agricultural Practices (Green Revolution, Organic farming, Precision Agriculture: role of Remote Sensing and GIS modelling, role of Artificial Intelligence)

Unit 5: Food Security: (7 hrs)

- Concept and dimensions, Food security in India: Challenges, Programmes and Policy.

Readings:

- Gregor, H.P.: Geography of Agriculture. Prentice Hall, New York, 1970.
- Grigg, D. (1984): 'An Introduction to Agricultural Geography', Hutchinson Publication, London

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

DISCIPLINE SPECIFIC CORE COURSE – REGIONAL GEOGRAPHY OF INDIA (DSC 11)

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title& Code	Credits	Credit Distribution of the course			Eligibility Criteria	Prerequisite
		Lecture	Tutorial	Practical/ Practice		
REGIONAL GEOGRAPHYOF INDIA	4	3	1	0	Class 12th	NIL

Learning Objectives:

a. To introduce the regional dimensions of physiography, climate, soils and vegetation of India

b. To show variations in resource base and population dynamics

c. To understand the regionalization of India on the basis of different geographical parameters

Learning Outcomes:

d. After completing this course students will be able to understand the regional diversity of India in terms of physiography, climate, resources and demography

e. Students will be able to understand the basis of regionalization of India based on physiographic, economic and socio-cultural factors.

Course Outline

UNIT 1: Physical Setting: (9 hrs)

- Major Physiographic Divisions, Climate, Drainage Basins (Peninsular and ExtraPeninsular).

UNIT 2: Natural Resources: (9 hrs)

- Soil, Natural Vegetation, Mineral (Iron Ore), and Renewable Energy Resources.

UNIT 3: Population: (9 hrs)

- Growth, Distribution and Density, Population Composition(Sex, Age and Literacy).

UNIT 4: Economy: (9 hrs)

- Agriculture (Rice and Wheat); Industries (Automobile industry and Information Technology), Development of diversified transport network.

UNIT 5: Regionalisation of India: (9 hrs)

- Physiographic (R.L. Singh), Social-cultural (Sopher)and Economic (P.Sen Gupta)

Teaching Plan

Unit 1: 9 hours

Unit 2: 9 hours

Unit 3: 9 hours

Unit 4: 9 hours

Unit 5: 9 hours

Total : 45 hours

Essential Readings

- Singh, R.L. (ed.) (1971) India: A Regional Geography, National Geographical Society ofIndia, Varanasi.
- Sopher, David E. (1980) An Exploration of India: Geographical Perspectives on Societyand Culture, Cornell University Press, Ithaca, New York.
- Gupta, P.Sen and Galina Sdasyuk (1967) Economic Regionalisation of India: Problemsand Approaches, Census of India (1961); Monography Series – 1(8).

Suggested Readings

- Saroha, J and Singh, S. (2022) Geography of India, Pearson India Education Services, Noida.
- Sharma, T.C. (2013) Economic Geography of India, Rawat Publication, Jaipur.
- Majid, H. (2020) Geography of India, McGraw Hill Education (India) Private Ltd.
- Tiwari, R. C. (2019) Geography of India. Pravalika Publication, Allahabad.
- Khullar, D.R. (2020) India – A Comprehensive Geography, Kalyani Publishers, Ludhiana.
- Gopal Krishan (2017) The Vitality of India: A Regional Perspective, Rawat

Publication,Jaipur.

- Singh, Gopal (2010) Geography of India, Atma Ram and Sons.

Hindi

- Tiwari, R. C. (2019) *Bharat ka Bhugol*, Pravalika Publication, Allahabad.
- Singh, S. and Saroha, J. (2019) *Bharat ka Bhugol*, CL Media (P) Ltd, New Delhi.
- Mamoria, C. B. and Mishra, J. P. (2021) *Bharat ka Bhugol,* Sahitya Bhawan Publication,Agra.

		Lecture	Tutorial	Practical/ Practice		
EVOLUTION OF GEOGRAPHICAL THOUGHT	4	3	1	0	Class 12th	NIL

Learning Objectives:

- The course aims to present an overview of the evolution of the discipline.
- The course will introduce students to the multi paradigmic nature of geography as adiscipline, key debates and emergence of modern geography

Learning Outcomes:

- On transacting this core course the students will be able to grasp the uniquedisciplinary focus of Geography
- Students will be able to identify the key debates that have shaped the subject
- Students will be well acquainted with the changing paradigms in Geography and theemergence of modern geography

Course Outline

Unit-1: Pre-Modern: Foundations of Geography: (9 hrs)

- Greek and Roman School, Arab School, Contributions of Chinese travellers, Age of Discovery and its Impact.

Unit 2: Paradigms in Geography: (9 hrs)

- Definition of 'Paradigm', major paradigms in geography – Determinism, Possibilism, Areal differentiation, Spatial Organization

Unit-3: Key Debates and Developments in Geography: (9 hrs)

- Geography as idiographic & Nomothetic, Systematic and Particular, General and Regional, Quantitative Revolution, Schaefer-Hartshorne Debate, impact of Darwin's theory

Unit-4: Theories and Models in Geography: **9 hrs)**

- Systems Approach and its relevance in Geography, concepts of place, space, environment, interconnection, scale

Unit -5: Emergence of Modern Geography: (9 hrs)

- Emergence of Radical, Behavioral and Feminist Geography, Evolution of Geographical Thinking and Disciplinary Trends in Germany, France and USA, India

Teaching Plan

Unit 1: 9 hours

Unit 2: 9 hours

Unit 3: 9 hours

Unit 4: 9 hours

Unit 5: 9 hours

Total: 45 hours

SEMESTER-VI

DISCIPLINE SPECIFIC CORE COURSE – REGIONAL GEOGRAPHY OF INDIA (DSC 6)

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title& Code	Credits	Credit Distribution of the course			Eligibility Criteria	Prerequisite
		Lecture	Tutorial	Practical/ Practice		
REGIONAL GEOGRAPHYOF INDIA	4	3	1	0	Class 12th	NIL

Learning Objectives:

f. To introduce the regional dimensions of physiography, climate, soils and vegetation of India

g. To show variations in resource base and population dynamics

h. To understand the regionalization of India on the basis of different geographical parameters

Learning Outcomes:

i. After completing this course students will be able to understand the regional diversity of India in terms of physiography, climate, resources and demography

j. Students will be able to understand the basis of regionalization of India based on physiographic, economic and socio cultural factors

Course Outline

UNIT 1: Physical Setting: (9 hrs)

- Major Physiographic Divisions, Climate, Drainage Basins(Peninsular and Extra Peninsular).

UNIT 2: Natural Resources: (9 hrs)

- Soil, Natural Vegetation, Mineral (Iron Ore), and Renewable Energy Resources.

UNIT 3: Population: (9 hrs)

- Growth, Distribution and Density, Population Composition(Sex, Age

and Literacy).

UNIT 4: Economy: (9 hrs)

- Agriculture (Rice and Wheat); Industries (Automobile industry and Information Technology), Development of diversified transport network.

UNIT 5: Regionalisation of India: (9 hrs)

- Physiographic (R.L. Singh), Social-cultural (Sopher)and Economic (P.Sen Gupta)

Teaching Plan

Unit 1: 9 hours

Unit 2: 9 hours

Unit 3: 9 hours

Unit 4: 9 hours

Unit 5: 9 hours

Total : 45 hours

ANNEXURE-43

Sub: Amendments to Ordinances

The following Amendments to the Ordinances and Appendices to the Ordinances of the University approved by the Executive Council at its meeting held on 9th June, 2023 are notified for information of all concerned:

1. Amendment to Ordinance XX. Colleges and Institutions Maintained by the University. (E.C Res. No. 14-2 dated 9th June, 2023**)**

Ordinance XX (Y)

Centre for Independence and Partition Studies

The Centre for Independence and Partition Studies (CIPS) shall be constituted under Ordinance XX (Y) of the Ordinances of the University. The Centre for Independence and Partition Studies, as a multi-disciplinary centre, shall focus on different facets of the struggle for freedom and the reasons and impact of Partition and emerge, in due course of time, as a specialized resource centre to facilitate such studies. For the purpose of launching academic programmes, designing curriculum, research programmes etc., the Centre for Independence and Partition Studies (CIPS) shall be constituent of the Faculty of Social Sciences.

1. Objectives

The major objectives of the Centre would include, inter alia, the following:

(i) To promote the study of those people and events that are mostly disregarded and forgotten or have received a biased and prejudiced treatment in history-writing, and thereby highlight such stories, including in Indian languages (under the 8th Schedule of the Constitution of India) and local dialects, that seldom find space in mainstream historical narratives. This should include the role played by unsung tribal heroes, leaders of marginal groups and women in the freedom struggle.

(ii) To facilitate a full investigation of the intense politics surrounding Partition.

(iii) To study and research the invasions, and consequent sufferings and slavery that occurred in the past 1300 years.

(iv) To undertake an exercise to map the location and other details of Partition victims including their routes of migration and to include narratives about their sorrows, challenges and triumphs.

(v) To revisit the lives of these victims by conducting interviews and creating a repository of oral history transcripts.

(vi) To collect and preserve the private papers of individual leaders, academics and diplomats who have left behind valuable and related writings. To include institutional papers wherever relevant.

(vii) To undertake research, collaboration and develop linkages including MoUs with similarly placed or related research centres and academic institutions.

(viii) To set up a comprehensive library dedicated to the study on the subject.

(ix) To create a strong digital and electronic database, and make it open-source wherever feasible, for larger dissemination of knowledge in the field.

(x) To carry out publications of reports, books and journals in the relevant area matching high professional standards.

2. Governing Structure

The governance of the Centre shall be carried out through the following bodies functioning under the overall control of the Executive Council of the University.

(i) Governing Body

(ii) Research Committee

2.1. There shall be a Governing Body, functioning under the overall control of the Executive Council of the University, and in accordance with the Statutes and Ordinances of the University. Its composition would be as follows:

(i) Vice-Chancellor or his Nominee: Chairperson

(ii) Pro-Vice-Chancellor (Ex-officio)

(iii) Director, South Delhi Campus (Ex-officio)

(iv) Dean of Colleges (Ex-officio)

(v) Dean, Faculty of Social Sciences (Ex-officio)

(vi) Dean, Faculty of Arts (Ex-officio)

(vii) Three Expert members from outside the University to be nominated by the Vice-Chancellor
(viii) Three scholars from the University and its colleges to be nominated by the Vice-Chancellor
(ix) The Director of the Centre, Member Secretary

2.1.1 Except for the ex-officio members, all other members of the Governing Body shall have a term of three years.

2.1.2 The Governing Body should meet at least twice in one academic year. The quorum in such meetings should be 50 percent of the total membership.

2.1.3 The Governing Body shall exercise the following functions:

(i) Provide overall supervision and guidance to the centre
(ii) Shall approve all appointments recommended by the Research Committee
(iii) Shall approve academic proposals, programmes and courses leading to certificates, diplomas and degrees.
(iv) Shall consider proposals of staff requirements and approve them.
(v) Shall consider major requirements related to infrastructure.
(vi) Shall consider and approve annual report of the centre.
(vii) Shall consider budetary and additional financial requirement and send them to the University for approval.
(viii) Shall consider and approve annual financial statement of the centre.
(ix) Shall consider and approve the recommendations of the Research Committee for major and long term collaborations with other institutions and/or bodies to facilitate the objectives of the centre.

2.2 There shall be a Research Committee, functioning under the overall control of the Governing Body of the centre, to guide research and other academic activities of the centre. Its composition would be as follows:

(i) Director of the centre- ex-officio Chairperson
(ii) Joint Director
(iii) Three members of the Governing Body who have been nominated by the Vice-C hancellor from amongst the teachers of the University and its colleges.
(iv) Three members who are experts in the field to be nominated by the Vice-Chancellor from within the University system or outside, and who are ordinarily resident in the NCR region.

(v) Two representatives of the Fellows or Scholars associated with the centre to be decided by the Research Committee in its initial meeting.

2.2.1 Except for the ex-officio members, all other members of the Research Committee shall have a term of three years.

2.2.2 The Research Committee should meet as and when required, but not less than twice in one academic year. The quorum in such meetings should be 50 percent of the total membership.

2.2.3 Subject to the overall control of the Governing Body of the centre, the Research Committee shall exercise the following functions:

(i) Periodically monitor and assess various academic and research activities in operation and consider fresh proposals.

(ii) Consider proposal for starting new academic and research programmes and courses, for approval of the Governing Body of the centre.

(iii) Formulate guidelines for further consideration of the Governing Body regarding involving faculty members and students of the University and its colleges for association with the centre in various capacities like Fellows, Interns, Associates, Visiting Faculty, Adjunct Faculty etc.

(iv) Evaluate the performance of fellows/interns and other academic members/faculties and research scholars associated with the centre.

(v) Consider and approve proposals for holding major seminars and conferences.

(vi) Formulate major guidelines for further consideration of the Governing Body regarding creation of respositories and such other significant research and academic activities of the centre.

(vii) Consider proposals from departments, colleges and other centres of the University, as well as from academic/research/strategic institutions from outside for collaboration or starting sub-units. It may also consider reaching out to the such departments, colleges, centres and outside institutions for furthering the objectives of the centre. Proposals with major financial implications or those with outside institutions shall be forwarded to the Governing Body for its approval.

(viii) Shall ensure holding Syama Prasad Mookerjee and Sardar Vallabhbhai Patel memorial lectures by eminent individuals every academic year and shall satisfy that proper documentation with regard to such lectures is maintained (including videos and oral transcripts). Memorial lectures can also be organized in the names of other prominent

individuals and leaders who suffered partition but went on to shape the destiny of Independent India.

(ix) It shall exercise such other functions which the Vice-Chancellor or the Governing Body of the centre may from time to time decide.

3 **Office bearers**

3.1 Director

(i) There shall be a Director of the centre to be appointed by the Vice-Chancellor from amongst the Professors of the University for a term of three years or till he/she attains the age of 65 years, whichever is earlier. This assignment would be in addition to his/her existing responsibilities in the Department. He/she shall be eligible for re-appointment for another term of three years.

(ii) He/she shall be responsible for efficient management and supervision of the centre including diligent handling of its finances, in accordance with the Act, Statutes, Ordinances, rules and regulations of the University.

(iii) The Director shall coordinate various academic and research activities of the centre.

(iv) The Director shall act as ex-officio Member Secretary of the Governing Body, and ex-officio Chairman of the Research Committee.

3.2 Joint Director

(i) There shall be a Joint Director of the Centre to be appointed by the Vice-Chancellor from among the Professors/Associate Professors of the University and its Colleges, for a term of three years, or till he/she attains the age of 65 years. He/she be eligible for re-appointment for another term of three years. This assignment would be in addition to his/her existing responsibilities in the University/College.

(ii) He/she would generally assist the Director in all his academic and administrative responsibilities, and in the absense of the Director perform all such functions and discharge all such responsibilities which are vested with the Director under this Ordinance.

4. Faculty Members

(i) Visiting and Adjunct Professors

Scholars with proven academic credentials and relevant work in the field can be associated with the Centre as Visiting/Adjunct Professors on the recommendation of the Research Committee and with the approval of the Governing Body or the Vice-Chancellor. The terms

and conditions of such association can be decided by the Research Committee generally and in individual cases with the approval of Governing Body or the Vice-Chancellor.

(ii) Fellows and Associates

Full time faculty members of the University and its Colleges with relevant experience and research interest may be appointed as Fellows for a period of three years. Research Scholars of the University can be appointed as Associates on similar terms and conditions. This engagement would run concurrently with the Fellow's existing responsibilities in the University or its Colleges. Appointment of Fellows and other terms and conditions necessary for the smooth operation of Fellowship may be decided by the Research Committee with the approval of Governing Body or the Vice-Chancellor.

(iii) Post-Doctoral Fellows: In specific cases, the Research Committee of the Centre may consider the request of individual scholars for carrying out their Post-Doctoral Fellowships at the centre with financial assistance from government/non-government sponsoring agencies. This research should be of relevance to the specified objectives of the Centre.

5. Finances

(i) All expenditures of the Centre such as those on the conduct of seminars, research projects, teaching, publications, administration, equipments and other support activities shall be made in accordance with the allocation, and in accordance with GFR and other prevailing rules and regulations.

(ii) Additional financial support can be sought from various government agencies, or through collaborations with national and international agencies as per the requirements.

6. General Conditions

(i) Subject to the provisions of the Act and Statutes, the issues not covered in this Ordinance, or in the event of the differences of interpretation, the Vice-Chancellor may take a final decision.

(ii) No financial and/or administrative responsibility in the Centre shall be given to any person beyond the age of 65 years.

Ordinance XX (Z)
Centre for Tribal Studies (CTS)

The Centre for Tribal Studies (CTS) shall be a constituent of Faculty of Social Sciences as a multi-disciplinary centre, to facilitate studies on different tribes of India.

1. Objectives

The major objectives of the Centre shall include, inter alia, the following:

(i) To understand the term "Tribe" from India-Centric perspective including study of their social, cultural, linguistic, religious, economic, environmental diversity and commonalities.

(ii) To study the role and contribution of tribal leaders in various eras of Indian history.

(iii) To highlight role and significance of tribal leaders in India's struggle for freedom, and bring out to prominence the unsung heroes among them.

(iv) To study and document various *Lok* traditions of India's tribes including their indigenous/traditional knowledge and work to disseminate such information to the public in general and to academia and students in particular.

(v) To identify special problems and needs of Denotified and Nomadic tribes and Particularly Vulnerable Tribal Groups (PVTGs) with special reference to conservation, development and special health needs.

(vi) To study the significance of forest-tribe relationship with special reference to stability of forest ecosystems and livelihood issues.

(vii) To study contemporary issues relevant to the tribal communities which has a significant bearing on their present well-being and future progression in terms of overall developmental perspective.

2. Governing Structure: The governance of the Centre shall be carried out through the following bodies which shall function under the overall control of the Executive Council of the University.

(i) Governing Body

(ii) Research Committee

2.1. **Governing Body**: There shall be a Governing Body which shall function under the overall control of the Executive Council of the University, and in accordance with the Act, Statutes and Ordinances of the University.

Composition:

(i) Vice-Chancellor or his Nominee - Chairperson
(ii) Pro-Vice-Chancellor (Ex-officio member)
(iii) Director, South Delhi Campus (Ex-officio member)
(iv) Dean of Colleges (Ex-officio member)
(v) Dean, Faculty of Science (Ex-officio member)
(vi) Dean, Faculty of Social Sciences (Ex-officio member)
(vii) Dean, Faculty of Arts (Ex-officio member)
(viii) Two External Expert members to be nominated by the Vice-Chancellor
(ix) Three distinguished academicians from the University and its colleges to be nominated by the Vice-Chancellor
(x) The Director of the Centre - Member Secretary

2.1.1 Except for the ex-officio members, all other members of the Governing Body shall have a term of three years.

2.1.2 The Governing Body shall meet at least twice in one academic year. The quorum in such meetings shall be half of the total approved strength of the Governing Body.

2.1.3 **Powers of the Governing Body:** The Governing Body shall exercise the following powers:

(i) Provide overall supervision and guidance to the Centre.
(ii) Make all the appointments of the Centre except those to be done by the University.
(iii) Consider academic proposals, programmes and courses leading to certificates, diplomas and degrees.
(iv) Consider proposals of staff requirements and approve them.
(v) Consider major requirements related to infrastructure of the Centre.
(vi) Consider and approve annual report of the Centre.
(vii) Consider budgetary and additional financial requirement and forward them to the University for approval.
(viii) Consider and approve annual financial statement of the Centre.

(ix) Consider and approve the recommendations of the Research Committee for major and long-term collaborations with other institutions and/or bodies to facilitate the objectives of the Centre.

2.2 **Research Committee:** There shall be a Research Committee, functioning under the overall control of the Governing Body of the centre, to guide research and other academic activities of the Centre.

Composition:

(i) Director of the Centre - Chairperson
(ii) Three distinguished academicians who shall be nominated by the Vice-Chancellor from among the teachers of the University and its colleges.
(iii) Three members who are experts in the field to be nominated by the Vice-Chancellor from within or outside the University system.
(iv) Two representatives from among the Fellows associated with the Centre to be decided by the Research Committee.
(v) Joint Director - Secretary

2.2.1 Except for the ex-officio members, all other members of the Research Committee shall have a term of three years.

2.2.2 The Research Committee should meet as and when required, but not less than twice in one academic year. The quorum in such meetings should be half of the total approved strength of the Research Committee.

2.2.3 **Functions of the Research Committee:** Subject to the overall control of the Governing Body of the Centre, the Research Committee shall exercise the following functions:

(i) Periodically monitor and assess various academic and research activities in operation and consider fresh proposals.
(ii) Consider proposals for starting new academic and research programmes and courses, for approval of the Governing Body of the Centre.
(iii) Formulate guidelines for further consideration of the Governing Body regarding involving faculty members and students of the University and its colleges for association with the Centre in various capacities like Fellows, Interns, Associates & Visiting Faculty.

(iv) Evaluate the performance of Fellows/Interns and other academic members/faculties and research scholars associated with the Centre.

(v) Consider and approve proposals for holding major seminars and conferences.

(vi) Formulate major guidelines for further consideration of the Governing Body regarding creation of repositories and such other significant research and academic activities of the Centre.

(vii) Consider proposals from departments, colleges and other centres of the University, as well as from academic/research/strategic institutions from outside, for collaboration or starting sub-units. It may also consider reaching out to such departments, colleges, centres and outside institutions for furthering the objectives of the Centre. Proposals with major financial implications, or those with the outside institutions, shall be forwarded to the Governing Body for its approval.

(viii) Shall ensure holding memorial lectures in the names of prominent tribal heroes by eminent individuals every academic year and shall maintain proper documentation of such lectures.

(ix) It shall exercise such other functions which the Vice-Chancellor or the Governing Body of the Centre may decide from time to time.

3 **Office bearers**

3.1 **Director**

(i) There shall be a Director of the Centre to be appointed by the Vice-Chancellor from among the Professors of the University for a term of three years or till he/she attains the age of 65 years, whichever is earlier. This assignment would be in addition to his/her existing responsibilities in the Department. He/she shall be eligible for re-appointment for another term of three years.

(ii) He/she shall be responsible for efficient management and supervision of the Centre including diligent handling of its finances, in accordance with the Act, Statutes, Ordinances, rules and regulations of the University.

(iii) The Director shall coordinate various academic and research activities of the Centre.

(iv) The Director shall act as ex-officio Member Secretary of the Governing Body, and ex-officio Chairman of the Research Committee.

3.2 **Joint Director**

(i) There shall be a Joint Director of the Centre to be appointed by the Vice-Chancellor from among the Professors/Associate Professors of the University and its Colleges, for a term of

three years, or till he/she attains the age of 65 years, whichever is earlier. He/she be eligible for re-appointment for another term of three years. This assignment would be in addition to his/her existing responsibilities in the University/College.

(ii) He/she would generally assist the Director in all his academic and administrative responsibilities, and in the absence of the Director perform all such functions and discharge all such responsibilities which are vested with the Director under this Ordinance.

(iii) The Joint Director shall act as ex-officio Secretary of the Research Committee.

4. Faculty

All Fellows and Associates would constitute the Faculty of the Centre.

(i) **Visiting and Adjunct Professors:** Scholars with proven academic credentials and relevant work in the field can be associated with the Centre as Visiting/Adjunct Professors on the recommendation of the Research Committee and with the approval of the Governing Body or the Vice-Chancellor. The terms and conditions of such association can be decided by the Research Committee generally and in individual cases with the approval of Governing Body or the Vice-Chancellor.

(ii) **Fellows and Associates:** Full time faculty members of the University and its Colleges with relevant experience and research interest may be appointed as Fellows for a period of three years. Research Scholars of the University can be appointed as Associates on similar terms and conditions. This engagement would run concurrently with the Fellow's existing responsibilities in the University or its Colleges. Appointment of Fellows and other terms and conditions necessary for the smooth operation of Fellowship may be decided by the Research Committee with the approval of Governing Body or the Vice-Chancellor.

(iii) **Post-Doctoral Fellows**: In specific cases, the Research Committee of the Centre may consider the request of individual scholars for carrying out their Post-Doctoral Fellowships at the Centre with financial assistance from government/non-government sponsoring agencies. This research should be of relevance to the specified objectives of the Centre.

5. Finance:

(i) All expenditures of the Centre such as those on the conduct of seminars, research projects, teaching, publications, administration, equipment and other support activities shall be made in accordance with the allocation, and in accordance with GFR and other rules and regulations as applicable from time to time.

(ii) Additional financial support can be sought from various government agencies, or through collaborations with national and international agencies as per the requirements from time to time.

6. General Conditions:

(i) Subject to the provisions of the Act and Statutes, the issues not covered in this Ordinance, or in the event of requirement of interpretation, the decision of the Vice-Chancellor shall be final.

(ii) No administrative and/or financial responsibility in the Centre shall be given to any one beyond the age of 65 years.

ORDINANCE XX (AA)

Centre for Hindu Studies (CHS)

The Centre for Hindu Studies (CHS) shall be constituted under Ordinance XX (AA) of the Ordinances of the University, as a multi-disciplinary centre, to focus on various facets of the Hindu civilization, its multiple dynamics, history, philosophy, worldview, and emerge as a major resource and reference centre in due course of time.

The Centre for Hindu Studies shall be a constituent of the Faculty of Arts in order to facilitate the curriculum design and implementation of the academic programmes as well as enrolment of the students for the doctoral studies.

1. Objectives

The major objectives of the proposed centre, inter alia, may include the following:

i. To initially offer Postgraduate and Doctoral programmes in Hindu Studies followed by certificate, diploma and other such programmes depending upon operational feasibility of the Centre.

ii. To offer, as part of the Postgraduate programme, Minor courses with Hindu Studies as Major in the knowledge domains of Computer Science, Data Analytics, Artificial Intelligence, Graphic Design & Animation, Management and Commerce.

iii. To involve all the stakeholders including the enrolled students to think critically as well as analytically and evolve a Bharat centric perspective beyond theoretical explanation.

iv. To create a dedicated rich repository of ancient and contemporary reference materials concerned with enhancing the values and knowledge of the Hindu way of life, culture, traditions and worldview.

v. To engage in comparative study with other belief systems, spiritual values and cultural traditions with a focus on Hindu spirit and ethos.

vi. To study inter-connectedness existing among different Hindu sects, philosophical practices, historical issues, statecraft, law, arts, architecture, literature, musical and dance traditions.

vii. To trace the evolution of reformist movements and practices, evolving nationalist ideas, and study their multiple dynamics.

viii. To publish in due course of time a journal dedicated to deep research on topics related to Hindu Studies.

ix. To coordinate with institutions in the same knowledge domain for better academic enrichment and research propagation.

2. Governing Structure: The governance of the Centre shall be carried out through the following bodies which shall function under the overall control of the Executive Council of the University.

(i) Governing Body

(ii) Research Committee

2.1. **Governing Body**: There shall be a Governing Body which shall function under the overall control of the Executive Council of the University, and in accordance with the Act, Statutes and Ordinances of the University.

Composition:

(i) Vice-Chancellor or his Nominee - Chairperson

(ii) Pro-Vice-Chancellor (Ex-officio member)

(iii) Director, South Delhi Campus (Ex-officio member)

(iv) Dean of Colleges (Ex-officio member)

(v) Dean, Faculty of Social Sciences (Ex-officio member)

(vi) Dean, Faculty of Arts (Ex-officio member)

(vii) Two External Expert members to be nominated by the Vice-Chancellor

(viii) Three distinguished academicians from the University and its colleges to be nominated by the Vice-Chancellor

(ix) The Director of the Centre - Member Secretary

2.1.1 Except for the ex-officio members, all other members of the Governing Body shall have a term of three years.

2.1.2 The Governing Body shall meet at least twice in one academic year. The quorum in such meetings shall be half of the total approved strength of the Governing Body.

2.1.3 **Powers of the Governing Body:** The Governing Body shall exercise the following powers:

(i) Provide overall supervision and guidance to the Centre.

(ii) Make all the appointments of the Centre except those to be done by the University.

(iii) Consider academic proposals, programmes and courses leading to certificates, diplomas and degrees.

(iv) Consider proposals of staff requirements and approve them.

(v) Consider major requirements related to infrastructure of the Centre.

(vi) Consider and approve annual report of the Centre.

(vii) Consider budgetary and additional financial requirement and forward them to the University for approval.

(viii) Consider and approve annual financial statement of the Centre.

(ix) Consider and approve the recommendations of the Research Committee for major and long-term collaborations with other institutions and/or bodies to facilitate the objectives of the Centre.

2.2 **Research Committee:** There shall be a Research Committee, functioning under the overall control of the Governing Body of the centre, to guide research and other academic activities of the Centre.

Composition:

(i) Director of the Centre - Chairperson

(ii) Three distinguished academicians who shall be nominated by the Vice-Chancellor from among the teachers of the University and its colleges.

(iii) Three members who are experts in the field to be nominated by the Vice-Chancellor.

(iv) Two representatives from among the Fellows associated with the Centre to be decided by the Research Committee.

(v) Joint Director - Secretary

2.2.1 Except for the ex-officio members, all other members of the Research Committee shall have a term of three years.

2.2.2 The Research Committee should meet as and when required, but not less than twice in one academic year. The quorum in such meetings should be half of the total approved strength of the Research Committee.

2.2.3 **Functions of the Research Committee:** Subject to the overall control of the Governing Body of the Centre, the Research Committee shall exercise the following functions:

(i) Periodically monitor and assess various academic and research activities in operation and consider fresh proposals.

(ii) Consider proposals for starting new academic and research programmes and courses, for approval of the Governing Body of the Centre.

(iii) Formulate guidelines for further consideration of the Governing Body regarding involving faculty members and students of the University and its colleges for association with the Centre in various capacities like Fellows, Interns, Associates, Visiting Faculty, Adjunct Faculty etc.

(iv) Evaluate the performance of Fellows/Interns and other academic members/faculties and research scholars associated with the Centre.

(v) Consider and approve proposals for holding major seminars and conferences.

(vi) Formulate major guidelines for further consideration of the Governing Body regarding creation of repositories and such other significant research and academic activities of the Centre.

(vii) Consider proposals from departments, colleges and other centres of the University, as well as from academic/research/strategic institutions from outside, for collaboration or starting sub-units. It may also consider reaching out to such departments, colleges, centres and outside institutions for furthering the objectives of the Centre. Proposals with major financial implications, or those with the outside institutions, shall be forwarded to the Governing Body for its approval.

(viii) It shall exercise such other functions which the Vice-Chancellor or the Governing Body of the Centre may decide from time to time.

3 **Office bearers**

3.1 **Director**

(i) There shall be a Director of the Centre to be appointed by the Vice-Chancellor from among the Professors of the University for a term of three years or till he/she attains the age of 65 years, whichever is earlier. This assignment would be in addition to his/her existing responsibilities in the Department. He/she shall be eligible for re-appointment for another term of three years.

(ii) He/she shall be responsible for efficient management and supervision of the Centre including diligent handling of its finances, in accordance with the Act, Statutes, Ordinances, rules and regulations of the University.
(iii) The Director shall coordinate various academic and research activities of the Centre.
(iv) The Director shall act as ex-officio Member Secretary of the Governing Body, and ex-officio Chairman of the Research Committee.

3.2 **Joint Director**

(i) There shall be a Joint Director of the Centre to be appointed by the Vice-Chancellor from among the Professors/Associate Professors of the University and its Colleges, for a term of three years, or till he/she attains the age of 65 years, whichever is earlier. He/she be eligible for re-appointment for another term of three years. This assignment would be in addition to his/her existing responsibilities in the University/College.
(ii) He/she would generally assist the Director in all his academic and administrative responsibilities, and in the absence of the Director perform all such functions and discharge all such responsibilities which are vested with the Director under this Ordinance.
(iii) The Joint Director shall act as ex-officio Secretary of the Research Committee.

4. Faculty

All Fellows and Associates would constitute the Faculty of the Centre.
(i) **Visiting and Adjunct Professors:** Scholars with proven academic credentials and relevant work in the field can be associated with the Centre as Visiting/Adjunct Professors on the recommendation of the Research Committee and with the approval of the Governing Body or the Vice-Chancellor. The terms and conditions of such association can be decided by the Research Committee generally and in individual cases with the approval of the Vice-Chancellor.
(ii) **Fellows and Associates:** Full time faculty members of the University and its Colleges with relevant experience and research interest may be appointed as Fellows for a period of three years. Research Scholars of the University can be appointed as Associates on similar terms and conditions. This engagement would run concurrently with the Fellow's existing responsibilities in the University or its Colleges. Appointment of Fellows and other terms and conditions necessary for the smooth operation of Fellowship may be decided by the Research Committee with the approval of Governing Body or the Vice-Chancellor.

(iii) **Post-Doctoral Fellows**: In specific cases, the Research Committee of the Centre may consider the request of individual scholars for carrying out their Post-Doctoral Fellowships at the Centre with financial assistance from government/non-government sponsoring agencies. This research should be of relevance to the specified objectives of the Centre.

5. Conduct of Teaching-Learning and Research

(i) Arrangement for teaching-learning and research facilities shall be made, as far as possible, by pooling the internal human resources of the University and its colleges. In special cases and subject to the availability of financial resources, the Governing Body with the approval of the Vice-Chancellor may, on the recommendation of the Research Committee, appoint scholars from outside the University system for a fixed tenure and on such terms and conditions as may be decided in specific cases.

(ii) Faculty members of the departments and colleges of the University, with proven credentials in the field, may be invited to be associated with the Centre as Adjunct Faculty. In such cases, their workload at the Centre shall count towards their overall workload in the parent department/college.

(iii) Fellows of the Centre may also be engaged in teaching. In such cases, their direct teaching hours shall count towards their overall workload in the parent department/college.

(iv) Fellows, Associates, Post-Doctoral Fellows, Research Scholars and others, associated with the Centre shall also assist in various works connected with smooth conduct of the academic and research programmes of the Centre.

(v) The University will make efforts to have sanctioned posts of Professor, Associate Professor and Assistant Professor for sustained teaching-learning and research in the Centre. Efforts will be made to maintain the ratio of 1:2:4 while requesting for these posts by the University.

6. Sanctioned strength of students

The centre will enrol sixty (60) students for Postgraduate studies with choice of various Minor courses alongwith Hindu Studies which will be the Major course as part of the Postgraduate programme in the centre. However, atleast 10 students will be required for running Minor courses under the Centre.

- Department of Hindi
- Department of English

Departments under the Faculty of Social Sciences:

- Department of History
- Department of Political Science
- Department of Sociology

Note: Other Departments may also be co-opted by the Centre for teaching-learning and research in relevant areas of knowledge pertaining to the respective departments under various faculties of the University.

8. Finance:

(i) All expenditures of the Centre such as those on the conduct of seminars, research projects, teaching, publications, administration, equipment and other support activities shall be made in accordance with the allocation, and in accordance with GFR and other rules and regulations as applicable from time to time.

(ii) Additional financial support can be sought from various government agencies, or through collaborations with national and international agencies as per the requirements from time to time.

9. General Conditions:

(i) Subject to the provisions of the Act and Statutes, the issues not covered in this Ordinance, or in the event of requirement of interpretation, the decision of the Vice-Chancellor shall be final.

(ii) No administrative and/or financial responsibility in the Centre shall be given to any one beyond the age of 65 years.

ANNEXURE-44

Sub: Amendment to Ordinance V

Amendment to Appendix-II to Ordinance V.2 & VII of the Ordinances of the University [E.C Resolution No. 14-3/- dated 09.06.2023] regarding introduction of Master of Arts in Hindu Studies, as approved by the Executive Council at its meeting held on 09.06.2023, is notified for information and necessary action, if any, to all the concerned :

Course Structure – Master of Arts in Hindu Studies

Semester	DSC (4 Credits)	DSE (4 Credits)	Minor (4 Credits)	SEC (2 Credits)	Total Credits
I	DSC-1 DSC-2 DSC-3	0	Mi-1	SEC-1 SEC-2	20
II	DSC-4 DSC-5 DSC-6	0	Mi-2A	SEC-3+ SEC-4 Or SEC of Mi-2B	20
III	DSC-7 DSC-8	DSE-1*	Mi-3 Mi-4	0	20
IV	DSC-9 DSC-10	DSE-2* (of Major or Minor)	Mi-5 Mi-6	0	20
Credits	40	08	24	08	80

* Note : Instead of Studying DSE-1 and DSE-2, a student can choose to write a Dissertation on a topic of the major discipline i.e Hindu Studies.

Minimum no. of credits of Major Discipline i.e Hindu Studies = 44 (max. is 48)
Minimum no. of credits of Minor Discipline = 24 (max. is 30)
DSC – Discipline Specific Course (Hindu Studies)
DSE – Discipline Specific Electives (Hindu Studies)
Mi- Minor Discipline which can be chosen from range of disciplines such as Computer Science, Languages etc.
SEC- Skill Enhancement Course which is provided by the University as a Pool

The syllabi of the Programme is at ***Annexure-I.***

Annexure-I

ज्ञान-विज्ञान विमुक्तये

UNIVERSITY GRANTS COMMISSION
NET BUREAU

NET SYLLABUS

SUBJECT : HINDU STUDIES CODE NO. : -102

UNIT 1: TATTVA VIMARŚA

1. Understanding the term "Hindu" (its historicity, and its geographic and *jīvana-dṛṣṭi* aspects)
2. Enumeration of *Aṣṭādaśa vidyās* and *Upāṅgas* with their respective *ācāryas*
3. *Padārtha/tattva/ātmā* across traditions and underlying unifying themes
4. Position of feminine in Bharata: Parallel sovereignty principles
   a. Self-definitions: *Vāk-Sūkta, Devya-atharva-śīrṣa sūkta* and Bhagavadgītā (10.20-40)
   b. *Ardhanārīśwara* concept, Bṛhadāraṇyaka Upaniṣad (1.4.3)
5. *Śakti* and *Prakṛti* principles
6. Position of feminine in Jaina-*darśana*, Bauddha-*darśana*, and Śrī Guru Granth Sahibji
7. The principle of Oneness in Vedānta and interconnectedness in Jaina, Bauddha, Nyāya & Vaiśeṣika darśana, and Śrī Guru Granth Sahib ji, and the consequential idea of all-inclusiveness
8. Understanding distinctions between *varṇa, jāti*, and caste (Bṛhadāraṇyaka Upaniṣad (1.4.10-15), Bhagavadgītā (18.41-45).
9. Enumeration of *ṛṣīs* and *saints* from different social backgrounds

UNIT 2: DHARMA, and KARMA VIMARŚA

1. Dharma: Definitions and meanings (Mahābhārata, Manusmṛti, Vaiśeṣika Sūtra, Bhagavadgītā - Śānkarabhāṣya- upodghāta, definitions in Śramaṇa traditions)
2. Distinctions between *dharma* and religion (*pantha, mazahab*)
3. Types of dharmas: pravṛttimūlaka, and nivṛttimūlaka
4. Dharma as the organizing principle for Vaidika and Śramaṇa traditions and in Śrī Guru Granth Sahib ji
5. Varṇāśrama dharma and choice
6. *Rāja-dharma, Āpaddharma, Samāja-dharma*, and *Swadharma*
7. *Karma, vikarma*, and *akarma* (Bagavadgītā 4.16, and corresponding Śānkarabhāṣya)
8. Six *karmas: Kāmya, nitya, niśiddha, naimittika, prāyaśchitta*, and *upāsanā*
9. *Niṣkāma* (Brahma/Sarvam as the real doer) and *sakāma karma*
10. Karma- *phala, prārabdha*, and *saṅskāra*

UNITS 3: PUNARJANMA-BANDHAN-MOKṢA VIMARŚA

1. Concept of Jīva
2. Definitions of *bandhana* (*prākṛtika, vaikṛtika, dākṣanika* from *Sāmkhyakārika* 44 with *Sāmkya-tattva-kaumudī*)
3. The root-cause and process of *bandhana*: Bhagavadgītā 3.37 – 3.41, Bhagavadgītā 2.62-66, Pratītya-samutpādasiddhānta
4. The principle of *punarjanma*: an enabler of *Dharma*
5. Conceptions of *mokṣa* and *nirvāṇa*
6. Multiple pathways for *mokṣa* (Yoga): *abhyāsa, karma, bhakti, jñāna*

UNIT 4: PRAMĀṆA SIDDHĀNTA

1. Definition of *pramāṇa*
2. Indian model of analysis of text: *pramātā, pramāṇa, prameya,* and *pramā*
3. Nature, definition, method, and limits of different types of *pramāṇas* : *Pratyakṣa, Anumāna, Upamāna, Śabda, Anuplabdhi, Arthāpatti*
4. *Śabda-śakti: abhidhā, lakṣaṇā, vyañjanā,* and *tātparya*
5. *Swatah-prāmaṇya,* and *paratah-prāmāṇya*
6. Applications of *pramāṇa* in contemporary texts

UNIT 5: *VĀDA-PARAMPARĀ*

1. *Vāda-Paramparā*: The method of *Śastrārtha* and the concept of *adhikaraṇa*
2. From doubt to determination: *Sanśaya to Nirṇaya*
3. *Kathā* (nature and types of *kathā*): Vāda, Jalpa, vitaṇdā
4. Embarking on knowledge discovery: *Anubandha-chatuṣṭaya (adhikārī, viṣaya, sambandha, prayojana)*
5. Organization of knowledge: *Sūtra, bhāṣya, vārtika, vṛtti, tīkā, tippaṇī* and *saṅgraha*
6. Analysing "*tātparya*" of knowledge through *śravaṇa vidhi*: *Upakrama, upasamhāra, abhyāsa, apūrvatā, phala, arthawāda, upapatti*
7. Analysing "*tātparya*" of knowledge through six-fold process (*ṣadvidha tātparya nirṇāyaka liṅga*) *śruti, liṅga, vākya, prakaraṇa, sthāna, sāmākhyā*
8. *Tantrayukti*: "Research methodology" in context of natural sciences

UNIT 6: APPLICABILITY OF WESTERN METHODS FOR UNDERSTANDING INDIAN TEXTS

1. Western restrictions on free inquiry
2. Western descriptions of Bharat and traditional literary theories
3. Hindus and Bharat as understood through the Marxist perspective, and The Critical Theory
    a. Intention of author versus that of the reader
    b. History, purpose of The Critical Theory, and stereotyping of images and conceptions
4. Hegemony (Gramsci)
5. Structuralism and portrayal of Bharat
6. Orientalism – theorizing Bharat in the Western experience
7. Use of psycho-analytical approaches in Bharatiya context
8. Descriptions of Bharat through lenses of post-modernism and deconstruction
9. Neutral inquiry and New-Historicism and portrayal of Bharat

UNIT 7: RĀMĀYAṆA

1. Types of Rāmāyaṇas – Traditional texts with divine origins/(Valmiki Ramayana) reverential texts, texts deviating from the core story
2. The popularity and relevance of traditional Rāmāyaṇa.
3. Rāmāyaṇa as one of the two source-books (*Upajīvya*) for much of Indian literature, and arts (folk, classical, and contemporary arts)
4. *Maryādā Puruṣottama* Rāma
5. Relationships between humans, and social-reconstruction (e.g. Niṣādarja, jatāyu, etc.), and between human and nature
6. *Strī-vimarśa*: Anasūyā, Ahilyā, Kaikeyī, Kauśalya, Mandodarī, Sītā, Swayamprabhā, Tārā, Trijaṭā, Urmilā, Sabari
7. Rāma-Rājya
8. The role of *ṛṣi* in a society
9. Data on Geography, flora and fauna in India

UNIT 8: MAHĀBHĀRATA

1. The period of Mahābhārata: Textual and traditional sources, as well as modern data
    a. Calendars (samvat) of Yudhiṣhṭhira (yugābda), Kṛṣna, and Vikrama
2. The core story of Mahābhārata.
3. *Dharma* and *samsāra*: 10 stories about 10 *Lakṣaṇas* of dharma: *dhṛtI* (Gaṅgāvataran), *kṣamā* (Vasiṣṭha and Viśwāmitra), *dama* (Yayāti and Puru), *asteya* (Yudhiṣhṭhira- Yakṣa samvāda), *śauca* (the tale of golden mongoose), *indriyanigraha* (dharma vyādha's upadeśa), *dhīh* (Savitri), *vidyā* (tale of man-tiger-snake-elephant from Strī Parva), *satyam* (Hariścandra/Satyakāma), *akrodha* (the story of Parīkṣita and his insult to Ṛiṣi Śamika)
4. Mahābhārata as one of the two source-*books* (*Upjīvya*) for much of Indian literature, and arts (folk, classical, and contemporary arts)
5. Viduranīti and Bhagavadgīta
6. *Rājdharma*, and *rajanīti* : Śāntiparva
7. Geography of Bhārata-varṣa
8. Strī-vimarśa in Mahābhārata: Draupadī, Gāndhārī, Hidimbā, Jāmbavati, Kuntī, Mādrī, Rukmaṇī, Satyabhāmā, Satyavatī, Śikhaṇḍī, Sulocanā, Ulūpi, Uttarā

UNIT 9: SANSKRIT PARICHAYA

1. संस्कृतवर्णमालापरिचयः - चतुर्दश माहेश्वरसूत्राणि।
स्वरः, व्यञ्जनम्, संयुक्तवर्णाः, अनुस्वारः, अनुनासिकम्, विसर्ग, वर्णविन्यासः, वर्णसंयोगः, उच्चारणस्थानम्, लेखन-प्रक्रिया, शब्दपदयोर्मध्ये अन्तरम् ।

2- शब्दरूपम् (दैनिकप्रयोगदृष्ट्या आधारभूता शब्दरूपप्रक्रिया),विभक्तिः, कारकम्(अर्थसहितः सामान्यपरिचयः) -
2.1 शब्दरूपम् (संज्ञात्मकम्) - अन्तिमवर्णदृष्ट्या, लिङ्गदृष्ट्या वचनदृष्ट्या च वर्गीकरणम्।

शब्दाः (अजन्ताः/स्वरान्ताः)						
	अकारान्तः	इकारान्तः	उकारान्तः	ऋकारान्तः	आकारान्तः	ईकारान्तः
पुल्लिंगम्	देव, राम	कवि, हरि, पति	गुरु	पितृ, दातृ	-	-
स्त्रीलिंगम्	-	मति	धेनु	मातृ	लता	नदी
नपुंसकलिंगम्	फल	वारि	वस्तु	-	-	-

2.2 शब्दरूपम् (हलन्तम्/व्यञ्जनान्तम्)-

शब्दाः (हलन्ताः/व्यञ्जनान्ताः)	
पुल्लिंगम्	भिषज् (भिषक्), महत्, सुहृद्, राजन्, विद्यार्थिन्, पथिन्, गच्छत्, मरुत्, आत्मन्, ब्रह्मन्, विद्वस्।
स्त्रीलिंगम्	वाच्, सरित्, दिश्, परिषद्, आशिष्, स्त्री, लक्ष्मी, श्री।
नपुंसकलिंगम्	जगत्, नामन्, कर्मन्, चक्षुष्, मनस्, हविष्, ब्रह्मन्, धनुष्, पयस्, दधि।
एतत्सदृशानाम् अन्येषाञ्च रूपाणाम् अभ्यासः।	

2.3 सर्वनाम- अस्मद्, युष्मद्, तद्, एतद्, यद्, भवत्, किम्, इदम्, अदस्, सर्व (त्रिषु लिङ्गेषु)।

3- धातुरूपम् (क्रियारूपम्)-
3.1 धातूनां गणपरिचयः, आत्मनेपदम्, परस्मैपदम्।
3.2 लकारदृशा - लट्लकारः (वर्तमानकालः), लुटलकारः (भविष्यत्कालः), लङ्लकारः (भूतकालः)
लोट्लकारः (आज्ञार्थकः), विधिलिङ्लकारः (सम्भावनायाम्)।
पुरुषदृशा - प्रथमपुरुषः, मध्यमपुरुषः, उत्तमपुरुषः।
वचनदृशा - एकवचनम्, द्विवचनम्, बहुवचनम्।
3.3 धातवः- पंचलकारेषु धातुरूपाणि -
परस्मैपदिनः- पठ्, लिख्, चल्, गम्, नम्, खाद्, वद्, हस्, गै, कृ, क्री, ज्ञा, घ्रा, नी, दृश्, धृ, पत्, पा(पिब्), स्मृ, क्रुध्, शक्, पृच्छ्, इष (इच्छ्), दा, जीव्, त्यज्, धाव्, पच्, रक्ष्, सृ, रुद्, भी, नश्, स्निह्, आप्, क्षिप्, जप्, विश्, मिल्, ग्रह्, चिन्त्, पालु, रच्, क्षल्।
आत्मनेपदिनः- लभ्, मुद्, क्षम्, वृध्, सह्, सेव्, ईक्ष्, ऊह्, कम्प्, भाष्, यत्, रम्, वन्द्, याच्, शीङ्।
सत्तात्मकौ - अस्, भू।

4. सन्धिः - स्वरसन्धिः- यण्, अयादि, गुण, वृद्धि, दीर्घ, पूर्वरूप, पररूप, प्रकृतिभाव ।
व्यञ्जनसन्धिः- परसवर्णः, अनुनासिकः, श्चुत्वम्, ष्टुत्वम्, जश्त्वम्, चर्त्वम्, णत्व-षत्वविधिः।
विसर्गसन्धिः - विसर्गलोपः, विसर्गस्थाने ओ, र्, स्, श्, ष्।
अनुस्वारः, 'र्' 'लोपः, 'त्' स्थाने 'ल्' अनुनासिकम्।

5. समासः - केवलः, अव्ययीभावः, तत्पुरुषः, कर्मधारयः, द्विगुः, बहुव्रीहिः, द्वन्द्वः।

6. कारकम् - कर्ता, कर्म, करण, सम्प्रदान, अपादान (सम्बन्ध), अधिकरण, सम्बोधन ।

7- उपपदविभक्तिः -

- अधि, अनु, उप, उभयतः, परितः, निकषा, प्रति, धिक्, विना.....योगे द्वितीया।
- अलम्, विना, हीनम्, सह, साकम्, सार्धम्, समम्.....योगे तृतीया।
- नमः, रुच्, दा, स्पृहा, अलम् (सामर्थ्यार्थे).....चतुर्थी।
- विना, बहिः, परम्, पूर्वम्.....योगे पञ्चमी।
- अग्रतः, पुरतः, पृष्ठतः, वामतः, दक्षिणेतः, उत्तरतः.....योगे षष्ठी।
- स्निह्, विश्वस्.....योगे सप्तमी।

8. वाच्यम्- कर्तृवाच्यम्, कर्मवाच्यम्, भाववाच्यम्।

9. प्रत्ययः- (क) कृत्प्रत्ययः - क्त, क्तवतु क्त्वा, ल्यप्, तुमुन्, शतृ, शानच्, ण्वुल्, क्तिन्, ल्युट्, तव्यत्, अनीयर्, ण्वुल्, तृच्, घञ्।
(ख) तद्धितप्रत्ययः- मतुप्, वतुप्, इन्, ठक् (इक्), घञ्, त्व, तल्, अण्, ष्यञ्।
(ग) स्त्रीप्रत्ययः- ङीप्, ङीष्, टाप्।

10- अव्ययम्- (स्थानवाचि)-अत्र, तत्र, यत्र, सर्वत्र, अन्यत्र, कुत्र, एकत्र,यतः, ततः।
(समयवाचि)- यदा, तदा, सदा, सर्वदा, कदा, अद्य, श्वः, ह्यः,परश्वः,परह्यः,वारम्,आरभ्य,निश्चयेन, ।
(समुच्चयवाचि)- च, अपि, एव।
(अवस्थावाचि)- आम्, किम्, धन्यवादः, आवश्यकम्।
(दिशावाचि)- उपरतः, पृष्ठतः, वामतः, दक्षिणतः, अभितः, परितः।
(पूर्णतावाचि)- पर्याप्तम्, अत्यन्तम्, अलम्, इति।
(सम्भावनावाचि)- किन्तु, प्रायशः, अपेक्षया, अतः, यत्-तत्।
सादृश्यवाची अव्यय- इव, नु, वा, चित्।
अव्यय- क्त्वातोसुन्कसुनः, कृन्मेजन्तः, तद्धितश्चासर्वविभक्तिः
11. उपसर्गः - आ, उत्, अनु, वि, प्र, परि, अव, उप, सम्, अप।
12 संख्या - सङ्ख्यावाचि- शब्दरूपाणि एकः, द्वौ, त्रयः, चत्वारः (त्रिषु लिङ्गेषु)।
संख्याः - 5 - 100

UNIT 10 – OTHER ALLIED TOPICS

1. Challenges in translations and understanding distinctions between original and translation: *dharma, sampradāya, ātmā, darśana, Iśwara, bhagawāna, prabhu, mana, buddhi, prāmāṇika, śiṣya, devatā, smṛti, mandira, adhyātma, prema, asura, daitya, rākṣasa, śarīra, padārtha, dravya, rāṣtra, varṇa, jāti, śāstra, śānti, ṛṣi, muni, guru, kalā, śāstrīya-saṅgīta, paṇdita, māya, strī, mahillā, nārī, nyāya, indriya, mokṣa, nirvāṇa, prāṇa*
2. Important *mandiras, śaktipītha, maṭha, jyotirliṅga, dhāmas*
3. Sant-paramparā: Brief knowledge of Chaitanya Mahaprabhu, Sankara Deb, Thiruvallavur, Basavanna, Namdev, Kabira, Ravidasa, Narsi Mehta, Guru Nanak, Tukaram, Tulsidas, Surdas, Mirabai, Andal, Jhulelal, Gyaneshwar, Vidyapati, Narayan Guru
4. *Nāṭya*: ten types, *tattvas: rasa, abhinaya, kathāvastu, pātra*
5. *Kāvya*: Type (*gadya, padya, champū*), *chandas* (*anuṣṭupa, upajāti, Indravajrā, upendravajrā, vasanta-tilakā, śikhariṇī, mandākrāntā, āryā, gāthā, dohā, chaupāī, soraṭhā*)
6. Some *kavis*: Bhasa, Kalidas, Ashvaghoṣ, Somdev Suri, Hala, Kalhan, Chandabaradai
7. Some kings and dynasties: Maurya, Lalitaditya, Chakradhwaj Singh, Chola, Harihar and Bukka, Bappa Rawal, Harshawardhan, Bhoj, Dahir-sen, Marthanda Verma, Rana Pratap, Shivaji
8. Concept of Iśwara in - Jaintia, Adi, Galo, Tagin, Apatani, Idu Mishmi, Miju Mishmi, Digaru Mishmi tribes of N. E. India

ANNEXURE-45

Sub: Amendment to Ordinance V

[E.C Resolution No. 14-1/-(14-1-13/-) dated 09.06.2023]

Following addition be made to Appendix-II-A to the Ordinance V (2-A) of the Ordinances of the University;

Add the following:

Syllabi alongwith course credit distribution of Semester-I & Semester-II of Bachelor of Technology (B.Tech.) in Computer Engineering, Electronics and Communication Engineering and Electrical Engineering under Faculty of Technology in respect of Department of Computer Engineering, Department of Electronics and Communication Engineering and Department of Electrical Engineering respectively under UGCF to be implemented from academic session 2023-24

Semester-I

Sr. No.	Course Domain	Course Title	Hours per week			Total Course Hrs. per week	Credits
			L	T	P		
1.	DSC-1	Mathematics-I	3	1	0	4	4
2.	DSC-2/ DSC-5*	Physics OR Introduction to Electrical and Electronics Engineering	3	0	2	5	4
3.	DSC-3	Fundamentals of Computer Programming	3	0	2	5	4
4.	GE	Select a course from the specified list of GEs					4
5.	AEC	Select a course from the specified list of AECs					2
6.	SEC	Select a course from the specified list of SECs					2
7.	VAC	Select a course from the specified list of VACs					2
Total Credits							**22**

NOTE:

***1. Half of the students enrolled will take up Physics and half of the students will take up Introduction to Electrical & Electronics Engineering in the Semester I and vice versa in the Semester II.**

Semester-II

Sr. No.	Course Domain	Course Title	Hours per week			Total Contact Hrs. per week	Credits
			L	T	P		
1.	DSC-4	Mathematics-II	3	1	0	4	4
2.	DSC-5/ DSC-2*	Introduction to Electrical and Electronics Engineering OR Physics	3	0	2	5	4
3.	DSC-6	Data Structures	3	0	2	5	4
4.	GE	Select a course from the specified list of Ges					4
5.	AEC	Select a course from the specified list of AECs					2
6.	SEC	Select a course from the specified list of SECs					2
7.	VAC	Select a course from the specified list of VACs					2
Total Credits							**22**

NOTE:
***1. Half of the students enrolled will take up Physics and half of the students will take up Introduction to Electronics & Electrical Engineering in the Semester I and vice versa in the Semester II.**

LIST OF SKILL ENHANCEMENT COURSES (SECs)

1. Computer Workshop (Course Credit: 0L-0T-2P, Course Hours: 0L+0T+4P)
2. Electronics Workshop (Course Credit: 0L-0T-2P, Course Hours: 0L+0T+4P)
3. Electrical Workshop (Course Credit: 0L-0T-2P , Course Hours: 0L+0T+4P)

LIST OF GENERIC ELECTIVES (Ges)

The students will be offered a list of Generic Electives as decided by the university from time to time.

LIST OF ABILITY ENHANCEMENT COURSES (AECs)

The students will be required to choose these courses from a pool of courses offered by the University as per UGCF-2022

LIST OF VALUE ADDITION COURSES (VACs)

The students will be required to choose these courses from a pool of courses offered by the University as per UGCF-2022

PROGRAM OUTCOMES

Engineering Graduates will be able to:

1. Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

2. Problem analysis: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

3. Design/development of solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

4. Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

5. Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and □odelling to complex engineering activities with an understanding of the limitations.

6. The engineer and society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

7. Environment and sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

8. Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

9. Individual and team work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

10. Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

11. Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

12. Life-long learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Assessment & Scheme of examination:

As per University of Delhi rules as applicable from time to time.

MATHEMATICS-I (DSC-1)
CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Mathematics-I	4	3L	1T	0P	Class XII with Physics, Chemistry and Mathematics	NIL

Course Hours: L: 03 T: 01 P: 00

Course Objectives:

To teach students concepts of Linear Algebra, Vectors and Calculus and apply them for problem solving.

Course Outcomes:

After completing the course, the students should be able to:

1. Develop a basic understanding of the linear algebra, vectors and calculus use in engineering
2. Solve mathematical problems of vector spaces and matrices
3. Derive calculus theorems and use these to solve some integral problems.
4. Apply calculus to solve suitable engineering applications

Unit-I

Matrices: Matrices, Vectors: addition and scalar multiplication, Matrix multiplication, Linear systems of equations, Linear Independence, Rank of a matrix, Determinants, Cramer's Rule, Inverse of a matrix, Gauss elimination and Gauss-Jordan elimination.

Unit-II

Vector spaces I: Vector Space, Linear dependence of vectors, Basis, Dimension,Range and kernal, Rank and nullity, Inverse of a linear transformation, Rank nullity theorem,

Unit-III

Vector spaces II: Eigenvalues, Eigenvectors, Symmetric, Skew-symmetric and Orthogonal Matrices, Eigenbases, Diagonalization, Inner product spaces, Gram-Schmidt orthogonalization.

Unit-IV

Calculus: Indeterminate forms and L'Hospital'srule, Rolle's Theorem, Mean value theorems, Taylor's and Maclaurin theorems, Evaluation of definite and improper integrals, Applications of definite integrals to evaluate surface areas and volumes of revolutions, Beta and Gamma functions and their properties.

Suggested Readings*:

1. G.B. Thomas and R.L. Finney, Calculus and Analytic geometry, Pearson Education.

2. Erwin Kreyszig, Advanced Engineering Mathematics, John Wiley & Sons.

3. D. Poole, Linear Algebra: A Modern Introduction, Brooks Cole.

4. Ramana B.V., Higher Engineering Mathematics, Tata McGraw-Hill Publishing Company Limited.

5. N.P. Bali and Manish Goyal, A text book of Engineering Mathematics, Laxmi Publications.

6. B.S. Grewal, Higher Engineering Mathematics, Khanna Publishers.

7. V. Krishnamurthy, V.P. Mainra and J. L. Arora, An introduction to Linear Algebra, Affiliated East– West Press Private limited

*Latest Edition of the books to be followed.

PHYSICS (DSC-2)

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Physics	4	3L	0T	1P	Class XII with Physics, Chemistry and Mathematics	NIL

Course Hours: L: 03 T: 00 P: 02

Course Objectives:

To teach students basic concepts of atomic structures, mechanics, electron theory, semiconductors and investigate their characteristics and applicability.

Course Outcomes:

After completing the course, the students should be able to:

1. Develop a basic understanding of concepts of atomic structures, electron theory and semiconductors.
2. Correlate mechanics and electron theory with engineering applications.
3. Apply concepts of semiconductor junctions and operations for device operations.
4. Plot characteristics of the studied devices, measure their characteristics and use these for some practical applications.

UNIT – I

Review of Atomic Structure and Statistical Mechanics: - Ideas on Atomic Structure, Quantum Mechanics, The Schrodinger Wave Equation, Statistical Mechanics, Bonding of atoms, Crystalline state

Free electron theory, Density of states and energy band diagrams, Kronig-Penny model (to introduce origin of band gap), Energy bands in solids, E-k diagram, Direct and indirect band gaps, Types of electronic materials: metals, semiconductors, and insulators, Density of states, Occupation probability, Fermi level, Effective mass, Phonons.

UNIT – II

Elemental and compound semiconductors, Intrinsic and extrinsic semiconductors, Dependence of Fermi level on carrier-concentration and temperature (equilibrium carrier statistics), Carrier generation and recombination, Carrier transport: diffusion and drift, The Hall Effect, Einstein Relations, Excess carriers in semiconductors p-n junction, Excess carriers and Quasi-Fermi Levels, Basic equations for semiconductor device operation, Solution of carrier transport equation.

UNIT – III

P-N Junctions: - The abrupt junction (Electric field, potential, capacitance), V-I characteristic of an ideal diode, a real diode. Metal-semiconductor junction (Ohmic and Schottky), Semiconductor materials of interest for optoelectronic devices

Optical transitions in bulk semiconductors: absorption, spontaneous emission, and stimulated emission; Joint density of states, Density of states for photons, Transition rates (Fermi's golden rule), Optical loss and gain; Photovoltaic effect, Exciton, Drude model.

UNIT – IV

Four-point probe and measurements for carrier density, resistivity, and hall mobility; Hot-point probe measurement, capacitance-voltage measurements, parameter extraction from diode I-V characteristics, DLTS, band gap by UV-VIS spectroscopy, absorption/transmission.

Density of states in 2D, 1D and 0D (qualitatively). Practical examples of low-dimensional systems such as quantum wells, wires, and dots: design, fabrication, and characterization techniques. Heterojunctions and associated band- diagram.

Practical Component :

Note: Course coordinator will prepare a list of experiments and lab manual for the Practicals covering the whole syllabus.

Suggested Readings*:

1. Pierret, Semiconductor Device Fundamental,
2. P. Bhattacharya, Semiconductor Optoelectronic Devices, Pearson Education
3. J. Singh, Semiconductor Optoelectronics: Physics and Technology, McGraw-Hill Inc.
4. B.E.A. Saleh and M.C. Teich, Fundamentals of Photonics, John Wiley & Sons, Inc.
5. S. M. Sze, Semiconductor Devices: Physics and Technology, Wiley
6. A. Yariv and P. Yeh, Photonics: Optical Electronics in Modern Communications, Oxford University Press, New York.
7. Online course: “Semiconductor Optoelectronics” by M R Shenoy on NPTEL
8. Online course: "Optoelectronic Materials and Devices" by Monica Katiyar, Deepak Gupta on NPTEL.

*Latest Edition of the books to be followed.

INTRODUCTION TO ELECTRICAL AND ELECTRONICS ENGINEERING (DSC-5)

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Introduction to Electrical and Electronics Engineering	4	3L	0T	1P	Class XII with Physics, Chemistry and Mathematics	NIL

Course Hours: L: 03 T: 00 P: 02

Course Objectives:

To solve electric circuits, to characterize motors, bipolar devices, and multi stage amplifiers

Course Outcomes:

After completing the course, the students should be able to:

1. Solve various DC & AC circuits using applicable theorems.
2. Demonstrate the working of electric motors using different laws and principles
3. Characterize and measure properties of bipolar devices
4. Conceptualize multi stage amplifiers and apply these for engineering applications.

Unit I: D.C. and A.C. Circuits:

Introduction to circuit elements, uncontrolled energy sources, Kirchhoff's laws, Superposition, Thevenin's, Norton's and maximum power transfer Theorems, AC Fundamentals: Sinusoidal a.c. quantities, instantaneous, maximum, average and effective values, Phasor representation, Steady state response of series and parallel R-L, R-C and R-L-C circuits, Concept of impedance and admittance, J-method, Active, Reactive and Apparent Power.

Unit II: Transformers and Electric Motors:

Electromagnetism: Simple magnetic circuits, Electric Circuit analogy. Electromagnetically induced EMF and Induced Force on a conductor. Faraday's Law, Lenz's Law Concept of Self and Mutual Inductance, Transformers: Construction and operation of single phase transformer, EMF equation, Losses, Efficiency and applications of transformers, Electrical Motors: Constructional details of D.C. Motor, Equations, operating characteristics and applications of shunt, series and Compound Motors, Construction, operation and application of different types of single phase induction motors, Measuring Instruments: Moving coil and moving iron Voltmeters and ammeters and extension of range, Dynamometer type wattmeter.

Unit III: Devices and Circuits:

PN Junction diode and its use in Rectifier circuits, Capacitive and Inductive filters, Operation and application of special diodes: Zener diode, photodiode, and light emitting diode (LED), Construction and operation of Bi-polar junction transistors, Characteristics under CB, CE, CC configurations, Voltage and current gains, input and output resistances, Biasing of transistors, load line and operating point, Transistor as a switch, Introduction to FET, UJT SCR, Traic and Diac, their characteristics and applications.

Unit IV: Multi Stage Amplifiers:

R-C coupled amplifier and its frequency response, concept of Bandwidth, Push pull amplifiers, Feedback amplifiers: Classification of feedback amplifiers, Gain, input & output resistance of feedback amplifiers, Advantage of negative feedback, Measuring Instruments: Digital voltmeters, Digital multimeters, CRO and its applications. DSO and oscilloscope probes.

Practical Component :

Note: Course coordinator will prepare a list of experiments and lab manual for the Practicals covering the whole syllabus.

Suggested Readings*:

1. Electrical and Electronics Technology by Hughes Revised by John H. Ley, Et al, Pearson
2. Principles of Electrical Engineering by Del-Toro. Pearson.
3. S.N. Singh, Basic Electrical Engineering, S.N. Singh,PHI Learning Private Limited.
4. Boylestad, R.L. and Nashelsky, L. Electronic Devices and Circuit Theory. Pearson Education.
5. Millman, J. and Grabel, A. Microelectronics. McGraw-Hill, Incl.
6. Malvino, A. and Bates, D. Electronic Principles, with Simulation CD,McGraw-Hill, Inc.

*Latest Edition of the books to be followed.

FUNDAMENTALS OF COMPUTER PROGRAMMING (DSC-3)

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Fundamentals of Computer Programming	4	3L	0T	1P	Class XII with Physics, Chemistry and Mathematics	NIL

Course Hours: L: 03 T: 00 P: 02

Course Objectives:
To teach students computer fundamentals and do programming using C for problem solving.

Course Outcomes:

After completing the course, the students should be able to:

1. Explain the use of software and programming for problem solving.
2. Develop programming using simple concepts of input, output and control statements.
3. Apply arrays, functions, strings, structures, and pointers for problem solving.
4. Design and implement solutions for data handling with permanent storage using modular programming and files

Unit I
Programming Fundamentals & Control Statements: Block Diagram of Computer, Hardware vs software, concept of operating system and compiler,

Introduction to C programming, basic programming using input and output operators and expressions, programming using if and if-else, Programming using looping-for, while, do-while; use of switch and break.

Unit II

Arrays based Programming: Defining and processing 1-D and 2-D Arrays for Problem solving, string as array of char and its processing

Unit III

Modular programming using Functions: Structured Programming, storage classes defining and calling a function, modular programming using functions, passing arguments and arrays to functions, functions of void and returning values. Recursion, file handling

Unit IV

Programming using pointers, structures and unions: Pointers in C: Pointer declaration, Passing Pointer to functions, pointers vs arrays, dynamic memory allocation. Structures and Unions, Programming Using Array of Structures and Unions, Memory Requirements for Unions.

Practical Component :

Note: The programming language to be used for teaching and implementation will be C. The Course coordinator will prepare a list of experiments and lab manual for the Practicals covering the whole syllabus.

Suggested Readings*:

1. Byron S. Gottfried, Programming with C Language, Schaum Series, Tata McGraw Hill.
2. E Balaguruswamy, Programming with C, Tata McGraw Hill.
3. Kernighan & Richie, C Programming, Prentice Hall of India.

*Latest Edition of the books to be followed.

MATHEMATICS-II (DSC-4)

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Mathematics-II	4	3L	1T	0P	Class XII with Physics, Chemistry and Mathematics	NIL

Course Hours: L: 03 T: 01 P: 00

Course Objectives:

To teach students process of doing Laplace and Fourier transformation, apply probability distributions over random variables, and statistical techniques for data processing.

Course Outcomes:

After completing the course, the students should be able to:

1. Develop a basic understanding of the Laplace and Fourier transformations
2. Apply random variable and probability distributions for different stochastic processes.
3. Evaluate data characteristics using statistical measures and techniques.
4. Compare and contrast different statistical tests for data evaluation.

Unit-I

Laplace and Fourier Transform: Laplace transformation and its properties, Unit – step, Impulse and Periodic functions; Fourier Transform, Fourier Sine and

Cosine Transform, Finite Sine and Cosine transform, Convolution theorem. Application of Fourier transform.

Unit-II

Random variables and probability distributions: Conditional probability, Probability spaces, Discrete random variables, Independent random variables, Expectation of discrete random variables, Sums of independent random variables, Moments, Variance of a sum, Correlation coefficient, Chebyshev's Inequality, The multinomial distribution, Poisson approximation to the binomial distribution, Infinite sequences of Bernoulli trials, Continuous random variables and their properties, Distribution functions and densities, Normal, Exponential and Gamma densities, Conditional densities, Bayes' rule.

Unit-III

Basic Statistics: Measures of Central tendency: Moments, Skewness and Kurtosis - Probability distributions: Binomial, Poisson and Normal - evaluation of statistical parameters for these three distributions; Correlation and regression – Rank correlation; Curve fitting by the method of least squares- fitting of straight lines, second degree parabolas and more general curves.

Unit-IV

Applied Statistics: Test of significance: Large sample test for single proportion, difference of proportions, single mean, difference of means, and difference of standard deviations; Small samples: Test for single mean, difference of means and correlation coefficients; Test for ratio of variances - Chisquare test for goodness of fit and independence of attributes; T-test, Anova Test, F-Test.

Suggested Readings*:

1. Erwin Kreyszig, Advanced Engineering Mathematics, John Wiley & Sons.
2. P. G. Hoel, S. C. Port and C. J. Stone, Introduction to Probability Theory, Universal Book Stall.
3. S. Ross, A First Course in Probability, Pearson Education.
4. W. Feller, An Introduction to Probability Theory and its Applications, Wiley.
5. N.P. Bali and Manish Goyal, A text book of Engineering Mathematics, Laxmi Publications.
6. B.S. Grewal, Higher Engineering Mathematics, Khanna Publishers.
7. Veerarajan T., Engineering Mathematics (for semester III), Tata McGraw-Hill Publishing Company Limited.

*Latest Edition of the books to be followed.

DATA STRUCTURES (DSC-6)

FUNDAMENTALS OF COMPUTER PROGRAMMING

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Data Structures	4	3L	0T	1P	Class XII with Physics, Chemistry and Mathematics	NIL

Course Hours: L: 03 T: 00 P: 02

Course Objectives:

To understand and efficiently apply various data structures such as stacks, queues, linked lists, trees and graphs for solving various computing problems using C programming language.

Course Outcomes:

After completing the course, the students should be able to:

1. Develop skills to identify and determine the usage of various data structures, operations, associated algorithms and implement their applications.
2. Implement trees and graphs, and explain its applications.
3. Design and implement algorithms for searching and sorting.
4. Analyze efficiency of different algorithms using time and space complexity.

Unit-I

Simple Data Structures: Arrays based Linear Data Structures: Array storage, sparse arrays; Transpose and addition of sparse matrices, Stacks and Queues and their applications, multiple stacks, and queues in an array.

Unit-II

Searching and Sorting: Searching techniques: Linear and Binary, Sorting techniques: Selection, Bubble, Insertion, Merge sort, Quicksort; Complexity analysis; revision of Pointers and Dynamic Memory,

Unit-III

Linked Data Structures: Singly, Doubly & Circular Linked Lists; representation, operations and applications, linked stacks and queues, linked lists based polynomial addition.

Unit-IV

Advanced Data Structures: Trees, Basic concepts and definitions of a tree and binary tree and associated terminology, Binary tree traversal techniques, some more operations on binary trees, Heaps, and heapsort; Graphs: Terminology and Representations, Directed Graphs, Representation of graphs and their Transversal.

Practical Component :

Note: The programming language to be used for teaching and implementation will be C. Course coordinator will prepare a list of experiments and lab manual for the Practicals covering the whole syllabus. Course coordinator will also prepare some mini projects to be done by the students utilizing various aspects of the subject & syllabus.

Suggested Readings*:

1. E Horowitz and S. Sahni: Fundamentals of Data Structures in C, Second Edition, Universities Press.
2. R.L. Kruse: Data Structures & Program Design in C, PHI.
3. D.F. Knuth: The Art of Computer Programming Vol-1, Narosa Publications.
4. Byron S. Gottfried: Theory and Problems of Programming with C Language, Schaum's Outlines Series, TMH.

*Latest Edition of the books to be followed.

COMPUTER WORKSHOP (SEC-1)

Semester-I & II [Common to all branches]

Course Name – Computer Workshop

Course Credits: 0L-0T-2P

Course Hours: 0L+0T+4P

Pre-requisite: Nil

Course objectives: Students of Computer Engineering are to work with various hardware and software not only in academia but also in the company. Thus, students should get familiar with various hardware, software, operating systems, and networking. This course will provide students a much-needed knowledge of computer hardware and networking, enabling them to identify and rectify onboard computer hardware, software, and network-related problems. With the help of this course, the student will be able to understand the hardware specifications that are required to run an operating system and various application programs.

Course outcomes: After completing their training in Computer Workshop, students will be able to

CO1. Describe the procedure for installation of software on different systems and identify the various components of hardware systems.

CO2. Identify and demonstrate components of computer and operating system and their troubleshooting.

CO3. Describe the basics of Internet and web design

CO4. Perform the process of software installation

Job 1. Assembly/Disassembly of Computers

Hardware peripherals like RAM, ROM, input devices, output devices, processors, etc. Processors and processor core counts and frequency etc. motherboards, internal and external connectors. Types of data cables. LAN, Audio, and Video. The physical set-up of Printers- Scanner set-up, Webcam, Bluetooth device, Memory card reader, etc. Working of SMPS. Connection of different types of devices to the ports (CPU), Single board computer: Raspberry Pi.

Job 2. Assembly/Dis-assembly of Laptop

Mounting of processor. Fixing of the motherboard in the tower case. Connection to the power supply. Installation of drivers. Connection of cables. Mount the memory modules. Install the internal cards. Connection of the external devices and power.

Job 3. Computer Network Setup

Networking components, devices, and tools; Preparing the network cables, network setup, configuration and management commands, Installation and configuration of network interface card and identification of MAC address. Sharing of resources

Job 4. Software Installations

Installation of Windows Operating System, Types of software and their installations, some useful software (MS office, Adobe Acrobat, Google Chrome, VLC Media Player, LibreOffice, Win Rar)

Job 5. PC Maintenance

POST (Power on Self-Test), identifying problems by Beep codes errors, checking power supply using Multi-meter, Replacement of components etc.

Job 6. Introduction to MS office

Introduction to MS office - MS Word, MS PPT, MS Excel, Working with MS Word. MS Excel - Introduction to MS Excel, Basic computations, and calculations. Creation of slides including hyperlink, video, audio, and textual content.

Job 7. Tools for Online Teaching and Meetings

Setting & troubleshooting of online meetings and video conferencing like google meet, zoom, Microsoft teams, Webex etc; use of google classroom and google forms for teaching, feedback, and evaluation.

Job 8. Internet and Basic Webpage Design

Searching the Internet, checking the speed of Internet connection, usage of E-Commerce, Creating webpage using HTML, CSS with static text, images, tables, audio, video etc and dynamic contents, animation usage and tools for webpages

Job 9. AI & ML Applications:

Case studies using module (Blackbox based) integration for AI & ML and its applications

Practical Component :

Note: Workshop incharge may make additions or deletions in respect of above mentioned jobs as per the situation at any point of time.

Electronics Workshop (SEC-2)

Semester-I & II [Common to all branches]

Course Name-Electronics Workshop

Course Credits: 0L-0T-2P

Course Hours: 0L+0T+4P

Pre-requisite: Nil

Pre-requisite: Nil

Course objectives: To impart practical knowledge to the students about electronic components, circuits, and electronic instruments. This course on Electronic Workshop will enable students to get a good opportunity for beginning their professional career even at the end of first year.

Course outcomes: After completing the course, the students should be able to:

CO1: Identify and troubleshoot various electronic components and instruments.

CO2: Differentiate between various ICs and PCBs

CO3: Disassemble a computer and identify various peripherals and internal circuit component.

CO4. Design and fabricate a product by building an actual power supply.

Job1. Basic components used in the Electronics circuits

- Identification of various components being used in any electronic circuit such as resistor, capacitor, various diodes (p-n junction, Zenner, LED), transistors (BJT, MOSFET, FET), breadboard, potentiometer.
- Learn graphical symbols used to represent the various components.
- Find the value of resistance, capacitance by its color code and value mentioned on the component.

Job2. Instruments for measurement and analysis of Electronics circuits

- Study the various controls on the panel of a typical CRO, Multimeter.
- Testing of components such as resistor, capacitor and transistor as PNP or NPN, Gain value of transistor, ensure the connectivity of their leads using multimeter.

- Perform small jobs as given by your instructor by using some of the above components and instruments.

Job3. Instruments for generating the signals for the electronic circuits

- Study the various controls on the panel of a function generator and DC power supply.
- Using CRO and function generator perform jobs such as waveform analysis, Voltage measurement, frequency measurement, phase difference measurement etc.

Job4. Integrated circuits and (IC) tester

- Study the pin configuration of a given IC number.
- Study the function of IC tester.
- Testing of IC on the IC tester.
- Verify the truth table of various logic gates by assembling them on the breadboard.
- Draw the Pin configuration of various logic gates in your file and record the observations of the truth table of these logic gates.

Job5. Transformer and soldering iron

- Study the transformers used in the electronic circuits.
- Learn the precautions while using a soldering iron.
- Perform small jobs using soldering iron.

Job6. Printed circuit board

- Learn to make a layout of electronic circuit using any PCB design software (OrCAD/TINA/ KiCAD/ DesignSpark PCB/ any other available software).
- Use of electronic components in the layout.
- Perform small jobs such as making a circuit on the PCB and learn soldering of components on PCB.
- Analysis of the designed circuit using CRO, Multimeter and signal generator.

Job7. Identification of various peripheral devices of computer

- Learn to find complete specification of the given computer.
- Identify various peripheral devices including a keyboard, mouse, printer, and flash drive of a computer.

Job8. Assembling and disassembling of computer

- Learn the precautions while disassembling of computer.

- Study of motherboard.
- Identification of various hardware peripherals like RAM, ROM and Processor.
- Study of various ports in a computer for interfacing with external hardware components.

Job9. Product Development (Part 1)

- Study the basic circuit of variable DC power supply.
- Procure all the components required to build a DC supply like transformer, diodes, capacitor, resistance, potentiometer, on/off switch etc. for given specifications of DC power supply.
- Test each component.
- Assemble it on breadboard and test its functionality.

Job10. Product Development (Part 2)

- Design a PCB for variable DC power supply designed in Job 9.
- Fabricate the variable DC power supply by assembling all the components on PCB and perform soldering.
- Test the fabricated variable DC Power supply.

Practical Component :

Note: Workshop Incharge may make additions or deletions in respect of above-mentioned jobs as per the situation at any point of time.

ELECTRICAL WORKSHOP (SEC-3)

Semester-I & II [Common to all branches]

Course Name: Electrical Workshop

Course Credits: 0L-0T-2P

Course Hours: 0L+0T+4P

Pre-requisite: **Nil**

Course objectives: In view of the multi exit facility to be provided to the students leaving after first year, this course on Electrical Workshop will enable such to get a good opportunity for beginning their professional career even at the end of first year.

Course Outcomes: After completing their training in Electrical Workshop, students will be able to

CO1. Differentiate the tools, recall their names and develop skill of using each one of these tools. They will also be able to describe the material and components used in House Wiring, get apprised of their names and use in the process of wiring.

CO2. Design various types of wirings and do actual wiring with his/her own hands. Students will also be able to explain the Energy Meter functions and make connections of energy meter and MCBs.

CO 3. Discuss the constructional details of DC and one type of single phase AC motor and maintain such items. Students will also be able to repair few house hold gadgets.

CO4. Design and fabricate the product by building an actual battery charger.

Job 1. Tools in the field of Electrical Engineering:

- Gain awareness about various tools used in the field of Electrical Engineering and to learn the operation of each tool. Like: Vice, drill machine, hand grinder, combination pliers, screw driver set, wire striper, tester, test lamp, multimeter, hammer, lug crimper, Soldering iron, hacksaw, different types of files.
- Perform small jobs as given by your instructor by using some of the above tools.

Job 2. House Wiring Materials:

- Make a study of various components and material used in house wiring. Like: Aluminum and Copper wires of different specifications used in house wiring. Wooden boards and Bakelite sheets, wall mounted switch boxes and wiring plates, 2 pin, 3 pin, 5 pin wall sockets, power sockets, 2 pin, 3 pin & power plugs, iron and PVC conduits, bends, casing capping, junction boxes, Gang boxes, baton holder, pendant holder, bracket holder, angle holder, incandescent bulbs, LEDs, tube light strips, CFL, Indicator lamps. One way, 2 way and power switches. Isolators, MCBs, ELCBs and other materials.
- Practice fixing of switches and sockets in gang box.

Job 3. Performing, House wiring:

- Study various types of house wiring techniques: Baton wiring, casing capping wiring, surface conduit wiring and concealed conduit wiring.
- Perform surface conduit wiring to accomplish stair case lighting.
- Prepare an extension board with following: Two 6A sockets with individual switches and individual indicators on an appropriate gang box.

Job 4. Electronic Energy Meter

- Study the connections of Electronic Energy Meter. Assemble an MCB main board with a double pole MCB/isolator and 2 single pole MCBs and make connection with energy meter on one side and two load circuits on the other. Show operations of MCBs one by one.

Job 5. House hold Gadgets

- Study the construction and operation of a heater, heat convector, Electric iron, kitchen Mixer, soldering iron (depending upon time and availability this list can be modified).
- Assemble a heater from the available components. Operate it and measure its current, Voltage and Power.

Job 6. DC and Single phase AC Motors

- Observe the given D.C. and single phase A.C. motors. Run them by connecting appropriate supply.
- Open the given D.C. Motor, observe its construction, do its servicing, clean its bearings and commutator. Reassemble and rut it.
- Open the given A.C. motor, study its construction. Clean its bearing. Assemble it back and operate it. Measure it’s no load current.

Job 7. Ceiling Fans

Study the construction and operation of a ceiling fan, Dis-mental the given ceiling fan. Observe all its parts. Clean its bearings and other parts. Check the continuity of running and starting windings. Test the capacitor for its functionality. Assemble the fan back. Operate it by connecting to supply.

Reverse the direction of rotation by changing connection at the capacitor. Connect an electronic regulator and control its speed.

Job 8. Product Development (Part-1)

- Study the circuit of a battery charger.
- Procure all the components required to build a charges like: Transformer, diodes, capacitor, voltmeter, ammeter, indicator, rotary switch, on/off switch, box connecting load. Test each component separately. (specification of charger will be given)
- Assemble bridge rectifier using 4 diodes.

Job 9. Product Development (Part-2)

- Complete the testing of components procured in job 8.
- Fabricate the battery charger by assembling all the components procured and tested in job no. 8 (product development part-I) and wire it..
- Test the fabricated charger.

Job 10. Experience of Electronic Devices

- Identify resistors, capacitors of various types and specifications
- Identify the given solid state devices like: diodes and transistors, SCR, Triac, Diac, few ICS of various specifications.
- Study the circuit of a solid state low rating voltage regulator.
- Assemble a voltage regulator and test it on fan and incandescent bulb. Or assemble a timer circuit using 555 IC.

Practical Component:

Note: Workshop incharge may make additions or deletions in respect of above mentioned jobs as per the situation at any point of time.

ANNEXURE - 46

SUB: AMENDMENT TO ORDINANCES

[E.C Resolution No. 60-1-14/- dated 03.02.2023]

The Following amendments to Ordinance of the University has been approved by the Executive Council at its meeting held on 03.02.2023 and are hereby notified for information and necessary action, by all the concerned:

1. **Amendment to Appendix II to Ordinance V (2) & VII. [E.C Res. No. 60-1-14 dated 03.02.2023]** regarding introduction of MBA (Business Analytics) Programme (2 years course) from academic year 2023-2024 under Faculty of Commerce & Business. ***(As per Annexure-I).***

Preamble

The objective of any programme at a Higher Education Institution is to create for its students a sound foundation for their character development which directly contributes to the well-being of a nation. The University of Delhi envisions all its programmes in the spirit of its ―motto‖ which is to inspire the youth to show steadfastness and devotion in a fearless pursuit of truth. The MBA (BA) aims at preparing young minds for constructive and productive development by honing their creative and analytical skills for their own betterment as well as for the greater good of the society.

The University of Delhi, a premier seat of teaching, learning, and research in higher education, acclaimed nationally and internationally, has nurtured the quest for reaching the peak in every sphere of education, in its true sense, in the process of its contribution to nation-building. Being a Central University, mandated to act as the torchbearer in expanding the horizons of human resource development through expansion of higher education, it has always paid adequate premium towards constructive and meaningful innovation as a regular feature in its undergraduate curriculum development over the years.

The focus of MBA (BA) is aimed at improving the students 'abilities in data analysis and helping them to become a competent decision maker and business leader who can contribute to nation building. Management education is not related only with knowing how to organize and apply skills related to business, trade, commerce, industry, and economy, but it further accelerates the process of thinking in a pragmatic manner about nation building through effective utilization of skills, resources, manpower, and one's abilities.

One essential aspect of MBA (BA) is to develop a commerce graduate who can meet the present and the future requirements of industry and economy. MBA (BA) emphasizes on developing the competent persons who can work as the contemporary and future leaders of the industry and business. The education system in the emerging scenario demands to enrich the personality of the students so as to develop a holistic personality. Therefore, the focus of MBA (BA) is based on the four pillars of education which are learning to know, learning to do, learning to live together, and learning to be.

The present situation of business education requires total over-hauling and restructuring in the light of the changed socio-economic scenario of the global economy in the context of Industry 4.0. The dynamic nature of global business demands a pool of competent human capital for which relevant education is essential in terms of timeliness, speed, flexibility, and dynamism. There is a need to provide students with appropriate skills and knowledge inputs which would make them globally competent and empower them to work in the changing business environment. Therefore, the focus of the MBA (BA) is to introduce a globally acknowledged choice-based credit system which will offer numerous opportunities to learn various core subjects and also explore additional avenues of learning beyond the routine and standardized framework. The sole purpose of this exercise is to provide opportunities for holistic development of the students.

Thus, the MBA (BA) can help in bringing uniformity in curricula on the one hand and empower the student on the other hand to choose the career options making it more relevant and globally acceptable which would create new benchmark in the world.

I. About the Department

The Department of Commerce was formally set up as a separate entity in the year 1967. Department of Commerce located in the premises of Delhi School of Economics, popularly known as DSE, has always kept the pace with changing times and explored the new frontiers of knowledge and innovation in academics and kept pace with, DSE tradition. In its history spanning over three decades, it has redefined commerce education in the country. The Department has the legitimate claim and pride of being the premier institution in India for course curriculum development, teaching and researches in Commerce discipline. *In 2017, as per Times Higher Education Ranking Department of Commerce was placed at 1st position in India and at 85th position in Asia. In 2018, Department of Commerce was placed at 2nd position in India and at 91st position in Asia.*

The Department of Commerce takes pride to pioneer the two specialized programmes, (MBA (IB) and MBA (HRD) erstwhile known as namely MIB and MHROD. Both programmes have been well received by the industry since 1995 till date. The courses were designed in a manner so that the students gain an in-depth knowledge and analytical skills which will enable them to efficiently and effectively carry out various HR, OD, marketing, finance and international business operations of an organization in the emerging globalized environment.

The Master of Business Administration (Business Analytics) programme of the Department of Commerce has been designed to cater to the growing needs of industry and business for professionally qualified young men and women in the area of Business Analytics. In liberalized framework of the Indian economy, corporate experts in the areas of Business Analytics will be amongst the key resource personnel needed for corporate strategic planning and control. The objective of Master of Business Administration (Business Analytics) –MBA(BA) is to develop research orientation, impart analytical skills and strengthen academic and analytical rigor of highly motivated, bright young men and women so that they can provide ethical, holistic and inclusive professional expertise to business and industry in the area of Business Analytics.

II. Introduction to CBCS (Choice Based Credit System)

Choice Based Credit System:

The CBCS provides an opportunity for the students to choose courses from the prescribed courses comprising core, elective/minor or skill-based courses. The courses can be evaluated following the grading system, which is considered to be better than the conventional marks system. Grading system provides uniformity in the evaluation and computation of the Cumulative Grade Point Average (CGPA) based on student's performance in examinations which enables the student to move across institutions of higher learning. The uniformity in evaluation system also enables the potential employers in assessing the performance of the candidates.

Definitions:

i) Academic Programme means an entire course of study comprising its programme structure, course details, evaluation schemes etc. designed to be taught and evaluated in a teaching Department/Centre or jointly under more than one such Department/ Centre.

ii) Course means a segment of a subject that is part of an Academic Programme.

iii) Programme Structure means a list of courses (Core, Elective, Open Elective) that makes up an Academic Programme, specifying the syllabus, Credits, hours of teaching, evaluation and examination schemes, minimum number of credits required for successful completion of the programme etc. prepared in conformity to University Rules, eligibility criteria for admission

iv) Core Course means a course that a student admitted to a particular programme must successfully complete to receive the degree and which cannot be substituted by any other course.

v) Elective Course means an optional course to be selected by a student out of such courses offered in the same or any other Department/Centre.

vi) Open Elective means an elective course which is available for students of all programmes, including students of same department. Students of other Department will opt these courses subject to fulfilling of eligibility of criteria as laid down by the Department offering the course.

vii) Credit means the value assigned to a course which indicates the level of instruction; One-hour lecture per week equals 1 Credit, 2 hours practical class per week equals 1 credit. Credit for a practical could be proposed as part of a course or as a separate practical course.

viii) SGPA means Semester Grade Point Average calculated for individual semester.

ix) CGPA is Cumulative Grade Points Average calculated for all courses completed by the students at any point of time. CGPA is calculated each year for both the semesters clubbed together.

x) Grand CGPA is calculated in the last year of the course by clubbing together of CGPA of two years, i.e., four semesters. Grand CGPA is being given in Transcript form. To benefit the student a formula for conversion of Grand CGPA into %age marks is given in the Transcript.

III. MBA (BA) Programme Details:

Programme Objectives (POs):

With the vision —*to nurture the young brains, to make them better employable and socially responsible citizens by encapsulating them with the right set of knowledge for a better tomorrow*, Department of Commerce focuses on building conviction with impartiality and modesty, create an enabling environment for innovative thought processes and nurture open- mindedness, equitability and perseverance. In the backdrop of Department vision and mission, MBA (BA) programme aims to:

- Provide a conducive environment that holistically engages students through an all– encompassing knowledge impartation and comprehensive practical applications.
- Mold them into future visionaries, and management leaders that are benevolent yet efficacious, versed in the leading business and human resource practices of the world and equipped to the hilt to implement themselves and adapt to the mutable global business environment.
- Develop an analytical mindset and skills to organize, analyse, interpret and communicate data to solve operational and strategic business problems.
- Develop managerial knowledge and strategic agility, providing students with a broader skill set and a fresh perspective and encouraging them to seek out bold, innovative solutions for today's business and societal challenges.

The concept of open electives has been incorporated as per the University's guideline. To better facilitate the self- study of the course by the student, the suggestive readings are provided for each unit of the concerned course. In addition, the course has been designed in line with outcome-based approach which requires specification of Course Outcomes and Course Learning Outcomes.

The following objectives of NEP are kept in perspective while framing MBA (BA) programme objectives:

1. to promote each student's holistic development in both academic and non-academic spheres;
2. to provide flexibility to students so that learners have the ability to choose

their learning trajectories and programmes, and thereby choose their paths in life according to their talents and interests;

3. to eliminate harmful hierarchies among disciplines/fields of study and silos between different areas of learning;
4. multidisciplinary and holistic education to ensure the unity and integrity of all knowledge;
5. to promote creativity and critical thinking and to encourage logical decision-making and innovation;
6. to promote ethics and human & Constitutional values;
7. to promote multilingualism and the power of language in learning and teaching;
8. to impart life skills such as communication, cooperation, teamwork, and resilience;
9. to promote outstanding research as a corequisite for outstanding education and development.

Programme Specific Outcomes (PSOs):

MBA (BA) Programme is mainly oriented towards professional augmentation in business analytics taking place in the global as well as domestic business analytics arena and the curriculum thus intends to reduce the gap between industry and academia, with the right blend of theory and practice, furthering students to nurture their talent for becoming good leaders and assets for an organization. Students shall gain an in-depth knowledge and analytical skills which will enable them to effectively and efficiently carry out various Trade and Marketing operations of an organization in the emerging globalized environment.

Programme Development Process:

Department of Commerce followed the consultative process in the development of MBA (BA) Programme, the following were the stages of development:

a. Proposal with concept note was sent to university for in-principal approval.
b. In-principal approval was received from Hon'ble Vice Chancellor.
c. A working group was formed.
d. Benchmarking of leading institutions in the domain of business analytics was done.
e. Draft curriculum was framed and e-mail was sent to all the stakeholders including corporate houses.
f. Feedback was received and incorporated as per suitability of the programme.
g. Approval by Statutory Committees including Committee of Courses, Faculty of Commerce and Business, Academic Council and Executive Council.

Programme Structure:

The MBA(BA) programme is a two-year course divided into four-semester. The course is of 112 Credits and for the award of degree a student will be required to complete the credits as per the University norm.

##Only those who have studied Startup-1 may opt for Startup-2.

Selection of Open Elective Courses:

h. Options for Open Elective Courses will be floated according to availability of faculty and minimum number of students. The minimum number to be reviewed in the due course of time which may vary programme-wise.

i. Open Elective Courses as placed in semester III would be announced at the beginning of the Semester II and accordingly students will be asked to select any one option at that time.

j. At least 10% of the proposed seats in open elective courses should be open to students from outside the discipline subject to fulfilling eligibility criteria.

k. Students opting for Finance area as a Major or Minor Elective in M. Com cannot opt the Open Elective Courses i.e. Financial Markets and Institutions (Paper No. „COMOE08" of MBA (IB) and MBA (HRD) and Planning for Personal Finance (Paper No. „COMOE09 ") of MBA (IB).

Eligibility Criteria for Open Elective Courses:

Eligibility Criteria for Open Elective Courses will be announced at the time of floating of courses as approved by Committee of Courses in due course of time.

Teaching:

The faculty of the Department is primarily responsible for organizing lecture work for MBA (BA). Faculty from some other Departments, constituent colleges and Industry are also associated with the teaching of the courses in the Department. There shall be 90 instructional days excluding examination in a semester. A student opting for dissertation project as elective course will be allotted a faculty as supervisor in the beginning of Semester III.

Eligibility for Admissions: Seats:

The Number of seats for MBA (BA) Programme is 60 (General -22, OBC – 15, SC – 8, ST – 4, EWS-5, PwD-3 and FS-3). As per University rules, the seats for PWD CW, and foreign students (FS) categories are supernumerary. Further, Bulletin of Information may be referred for relevant details.

Selection Procedure

The admission to MBA (BA) programme is done through three layered process including CAT percentile, matriculation and 10+2 marks; Group discussion, extempore; and Interview score. This is done with a view to identify and process the interpersonal skills in addition to the overall knowledge of the students. Bulletin of Information may be referred for further relevant details.

Reservations/Relaxations

There will be reservation for SC, ST, PWD, OBC, CW and FS categories as per University of Delhi rules.

Assessment of Students' Performance and Scheme of Examinations:

1. English shall be the medium of instruction and examination.

2. Assessment of students' performance shall consist of:

   (i) Each paper shall carry 100 marks of which 30 marks shall be reserved for internal assessment based on class room participation, seminar, term papers, study reports, tests, viva-voce and attendance. The weightage given to each of these factors shall be decided and announced at the beginning of the Semester.

   (ii) The remaining 70 marks in each paper shall be awarded on the basis of a written examination at the end of each semester. The duration of the written examination of each paper shall be three hours.

Pass Percentage & Promotion Criteria:

(i) The minimum marks for passing the examination shall be 45% in each paper and 50% in the aggregate of the semester. If a student fails to secure 45 percent marks in any of the papers, he/she can reappear in those paper/papers in the subsequent semesters. If a candidate admitted to the examination in any semester secures the minimum marks to pass in each paper but fails to secure the minimum marks to pass in the aggregate, he/she may appear in any of

the paper/s of the Semester concerned according to his/her choice in order to be able to secure the minimum marks prescribed to pass in the aggregate in each semester.

(ii) Only those candidates who have secured at least 45 per cent in each paper and 50 percent in aggregate in each of the semesters of the MBA (BA) programme shall be eligible for the award of the Degree. Successful candidates will be classified on the basis of the combined results of Part – I and Part – II examination as follows:
Candidates securing 60% and above: I Division
All others: II Division

(iii) The conditions of passing the programme shall not be deemed to have been satisfied unless a student undergoes practical training under the supervision of the Department in approved organizations for at least two months. Summer training is not an evaluative course but will be mandatory for students to undergo summer training and certificate of completion will be issued after submission of training report.

(iv) A candidate must qualify for the award of the Degree within four years of his/her admission to the MBA (BA) programme.

Part I to Part II Progression:

(i) Admission to Part-II of MBA (BA) Programme shall be open to those who have cleared successfully at least 10 papers out of 14 papers offered for the MBA (BA) Part –I programme comprising of Semesters I and II taken together. However, he/she would have to clear the remaining papers while studying in MBA (BA) Part – II in the second year.

(ii) If a student fails to appear in any of the papers in MBA (BA) Semester – I of Part-I of the University examination, he/she will be allowed to take examination in that paper/papers along with second semester examination of Part – I.

(iii) If a student fails or fails to appear in any of the papers in third semester examination of Part-II, he/she will be allowed to take the examination in the subjects along with examination in the subjects of fourth semester of Part-II Examination.

(iv) Candidates who fail or failed to appear the MBA (BA) examination after pursuing a regular programme may be allowed to reappear at the examination on being enrolled as an ex-student as per the rules of the University. The old programme will remain in force for ex-student only for a period of three years from the year in which the revised programme introduced.

(v) No candidate shall be considered to have pursued a regular course of study unless he/she is certified by the Department to have attended at least three-fourth of the total number of lectures, tutorials, special lectures and seminars conducted in each semester during his course of study. Provided that he/she fulfills other conditions, the Department may permit a student to proceed to the next semester who falls short of the required percentage of attendance by not more than 10% lectures, tutorials, special lectures and seminars conducted during the whole of that semester of the course but a student so permitted shall not be deemed to have completed a regular course of study in the next succeeding semester unless he/she makes up the shortage so condoned.

(vi) No revaluation of answer books is permitted as per the rules of the University applicable to the professional courses.

Conversion of Marks into Grades:

As per University Examination rule.

Grade Points:

Grade point table as per University Examination rule.

CGPA Calculation:

As per University Examination rule.

SGPA Calculation:

As per University Examination rule.

Grand SGPA Calculation:

As per University Examination rule.

Conversion of Grand CGPA into Marks:

As per University Examination rule.

Division of Degree into Classes:

Post Graduate degree to be classified based on CGPA obtained into various classes as notified into Examination policy.

Attendance Requirement:

10 marks are allocated for attendance in the class. The marks for attendance shall be as follows:

(i) 75% or more but less than 77.5% = 1
(ii) 77.5% or more but less than 80% = 2
(iii) 80% or more but less than 82.5% = 3
(iv) 82.5% or more but less than 85% = 4
(v) 85% or more but less than 87.5% = 5
(vi) 87.5% or more but less than 90% = 6
(vii) 90% or more but less than 92.5% = 7
(viii) 92.5% or more but less than 95% = 8
(ix) 95% or more but less than 97.5% = 9
(x) 97.5% and above = 10

Span Period:

No student shall be admitted as a candidate for the examination for any of the Parts/Semesters after the lapse of four years from the date of admission to the Part-I/Semester-I of the MBA (BA) Programme.

Guidelines for the Award of Internal Assessment Marks MBA (BA) Programme (Semester Wise)

(i) For each core and elective course there are 30 marks allocated for internal examination and 70 marks for the Semester- End Examination. Out of 30 marks allocated for internal assessment for each course:

- 10 marks are assigned for class test / written assignment or any other method and will be evaluated by the concerned faculty as part of their continuous evaluation.

- 10 marks are assigned for class presentation / project work

- 10 marks are assigned for attendance in the class. The marks for attendance will be assigned as mentioned under the heading "Attendance Requirement".

(ii) For open elective course there are 30 marks allocated for internal examination and 70 marks for the Semester- End Examination. Out of 30 marks allocated for internal assessment for each course:

- 10 marks are assigned for project.
- 20 marks are assigned for class test.

(iii) Open-source software wherever required may be used for pedagogy purpose and for internal examination.

Master of Business Administration (Business Analytics) MBA (BA)
Semester I

Marks: 100 **Duration: 60 Hrs.**

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Management And Organisational Behaviour MBABACC101	**4**	**3**	**0**	**1**	**Pass in Graduation**	**NIL**

Learning Objectives: To develop an understanding of basic concepts of management and its functions and to familiarize them with different components of organizational behaviour.

Learning Outcomes:

After completion of the course, learners will be able to:

Unit IV: Promotion Decisions (14 Hours)

Promotion-Its meaning and importance; Communication process and flows; Promotion mix decision- major promotion tools and their characteristics; Integrated Marketing Communication- Concept and importance, Ethical issues related to promotion decision

Distribution Decisions: Distribution- Meaning and nature; Channels of distribution- concept, importance and types; Retailing- meaning and major types of store and non-store-based retailing; Wholesaling - meaning and major types of wholesaling; Distribution channel planning- issues and process; Physical distribution/logistics- meaning and major logistic decisions.

Unit V: Contemporary Development and Issues in marketing (8 Hours)

Internal marketing, Green marketing, Social marketing, Sustainability marketing, Digital marketing, Influencer marketing- Concept, need and issues, legal aspects of marketing.

Practical Exercises:

The learners are required to:

1. analyze the marketing mix strategy of a durable goods/ non-durable goods/ service/ ideas/ event/ organization/ people.
2. select any product and analyse its segmentation strategy in comparison to its immediate competitive product.
3. examine the marketing strategies followed by companies to prolong the maturity stage and defer its decline.
4. suggest an appropriate distribution strategy of a product of your choice.
5. study the promotional strategies followed by companies selling products through digital mode.

Essential/ Recommended readings

Suggested Reading:

Master of Business Administration (Business Analytics) MBA (BA)
Semester I

Marks: 100 **Duration: 60 Hrs.**

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Accounting for Managers **MBABACC103**	**4**	**3**	**0**	**1**	**Pass in Graduation**	**NIL**

Learning Objective

To familiarise the learner to acquire knowledge and skills relating to the application of accounting concepts and techniques for business decisions, short-term and long- term/strategic decision-making models, cost management ideas along with budgeting and associated performance measurement practices.

Learning Outcomes

After completion of the course, learners will be able to:

- apply the Generally accepted accounting principles while recording transactions and preparing financial statements.
- analyze and interpret the qualitative and quantitative features of information provided in the Financial Statements of a company
- conduct cost, volume, and profit analysis of companies, and solve short run decision making problems by applying marginal costing and Break- Even technique.
- prepare various budgets and measure the performance of the business firm by applying budgetary control measures.
- analyze the fundamentals and significance of Sustainability Reporting, Forensic Accounting, Human Resource Accounting, and Integrated Reporting.

Syllabus:

Unit I: **Financial Accounting (12 Hours)**

Meaning of financial accounting; Accounting as an information system; Accounting concepts and principles; Accounting equation; Emerging Issues in Financial Accounting and Reporting Systems Capital and revenue items; Inventory Valuation; Property, Plant and Equipment Accounting; Generally accepted accounting

principles, accounting standards and International Financial Reporting Standards (IFRS); IndAS.

Accounting process using accounting software: Journals; Ledger accounts, trial balance; Financial statements of corporate entities.

Unit II: **Financial Statement Analysis (12 Hours)**

Analyzing financial statements through ratios: Liquidity analysis ratios, Profitability analysis ratios; Activity analysis ratios; Coverage ratios; limitations of Ratio Analysis; Analytical comparative statement; Cash flow statement; Du-Pont Analysis.

Unit III: **Introduction to Cost Accounting (12 Hours)**

Meaning, objectives and importance of cost accounting; Comparative implications of Financial Accounting and Cost Accounting; Elements of cost; Classification of cost including cost for managerial decision making; Cost centre; Cost unit; Cost allocation, Cost apportionment and ascertainment; Cost sheet analysis; Methods of costing; Cost control and Cost reduction.

Costing and Control of Materials: Introduction control of material, cost of inventory a costing methods, Just in time Inventory.

Unit IV: **Cost Volume Profit Analysis and Budgetary Control (12 Hours)**

Marginal cost statement/equation; P/V ratio; Break Even Point (BEP), Break even chart; Margin of safety; Decisions relating to key factor, Price fixation, Export order, Make or buy, Deletion or addition to product/Services, Sell or process further, Continue or shut down, etc.

Budgetary Control: Basic concepts of budgeting; Preparation of functional budgets and Fixed budget and flexible budgets.

Unit V – Recent Developments in Accounting (12 Hours)

Sustainability Reporting; Forensic Accounting; Human Resource Accounting; Integrated Reporting

Note: Case-based analysis and relevant software will be used for pedagogical purposes. Evaluation of practical exercise using software will be part of internal assessment.

Practical Exercises:

The learners are required to:

1. prepare Trading and Profit & Loss Account and Balance Sheet after collecting necessary data for small business firms.
2. download 'Framework for the Preparation and Presentation of Financial Statements' from the websites of the Institute of Chartered Accountants of India (ICAI). Analyze the qualitative characteristics of accounting information provided therein.
3. prepare a cost statement for manufacturing and/ or service organization.
4. compute Break Even Sales for small shops like Grocery (Kirana) store, pharmacy, etc. by finding out monthly sales volume, variable expenses, and fixed expenses.
5. prepare a monthly cash budget, expense budget, activity budget, for a small retail shop, club, learner association, college. Also, prepare a purchase/production/sales budget for a small factory. Additionally, prepare a time budget for specific jobs or functions.
6. analyze the modus operandi of any international/national accounting fraud(s).

Master of Business Administration (Business Analytics)

MBA (BA)
Semester I

Marks: 100 **Duration: 60 Hrs.**

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Economics for Managers **MBABACC104**	**4**	**4**	**0**	**0**	**Pass in Graduation**	**NIL**

Objective: The objective of this course is to acquaint the students with the economic concepts and principles and to enable them to use them to address business problems in a globalized economic environment.

Learning Outcomes:

After completion of the course, learners will be able to:

1. understand the nature and scope of managerial economics, demand analysis and firm & its organization.
2. analyse the techniques of production function, cost analysis and forms of market.
3. apply the pricing techniques to determine the price of factors of production.
4. evaluate the knowledge of national income accounting, inflation and monetary and fiscal policies in real world situations.
5. describe the trade cycles in the open economy and exchange rate determination**.**

Syllabus :

Section A: Firm and Market

Unit I: Demand and The Firm (12 Hours)

Nature and scope of managerial economics, principles of managerial economics, demand function; Determinants of demand; Elasticity of demand – Price, income and cross elasticity, demand estimation, demand forecasting; Supply function; Firm and its organization: Nature of the firm and types of organizations; The Corporation: Ownership and control.

Unit II: Production, Cost and Market Forms (12 Hours)

Production function; Concept of productivity and technology; Production with one variable input, Returns to scale; Production with two variable inputs; Isoquants, ridge lines, Isoclines; Producer‟s Equilibrium.
Cost function- Classification of costs, short run cost functions; Relationship between return to scale and return to a factor; Long-run cost functions.
Market Forms- Shapes of AR, MR curve and their relationship in different market forms, perfect competition; Market Imperfections–monopoly, monopolistic, collusive oligopoly and price discrimination.

Unit III: Pricing (12 Hours)

Pricing practices; Commodity Pricing: Economics of advertisement costs; Types of pricing practices; Factor Pricing: demand and supply of factor of production; Collective bargaining; Concept of rent, profit, interest- Rate of return and interest rates; Real vs. Nominal interest rates; Basic capital theory–Interest rate and return on capital; Measurement of profit.

Section B: Macroeconomic environment
Unit IV: National Income Accounting and Macro-Economic Markets (12 Hours)

National income accounting; Measuring the cost of living; unemployment and inflation; Product market and financial market.

Unit V: Trade Cycles and the Open Economy (12 Hours)

Economic fluctuations and business cycle; Open economy macroeconomics; Determination of exchange rate; Purchasing power parity; Fixed and flexible exchange rate.

Practical Exercises:

The learners are required to:

1. conduct a demand and supply survey
2. make a production and cost analysis of a product
3. analyse the pricing policy of the select manufacturing firm
4. evaluate national income of India based on reports of Ministry of Finance
5. compute and compare flexible exchange rate of India and USA

Essential/ Recommended readings

Suggested Reading:

- Dominick, S. (2014). *Managerial Economics a Global Economy*. McGraw Hill Inc., Princeton.
- Dornbusch, R. & Stanley, Fisher (2012). *Macroeconomics*. McGraw Hill, New York.
- Koutsoyiannis, A. (2008). *Modem Micro Economics*. Macmillian Press Ltd.
- Mankiw, N. Gregory (2016). *Macro Economics.* Macmillan.
- Paul. A. Samuelson & William, D. Nordhaus (2010). *Economics, (Indian adaptation by SudipChaudhuriand AnindyaSen)*. Tata McGraw Hill.

Note: Latest edition of the readings may be used.
Latest and relevant case studies to be used.

Note: Readings will be updated by the Department of Commerce and uploaded on Department's website.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Master of Business Administration (Business Analytics)

MBA (BA)
Semester I

Marks: 100 **Duration: 60 Hrs.**

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Business Statistics and Research Methods **MBABA105**	4	3	0	1	**Pass in Graduation**	**NIL**

Learning Objectives

The objective of the course is to provide a conceptual understanding of statistics and its applications.

The objective of the course is to introduce the concepts and practices of research and to show how research tools, skills and understanding can be applied in solving management problems. The focus of the course is applied.

Learning outcomes

After completion of the course, learners will be able to:

1. apply statistical techniques and tools
2. demonstrate Managerial applications of Statistics
3. extrapolate from data the important trends in order to forecast
4. calculate and interpret numerous statistical values and apply it for decision making
5. carry out a sample survey, qualitative interviews and analyze and present the results and findings.

SYLLABUS

Unit I: Introduction and Forecasting Techniques (8 hours)

Statistics and Role of Statistics in Research, Uni- variate, bivariate and multivariate data. Frequency distributions; Dot plot, histogram, ogive, pie chart. Measures of Central Tendency and Dispersion. Introduction to Skewness and Kurtosis. Correlation, Scatter diagram Method, Karl Pearson's Coefficient of Correlation Spearman's Rank Correlation. Simple Linear Regression Model, Least squares Method, Coefficient of Determination, Interpreting computer output of solution. Components of Time Series, Smoothing Methods, Trend-Seasonal Analysis.

Unit II: Statistical Inference (16 hours)

Sampling and Sampling Distribution, Estimation: Point Estimates, Interval estimation for Mean and Proportion. Determining the sample size in estimation. Testing Hypotheses: Developing Null and Alternative Hypothesis. Type I and Type II errors. One Sample Tests for Mean and Proportion. Two Sample Tests for Mean and Proportion and Inferences about population variances. Tests of Goodness of Fit and Independence. Analysis of Variance and Experimental design.

Unit III: Fundamentals of Research (12 hours)

Definitions and types of research; Research Strategies, Relationship of epistemology and ontology to business research; Planning a research project and formulating research questions, writing research proposal. Reviewing and evaluating the existing literature and looking for business information, The Research Process; Problem Identification, Research Objectives and Research Ethics

Unit IV: Designs and Gathering and Collecting Accurate Data (16 hours)

Exploratory Designs: In-Depth Interviews and Focus Groups; Descriptive Research Designs: Survey Methods and Errors; Observation Techniques, Experiments, and Test Markets; Experimental Designs: Validity and Reliability Concerns with Experimental Research Designs, Improving the Internal and External Validity of Experimental Designs. Types of Experimental Research Designs- Pre-experimental Designs, True Experimental Designs and Quasi-experimental Designs.

Sampling: Theory, Designs, and Issues in Research – Sampling Terminology, Determining Appropriate Sample Sizes, Probability and Nonprobability Sampling, Steps in Developing a Sampling Plan. Overview of Measurement: Construct Development - Abstractness of the Construct, Determining Dimensionality of the Construct, Construct Validity. Scale Measurement - The Nature of Scale Measurement, Properties of Scale Measurements, Four Basic Levels of Scales - Nominal Scales, Ordinal Scales, Interval Scales, Ratio Scales, Attitude Scale Measurements Used in Survey Research. Questionnaire Design and Issues

Unit V: Data Preparation and Analysis (8 hours)

Coding, Editing, and Preparing Data for Analysis, Cross Tabs in SPSS, Interpretation of SPSS outputs of - tests appropriate for nominal data - χ^2 test, Contingent Relationship in Cross Tabs and related indices in Cross-Tabs, tests appropriate for ordinal data - Kolmogorov-Smirnov One Sample Test, Mann-Whitney U Test, Kruskal Wallis Test, Friedman Test, Regression Analysis: Model, Least squares method, Coefficient of determination, Testing for significance (F, t and multicollinearity), Dummy Variable, Residual Analysis, Logistic Regression, Stepwise Regression, Advance Multivariate analysis - Factor Analysis for Data Reduction, Cluster Analysis for identifying Segments, Discriminant Analysis.

Practical Exercises:

The learners are required to

1. demonstrate their understanding of 'research methodology' section of a research paper (related to a topic of student's interest) in the form of class presentation.
2. demonstrate their understanding of 'result and findings' section of a research paper (related to a topic of student's interest) in the form of class presentation.
3. collect survey data on a particular topic, apply relevant statistical technique and present its findings in class.
4. conduct qualitative interviews, apply relevant statistical technique and present its findings in class.
5. solve case study-based problems for applying concepts learned.

Essential/ Recommended readings

- Levin, R. & Rubin, D. (2017). Statistics for Management. Pearson Education, Eight Edition.
- Kothari, C.R. & Garg, G. (2019). Research Methodology: Methods and Techniques. New Age International Publishers, Fourth Edition.
- Levine, Stephen, Krihbiel, Berenson (2008). Statistics for Managers: Using Microsoft Excel. Pearson Education.
- Dangi, H.K., & Dewen, S. (2016). Business Research Methods. Cengage Learning.
- Saunders, M., Lewis, P. and Thornhill, A. (2019). Research Methods for Business Students. Pearson Education.
- Recent Research papers in the area of interest of the student.

Note: Readings will be updated by the Department of Commerce and uploaded on Department's website.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Master of Business Administration (Business Analytics)

MBA (BA)
Semester I

Marks: 100 **Duration: 60 Hrs.**

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Introduction to Analytics **MBABACC106**	**4**	**3**	**0**	**1**	**Pass in Graduation**	**NIL**

Learning Objectives

The objective of the course is to provide know-how to evaluate various alternatives by gaining insight from past performance in the essence of business analytics. Business analytics focuses on how business performance can be improved by changing the course of actions and using various tools to perform informed decision making.

Learning outcomes

After completion of the course, learners will be able to:

- Understand the need for effective business analytics within an organization.
- Analyze complex problems using advanced analytics tools.
- Learn descriptive, predictive and prescriptive business analytics.
- Interpret data for better decision-making

SYLLABUS

Unit I: Introduction to Analytics (10 Hours)

Foundations of Business Analytics, Decision making, Introduction to Business Analytics, Models in Business Analytics, Problem solving with analytics, Big data, Stages of analytics (descriptive, predictive, prescriptive).

Unit II: Descriptive Analytics (10 Hours)

Descriptive Statistical Measures: measures of location, dispersion, shape and association. Visualizing and Exploring Data: Overview, Tables, Charts, Advanced data visualization, data dashboards.

Unit III: Predictive Analytics (14 Hours)

Trendlines and Regression Analysis, Forecasting Techniques, Introduction to Data Mining, Spreadsheet Modeling and Analysis, Monte Carlo Simulation and Risk Analysis.

Unit IV: Predictive Analytics (14 Hours)

Linear Optimization, Applications of Linear Optimization, Integer Optimization, Decision Analysis.

Unit V: Business Analytics Applications (12 Hours)

Application of Analytics in Finance, Marketing, Human Resource Management, Supply Chain, Healthcare, Social Media and Cyber Space.

Practical Exercises:

1. Descriptive Statistical Measures.
2. Visualizing and Exploring Data.
3. Trendlines and Regression Analysis.
4. Spreadsheet Modeling and Analysis.

Essential/ Recommended readings

Text Books:

- James, E.R. (2017). Business Analytics. UK: Pearson Education Limited.

Master of Business Administration (Business Analytics)

MBA (BA)
Semester I

Marks: 50 **Duration: 30 Hrs.**

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Data Visualisation **MBABACC 107**	**2**	**1**	**0**	**1**	**Pass in Graduation**	**NIL**

Learning Objectives

To enable the students to understand, analyze, and develop insights from the data represented through graphs, charts and maps etc. The course is designed to introduce students to the theory and practical methods to create visual representations of data sets. The data visualizations are beneficial for multiple purposes such as dashboards, annual reports, sales and marketing materials and investor slide decks etc. This course aims to familiarize the students with the top data visualization tools and its utility in business and research.

Learning outcomes

After completion of the course, learners will be able to:

- evaluate skills in building visualizations, organize data, and design charts and dashboards.
- understand data visualization features of Tableau and Power BI
- create charts, work with filters, parameters, and sets.
- evaluate metadata and its usage.
- discuss the tools of Power BI.

SYLLABUS

Unit I: Tableau: (5 hours)

Getting Started with Tableau, Dimensions vs. Measures, Discrete vs Continuous, Application of Discrete and Continuous Fields, Aggregation in Tableau.

Unit II: Tableau: (7 hours)

Working with Metadata, Filters in Tableau, Applying Analytics to the worksheet, Dashboard in Tableau, Modifications to Data Connections, Edit Data Source, Unions, Joins Data blending.

Unit III: Power BI : (18 hours)

Introduction to PowerBI – Working with data – Importing from flat files, excel files, other Sources, Data Sources in Power BI Desktop, Loading Data in Power BI Desktop, Views in Power BI Desktop, Query Editor in Power BI, Transform, Clean, Shape, and Model Data Manage Data Relationship, editing a Relationship, Cross Filter Direction, Saving Workfile Measures. Data Analysis Expressions – Introduction to Power Query – Introduction to Power View – Power View visualizations – Power View filtering options – Introduction to Power Map – Preparing geospatial data – Publish from Power BI desktop – Publish Dashboard to Web.

Practical Exercises:

The learners are required to:

1. apply Discrete and Continuous Fields, Aggregation in Tableau.
2. demonstrate Analytics to the worksheet.
3. create a Dashboard in Tableau.
4. load Data, Query Editor in Power BI, Transform, Clean, Shape, and Model Data Manage Data Relationship, editing a Relationship.
5. publish from Power BI desktop – Publish Dashboard to Web

MBA (BA)
Semester I

Marks: 50 **Duration-30 Hrs.**

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/Practice		
INDIAN KNOWLEDGE SYSTEM	2	2	0	0	**Pass in Graduation**	**NIL**

Learning Objectives

To facilitate the students with the concept of Indian traditional knowledge and to make them understand the importance of roots of knowledge system. Further to make the students understand the traditional knowledge and analyse it and apply it to their day to day life.

Learning outcomes

After completion of the course, learners will be able to:

- Identify the concept and importance of traditional knowledge system and its framework
- Understand the significance of Yoga, Ayurveda on health, wellness, mind and soul
- Understand the traditional governance system and apply the management principles from the epics and compare them with the current practices

Unit I: Bhartiya Gyan Parampara (Indian Knowledge System) – An Overview and its framework (12 Hours)

Importance of Ancient Knowledge; Defining Indian Knowledge System; the Indian Knowledge System Corpus- a Classification Framework; Some unique aspects of Indian Knowledge System: Nuances of an Oral Tradition. History of Traditional Indian Trade and commerce: Silk, cotton, sugar, spices etc., silk route; currency and transportation; Traditional mercantile system, the Concept of Dharma; Tarka: The Indian Art of Debate- The Knowledge Triangle; Knowledge Management; Types of Knowledge Management, Knowledge Barriers, Knowledge Retention.

Unit II: Health, Wellness and Psychology (8 Hours)

Impact of Yoga Way of life on Emotional Intelligence of Managers; Ayurveda- Definition of Health; Tri-dosas – Relationship to Health; The Body- Mind- Intellect- Consciousness Complex; Consciousness- The True Nature of an Individual; Five layered Consciousness of an Individual (Panchkoshas); Chakra System (Energy centres). Consciousness: Management by consciousness, Levels of Individual and Organizational consciousness, Self-consciousness, beyond self- consciousness.

Unit III: Governance and Public Administration (10 Hours)

Ramayana on Great Attributes, Dos, and Don'ts of a King; Arthasastra-Governance; Relevance of Arthasastra; Kautilyan State; Vidura- niti – Advice to a King- TheAmatya, Settlements andLand Use (Janapada),FortifiedCapital city (Durga),Treasury and State Economy (Kosa), Law & Order and Security (Danda), Foreign Policy and Allies (Mitra). Public Administration- Perspectives from the Epics. Indigenous banking system: Methods of the Indigenous banking system; Promissory note, Dastavez, Rahan, Functions of the indigenous banking system;

Practical Exercises:

- Visit a Gurukul/ Ashram and have own experience (anubhooti) of the Indian ancient knowledge system.
- Discuss Case studies relating to
  - ❖ Mathematics of Madhava, Nilakantha Somayaji
  - ❖ Foundational aspect of Ayurveda
  - ❖ Foundational aspect of Ashtanga yoga
  - ❖ Foundational aspects of Sangeeta
  - ❖ Foundational aspect of traditional Bharat trade and commerce
- Practical sessions relating to Ayurveda with reference to self – exploration can be planned (Ayurveda Personality Test).
- Practise of meditation on Panchkoshas and Chakras.Muktchintan (brainstorming) on the perspectives from the epics and the real-life scenario of their applicability in the policies and schemes of the Government of India like Foreign policy, Defence policy, Innovation and Start-up Policy, Global Initiatives like One Sun One World One Grid: India's Initiative; Vaccine Diplomacy, International Yoga Day.

Master of Business Administration (Business Analytics)

MBA (BA)
Semester II

Marks: 100 **Duration: 60 Hrs.**

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Corporate Finance **MBABA CC201**	**4**	**3**	**0**	**1**	**Pass in Graduation**	**NIL**

Learning Objectives

To make students analyse various issues involved in financial management of a company and equip them with advanced analytical tools and techniques which can enhance their logical ability for making sound financial decisions and policies in a company.

Learning outcomes

After completion of the course, learners will be able to:

- understand the present and future value of cash flows associated with financial decisions using analytical tools
- analyse capital budgeting decisions using appropriate techniques/tools
- evaluate the capital structure of firms, and analyse the agency problems between different stakeholders
- discuss the dividend decisions and working capital policy of firms
- evaluate contemporary issues in Financial Management, and evaluate different forms of corporate restructuring

SYLLABUS

Unit I: Introduction to Financial Management (8 Hours)

Nature, scope and objectives of financial management; Measurement of shareholders' wealth; Finance as a strategic function; Role of a finance manager; Concepts of Risk, Return and Time value of money; Discounted Cash Flows (DCF); Financial decision making and types of financial decisions; Risk-return trade off in financial decisions; Annuity calculators; Introduction to expert systems for financial analysis.

Unit II: Capital Budgeting Decisions (14 Hours)

Nature, significance and types of capital budgeting decisions; Capital budgeting process; Principles of cash flow estimation; Estimation of cash flows; Capital budgeting techniques- ARR, Payback period, Discounted Payback Period (DPB), Net Present value (NPV), Equivalent Annual NPV, and Internal rate of return (IRR), Incremental IRR, Modified IRR and Profitability index; Fisher's rate of intersection; Capital budgeting decision under inflation, capital rationing and multi period budget constraints; Capital budgeting decision under risk and uncertainty; Techniques for incorporating risk and uncertainty in capital budgeting decisions- Risk Adjusted Discount Rate Method (RADR), Certainty Equivalent method, DCF Break Even Analysis, Simulation method, Probability distribution method, Decision tree analysis, Backward induction method, Sensitivity analysis and Scenario analysis.

Unit III: Cost of Capital and Capital Structure Decisions (12 Hours)

Specific costs of capital, weighted average cost of capital, weighted marginal cost of capital; Theories of capital structure- Net Income theory, Net Operating Income theory, Traditional theory, MM Hypothesis without and with corporate taxes, Merton Miller argument with corporate and personal taxes, Trade off theory, Pecking order theory, Market timing theory; Signaling theory and effect of information asymmetry on capital structure; The concept of present value of interest tax shield; Agency Problems and Agency Costs; Financial leverage and evaluation of financial plans (EBIT-EPS analysis); Determination of beta of levered firm and optimal capital structure; Factors affecting choice of Capital structure in practice.

Unit IV: Dividend Decisions and Working Capital Management (18 Hours)

Dividend Decisions

Issues in dividend decision; Dividend rate and dividend yield; Theories of relevance and irrelevance of dividend in firm valuation -Pure residual theory, Walter's model, Gordon's Model, MM Hypothesis, Bird-in-hand theory and Dividend signaling theory; Relevance of dividend under market imperfections; Traditional and Radical position on dividend; Types of dividend polices in practice-Pure residual policy, constant rupee dividend policy, constant dividend payout policy and smooth stream dividend policy; Determinants of dividend policy in practice; Lintner's Model of corporate dividend behavior.

Working Capital Management

Concept and types of working capital; Operating cycle and cash cycle; Estimation of working capital requirement; Approaches of working capital financing; Determinants of working capital; Components of working capital

management; Cash management- Baumol's Model and Miller-Orr Model of managing cash; Receivables management- dimensions of credit policy, credit analysis and evaluation of credit policies; Inventory management.

Unit V: Corporate Restructuring and Contemporary Issues in Financial Management (8 Hours)

Corporate restructuring and its various forms; Mergers and Acquisitions (M&A)- types, motives, benefits, valuation and financing; Leveraged buyouts; Management buyouts; Demerger, split up, Spin offs; Divestiture; Bases for calculation of Share exchange ratio; Determination of minimum and maximum exchange ratio; Contemporary issues in financial management.

Note: Relevant software will be used for pedagogical purposes. Evaluation of practical exercise (if any) using software will be part of internal assessment.

Practical Exercises:

The learners are required to:

1. compute income from various investment alternatives using annuity calculators.
2. estimate cash flows from a hypothetical project. Using appropriate software, evaluate the project's profitability by employing capital budgeting evaluation techniques.
3. extract data from financial statements of different firms/financial databases and estimate the cost of capital using appropriate software.
4. evaluate dividend policies of different firms.
5. estimate the working capital requirements for a firm using relevant software.
6. evaluate any recent Merger or Acquisition. Estimate the firm's value using appropriate software.

Suggested Readings:

- Brealey, R. A. & Myers S. C. (2020). *Principles of Corporate Finance*. McGraw Hill.
- Chandra, P. (2017). *Financial Management-Theory and Practice*. Tata McGraw Hill.
- Damodaran, A. (2007). *Corporate Finance: Theory and Practice.* John Wiley & Sons.
- Ehrhardt, M. C. & Brigham, E. F. (2003). *Corporate Finance*. Cengage Learning
- Hillier, D., Grinblatt, M. & Titman, S. (2011). *Financial Markets and Corporate Strategy.*McGraw Hill
- Khan, M. Y. and Jain, P. K. (2017). *Financial Management: Text, Problems and Cases*. Tata McGraw Hill.
- Pandey, I. M. (2021). *Financial Management.* Vikas Publishing.
- Ross, S. A. and Westerfield, R. W. (2020). *Corporate Finance.* McGraw Hill.
- Van, Horne and Dhamija (2011). *Financial Management and Policy.* Pearson

Note: Latest edition of the readings may be used.

Note: Relevant software will be used for pedagogical purpose. Evaluation of practical exercise using software will be part of internal assessment. Further, case studies related to above topics are required to be discussed.

Note: Suggested readings will be updated by the Department of Commerce and uploaded on Department's website.

Master of Business Administration (Business Analytics)

MBA (BA)
Semester II

Marks: 100 **Duration- 60 Hrs.**

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Human Resource Management **MBABACC202**	**4**	**3**	**0**	**1**	**Graduation**	**No**

Learning Objective: To familiarize the students with the different aspects of managing people in organizations from the stage of acquisition to development and retention.

Learning Outcomes:

After completion of the course, learners will be able to:

- understand HRM and the role of HRM in effective business administration.
- analyse the role that HRM has to play in manpower planning, job analysis and forecasting the human resource requirements.
- apply the recruitment and selection process in relation to the organization's business and HRM objectives.
- evaluate job-based compensation schemes and performance management systems and appraisals.
- recognise the emerging horizons of HRM and also enduring international HRM, e-HRM, and HRIS.

Syllabus:

Unit I- Introduction: (12 Hours)

Conceptual foundations; Human aspect of management; Human resource management- concept, scope and importance; Competencies of HR manager- employer branding and competency mapping; Changing role of HRM- workforce diversity, technological change, restructuring and rightsizing, empowerment, downsizing, VRS, work-life balance.; TQM; Management of ethics.

Unit II- Human Resource Planning, Job Analysis, and Job Design: (12 Hours)

Assessing human resource requirements; Human resource forecasting- concept, scope and importance; Workload analysis; Job analysis; Job description and specifications; Job design; Job characteristic approach to job design, HR policies

Unit III- Recruitment, Selection, Training, and Development: (10 Hours)

Factors affecting recruitment; Sources of recruitment (internal and external); Basic selection model; Psychological tests for selection; Interviewing; Placement, induction and socialization; Job changes- Transfers, Promotions, and Separations; An overview of training and development-concept and importance; Role specific and competency-based training; Responsibilities and challenges to Training Managers; Emerging trends in recruitment, selection, and development.

Unit IV- Compensation Management, Performance Appraisal, and Audit: (14 Hours)

Compensation management- Job evaluation, base compensation and supplementary compensation; Innovations in compensation management- Pay band system, ESOP; Performance appraisal-concept, traditional and modern methods- MBO, 360-degree appraisal, 720-degree appraisal, behaviourally anchored rating scale, balanced scorecard; Potential appraisal, employee counselling, Job changes - Transfers and promotions, HR Audit – meaning, objectives and areas, approaches, frequency of audit

Unit V- Emerging Horizons of HRM: (12 Hours)

International HRM, challenges of international HR managers; Green HRM; E-HRM; HRIS (Human Resource Information System); Contemporary issues in human resource management-moonlighting phenomenon, employee engagement, flexitiming, psychological contract, managing protean career, layoffs, emerging job opportunities; Remote learning – Virtual team building – Upskilling; ethics in HRM

Case Studies: Some cases of the real business world to supplement learning from the course.

Practical Exercises:

The learners are required to

1. Analyse and interpret case studies on various organisations.

2. Participate in simulation exercises in the classroom on work-life balance and thereby identify their needs.

3. Participate in simulation exercises and role play on human resource planning. Learners may be assigned to draft an HR policy to combat issues assuming themselves as an HR manager.

4. To interview HR managers and develop in-depth knowledge of practical applications of HR concepts.

5. To visit a company and identify the training methods adopted in various functional areas.

6. Develop a case study on the applicability and use of different kinds of training and development strategies by various companies in real-life scenarios. Learners may be assigned to draft a training and development module on the basis of selected strategies.

7. Conduct a job analysis for any two positions in a select organisation and present the report of the same.

8. Draft virtual team building schemes for different job roles in their organisation.

Essential/ Recommended readings

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Master of Business Administration (Business Analytics)

MBA (BA)
Semester II

Marks: 100 **Hours: 60**

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical / Practice		
Big Data and Cloud Computing **MBABACC203**	4	3	0	1	**Pass in Graduation**	**NIL**

Learning Objectives

The course aims to aid the learner in applying problem-solving skills and the knowledge of Big Data & Cloud Computing to solve real-world problems. It would focus on providing the learners with the foundation knowledge and understanding of Big Data, distributed computing systems, and applications, especially in the context of Cloud. It will enable analysis of untapped data for business intelligence and analytics. The objective of the course is to learn tools and techniques to apply analytics on such data which would point to various business benefits.

Learning outcomes

After completion of the course, learners will be able to:

- Acquire comprehensive knowledge and understanding of Big data & Cloud computing
- Understand the challenges of Big data.
- Learn to apply skills and tools to analyze and manage Big data.
- Understand the impact of making Big data decisions on business growth and strategy.
- Perform Big data analysis in cloud

SYLLABUS

Unit I: Introduction to Big Data (12 Hours)

Analytics – Nuances of big data – Value – Issues – Case for Big data – Big data options Team challenge – Big data sources – Acquisition – Nuts and Bolts of Big data. Features of Big Data - Security, Compliance, auditing and protection - Evolution of Big data – Best Practices for Big data Analytics -

Big data characteristics - Volume, Veracity, Velocity, Variety – Data Appliance and Integration tools – Greenplum – Informatica, Big vs Thick data.

Unit II: Data Analysis (10 Hours)

Evolution of analytic scalability – Convergence – parallel processing systems – Cloud computing – grid computing – map reduce – enterprise analytic sand box – analytic data sets – Analytic methods – analytic tools – Cognos – Microstrategy - Pentaho. Analysis approaches – Statistical significance – business approaches – Analytic innovation – Traditional approaches – Iterative

Unit III: Fundamentals of Cloud Computing and Stream Computing (14 Hours)

Introduction to Cloud Computing - History of cloud computing- Understanding the roots and essential characteristics of cloud computing - Understanding basic concepts and terminologies, benefits and limitations of Cloud computing- Introduction to Streams Concepts – Stream data model and architecture - Stream Computing, Sampling data in a stream – Filtering streams – Counting distinct elements in a stream – Estimating moments – Counting oneness in a window – Decaying window - Realtime Analytics Platform(RTAP) applications IBM Infosphere – Big data at rest – Infosphere streams – Data stage – Statistical analysis – Intelligent scheduler – Infosphere Streams.

Unit IV: Predictive Analytics and Visualization (12 Hours)

Predictive Analytics – Supervised – Unsupervised learning – Neural networks – Kohonen models – Normal – Deviations from normal patterns – Normal behaviours – Expert options – Variable entry - Mining Frequent itemsets - Market basket model – Apriori Algorithm – Handling large data sets in Main memory – Limited Pass algorithm – Counting frequent itemsets in a stream – Clustering Techniques – Hierarchical – K- Means – Clustering high dimensional data Visualizations - Visual data analysis techniques, interaction techniques; Systems and applications.

Unit V: Frameworks and Applications (12 Hours)

IBM for Big Data – Map Reduce Framework - Hadoop – Hive - – Sharding – NoSQL Databases - S3 - Hadoop Distributed file systems – Hbase – Impala – Analyzing big data with twitter – Big data for ECommerce – Big data for blogs.

Practical Exercises:

The learners are required to

1. Access HDFS using JAVA API
2. Access HDFS Using COMMAND-LINE INTERFACE Setup Hadoop cluster
3. Run Hadoop sample jobs
4. Perform Workflow Diagram Oozie workflow application
5. Create your First PIG Program

Notes:

1. **Latest edition of the readings may be used.**
2. **Relevant software will be used for pedagogical purpose. Evaluation of practical exercise using software will be part of internal assessment. Further, case studies related to above topics are required to be discussed.**
3. **Suggested readings will be updated by the Department of Commerce and uploaded on Department's website.**

Master of Business Administration (Business Analytics)

MBA (BA)
Semester II

Marks: 100 **Hours: 60**

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Using R for Analytics **MBABACC204**	4	2	0	2	**Pass in Graduation**	**NIL**

Learning Objectives

The course aims to train students in R programming language and its applications in the business world as well as to provide hands-on-training to use various tools and packages of R for advanced data analytics with real and simulated datasets to analyze and solve real and complex analytics problems including data visualization and machine learning.

Learning outcomes:

After completion of the course, learners will be able to:

1. learn R Programming language and data wrangling in R,
2. visualize the Business Data using R for key insights,
3. analyze statistical models and estimate future prospects for Business,
4. leverage data mining techniques using R to solve real life problems,
5. apply machine learning techniques to solve Business Analytics Problems.

SYLLABUS

Unit I: Introduction to R & R Environment and Exploratory Data Analysis (12 Hours)
Overview of R Language, Installation of R and RStudio, Scripts, Data Types in R, Data Structure in R, Loading Packages, Operators and functions in R, Data Extraction and Wrangling, Exporting Data from R. Pre-processing of data, Exploratory Data Analysis.

Unit II: Data Visualization for insights using R (6 Hours)
Perceptual mapping through Advanced R packages: ggplot2, Lattice, highcharter, RColorBrewer, Plotly, etc. Charts, Graphs, and Maps.

Unit III: Inferential Statistics (10 Hours)

Testing assumptions, Parametric and non-parametric tests, Correlation, Regression: Linear & Logistic, Dimensionality Reduction techniques: EFA & PCA, Multidimensional Scaling, ANOVA, Time Series Analysis: Stationarity, AR, MA, ARMA and ARIMA, Forecasting

Unit IV: Cluster Analysis and Classification (12 Hours)

Introduction to Cluster Analysis, Clustering models and Analysis, Hierarchical Clustering, Non-Hierarchical Clustering, K means Clustering, C means Clustering, KNN Classification, Decision Tree and Random Forests,

Unit V: Data Mining and Machine Learning using R (20 Hours)

Text Mining, Text Mining Algorithms, Sentiment Analysis, Supervised and Unsupervised Machine Learning Algorithms, R-packages for Machine Learning: caret, e1071, xgboost, randomForest, data.table.

Note: All the classes will be held in the computer lab. Latest versions and packages of R programming will be used to provide hands-on training / demonstration in the class. One Capstone Project as an assignment must be made compulsorily.

Practical Exercises:

The learners are required to:

1. conduct an exploratory study on real data..
2. apply R and obtain the results from a data set regarding data visualisation.
3. evaluate the survey results of a pilot study related to primary data.
4. analyse the results related to the Decision Tree by taking primary data.
5. collect a stock market data set and apply data mining tools.

Master of Business Administration (Business Analytics)

MBA (BA)
Semester II

Marks: 100 **Hours: 60**

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Operations Management **MBABA206**	4	3	1	0	**Pass in Graduation**	**NIL**

Learning Objectives

The course aims to familiarize the learner with the formulation of business problems using mathematical modelling techniques. To provide an understanding of the applications of Operational Research and how to use Excel to solve these problems

Learning outcomes

After completion of the course, learners will be able to:

- Understand the role of operations in both manufacturing and service organizations and the significance of operations strategy in the overall business.
- Understand the importance of facilities location and layout
- Understanding aggregate planning strategies
- Learn different quality tools and the tools of statistical process control for analyzing a process in terms of quality and also develop an understanding of six sigma quality.
- Learn the process of Just in time and lean production system

Syllabus

Unit I: Nature, Evolution and Scope of Operations Management (12 Hours)

Nature, Evolution and Scope of Operations Management. Emerging trends in Operations Management. Operations Strategy: Linkage with Competitive Strategy and formulation of Operations Strategy.

Unit II: Facilities location and Layout (12 Hours)

Site Selection and its methods, factors affecting location decisions, location planning methods, Types of layout, Production process

Unit III: Planning (12 Hours)

Aggregate Production Planning (APP), Master production schedule (MPS), Materials requirements planning (MRP).

Unit IV: Quality: (12 Hours)

Quality Management, Statistical Process Control (SPC), Process capability and Six Sigma.

Unit V: Methods (12 Hours)

Just-in-time, Lean operations and Toyota Production System Theory of Constraints, Role of technology in Operations Management

Essential/ Recommended readings

- Chase, R. B., Shankar, R., and Jacobs, R. F. (2019). Operations and Supply Chain Management (15th Ed.) Mc Graw Hill, Chennai.

Note: Readings will be updated by the Department of Commerce and uploaded on Department's website.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Master of Business Administration (Business Analytics)

MBA (BA)
Semester II

Marks: 100 **Hours: 60 Hrs.**

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Management Science **MBABACC206**	4	2	0	2	**Pass in Graduation**	**NIL**

Learning Objective:

The course aims to develop the knowledge of quantitative tools for decision making and to prepare for application of their tools in application of these tools in different organizational settings.

Learning Outcomes:

After completion of the course, learners will be able to:

- understand different decision making situations in business and the role of different quantitative approaches in solving them.
- evaluate the quantitative approaches to problem solving in different business situations constrained by availability of resources and alternatives.
- create prudent and cost effective decision making transportation, assignment and transshipment problems.
- evaluate various models of EOQ by using simulated situations to solve the problems related to inventory and queuing management.
- apply Markov Chains decision process and Theory of Games to the decision situations requiring prediction about outcomes.

Syllabus:

Unit I– Fundamental of decision making: **(10 Hours)**

Types of decisions; Steps in decision making; Quantitative analysis and decision making; Different types of models and their uses; Model building steps.

Unit II- Linear Programming: (10 Hours)
Basic concepts; Mathematical formulation and applications; Solution of LP problem using graphic and simplex method; Sensitivity analysis and interpretation of solution; Duality in linear programming – formulation and solution, integer linear programming - solution.

Unit III– Transportation, Assignment and Trans-shipment: (10 Hours)

Formulation; Solving transportation and assignment problems; Dealing with special cases of transportation and assignment problems.

Unit IV- Simulation and Queuing Management: (10 Hours)

Concepts of heuristics; Simulation: Monte Carlo Simulation, Application of simulation in business scenario. Queuing models: Elements of a queuing system; Models with Poisson arrival and Exponential services rates- single server and infinite and finite population; Cost behaviour analysis. Stochastic analysis and Utility function.

Unit V– Project Scheduling: (20 Hours)

Concepts of PERT & CPM techniques and their applications; Network analysis- Scheduling activities, determining critical path, calculation of floats; Time-cost trade-off, resource allocation & resource levelling. Use of Software for Project Management. Markov Chains- decision processes; Market share analysis; Game Theory- Pure strategy games; Mixed strategy games; Value of the game; Rules of Dominance, Graphical methods. Algebraic methods and LPP for solving games. Orientation to Optimization package for Games and Markov analysis.

Note: List of cases to be discussed shall be announced at the beginning of the semester.

Practical Exercises:

The learners are required to:

1. solve a manufacturing problem based on LPP model.
2. evaluate transportation scenario in supply chain management .
3. apply Monte Carlo simulation in service industry.
4. conduct network analysis in IT Industry.
5. conduct a game theory simulation.

Essential/ Recommended readings

Additional Readings

Winston, W.L. (1994*). Operations Research: Applications and Algorithms.* Duxbury Press.

Master of Business Administration (Business Analytics)

MBA (BA)
Semester II

Marks: 50 **Duration-30 Hrs.**

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Data Warehousing and Data Mining MBABACC207	2	1	0	1	**Pass in Graduation**	**NIL**

Course Objectives:

To mine interesting and useful patterns from the explosive volume of data by application of analytical techniques. The course is designed to extract new and valuable information by learning core concepts of data mining, which when properly implemented can yield to business solutions and profitable enterprises.

Learning Outcomes:

After completion of the course, learners will be able to:

SYLLABUS:

Unit I: Introduction to data mining (8 Hours)
Why data mining? What is data mining? Kinds of data, kinds of patterns, technologies, Kinds of applications, Major issues in data mining.

Data exploration and preprocessing
Data objects and attribute types, basic statistical descriptions of data, data visualization, measuring data similarity & dissimilarity, Data preprocessing: Overview, data cleaning, data integration, data reduction, data transformation & data discretization

Unit II: Data Warehousing & Online Analytical Processing (12 Hours)
Data Warehouse: Basic Concepts, Data warehouse modeling: Data cube & OLAP, Data warehouse design & usage, data warehouse implementation, data generalization by attribute-oriented induction

Clustering: Basic concepts & Methods
Cluster Analysis, Partitioning methods, hierarchical methods, density-based methods, grid-based methods, evaluation of clustering

Unit III: Data Mining Trends & Research Frontiers (10 Hours)

Mining complex data types, other methodologies of data mining, data mining applications, data mining & society, data mining trends

Mining Unstructured Data: Text mining

What is unstructured data? Importance of text mining, characteristics of text mining, steps in text mining: Representation of text documents, preprocessing techniques, feature selection, constructing a vector space model, predicting and validating the text classifier

Practical Exercises:

The learners are required to:

1. solve a manufacturing problem based on a data mining model.
2. evaluate data warehousing and analytical processes in supply chain management .
3. apply text mining in observing trends on social media.

Essential/ Recommended readings

		Lecture	Tutorial	Practical/ Practice		
Life Skills and Communication MBABA208	2	2	0	0	**Pass in Graduation**	**NIL**

Learning Objectives: To build understanding and perspective about life beyond profession.

Learning Outcomes:

After completion of the course, learners will be able to:

- understand the meaning, grand narrative of life and the concept of leverage psychological capital.
- analyse the role of society and technology in life.
- explore nuances of communication and the role of life skills in various aspects.

Syllabus:

Unit I-Introduction (10 Hours)

Ontological perspective of life; Meaningfulness and mindfulness; Understanding personal and organizational outcomes of meaningfulness and mindfulness; Notion of time; Understanding psychological capital - Hope, efficacy, resilience and optimism; Developing strengths and living well; Happiness and pleasure dialogue.

Unit II- Society Technology Interface (10 hours)

Role of technology in shaping present day society; Role of Digital Literacy in professional life; Trends and opportunities in using digital technology in workplace; Social interaction and changing paradigm of physical, digital and biological world.

Unit III-Effective Communication and Life Skills (10 hours)

Principles of effective communication; Verbal, non- verbal and listening skills; Learning Team skills and Career skills; Creating persuasive communication and avoiding common mistakes in communication at personal,

interpersonal and organizational level; Understanding role of life skills for increasing employability and entrepreneurship, meaning and significance of good work; Case Studies of Successful Entrepreneurs

Practical Exercises

The learners are required to:

1. Group discussion on personal and organizational outcomes of meaningfulness and mindfulness
2. Participate in simulation exercises in the classroom on focus and self-control and critical thinking.
3. Participate in simulation exercise and role play on Learning Team, reverse mentoring and engaged leaning. Learners may be assigned to draft an HR policy to combat work life issues assuming themselves as an HR manager.
4. Brainstorming session on how to strengthen cognitive impairments through therapeutic interventions.
5. Practical hands on exercise/sessions on happiness and pleasure dialogue to find out positive outcome towards life.
6. Conduct survey on role of technology and its impact on society.
7. Various role plays relating to verbal and non-verbal communication can be planned.
8. Brainstorming exercises can be conducted and case studies of successful entrepreneurs to be presented.

Corporate Governance , Ethics And Sustainability **MBABACC301**	**4**	**4**	**0**	**0**	**Pass in Graduation**	**NIL**

Learning Objectives

The course aims to develop the understanding about the role of corporations in society and boards‟ role in keeping oversight on the functioning of the company, global developments in Governance and Corporate Citizenship. The course will also provide necessary knowledge and skills for building professional boards, stakeholder engagement and shareholder activism.

Learning outcomes

After completion of the course, learners will be able to:

- Create a framework for effective corporate governance by understanding the role and responsibility of different stakeholders in large corporates and how their interplay results in alternate governance structures in different countries.
- Appreciate the accountability of corporations towards its stakeholders and society and to create an integrated value framework for sustainability.
- Serve as an effective board member, build professional boards and as senior managers contribute in strengthening board performance.
- Know about rights and responsibilities of shareholders.
- Build and monitor systems that have strong internal controls to prevent corporate frauds.

SYLLABUS

Unit I- Concepts and Framework: (10 Hours)

Understanding Corporate governance, Shareholders, Stakeholders; Type of directors: Insider and outsider, executive and non-executive, Independent, Nominee; Ownership and Control; Theories and development of corporate governance; Models: Types and basis of adoption; Principles of corporate governance;

Unit II- Boards and Directors: (16 Hours)

Role of board; Board composition, independence, and committees; Board leadership: Splitting chairman and CEO, CEO succession, lead director; Board processes and meetings, Building professional Boards – Directors' selection, compensation and stock options, directors‟ training and competence, board diversity, board evaluation; Boards oversight of CEO.

Unit III- Stakeholders and Shareholder: (14 Hours)

Shareholders rights and responsibilities; Differential voting rights; Voting mechanism; Class action suit; Rights of minority shareholders; Activism – Exit or voice, shareholder proposals, institutional activism, stewardship code, foreign institutional investors, proxy advisory firms; Family controlled firms: Stages, convergence of ownership and control, Family governance, Family splits and succession planning, Insider Trading; Whistle Blowing;

Unit IV - Financial Oversight, Risk Management and Corporate Scams: (10 Hours)

Internal control; Reliability of financial statements; Audit and auditors: Selection, rotation and role; Audit committee: Composition and role; Risk management; Related party transactions. Corporate Scams across countries and their implications.

UNIT V-Ethics, Sustainability and Responsible Investment: (10 Hours)

Ethical theories and business decisions; Business ethics; Code of ethics, Sustainable development goals, role of company in Sustainable development, Sustainable reporting, Integrated reporting, Sustainability index, Sustainability impact matrix-ESG methodology, carbon estimate models. Climate Governance. Corporate social responsibility- Meaning and models; CSR and strategy, CSR in India.

Practical Exercises:

The learners are required to

1. Analyze the cases- Poly Peck International, UK, 1991, Maxwell Corporation, UK, 1991, Bank of Credit and Commerce International, UK, 1991-92, World.com, US, 2001, Vivendi, France, 2002, Kingfisher, India, 2012 to under governance concerns that led to the governance movement

2. Analyze Case - Enron, US, 2001 to examine the importance of effective board and independent directors. The ICICI~Videocon Ltd and Chandra Kochhar, India, 2018 to be evaluated to understand Conflict of interest/ Quid-pro-quo.

3. Tata Group and Cyrus Mistry, India, 2016 Case to be analysed to assess governance issues in family owned firms. Critically analyse DHFL fiasco. Analyse case Rajat Gupta, USA, 2010-12 to understand the concept of insider trading.

4. Analyze Nick Leeson and Barings Bank, UK, 1991-93, Punjab National Bank and Nirav Modi, India, 2018 to develop Internal Control systems. Scrutinize the case - Satyam Computers, India, 2008 to understand the need for financial oversight, role of audit committee and need for audit effectiveness.

5. Examine corporate governance report and responsibility reports of different companies, examine

components of CSR reports of different companies.

Essential/ Recommended readings

- Companies Act, (2013), Parliament of India.
- *Robert, A. G. Monks & Nell, Minow (2011). Corporate Governance.* John, Wiley & Sons.
- Satheesh, Kumar T.N. (2010). Oxford Governance.
- SEBI (2015), Chapter IV, Listing Obligations and Disclosure Requirements Regulations.
- Sharma, J.P. (2016). Corporate Governance, Business Ethics and CSR.
- Tricker, B. (2012). *Corporate Governance*. Oxford.

Additional Readings

- Financial Aspects of Corporate Governance Report, 1992, UK.
- OECD Principles of CG 2015, retrieved from http://www.oecd.org/daf/ca/Corporate-Governance- Principles-ENG.
- Sarbanes-Oxley Act of 2002, USA.
- SEBI, Prohibition of Insider Trading Regulations, 2015.

Master of Business Administration (Business Analytics)

MBA (BA)
Semester III

Marks: 50 **Duration-30 Hrs.**

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Using Python for Analytics **MBABACC302**	2	1	0	1	**Pass in Graduation**	**NIL**

Learning Objectives

The course aims to impart knowledge about python programming language and its applications in the business world and to provide hands-on-training to use various tools and libraries of Python for advanced data analytics with real and simulated datasets to solve real and complex business analytics problems including predictive analytics, data mining and machine learning.

Learning outcomes

The Learning Outcomes of this course are as follows:

1. understand the main features of Python and its applications for Analytics,
2. learn & use tools and techniques of Python to explore, analyze and solve the real business world problems,
3. analyze and solve various real-life problems of Finance, HR and Marketing,
4. present business data through specialized visualization tools,
5. learn basics of data mining techniques using Python
6. learn basics of machine learning techniques using Python

Unit I: The Python Fundamental and Descriptive Statistics using Python (12 Hours)

Anaconda, IDEs-Jupyter, Pycharm; GIT- Configuration with IDEs, Creating and Managing Analytics Projects, Basic Data Structures, Programming Constructs, Libraries-Numpy, Pandas, Matplotlib, Data Wrangling, Managing Missing values, Outliers Detection, Various types of Joins, merge, Partitioning data into train and test set, Scaling of data, Descriptive Statistics: measures of central tendency, measures of dispersion.

Unit II: Graphical Representation of Data (4 Hours)

Selection of Graph, Basic Graphs- histogram, Bar Plot, boxplot, pie etc., Libraries- Matplotlib, seaborn, plotline; Advanced Graphs, Exploratory visualization and Explanatory visualization, Exporting Graphs.

Unit III: Predictive Statistical Modeling (14 Hours)

Hypothesis Testing, Correlation, Linear Regression, Logistic Regression, ANOVA, Exploratory Factor Analysis, Principal Component Analysis, Time Series Analysis- ARMA & ARIMA models, Forecasting.

Note: The main focus will be the demonstration and hands-on training exercise classes which will be held in the computer lab on the latest and relevant libraries of Python. Latest versions and libraries of the Python programming language will be used to provide hands-on training / demonstration in the class.

Practical Exercises:

The learners are required to:

1. analyse the data with the help of descriptive statistics.

2. evaluate the data by applying exploratory visualisation.
3. compute output of secondary/primary data with the help of predictive statistical modelling.

Essential/ Recommended readings

1. Pilgrim, M., & Willison, S. (2009). *Dive into python 3* (Vol. 2). New York, NY, USA: Apress.
2. Raschka, S. (2020). *Python machine learning*. Packt publishing ltd.
3. Mitchell, T. M., & Mitchell, T. M. (1997). *Machine learning* (Vol. 1, No. 9). New York: McGraw-hill.
4. Joshi, P., Hearty, J., Sjardin, B., Massaron, L., & Boschetti, A. (2016). *Python: Real world machine learning*. Packt Publishing Ltd.
5. Kumar, M. (2022). *Business Analytics using Python.* Excellence Brings Success
6. Liu, Y. H. (2020). *Python Machine Learning By Example: Build intelligent systems using Python, TensorFlow 2, PyTorch, and scikit-learn*. Packt Publishing Ltd.
7. Massaron, L., & Boschetti, A. (2016). *Regression analysis with Python*. Packt Publishing Ltd.

Master of Business Administration (Business Analytics)

MBA (BA)
Semester III

Marks: 100 **Duration-60 Hrs.**

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Artificial Intelligence and Machine Learning **MBABACC303**	4	3	0	1	**Pass in Graduation**	**NIL**

Learning Objectives

To provide solutions to hard and unsolvable problems using a reasonable amount of time, by exploiting the knowledge of the problem domain. In view of the significance of knowledge in AI, in this course, a number of knowledge representation formalisms are introduced. Currently these two fields i.e. Artificial Intelligence and Machine Learning are in high demand, the course will help the learners to build the understanding of these fields.

Learning outcomes

After completion of the course, learners will be able to:

- Recognising if a particular problem can be viewed as a Machine Learning problem.
- Breaking down standard Machine Learning problems into more fundamental problems using tools from Calculus, Linear Algebra, Probability and Optimisation.
- Recognising relationships between equation solving, projection onto a subspace, and the supervised learning problem of linear least squares regression.
- Using, identifying failure modes, programming and debugging simple gradient descent methods for solving unconstrained optimisation problems.
- Demonstrating understanding of machine learning algorithms - model, objective or loss function, optimization algorithm and evaluation criteria.

SYLLABUS

Unit-I Introduction and Foundation (12 Hours)

What is AI - Examples of AI systems, Approaches to AI, Brief history of AI, Comparison Between Artificial intelligence, Machine Learning, and Deep Learning , Intelligent Agent. : stimulus response agents. components of intelligence.

Introduction to machine learning - Calculus, Linear Algebra - Least Squares Regression, Linear Algebra - Eigenvalues and eigenvectors, Linear Algebra - Symmetric matrices, Linear Algebra - Singular value decomposition, Principal Component Analysis in Image Processing, Unconstrained Optimisation , Convex sets, functions, and optimisation problems, Constrained Optimisation and Lagrange Multipliers. Logistic regression as an optimization problem, Examples of probabilistic models in machine learning problems, Exponential Family of distributions, Parameter estimation. Expectation Maximization.

Unit – II AI – Search (12 Hours)

Problem Solving using Search - Single agent search : Introduction to State Space Search, Statement of Search problems:, state space graphs , Searching explicit state spaces. Feature based state spaces. Problem types, examples (puzzle problem, n-queen, the road map) Two agent search : Adversarial search: Two agent games(alpha-beta pruning). MinMax Search.

Uninformed and Informed Search –Uninformed Search: Formulating the state space, iterative deepening, bidirectional search. Informed Search Strategies : Using evaluation functions. A* & AO* , admissibility of A* , Iterative deepening A*, recursive best first search.

Unit-III AI - Knowledge Representation (8 Hours)

First Order Logic – First Order Logic : Motivation, Syntax, Interpretations, semantics of quantifiers, Entailment in FOL, Interpretation ,Inference in FOL : First Order resolution. Conversion to clausal form. Unification. Most general unifier. Resolution with variables Proving validity.

Rule based Systems and other formalism - Rule Based Systems : Forward chaining. Backward chaining. Conflict resolution. Semantic nets, Frames, Scripts.

Probabilistic Reasoning - Reasoning with uncertain information Review of Probability Theory, Introduction to Bayesian Theory, Baye's Networks, Probabilistic Inference, Basic idea of inferencing with Bayes networks. Other paradigms of uncertain reasoning. Dempster-Scheffer Theory

Unit IV – ML Methods (Supervised Learning) (14 Hours)

Introduction to Machine Learning Methods – Introduction to Machine Learning, Techniques of Machine Learning, Reinforcement Learning and algorithms, Deep Learning and its Algorithms, Ensemble Methods.

Classification – Understanding of Supervised Learning, Introduction to Classification, Classification Algorithms: Naïve Bayes, K-NN, Decision Trees, Logistic Regression, Support Vector Machines.

Regression – Introduction to Regression , Regression algorithm Linear Regression and Polynomial Regression, Support Vector Regression

Unit V – ML Methods (Unsupervised Learning) (14 Hours)

Feature selection and Extraction - Introduction to Feature Selection and Extraction, Dimensionality Reduction, Principal Component Analysis, Linear Discriminant Analysis, Singular Value Decomposition.

Association Rules – Introduction to Pattern search and its algorithms :Apriori Algorithms. And its variants, FP Tree Growth, Pincer Search.

Clustering – Introduction to Clustering, Types of Clustering, Partition Based , Hierarchical Based, Density Based Clustering Techniques, Clustering algorithms : K means, Agglomerative and Divisive, DBSCAN, Introduction to Fuzzy Clustering.

Neural Networks and Deep Learning : Overview of Artificial Neural Networks, Multilayer Feedforward Neural networks with Sigmoid activation functions; Back propagation Algorithm; Representational abilities of feed forward networks, Feed forward networks for Classification and Regression, Deep Learning

Essential/ Recommended readings

Master of Business Administration (Business Analytics)

MBA (BA)
Semester III

Marks: 100 **Duration-60 Hrs.**

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
HR Analytics MBABACC304	4	3	0	1	**Pass in Graduate**	

Learning Objectives

To develop data driven skills in students. The course will enable students to apply analytical tools in understanding employees' behavior.

Learning outcomes

After completion of the course, learners will be able to:

- understand role of analytics in human resource management.
- develop knowledge about HR metrics and types of analytics in HR.
- critically analyse the HR effectiveness and its impact on employee life cycle & experience.
- analyse data driven insights out of HR analytics.
- help in implementation of predictive modelling and dashboards in HR

SYLLABUS

Unit I- Introduction to HR Analytics (5 Hours): Evolution of HR analytics, challenges with HR Analytics, strategic focus on HR Analytics; Common pitfalls of HR Analytics; HR analytics process and skill-set needed in HR analytics team.

Unit II- Approaches to Data Analytics (15 Hours): Current approaches to measuring HR; Strategic HR metrics versus Bench marking; HR scorecards & workforce scorecards; Types of analytics in HR- descriptive, predictive and prescriptive; HR analytics framework.

Unit III- Dynamics of HR Metric (10 Hours): People analytics cycle, employee lifecycles and employee experiences, performance- and succession management; Agile framework; HR value chain; Metrics to measure HR effectiveness; Factors driving employee turnover, link between engagement and performance; Competitive edge and HR analytics.

Unit IV- Data Mining Techniques (15 Hours): Data analysis, data visualization techniques and effective utilization using tools; Common pitfalls associated with data visualization; Driving insights out of HR analytics.

Unit V- Decision Making Based on Analytics (15 Hours): Data driven culture in an organization;

Implementation of predictive modelling; Importance of predictability in fulfilling strategic objectives; Effective HR dashboards.

Practical Exercises:

1. Data analysis, data visualization techniques and effective utilization using tools.
2. Common pitfalls associated with data visualization.
3. Driving insights out of HR analytics.
4. Data driven culture in an organization;
5. Implementation of predictive modelling; Importance of predictability in fulfilling strategic objectives;
6. Effective HR dashboards.

Essential/ Recommended readings

Reading List (Unit wise)

- Edwards, M. & Kirsten Edwards, K. (2016). *Predictive HR Analytics: Mastering the HR Metric.* Kogan Page.
- Isson, J.P. Harriott & J.S. (2016). *People Analytics in the Era of Big Data: Changing the Way You Attract, Acquire, Develop, and Retain Talent.* John Wiley & Sons.
- James, E.R. (2017). *Business Analytics*. UK: Pearson Education Limited.
- Van, Wieren S. (2017). *Quantifiably Better: Delivering Human Resource (HR) Analytics from Start to Finish.* Technics Publications LLC

Note: Readings will be updated by the Department of Commerce and uploaded on Department's website.

Master of Business Administration (Business Analytics)

MBA (BA)
Semester III

Marks: 100 **Duration-60 Hrs.**

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Marketing Analytics **MBABACC 305**	4	3	0	1	**Pass in Graduation**	**NIL**

Learning Objectives

The course will provide learners a strong foundation in marketing analytics in order to handle diversified marketing data, build advanced analytical models and deliver effective visualization product and comprehensive reports.

Learning outcomes

After completion of the course, learners will be able to:

- Comprehend the concept of marketing analytics and various analytical modelling.
- Understand the marketing segmentation and various business strategy.
- Understand the dynamics of product, service and price analytics.
- Evaluate the promotion budget and allocation.
- Understand the analytics in action.

SYLLABUS

Unit I: Concept and Marketing Insight (12 Hours)

Concept of marketing analytics, analytical modelling and metrics in marketing, Marketing Insight: sources of market data, market sizing, porter five forces analysis, STEEPLE model.

Unit II: Market Segmentation and Business Strategy (12 Hours)

Market segmentation: market segmentation, target market, marketing positioning. Business strategy: strategic scenarios and strategic decision models, business forecasting, predictive analytics in marketing, data mining, balanced scorecard, critical success factors.

Unit III: Product, Service and Price Analytics (12 Hours)

Product and Service Analytics: Conjoint analysis, portfolio resource allocation, decision tree models, product and service metrics, attribute preference testing. Price analytics: pricing techniques and assessments, price metrics, profitable pricing, price discrimination.

Unit IV: Promotion and Distribution Analytics (12 Hours)

Promotion Analytics: Promotion budget estimation and allocation, promotion metrics for traditional and social media marketing. Distribution Analytics: Designing distribution channel, channel evaluation and selection, managing conflicts and control in channels.

Unit V: Sales Analytics and Analytics in Action (12 Hours)

Sales Analytics: Consumer sales process, e-commerce sales model, prescriptive marketing sales metrics, profitability metrics, support metrics. Analytics in Action: Rapid decision models, metrics in marketing campaigns, excel excellence, data driven presentations.

Practical Exercises:

The learners are required to

1. Identify a company and evaluate its STEEPLE model.
2. Prepare a comparative analysis of companies based on market segmentation, their target market and their marketing positioning
3. Discuss various types of price discrimination techniques adopted in different industries.
4. Discuss the impact of promotion and distribution Analytics.
5. Apply predictive and prescriptive analytics to solve marketing problems.

Essential/ Recommended readings

- Sorger, S. (2013), Marketing Analytics: Strategic Models and Metrics, Admiral Press.
- Winston, W.L. (2014), Marketing Analytics: Data-Driven Techniques with Microsoft Excel, Wiley, First Edition.
- Etzel, M. J., Walker, B. J., Stanton, W. J., & Pandit, A. (2010). Marketing (14th ed.). Mc Graw Hill.
- Grewal, D., & Levy, M. (2022). Marketing (8th ed.). McGraw-Hill Education.
- Kapoor, N. (2021) Principles of Marketing, Prentice Hall of India.
- Kotler, P., Keller, K L., & Chernev, A. (2022). Marketing Management (16th Edition).
- Pearson Education.
- Kotler, P., Armstrong, G. & Agnihotri, P. (2018). Principles of Marketing (17th
- Edition), Pearson Education. Indian edition.
- Sharma, K., & Swati Aggarwal. (2021). Principles of Marketing. Taxmann Publications.

Notes:

1. Latest edition of the readings may be used.
2. Relevant software will be used for pedagogical purpose. Evaluation of practical exercise using software will be part of internal assessment. Further, case studies related to above topics are required to be discussed.
3. Suggested readings will be updated by the Department of Commerce and uploaded on Department's website.

Master of Business Administration (Business Analytics)

MBA (BA)
Semester III

Marks: 100 **Duration-60 Hrs.**

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical / Practice		
Financial Analytics MBABACC306	4	3	0	1	**Pass in Graduation**	**NIL**

Learning Objectives

The objective of this course is to develop financial data analytical skills in students. The course will enable students to arrive at diversified and optimum financial decisions analytically.

Learning outcomes

After completion of the course, learners will be able to:

1. understand role of analytics in finance.
2. develop knowledge about business valuation and types of methods used in valuation.
3. apply predictive modelling techniques in analyzing financial data for decision making.
4. understand derivative pricing and role of real options in business decisions.
5. develop a sound investment strategy considering market and credit risk.

SYLLABUS

Unit-I - Introduction to Financial Analytics (5 hours): Definition, relevance and scope financial Analytics, recent trends in financial analytics, Concept of Primary Data and Secondary Data, Concept of Supervised and Unsupervised learning.

Unit-II - Business Valuation Analytics (15 hours): Financial and Cost Modelling using Spreadsheets, Company Business Model Analysis, Company Profitability Analysis, Product Profitability Analysis, Financial Statements and Projections - Discounted Cash Flow Analysis, Comparable Company Analysis, Precedent Transactions Analysis etc.

Unit-III - Predictive Analysis in Finance (10 hours): Simple linear regression: coefficient of determination, significance tests, residual analysis, confidence and prediction intervals. Multiple linear regression: coefficient of multiple coefficients of determination, interpretation of regression coefficients, categorical variables, heteroscedasticity, multi-collinearity, outliers, autoregression and transformation of variables, stock prices forecasting models using machine learning

Unit-IV - Derivative Pricing (15 hours): Issues regarding derivative markets, Brownian motion, Black-Sholes model, Monte-Carlo simulation. Use of real options for better financial decisions- Growth (or expansion) options, Abandonment options, Investment timing options and flexibility (input/output) options.

Unit-V - Portfolio Analytics (15 hours): Modelling Volatility and Risk: Characteristics of volatility. Modelling volatility using ARCH/GARCH models. Measuring and modelling risk. application of Value at Risk (VaR), building an optimum portfolio. develop a sound investment strategy considering market and credit risk. Credit Risk Modelling-Firm wide Risk, Business Risk, Non-Business Risk, building blocks of making a credit default model, Statistical Models in Credit Risk Measurement.

Practical Exercises:

1. Financial and Cost Modelling using Spreadsheets
2. Multiple linear regression
3. Use of real options for better financial decisions
4. Modelling Volatility and Risk.
5. Modelling volatility using ARCH/GARCH models.
6. Apply predictive and prescriptive analytics to solve financial problems.

Master of Business Administration (Business Analytics)

MBA (BA)
Semester III

Course MBABACC307: SUMMER INTERNSHIP PROJECT REPORT

Marks: 50 Duration-30 Hrs.

OPEN ELECTIVE COURSES

Master of Business Administration (Business Analytics)

MBA (BA)
Semester III

Marks: 100 **Duration-60 Hrs.**

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Skills and Techniques of Accounting **COMOE03**	**4**	**3**	**0**	**1**	**Pass in Graduation**	**NIL**

Learning Objectives

To impart skills of maintaining and recording various kinds of business transactions and accounting information using computerized accounting software.

Learning Outcomes

After completion of the course, learners will be able to:

- Evaluate the application of relevant accounting standards and Ind AS in the preparation of financial statements.
- Analyze the manual and computerized accounting system environment.
- Generate financial statements using Tally.
- Generate Bank Reconciliation Statements using Tally.
- Analyze the concept and applications of payroll accounting in managerial decision making.

Unit I: Introduction to Accounting Standards (10 Hours)

Relevance of accounting standards and Ind AS in the preparation of financial statements with special emphasis on Inventories; Property, Plant and Equipment; Leases; Statement of Cash Flows.

Unit II: Computerized Accounting System (10 Hours)

Introduction to accounting; Concept of computerized accounting system, advantages and disadvantages of computerized accounting system.

Unit III: Accounting in Tally (20 Hours)

Introduction, company creation, vouchers creation, transactions recording, outstanding report of customers and suppliers.

Maintaining inventory details, creation of price list, godowns detail, warn on negative stock and cash balance, maintaining bill wise details.

Generating various financial statements and reports- balance sheet, profit and loss account, funds flow statement, cash flow statement, day book, account book, inventory books, trial balance, exception reports.

Basics of GST in Tally- purchase and sales of goods entry for GST purpose; Single and multiple tax rate entries; Service tax entry; Use of GST classification; Entries related to reverse charge mechanism; GST on packing charge and discount in sales purchase entry; Entry for cess based on value and quantity; Application of GST for selling single item at different prices; Entry for ineligible ITC.

Unit IV: Bank Reconciliation Statement (10 Hours)

Concept of bank reconciliation statement, need of bank reconciliation statement; Bank Reconciliation Statements using tally.

Unit V: Payroll Accounting (10 Hours)

Concept and uses of payroll accounting; Payroll accounting using tally.

Note: Case-based analysis and relevant software will be used for pedagogical purposes. Evaluation of practical exercise using software will be part of internal assessment.

Practical Exercise:

The learners are required to:

1. Download the financial statements of any publicly listed company. Evaluate the application of relevant accounting standards and Ind As in the preparation of these financial statements.

2. Compare and contrast the computerized accounting system of any 2 firms operating in different industries.

3. For any hypothetical firm, make appropriate entries and generate financial statements using Tally.

4. For any hypothetical firm, make appropriate entries and generate bank reconciliation statements using Tally.

5. Create a hypothetical payroll solutions system for any firm.

Suggested Readings:

- Goyal, V. K. & Goyal, R. (2013). *Financial Accounting*. PHI Learning Pvt. Ltd.
- Tally Education Private Limited: Computerized Accounting Using Tally.ERP9
- Schroeder, Richard G., Clark, Myrtle W. & Cathey, Jack M. (2005). *Financial Accounting Theory and Analysis, Text Readings and Cases*. John Wiley and Sons.
- Tally Education Private Limited: GST using Tally ERP 9

Note: Readings will be updated by the Department of Commerce and uploaded on Department's website.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Master of Business Administration (Business Analytics)

MBA (BA)
Semester III

Marks: 100 **Duration-60 Hrs.**

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Business Analysis Using Financial Statements **COMOE04**	**4**	**3**	**0**	**1**	**Pass in Graduation**	**NIL**

Learning Objectives

To enable students, through analysis of financial statements, to identify the imperfections in the financial statements and frame strategic action and to gain knowledge of the application of valuation principles and techniques in business environment.

Learning Outcomes

After completion of the course, learners will be able to:

- Analyze and interpret the quantitative information provided in the Financial Statements of a company.
- Evaluate the firm's performance and position by analyzing the cash flow statement and earnings quality.
- Compute and analyze accounting ratios of a company;
- Apply different business valuation models
- Apply valuation principles and techniques in the business environment to make valuation estimates.

Syllabus:

Unit I: The Framework for doing Business Analysis using Financial Statements (10 Hours)

The analysis of the statement of shareholders' equity- the analyst's checklist, reformulating the statement of owners' equity, comprehensive income reporting, financial analysis – ratio analysis and report writing.

Unit II: The Analysis of the Balance Sheet and Income Statement (10 Hours)

The analyst's checklist, reformulation of the balance sheet, reformulation of the income statement- tax allocation, issues in reformulating income statements, comparative analysis of the balance sheet and income statement (common size analysis, trend analysis), the analysis of cash flow statement and quality of earnings.

Unit III: The Analysis of Profitability (10 Hours)

Du Point analysis, cutting to the core of operations (the analysis of profitability); Analysis of changes in profitability and sustainable earnings.

Unit IV: Business Valuation Basics (15 Hours)

Principles and techniques of valuation – DCF, multiple methods, accounting based valuation, asset valuation; Earning valuation; Cash flow valuation; Other valuation basis, forms of intellectual property and methods of valuation, human resource accounting.

Unit V: Valuation of Assets and Liabilities (15 Hours)

Valuation of fixed assets, valuation of inventories, valuation of investments, valuation of share, valuation of goodwill, patents and copyrights, valuation of real estate, valuation of liabilities.

Note: Case-based analysis and relevant software will be used for pedagogical purposes. Evaluation of practical exercise using software will be part of internal assessment.

Practical Exercise:

The learners are required to:

1. Download annual reports of reputed companies from the websites and analyze the information contained in the financial statements.
2. Prepare cash flow statement from the information available in the financial statements.
3. Select any 5 companies. From their financial statements compute accounting ratios to examine operating efficiency, profitability, liquidity, and solvency of the company.
4. Estimate the value of any company by employing different valuation methods.
5. Select any company. Estimate the value of its tangible/intangible assets and liabilities from the information available in its financial statements.

Suggested Readings:

- Penman, Stephen H. (2017). *Financial Statement Analysis and Security Valuation*. McGraw Higher Ed.
- Wahlen, J., Baginski, S. & Bradshaw, M. (2015). *Financial Reporting, Financial Statement Analysis, and Valuation: A Strategic Perspective*. Cengage Learning.
- White, Gerald I., Sondhi, Ashinpaul C. & Fried, Dov. (2003). *The Analysis and Use of Financial Statement.* Wiley.

Note: Readings will be updated by the Department of Commerce and uploaded on the Department's website.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Master of Business Administration (Business Analytics)

MBA (BA)
Semester III

Marks: 100 **Duration: 60Hrs.**

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Financial Markets and Institutions COMOE08	**4**	**4**	**0**	**0**	**Pass in Graduation**	**NIL**

Learning Objectives

The course aims to provide students a critical overview of the financial system to help them understand the role of financial institutions and financial markets in the global context with special emphasis on financial stability.

Learning Outcomes

After completion of the course, learners will be able to:

1. Examine the meaning, components and functions of a financial system.
2. Analyze the impact of different factors on interest rate; the shape and relevance of the yield curve.
3. Analyze the functioning of money and capital markets and the challenges associated with their regulation.
4. Examine the role and relevance of different types of non depository institutions like mutual funds, pension funds, insurance, venture capital, private equity, hedge funds and their regulation.
5. Assess the functioning of banks, analyze their balance sheets and off balance sheet activities and critically examine banking regulation.

Syllabus

Unit I : Introduction (8 Hours)

Overview of financial markets and financial instruments, role of financial institutions, depository and non-depository institutions, consolidation & competition among financial institutions, financial conglomerates.

Overview of the Indian financial system including financial sector reforms; Other contemporary issues in finance.

Unit II: Interest Rate (12 Hours)

Loanable funds theory; Economic forces affecting interest rates; Factors affecting yield differentials of debt instruments; Term structure of interest rates- pure expectations theory, liquidity premium theory, segmented markets theory & preferred habitat theory, yield curve. Monetary policy and its transmission.

Unit III: Financial Markets (12 Hours)

Money markets-organization, economic role, instruments & regulation; Capital markets- primary & secondary markets and their organization; Different types of market structures, short selling and its implications, buying on margin; Stock market indicators, their methods of computation and implications of the same; Security market regulation and stability.

Unit IV: Non Depository Institutions (13 Hours)

Mutual funds- types of mutual funds schemes, ETFs, expenses associated with mutual funds; An overview of Indian mutual funds industry; Hedge funds, venture capital funds, private equity funds;Fintech; Regulation.

Pension Funds- issues in saving for retirement & role of the financial system; Defined benefit & defined contribution pension plans, pension funds as financial intermediaries and their regulation; An overview of Indian pension fund industry including national pension system.

Insurance- Incentive problems in insurance-moral hazard & adverse selection, pure premium, premium smoothing etc. reinsurance, catastrophe insurance, captive insurance; Regulation; An overview of the Indian insurance industry.

Unit V: Banking (15 Hours)

An overview of the banking industry, balance sheet of a bank, sources & uses of funds of banks, fee based & off balance sheet activities; Securitization; Bank earnings & bank performance, investment banking; Bank failure & regulation; Reasons for banks being heavily regulated, bank run, deposit insurance, capital adequacy regulation, bank examination etc. A critique of the Basel norms, The problem of moral hazard & too big to fail institutions; RBI and its policy evolution.

Practical Exercise –

The learners are required to –

1. Identify one Indian and one global financial conglomerate and examine their genesis and evolution.
2. Compare the yield curve of India, another developing country and a developed country. Analyze the reasons for similarities and differences.
3. Pick three leading stock market indices in the world, analyse their method of computation, reasons behind the differences and their implications.
4. Analyze the global reinsurance industry, its main players and recent trends.
5. Identify one global systemically important financial institution (G-SIFI), and one domestic systemically important financial institution (D- SIFI) and compare their functioning through their balance sheets and other information.

Suggested Readings:

- *Annual Report*. Insurance Regulatory and Development Authority.
- *Annual Report*. Pension Fund Regulatory and Development Authority.

- *Annual Report*. Securities and Exchange Board of India.
- Fabozzi, F., Modigliani, F. & Jones, F. (2013). *Foundations of Financial Markets and Institutions*. Pearson.

Semester III

Marks: 100 **Duration-60 Hrs.**

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Planning For Personal Finance **COMOE09**	**4**	**3**	**0**	**1**	**Pass in Graduation**	**NIL**

Learning Objectives

To enable critical thinking in students with respect to analysis and application of innovative solutions to varied financial problems.

Learning outcomes

After completion of the course, learners will be able to:

- Evaluate the premise of financial planning and identify financial goals.
- Critically evaluate the investment instruments suitable for different financial goals in different time spans.
- Analyze the investment process in the primary market.
- Evaluate different avenues for credit planning, retirement planning as well as estate planning.
- Evaluate different investment alternatives and create financial plans.

SYLLABUS:

Unit I: Financial Planning & Investment Environment (14 Hours)

Financial planning process and life cycle approach, ascertainment of financial goals; Application of investment alternatives in financial plans – including Mutual Funds, Index Funds, ETF, Real Estate Investment Trusts (Reits),Infrastructure Investment Trust (Invits), SIP/SWP/STP, Management of Direct Investments in all instruments

Unit II: Diversity in Financial Planning: **(16 Hours)**

Planning for life insurance and health insurance; Primary clauses in life and healthcare insurance agreement; Application of Compounding and Indexing; Critical Analysis of instruments based on CAGR of return,

Identification of Common Stocks with Uncommon Profits; Identification of Competitive Durable Advantage of Equity; Equity with Moat; Principles and variables of Value investing system, Balancing Debt and Equity.

Unit III: Investment in Primary Market: (8 Hours)

Concept of Initial Public Offer (IPO), FPO, Offer for sale, Private Placement; IPO Process; Evaluating IPO for investment or listing gains, Categories of IPO: Traditional and Contemporary. Debt instruments.

Unit IV: Credit & Retirement Planning: (10 Hours)

Assessment of credit; Consumer and housing finance; EMI : Calculations & Long term Impact, Rent or buy decisions of house property, Optimal use of education loan, Credit card management; Overdraft protection, Credit history, Retirement solutions, Analysis of retirement planning, pension plans including taxes and inflation, Reverse mortgage ; Estate planning- Objectives of will, creating a valid will; Power of attorney.

Unit V: Building Financial Plans: (12 Hours)

Critical analysis of investments; Insurance and Tax saving Instruments; Risk assessment of individual; Building financial plans using spreadsheets; Evaluation of financial plan.

Note: Relevant software will be used for pedagogical purposes. Evaluation of practical exercise (if any) using software will be part of internal assessment.

Practical Exercises:

The learners are required to-

1. Collect newspaper articles to observe the latest and trending investment alternatives preferred by the investors and identify the reasons thereof.
2. Visit a bank of their choice. Prepare a presentation on various investment alternatives and services provided by that bank and suitability of these alternatives with respect to financial goals.
3. Prepare a report on changes that took place in health and life insurance policies post COVID 19.
4. Discuss the functions of an investment banker in the IPO process in a group discussion.
5. Build financial plans for your family members post retirement. Identify different financial instruments that they should invest in for meeting their financial needs after retirement.
6. Based on your financial goals, prepare a hypothetical financial plan using various investment alternatives.

MBA (BA)
Semester III

Marks: 100 **Duration-60 Hrs.**

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Investment Management **COMOE10**	4	3	0	1	**Pass in Graduation**	**NIL**

Learning Objectives

To equip the students with essential tools, techniques, models, and investment theory necessary to analyze securities and portfolios so as to make sound investment decisions and optimal portfolio choice.

Learning outcomes

After completion of the course, learners will be able to:

- Analyze the investment environment and assess risk-return trade off in case of financial investments
- Evaluate the risk and yields of bonds and perform bond valuation.
- Analyze equity stocks using different approaches and models.
- Construct, analyze, select, and evaluate portfolios along with a deep understanding of capital
- market theory and associated models.
- Analyze futures and options, use various options trading strategies and critically examine various
- innovations in the derivatives market.

SYLLABUS

Unit I: Introduction (8 Hours)

The investment environment, various investment alternatives and risk return trade off; Investment decision process; Risk aversion; Types of investors; Risk-return analysis and impact of taxes and inflation; Types and sources of returns and risks and their measurement; Diversification and hedging; Socially responsible investing, ethical investing and other contemporary issues in investment management.

Unit II: Bond Analysis (10 Hours)

Bond fundamentals; Types of bonds; Innovations in bond market; Valuation of bonds; Bond yields (yield to maturity, yield to call, realized annual yield); Bond price- yield relationship; Bond convexity; Risks in bonds.

Unit III: Equity Analysis (12 Hours)

Approaches to security valuation; Fundamental analysis- Economy, Industry, Company Analysis (EIC framework); Equity valuation models (DDM, P/E Ratio model and free cash flow valuation approach); Technical analysis – basic premise and Dow theory; Types of charts and chart patterns; Moving average analysis; Market indicators and stock specific indicators including Bollinger bands; Odd lot theory; Efficient Market Hypothesis (EMH); Forms of market efficiency and their implications.

Unit IV:Portfolio Analysis, Selection and Management (16 Hours)

The concept and significance of portfolio; Types of Portfolio; Calculation of portfolio return and risk; Risk aversion; Optimal Portfolio Selection and Construction: Markowitz portfolio selection model, Sharpe's single index model and optimal portfolio construction, Capital Market Theory (including Separation Theorem), Capital Asset Pricing Model (CAPM); Stock market anomalies (size effect, value effect, seasonality effect, prior return effect, overreaction effect); Active and passive portfolio management; Investment strategies- value investing, momentum and contrarian strategies.

Unit V: Financial Derivatives (14 Hours)

Futures- features, types and payoffs; Pricing of financial futures (cost of carry model); Options- features, types, styles, payoffs and valuation (Black- Scholes option pricing model).Options trading strategies- bull spread, bear spread, straddle and butterfly spread; Exotic options and other innovations in derivatives market including swaps.

Note: Relevant software will be used for pedagogical purposes. Evaluation of practical exercise (if any) using software will be part of internal assessment.

Practical Exercises:

The learners are required to:

1. Extract historical data on daily/monthly/annual prices for stocks in an index from a financial database. Evaluate them in terms of risk and return using an appropriate software.
2. Participate in a group discussion on 'Verifying the existence of Bond price – yield relationship in today's times with real life examples'.
3. Estimate the Yield-to-Maturity, Duration, and Convexity of a corporate bond using relevant software.
4. Apply moving average analysis on the stock price of any company. Evaluate whether to buy, sell or hold the stock for one month using spreadsheets. Further, learners are also required to assess their decision after one month of decision making.
5. a) Draft a case study to devise an investment strategy for yourself in the short term, based on your risk aversion level.
   b) Prepare a presentation to demonstrate real-life examples of stock market anomalies.
6. Select any 5 companies of your choice. Using appropriate models, forecast their future cash flows, growth rate and cost of capital. Estimate the intrinsic value of stocks of these companies using relevant software.

7. Select any 5 stocks of your choice. Extract past data on their prices and volumes from a financial database. Make investment decisions using appropriate technical analysis tools and techniques. Use any technical analysis software for this purpose.
8. Construct portfolios based on any firm attribute using past data on NSE 500 stocks. Assess the profitability of this investment strategy. Evaluate if the returns on this strategy are explained by standard risk models such as CAPM and F-F Model. Use relevant software for your estimations.
9. Build and analyze option strategies for Index and Stock options using any option building analytical tool.

Master of Business Administration (Business Analytics)

MBA (BA)

Semester III

Marks: 100 **Duration-60 Hrs.**

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Project Management (PM)-I COMOE11	4	3	1	0	**Pass in Graduation**	**NIL**

Learning Objective

The objective of the course is that students will be able to approach project management in the right perspective and understand all the essential concepts from both a theoretical and applied point of view.

Learning outcomes

After completion of the course, learners will be able to:

- Identify the elements of the PM life cycle, including plan, control, and organize and allocate resources.
- Analyze PM processes, Comprehend and become familiar with the use of basic tools and techniques to plan, organize, and manage a project
- Develop PM plan and managing project changes
- Establish appropriate project governance structure and how to deal with issues linked to PM.
- Discuss the various management issues in project governance

Syllabus

Unit I: Understanding Project Management (10 Hours)

Defining Project and Project Management: The project manager's role; Internal and external environment; Project structures; Project and product life cycles and PM processes

Unit II: Plan and manage project compliance (12 Hours)

Confirm project compliance requirements (e.g., security, health and safety, regulatory compliance) , Classify compliance categories , Determine potential threats to compliance

Analyze the consequences of noncompliance, Determine necessary approach and action to address compliance needs (e.g., risk, legal) The Project Management Office Rationale, Mission, goals and strategy, Financial analysis (Projections)

Evaluate project benefits and value

Investigate that benefits identified, Evaluate delivery options to demonstrate value and appraise stakeholders of value gain progress, Evaluate and address external business environment changes for impact on scope Survey changes to external business environment (e.g., regulations, technology, geopolitical, market), Assess and prioritize impact on project scope/backlog based on changes in external business environment

Unit III: Project Plan and Manage Project Change (13 Hours)

Preparation of PM Plan, Charter, Project justification, specifications nd constraints, limits, technical requirements, statement of work & Priority matrix, Work-Breakdown Structure, Graphical Vs outline format, work packages, log frame structure, learning of Log-framework structure on Open software.

Managing Project change in terms of scope, Executing change management strategy, Develop and determine change response to move forward.

Unit IV: Cost Estimation, Stakeholder engagement and Determining milestones (13 Hours)

Top-down and Bottom-up approach, parametric estimation, budget & contingencies, Stakeholder Engagement, identify stakeholders, manage stakeholders expectations, communication tools required.

Estimate project tasks (milestones, dependencies, story points), prepare schedule based on methodology, determine quality of products/ deliverables, identify quality gaps and mitigate them.

Unit V: Establish project governance structure (12 Hours)

Determine appropriate governance for a project (e.g., replicate organizational governance)
Define escalation paths and thresholds. Manage project issues. Recognize when a risk becomes an issue. Attack the issue with the optimal action to achieve project success. Collaborate with relevant stakeholders on the approach to resolve the issues. Plan and manage project/phase closure or transitions. Determine criteria to successfully close the project or phase. Validate readiness for transition (e.g., to operations team or next phase). Conclude activities to close out project or phase (e.g., final lessons learned, retrospective, procurement, financials, and resources)

Practical Exercises

The learners are required to:

1. Identify the stages of the project lifecycle and the different tools and techniques used in each stage
2. Develop and evaluate project plans on the basis of timing, cost and risk
3. Explore the project management process and how this is applied in the workplace.
4. Explain the criteria to successfully close the project or phase
5. Highlight the appropriate governance for a project through a case study

Suggested Readings

Semester III

Marks: 100 **Duration-60 Hrs.**

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
International Financial Management **COMOE12**	4	3	1	0	**Graduation in any field**	**NIL**

Course Objective:

To equip students with an understanding of the international financial system, its evolution and growing importance as well as challenges thrown up by increasing globalization of finance.

Learning Outcomes:

After completion of the course, learners will be able to:

- understand the relevance and implications of global imbalances.
- evaluate the factors affecting exchange rates and the inter linkages among them.
- analyse the evolution of the international monetary system both in terms of historical construct and its implications for the contemporary system.
- discuss the evolution and spread of international financial markets and the implications of globalized finance.
- evaluate the causes and consequences of financial crises in both developing and developed countries, the similarities and differences between the crises and implications of different ways of handling the crisis.

Syllabus:

Unit I-Introduction: (12 Hours)
Globalization and the multinational enterprise (MNE); Environment of International Financial Management; Complexities and issues in financial decision making of MNEs; Decisions in a global setting; Foreign Exchange Market- Spot and Forward market; Participants in foreign exchange market; Arbitrage, hedging and speculation; Covered interest rate arbitrage; Contemporary issues in international financial management.

Unit II-Cross-Border Investment Decision: (12 Hours)
Types of and issues in cross border investment decision; Green field investment vs. cross border M&As; Estimation of cash flows from cross border investment projects; Valuation techniques including adjusted present value method; Risks in cross border investment decision-currency risk, political risk, country risk, inflation risk etc; Techniques for incorporating risks in cross border investment decision.

Unit III-Working Capital Management in MNEs: (12 Hours)
International Cash management, International Inventory management and International receivables management;

International capital structure and cost of capital; Determinants of capital structure of MNEs; Dividend decision and policies of MNEs; International transfer pricing.

Unit IV-Managing currency Risk and Interest Rate Risk: (12 Hours)
Types of risk exposure - Transaction exposure, Economic exposure and Translation exposure; Measurement of risk exposure; Management of currency risk using currency forwards and futures, currency options and currency swaps; Assessment of interest rate risk; Management of interest rate risk using Interest rate futures, interest rate swaps and other financial swaps.

Unit V-International Diversification and Portfolio Investment: (12 Hours)
Global markets for equities; Risk factors in international investing; International diversification-risk and return aspects; International CAPM assuming no differences in consumption and no barriers to investment as well as assuming such differences; Identification of optimum portfolio; International Capital Market.

Practical Exercises:

The learners are required to:

1. trace the evolution of international financial markets by collecting historical data.
2. test the presence of efficient market hypothesis in the exchange market.
3. evaluate the exchange rate India with US dollar and British pound with the help of fixed exchange rate.
4. create a portfolio of four international bonds and four international stock and compute the portfolio return and risk.
5. make a comparative analysis of the Basel Norms issued till date for baking regulation and operations.

MBA (BA)
Semester III

Marks: 100 **Duration-60 Hrs.**

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (If any)
		Lecture	Tutorial	Practical/ Practice		
Start UP-1 **COMOE13**	**4**	**3**	**0**	**1**	**Pass in Graduation**	**NIL**

Learning Objectives

To understand new venture creation opportunities, its resources, and requirements for Enterprise Start-up.

Learning outcomes

After completion of the course, learners will be able to:

- develop a start-up Enterprise with Big Idea Generation.
- evaluate the requisite start-up capital requirements within the prevailing entrepreneurial eco-system.
- undertake feasibility Analysis of available funding sources.
- strategize growth of business at every stage of venture operation and scaling up.
- manage financial stability and carry plan on expansion possibilities

SYLLABUS

Unit I: Start-up opportunities: (10 Hours)

The New Industrial Revolution – The Big Idea- Generate Ideas with Brainstorming- Business Start-up - Ideation- Pitching your business and yourself;
Venture Choices - The Rise of the startup Economy - The Six Forces of Change- The Start-up Equation – The Entrepreneurial Ecosystem – Entrepreneurship in India. Government Initiatives: Ease of Doing Business (EOD), Atmanirbhar Bharat and Make in India (In the Context of Startup facilitation).

Unit II: Startup Operations: (10 Hours)

Launching a startup: Pre-requisites to start. Factors to be considered before launching a startup; Identifying Startup capital Sources; estimating Startup cash requirements; Developing a financial model; Constructing a Process Map; - Positioning the venture in the value chain; Analyzing the Risk-benefits tradeoff, Drawing a startup life cycle.

Unit III: Management of Starting up Finances: (12 Hours)

Feasibility Analysis of various sources - The cost and process of raising capital – Unique funding issues of a high-tech ventures - Funding with Equity – Financing with Debt- Funding startups with bootstrapping- crowd funding- strategic alliances with sources such as Angel capital. Venture capital and seed capital providers; Financial ecosystem in the country: various MSME dedicated schemes, (discussion on types of start-ups in the last two decades)

Unit IV: Start-up Survival and Growth: (14 Hours)

Stages of growth in a new venture- Growing with the market - Growing within the industry- Venture life patterns with sustainable strategies at various stages of life-growth cycle- Reasons for new venture failures- Scaling Ventures – preparing for change - Leadership succession. Institutional support mechanisms- private and public for growth and survival of the venture.

Unit V: Planning for Harvest and Exit: (14 Hours)

Managing Failure for sustenance; Recouping strategies: Bankruptcy, Exit Strategies- Selling the business - Cashing out but staying in-being acquired- Going Public (IPO) – Liquidation. (Discussion on the real-life examples of failed start-ups and their poor valuation- case study of Paytm, Ola, Meesho etc.)

Practical Exercise:

The learners are required to:

1) to understand how to create a financial model for a startup business
2) to leverage financial modeling to make better business decisions and create a business plan for a business idea
3) Working on a real business case, we will be implementing the theory to develop the go to market strategy, using collaborative online templates in real time.
4) To evaluate the managerial problems of new enterprises: production, financing and labour and marketing problems
5) Analyse the economic costs and benefits of startups
6) Evaluate the process of becoming a start-up with current trends and Regulatory environment

Master of Business Administration (Business Analytics)

MBA (BA)

Semester III

Marks: 100 **Duration-60 Hrs.**

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Enterprise Risk Management COMOE14	**4**	**4**	**0**	**0**	**Pass in Graduation**	**NIL**

Learning Objectives

The course aims to familiarize the learner with comprehensive and all-inclusive risk management framework that can stop corporates disasters, save reputation, provide competitive advantages and yield intangibles benefits.

Learning outcomes

After completion of the course, learners will be able to:

- Analyze various types of risks that exist across the entire enterprise;
- Evaluate the key stages in the risk management process
- Discuss the impact of risks on operations and mission/goals
- Outline the key characteristics of the COSO ERM framework
- Evaluate and develop responses of various mitigation plans;
- Analyze the approaches for monitoring & scanning of emerging risks, and importance of insurance.

SYLLABUS

Unit I: Introduction to risk & ERM (8 Hours)

Different approaches to define risk; Impact of risk; Components of enterprise risk management; Principles and aims of risk management; Benefits of ERM; Current issues and emerging best practices in enterprise risk management, case study of business failure

Unit II: Implementing ERM (16 Hours)

General risk management standards; Alternative risk management approaches; Stages in the risk management process; Characteristics of the COSO ERM framework; ERM implementation best practices; Challenges of ERM;

Unit III: Risk assessment (12 Hours)

Introduction and importance of risk identification; Techniques of Risk assessment & comparison of different techniques; Classification of risk; life cycle of risk; tools for identifying and managing risk;

Unit IV: Risk analysis and evaluation (16 Hours)

Introduction to risk analysis; Risk likelihood and its impact; Risk tolerance Vs. Strategic goals; Loss control; Alternative approaches to define the upside of risk application of these approaches for strategies, projects and operations

Unit V: Mitigation of risk (8 Hours)

Introduction to risk treatment and risk response; The 4Ts of response mechanism; Risk control techniques (PCDD); Control of crucial operational & financial risks; Monitoring and reviewing the risk management process; Importance of insurance for the transfer of risk; Business continuity planning.

Practical Exercises:

The learners are required to:

1. Prepare a comparative risk profile for different types of industries.
2. Prepare a COSO cube diagram for any company of your choice.
3. Creating a heat map of risks and identifying unacceptable risks for any company of your choice.
4. Demonstrate various types of responses that are suitable for different types of risk for any two Industries of your choice and make a comparison.
5. Development of a risk assessment tool for a start-up.

Master in Business Analytics
MBA(BA)
Semester-III

Marks: 100 **Duration-60 Hrs.**

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
World Law Prospects **COMOE15**	4	3	0	1	**Pass in Graduation**	**NIL**

Learning Objectives

The course aims to familiarize the learner with the philosophy and practice of international law and emerging world legal systems, including the arc toward systems approaching constitutional World Parliament and global self-government through principles of world federal republic. The course looks at the historical foundations of law, and distinguishes between international law and world law.

Learning outcomes

After completion of this course the learner will be able to:

- explain the basic philosophies of government, including particularly principles of self-government.
- apply theories and concepts of the course to analyze and write about contemporary legal principles within international law and world law.
- describe the distinctions between international law and world law and illustrate the progression toward constitutionally limited democratic world parliament.
- evaluate the prospects for worldwide self-governing systems and give constructive commentaries on shared writings.
- develop a case study (term paper) suitable for presentation to a world federal organisation, to a non- governmental organisation or to an international organisation.

Syllabus

Unit-I: Introduction, Philosophy of Law and International Law: Preamble and articles 1 through 4 of A Constitution for the Federation of Earth, available in The Earth Constitution, Editor G. Martin, in World Revolution through World Law, Editor G. Martin.

Introduction, and chapters 17, 18, and 29 of Leviathan by Thomas Hobbes. Excerpts to Anatomy of Peace by Emery Reves. Critical reactions to our global neighbourhood.

Unit-II: The United Nations System , The Rome Statute Family of International Law and World Law :

The United Nations Charter, White paper, The World Court Order, Distinctions between International law and world law. Submit discussion questions.

Unit-III: Distinctions Between International Law and World Law, The World Constituent Assemblies and the World Constitutions and Integrative Systems under the Earth Constitution: Sustainability, Prosperity, Family Planning, Human Rights, Peace and Disarmament:

Understanding A Constitution for the World" (1947), Protocols (1902) attributed to Sergei Nilus, among others, and Procedure for the World Constituent Assembly.

Articles 11 through 16 of the Earth Constitution.

Unit-IV: World Legislation and World Parliament, World Election Laws, Referendum and Initiative and Overview of Form and Style for World Legislative Drafting and Legislative Amendment

Articles 5 through 10, 17 and 19 of the Earth Constitution. Review Earth Constitution Article Sections 8.3. and 17.1. Design and Action for a New World. World Legislative Acts numbers 47. World Diplomatic Integration Act; 53.

Unit-V: Transfer, Reconstitution and Integration of the United Nations System, World Federal Organizational Relations and Prospects for Democratic World Federal Republic

Transition Process; 59, Truth and Reconciliation Act; 64. United Nations Merger; and 65. Global Sustainability Directorate. Assigned excerpts from Annotated Bibliography for a Graduate School of World Problems, E. Almand (on-line). A World Parliament by Jo Leinen and Andreas Bummel. Discussions on international organizations, non-governmental organisations, the relation, if any, between Earth Federation and international organizations.

Practical Exercises:

The learners are required to:

1. submit written proposal for Case Study Presentation, One page, double spaced. Start reading the United Nations Charter, Preamble through Chapter Nine.
2. present the case study related The United Nations Charter.
3. Make at least one paragraph constructive commentary on each posted case study presentation draft, up to twenty (or class size limit) commentaries.
4. Make at least one paragraph constructive commentary on each posted case study presentation not already commented upon.
5. review of selected chapters (Intro & Conclusion) of A World Parliament by Jo Leinen and Andreas Bummel.

Essential/ Recommended readings

Readings:

- Essay "Perpetual Peace" of Immanuel Kant
- Readings from Thomas Hobbes, John Locke, Emery Reves.
- United Nations Charter
- Read Harris in Harris, Errol E. & Yunker, James A., (Eds.). (1999) Toward Genuine Global Governance: Critical Reactions to Our Global Neighborhood. Westport, CT: Praeger.
- "A Bill of Particulars (on United Nations)", H. Philip Isely.
- The Earth Constitution, Editor G. Martin
- World Revolution through World Law, Editor G. Martin
- Toward Genuine Global Governance: Critical Reactions to Our Global Neighborhood. Westport, CT: Praeger. Harris, Errol
- E. & Yunker, James A., (Eds.). (1999)
- The Rome Statute of the International Criminal Court, A. Koroma, D. Thiam, J. Crawford et al.
- World Legislative Act #20 Criminal Case Bench Legislative Memorandum Summary
- Emerging World Law, Editors E. Almand & G. Martin
- A World Parliament: Governance and Democracy in the 21st Century, Jo Leinen & Andreas Bummel.
- Annotated Bibliography for a Graduate School of World Problems, E. Almand (on-line)
- Reviews of various websites
- "A Constitution for the World", by the Chicago Committee to Draft a World Constitution. 1947.
- (This is for critical discussion.)
- The Protocols. Attributed to Sergei Nilus, among others. 1902. (This is for critical discussion.)

Note: Readings will be updated by the Department of Commerce and uploaded on Department's website.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Semester IV

Marks: 100 **Duration-60 Hrs.**

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (If any)
		Lecture	Tutorial	Practical/ Practice		
Entrepreneurship and New Venture Planning **MBABACC401**	4	3	0	1	**Graduation Pass**	**Nil**

Learning Objectives

This course aims to provide necessary inputs for entrepreneurial effort and planning to start a new venture and to enable them to investigate, understand and internalize the process of setting up a business.

Learning outcomes

After completion of the course, learners will be able to:

- be familiarised with the fundamentals of entrepreneurship and its role in economic development and to motivate them towards entrepreneurial activities.
- understand the concept of entrepreneurial leadership and stimulate them to think and innovative as entrepreneurs.
- be able to write effective business plans for establishing and managing any business venture.
- know how to raise the funding for the business from different sources for a startup venture.
- form a business entity in the light of the legal and regulatory framework in India.

SYLLABUS

Unit I: Introduction: (12 Hours)

Concept of Entrepreneurship; Role of entrepreneurship in economic development; Understanding the entrepreneurial history of India: Pre-Independence and post-Independence Period; Factors impacting emergence of entrepreneurship; Managerial vs. entrepreneurial approach; Types of entrepreneurs;

Characteristic of successful entrepreneurs; Entrepreneurship process; Women entrepreneurs; Social entrepreneurship; Entrepreneurial challenges.

Unit II: Entrepreneurship Development and Leadership: (12 Hours)
Types of startups; Entrepreneurial class theories; Entrepreneurial training; EDP programmes; Characteristics of entrepreneurial leadership, Components of entrepreneurial leadership; International entrepreneurship- Opportunities and challenges; Entrepreneurial challenges; Source of innovative ideas; Entrepreneurship and creativity; Techniques for generating ideas, Impediments to creativity.

Unit III: New Venture Planning: (12 Hours)
Methods to initiate ventures; Acquisition- Advantages of acquiring an ongoing venture and examination of key issues; Franchising- how a franchise works, franchising law, evaluating of franchising opportunities; Developing a marketing plan- customer analysis, sales analysis and competition analysis, steps in marketing research; Marketing mix; Business plan-benefits of drivers, perspectives in business plan preparation, elements of a business plan; Feasibility analysis of a business Plan; Business plan failures.

Unit IV: Financing Venture: (12 Hours)
Financing stages; Sources of finance; Venture capital; Criteria for evaluating new venture proposals; Evaluating venture capital- process; Sources of financing for Indian entrepreneurs (including angel funds, Seed capital fund).

Unit V: Special Issues for Entrepreneurs: (12 Hours)
Legal issues – Forming business entity, considerations and criteria, requirements for formation of a Private/Public Limited Company, intellectual property protection- patents, trademarks and copyrights – importance for start-ups, legal acts governing business in India; Opportunities and challenges; Intrapreneurship.

Strategic Management **MBABACC402**	4	4	0	0	**Pass in Graduation**	**NIL**

Course Objective:

To develop the knowledge about the strategy making process that is informed, integrative and responsive to rapid changes in the organization environment and also about tasks implemented in a global market.

Learning Outcomes*:*

After completion of the course, learners will be able to:

- understand the role of Strategic Management.
- describe various levels at which Strategy exists namely Corporate, Business and Functional level.
- develope strategic management models.
- analyse how organizations make decisions in response to rapid changes that occur due to environmental changes.
- apply how firms make entry into global markets and implement and evaluate strategy at an international level.

Syllabus:

Unit I: Introduction (12 Hours)

Role and concept of strategy; Strategic management process; Approaches to strategic decision making; Components of business policy; Strategic role of board of directors & top management. Strategic intent

Unit II: Environmental Analysis (12 Hours)

Analysis of broad environment: Environmental profile; Constructing scenarios; Environmental scanning techniques- ETOP, PEST and SWOT (TOWS) Matrix; Michael Porter‘s Diamond framework; Analysis of operating environment - Michael Porters model of industry analysis; Strategic group analysis; Analysis of internal environment– Resource audit; Resource Based View

(RBV); Core and distinctive competencies; Sustainable competitive advantage and transient competitive advantage.

Unit III: Strategic Choices (12 Hours)

Strategic options at corporate level: Growth, stability and retrenchment strategies; Corporate restructuring; Strategic options at business level- Michael porters' competitive strategies and cooperative strategies. Evaluation of strategic alternatives – Product portfolio models (BCG matrix, GE Matrix, etc.)

Unit IV: Situation Specific Strategies (12 Hours)

Strategies for situation like competing in emerging industries, maturing and declining industries, fragmented industries, hyper –competitive industries and turbulent industries; Strategies for industry leaders, runner -up firms and weak businesses.

Unit V: Strategic Issues and Alternatives in Globally Competitive Markets (12 Hours)

Why & how firms internationalize; International entry options; Outsourcing strategies; Strategy implementation and control: Interdependence of formulation and implementation of strategy; Issues in strategy implementation- Planning and allocating resources; Organization structure and design; Budgets and support system commitment; culture and leadership. Strategy evaluation and control.

Supply Chain Analytics **MBABACC 403**	4	3	0	1	**Pass in Graduation**	**NIL**

Learning Objectives

To develop analytical skills for supply-chain in order to address real-world problems. The focus will be to familiarize and educate students to strategically manage the issues related to design and management of logistic and operations networks. The benefit of integration of marketing and corporate strategy into logistics and operations is also evaluated.

Learning outcomes

After completion of the course, learners will be able to:

- Learn the basic framework of supply chain management.
- Evaluate Demand Forecasting.
- Test and analyse the Stationary Time series.
- Examine Forecasting Models.
- Develop coordination in a supply chain.

SYLLABUS

Unit I: Introduction

Forecasting for Supply Chain Planning and Management: Introduction to forecasting, same case studies, time series data, Some simple forecasting methods. The forecaster's toolbox: Time series graphics, seasonal or cyclic? Autocorrelation, forecast residuals, white noise, evaluating forecast accuracy. Introduction to Multiple Regression and Stepwise Selection of Predictive Variables, Model Overfitting, the Parsimony Principle and Model Cross-Validation, Selection of Variates in Linear Regression:

Forward, Backward and Best Subset Selection, Model Shrinkage Methods and Selection of Variates in Linear Regression: The Lasso, Using Cross-Validation for Model Selection in The Lasso.

Unit II: Demand Forecasting

Introduction to Demand Forecasting Simple Exponential Smoothing Model FPP, Holt's Model and Holt-Winters Model FPP, State-Space Approach to Exponential Smoothing.

Unit III: ARIMA Models

Introduction to ARIMA Models Differencing and Rescaling Time Series, Backshift Notation and Non-seasonal ARIMA Models FPP, Seasonal ARIMA Models.

Unit IV: Forecasting Models

Hierarchical Forecasting Models Top-Down, Bottom-Up, and Middle-Out Approaches to Forecasting, Modelling Interventions: Model Selection and Calibration, Modelling Interventions: Forecasting.

Unit V: Managing Cross-Functional Drivers in Supply Chain

Sourcing decisions in a supply chain, pricing and revenue management in a supply chain, information technology in a supply chain, coordination in a supply chain.

Practical Exercises:

The learners are required to:

1. Examine the stationarity of the time series using appropriate software.
2. Demand Forecasting using appropriate software.
3. Examine ARIMA Models using appropriate software.
4. Analyse Forecasting Models using appropriate software.
5. Examine coordination in a supply chain using appropriate software

MBA (BA)
Semester IV

Marks: 100 **Duration-60 Hrs.**

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Healthcare Analytics	4	3		1	Pass in Graduation	NIL

Learning Objectives

In an environment where complexity is growing, decision makers in healthcare systems need to use data to make pertinent and accurate decisions. Their practices and policies should be supported and strengthened by data. Tools of analytics provide the capability to identify patterns in data and to implement this knowledge in developing strategies and improving performance. The objectives of this course are to enable the participants to develop an understanding of basic principles of data analysis and familiarize them with key tools and techniques that would enable them to take data driven decisions in a hospital/healthcare delivery setting.

Learning outcomes

After completion of the course, learners will be able to:

1. Identify sources of data, suggest methods for collecting, sharing and analyzing data.
2. Understanding the issues involved in data quality and their management.
3. Discuss the difference between descriptive, predictive and prescriptive analytics.
4. Able to use basic data presentation and visualization tools and manipulate simple data- sets.
5. Discuss the basics of big-data, machine learning and artificial intelligence.
6. Able to identify decision problems amenable for analytics-based solutions. Understand how data analytics can provide potential solutions to improve quality and lower cost • Able to lead team comprising of data scientists

Syllabus

Unit I: Health Care Data (10 Hours): Data as an asset for health care organization; Data, information, knowledge and wisdom hierarchy; Types and sources of healthcare data; Data governance, methods for effective use of data analytics; Ethics, data ownership and privacy

Unit II: Working with Data (15 Hours): Common data analytics terms, Steps of data analytics; Enterprise data architecture as seen in health care organizations; Common data types; Selection, aggregation, querying and transformation of data; Descriptive and visual analytics; Common patterns or distributions in data.

Unit III: Healthcare analytics tools-1 (10 Hours): Predictive analytics tools, classification, regression; Introduction to text mining, contextual analysis, social media analytics; Text mining, social media analytics.

Unit IV: Healthcare analytics tools-2 (10 Hours): Basics of image Analysis; analysis of multimedia Data, big data Analysis.

Unit V: Decision analysis (15 Hours): Decision tree; Simulation in Decision Analysis; Select prescriptive analytics applications in health care operations management (scheduling, resource allocation, project management, waiting line management etc).

Practical Exercises:

The learners are required to:

1. perform querying and transformation of data.
2. conduct descriptive and visual analytics.
3. obtain the results from Social media analytics; Text mining.
4. apply simulation in Decision Analysis.

Essential/ Recommended readings

Text Books:

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Master of Business Administration (Business Analytics)

MBA (BA)
Semester IV

Marks: 50 **Duration: 30 Hrs.**

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Social Media Analytics **MBABACC405**	**2**	**1**	**0**	**1**	**Pass in Graduation**	**NIL**

Learning Objectives

The aim of the course is to make learners understand about the increasing world connectivity using social network analysis. This course will also help the learners in examining the creation of various networks be it technological, economic or social and how they affect our behavior and attitudes.

Learning outcomes

After completion of the course, learners will be able to:

- Understand the concept of social networks
- Learn models to interpret the structure of Web graph and its spread of information.
- Perform social network analysis to understand and identify social media network properties, its actors and sub-groups.
- Identify the groups within the social networks
- Understand the concept of similarity and equivalence in social roles and positions.

Syllabus

Unit I: Introduction (10 Hours)

Introduction: What's different about social network data? Nodes, Relations, Scales of measurement, statistics and social network data. Introduction to formal methods, efficiency, using computers, seeing patterns. Using graphs to represent social relations: Introduction, graphs and sociograms, kinds of graphs. Working with NetDraw to visualize graphs: Introduction, node attributes, relation properties, location, highlighting parts of the network.

Unit II: Web Analytics & Social Connection Analysis (10 Hours)

World of web analytics, optimal strategy for choosing web analytics soul mate, Clickstream analysis: metrics and practical solutions. Making connections: Link analysis. Random graphs and network evolution. Social contexts: Affiliation and identity. Connection: Search, collapse, robustness Social movements and diffusion of innovation.

Ego Networks, Centrality and Power

Ego Networks: Introduction, Ego network data, ego network density, structural holes, brokerage. Centrality, centralization, and power: Introduction, Degree centrality, closeness centrality, betweenness centrality. Embedding: Introduction, Density, Reciprocity, Transitivity, Clustering, Group-external and group-internal ties, Krackhardt's graph theoretical dimensions of hierarchy.

Unit III: Cliques and Subgroups, Positions and Roles

Cliques and groups: Introduction, Bottom-up approaches, top-down approaches. Homophily and social segregation.

Measures of Similarity and Structural, Automorphic and Regular Equivalence

Equivalence: Positions and Social Roles. Introduction, Measuring similarity/dissimilarity, visualizing similarity and distance, describing structural equivalence sets. Automorphic Equivalence: Definition, uses of concept, finding equivalence sets. Regular equivalence: Definition, uses of concept, finding equivalence sets.

Practical Exercises:

The learners are required to

1. Apply qualitative and quantitative methods for analyzing web traffic.
2. Recognize the groups in any social media platform.
3. Identify the similarities/dissimilarities amongst social structures of social media groups

Essential/ Recommended readings

Text Books

- Hanneman, R. and Riddle, M. (2005), Introduction to Social Network Methods, Riverside.
- Kaushik A. (2009), Web Analytics 2.0: The Art of Online Accountability, Wiley Publishing.

Cyber Threats and Security MBABACC406	**4**	**3**	**0**	**1**	**Pass in Graduation**	**NIL**

Learning Objectives:

To enable the student to comprehend different business scenarios operative on digital platform with the legitimacy of managerial process and actions.

Learning Outcomes:

After completion of the course, learners will be able to:

- To be equipped with a vision to formulate legitimate business process, product and policies on digital platforms.
- To work in the vertical of maintenance and compliance in E-business.
- To be able to be an entrepreneur to start and manage business on virtual platforms.
- To possess acumen to avoid traps of cyber threats in varied business and process thereof while operating in regular banking, e-commerce, retail, consultancies or other business intermediary.
- To equip with judicial pronouncement of banks, e-commerce business platforms, manufacturing companies, social media platforms and other similar platforms, intermediaries or APPs, BPO's and KPO's.

Syllabus

Unit I: **Cyber Space, E-Business and Social Media (10 Hours)**

Significance, limitations and framework of e-business; Models of e-business based on relationship of transacting parties; Virtual payment platforms- application of cyber laws in different digital payments including pre-paid instruments; Precautions in using electronic payments, zero liability and limited liability protections by RBI, Bitcoin and Block Chain crimes. Social Media & Cyber Menace.

Unit II: **Legislative Framework (10 Hours)**

Under Section 2 of the Information Technology Act and its application in creating business products and policies- e-contract, e-forms, encryption, data security, access, computer, computer network, computer resource, computer system, data, digital signature, electronic record, information, intermediary, originator, public key, secure system, as defined in the Information Technology Act, 2000; Privacy of data; Access to user data.

Unit III: **Authentication of Electronic Records (12 Hours)**

Business scenario and cases; Legal recognition of electronic records and digital signatures- cases and judicial

pronouncements; Use of electronic records and digital signatures in government and its agencies; Retention of electronic records- synthesis for business data; Acknowledgement and dispatch of electronic records- cases of management submissions and contracts.

Unit IV: Penalties and Adjudications (14 Hours)

Cases and judicial pronouncement of banks, e-commerce business platforms, manufacturing companies, social media platforms, intermediaries or apps, BPO's and KPO's, human resource consultancies; Offences: analysis of business process leading to offences in business organizations including banks, digital marketing platforms, digital information platforms, blogging websites, matrimonial or jobs portals.

Indian ethos and leadership	2	2	0	0	Pass in Graduation	NIL

Learning Objective:

To build an understanding and perspective of Indian Ethos and leadership. It helps appreciating Indian way of leading different organizations.

Learning Outcomes:

- After completion of the course, learners will be able to:
- Understand the relevance of Indian Ethos, Ethical Codes and management lessons from scriptures.
- Analyse the Approaches to leadership through Indian Tradition and develop different approaches of leadership and contemporary Indian leadership practices.

Syllabus

Unit I-Indian Ethos and Perspectives on Ethics (10 Hours)

History & relevance of Indian tradition of understanding physical and metaphysical world; Appreciating scripturesand their role in shaping cognition and social interactions; Role of Indian Ethos in Managerial Practices; Gender Ethics; Ethos and ethics; Relevance of Values in Management, Morality, ethics and values; Indian values, ethical dilemmas in different business areas of finance, marketing, Management Lessons from Vedas, Mahabharata; Ethics v/s Ethos.

Unit II-Ethos–Leadership Interface (10 Hours)

Perspectives on leadership through ancient values and Indian traditions; leadership -in relevance to time, space, narratives and eternity; Moral principles for leadership based on Indian ethos; Social Values and Political Environment, Target (goal) vis-à-vis process orientation; Leadership through storytelling.

Unit III- Great Indian Thought on Leadership (10 hours)

Leadership lessons from sacred Indian texts as well as non-text sources; Gandhian thoughts on leadership; Vivekananda's thinking on leadership; Studies of S.K. Chakraborty & C.K. Prahlad on Indian leadership; Personal character of a leader; Understanding relevance of leadership in contemporary times, role of Indian leadership model and its relevance in bringing world order; Contemporary Leadership Challenges; Cases on Indian leadership practices.

Practical Exercise

Learners are required to:

1. Visit to some traditional/historical places to grab the knowledge of Indian scriptures and philosophy
2. Brain storming sessions on different ethical dilemmas for effective management lessons
3. Group discussion on Role of Indian Ethos in fostering the ethical environment
4. Industrial visits/interview with position holders to understand the relevance of leadership
5. Evalute the leadership skills of selected famous leaders in the real world
6. Stimulate lessons from various kinds of leadership in ethical perspective
7. Analyse case studies on Indian leadership practices.
8. Participate in simulation exercise in classroom Ethical codes of various organisations.

This course aims to help learners to know how to manage a team and its performance at the workplace. This course also highlights the various strategies to deal with different conflicts among the team members.

Learning outcomes

After completion of the course, learners will be able to:

1. Analyze various sources of conflicts and identify appropriate conflict resolution solutions.
2. Appraise performance of team members.
3. Determine impediments for the team and identify ways to manage them.
4. Engage in virtual teams.
5. Enhance team performance through the application of emotional intelligence

Syllabus

Unit I: **Managing conflicts (8 Hours)**

Interpret the source and stage of the conflict, Analyze the context for the conflict

Evaluate/recommend/reconcile the appropriate conflict resolution solution

Lead a team

Set a clear vision and mission, Support diversity and inclusion (e.g., behavior types, thought process), Determine an appropriate leadership style (e.g., directive, collaborative),

Inspire,motivate, and influence team members/stakeholders (e.g., team contract, social contract, reward system), Analyze team members and stakeholders' influence

Unit II: Support team performance (12 Hours)

Appraise team member performance against key performance indicators, Support and recognize team

member growth and development, Determine appropriate feedback approach , Organize around team strengths Support team task accountability, Evaluate demonstration of task accountability

Determine required competencies and elements of training, Determine training options based on training needs, Allocate resources for training, Measure training outcomes, Continuously assess and refresh team skills to meet project needs, Maintain team and knowledge transfer

Unit III: Address and remove impediments, obstacles, and blockers for the team (18 Hours)

Determine critical impediments, obstacles, and blockers for the team, Prioritize critical impediments, obstacles, and blockers for the team, Use network to implement solutions to remove impediments, obstacles, and blockers for the team

Negotiate project agreements

Analyze the bounds of the negotiations for agreement, Assess priorities and determine ultimate objective(s), Verify objective(s) of the project agreement is met, Participate in agreement negotiations, Determine a negotiation strategy

Build shared understanding

Break down situation to identify the root cause of a misunderstanding, Survey all necessary parties to reach consensus, Support outcome of parties' agreement, Investigate potential misunderstanding

Unit IV: **Engage and support virtual teams (14 Hours)**

Examine virtual team member needs (e.g., environment, geography, culture, global, etc.), Investigate alternatives (e.g., communication tools, colocation) for virtual team member engagement, Implement options for virtual team member engagement, continually evaluate effectiveness of virtual team member engagement

Communicate organizational principles with team and external stakeholders, Establish an environment that fosters adherence to the ground rules, Manage and rectify ground rule violations

Unit V: Promote team performance through the application of emotional intelligence (8 Hours)

Assess behavior through the use of personality indicators, Analyze personality indicators and adjust to the emotional needs of key project stakeholders

Leading in an intercultural environment

Gender issues in leadership, Emotional intelligence Team communication and socialization

Managing changes due to project impact

Best practices in project leadership—techniques to win over team members

Practical Exercises

The learners are required to:

1. Prepare the appropriate conflict resolution solutions for different situations.
2. Assess various key performance indicators for performance appraisal.
3. Analyze different impediments faced by any team and identify ways to manage them.
4. Participate in virtual team exercises.
5. Evaluate the role of emotional intelligence in enhancing team performance.

Suggested Readings:

- Berkun, S. (2005). *The art of project management* (pp. I-XII). O'reilly.
- Ellis, C. D. (2019). *The Project Book: The Complete Guide to Consistently Delivering Great Projects*. John Wiley & Sons.
- Larson, E., & Gray, C. (2014). *Project Management: The Managerial Process 6e*. McGraw Hill.
- Pinto, J. K. (2013). *Project management: achieving competitive advantage* (No. s 57). Boston, MA: Pearson.
- Horine, G. (2013). *Project management: Absolute beginner's guide*. Pearson Education.
- Wysocki, R. K. (2011). *Effective project management: traditional, agile, extreme*. John Wiley & Sons.

Note: This course to be taught through Role play and lots of Cases and case studies to effectively learn project management.

Note: Readings will be updated by the Department of Commerce and uploaded on Department's website.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Master of Business Administration (Business Analytics)

MBA (BA)
Semester IV

Marks: 100 **Duration: 60 Hrs.**

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Start Up – 2 **MBABAEC02**	4	3	0	1	**Graduation Pass**	**Start UP-1** **COMOE13**

Learning Objectives

The goal of this program is to take the students from the MVP (Minimum Viable Product) stage to the Business Model stage, i.e., the students will acquire the skills required to transform their MVP into a business model. In this course, they will start building their teams by finding co-founders and perhaps even hiring. They will transform their business idea into the Business Model Canvas and will use it to further refine their MVP. They will also set up a digital presence and learn to use promotional channels and distribution channels to engage and serve their customers. Additionally, they will get started with various legal and operational aspects as well as initial funding concepts such as bootstrapping. The knowledge acquired through the earlier semester on the experimentation undertaken on developing new business ideas in a simulated environment can be extended to practice at the end of this course.

Learning outcomes

After completion of the course, learners will be able to:

- Form a team and recognise the importance of teamwork
- Prepare a business model/plan
- Analyze the importance and diversity of business models
- Analyze the concept of product/market fit
- Assess the customer validation process

Syllabus:

Unit I: Team (6 Hours)

Finding your team, art of team formation, teamwork planning, chief mentor/ founder & Co founders, team formation, and delegation of work, Establishing linkage with possible future external collaborator(s).

Unit II: Preparation of Business model/Plan (10 Hours)

Meaning and significance of a business plan, components of a business plan, and feasibility study, Iterating the MVP, Digital Presence for Ventures, Detailing the value proposition, Guidelines for writing BP: pre- requisites from the perspective of investor.

Unit III: Business Model (10 Hours)

The importance and diversity of business model, how business model emerge, potential fatal flaws of business models, components of an effective business model, core strategy, strategic resources, Competency of partnership and their network, Detailing potential product/service-customer interface.

Unit IV: Product/ Market Fit (16 Hours)

Understanding basics of unit economics, cost and profitability, Break-even analysis, Refining the product/service, Establishing the success and operational matrix, Starting Operations. Addressing basic start-up problems. (Case analysis presentation of renowned Indian and International startups through group assignment as part of class room presentation).

Unit V: Customer Validation (18 Hours)

Evaluate the efficiency with which customers can be captured and kept, Early insights on cost of customer acquisition, Other Stakeholder Validation, Customer Development and Experience. Detailing differentiation of proposed product/service with the existing competitors. (Various case studies on various level of funding as an indicator of startup validation/sustainability)

Practical Exercise:

The learners are required to:

1. Participate in a team and frame a plan for a potential start up.
2. Prepare a detailed business plan for the potential start up discussed in the previous exercise.
3. Evaluate the core strategy of their business plan.
4. Perform a break-even analysis for their proposed business plan.
5. Assess the customer validation process of the proposed business plan.

Suggested Readings:

Master of Business Administration (Business Analytics)

MBA (BA)

Marks: 100 **Duration-60 Hrs.**

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/Practice		
Internet of Thing **MBABAEC03**	**4**	**3**	**0**	**1**	**Pass in Graduation**	**NIL**

Learning Objectives

This course provides an overview of the working of Internet of things and aims to make the students understand the IoT market perspective, its architecture and knowledge and data management of IoT in use of technology.

Learning Outcomes

After completion of the course, learners will be able to:

- Describe the fundamentals of data communication, network and internet of things (IOT).
- Develop the knowledge of IOT architecture and models
- Recognise the process of IOT device management and evaluate design constraints.
- Demonstrate the various IOT market perspectives in the global scenario.
- Demonstrate the concept of automation and its application

Syllabus:

Unit I: Fundamentals of Computer Network and Internet of Things (IoT) (10 Hours)

Introduction, Fundamentals of Computer Network, M2M and IoT; Networking Devices and gateways, Local and wide area networking, Data management, Business processes in IoT, Everything as a Service(XaaS), M2M and IoT Analytics, Knowledge Management. Global Context and Cases

Unit II: IoT Architecture (12 Hours)

State of the IoT Architecture – Introduction-Reference Model and architecture, IoT reference Model.

Unit III: IoT Reference Architecture and Design Constraints (13 Hours)

Functional View, Information View, Deployment and Operational View, Other Relevant architectural views. Real-World Design Constraints- Introduction, Technical Design constraints-hardware is popular again, Data representation and visualization, Interaction and remote control.

Unit IV: Market perspective and Architectural Overview (15 Hours)

M2M to IoT – A Market Perspective– Introduction, Some Definitions, M2M Value Chains, IoT Value Chains, An emerging industrial structure for IoT, The international driven global value chain and global information monopolies. M2M to IoT-An Architectural Overview– Building an architecture, Main design principles and needed capabilities, An IoT architecture outline, standards considerations.

Unit V: Industrial Automation and Commercial Building Automation (10 Hours)

Industrial Automation- Service-oriented architecture-based device integration, SOCRADES: realizing the enterprise integrated Web of Things, IMC-AESOP: from the Web of Things to the Cloud of Things, Commercial Building Automation- Introduction, Case study: phase one-commercial building automation today, Case study: phase two- commercial building automation in the future.

Practical Exercise:
The learners are required to:

1. Participate in a team and discuss various networking devices and gateways.
2. Prepare a detailed reference model in context to IoT Architecture
3. Evaluate the different views of IoT reference Architecture .
4. Design IoT value chain with the help of any particular industry.
5. Analyze a case study on the concept of automation and its application.

Suggested Readings:

Note: Readings will be updated by the Department of Commerce and uploaded on Department's website.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Master of Business Administration (Business Analytics)

MBA (BA)
Semester IV

Marks: 100 **Duration-60 Hrs.**

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Compensation Management **MBABAEC04**	**4**	**3**	**0**	**1**	**Graduation**	**No**

Learning Objective

The course is designed to promote understanding of issues related to compensation management in the corporate sector and public services and to impart skill in designing compensation management system, policies and strategies, apart from promoting understanding of legal issues in the administration of compensation, welfare and social security.

Learning Outcomes

After completion of the course, learners will be able to:

- Acquaint themselves with the basic legal framework envisaged under the statutes for compensation and welfare of employees in different modes.
- Recognise the principles involved and the premise of the grant of bonus, wages, and minimum wages to workers.
- Work in the maintenance and compliance vertical of the compensation structuring department.
- Handle organizational scenarios having large-scale variations of minimum wages- both within the country and internationally.
- Recognise the employment benefits for women envisaged under the compensation laws of India.

Syllabus:

Unit I: Compensation Management (10 Hours)

Compensation management process, forms of pay, financial and non-financial compensation; Compensation strategies, assessing job values & relativities; Pay structures; Designing pay levels, mix and pay structures, construction of optimal pay structure; Paying for performance, skills and competence; National differences in compensation, International pay systems- comparing costs and systems; Expatriate pay; Concept and rationale of employee welfare.

Unit II: The Payment of Bonus Act, 1965 (15 Hours)

Objects, scope and application; Definitions; Calculation of amount payable as bonus; Eligibility and disqualifications for bonus; Minimum & maximum bonus; Set on & Set off of allocable surplus; Application of Act in the establishment in the public sector; Bonus linked with production or productivity, The Payment of Bonus (Amendment) Act, 2015.

Unit III: The Payment of Wages Act, 1936 (15 Hours)

Objects; Application; Responsibility for payment of wages; Fixation of wage periods; Time-limits; Deduction from

wages; Remedies available to the worker; Powers of authorities, penalty for offences; Payment of Wages (Amendment) Act, 2017

Unit IV: The Minimum Wages Act, 1948 (10 Hours)

Objects; Application; Minimum fair and living wages; Determination of minimum wage; Taxation of minimum wage; Advisory board; Remedy to the worker for non-payment of minimum wages.

Unit V: The Maternity Benefit Act, 1961 (10 Hours)

Definitions, Object, Applicability, employment of, or work by, women prohibited during certain periods, right to payment of maternity benefits, notice of claim of maternity benefit and payment thereof, leaves, dismissal in absence during pregnancy, forfeiture of maternity benefits. The Maternity Benefits (Amendment) Act, 2017; Impact of the Maternity Benefit (Amendment) Act, 2017 on employability.

Case laws in respect of recent trends and administration of the Acts are required to be done in all units.

Practical Exercises:

The learners are required to:

1. Analyze the compensation system of an organization and identify opportunities for improvement of those systems
2. Visit different companies and identify the variation of the minimum wages.
3. Summarize some similarities and differences between financial and non-financial benefits for the employees.
4. Discuss the compensation and benefits practices that contribute to attracting and retaining high-quality employees. Learners may be assigned to evaluate the compensation and benefits practices.
5. Analyze, integrate and apply the knowledge to solve compensation-related problems in the organization.
6. Design performance pay and indirect pay plans necessary to attract, retain and motivate the workforce.
7. Apply various tools for decision-making in complex, compensation-related environments, as well as design, develop, and implement compensation strategies that achieve value-added results, thereby enabling organizations to more effectively and efficiently achieve their goals.
8. Analyze and interpret case studies on maternity benefits in various organizations.

Master of Business Administration (Business Analytics)

MBA (BA)
Semester IV

Course MBABAEC05: LEARNING AND DEVELOPMENT

Marks: 100 **Duration-60 Hrs.**

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Learning and development **MBABAEC05**	**4**	**3**	**0**	**1**	**Graduation**	**No**

Learning Objective:

To explore the learner to the concept and practice of learning and development in the modern organizational setting through the pedagogy of case discussions, practical, experiential learning, and recent experiences.

Learning Outcomes:

After completion of the course, learners will be able to:

- Link learning and development to the company's strategy effectively and assess the training needs of the people working in the organization.
- Apply various methods of learning and development in real-life situations.
- Design, develop, and conduct learning and development programmes.
- Evaluate the effectiveness of training and development programmes as well as learning outcomes.
- Recognise the emerging trends in the field of learning and development.

Syllabus:

Unit I: Introduction (10 Hours)

Fundamentals of learning and development; Difference between training & development and learning & development; Linking learning and development to company's strategy; Learning theories, strategies and constructivist approach to learning, learning in a digital world; Training Needs Assessment (TNA)- meaning and purpose of TNA, TNA at different levels, approaches for TNA, output of TNA, methods used in TNA.

Unit II: Learning and Development Methodologies (15 Hours)

Overview- logic and process of learning; Principles of learning; Individual differences in learning; Learning curve; Learning management system; Criteria for method selection; Skills of an effective trainer; Development techniques for enhancing decision–making and interpersonal skills, case-study, in-basket exercise, special projects, action learning, syndicate work, games, action maze, role play, experiential learning discovery learning, brainstorming, position rotation, team building, and sensitivity training; new learning methodologies using modern technologies.

Unit III: Designing Learning and Development Programmes (15 Hours)

Organization of learning and development programmes, design, kinds, choice of learning and development methods, preparation of trainers; Developing training materials; E-learning environment; technologies convergence and multimedia environment; Flexible learning modules; Self- development; Training process outsourcing.

Unit IV: Evaluation of Learning and Development (10 Hours)

Reasons for evaluation; Evaluation planning and data collection; Different evaluation frameworks; Value of learning research-RAM Model; the implication of learning evaluation, Problems of measurement and evaluation; Methods of evaluating the effectiveness of L & D efforts; Issues resulting from the external environment and internal needs of the company.

Unit V: Emerging Trends in Learning and Development (10 Hours)

Gamification, team building and six sigma training; Electronic enabled learning systems- its up scalability and follow up activities.
Learning and development initiatives of some selected companies from private and public sectors and MNCs; Upskilling & Reskilling; Adaptive Learning; Social Learning; Microlearning, Knowledge - sharing Ecosystem.

Case Studies: Some cases of the real business world supplement learning from the course.

Practical Exercises:

The learners are required to:

1. Analyze and interpret the learning and development strategies of various Indian organizations.

2. Participate in simulation exercises in the classroom to conduct learning and development techniques for enhancing decisions.

3. Develop a case study on different kinds of Learning and Development strategies by various companies in real-life scenarios. Learners may be assigned to compare different kinds of Learning and Development strategies by various companies.

4. Interview HR managers and develop a learning module on practical applications of Learning and Development concepts.

5. Visit a company and identify the different evaluation frameworks adopted in various functional areas.

6. Compare new Learning and development initiatives of some selected companies from private, and public sectors and MNCs.

Essential/ Recommended readings

Master of Business Administration (Business Analytics)

MBA (BA)
Semester IV

Marks: 100 **Duration-60 Hrs.**

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Digital Marketing Analytics **MBABAEC06**	**4**	**2**	**0**	**2**	**Pass in Graduation**	**NIL**

Learning Objectives

This course provides the knowledge base for understanding and practicing of the data analytics in Marketing. The primary objective is to help students in familiarizing and learning essential contrivances for steering business transactions through the various resources of information technology along with concept related contemporary case studies. The course provides thorough knowledge on various functions of data analytics in Marketing.

Learning outcomes
After completion of the course, learners will be able to:

- Recognise the concept of digital analytics and its role in marketing.
- Improve the visibility of a website on search engines and increase traffic with help of SEO and dive deep into different facets of SEO like on-page optimization and off-page optimization, keyword research, and SEO performance measurement.
- Analyze the process of Social Media Optimisation.
- Identify different kinds of marketing.
- Improve Return on Investment for any digital marketing program

Syllabus

Unit I: Introduction to Marketing & Digital Marketing Perspective (10 Hours)
Role of Marketing, Consumers and Consumption Segmentation, Targeting and Positioning, Designing Products and Services, Pricing and Channels, Using Communication to Engage Customers.
Introduction to Digital Marketing Basics Digital vs. Traditional Marketing, Why Care About Digital Marketing? Revisiting Marketing Mix: Digital Perspective with Case Study , Opportunities in Digital Marketing in India.
Personas in Digital Marketing Developing, Using and Refining Personas , The Personas and User Journeys, Consumer Journey Mapping Frameworks, Digital Marketing Mix and Digital Models, Case-based Discussions

Unit II: Search Engine Optimization (SEO) (13 Hours)

What is SEO and how do Search Engines Work?, Understanding On-page and Of-page SEO In Details, Keyword research techniques, Technical SEO, Mobile SEO, and Schema Markups, Link building – Blogger Outreach and Other Techniques, Social SEO, Local SEO, and International SEO, SEO Audits, SEO Tools – SEMrush, Ahrefs, etc., How to Rank #1 on Google? , Google AdWords , Set Up, Manage and Optimise a Google Ad Campaign , Google Analytics , Pay Per Click: An online internet model

Unit III: Social Media Optimization (SMO) (12 Hours)
Social Media Optimization, its Benefits, Different Platforms
Affiliate Tracking on a Website, How to Handle Affiliates?, Handling Fraudulent Transactions, Tips and Tricks

Unit IV: Kinds of Marketing (10 Hours)
Content Marketing, Email Marketing , Video Marketing, Paid Marketing , Affiliate Marketing, Influencer Marketing, Mobile Marketing

Unit V: Digital Marketing Analytics & ROI Measurement (15 Hours)
Descriptive, Predictive and Prescriptive Analytics , Market Basket Analysis , Sentiment Analysis, Understanding Google Analytics and Visitors' Traffic Matrices, Understanding Visitor Behaviour using Multiple Metrics, Slicing and Dicing Data, Understanding Growth Patterns, How to Build a Marketing Strategy by Seeing Traffic Patterns?, Channel Performance, Setting Goals, and Creating Reports and Dashboards, Measuring ROI as an Integrated Approach and Strategy Creation

Practical Exercise:
The learners are required to:

1. Discuss case studies on digital analytics and its role in marketing.
2. Participate in role play exercises to evaluate and choose appropriate web analytics tools and techniques.
3. Examine the important tools to collect data using today's most important online techniques: performing bulk downloads, tapping APIs, and scraping web pages.
4. Understand approaches to visualizing data effectively.
5. Evaluate different kinds of marketing.
6. Utilise Predictive and Prescriptive Analytics techniques to supplement decision making and policy formulation.
7. Recognize Key Performance Indicators tied to any digital marketing program

Suggested Readings:

1. Sponder, M. & Khan, G. F. (2017). *Digital Analytics for Marketing*. United Kingdom: Taylor & Francis.
2. Hemann, C. & Burbary, K. (2013). *Digital Marketing Analytics: Making Sense of Consumer Data in a Digital World.* United Kingdom: Pearson Education.
3. Hartman, K. (2020). *Digital Marketing Analytics: In Theory and In Practice* (Black & White Print Version). (n.p.): Independently Published.
4. Hemann, C. & Burbary, K. (2018). *Digital Marketing Analytics: Making Sense of Consumer Data in a Digital World*. United Kingdom: Pearson Education, Incorporated.
5. Kotler, P., Kartajaya, H & Setiawan,I. (2017). *Marketing 4.0: Moving from Traditional to Digital*. Wiley.
6. Winston, W.L. (2016). *Marketing Analytics: Data-Driven Techniques with Microsoft Excel*. Wiley.
7. Ian, Dodson I. (2016). *The Art of Digital Marketing: The Definitive Guide to Creating Strategic, Targeted, and Measurable Online Campaigns*. Wiley.

Note: Readings will be updated by the Department of Commerce and uploaded on Department's website.
Note: Relevant software will be used for pedagogical purpose. Evaluation of practical exercise using software will be part of internal assessment. Further, case studies related to above topics are required to be discussed.

Master of Business Administration (Business Analytics)

MBA (BA)
Semester IV

Marks: 100 **Duration-60 Hrs.**

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Financial Modeling using Excel **MBABAEC07**	4	0	0	4	**Pass in Graduation**	**NIL**

Learning Objectives

To provide hands-on learning on financial modelling using spreadsheets for Business Analysis and financial decisions.

Learning outcomes

After completion of the course, learners will be able to:

- Evaluate the basics of financial modelling using spreadsheets.
- Build financial models for business analysis, CVP analysis, forecasting and to make projected financial statements
- Analyze models for making capital budgeting decisions and evaluate capital structure for the business.
- Apply modelling tools and techniques for pricing bonds, securities, portfolios and options.
- Examine different automation techniques for financial models.

Syllabus

Unit I: Modeling Overview and Core Concepts (10 Hours)

Financial modeling and application, tools for modeling, skills for financial modeling, steps of modeling, Structure and Challenges, Spreadsheet environment and its application, designing the spreadsheet model, using formulae in

modeling, Financial Modeling standards

Unit II: Modeling for Business Analysis (12 Hours)

Building a financial statement model, trend analysis, common-size analysis, working capital schedule, amortization schedule, Construction of pyramid of ratios Is something missing here, Financial analysis of company, Developing a financial model for Cost-Volume-Profit Analysis – Break-Even-Point, and Risk Analysis in Cost-Volume-Profit Analysis Integration and linking of financial statements; Lag and lead indicators; Forecasting techniques; Forecasting turnover, expenses, current and non-current assets, liabilities; Adjusting for seasonality, projected financial statements

Unit III: Modeling for Capital Budgeting Decisions (13 Hours)

Applying modeling tools and functions for basic functions of time value of money-FV & PV; Annuity; Loan Amortization; Connecting Loan structure with Taxation, projected discounted cash flows, DCF valuation, Pay Back Period, NPV and IRR; Necessary Projections, Data Tables, Sensitivity Analysis and Scenario Analysis, Expected NPV and associated Variance – Complete Model for capital budgeting decisions, Modeling Financial Leverage, capital structure and weighted average cost of capital

Unit IV: Financial Modeling for Securities (13 Hours)

Modeling Price and Yield for different types of bonds; modeling dynamics of bonds, interest rate risk modeling and prediction of prices – duration and convexity, developing models to determine and analyze security risk and return; Portfolio Risk and Return; and Efficient Frontier, Developing financial models for pricing Binomial Options and Black–Scholes model.

Unit V: Automation of Models (12 Hours)

Building a dynamic Dashboard for assisting the management to make necessary financial decision, Introduction to VBA and Macros, Building user-defined Functions, Macros for Automation, Automation of the Financial Models

Evaluation will be done through a practical exam.

Practical Exercises:

The learners are required to:

1. Find out the different tools and features of a spreadsheet
2. Extract historical data from financial statements of companies to forecast company earnings. Compare the performance of any two companies of your choice in an industry using ratios.
3. Select any 5 companies of your choice. Using appropriate models, forecast their future cash flows, growth rate and cost of capital. Estimate the intrinsic value of stocks of these companies by building a financial model.
4. Extract historical data for 5 companies and compare their capital structure. Also, estimate their

value if more debt is incorporated as part of their capital structure.

5. Construct portfolios based on any firm attribute using past data. Assess the profitability of this investment strategy. Evaluate if the returns on this strategy are explained by standard risk models such as CAPM and F-F Model. Use excel for your estimations.

6. Construct macro using VBA for any new financial function not existing in the Excel like Pay back period, Cumulative Cash Flows etc.

Suggested Readings:

- Beninga, Simon (2014). *Financial Modeling*. MIT press.
- Day, Alastair L. (2012). *Mastering Financial Modeling*. Pearson Education.
- Moschella, John (2017). *Financial Modeling for Equity Research: A Step-by-Step Guide to Earnings Modeling*. Guternberg Research publishing.
- Proctor, K. Scott (2004). *Building Financial Models with Microsoft Excel*. John Wiley and Sons.
- Sengupta, Chandan (2004). *Financial Modeling using Excel and VBA.* John Wiley & Sons.
- Tija, John S. (2009). *Building Financial Models.* McGraw Hill.

Note: Latest edition of the readings may be used.

Note: Suggested readings will be updated by the Department of Commerce and uploaded on Department's website.

Knowledge Management **MBABAEC08**	**4**	**3**	**0**	**1**	**Pass in Graduation**	**NIL**

Learning Objective:

To prepare the students to participate in the organizational knowledge management efforts and how the three aspects, strategy, technology, and HRM need to be aligned together to facilitate management of knowledge.

Learning Outcomes:

After completion of the course, learners will be able to:

-
- Explain the evolution of knowledge management and its relevance in a competitive environment.
- Describe the entire process of KM & knowledge creation.
- Develop knowledge leadership capabilities.
- Apply knowledge management systems and tools.
- Analyze knowledge as a strategic resource using enabling technologies and evaluate knowledge strategies.

Syllabus:

Unit I: Introduction (10 Hours)

Definition, need and objectives of knowledge management; Organizational benefits of KM; The drivers of knowledge management; Challenges of KM implementation; Knowledge hierarchy; Structural and process perspective of knowledge; Context and relevance of KM in competitive environment and knowledge economy.

Unit II: KM Process & Knowledge Creation (12 Hours)

Knowledge identification; Knowledge capture; Knowledge acquisition; Knowledge creation; Knowledge codification; Knowledge linking and building; Knowledge transfer & dissemination; Knowledge storage; Knowledge sharing; Knowledge application; Nonaka's model of knowledge creation-SECI model, Ba model.

Unit III: Knowledge Management Soft Support System (13 Hours)

Developing knowledge leadership capabilities; Recruiting and selecting knowledge leaders; Strategic knowledge leaders; Developing a knowledge culture; Knowledge culture enablers; Developing and

maintaining knowledge motivators, and other managerial and social infrastructure; Knowledge community.

Unit IV: KM Systems and Tools (13 Hours)

Knowledge management systems; Knowledge system design and architecture; Knowledge maps, implementation and challenges of KM system; ICT and groupware technology; Knowledge technology; Data warehouse and data mining; Search engines; Expert systems; Knowledge portal; Intelligent agents.

Unit V: Knowledge Strategies (12 Hours)

Knowledge as strategic resource; Knowledge strategies and its evaluation; Benchmarking; Knowledge audit; Introduction of enabling technologies of KM- big data, cloud computing, AI, etc.; Sustainable knowledge management; Top management challenges and emerging perspective ahead.

Practical Exercises:

The learners are required to:

1. Discuss the evolution of knowledge management and its relevance in the present competitive environment.
2. Analyze the entire process of KM & knowledge creation.
3. Assess the qualities of knowledge leaders in different organizations.
4. Apply knowledge management systems and tools.
5. Evaluate knowledge of different organizations.

Learning experiences from real life case studies.

Suggested Readings:

- Tiwana, A. (2003). *Knowledge Management Toolkit, The: Orchestrating IT, Strategy, and Knowledge Platforms*. Prentice Hall.

Note: Readings will be updated by the Department of Commerce and uploaded on Department's website.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Master of Business Administration (Business Analytics)

MBA (BA)
Semester IV

Marks: 100 **Duration-60 Hrs.**

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical / Practice		
Human Resource Information System **MBABAEC09**	4	3	0	1	**Pass in Graduate**	**NIL**

Learning Objectives

The objective of the course is to acquaint the students about the concept of information systems, internet, World Wide Web, HRIS and their application in Human Resource Development.

Learning outcomes

After completion of the course, learners will be able to:

- Describe the role of information technology and information systems in business and with respect to different management levels.
- Recognise the relevance of information in decision making. Identify and evaluate hardware and software requirements for information systems.
- Develop an understanding of the System Development Life Cycle in detail and analyze the MIS applications in different industries.
- Discuss how Human Resources Information Systems (HRIS) are bought/developed and implemented for various levels in an organization.
- Explore the use of some common Information Systems development tools

Syllabus

Unit I: Introduction (12 Hours)

Introduction to Management Information Systems, history of MIS, impact of MIS, role and importance of MIS in organization; Role of MIS at management levels; MIS growth and development; Artificial intelligence, Decision Support System (DSS), Executive Information System (EIS); Applications of MIS.

Unit II: Information Concepts and Information Technology (12 Hours)

Data and information; Relevance of information to decision making; Source, quality and types of information; Relevance of information in MIS; Assessing information needs of the organization; Use of information for competitive advantage; Trends in Information Technology- hardware and software, data-communication concepts; Decision making with communication technology; Multimedia approach to information processing; Decision of appropriate information technology for proper MIS.

Unit III: System Development and Applications of MIS (13 Hours)

Systems definition-types of systems:

open, closed, deterministic, probabilistic, etc; Relevance of choice of system in MIS; Integration of organization systems and information systems; System Development Life Cycle (SDLC); Alternative system building approaches, prototyping, rapid development tools, case tools, object-oriented systems; MIS applications in HRD & O.D. in manufacturing, R&D, public transport, hospitals, hotels and service industries.

Unit IV: HRIS Development (13 Hours)

HRIS life cycle/HR responsibility in each phase of HRIS development; Pre implementation stage of HRIS; HRIS planning; HRIS expectation, productivity through HRIS; HRIS cost-benefit value analysis; Getting management support for HRIS; Limitations of computerization of HRIS.

Unit V: Emerging Trends in HRIS (10 Hours)

Implementation of HRIS- tools in HRIS development, cases

and exercises; Human Resources Information Systems in large and small organizations- cases & exercises, packaged Human Resources Information Systems/ business process, re-engineering, enterprise resource planning systems, emerging trends in HRIS, networking, internet, intranet, technology implications, etc.

Practical Exercises:

The learners are required to:

1. Analyze the role of information technology and information systems in various organizations with respect to different management levels.
2. Identify and evaluate hardware and software requirements for information systems.
3. Evaluate the role of MIS applications in different industries.
4. Perform HRIS cost-benefit value analysis.
5. Compare Human Resources Information Systems in large and small organizations.
6. Explore and evaluate some common Information Systems development tools.

Suggested Readings:

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

Master of Business Administration (Business Analytics)

MBA (BA)
Semester IV

Marks: 100 **Duration-60 Hrs.**

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Advanced Machine Learning **MBABAEC10**	4	3	0	1	**Pass in Graduation**	**NIL**

Learning Objectives

The course aims to familiarize the learners with machine learning methods for various problems where human expertise is not present, or where humans are unable to identify the reason behind their expertise, or where problem size is too huge for humans to comprehend solutions or where solutions are context specific. The course will introduce topics which include Bayesian statistics, Markov modeling, graphical model structure learning, deep learning and Gaussian processes.

Learning outcomes

After completion of the course, learners will be able to:

1. Describe the role of machine learning in solving complex and large scale problems.
2. Analyze Bayesian Statistics and decision theory.
3. Analyze Markov and Hidden Markov Models.
4. Analyze Additive models, Tree based methods and Boosting methods.
5. Evaluate graphical methods.
6. Recognize the concept of Deep learning and analyze the Gaussian Process.

Syllabus

Unit I: Unsupervised Learning (8 Hours)

Introduction, Association rules, Cluster analysis, Self-organizing maps, Principal components, curves and surfaces, non-negative matrix factorization, independent component analysis, multidimensional scaling, nonlinear dimension reduction, the google Pagerank algorithm.

Unit II: Bayesian Statistics (12 Hours)

Introduction, Summarizing posterior distributions, Bayesian model selection, Priors, Hierarchical Bayes, Empirical Bayes, Bayesian decision theory.

Unit III: Markov and Hidden Markov Models (8 Hours)

Introduction, Markov models, Hidden Markov models, Inference in HMMs, Learning from HMMs, Generalizations of HMMs.

Unit IV: Additive Models, Trees and Boosting (12 Hours)

Generalized Additive Models, Tree based methods, PRIM: Bump hunting, MARS, Hierarchical mixture of experts, missing data, computational considerations. Boosting methods, boosting fits an additive model, forward stagewise additive modeling, exponential loss and adaboost, why exponential loss, loss functions and robustness, off the shelf procedures for data mining, boosting trees, right sized trees, regularization, interpretation.

Unit V: Graphical Model Structure Learning (20 Hours)

Introduction, Learning tree structures, learning DAG structures, Learning DAG structures with latent variables, learning casual DAG's, learning undirected Gaussian graphical methods, learning undirected discrete graphical methods.

Deep learning and Gaussian Process

Deep learning: Introduction, Deep generative models, Deep neural networks, applications of deep networks. Gaussian Processes: Introduction, GPs for regression, GPs meet GLMs, Connection with other methods, GP latent variable model.

Practical Exercises:

The learners are required to: learn to analyse using appropriate softwares:

1. Analyze the role of machine learning in solving complex and large scale problems.
2. Analyze Bayesian Statistics and decision theory.
3. Analyze Markov and Hidden Markov models using appropriate software.
4. Analyze Additive models, Tree based methods and Boosting methods using appropriate software.
5. Evaluate graphical methods.
6. Evaluate applications of deep networks.

Master of Business Administration (Business Analytics)

MBA (BA)
Semester IV

Marks: 100 **Duration-60 Hrs.**

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Time Series Analytics **MBABAEC 11**	4	3	0	1	**Pass in Graduation**	**NIL**

Learning Objectives

To make students model, analyse and forecast the behaviour of time series data. To make them analyse various issues involved in Time series Econometrics. The course is designed to equip them with advanced analytical tools and techniques which can enhance their logical ability for forecasting in business.

Learning outcomes

After completion of the course, learners will be able to:

- Discuss the basics of Time Series Data.
- Evaluate Stationary Time Series Models.
- Test and analyze the Stationary Time series.
- Model volatility using Time series.
- Examine cointegration and error correction among time series data.
- Analyze, Model and Forecast using time series data.

SYLLABUS

Unit I: Difference Equations (10 Hours)

Time series models, Difference equations and their solutions, solution by iteration, an alternative solution methodology, the cobweb model, solving homogeneous difference equations, particular solutions for deterministic processes, the method of undetermined coefficients, lag operators.

Unit II: Stationary Time Series Models (12 Hours)

Stochastic difference equation models, ARMA models, stationary restrictions for ARMA(p,q) model, autocorrelation function, partial autocorrelation function, sample autocorrelations of stationary series, box-jerkins model selection, properties of forecasts, model of interest rate spread, seasonality, parameter instability and structural change.

Unit III: Models with Trend (12 Hours)

Deterministic and Stochastic trends, removing the trend, unit roots and regression residuals, Monte- Carlo method, Dickey-Fuller tests: examples and extensions, structural change, power and the deterministic regressors, test with more power, panel unit root tests, trends and univariate decompositions.

Unit IV: Modelling Volatility (13 Hours)

Economic time series: the stylized facts, ARCH processes, ARCH and GARCH estimates of inflation, examples of GARCH models, A GARCH model of risk, ARCH-M model, additional properties of GARCH processes, maximum likelihood estimation of GARCH models, other models of conditional variance, Multivariate GARCH.

Unit V: Multi-equation Time Series Models (13 Hours)

Intervention Analysis, Transfer function analysis, estimating a transfer function, limits to a structural multivariate estimation, VAR analysis, estimation and identification, Impulse response function, testing hypothesis, Example of Simple VAR, structural VARs, examples, Granger Causality Test, Variance decomposition. Co-integration and Error Correction Models.

Practical Exercises:

The learners are required to:

1. Analyze time series data.
2. Examine the stationarity of the time series using appropriate software.
3. Model volatility of time series using appropriate software.
4. Examine cointegration among time series using appropriate software.
5. Analyze and examine error correction between time series using appropriate software.
6. Examine causality between time series using appropriate software.
7. Analyze, Model and Forecast using time series data.

Essential/ Recommended readings

Suggested Readings:

- Anderson (2011). *The Statistical Analysis of Time Series*. Wiley.
- Brockwell, P.J. & Davis, R.A. (2016). *Introduction to Time Series and Forecasting*. Springer, Third Edition.
- Chatfield, C. (2003). *The Analysis of Time Series: An Introduction*. Chapman & Hall, Sixth Edition.

- Enders W. (2014). *Applied Econometric Time Series*. John Wiley & Sons, Inc., Fourth Edition.
- Hamilton, J.D. (2012). *Time Series Analysis*. Princeton University Press.
- Mills, T.C. & Markellos, R.N. (2008). *The Econometric Modelling of Financial Time Series*. Cambridge University Press, Third Edition.
- Shumway, R.H. & Stoffer, D.S. (2013). *Time Series Analysis and Its Applications: With R Examples*. Springer.
- Tsay, R.S. (2014). *Analysis of Financial Time Series*. Wiley, Third Edition

Note: Latest edition of the readings may be used.

Note: Relevant software will be used for pedagogical purpose. Evaluation of practical exercise using software will be part of internal assessment. Further, case studies related to above topics are required to be discussed.

Note: Suggested readings will be updated by the Department of Commerce and uploaded on Department's website.

Master of Business Administration (Business Analytics)

MBA (BA)
Semester IV

Marks: 100 **Duration-60 Hrs.**

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical / Practice		
Predictive Analytics MBABAEC12	4	2	0	2	**Pass in Graduate**	**NIL**

Learning Objectives

The objective of the course is to make one understand the correct framework of predictive modeling process which involves data preparation, model development, hypothesis testing and model evaluation. The course also focuses on various concerns in model prediction such as overfitting, model tuning and class imbalance.

Learning outcomes

After completion of the course, learners will be able to:

1. Gain skills in understanding predictive models.
2. Analyze metric data and get an overview of statistical tests
3. Gain skills in building predictive models.
4. Recognise the process of hypothesis testing and model evaluation.
5. Use Linear and Logistic Regression for Model Estimation.
6. Apply predictive models to solve business problems.

SYLLABUS

Unit I: Introduction (5 Hours)

Classification & prediction, Key ingredients of predictive models, Goals of a regression analysis. Regression models, Data in a regression analysis.

Unit II: Data Preparation & Statistical Tests (10 Hours)

Analyzing the metric data: Measures of central tendency, measures of dispersion, data distribution, histogram analysis, outlier analysis, correlation analysis. Attribute Reduction Methods: Univariate Analysis, Correlation-based Feature Selection, Attribute Extraction: Principal Component Analysis. Overview of statistical tests: Categories, one-tail and two-tail, Type I and Type II errors, interpreting significance results.

Unit III: Model Development (10 Hours)

Model Development: Data partition, Attribute reduction, model construction, model validation, hypothesis testing, results interpretation, cross-validation.

Unit IV: Hypothesis Testing & Model Evaluation (10 Hours)

Steps in Hypothesis Testing, Statistical testing, model-comparison tests. Performance measures for categorical and continuous dependent variables, ROC analysis.

Unit V: Linear and Logistic Regression Model Estimation (25 Hours)

Simple Linear Regression, Multiple Regression, Logistic Regression Overfitting, Model Tuning & Class Imbalance.

Applying Predictive analytics

Applying Predictive analytics across various industries (Banking, Healthcare, Human resources (HR), Marketing and sales, Supply chain) for different business problems and making informed decisions within real-world situations.

Practical Exercises:

The learners are required to:

1. Interpret key ingredients of predictive models.
2. Apply statistical tests and interpret the significance of their results.
3. Build predictive models
4. Apply Statistical testing techniques and model-comparison tests
5. Use Linear and Logistic Regression Models on real life situations.
6. Apply predictive analytics to solve business problems.

Note: Readings will be updated by the Department of Commerce and uploaded on Department's website.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time

Master of Business Administration (Business Analytics)

MBA (BA)
Semester IV

Marks: 100 **Duration: 60 Hrs.**

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Enterprise Performance Management **MBABAEC13**	**4**	**3**	**0**	**1**	**Pass in Graduation**	**NIL**

Learning Objectives:
This course aims to discuss the major aspects of technological change and the kind of human resource management strategies and steps which may equip the organization and its human resources to adequately cope with such changes. It also examines the importance of an effective performance management system in helping organizations define and achieve short and long term goals.

Learning Outcomes: After completion of the course, learners will be able to:

1. Discuss the role of HR management in effective business administration.
2. Recognise the role of changing technology and leadership skills in the management of an enterprise.
3. Evaluate and analyze the need for performance management and provide solutions that align with strategic goals as well as maximizing productivity.
4. Develop knowledge of the concept of auditing and its applicability as a performance management tool.
5. Analyze HR scorecard, stochastic models and future trends in Business Analytics.

Syllabus:

Unit I: Manpower Management (10 Hours)

HR Management in the 21st Century; Environmental Context of Human Resource Management; The Emerging Profile of Human Resources; Special Features of New Technology; Concept and Process of Technological Innovation; Organizational and Human Resource Implications of Technological Change.

Unit II: Globalization, Technology and Human Resource Issues (12 Hours)
Technology and Culture, Technology Management, Changing Technology and New Leadership Skills, Economic Theory of Choice and Employee Benefits.

Unit III: Performance Management (13 Hours)

Concepts and issues, definition, performance, principles, role of performance management in the organization; Management Control and Operational Control; Framework and key factors to successful performance system.

Unit IV: Evaluating HR function (12 Hours)
Overview of evaluation - scope - strategic impact - level of analysis - Criteria - Level of Constituents - ethical dimensions. Approaches to evaluation, - audit approach, - analytical approach, - quantitative and qualitative measures - outcome and process criteria, Balanced Scorecard perspective, Benchmarking, Accounting for HRM.

Unit V: HR Scorecard and Stochastic Models (13 Hours)
Creating an HR Scorecard, Measuring HR alignment -2 dimensions of alignment - assessing internal and external alignment - Systems alignment Map. 7-step Model for implementing HR's strategic role. New issues in Manpower Training and Career Development; Introduction to stochastic models, Markov models, Poisson process with applications, Markov decision process in sequential decision-making, future trends in Business Analytics.

Practical Exercises:
The learners are required to:

1. Analyze and interpret case studies related to HR Management.
2. Discuss the role of changing technology and leadership skills in the management of an enterprise.
3. Participate in simulation exercises in the classroom on Leadership Skills and thereby identify their needs in performance management.
4. Participate in simulation exercises and role play on performance management. Learners may be assigned to draft solutions that align with strategic goals as well as maximize productivity.
5. Interview HR managers and develop in-depth knowledge on practical applications of evaluation of HR functions.
6. Visit a company and identify the manpower training and career development methods adopted in various functional areas.
7. Create an HR Scorecard in a select organization and present the report of the same.

Essential/ Recommended readings

Robotic Process Automation in Business **MBABAEC14**	**4**	**3**	**0**	**1**	**Pass in Graduation**	**NIL**

Learning Objectives

The objective of the course is to acquaint the students with the concept of information systems, internet, World Wide Web, HRIS and their application in Human Resource Development.

Learning outcomes

After completion of the course, learners will be able to:

- Explain the concept and relevance of robotic process automation
- Discuss the working process of robotic process automation
- Evaluate application areas of robotic process automation for business
- Create different robotic process automation models of business
- Develop a business model using robotic process automation

Syllabus:

Unit I: Introduction (10 Hours)

Overview of robotic process automation. Robotic process automation: Concept and Introduction, features, merits, demerits, role and importance of Robotic Process Automation.

Unit II: Application area of robotic process automation with examples (12 Hours)
Automation: Meaning and types. differentiate between process automation and robotic process automation, Software automation and its importance.

Unit III: Various robotic process automation models of business (13 Hours)
SWOT analysis for robotic process automation, Application areas of robotic process automation. Opportunities and challenges of adoption and application of robotic process automation in business, study of various models of robotic process automation in business.

Unit IV: Study of various existing models of robotic process & Hands on hands practice on the existing robotic process models automation (13 Hours)

Practice on specific models of robotic process automation i.e. attendance tracking, performance tracking, performance evaluation etc. business models using robotic process automation.

Unit V: Development of business models using robotic process automation (12 Hours)
Development of models in various areas of finance and accounting, sales and marketing, HR, Production and operations and service sector.

Practical Exercises:

The learners are required to:

1. Discuss the relevance of robotic process automation in present times.
2. Analyze the working process of robotic process automation.
3. Identify and evaluate different application areas of robotic process automation in any industry.
4. Create and assess different robotic process automation models of business.
5. Develop and evaluate a business model using robotic process automation.

Essential/ Recommended readings

Note: Readings will be updated by the Department of Commerce and uploaded on Department's website.

Note: Use cases to supplement learning from the course.

Note: Relevant software will be used for pedagogical purpose. Evaluation of practical exercise (if any) using software will be part of internal assessment.

Updated on 21.03.2023

ANNEXURE-47

Addition to Ordinance VIII

[EC Resolution No. 60-1/ (60-1-13) dated 03.02.2023]

Following addition be made to the Ordinance VIII (VIII-F) of the Ordinances of the University:

Add the Following:

Assessment pattern of Courses based on Under Graduate Curriculum Framework – 2022 to be implemented from the Academic Year 2022-2023.

1. The assessment pattern that shall be adopted for the purpose of assessment of courses that have been approved by the Competent Authorities under the UGCF 2022 shall be as follows:

   (a) In any course where 01 credit is attributed to 'Tutorial', an objective assessment process has to be developed as a credit earned by a student in a course will eventually lead to its deposition in the Academic Bank of Credit of such student. Therefore, it is imperative that each credit earned by a student is adequately assessed and recorded accordingly.

   (b) In view of the above, the components of Tutorial have been listed so that at least some of these activities (listed at point no. 3 below) may be picked up by a student, in consultation with the teacher, as per rules devised for this purpose. The activities conducted shall be assessed through continuous assessment.

      (i) Some of the activities that may be done as component of tutorials are as follows:
      - Literature review
      - Book review
      - Movie review
      - Project activity (group)
      - Research cum presentation
      - Creative Writing/Paper writing
      - Group discussion
      - Problem Solving exercises
      - Any creative production (may be done in a group)

- Innovative Project
- Any other scholastic work related to application of conceptual understanding of the subject.

(ii) Further, out of forty marks allocated for Continuous Assessment of tutorial, five marks shall be for attendance, which shall be distributed as follows:

a. 67% attendance or more but less than 70% attendance (67% ≤ to < 70%) – 1 mark
b. 70% attendance or more but less than 75% attendance (70% ≤ to <75%) – 2 marks
c. 75% attendance or more but less than 80 % attendance (75% ≤ to < 80%) – 3 marks
d. 80% attendance or more but less than 85% attendance (80% ≤ to 85%) – 4 marks
e. 85 % attendance or more (85% ≤) – 5 marks

There shall **not** be marks for attendance in Continuous Assessments for practical.

2. (i) Internal Assessment (IA) shall consist of marks secured in class tests, assignments/ presentations and attendance. For instance, for an Internal Assessment of 25 marks, Class tests shall comprise of 10 marks, Assignments/Presentations shall comprise of 10 marks and attendance shall be for 5 marks. Similarly, for IA of 30 marks, 6 marks shall be for attendance, 12 marks for class test and 12 marks for Assignments/Presentations.

(ii) Six marks for attendance shall be distributed as follows:

(a) 67% attendance or more but less than 70% attendance (67% ≤ to < 70%) – 1.2 mark
(b) 70% attendance or more but less than 75% attendance (70% ≤ to <75%) – 2.4 marks
(c) 75% attendance or more but less than 80 % attendance (75% ≤ to < 80%) – 3.6 marks
(d) 80% attendance or more but less than 85% attendance (80% ≤ to 85%) – 4.8 marks
(e) 85 % attendance or more (85% ≤) – 6.0 marks

3. (i) To make Internal Assessment and Continuous Assessment fair and reasonable, it is necessary to strengthen the Monitoring Committee for Internal Assessment in every College, constituted as per clause 5 (ii) of Ordinance VIII-E of the Ordinances of the University. This Committee shall be responsible for the entire process of Internal Assessment in the College, including redressal of grievances, if any. The same Committee shall also look into the process of Continuous Assessment and redress grievances, if any.

(ii) A student who is discontent with the decision taken by the Monitoring Committee for Internal Assessment of the College, with respect to the

grievance submitted by him/her relating to Internal Assessment/Continuous Assessment, may file an appeal before an appellate body consisting of the Principal of the College, the Teacher-in-charge of the department/senior faculty member, the concerned teacher who has assessed the aggrieved student and shall be chaired by the Nominee of Dean of Colleges or Director South Delhi Campus, under whose jurisdiction the concerned College falls.

4. The theory examination and internal assessment shall be a cumulative assessment of the teaching-learning done in the theory as well as tutorial classes.

5. The assessment pattern for courses of different credit distributions is provided in **Table – 1**.

6. Practical marks for courses of total four credits, shall comprise of

   (i) continuous evaluation (25%),
   (ii) end term practical examination (50%) and
   (iii) viva-voce (25%).

   Practical marks for courses of total two credits shall comprise of

   (i) continuous evaluation (25%),
   (ii) end term practical /written exam (50%) and
   (iii) viva-voce (25%)

7. The variance of the total marks in various combinations of LTP structure shall be aligned with the help of "weighted average" calculated through an appropriately devised formula for conversion of marks to grades.

8. "The attendance requirement for continuous mode of assessment shall be as per Ordinance VII of the Ordinances of the University".

9. To enable students to improve their grades, the following may be adopted:

Grade obtained in the course/paper	**Grade obtained in Theory**	**Grade obtained in Practical/ Tutorial**	**Re-register**	**Course of action to improve the Grade**
F	Not Satisfied*	Satisfied	No	To appear in end term theory exam of that course/paper for Essential Repeat
More than F	Not Satisfied*	Satisfied	No	To appear in end term theory exam of that course/paper for improvement
More than F	Not Satisfied (IA marks satisfied)	Satisfied	No	To appear in end term theory exam of that course/paper for improvement
More than F	Not Satisfied including IA	Satisfied	Yes	To attend the course and appear for IA and end term theory examination for improvement
More than F	Satisfied	Not Satisfied*	Yes	To attend the course and appear in both theory and practical

				examinations, along with their CA and IA for improvement.
F	Satisfied	Not Satisfied*	Yes	To attend the course and appear in both theory and practical examinations, along with their CA and IA for Essential Repeat.
F	Not Satisfied*	Not Satisfied*	Yes	Attend the course and appear in both theory and practical examinations, along with their CA and IA for Essential Repeat.

*Not satisfied indicates Grade below the passing marks prescribed for theory/practical.

10. The final percentage of marks (%) for the students graduating from 2022-2023 shall be calculated as Grand CGPA (Cumulative Grade Point Average) multiplied by a factor of 10.

TABLE-1

Total Credits	L	T	P	End term Theory Exam marks	Internal Assessment (IA) marks	Total of theory exam and IA	Duration of theory exam	Tutorial	Practical marks				Grand Total marks
								CA	CA	End term practical/ written exam	Viva-voce	Total	
4	3	1	0	90	30	120	3 hours	40	0	0	0	0	160
4	3	0	1	90	30	120	3 hours	0	10	20	10	40	160
4	0	0	4	0	0	0	NA	0	40	80#	40	160	160
4	1	0	3	30	10	40	1 hour	0	30	60	30	120	160
4	2	0	2	60	20	80	2 hours	0	20	40	20	80	160
2	1	0	1	30	10	40	1 hour	0	10	20**	10	40	80
2	0	0	2	0	0	0	NA	0	20	40**	20	80	80
2	2	0	0	60	20	80	2 hours	0	0	0	0	0	80

#In case there is no end term Practical examination for any 4 credit course, which has only Practical component, this mark shall be added to Continuous Assessment of the Practical and the total of the CA for Practical shall be 120.

****In case of courses of two credits which have practical component, either there shall be end term Practical Examination or end term written examination.**

CA - Continuous Assessment
IA - Internal Assessment

ANNEXURE-48

Sub: Amendment to Ordinances

[E.C Resolution No. 38-1-18, 47/- and 51-2/- dated 08.12.2022]

The Following amendments to Ordinances of the University has been approved by the Executive Council at its meeting held on 08.12.2022 are hereby notified for information and necessary action, by all the concerned:

1. Amendment to Appendix-II to Ordinance V (2) & VII. **[EC Res. No. 38-1-18 dated 08.12.2022]** regarding 2-year MCA curriculum in the Department of Computer Science from the academic session 2022-23 **(As per Annnexure-1).**

2. Amendment to Ordinance XXIV. **[EC Res. No. 47/- dated 08.12.2022]** as follows:

EXISTING	AMENDED
CAREER ADVANCEMENT SCHEME – 2018 (CAS-2018) **Clause (vi) (c)** (c) x-x-x-x-x	CAREER ADVANCEMENT SCHEME – 2018 (CAS-2018) **Clause (vi) (c)** (c) - No Change - ***Add the following: -*** ***Note:*** *Date of rejection shall imply date of eligibility.*
Clause (4.) (ii) 4. SCREENING CUM EVALUATION COMMITTEE: (Applicable for both CAS-2010 and CAS-2018) (i) x-x-x-x-x-x-x-x (ii) x-x-x-x-x-x-x-x	**Clause (4.) (ii)** 4. SCREENING CUM EVALUATION COMMITTEE: (Applicable for both CAS-2010 and CAS-2018) (i) - No Change (ii) - No Change ***Add the following: -*** ***Note:*** *Date of rejection shall imply date of eligibility.*

3. Amendment to Ordinance -IV. **[EC Res. No. 51-2/- dated 08.12.2022]** regarding re-admission with effect from academic session 2022-2023 as follows:

Clause	Existing	Amended
5 (a)	A student of the University failed to pass any examination of the University will be registered as an Ex-Student for re-appearing in the said examination subject to the conditions laid down under the Regulations of the University relating to Conditions of Admission to University Examinations	A student of the University having failed to pass any examination of the University will be registered as an Ex-student for re-appearing in the said examination subject to the conditions laid down under the Regulations of the University relating to Conditions of Admission to University Examinations. Provided that a student, having failed to pass any practical examination(s) of the University through Continuous Evaluation System will be eligible to seek re-admission, only for the purpose of re-appearing in the said practical examination(s) through Continuous Evaluation System.

I. About the Department

Department of Computer Science was established at the University of Delhi in 1981 with the objective of imparting quality education in the field of computer science. With rapidly evolving technology and a continuous need for innovation, the department has been producing quality professionals, currently holding important positions in the information technology industry both in India and abroad.

The Department started the Master of Computer Applications (MCA) programme in the year 1982, which was among the first such programmes in India. The MCA programme focuses on providing a sound theoretical background as well as good practical exposure to students in the relevant areas. It is intended to provide a modern, industry-oriented education in applied computer science. It aims at producing trained professionals who can successfully meet the demands of the IT industry. They obtain skills and experience in up-to-date approaches to analysis, design, implementation, validation, and documentation of computer software and hardware.

The Department started M.Sc. Computer Science course in the year 2004 with the aim to develop core competence in Computer Science and to prepare the students to take up challenges of research and development. The students develop the ability to apply a high level of theoretical expertise and innovation to complex problems and application of new technologies. M.Sc. programme has been designed to teach the mathematical principles of specification, design and efficient implementation of both software and hardware.

The Department also offers a Doctor of Philosophy (Ph.D.) programme, aimed at producing quality researchers in several diverse branches of Computer Science. The Department also coordinates B.Sc. (H) Computer Science, B.Sc. Physical Science (Computer Science) and other courses taught at constituent colleges of University of Delhi.

II. Introduction to CBCS-LOCF (Choice Based Credit System-Learning based Curriculum Framework)

Scope:

The CBCS-LOCF provides an opportunity for the students to choose courses from the prescribed courses comprising core, elective/minor or skill-based courses. The courses will be evaluated following the grading system, which is considered to be better than the conventional marks system. Grading system provides uniformity in the evaluation and computation of the Cumulative Grade Point Average (CGPA) based on a student's performance in examinations which enables the student to move across institutions of higher learning. The uniformity in evaluation system also enables the potential employers in assessing the performance of the candidates.

Definitions:

(i) 'Academic Programme' means an entire course of study comprising its programme structure, course details, evaluation schemes etc. designed to be taught and evaluated in a teaching Department/Centre or jointly under more than one such Department/ Centre

(ii) 'Course' means a segment of a subject that is part of an Academic Programme

(iii) 'Programme Structure' means a list of courses (Core, Elective, Open Elective) that makes up an Academic Programme, specifying the syllabus, Credits, hours of teaching, evaluation and examination schemes, minimum number of credits required for successful completion of the programme etc. prepared in conformity to University Rules, eligibility criteria for admission

(iv) 'Core Course' means a course that a student admitted to a particular programme must successfully complete to receive the degree and which cannot be substituted by any other course

(v) 'Elective Course' means an optional course to be selected by a student out of such courses offered in the same or any other Department/Centre

(vi) 'Open Elective' means an elective course which is available for students of all programmes, including students of the same department. Students of other departments will opt these courses subject to fulfilling of eligibility of criteria as laid down by the Department offering the course.

(vii) 'Credit' means the value assigned to a course which indicates the level of instruction; One-hour lecture per week equals 1 Credit, 2 hours practical class per week equals 1 credit. Credit for a practical could be proposed as part of a course or as a separate practical course

(viii) 'SGPA' means Semester Grade Point Average calculated for an individual semester.

(ix) 'CGPA' is Cumulative Grade Points Average calculated for all courses completed by the students at any point of time. CGPA is calculated each year for both the semesters clubbed together.

(x) 'Grand CGPA' is calculated in the last year of the course by clubbing together a CGPA of two years, i.e., four semesters. Grand CGPA is being given in Transcript form. To benefit the student a formula for conversion of Grand CGPA into %age marks is given in the Transcript.

III. MCA Programme Details:

Programme Objectives (POs):

Master of Computer Applications (MCA) is a full-time, four-semester course that includes one semester of project work in the fourth semester. The objective of the MCA programme is to impart quality education in computer science and its applications, so that students are well prepared to face the challenges of the highly competitive IT industry. The course structure ensures overall development of the student, while concentrating on imparting technical skills required for an IT profession. No wonder, today after forty years of its existence, its alumni are holding important positions in the IT industry and academia in India and abroad.

Programme Specific Outcomes (PSOs):

The programme is designed to:

PSO1: enable the students to apply the computing and soft skills acquired in the MCA program for designing and developing innovative applications for the betterment of the society.

PSO2: provide exposure to techniques that would enable the students to design, implement, and evaluate IT solutions.

PSO3: To enable the students to meet the challenges of computer science and applications.

Programme Structure:

The MCA programme is a two-year course divided into four semesters. A student is required to complete 100 credits for the completion of the course and the award of degree.

		Semester	*Semester*
Part – I	First Year	Semester I	Semester II

Part – II	Second Year	Semester III	Semester IV

Course Credit Scheme

Semester	Core Courses			Elective Course			Open Elective Course			Total Credits
	No. of papers	Credits (Th+P+T)	**Total Credits**	No. of papers	Credits (Th+P+T)	**Total Credits**	No. of papers	Credits (Th+P+T)	**Total Credits**	
I	5	20+5+0	**25**	0	0	**0**	0	0	**0**	**25**
II	5	20+5+0	**25**	0	0	**0**	0	0	**0**	**25**
III	2	8+2+0	**10**	2	8+2+0	10	1	4+X+X	**5**	**25**
IV	Project	0	**25**	0	0	**0**	0	0	**0**	**25**
Total Credits for the Course			**85**			**10**			**5**	**100**

* For each core and elective course there will be 4 lecture hours of teaching per week.
* Open electives to the maximum total of 8 credits.
* Duration of examination for each course shall be 3 hours.
* Each course will be of 100 marks out of which 70 marks shall be allocated for semester examination and 30 marks for internal assessment.
* Each student shall carry out a project in the fourth semester. The projects will be carried out under the supervision of teachers of the department. When the project is carried out in an external organization (academic institution/ industry), a supervisor will also be appointed from the external organization. The project work will be evaluated jointly by the internal supervisor and an examiner to be appointed by the department in consultation with the internal supervisor. The project shall carry 500 marks distributed as follows:
  Dissertation: 50% weightage
  Viva-voce: 50% weightage
* To be eligible to pass a course and earn credits for it, a student must satisfy the criteria laid down by the University.
* Examination for courses specified in the odd (even) semesters shall be conducted only in the respective odd (even) semesters.
* Promotion Criteria: As laid down by the University.
* Award of degree: In order to be eligible for the award of the Master of Computer Applications (MCA) degree, a student must earn all the credits (100) as per the structure of the course, specified in the above table.

Semester wise Details of MCA Course

Semester I

Semester I					
	Number of core courses	5			
Course Code	**Course Title**	**Credits in each core course**			
		Theory	Practical	Tutorial	**Total**

	Total credits in elective courses	0
	Number of open electives	0
	Total credits in open elective	0
	Total credits in Semester VI	**25**

Total Credits = 25 +25 + 25 + 25 =100

Selection of Elective Courses:

The students may select the elective courses out of the list of courses which are offered in a semester.

Eligibility and Mode of Admissions for the MCA Programme:

To be decided by the University in every academic year.

Number of seats in the MCA programme: 58

The candidates who are appearing in the final year examinations of the Bachelor's degree on the basis of which admission is sought are eligible to apply in all categories mentioned above.

1. ***Relaxation will be given to the candidates belonging to SC, ST and OBC category as per the University rules***
2. ***For preparing the final merit list, 85% weightage will be given to the score in the Entrance Exam and 15% weightage will be given to the score in the Interview.***

Assessment of Students' Performance and Scheme of Examinations:

A. English shall be the medium of instruction and examination.
B. Examinations shall be conducted at the end of each semester as per the academic calendar notified by the University of Delhi.
C. Assessment of students' performance and scheme of evaluation shall be as per University rules.

Pass Percentage and Promotion Criteria

As per University rules.

Conversion of Marks into Grades

A. Grade Points: Grade point table as per University Examination rules.
B. CGPA Calculation

   As per University Examination rules.
C. SGPA Calculation

   As per University Examination rules.

D. Grand CGPA Calculation

As per University Examination rules.

E. Conversion of Grand CGPA into Marks

As per University Examination rules.

F. As notified by competent authority the formula for conversion of Grand CGPA into marks is:

Final %age of marks = CGPA based on all four semesters × 9.5

Division of Degree into Classes

Post Graduate degree to be classified based on CGPA obtained into various classes as notified into Examination policy.

Attendance Requirement

As per University rule.

Span Period

As per University rule.

Guidelines for the Award of Internal Assessment Marks for the MCA Programme

The performance of the students will be evaluated based on a comprehensive system of continuous evaluation. For each course, there shall be a minor test, assignments/ laboratory work. There shall be a monitoring committee to be constituted at the beginning of each semester to monitor the internal assessment.

IV. Content Details for MCA Programme

SEMESTER – I

MCAC101: OBJECT ORIENTED PROGRAMMING [4-1-0]

Course Objectives: The course aims to develop the student's problem-solving skills. The course also focuses on debugging skills. The student learns to develop modular well documented code.

Course Learning Outcomes:

On completing this course, the student will be able to:

CO1: apply object-oriented paradigm for problem-solving.

CO2: select a suitable programming construct and in-built data structure for the given problem.

CO3: design, develop, document, and debug modular programs.

CO4: use recursion as a programming paradigm for problem-solving.

Syllabus:

Unit-I Introduction: Notion of class, object, identifier, keyword, and literal; basic data types: int, float, string, Boolean; basic operators (arithmetic, relational, logical, assignment), standard libraries.

Unit-II Program Development: Modular program development, input and output statements, control statements: branching, looping, exit function, break, continue, and switch-break; use of mutable and immutable structures. strings, lists, sets, tuples and dictionary, and associated operations testing and debugging a program.

Unit-III Recursion: Use of recursion as a programming paradigm for problem-solving.

Unit-IV Object Oriented Programming: Use of classes, inheritance, and operator overloading in problem-solving..

Unit-V Visualization using 2D and 3D graphics: Visualization using graphical objects like point, line, histogram, 3D objects, animation.

Unit-VI Exception Handling and File Handling: Reading and writing text and structured files, errors and exceptions.

Readings:

1. R. G. Dromey, **How to Solve it by Computer,** Pearson, 2006.
2. J.V. Guttag, **Introduction to Computation and Programming Using Python: With Application to Understanding Data**, MIT Press, 2016.
3. S. Taneja, N. Kumar, **Python Programming: A Modular Approach,** With Graphics Database, Mobile, and Web Applications, Pearson Education, 2017.
4. C. S. Horstmann, **Core Java- Volume I, Fundamentals**. Pearson Education, 2016.
5. K. Arnold and J. Gosling, **The Java™ Programming Language**, Addisson Wesley, 2005.
6. Bjarne Stroustrup, **The C++ Programming Language (4th Edition)** Addison-Wesley, 2013

MCAC102: COMPUTER SYSTEMS ARCHITECTURE [4-1-0]

Course Objectives: The course is designed to introduce basic building blocks of digital electronics, design and architecture of computer systems. This course aims to develop the skill to architect a digital computer system using a simulator.

Course Learning Outcomes:

On completing this course, the student will be able to:

CO1: describe the basic organization of computer hardware.

CO2: represent and manipulate data – number systems, conversion between different number systems, perform binary arithmetic.

CO3: design simple combinational and sequential logic circuits - flip-flops, counters, shift registers, adders, subtractor, multiplexer, demultiplexer, and Arithmetic/Logic unit.

CO4: design a CPU simple computer / microprocessor: instruction format, instruction set, addressing modes, bus structure, input/output architecture, memory unit, Arithmetic/Logic and control unit, data, instruction and address flow.

Syllabus:

Unit-I Basic Building Blocks: Boolean logic and Boolean algebra, tri-state logic; flip-flops, counters, shift registers, adders, subtractors, encoders, decoders, multiplexers, demultiplexers.

Unit-II Register Transfer and Micro Operations: Bus and memory transfers, arithmetic, logic shift micro-operations; basic computer organization: common bus system, instruction formats, instruction cycle, interrupt cycle, input/output configuration, CPU organization, register organization, stack organization, microprogrammed control unit, RISC architecture; microprocessor architecture, modern computing architectures.

Unit-III Memory Unit: Primary memory, secondary memory, associative memory, sequential access, direct access storage devices.

Unit-IV Input-Output Architecture: Input/Output devices; data transfer schemes - programmed I/O and DMA transfer; data transfer schemes for microprocessors.

Readings:

1. M. Morris Mano, **Computer System Architecture,** Revised 3rd Edition, Pearson, 2018.
2. W. Stallings, **Computer Organization and Architecture: Designing for Performance**, 9th Edition, Pearson Education, 2012.
3. A.S. Tanenbaum, **Structured Computer Organization**, 6th Edition, Prentice-Hall of India, 2012.
4. J.P. Hayes, **Computer System Architecture & Organization**, 3rd Edition, McGraw-Hill Education, 2017.

MCAC103: DATA STRUCTURES [4-1-0]

Course Objectives: The course is designed to develop the student's ability to develop algorithms for creating and manipulating basic data structures. The students also learn to compare and contrast different data structures for the problem.

Course Learning Outcomes:

On completing this course, the student will be able to:

CO1: develop programs using basic data structures: sets, lists, stacks, queues, trees, graphs and advanced data structures like balanced trees and skip lists.

CO2: apply data structures like Tries, Prefix- and Suffix-trees to different applications.

CO3: identify the best-suited data structure for the problem at hand.

CO4: identify the programming constructs to optimize the performance of the data structure in different scenarios.

Syllabus:

Unit-I Basic data Structures: Primitive Data Types, Abstract Data Types, Arrays - Static and Dynamic, 2D Arrays, Linked Lists - Single, Doubly-linked, Circular; Stacks and Queues using arrays and linked lists; operations, their analysis; Applications to searching & sorting.

Unit-II Trees: Binary Tree, Binary Search Tree, Height Balanced Trees: AVL/RB Tree, 2-3 Trees, B and B+ Trees, Splay Trees, Heaps, Priority Queues, Mergeable heaps, Tries, Prefix and Suffix Trees, Skip Lists; operations, their analysis, applications to searching.

Unit-III Sets: Sets, Multisets, Maps, Hash Tables, Dictionaries.

Unit-IV Graphs: Representation of Graphs, Searching in Graphs – BFS and its applications, DFS and its applications.

Readings:

1. Goodrich, M., Tamassia, R. and Mount D, **Data Structures and Algorithms in C++/Java**, 2nd Edition, 2016, Wiley.

2. Elliot B. Koffman, Paul A.T. Wolfgang, **Objects, Abstraction, Data Structures and Design Using C++/Java**, 1st Edition, 2005, Wiley Global Education.

3. T.H. Cormen, C.E. Leiserson, R.L. Rivest and C. Stein, **Introduction to Algorithms**, 3rd Edition, 2010, Prentice-Hall of India Learning Pvt. Ltd.

MCAC104: DATABASE SYSTEMS [4-1-0]

Course Objectives: This course aims to achieve competency to design and develop databases for different applications keeping in view their constraints. The students learn to apply database design techniques to design a database and answer the user's queries.

Course Learning Outcomes:

On completion of this course, the student will be able to:

CO1: apply basic database concepts, including the structure and operation of the relational data model.

CO2: apply logical database design principles, including data normalization and E-R/EE-R diagrams to an application,

CO3: apply the integrity constraints to the application at hand.

CO4: answer database queries using Structured Query Language (SQL).

CO5: enumerate the concurrency control issues and identify their resolution strategies.

CO6: design and implement database projects.

Syllabus:

Unit-I Basic Concepts: Data modelling for a database, abstraction and data integration, three-level DBMS architecture.

Unit-II Database Design: Entity-Relationship model, Extended Entity-Relationship model.

Unit-III Relational Model & Relational Data Manipulations: Relation, conversion of ER diagrams to relations, integrity constraints, relational algebra, relational domain & tuple calculus.

Unit-IV Structured Query Language: DDL, DML, Views, Embedded SQL.

Unit-V Relational Database Design Concepts: Functional dependencies, determining keys, normalization-, lossless join and dependency preserving decomposition.

Unit-VI Transaction Management: ACID properties, Concurrency Control in databases, transaction recovery.

Unit-VII Introduction to NoSQL databases, XML

databases. Readings:

1. A. Silberschatz, H. Korth and S. Sudarshan, **Database System Concepts,** 6th Edition, McGraw Hill, 2014.

2. R. Elmasri and S. B. Navathe, **Fundamentals of Database Systems**, 7th Edition, Pearson, 2016.

3. R. Ramakrishnan and J. Gehrke, **Database Management Systems,** 3rd Edition, McGraw Hill, 2014.

4. Philip Lewis, Arthur Berstein and Michael Kifer, **Databases and Transaction Processing-An application oriented approach**, Prentice Hall, 2003

MCAC105: MATHEMATICAL FOUNDATIONS OF COMPUTER APPLICATIONS [4-1-0]

Course Objectives: The course is designed to introduce fundamental concepts of linear algebra and probability theory from a computational perspective. This course aims to build the foundation for advanced courses in later semesters.

Course Learning Outcomes:

On completing this course, the student will be able to:

CO1: perform operations on vectors; represent vectors geometrically; apply vector algebra to solve problems in sub-disciplines of computer science.
CO2: perform operations on matrices and sparse matrices; compute the determinant, rank and eigenvalues of a matrix; apply matrix algebra to solve problems in sub-disciplines of computer science.
CO3: perform data analysis in a probabilistic framework.

CO4: visualize and model the given problem using mathematical concepts covered in the course.

Syllabus:

Unit-I Linear Algebra: Vector Spaces: Introduction, Subspace, Linear Independence and Dependence, Basis and Dimensions, Convex set, Rank of a matrix, System of linear equations, Application in text analytics.
Inner product Space and Orthogonality: Orthogonal bases, Projection, Gram-Schmidt orthogonality process.
Linear Mapping: Introduction, Kernel and Image space of a linear map, Matrix associated with linear map, Eigenvalues and Eigenvectors, PCA, SVD, Application to Image Processing.

Unit-II Probability and Statistics: Introduction, Conditional Probability, Independent events, Bayes' theorem
Introduction to Descriptive and Inferential Statistics, Describing Data as Frequency tables, Relative frequency tables and graphs, Scatter diagram, Grouped data, Histograms, Ogives, Percentiles, Box Plot, Coefficient of variation, Skewness, Kurtosis

Unit-III Random variable: Introduction, Discrete (Bernoulli, Binomial, Multinomial, Poisson, Geometric, Negative Binomial), Continuous (Uniform, Exponential, Normal, Gamma), Expectation, variance, Conditional probability and conditional expectation, Central Limit Theorem, Markov and Chebyshev's inequality.

Readings:

1. Kishor S. Trivedi, Probability and Statistics with Reliability, Queuing and Computer Science Applications, John Wiley, 2016.
2. Sheldon M. Ross, Probability Models for Computer Science, Academic Press, 2001.
3. Linear Algebra and Probability for Computer Science Applications, Ernest Davis, CRC Press 2012. https://cs.nyu.edu/davise/MathTechniques/index.html
4. From Algorithms to Z-Scores: Probabilistic and Statistical Modeling in Computer Science Norm Matloff, University of California, Davis (Creative Common Licence) http://heather.cs.ucdavis.edu/~matloff/132/PLN/probstatbook/ProbStatBook.pdf

SEMESTER – II

MCAC201: DESIGN AND ANALYSIS OF ALGORITHMS [4-1-0]

Course Objectives: The course introduces the techniques for algorithm design and analysis of the asymptotic performance of these algorithms. This course aims to achieve competence in designing efficient algorithms using different data structures for real-world problems.

Course Learning Outcomes:

On completing this course, the student will be able to:

CO1: describe various algorithm design techniques, including iteration, divide and conquer, dynamic programming, and greedy approach algorithms.

CO2: analyze the strengths and weaknesses of each technique.

CO3: identify and apply technique(s) suitable for simple applications.

CO4: demonstrate the correctness of algorithms and analyze their time complexity theoretically and practically.

CO5: model simple problems as graphs and solve them using Graph Algorithms.

CO6: analyze algorithms in the probabilistic framework.

CO7: appreciate that certain problems are too hard to admit fast solutions

Syllabus:

Unit-I Review of Growth of Functions

Unit-II Iterative Algorithms: Searching and Sorting Techniques - Linear search, Binary search, insertion sort – time complexity and proof of correctness.

Unit-III Divide and Conquer: Recurrence Relation, Master's Theorem, Recursion Trees; Binary Search, Merge sort and Quick sort – time complexity and proof of correctness.

Unit-IV Lower bounding techniques: Decision Trees.

Unit-V Linear Sorting: Count Sort, Radix Sort, Bucket Sort.

Unit-VI More on Divide and Conquer: Integer Multiplication, Convolution and Fast-Fourier Transform.

Unit-VII Greedy Algorithms: Interval Scheduling, Minimum Spanning Trees – Prim's algorithm, Kruskal Algorithm, Shortest Path Problem – Djikstra's algorithm.

Unit-VIII Dynamic Programming: Weighted Interval Scheduling, Segmented Least Square problem, Knapsack problem, Shortest Paths.

Unit-IX String Processing: Finite Automata method, KMP.

Unit-X Randomized algorithms: Introduction to random numbers, randomized Qsort, randomly built BST.

Unit-XI Introduction to Complexity Classes: P, NP, NP-Hard, NP-Complete.

Readings:

1. J. Kleinberg and E.Tardos, **Algorithm Design**, 1st Edition 2013., Pearson Education India,
2. T.H. Cormen, C.E. Leiserson, R.L. Rivest and C. Stein, **Introduction to Algorithms**, 3rd Edition, 2010, Prentice-Hall of India Learning Pvt. Ltd.
3. Sara Baase, Allen Van Gelder, **Computer Algorithm – Introduction to Design and Analysis**, 3rd edition , 2002, Pearson Education.
4. Sanjoy Dasgupta, Christos Papadimitriou and Umesh Vazirani, **Algorithms**, 1st Edition, 2017, Tata McGraw Hill.
5. Richard Johnsonbaugh and Marcus Schaefer, **Algorithms**, 2014, Pearson Education India.

MCAC202: DATA COMMUNICATION AND COMPUTER NETWORKS [4-1-0]

Course Objectives: The course aims to introduce the basic concepts of data communication techniques, which would serve as a foundation for the computer network concepts, various protocols and their applications. It also aims to develop practical skills for interworking between computer networks and switching components in telecommunication systems.

Course Learning Outcomes:

On completing this course, the student will be able to:

CO1: apply data communication techniques in real-life experiments like telemetry and develop some basic skills to modify the existing ones to better suit them in different situations.

CO2: develop skills to apply services of various computer networks in various technical and professional fields.

CO3: reduce the overheads of different Reference models and optimize their performances.

CO4: develop basic skills to apply, modify and develop new protocols in different layers of existing protocol stacks to suit customized requirements.

CO5: use various network applications to avail network services efficiently and develop basic skills to design new applications to open new services.

Syllabus:

Unit-I Data Communication Techniques: Theoretical basis of data communication, analog and digital signals, time domain and frequency domain analysis, frequency spectrum and bandwidth, asynchronous and synchronous transmission, data encoding and modulation techniques, baseband and broadband transmission, pulse code modulation, baud rate and bitrate of a channel, multiplexing- FDM & TDM, transmission medium, transmission errors – error detection techniques.

Unit-II Network Classification and Network services: Local Area Networks, Metropolitan Area Networks, Wide Area Network, wireless networks, internetworking and Internet, business and home applications, mobile user services.

Unit-III Network Architecture and Reference Models: Layered network architectures, protocol hierarchies, interface and services, ISO-OSI reference model, TCP/IP reference model, Internet protocol stack.

Unit-IV Data Link Layer Functions and Protocols: Framing, flow-control, error recovery protocols, Data link layer of internet-PPP protocol.

Unit-V Medium Access Sublayer: CSMA/CD protocol and Ethernet, hubs and switches, fast Ethernet, gigabit Ethernet, CSMA/CA protocol and WLAN.

Unit-VI Network and transport layers functions and protocols: Network switching mechanisms- Circuit switching, packet switching, routing and congestion control, TCP/IP protocol architecture.

Unit-VII Network Applications: File transfer protocol, electronic mail, World Wide Web.

Readings:

1. A S Tanenbaum, **Computer Networks**, 5th Edition, Pearson Education India, 2013
2. Behrouz A Forouzan, **Data Communications and Networking**, 5th Edition, McGraw Hill Education, 2017.

MCAC203: OPERATING SYSTEMS [4-1-0]

Course Objectives: This course aims to provide a functional perspective of the operating systems and develop skills to experiment with different components, tasks and services, including job scheduling, memory management, device management, process management and file management.

Course Learning Outcomes:

On completing this course, the student will be able to:

CO1: describe the basic functions of an Operating System.

CO2: distinguish between different types of operating systems to use each of them most efficiently in the respective application areas.

CO3: describe different techniques for managing computer resources like CPU, memory, file and devices.

CO4: implement algorithms for managing computer resources.

CO5: experiment with different components, tasks and services of the operating system.

Syllabus:

Unit-I Introduction: Operating System as a resource manager, operating systems services, system calls, operating system classifications, operating systems architectures.

Unit-II Processor Management: Process overview, process states and state transition, multi-programming, multi-tasking, levels of schedulers and scheduling algorithms. Process Synchronization-Critical section and mutual exclusion problem, classical process synchronization problems, deadlock prevention. Multithreading.

Unit-III Memory Management: absolute and relative code, address translation, memory management techniques- partition, paging, segmentation, virtual memory. Static and dynamic memory management.

Unit-IV Device Management: Goals of I/O software, Design of device drivers- interrupt service routines, upper half of kernel software, lower half of kernel software.

Unit-V File Management: Overview of file management system, disk space management, directory structures, file sharing and protection, access control lists, protection models.

Readings:

1. Silberschatz, Galvin,and Gagne, **Operating Systems concepts** , Wiley ,2009.
2. Gary Nutt, Nabendu Chaki, Sarmistha Neogy, **Operating Systems: A Modern Approach (3rd ed.)**, Addison Wesley, 2009.
3. D.M. Dhamdhere, **Operating Systems: A Concept Based Approach (2nd ed.)**, Tata McGraw- Hill, 2007.

MCAC204: DATA ANALYSIS AND VISUALIZATION [4-1-0]

Course Objectives: The course develops students' competence in cleaning and analyzing data related to a chosen application. It also aims to develop skills in using various tools for data visualization and choosing the right tool for given data.

Course Learning Outcomes:

On completing the course, the students will be able to :

CO1: use data analysis tools with ease.
CO2: load, clean, transform, merge, and reshape data.
CO3: create informative visualisations and summarise data sets.
CO4: analyse and manipulate time series data.

CO5: solve real world data analysis problems.

Syllabus

Unit 1 Introduction: Introduction to Data Science, Exploratory Data Analysis and Data Science Process. Motivation for using Python for Data Analysis, Introduction of Python shell iPython and Jupyter Notebook. Essential Python Libraries: NumPy, pandas, matplotlib, SciPy, scikit-learn, statsmodels

Unit 2 Getting Started with Pandas: Arrays and vectorized computation, Introduction to pandas Data Structures, Essential Functionality, Summarizing and Computing Descriptive Statistics. Data Loading, Storage and File Formats. Reading and Writing Data in Text Format, Web Scraping, Binary Data Formats, Interacting with Web APIs, Interacting with Databases
Data Cleaning and Preparation. Handling Missing Data, Data Transformation, String Manipulation

Unit 3 Data Wrangling: Hierarchical Indexing, Combining and Merging Data Sets Reshaping and Pivoting. Data Visualization matplotlib: Basics of matplotlib, plotting with pandas and seaborn, other python visualization tools

Unit 4 Data Aggregation and Group operations: Data grouping, Data aggregation, General split-apply-combine, Pivot tables and cross tabulation

Unit 5 Time Series Data Analysis: Date and Time Data Types and Tools, Time series Basics, Frequencies and Shifting, Time Zone Handling, Periods and Periods Arithmetic, Resampling and Frequency conversion, Moving Window Functions.

Readings

1. McKinney, W.(2017). Python for Data Analysis: Data Wrangling with Pandas, NumPy and IPython. 2nd edition. O'Reilly Media.
2. O'Neil, C., & Schutt, R. (2013). Doing Data Science: Straight Talk from the Frontline, O'Reilly Media.

MCAC205: WEB TECHNOLOGIES [4-1-0]

Course Objectives: The course aims to develop skills for static and dynamic web development, including the use of front-end designing tools and client-side and server-side programming. It also sensitizes and prepares the student to apply security and privacy concerns in an application.

Course Learning Outcomes:

On completing this course, the student will be able to:

CO1: describe Internet, World Wide Web, client-server architecture and communication protocols.

CO2: design multi-platform web applications.

CO3: apply various client-side web technologies for front-end development.

CO4: work with server-side web technologies.

CO5: apply web technologies for retrieval of information.

Syllabus:

Unit-I Introduction: Introduction to Networking, TCP/IP, DNS, Internet and its Evolution, World Wide Web, Web 2.0, Web 3.0, network communication protocols (HTTP/HTTPS, SMTP,

IMAP, POP, FTP), client-server architecture, web applications architecture, application and web servers, web clients.

Unit-II Front-end Development: Introduction to HTML5, HTML elements, HTML tags, lists, tables, frames, forms, basics of XHTML, CSS style sheets, DOM, XML, XSLT

Unit-III Client-Side Programming: JavaScript basic syntax, variables and data types, literals, functions, objects, arrays, built-in objects, event handling, modifying element style, document trees.

Unit-IV Server-Side Programming: Creation of dynamic content, server-side programming using Java Servlets, Web Services, session management, introduction to server-side scripting, accessing database from the front-end.

Unit-V Web Security, Cookies and Authentication: Security threats, Security risks of a website, Web attacks and their prevention, Web security model, Setting, accessing and destroying cookies, Anonymous Access, Authentication by IP address and Domain, Integrated Windows Authentication, Digital signatures, Digital certificates, Firewalls.

Readings:

1. Jeffery C. Jackson, **Web Technologies: A Computer Science Perspective**, Pearson Education India, 2007.
2. Achyut Godbole and Atul Kahate, **Web Technologies: TCP/IP, Web/Java Programming, and Cloud Computing** (3rd ed.), McGraw-Hill Education, 2013.
3. Roger S Pressman and David Lowe, **Web Engineering: A Practitioner's Approach,** TMH, 2017.
4. Mark Pilgrim, **HTML5: Up and Running**, O'Reilly | Google Press, 2010 .
5. Jim Keogh, **J2EE: The Complete Reference**, McGraw Hill Education, 2017.

SEMESTER – III

MCAC301: CYBER SECURITY [4-1-0]

Course Objectives: The course aims to expose students to cyber security and threat landscape concerns. The student learns to develop skills to help them plan, implement, and monitor cyber security mechanisms to protect information technology assets.

Course Learning Outcomes:

On completing this course, the student will be able to:

CO1: state the need and scope for cyber laws.

CO2: enumerate various network attacks, and describe their sources and mechanisms of prevention

CO3: describe the genesis of SCADA policies and their implementation framework

CO4: Carry out malware analysis using simulations.

Syllabus:

Unit-I Introduction: Cyberspace, Internet, Internet of things, Cyber Crimes, cybercriminals, Cyber Security, Cyber Security Threats, Cyber laws and legislation, Law Enforcement Roles and

Responses.

Unit-II Network Attacks: Network Threat Vectors, MITM, OWAPS, ARP Spoofing, IP & MAC Spoofing, DNS Attacks, SYN Flooding attacks, UDP ping-pong and Fraggle attacks, TCP port scanning and reflection attacks, DoS, DDOS. Network Penetration Testing Threat assessment, Penetration testing tools, Penetration testing, Vulnerability Analysis, Threat matrices, Firewall and IDS/IPS, Wireless networks, Wireless Fidelity (Wi-Fi), Wireless network security protocols, Nmap, Network fingerprinting, BackTrack, Metasploit.

Unit-III Introduction to SCADA (supervisory control and data acquisition) Understanding SCADA security policies, SCADA Physical and Logical Security, Understanding differences between physical and logical security, Define perimeter controls and terms, Define various security zones, Understand communication cyber threats, Understand firewall, architectures.

Unit-IV Introduction to Malware, Malware Analysis: Static Analysis, Code Review, Dynamic Analysis, Behavioral analysis of malicious executable, Sandbox Technologies, Reverse-engineering malware, Defeat anti-reverse engineering technique, automated analysis, intercepting network connections, Network flow analysis, Malicious Code Analysis, Network analysis, Anti-disassembling techniques, Identifying assembly logic structures with a disassembler.Malware Handling: Malicious Documents and Memory Forensics - Reverse engineering of malicious executable using memory forensic techniques, Analyze malicious Microsoft Office (Word, Excel, PowerPoint) and Adobe PDF documents, Analyzing memory to assess malware characteristics and reconstruct infection artifacts. Using memory forensics to analyze rootkit infections, Legal & Ethical Issues - Reinforce understanding and the application of discipline specific legal and ethical issues, Reverse Engineering Malware (REM) Methodology.

Readings:

1. Peter W. Singer and Allan Friedman, **Cybersecurity and Cyberwar**, Oxford University Press, 2014
2. Jonathan Clough, **Principles of Cybercrime**, Cambridge University Press, 24-Sep-2015
3. Jie Wang, Zachary A. Kissel, **Introduction to Network Security: Theory and Practice**, Wiely 2016.
4. Michael Bazzell , **Open Source Intelligence Techniques: Resources for Searching and Analyzing Online Information**, 2nd edition, CreateSpace Independent Publishing Platform, 2014.
5. Robert Radvanovsky, Jacob Brodsky, **Handbook of SCADA/Control Systems Security**, CRC Press, 2013.
6. Ed Skoudis, Lenny Zeltser, **Malware: Fighting Malicious Code**, Prentice Hall Series in Computer Networking and Distributed, 2003
7. Michael Sikorski, Andrew Honig, **Practical Malware Analysis: The Hands-On Guide to Dissecting Malicious Software** 2012, No Starch Press, San Francisco.

MCAC302: SOFTWARE ENGINEERING [4-1-0]

Course Objectives: The course targets developing skills that would enable the students to construct high-quality software by applying the established software design practices for analysis, design, implementation, testing and maintenance.

Course Learning Outcomes:

On completing this course, the student will be able to:

CO1: demonstrate an understanding of software engineering layered technology and software

process models that provide a basis for the software development lifecycle.

CO2: apply agile development methods for developing software.

CO3: describe software/system requirements and understand the processes involved in the discovery and documentation of these requirements.

CO4: practice system modelling techniques and object-oriented design for software development.

CO5: test software using verification and validation, static analysis, reviews, inspections, and audits.

CO6: appreciate software project management that includes project planning, project estimation techniques, risk management, quality management, and configuration management.

CO7: Work individually and/or in a team to develop and deliver quality software.

Syllabus:

Unit-I Software Engineering: The software crisis, software engineering principles, programming-in-the-small vs programming-in-the-large.

Unit-II Software process: The software lifecycle, the waterfall model and variations, risk-driven approaches, introduction to evolutionary and prototyping approaches, agile process models, and system classifications.

Unit-III Project management: Relationship to lifecycle, project planning, project control, project organization, risk management, cost models, configuration management, version control, quality assurance, metrics.

Unit-IV Software requirements: Requirements analysis, functional and non-functional requirements elicitation, analysis tools, requirements definition, requirements specification, static and dynamic specifications, requirements review.

Unit-V Software design: Design for reuse, design for change, design notations, design evaluation and validation.

Unit-VI Implementation and Maintenance: Programming standards and procedures, modularity, data abstraction, static analysis, unit testing, integration testing, regression testing, verification and validation, tools for testing, fault tolerance, The maintenance problem, the nature of maintenance, planning for maintenance.

Readings:

1. R.S. Pressman, **Software Engineering: A Practitioner's Approach** (7th ed.), McGraw-Hill, 2010.

2. I. Sommerville, **Software Engineering** (10th ed.), Pearson Education, 2015.

3. R. Mall, **Fundamentals of Software Engineering** (4th ed.), Prentice-Hall of India, 2014.

4. K.K. Aggarwal and Y. Singh, **Software Engineering** (3rd ed.), New Age International Publishers, 2008.

5. P. Jalote, **An Integrated Approach to Software Engineering** (3rd ed.), Narosa Publishing House, 2005.

6. N.S. Godbole, **Software Quality Assurance: Principles and Practice for Students**, Alpha Science International Limited, 2004.

MCAE 301: COMPILER DESIGN [4-1-0]

Course Objectives: The course aims to develop the ability to design, develop, and test a functional compiler/ interpreter for a subset of a popular programming language.

Course Learning Outcomes:

On completing this course, the student will be able to:

CO1: describe how different phases of a compiler work.

CO2: implement top-down and bottom-up parsing algorithms.

CO3: use tools like Lex and Yacc to implement syntax-directed translation.

Syllabus:

Unit- I Lexical and Syntactic Analysis: Review of regular languages, design of a lexical analyzer generator, context-free grammars, syntactic analysis: top-down parsing: recursive descent and predictive parsing, LL(k) parsing; bottom-up parsing: LR parsing, handling ambiguous in bottom-up parsers.

Unit-II Syntax directed translation: Top-down and bottom-up approaches, data types, mixed mode expression; subscripted variables, sequencing statement, subroutines and functions: parameters calling, subroutines with side effects.

Unit-III Code generation, machine dependent and machine-independent optimization techniques.

Readings:

1. Alfred V. Aho, Ravi Sethi, D. Jeffrey Ullman, Monica S. Lam, **Principles, Techniques and Tools**, Pearson Education India, 2nd edition,, 2013.
2. A.V. Aho, M. S. Lam, R. Sethi and J. D. Ullman, **Compilers,** Pearson, 2016.
3. Dick Grune, Kees van Reeuwijk, Henri E .Bal, Ceriel J.H. Jacobs, K Langendoen, **Modern Compiler Design,** Springer, 2012.

MCAE302: ARTIFICIAL INTELLIGENCE [4-1-0]

Course Objectives: The course aims to introduce the student to intelligent systems and agents, formalization of knowledge, reasoning with and without uncertainty at a basic level. The student develops skills to apply the concepts, methods, and theories of search, heuristics, games, knowledge representation, and planning in different applications.

Course Learning Outcomes:

On completing this course, the student will be able to:

CO1: describe various approaches to Artificial Intelligence.

CO2: design intelligent agents.

CO3: distinguish between Utility-based agents and Goal-based agents.

CO4: describe and apply concepts, methods, and theories of search, heuristics, games, knowledge representation, and planning.

CO5: acquire basic knowledge of Natural language processing.

CO6: understand the limitations of Artificial Intelligence techniques.

Syllabus:

Unit-I Introduction: Introduction to Artificial Intelligence, various definitions of AI, AI Applications and Techniques, Turing Test and Reasoning - forward & backward chaining.

Unit-III Intelligent Agents: Introduction to Intelligent Agents, Rational Agent, their structure, , reflex, model-based, goal-based, and utility-based agents, behavior and environment in which a particular agent operates.

Unit-IV Problem Solving and Search Techniques: Problem Characteristics, Production Systems, Control Strategies, Breadth First Search, Depth First Search, iterative deepening,

uniform cost search, Hill climbing and its Variations, simulated annealing, genetic algorithm search.

Heuristics Search Techniques: Best First Search, A* algorithm, AO* algorithm, Minmax & game trees, refining minmax, Alpha – Beta pruning, Constraint Satisfaction Problem, Means-End Analysis.

Unit-V Knowledge Representation: Introduction to First Order Predicate Calculus, Resolution Principle, Unification, Semantic Nets, Conceptual Dependencies, semantic networks, Frames system, Production Rules, Conceptual Graphs, Ontologies.

Unit-VI Planning: Basic representation for planning, symbolic-centralized vs reactive-distributed, partial order planning algorithm.

Unit-VII Reasoning with Uncertain Knowledge: Different types of uncertainty - degree of belief and degree of truth, various probability constructs - prior probability, conditional probability, probability axioms, probability distributions, and joint probability distributions, Bayes' rule, other approaches to modelling uncertainty such as Dempster-Shafer theory and fuzzy sets/logic.

Unit-VIII Understanding Natural Languages: Components and steps of communication, contrast between formal and natural languages in the context of grammar, parsing, and semantics, Parsing Techniques, Context-Free and Transformational Grammars.

Readings:

1. S. Russell and P. Norvig, **Artificial Intelligence: A Modern Approach, 3rd edition**, Pearson Education, 2015. Elaine Rich and Kelvin Knight, Artificial Intelligence, 3rd edition, Tata McGraw Hill , 2017.

2. DAN.W. Patterson, **Introduction to A.I. and Expert Systems** – PHI, 2007.

3. Michael Wooldridge, **An Introduction to MultiAgent Systems**, 2nd edition, John Wiley & Sons, 2009..

4. Fabio Luigi Bellifemine, Giovanni Caire, Dominic Greenwood, **Developing Multi-Agent Systems with JADE**, Wiley Series in Agent Technology, John Wiley & Sons, 2007.

5. W.F. Clocksin and C.S. Mellish, **Programming in PROLOG**, , 5th edition, Springer, 2003.

6. Saroj Kaushik, **Logic and Prolog Programming**, New Age International Publisher, 2012.

7. Ivan Bratko, **Prolog Programming for Artificial Intelligence**, Addison-Wesley, Pearson Education, 4th edition, 2011.

MCAE303: INFORMATION SECURITY [4-1-0]

Course Objectives: The course aims to train the students to maintain the confidentiality, integrity and availability of data. The student learns various data encryption protocols for transmitting data over unsecured channels in a network.

Course Learning Outcomes:

On completing this course, the student will be able to:

CO1: describe various security issues.

CO2: implement symmetric and asymmetric cryptographic methods.

CO3: describe the role and implementation of digital signatures.

CO4: describe security mechanisms like intrusion detection, auditing and logging.

Syllabus:

Unit-I Overview of Security: Protection versus security; aspects of security– confidentiality, data integrity, availability, privacy; user authentication, access controls, Orange Book Standard.

Unit-II Security Threats: Program threats, worms, viruses, Trojan horse, trap door, stack and buffer overflow; system threats- intruders; communication threats- tapping and piracy.

Unit-III Cryptography: Substitution, transposition ciphers, symmetric-key algorithms: Data Encryption Standard, Advanced Encryption Standard, IDEA, Block cipher Operation, Stream Ciphers: RC-4. Public key encryption: RSA, ElGamal. Diffie-Hellman key exchange. Elliptic Curve, EC cryptography, Message Authentication code (MAC), Cryptographic hash function.

Unit-IV Digital signatures: ElGamal digital signature scheme, Elliptic Curve digital signature scheme, NISTdigital signature scheme.

Unit-V Key Management and Distribution: Symmetric Key Distribution, X.509 Certificate public key infrastructures.

Unit-VI Intrusion detection and

prevention. Readings:

1. W. Stalling, **Cryptography and Network Security Principles and Practices** (7th ed.), Pearson Education of India, 2018.

2. A.J. Elbirt, **Understanding and Applying Cryptography and Data Security**, CRC Press, Taylor Francis Group, New York, 2015.

3. C. Pfleeger and SL Pfleeger, Jonathan Margulies, **Security in Computing** (5th ed.), Prentice-Hall of India, 2015.

MCAE304: NETWORK SCIENCE [4-1-0]

Course Objectives: The course aims to acquaint the students with the graph theory concepts relevant for network science. The students learn dynamics of and on networks in the context of applications from disciplines like biology, sociology, and economics

Course Learning Outcomes:

On completing this course, the student will be able to:

CO1: appreciate the ubiquity of graph data models.

CO2: Understand a network's structural features and their impact on network functions.

CO3: identify community structures in networks

CO4: solve real-world problems modelled as complex networks

Syllabus:

Unit-I Introduction: Introduction to complex systems and networks, modeling of complex systems, review of graph theory.

Unit-II Network properties: Local and global properties like clustering coefficient, eccentricity; centrality measures for directed and undirected networks.

Unit-III Graph models: Random graph model, Small world network model, Barabasi-Albert (preferential attachment) network model.

Unit-IV Community structure in networks: Communities and community detection in networks, Hierarchical algorithms for community detection, Modularity based community detection algorithms, Label Propagation algorithm.

Readings:

1. Mohammed J. Zaki, Wagner Meira Jr.; **Data Mining and Analysis: Fundamental Concepts and Algorithms**, Cambridge University Press, 2014.

2. Albert Barabasi, **Network Science** , Cambridge University Press, 2016.

3. David Easley and Jon Kleinberg, **Networks, Crowds, and Markets: Reasoning About a Highly Connected World**, Cambridge University Press, 2010.

MCAE305: DEEP LEARNING[4-1-0]

Course Objectives: The student learns various state-of-the-art deep learning algorithms and their applications to solve real-world problems. The student develops skills to design neural network architectures and training procedures using various deep learning platforms and software libraries.

Course Learning Outcomes:

On completing this course, the student will be able to:

CO1: describe the feedforward and deep networks.

CO2:design single and multi-layer feed-forward deep networks and tune various hyper-parameters.

CO3: analyze the performance of deep networks.

Syllabus:

Unit-I Introduction: Historical context and motivation for deep learning; basic supervised classification task, optimizing logistic classifier using gradient descent, stochastic gradient descent, momentum, and adaptive subgradient method.

Unit-II Neural Networks: Feedforward neural networks, deep networks, regularizing a deep network, model exploration, and hyperparameter tuning.

Unit-III Convolution Neural Networks: Introduction to convolution neural networks: stacking, striding and pooling, applications like image, and text classification.

Unit-IV Sequence Modeling: Recurrent Nets: Unfolding computational graphs, recurrent neural networks (RNNs), bidirectional RNNs, encoder-decoder sequence to sequence architectures, deep recurrent networks.

Unit-V Autoencoders: Undercomplete autoencoders, regularized autoencoders, sparse autoencoders, denoising autoencoders, representational power, layer, size, and depth of autoencoders, stochastic encoders and decoders.

Unit-VI Structuring Machine Learning Projects: Orthogonalization, evaluation metrics, train/dev/test distributions, size of the dev and test sets, cleaning up incorrectly labelled data, bias and variance with mismatched data distributions, transfer learning, multi-task learning.

Readings:

1. Ian Goodfellow, **Deep Learning**, MIT Press, 2016.
2. Jeff Heaton, **Deep Learning and Neural Networks**, Heaton Research Inc, 2015.
3. Mindy L Hall, Deep Learning, VDM Verlag, 2011.
4. Li Deng (Author), Dong Yu, **Deep Learning: Methods and Applications (Foundations and Trends in Signal Processing)**, Now Publishers Inc, 2009.

MCAE 306: Interpretable Learning [4-1-0]

Course Objectives: The course introduces the students to the need and methods for interpretability of machine learning algorithms and the related societal concerns. The students will develop skills to apply different explanation techniques for various real-world applications.

Course Learning Outcomes:

On completing this course, the student will be able to:

CO1: distinguish between local and global explanations.

CO2: choose a type of explanation method for a given situation.

CO3: provide mathematical reasoning behind different explanation methods.

CO4: to conduct what-if-analysis of a machine learning model by generating counterfactuals.

CO5: use programming tools for generating explanations of machine learning models.

Unit-I Introduction to Interpretability: Motivation of interpretability; taxonomy of interpretability methods; scope of interpretability- local explanation vs global explanation; properties of explanation methods and individual explanations; model agnosticity: model-specific vs model-agnostic; dataset type- image, textual, speech, tabular, and graph-based; type of explanations.

Unit-II Inherently Explainable Models: Linear regression, logistic regression, Generalized Linear Models (GLM), Generalized Additive Models (GAM), decision tree, rule-based classifier, naive Bayes classifier, k-nearest neighbours.

Unit-III Model-Agnostic Post-hoc Methods: Global model-agnostic methods: Partial Dependence Plot (PDP), Accumulated Local Effect Plot (ALE), feature interaction, functional decomposition, permutation feature importance; local model-agnostic methods: SHAP (SHapley Additive exPlanations), LIME (Local Interpretable Model-Agnostic Explanations),

Counter-Factual Explanations.

Unit-IV Model-Specific Post-hoc Methods: Gradient, gradient*input, smooth-gradient, guided backpropagation, Layerwise Relevance Propagation (LRP), Layerwise Relevance Propagation-Epsilon (LRP-ε), deep Taylor, integrated gradient, DeepLIFT (Deep Learning Important FeaTures), deconvolution, Class Activation Mapping (CAM), Gradient-weighted Class Activation Mapping (Grad-CAM), Guided Gradient-weighted Class Activation Mapping (Guided Grad-CAM).

Unit-V Limitations of Explainable Methods: Faithfulness/fidelity, fragility, stability, usefulness in practice

Unit-VI Future of Machine Learning and Explainability: Open issues: Modelling uncertainty, generating stable explanations, issue of over-trust on model's explanations by domain experts and end-users, data leakage exposing sensitive information from the dataset, usefulness of the explanations in real-world.

Readings:

1. Molnar, Christoph. **Interpretable machine learning. A Guide for Making Black Box Models Explainable**, 2019, Lulu.com, https://christophm.github.io/interpretable-ml-book/.
2. Rothman, Denis, **Hands-On Explainable AI (XAI) with Python: Interpret, visualize, explain, and integrate reliable AI for fair, secure, and trustworthy AI apps**, Packt Publishing Ltd, 2020.

MCAE 307: NATURAL LANGUAGE PROCESSING [4-1-0]

Course Objectives: The course provides a rigorous introduction to the essential components of a Natural Language Processing (NLP) system. The students will learn various statistical, machine learning, and deep learning techniques in NLP and apply them to solve machine translation and conversation problems.

Course Learning Outcomes:

On completing this course, the student will be able to:

CO1 : Understand and describe the evaluation of NLP systems.

CO2 : Understand deep learning techniques in NLP and apply them to solve machine translation and conversation problems.

CO3 : Learn about major NLP issues and identify possible future areas of NLP research.

Syllabus:

UNIT I Introduction: Natural Language Processing (NLP), History of NLP, Neural Networks for NLP, Applications - Sentiment Analysis, Spam Detection, Resume Mining, Conversation Modeling, Chat-bots, dialog agents, Question Processing

UNIT II Language Modeling and Part of Speech Tagging: Unigram Language Model, Bigram, Trigram, N-gram, Advanced smoothing for language modeling, Empirical Comparison of Smoothing Techniques, Applications of Language Modeling, Natural Language Generation, Parts of Speech Tagging, Morphology, Named Entity Recognition

UNIT III Words and Word Forms: Bag of words, skip-gram, Continuous Bag-Of-Words, Embedding representations for words Lexical Semantics, Word Sense Disambiguation, Knowledge Based and Supervised Word Sense Disambiguation

UNIT IV Text Analysis, Summarization and Extraction: Sentiment Mining, Text Classification, Text Summarization, Information Extraction, Named Entity Recognition, Relation Extraction, Question Answering in Multilingual Setting; NLP in Information Retrieval, Cross-Lingual IR

UNIT V Machine Translation: Need of MT, Problems of Machine Translation, MT Approaches, Direct Machine Translations, Rule-Based Machine Translation, Knowledge Based MT System, Statistical Machine Translation (SMT), Parameter learning in SMT (IBM models) using EM), Encoder-decoder architecture, Neural Machine Translation

Readings:

1. Speech and Language Processing. Dan Jurafsky and James H. Martin. Pearson (2009).
2. Introduction to Natural Language Processing. Jacob Eisenstein. The MIT Press (2019).
3. Neural Network Methods for Natural Language Processing. Yoav Goldberg. Morgan and Claypool Publisher (2017).
4. Deep Learning for Natural Language Processing: Develop Deep Learning Models for Natural Language in Python. Jason Brownlee. Machine Learning Mastery (2019).
5. Natural Language Processing with Python: Analyzing Text with the Natural Language Toolkit. Steven Bird, Ewan Klein and Edward Loper. O'Reilly (2009).

MCAE 308: GRAPH THEORY [4-0-1]

Course Objectives: This course will thoroughly introduce the basic concepts of graphs theory, graph properties and formulations of typical graph problems. The student will learn to model real-life problems such as graph coloring and connectivity as graph problems.

Course Learning Outcomes:

On completing this course, the student will be able to:

CO1: model problems using different types of basic graphs like trees, bipartite graphs and planar graphs.

CO2: understand and identify special graphs like Euler graphs and Hamiltonian

graphs. **CO3:** have increased ability to understand various forms of connectedness

in a graph **CO4:** appreciate different graph-coloring problems and their solutions.

CO5: to model simple problems from real life as graph-coloring problems.

Syllabus:

Unit-I Fundamental Concepts: Definitions, examples of problems in graph theory, adjacency and incidence matrices, isomorphisms, paths, walks, cycles, components, cut-edges, cut-vertices, bipartite graphs, eulerian graphs, vertex degrees, reconstruction conjecture, extremal problems, degree sequences, directed graphs, de Bruijn cycles, Orientations and tournaments.

Unit-II Trees: Trees and forests, characterizations of trees, spanning trees, radius and diameter, enumeration of trees, Cayley's formula, Prüfer code, counting spanning trees, deletion-contraction, the matrix tree theorem, graceful labeling, minimum spanning trees (Kruskal's algorithm), shortest paths (Dijkstra's algorithm).

Unit-III Matching and Covers: Matchings, maximal and maximum matchings, M-augmenting paths, Hall's theorem and consequences, Min-max theorems, maximum matchings and vertex covers, independent sets and edge covers,Connectivity, vertex cuts, Edge-connectivity.

Unit-IV Connectivity and Paths: Blocks, k-connected graphs, Menger's theorem, line graphs, network flow problems, flows and source/sink cuts, Ford-Fulkerson algorithm, Max-flow min-cut theorem.

Unit-V Graph Coloring: Vertex colorings, bounds on chromatic numbers, Chromatic numbers of graphs constructed from smaller graphs, chromatic polynomials, properties of the chromatic polynomial, the deletion-contraction recurrence.

Unit-VI Planar Graphs: Planar graphs, Euler's formula, Kuratowski's theorem, five and four color theorems.

Readings:

1. Douglas B West, **Introduction to Graph Theory**, II Edition, 2017, Pearson.

2. Gary Chartrand and Ping Zhang, **Introduction to Graph Theory**, 2017, Tata McGraw Hill.

3. Jonathan L. Gross and Jay Yellen, **Graph Theory and Its Applications**, 2nd Edition, 2005, Chapman Hall (CRC).

MCAE 309: TEXT ANALYTICS [4-1-0]

Course Objectives: This course aims to provide an introduction to the basics of text analytics theory and practice. The student will learn to apply the text analytics tools including clustering and classification tools to various real-world problems.

Course Learning Outcomes:

On completion of the course, the student will be able to

CO1: identify relevance of text to the information needs of diverse individuals, communities and organizations.

CO2: select appropriate technique to automatically process the text.

CO3: use open source text analytic tools to perform various text processing and analysis

tasks. CO4: develop simple text analysis tools and solve real world problems.

Syllabus:

Unit-I Introduction : Introduction to Natural Language Processing (NLP) and Text Analytics, Tokenization, Part-of-speech tagging, Stemming and lemmatization, NLP toolkits, Indexing text using inverted file index, Posting lists , Information retrieval, Authorship attribution, Sentiment analysis, Named-entity recognition, Document summarization.

Unit-II Document representation and Language models : Representation of the unstructured text

documents, Heaps' and Zipf's Laws, Boolean vector representation, Bag-of-words model, tf-idf model, Term weighting, Scoring and ranking, Vector space model, Visualization techniques, Unigrams, bi-grams and n-grams, language models.

Unit-III Text categorization: Supervised text categorization algorithms, Naive Bayes, k Nearest Neighbor (kNN), Logistic Regression.

Unit-IV Text clustering: Clustering structure of a corpus of text documents, Hierarchical clustering, Centroid-based clustering. Topic Modeling- Latent Semantic Indexing (LSI).

Readings:

1. Ricardo Baeza – Yates, Berthier Ribeiro – Neto, **Modern Information Retrieval: The concepts and Technology behind Search**, (ACM Press Books), Second Edition, 2011.

2. Christopher D. Manning, Prabhakar Raghavan, Hinrich Schutze, **Introduction to Information Retrieval**, Cambridge University Press, First South Asian Edition, 2008.

3. Steven Struhl, **Practical Text Analytics: Interpreting Text and Unstructured Data for Business Intelligence**, Kogan Page, 2015.

4. Matthew A. Russell, **Mining the Social Web**, O'Reilly Media, 2013.

MCAE310: AUTOMATA THEORY [4-0-1]

Course Objectives: The course introduces the theoretical models of computation and their limitations. The students will develop skills to analyze automata and their computational power to recognize languages. The students will learn to apply the knowledge of Automata Theory, Grammar, and Turing machines for solving problems in language translation.

Course Learning Outcomes:

On completion of this course, the student will be able to:

CO1: describe the mathematical model of machines.

CO2: describe the concept of formal language and the corresponding automaton.

CO3: identify ambiguity in grammar

CO4: construct a parse tree for the given grammar.

Syllabus:

Unit-I Introduction: Alphabets, strings, and languages.

Unit-II Finite Automata and Regular Languages: Deterministic and non-deterministic finite automata, regular expressions, regular languages and their relationship with finite automata, pumping lemma and closure properties of regular languages.

Unit-III Context Free Grammars and Pushdown Automata: Context free grammars (CFG), parse trees, ambiguities in grammars and languages, pushdown automaton (PDA) and the language accepted by PDA, deterministic PDA, Non- deterministic PDA, properties of context free languages; normal forms, pumping lemma, closure properties, decision properties.

Unit-IV Turing Machines: Turing machine as a model of computation, programming with a Turing machine, variants of Turing machine and their equivalence.

Unit-V Undecidability: Recursively enumerable and recursive languages, undecidable problems about Turing machines: halting problem, Post Correspondence Problem, and undecidability problems about CFGs.

Readings:

1. J. E. Hopcroft, R. Motwani, and J. D. Ullman, **Introduction to Automata Theory, languages, and computation**, 2016.

2. H.R. Lewis, C.H. Papadimitriou, C. Papadimitriou, **Elements of the Theory of Computation** (2nd ed.), Pearson Education, 2015

3. P. Linz, **Introduction to Automata Theory, Languages, and Computation**, Jones & Bartlett, 2016.

MCAE 311: COMBINATORIAL OPTIMIZATION [4-1-0]

Course Objectives: This course aims to introduce the mathematical tools for solving and analyzing combinatorial optimization problems. The course develops skills for the formulation of problems in different computing and data science domains as combinatorial optimization problems.

Course Learning Outcomes:

On completion of this course, the student will be able to:

CO1: differentiate between the computational complexities of LP and IP.

CO2: Develop knowledge and skills in linear and integer programming (LP;IP) and their applications.

CO3: apply polyhedral analysis to develop algorithms.

CO4: use the concept of duality to design exact and approximate algorithms.

CO5: explain the mathematical theory forming the basis of algorithms for combinatorial optimization (particularly graph theoretic).

Syllabus:

Unit-I Introduction: Optimization problems, neighborhoods, local and global optima, convex sets and functions, simplex method, degeneracy; duality and dual simplex algorithm, computational considerations for the simplex and dual simplex algorithms-Dantzig-Wolfe algorithms.

Unit-II Integer Linear Programming: Cutting plane algorithms, branch and bound technique and approximation algorithms for traveling salesman problem.

Unit-III Graph Algorithms: Primal-Dual algorithm and its application to shortest path (Dijkstra's algorithm, Floyd-Warshall algorithms), max-flow problem (Ford and Fulkerson labeling algorithms), matching problems (bipartite matching algorithm, non-bipartite matching algorithms, bipartite weighted matching-hungarian method for the assignment problem, non-bipartite weighted matching problem), efficient spanning tree algorithms.

Unit-IV Matroids: Independence Systems and Matroids, Duality, Matroid Intersection.

Readings:

1. Bernhard Korte and Jens Vygen, **Combinatorial Optimization: Theory and Algorithms (Algorithms and Combinatorics)**, 6th edition, 2018, Springer.

2. Matousek and Gartner, **Understanding and Using Linear Programming**, 2007, Springer.

3. C.H. Papadimitriou and K.Steiglitz, **Combinatorial Optimization: Algorithms and complexity**, 1998, Dover Publications.

4. Mokhtar S.Bazaraa, John J. Jarvis and Hanif D. Sherali, **Linear Programming and Network Flows**, 4th Edition, 2010, Wiley-Blackwell.

5. H.A. Taha, **Operations Research An Introduction**, 8th edition, 2014, Pearson Education India.

MCSE 312: DIGITAL WATERMARKING AND STEGANOGRAPHY [4-1-0]

Course Objectives: The students will learn about the need and various approaches of information hiding, steganography, watermarking models and message coding, watermark security and authentication. The students will develop skills to implement the same in different real-world scenarios.

Course Learning Outcomes:

On completion of this course, the student will be able to:

CO1: implement algorithms for steganography and watermarking operations.

CO2: evaluate steganography and watermarking algorithms for robustness.

CO3: describe various fingerprinting techniques.

Syllabus:

Unit-I Information hiding: Introduction, Background, and Applications of Information hiding: Data hiding, applications of data hiding.

Unit-II Steganography: Frameworks of secret communication, Security of steganography systems, Information hiding in noisy data, Adaptive and non-adaptive algorithms, Active and malicious attackers, Information hiding in written text, Invisible communication.

Unit-III Data hiding in still images: LSB encoding, BPCS steganography, Lossless data hiding, Data hiding by quantification, Patchwork, Transform domain methods, Robust data hiding in JPEG images, frequency domain watermarking Detecting malicious tempering, Robust wavelet-based watermarking, Kundur-Hatzinakos watermarking, Data hiding in binary images, Zhao-koch method, Wu-Lee method, CPT method, TP method, Data hiding in fax images.

Unit-IV Watermarking: Introduction, Watermarking principals, Applications, Requirements and algorithmic design issues, Evaluation and standards of watermarking.

Unit-V Fingerprinting: Introduction, Terminology and requirements, Classifications, Research history, fingerprinting schemes, Statistical fingerprinting, and Collusion-secure fingerprinting.

Readings:

1. I.J.Cox, M.L.Miller, J.A.Bloom, J.Fridrich, T.Kalker, Digital Watermarking and Stegonagraphy, Morgan Kaufman 2008.

2. F.Y.Shih, Digital Watermarking and Stegonagraphy Fundamentals and Techniques, CRC press 2008.

3. Stefon Katzeubeisser, F.A.Petitolos, Information Hiding Techniques for Stegonagraphy and digital watermarking, Aatech House London 2008.

MCAE 313: QUANTUM COMPUTING [4-1-0]

Course Objectives: The course introduces students to the fundamentals of quantum computing. The aim is to help students in imparting concepts of quantum computing including quantum systems, quantum Turing machines and various algorithms on quantum computing.

Course Learning Outcomes:

On completion of this course, the student will be able to:

CO1: describe the architecture of a quantum system.

CO2: describe a quantum Turing machine and compare it with the standard Turing Machine.

CO3: distinguish between probabilistic and quantum algorithms.

CO4: describe the notion of error correction in quantum systems.

CO5: implement quantum algorithms like kickback algorithm, Deutsch-Jozsa algorithm, Simon's algorithm, fast factorization algorithms, quantum Fourier transform, Shor's Algorithm, Grover's search algorithm.

Syllabus:

Unit-I Introduction & Background: A brief history of computing including 'Turing Machines', Probabilistic systems, Quantum Systems.

Unit-II QUBITS and Framework of Quantum Systems: The State of a Quantum System, Quantum Bits, Quantum Registers, Quantum information, Quantum Turing Machine.

Unit-III Quantum Circuits: Boolean Circuits, Reversible Circuits, Quantum Circuit Model, Quantum Gates, Universal Sets of Quantum Gates, Efficiency in approximating unitary transformation, Implementing measurements with Quantum Gates.

Unit-IV Introduction to Quantum Algorithm: Probabilistic versus Quantum Algorithm, Phase Kick- Back Algorithm, The Deutsch Algorithm, The Deutsch-Jozsa Algorithm, Simon's Algorithm.

Unit-V Fast Factorization & Search Algorithms: Quantum Fourier Transform, Shor's Algorithm, The Correctness Probability. Grover's Search Algorithm.

Unit-VI Computational lower bound complexity for quantum circuits: General ideas, Polynomial representations, Quantum Circuit Lower Bound.

Unit-VII Introduction to quantum error Correction: Classical Error correction, Fault tolerance, Quantum Error Correction, Fault Tolerance Quantum computation.

Readings:

1. S Arora and B.Barak, **Computational complexity, A Modern approach**; Cambridge ,Cambridge University Press, 2009
2. Michael A. Nielsen, Isaac L. Chuang, **Quantum Computation and Quantum Information**: 10th Anniversary Edition, Cambridge University Press, 2011
3. Mika Hirvensalo, **Quantum Computing**, Springer, 2001.

4. P Kaye, R Laflamme, and M Mosca, **An Introduction to Quantum Computing,** Oxford University Press, 2007.

MCAE 314: COMPUTER GRAPHICS [4-1-0]

Course Objectives: The course is designed to introduce students to the basic concepts and theory of computer graphics. The aim is to introduce students regarding various object rendering algorithms, projections, and latest concepts related to virtual reality.

Course Learning Outcomes:

On completing this course, the student will be able to:

CO1: acquire familiarity with the concepts and relevant mathematics of computer graphics.
CO2: ability to implement various algorithms to scan, convert the basic geometrical primitives, transformations, area filling, clipping.
CO3: describe the importance of viewing and projections.
CO4: ability to design basic graphics application programs.
CO5: familiarize with fundamentals of animation and Virtual reality technologies.
CO6: be able to design applications that display graphic images to given specifications.
CO7: to understand a typical graphics pipeline.

Syllabus:

UNIT I. Application Areas of Computer Graphics: Overview of Graphics Systems and Devices. Points and Lines, Line Drawing Algorithms, Mid-Point Circle and Ellipse Algorithms. Filled Area Primitives, Polygon Filling Algorithms. Curve Generation: Bezier and B-Spline Curves.

UNIT II 2-D Geometrical Transforms: Translation, Scaling, Rotation, Reflection and Shear Transformations Composite Transforms, Transformations between Coordinate Systems. 2-D Viewing: The Viewing Pipeline, Viewing Coordinate Reference Frame, Window to Viewport Coordinate Transformation, Viewing Functions.

UNIT III Line Clipping Algorithms: Cohen-Sutherland and Cyrus Beck Line Clipping Algorithms, Sutherland–Hodgeman Polygon Clipping Algorithm. 3-D Object Representation: Polygon Surfaces, Quadric Surfaces, Spline Representation

UNIT IV 3-D Geometric Transformations: Translation, Rotation, Scaling, Reflection and Shear Transformations, Composite Transformations, 3-D Viewing: Viewing Pipeline, Viewing Coordinates, View Volume, General Projection Transforms and Clipping.

UNIT V Visible Surface Detection Methods: Classification, Back-Face Detection, Depth-Buffer, Scanline, Depth Sorting, BSP-Tree Methods, Area Sub-Division and Octree Methods Illumination Models and Surface Rendering Methods: Basic Illumination Models, Polygon Rendering Methods Computer Animation: Design of Animation Sequence, General Computer Animation Functions Key Frame Animation, Animation Sequence, Motion Control Methods, Morphing, Warping (Only Mesh Warping)

UNIT VI Virtual Reality: Basic Concepts, Classical Components of VR System, Types of VR Systems, Three-Dimensional Position Trackers, Navigation and Manipulation Interfaces, Gesture Interfaces. Input Devices, Graphical Rendering Pipeline, Haptic Rendering Pipeline, Open GL Rendering Pipeline. Applications of Virtual Reality.

Readings:

1. Donald Hearn and M. Pauline Baker, "Computer Graphics with Open GL", Prentice Hall.
2. R. K Maurya, "Computer Graphics with Virtual Reality", Wiley

MCAE 315: PARALLEL AND DISTRIBUTED COMPUTING [4-1-0]

Course Objectives: In this course, the objective is to describe the parallel and distributed computing environments. The course also covers the process of communication, naming and coordination followed by the issues such as consistency, fault tolerance, and security in distributed systems.

Course Learning Outcomes:

On completion of this course, the student will be able to:

CO1: describe architectures for parallel and distributed systems.

CO2: develop elementary parallel algorithms.

CO3: develop an application involving synchronization of communicating distributed process.

Syllabus:

Unit-I Parallel Computing: Trends in microprocessor architectures, memory system performance, dichotomy of parallel computing platforms, physical organization of parallel platforms, communication costs in parallel machines, SIMD versus MIMD architectures, global versus distributed memory, the PRAM shared-memory model, distributed-memory or graph models, basic algorithms for some simple architectures: linear array, binary tree, 2D mesh with shared variables.

Unit II Distributed Computing Architectures: Characteristics and goals of distributed computing, architectural styles: centralized, decentralized, and hybrid architectures, layered, object-based and service oriented, resource-based, publish-subscribe architectures, middleware organization: wrappers, interceptors, and modifiable middleware, system architecture, example architectures: network file system and web.

Unit-III Distributed Processes and Communication in Distributed Systems: Threads in distributed systems, principle of virtualization, clients: network user interfaces and client-side software for distribution transparency; servers: design issues, object servers, server clusters; code migration; Layered protocols, remote procedure call: RPC operation, parameter passing; message- oriented communication: transient messaging with sockets, message-oriented persistent communication; multicast communication: application-level tree-based multicasting, flooding-based multicasting, gossip-based data dissemination.

Unit IV Naming and Coordination in Distributed Systems: Names, identifiers, and addresses, flat naming, Structured naming, and attribute-based naming; coordination: clock synchronization, logical clocks, mutual exclusion: centralized, distributed, token-ring, and decentralized algorithms; election algorithms, location systems, distributed event matching, gossip-based coordination.

Unit-V Consistency and replication, Fault Tolerance, and Security: Introduction to consistency models and protocols, fault tolerance, and security issues in distributed systems.

Readings:

1. Ananth Grama, Anshul Gupta, George Karypis, Vipin Kumar, Introduction to Parallel Computing, 2nd edition, 2003, Addison-Wesley.
2. B. Parhami, Introduction to Parallel Processing: Algorithms and Architectures, Plenum, 1999, Springer.
3. M. van Steen, A. S. Tanenbaum, Distributed Systems, CreateSpace Independent

Publishing Platform, 2017.

MCAE316: DATA MINING [4-1-0]

Course Objectives: In this course, the objective is to introduce the concept of data mining. The course should enable students to translate real-world problems into data hypotheses. Data cleaning and visualization followed by classification and clustering of data points are other intents of the course. The course also covers mining frequent itemsets from the transactional data.

Course Learning Outcomes:

On completion of this course, the student will be able to:

CO1: experiment with basic data exploration methods to develop an understanding of given data.

CO2: identify a suitable pre-processing method for the given problem.

CO3: implement and apply appropriate data mining algorithms for the given problem.

CO4: use programming tools (Weka/Python/R) for solving data mining problems.

Syllabus:

Unit-I Overview: The process of knowledge discovery in databases, predictive and descriptive data mining techniques, supervised and unsupervised learning techniques.

Unit-II Data preprocessing: Data cleaning, Data transformation, Data reduction, Discretization.

Unit-III Classification: Supervised learning/mining tasks, Decision trees, Decision rules, Bayesian classification, Instance-based methods, evaluation and Validation methods.

Unit-IV Clustering: Basic issues in clustering, k-means clustering, expectation maximization, Hierarchical clustering, Density-based methods, Cluster Validation methods and metrics.

Unit-V Association Rule Mining: Frequent item sets, closed and maximal item sets, Apriori algorithm for association rule mining.

Readings:

1. P. Tan, M. Steinbach and V. Kumar, **Introduction to Data Mining**, Addison Wesley, 2016.
2. Jiawei Han and Micheline Kamber, **Data Mining: Concepts and Techniques** (3nd ed.), Morgan Kaufmann, 2011.
3. Charu C Agrawal, **Data Mining: The Textbook**, Springer, 2015.
4. Luis Torgo, **Data Mining with R Learning with Case Studies,** Second Edition, CRC Press, 2017.
5. Robert Layton, **Learning Data Mining with Python**, Second Edition,

MCAE 317: GPU PROGRAMMING[4-1-0]

Course Objectives: The objective of this course is to introduce the architecture of the graphic processing unit (GPU) followed by the construction of models developed through parallel programming. The fundamental GPU algorithms – reduce, scan, and histogram will also be introduced in this course. Problems such as matrix multiplication in the CUDA environment by parallelizing tasks is another

objective of this course.

Course Learning Outcomes:

On completion of this course, the student will be able to:

CO1: describe GPU architecture and parallel programming models.

CO2: implement fundamental GPU Algorithms – reduce, scan, and histogram.

CO3: analyze, and figure out the portion of programs being parallelizable.

CO4: write an efficient parallel algorithm to solve a given problem.

CO5: optimize GPU programs.

Syllabus:

Unit-I Introduction: Introduction to heterogeneous computing, overview of CUDA C/Python, and kernel-based parallel programming.

Unit-II Performance Issues: Memory model for locality, tiling for conserving memory bandwidth, handling boundary conditions, and performance considerations, simple matrix-matrix multiplication in CUDA environment.

Unit-III Introduction to OpenCL, operations such as vector addition using streams.

Unit-IV Applications: Parallel convolution pattern, parallel scan pattern, parallel histogram pattern and atomic operations, data transfer and task parallelism.

Readings:

1. Shane Cook, **CUDA Programming: A Developer's Guide to Parallel Computing with GPUs**, Elsevier; 2014.

2. Norman Matloff, **Parallel Computing for Data Science: With Examples in R, C++ and CUDA**, Chapman & Hall/CRC, 2015.

MCAE 318: Neural Networks [4-1-0]

Course Objectives: The objective of this course is to introduce the basics of neural networks. The concepts of single and multi-layer feed-forward neural networks and their engineering applications of artificial intelligence with respect to neural networks will also be covered in the course.

Course Learning Outcomes:

On completion of this course, the student will be able to:

CO1: describe the role of neural networks in engineering, artificial intelligence, and cognitive modeling.

CO2: design single and multi-layer feed-forward neural networks for practical applications,

CO3: analyze the performance of neural networks and tune various hyper-parameters.

Syllabus

Unit-I Introduction: Neuron as basic unit of neurobiology, McCulloch-Pitts model, Hebbian Hypothesis; limitations of single-layered neural networks.

Unit-II Supervised Learning: Single-layered neural networks, perceptron rule, review of gradient-descent algorithms; multi-layered neural networks: first order methods, backpropagation algorithm, second order methods, modeling sequences using recurrent neural networks, Hopfield networks, Boltzmann machines, restricted Boltzmann machines.

Unit-III Kernel methods and support vector machines: soft margin techniques.

Readings:

1. C. M. Bishop, **Pattern Recognition and Machine Learning**, Springer, 2010.

2. Simon O. Haykin, **Neural Networks and Learning Machines,** Pearson Education, 2016

MCAE319: MACHINE LEARNING APPLICATIONS [4-1-0]

Course Objectives: In this course, the objective is to study machine learning (ML) techniques. The course covers the basics of supervised and unsupervised ML techniques followed by their hands-on applications in solving real-world problems. The course also covers the different ways to evaluate developed ML models in different domains.

Course Learning Outcomes:

On completion of this course, the student will be able to:

CO1: appreciate fundamental issues and challenges of supervised and unsupervised learning techniques.

CO2: design and implement supervised and unsupervised machine learning algorithms for real-world applications while understanding the strengths and weaknesses.

CO3: appreciate the underlying mathematical relationships within and across Machine Learning algorithms.

CO4: fine tune machine learning algorithms and evaluate models generated from data.

Syllabus:

Unit-I Introduction: Learning theory, Hypothesis and target class, Inductive bias and bias-variance tradeoff, Occam's razor, Limitations of inference machines, Approximation and estimation errors, Curse of dimensionality, dimensionality reduction, feature scaling, feature selection methods.

Unit-II Regression: Linear regression with one variable, Linear regression with multiple variables, Gradient Descent, Logistic Regression, Polynomial regression, over-fitting, regularization. performance evaluation metrics, validation methods.

Unit-III Classification: Decision trees, Naive Bayes classifier, k-nearest neighbor classifier, Perceptron, multilayer perceptron, Neural network, back-propagation Algorithm, Support Vector Machine, Kernel functions.

Unit IV Evaluation: Performance evaluation metrics, ROC Curves, Validation methods, Bias-variance decomposition, Model complexity.

Unit-V Unsupervised learning: Clustering, distance metrics, Mixture models, Expectation Maximization, Cluster validation methods.

Readings:

1. Alpaydin, Ethem, **Introduction to machine learning,** MIT press, 2014.

2. Christopher, M. Bishop, **Pattern Recognition And Machine Learning**, Springer-Verlag, 2016.

3. Shai Shalev-Shwartz, Shai Ben-David, **Understanding Machine Learning: From Theory to Algorithms,** Cambridge Press, 2014.

4. Michalski, Ryszard S., Jaime G. Carbonell, and Tom M. Mitchell, eds. **Machine learning: An artificial intelligence approach**, Springer Science & Business Media, 2013.

MCAE320: DIGITAL IMAGE PROCESSING [4-1-0]

Course Objectives: The objective of this course is to study the concept of digital image processing. The course should also cover the image enhancement in the spatial and frequency domain followed by the image morphological operations such as dilation, erosion, and hit-or-miss transformations. The course also covers image segmentation and image compression.

Course Learning Outcomes:

On completion of this course, the student will be able to:

CO1: enhance the quality of an image using various transformations.

CO2: transform an image in spatial domain to frequency domain, and DWT domain.

CO3: apply required morphological operations to an image.

CO4: segment an image using various approaches.

Syllabus:

Unit-I Introduction: Applications of digital image processing, steps in digital image processing: image acquisition, image sampling and quantization, basic relationships between pixel.

Unit-II Image enhancement in the spatial domain and frequency domain: Gray level transformations, histogram processing, local enhancement, image subtraction, image averaging, spatial filtering: smoothing and sharpening filters, Discrete Fourier transformation, filtering in the frequency domain: smoothening and sharpening filters, image restoration in spatial and frequency domains.

Unit-III Morphological image processing: erosion and dilation, opening and closing, hit-or-miss transformation, some basic morphological algorithms.

Unit-IV Image segmentation: Point, line and edge detection, gradient operator, edge linking and boundary detection, thresholding, region-based segmentation, representation schemes like chain codes, polygonal approximations, boundary segments, skeleton of a region, boundary descriptor, regional descriptor.

Unit-V Introduction to Image Compression: Image compression models, Error free compression techniques, lossy compression techniques, JPEG, MPEG.

Readings:

1. Rafael C. Gonzalez and Richard E.Woods, **Digital Image Processing** (3rd edition), Prentice–Hall of India, 2016.

2. Bernd Jahne, **Digital Image Processing**, (6th edition), Springer, 2005.

3. S. Annadurai and R. Shanmugalakshmi, **Fundamentals of Digital Image Processing**, Pearson Education, 2007.

4. M.A. Joshi, **Digital Image Processing: An Algorithmic Approach** (2nd edition), Prentice-Hall of India.

5. B. Chandra and D.D. Majumder, **Digital Image Processing and Analysis**, Prentice-Hall of India, 2011.

MCAE321: INTERNET OF THINGS [4-1-0]

Course Objectives: The objective of this course is to introduce the concept of the Internet of Things (IoT) and its working. The course should also cover the microcontroller and interfacing of IoT devices, the security policies and issues related to IoT devices followed by some real-life applications of IoT.

Course Learning Outcomes:

On completion of the course, the student is expected to:

CO1 : describe the basics of IoT and how it works.

CO2 : understand the key components that make up an IoT system

CO3 : recognise the factors that contributed to the emergence of IoT

CO4: use real IoT protocols for communication

Syllabus:

Unit I Basics of IoT: Introduction to Internet of things, characteristics, architecture, Various sensors and sensing techniques. Technological trends in IoT, Impact of IoT on society, Application scenarios, vision, scalability, current solutions, issues.

Unit II – Microcontroller and Interfacing Techniques for IoT Devices

Introduction to IoT and architecture layers, IoT smart devices, Typical embedded computing systems, Introduction to ARM architecture and programming method, Embedded system development: a case study, Introduction to interfacing techniques.

Unit III – IoT Protocols & Security

Networking and basic networking hardware. Networking protocols, Interaction between software and hardware in an IoT device. IoT components and technologies to secure systems and devices.

Various security issues related to the IoT and security architectures. Hardware security threats and security vulnerabilities; protecting physical hardware

Unit IV – Location Tracking

Introduction to device localization and tracking; different types of localization techniques: time-of-arrival (TOA) based, time-difference-of-arrival (TDOA) based, angle-of-arrival (AOA) based, received signal strength (RSS) based, Radio-Frequency IDentification (RFID) based and fingerprinting based; Monte-Carlo tracking; Kalman filter based tracking; Cramer-Rao lower bound (CRLB) for device location estimator; Device diversity/heterogeneity issue in IoT networks.

Unit VI - IoT Applications: Application of IoT in Agriculture, Healthcare, Activity Monitoring.

Readings:

1. The Internet of Things: Enabling Technologies, Platforms, and Use Cases", by Pethuru Raj and Anupama C. Raman (CRC Press)

2. "Internet of Things: A Hands-on Approach", by Arshdeep Bahga and Vijay Madisetti (Universities Press)

MCAO301: JAVA PROGRAMMING [3-1-0]

Course Objectives: The objective of this course is to study object-oriented concepts of Java programming. The course should also cover the reading and writing files followed by exception handling. The graphical user interface (GUI) using Swings is another objective.

Course Learning Outcomes:

On completing this course, the student will be able to:

CO1: understand the object-oriented concepts – Classes, Objects, Inheritance, Polymorphism– for problem solving.

CO2: handle program exceptions.

CO3: design, implement, document, test, and debug a Java application consisting of multiple classes.

CO4 : handle input/output through files.

CO5 : create Java applications with graphical user interface (GUI).

Syllabus:

Unit-I Introductory Concepts: program, identifiers, variables, constants, primitive data types, expressions, control statements, structured data types, arrays, functions.

Unit-II Object Oriented Concepts: Abstraction, encapsulation, objects, classes, methods, constructors, inheritance, polymorphism, static and dynamic binding, overloading, Abstract classes, Interfaces and Packages.

Unit-III File Handling: Byte Stream, Character Stream, File I/O Basics, File Operations, Serialization.

Unit-IV Exception handling: Throw and Exception, Throw, try and catch Blocks, Multiple Catch Blocks, Finally Clause, Throwable Class, Types of Exceptions, java.lang Exceptions, Built-In Exceptions.

Unit-V GUI Design: GUI based I/O, Input and Message Dialog boxes, Swing components, Displaying text and images in window.

Readings:

1. James Gosling, Bill Joy, Guy L. Steele Jr, Gilad Bracha, Alex Buckley, **The Java Language Specification, Java SE 7 Edition**, Addison-Wesley, 2013.

2. Cay S. Horstmann, Core Java - Vol. I – Fundamentals, 10th Edition, Pearson, 2017.

3. Deitel & Deitel, **Java-How to Program** (9th ed.), Pearson Education, 2012.

4. Richard Johnson, An Introduction to Java Programming and Object-Oriented Application Development, **Thomson Learning,** 2006.

5. Herbert Schildt, Java: The Complete Reference, 10th Edition, McGraw-Hill Education, 2018.

MCAO 302: DATA MINING FOR BUSINESS APPLICATIONS (4+1)

Course Objectives: In this course, the objective is to explore the applications of data mining for business. The course should enable students to translate business problems into data hypotheses. Data wrangling and visualization followed by classification and clustering of data points are other intents of the course. The course also covers mining frequent itemsets from transactional data.

Course Learning Outcomes:

On completion of this course, the student will be able to:

CO1: Visualize data from a business perspective
CO2: Carry out data wrangling tasks, like handling missing data and data transformation
CO3: Map a business problem to data mining tasks like classification, clustering, and rule mining, and apply a suitable technique to it.
CO4: Use programming tools for the application of data mining tasks.

Syllabus:

Unit-I Handling Business Data: Translate business problems into data hypotheses, Exploring and describing datasets, Predictive and descriptive data mining techniques, use of visualizations to generate hypotheses

Unit-II Data Wrangling: Prepare and clean data for analysis, identify solutions for managing missing data, Data transformation, Data reduction, Discretization

Unit-III Data Visualization: Generate insight with graphs, Design visualizations to express data clearly

Unit-IV Linear Regression: Identify relationships between variables, Explain the parts of a linear model

Unit-V Classification: Logistic Regression, Decision Trees, Naïve Bayes, Voting, confusion matrix, interpreting results, select a model to guide decisions

Unit-VI Clustering: Clustering methods: centroid-based clustering, expectation maximization, hierarchical clustering, density-based methods, cluster validation methods, and metrics.

Unit-VII Association Rule Mining: Frequent item sets, closed and maximal item sets, Apriori algorithm for association rule mining.

Readings:

1. P. Tan, M. Steinbach and V. Kumar, **Introduction to Data Mining**, Addison Wesley, 2016.
2. J Zaki Mohammed and Wagner Meira, **Data Mining and Analysis: Fundamental Concepts and Algorithms,** Cambridge University Press, 2014.
3. Jiawei Han and Micheline Kamber, **Data Mining: Concepts and Techniques** (3nd ed.), Morgan Kaufmann, 2011.
4. Robert Layton, **Learning Data Mining with Python**, Second Edition.

MCAO 303: DATA SCIENCE [4-1-0]

Course Objectives: The objective of this course is to analyze the data statistically and discover valuable insights from it. The course gives hands-on practice on predictive and descriptive modeling of the preprocessed data. In addition, the student also learns to apply mining association rules from the transactional data and mining text from the document will also be covered during the course.

Course Learning Outcomes:

On completion of this course, the student will be able to:

CO1: demonstrate proficiency with statistical analysis of data.
CO2: develop the ability to build and assess data-based models.
CO3: execute statistical analyses and interpret outcomes.
CO4: apply data science concepts and methods to solve problems in real-world contexts and will communicate these solutions effectively.

Syllabus:

Unit-I Introduction: Introduction data acquisition, data preprocessing techniques including data cleaning, selection, integration, transformation, and reduction, data mining, interpretation.

Unit-II Statistical data modeling: Review of basic probability theory and distributions, correlation coefficient, linear regression, statistical inference, exploratory data analysis, and visualization.

Unit-III Predictive modeling: Introduction to predictive modeling, decision tree, nearest neighbor classifier, and naïve Bayes classifier, classification performance evaluation, and model selection.

Unit-IV Descriptive Modeling: Introduction to clustering, partitional, hierarchical, and density based clustering (k-means, agglomerative, and DBSCAN), outlier detection, clustering performance evaluation.

Unit-V Association Rule Mining: Introduction to frequent pattern mining and association rule mining, Apriori algorithm, measures for evaluating the association patterns.

Unit-VI Text Mining: Introduction of the vector space model for document representation, term frequency-inverse document frequency (tf-idf) approach for term weighting, proximity measures for document comparison, document clustering, and text classification.

Readings:

1. W. McKinney, Python for Data Analysis: Data Wrangling with Pandas, NumPy and iPython, 2nd Ed., O'Reilly, 2017.
2. P. Tan, M. Steinbach, A Karpatne, and V. Kumar, Introduction to Data Mining, 2nd Edition, Pearson Education, 2018.
3. G. Grolemund, H. Wickham, R for Data Science, 1st Ed., O'Reilly, 2017.

ANNEXURE-49

Sub: Amendment to Ordinances

[E.C Resolution No. 38-1/ (38-1-17) dated 08.12.2022]

The Following amendments to Ordinances of the University has been approved by the Executive Council at its meeting held on 08.12.2022 are hereby notified for information and necessary action, by all the concerned:

1. Minor modifications in Course Credit Scheme of Open Elective papers under PG LOCF.
   (i) M.A. Psychology ***(As per Annexure-1)***.
   (ii) M.A. Applied Psychology ***(As per Annexure-2)***.

2. Adding options on Indian Languages in the Open Elective Course in Semester-III and Semester-IV for syllabus for M.A Comparative Indian Literature (CIL) under the Department of Modern Indian Languages and Literary Studies ***(As per Annexure-3)***.

3. Minor change in course structure of M.A Programme in Linguistics for Semester-III and Semester-IV under the Department of Linguistics ***(As per Annexure-4)***.

4. Minor modifications/ introduction in the syllabi under the Department of Slavonic & Finno-Ugrian Studies.

   (i) M.A Russian ***(As per Annexure-5).***
   (ii) Full time Intensive Advance Diploma in Russian ***(As per Annexure-6)***.
   (iii) Part-time Certificate/ Diploma/ Advance Diploma Courses in Russian ***(As per Annexure-7)***.

5. Change of nomenclature of GE Papers in B.A (H) French/ German/ Spanish/ Italian for Semester-I, II,III and IV of CBCS-LOCF Syllabus under the Department of Germanic & Romance Studies as follows :

Existing	**Amended**	**Semester**
Introduction to French	Basic - French– I	Semester-I of UG Courses
Introduction to German	Basic - German– I	

Introduction to Italian	Basic - Italian– I	
Introduction to Spanish	Basic - Spanish – I	
Introduction to Portuguese	Basic - Portuguese – I	
Introduction to French	Basic - French– II	Semester-II of UG Courses
Introduction to German	Basic - German– II	
Introduction to Italian	Basic - Italian– II	
Introduction to Spanish	Basic - Spanish – II	
Introduction to Portuguese	Basic - Portuguese – II	
Introduction to French	Intermediate - French– I	Semester-III of UG Courses
Introduction to German	Intermediate - German – I	
Introduction to Italian	Intermediate - Italian– I	
Introduction to Spanish	Intermediate - Spanish – I	
Introduction to Portuguese	Intermediate - Portuguese – I	
Introduction to French	Intermediate - French– II	Semester-IV of UG Courses
Introduction to German	Intermediate - German – II	
Introduction to Italian	Intermediate - Italian– II	
Introduction to Spanish	Intermediate - Spanish – II	
Introduction to Portuguese	Intermediate - Portuguese– II	

Annexure-1
Resolution No. 38 {38-1 [38-1-17(1)]}

UNIVERSITY OF DELHI

MASTER OF ARTS

M. A. Psychology

Effective from the Year 2021-2022

Revised Syllabus as per Choice Based Credit System (C.B.C.S.)

Department of Psychology, University of Delhi, Delhi

COURSE CREDIT SCHEME- M.A. PSYCHOLOGY

Semester	Core Course			Elective Course			Open Elective Course			Total Credits
	No. of papers		Total	No. of papers		Total	No. of papers			
I	4+1 (prac)	4	20	-	-	-	-	-	-	20
II	2+1 (prac)	4	12	2	4	8	-	-	-	20
III	**1 (Field Training)**	**4**	**4**	**3 +1 (prac)**	**4**	**16**	**1**	**4**	**4**	**24**
IV	**1(Dissertation)**	**8**	**8**	**3+1 (prac)**	**4**	**16**	**1**	**4**	**4**	**28**
Total credits for the course										**92**

***For each Core and Elective Course there will be 4 lecture hours of teaching per week.**
***Open Electives to the maximum total of 4 credits.**
***Duration of examination of each paper shall be 3 hours.**
***Each paper will be of 100 marks out of which 70 marks shall be allocated for semester examination and 30 marks for Internal Assessment.**

***Credit points for tutorial forms the component of the internal assessment.**

Semester -I:

Semester 1 shall consist of 4 core papers which will be compulsory for all students. Each core paper will be for 4 credits. 4 credits will be provided for the Practicum that will be compulsory for all students. Total credit points for this Semester shall be 20.

Semester I				
Core Courses	Credits in each course			
	Theory	Practical	Tutorial	Credits
PSY 101: Human Cognition: Theory & Research	4	-	*	4
PSY 102: Research Method and Statistics	4	-	*	4
PSY 103: Social Psychology	4	-	*	4
PSY 104: A Conceptual History of Psychology	4	-	*	4
PSY 105: Practicum based on 101, 102, 103 and 104	-	4	-	4

*Credit points for tutorial forms the component of the internal assessment

Semester II:

Semester 2 shall consist of 2 core papers (4 credit points per paper) and one compulsory Practicum (4 credits). There will be **six** specializations offered to the students out of which students will have to opt for 1 specialization: **Applied Developmental Psychology (A), Organizational Behaviour/HR(B), Clinical/Neuropsychology (C), Indian and Transpersonal Psychology (D), Health and Culture (E) and Social Psychology (F)** Each elective paper will be for 4 credit points.Total Credit points for this semester shall be 20.

Semester -II				
Core Courses	**Credits in each course**			
	Theory	**Practical**	**Tutorial**	**Credits**
PSY 201: Psychometrics	4	-	*	4
PSY 202: Qualitative Research Methods	4	-	*	4
	Credits in each course			
	Theory	**Practical**	**Tutorial**	**Credits**
PSY 203A: Applied Developmental Psychology: Theory, Research and Practice	4	-	*	4
PSY 204A: Socio-emotional Development in Children	4	-	*	4
PSY 203B: Organizational Psychology and Indian Context	4	-	*	4
PSY 204B: Cultural Processes and Leadership	4	-	*	4
PSY 203C: Philosophy of Clinical Psychology	4	-	*	4
PSY204C: Understanding Psychological Disorders	4	-	*	4
PSY 203D: Philosophical and Historical Foundations of Indian Thought	4	-	*	4
PSY204D: Notion of Knowledge in Indian Intellectual Tradition	4	-	*	4
PSY 203E: Health and Well-Being	4	-	*	4
PSY204E: Psychology of Vulnerability	4	-	*	4
PSY 203F:Intergroup Relations in Indian Society	4	-	*	4
PSY204F: Conflict Resolution and Peace Psychology	4	-	*	4
PSY 205: Practicum based on paper 201, 202, 203 and 204.	-	4	-	4

Semester III:

- **Semester III** shall consist of **3 elective papers** from each of the six specializations. **4 credit** points shall be given for each of these elective papers. The students can opt for **1 open elective** from this semester. **4 credit** points shall be given for the open elective paper which shall consist of **4 units** of theory (**4** hours/week classes).
- There will be a mandatory paper on Field Training Work that the students will have to undertake which shall be for **4 credit** points. Total credits for this semester shall be **28 credits.**
- The floating of Elective and Open Elective Papers shall be dependent on the availability of the faculty.

Semester-III				
Elective Courses	**Credits in each course**			
	Theory	**Practical**	**Tutorial**	**Credits**
PSY301A: Contemporary Perspectives and Issues in Applied Developmental Psychology	4	-	*	4
PSY302A: Cognitive Development: Mind, Brain and Education	4	-	*	4
PSY 303A: Developmental Disorders	4	-	*	4
PSY 301B: Organizational Change and Development **(Currently Offered)**	4	-	*	4
PSY 302B: Interpersonal Process and Team Building **(Currently Offered)**	4	-	*	4
PSY 303B: Power and Politics in	4	-	*	4

Organization **(Currently Offered)**				
PSY 301C: Psychotherapeutic Interventions **(Currently Offered)**	4	-	*	4
PSY 302C: Community Mental Health **(Currently Offered)**	4	-	*	4
PSY 303C: Clinical Assessment and Diagnosis **(Currently Offered)**	4	-	*	4
PSY 301D: Self and Personality: Indian Perspective **(Currently Offered)**	4	-	*	4
PSY 302D: Aspects and Practical Implications of Yoga **(Currently Offered)**	4	-	*	4
PSY 303D: Emotions and the transformation of personhood in Indian Psychology **(Currently Offered)**	4	-	*	4

PSY 301E: Positive Psychology	4	-	*	4
PSY 302E: Diversity, Culture and Health	4	-	*	4
PSY 303E: Emotions and Well Being	4	-	*	4
PSY 301F: Psychology of Intimacy	4	-	*	4
PSY 302F: Environmental Psychology	4	-	*	4
PSY 303F: Vulnerabilities of Contemporary Indian Society	4	-	*	4
PSY 304: **Practicum based on 301, 302 and 303**	-	4	-	**4**
Total (Elective + Practicum)				**16**

Open Elective Courses	**Credits in each course**	
	Theory	**Credits**
PSY 305: Gender and Psychology	4	**4**
PSY 306: Theory and Practice of Persuasion	4	**4**
PSY 307: Development of Theory of Mind	4	**4**
PSY 308: Children and Narratives	4	**4**
PSY 309: Play and Child Development	4	**4**
PSY 310: Psychology of Disability	4	**4**
PSY 311: Psychological Assessment and Behavioral Skills **(Currently Offered)**	4	**4**
PSY 312: Psychology and the Virtual World	4	**4**
PSY 313: Psychological Understanding of texts and films **(Currently Offered)**	4	**4**

PSY 314: Introduction to Analytical Psychology **(Currently Offered)**	4	**4**
PSY 315: Archetypes and the Collective Unconscious (Currently Offered)	4	**4**
PSY 316: Field Training (Compulsory for all)	**4**	
Total Credits	**24**	

Semester -IV:

- Semester 4 shall consist of 3 elective papers each from 6 specializations. There will be one compulsory Practicum paper.
- Students will have to opt 1 elective papers from this semester. The total credit points for this semester shall be 32 points.

Semester IV				
Elective Courses	**Credits in each course**			
	Theory	**Practical**	**Tutorial**	**Credits**
PSY401A: Adolescence and Young Adulthood	4	-	*	4
PSY402A: Ageing: Growth and Development during Late Adulthood	4	-	*	4
PSY403A: Counselling Children and Adolescents	4	-	*	4
PSY401B: Coaching and Mentoring at Workplace	4	-	*	4
PSY402B: Human Resource Management	4	-	*	4
PSY403B: Negotiation and Bargaining Skills	4	-	*	4
PSY401C: Behavioural Medicine	4	-	*	4
PSY402C: Clinical Neuropsychology	4	-	*	4
PSY403C:Childhood Disorders	4	-	*	4
PSY 401D: Introduction to Transpersonal Psychology	4	-	*	
PSY402D: Transpersonal Phenomena-Transformation, Healing and Wellness	4	-	*	4
PSY403D: Introduction to Buddhist Psychology	4	-	*	4
PSY401E: Cultural Psychology of Health in Indian Context	4	-	*	4
PSY402E: Psychology of Happiness and Peace	4	-	*	4
PSY403E: Stress and Health	4	-	-	4
PSY 401F: Self, Globalization and Society	4	-	*	4
PSY 402F: Challenges of Societal	4	-	*	4

Development				
PSY 403F: Social Psychology and Education	4	-	*	4
PSY 404: Practicum based on papers 401, 402 and 403	-	4	*	4
Open Elective Courses	**Credits in each course**

PSY 415: Training and Consulting in Organizations	4			
PSY 416: Dissertation (Compulsory for all students)	8			

UNIVERSITY OF DELHI

MASTER OF ARTS

M. A. Applied Psychology

Effective from the Year 2021-2022

Revised Syllabus as per Choice Based Credit System (C.B.C.S.)

Department of Psychology, University of Delhi, Delhi

Designing of the Course

1. These courses were designed and developed by smaller groups of faculty members. At least two faculty members were assigned the task of designing the Core and Elective papers.
2. The courses were designed to be commensurate with the credit system, which requires a minimum of 40-50 hours of active engagement over asemester.
3. It was envisaged to provide learning possibilities with a high degree of specialization and in-depth knowledge in at least one area/domain of the discipline, or more than one. Nonetheless, developing and retaining appropriate level of skills to enhance employment opportunities in different domains was decided to be a concurrent priority while designing the courses. It is to be remembered that a significant number of students enroll in the Graduation Program after having done Psychology in grade XII. Larger number of students, however, has previous study exposure from other streams of sciences, arts and commerce. Therefore, one of the principles that was kept in mind was that the transition be made smooth both from content as well as process orientation ofteaching.

Programme Structure

The M. A. Applied Psychology Programme is a two years programme consisting of 4 semesters, 2 in each year

Semester	Core Course			Elective Course			Open Elective Course			Total Credits
	No. of papers	Credits	Total	No.of papers	Credits	Total	No.of papers	Credits	Total	
I	4+1(Practicum)	4	20	-	-	-	-	-	-	20
II	2+1 (Practicum)	4	12	2	4	8	-	-	-	20
III	1(Field Training) + 1 (Practicum)	4	8	3	4	12	1	4	4	24
IV	1 Practicum + 1 Dissertation	4+8	12	3(Elective papers)	4	12	1	4	4	28
Total credits forthecourse										92

Course Credit Scheme

The structure of papers prescribed for various semesters shall be as follows:

Semester I

Semester 1 shall consist of 4 core papers, which will be compulsory for all students. Each core paper will be for 4 credits. 4 credits will be provided for the Practicum that will be compulsory for all students.

Paper Code	Nature	Title	Maximum marks	Credit Points
AP/10001	Core paper	Introduction to Applied Psychology	100	4
AP/10002	Core paper	Community Psychology	100	4
AP/10003	Core paper	Quantitative Research Methods	100	4
AP/10004	Core paper	Applied Cognitive Psychology	100	4
AP/10005	Compulsory	Practicum	100	4

7

Semester II

Semester 2 shall consist of 2 core papers (4 credit points per paper.There will be three specializations offered to the students out of which students will have to opt for 1 specialization: Clinical Psychology (A), Organizational Behaviour (B) and Counseling Psychology (C). Students have to take two elective papers from that chosen specialization. Each elective paper will be for 4 credit point

Paper Code	Nature	Title	Maximum Marks	Credit Points
AP/20001	Core paper	Applied Psychometrics	100	4
AP/20002	Core paper	Qualitative Research methods	100	4
AP/20003A	Elective	Psychopathology	100	4
AP/20004A	Elective	Psychotherapeutic Processes	100	4
AP/20003B	Elective	Basics of Organizational Behaviour	100	4
AP/20004B	Elective	Applied Industrial/Organizational Psychology	100	4
AP/20003C	Elective	Psychology of Group Dynamics	100	4
AP/20004C	Elective	Self and Personal Growth	100	4
AP/20005	Compulsory	Practicum	100	4

Semester III

Semester 3 shall consist of 3 elective papers from each of the three specializations. 4 credit points shall be given for each of these elective papers.

There will be a mandatory paper on Field Training Work that the students will have to undertake which shall be for 4 credit points. Students will have to opt for one Open elective paper which shall be of 4 credits.
One practicum paper will be compulsory for all students.

8

Paper No:	Nature of Paper	Title	Maximum Marks	Credit Points
AP/30001A	Elective	Forensic Psychology	100	4
AP/30002A	Elective	Childhood Psychopathology	100	4
AP/30003A	Elective	Neuropsychology	100	4
AP/30001B	Elective	Organizational Change and Development	100	4
AP/30002B	Elective	Training and Consulting in Organizations	100	4
AP/30003B	Elective	Managing Across Cultures	100	4
AP/30001C	Elective	Critical Psychology	100	4
AP/30002C	Elective	Counselling and socio-cultural context	100	4
AP/30003C	Elective	Psychology of Relationships	100	4
AP/30004	Compulsory	Practicum	100	4
AP/30005	Open Elective	Health Psychology	100	4
AP/30006	Open Elective	Psychological Testing and Applications	100	4
AP/30007	Open Elective	Applications of Social - Psychological Principles	100	4
AP/30008	Theory-Practice Integration	Field Training/Internship	100	4

Semester IV:

Semester 4 shall consist of 3 elective papers each from 3 specializations, there will be one compulsory Practicum paper. Students will have to opt for one open elective papers from this semester. There shall be a Dissertation paper that will be compulsory for all students. The dissertation shall be for 8 credit points.

Paper No:	Nature of paper	Title	Maximum Marks	Credit points
AP/40001A	Elective	Neuropsychological Rehabilitation	100	4
AP/40002A	Elective	Cognitive Behavioral Interventions	100	4
AP/40003A	Elective	Applied Psychophysiology and Biofeedback	100	4
AP/40001B	Elective	Organizational Culture and Climate	100	4
AP/40002B	Elective	Leadership processes in Organizations	100	4
AP/40003B	Elective	Cross-Cultural Communication	100	4
AP/40001C	Elective	Psychology of Gender and Power	100	4
AP/40002C	Elective	Psychoanalytic and Cognitive-Behavioral Approaches to Counseling	100	4
AP/40003C	Elective	Humanistic and Feminist Approaches to Counseling	100	4
AP/40004C	Compulsory	Practicum	100	4
AP/40005	Open Elective	Psychology of Peace and Happiness	100	4
AP/40006	Open Elective	Correctional Psychology	100	4
AP/40007	Open Elective	Hypnotherapy	100	4
AP/40008	Open Elective	Sports Psychology	100	4
AP/40009	Compulsory	Dissertation	200	8

Notes:

1. Students can earn a maximum of 8 credit points from the Open Electivepapers (including Semester 3 and4)
2. Open Elective and Specialization Papers shall be offered depending upon the availability of thefaculty.
3. In order to claim/earn a Specialization; students are required to take at least Six Elective papers in thatSpecialization.
4. In each semester the students can opt for only one specializationarea.
5. No practical examination or Viva-voceshall be conducted for the openelectives.

Annexure-3
Resolution No. 38 {38-1 [38-1-17(2)]}

OPEN ELECTIVE COURSE

CILOE 305(iii)

INTRODUCTION TO AN INDIAN LANGUAGE (I)

(ASSAMESE)

COURSE – I

SEMESTER-III

Marks: 70+30= 100 Credits: 04

Objective: This course aims to introduce students to Assamese, one of the Modern Indian languages. Since this course of study is offered to students who don't have prior knowledge of Assamese language hence, to give a basic overview of Assamese language is the main objective of this course. This course will introduce students to the letters and sounds of Assamese language. They will also be taught to frame Assamese words and different types of sentences. In this process, students will learn how to read, write, speak and listen in the language.

Course learning outcomes: This course of study will introduce students to a language other than their mother tongue and simultaneously improves their multilingual abilities. Moreover, this course will lead the students to study Assamese language in detail in future which will ultimately help them in their professional and technical life.

Course Units:

I. Introduction to Assamese language (10 marks)
- Origin of Assamese language
- Different stages of development of Modern Assamese language

II. Introduction to sounds and letters, Framing words and sentences (20 marks)
- Vowels, Consonants, Consonant Clusters
- Framing words
- Framing simple sentences

III. Basic Grammar (20 marks)
- Parts of speech
- Verb
- Tense

IV. Formation of different kinds of Sentences (20 marks)

- Simple, Compound and Complex Sentence
- Assertive (Affirmative, Negative), Interrogative, Exclamatory Sentence

Teaching Plan: Lecture- 40 Hrs., discussions-10 Hrs., Assignments/Presentations

Unit I : 2 week

Unit II : 4 weeks

Unit III : 4 weeks

Unit IV : 4 weeks

Suggested Readings:

OPEN ELECTIVE COURSE

CILOE 405(iii)

INTRODUCTION TO AN INDIAN LANGUAGE (II)

(ASSAMESE)

COURSE – II

SEMESTER-IV

Marks: 70+30= 100 Credits: 04

Objective: The purpose of this course is to introduce the language in a more detailed manner to students who have gained a basic understanding of the Assamese language in the previous semester. This course will focus on the salient features and grammatical rules of the Assamese language as well as give a brief understanding on writing skills and developing contents in Assamese languages.

Course learning outcomes: The course is expected to add working knowledge about Assamese language and its grammar, which will eventually lead them to produce oral and written contents in Assamese language correctly. It is expected that it will help the students in the future in professional and technical fields related to Assam or Assamese language.

Course Units

I. Assamese Phrases and Proverbs (10 marks)

II. Assamese Grammar (20 marks)
- Number
- Gender
- Salient features of Assamese language

III. Writing skills and Content development (20 marks)
- Language Vocabulary
- Use of Dictionary
- Role of Translation

IV. Comprehension and Paragraph writing (20 marks)

Teaching Plan: Lecture- 40 Hrs., discussions-10 Hrs., Assignments/Presentations

Unit I : 2 week

Unit II : 4 weeks
Unit III : 4 weeks
Unit IV : 4 weeks

Suggested Readings:

OPEN ELECTIVE COURSE
CILOE 305(iv)
INTRODUCTION TO AN INDIAN LANGUAGE (I)

(BENGALI)

COURSE – I

SEMESTER-III

Marks: 70+30= 100 Credits: 04

Course Objective:

This course is aimed at teaching basic language skills in Bengali. It will introduce the student to the basic skills of the Bengali Language: its alphabet, essential words and simple sentence construction method along with the history of its origin and development. The course intends to facilitate students acquiring primary skills of reading, writing and speaking Bengali alongside building up an elementary vocabulary.

Course Learning Outcome:

The course will enable the students to obtain the basic skills of reading, writing and speaking in Bengali along with building up a primary vocabulary. After the completion of the course they can read and write simple Bengali sentences, can figure out words having conjunct characters, and can have a basic everyday conversation.

Unit I (25 Marks)
Introduction to Bengali language
Introduction to Bengali Vowel & Consonant sounds along with the sound-images
Introduction to vowel allographs
Introduction to Bengali Consonant Conjuncts

Unit II (25 Marks)
Introduction to Bengali Pronoun
Introduction to Bengali Noun, Numbers & subjunctive
Introduction to Verb & Time/Tense
Conjugation of different verbs
Bengali qualifiers/adjectives
Bengali postpositions
Conjunctions and its usage

Unit III (20 Marks)
Making simple sentences in Bengali (basic syntactical rules)
Making Negative sentences in Bengali
Making Interrogative sentences in Bengali

Teaching Learning Process: Lecture-40 Hrs. Discussions 5Hrs. Assignments / Presentation-5 Hrs

Unit-I Two weeks

Unit-II Six weeks

Unit-III Six weeks

Assessment Methods: Monthly Test., Internal Exam, Semester Exam.

OPEN ELECTIVE COURSE

CILOE 305(iv)
INTRODUCTION TO AN INDIAN LANGUAGE (II)

(BENGALI)

COURSE – II

SEMESTER-IV

Marks: 70+30= 100 Credits: 04

Course Objective:

This course is designed for students who have prior knowledge of the Bengali language and can make and figure out simple Bengali sentences. The course aimed at enabling them to figure out and construct compound and complex sentences in Bengali. Furthermore, the course will enable the students to achieve skills to comprehend small passages, write short paragraphs, and have better conversational skills. The course will also introduce them to the basic history of the Bengali literary culture and the basic rules of translation as well.

Course Learning Outcome:

The course will facilitate the students to understand the nuances of the language by empowering them with better reading, writing and conversational skills. It will also enable them to translate from Bengali to English and vice versa.

Unit I (15 Marks)
Compound verbs
Transitive and intransitive verbs
Making compound sentences in Bengali using conjunction
Making complex sentences in Bengali

Unit II (15 Marks)
Reading comprehension

Unit III (15 Marks)
Writing Skills and Content Development

Unit IV (15 Marks)
Translation from another language to Bengali
Translation from Bengali to another language

Teaching Learning Process: Lecture-40 Hrs. Discussions 5Hrs. Assignments / Presentation-5 Hrs

Unit-I Four weeks

Unit-II Three weeks

Unit-III Three weeks

Unit-IV Four Week

Assessment Methods: Monthly Test., Internal Exam, Semester Exam.

INTRODUCTION TO AN INDIAN LANGUAGE (I)

(GUJARATI)

COURSE – I

SEMESTER-III

Marks: 70+30= 100 Credits: 04

Objective: This course aims to introduce students to Language, one of the Modern Indian languages. Since this course of study is offered to students who don't have prior knowledge of Language. Hence, to give a basic over view of Language is the main objective of this course. This course will introduce students to the letters and sounds of Language. They will also be taught to frame words and simple sentences. In this process, students will learn how to read, write, speak and listen to the Gujarati language.

Course learning outcomes: This course of study will introduce students to Gujarati language other than their mother tongue and simultaneously improves their multilingual abilities. Moreover, this course will lead the students to study Language in detail in future which will ultimately help them in their professional and technical life.

Course Units:

I. **Introduction:** Gujarati language and its silent features.

II. sounds and letters, Framing the words and sentences (25 marks)

- Vowels, consonants, Consonant Clusters
- Framing the words
- Framing the simple sentences
- Pre and Post-positions, Verb adjuncts

III. Basic Grammar (25 marks)

- Parts of speech
- Verb
- Types of sentences

IV. Writing skills and content development (20 marks)

Writing for different platforms/media
(Blog, articles, reviews, reports, speeches, advertisements and copy writing,

Reports, scripts, etc.)

30 marks for internal examination/course papers/assignments/project-field works And presence etc.

Teaching Plan: Lecture- 40 Hrs., discussions and demonstration -10 Hrs., Assignments/Presentations

Unit I : 2 week

Unit II : 4 weeks

Unit III : 4 weeks

Unit IV : 4 weeks

Suggested Readings:

1. Christian, Sonal, *Gujarati-English/English-Gujarati Dictionary & Phrasebook (Hippocrene Dictionary & Phrasebook),*hippocrene book,ney york, 2006

2. Clair Tisdall, William St., *A Simplified Grammar of the Gujarati Language together With a Short Reading Book and Vocabulary,* Forgotten Books and kegun paul, London, 2017

OPEN ELECTIVE COURSE

CILOE 405(v)

INTRODUCTION TO AN INDIAN LANGUAGE (II)

(GUJARATI)

COURSE – II

SEMESTER-IV

Marks: 70+30= 100 Credits: 04

Objective: The purpose of this course is to introduce the language in a more detailed manner to students who have gained a basic understanding of the Language in the previous semester. This course will focus on the salient features and grammatical rules of the Language as well as give a brief understanding of translation between Indian languages.

Course learning outcomes: The course is expected to add working knowledge about Language and its grammar, which will eventually lead them to produce oral and written contents in Language correctly. It is expected that it will help the students in the future in professional and technical fields related to the Language

Course Units

I. Gujarati Language: Phrases, Proverbs, idioms, dialect etc. (10 marks)

II. Gujarati Grammar (20 marks)
- Numbers
- Gender
- Types of verbs: dative, experiencer, transitive, intransitive etc.

III. Writing skills and content development (20 marks)
- Language Vocabulary
- Use of Dictionary and lexicon resources
- Technical glossaries

IV. Comprehension (20 marks)

30 marks for internal examination/course papers/assignments/project-field works And presence etc.

Teaching Plan: Lecture- 40 Hrs., discussions-10 Hrs., Assignments/Presentations

Unit I : 2 week
Unit II : 4 weeks
Unit III : 4 weeks
Unit IV : 4 weeks

Suggested Readings:

1.Dwyer, y Rachel Dwyer, *Get Started in Gujarati Absolute Beginner Course: The essential introduction to reading, writing, speaking and understanding a new language.*NTC publishing group, 2013

INTRODUCTION TO AN INDIAN LANGUAGE (I)

(TAMIL)

COURSE – I

SEMESTER-III

Marks: 70+30= 100 Credits: 04

Objectives: The main aim of the course is to introduce Tamil – a distinctive modern language of India which is also a classical language of the world – to students of other lingua franca, who don't have prior knowledge of the said language. This course will introduce vowels, consonants, vowel consonants and their phonology, phonemes, morphology, morphemes, syntax, etc., to students. This will also make the students familiar with nouns, pronouns, verbs, adverbs, adjectives, etc., and their meanings, besides making them familiar with the construction of Tamil sentences and some proverbs, idioms and phrases in passages.

Outcomes: This course will enable non-Tamil students to know the alphabet and its categories, sounds and pronunciations. The students will be familiar with important nouns, basic verbs, kinds of verbs and tenses, adverbs, adjectives, and their meanings, and style of sentence construction in Tamil language. In addition, they will be aware of certain proverbs, idioms and phrases and their contextual meanings in given passages. Further, the language proficiency of speaking, writing, and reading Tamil may be helpful for their academic and professional life.

Course Units:

I. Brief history of Tamil language and literature and its literary genres.

II. Introduction of vowels, consonants, vowel consonants, nouns, pronouns, verbs, adverbs, adjectives, and construction of sentences and idioms and phrases. (25 Marks)

- Vowels, consonants, vowel consonants and their morphology, phonology, phonemes and morphemes.
- Kinds of Words – Nouns, Pronouns, Adverbs and Adjectives.
- Kinds of Verbs – Past tense, Present tense, Future tense, and Continuous tense of past, present and future.

- Construction of simple and combined sentences.

III. Elucidation of the basic grammar of Tamil language. (25 Marks)

- Parts of Speech
- Kinds of nouns
- Kinds of Verbs
- Kinds of Tenses
- Types of Sentences

IV. Writing skill and content development (20 Marks)
(For Cyber and Print Media, Blogs, Advertisements, Reports, Scripts, etc.)

Teaching Plan: Lecture – 40 Hrs., Discussions – 05 Hrs., Assignment/Presentation – 05 Hrs.

Unit I: 2 weeks

Unit II: 4 weeks

Unit III: 4 weeks

Unit IV: 4 weeks

Suggested Readings:

A Programmed Course in Tamil. 2012. G. Sankaranarayanan. Mysore: Central Institute of Indian Languages.

Learn Tamil in 30 Days through English. 2009. Krishna Gopal Vikal *et al*. Okhla Industrial Area, New Delhi: Diamond Books.

OPEN ELECTIVE COURSE

CILOE 405(vii)

INTRODUCTION TO AN INDIAN LANGUAGE (II)

(TELUGU)

COURSE – II

SEMESTER-IV

Marks: 70+30= 100 Credits: 04

Objectives: The course aims at introducing the Tamil language to students of other lingua franca, who gained essential knowledge of the said language in the previous semester. This course will deliberate elaborately in detail about the phonology, morphology and syntax of the Tamil language, its basic grammatical rules, kinds of tenses and a standard spoken language. It will make the students a clear understanding of the construction of Tamil sentences, and a basic knowledge of the art of translation between Indian languages.

Outcomes: This course will enable non-Tamil students to acquire the essential knowledge of the Tamil language and its grammatical rules. The students will gain the required language skill to speak with common Tamils and produce literary content in Tamil. Further, the students will have the desired aptitude of the art of translation, a forte for their professional or career-oriented life.

Course Units

I. Language: Proverbs, Idioms, Phrases, etc. (10 Marks)

II. Language: Grammar (20 Marks)

- Numbers
- Genders
- Tenses
- Other features of the Tamil language

III. Writing skill of contents (20 Marks)

- Gaining Tamil vocabulary
- Using Dictionary and Lexicons
- Acquiring Tamil Technical glossaries

IV. Comprehension (20 Marks)

Teaching Plan: Lecture – 40 Hrs., Discussions – 05 Hrs., Assignment/Presentation – 05 Hrs.

Unit I: 2 weeks

Unit II: 4 weeks

Unit III: 4 weeks

Unit IV: 4 weeks

Suggested Readings:

An Intensive Course in Tamil. 2000. S. Rajaram. Mysore: Central Institute of Indian Languages.

Colloquial Tamil. 2002. R.E. Asher and E. Annamalai. London: Routledge.

Tamil Text Books (*Fourth-Fifth-Sixth Standards*). 2010. Text Book Committee. Chennai: Tamil Nadu Text Book Society.

Updated Cover Page of Programme Brochure

UNIVERSITY OF DELHI

MASTER OF ARTS IN LINGUISTICS

(M.A. in Linguistics)

(Effective from Academic Year 2019-20)

PROGRAMME BROCHURE

Revised Syllabus as approved by Academic Council and

Executive Council in 2019

Amendments Proposed

A minor correction/amendment is proposed to rectify the anomaly arising out of the incorrect number of credits (inadvertently) shown against the two Open Elective and two Workshop courses in the recently AC/EC approved syllabus. This has been corrected to 4 credits for the Open Elective courses and 5 credits for the Workshop courses which are now included in Core/Elective courses as indicated on Pages 9-14 and as per the rules of the University.

Updated sections of Programme Brochure (Changes on Pages 9-14)

Programme Structure:

The M.A. in Linguistics programme is a two-year course divided into four-semesters. A student is required to complete 88 credits for the completion of course and award of degree.

Open Elective Courses

Open Elective I and II are offered at the discretion of the Department

Department policy for selection of elective courses: The department has provided a large number of courses to be offered as elective courses. The primary objective of offering these courses is to ensure adequate exposure in three to four areas across the entire MA programme. Accordingly, selection of the Elective Courses will be guided by the criteria set up by the Department

(from time to time) keeping in view adequate exposure and training in three to four areas across the entire MA programme for each of its students.

Group (C)

Note. Depending on the availability of a suitable faculty and availability of choices, four of these will be offered as compulsory/elective courses in the third semester. If adequate number of faculty is available, students will have the liberty to choose according to the criteria set by the Department. Students will have to choose at least one course each from (C-1) and (C-II).

Group (D)

Note. Depending on the availability of a suitable faculty and availability of choices, four of these will be offered as compulsory/elective courses in the fourth semester. If adequate number of faculty is available, students will have the liberty to choose according to the criteria set by the Department (to ensure adequate exposure and training in three to four areas across the entire MA programme).

Teaching:

The faculty of the Department is primarily responsible for organizing teaching for M.A. in Linguistics. The tutorials/labs, if possible, will be provided by engaging the research scholars under the overall guidance of the Department. Teaching comprises lectures, demonstration, field /Lab projects, data oriented analytical exercises.
There shall be 90 instructional days excluding examination in a semester.

Projects/Dissertation:

Students have the option to choose Research Based Dissertation in Semester 4 at the M.A. level as part of Group D courses. In addition, there are ample opportunities for carrying out research projects and producing research reports/ term papers as part of the teaching practices of the department. Students are encouraged to participate in Faculty research projects to enhance their methodological and analytical abilities.

Intensive Advanced Diploma in Russian
PAPER: **RUSSIAN GRAMMAR**
Max. Marks: 100
Total Number of Hours: 180

Aims & Objectives: The aim of the course is to introduce basic grammatical structures of Russian.
The objective is to achieve competence in correct usage of grammatical structures in communicative speech situations. Students will be encouraged to use computer-aided learning programs on Russian language, Students would also be able to develop their knowledge of Lexical system of Russian.

UNITS	Number of hours	Marks
UNIT 1) **WORD FORMATION** a. Word formation of nouns, b. Word formation of adjectives, c. Word formation of adverbs, d. Word formation of verbs	30	10
UNIT 2) **MORPHOLOGY**	100	60

I. Nouns
   i. Animate & Inanimate Nouns
   ii. Gender & Number of Nouns
   iii. Case System of Nouns
   iv. Case forms: meaning & usage
      1. Nominative case
      2. Genitive case
      3. Dative case
      4. Accusative case
      5. Instrumental case
      6. Prepositional case

II. Pronouns
   i. Personal pronouns
   ii. Reflexive pronouns
   iii. Demonstrative pronouns
   iv. Negative pronouns
   v. Interrogative pronouns
   vi. Indefinite pronouns

III. Adjectives
   i. Declension of adjectives
   ii. Comparative degree of adjectives
   iii. Superlative degree of adjectives

IV. Verbs
   i. Reflexive verbs
   ii. Aspects of verbs
   iii. Imperative form of verbs
   iv. Case governance of verbs
   v. Transitive & Intransitive verbs

vi. Verbs of motion: with & without prefixes
vii. Participles
viii. Verbal Adverbs

V. Numerals
i. Cardinal numerals
ii. Use of numerals with nouns & adjectives
iii. Collective Numerals
iv. Fractional numerals

VI. Adverbs: Comparative Degree of Adverbs

VII. Other parts of speech:
i. Prepositions: Simple & Derived
ii. Conjunctions & conjunctive words
iii. Particles
v. Ordinal numerals & their declension

UNIT 3) **SYNTAX** 50 30

a. Types of Simple sentences
i. Narrative, Interrogative & Conditional sentences
ii. Affirmative & Negative sentences
iii. Mono-Nuclear sentences
iv. Two-member sentences
b. Subject & Predicate, their expression & combination
c. Direct & Indirect speech
d. Word order in a sentence
e. Types of complex sentences
f. Types of Subordinate clauses

- Analyse various civilisational aspects of the French speaking countries such as their education systems, home, family, leisure activities, festivals, politics, food, cultural and literary movements etc.
- Develop intercultural competence to engage with French Speaking Countries.

SYLLABUS DSE 2: Option 3: Life in French Speaking Countries

Unit 1 **(15 hours)**

Basic knowledge of various cultural and civilisational aspects of France and Francophone countries, such as, daily lives and routines of an average person, education systems, home, family, leisure activities, festivals, politics, tourism, physical geography etc. in the areas of literature, cinema, art, etc.

Unit 2 **(15 hours)**

Great thinkers of France and other Francophone countries.

Unit 3 **(15 hours)**

Introduction to literature, cinema, art of France and other Francophone countries.

Essential/recommended Readings

1.Belhabib, Assia (2008) *Langues, littératures, civilisations des pays francophones*. Ponts/Ponti 7 : Présences du mythe. Le français à l'université.
2 .Jeffroy, Géraldine et Unter, *Bulles De France, Les stéréotypes et l'interculturel en BD*, FLE, Mauchamp, Nelly , *La France De Toujours – Civilisation*, CLE International, Paris, 2014.
3.Noutchié Njiké, Jackson, *Civilisation progressive de la Francophonie* : Avec 350 activités, Niveau avancé, CLE International, Paris, 2005

4.Silva Ochoa, Haydée, *Langues, littératures, civilisations des pays francophones*, Ponts/Ponti 5 : Enfances. Le français à l'université, 2007.

Additional material will be made available by the Department.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DSE 2: Option 4: Debating and Presentation Techniques
Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Debating and Presentation Techniques (Option 4)	**4**	**3**	**1**	**0**	**XII Passed**	**NIL**

Learning Objectives

- Improve critical thinking and argumentative skills
- Develop skills to structure thoughts
- Impart skills to present structured thought in a coherent and rational manner
- Teach necessary lexical, discursive and grammatical tools of argumentative speech

Learning Outcomes

- Present and explain information, findings, and supporting evidence, conveying clear and distinct arguments on simple topics related to their immediate environment
- Justify one's point of view with proper line of reasoning and examples
- Develop the skills to formulate, organize, prove arguments with the help of examples, data, tables, charts, illustrations or other graphic supports.
- Develop the capacity to formulate and present counter-arguments
- Acquire lexical, discursive, grammatical tools of argumentative speech
- Develop awareness about ICT enabled tools and non-verbal elements of an effective presentation such as, voice modulation, eye contact, use of space etc.

Unit 1 **(12 hours)**
Components and structure of augmentative speech: Introduction, development, conclusion, claims, proofs and evidences, distinction between speaking and demonstrating

Unit 2 **(12 hours)**
Exercises on coherence and coherence with the help of connectors, Introduction of lexical, discursive and grammatical tools required to effectively present and justify concrete arguments.

Unit 3 **(12 hours)**
Components and structure of debate: How to start and end a debate, how to present counter-arguments etc.

Unit 4 **(9 hours)**

Gathering information, data, evidences through research and structured presentation of all these elements by utilizing verbal, non-verbal and ICT tools.

Essential/Recommended Readings

1.Lambert Jean, (2022), *Tout sur l'expression orale-Plus de 40 fiches d'exercices et corrigés et commentés pour réussir sa prise de parole en public*, Paris : Bloc-notes-ellipses

2.Michele Barfety, Patricia Beaujohn, (2018), *Expression Orale : Niveau 2*, Paris : CLE International

Additional material will be made available by the Department.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

COURSES OFFERED BY DEPARTMENT OF
Germanic & Romance Studies
SEMESTER-IV

Category III

Courses for Undergraduate Programme of study with discipline as one of the Core Disciplines

B.A. Programme with French

(For e.g. courses for B.A. Programmes with_____ (discipline's name) as non-Major or Minor discipline)

DISCIPLINE SPECIFIC CORE COURSE (DSC-4): French in Context: Intermediate Level – 2

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
French in Context: Intermediate Level – 2	4	3	1	Nil	Passed Class XII	None

Learning Objectives: (Reading, Writing, Listening and Speaking):

In Semester 4, the student will learn to

- read and understand relevant information in everyday material, such as letters, brochures, etc. in order to recognise significant points and line of argument in the treatment of the issue presented
- write personal letters describing experiences, feelings and events in some detail
- write a short story/anecdote and writing about feelings/impressions

- understand the main points of short radio or TV programmes on current affairs or topics of personal or professional interest when the delivery is relatively slow and clear

DISCIPLINE SPECIFIC ELECTIVES (DSE-4)

DSE 4: Option 1: Research Methodology and Academic Writing

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Research Methodology and Academic Writing (Option 1)	4	3	1	0	XII Passed	Should have Semester

Research Methodology and Academic Writing	
The Learning Objectives of this course are as follows; • **To introduce the learner to the basics of the research process and argumentation.** • **To familiarize the learner with the process and stylistics of various forms of academic writing such as research papers, monographs, conference presentations, academic essays, book review, literature review, dissertation and thesis.** • **To develop in the learner an independent point of view and critical thinking.**	
The Learning Outcomes of this course are as follows: The learner will be able • **to identify research gaps and construct hypothesis and arguments.** • **To choose, access and effectively engage with primary, secondary and tertiary courses.** • **To produce a coherent academic paper/text.**	
Syllabus:	
UNIT I	**9 hours**
• Identifying the student's area of interest, a research gap and a research problem. • Training students on how to choose and narrow down a topic. • Building a research hypothesis. • Basic types and components of a research question.	
UNIT II	**9 hours**
• Identifying and evaluating different kinds of sources like primary vs secondary vs tertiary sources, as well as journal articles, books, dissertations etc. • Identifying and choosing relevant and reliable sources for research, as well as basic knowledge on different websites, portals and journals for accessing said sources. • Constructing an annotated Bibliography.	

• Familiarizing students with the different kinds of research: quantitative and qualitative research (e.g. Surveys, questionnaires etc. In case of foreign language teaching) and qualitative research (e.g. Different literary and cultural theories in case of research in literature).	
UNIT III	**9 hours**
• Basic knowledge on what an argument is and its components and structure. • Identifying simple and complex arguments, as well as validity and soundness of an argument, • Knowledge of logical fallacies. • Engaging with and evaluating sources by identifying underlying arguments, their structures, validity and soundness.	
UNIT IV	**9 hours**
• Effective note-taking and summarizing academic/scientific texts. • Constructing arguments and counter arguments. Quoting, paraphrasing and summarising from the source texts to construct the argument(s).	
UNIT V	**9 hours**
• Planning and structuring a draft. Familiarization with stylistic conventions, using different citation styles and making footnotes. • Familiarizing students with the ethics of research and plagiarism. • Perfecting a final draft based on coherence and cohesion.	
Essential/Recommended Reading: Any of the textbooks given below may be prescribed: Jacques Garneau, (2016), *Pour réussir un texte argumentatif*, Montréal : Trécarré Pierre Mongeau, (2009) *Réaliser son mémoire ou sa thèse*, Québec : Presses de l'Université du Québec Pierre N'Da, (2016), *Initiation aux méthodes de recherche, aux méthodes critiques d'analyse des textes, et aux méthodes de rédaction en lettres, littératures et sciences humaines et sociales,* Paris : Connaissances et Savoirs, Sylvie Garnier, Alan D. Savage, (2011), *Rédiger un texte académique en français*, Canada : Editions Ophrys	
Additional material may be provided by the Department. **Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.**	

DSE 4: Option 2: Introduction to Foreign Language Teaching
Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Introduction to Foreign Language Teaching (Option 2)	4	3	1	0	XII Passed	NIL

Course Learning Objectives:

- Create basic awareness about a foreign language classroom and textbook.
- Establish a theoretical basis and introduce students to basic practical aspects of Foreign Language Teaching.
- Familiarisation with the theories in the fields of language, interaction and communication and their implications for Foreign language teaching programmes.

Course Learning Outcomes:

- Understand the basic principles in which the teaching of a foreign language is based
- Reflect upon the teaching and learning process of a foreign language
- Understand the role of mother tongue in Foreign language learning
- By using latest tools of Information technology and learning apps the students will be expected to create teaching materials.

Syllabus DSE 4: Option 2: Introduction to Foreign Language Teaching

Unit 1 **(15 hours)**
What is a classroom? Models of learning/teaching. Learning/acquisition different learning styles

Unit 2 **(15 hours)**
Different methods/approaches to teaching a foreign language. Introduction to the four skills

Unit 3 **(15 hours)**
Evaluation.
What is a text book? Issues in material production. Self-Instruction Material
.

Essential/Recommended Readings:

1.Pierre Martinez, *La didactique des langues,* Presses Universitaires de France (2014).
2.Dominique Maingueneau, *Initiation aux methodes de l'analyse du discours. Problemes et perspectives*, Hachette (1979).
3.Moirand S.: *Enseigner à communiquer en langue étrangère*, Ed; Hachette, Paris,1982.
4.Germain C.: *Evolution de l'enseignement des langues: 5000 ans d'histoire*, CLE International, Paris 1993

Additional material will be made available by the Department.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DSE 4: Option 3: Introduction to Translation

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Introduction to Translation (Option 3)	4	3	1	0	XII Passed	NIL

Learning Objectives

- Familiarise students with language for specific purposes.
- Familiarise students to the techniques of translation.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Enable students to do scientific and technical translation, and translation of canonical texts.
- Help students to make word glossaries in above fields.
- Enable students to read parallel literature on texts chosen for translation.
- Sensitise students towards machine translation and its limitations.
- Develop awareness about ethics and accountability in translation.

SYLLABUS OF DSE-4: Option 3: Introduction to Translation

Unit I **(9 hours)**

Study of language used in industries such as hospitality, tourism, banking, business sectors and translation of texts in the chosen areas (including birth, educational qualification, marriage, birth and death certificates, mark sheets).

Unit II **(9 hours)**

Scientific and technical translation.Translation of canonical texts.

Unit III **(9 hours)**

Introducing the students to the techniques of translation.
Making of word glossaries in above fields.

Unit IV **(9 hours)**

Machine translation and its limitations.
Ethics and accountability in translation.

Unit V **(9 hours)**

Reading of parallel literature on texts chosen for translation.
Role of Translation in Multimedia contexts.

Essential/Recommended Readings

- Xavier Barral, I. Altet, (2013), *Histoire de l'art*, Paris : PUF

Additional material may be provided by the Department.

Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

DSE 4: Option 6: Children and Adolescent Literature

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course
		Lecture	Tutorial	Practical/ Practice		
Children and Adolescent Literature (Option 6)	**4**	**3**	**1**	**0**	**XII Passed**	**NIL**

Children and adolescent literature can be distinguished from mere books written for children as literature implies genre and literary tropes, premeditated contexts and settings and often a conscious attempt at portraying history and multiculturalism. In addition, adolescent literature written by adults is an institutional discourse that helps teenage readers understand their environment and society through the issues that present themselves in texts. Through novels, poems and theatre, we examine the values transmitted to children and how literature can influence moral and social decisions that adolescents are faced with.

Course Learning Objectives:

- Introduce students to the changing conceptions of children's literature.
- Help students in analyzing various genres meant for young children and adolsecnts.
- Sensitize students about the role of children's literature in transmitting values.

Course Learning Outcomes :

- Students will become familiar with the changing conceptions of children's literature.
- Students will be able to analyse various genres meant for young children and adolescents.
- Students will be aware of the role of children's literature in transmitting values.

SYLLABUS DSE 4 : Option 6: Children and Adolescent Literature

Unit 1 **(15 hours)**

1.1 Changing conceptions of children's literature
1.2 Literature for children and /or adult readers?

Unit 2 **(15 hours)**

2.1 Folklore for young children
2.2 Fables for young children

Unit 3 **(15 hours)**

3.1 Fairy tales for young children

3.2 Theatre for children
3.3 Children's literature and transmission of values.

Essential/Recommended Readings

DISCIPLINE SPECIFIC CORE COURSE – 17 (DSC-17)
Language in Context: Advanced Listening and Speaking Skills (2)

Credit distribution, Eligibility and Prerequisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Language in Context: Advanced Listening and Speaking Skills (2)	**4**	**3**	**1**	**0**	**XII passed**	**Should have studied "Language in Context: Advanced Listening and Speaking Skills (1)"**

Learning Objectives

Enable student to

- read advanced texts and answer questions on them;
- be able to express on different topics, about subjects pertaining to his/her advanced environment;
- attain complete Level B1.2 of the Common European Framework (CEF).

Learning Outcomes

- Enable students to fully attain B1.2 Level of listening and speaking skills in the concerned language.
- Express ideas on audios listened and answering questions on them.
- Equip students to speak about subjects pertaining to his/her advanced environment

Unit I **(9 hours)**

Listen to a text describing a conflict situation.
Talk about reasons for conflicts.
Listen to conversations and talk about the situations portrayed there.
Carry out a conversation with the help of given expressions (Topic: Conflict)

Unit II **(9 hours)**

Chose a situation related to hospital and carry out a conversation.
Listen to a conversation between a doctor and a patient and discuss the problems.
Discuss what kind of music does one listen to in which particular situation.
Listen to some songs and talk about which experience one could relate with the particular songs.

Unit III **(9 hours)**

Listen to conversation about different works of art.
Use different expressions for likes and dislikes.
Give a structured presentation on a given topic.
Hold a discussion on which values are important for a society.

Unit IV **(9 hours)**

Look at the pictures and discuss what is applicable for a city or a village.
Discuss about one's favourite city.
Listen to a text and find out who likes which city.
Discuss how one can improve one's city.

Unit V **(9 hours)**

Look at the pictures and discuss for what purpose one would be spending the money.
Listen to and simulate a conversation in a bank.
Discuss the role of money in life.
Listen to a conversation about globalisation.

Practical component (if any) - NIL

DISCIPLINE SPECIFIC CORE COURSE– 18 (DSC-18)
History of German Literature (2)

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
History of German Literature (2)	**4**	**3**	**1**	**0**	**XII passed**	**Should have studied "History of German Literature (1)"**

Learning Objectives

- To introduce the learner to different literary movements and genres in literature from Germany and German-speaking contexts in the 19th century.
- To read and analyse German literary texts representing movements and genres of the 19th century.

Learning outcomes

- Enable students to understand and identify characteristics of German literary texts produced in 19th century.
- Familiarise students with literary movements, genres and literary conventions of this period.
- Train students to analyse literary genres that emerged in this period.

SYLLABUS OF DSC-18

UNIT – I **(9 hours)**

Study of literary texts of the 19th century in order to analyse form and content of these works in a critical manner.

UNIT – II **(9 hours)**

Familiarise students with various literary movements of this period along with the representative writers who contributed in shaping these movements.

UNIT – III **(9 hours)**

Analysing new literary genres, devices and conventions that emerged during this period.

UNIT – IV **(9 hours)**

Understanding macroanalysis

UNIT – V **(9 hours)**

Understanding microanalysis

DISCIPLINE SPECIFIC ELECTIVE COURSE – 4 (DSE-4):
Research Methodology and Academic Writing.

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Research Methodology and Academic Writing	4	3	1	0	XII passed	NIL

Learning Objectives

The Learning Objectives of this course are as follows:

- To introduce the learner to the basics of research process and argumentation.
- To familiarize the learner with the process and stylistics of academic writing.
- To develop in the learner an independent point of view and critical thinking.

Learning outcomes

The Learning Outcomes of this course are as follows:

- The learner will be able to identify research gaps and construct hypotheses and arguments.
- The learner will be able to choose, access and effectively engage with primary, secondary and tertiary sources.
- The learner will be able to write an academic paper/text.

SYLLABUS OF DSE-4

UNIT – I **(9 hours)**

Identifying the student's area of interest, a research gap and a research problem.
Training students on how to choose and narrow down a topic. Building a research hypothesis.
Basic types and components of a research question.

UNIT – II **(9 hours)**

Identifying and evaluating different kinds of sources like primary vs secondary vs tertiary sources, as well as journal articles, books, dissertations etc.
Identifying and choosing relevant and reliable sources for research, as well as basic knowledge on different websites, portals and journals for accessing said sources.

Constructing an annotated Bibliography.
Familiarizing students with the different kinds of research: quantitative research (e.g., surveys, questionnaires etc. in case of foreign language teaching) and qualitative research (e.g., different literary and cultural theories in case of research in literature).

UNIT – III **(9 hours)**
Basic knowledge on what an argument is and its components and structure. Identifying simple and complex arguments, as well as validity and soundness of an argument.
Knowledge of logical fallacies.
Engaging with and evaluating sources by identifying underlying arguments, their structures, validity and soundness.

UNIT – IV **(9 hours)**
Effective note-taking, and summarizing academic/scientific texts.
Constructing arguments and counter-arguments. Quoting, paraphrasing and summarizing from the source texts to construct the argument(s).

UNIT – V **(9 hours)**
Planning and structuring a draft. Familiarization with stylistic conventions, using different citation styles and making footnotes.
Familiarizing with the ethics of research and plagiarism.
Perfecting a final draft based on coherence, connection and flow in writing.

Practical component (if any) - NIL

Introduction to Translation	**4**	**3**	**1**	**0**	**XII passed**	**NIL**

Learning Objectives

The Learning Objectives of this course are as follows:

- Familiarise students with language for specific purposes.
- Familiarise students to the techniques of translation.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Enable students to do scientific and technical translation, and translation of canonical texts.
- Help students to make word glossaries in above fields.
- Enable students to read parallel literature on texts chosen for translation.
- Sensitise students towards machine translation and its limitations.
- Develop awareness about ethics and accountability in translation.

SYLLABUS OF DSE-1

Unit I **(9 hours)**

Study of language used in industries such as hospitality, tourism, banking, business sectors and translation of texts in the chosen areas (including birth, educational qualification, marriage, birth and death certificates, mark sheets).

Unit II **(9 hours)**
Scientific and technical translation. Translation of canonical texts.

Unit III **(9 hours)**
Introducing the students to the techniques of translation.
Making of word glossaries in above fields.

Unit IV **(9 hours)**
Machine translation and its limitations.
Ethics and accountability in translation.

Unit V **(9 hours)**
Reading of parallel literature on texts chosen for translation.
Role of Translation in Multimedia contexts.

DISCIPLINE SPECIFIC ELECTIVE COURSE – 4 (DSE-4):
Children and Adolescent Literature.

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		

Children and Adolescent Literature	**4**	**3**	**1**	**0**	**XII passed**	**NIL**

Course Description

Children and adolescent literature can be distinguished from mere books written for children as literature implies genre and literary tropes, premeditated contexts and settings and often a conscious attempt at portraying history and multiculturalism. In addition, adolescent literature written by adults is an institutional discourse that helps teenage readers understand their environment and society through the issues that present themselves in texts. Through novels, poems and theater, we examine the values transmitted to children and how literature can influence moral and social decisions that adolescents are faced with.

Learning Objectives

The Learning Objectives of this course are as follows:

- To define what is Children's Literature and distinguish it from literature for adults.
- To introduce the learner to different genres of children and adolescent literature.
- To read and understand children and adolescent literature texts.

Learning outcomes

The Learning Outcomes of this course are as follows:

- Introduce students to the changing conceptions of children's literature.
- Help students in analysing various genres meant for young children and adolescents.
- Sensitise students about the role of children's literature in transmitting values.

SYLLABUS OF DSE-1

UNIT – I **(9 hours)**
Changing conceptions of children's literature: Literature for children and /or adult readers?

UNIT – II **(9 hours)**
Folklore, fables and fairy tales for young children.

UNIT – III **(9 hours)**
Theatre for children.

UNIT – IV **(9 hours)**
Comic books and songs for children.

UNIT – V **(9 hours)**
Children's literature and transmission of values.

Practical component (if any) - NIL

Germanic & Romance Studies

Category III

SEMESTER-IV

Courses for Undergraduate Programme of study with discipline as one of the Core Disciplines
B.A. Programme with Spanish
(For e.g. courses for B.A. Programmes with_____ (discipline's name) as non-Major or Minor discipline)

DISCIPLINE SPECIFIC CORE COURSE (DSC-4): Spanish in Context: Intermediate Level – 2

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Spanish in Context: Intermediate Level – 2	4	3	1	Nil	Pass in B.A. (Prog.) Sem. III	none

Learning Objectives

The Learning Objectives of this course are as follows:
At the end of Semester 4, a student will be able to:

- Read texts on various topics and answer questions on them.
- Write texts on a range of familiar subjects.
- Complete Level A2 and partially attain Level B1 of the Common European Framework (CEF).

Learning Outcomes

The Learning Outcomes of this course are as follows:

- Enable students to attain A2 Level of listening, speaking, reading and writing skills in the concerned language and partially attain Level B1.
- Reading texts and answering questions on them.
- Equip students to write texts on a range of familiar subjects.

SYLLABUS OF DSC – 4

Content	Description
Listening	Listen to and understand texts on various topics like migration, art, technology, diversity, tradition, etc.
Speaking, which includes:	

1.Monologue	Present orally one's views on various topics like migration, art, technology, diversity, tradition, etc.
2.Dialogue	Engage in conversations on various topics like migration, art, technology, diversity, tradition, etc.
Reading	Read and understand texts, emails, blogs on various topics like migration, art, technology, diversity, tradition, etc.
Writing	Guided writing activities. Writing a text, an email, instructions for someone, etc.
Morphosyntax & Vocabulary	Grammatical structures and vocabulary used to talk and write on various topics like migration, art, technology, diversity, tradition, etc.
Intercultural and co-cultural	Introduction to Spanish-speaking regions/countries, celebrities from Spanish speaking countries, fashion, cinema, comic strips, etc.

Unit	Content	Duration
Unit 1	Migration and its influence on different cultures. Discussing multiculturalism. A brief overview of some important events in world history. Use of "presente histórico". Use of roman numbers. Learning how to refer to different periods of time using "a principios de, hoy en día, en las 'últimas décadas, etc.". Reading about the different periods in the formation of the Spanish language. Cultures which have had an influence on the Spanish language and on our language. Learning "el pretérito imperfecto". Reading about how certain cities and localities were earlier and how they are now and discussing what has changed and what is the same. Use of "ya no/todavía". "Marcadores temporales del pasado y del presente – de joven, cuando…hoy en día, actualmente." Talking about special memories of one's childhood. Use of "recordar" and "acordarse de algo o alguien". Talking about the different periods of life – childhood, adolescence, youth, etc.	9 hours
Unit 2	Art and its importance. Describing works of art and discussing the messages different art works transmit. Discussing what art means to different students. Discussing the different art forms like painting, sculpture, dance, architecture, etc. Expressing prohibition and permission. Knowing what different signs mean in a museum or an art gallery so as to know what is prohibited and what is permitted. Reading a blog related to literature. "Contraste pretérito indefinido/pretérito imperfecto". Reading the synopsis of novels and stories. Writing a synopsis of a book of one's liking. Completing a poem with the given expressions. Talking about the importance of music in our lives and the different music genres like classical, pop, jazz, etc. Reading a text on how the type of music we like tells us about our personality. Having a discussion on this topic. Use of quantifiers like "casi todo/a, todos/as, ningún, ninguno, etc.". "Pronombres y adverbios interrogativos y exclamativos – qué, quién, cómo, cuánto, etc.".	9 hours

Unit 3	Technology and its importance in our lives. Vocabulary related to technology and inventions. Reading and having a discussion on some inventions which changed our lives. Discussing the role of technology in education. Vocabulary related to computers and informatics. Discussing the pros and cons of using technology in the class. Revision of "el pretérito perfecto, el pretérito indefinido, el pretérito imperfecto". Using them together. Study of "el imperativo" and using it to give advice and instructions. "Colocación de los pronombres con imperativos." Using the imperative in advertisements for giving instructions as to how to use a certain product. Making an advertisement for promoting a product. Discussing science fiction movies and the cybernetic technology. Reading and discussing a blog on robots. Imagine the presence of a robot in one's life and have a discussion on this topic.	9 hours
Unit 4	Talking of diversity. Discussing the differences and similarities amongst different persons. How diversity begins with the physical aspect of a person. "El adjetivo y los modificadores – muy, demasiado, un poco gordo, guapo, etc." "La descripción física – tiene ojos grandes, lleva barba, etc.". "los artículos indeterminados y determinados". "Los sustantivos masculinos y femeninos según sus terminaciones". Discussing how and when our nationality is an important part of our personality. Reading about and having a discussion on habits and how good habits can improve the quality of our life. Revision of "el presente de indicativo; los verbos reflexivos". Showing preference using "preferir", "gustar", "interesar". Using "antes de/después de + infinitivo". Expressing how frequently one does something using "siempre, normalmente, nunca, etc.". Talking about the different styles of learning and what makes each student learn better. "Cuantificadores – cada, cualquier, todo el, toda la, etc." Discussing what empathy means. Vocabulary related to the process of learning.	9 hours
Unit 5	Talking about tradition. Discussing customs and traditions. Discussion on vintage clothes, cars, furniture, etc. "Perifrasis verbales con gerundio – estar + gerundio, seguir + gerundio, llevar + gerundio." "Perifrasis verbales con infinitivo – empezar a/comenzar a + infinitivo, volver a + infinitivo, estar a punto de + infinitivo. Reading and discussing an Instagram post on the topic of vintage fashion. "Expresar duración - desde + tiempo, desde que + verbo, desde hace, hace…que, etc." Discussion on stereotypes and vocabulary related to the same. "Se sin sujeto agente - se + verbo". Discussing time management and the important factors involved in it. "Cuantificadores – demasiado, mucho, bastante, poco, algún, ningún, la mayoría, etc.". "Pronombres posesivos." Vocabulary related to celebrations, customs and traditions. Discussing customs and celebrations of one's country and of Spanish speaking countries.	9 hours

COURSES OFFERED BY DEPARTMENT OF
Germanic & Romance Studies
Category III

Courses for Undergraduate Programme of study with discipline as one of the Core Disciplines
SEMESTER-V
B.A. Programme with Spanish
(For e.g. courses for B.A. Programmes with_____ (discipline's name) as non-Major or Minor discipline)

DISCIPLINE SPECIFIC CORE COURSE (DSC-5): Spanish in Context: Advanced Level – 1

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Spanish in Context: Advanced Level - 1	4	3	1	Nil	Pass in B.A. (Prog.) Sem. IV	none

Learning Objectives

The Learning Objectives of this course are as follows:
At the end of Semester 5, a student will be able to:

- Read texts on various topics and answer questions on them.
- Write texts on a range of familiar subjects.
- Complete Level B1 and partially attain Level B2 of the Common European Framework (CEF).

Learning Outcomes

The Learning Outcomes of this course are as follows:

- Enable students to attain B1 Level of listening, speaking, reading and writing skills in the concerned language and partially attain Level B2.
- Reading texts and answering questions on them.
- Equip students to write texts on a range of familiar subjects.

SYLLABUS OF DSC – 5

Content	Description
Listening	Listen to and understand texts on various topics like change, co-existence, sources of information, well-being, science, etc.
Speaking, which includes:	

1.Monologue	Present orally one's views on various topics like change, co-existence, sources of information, well-being, science, etc.
2.Dialogue	Engage in conversations on various topics like change, co-existence, sources of information, well-being, science, etc.
Reading	Read and understand texts, emails, blogs on various topics like change, co-existence, sources of information, well-being, science, etc.
Writing	Guided writing activities. Writing a text, a biography, a blog, an article, an email, instructions for someone, etc.
Morphosyntax & Vocabulary	Grammatical structures and vocabulary used to talk and write on various topics like change, co-existence, sources of information, well-being, science, etc.
Intercultural and co-cultural	Introduction to Spanish-speaking regions/countries, celebrities from Spanish speaking countries, fashion, cinema, comic strips, etc.

Unit	Content	Duration
Unit 1	Talking of change in various spheres – in the education field, in the workplace, etc. Discussing social and economic changes in our country over the last few years. Reading and answering questions on the recent changes in the workplace in Europe. Vocabulary related to work and society. Revision of "pretérito perfecto, pretérito imperfecto, pretérito indefinido." Reading and discussing about the changes which come about in a person after joining a job. Each student to tell how he or she has changed in the last year. Using the following expressions when talking of change – "volverse, hacerse, engordar/adelgazar, transformar, crecer, etc.". Talking to one's grandparents to know how the school was in their time. Defining and discussing resilience. Vocabulary related to different attitudes. Discussing how the situation of the women has changed over the last 100 years. Talking about some achievements of women. Discussing how the situation of women is different in different countries. Reading about some young persons who have brought changes in the world. Writing a biography about a person who has done something important to bring change in the world.	9 hours
Unit 2	Talking of co-existence. Discussing what co-existing in a new culture involves and reasons why people leave their country of origin and the positive and negative experiences they have or have had. "El pretérito pluscuamperfecto". Revision of past tenses. Important factors in translation and interpretation. Talking about the conflicts which are generated between family members when living together in the same house. Discussing the norms which should be followed to co-exist together harmoniously at home and in class. "Causa y consecuencia – conectores: como, porque, es que, por eso, así que, etc.". "La exclamación". "Interjecciones". Discussing various aspects related to immigration. Reading a portion of a book about the Spanish people who went to Latin American countries during the civil war in Spain.	9 hours

	Answering questions on the same. Translating part of a poem. Reading a text on Latin American people who live in Spain. "Expresar aprobación y desaprobación – me parece bien/mal, etc." "Conectores para relatar – cuando, entonces, al final, pero, de repente, etc.". "Contraste de pasados – pretérito imperfecto, pretérito indefinido, pretérito perfecto y pretérito pluscuamperfecto".	
Unit 3	Talking about the different sources of information. Discussing the importance of publicity and the social networks in our life. Discussing as to which source of information we give more importance to in our daily lives. Vocabulary related to publicity. Discussing what the purpose of publicity is and imagining life without it. Advertisements as an important source of communication and publicity. Slogans of different advertisements. "El imperativo afirmativo y negativo." Use of imperative in advertisements. Comparing advertisements and seeing which each student likes the best. Factors involved in research work. Discussing how we are trapped in the digital world – how much time we spend on the mobile, on the internet. etc. Use of social networks for spreading government and other campaigns. "Los pronombres de objeto directo (OD) e indirecto (OI). Identifying the direct and indirect object pronouns in different campaigns. Writing a blog on your view about a video that has gone viral. Discussing how a person can be known by seeing who he or she follows on Twitter.	9 hours
Unit 4	Talking about one's well-being and the factors involved in maintaining one's well-being. Discussing the well-being of the country – its economy, education, social services, etc. Participating in a conference – "Dar una conferencia – saludo…presentación…conclusión, etc.". "El presente de subjuntivo". "Es Bueno/malo/mejor/necesario/importante/recomendable que + presente de subjuntivo." "Te aconsejo/recomiendo/sugiero que + presente de subjuntivo." Discussing what stress is and who suffers the most from it – the youth or the adults. Vocabulary related to the different states of mind. Discussing what situations of life lead to more stress. Reading about students who are facing problems related to stress and giving each one some advice. "Verbos irregulars en presente de subjuntivo". Discussing the activities one does during free time. Reading a blog on the benefits of doing exercises and having a discussion on this topic. Writing an article on mental or physical health. "Adjetivos con ser y estar – es inteligente, estoy preocupado, etc."	9 hours
Unit 5	Talking about science and its role in society. Discussing sustainability science of the planet. Vocabulary related to sustainability. "El futuro simple – verbos regulares e irregulares". "Futuro+si+presente", "si+presente+futuro". Write about what each one does to protect the environment where one lives. Each student to write about his/her future as a student and what profession each one wants to take up in	9 hours

	the future. Vocabulary related to the different professions. Read a blog on what it means to be scientific. Vocabulary related to the role of a scientist. "Cuando + presente de subjuntivo". "Construcciones para expresar probabilidad – a lo mejor+indicativo." "Posiblemente, seguramente, probablemente, quizás/tal vez+ indicativo/subjuntivo." "Expresar hipótesis." Each student to imagine and write about how his life will be after 15 years. Importance of science in one's daily life. Discussion on the positive and negative aspects of science. Reading about certain projects devised by adolescents. "Extranjerismos innecesarios y necesarios".

COURSES OFFERED BY DEPARTMENT OF GERMANIC AND ROMANCE STUDIES

STRUCTURE OF SIXTH SEMESTER

DISCIPLINE SPECIFIC CORE COURSE -16 (DSC-16)
Language in Context: Advanced Reading and Writing Skills (2)

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Language in Context: Advanced Reading and Writing Skills (2)	**4**	**3**	**1**	**0**	**XII Passed**	**Should have studied Language in Context: Advanced Reading and Writing Skills (1)**

Learning Objectives

- To read and understand a number of specialized texts dealing with the same subject. Related or not related to the learner's field of interest.
- To summarize the main points of the read texts in writing in one's own words
- To present a written synthesis of the texts read in a structured manner.
- To write texts on a wide range of topics whether they are related or not to the learner's field of interest
- To attain partially Level B2 of the CEF.

Learning Outcomes

- Enable learners to partially attain B2 Level of reading and writing skills in the concerned language.
- Develop required skill to understand specialized articles within and outside his/her field with the help of dictionary.
- Develop required skills to prepare specialized written documents/reports/term papers for academic and professional needs.

Unit 1 **(12 hours)**

Reading : Reading, analysing and synthesizing information, ideas and opinions from highly specialised sources within his/her field/understanding specialised articles outside his/her field, provided he/she can use a dictionary/understanding lengthy, complex instructions in his/her field, including details on conditions and warnings, provided he/she can reread difficult sections/scanning longer texts in order to

locate desired information, and gather information from different parts of a text, or from different texts in order to fulfil a specific task.

Unit 2 **(11 hours)**

Writing: Writing term papers on various topics/project reports/Preparing news reports/blog writing/writing applications/wall magazines/editorials/brochures/newsletters etc.

Unit 3 **(11 hours)**

Lexical, Morphosyntactic and Phonological Competences:

Developing a good range of vocabulary for expressing one's views on matters connected to professional, academic, social and cultural domains.

Appropriate control of tenses and temporal notions, moods, voices, complex syntactical structures and logical connectors to produce clearly structured speech in a coherent and cohesive manner.

Developing clear, natural, pronunciation and intonation in Spanish

Unit 4 **(11 hours)**

DISCIPLINE SPECIFIC ELECTIVE COURSE – 4 (DSE-4):
Research Methodology and Academic Writing.

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Research Methodology and Academic Writing	4	3	1	0	XII Passed	Nil

Learning Objectives

The Learning Objectives of this course are as follows:

- To introduce the learner to the basics of research process and argumentation.
- To familiarize the learner with the process and stylistics of academic writing.
- To develop in the learner an independent point of view and critical thinking.

Learning outcomes

The Learning Outcomes of this course are as follows:

- The learner will be able to identify research gaps and construct hypotheses and arguments.
- The learner will be able to choose, access and effectively engage with primary, secondary and tertiary sources.
- The learner will be able to write an academic paper/text.

SYLLABUS OF DSE-4

UNIT – I **(9 hours)**

Identifying the student's area of interest, a research gap and a research problem. Training students on how to choose and narrow down a topic. Building a research hypothesis. Basic types and components of a research question.

.

UNIT – II **(9 hours)**

Identifying and evaluating different kinds of sources like primary vs secondary vs tertiary sources, as well as journal articles, books, dissertations etc.

Identifying and choosing relevant and reliable sources for research, as well as basic knowledge on different websites, portals and journals for accessing said sources.
Constructing an annotated Bibliography.
Familiarizing students with the different kinds of research: quantitative research (eg. different literary and cultural theories in case of research in literature.

UNIT – III **(9 hours)**

Basic knowledge on what an argument and its basic components and structure are. Identifying simple and complex arguments, as well as validity and soundness of an argument. Basic knowledge of logical fallacies.
Engaging with and evaluating sources by identifying underlying arguments, their structures, validity and soundness.

UNIT – IV **(9 hours)**

Effective note-taking, and summarizing academic/scientific texts.
Constructing arguments and counter-arguments. Quoting, paraphrasing and summarizing from the source texts to construct the argument(s).

UNIT – V **(9 hours)**

Planning and structuring a draft. Familiarization with stylistic conventions, using different citation styles and making footnotes.
Familiarizing with the ethics of research and plagiarism.
Perfecting a final draft based on coherence, connection and flow in writing.

Practical component (if any) - NIL

DISCIPLINE SPECIFIC ELECTIVE COURSE – 4 (DSE-4):
Introduction to Translation

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Introduction to Translation	**4**	**3**	**1**	**0**	**XII Passed**	**Nil**

Learning Objectives

- Familiarizes students with language for specific purposes
- Familiarize students to the techniques of translation;

Learning Outcomes

- Enable students to do Scientific and Technical translation, and translation of sacred texts.
- Help students to make word glossaries in above fields.
- Enable students to read parallel literature on texts chosen for translation.
- Sensitize student towards Machine translation and its limitations
- Develop awareness about Ethics and accountability in translation.

Unit 1 **(12 hours)**

Study of language used in industries such as hospitality, tourism, banking, business sectors and translation of texts in the chosen areas (including birth, educational qualification, marriage, death, certificates, mark sheets). Scientific and Technical translation. Translation of sacred texts.

Unit 2 **(11 hours)**

Introducing the student to the techniques of translation
Making of word glossaries in above fields.

Unit 3 **(11 hours)**

Machine translation and its limitations
Ethics and accountability in translation.

Unit 4 **(11 hours)**

Reading of parallel literature on texts chosen for translation
Role of Translation in Multimedia contexts.

DISCIPLINE SPECIFIC ELECTIVE COURSE – 4 (DSE-4):
Children and Adolescent Literature.

Credit distribution, Eligibility and Pre-requisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Children and Adolescent Literature	**4**	**3**	**1**	**0**	**XII Passed**	**Nil**

Children and Adolescent Literature
Children and adolescent literature can be distinguished from mere books written for children as literature implies genre and literary tropes, premeditated contexts and settings and often a conscious attempt at portraying history and multiculturalism. In addition, adolescent literature written by adults is an institutional discourse that helps teenage readers understand their environment and society through the issues that present themselves in texts. Through novels, poems and theater, we examine the values transmitted to children and how literature can influence moral and social decisions that adolescents are faced with.

Learning Objectives

- To define what is Children's Literature and distinguish it from Literature for Adults.
- To introduce the learner to different genres of children and adolescent literature.

- To read and understand Children and adolescent literature texts.

Learning Outcomes

- Introduce students to the changing conceptions of children's literature:
- Help students in analyzing various genres meant for young children and adolescents.
- Sensitize students about the role of children's literature in transmitting values.

Unit 1 **(15 hours)**

Changing conceptions of children's literature: Literature for children and /or adult readers?

Unit 2 **(15 hours)**

Folklore, fables and fairy tales for young children,theater for children

Unit 3 **(15 hours)**

Children's literature and transmission of values

B.A. Programme with Spanish as Non-Major

DISCIPLINE SPECIFIC CORE COURSE (DSC-6): Spanish in Context: Advanced Level – 2

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Spanish in Context: Advanced Level - 2	**4**	**3**	**1**	**Nil**	**Pass in B.A. (Prog.) Sem. V**	**none**

Learning Objectives

The Learning Objectives of this course are as follows:
At the end of Semester 6, a student will be able to:

- Read texts on various topics and answer questions on them.
- Write texts on a range of familiar subjects.
- Partially attain Level B2 of the Common European Framework (CEF).

Learning Outcomes

The Learning Outcomes of this course are as follows:

- Enable students to partially attain B2 Level of listening, speaking, reading and writing skills in the concerned language.
- Reading texts and answering questions on them.
- Equip students to write texts on a range of familiar subjects.

SYLLABUS OF DSC – 6

Content	Description
Listening	Listen to and understand texts on various topics like love, friendship, solidarity, triumph, talent, festivals, hypothetical situations, etc.
Speaking, which includes:	
1.Monologue	Present orally one's views on various topics like love, friendship, solidarity, triumph, talent, festivals, hypothetical situations, etc.
2.Dialogue	Engage in conversations on various topics like love, friendship, solidarity, triumph, talent, festivals, hypothetical situations, etc.
Reading	Read and understand texts, emails, blogs on various topics like love, friendship, solidarity, triumph, talent, festivals, hypothetical situations, etc.

Writing	Guided writing activities. Writing a text, an informal letter and e-mail, an article, a formal letter, etc.
Morphosyntax & Vocabulary	Grammatical structures and vocabulary used to talk and write on various topics like love, friendship, solidarity, triumph, talent, festivals, hypothetical situations, etc.
Intercultural and co-cultural	Introduction to Spanish-speaking regions/countries, celebrities from Spanish speaking countries, fashion, cinema, comic strips, etc.

Unit	Content	Duration
Unit 1	Talking of love and friendship. Meaning of love and the various associated sentiments, both positive and negative. Reading and discussing fragments of poems on love. Vocabulary related to various sentiments. "Verbos valorativos – me molesta + infinitivo, me molesta(n) + sustantivo, me molesta + que + presente de subjuntivo." Answering questions on different aspects of love. Writing about what love means to each student. Expectations from the persons one loves. What expectation each one has from his/her best friend. "Expresar deseos – querer, esperar, pedir, etc." "Ojalá/ojalá que + subjuntivo." "La escucha activa." "Mayúsculas y minúsculas." Reading and having a discussion on "Valentine's day". "Para que + subjuntivo." Reading a text on true friendship - agreeing or disagreeing with the author. Learning how to write an informal letter and an e-mail and writing one of them to one's friend telling him or her about one's experiences of a summer vacation.	9 hours
Unit 2	Solidarity and what it means to be supportive, caring, humanitarian. Discussing what bullying is. Read about a news item about a victim of school bullying. Vocabulary related to bullying. "El condicional". "Aconsejar o sugerir – debería(s) + infinitivo, podría(s) + infinitivo, yo que tú/yo en tu lugar+condicional." "Deseos – me gustaría+infinitivo." "El aprendizaje colaborativo". Disabilities and civic responsibility. Vocabulary related to disabilities. "Estilo indirecto - transmitir mensajes – me ha dicho que…, me ha felicitado por…, me ha preguntado si…etc."; transmitir peticiones, consejos, recomendaciones, órdenes o sugerencias – Dice que seas…, me ha pedido que le ayude, sugieren que votemos, etc." Imagine that you have spoken to different persons and write what they have said to you. Read a text on how we can be good citizens. Vocabulary related to non-governmental organizations. Students to share their experiences and views on being a volunteer in some NGO. Imagine that one opens an NGO – what cause would he/she support, what activities would be done, etc. "El pretérito imperfecto de subjuntivo." "Expresar condiciones poco probables – si pudiera …. crearía…" Learn how to write a formal letter.	9 hours

Unit 3	Reading a text on the triumph of a Spanish football team – "La selección, el triunfo en equipo". Discussing what each student thinks is the key to success as a team. Expressing happiness and satisfaction after winning. "El pretérito perfecto de subjuntivo." "Expresar alegría y satisfacción – "que bien que/ es estupendo que/hacer ilusión que + subjuntivo; pretérito perfecto de subjuntivo." Reading the text "Todo es posible" (Everything is posible). "El futuro compuesto." "El condicional compuesto". "Expresar hipótesis sobre el pasado – futuro compuesto, condicional simple y compuesto". "Estilo directo a indirecto usando dijo/comentó, etc. que… (Presente a imperfecto, pretérito perfecto a pluscuamperfecto, imperfecto a imperfecto, indefinido a indefinido o pluscuamperfecto, futuro a condicional). Read about recipes which have had success. Write a recipe of one's own. "Expresar modo – como + subjuntivo; gerundio (como prefieras; el arroz se hace mejor cociéndolo…)." Reading a text on talent - ¿Tiene usted talento?" "Pedir valoración y valorar – ¿qué te parece lo de + infinitivo/que + subjuntivo? – es una suerte/pena que + subjuntivo". "Expresar deseos poco probables – ojalá + imperfecto de subjuntivo; condicional simple."	9 hours
Unit 4	Reading the text – "Días para comemorar". Having a discussion on the favourite festival of each student. "Proponer y sugerir – habría que/estaría bien + infinitivo, estaría bien que + subjuntivo." "Expresar deseos sobre el presente, el futuro y el pasado – me gustaría/habría gustado que + imperfecto de subjuntivo." "Expresar tristeza y aflicción 1 – sentir, lamentar que/ser una pena, lástima….que + subjuntivo." "Expresar condiciones hipotéticas y sus consecuencias en presente y futuro – si + imperfecto de subjuntivo, condicional simple." Reading about the movie "Te doy mis ojos." Having a discussion on the same. "Expresar empatía – sentir que + subjuntivo, te entiendo, sé cómo te sientes." "Expresar desconocimiento – no sabía que + imperfecto de subjuntivo." Read "Querido vecino" – a comic strip of a neighbourhood. Describe and discuss the same. Read about a contest – ¿Y qué hago? – concurso del mes: ¡El mejor consejo que te han dado nunca!". "Transmitir sugerencias – estilo directo a indirecto (Imperativo al imperfecto de subjuntivo usando sugirió/aconsejó/recomendó, etc. que…."	9 hours
Unit 5	Read about and participate in a forum entitled "Hogar, dulce hogar" (Home, sweet home) and share one's memories of childhood. "El pluscuamperfecto de subjuntivo". "Expresar deseos y esperanzas sobre el pasado – ojalá + pluscuamperfecto de subjuntivo – me hubiera gustado + infinitivo. Read the text "Condiciones hipotéticas" (hypothetical situations) "Expresar condiciones hipotéticas – si +	9 hours

	pluscuamperfecto de subjuntivo, condicional compuesto/simple". Imagine past situations which each student would have liked to have happened and discuss what would have been the consequences of the same – "si hubiera aprendido español , habría ido a España." Read and discuss the text "Bebés y trabajo" (Babies and work) dealing with issues of working mothers, father's role, etc. "Expresar anterioridad en el futuro – cuando/antes de que + subjuntivo, futuro compuesto – "cuando nazca el bebé, ya habremos comprado todo lo necesario". Talk about all the things each student will have done before the end of the day, the week and the year.

ANNEXURE-4

SEMESTER-IV
BA (H) ITALIAN

GERMANIC AND ROMANCE STUDIES
Category I

(B.A. Honours in Italian in three years)

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

DISCIPLINE SPECIFIC CORE COURSE - 10 (DSC-10)
Language in Context: Intermediate Reading and Writing Skills (2)

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Language in Context: Intermediate Reading and Writing Skills (2)	**4**	**3**	**1**	**0**	**Passed XII Class**	**Should have studied "Language in Context: Intermediate Reading and Writing Skills (1)"**

DSC-10 **Language in Context: Intermediate Reading and Writing Skills (1)**	
Learning Objectives: Enable student to • To read and understand longer texts related to socio-cultural issues. • To answer questions in one's own words on tests related to socio-cultural issues. • To write detailed descriptions. • To attain A2 level of the CEF.	
Learning Outcomes: • Enables learner to attain A2 Level of reading and writing skills in the concerned language • Equip learners to read longer texts on socio-cultural issues in order to extract key information and conclusions of the text. • Gives training to write straightforward connected texts on a range of familiar subjects within one's field of interest.	
Syllabus:	
UNIT I	**9 Hours**
Reading	

• Reading longer texts in order to locate desired information, and gather information from different parts of a text, or from different texts in order to fulfil a specific task, identifying the main conclusions in clearly signalled argumentative texts, • Understanding clearly written, straightforward instructions for a piece of equipment. • Reading, analysing, and summarizing texts/articles on different social issues or current affairs.	
UNIT II	**9 Hours**
Writing • Writing detailed descriptions on a range of familiar subjects within one's field of interest. • Writing accounts of experiences. • Describing feelings and reactions in simple connected text • Writing a description of an event, a recent trip - real or imagined • Describing and comparing education systems.	
UNIT III	**9 Hours**
Writing • Writing an open letter to the authorities. • Writing a petition. • Describing and analysing cultural representations. • Writing a short story. • Writing blogs. • Writing short, simple essays on topics of interest. etc.	
UNIT IV	**9 Hours**
Lexical, Morphosyntactic and Phonological Competences • Developing a repertoire of sufficient vocabulary to express him/herself on most topics of personal/professional/ interests and familiar topics related to culture and civilization. • Grammatical structures required to describe events, feelings, impressions, opinions in past, present, and future in a more coherent and sequenced manner, more detailed knowledge and usage of connectors, developed sense of various moods, tenses and voices etc. • Developing sufficient understanding of phonological specificity and intonations of Italian to help learners articulate more clearly and read more independently predicting pronunciation of unknown words.	
UNIT V	**9 Hours**
Co-cultural and Inter-cultural Competence • Awareness of the most significant differences between the customs, usages, attitudes, values, and beliefs prevalent in the community concerned and those of his or her own in order to perform and respond to a wide range of social functions selecting the appropriate register. • Awareness of the salient politeness conventions and acting and responding appropriately.	
Learning / Teaching Material: Any of the textbooks given below may be prescribed: • Corno, Dario. (2002). *Scrivere e comunicare*. Milano: Bruno Mondadori. • De Giuli, Alessandra. Guastalla, Carlo. Naddeo, Ciro Massimo. (2011). *Nuovo Magari*. Firenze: Alma Edizioni. • Frattegiani, M. Teresa. Gigliarelli, Valentina. DSC-16
Language in Context: Advanced Reading and Writing Skills (2)

Learning Objectives:

Enable student

- To read and understand a few specialized texts dealing with the same subject. Related or not related to the learner's field of interest.
- To summarize the main points of the read texts in writing in one's own words.
- To present a written synthesis of the texts read in a structured manner.
- To write texts on a wide range of topics whether they are related or not to the learner's field of interest.
- To attain B1 Level B1 of the CEF.

Learning Outcomes:

- Enable learners
- To attain B1 Level of reading and writing skills in the concerned language.
- Develop required skill to understand specialized articles within and outside his/her field with the help of dictionary.
- Develop required skills to prepare specialized written documents/reports/term

papers for academic and professional needs.	
Syllabus:	
UNIT I	**12 Hours**
Reading	
• analysing and synthesizing information, ideas and opinions from highly specialized sources within his/her field/understanding specialized articles outside his/her field, provided he/she can use a dictionary • Understanding lengthy, complex instructions in his/her field, including details on conditions and warnings, provided he/she can reread difficult sections • Scanning longer texts in order to locate desired information, and gather information from different parts of a text, or from different texts in order to fulfil a specific task.	
UNIT II	**12 Hours**
Writing	
• Writing term papers on various topics/project reports • Preparing news reports / blog writing / writing applications / wall magazines / editorials / brochures / newsletters etc.	
UNIT III	**12 Hours**
Lexical, Morphosyntactic and Phonological Competences	
• Developing a good range of vocabulary for expressing one's views on matters connected to professional, academic, social, and cultural domains. • Appropriate control of tenses and temporal notions, moods, voices, complex syntactical structures and logical connectors to produce clearly structured speech in a coherent and cohesive manner. • Developing clear, natural, pronunciation and intonation in Italian.	
UNIT IV	**9 Hours**
Co-cultural and Inter-cultural Competence	
• Developing the capacity to him- or herself confidently, clearly, and politely in a formal or informal register, appropriate to the situation and person(s) concerned. • Advanced knowledge of history, society, culture, gastronomy, geography, political, economic and educational systems of Italy and Italophone countries.

Research Methodology and Academic Writing	
The Learning Objectives of this course are as follows: • **To introduce the learner to the basics of the research process and argumentation.** • **To familiarize the learner with the process and stylistics of various forms of academic writing such as research papers, monographs, conference presentations, academic essays, book review, literature review, dissertation and thesis.** • **To develop in the learner an independent point of view and critical thinking.**	
The Learning Outcomes of this course are as follows: ** **The learner will be able • **To identify research gaps and construct hypothesis and arguments.** • **To choose, access and effectively engage with primary, secondary and tertiary courses.** • **To produce a coherent academic paper/text.**	
Syllabus:	
UNIT I	**9 Hours**
• Identifying the student's area of interest, a research gap and a research problem. • Training students on how to choose and narrow down a topic. • Building a research hypothesis. • Basic types and components of a research question.	
UNIT II	**9 Hours**
• Identifying and evaluating different kinds of sources like primary vs secondary vs tertiary sources, as well as journal articles, books, dissertations etc.	

• Identifying and choosing relevant and reliable sources for research, as well as basic knowledge on different websites, portals and journals for accessing said sources. • Constructing an annotated Bibliography. • Familiarizing students with the different kinds of research: quantitative and qualitative research (e.g. Surveys, questionnaires etc. In case of foreign language teaching) and qualitative research (e.g. Different literary and cultural theories in case of research in literature).	
UNIT III	**9 Hours**
• Basic knowledge on what an argument is and its components and structure. • Identifying simple and complex arguments, as well as validity and soundness of an argument, • Knowledge of logical fallacies. • Engaging with and evaluating sources by identifying underlying arguments, their structures, validity and soundness.	
UNIT IV	**9 Hours**
• Effective note-taking and summarizing academic/scientific texts. • Constructing arguments and counter arguments. Quoting, paraphrasing and summarising from the source texts to construct the argument(s).	
UNIT V	**9 Hours**
• Planning and structuring a draft. Familiarization with stylistic conventions, using different citation styles and making footnotes. • Familiarizing students with the ethics of research and plagiarism. • Perfecting a final draft based on coherence and cohesion.	
Learning/Teaching Material: Any of the textbooks given below may be prescribed: • Brian Paltridge and Sue Starfield, *Thesis and Dissertation Writing in a Second Language*, Routledge, 2007. • Umberto Eco: *Come si fa una tesi di laurea*, • SEGRE, Cesare: Avviamento all'Analisi del Testo Letterario, Einaudi, • Torino,1985. • Raman Selden, Peter Widdowson Peter Brooker, *A Reader's Guide to Contemporary Literary Theory*, Pearson Education Limited, 2005 (fifth edition). • Topolski J. , *Narrare la storia. Nuovi principi di metodologia storica*, Milano, 1997 Bruno Mondadori. • DOMENICHELLI, Mario, *Lo scriba e l'oblio: Letteratura e storia: teoria e critica delle rappresentazioni nell'epoca borghese*, Edizione ETS, Pisa, 2011. • Dario Antiseri, *Introduzione alla metodologia della ricerca*, Rubbettino Editore 2005. • Patton M.Q., *Qualitative research & evaluation methods* (3rd edition),thousand oaks, California: (2002), Sage Publications. • Creswell J.,*Research design: qualitative, quantitative, and mixed methods approaches*, thousand oaks, California, (2003), Sage Publications.	
Additional material may be provided by the Department. **Note: Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.**

Introduction to Foreign Language Teaching.

Learning Objectives:

- To introduce and define basic notions related to Foreign Language teaching.
- To familiarize students with the evolution in foreign language teaching methods

Learning Outcomes:

- Create basic awareness about a foreign language classroom and textbook.
- Establish a theoretical basis and introduce students to basic practical aspects of Foreign Language Teaching

Syllabus:

UNIT I	**15 Hours**
• What is a classroom? • Models of learning/teaching. • Different methods/approaches to teaching a foreign language. • Introduction to the four skills. • Evaluation.	
UNIT II	**15 Hours**
• What is a text book? • Issues in material production. • Self-Instruction Material	
UNIT III	**15 Hours**
• Ludic function of language: Teaching through games.	

Learning/Teaching Material: Any of the textbooks given below may be prescribed:

Introduction to Translation.

Learning Objectives:

- To introduce and define different types of translation and basic concepts of translation.
- To acquaint and teach learners the basic translation techniques.
- To translate simple non- literary texts.

Learning Outcomes:

- Familiarizes students with language for specific purposes.
- Familiarize students to the techniques of translation.
- Enable students to do Scientific and Technical translation, and translation of sacred texts.
- Help students to make word glossaries in above fields.
- Enable students to read parallel literature on texts chosen for translation.
- Sensitizes students towards Machine translation and its limitations.
- Develops awareness about ethics and accountability in translation.

Syllabus:

UNIT I	**12 Hours**
• Study of language used in industries such as hospitality, tourism, banking, business sectors and translation of texts in the chosen areas (including birth, educational qualification, marriage, death, certificates, mark sheets). • Scientific and Technical translation.	
UNIT II	**12 Hours**
• Introducing the student to the techniques of translation • Making of word glossaries in above fields.	
UNIT III	**12 Hours**
• Machine translation and its limitations. • Ethics and accountability in translation.	
UNIT IV	**9 Hours**
• Reading of parallel literature on texts chosen for translation. • Role of Translation in Multimedia contexts.	

Learning/Teaching Material: Any of the textbooks given below may be prescribed:

- Baker, Mona. (2011). *In Other Words: A Course Book in Translation*. New York: Routledge.

Total No. of Credits	Distribution of Total Credits			No. of Hours of Lectures	No. of Hours of Tutorials	No. of Hours of Practical	Total Hours of Teaching
	Lecture (Credits)	Tutorial (Credits)	Practical (Credits)				
4	**3**	**1**	**0**	**45**	**15**	**0**	**60**

Children and Adolescent Literature

Children and adolescent literature can be distinguished from mere books written for children as literature implies genre and literary tropes, premeditated contexts and settings and often a conscious attempt at portraying history and multiculturalism. In addition, adolescent literature written by adults is an institutional discourse that helps teenage readers understand their environment and society through the issues that present themselves in texts. Through novels, poems and theatre, we examine the values transmitted to children and how literature can influence moral and social decisions that adolescents are faced with.

Learning Objectives:

- To define what is Children's Literature and distinguish it from Literature for Adults.
- To introduce the learner to different genres of children and adolescent literature.
- To read, understand and analyse Children and adolescent literature texts.

Learning Outcomes:

- Introduce students to the changing conceptions of children's literature.
- Help students in analysing various genres meant for young children and adolescents.
- Sensitize students about the role of children's literature in transmitting values.

Syllabus:

UNIT I	**15 Hours**
• Changing conceptions of children's literature: Literature for children and /or adult readers?	
UNIT II	**15 Hours**
• Folklore, fables and fairy tales for young children • Theatre for children	
UNIT III	**15 Hours**
• Children's literature and transmission of values.	

Learning/Teaching Material: Any of the textbooks given below may be prescribed:

- Avanzini, Alessandra. (2013). *Linee europee di letteratura per l'infanzia, Vol. I: Danimarca, Francia, Italia, Portogallo*, Regno Unito. Milano: FrancoAngeli.
- Bruno, Bettelheim. (1975). *The Uses of Enchantment: The Meaning and Importance of Fairy Tales*. New York: Vintage.
- Collodi, Carlo. (2012). *Le avventure di Pinocchio*. Milano: Mondadori.
- Marazzi, Elisa. (2014). *Libri per diventare italiani. L'editoria per la scuola a Milano nel secondo Ottocento*. Milano: Franco Angeli.
- Myers, Lindsay. (2012). *Making the Italians. Poetics and Politics of Italian Children's Fantasy*. Oxford: Peter Lang.

Bangla Sahityer Itihas: Adhunik Jug -2

বাংলা সাহিত্যের ইতিহাস : আধুনিক যুগ–২

Learning Objectives: Bengali Literature in the 19th and 20th Century had seen a scintillating outburst of various genres like poetry, drama, Novel, Essays etc. Emergence of Bengali prose took a much matured turn in the early 19th century. Farces and Plays on social issues were being written. Greatest of the Fiction and non-

fiction Writers, Playwrights etc became evident. The objective of introducing this paper is to get our students acquainted with the main features of the literature of this century

Learning Outcomes: While studying this paper, the students will be knowing the social and political history of Bengal during this period which led to the creation of a whole bunch of literary works. They will also be acquainted to the main writers and poets and their works. Like the previous history of Literature paper, this one also will draw an outline of the literature in the 19th and 20th century.

.

UNIT I (22 Hours)

সাময়িক পত্র: সংবাদ প্রভাকর, তত্ত্ববোধিনী, বঙ্গদর্শন, ভারতী, বামাবোধিনী, সবুজপত্র, কল্লোল-কালিকলম-প্রগতি, পরিচয়, কবিতা, শনিবারের চিঠি, কৃত্তিবাস

UNIT II (23 Hours)

নাটক ও প্রহসন: মধুসূদন দত্ত, দীনবন্ধু মিত্র, অমৃতলাল বসু, গিরিশচন্দ্র ঘোষ, রবীন্দ্রনাথ ঠাকুর, দ্বিজেন্দ্রলাল রায়, শম্ভু মিত্র, বিজন ভট্টাচার্য, বাদল সরকার, উৎপল দত্ত

DISCIPLINE SPECIFIC CORE COURSE – 11 (DSC-11): Prachya Sahityatatwa

Credit distribution, Eligibility and Prerequisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Prachya Sahityatatwa	4	3	1	NIL	Class 12th pass in any subject	Studied Bengali Up to 10th & Above

Prachya Sahityatatwa

প্রাচ্য সাহিত্যতত্ত্ব

Learning Objectives: This paper is a special one which must be studied by every student of Indian Literature because this paper talks about the Indian theory of

Literature based on early Indian Poetry. The principles and methods we use in literature, are told by theorists of literature. Theories like Alamkara, Riti, Dhvani, Rasa etc. can guide one towards what is literature and what is not.

Learning Outcomes: After studying this paper, students will be equipped with the theories of Literature that grew in India in ancient times. They will learn about the 'Vachyarth' and 'Vyangyarth' in poetry. The students will then become able to judge a bad or a good poetry by applying these theories on their reading materials which is very necessary. Students will find it interesting after being acquainted with the metre and rhetorics used in Bangla from time to time.

UNIT I (25 Hours)

অতুলচন্দ্র গুপ্ত – কাব্যজিজ্ঞাসা

UNIT II (20 Hours)

রবীন্দ্রনাথ ঠাকুর – সাহিত্যের পথে (ভূমিকা, সাহিত্যের স্বরূপ)

জীবনানন্দ দাশ – কবিতার কথা (কবিতার কথা)

Essential/Recommended readings:

অতুলচন্দ্র গুপ্ত, ১৪২১ বঙ্গাব্দ, *কাব্যজিজ্ঞাসা,* বিশ্বভারতী গ্রন্থনবিভাগ, কলকাতা

রবীন্দ্রনাথ ঠাকুর, ১৩৬৫ বঙ্গাব্দ, সাহিত্যের পথে, বিশ্বভারতী, কলকাতা

জীবনানন্দ দাশ, ১৪১৩ বঙ্গাব্দ, কবিতার কথা, সিগনেট প্রেস, কলকাতা

Suggestive readings:

করুণাসিন্ধু দাস, ২০০৭, *কাব্যজিজ্ঞাসার রূপরেখা,* রত্নাবলী, কলকাতা

দুর্গাশঙ্কর মুখোপাধ্যায়, ২০০১, *কাব্যতত্ত্ব-বিচার,* মডার্ণ বুক এজেন্সী, কলকাতা

সুধীরকুমার দাশগুপ্ত, ২০১২, *কাব্যালোক,* দে'জ পাবলিশিং, কলকাতা

DISCIPLINE SPECIFIC CORE COURSE – 12 (DSC-12): Rabindrasahitya-2

Credit distribution, Eligibility and Prerequisites of the Course

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Rabindrasahitya-2	4	3	1	NIL	Class 12th pass in any subject	Studied Bengali Up to 10th & Above

Rabindrasahitya-2

রবীন্দ্রসাহিত্য-২

Learning Objective: Rabindranath Tagore, the first Nobel-laureate in Literature (1913) from Asia, has contributed innumerable literary works in Bangla. No branch of literature exists where we do not get his works. His importance in Bangla Sahitya is

beyond question. So, a full paper containing his literature has been added in this syllabus.

Learning Outcomes: Students will get the scope to know Rabindra-sahitya-2 (along with his life) better as earlier they have studied only one or two of his short poems or stories in the school syllabus. Here they will be working upon his Poems, Novels and see his overflowing philosophy through all these works.

UNIT I (20 Hours)

ছোটোগল্প

পোস্টমাষ্টার, কঙ্কাল, খাতা, স্ত্রীরপত্র, ছুটি

UNIT II (25 Hours)

নাটক ও প্রবন্ধ

রথের রশি

কাব্যের উপেক্ষিতা

রূদ্ধগৃহ

Essential/Recommended readings:

রবীন্দ্রনাথ ঠাকুর, ১৩২৪ বঙ্গাব্দ, *গল্পগুচ্ছ,* অখণ্ড, বিশ্বভারতী, কলকাতা

রবীন্দ্রনাথ ঠাকুর, ১৩৭৮ বঙ্গাব্দ, কালের যাত্রা, বিশ্বভারতী, কলকাতা

রবীন্দ্রনাথ ঠাকুর, ১৪২৬ বঙ্গাব্দ, প্রাচীন সাহিত্য, বিশ্বভারতী, কলকাতা

রবীন্দ্রনাথ ঠাকুর, ১৯২৭, বিচিত্র প্রবন্ধ, বিশ্বভারতী, কলকাতা

Suggestive readings:

অশোক সেন, ২০০০, *রবীন্দ্রনাট্য-পরিক্রমা,* এ মুখার্জী, কলিকাতা

অশোককুমার মিশ্র, ২০১১, *রবীন্দ্রনাট্যে রূপ : অরূপ,* দে'জ পাবলিশিং, কলকাতা

তপোব্রত ঘোষ, ২০১৬, *রবীন্দ্র-ছোটগল্পের শিল্পরূপ*, দে'জ পাবলিশিং, কলকাতা

Loksahitya

লোকসাহিত্য

Learning Objectives: Bengali folk Literature is an important component of Bengali Literature. All those myths, fables, folk-tales, ballads, proverbs and riddles etc. were told and passed down verbally from generations to generations by the members of rural Bengal through ages. Folk literature has been collected in Bengal since 19th century and now it is being studied as a genre. In the following paper we would like our students to study this literature and know the richness of our culture.

Learning Outcomes: Students will find it interesting to know and study this literature of Rural Bengal from where their roots had spread out wide. They will also know how some writings like folk-tales and fables, whose authors are not known, have preserved the cultural history of rural Bengal.

Unit I (25 Hours)

লোককথা : সংজ্ঞা ও উদাহরণ, প্রকার — রূপকথা, পশুকথা, ব্রতকথা

দক্ষিণারঞ্জন মিত্রমজুমদার — লালকমল ও নীলকমল, কলাবতী রাজকন্যা (রূপকথা), শিয়ালপণ্ডিত(পশুকথা), পুণ্যিপুকুর ব্রত, শিবরাত্রি ব্রত, কোজাগরী লক্ষ্মী পূজার কথা(ব্রতকথা)

Unit II (20 Hours)

লোকগান ও লোকনৃত্য : সংজ্ঞা ও উদাহরণ, বাউল, ভাওয়াইয়া, ভাটিয়ালী, ভাদু, ঝুমুর, টুসু, ছৌ

Compulsory Reading:

প্রবীর ঘোষ (সম্পা.), ২০০৯, *দক্ষিণারঞ্জণ রচনাসমগ্র : ঠাকুমার ঝুলি*, মিত্র ও ঘোষ প্রকাশন, কলকাতা

আশুতোষ মজুমদার, মেয়েদের ব্রতকথা, দেব সাহিত্য কুটির, কলকাতা

Additional Resources:

অবনীন্দ্রনাথ ঠাকুর, ১৪১২ বঙ্গাব্দ, *বাংলার ব্রত*, বিশ্বভারতী, কলকাতা

অবনীন্দ্রনাথ ঠাকুর, ২০১২, *বাংলার ব্রত ও অন্যান্য ব্রতকথা*, দীপায়ন, কলকাতা

অমিত ভট্টাচার্য (সম্পা.), ২০১৬, *মেয়েদের ব্রতকথা*, আশুতোষ মুখোপাধ্যায়, পারুল, কলকাতা

আশুতোষ ভট্টাচার্য, ১৯৬২, *বাংলার লোক–সাহিত্য*, ক্যালকাটা বুক হাউস, কলিকাতা

আসরাফ সিদ্দিকী, ১৯৯৪, *লোকসাহিত্য*, প্রথম খণ্ড, গতিধারা, ঢাকা

আসরাফ সিদ্দিকী, ১৯৯৫, *লোকসাহিত্য*, দ্বিতীয় খণ্ড, গতিধারা, ঢাকা

উপেন্দ্রনাথ ভট্টাচার্য, ২০১৫, *বাংলার বাউল ও বাউলগান*, ওরিয়েন্ট বুক কোম্পানি, কলকাতা

ওয়াকিল আহমদ, ১৯৯৭, *বাংলা লোকসংগীত : ভাটিয়ালী গান*, বাংলাদেশ শিল্পকলা একাডেমী, ঢাকা

ওয়াকিল আহমদ, ২০০০, *বাউল গান*, বাংলাদেশ শিল্পকলা একাডেমী, ঢাকা

ওয়াকিল আহমেদ, ২০১৪, *লোককলা তত্ত্ব ও মতবাদ*, বইপত্র, ঢাকা

Bangla Prabandha	4	3	1	NIL	Class 12th pass in any subject	Studied Bengali Up to 10th & Above

Bangla Prabandha

বাংলা প্রবন্ধ

Learning Objectives: Bengali Non-fictional Prose, though emerged in the 17th and 18th centuries, it flourished in the 19th century, mostly because of arguments surrounding social issues. New ideas were taken from the western world by the newly visible elites,

opinions were debated in the periodicals and a strong prose came into being. In this paper we have introduced some of the famous non-fiction prose and essays for the students, from the previous two centuries.

Learning Outcomes: Students will study and know the various forms of prose: polemical prose, Sketches, Letters, journals, biographies etc. They will be acquainted with some of the most interesting and famous essays and sketches of 19th and 20th Century.

Unit-I (15 Hours)

বঙ্কিমচন্দ্র চট্টোপাধ্যায়- পতঙ্গ

কালীপ্রসন্ন সিংহ – চড়ক পার্ব্বন

স্বর্ণকুমারী দেবী – আমাদের গৃহের অন্তঃপুর শিক্ষা ও তাহার সংস্কার

Unit-II (30 Hours)

বলেন্দ্রনাথ ঠাকুর – নিমন্ত্রণ সভা

কল্যাণী দত্ত – ভেতর বাড়ি

বেগম রোকেয়া সাখাওয়াত হোসেন – অলংকার, না 'badges of slavery'

শিশিরকুমার দাশ – জনপ্রিয়তা ও উপন্যাস

অন্নদাশঙ্কর রায় – হিন্দু-মুসলমান

Essential/ Recommended Readings:

অন্নদাশঙ্কর রায়, ১৯৫৯, অন্নদাশঙ্কর রায়ের শ্রেষ্ঠ প্রবন্ধ, নবার্ক, কলকাতা

অলোক রায় প্রমুখ (সম্পা.) ২০০২, দুশ বছরের বাংলা প্রবন্ধসাহিত্য, প্রথম ও দ্বিতীয় খন্ড, সাহিত্য অকাদেমি, নতুন দিল্লি,

কল্যাণী দত্ত, ১৯৯৫, থোড় বড়ি খাড়া, থীমা, কলকাতা

শিশিরকুমার দাশ, ২০২২, শিশিরকুমার দাশ : প্রবন্ধসংগ্রহ, দেজ পাবলিশিং, কলকাতা

সুতপা ভট্টাচার্য, (সংক. ও সম্পা.), ২০১১, বাঙালি মেয়ের ভাবনামূলক গদ্য, সাহিত্য অকাদেমি, নতুন দিল্লি

Suggestive Readings:

DISCIPLINE SPECIFIC ELECTIVE COURSE– 3 (DSE-3): Biswasahitya - 1

Biswasahitya - 1

বিশ্বসাহিত্য- ১

Learning Objectives: In an age of cross-discipline studies, no student of Literature can limit him/herself within the sphere of a literature written in a particular language. One literature must be studied in the broader canvas of world literature. Also, this has been a practice of the Bengali Litterateurs that from 19th century onwards, after emergence of British, poets and writers have studied world Literature a lot (sometimes through English and otherwise also) and were influenced by their works. A

student of Bangla must read World Literature to know his/her own literature much better

Learning Outcomes: This paper will not only make the students acquainted with some wonderful texts of World Literature but also improve their understanding of their own Literature.

UNIT - I

কবিতা ও নাটক (20 Hours)

- বিষ্ণু দে- ফাঁপা মানুষ (এলিয়ট)
- বুদ্ধদেব বসু – দুরদৃষ্ট (বোদলেয়ার)
- শিশিরকুমার দাশ – আন্তিগোনে

UNIT - II (25 Hours)

কথাসাহিত্য

- চিনুয়া আচেবে - সবকিছু ভেঙে-চুরে যায়
- মপাসাঁ – নেকলেস
- নিকোলাই গোগল – ওভারকোট

Essential/Recommended Readings:

কবির চৌধুরী (অনু), ২০১২, সবকিছু ভেঙে-চুরে যায়, সময় প্রকাশন, ঢাকা

বুদ্ধদেব বসু (অনু), ১৩৬৭ বঙ্গাব্দ, শার্ল বোদলেয়ার : তাঁর কবিতা, দেজ পাবলিশিং, কলকাতা

শিশিরকুমার দাশ (অনু.), ১৯৯১, *সাহিত্য সংসদ গ্রন্থমালা-৩*, আন্তিগোনে:সোফোক্লেস, প্রমা প্রকাশনী, কলকাতা

সুধাংশুরঞ্জন ঘোষ(অনুবাদ), ১৯৮৯, মপাসাঁ রচনাবলীঃ প্রথম খণ্ড, তুলি-কলম, কলকাতা

শহিদুল আলম(সম্পা), ২০১২, নিকোলাই গোগলের শ্রেষ্ঠ গল্প, বিশ্বসাহিত্য কেন্দ্র, ঢাকা

Suggestive Readings:

দেবব্রত চট্টোপাধ্যায় (সম্পা.), ২০১৩, *পরিকথা:বিশ্বসাহিত্য,* পঞ্চদশ বর্ষ, দ্বিতীয় সংখ্যা, সাউথ গড়িয়া, দক্ষিণ ২৪ পরগণা।

OR/অথবা

DISCIPLINE SPECIFIC ELECTIVE COURSE– 3 (DSE-3): Naribadi Sahitya - 1

নারীবাদী সাহিত্য – ১

Naribadi Sahitya – 1

Learning Objectives: Literature written by women in Bengali (like other languages in and outside India) has not been treated as equal to the Literature written by their male-counterparts since long but the feminist movements all over the world demanded the literature written by women to be studied with care to discover issues very different from other texts. There is a new trend (particularly after 60-s) to study these texts intensely and work upon the language used, the issues discussed, the fear of male gaze etc. Our main objective is to make the students study these kinds of Texts.

Learning Outcomes: While reading these Texts the students will find the arguments interesting, substantial and strong which will lead them to understand the issues of feminist writings and its importance. A bunch of grand literary Texts by women will be a gift to kindle their rational thinking.

UNIT - I (25 Hours)

উপন্যাস

- আশাপূর্ণা দেবী – প্রথম প্রতিশ্রুতি

UNIT - II (20 Hours)

কবিতা

- অপরাজিতা দেবী — গৃহিণী
- কবিতা সিংহ — ঈশ্বরকে ইভ
- মল্লিকা সেনগুপ্ত – দ্রৌপদী জন্ম
- মন্দাক্রান্তা সেন – অর্জুন কৃষ্ণচূড়ার কথা

Essential/Recommended Readings:

আশাপূর্ণা দেবী ১৪১৪ বঙ্গাব্দ, *প্রথম প্রতিশ্রুতি,* মিত্র ও ঘোষ পাবলিশার্স, কলকাতা

নবনীতা দেবসেন (সম্পা), ১৯৮৪, অপরাজিতা দেবীর শ্রেষ্ঠ কবিতা, করুণা প্রকাশনী, কলকাতা

মল্লিকা সেনগুপ্ত, ১৯৯৯, হৃদয় অবাধ্য মেয়ে, আনন্দ পাবলিশার্স, কলকাতা

ব্রজেন্দ্রনাথ বন্দ্যোপাধ্যায়, ১৩৪০ বঙ্গাব্দ, বঙ্গীয় নাট্যশালার ইতিহাস, কলকাতা

সুধাংশুশেখর দে (প্রকাশক), ২০০৯, *কবিতা সিংহের শ্রেষ্ঠ কবিতা,* দে'জ পাবলিশিং, কলকাতা

সুধাংশুশেখর দে (প্রকাশক), ২০১২, *মল্লিকা সেনগুপ্তের শ্রেষ্ঠ কবিতা,* দে'জ পাবলিশিং, কলকাতা

Suggestive Readings:

অপু দাস, ২০০৬, *নারীবাদী পাঠ,* বাণীশিল্প, কলকাতা

ঊর্মি রহমান, ১৯৯৬, *পাশ্চাত্যে নারী আন্দোলন,* নয়া উদ্যোগ, কলকাতা

সুদক্ষিণা ঘোষ, ২০০৮, মেয়েদের উপন্যাসে মেয়েদের কথা, দে'জ পাবলিশিং, কলকাতা

Naribadi Sahitya - 2	4	3	1	NIL	Class 12th pass in any subject	Studied Bengali Up to 10th & Above

নারীবাদী সাহিত্য – ২

Naribadi Sahitya – 2

Learning Objectives: Literature written by women in Bengali (like other languages in and outside India) has not been treated as equal to the Literature written by their male-counterparts since long but the feminist movements all over the world demanded the literature written by women to be studied with care to discover issues very

different from other texts. There is a new trend (particularly after 1960-s) to study these texts intensely and work upon the language used, the issues discussed, the problem of male gaze etc. Our main objective is to make the students study these kinds of Texts.

Learning Outcomes: While reading these Texts the students will find the arguments interesting, substantial and strong which will lead them to understand the issues of feminist writings and its importance. A bunch of grand literary Texts by women will be a gift to kindle their rational thinking.

UNIT - I (15 Hours)

আত্মজীবনী

- রাসসুন্দরী দেবী — আমার জীবন

UNIT - II (30 Hours)

গল্প ও প্রবন্ধ

- জগদীশ গুপ্ত – চন্দ্র-সূর্য যতোদিন
- মহাশ্বেতা দেবী — চোলি কী পিছে
- গিরীন্দ্রমোহিনী দাসী — বিষম সমস্যা
- তসলিমা নাসরিন — আর রেখো না আঁধারে আমায় দেখতে দাও

Prachin Bharatiya Kavyatattwa O Paschatya kavyatattwa	4	3	1	NIL	Class 12th pass in any subject	Studied Bengali up to 10th standard Or Working knowledge of Bengali language

Learning Objectives

Literature can't be understood without aesthetics. This course contains ancient Indian aesthetics, western aesthetics as well as literary genre study of Dhani and Rasa. This will help us to understand the basics of literature according to Indian aesthetics. Contemporary western theories like feminism, gender studies, neo-historicism, post colonialism etc. will help to realise contemporary literature. Literary genre will also help students to mark a particular literature within characteristics. Overall, this course will help to understand both western and Indian literature as well.

Learning outcomes

The course will help students to understand the basics of world literature. This will also enable students to realize the relation of aesthetic literary genre across languages.
